GHSAC WEEKLY UPDATE – June 29, 2018

\_\_\_\_\_

## GHSAC NEWS

### NASCIO Assistance for FEMA Grants

The National Association of State Chief Information Officers (NASCIO) has offered its assistance with developing or revising the Cybersecurity Investment Justification (CIJ) required by FEMA grant guidance. A letter with more information is attached. Please let Maggie Brunner know if you have any feedback or suggestions. NGA Contact: Maggie Brunner, 202-624-5364.

### DOJ Releases Two Grants for STOP School Violence Act

The Department of Justice Bureau of Justice Assistance has released competitive grant announcements for two new programs created by the STOP School Violence Act: Threat Assessment and Technology Reporting Program and Prevention and Mental Health Training Program. More information on the grants is in Federal Relations News. NGA is reaching out to its BJA partners for more guidance and will provide that information when available. NGA Contact: Maggie Brunner, 202-624-5364.

### NGA Center State School Safety Initiatives Tracker

In an effort to understand current state actions to enhance school safety, NGA would like to create a clearinghouse of promising state practices and resources for HSAs per a request from the Special and Emerging Issues Subcommittee. The NGA Center has been tracking the information submitted by GHSAC members on initiatives to improve school safety in states via an Excel document that is viewable [here](#). If you have information to provide, please complete the brief Request for Information (attached). Please do not hesitate to reach out if you have questions. NGA Contact: Maggie Brunner, 202-624-5364.

## ASPR Releases Grant for Regional Disaster Health Response

The Department of Health and Human Services Assistant Secretary for Preparedness and Response has released a funding opportunity announcement: Partnership for Disaster Health Response. The grant asks applicants develop projects to address healthcare preparedness challenges, establish best practices for improving disaster readiness across the healthcare delivery system, and show the potential effectiveness and viability of a Regional Disaster Health Response System. NGA Contact: Maggie Brunner, 202-624-5364.

## Legislation Regarding New Mexico National Guard Activation for Cybersecurity Threats

Attached is the State Statute signed this past year regarding New Mexico National Guard activation of individuals for a cybersecurity threat. Activation by the GAR (Governor's Authorized Representative), the Secretary of Homeland Security and Emergency Management Department is contained in separate, pre-existing Statute. Please feel free to forward any questions regarding this Statute directly to Jay Mitchell and/or the TAG.

## NGA Homeland Security & Public Safety is Hiring

The HSPS Division is hiring a policy analyst to support its projects in the Homeland Security Program. The job posting is viewable here. NGA Contact: Alisha Powell, 202-624-5341.

## GHSAC Plenary Call

The next GHSAC plenary call is scheduled for July 26 at 3:00 p.m. ET [Dial In: 888-858-6021 | ID: 2026245364]. Please note the new call-in number. The agenda for the call is forthcoming. NGA Contact: Maggie Brunner, 202-624-5364.

---

## REQUESTS FOR INFORMATION

### Preparing the Next Class of Governors

During the GHSAC Summer Meeting NGA requested that homeland security advisors consider the following questions for NGA's briefing of the next class of governors during the Seminar for New Governors on November 16-18 :

- \* What information did governors need to have that they did not have previously?
- \* In what ways did you find NGA helpful in the transition?
- \* What more could NGA have done to support you and your governor?
- \* What advice would you give to new governors?
- \* What advice would you give to new homeland security advisors?

If you would like to share your insights, please contact NGA. NGA Contact: Maggie Brunner, 202-624-5364.

## Governors Crisis Manuals Request for Information

The NGA Center received a technical assistance request asking if any states have “crisis manuals” for the governor’s office (potentially including decision trees, contact lists, roles and responsibilities, crisis communications plan, and other relevant information). If your state has such a document, please contact NGA. NGA Contact: Alisha Powell, 202-624-5341.

## Business Case for Emergency Management Request for Information

The NGA Center received a technical assistance request asking whether any states have developed a business case for emergency management. If your state has gone through such an undertaking, please contact NGA. NGA Contact: Alisha Powell, 202-624-5341.

---

## NGA UPDATES

### NGA Countering Violent Extremism Webinar

The NGA Center for Best Practices is hosting the Preventing Targeted Violence Webinar: Developing Intervention Programs on Monday, July 9 at 2 p.m. ET as part of its series on countering violent extremism. This webinar will include a speaker from the Department of Homeland Security’s Science and Technology Directorate to discuss the science behind indicators and their effectiveness in predicting who may mobilize towards violence. Following that presentation, a speaker from The Center for the Prevention of Radicalization Leading to Violence, a Canadian non-profit, will discuss how they developed and deployed their intervention program for individuals mobilizing towards violence. You can register at the link here. This webinar is available for state, local, and nonprofit practitioners. Feel free to share this invitation with other state colleagues who may be interested in participating. Further information is forthcoming. Please direct questions to Michael Garcia ([mgarcia@nga.org](mailto:mgarcia@nga.org) ; 202-624-5312).

---

## FEDERAL RELATIONS NEWS

### House Passes FY19 Defense Appropriations Bill

The House approved 359-49 the Fiscal Year (FY) 2019 Defense Appropriations bill (H.R. 6157) after considering several amendments. The bill provides \$674.6 billion for defense and intelligence programs and an additional \$68.1 billion for the Overseas Contingency Operations (OCO) account. Additionally, the Senate Appropriations Committee passed its version of the FY19 Defense Appropriations bill. The Committee summary can be found [here](#) and the NGA appropriations tracker can be found [here](#).

Please contact your Washington representative or state-federal director for additional information.

### House Votes Down Second Immigration Bill

The House voted down H.R. 6136, the republican compromise immigration bill at a vote of 121-301. The vote, which was postponed after another GOP measure H.R. 4760 failed, came amid opposition

from all Democrats and dozens of Republicans, who feared backing a bill that would have provided a path to citizenship for Deferred Action for Childhood Arrival (DACA) recipients, even though it also would have funded Trump's border wall and curbed legal immigration.

Please contact your Washington representative or state-federal director for additional information.

#### Federal Commission on School Safety Holds Listening Session in Kentucky

The Federal Commission on School Safety held a listening session in Lexington, Kentucky. Deputy Secretary of Education Mick Zais presided over the session with representatives from the Departments of Justice, Homeland Security and Health and Human Services. The session consisted of two panel discussions with local and state officials and a two hours during which the Commission heard from the general public. Among the panelists were Kentucky Governor Matt Bevin, Wisconsin First Lady Tonette Walker and Tennessee Commissioner of Education Candice McQueen. Mrs. Walker emphasized the importance of counselors, nurses and psychologists in school and the training of other school personnel to engage students with adverse childhood experiences. Commissioner McQueen spoke about Tennessee's efforts to ensure every school in the state received a baseline needs assessment of its safety, and the state's use of the local needs assessments in awarding grant funding for school safety initiatives. Governor Bevin spoke about Kentucky's working group to address school safety and voiced concerns related to students' increasing reliance on technology, violent content in entertainment and the publicizing of school shootings as issues that may contribute to school violence. More information on past meetings of the Federal Commission on School Safety can be found [here](#).

Please contact your Washington representative or state-federal director for additional information.

#### Federal Judge Orders Administration to Reunite Migrant Families

A federal judge ordered the federal government to reunite migrant parents with children taken from them under the Trump administration's zero-tolerance immigration policy. U.S. District Court Judge Dana Sabraw, based in San Diego, issued a preliminary injunction requiring that nearly all children younger than 5 be returned to their parents within 14 days and that older children be returned within 30 days.

Please contact your Washington representative or state-federal director for additional information.

#### Supreme Court Upholds Travel Ban

The Supreme Court ruled 5-4 to uphold the third version of the Trump Administration's "travel ban" issued in September 2017 that restricts entry from seven countries by varying degrees – Iran, North Korea, Syria, Libya, Yemen, Somalia, and Venezuela. Challengers to the ban argued that the travel ban exceeded the President's authority under immigration law and the Constitution. Chief Justice Roberts noted in the ruling that, "the Government has set forth a sufficient national security justification to survive rational basis review. We express no view on the soundness of the policy. We simply hold today that plaintiffs have not demonstrated a likelihood of success on the merits of their constitutional claim...The proclamation is squarely within the scope of Presidential authority under the Immigration and Nationality Act."

Please contact your Washington representative or state-federal director for additional information.

## Two Military Bases Selected to House Migrants

The Trump Administration announced an Army and Air Force Installations in Texas to house detained migrants as part of the “zero-tolerance” immigration policy. According to Secretary of Defense Jim Mattis, a number of migrants will be sheltered at Fort Bliss and Goodfellow Air Force base. During a Monday press conference, Secretary Mattis stated, “We’ll provide whatever support the Department of Homeland Security needs in order to house the people that they have under their custody.” The number of detained migrants who might be held at Bliss and Goodfellow has not been announced, but the Pentagon had said last week that it had been asked to be prepared to shelter as many as 20,000 unaccompanied children.

Please contact your Washington representative or state-federal director for additional information.

## Senate Passes “Minibus” Appropriations Package

The Senate passed the “minibus” appropriations package (H.R. 5895) by a vote of 86-5. The bill contains the Senate’s \$43.8 billion Energy and Water Appropriations bill, \$97.1 billion Military Construction and Veterans Affairs Appropriations bill, and \$4.8 billion Legislative Branch Appropriations bill. The House passed H.R. 5895 with its versions of the three bills on June 8 by a vote of 235-179. A House-Senate conference committee will have to resolve the differences.

Please contact your Washington representative or state-federal director for additional information.

## DOJ Releases Announcements of Two Grants Created by the STOP School Violence Act

The Department of Justice Bureau of Justice Assistance has released competitive grant announcements for two new programs created by the STOP School Violence Act. The two grants are authorized to award a combined \$50 million in fiscal year 2018 to states, territories, local governments and federally-recognized tribes. The Threat Assessment and Technology Reporting Program grant will assist jurisdictions in improving efforts to reduce violent crime through the creation of school threat assessment teams and the use of technology for anonymously reporting suspicious activity as it relates to violence in schools, and the Prevention and Mental Health Training Program grant will assist jurisdictions with the creation of school safety training and mental health programs for school personnel and students as they relate to violence in schools. The deadline for states to apply for the grants is July 23, and the full details can be viewed [here](#) and [here](#).

Please contact your Washington representative or state-federal director for additional information.

Governors Homeland Security Advisors Council (GHSAC)  
 444 North Capitol St NW #267  
 Washington, DC 20001

Dear Commissioner Squires and Director Klein,

On behalf of the National Association of State Chief Information Officers (NAS CIO), we wanted to reach out and offer our assistance to the Governors Homeland Security Advisors Council (GHSAC) and your members on the new grant guidance by the Federal Emergency Management Agency (FEMA) related to homeland security grants. As you know, FEMA grant guidance now requires a cybersecurity investment justification (CIJ) and requires state CIOs and state CISOs to sit on the Senior Advisory Committee (SAC) and the Urban Area Working Group (UAWG) to better address cybersecurity preparedness.

State CIOs have a long history with state cybersecurity and have consistently ranked it a top priority for state IT. In the [2016 Deloitte-NASCIO Cybersecurity Study](#), we found that the top challenges to addressing cyber within state government were: lack of sufficient funding (80 percent), inadequate availability of cybersecurity professionals (51 percent), increasing sophistication of threats (45 percent), lack of documented processes (45 percent), and lack of visibility and influence within the enterprise (33 percent). We believe that by collaborating with state homeland security and emergency management professionals, we can begin to holistically address some of the aforementioned challenges.

We recognize that redirecting FEMA grant funds to address state cybersecurity may be difficult due to the need to fund existing priorities, required set-asides, and pass through requirements. We also understand that FEMA grants are insufficient to meet all the emergency management and homeland security needs of state and local governments. Acknowledging the challenging financial environment that state and local governments face, we would like to begin engaging in a collaborative discussion with GHSAC members and other homeland security/emergency management professionals in our respective states about how to strategically fund cybersecurity initiatives that would bring the most benefit to our states. Most importantly, we would like to offer our assistance with developing or revising the CIJ document that FEMA requires states to submit.

NASCIO would be happy to connect interested HSAs and state emergency managers to their state’s CIO and CISO. Please contact NAS CIO director of government affairs, Yejin Jang ([yjang@NAS CIO.org](mailto:yjang@NAS CIO.org) 202.624.8477) for contact information. We look forward to working with you.

Sincerely,

Bo Reese, NAS CIO President and Oklahoma CIO

AN ACT

RELATING TO MILITARY AFFAIRS; AUTHORIZING ACTIVATION OF THE NATIONAL GUARD IN THE CASE OF CYBERSECURITY THREATS; PLACING LIMITS ON THE AUTHORITY EXERCISED PURSUANT TO SUCH ACTIVATIONS; PROHIBITING THE INCURRENCE OF DEBT FOR SUCH ACTIVATIONS; DECLARING AN EMERGENCY.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF NEW MEXICO:

SECTION 1. Section 20-2-3 NMSA 1978 (being Laws 1987, Chapter 318, Section 10, as amended) is amended to read:

"20-2-3. GOVERNOR--POWER TO CALL OUT MILITIA.--

A. The governor may, in case of insurrection, invasion, riot or breach of the peace or of imminent danger thereof or in case of other emergency, order into active service of the state the militia or any components or parts thereof that have not been called into federal service. As used in this section, "emergency" includes any man-made or natural disaster causing or threatening widespread physical or economic harm that is beyond local control and requiring the resources of the state.

B. The governor may also order any member of the national guard to active state service for a period not to exceed a cumulative total of four months within a calendar year for any individual member for the following reasons:

- (1) to protect critical infrastructure in

1 the state from a cybersecurity threat or security  
2 vulnerability;

3 (2) to protect an information system owned  
4 or operated by the state from a cybersecurity threat or  
5 security vulnerability;

6 (3) to protect information that is stored  
7 on, processed by or transiting on an information system owned  
8 or operated by the state from a cybersecurity threat or  
9 security vulnerability; or

10 (4) to identify the source of a  
11 cybersecurity threat.

12 C. A member of the national guard called to active  
13 service pursuant to the provisions of Subsection B of this  
14 section shall not have any police powers or arrest authority.  
15 "Subsection B of Section 20-2-3 NMSA 1978" shall be cited on  
16 all orders, vouchers and payroll documents submitted for  
17 reimbursement pursuant to Section 20-1-6 NMSA 1978 in support  
18 of all actions authorized by Subsection B of this section.  
19 In no case shall an activation ordered pursuant to Subsection  
20 B of this section be used to incur a debt under Article 9,  
21 Section 7 of the constitution of New Mexico.

22 D. In case of any breach of the peace, tumult,  
23 riot or resistance to process of this state or imminent  
24 danger thereof, the sheriff of a county may call for aid from  
25 the governor as commander-in-chief of the national guard. If

1 it appears to the governor that the power of the county is  
2 insufficient to enable the sheriff to preserve the peace and  
3 protect the lives and property of the peaceful residents of  
4 the county or to overcome the resistance to process of this  
5 state, the governor shall, on application of the sheriff,  
6 order out such military force as is necessary.

7 E. When any portion of the militia is called out  
8 for the purpose of suppressing an unlawful or riotous  
9 assembly, the commander of the troops shall cooperate with  
10 the civil officers to the fullest extent consistent with the  
11 accomplishment of the object for which the troops were  
12 called. The civil officials may express to the commander of  
13 the troops the general or specific objective that the civil  
14 officials desire to accomplish, but the tactical direction of  
15 the troops, the kind and extent of force to be used and the  
16 particular means to be employed to accomplish the object  
17 specified by the civil officers shall be left solely to the  
18 commander of the troops present on duty.

19 F. When any portion of the militia is ordered into  
20 active service pursuant to this section in case of an  
21 emergency, the militia may provide those resources and  
22 services necessary to avoid or minimize economic or physical  
23 harm until a situation becomes stabilized and again under  
24 local self-support and control, including the provision, on a  
25 temporary, emergency basis, for lodging, sheltering, health

1 care, food and any transportation or shipping necessary to  
2 protect lives or public property; or for any other action  
3 necessary to protect the public health, safety and welfare.

4 G. In the event of the exercise by the governor of  
5 the powers under this section, the governor shall first  
6 utilize the personnel and assets of the national guard and  
7 only in their absence or insufficiency utilize the personnel  
8 and assets of the state defense force."

9 SECTION 2. EMERGENCY.--It is necessary for the public  
10 peace, health and safety that this act take effect  
11 immediately. \_\_\_\_\_

HEADLINE	<b>06/24 Immense rains cause more flash flooding</b>
SOURCE	<a href="https://www.washingtonpost.com/national/immense-rains-are-causing-more-flash-flooding-and-experts-say-its-getting-worse/2018/06/24/3970a236-765e-11e8-805c-4b67019fcfe4_story.html?utm_term=.9e5ec3715270">https://www.washingtonpost.com/national/immense-rains-are-causing-more-flash-flooding-and-experts-say-its-getting-worse/2018/06/24/3970a236-765e-11e8-805c-4b67019fcfe4_story.html?utm_term=.9e5ec3715270</a>
GIST	<p>OLD FORT, N.C. — Brian Gentry was certain his 33,000-pound truck would be fine as he headed out into the heavy rains here in the Blue Ridge Mountains. But as he went to clear debris from a two-lane highway after more than a half-foot of rain, rocklike drops pounded the windows, and he heard the earth “crack” around him as the land began to slide.</p> <p>Mud and uprooted trees slammed his vehicle, tossing it across the highway, over a 10-foot embankment and into the raging Catawba River. Gentry and a co-worker with the North Carolina Department of Transportation were rolled, and the truck came to rest in the water, just the passenger-side window peeking out.</p> <p>“I looked around, and I saw everything that was going on, and I thought, ‘I am going to die,’ ” Gentry, 47, recalled. “I thought, ‘My life is about over, so I need to call my wife.’ ”</p> <p>Gentry spent 40 minutes clinging to a rope in the water awaiting rescue, the victim of an alarming phenomenon: Torrential rain events across the United States are becoming more frequent and more intense, leading to record rainfall, rare extreme flooding and perilous infrastructure failures.</p> <p>Experts say the immense rains — some spawned by tropical ocean waters, others by once-routine thunderstorms — are the product of long-rising air temperatures and an increase in the sheer size of the storms. Because warmer air can hold more water, large storms are dropping far more rain at a faster clip.</p> <p>Such rains in recent weeks have deluged the Great Lakes region, the Deep South and the suburbs of major cities along the Atlantic coast. Philadelphia, Charlottesville, and Ocean City, Ellicott City and Frederick in Maryland all have experienced major flooding since mid-May. Several locations in Maryland had their wettest May on record, including Baltimore, which tallied more than eight inches, most of which fell in the second half of the month.</p> <p>“Things are definitely getting more extreme,” said Andreas Prein, an atmospheric scientist at the National Center for Atmospheric Research in Boulder, Colo. “You just have to look at the records. All areas of the continental U.S. have seen increases in peak rainfall rates in the past 50 years. . . . And there is a chance that we are underestimating the risk, actually.”</p> <p>On Friday, Richmond experienced its second-wettest day on record — 7.61 inches of rain, more than the city typically gets in the entire month of June, topping the previous record on Aug. 12, 1955, during Hurricane Connie. The torrential rains in the past week flooded Richmond International Airport, which closed its doors for more than two hours Friday.</p> <p>Slow-moving thunderstorms on Wednesday triggered widespread flooding in suburban Pittsburgh, where residents posted online videos showing cars, television sets and dumpsters floating down streets and highways. Rainfall rates reached two to three inches per hour during that storm, according to the National Weather Service in Pittsburgh.</p> <p>Several stalled storms last weekend resulted in catastrophic flooding of homes and businesses on the Upper Peninsula of Michigan, prompting Gov. Rick Snyder (R) to declare a state of disaster in the counties affected. In South Texas, days of heavy rain inundated subdivisions with several feet of water, and the Texas National Guard used helicopters to rescue stranded residents.</p> <p>And in North Carolina, the May 29 flooding in McDowell County resulted in 18 people needing rescue, including the highway workers in Old Fort. As the runoff poured into mountain streams, officials ordered up to 2,000 residents to evacuate amid fears that the Lake Tahoma Dam could fail. There were also more than 40 landslides, which the McDowell County Office of Emergency Management described as unprecedented.</p>

“The storms are worse. The rain is worse. The heat is worse,” said Melissa Smith, an Old Fort resident, after a mountain stream overflowed that night and spilled several feet of mud, rocks and other debris into her yard. “Everything is worse.”

Several atmospheric researchers said in interviews that they agree with that perception. They say it is getting worse.

Since 1880, global temperature has risen just more than 0.13 degrees per decade, for a total of 1.8 degrees Fahrenheit (1 degree Celsius). The amount of water air can hold is based on temperature — put very simply, the warmer the air is, the more water it can hold.

Theoretically, experts say, an additional 1.8 degrees would amount to about 7 percent more water in the air, resulting in a similar increase in extreme rainfall. But what Prein and other researchers have found is much higher across a vast portion of the United States.

According to the 2014 National Climate Assessment, the eastern half of the continental United States has seen the most dramatic change in extreme rainfall. The amount of rain during the most extreme storms in the Northeast has risen 71 percent since 1958; in the Midwest, heavy rain has increased 37 percent; in the Southeast, it’s up 27 percent.

And the area covered by each storm also is getting larger, Prein said, another major factor in the increased precipitation. Prein’s new research suggests thunderstorms will become 80 to 90 percent larger by the end of the century.

<b>HEADLINE</b>	<b>06/25 Wildfires race thru northern California</b>
<b>SOURCE</b>	<a href="http://time.com/5320813/california-wildfires-thousands-flee/">http://time.com/5320813/california-wildfires-thousands-flee/</a>
<b>GIST</b>	<p>(CLEARLAKE OAKS, Calif.) — Wind-driven wildfires destroyed buildings and threatened hundreds of others as they raced across dry brush in rural Northern California.</p> <p>The Pawnee Fire, which broke out Saturday near the community of Clearlake Oaks, has destroyed 12 buildings and threatened an additional 600. As of Sunday, there was no containment and it burned across about 12 square miles. Authorities ordered people to evacuate all homes in the Spring Valley area, where about 3,000 people live.</p> <p>“What we’re stressing is that people, when they get the evacuation order, they heed it immediately and get out and stay out until it is safe to return,” state Department of Forestry and Fire Protection Battalion Chief Jonathan Cox said. “This is one of four large fires burning in Northern California. It’s a good reminder that fire season is upon us.”</p> <p>Erratic wind and heat gripping a swath of California from San Jose to the Oregon border drove the flames, which were north of the wine country region where devastating wildfires killed 44 people and destroyed thousands of homes and businesses last October.</p> <p>Farther north, a fire spanning about three-quarters of a mile in Tehama County destroyed “multiple residential and commercial buildings,” Cal Fire said. But firefighters appeared to be making good progress — the Stoll Fire was halfway contained and some evacuees were allowed to return home, authorities said.</p> <p>A second fire in Tehama County consumed 5.5 square miles, but no buildings were reported burned. The so-called Lane Fire threatened 200 structures and some homes had been evacuated, Cox said. It was 10 percent contained.</p> <p>A fire in neighboring Shasta County grew to 1.6 square miles and was 20 percent contained. The so-called</p>

	<p>Creek Fire had damaged no structures but did prompt evacuations.</p> <p>The cause of each blaze was under investigation Sunday. No one was reported hurt.</p> <p>More than 230 firefighters using helicopters, bulldozers and other equipment were battling the Pawnee Fire in a rugged area that made it difficult to get equipment up close.</p> <p>“It’s kind of the worst possible combination,” Cox said.</p>

<b>HEADLINE</b>	<b>06/24 Seattle Pride: 300,000 crowd parade</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1027150/thousands-to-pack-seattle-streets-for-annual-pride-parade/">http://mynorthwest.com/1027150/thousands-to-pack-seattle-streets-for-annual-pride-parade/</a>
<b>GIST</b>	<p>As many as 300,000 people crowded into downtown Seattle for the annual Pride Parade on Sunday. This year’s theme was “The Many Faces of Pride.”</p> <p>The parade started at Fourth Avenue and ended at Second Avenue and Denny Way near Seattle Center, lasting about 2.5 hours.</p> <p>Seattle Center will host the 12th annual PrideFest until 8pm with live music and vendors.</p> <p>Seattle celebrated its first Pride Week from June 24-30 in 1974. Three years later, Mayor Uhlman declared June 25 to July 1 Gay Pride Week in the city of Seattle. The city held its first Gay Pride Week march that same year. Opponents picketed outside City Hall and wrote angry letters to the mayor’s office.</p>

<b>HEADLINE</b>	<b>06/24 Record levels of imported seafood</b>
<b>SOURCE</b>	<a href="https://finance.yahoo.com/news/us-imported-more-seafood-2017-prior-141246717--finance.html">https://finance.yahoo.com/news/us-imported-more-seafood-2017-prior-141246717--finance.html</a>
<b>GIST</b>	<p>PORTLAND, Maine (AP) -- The United States imported more seafood last year than at any point in its history, and the nation's trade deficit in the sector is growing, federal data show.</p> <p>The U.S. imported more than 6 billion pounds of seafood valued at more than \$21.5 billion in 2017, according to data from the National Oceanic and Atmospheric Administration, which oversees American fisheries. The country exported more than 3.6 billion pounds valued at about \$6 billion.</p> <p>The widening gap comes at a time when Commerce Secretary Wilbur Ross, who heads the federal agency that includes NOAA, has identified reducing the deficit as a priority for the government.</p> <p>The U.S. is home to major commercial fisheries for species such as Pacific salmon, New England lobster and Alaska pollock, but it imports more than 90 percent of the seafood the public consumes.</p> <p>Ross and others in U.S. fisheries are looking at new strategies to cut the deficit, including increasing the amount of aquaculture-based farming, said Jennie Lyons, a NOAA spokeswoman.</p> <p>The U.S. trades in seafood with countries all over the world, and the countries it buys the most from include Canada, China and Chile. Major buyers of U.S. seafood include China, Japan and South Korea.</p> <p>While U.S. fishermen would love to grow commercial fisheries, it's important to note that domestic and imported seafood are both important parts of the supply chain and support thousands of American jobs, said Gavin Gibbons, spokesman for the National Fisheries Institute.</p> <p>He added that the trade imbalance isn't caused by a lack of fish to catch in U.S. waters, as NOAA announced this spring the number of overfished fish stocks in the country is at an all-time low.</p>

	<p>"Our stocks are fished to the maximum sustainable yield. In order to feed Americans, and to feed the raw materials into the jobs that are needed, we have to get it from overseas," Gibbons said.</p> <p>Some of the seafood items that American consumers are especially fond of, including tuna, salmon and shrimp, are heavily dependent on foreign imports to make it to U.S. markets and restaurants. Some species, such as lobsters, are caught in the U.S., exported to other countries that have greater processing capacity, and return to the U.S. as imports.</p> <p>In this way, the U.S. and its trade partners depend on each other to satisfy worldwide demand for seafood products, said Geoff Irvine, executive director of the Lobster Council of Canada.</p> <p>"Our relationship is vital, and it is symbiotic," he said.</p>

<b>HEADLINE</b>	<b>06/24 CDC: vector-borne diseases tripled</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/24/health/bug-disease-preparedness/index.html">https://www.cnn.com/2018/06/24/health/bug-disease-preparedness/index.html</a>
<b>GIST</b>	<p>(CNN)In many parts of the United States, this weekend marks the start of summer sleepaway camp season, which means swimming, arts and crafts, marshmallow roasts -- and, very often, ticks.</p> <p>Of the more than 1,600 overnight camps that are members of the American Camp Association, more than a third are in New England and the mid-Atlantic states, where Lyme disease is particularly prevalent, according to the Centers for Disease Control and Prevention.</p> <p>According to a May CDC report, cases of vector-borne diseases -- those caused by viruses and bacteria carried by ticks, mosquitoes and other bugs -- tripled in the United States from 2004 to 2016.</p> <p>For years, experts have voiced concern that many local public health agencies are unprepared to control such pests and limit the spread of the diseases.</p> <p>"I started to look into it, and the numbers were on the increase and didn't show any signs of stopping," said Lauren Rutkowski, who with her husband, Joel, owns Indian Head Camp for children in Equinunk, Pennsylvania. "As a mom and a camp director, I was concerned."</p> <p>Every summer from 2010 to 2014, seven or eight campers had confirmed or suspected tick bites at Indian Head, and each summer, three or four of those children tested positive for Lyme disease, according to Rutkowski. Lyme disease is a bacterial infection transmitted through bites from infected ticks, and if left untreated, it can spread to joints, the heart and the nervous system.</p> <p>She said it's not known whether the children contracted the disease from the tick bite they got at camp or from a previous tick bite at home.</p> <p>In 2014, her son, Oakley, was bitten by a tick at the family's camp, which hosts 650 children every summer. He did not contract Lyme disease.</p> <p>The next year, Rutkowski hired a new service that helps fight ticks, including spraying the perimeter of the camp with pesticides and offering advice on how to get rid of habitats where ticks breed.</p> <p>Since then, not a single camper is known to have been bitten by a tick, Rutkowski said.</p> <p>Now, 123 camps use the service, Ivy Oaks Analytics, according to Isaiah Ham, who started the company after one of his summer campers contracted Lyme disease from a tick bite.</p> <p>Ham, then a college student working as a counselor, said he wasn't pleased with the camp's response.</p>

