CSI Narrative

On 03/26/24, Sergeant Miller 344 requested CSI process evidence items 1075.15, 1075.17, 1075.19, for latent prints and DNA. A digital camera was used to take color photographs of the following items:

- 1075.15 – Clear plastic baggie previously containing a white crystal substance
- 1075.17 – Clear plastic baggie
- 1075.19 – Clear plastic bag

The zipper of each baggie was swabbed for possible DNA evidence. The following evidence items were collected:

- 1169.1 – swab of zipper on baggie (1075.15)
- 1169.2 – swab of zipper on baggie (1075.17)
- 1169.3 – swab of zipper on baggie (1075.19)

The items were properly packaged, sealed and submitted to evidence on 03/26/24.

The baggies were exposed to cyanoacrylate ester fumes, a product of heated Superglue. The baggies were viewed with white light and no usable ridge detail was observed. The baggies were dipped in fluorescent dye and then viewed with an alternate light source. No usable ridge detail was observed.

The items were properly repackaged, resealed, and returned to property.

All photographs were uploaded to Evidence.com under case 2024-00025353.

No further action was taken.
