Subject: RE: Shots fired on [REDACTED] INC #190201261

Roy,

I am aware of that. There were ten shots fired on this incident and the suspects were standing on the sidewalk. I am aware that not all shots will be detected by ShotSpotter, I just was wondering if there was a way for them to verify that the system was working properly in that area.

ShotSpotter has been clear on this issue. Shots fired from inside a home or inside a vehicle may not be picked up by the ShotSpotter system sensors.

All,

Today there was an incident on [REDACTED]. Several shots were fired and a house and car were struck. This location is within the boundary of ShotSpotter, however we did not receive an alert. Other officers stated that there have been other verified shots fired calls in that area that also did not generated an alert. I was wondering if someone could check and see if that area of the ShotSpotter is functioning correctly.

Thanks,

Sergeant Patrick Shaffer #5161