	<p>"The camp just kind of shrugged and thought it was just inevitable, like a hurricane; it was just part of being in the outdoors," Ham remembered.</p> <p>It's unknown how many children are bitten by ticks at summer camps or how many camps are using services to mitigate the pests, according to Sam Borek, president of the New York/New Jersey section of the American Camp Association.</p> <p>Camps don't exist in a vacuum, of course, and there are concerns that state public health departments aren't doing enough to fight diseases caused by ticks, mosquitoes and other pests.</p> <p>"Mosquitoes, ticks, fleas can all carry very serious diseases that are life-threatening," said Dr. Irwin Redlener, a professor at the Columbia University Mailman School of Public Health.</p> <p>A report from the National Association of County and City Health Officials says 84% of programs to control diseases from mosquitoes need improvement. In 18 states, every program is falling short.</p> <p>These programs often aren't well-funded and aren't equipped to do proper surveillance or prevention, Redlener said.</p> <p>"We're, simply put, not ready, and we should be," he said.</p>
<p><a href="#">Return to</a> <a href="#">Top</a></p>	

<b>HEADLINE</b>	<b>06/23 Iraq one step closer to new govt.</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-iraq-election-alliance/pm-abadi-sadr-alliance-brings-iraq-government-closer-idUSKBN1JJ0ZS">https://www.reuters.com/article/us-iraq-election-alliance/pm-abadi-sadr-alliance-brings-iraq-government-closer-idUSKBN1JJ0ZS</a>
<b>GIST</b>	<p>Prime Minister Haider al-Abadi and cleric Moqtada al-Sadr said on Saturday their political blocs would enter into an alliance, bringing Iraq one step closer to forming a new government after an election marred by low turnout and fraud allegations.</p> <p>The alliance between Abadi's Victory Alliance, which came third in a May parliamentary election, and Sadr's Saeroon list, which won the largest number of seats, increases the chances of forming a government after weeks of political tensions.</p> <p>"We announce a cross-sectarian, cross-ethnic alliance to speed up forming the next government and to agree on common points that guarantee the interests of the Iraqi people," Sadr said at a news conference in the Shi'ite holy city of Najaf.</p> <p>He called for a wider alliance consisting of all components of Iraqi society that would form an inclusive government.</p> <p>Sadr presents himself as a non-sectarian nationalist opposed to both the United States and Iran's influence over his country. Saeroon is an electoral alliance between Sadrist politicians, the Iraqi Communist Party, and other secular candidates.</p> <p>Yet earlier in June Sadr went into an alliance with Hadi al-Amiri, a Shi'ite militia commander with close ties to Iran whose Fatih coalition came second in the election.</p> <p>There was no immediate reaction from al Amiri's camp, but the prime minister said his pact with Sadr would not compromise the cleric's other alliance.</p> <p>"I affirm that this alliance is not in contrast to any other alliances either of the two lists have previously entered into with other blocs, rather, it flows in the same direction and same principles," said Abadi.</p> <p>The top three winning blocs, all Shi'ite-led, have upwards of 140 seats between them. At least 165 seats</p>

	<p>are needed to form a government although traditionally the ruling bloc in parliament tends to be larger so as to include Sunni Arab and Kurdish lawmakers.</p> <p>A coalition between Sadr, Amiri, and Abadi could see internal divisions. Abadi had balanced U.S. and Iranian interests during his term and was backed by the West. Sadr says he opposes both, and Amiri is Iran's biggest Iraqi ally.</p> <p>Despite coming in third, Abadi is hoping to win a second term as a compromise candidate for the premiership. Analysts and diplomats say he would be weakened and beholden to Sadr and Amiri even if he manages to stay on, however.</p> <p>Abadi and Sadr both called on the leaders of other blocs to meet and "agree on the coming steps" in order to speed up the formation of an inclusive Iraqi government.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>06/22 US, SKorea suspend training exercises</b>
<b>SOURCE</b>	<a href="https://www.i24news.tv/en/news/international/asia-pacific/177793-180623-us-suspending-more-training-exercises-with-s-korea-pentagon">https://www.i24news.tv/en/news/international/asia-pacific/177793-180623-us-suspending-more-training-exercises-with-s-korea-pentagon</a>
<b>GIST</b>	<p>The US and South Korea have agreed to indefinitely suspend two exchange program training exercises, to support diplomatic negotiations with North Korea, the Pentagon said Friday.</p> <p>The move comes after the two countries announced the shelving of the large-scale Ulchi Freedom Guardian exercises slated for August, making good on a pledge by President Donald Trump during his summit with North Korea's leader. Friday's decision followed a high-level meeting between Defense Secretary Jim Mattis, Secretary of State Mike Pompeo, Chairman of the Joint Chiefs of Staff Joe Dunford, and National Security Advisor John Bolton.</p> <p>"To support implementing the outcomes of the Singapore Summit, and in coordination with our Republic of Korea ally, Secretary Mattis has indefinitely suspended select exercises," Pentagon spokeswoman Dana White said in a statement. Two Korean Marine Exchange Program training exercises scheduled to occur in the next three months have now been shelved.</p> <p>"In support of upcoming diplomatic negotiations led by Secretary Pompeo, additional decisions will depend upon the DPRK continuing to have productive negotiations in good faith," White continued, using the acronym for the official name of North Korea. Some 17,500 US military personnel were due to take part in the Freedom Guardian drills.</p> <p>Last week, after his historic summit with North Korean leader Kim Jong Un, Trump made the surprise announcement that the US would halt "war games" with its South Korean security ally -- without making clear when the freeze would begin. The US leader raised eyebrows by describing the exercises as "provocative" -- a term used by the North. US and South Korean forces have been training together for years, and routinely rehearse everything from beach landings to an invasion from the North, or even "decapitation" strikes targeting the North Korean regime. Pyongyang typically reacts furiously.</p>

<b>HEADLINE</b>	<b>06/24 Hundreds stranded on migrant boats</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/24/europe/maersk-lifeline-migrants-stranded-mediterranean-intl/index.html">https://www.cnn.com/2018/06/24/europe/maersk-lifeline-migrants-stranded-mediterranean-intl/index.html</a>
<b>GIST</b>	<p>(CNN)Almost 350 migrants are stranded on two boats in the Mediterranean, including a Danish cargo ship, as a standoff between nearby European countries deepened on Sunday.</p> <p>The boats include German rescue ship, Lifeline, which picked up 234 people and 17 crew members off the</p>

coast of Libya on Thursday; and a cargo ship operated by Danish transportation company Maersk, which picked up another 113 migrants off the coast of Libya on Friday morning.

Both boats have been barred from docking at nearby Italy and Malta, as the countries urged other European nations to take in the stranded migrants.

The standoff comes weeks after Italy and Malta refused to accept another rescue ship, the Aquarius, which was carrying over 600 migrants. After two days drifting in the Mediterranean the migrants were accepted by Spain, exposing the tough new policies of Italy's hardline interior minister and leader of the anti-immigration League party, Matteo Salvini.

Similarly, Italy has also refused to allow the Maersk cargo ship, which is carrying over 100 migrants and is located south of Sicily, to dock in its ports. That's despite the Italian Maritime Rescue Coordination Center calling Maersk on Thursday night and asking for it to rescue the migrants, a Maersk spokesman told CNN.

The cargo ship had been traveling between Libya and Malta at the time, the spokesman said, adding that "it is now denied a port of entry and the company is awaiting further instruction from authorities."

Meanwhile, the fiery exchange between Italy and Malta continued over the weekend, with Italian transportation minister Danilo Toninelli calling the Maltese decision not to allow the Lifeline to dock "inhumane" and "absurd" on his Facebook page on Saturday.

Malta's Minister for Home Affairs and National Security, Michael Farrugia, responded with tweets asking Toninelli to get his facts right and accusing Lifeline of breaking "international rules."

Immigration continues to be a controversial issue for EU member states. During the recent federal election campaign that led to Italy's new government -- a coalition between the anti-immigrant League and anti-establishment Five Star Movement -- Salvini promoted his party with an "Italians first" slogan and pledged to deport half a million migrants.

At an informal EU summit on immigration in Brussels on Sunday, German Chancellor Angela Merkel appeared keen to manage expectations that European leaders could reach a broad agreement on migration, telling journalists that countries will need to work on bilateral and trilateral deals with one another instead of waiting for all 28 EU member countries to come to an agreement.

The Mediterranean remains the world's deadliest migration route, despite sharp falls in the number of people trying to reach Europe by boat. That drop is partly ascribed to a deal struck between Italy and Libya last year, in which the southern European country pledged to bolster Libya's coast guard so it could spot departing migrant boats and house migrants attempting to cross.

As of June 6, there had been an estimated 785 deaths on the route this year, the International Organization for Migration (IOM) said, with the majority of the 33,400 migrants and refugees arriving through Greece and Italy.

<b>HEADLINE</b>	<b>06/25 Trade worries hit world stocks</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-global-markets/trade-worries-hit-world-stocks-oil-gives-back-gains-idUSKBN1JL037">https://www.reuters.com/article/us-global-markets/trade-worries-hit-world-stocks-oil-gives-back-gains-idUSKBN1JL037</a>
<b>GIST</b>	LONDON (Reuters) - World shares fell on Monday, dented by worries over a worsening trade dispute between the United States and other major economies, while oil prices gave up some of the gains made after major exporters agreed a modest production increase.  The Wall Street Journal said U.S. President Donald Trump planned to bar many Chinese companies from

	<p>investing in U.S. technology firms and block additional technology exports to China.</p> <p>The report hit Asian stocks overnight and in London the pan-European STOXX 600 index was down over half a percent in morning trade.</p> <p>S&amp;P500 mini futures fell as much as 0.6 percent while MSCI's broadest index of Asia-Pacific shares outside Japan fell 0.95 percent to 6-1/2-month lows. Japan's Nikkei lost 0.8 percent.</p> <p>Taking a particular hit on the trade tensions was the European autos sector, falling 1.4 percent and set for its seventh straight day of losses after Trump said on Friday he aimed to hike tariffs on EU car imports by 20 percent.</p> <p>MSCI's All-Country World index, which tracks shares in 47 countries, was down 0.3 in morning trade in Europe.</p> <p>As the threat of a full-blown trade war has grown, the gauge has fallen in five of the last six weeks. Last week it fell one percent - its biggest weekly drop in three months.</p>

<b>HEADLINE</b>	<b>06/24 Crews contain wildfire near Vantage</b>
<b>SOURCE</b>	<a href="https://www.king5.com/article/news/local/wildfires/fire-crews-contain-wildfire-near-vantage/281-566977595">https://www.king5.com/article/news/local/wildfires/fire-crews-contain-wildfire-near-vantage/281-566977595</a>
<b>GIST</b>	<p>Fire crews have managed to contain a wildfire burning in central Washington that had threatened about 30 homes.</p> <p>The Spokesman-Review reports that firefighters had fully contained the fire near Vantage and the Columbia River on Saturday. State resources will now withdraw from the area, leaving local crews to address any smaller hotspots.</p> <p>The fire started Wednesday night and quickly began burning through brush and grass in the area. The cause is under investigation.</p> <p>Fire officials say the fire had scorched more than 11 square miles (28 square kilometers).</p>

<b>HEADLINE</b>	<b>06/25 Algeria expels 13,000 migrants to Sahara</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/walk-die-algeria-abandons-13000-migrants-sahara-56133827?">https://abcnews.go.com/International/wireStory/walk-die-algeria-abandons-13000-migrants-sahara-56133827?</a>
<b>GIST</b>	<p>Algeria has abandoned more than 13,000 people in the Sahara Desert over the past 14 months, including pregnant women and children, expelling them without food or water and forcing them to walk, sometimes at gunpoint, under a blistering sun. Some never make it out alive.</p> <p>The expelled migrants can be seen coming over the horizon by the hundreds, appearing at first as specks in the distance under temperatures of up to 48 degrees Celsius (118 degrees Fahrenheit).</p> <p>In Niger, where the majority head, the lucky ones limp across a desolate 15-kilometer no-man's-land to the border village of Assamaka. Others wander for days before a U.N. rescue squad can find them. Untold numbers perish; nearly all of the more than two dozen survivors interviewed by The Associated Press told of people in their groups who simply vanished into the Sahara.</p> <p>Algeria's mass expulsions have picked up since October 2017, as the European Union renewed pressure on North African countries to head off migrants going north to Europe via the Mediterranean Sea or the</p>

	<p>barrier fences with Spain.</p> <p>A European Union spokesperson said the EU was aware of what Algeria was doing, but that "sovereign countries" can expel migrants as long as they comply with international law. Unlike Niger, Algeria takes none of the EU money intended to help with the migration crisis, although it did receive \$111.3 million in aid from Europe between 2014 and 2017.</p> <p>Algeria provides no figures for its involuntary expulsions. But the number of people crossing on foot to Niger has been increasing since IOM started counting in May 2017, when 135 people were dropped, to as high as 2,888 in April 2018. In all, according to the IOM, a total of 11,276 men, women and children survived the march.</p> <p>At least another 2,500 were forced on a similar trek into neighboring Mali, with an unknown number succumbing along the way.</p>

<b>HEADLINE</b>	<b>06/25 Turkey's victorious Erdogan new powers</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/turkeys-victorious-erdogan-set-assume-sweeping-powers-56133721?cid=clicksource_76_2_hero_headlines_bsq_hed">https://abcnews.go.com/International/wireStory/turkeys-victorious-erdogan-set-assume-sweeping-powers-56133721?cid=clicksource_76_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>Recep Tayyip Erdogan, who has dominated Turkish politics for the past 15 years, was set on Monday to extend his rule with sweeping new powers after winning landmark presidential and parliamentary elections.</p> <p>Turkey's High Electoral Board declared Erdogan, 64, the winner of Sunday's polls, which usher in a new executive presidential system that was approved in a referendum last year. Under the system, the office of the prime minister is eliminated and executive powers are transferred to the president, who can rule with only limited checks and balances.</p> <p>The Turkish leader, who is accused by critics of adopting increasingly authoritarian tactics but is loved by supporters for bringing prosperity and stability, may be facing rough times ahead, however. Analysts predict an economic downturn amid rising inflation and a struggling currency.</p> <p>President Recep Erdogan cited economic challenges and a growing military campaign in Syria in calling an early election.</p> <p>His win could deepen Turkey's rift with Western allies, who are already concerned by setbacks in democracy and human rights as well as Turkey's closer ties with Russia.</p> <p>Still, Turkey's currency, the lira, rallied on Monday over Erdogan's victory, which allows the country to avoid instability in the short-term.</p> <p>In his victory speech, Erdogan said he would work toward achieving his goal of making Turkey one of the world's top 10 economies by 2023, when the Turkish Republic marks its centenary.</p> <p>He also pledged a more "determined" fight against outlawed Kurdish rebels and alleged members of a movement led by U.S.-based cleric Fethullah Gulen, whom he accuses of orchestrating a 2016 failed coup against his government. Gulen denies involvement.</p> <p>"Turkey made its choice in favor of a more determined fight against the PKK (Kurdistan Workers Party) and (Gulenists)," Erdogan said. "We will go after terror organizations with stronger determination."</p> <p>Under the new system, Erdogan will appoint ministers, vice presidents and high-level bureaucrats, issue decrees, prepare the budget and decide on security policies.</p>

According to unofficial results that have yet to be confirmed by the electoral board, Erdogan garnered 52.5 percent of the votes, while his ruling Justice and Development Party, or AKP, won 42.5 percent in the parliamentary vote. Erdogan's closest contender, Muharrem Ince of the main opposition Republican People's Party, won 30.7 percent.

Erdogan's AKP fell short of a parliamentary majority but a better-than-expected performance by its nationalist ally should allow the party to control the 600-seat legislature.

<b>HEADLINE</b>	<b>06/22 Schools offer hope in opioid crisis</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/education-lab/in-opioid-crisis-schools-are-on-the-front-lines-but-slow-to-get-help/">https://www.seattletimes.com/education-lab/in-opioid-crisis-schools-are-on-the-front-lines-but-slow-to-get-help/</a>
<b>GIST</b>	<p>EVERETT — The front office at Hawthorne Elementary School, built in 1952, was never imagined as a social-service referral hub, drug-counseling center or confessional. But that’s the role it has served for Tiffany Smith over the past two years, as she’s worked to rid herself of heroin addiction while raising three children.</p> <p>Smith, who lives across the street from the school, regularly stops in to chat with the office staff and update Principal Celia O’Connor-Weaver on her progress in treatment. It wasn’t always such a cheery occasion. The first time she ventured inside, Smith, now 31, clutched a sheaf of paperwork from Child Protective Services. She needed to tell the principal that her children — taken into foster care months before — might still get visits from state social workers, even now that the kids were back home.</p> <p>Explaining all of this to O’Connor-Weaver meant describing what had led to the boys’ removal, which meant confessing the words Smith hated saying aloud: She had been addicted to heroin for the better part of a decade. She had been living in her car, the kids staying at her grandmother’s house, until her grandmother finally called state authorities.</p> <p>“I was afraid of the judgment — or that my children would get shunned,” Smith said. “But it wasn’t that way at all. They said they have a lot of parents that have gone through this and what can we do to help? It was not what I was expecting.”</p> <p>In her six years at the elementary school, Principal O’Connor-Weaver has repeated this conversation more times than she cares to count. Children in Everett, an epicenter of the opioid crisis in Washington, were among the 525 Snohomish County kids removed from addicted parents in 2017 and placed into foster care. In King County, more than 1,000 children were removed.</p> <p>And while public-health workers scramble to stem adult addictions, less visible have been the reverberations downstream — that is, on addicts’ children, in school. Across the region, educators and child-welfare workers report increased learning problems and behavioral outbursts from the kids of addicted parents. Research, too, suggests dire life-outcomes for these students. Yet the potential for school-based interventions has been, as yet, underutilized — even as public-health investigators say schools offer the most efficient hope for stemming a looming social crisis.</p> <p>“This fallout has been coming for a few years, but we’ve seen it get progressively worse,” said O’Connor-Weaver, pointing toward increased tardiness, low attendance and “kids not being well taken care of.”</p> <p>Evidence shows up during the most mundane moments, like recess, when teachers at Hawthorne watch 7- and 8-year-olds pretend to revive overdosed patients. Or in the principal’s office, when a parent freshly home from rehab confesses that they’ve relapsed.</p> <p>“The focus of school, of course, is learning,” O’Connor-Weaver said. “But kids’ minds are not focused on that. They’re worried about their parents. They’re worried about their next meal and who’s going to be home to take care of them. When a parent goes into rehab, it puts a huge stress on the family.”</p>

### Drug users' children flooding to foster care

In Tiffany Smith's case, three years of methadone treatment have helped her regain solid enough footing to secure housing and begin working toward a GED, in hopes of becoming a drug and alcohol counselor. (She'd dropped out of Sedro-Woolley High School at 15.)

But her children are still reeling. Smith's 6-year-old cannot stand to be apart from his mother and struggles with speech, cognitive and learning delays.

"He was talking fine before foster care," Smith said. "But when he came out, he couldn't pronounce some words. They said it was due to the trauma."

Her older son, now 7, was born prematurely and spent his first two days of life trembling from heroin withdrawal as his mother watched, devastated.

"Seeing my baby shake from detoxing really hurt — I knew it was my fault," she said.

This may be the most pressing, but largely hidden, toll of the opioid crisis in Washington. Though 10,000 high-school seniors said they'd used heroin or gotten high on opioid-derived painkillers in 2016, those numbers were about the same as two years prior. Foster care, however, is surging.

Between 2011 and 2017, the state took children from drug-abusing parents nearly 14,000 times. Last year's rate was the highest for drug-related causes since 2010 — up 16 percent over 2015 — while state hospitals report a steady increase in substance-exposed newborns.

Child-welfare workers hear complaints about increasingly severe problems in school — more physical violence toward peers, or kids who need to be taught separately — from students whose parents are staggering through addiction, said Jenna Kiser, who oversees intake at the state Children's Administration.

"These numbers are very concerning," said Jenny Heddin, a supervisor at the agency. "When children from these homes come into foster care, they can be very difficult to serve. Meanwhile, our foster-family system, too, is very stressed. So this is a bit of a perfect storm."

Heddin and her staff represent one corner of a national wave. More than 37 states report unprecedented numbers of kids entering foster care, many of them for reasons related to a parent's substance abuse, according to the federal Department of Education.

The fallout is evident nearly every day at Hawthorne Elementary.

"I don't care about you!" shouted a child who had been muscled out of his behavior-intervention classroom on a Thursday morning in March, a teacher gripping each arm, bouncer-style. In the hallway outside, the boy covered his face with his hands. His father was no longer living at home, no one had any idea when he'd be back and the child was "a mess," his teachers told Principal O'Connor-Weaver.

Smith has seen or heard of similar disruptions across the district.

"It's pretty much everywhere," she said. "People I'm in recovery with have their children all over Everett Public Schools. One time, I saw a woman nodding out, obviously high while waiting for her kid. She was going to get into her car. I hate to point fingers, but I told the school that's definitely what's going on."

### Damaging children's futures

By the time Child Protective Services is knocking on someone's door, the problem is already severe. And so far, efforts to respond might best be described as triage — focused more on addiction treatment than

prevention, both in Washington and across the country.

“People are very early in their planning on how to make an impact on this,” Kiser said. “I’d love to hear that there’s a state doing awesome so we could follow suit, but I haven’t heard of anyone who’s been able to resolve this.”

Earlier this year, Gov. Jay Inslee proposed spending \$20 million on a multipronged effort to combat opioid addiction. The bill never made it to the floor for a full vote, and it contained little funding for prevention. (But \$1.7 million targeted for youth did get funding.)

Yet researchers warn that ignoring that aspect of the crisis virtually guarantees costly problems to come as the children of addicts grow into adulthood. Kevin Haggerty, a professor at the University of Washington who studies risk factors for drug abuse, authored one of the few peer-reviewed studies tracking life outcomes for these young people.

In the early 1990s, he identified 151 elementary and middle-school children in Washington who were growing up with heroin-addicted parents. Fifteen years later, as young adults, 33 percent had dropped out of high school. The vast majority were addicts themselves, and half had criminal records. Only 2 percent had made it through college. (Nationally, 33 percent of all kindergartners in 1992 grew up to earn a college degree.)

“The results are astounding at how poor the outcomes are, having a drug-addicted parent,” said Caleb Banta-Green, principal research scientist at the Alcohol and Drug Abuse Institute at the University of Washington’s School of Public Health.

A few East Coast states — particularly New Hampshire and Massachusetts — have been forced to confront the school-level effects because the scale of adult addiction in their communities has grown impossible to ignore.

“We’re getting that first big wave of kids who were born addicted — they’re kindergartners right now — and it’s not just medical issues. It’s neurodevelopment and behavioral issues,” said McKenzie Harrington-Bacote, who oversees special programs in the Laconia, New Hampshire, schools. “Their behavior is so off-the-charts and aggressive in ways we’re not accustomed to — it’s just a whole other world. The littlest guys in our building are the ones destroying the building.”

New Hampshire itself is relatively prosperous, with a high median household income and low unemployment. But its rural areas have pockets of severe poverty and, like Washington, the Granite State levies no income tax.

To address the need for kid-level interventions, Laconia has increased funding for school-based mental-health treatment by nearly 20 percent in the last three years. This, in turn, has forced layoffs elsewhere in the district. But the possibility that better trauma care now could head off ballooning special-education costs in the future has won the community’s support, Harrington-Bacote said.

Much like O’Connor-Weaver and her staff at Hawthorne Elementary in Everett, educators in Laconia find themselves pressed into service as ad hoc social workers almost every day.

Sometimes that means helping illiterate parents fill out Medicaid forms, or welfare paperwork, or job applications — nothing that teachers were told to expect in their master’s programs.

“Families literally bring their problems to our door now to help them navigate their lives,” Harrington-Bacote said. “Public schools are doing things that fall way outside of regular academic education. But if they don’t, it’s not going to get addressed at all.”

HEADLINE	<b>06/23 Camp Pendleton to house 47K illegals?</b>
SOURCE	<a href="https://www.stripes.com/news/us/report-navy-memo-plans-for-camp-pendleton-to-house-up-to-47-000-migrants-in-temporary-detention-1.534406">https://www.stripes.com/news/us/report-navy-memo-plans-for-camp-pendleton-to-house-up-to-47-000-migrants-in-temporary-detention-1.534406</a>
GIST	<p>SAN DIEGO (Tribune News Service) — San Diego County could become a destination for tens of thousands of unauthorized immigrants to be housed indefinitely by the U.S. Government, under the zero-tolerance policy implemented by President Donald Trump.</p> <p>According to a report published Friday afternoon by Time magazine, military leaders are drawing up plans to create a tent city at Camp Pendleton to detain as many as 47,000 illegal immigrants from Central America and other locations over the coming months.</p> <p>The facility at Camp Pendleton would be one of multiple temporary detention centers designated to house immigrants making their way into the United States.</p> <p>According to an internal memo obtained by Time magazine, the U.S. Navy has been directed to establish “temporary and austere” encampments on military installations in Alabama, Arizona and California that each could host tens of thousands of detainees.</p> <p>The document, prepared by an assistant secretary for approval by Navy Secretary Richard Spencer, suggests construction could begin at one site within 60 days. The structures would be designed to last for six months to one year, Time magazine reported.</p> <p>The memo has not yet been approved by Spencer or Secretary of Defense James Mattis, the report said.</p> <p>The plans detailed in the internal document match the executive order Trump signed earlier this week in response to growing political pressure to halt the separation of parents and children crossing the southern border illegally.</p> <p>The order does not end the Trump administration zero-tolerance program that aims to prosecute all illegal border crossings. Rather, it calls for families to be housed together in detention facilities instead of separated while parents go through both the criminal court system for illegal entry and then immigration proceedings after that.</p> <p>The order says immigration courts should prioritize detained-family cases, but it will still likely take longer than the 20 days the government is currently allowed to hold children in detention, even if they are held with their families.</p> <p>Officials at Camp Pendleton said they know nothing about a temporary immigrant-housing project.</p> <p>“Camp Pendleton is unaware of any plan to house detainees on our base at this time,” Capt Luke Weaver said in a statement. “Contact DoD Office of the Secretary of Defense public affairs for information on this subject.”</p> <p>The Time magazine report quoted a U.S. Navy spokesman saying it would be inappropriate to discuss internal deliberative planning documents.</p> <p>The detainment plan estimates the Navy would spend more than \$230 million to build and run a single facility serving 25,000 people for a six-month term.</p> <p>According to a Government Accountability Office report published in April, the U.S. Immigration and Customs Enforcement office requested \$3.6 billion in 2018 funding to pay for immigrant housing — \$1 billion more than the amount of funds requested the prior year.</p>

	<p>The GAO report recommended several recommendations aimed at improving ICE’s cost estimates and making sure the budget documents are accurate.</p> <p>The ICE budget for 2019 proposes a nearly 33 percent increase in the average daily count for unauthorized immigrants, from about 38,000 in 2017 to more than 51,000 this year.</p> <p>Advocates who work with San Diego immigrant communities were stunned by the Time magazine report.</p> <p>According to the Time report, a similar tent city would be established at the former Naval Weapons Station Concord, east of San Francisco. It too would be constructed to hold as many as 47,000 people.</p> <p>Other facilities that are expected to house 25,000 immigrants would be established at abandoned airfields outside Mobile, Alabama. The memo also proposes studying the Marine Corps Air Station in Yuma, Arizona, as a possible site for an additional immigrant detention center.</p> <p>The arrival and housing of tens of thousands of immigrants at Camp Pendleton would not be a first for the military base that buffers between San Diego and the Greater Los Angeles area.</p> <p>In April 1975, after the fall of Saigon, the first of 50,000 or more refugees from Vietnam, Cambodia and Laos began arriving at Camp Pendleton for processing before they were resettled to other parts of Southern California and beyond.</p>

<b>HEADLINE</b>	<b>06/22 When asylum seekers reach border</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/nation-now/2018/06/22/migrants-seeking-asylum-border-nogales-immigration/727378002/">https://www.usatoday.com/story/news/nation-now/2018/06/22/migrants-seeking-asylum-border-nogales-immigration/727378002/</a>
<b>GIST</b>	<p>NOGALES, Sonora — Word of mouth gets migrants who arrive to this border city, by bus or freight train, to the DeConcini port of entry.</p> <p>"Look for Marla, she'll help you," Magali Nieto Romero told a recently arrived woman and her teenage son who wanted to make contact with U.S. immigration officials.</p> <p>Both women are among the 147 families that have arrived since May at Arizona’s busiest port of entry to seek asylum, according to local community groups.</p> <p>The people — mostly from Guatemala and southern Mexico — are being processed by U.S. immigration officials at a much slower pace than they are arriving, so families seeking asylum at official ports of entry have to wait for several days.</p> <p>More than a dozen asylum-seekers camp out daily next to the port's pedestrian lanes, where travelers with passports and border-crossing cards enter the United States.</p> <p>Blankets and thin foam mattresses, coolers with water bottles and juice, coloring books and crayons, and a black plastic bag filled with stuffed animals form the makeshift camp outside the mesh metal door where U.S. immigration officers call on people to be processed for asylum.</p> <p>That call might happen anytime. On Wednesday, only two men were allowed in. On Thursday, seven unaccompanied boys and two women with their children were called for processing.</p> <p>So far, the wait times stretch about two weeks, said Marla Conrad, the point person for the migrants. She's a coordinator in Mexico for the Kino Border Initiative, which operates shelters for migrants and recent deportees at the border.</p> <p>During the first few weeks after their arrival, close to 100 migrants, many of them children, packed the</p>

border crossing. Nowadays, Mexican immigration authorities only allow up to 10 families to be at the camp. The rest are split among four migrant shelters run by non-profit organizations in Nogales. Local groups and volunteers operate the camp in an attempt to avoid a crisis at the port of entry.

People traveling from Arizona have regularly stopped by the camp and the shelters with donations of toys, food and hygiene products. Others play with the children and talk to the families to help them pass time. Representatives from the Florence Immigrant and Refugee Rights Project also visit them and share guidance on what to expect of the asylum process and how their claims do or don't fit with U.S. asylum policy.

The waitlist

Conrad runs the waitlist for asylum seekers.

She talks to migrants when they arrive, writes their names down, assigns them a shelter and — most importantly — hands them a little handmade card with their assigned number in line.

Areli Aguilar's is 113.

Aguilar, 32, arrived in Nogales from Honduras with her son Esau, 17, the night of June 13. After getting off her bus, she waited under a bridge for about two hours, exhausted from the 12-day-long journey north. They went several days without eating and were robbed in Guatemala by police. Her intent was to arrive in Reynosa — a border city along the Rio Grande near McAllen, Texas — she wasn't sure where the buses she took in Mexico were going and ended up in the Arizona-Sonora border instead.

The single mother left Honduras terrified after two young men on motorcycles told her son he either had to join their criminal gang or they'd kill him. Sobbing in her home's bathroom, Aguilar called her mother, who said three of her cousins were killed by the same group.

"My mom told me, 'Take my savings and see if you can at least try,'" Aguilar said at a Nogales migrant shelter, crying as she recounted the events that pushed her out. "You don't play around with them. I know that if we were in Honduras, we would have the same luck as my mom's cousins."

The night she arrived, a Nogales man paid for her and her son's bus fare, told them where to get off and to go past a place that sold ice cream and shakes — the La Michoacana stand at the entrance of the DeConcini port.

She found the camp and a volunteer welcomed them, fed them and gave them water. The next morning, another volunteer took her and her son to Casa Belen, a provisional shelter run by Kino in an empty municipal building.

There's nothing official about this process, and migrants don't have to respect the waitlist system devised by the community groups. But they do. They wait their turn.

They help sweep and mop floor at the camp. They gather and take out their trash. They help cook the food at the shelters.

The wait ends when U.S. officials call asylum seekers for interviews. But that interview can last many hours, sometimes not concluding until the early morning hours, migrant advocates say.

Once in custody, U.S. Customs and Border Protection provides the families medical care, if needed, and have 72 hours to review and process their claim. The people can then either be deported, held in detention to fight their case or released to a friend or family member in the country.

At the DeConcini port, once families are being processed, the next families move from the shelters to the makeshift camp.

As of Thursday afternoon, there were 56 families, or about 104 people, on Conrad's waitlist.

Nogales migrant shelters strained

Nogales organizations that for years have been giving migrants food, shelter and medical attention are strained for resources because of the constant arrival of new migrants and growing wait times.

"We obviously are asking the U.S. government to process people quicker, lessen the amount of time they are at risk on the border."

Marla Conrad, coordinator in Mexico for the Kino Border Initiative

"Shelters aren't accustomed, either, for people to stay for that amount of time — it's usually three to seven days," Conrad said. "This is different for us."

She added the long waits also put asylum seekers at risk.

"The U.S.-Mexico border is an unsafe place but (it is) especially for migrants because of the organized crime groups that make a business off migrants," Conrad said.

Conrad added that the situation as it exists, is not sustainable.

The volunteers sleep there and are at the port of entry all hours of the day.

She wants municipal leaders to step in and for U.S. authorities to speed up the intake.

"We would need the help from the city government to make sure that this mechanism we've created to help people that are arriving continues," Conrad said. "We obviously are asking the U.S. government to process people quicker, lessen the amount of time they are at risk on the border, and asking the Mexican officials to continue to coordinate with local organizations so their wait time can be as easy as possible."

Magali Nieto Romero, 33, of Guerrero, Mexico, has been waiting for an asylum interview with U.S. immigration officials for nine days. Arizona Republic

Officials: 'Operational constraints' cause delay

U.S. Customs and Border Protection officials in Arizona have not explained why the times to process asylum requests in Nogales have increased over the past few weeks. When the first families began camping out, they limited their responses to saying that it was due to constraints on space and on resources as medical and translation services for migrant families.

"It's a matter of balancing that to make sure we're appropriately addressing all of the requirements that we have. We've talked about the vacancies that we do have and the need for more hiring."

John Wagner, CBP's deputy executive assistant commissioner for the Office of Field Operations

The situation in Nogales is not isolated. Migrants seeking asylum at border crossings along the U.S.-Mexico border have sometimes faced even longer waits. Some families at the Tijuana-San Diego crossing have reportedly been waiting up to three weeks to talk to an immigration officer, according to the USA TODAY Network.

John Wagner is CBP's second-in-command for the Office of Field Operations, the subagency responsible for staffing the ports of entry. He attributed the long lines to customs officers' varied mission along the border, which includes border security, as well as facilitating trade and commerce. He also cited hundreds of critical staff shortages at the ports.

"It's a matter of balancing that to make sure we're appropriately addressing all of the requirements that we have," he said. "We've talked about the vacancies that we do have and the need for more hiring."

Yet despite staffing shortages, CBP has routinely posted customs officers over the past few weeks at the

	<p>entrances to the ports of entry. In places such as Nogales, these officers control the flow of authorized, visa holders into the ports. In some cities along the Texas border, they are reportedly not allowing asylum seekers to even approach the crossings.</p> <p>Wagner declined to answer why some officers were apparently turning away asylum-seekers at the border. But he reiterated that it was a matter of resources, though when pressed, he refused to say whether the agency had requested additional resources to help expedited the process.</p> <p>"It's a matter of how many people we can process at a single time. Part of it is the facility constraints, part of it is operational constraints," he said. "So how do we do this in a humane and safe environment? ... So, it's just a matter of doing it in an orderly fashion."</p>

<b>HEADLINE</b>	<b>06/24 Calif. wildfire threatens homes</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/06/24/california-wildfire-burns-12-buildings-threatens-hundreds.html">http://www.foxnews.com/us/2018/06/24/california-wildfire-burns-12-buildings-threatens-hundreds.html</a>
<b>GIST</b>	<p>CLEARLAKE OAKS, Calif. – A wind-driven wildfire destroyed a dozen buildings and threatened hundreds of others Sunday as it raced across dry brush in rural Northern California.</p> <p>The Pawnee Fire, which broke out Saturday near the small community of Clearlake Oaks, was one of four wildfires burning in largely rural areas as wind and heat gripped a swath of California from San Jose to the Oregon border.</p> <p>The blaze destroyed 12 buildings and threatened an additional 600 as it burned out of control across about 2.5 square miles (6.5 square kilometers). It is north of the wine country region where devastating wildfires killed 44 people and destroyed thousands of homes and businesses last October.</p> <p>Authorities ordered people to evacuate all homes in the residential area of Spring Valley and surrounding areas. Evacuation centers for residents and animals were being opened. No injuries were reported.</p> <p>"What we're stressing is that people, when they get the evacuation order, they heed it immediately and get out and stay out until it is safe to return," California Department of Forestry and Fire Protection Battalion Chief Jonathan Cox said.</p> <p>"This is one of four large fires burning in Northern California. It's a good reminder that fire season is upon us," he said.</p> <p>Another blaze consumed 5.5 square miles in nearby Tehama County but did not burn any buildings. Some homes were threatened and some had been evacuated, Cox said, although he did not have specific numbers. It was partially contained.</p> <p>Another smaller fire, also in Tehama County, was nearly halfway contained after consuming less than a mile of brush. The fourth fire, in neighboring Shasta County, smaller still, was three-fourths contained.</p> <p>The Pawnee Fire was being driven by erratic winds, low humidity and high temperatures. Firefighters</p>

	<p>battled it in a rugged area that made it difficult to get engines and other equipment up close.</p> <p>"It's kind of the worst possible combination," Cox said.</p> <p>Fire officials had no estimate on when it might be contained and didn't yet know what caused it.</p>

<b>HEADLINE</b>	<b>06/23 NATO focuses on 'speed' over Russia</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/world/nato-focuses-speed-baltics-amid-worries-over-russia-n885261">https://www.nbcnews.com/news/world/nato-focuses-speed-baltics-amid-worries-over-russia-n885261</a>
<b>GIST</b>	<p>RUKLA, Lithuania — The U.S. military and its NATO allies have sliced the number of days needed to deploy armored vehicles to a former Cold War foe almost in half in just a year amid concern about potential Russian aggression in Europe.</p> <p>NATO countries are still seeking more support in the wake of Russia's 2014 military intervention and annexation of Crimea from Ukraine. Poland, the former Warsaw Pact member that joined NATO in 1999, reportedly offered the U.S. around \$2 billion recently to establish a permanent military base in the country.</p> <p>Saber Strike, a U.S.-led military exercise featuring about 18,000 soldiers, is conducted annually in Poland and the Baltics. The war games, which finished last week, has become a major part of NATO's deterrence measures against Russia and offers a chance for troops to focus on speed.</p> <p>Capt. William Rand of the U.S. Army's 2nd Cavalry Regiment said his unit had substantially boosted its pace of deployment during this year's drills. The road march of armored personnel carriers from Germany to Poland took about five days, compared to nine in 2017.</p> <p>"There's a dramatic increase," he said. "Speed is always important. The faster you can bring combat power and mass it anywhere in the world enables you to be more successful, to start off on the right foot."</p> <p>As part of Saber Strike, the 2nd Cavalry Regiment's mission was to help secure an abandoned airfield at the Panevsžys military base in central Lithuania.</p> <p>Memories of the occupation during Soviet times are still fresh in Lithuania, Estonia and Latvia.</p> <p>In March, Russian President Vladimir Putin denied that a new Cold War was underway but said "listen to us now" when he unveiled new weapons — including nuclear missile technology.</p> <p>The Trump administration's 2017 National Security Strategy said "Russia's invasions of Georgia and Ukraine ... demonstrated its willingness to violate the sovereignty of states in the region."</p> <p>It added, "Russia continues to intimidate its neighbors with threatening behavior, such as nuclear posturing and the forward deployment of offensive capabilities."</p> <p>Maj. Gen. Vitalijus Vaikšnoras, chief of the Joint Staff of the Lithuanian armed forces, told NBC News that increased cooperation had improved the reaction time of NATO allies in recent years.</p> <p>Asked if other actors in the region should take notice, Vaikšnoras replied, "I hope so."</p> <p>Vaikšnoras watched German and British amphibious vehicles ferry heavy American armored Stryker vehicles across the Neman River.</p> <p>"It's a very strong message that not only Lithuania and Lithuanian armed forces, but as well as our allies are going, if necessary, to come here and defend Lithuania, the Baltic region and the eastern frontier of NATO against any aggressor," he added.</p>

But experts say speedier deployments by the alliance might not be enough in case of a conflict along NATO's eastern front. Military analysts believe Russia's military would likely still have an advantage.

Gustav Gressel, a senior policy fellow with the European Council on Foreign Relations, said Russia has concentrated on speed and built a smaller but more mobile army than during the Soviet era.

"If you simulate conflicts in the Baltic Sea region, you can see a time gap in the near and medium area of about a week," he said. "You have to expect that you will be caught off guard."

Gressel said an additional division, about 10,000 to 15,000 troops, would need to be based in the region to close the one-week advantage Russian troops would have in the event of a large-scale conflict

Following NATO's 2016 summit, the alliance stationed about 1,000 soldiers each in Estonia, Latvia, Lithuania and Poland.

"Things have improved certainly. NATO has taken important steps with the enhanced forward presence initiative," said David Shlapak, a senior defense researcher at the RAND corporation. "There remains an open question whether the forces present in the region would be adequate if deterrence fails and a conflict would occur."

For now, NATO has been focusing on the rapid reinforcement of troops.

During Saber Strike, a U.S. Air Force C-17 transport plane delivered Kentucky National Guard heavy artillery from Poland to a military airfield in Rukla, Lithuania. The site has rarely been used by large aircraft since the Soviets abandoned it and pulled out of Lithuania after the end of the Cold War.

Later that day, three U.S. Army Chinooks delivered howitzer artillery guns and soldiers to operate them to nearby agricultural fields.

"Mobility inside Europe is important to us," Brig. Gen. Richard Coffman of the U.S. Army's 1st Infantry Division said. "We plan accordingly so that we can be ready for any crisis that is presented to us."

<b>HEADLINE</b>	<b>06/23 Police at Pride? Some LGBTQ say no</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/feature/nbc-out/police-pride-gay-cops-lgbtq-activists-struggle-see-eye-eye-n886031">https://www.nbcnews.com/feature/nbc-out/police-pride-gay-cops-lgbtq-activists-struggle-see-eye-eye-n886031</a>
<b>GIST</b>	<p>Just before members of the Gay Officers Action League (GOAL) marched past the Stonewall Inn, the finish line of last year's New York City Pride March, a small group of activists slipped past the barriers and chained their hands together to prevent the officers from passing, a protest technique called a "lockdown."</p> <p>Dozens of cops working security at the march surrounded the protesters, and, over shouts of "f--k the police" and "racist, sexist, anti-gay, NYPD, KKK," began to break through what appeared to be chains and rubber tubes the protesters had used to lock themselves together. Twelve protesters affiliated with the group No Justice No Pride were arrested, and after a brief delay, the march continued.</p> <p>The irony of the incident was not lost on many in the crowd — cops arresting gay people in front of the Stonewall Inn, the very place where homophobic police brutality sparked the modern LGBTQ rights movement nearly five decades years prior. In fact, New York City's first gay pride march, which was held on June 28, 1970, was organized to commemorate the one-year anniversary of what has become known as the Stonewall Riots — when in 1969 patrons of the now-iconic gay bar finally had enough after yet another police raid.</p> <p>"We have to come out into the open and stop being ashamed, or else people will go on treating us as</p>

freaks. This march,” activist Michael Brown told The New York Times on that day in 1970, “is an affirmation and declaration of our new pride.”

Last year’s clash between the NYPD and anti-police protesters was not an isolated incident. Protesters in several cities across the U.S. and Canada have, over the past two years, tried to prevent, disrupt or minimize the presence of police officers in pride marches — even though the officers impacted are typically members of LGBTQ police groups, like GOAL. Nonetheless, protesters say they’re doing so to take a stand against police brutality and harassment of marginalized groups, namely people of color and the transgender community.

#### EARLY DAYS OF GOAL

The relationship between the police and the lesbian, gay, bisexual, transgender and queer community has long been fraught, but for LGBTQ cops, the right to march in pride is a hard-fought civil rights victory.

In the decade after that first pride march on June 28, 1970, New York’s gay rights movement made so much progress that by 1981 the police force itself was facing LGBTQ activism from within. Gay cops in New York City, for example, led by Officer Charles Cochrane, sought to form their own employee resource group, like the ones that existed for Hispanic, Irish-American and African-American cops.

Edgar Rodriguez, now a retired NYPD sergeant, was still in the New York City Police Academy when Officer Cochrane entered his classroom in 1982.

“We all stood to attention, [the instructor] introduced him in full uniform, and said he had an announcement about a fraternal organization he was starting,” Rodriguez remembered.

Cochrane told the rookies his new group was called the Gay Officers Action League, or GOAL. A few months earlier, Cochrane had become the first NYPD officer to publicly come out when he announced that he was gay at a city council meeting in November 1981.

“Is anybody here interested in joining?” Cochrane asked the class.

“When he said this the room fell silent,” Rodriguez recalled, “and I could hear a faint snicker in the back of the room.”

Rodriguez also said he could hear his “heart thumping in [his] chest.”

“I was deeply closeted, and I thought, ‘This has got to be a setup to see who’s closeted and fire them,’” he recalled. “I never raised my hand.”

Later that day, a woman from Rodriguez’s Police Academy class asked him which room the gay officers’ group was meeting in. “Why do you ask?” Rodriguez responded. “Well, I’m a lesbian,” she replied. Rodriguez said he thought to himself, “What’s a lesbian?”

Rodriguez, who kept his sexuality to himself in his early days as a cop, recalled overhearing on several occasions racist, sexist and homophobic comments from his largely straight, white and male colleagues back then.

When he was posted to New York City’s 6th Precinct, which covers Greenwich Village, he recalled a senior officer asking him, “So you work with all the fags?” Rodriguez corrected him, responding, “You mean lesbians and gays?” Rodriguez said the officer apologized and told him their interaction had been a learning moment. “He kept nudging me in the arm and said, ‘You know kid, you really taught me something.’”

Trying to make change from within was a slow process for Rodriguez, who said homophobia was rampant in the NYPD in the ‘80s. He recalled a particularly daunting incident when a fellow officer who had been patrolling Macombs Dam Park, where the new Yankee Stadium now stands, encountered a well-known

gay cruising area. Later that day in the locker room, Rodriguez overheard him say, “F-----g faggots. If I ever find out that one of us is the f-----g fggot, I’m going to blow his head off ‘by accident.’”

“I remember feeling the fear shoot through my body, and I thought, ‘I’m never going to come out,’” Rodriguez said.

But eventually, he did come out. Rodriguez recalled marching in his first NYC Pride March with GOAL in the late ‘80s. He was still closeted to most of his fellow officers, but when he was off duty, he lived openly in the gay neighborhoods of New York City.

“We didn’t have uniforms,” Rodriguez said of that first march. “I was terrified. I was closeted.” He said he put on a hat and sunglasses and held a banner in front of his face as he began to march.

As the march proceeded, however, Rodriguez said something changed.

“A crowd of spectators let out a roar of acceptance that just charged through my body, and it was one of the most incredible experiences I’ve ever had in my life,” he said. “The energy that came from that crowd of love and support — I threw off my glasses and my hat and marched proudly.”

Then in 1996, 14 years after Rodriguez declined to raise his hand when Officer Cochrane spoke in front of his Police Academy class, Rodriguez became the president of GOAL.

But even in the mid-’90s, Rodriguez said the NYPD had a long way to go in terms of LGBTQ acceptance. That’s why in 1996, the year he took the helm at GOAL, the group sued the NYPD for discrimination. As part of the suit, GOAL wanted to march in the annual NYC Pride March in uniform and with the official police marching band — a request that had been rejected in previous years. By June of that year, GOAL had won concessions from the NYPD and was permitted to march in uniform, to use the marching band and to host an event at NYPD headquarters. The lawsuit worked.

Rodriguez said even though GOAL had been participating in the NYC Pride March for years before the lawsuit, it was different afterwards.

“The roar from the community was 10 times louder than it was when I first marched outside of uniform,” Rodriguez said.

#### COPS VS. PROTESTERS

From Washington, D.C., to Sacramento, a number of progressive LGBTQ activists, some of them too young to remember the gay police activism of the ‘80s and ‘90s, view cops to be an unwelcome — and even threatening — presence at pride events.

In addition to getting cops out of pride, many of these different activist groups also have an array of social justice demands. Last year at Capital Pride in Washington, D.C., a group called No Justice No Pride (NJNP) blocked the pride parade and forced it to reroute. The group says it exists “to end the LGBT movement’s complicity with systems of oppression that further marginalize queer and trans individuals.”

Part of those systems of oppression are the police, according to Ale Jacinta, a member of No Justice No Pride. She said the point of the organization is to transform Capital Pride from a day when a majority of the community gets sloshed and watches a parade to a day of building community power.”

In 2017, No Justice No Pride delivered a list of demands to Capital Pride’s organizing committee. They demanded transgender people and members of local Native American tribes be named to paid positions on Capital Pride’s planning committee. The group also demanded that the event “stop celebrating the police,” prevent the Metropolitan Police Department from participating in the march and ban all law enforcement agencies from recruiting at the event.

“At the end of the day, NJNP doesn’t want a formal cop presence in the parade,” Jacinta said. “We look at

our history and our present reality and see there is very little accountability for the extrajudicial murder of civilians, especially brown and black folks.”

But Capital Pride held fast, and a diverse group from the Metropolitan Police Department marched in both the 2017 and 2018 parades — guns holstered and in uniform. Unlike in 2017, No Justice No Pride did not block the 2018 Capital Pride march, held earlier this month. Jacinta said the group decided this year to focus on “taking back D.C.’s historically trans sex worker stroll” to protest harassment they and other trans activists say they face from the Metropolitan Police Department.

Other activist groups have had better success in preventing or minimizing the presence of police officers in pride events. In Sacramento, police did not march in this year’s pride event on June 10 due to the community outrage that followed the murder of Stephon Clark, an unarmed black man shot by two cops in March.

In Minneapolis, the city’s police chief told his officers if they want to march in the Twin Cities Pride event on Sunday, they would have to do so out of uniform and unarmed. Like Sacramento, community tensions have been simmering in Minneapolis following a high-profile police shooting.

Last year’s anti-police protest at the NYC Pride March was organized by a number of community groups operating under the No Justice No Pride umbrella. In a Facebook post following the protest, the New York group Hoods4Justice explained why it joined the protest effort.

“We stand against any police presence in Pride, since police have never stood with us. The police serve as the state’s puppets to terrorize Black, Brown, and working class communities. The notion that police serve all people is a myth,” the post stated. “Trans women who survive hate attacks are 6 times more likely to experience violence when dealing with police than cis-gender folks.”

Jay Walker, an organizer with the Reclaim Pride Coalition, a group involved with the No Justice No Pride movement, said the NYPD and Heritage of Pride, the LGBTQ group that organizes the annual NYC Pride March, have made a few concessions this year. The NYPD has agreed not to arrest pride participants for failing to wear required Pride March wristbands, and Heritage of Pride agreed to provide space toward the front of the march for LGBTQ activist groups, like ACT UP! New York and Gays Against Guns.

However, this year members of the Gay Officers Action League will march, as they have every year since 1996, in uniform with their guns holstered.

#### MOVING FORWARD

Rodriguez said while he knows where the protesters are coming from, he disagrees with their tactics.

“I understand the people of color and the other people who have been abused by officers that are representing the NYPD,” he said. “I know police brutality existed, I know it exists; I observed it when I was a rookie officer, and I saw it happen ... but doing this is counterproductive.”

“They have to remember that it is us, the people of color, marching in uniform, and us, the LGBT people marching out in uniform. We are the people who were on the ground,” he added.

Rodriguez said when he was policing the 6th Precinct, which covers much of Manhattan’s gay neighborhoods, he once saw a transgender woman with blood streaming down her cheek running away from a group of men. He asked her if she was OK, and she just said, “I’m fine.”

“She was too afraid to let me help her, and the pricks who attacked her got away,” he recalled. “She was too afraid to embrace my willingness to protect her.”

NYPD Detective Brian Downey, the current president of the Gay Officers Action League, said imagery of uniformed LGBTQ cops marching proudly “is powerful,” and he hopes it will prevent people in the community, like the trans woman Rodriguez described, from being afraid of cops.

	<p>“I think that imagery needs to be displayed, because people to this day, I don’t know for what reason, people still don’t know we exist. People still don’t know we are a resource for people, and I think it is important that people know that,” he said.</p>

<b>HEADLINE</b>	<b>06/23 BNSF: derailment spills 230K gal. oil</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/iowa-derailment-oil-spill-amount-mystery-5611111?cid=clicksource_76_4_article%20roll_articleroll_hed">https://abcnews.go.com/International/wireStory/iowa-derailment-oil-spill-amount-mystery-5611111?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>An estimated 230,000 gallons (870,619 liters) of crude oil spilled into floodwaters in the northwestern corner of Iowa following a train derailment, a railroad official said Saturday.</p> <p>BNSF spokesman Andy Williams said 14 of 32 oil tanker cars just south of Doon in Lyon County leaked oil into surrounding floodwaters from the swollen Little Rock River. Williams had earlier said 33 oil cars had derailed.</p> <p>Nearly half the spill — an estimated 100,000 gallons (378,530 liters) — had been contained with booms near the derailment site and an additional boom placed approximately 5 miles (8.05 kilometers) downstream, Williams said. Skimmers and vacuum trucks were being used to remove the oil. Crews will then use equipment to separate the oil from the water.</p> <p>Officials still hadn't determined the cause of Friday morning's derailment, but a disaster proclamation issued by Gov. Kim Reynolds for Lyon and three other counties placed the blame on rain-fueled flooding. Reynolds visited the derailment site Saturday afternoon as part of a tour of areas hit by recent flooding.</p> <p>Some officials have speculated that floodwaters eroded soil beneath the train track. The nearby Little Rock River rose rapidly after heavy rain Wednesday and Thursday.</p> <p>The train was carrying tar sands oil from Alberta, Canada, to Stroud, Oklahoma, for ConocoPhillips. ConocoPhillips spokesman Daren Beaudou said each tanker can hold more than 25,000 gallons (20,817 imperial gallons) of oil.</p> <p>Beaudou said Saturday that the derailed oil cars were a model known as DOT117Rs, indicating they were newer or had been retrofitted to be safer and help prevent leaks in the event of an accident.</p> <p>The derailment also caused concern downstream, including as far south as Omaha, Nebraska, about 150 miles (240 kilometers) from the derailment site. The spill reached the Rock River, which joins the Big Sioux River before merging into the Missouri River at Sioux City.</p> <p>Omaha's public water utility — Metropolitan Utilities District — said it was monitoring pumps it uses to pull drinking water from the Missouri River.</p>

<b>HEADLINE</b>	<b>06/24 Activists vow Arctic drilling protests</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/government-plans-arctic-refuge-drilling-activists-vow-continue/story?id=56094589&amp;cid=clicksource_81_4_article%20roll_articleroll_hed">https://abcnews.go.com/US/government-plans-arctic-refuge-drilling-activists-vow-continue/story?id=56094589&amp;cid=clicksource_81_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>A sweaty volunteer took off the fake fur head of her full-body, polar bear outfit as a friend and fellow protester handed her a drink of water.</p> <p>It was 80 degrees and terribly humid in the nation’s capital last week as a few hundred activists stood and chanted outside a public comment hearing to oppose a new law directing oil exploration in the northern tip of Alaskan wilderness.</p>

The Bureau of Land Management (BLM) hearing in Washington, D.C., was the last of a series of meetings the bureau held throughout the spring giving people an opportunity to express thoughts and concerns about the government’s plans to lease part of the Arctic National Wildlife Refuge (ANWR) to oil and gas developers.

With the 60-day public comment period now closed, the bureau will move forward with the rest of its required environmental impact study, which it hopes to have done by the end of the year.

Typically these studies take two to three years at minimum. The fast-pace is a clear sign the government is quickly ticking through its processes in order to fast-track lease sales down the road.

The BLM got serious blowback from environmental activists, Native American leaders and concerned citizens for only holding limited public comments hearing, exclusively in Alaska and Washington, D.C., though proponents of the drilling and the bureau say the process has been robust and there will be more time for public feedback later.

Representatives from groups like Defenders of the Wilderness and the Center for Biological Diversity held signs at the protest last week in the shape of all 50 states. Each sign had a number, most totaling in the thousands, representing the written comments sent into the bureau opposing the drilling plans from each state.

“This is actually not so much of a democratic process as it is, in their mind, an eventuality of development circumventing our human rights,” Dana Tizya-Tramm of the Vuntut- Gwich’in first nation told ABC News in Washington.

The notice from the BLM for the public comment period, also known as the public “scoping” period, said explicitly that when the period wrapped the bureau could move forward with plans to lease at least two 400,000-acre plots in the ANWR’s coveted Coastal Plain, as dictated by the tax law passed by Republicans last year.

Still, members of the Gwich’in tribe in northern Alaska and their partners vow to keep fighting.

“We are the first nations of this area. We have been living and subsisting off of this land and the animals for thousands and thousands of years. This area is sacred to us. It’s not right to sell it out to oil and gas companies for greed,” Bernadette Demientieff, executive director of the Gwich’in Steering Committee, told ABC News outside the BLM hearing in Washington.

The Gwich’in refer to themselves as the caribou people. For thousands of years their survival in the outer stretches of Alaska and the Arctic has been linked to the porcupine caribou herds that traverse, and specifically nurse their young, in the exact location on the water now slated for oil development.

The 1.5 million-acre segment of the larger refuge, which has been designated for oil leasing, lies along the coast. The caribou come there to escape inland mosquitoes and enjoy nutritious ground. Many experts say the caribous will avoid man-made construction, leaving the herds’ and Gwich’in fate unknown should the leasing and development go into effect.

<b>HEADLINE</b>	<b>06/22 Least prepared entering retirement age</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/a-generation-of-americans-is-entering-old-age-the-least-prepared-in-decades-1529676033?mod=trending_now_5">https://www.wsj.com/articles/a-generation-of-americans-is-entering-old-age-the-least-prepared-in-decades-1529676033?mod=trending_now_5</a>
<b>GIST</b>	Americans are reaching retirement age in worse financial shape than the prior generation, for the first time since Harry Truman was president.

This cohort should be on the cusp of their golden years. Instead, their median incomes including Social Security and retirement-fund receipts haven't risen in years, after having increased steadily from the 1950s.

They have high average debt, are often paying off children's educations and are dipping into savings to care for aging parents. Their paltry 401(k) retirement funds will bring in a median income of under \$8,000 a year for a household of two.

#### Change of Plans

The decline of pensions and increase in 401(k) and similar plans is one reason many seniors aren't as ready for retirement as the previous generation.

In total, more than 40% of households headed by people aged 55 through 70 lack sufficient resources to maintain their living standard in retirement, a Wall Street Journal analysis concluded. That is around 15 million American households.

Things are likely to get worse for a broader swath of America. New census data released this week shows the surge of aging boomers is leaving the country with fewer young workers to support the elderly.

Individuals will find themselves staying on the job past 70 or taking menial jobs as senior citizens. They'll have to rely more on children for funding, pressuring younger generations, too.

Companies, while benefiting from older workers' experience, also have to grapple with employees who delay retirement, which means they'll be footing the costs of a less healthy workforce and retraining older workers.

And for the nation, the retirement shortfall portends a drain on public resources, especially if seniors reduce taxable spending and officials decide to cover additional public-assistance costs for older Americans who can't make ends meet.

"This generation was left on their own," said Alicia Munnell, director of the Boston College Center for Retirement Research. The Journal's conclusion about living standards in retirement was based on estimates provided by Ms. Munnell's center and data from the U.S. Census.

As with many baby boomers, 56-year-old Kreg Wittmayer once thought he was doing things right for a solid retirement. In his 20s, he began saving in his 401(k). He cashed it out after a divorce at age 34. He built up the fund again, then cashed out five years later after losing his job, he says. "It was just too easy to get at."

Mr. Wittmayer, of Des Moines, Iowa, says he now has a little over \$100,000 saved for retirement. He owes \$92,000 in parent loans for his daughters' college costs, he says. He doesn't know when, or whether, he will be able to retire, in direct contrast to his parents, a former firefighter and a former teacher who collect guaranteed pensions. "They never had to worry about saving for their retirement."

This prospect is upending decades of progress in financial security among the aging. In the postwar era, for a while, fixed government and company pensions gave millions a guaranteed income on top of Social Security. An improving economy led to increased wages. Many Americans retired in better shape than their parents.

No more. Baby boomers were the first generation of Americans who were encouraged to manage their own retirement savings with 401(k)s and similar vehicles. Many made investing mistakes, didn't sock enough away or waited too long to start.

Consider:

- Median personal income of Americans 55 through 69 leveled off after 2000—for the first time since data

became available in 1950—according to an analysis of census data done for the Journal by the Urban Institute, a nonprofit research organization that has published research advocating for more government funding for long-term care. Median income for people 25 through 54 is below its 2000 peak, but has edged up in recent years, and younger workers have more time to adjust retirement-savings strategies.

- Households with 401(k) investments and at least one worker aged 55 through 64 had a median \$135,000 in tax-advantaged retirement accounts as of 2016, according to the latest calculations from Boston College’s center. For a couple aged 62 and 65 who retire today, that would produce about \$600 a month in annuity income for life, the center says.

- The percentage of families with any debt headed by people 55 or older has risen steadily for more than two decades, to 68% in 2016 from 54% in 1992, according to the Employee Benefit Research Institute, a nonpartisan public-policy research nonprofit.

- Americans aged 60 through 69 had about \$2 trillion in debt in 2017, an 11% increase per capita from 2004, according to New York Federal Reserve data adjusted for inflation. They had \$168 billion in outstanding car loans in 2017, 25% more per capita than in 2004. They had more than six times as much student-loan debt in 2017 than they did in 2004, Fed data show.

#### Shortfall generation

A combination of economic and demographic forces have left older Americans with bigger bills and less money to pay them.

Tempted by a prolonged era of low interest rates, boomers piled on debt to cope with rising home, health-care and college costs. Interest-rate declines hurt their security blankets. Lower earnings on bonds prompted many insurance firms to increase premiums for the universal-life and long-term-care insurance many Americans bought to help pay expenses. Some public-sector workers are living with uncertainty as cash-strapped governments consider pension cuts.

Gains in life expectancy, combined with the soaring price of education, have left people in their 50s and 60s supporting adult children and older relatives. Some are likely to have to rely on professional caregivers, who are in short supply and are more expensive than informal arrangements of the past.

Then there are health-care costs. Since 1999, average worker contributions toward individual health-insurance premiums have risen 281%, to \$1,213, during a period of 47% inflation, according to the nonprofit Kaiser Family Foundation. Nearly half of 1,518 workers surveyed last June by the Employee Benefit Research Institute said their health-care costs increased over the prior year, causing more than a quarter to cut back on retirement savings, and nearly half to reduce other savings.

Only a quarter of large firms offer retiree medical insurance, which typically covers retirees before they become eligible for Medicare, down from 40% in 1999, according to Kaiser. More money is coming out of people’s Social Security checks to pay for Medicare premiums and costs that the federal program doesn’t cover, Kaiser says. Medical spending accounted for 41% of the average \$1,115 monthly Social Security benefit in 2013, and the percentage has likely risen since, it says.

#### Pension retreat

For many Americans facing a less secure retirement than their parents, the biggest reason is the shift from pensions to 401(k)-type plans.

A piano and organ maker in the 1880s launched one of the first employer-sponsored pension plans, and railroads, state and local governments, and others followed, according to the Social Security Administration. By the 1930s, about 15% of the labor force had employer pensions.

In 1935, federal officials created Social Security to offer a basic income. Pensions gained steam after World War II, and by the 1980s, 46% of private-sector workers were in a pension plan, according to the Employee Benefit Research Institute.

	<p>A seemingly small congressional action in 1978 set the stage for a pension retreat. Some companies had sought tax-deferred treatment of executives' bonuses and stock options to supplement their pension payouts, and Congress authorized the move. The tax-law change ushered in the 401(k), allowing employees to reduce their taxable income by placing pretax dollars in an account.</p> <p>In the 1980s, union strength was ebbing and a recession pressured employers to reduce pension funding, says Teresa Ghilarducci, an economics professor at the New School. Many employers deployed the 401(k) to displace pensions.</p> <p>Market declines in 2000 and 2008 revealed the perils of do-it-yourself retirements, as many 401(k) participants cut back on contributions, shifted funds out of stocks and never put them back in, or withdrew money to pay bills.</p>

<b>HEADLINE</b>	<b>06/23 Thousands cross border seeking asylum</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/thousands-cross-the-u-s-border-seeking-asylum-most-wont-get-it-1529755200">https://www.wsj.com/articles/thousands-cross-the-u-s-border-seeking-asylum-most-wont-get-it-1529755200</a>
<b>GIST</b>	<p>EL PASO, Texas—When 42-year-old Angelica walked up to a U.S. Customs and Border Protection inspection booth here Wednesday, she started what is likely to be a lengthy, long shot bid to win refuge in the U.S.</p> <p>Angelica and her 3-year-old granddaughter, Ruth Sofia, said they fled their home in Michoacán, along Mexico's Pacific coast, more than a month ago amid increasing violence and threats to their safety.</p> <p>As they waited before making their requests, Ruth, clad in a "Disney Princess" T-shirt, sat quietly on her grandmother's purse. Angelica said that, if they are allowed into the U.S., they plan to reunite with her adult daughter in Modesto, Calif.</p> <p>On Saturday, days after Angelica had asked for asylum, U.S. Rep. Beto O'Rourke (D., Texas) said he met with her at Annunciation House, a migrant shelter and aid group in El Paso. Mr. O'Rourke said Angelica and her granddaughter had been separated by immigration authorities.</p> <p>Their requests for asylum had come shortly before President Donald Trump signed on Wednesday an executive order directing that immigrant families taken into custody at the border be kept together.</p> <p>Angelica and Ruth had been among the thousands of people arriving monthly at legal U.S. border crossings and asking for the U.S. government to protect them. Tens of thousands more people, mostly from Central America, have been arrested trying to cross the border with Mexico illegally. Most of the illegal border crossers, including parents and their children and child immigrants traveling alone, are also seeking asylum.</p> <p>Most won't win, according to U.S. government data on asylum cases. About 6,300 asylum requests were approved between January and March 31, according to the Executive Office for Immigration Review, the Justice Department office that manages the immigration court system where most asylum cases are ultimately decided.</p> <p>During the same period, about 90,000 people were arrested crossing the border illegally and about 32,700 immigrants went to ports of entry. Many of those people have likely asked for asylum.</p> <p>According to EOIR, about 22% of the asylum cases decided this year were approved, while 41% were denied. Other cases were closed without a ruling in favor or against.</p> <p>The approval rate in the court has fluctuated since 2009, the agency's data shows. During that time,</p>

approvals rates hit a high of nearly 33% in 2011 but dropped below 17% in 2016.

Asylum seekers have been in the spotlight after the Trump administration vowed to tighten the rules around asylum and pushed Congress to overhaul immigration laws. Administration officials have referred to asylum and other laws and regulations that govern these cases as loopholes. There are also more than 700,000 cases pending in immigration court, which means cases can take years to be completed.

“Asylum and credible fear claims have skyrocketed across the board in recent years largely because individuals know they can exploit a broken system to enter the U.S., avoid removal, and remain in the country,” said Michael Bars, a spokesman for U.S. Citizenship and Immigration Services.

Mr. Sessions earlier this month ruled in one asylum case that domestic violence victims and people fleeing generalized violence, including from gangs, won’t necessarily qualify for asylum going forward.

Mr. Bars said his agency “is carefully reviewing proposed changes” with an eye toward protecting the system’s integrity, adding that Mr. Sessions’ decision will be implemented as soon as possible.

Jeremy McKinney, a Greensboro, N.C., immigration attorney, said that ruling may not have an immediate impact on the hundreds of thousands of pending asylum cases in immigration courts.

“The attorney general did not change the test for asylum,” said Mr. McKinney, a member of the executive committee of the American Immigration Lawyers Association. “Actual case law has not changed.”

The U.S. has long recognized the international right of foreigners to apply for asylum, though there is no guarantee that anyone who asks for refuge will be approved. Last year, tens of thousands of immigrants sought asylum in the U.S.

On Saturday, Mr. O’Rourke, who had been touring the Tornillo, Texas, tent shelter that houses as many as 300 child migrants, said Angelica told him she wasn’t told why Ruth was taken from her or why she was released from immigration custody.

<b>HEADLINE</b>	<b>06/24 EU discord over migrant crisis deepens</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/discord-over-migrant-crisis-deepens-ahead-of-eu-meeting-1529833013">https://www.wsj.com/articles/discord-over-migrant-crisis-deepens-ahead-of-eu-meeting-1529833013</a>
<b>GIST</b>	<p>BRUSSELS—Half of European Union’s leaders meet in Brussels on Sunday to seek a common solution to the bloc’s politically toxic migration issue, a long-unresolved conundrum now threatening to topple the EU’s most powerful leader, Germany’s Angela Merkel.</p> <p>Discord over how to process and find homes for migrants reaching the bloc is once again causing deep strains between EU capitals, three years after a million people, mostly fleeing the war in Syria, came to Europe, partly encouraged by Ms. Merkel’s open-door policy.</p> <p>Now under pressure at home, Ms. Merkel is seeking European backing for turning some migrants away. But that pits Germany against Italy’s new nationalist, anti-immigration government and is renewing tension with some Eastern European countries who refuse to take in refugees.</p> <p>Ahead of Sunday’s emergency summit, EU leaders were once again locked in a war of words, with French and Italian leaders clashing over whether to turn migrants away from Europe’s shores and process refugees with legitimate claims of entry in Africa.</p> <p>Italy’s prime minister threatened to cancel his participation until a draft statement of the meeting, in his view favoring Germany, was withdrawn. The leaders of Hungary, the Czech Republic, Poland and Slovakia declared they won’t come to Sunday’s meeting, saying the EU proposals were “unacceptable.”</p>

Sunday's meeting is meant to prepare decisions among all 28 EU leaders on migration next week at the bloc's regular quarterly summit. Expectations are low that after three years of failed efforts to reform the bloc's migration laws, leaders can provide more than a quick fix, at best, to their differences.

Sunday's meeting, which will include 16 out of EU's 28 leaders, was called by Jean-Claude Juncker, the president of the European Commission. The bloc's executive branch in charge of drafting policies and funding the bloc's border and asylum agencies.

Mr. Juncker was in Berlin earlier this week and offered to host the meeting in an attempt to help Ms. Merkel after she narrowly avoided the collapse of her government. The German chancellor had rejected a plan by her coalition partner to start returning migrants at the German-Austrian border and was given a two-week deadline to find a European solution.

Austria, sandwiched between Germany and Italy, said such a unilateral move would force it to start sending asylum seekers back to Italy.

Officials involved in discussions ahead of the Sunday meeting hoped to convince Italy to take back migrants from Austria and Germany, replicating an existing arrangement it has with France, which routinely turns back migrants to Italy. Ms. Merkel said Friday she hoped to see "if we can reach bilateral, trilateral or even multinational agreements to better solve certain problems."

The European Commission, in an attempt to alleviate Italian concerns about a steady flow of boats from Libya, said it was considering so-called "disembarkation platforms" in North African countries, meaning creating safe areas where migrants rescued at sea could be sent back to. Most migrants who arrived in Europe last year and in the first half of this year crossed the Mediterranean from Libya or were rescued at sea and brought to Italy.

The newly-appointed Italian government in recent weeks refused to grant access to its ports to two ships which had rescued hundreds of migrants at sea. The first ship was eventually accepted by Spain, while the destination of the second one is still being negotiated.

The U.N.'s International Organization for Migration criticized the idea and said they would only cooperate with the commission on setting up migrant camps on EU soil.

"You have an obligation not to send people back until they land somewhere," said Eugenio Ambrosi, director of IOM's regional EU office.

French President Emmanuel Macron also said Saturday Europe should not outsource its asylum process to north Africa, but rather set up closed migrant centers on EU soil with enough experts to quickly assess who has the right to stay.

Italy's Deputy Prime Minister Matteo Salvini, the leader of the anti-immigrant League party, responded that "if French arrogance thinks it can transform Italy into Europe's refugee camp, maybe handing out a few euros as a tip, then they've got it totally wrong."

<b>HEADLINE</b>	<b>06/24 Tension: Seattle handling homeless crisis</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/homeless/string-of-assaults-fuels-criticism-of-seattles-handling-of-homelessness-crisis/">https://www.seattletimes.com/seattle-news/homeless/string-of-assaults-fuels-criticism-of-seattles-handling-of-homelessness-crisis/</a>
<b>GIST</b>	Tensions over Seattle's handling of the homelessness crisis were roiled again last week, as authorities on Wednesday charged a 26-year-old homeless man in connection with an alleged attack near the Cinerama movie theater downtown.  David Ailep Jr., who told authorities he's homeless, now faces three counts of felony assault and theft

after he allegedly accosted a woman passing him on the street, then struck her father in the head when he attempted to intervene.

The incident near the theater is the third high-profile incident involving a homeless suspect to capture the city's attention, further inflaming criticism of City Hall's approach to managing the unauthorized tent encampments that have become a common feature of downtown Seattle and beyond.

Michael Person, 47, was charged earlier this month with misdemeanor assault after he allegedly attacked a tourist from Arizona as the man and his family walked by his tent to the Space Needle. Person later entered a plea of not guilty.

In May, county prosecutors accused Christopher Teel, a 24-year-old former resident of Ballard Nickelsville, one of the city's seven sanctioned homeless encampments, with sexually assaulting a woman in the temporary bathroom of a nearby auto-dealership.

Advocates for the homeless say that while serious, these incidents represent a minute fraction of similar crimes committed in the region, and that homeless people are more likely to be the victims of violent crime than perpetrate it.

But they come after a raucous month of debate about the city's declared state of emergency on homelessness. The Seattle City Council, in a stunning reversal, repealed a tax on large employers to fund homeless services in the face of a business-backed signature campaign to kill it.

Homelessness placed third in a list of issues mentioned most by Seattle residents in a Seattle Police Department survey released last week. Property crime and car prowls were among the top five specific public-safety concerns identified by residents.

Seattle's property-crime rate remains one of the highest in the country, though the numbers have fallen across the city in recent years.

Concerns about the effect street homelessness has had on tourism have also returned, though data suggests visits to the city have not been affected.

According to Visit Seattle, Seattle and King County's tourism marketing organization, about 39.9 million people visited Seattle and King County in 2017 — a 2.6 percent increase from the previous year.

David Blandford, senior vice president of Visit Seattle, said conventioners have expressed serious concern, but none have actually canceled a booking over issues related to homelessness.

Similarly, the number of cruise-ship passengers entering Seattle reached an all-time high of about 500,000 people last year. Port of Seattle spokesman Peter McGraw said the port has not heard of "bad interactions" between passengers and people who are homeless.

But Jordan Royer, vice president of Pacific Merchant Shipping Association, which supported the referendum to repeal the city's short-lived tax on high-grossing businesses, said a lack of enforcement is driving frustration among city residents.

"Right now it feels like we are a place where people can do anything they want, camp anywhere they want and get away with it," he said. "Without a balanced, common-sense approach that puts pressure on people to accept help and leave these destructive lifestyles, you're going to see more of the kind of assaults we've seen recently."

Lisa Daugaard, director of the Public Defender Association, agrees that enforcement is critical to addressing the legitimate concerns about public health and safety tied to people living on the streets.

But to see real reductions in the problems associated with homelessness, enforcement has to be coupled

with robust outreach to connect people to mental-health, drug-treatment and other services, she said.

“It makes sense that people would reach for the enforcement option when they see things aren’t working, but it’s not an either or proposition” Daugaard said.

“It’s true that we’re not flooding jails with people committing low-level, quality-of-life crimes, but I can remember a time when we were and I can say with absolute certainty that it did not work.”

<b>HEADLINE</b>	<b>06/23 Seattle commission seeks answers</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/crime/seattles-community-police-commission-wants-answers-on-how-finalists-for-police-chief-were-chosen/">https://www.seattletimes.com/seattle-news/crime/seattles-community-police-commission-wants-answers-on-how-finalists-for-police-chief-were-chosen/</a>
<b>GIST</b>	<p>As the three finalists for Seattle police chief spent time this week meeting with community organizations, the city’s Community Police Commission (CPC) asked the City Council to postpone a confirmation hearing for the mayor’s as-yet unnamed nominee until commissioners get a clearer understanding of what kept Interim Police Chief Carmen Best out of the top group.</p> <p>Following a nationwide search, Best – who is African American, has spent her entire policing career in Seattle, and has deep community ties – was the only woman and only candidate from inside the Seattle Police Department to make the top five to be considered for the chief’s job. She became interim chief Jan. 1, after Chief Kathleen O’Toole stepped down late last year.</p> <p>A spokeswoman for Mayor Jenny Durkan did not return a phone call, but emailed a three-page letter that was sent to the CPC on Friday. In it the mayor detailed the history of reform and efforts to confront bias, the organizations and people consulted, and the unfolding process of choosing a new police chief for a rapidly-changing city.</p> <p>Cody Reiter, a legislative aide to Councilmember M. Lorena González, who chairs the council’s public-safety committee, said the council is aware of the ongoing dialogue between the mayor’s office and the CPC but isn’t involved in those conversations. Reiter said a date has not been set for a confirmation hearing for the mayor’s pick.</p> <p>A search committee appointed by Durkan selected the five semifinalists, a group winnowed to three in May. They are former Pittsburgh Police Chief Cameron McLay, who is the only finalist to have served as the chief of a large city department; Ely Reyes, assistant chief in the Austin Police Department in Texas; and Eddie Frizell, an inspector and former deputy chief of patrol in the Minneapolis Police Department.</p> <p>All three spent a few days in Seattle this week, meeting with community groups and filming short interviews with the Seattle Channel. The candidates are to return to Seattle in July for formal interviews with Durkan.</p> <p>McLay, Frizell and Reyes were ranked as the top three by the search committee, two sources familiar with the search process told The Seattle Times last month.</p> <p>Best and Jorge Villegas, an assistant chief in the Los Angeles Police Department, were dropped from contention.</p> <p>At the time, Best, a 26-year veteran of the department, issued a statement thanking Durkan for the opportunity to serve as interim chief and agreed to stay on until a new chief is confirmed.</p> <p>But Best’s absence from the finalists’ group has drawn sharp criticism from some community leaders who say she was treated unfairly after playing a key role as a deputy chief in navigating the department through federally mandated reforms.</p>

Two days after the three finalists were announced, the CPC requested records from the mayor's office, said Isaac Ruiz, one of the CPC's three co-chairs. The requested documents included records relating to the design of the recruitment and selection process, how the candidates were reduced from five to three, and criteria or policy viewpoints that may have shown a preference for an external candidate over an internal one. The CPC also requested the five candidates' responses to written questions but have received only the three finalists' answers, Ruiz said.

Though the CPC has received some records, others remain outstanding, despite assurances from the mayor's office that they would be provided by Friday, according to Ruiz and a letter sent by the CPC to City Council members this week.

"As a co-chair of the CPC, I still don't really understand how it played out," Ruiz said of the selection of the three finalists. "It's concerning because when we're talking about policing and reform in the community, it's important to have as much transparency as possible."

It's unknown when Durkan will present her nominee for chief to the council for a vote. But "what we don't want is the council to act before we have access to the documents," as well as time to review them and offer meaningful feedback, said Ruiz, an attorney with the Seattle law firm Keller Rohrback.

The CPC also has hired an independent expert to assess potential legal issues or issues related to equal employment opportunities in the search process.

"There are members of the CPC who feel very strongly that Interim Chief Best shouldn't have been eliminated and these are commissioners with very deep ties within the community," he said. "The process is moving along, which is why we have this concern that any feedback from the CPC or community will be too late to make any kind of difference."

The CPC was mandated under the settlement agreement between the city and federal Department of Justice to provide community input on needed police reforms. The 2012 agreement include creation of the commission to help guide an independent, court-appointed monitor and ensure community involvement in reforms.

In June 2017, the City Council passed legislation made the CPC permanent. Increased from 15 members to 21, the commissioners appointed to the CPC are meant to represent the city's diversity.

"The CPC is relatively new ... and somewhat unique in this country in providing community oversight in policing," Ruiz said. "There is an expectation the CPC will be independent and ask the tough questions.

"Sometimes that means people in government won't be happy about the hard questions but that's what we signed up to do and it's what we're doing in this case," he said.

<b>HEADLINE</b>	<b>06/23 'Occupy ICE' protests emerge nationwide</b>
<b>SOURCE</b>	<a href="http://thehill.com/business-a-lobbying/393790-occupy-ice-protests-emerge-across-the-country">http://thehill.com/business-a-lobbying/393790-occupy-ice-protests-emerge-across-the-country</a>
<b>GIST</b>	<p>Protesters are occupying Immigration and Customs Enforcement (ICE) facilities across the country, inspired by a Portland protest that resulted in the indefinite shutdown of an ICE detention center on Wednesday.</p> <p>"Occupy ICE" protesters are blocking the loading dock of ICE headquarters in New York, have set up tents in front of an ICE facility in Los Angeles and are gathered outside of a detention center in Washington state.</p> <p>Though the protests are not led by any one group, the Democratic Socialists of America are involved in most states, alongside groups associated with prison abolition, immigration rights and anarchist</p>

collectives. The protests are calling for an abolition of ICE and an end to what they call human rights abuses by the criminal justice system, alongside other reforms.

The Portland protest began in response to the Trump administration's policy of separating migrant children from their parents at the border, a result of the administration's "zero tolerance" policy toward illegal border crossings.

ICE spokeswoman Carissa Cutrell told The Hill on Wednesday that the agency "fully respects the rights of all people to voice their opinion without interference" and "ICE remains committed to immigration enforcement consistent with federal law and agency policy."

The Hill reached out to ICE and the Department of Homeland Security for further comment.

In New York, dozens of protesters organized by the Metropolitan Anarchist Coordinating Council (MACC) are camping outside of an ICE office building in Manhattan on Saturday. They are blocking the loading dock through which ICE vans bring immigrants in and out of the building, MACC organizer Marisa Holmes said to The Hill.

"For the last year or two, we've seen an escalation of repression, an escalation of criminalization and dehumanization of immigrants as a result of Trump's election," Holmes said. "We've seen more of a consolidation happening of Homeland Security and ICE and unbelievable, indiscriminate capturing of people and detaining without due process."

"I think right now is really a turning point where we have to ask ourselves what kind of society and what kind of world we want to live, what is acceptable to do to other human beings and what is not," Holmes added. "We cannot allow this level of dehumanization and violence to be normalized. It's horrifying."

She said there have been no arrests but protests in front of the loading dock has prevented ICE from bringing people into the building. The protests began on Thursday and are ongoing.

"They're trying to rough people up one-on-one and deter us from being here," Holmes said. "We continue to stay and we're going to bring more people and we're not going to be deterred."

In Los Angeles, protesters are blocking the driveway for ICE vans, according to the Twitter account "LA Against ICE," and have been doing so for at least two days.

There are similar protests happening in Washington state, Utah, Chicago and other locations, according to reports.

<b>HEADLINE</b>	<b>06/23 Boston schools data shared w/ICE?</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/answer-sheet/wp/2018/06/23/boston-schools-chief-resigning-after-lawsuit-says-district-shared-student-data-with-immigration-officials/?utm_term=.9ec35bce3ed0">https://www.washingtonpost.com/news/answer-sheet/wp/2018/06/23/boston-schools-chief-resigning-after-lawsuit-says-district-shared-student-data-with-immigration-officials/?utm_term=.9ec35bce3ed0</a>
<b>GIST</b>	<p>Boston Schools Superintendent Tommy Chang is stepping down two years before the end of his contract after a three-year tenure marked by controversy and a new lawsuit that says the school district has shared student information with federal immigration officials.</p> <p>Chang, who signed a five-year contract to run the 56,000-student district in 2015, said late Friday that he was negotiating a departure, and he left a farewell message on the district's website that cited higher graduation and lower suspension rates among his accomplishments.</p> <p>Boston Mayor Marty Walsh released a statement saying that he and Chang had "mutually agreed" that there should be a change in leadership in the school district and that "significant work" remained to</p>

improve Boston schools. He did not mention the lawsuit, though it may have been the final straw for Chang.

Last year, Walsh blamed Chang in part when the Internal Revenue Service found irregularities in an audit of the city's finances and fined Boston nearly \$1 million. Walsh said Chang knew earlier than he did about the findings and did not tell him. In 2016, Chang was accused of botching a proposal to change start times for schools to allow older students to begin later. And the heralded Boston Latin School was accused by U.S. prosecutors of failing to seriously address allegations that students of color were being harassed.

The Lawyers' Committee for Civil Rights and Economic Justice and a coalition of students' rights groups filed a lawsuit this week against Boston Public Schools in an effort to obtain public records about its practice of sharing student information with federal immigration officials, including U.S. Immigration and Customs Enforcement (ICE), through the Boston Regional Intelligence Center. According to the committee, the Massachusetts supervisor of records has ordered the district to disclose the records, but district officials have not done so.

Asked about the lawsuit and the practice of sharing student information with immigration officials, a spokesman for the Boston district said officials would look at the suit when they received it and not comment until then.

Matt Cregor, education project director at the lawyers' committee, said in an email that it was impossible to know exactly how many school districts are cooperating with ICE. He said in an email that the Boston Regional Intelligence Center is one of dozens of fusion centers that enable information-sharing between local and federal law enforcement agencies. Here's a state-by-state list of the fusion centers, but it is not clear when and how often school security officials participate, he said.

Students' rights groups, with help from the nonprofit Center for Law and Education, had filed to obtain public records of the case of a student at East Boston High School who had been deported based in part on an incident in school that Boston School Police shared with ICE via the Boston Regional Intelligence Agency. According to the lawyers' committee, the student got caught up in an incident at school in which two students were attempting to start a fight, but it never happened. An "unsubstantiated gang allegation" was used against the student, the committee said.

The Massachusetts supervisor of records agreed that the request for documents should be accepted but that the school district never turned them over, leading to the lawsuit.

"An 'unsuccessful fight' should be referred to a principal's office, not ICE," Cregor said in a statement.

<b>HEADLINE</b>	<b>06/23 Hope, healing thru Warrior Games</b>
<b>SOURCE</b>	<a href="https://www.heraldnet.com/news/veterans-find-hope-and-healing-through-warrior-games/">https://www.heraldnet.com/news/veterans-find-hope-and-healing-through-warrior-games/</a>
<b>GIST</b>	<p>AIR FORCE ACADEMY, Colo. — Tim Vaughn thought he was getting a haircut that day in October 2014. But his barber snapped, and Vaughn left the shop in an ambulance with severed muscles in his neck.</p> <p>The incident, Vaughn said, brought up traumatic experiences from his time in the Navy.</p> <p>Vaughn, a Marysville resident, used his participation in the Department of Defense Warrior Games earlier this month at the U.S. Air Force Academy to continue his recovery — his "lifelong" recovery, as his wife, Monica Vaughn, described it.</p> <p>Vaughn competed in track and swimming in his first Warrior Games. His best finish was fifth place in the 800-meter race.</p> <p>The games made him more aware of his need to keep healing, he said.</p>

“It kind of opened my eyes to strive and say, ‘Oh my God, I really have something,’ ” he said.

U.S. Navy Senior Chief Hospital Corpsman Joe Paterniti, a 1983 Bothell High School graduate, also competed at the Games.

The Everett paramedic has been attached to a voluntary Navy training unit for three decades.

He competed in rowing, field, powerlifting and cycling. All but field were new sports for the Games. Paterniti’s best finish was fourth place in a rowing sprint.

The Games are tough, he said.

“It’s training your mind to being really comfortable with being uncomfortable,” he said in a Department of Defense story about the competition.

Throughout Vaughn’s time deployed in 2011 and 2012, he saw children who had been shot and he himself had to avoid gunfire in areas such as Kabul, Afghanistan.

But on Oct. 13, 2014, Vaughn was stopping by for a routine haircut at Vic’s Barbershop in Imperial Beach, California. It was impossible for him to be prepared for what happened next.

As an active-duty Navy petty officer up for promotion, Vaughn was recovering from hernia surgery and yearning to get back to work. The barber, Daniel Flores, asked Vaughn if he wanted a neck shave. Vaughn, thinking nothing of it, agreed, preoccupied with looking at pictures his wife had sent of her parents’ new home.

Flores, whom Vaughn had not met before that day, took out the straight razor and cut his neck. Vaughn shoved him off, but not before Flores stabbed him in the same area.

Bleeding profusely, Vaughn reacted quickly. He stumbled to the back of the shop and laid down with his feet up. He recalled himself yelling, “Call 911! I’m a 32-year-old male, I’m O positive and I’m going to need a blood transfusion.”

Another barber came out of the bathroom and Vaughn directed him to grab some towels and squeeze him in the neck until he “couldn’t talk.”

The first responders were surprised to see that Vaughn’s blood pressure was so low. He might have saved his own life.

Flores received a 10-year prison sentence for attempted murder.

Vaughn spent the next few years doing his best to get better. He noticed himself getting angry often, mostly since people couldn’t seem to comprehend what happened to him.

“I don’t think I’ve gotten the attention I needed, so I was very bitter,” Vaughn said.

That anger was alleviated after Vaughn discovered the Navy Safe Harbor Foundation in November 2017.

Through the organization, Vaughn found the Warrior Games. He qualified for four events.

“It’s just getting up every day, and believe it or not, just having something to look forward to,” Vaughn said.

Competing has changed his outlook. He found camaraderie and learned to depend on others, he said.

	“You’ve got to allow people to help you,” Vaughn said. “Me talking about it is kind of therapeutic. I’m now an open book — here I am, this is who I am.”

<b>HEADLINE</b>	<b>06/22 Seattle: Lyle’s lawyers ‘grandstanding’</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1027217/seattle-perjury-argument/">http://mynorthwest.com/1027217/seattle-perjury-argument/</a>
<b>GIST</b>	<p>The City of Seattle has responded to allegations that one of its officers committed perjury when testifying about a controversial police shooting. The city has aimed its arguments at opposing attorneys.</p> <p>Attorneys representing the family of Charleena Lyles recently argued that a Seattle police officer committed perjury when he testified about the incident. The officer, Jason Anderson, said that the door to Lyle’s apartment was shut when the pregnant mother was shot to death by police. The African American mother was shot five times by two white police officers on June 18, 2017.</p> <p>The Lyles family has filed a civil wrongful death lawsuit against the City of Seattle.</p> <p>On Friday, city attorneys said the motion filed by the Lyle’s lawyers was grandstanding meant to harass the city and the officer. Lyle’s attorneys asked the judge to refer the perjury allegation to the King County prosecutor. City attorneys also said that expert analysis of video and audio used to make the perjury allegation is faulty, because the recordings had been redacted for public release and were not meant for forensic analysis.</p> <p>In its oral argument, city attorneys called the perjury allegations “baseless” and said that the city’s response has nothing to do with the police officer or Ms. Lyles. Rather, they targeted their statements at opposing attorneys and their conduct, arguing their motion lacks decorum and “flouts the bounds of our Civil Rules and Rules of Professional Conduct.” Seattle argues that the perjury motion is legally unsupported.</p> <p>The next hearing date for the case is scheduled for Tuesday, June 26.</p> <p>Karen Koehler, an attorney for the Lyles family, released this statement following the city’s argument Friday:</p> <p>“The disrespectful tone of the response and bully tactics used are a poor reflection on the City of Seattle. The City’s lawyers believe that by aggressively charging the Estate of Charleena Lyles’ attorneys with misconduct, they can sidestep and minimize the issue of whether Officer Anderson actually committed the alleged perjury.</p> <p>We are confident that the truth will come out in this case. We stand on our motion and the evidence produced to support it.”</p>

<b>HEADLINE</b>	<b>06/23 Mayor responds to PD chief process</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1027374/durkan-seattle-police-chief-criticism/">http://mynorthwest.com/1027374/durkan-seattle-police-chief-criticism/</a>
<b>GIST</b>	<p>Mayor Jenny Durkan has responded to ongoing criticism over the city’s selection process for the new Seattle police, noting her extensive history in SPD reform efforts.</p> <p>The Seattle Community Police Commission sent a letter to Council President Bruce Harrell on June 20. In it, they requested multiple records related to the police chief selection process. The commission has previously asked the council to halt the police process over its concerns. Durkan’s letter does not indicate interviews will be paused anytime soon.</p>

Concerns largely stemmed from the snubbing of Interim Chief Carmen Best. More than 60 people applied for the Seattle police chief position. Best made the list of the top five finalists as selected by a committee. But as Mayor Durkan explains in her letter to the commission, the interim chief did not make the final list of three. She backs her reasoning for this by citing the city charter and a finalist exam.

#### Seattle police chief selection process

Mayor Durkan writes that there were a couple phases in the Seattle police chief selection process as ordered by the city's charter. The first phase involved a 25-member committee to come up with a handful of finalists. They produced five — including Best.

“To comply with the City Charter and maximize community input, the search had two initial phases,” Durkan writes to the commission. “The first phase was to conduct deep community engagement and to review all candidates to reduce the list to finalists. The second, as required by the City Charter, was a competitive exam process that was to select three candidates from which I select the final nominee for Chief of Police.”

Durkan further explains the second phase:

“As the Police Chief Search Committee was informed at the beginning by the City Attorney's office and again at the end of their role, the search then proceeded to the second phase, the Competitive Exam. As required by the City Charter, a police chief “shall be selected by the Mayor from among the three highest ranking candidates in a competitive examination to be conducted under the direction of the Mayor.” The Competitive Exam Process then selected the three finalists. The Competitive Exam Process was conducted by: Mike Fong, Senior Deputy Mayor; Shefali Ranganathan, Deputy Mayor, Ron Sims, former King County Executive and previous Co-Chair to the 2014 Police Chief Search; Ian Warner, Legal Counsel to the Mayor and a former member of the Monitoring Team to the Consent Decree; and Barney Melekian, former Director of the Office of Community Oriented Policing Services under President Obama.

.... The Competitive Exam Process decided on three finalists to move forward to me, as required by the City Charter. This includes: Eddie Frizell, Cameron McLay, and Ely Reyes as the three finalists for permanent Chief of the Seattle Police Department.”

Durkan's response also details how the process included 50 community stakeholders, 14 neighborhood meetings, and an online survey posted in 15 different languages over the course of two months prior to the comprehensive exam. All that information was used in the exam phase of the selection process.

The mayor also notes her history working on Seattle policing issues, dating back to 1985 when she was appointed to oversight roles by three mayors. She then writes that as U.S. attorney, she was involved in the Department of Justice consent decree which required the Seattle Police Department to reform.

“I worked with community groups—the ACLU, El Centro, One America, Mothers for Police Accountability, Northwest Immigrant Rights Project—to deeply reform the Seattle Police Department and enter into a federal consent decree, which I signed as U.S. Attorney,” Durkan notes.

<b>HEADLINE</b>	<b>06/23 Brexit marchers demand final vote</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/23/world/brexit-march-final-vote/index.html">https://www.cnn.com/2018/06/23/world/brexit-march-final-vote/index.html</a>
<b>GIST</b>	(CNN) — Thousands of people marched Saturday through central London on the second anniversary of the Brexit referendum, demanding that the UK government give people a chance to make the final decision on whether it goes into effect next year.  The rally was organized by several pro-European Union campaign groups and dubbed the People's Vote march. Organizers say that if a Brexit deal is rejected by the Parliament, citizens should have a vote on any

	<p>final terms of UK's exit out of the EU.</p> <p>The initiative to leave the EU goes into effect March 29, 2019.</p> <p>The rally started at noon at London's central Pall Mall street, and finished at Parliament Square. Neither the London Metropolitan Police nor Westminster Council -- the borough authority where the march took place -- would comment on the crowd's size. The BBC reported there were tens of thousands of protesters and a smaller pro-Brexit counterprotest.</p> <p>The government remains knotted up on how to manage the economy, continue trading goods with the European Union -- its biggest export market -- and mollify businesses and investors who demand answers about future trade. The economy is now the slowest-growing in Europe.</p> <p>Economic and political turmoil started not long after British voters approved a referendum to leave the EU in June 2016.</p> <p>The country's own economists are making dire predictions. The British Chambers of Commerce last week said the UK's economic growth forecast of 1.3% this year would be the weakest since the financial crisis, a CNN Money report said.</p> <p>Despite the well-attended march, some voters interviewed by CNNMoney last week said they are worn out from the protracted talks.</p>

<b>HEADLINE</b>	<b>06/24 Germany: bldg. explosion injures 25</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/nation-world/apxpolice-25-injured-in-building-explosion-in-germany/">https://www.seattletimes.com/nation-world/apxpolice-25-injured-in-building-explosion-in-germany/</a>
<b>GIST</b>	<p>BERLIN (AP) — Twenty-five people were injured, four of them severely, when an explosion destroyed an apartment building in the western German city of Wuppertal, police said Sunday.</p> <p>Police said the explosion rocked the several-story building shortly before midnight Saturday with a large bang, scaring people in surrounding homes so much they ran out into the street in a panic. The detonation was so severe it destroyed the building's attic and the top three floors, the German news agency dpa reported.</p> <p>Fire then broke out in several different parts of the apartment building and firefighters had trouble dousing the flames because parts of the building kept collapsing. They were able to rescue four severely injured from inside the building and sent them to the hospital. Another 21 people were slightly injured and treated by emergency staff at the scene.</p> <p>Police said they were in the dark about the cause of the explosion, dpa reported.</p> <p>A car nearby was destroyed, buried under window frames that were blown onto it by the explosions' impact. Emergency personnel on Sunday picked up bricks and furniture on the street.</p> <p>Some of the building's roof beams stood black and eerie in the smoke as police scoured accessible parts of the building for further people trapped inside before giving the all-clear.</p> <p>Where the building stood is now a huge gap in a row of apartment buildings in the city's Langerfeld neighborhood.</p> <p>Later Sunday, authorities brought in heavy equipment to tear down the remains of the ruin. They said it was too dangerous for investigators to search for evidence that might reveal the explosion's cause because the destroyed building could collapse at any time.</p>

<b>HEADLINE</b>	<b>06/24 Landmark day for Saudi women</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/23/middleeast/saudi-women-driving-ban-lifts-intl/index.html">https://www.cnn.com/2018/06/23/middleeast/saudi-women-driving-ban-lifts-intl/index.html</a>
<b>GIST</b>	<p>Jeddah, Saudi Arabia (CNN) — Saudi women drivers took to the roads legally Sunday for the first time in the kingdom's history, as its decades-old ban on women driving finally lifted.</p>

The end of the controversial ban brings the ultra-conservative Gulf nation into line with the rest of the world. It also represents the culmination of years of campaigning by rights activists who have sometimes been arrested and imprisoned for their efforts.

Mona Al-Fares, a doctor, was in her car before midnight, waiting for the ban to lift before setting off through the streets of Jeddah with her husband and children.

"I feel like I'm surprised -- am I really driving in my own country? I feel happy, relieved. I feel like I'm free," she told CNN.

The step, first announced last September, will liberate many women from the constraints of needing to hire a male driver to travel even small distances, allowing many more to join the workforce, grow their own businesses and explore the kingdom.

Hiring women is a key part of Saudi Arabia's ambitious plan to overhaul its economy, known as Vision 2030. The reform agenda is being spearheaded by Crown Prince Mohammed bin Salman.

For some, though, the jubilation at realizing a hard-won freedom Sunday will be tempered by the arrests last month of a number of Saudi rights activists, including some who have played a prominent role in the fight for women's right to drive.

Many other restrictions on women's everyday lives remain in place under the male guardianship system -- including the right to marry, work or travel.

<b>HEADLINE</b>	<b>06/23 DHS employees warned about safety</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/23/politics/dhs-employees-safety-immigration/index.html">https://www.cnn.com/2018/06/23/politics/dhs-employees-safety-immigration/index.html</a>
<b>GIST</b>	<p>Washington (CNN) — Amid the furor over the policy that resulted in thousands of families separated at the border, Department of Homeland Security employees have been warned about threats to their personal safety, according to a department-wide email obtained by CNN.</p> <p>In the message from Claire M. Grady, the acting deputy secretary of homeland security, on Saturday afternoon, DHS employees were given information about the security resources available to them and were provided with tips for security, like not wearing their badges in public and being on guard for risks in public and online.</p> <p>"In recent days, DHS has determined there may be a heightened threat against DHS employees in response to U.S. Government actions surrounding immigration," Grady wrote.</p> <p>"This assessment is based on specific and credible threats that have been levied against certain DHS employees and a sharp increase in the overall number of general threats against DHS employees -- although the veracity of each threat varies. In addition, over the last few days, thousands of employees have had their personally identifiable information publically (sic) released on social media."</p> <p>The message went to the entire DHS workforce of more than 200,000, a source familiar with the message told CNN. That includes individuals who work for DHS sub-components like US Customs and Border Protection and US Immigration and Customs Enforcement.</p> <p>Grady's email warning of risks outlined a list of "general security awareness measures that all DHS employees can take to protect themselves while in public."</p> <p>At the end of the email, Grady wrote, "Keep your heads held high and focused on the Department's important missions. You are making a difference to secure our country. And in the meantime, let's continue to be security-conscious and look out for each other."</p>

<b>HEADLINE</b>	<b>06/23 Central Oregon fire continues to grow</b>
<b>SOURCE</b>	<a href="http://www.kptv.com/story/38490622/boxcar-fire-in-central-oregon-grows-to-18000-acres-graham-fire-forces-evacuations">http://www.kptv.com/story/38490622/boxcar-fire-in-central-oregon-grows-to-18000-acres-graham-fire-forces-evacuations</a>
<b>GIST</b>	<p>MAUPIN, OR (KPTV) - The Boxcar Fire south of Maupin grew to 23,000 acres on Friday.</p> <p>That fire is just one that crews are working to contain in the central Oregon area after lightning strikes Wednesday and Thursday led to more than three dozen separate incidents.</p> <p>For most of Friday, the Boxcar Fire moved south and east away from Maupin and the Deschutes River corridor. However, around 3 p.m., firefighters said the fire jumped Bakeoven Canyon, began moving toward Maupin and threatened homes.</p> <p>"It's difficult, the terrains difficult, it's rocky, it's smoky," Chief Don Colfels of Lake Chinook Fire and Rescue said.</p> <p>Dozer lines were put in place to protect recreation areas along the Deschutes River. Central Oregon Fire Info reported the fire was 10 percent contained Friday night.</p> <p>The Graham Fire had burned just over 2,000 acres near Culver, four miles south of the Metolius River arm of Lake Billy Chinook.</p> <p>The Graham Fire led to Level 3 evacuation orders – meaning go now – for the Three Rivers Subdivision. Around 100 structures were threatened, according to Central Oregon Fire Info.</p> <p>Another fire reported Friday morning, the Jack Knife Fire, grew to 2,000 acres in brush and grass five miles northeast of Kent. 10 homes are threatened and the fire has reached the John Day River on the west side of the river, fire authorities said. Large pockets of fuel are within the perimeter of the fire.</p> <p>Gov. Kate Brown invoked the Emergency Conflagration Act on Thursday, sending additional resources from the Portland area to battle the fires.</p>

<b>HEADLINE</b>	<b>06/24 BP checkpoints New England highways</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/23/us/maine-new-hampshire-border-patrol-checkpoints/index.html">https://www.cnn.com/2018/06/23/us/maine-new-hampshire-border-patrol-checkpoints/index.html</a>
<b>GIST</b>	<p>(CNN) — Far from ground zero in the Trump administration's crackdown on illegal immigration along the southern border, US Customs and Border Protection checkpoints on highways in Maine and New Hampshire are catching the eye of civil liberties groups.</p> <p>On Interstate 95 near the remote northern Maine town of Lincoln this week, the Border Patrol said it made nine drug seizures and two arrests for immigration violations during an 11-hour checkpoint operation in which agents asked motorists about their place of birth and citizenship status.</p> <p>The federal agency -- one of several at the center of a growing humanitarian crisis involving 2,300 children separated from their parents at the Mexico border -- said in a statement that Wednesday's checkpoint in Maine was "a means of preventing smuggling organizations from exploiting existing transportation systems to travel to the interior of the United States."</p> <p>Customs and Border Protection says the US Supreme Court has affirmed the agency's ability to ask motorists' citizenship status, even if they have no suspicion. Agents use training and questions to make decisions about a traveler's citizenship or residency, it said.</p> <p>"Travelers have the right to remain silent," it said in a statement. "Travelers who cooperate are passed through quickly, unless the agent suspects they are in violation of federal law. Travelers who refuse to</p>

cooperate may be referred to a secondary examination area to allow agents to conduct additional questioning to determine the traveler's citizenship or residency."

Armed with search authority to conduct immigration checks within a "reasonable distance" of 100 air miles from US land borders and coastlines, the Border Patrol also set up a checkpoint last weekend on Interstate 93 near Woodstock, New Hampshire.

The June 15-17 operation resulted in the arrests of five undocumented immigrants from Brazil, China, Ecuador, El Salvador and Mexico as well as the seizure of drugs, according to Customs and Border Protection.

The American Civil Liberties of New Hampshire has said there have been a handful of Border Patrol checkpoints on I-93 in Woodstock -- about 90 miles from the Canadian border -- since last summer, CNN affiliate WMUR reported. There had been no such checkpoints there in more than five years.

"Immigration police in this country are emboldened," Gilles Bissonette, legal director of the ACLU of New Hampshire, said in statement after 17 people were arrested during a Memorial Day weekend operation. "We're seeing it not only nationally, but right here in New Hampshire."

The ACLU in Maine, New Hampshire and Vermont filed suit in May against US Department of Homeland Security, Customs and Border Protection and the Immigration and Customs Enforcement, seeking records on Border Patrol checkpoints and bus raids, ICE arrests at courthouses and what it said were the targeted arrests of immigrants' rights activists.

"New England residents have a right to know what federal agents are doing in their communities and to demand accountability for their actions," ACLU Vermont staff attorney Lia Ernst said in a statement at the time.

<b>HEADLINE</b>	<b>06/25 Biggest digital heist isn't over yet</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/features/2018-06-25/the-biggest-digital-heist-in-history-isn-t-over-yet">https://www.bloomberg.com/news/features/2018-06-25/the-biggest-digital-heist-in-history-isn-t-over-yet</a>
<b>GIST</b>	<p>As night fell in Taipei on July 10, 2016, most people in the city were hunkered down to ride out the end of a typhoon. Not Sergey Berezovsky and Vladimir Berkman. The two Russians made their way through the rain to an ATM at First Commercial Bank, one of Taiwan's top lenders. Wearing hats and antipollution masks, they loitered at the machine for a moment. Then, as the astonished couple in line behind them later told the police, the ATM started disgorging cash without either man touching it. The men shoved the bills into a satchel and brushed past them. As the Russians drove off in a black sedan, the couple spotted something on the ground: One of the guys had dropped his bank card.</p> <p>By the time detectives traced Berezovsky and Berkman to the nearby Grand Hyatt the next day, the Russians had already jetted off to Moscow by way of Hong Kong. And they were just two of 15 "money mules" who'd hit 41 ATMs at 22 branches of First Commercial over that stormy weekend, the cops learned, taking 83 million New Taiwan dollars (NT\$), or about \$2.6 million. Hackers, investigators discovered, had forced the machines to spit out cash.</p> <p>The Carbanak gang had struck again.</p> <p>Before WannaCry, before the Sony Pictures hack, and before the breaches that opened up Equifax and Yahoo!, there was a nasty bit of malware known as Carbanak. Unlike those spectacular attacks, this malware wasn't created by people interested in paralyzing institutions for ransom, publishing embarrassing emails, or taking personal data. The Carbanak guys just wanted loot, and lots of it.</p>

Since late 2013, this band of cybercriminals has penetrated the digital inner sanctums of more than 100 banks in 40 nations, including Germany, Russia, Ukraine, and the U.S., and stolen about \$1.2 billion, according to Europol, the European Union's law enforcement agency. The string of thefts, collectively dubbed Carbanak—a mashup of a hacking program and the word “bank”—is believed to be the biggest digital bank heist ever. In a series of exclusive interviews with Bloomberg Businessweek, law enforcement officials and computer-crime experts provided revelations about their three-year pursuit of the gang and the mechanics of a caper that's become the stuff of legend in the digital underworld.

Besides forcing ATMs to cough up money, the thieves inflated account balances and shuttled millions of dollars around the globe. Deploying the same espionage methods used by intelligence agencies, they appropriated the identities of network administrators and executives and plumbed files for sensitive information about security and account management practices. The gang operated through remotely accessed computers and hid their tracks in a sea of internet addresses. “Carbanak is the first time we saw such novel methods used to penetrate big financial institutions and their networks,” says James Chappell, co-founder and chief innovation officer of Digital Shadows Ltd., a London intelligence firm that works with the Bank of England and other lending institutions. “It's the breadth of the attacks, that's what's truly different about this one.”

For years police and banking-industry sleuths doubted they'd ever catch the phantoms behind Carbanak. Then, in March, the Spanish National Police arrested Ukrainian citizen Denis Katana in the Mediterranean port city of Alicante. The authorities have held him since then on suspicion of being the brains of the operation. Katana's lawyer, Jose Esteve Villaescusa, declined to comment, and his client's alleged confederates couldn't be reached for comment. While Katana hasn't been charged with a crime, Spanish detectives say financial information, emails, and other data trails show he was the architect of a conspiracy that spanned three continents. And there are signs that the Carbanak gang is far from finished.

Carbanak first surfaced in Kiev, when executives at a Ukrainian bank realized they were missing a bunch of money. Security cameras showed the lender's ATMs dispensing cash in the predawn hours to people who didn't bother to insert cards or punch in PINs. The bank hired the Russian cybersecurity firm Kaspersky Lab to check it out. Initially, the researchers suspected that hackers had infected the machines with malware from a handheld device. “What we found instead was something else,” says David Emm, Kaspersky's principal security researcher.

Someone had sent emails to the bank's employees with Microsoft Word attachments, purporting to be from suppliers such as ATM manufacturers. It was a classic spear-phishing gambit. When opened, the attachments downloaded a piece of malicious code based on Carberp, a so-called Trojan that unlocked a secret backdoor to the bank's network. The malware siphoned confidential data from bank employees and relayed the information to a server the hackers controlled. Delving deeper, the Kaspersky team found that intruders were taking control of the cameras on hundreds of PCs inside the organization, capturing screenshots and recording keystrokes. Soon, the researchers learned that other banks in Russia and Ukraine had been hacked the same way.

Experts point out that even if Katana was the mastermind, he was just one guy in a crime that surely must have had many authors

The attackers cased their targets for months, says Kaspersky. The Carbanak crew was looking for executives with the authority to direct the flow of money between accounts, to other lenders, and to ATMs. They were also studying when and how the bank moved money around. The thieves didn't want to do anything that would catch the eyes of security. State-backed spies use this type of reconnaissance in what's known as an advanced persistent threat. “In those instances, the attacks are designed to steal data, not get their hands on money,” Emm says. When the time was right, the thieves used the verification codes of bank officers to create legit-looking transactions.

By the fall of 2014, the authorities realized they were dealing with something new. That October, Keith Gross, chair of the cybersecurity group for a European bank lobby, called a crash meeting with experts

from Citigroup, Deutsche Bank, and other major European lenders. In a meeting room at Europol's fortress-like headquarters in The Hague, Kaspersky researchers briefed the bank officials on what they'd found in Ukraine. "I've never seen anything like this before," Troels Oerting, then the head of Europol's Cybercrime Centre, told the group. "It's a well-orchestrated malware attack, it's very sophisticated, and it's global."

So Europol went global, too, enlisting help from law enforcement agencies in Belarus, Moldova, Romania, Spain, Taiwan, the U.S., as well as bank industry representatives. It set up a secure online clearinghouse where investigators could cross-check data and find links between the thefts, says Fernando Ruiz, head of operations in Europol's cybercrime unit. At the heart of its operation was a lab where technicians dissected the two dozen samples of malware identified in the Carbanak thefts. By isolating unique characteristics in the code, detectives could trace where the programs came from and maybe who was using them. The work led them toward Denis Katana's apartment in Alicante, a four-hour drive southeast of Madrid. "This is what the Spanish police used to open their investigation," Ruiz says.

Carlos Yuste, a chief inspector in the National Police's cybercrime center, took it from there. Yuste, a cerebral veteran detective with salt-and-pepper hair, and his chatty younger partner, Javier Sanchez, started taking a closer look at 34-year-old Katana. He used offshore servers for his computing needs—not unlawful, but unusual. More interesting, he was visited by Romanians and Moldovans linked to organized crime. Yuste ordered surveillance, but he and Sanchez labored to build a case for a wiretap or arrest.

From a distance, Katana appeared to be just another immigrant building a new life in the West. A skinny, smallish man, he shared a modest 1,100-square-foot apartment with his Ukrainian wife and young son and didn't seem to have much of a social life. He wasn't trying to learn Spanish, and the cops never once saw him visit San Juan Beach, the long stretch of golden sand just a few blocks away. He appeared to have a much more active life online, often toiling on his laptop until sunrise.

Slowly, Yuste and Sanchez started piecing together how they believed Katana was working on the Carbanak thefts with three other men in Ukraine and Russia. One sent the malicious emails, another was a database expert, and the third cleaned up the gang's digital footprints, the police say. As for Katana, Sanchez says he handled the most critical and complex task: He allegedly conducted the reconnaissance of banking systems and then shuffled money around the network like an air traffic controller. In his hands, it was art as much as science, the police say. "This guy is in another league, he's like Rafa Nadal playing tennis," Yuste says. "There are few people in the world capable of doing what he did."

Just as the police started to make strides, the Carbanak crew opened another front, says Kaspersky's Emm. In the first half of 2016, the thieves sent spear-phishing emails that looked like messages from legitimate financial institutions. When bank employees opened the emails' attachments, they downloaded malware based on a program called Cobalt Strike, which is designed to let security officers hack their own institutions to find vulnerabilities, like in a war game. The Carbanak-Cobalt gang was able to extract \$12 million per heist, says Europol. The thieves' nimbleness was sobering. "Sometimes the investigation looked good," Ruiz says, "and sometimes it looked like we'd reached a dead end."

The Carbanak crew did have one weakness that wasn't easy to finesse: humans. On July 16, 2016, six days after the suspected Russian mules Berezovsky and Berkman allegedly hit ATMs in the wake of Typhoon Nepartak, two other men linked to the thefts landed in Taipei. After clearing customs at Taiwan Taoyuan International Airport, Mihail Colibaba and Nicolae Pencov took a taxi to the central railway station. There they entered the baggage storage facility and, after receiving access codes by text, took suitcases from three separate lockers, according to police. The bags held NT\$60 million in bundles of crisp blue NT\$1,000 notes. The men then checked into the Grand Victoria Hotel across from the city's mammoth Ferris wheel and holed up in their rooms for the next 24 hours. At about 8 p.m. the next day, they enjoyed a leisurely dinner at the hotel's restaurant. Their job was nearly done. As the pair left the dining room, police confronted them and took them into custody. They'd been under surveillance since they left the railway station the day before.

They have the sloppy tradecraft of their alleged accomplices, Berezovsky and Berkman, to thank for their

capture. After the police got hold of the bank card one of the men had dropped the prior Sunday, Hsin-Yi Tseng, a 28-year-old detective in Taipei's Criminal Investigation Bureau, coordinated a citywide sweep to map out the scope of the ATM heists. She had scores of officers scan security camera footage, and her colleagues managed to track down another mule, whom they followed to the railway station. They watched him stash the three cash-stuffed suitcases in lockers and waited to see who came to collect them. It was Colibaba and Pencov, who are now serving four and a half years in prison. Colibaba's iPhone contained photos of stacks of cash in different currencies about the size of the piles in the suitcases, and, Tseng says, email exchanges with a man who appeared to be in charge of the operation. They traced the man to Alicante.

Yuste and Sanchez say Katana didn't ease up on the bank raids. In early 2017, mules extracted \$4 million from ATMs in Madrid after Katana allegedly took control of accounts inside Russian and Kazakh lenders. That was a mistake, because it enabled Yuste to get judicial approval to wiretap Katana's phones. The funny thing is Katana didn't need the money, Sanchez says. Katana was laundering his money through a Bitcoin warehouse he'd bought in China, had already converted most of his cash into Bitcoin, and was constructing a mansion in Alicante. "It was a kind of game for him," Sanchez says. "To attack a bank wasn't about 'Let's steal a million dollars.' It was, 'Let's crack the security the bank is putting in our way.'"

Earlier this year the detectives learned Katana and his partners were preparing to up their game with the release of a more potent version of Carbanak. On the morning of March 6, a police officer knocked on the door of his apartment. Katana answered with a resigned look. He didn't resist as more than a dozen armed cops entered and bagged his laptop and other evidence. In addition to jewelry and two BMWs in his name, they found 15,000 Bitcoins, then valued at about \$162 million. Law enforcement officials worldwide were jubilant.

Yet experts point out that even if Katana was the mastermind, he was just one guy in a crime that surely must have had many authors. Unlike the bank jobs of yore, digital heists are amoeba-like ventures that divide over and over again as the malware proliferates. "We've already seen the modification of Carbanak and multiple groups using it," says Kimberly Goody, an analyst at security software maker FireEye Inc. "Same case with Cobalt."

In recent weeks, employees at banks in the Russian-speaking world have been receiving emails that appear to be from Kaspersky, the security company that unearthed Carbanak. The messages warn recipients that their PCs have been flagged for possibly violating the law and they should download a complaint letter or face penalties. When they click on the attachment, a version of the Cobalt malware infects their networks. It turns out cyberheists may not die even when their suspected perpetrators are nabbed.

<b>HEADLINE</b>	<b>06/25 Cryptojacking: alternative to ransomware</b>
<b>SOURCE</b>	<a href="https://www.business-standard.com/article/news-ians/cryptojacking-emerging-as-alternative-to-ransomware-quick-heal-118062500378_1.html">https://www.business-standard.com/article/news-ians/cryptojacking-emerging-as-alternative-to-ransomware-quick-heal-118062500378_1.html</a>
<b>GIST</b>	<p>With more than three million hits globally in the first five months of this year, cryptojacking, a form of cyber-attack in which hackers hijack the infected system's processing power to mine cryptocurrency, is fast emerging as an alternative to ransomware, according to IT security firm Quick Heal.</p> <p>The number of mobile cryptojacking malware variants has also grown from eight in 2017 to 25 by May 2018, marking a three-fold increase, Quick Heal said in a statement on Monday.</p> <p>"Cryptojacking is emerging as a more cost-effective and efficient alternative to ransomware. With a ransomware attack, there is no guarantee that hackers will be paid a ransom," said Sanjay Katkar, Joint Managing Director and Chief Technology Officer, Quick Heal Technologies.</p> <p>"Cryptojacking, on the other hand, is empowering hackers to make use of infected endpoints for swifter</p>

and more assured financial gains," Katkar said.

As more cybercriminals leverage cryptojacking as a lucrative channel of generating illicit revenues, Quick Heal Security Labs researchers expect these numbers to grow even further.

As opposed to ransomware, cryptojacking attacks remain almost undetected, enabling attackers to use the compromised systems to mine cryptocurrencies for as long as they want.

They are also easier to deploy than ransomware attacks. All a hacker needs to do is to drop a cryptomining code on your system without your knowledge through an infected link or file.

Another commonly used method is to infect websites and pop-up ads with a JavaScript-based cryptomining script, which is triggered when you click on infected ads or visit compromised websites.

In such instances, attackers do not even need to install a code; just opening the infected link is enough to turn your system into a cryptomining machine and generate instant returns on investment for the hacker, Quick Heal said.

<b>HEADLINE</b>	<b>06/23 Ransomhack: GDPR blackmail scheme</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/ransomhack-gdpr-attack-blackmailing-business-owners/">https://www.hackread.com/ransomhack-gdpr-attack-blackmailing-business-owners/</a>
<b>GIST</b>	<p>Hackers are threatening companies to leak stolen user data online to hurt them through GDPR regulations – In return they are demanding ransom money.</p> <p>On 25 May 2018, the new European General Data Protection Regulation (GDPR) which aims to improve information security on a global scale came into force. At the same time, this provoked the emergence of a new method for blackmailing the market.</p> <p>Business owners are reporting that they are being a subject to cyber attacks related to ransomware where personal data that belongs to users or customers is exposed and the ransom demand is made in return for its retrieval.</p> <p>Experts from Bulgaria based TAD GROUP point out the difference in the ransom methodology. This time cybercriminals aim to disclose private information to the public eye rather than encrypt it so it is unobtainable unless paid for.</p> <p>Hackers threaten to publish the entire content of the database, containing personal data records, on a public server, that according to the regulation, means that the company will be severely fined.</p> <p>This is the warning that Ivan Todorov, the founder of TAD GROUP, is issuing. According to him, the victims are medium and large-scale Bulgarian companies which are requested to pay a ransom in an untraceable cryptocurrency.</p> <p>The ransoms vary from \$ 1,000 to \$ 20,000, while the fines for companies that the new EU regulation envisions account for 4% of the global annual turnover for the previous year or up to 20 million euros. In short, Ivan Todorov calls this type of hacker attacks “ransomhack“.</p> <p>According to TAD GROUP, from credible sources, it has become clear that the attacked companies have taken in GDPR protection measures by creating policies for personal data storage and security in their offices but have not conducted information security tests to verify whether they are actually susceptible to virtual attacks from cybercriminals.</p> <p>In other words, they did what is necessary to achieve compliance with the requirements of the Commission for Personal Data Protection. However, most companies did not consider securing their Internet-facing</p>

	infrastructure.

<b>HEADLINE</b>	<b>06/22 Afghan-based attack disguised as news</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/afghanbased-attack-disguised-as/">https://www.infosecurity-magazine.com/news/afghanbased-attack-disguised-as/</a>
<b>GIST</b>	<p>Researchers have detected a new Afghanistan-based attack disguised as a recent article from a Middle Eastern news network about the next Shanghai Cooperation Organisation Summit. Attackers used a malicious document that contained an excerpt from a story and titled it “Afghanistan – ‘Shanghai Spirits’ Contributes to Afghan Peace.”</p> <p>In order to read the full story, readers were asked to click “enable content” because the document was protected. Duping the victims into clicking on the malicious document was the first stage in a multi-staged attack involving various servers and artifacts. The attack aims to install a Metasploit backdoor using “an interesting .NET downloader which uses a custom encryption method to obfuscate process memory and evade antivirus detection,” according to research reported by AlienVault.</p> <p>An Afghan user uploaded the malicious file, within which the the macro malware, dubbed "GZipDe," was embedded so that it executed a Visual Basic script upon opening. The script, stored as a hexadecimal stream, then executed the next task from a hidden PowerShell console. Because the server is now offline, the researchers do not have access to the next step in the infection chain; however, they did find the original reverse-tcp payload publicly available (with an additional layer of encryption payload) on GitHub.</p> <p>“The malware allocates a new memory page with execute, read and write privileges. Then it copies the contents of the decrypted payload and launches a new thread to execute it,” researchers wrote.</p> <p>The research team has only seen one sample of the malware but said that it seemed very targeted. “Given the decoy document is in English and uploaded from Afghanistan, it may have been targeting someone in an embassy or similar,” Chris Doman, AlienVault security researcher, wrote in an email.</p>

<b>HEADLINE</b>	<b>06/22 Popular games remove 'spyware'</b>
<b>SOURCE</b>	<a href="https://nakedsecurity.sophos.com/2018/06/22/holy-potatoes-popular-games-remove-spyware-after-gamers-revolt/">https://nakedsecurity.sophos.com/2018/06/22/holy-potatoes-popular-games-remove-spyware-after-gamers-revolt/</a>
<b>GIST</b>	<p>The games industry has just been taught an important privacy lesson: don't mess with gamers – especially the ones who play something called Holy Potatoes! We're in Space?!</p> <p>It was on a forum connected to this game on 8 June that one of the biggest gamer insurgencies of recent times finally drew blood.</p> <p>The complaint was that some recent downloads of the game had included a marketing monitoring program – Red Shell – developed by a company called Innervate, that behaved like “spyware”.</p> <p>The controversy originated on other forum threads months ago but by now alarm about Red Shell was spreading like wildfire, not helped by the coincidence – openly acknowledged by its developers – that a 2004 Trojan shared the same name.</p> <p>The game's developer took the path of least resistance and caved, agreeing to de-install Red Shell using a software update.</p> <p>More developers pledged to do the same, including the makers of Elder Scrolls online, Conan Exiles, the Warhammer series, Total War, and a list of others constituting perhaps a third of the total number of games that currently incorporate Red Shell.</p> <p>Whether what Red Shell does is an invasion of privacy or a harmless tool seems to depend on whether you're a developer or a concerned games consumer.</p> <p>To its makers, and what turned out to be its numerous developer customers, it's an analytics plug-in that can be used to see which marketing campaign on sites such as Facebook, Twitter or YouTube led to someone downloading and purchasing their game.</p> <p>This monitoring includes the ability to “fingerprint” if not the gamer then his or her computer or console. As its makers describe:</p> <p><i>Red Shell tracks information about devices. We collect information including operating system, browser version number, IP address (anonymized through one-way hashing), screen resolution, in-game user id, and font profiles.</i></p> <p>As gamers began calling out Red Shell as “spyware” on Steam and Reddit, it quickly became clear that this form of market surveillance was not going down well.</p> <p>The first mistake games developers made when they added Red Shell was not telling anyone about it, or even offering a clear way to opt in or out.</p> <p>The second mistake was to think that some in the games community, perhaps fired up by controversies such as Facebook's ties to Cambridge Analytica, wouldn't object when they found out.</p>

<b>HEADLINE</b>	<b>06/22 Hackers exploit Drupal flaw for mining</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/hackers-exploit-drupal-flaw-monero-mining">https://www.securityweek.com/hackers-exploit-drupal-flaw-monero-mining</a>
<b>GIST</b>	<p>Network attacks exploiting a recently patched Drupal vulnerability are attempting to drop Monero mining malware onto vulnerable systems, Trend Micro reports.</p> <p>Tracked as CVE-2018-7602 and considered a highly critical issue that could result in remote code</p>

execution, the vulnerability impacts Drupal's versions 7 and 8 and was addressed in April this year.

The flaw is dubbed Drupalgeddon3 and the patch for it only works if the fix for the original Drupalgeddon2 vulnerability (CVE-2018-7600) has been applied.

Last month, hackers were observed targeting both security vulnerabilities to deliver a variety of threats, including cryptocurrency miners, remote administration tools (RATs) and tech support scams.

Trend Micro now says they noticed network attacks exploiting CVE-2018-7602 to turn affected systems into Monero-mining bots. As part of the observed incidents, the exploit fetches a shell script that retrieves an Executable and Linkable Format-based (ELF) downloader.

The malware adds a crontab entry to automatically update itself and also retrieves and installs a Monero-mining application, a modified variant of the open-source XMRig (version 2.6.3). The use of XMRig is a feature common to most attacks attempting to mine for Monero.

The downloader also checks the target machine to determine whether it is worth compromising.

The actors behind this attack hide behind the Tor network, but Trend Micro says they were able to trace the activity to 197[.]231[.]221[.]211, an IP belonging to a virtual private network (VPN) provider. This IP address is a Tor exit node.

Over the past month, the security firm has blocked 810 attacks coming from this IP address, but cannot confirm that they were all related to the Monero-mining payload or performed by the same actor.

Most of the attacks attempt to exploit the Heartbleed vulnerability (CVE-2014-0160), while others target ShellShock (CVE-2014-6271), a flaw in WEB GoAhead (CVE-2017-5674), and an old memory leak in Apache (CVE-2004-0113).

“Trend Micro also blocked File Transfer Protocol (FTP) and Secure Shell (SSH) brute-force logins from this IP address. Note that these attacks exploit even old Linux or Unix-based vulnerabilities, underscoring the importance of defense in depth,” the security researchers warn.

<b>HEADLINE</b>	<b>06/22 Hacked federal workers fear identity theft</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/for-millions-of-hacked-federal-employees-new-fears-of-identity-theft-1529700194">https://www.wsj.com/articles/for-millions-of-hacked-federal-employees-new-fears-of-identity-theft-1529700194</a>
<b>GIST</b>	<p>Some current and former federal government employees are taking a look at their credit activity after the Justice Department said this week that data stolen by suspected Chinese hackers in 2014 cyberattacks at the Office of Personnel Management may have been used to commit identity fraud.</p> <p>Federal prosecutors on Monday said a Maryland couple had pleaded guilty to using information stolen in the OPM breach to set up fraudulent car-loan applications with a Langley, Va., credit union.</p> <p>Disclosure of the car-loan scheme, which took place in 2015 and 2016, has prompted new worries of potential identity theft for the more than 21 million current and former federal employees and contractors affected by the breach, which exposed Social Security numbers, addresses and other sensitive information, in addition to 5.6 million fingerprints.</p> <p>The Maryland scheme also confused cybersecurity investigators who, along with the U.S. government, had concluded the Chinese government was behind the breach, motivated by the espionage value of the database and not by financial gain.</p> <p>A spokesman for the U.S. attorney in the Eastern District of Virginia, where the case is being prosecuted, declined to elaborate on how those charged in the case might have obtained the OPM files. In a statement Thursday, the spokesman said numerous victims of the fraud scheme had "self-identified" as OPM breach victims and that the government was still investigating how the crimes were carried out.</p> <p>Public filings in the case didn't address how many people fell victim to the loan-fraud conspiracy.</p> <p>OPM hack victims quickly began assessing the potential ramifications. Carrie Wells, 30, said she immediately checked her credit report after learning of the fraud.</p> <p>"I do have permanent credit-monitoring," said Ms. Wells, who had a part-time job at the Internal Revenue Service more than a decade ago. "But I had been wondering when the shoe is going to drop. When am I going to get this notification that someone is trying to access my credit?"</p> <p>"Federal employees are understandably alarmed to see direct proof that the personal information lost in the OPM data breaches is being used for nefarious purposes," the National Treasury Employees Union said in a statement. The NTEU, which represents more than 150,000 federal employees, is pursuing a lawsuit against the federal government over the breach.</p> <p>Current and former U.S. officials familiar with the OPM breach said it wasn't clear how the hacked files would have ended up in the hands of people in Maryland seeking to commit identity fraud. China has</p>

denied any involvement in the hack.

“This fraud case makes no sense,” said one former federal investigator who worked on the OPM investigation.

OPM itself was caught off guard by the fraud case and has asked the Justice Department for more details, believing it is possible there has been some kind of error in connecting the OPM data to the case, according to a source familiar with discussions between the two agencies.

An OPM spokeswoman declined to comment and referred questions to the Justice Department.

A Justice Department press release said Ms. Cross and Mr. McKnight pleaded guilty to fraud using stolen information of victims of the OPM hack, although the court documents make only one mention of the data breach.

Investigators determined that many of the identity-theft victims also were victims of the OPM hack and resided in Colorado, according to a statement of facts signed by a prosecutor and an attorney for Ms. Cross.

The case has emerged publicly at a time when U.S. counterintelligence officials have grown increasingly concerned about Chinese espionage against U.S. national security assets. About a half-dozen public cases involving the leak of secrets to Beijing have been brought against current or former U.S. intelligence employees or contractors in recent months, and some U.S. officials believe China may be leveraging the hacked OPM files to better target Americans vulnerable to turning against their country.

Last year in Los Angeles, federal authorities arrested a Chinese national, Yu Pingan, with providing the malicious software used in the OPM breach and other hacks. Mr. Pingan, via his lawyer, has denied any involvement.

Curtis Dukes, the former head of cyberdefense at the National Security Agency, said there were several plausible explanations for the connection, including that the data could have been purchased on the dark web.

Such a scenario “has serious implications,” said Mr. Dukes, now an executive vice president at the Center for Internet Security, a nonprofit that works with businesses and governments. “I would hope we are looking for indications of identities from the OPM theft being available for sale.”

To date, the OPM data hasn’t been advertised for sale in dark-web forums, where this kind of information is typically bought and sold by criminals, said Andrei Barysevich, a researcher with the fraud-intelligence firm Recorded Future Inc. It is possible that the data was sold, he said, “however it is very unlikely that it was marketed as government data.”

Some people affected by the OPM hack, who previously alleged they had suffered identity theft due to the breach, said they felt vindicated by news of the credit union fraud scheme after long being told there was no evidence to support their claims.

<b>HEADLINE</b>	<b>06/24 Hackers hit towns across the US</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/ransom-demands-and-frozen-computers-hackers-hit-towns-across-the-u-s-1529838001?mod=hp_lead_pos2">https://www.wsj.com/articles/ransom-demands-and-frozen-computers-hackers-hit-towns-across-the-u-s-1529838001?mod=hp_lead_pos2</a>
<b>GIST</b>	Town officials in Rockport, Maine, were closing up shop on Friday, April 13, when they realized they couldn’t open files on their computers.  After fielding messages from town workers, local information-technology contractor Gus Natale said he

“went straight to the town office and started yanking plugs.”

An unknown hacker had snuck malicious software onto the network and was demanding a payment of roughly \$1,200 in bitcoin in return for codes to unlock the town’s files.

“My thinking was, let’s just get this paid. It’s a small amount,” said Town Manager Rick Bates. But, he added, Mr. Natale and a helper “did not want the bad guys to beat them.”

The attack on Rockport is one example in a rising tide of similar invasions of municipal systems across the U.S.—from major cities like Atlanta, which got hit in March, to counties, tiny towns and even a library system in St. Louis. Local governments are forced to spend money on frantic efforts to recover data, system upgrades, cybersecurity insurance and, in some cases, to pay their online extortionists if they can’t restore files some other way.

Public-sector attacks appear to be rising faster than those in the private sector, according to the Ponemon Institute, a Traverse City, Mich., research company focused on information security. Ponemon estimates 38% of the public entities it samples will suffer a ransomware attack this year, based on reports through May, up from 31% last year and 13% in 2016. The company samples roughly 300 to 400 public-sector entities each year.

“We’re right at the front end of this,” said Marshall Davies, executive director of the Alexandria, Va.-based Public Risk Management Association. Hackers are “just now coming after the public entities. They’ve been hitting the businesses for years,” he said.

Hackers generally don’t target specific cities, but instead are constantly searching for vulnerabilities wherever they may occur, security experts said. “The trick about ransomware right now is that it’s typically not a targeted, focused attack,” said Christopher Krebs, a senior official at the Department of Homeland Security, at a recent mayors’ conference in Boston. “You’re not special.”

Hackers attacking cities aren’t typically nation states, but rather cybercriminals, Mr. Krebs said. Sometimes the hackers demand ransoms in poorly written English, and they typically demand to be paid in bitcoin, according to officials who have been hacked. The Rockport hacker offered a “customer service” chat window and offered tips on how to acquire cryptocurrency.

The Federal Bureau of Investigation advises against paying, and warns that “some individuals or organizations are never provided with decryption keys after paying a ransom.”

Rockport didn’t pay the hackers. Instead, Mr. Natale and a helper worked through the weekend to recover files from a compromised backup server, and had town systems up and running again by the next week. Still, the hamlet of about 3,400 ultimately paid about \$10,000 to cover the immediate restoration work, plus another \$28,000 to \$30,000 on security improvements, including a cloud-based backup system.

#### RANSOM REQUESTS

- Atlanta: March 2018. Ransom demanded: \$51,000 (not paid)
- Leeds, Ala.: Feb. 2018. Ransom demanded: \$12,000 (paid \$8,000)
- Montgomery County, Ala.: Sept. 2017. Ransom demanded: \$33,000 (paid in full)
- Rockport, Maine: April 2018. Ransom demanded: \$1,200 (not paid)
- St. Louis Public Library: Jan. 2017. Ransom demanded: \$25,000 (not paid)
- Licking County, Ohio: Early 2017. Ransom demanded: \$50,000 (not paid)
- Spring Hill, Tenn.: Late 2017. Ransom demanded: \$250,000 (not paid)
- Dawson County, Ga.: April 2018. Ransom demanded: \$98,000 (not paid)

#### Should Cities Pay?

Officials in Leeds, Ala., recently folded when faced with a ransom demand from hackers who froze the Birmingham suburb’s computer system. It wasn’t an easy choice, but everything from email to personnel records was effectively locked down, and the city of about 12,000 felt powerless.

“You just hold your nose and do it,” Mayor David Miller said.

After being paid, the hackers provided a code that helped the city regain access to most of its files, he said. Similarly, Montgomery County, Ala., unable to access backup files that were also encrypted, spent about \$47,000 to acquire nine bitcoins for hackers so they would unlock files last September, said Lou Ialacci, county IT director.

Every victim asks the same question, said Jeffrey Carpenter, director of incident response at SecureWorks Corp. , an Atlanta-based cybersecurity firm: “Should we pay the ransom?”

Compared with private companies, local governments may be less prepared for an attack, according to security experts. Some smaller entities can’t afford to compete for cybersecurity talent, which is in high demand across the country. Information-security analysts’ salaries average \$100,000 a year, and private-sector employers pay more than state and local governments, according to the Bureau of Labor Statistics.

Ransoms might be loosely calibrated to what hackers think a city can pay, although numbers can vary widely. Hackers demanded \$250,000 late last year from Spring Hill, Tenn., a city of about 38,000, which is nearly five times the amount hackers tried to pilfer from Atlanta in March. Both cities refused to pay.

In Spring Hill, that has meant a still-unfolding restoration effort that could cost some \$100,000, City Administrator Victor Lay said.

The St. Louis Public Library spent almost \$200,000 on system upgrades after successfully fending off a ransomware demand for about \$25,000 in bitcoin last year, executive director Waller McGuire said.

Licking County, Ohio, also refused payment when hackers demanded \$50,000 in bitcoin after hijacking the county’s computer system last year, apparently by exploiting a firewall gap, said County Commissioner Tim Bubb.

The county of about 170,000 people east of Columbus was lucky: Technicians quickly determined nearly all data were backed up and systems could be restored. Outside consultants also advised against paying, Mr. Bubb said.

“We didn’t want to deal with criminals if we could avoid it,” Mr. Bubb said. “Nobody likes to be blackmailed.”

#### Cybersecurity Insurance: Cost vs. Benefits

Speaking at the recent mayors’ conference, Atlanta Mayor Keisha Lance Bottoms triggered murmurs in a roomful of mayors when she said her city had purchased cyber insurance just months before getting hit.

She estimated that the city, which decided to rebuild its systems, was facing more than \$20 million in costs, but she hoped insurance would cover much of that. An Atlanta spokesman said the city was still evaluating the overall cost of the attack and the city’s recovery efforts.

Franklin County, Ohio, the state’s most populous with 1.3 million residents, bought a \$10 million policy last year that came with a \$200,000 annual premium. The county hasn’t needed the insurance, but officials said they were motivated after seeing hackers cause disruptions in Ohio and beyond.

Some officials said they preferred to spend money on better system back-ups, since insurance wouldn’t solve the immediate problem of accessing data they need to serve the public.

In Leeds, Ala., February’s breach came just a week before a planned upgrade to better protect backup data, Mr. Miller said.

Insurance covered most of Leeds’s ransom payment—plus, the city managed to bargain the hackers down

	from \$12,000. “We said, how about \$8,000?” Mr. Miller recalled. “They said OK.”

<b>HEADLINE</b>	<b>06/23 PDQ restaurants warn of data breach</b>
<b>SOURCE</b>	<a href="http://www.azfamily.com/story/38490568/pdq-chicken-restaurant-warns-customers-of-a-data-breach">http://www.azfamily.com/story/38490568/pdq-chicken-restaurant-warns-customers-of-a-data-breach</a>
<b>GIST</b>	<p>(3TV/CBS 5) - The restaurant "PDQ" is warning its customers about a widespread data breach.</p> <p>PDQ officials say a hacker got into the company's computer system and accessed personal information of some of its customers.</p> <p>The alleged hacking took place between May 19, 2017, and April 20, 2018. All PDQ locations in operation during some or all of the breach time period were affected. Customers' names, credit card numbers, expiration dates and cardholder verification value were all accessed or acquired, PDQ officials said.</p> <p>PDQ posted the following information on its website:</p> <p><b>WHAT HAPPENED</b> We have been the target of a cyber-attack. An unauthorized person (hacker) exploited part of our computer related system and accessed and or acquired personal information from some of our customers. We believe the attacker gained entry through an outside technology vendor's remote connection tool. Based on an investigation, the unauthorized access and or acquisition occurred from May 19, 2017 – April 20, 2018 (breach time period). We learned on June 8, 2018, that credit card information and or some names may have been hacked.</p> <p><b>PDQs AFFECTED</b> All PDQ locations in operation during some or all of the breach time period, May 19, 2017 – April 20, 2018, were affected. However, the following locations were not affected: Tampa International Airport location at 4100 George J Bean Pkwy, Tampa, FL 33607, Amalie Arena location at 401 Channelside Drive, Tampa, FL 33602, and PNC Arena location at 1400 Edwards Mill Road, Raleigh, NC 27607.</p> <p><b>WHAT INFORMATION WAS INVOLVED</b> The information accessed and or acquired included some or all of the following: names, credit card numbers, expiration dates, and cardholder verification value. However, it should be noted that the cardholder verification value that may have been accessed or acquired is not the same as the security code printed on the back of certain payment cards (e.g., Discover, MasterCard, and Visa) or printed on the front of other payment cards (e.g., American Express). Based on the nature of the breach, it was not possible to determine the identity or exact number of credit card numbers or names that were accessed or acquired during the breach time period. If you used a credit card for your purchase at a PDQ restaurant during the breach period, then your credit card number, expiration date, cardholder verification value and or name may have been accessed or acquired by a hacker.</p>

<b>HEADLINE</b>	<b>06/22 Can the Emmy's be hacked?</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/arts-and-entertainment/wp/2018/06/22/can-the-emmys-be-hacked-one-contender-tried-to-find-out/?utm_term=.cd73eed10040">https://www.washingtonpost.com/news/arts-and-entertainment/wp/2018/06/22/can-the-emmys-be-hacked-one-contender-tried-to-find-out/?utm_term=.cd73eed10040</a>
<b>GIST</b>	This month, Nathan Fielder, the prankster genius behind Comedy Central's "Nathan for You," popped a 13-minute video onto his YouTube feed titled "Can the Emmys Be Hacked?"

Amid the endless discussion of Russian interference in the 2016 presidential election, Fielder had identified another clear and present danger: What if a hacker with an irrational appreciation of Judd Hirsch made this the year of “Superior Donuts?”

Fielder’s piece was surprisingly simple, considering his history. In the clip, Fielder talked briefly of his concern that “Nathan for You” could get robbed of its rightful place on the Emmy stage. The show did earn rave reviews for its fourth and perhaps final season, with Oscar-winning documentarian Errol Morris declaring, in an essay in the New Yorker, that the “Finding Frances” season finale was “my new favorite exploration of love.”

To make his point, Fielder interviewed Carsten Schürmann. The Danish voting security expert demonstrated a potential breach in the Emmy voting process largely through phishing, which tricks people into sharing personal information that can then be used for scams.

With the nomination process closing Monday, the Television Academy, which presents the Emmy Awards, responded to our request for a response.

“The Television Academy has seen Mr. Fielder’s video parody,” an academy spokesman said in a statement. “Phishing scams like the one described by Mr. Fielder’s security expert are a concern for anyone with an online account, no matter the site, from banking to retail to social media. As is common practice for those looking to protect their online accounts, we strongly recommend our members confirm they are on the official Television Academy voting site before entering any of their account information. We are quite confident in the security of our site and are continuously monitoring for any phishing activities like those described.”

Fair enough, but the statement did not address several questions about the voting process. The spokesman also said nobody from the academy would be available for an interview.

Schürmann, who earned a measure of acclaim when he hacked a voting machine at a 2017 conference in Las Vegas, showed Fielder on camera how he could create a phony Web page by purchasing an Internet domain similar to that used by the Television Academy and then duping the organization’s voters into unwittingly authenticating a hacker’s votes.

The weaknesses in the system didn’t surprise Schürmann.

“All attacks are frighteningly easy once you’ve discovered them,” he told Fielder. And in an interview this week with The Washington Post, Schürmann talked of how he hopes Fielder’s clips lead to more awareness of what he considers a more important issue, voter fraud. He’s concerned about the potential for hacking during the upcoming midterms.

“These phishing attacks are successful in 40 percent of cases,” he said. “We trust our computers, and we trust our email. And we let our guards down all the time.”

Philip Stark, the associate dean of the Division of Mathematical and Physical Sciences at the University of California, went a step further when asked by The Post to review Fielder’s piece. Phishing is only one way to try to hack votes, he said. He noted that Schürmann could have also done a port scan for Fielder. That’s how security experts — and hackers — check systems for potential vulnerabilities.

“If he had, I strongly suspect he would have found a vulnerability,” Stark said.

Is the Television Academy taking the threat seriously, or is there real hope for Marvel’s “Iron Fist”? The spokesman would not talk of what measures were in place to monitor the process as its 23,000 members click through.

HEADLINE	<b>06/22 Power plants: cyber threats, risks</b>
SOURCE	<a href="https://breakingenergy.com/2018/06/22/power-plants-cybersecurity-threats-and-risks-part-1/">https://breakingenergy.com/2018/06/22/power-plants-cybersecurity-threats-and-risks-part-1/</a>
GIST	<p>Power plant networks are under constant attack from Chinese, Russian and other unknown hackers across the world 24 hours a day and 365 days a year. A hacker’s goal is to breach critical infrastructure, such as a power plant’s external firewalls, to gain access to the internal networks and find a way into the control system environment.</p> <p>Hackers typically use port scanners, password-guessing software and other readily available Internet tools to perform non-stop attacks against a power plant’s external environments. These tools look for and exploit any potential weaknesses that could be used to access internal networks. Once inside, the hacker can continue to run tools against control networks to exploit any weaknesses that might allow them to take control of plant control networks.</p> <p>Social engineering attacks such as ransomware are used to trick a user into clicking an attachment (i.e., phishing schemes) in order to extract and encrypt data files. This enables a hacker to extort money and decrypt information. The more access a user has to a system environment the greater the damage that can be done. Limiting administrative privileges reduces these risks.</p> <p>Control system data, operational data and sensitive financial data can be encrypted and only restored if backups are currently performed. Phishing attacks can also trick users into providing their username and passwords, which can then be used to login remotely to other systems. People tend to use the same passwords across many different sites with little to no variations. This can allow a hacker to gain access to many other systems using the same login credentials and passwords from a compromised account, including control systems, banking information and other applications.</p> <p>Many power plants lack dedicated IT staff that can effectively identify and repel a cyber attack so user diligence is key to identifying problems. Without proper controls, it is only a matter of time before hackers gain access to targeted resources and establish control of the environment.</p> <p>Historically, control systems have been physically separated – or “air gapped”. However, these environments are now connected at various firewalled points as businesses increasingly rely on real-time plant data. Firewalls can provide security needed to prevent access to control networks. However, misconfigurations are common and they are sometimes not tested, thus enabling security weaknesses. Control networks continue to move closer to the Internet and many are now running on Microsoft-operating systems, which can expose them to similar security vulnerabilities.</p> <p><b>Lack of Updates and Risk Mitigation</b></p> <p>Complex passwords, two-factor authentication and user awareness are all lines of defense that help mitigate a successful hack. Many power plants do not want passwords that change on a set interval and do not use complex options because they are difficult to remember. Passwords such as “Password”, “2018Texans” or other dictionary words only take a few minutes of hacking to gain access to a network.</p> <p>More power plants are using virtual private network (VPN) connections for remote starting of power plants. VPNs move critical control networks closer to the Internet. which can provide the ability for someone to hack into the plant and start or stop operations. If hackers figure out how to operate plant control systems, damage can be significant.</p> <p>Security updates are critical to mitigating cyber hacking attacks by closing vulnerabilities that could provide access to the system without having to provide login identification and passwords. Recent Cisco AnyConnect VPN software and Cisco Switch vulnerabilities have provided a great opportunity for network breaches or complete network failures if these issues are not patched up in a timely period.</p> <p>Once a critical vulnerability has been identified, it is key that a technical team is deployed to make a fix. Critical patches need to be identified and fixed as soon as possible. Oftentimes, clients do not have an active IT group that updates servers, firewalls and other devices when vulnerabilities arise. Computer</p>

systems require maintenance, backups and regular updates. Without these processes in place, power plants become an easy target for hackers looking for a thrill or a foreign government who may seek visibility by taking control of power plant environments.

#### Cyber Attack by Chinese Actor – A Case Study

Opportune LLP was engaged by a client to review a power plant on concerns that their site may not be secure from external cyber attacks. During our review, it was found that China had hacked into the control system through a Microsoft Windows machine connected directly to the Internet without firewall protection.

The local IT resource lacked security experience and did not understand the risks of how the computer was at risk. The malicious activity was subsequently traced back to China to hack into the power plant control system. Consequently, the hacked machine was eventually rebuilt, patched and moved behind firewalls to fix the issue. It is not known what China's intent was for hacking the asset. We suspect it could have been using these easy targets to figure out a way how to cause physical damage to a power plant with an intent to disrupt the power grid.

<b>HEADLINE</b>	<b>06/22 Court: need warrant phone location data</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/u-s-supreme-court-rules-police-need-warrant-for-most-cellphone-location-data-1529678019">https://www.wsj.com/articles/u-s-supreme-court-rules-police-need-warrant-for-most-cellphone-location-data-1529678019</a>
<b>GIST</b>	<p>WASHINGTON—Police must get a search warrant before obtaining data showing the location of cellphone users, the Supreme Court ruled Friday, the third in a string of decisions that limit law enforcement's access to the most intimate details of citizens' digital lives.</p> <p>“When the government tracks the location of a cell phone it achieves near perfect surveillance, as if it had attached an ankle monitor to the phone's user,” Chief Justice John Roberts wrote in the 5-4 opinion.</p> <p>“Unlike the nosy neighbor who keeps an eye on comings and goings,” he wrote, the signal towers and processing centers that track cellphone users “are ever alert, and their memory is nearly infallible,” making analog-era precedents prosecutors cited to justify such warrantless searches all but obsolete.</p> <p>As it had in 2012 and 2014, the court rejected government arguments that police should have the same access to digital data as investigators do, under 20th century precedents, to examine business records held by banks or to conduct shoe-leather surveillance.</p> <p>“There is a world of difference between the limited types of personal information addressed” by 1970s decisions allowing warrantless examination of business records “and the exhaustive chronicle of location information casually collected by wireless carriers today,” the court said.</p> <p>In 2012, the court held that police had conducted a search when they surreptitiously attached a GPS tracker to a suspect's vehicle, triggering Fourth Amendment protections against illegal searches. Two years later, it said authorities generally need a warrant to search the contents of a cellphone found in a suspect's pocket, despite precedents allowing police to examine address books, matchboxes and other items found on an arrestee without demonstrating probable cause.</p> <p>The court's recent consensus collapsed in Friday's case. Conservative justices Anthony Kennedy, Clarence Thomas, Samuel Alito and Neil Gorsuch filed four separate dissents, sometimes joining each other.</p> <p>Chief Justice Roberts found support only from the court's liberal wing, relying on justices Ruth Bader Ginsburg, Stephen Breyer, Sonia Sotomayor and Elena Kagan for his majority.</p> <p>Friday's decision applied one of the court's best-known yet most enigmatic constitutional doctrines—that</p>

Fourth Amendment protections against police searches hinge on the public's "reasonable expectation of privacy," as Justice John Marshall Harlan put it in a 1967 opinion.

The case focused on defendant Timothy Carpenter, who was convicted of armed robberies in Michigan and Ohio. Prosecutors made their case in part by relying on information provided by MetroPCS and Sprint that showed Mr. Carpenter's whereabouts over several months. The data generated by his phone's signal connection to nearby cell towers placed him near several of the crime scenes at the times the robberies occurred.

Prosecutors didn't seek a warrant for the cell-site data, which would have required a showing of probable cause to believe the records show evidence of a crime. Instead, they sought the data under the Stored Communications Act, which requires only "reasonable grounds" to believe the information is relevant to an investigation.

With the explosion of modern telecommunications technology, courts have been trying to sort out how to apply older court precedents, such as those governing landline phones, to current criminal investigations.

The chief justice has rarely aligned himself with the court's liberal wing in 5-4 cases. Before Friday, the only other major high-court case to produce a similar lineup came in 2012, when the same five justices formed a majority to uphold the Affordable Care Act, President Barack Obama's signature health-care law.

In their dissents, the other conservative justices criticized the majority for drawing a dividing line from decades of high-court precedent that had permitted police to obtain an individual's business records from banks and other companies, on the assumption that the suspect had waived his privacy rights by voluntarily disclosing information to a third party.

Cell-site records "are no different from the many other kinds of business records the government has a lawful right to obtain by compulsory process," Justice Kennedy wrote in a dissent joined by justices Thomas and Alito. He accused the majority of undermining precedents that police have relied on to obtain evidence.

Justice Gorsuch, the court's newest member, took a different tack in his dissent, saying he agreed stronger privacy protections were in order, but not in the way the court provided them.

Lawyers for the American Civil Liberties Union, which represented Mr. Carpenter at the high court, called the decision "a truly historic vindication of privacy rights."

<b>HEADLINE</b>	<b>06/22 India bookies hack into cricket live feed</b>
<b>SOURCE</b>	<a href="https://thewire.in/sport/investigators-stumped-over-how-bookies-are-hacking-into-ipls-live-feed">https://thewire.in/sport/investigators-stumped-over-how-bookies-are-hacking-into-ipls-live-feed</a>
<b>GIST</b>	<p>New Delhi: Investigation agencies and technology experts in India are banging their heads against the wall trying to figure out how cricket bookies are hacking into the scrambled live feed from the ground during the uplink process.</p> <p>In May 2018, the Indore police unearthed a betting syndicate which was receiving and distributing the live feed of Indian Premier League (IPL) matches.</p> <p>A live feed is roughly 8-10 seconds ahead of the original telecast. Or in other words, what you see on your television is 8-10 seconds behind what's actually happening on the field.</p> <p>This is standard practice as live pictures from the venue get a little delayed as it passes through several intermediate stages, via satellite and cable or DTH or HD platforms, before ending up on a television screen.</p>

“As they were getting live feed before it appeared on TV sets, which was 8-10 seconds ahead of live telecast, it is likely that they were not only manipulating the odds in online betting during the matches but also providing this feed to other persons, who were betting on the matches through apps”, Jitender Singh, superintendent of police, Cyber Crime Branch of Indore Police, told this reporter.

Popular sports betting websites such as Bet365.com and Betfair.com offer odds on various aspects of a cricket game such as the toss, the first over total or an innings total.

According to a senior engineer who works for Star’s cricket broadcast team, the broadcaster uplinks the signal to a satellite in scrambled form. For receiving at the other end, a 12-digit BISS code is needed to unscramble the feed, which automatically keeps changing every 10-15 minutes.

“Still, someone cracked this code and stole the feed. Arrested bookies told us they were getting this live feed from another bookie based in Dubai. This is a very challenging case for us. Our experts and engineers of official broadcaster of the IPL, Star TV, are working together to find how the bookies have been able to steal the BISS (Basic Interoperable Scrambling System Code) code so easily,” said Singh, who is heading the team of investigators in this case.

An Enforcement Directorate (ED) investigation into IPL betting in 2015 revealed that – because online betting in India is illegal and Indian citizen are not allowed to carry out even digital transactions for online betting – people involved with this well-organised business use hawala channels to obtain passwords and carry out transactions on betting websites that are located overseas and outside the purview of Indian law.

As both password and login on the websites are not registered or generated from India but from different countries, it is tough for betting sites to check such accounts that have benefited from the live feed.

Star India didn’t respond to email or WhatsApp messages asking whether it has initiated an internal investigation to check possible involvement of an insider.

Interestingly, the hacking of a live feed is not the first case of its kind.

During the eighth season of the IPL in 2015, the Ahmedabad Branch of the ED allegedly busted a Rs 2,000 crore betting racket.

The chargesheet in the case, still under court proceedings, reads: “They (bookies) used to install their antenna gadgets in a room for receiving live telecast on the ongoing matches. For cricket betting operations they were use special decoders which give them live streaming without any breakup on account of advertisements and they were able to have advantage of around 5 to 10 second. The annual payment for three decoders which were being used by them was Rs 65,000 and provided by one Sanjay of Delhi.”

At that time Sony was the official broadcaster of the IPL, but it strangely never initiated any criminal proceedings against any of the accused.

In the Indore case, the alleged kingpin of the racket is one Amit Majithia, who is based in Adipur in Gujarat’s Kutch. But during the raids, he was operating from Dubai and he is still there.

A look-out notice has been issued against him and two other accused.

<b>HEADLINE</b>	<b>06/22 Europol busts e-commerce fraud ring</b>
<b>SOURCE</b>	<a href="https://teiss.co.uk/news/europol-busts-e-commerce-fraud/">https://teiss.co.uk/news/europol-busts-e-commerce-fraud/</a>
<b>GIST</b>	In a significant setback to the multi-nation cyber crime mafia that has been carrying out financial fraud on a large scale, Europol announced yesterday that it arrested as many as 95 fraudsters earlier this month for

	<p>carrying out fraudulent transactions exceeding EUR 8 million (£7 million).</p> <p>Fraudsters arrested by Europol in a joint operation with police forces and the banking industry in over 28 countries carried out over 20,000 fraudulent transactions using compromised credit cards but were caught after Europol teamed up with merchants, logistics firms, financial institutions and analytical companies to determine their identities.</p> <p>"The main goal was to target online fraud through a coordinated law enforcement action within the European Union (EU) and beyond, followed by an awareness-raising campaign. This action also marks the start of several investigations with more arrests expected in the next few months," said Europol in a press release.</p> <p>"The e-commerce action combats card-not-present fraud, aiming for a safer online environment for customers worldwide by sharing information and developing best practices between law enforcement and the private sector," it added.</p> <p>"The success of these operations shows how through close cooperation with our European partners, retailers and the financial sector, we are cracking down on the criminal gangs targeting consumers online. People should remember when shopping online that if an offer seems too good to be true, it probably is," said Glyn Whittick, head of the UK's Dedicated Card and Payment Crime Unit (DCPCU).</p>

<b>HEADLINE</b>	<b>06/23 Vietnam busts huge online gambling ring</b>
<b>SOURCE</b>	<a href="https://e.vnexpress.net/news/news/vietnam-busts-another-multi-million-dollar-online-gambling-ring-3767719.html">https://e.vnexpress.net/news/news/vietnam-busts-another-multi-million-dollar-online-gambling-ring-3767719.html</a>
<b>GIST</b>	<p>The 12bet portal allegedly drew thousands of Vietnamese players with bets worth over \$26 million. Vietnam's cyber crime police announced on Friday they had busted an online gambling ring through the web portal 12bet.</p> <p>As part of the operation, police in Ho Chi Minh City have arrested and searched houses of Vo Van Nghia, Vo Van Hoa, Do Thi Tu Anh and Phan Thanh Hoang for organizing gambling.</p> <p>Another four suspects have also been summoned and had their houses searched for gambling. Police seized a total of over VND300 million (\$13,000) in cash, multiple computers and phones during the searches.</p> <p>According to the cyber crime police, the online gambling portal 12bet was launched in 2007 by a foreign company. The site has since attracted thousands of players in Vietnam with a variety of gambling games such as sports betting, online casino and online lottery.</p> <p>Players joining the site are required to create accounts and pay the operators real money through online banking in return for virtual currency, which they can spend on the gambling games.</p> <p>Vietnamese police first discovered the ring, which has netted a total of over VND600 billion (\$26.25 million) in transactions between the organizers and players, in early 2017.</p> <p>Police are conducting further investigations.</p> <p>The busting of this online gambling ring comes just three months after police announced the uncovering of another massive operation run by two major Vietnamese tech businessmen. Investigators found the gambling network started operating in April 2015, drawing around 14 million players and bets worth VND9.6 trillion (\$419.7 million), and earning the two masterminds VND3.2 trillion (\$140 million).</p> <p>Police arrested dozens of people, including Phan Van Vinh, former director of the General Police</p>

	Department under the Ministry of Public Security and Nguyen Thanh Hoa, former director of the ministry's cyber crime division, and seized over VND1 trillion (\$43.8 million).

<b>HEADLINE</b>	<b>06/22 Indonesia cyber-vigilantes on march</b>
<b>SOURCE</b>	<a href="https://www.asiasentinel.com/society/indonesia-cyber-vigilantes/">https://www.asiasentinel.com/society/indonesia-cyber-vigilantes/</a>
<b>GIST</b>	<p>With nearly 110 million people now online in Indonesia, there is growing concern about the pervasiveness of cyber-vigilantism and the threat to free expression, especially on religious matters.</p> <p>For instance, Zulfikar Akbar, a journalist at the sports newspaper Top Skor Daily, lost his job after using his Twitter account to criticize Ustaz Abdul Somad, a religious figure who was barred entry into Hong Kong, on Dec. 23 last year. Three days later, his workplace had received so many intimidating messages that the publication felt it could no longer keep him employed.</p> <p>Another was Fiera Iovita, a physician who uploaded a Facebook post in May of 2017 questioning the absence of Habib Rizieq, the leader of the fundamentalist Islamic Defenders Front, known by its Indonesian-language initials FPI, who fled the country ahead of charges of extramarital sex and saying if he was innocent, he should return to face charges. The post went viral. Three days later, she was ordered to take it down by the deputy director of the hospital where she worked and ended up being threatened on the street by white-clad figures believed to be connected to the FPI. At about the same time, another physician faced intimidation for a statement criticizing religious leaders.</p> <p>These cases demonstrate the extent to which vigilantism prevails in Indonesia despite the guarantees of free expression in Article 28 F of the 1945 Constitution of the Republic of Indonesia which reads “Everyone has the right to communicate and obtain information to develop their personal and social environment, and has the right to seek, obtain, possess, store, process and convey information by using any available channel types.”</p> <p>Of particular concern is a group calling itself the “Muslim Cyber Army,” 20 of whose members have been arrested for defamation, spreading false reports and racial and religious discrimination. The group, according to Future Directions International, an independent, not-for-profit strategic research institute, was formed two years ago after the government, growing concerned about Islamic terrorism, shut down several websites and social media accounts belonging to the FPI.</p> <p>Future Directions called it a “loose-knit group of tech-savvy conservative Islamic activists” that operate across Facebook, Twitter and WhatsApp among others, hacking “enemy” accounts and sending viruses to their communications devices, spreading news to its members and training its members with technology.</p> <p>“Members and followers are not limited to specific pages, however, and are spread across various affiliated groups such as Srikandi Muslim Cyber Army, the United Muslim Cyber Army, the Legend MCA and Muslim Coming.”</p> <p>What is potentially concerning, according to Future Directions, is the group’s public influence and the possibility of links between it and “certain prominent military and political figures.”</p> <p>The FPI itself has long been believed to act in extrajudicial operations for police, shutting down organizations the police deem to be troublesome.</p> <p>There is plenty of vigilantism in society without the need for electronic help. The country’s weak justice system encourages the tendency to take action where the law is ineffective. That particularly extends to social matters. In villages throughout Indonesia, it is hardly rare for cohabiting couples who aren’t married to be set upon by mobs, stripped naked and paraded through the streets. That happened last November to a Sumatra couple who were reportedly caught having sex.</p>

Such attacks have too often turned violent, according to the National Violence Monitoring System, established by the World Bank with support from the Korea Trust Fund for Economic and Peace-Building Transitions, which is seeking to strengthen the capacity of Indonesia's institutions to detect and respond to social conflict through data and analysis. According to its statistics, mob attacks by vigilantes increased by 25 percent in the seven years to 2014. \

The country's LGBT community has borne an outsize share of trouble from such vigilantes, according to Human Rights Watch, which last November called attention to humiliation of women on suspicion of being lesbians.

In an earlier report, Human Rights Watch said the rights of Indonesian sexual and gender minorities "have come under unprecedented attack... While lesbian, gay, bisexual, and transgender (LGBT) civil society groups had endured sporadic hateful rhetoric and violent attacks over the preceding three decades, they had been able to gain a foothold and increasing recognition as part of Indonesia's pluralistic society. And while no national laws specifically protected them against discrimination, the central government had never criminalized same-sex behavior."

In the growing atmosphere of religious conservatism, such minorities are in danger of their lives. Two gay men were flogged in Aceh in May 2016, Indonesia's first public caning for homosexuality, sparking a complaint by United Nations experts wrote to the Indonesian government expressing concerns about the abusive enforcement of Sharia against LGBT people in Aceh.

"Despite Indonesian leaders' frequent touting of the country's diversity and pluralism, many of Indonesia's minorities remain vulnerable to harassment, intimidation, and violence, a Human Rights Watch spokesman said. "Last weekend's detention of friends attending a birthday party is just the latest example of this. The government should condemn this vigilantism, but will Jakarta speak out?"

<b>HEADLINE</b>	<b>06/22 Healthcare facing mounting attacks</b>
<b>SOURCE</b>	<a href="http://www.modernhealthcare.com/article/20180622/TRANSFORMATION02/180629972">http://www.modernhealthcare.com/article/20180622/TRANSFORMATION02/180629972</a>
<b>GIST</b>	<p>A year after hackers unleashed the WannaCry and NotPetya ransomware, taking down healthcare organizations and other companies around the world, the healthcare industry still struggles to keep its systems secure.</p> <p>In the first six months of 2018, there were 154 breaches reported to the Office for Civil Rights, up 13% compared to the same period in 2017. There were 50 "hacking/IT" incidents specifically during that period in 2018, just two more than there were during the first six months of 2017.</p> <p>"There's definitely more healthcare-related breaches," said Bob Olsen, Navigant's director of cybersecurity. "The challenge is there are new vulnerabilities being discovered every day. It's a bit of a moving target.</p> <p>But there could be multiple factors behind those increases, cautioned John Riggi, senior adviser for cybersecurity and risk for the American Hospital Association and an FBI veteran. Organizations may simply be reporting breaches they wouldn't have reported in the past, or reporting breaches that happened years ago. That's what happened with LifeBridge Health, which in 2018 reported a breach of half a million patients that happened in 2016.</p> <p>Nevertheless, healthcare organizations are engaged in a constant battle against cybercriminals, Riggi and others said.</p> <p>The struggle peaked in May 2017, when hackers let loose the WannaCry ransomware, which encrypted data and demanded ransom in bitcoin in exchange for the decrypted files. The attack affected about 200,000 computers in 150 countries, including the UK, where the National Health Service's systems went</p>

down.

A little over a month later, hackers sent out another piece of ransomware, NotPetya, which took down Nuance and other companies. Nuance lost \$92 million in revenue due to the attack.

But ransomware attacks don't come from hacker organizations alone. "Nation-states are aggressively targeting healthcare and hospitals in particular," Riggi said.

Health systems have more to fear than their IT infrastructure going down. Breached data can end up on the dark web, where they're bought and sold. As more health data becomes available on those networks, prices have fallen. But the data is still useful to buyers, Finn said. People can aggregate health data and non-healthcare data from multiple sources, connecting people's health data with their financial information.

"They're using data in ways we don't even think of," he said.

Those risks have spurred hospitals and healthcare organizations to be more aggressive in their defenses, Riggi said. But their plight never ends. "With every counter-measure put in place by a hospital, the adversaries come forward with a counter-measure for that," Riggi said.

Part of the trouble is the speed—or lack thereof—with which healthcare organizations can react, Olsen said. "It's sort of like moving a big ocean liner—it just takes time."

Healthcare executives and security teams should prioritize protecting the most sensitive and critical data, including protected health information, Olsen said. That work includes an initial risk assessment and putting in place appropriate training policies, and patches.

Those assessments now need to be in line with HIPAA and the EU's GDPR. "It is a much broader and deeper regulation," said David MacLeod, Welltok's senior vice president, chief information officer, and enterprise CISO.

Healthcare organizations could also benefit by taking the hackers' perspective and conducting white-hat hacking to expose vulnerabilities. Even when health systems think they're well-prepared, they may still be hacked.

"The key is knowing when the breach has occurred, obtaining that knowledge in real time, and then having predefined plans for responding to the incident," MacLeod said.

For healthcare systems to succeed in protecting their data, they need to put someone in charge of information security, Olsen said. Too often, that role falls onto the chief compliance officer or chief privacy officer, who might not have cybersecurity backgrounds or not have time to dedicate to security, he said.

"If you don't have somebody in that role looking across the entire enterprise, it's easy to have a lot of blind spots," Olsen said.

There might be gaps between linked information systems, for instance. "When you connect, security IT really is like the old chain adage: Your security can be only as good as the weakest link in the chain," said David Finn, executive vice president of strategic innovation for IT consulting firm CynergisTek. One straightforward tactic is making sure all software is up to date and sufficiently patched, he said.

"In healthcare, we have a legacy problem with old hardware and software," he said. "That represents a huge risk."

At the core, cybersecurity is about actual people, security consultants said. "The best defense against cyber-adversaries is a culture of cybersecurity within an organization," Riggi said. "Ultimately, the entire staff and leadership of an organization should be considered part of the information security department."

	Everyone in an organization should also take into account the business implications of an attack, Finn said. "They have to understand that every time there's a breach or disruption, it costs them money."

<b>HEADLINE</b>	<b>06/22 New VEP board head appointed</b>
<b>SOURCE</b>	<a href="https://www.zdnet.com/article/white-house-picks-new-chief-to-overlook-cyber-weapons-group/">https://www.zdnet.com/article/white-house-picks-new-chief-to-overlook-cyber-weapons-group/</a>
<b>GIST</b>	<p>The White House has a new leader of a largely secretive government group that decides whether software and hardware vulnerabilities should be withheld from the public to help the government conduct cyber operations.</p> <p>Grand Schneider, the federal chief information security officer and senior director at the National Security Council, was named head of the Vulnerabilities Equities Process (VEP) board.</p> <p>The group determines if the government should withhold so-called zero day flaws, which are previously undiscovered security bugs that have not yet been patched. The government uses the board to decide which flaws it can use to conduct surveillance -- or to disclose to the public.</p> <p>But, in withholding the flaws for cyber-operations, companies and citizens can be left vulnerable if the vulnerabilities are discovered by others.</p> <p>The personnel shift, first revealed by Cyberscoop, comes after Rob Joyce, who previously oversaw the group, left his position to return to the National Security Agency.</p> <p>His role, the White House cybersecurity coordinator, was subsequently dissolved.</p> <p>It's been long believed that the government has been stockpiling software and hardware vulnerabilities, allowing the nation's intelligence agencies to remotely break into other computers, collect surveillance data, or to conduct espionage. Those suspicions were confirmed in 2016, when a Freedom of Information Request by the Electronic Frontier Foundation revealed the program.</p> <p>But the very existence of the process has been controversial. The Trump administration cast new light on the board's work after a cache of government hacking tools were stolen in 2016.</p> <p>The stolen tools enabled hackers to launch the wide-scale WannaCry ransomware attack. Other tools allowed NSA analysts to break into a range of systems, network equipment, and firewalls, and most recently, Linux servers, as well as a range of Windows operating systems. Companies scrambled to fix the vulnerabilities in the aftermath the WannaCry attack.</p> <p>Schneider has a long career history in government as a defense cybersecurity expert, said one former NSA staffer, but warned the VEP process requires an "offensive" security mindset.</p> <p>"If the default behavior of the VEP is to disclose a discovered vulnerability, I think we need someone at the helm that has offensive cyber experience advocating for the outliers," said Jake Williams, now principal consultant at Rendition Infosec.</p> <p>"The reality is that foreign intelligence shapes national policy -- and in many cases prevents conflicts. We need to use some vulnerabilities discovered to get that intelligence," he said in a tweet. "Offensive cyber experience is hard to come by, particularly at the senior levels."</p>

<b>HEADLINE</b>	<b>06/23 Hacks shutting down cities, countries</b>
-----------------	--

SOURCE	<a href="https://qrius.com/cyber-attacks-are-shutting-down-countries-cities-and-companies-heres-how-to-stop-them/">https://qrius.com/cyber-attacks-are-shutting-down-countries-cities-and-companies-heres-how-to-stop-them/</a>
GIST	<p>What if a cyber attack took over a government's IT network, bringing an entire nation to its feet? Does this seem like a far-flung scenario? It isn't. In April 2018, the small independent Caribbean nation of Sint Maarten faced a total public shutdown for an entire day. The previous month, the city of Atlanta was crippled by a ransomware attack that lasted two weeks and cost nearly \$3 million.</p> <p>In the US alone, Baltimore, Charlotte, Dallas and San Francisco have been victims of cyber attacks during the past year, following (ironically) a transition to smart city technology. Although the smart city concept has created more connected cities, the lack of cybersecurity preparedness often creates serious security vulnerabilities. So what can organizations seeking to advance to smart infrastructures, cloud networks and IoT environments do in the face of rising cyber threats?</p> <p>The cyber threat landscape is an immense challenge for security practitioners. Today's Chief Information Security Officers (CISOs) must contend with threats on multiple fronts, causing the perimeter to both expand and deepen in size. The jury's still out on whether cyber attacks are a bigger threat to mankind than nuclear war, but networks are certainly more vulnerable than ever. The FBI reports that more than 4,000 ransomware attacks occur daily, while other research sources state that 230,000 new malware samples are produced every day.</p> <p>The notorious attacks of the last few years have finally propelled cyber security to the top of the boardroom agenda, and raised the level of criticality to new heights. As a result, global security expenditure reached \$86.4 billion in 2017, with no sign of abating. On the contrary, Gartner forecasts that industry spend in 2018 will reach \$93 billion, as traditional security measures such as firewalls and anti-virus software prove to be inadequate.</p> <p>The volume and severity of attacks over the past year mean that in 2018, organizations are no longer asking if they can be attacked; rather, they are asking how they will be attacked. Realizing that the perimeter is rapidly diminishing, organizations are waking up to a reality where the security battlefield is playing out inside their network.</p> <p>A fading perimeter, combined with the transition to the cloud and deployment of myriads of IoT devices, mean that the attack surface is expanding. The risks for organizations are increasing greatly, as standards and policies fail to keep up. At this point, even consumers are worrying.</p> <p>The early viruses and worms that targeted networks have evolved into something altogether more powerful and problematic. These new attack vectors prefer to be slow and low, moving laterally within networks and often slipping in and out unnoticed, as though the entire network was fenceless. They are forcing organizations to step up their knowledge of cyberattacks and adopt new Tools, Tactics and Processes (TTPs) for defending their network from within.</p> <p>Advanced Persistent Threats (APTs) pushing the perimeter The most lethal vectors of attack today can often be attributed to APTs. APT refers to a network attack by a third party that gains unauthorized access and remains undetected for a lengthy period. APTs are renowned for their high level of sophistication, use of bespoke software back doors and zero-day vulnerabilities.</p> <p>An ominous trait of APTs is their 'persistence' factor, since advanced hackers seek to remain in the network undetected for a lengthy period, until they pursue their end goals. Today, APTs are particularly dangerous because of the strategic intent behind the bodies planning, funding and running them.</p> <p>These threat actors launch APTs at networks to access sensitive data and systems, creating a reputational and operational risk for their targets. They often take advantage of shadow IT loopholes, poor IT hygiene and human error. Today no network, irrespective of size or type, is immune to these attacks.</p> <p>The cybersecurity skill set crisis</p>

While hackers are gaining expertise and APTs are becoming more sophisticated, existing security controls are not keeping up. A growing shortage of security personnel is making matters worse. By the end of 2018, one to two million cybersecurity jobs could remain unfilled. About six million cyber security analysts will be needed, yet only four to five million will be available to fill these positions.

<b>HEADLINE</b>	<b>06/22 China escalates hacks against US</b>
<b>SOURCE</b>	<a href="https://www.wired.com/story/china-hacks-against-united-states/">https://www.wired.com/story/china-hacks-against-united-states/</a>
<b>GIST</b>	<p>IN 2015, THE United States and China agreed to a digital truce that banned hacking private companies to steal trade secrets. And though the agreement has been touted as a success, it hasn't stopped Chinese state-sponsored hackers from pushing the envelope of acceptable behavior. Moreover, it certainly hasn't slowed types of hacking that fall outside the purview of the accord. Lately, it seems, that means defense intelligence gathering.</p> <p>In recent weeks, Chinese hackers have reportedly breached a US Navy contractor that works for the Naval Undersea Warfare Center, stealing 614 GB of data about submarine and undersea weapons technology. Attacks in the last few months originating from China have also targeted US satellite and geospatial imaging firms, and an array of telecoms. The incidents highlight the clandestine but incessant hacking campaigns that continue reliably between the US and China.</p> <p>"China's actually backed off quite a bit on intellectual property theft, but when it comes to military trade secrets, military preparedness, military readiness, satellite communications, anything that involves the US's ability to keep a cyber or military edge, China has been very heavily focused on those targets," says David Kennedy, CEO of the threat tracking firm Binary Defense Systems, who formerly worked at the NSA and with the Marine Corps' signal intelligence unit. "And the US does the same thing, by the way."</p> <p>The submarine contractor breach, recently reported by the Washington Post, reflects this intense focus on bridging any technological advantage the US may have. It involved attacks in January and February that nabbed important data, albeit from an unclassified network. When taken together, though, the information would have amounted to a valuable snapshot of US cutting edge underwater weapons development, plus details on a number of related digital and mechanical systems.</p> <p>The attack fits into a known pattern of Chinese hacking initiatives. "China will continue to use cyberespionage and bolster cyberattack capabilities to support [its] national security priorities," US director of national intelligence Daniel Coats wrote in a February threat report. "The [Intelligence Community] and private-sector security experts continue to identify ongoing cyberactivity from China...Most detected Chinese cyberoperations against US private industry are focused on cleared defense contractors or IT and communications firms."</p> <p>This week, analysts from Symantec also published research on a series of attacks in the same category from November 2017 to April from a hacking group dubbed Thrip. Though Symantec does not go so far as to identify Thrip as Chinese state-sponsored hackers, it reports "with high confidence" that Thrip attacks trace back to computers inside the country. The group, which Symantec has tracked since 2013, has evolved to hide in plain site by mostly using prefab malware to infiltrate networks and then manipulating administrative controls and other legitimate system tools to bore deeper without setting off alarms. All of these off-the-shelf hacking tools and techniques have made Thrip harder to identify and track—which is likely the idea—but Symantec started to notice patterns in their anomaly detection scanners that ultimately gave these attacks away, and led the researchers to a unique backdoor that implicated Thrip.</p> <p>The researchers found evidence of intrusions at some southeast Asian telecom firms, a US geospatial imagery company, a couple of private satellite companies including one from the US, and a US defense contractor. The breaches were all deliberate and targeted, and in the case of the satellite firms the hackers moved all the way through to reach the control systems of actual orbiting satellites, where they could have impacted a satellite's trajectory or disrupted data flow.</p>

	<p>"It is scary," says Jon DiMaggio, a senior threat intelligence analyst at Symantec who leads the research into Thrip. "We looked at which systems they were interested in, where they spent the most time, and on the satellites it was command and control. And then they were also on the operational side for both the geospatial imagery and the telecom attacks."</p> <p>Though hacking for intelligence-gathering is a priority for all nations and can sometimes be mutually tolerated, Binary Defense Systems' Kennedy points out that it can also serve as a way to make a statement when two countries are at odds. He notes that it's not surprising to detect escalating hacking operations from China against the US given rising geopolitical tensions between the two countries about trade and increased tariffs. "Hacking can be used as a sign of force in a lot of cases to say 'hey, we're not happy and we're going to make you feel some pain,'" Kennedy notes. "They'll use that as a first step instead of having to send fighter jets or something."</p> <p>Though Chinese hacking was brought under control somewhat by the 2015 agreement, analysts say that China's nation state hackers have reorganized and retooled over the last few years to be even more stealthy and effective in their digital espionage operations. And recent attacks indicate that they are optimizing their plans to get the most valuable information they can out of each victim.</p> <p>"All of these pieces fit together," Symantec's DiMaggio says of Thrip. "It's not targets of opportunity; it's definitely a planned operation."</p>
<p><a href="#">Return to Top</a></p>	

## Terror Conditions

[Top of page](#)

<b>HEADLINE</b>	<b>06/25 Crowdsourcing terror in Indonesia</b>
<b>SOURCE</b>	<a href="https://www.mmtimes.com/news/crowdsourcing-terror-indonesia.html">https://www.mmtimes.com/news/crowdsourcing-terror-indonesia.html</a>
<b>GIST</b>	<p>In the wake of high-profile terrorist attacks in Indonesia, social media's role in violent extremism is once again under scrutiny. The 36-hour standoff on May 8 between inmates linked to the so-called Islamic State (IS) and prison officers at Mako Brimob (the detention centre of the Indonesian National Police Mobile Brigade on the outskirts of Jakarta) provides some clues on how extremists use social media, especially to 'crowdsource'.</p> <p>The term 'crowdsourced terrorism', whereby IS outsources the conduct of attacks to its followers and attempts to attract them to Syria, first emerged in 2014. Relevant cases include the knife attack in Leytonstone subway station in east London and the shooting in San Bernardino in the United States in December 2015. These events signalled what former US secretary of homeland security Jeh Johnson called an 'entirely new phase in the global terrorist threat'.</p> <p>Crowdsourcing refers to the open call for ideas, innovations and solutions from a large number of people. The driving force behind participation in crowdsourcing is the passion of a person or group of people who seek to contribute to a particular cause. Social media takes crowdsourcing to greater heights by allowing it to reach more people within a shorter amount of time. It also facilitates collaboration between individuals who are geographically distant.</p> <p>The Brimob inmates broadcast the standoff with prison officers through social media platforms. One inmate live-streamed a call for viewers to participate in jihad via Instagram, while showing a compatriot who had apparently died during the riot. Other videos showed the inmates posing with weapons seized from the police guards and pledging allegiance to IS. The IS-affiliated Amaq News Agency also picked up the story, and claimed responsibility while providing updates from the prison.</p> <p>Viewers appear to have heeded the social media posts. On May 10, a counterterror unit arrested four men who were suspected to have come from Tasikmalaya (five hours from Mako Brimob) to join the siege. Another man stabbed a Brimob officer in front of the detention centre soon after the end of the siege. The</p>

police also arrested two women for allegedly trying to stab police with scissors. These individuals claim that they were simply responding to calls on a Telegram channel to bring food to support the inmates.

#### Enabling sympathisers

The Brimob siege shows the willingness of extremist sympathisers to provide manpower and material support, provided that they are aware of how they can do so. Social media enables extremist supporters to gain information on the location of and updates on a given incident through posts, geolocation technology and search functions.

While conventional crowdsourcing employs public social media platforms, private platforms such as Telegram support the development of close social networks that are united by their investment in a specific cause. Behavioural studies on crowdsourcing show that intrinsic motivations (such as a desire to expand friendship networks and a love of the cause) are more influential than outward motivations (such as financial rewards) in encouraging voluntary participation.

Until the Brimob incident, few extremist sympathisers in Indonesia had responded to crowdsourcing in ways other than ideological agreement. Although some had translated ideological agreement to action, heeding the call to travel to Syria, very few instances of locally-conducted terrorist acts could be directly linked to social media posts. The Brimob siege, however, shows that under certain conditions militants can use social media to crowdsource personnel and material resources on national soil. Crowdsourcing over social media most likely succeeded in the Brimob incident because of the inmates' unexpected triumph in holding the prison officers hostage and taking control of the building.

Proposed solutions to prevent extremists from exploiting social media are struggling to keep up with current events. Encryption has become a point of legal contention between technology companies and security services in several countries, including Indonesia. Intelligence agencies in the United States are demanding that technology companies build backdoors to their encrypted apps that would allow authorities to monitor online communication and obtain chat transcripts. Apple famously rejected the FBI's request for access to the chat histories of the San Bernardino attackers in 2016.

#### App blocked for role in attacks

Indonesia's communications ministry blocked access to Telegram in July 2017 on the grounds that it was hosting extremist materials and facilitating the planning and coordination of terrorist attacks. After the terrorist attacks in Surabaya in May 2018, the ministry reported that it had removed as many as 3195 terrorist-related pieces of content from social media platforms.

Technology companies have pledged to work harder to remove terrorist-related content from their platforms. Telegram agreed to block extremist-related content and to create a team of Indonesian culture and language specialists to evaluate online material more accurately. Google has promised to step up monitoring of terrorist content on its video-sharing site YouTube.

But the efficacy of such moves is uncertain. The spontaneity of user-generated content means that its removal by social media platforms tends to be too slow. Technology companies typically rely on user reporting to identify extremist content, which is then relayed to human reviewers who decide whether the content violates the platform's policies. This process means that social media platforms can take anywhere between a few hours to weeks to take down problematic content, which may have been reposted on other platforms by then. Although some companies have begun using artificial intelligence to identify and take down extremist content, the technology is far from perfect.

**HEADLINE** 06/23 Israel: car-ramming attack injures soldiers

**SOURCE** <https://www.algemeiner.com/2018/06/23/three-wounded-in-suspected-car-ramming-attack-near->

	<a href="#">jerusalem/</a>
<b>GIST</b>	<p>Three Israeli soldiers were wounded on Saturday in a suspected car-ramming terror attack near Jerusalem.</p> <p>According to Israel Hayom, the incident took place in the area of Gush Etzion, a group of West Bank settlements in close proximity to Jerusalem. The site of the attack is near the Arab village of Kfar Husan, to which the attacking car apparently escaped. The attacker has not been apprehended.</p> <p>The three victims are reported to be conscious and in good to moderate condition, suffering from injuries to their lower bodies.</p> <p>Israel Hayom quoted the Israeli ambulance service Magen David Adom saying, “At 8:56pm a report was received at MDA Center 101 in the Jerusalem area about three young pedestrians injured by a vehicle near Kfar Husan. An IDF medical team is giving medical aid to three people who were lightly wounded.”</p> <p>Car-ramming has been a common tactic used by Palestinian terrorists for well over a decade.</p>

<b>HEADLINE</b>	<b>06/25 France: extreme far-right group plot</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/french-extreme-group-detained-attack-plot-56134339?">https://abcnews.go.com/International/wireStory/french-extreme-group-detained-attack-plot-56134339?</a>
<b>GIST</b>	<p>A group of people linked to France's extreme far-right has been arrested on suspicion of planning an attack.</p> <p>France's Interior Minister, Gerard Collomb, did not specify the target in his tweet late Sunday, but French media said the 10 people detained over the weekend are suspected of targeting Muslims. Le Parisien newspaper said potential targets included radical imams, Islamist prison inmates or veiled women chosen at random.</p> <p>There was a similar wave of arrests in October 2017, in which the suspected targets were believed to be migrants and mosques.</p>

<b>HEADLINE</b>	<b>06/24 Claim: no more US support Syria rebels</b>
<b>SOURCE</b>	<a href="https://www.stripes.com/news/middle-east/activists-us-tells-rebels-in-south-syria-not-to-expect-support-1.534550">https://www.stripes.com/news/middle-east/activists-us-tells-rebels-in-south-syria-not-to-expect-support-1.534550</a>
<b>GIST</b>	<p>BEIRUT — Syrian government forces advanced deeper into the southern province of Daraa on Sunday under the cover of airstrikes, entering new villages amid reports that the U.S. has told rebels not to expect an American intervention to defend them from the army’s offensive.</p> <p>Syrian government forces have been on the offensive in eastern parts of Daraa province for the past five days in an operation that aims to reach a main border crossing point with Jordan. The push comes two months after government forces regained control of eastern rebel-held eastern suburbs of the capital Damascus that freed thousands of government soldiers for the new battle in Daraa province.</p> <p>Opposition activists have been reporting for days that President Bashar Assad’s government has sent some of its elite units to the south, including the Republican Guards and the Tiger force that is commanded by Brig. General Suheil al-Hassan, who is widely known as Nimr, Arabic for tiger.</p> <p>The Britain-based Syrian Observatory for Human Rights and Daraa-based opposition activist Osama Hourani said that the U.S. has informed rebel groups in southern Syria that Washington will not intervene in the operations to defend them against the government offensive that is ongoing under the cover of Russian airstrikes.</p>

There was no immediate comment from Washington but if true, the decision would be a major reversal from earlier pronouncements.

The U.S. warned last month it would take “firm and appropriate measures” to protect a cease-fire in southern Syria if government forces move against rebels there. The region also has been a source of regional tensions between Iran and Israel in recent months.

“It is clear that since yesterday, the Russians and the (Syrian) regime have been given the green light to regain control of Houran,” Hourani said, referring to the region that includes Daraa, the nearby region of Quneitra and parts of Sweida province. “The proof is that after the rebels received the (American) message, Russian warplanes joined the battle.”

The U.S., Russia, and Jordan agreed last year to include Daraa in a “de-escalation zone” and to freeze the lines of conflict there. But the area has been tense following a series of recent Israeli strikes on Syrian and Iranian forces. Iran is a close ally of Assad, and its advisers are embedded with his troops.

Syrian state news agency SANA said Sunday that troops made territorial gains in al-Lujat and other areas including the village of Jadal on the eastern edge of Daraa province.

Russia’s Defense Ministry said some rebels voluntarily have joined forces with Syrian government forces, adding that Syrian troops repelled an attack by al-Qaida-linked fighters in Daraa.

State news agency SANA said that rebels shelled the southern government-held city of Sweida, wounding three people.

The Observatory said government forces reached the rebel-stronghold of Busra al-Harir, where fighting is ongoing inside the town.

In an interview aired Sunday, Assad said Syria has not possessed chemical weapons since it got rid of them five years ago and that allegations of their use are a pretext for invasion by other countries. Assad’s comments came in an interview with Russia’s state-controlled NTV television channel.

“We fully eliminated chemical weapons. We haven’t had them in Syria since 2013,” Assad said in the interview.

Syria has been charged repeatedly with using chemical weapons in its civil war, most recently in April in the town of Douma. The U.S., France and the United Kingdom launched airstrikes in retaliation.

“Americans constantly lie and attack immediately,” Assad said in the interview.

Assad said reconstructing Syria after the devastation wrought by the war could cost \$400 billion, but said “we have enough means to restore our country, we are sure about that” and that funds could be sought from the Syrian diaspora.

<b>HEADLINE</b>	<b>06/24 Yemen: fighting nears main port city</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-yemen-security/fighting-moves-closer-to-center-of-yemens-main-port-city-idUSKBN1JK05N">https://www.reuters.com/article/us-yemen-security/fighting-moves-closer-to-center-of-yemens-main-port-city-idUSKBN1JK05N</a>
<b>GIST</b>	ADEN (Reuters) - Yemen’s Houthis deployed additional forces in the main port city of Hodeidah on Sunday as a Saudi-led military coalition moved closer to the city center in the largest offensive of the war, raising U.N. fears of a humanitarian catastrophe.  The alliance led by Saudi Arabia and the United Arab Emirates launched its assault on the heavily

defended Red Sea city on June 12 to try to weaken the Iran-aligned Houthi movement by cutting off a key supply line for the group which controls the capital Sanaa and most populated areas.

“There is a heavy deployment of armed Houthis in the city and new check points have been set up in neighborhoods where there are supporters of the Tehama brigades,” said one resident, referring to a Yemeni faction from the Red Sea coastal plain that is fighting with coalition forces.

Fierce clashes broke out after midnight near Hodeidah University, around 3 km (1.9 miles) west of the city center, on the coastal road linking the airport to the port, added the resident, who requested anonymity.

Coalition forces seized the airport on Wednesday and have been consolidating their hold in the area as U.N. efforts continued to reach a political deal that would avert an assault on the port, a lifeline for millions of Yemenis.

The United Nations fears the escalation in fighting could exacerbate what is already the world’s most urgent humanitarian crisis, with 22 million Yemenis dependent on aid and an estimated 8.4 million believed to be on the verge of starvation.

<b>HEADLINE</b>	<b>06/23 Tax dollars on Afghan road to nowhere</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/world/afghan-highway-barely-built-after-12-years-millions-u-s-n885731">https://www.nbcnews.com/news/world/afghan-highway-barely-built-after-12-years-millions-u-s-n885731</a>
<b>GIST</b>	<p>Call it the road to nowhere.</p> <p>A highway in Afghanistan, partly funded by U.S. taxpayer dollars, is largely unbuilt after 12 years of construction work according to inspectors who say it might never be completed.</p> <p>The 145-mile section of road, from Qeysar in northern Faryab province to Laman in western Badghis province, was supposed to form part of the country’s orbital freeway — a major economic thoroughfare connecting major cities.</p> <p>But only 15 percent of the expressway is finished, even though one-third of the budget has been spent.</p> <p>Auditors blame the country’s increasingly dire security situation, as well as more conventional problems such as local contractor incompetence.</p> <p>At least 19 workers on the project have been abducted and one of them killed, according to a report published Thursday by the Special Inspector General for Afghanistan Reconstruction (SIGAR).</p> <p>Remembering Charles Krauthammer, a man who shaped the views of a generation of conservatives The violence is so bad that Afghan officials are struggling to find any bidders willing to work on the road, SIGAR found.</p> <p>The Taliban controls 14.5 percent of Afghanistan’s districts — the highest level recorded in recent years, and the country is plagued by attacks and bombings by ISIS and the Taliban that have claimed hundreds of lives.</p> <p>The U.S.-led coalition “will continue” to fight militants, Defense Secretary Jim Mattis said last month, in a campaign to push the Taliban to the peace table. Indeed, the Taliban announced a brief cease-fire earlier this month to coincide with the end of Ramadan.</p> <p>The U.S. has spent more money reconstructing Afghanistan than it did rebuilding Europe at the end of World War II. It's part of a wider aim among allies to improve regional security and reduce terrorism — but a separate SIGAR report published in May concluded that the 15-year, \$5 billion U.S. effort hasn't</p>

	<p>worked.</p> <p>Washington is the second-biggest contributor to the Asian Development Bank, which allocates reconstruction funds. The bank has authorized \$721 million for the Qeysar to Laman road since 2006, of which \$249 million, had been spent by the end of 2017.</p> <p>The project has been dogged by so many problems that there was no physical progress at all from March 2014 through September 2017, SIGAR found. In fact, the delay “almost certainly eroded much of the limited work that had been completed prior to that period,” it said.</p> <p>One contractor was fired after it failed to construct a single inch of highway over a three-year period but left \$25.5 million in outstanding payments to subcontractors.</p> <p>“While we hope for success, we are left without any indication that the circumstances have improved sufficiently to warrant a high degree of confidence that the project will be completed, that more money will not be wasted, or that more security incidents will not occur,” SIGAR said.</p> <p>Many other taxpayer-funded projects have ended in similar failure, such as the Pentagon’s purchase of \$28 million worth on forest camouflage uniforms for the Afghan army that proved useless in the local desert, and a \$36 million military command facility that has never been used.</p>

<b>HEADLINE</b>	<b>06/24 Russia airstrikes hit southwest Syria</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/russian-airstrikes-hit-southwest-syria-breaking-a-ceasefire-deal-1529853026">https://www.wsj.com/articles/russian-airstrikes-hit-southwest-syria-breaking-a-ceasefire-deal-1529853026</a>
<b>GIST</b>	<p>The Syrian regime's main military ally, Russia, carried out airstrikes Sunday in the country's southwest, defying a cease-fire pact with the U.S. and Jordan, as forces aligned with President Bashar al-Assad pushed to capture one of the last opposition strongholds.</p> <p>The Russian strikes, which have been accompanied by regime barrel bombs and mortar shells, are the latest signs of the high-stakes military maneuvers unfolding in a volatile corner of southwest Syria. Forces aligned with President Assad have threatened a ground offensive, dropping leaflets that demand the surrender of rebels in the area. At least five civilians have been killed in the bombardment, which also destroyed a hospital and emergency rescue center, according to antigovernment activists.</p> <p>For weeks, the U.S. has warned the Syrian regime not to violate a cease-fire agreement brokered last year with Russia and Jordan that stretches across the Syrian provinces of Daraa and Quneitra.</p> <p>But the U.S. appears intent on not getting dragged into a confrontation between the rebels and Mr. Assad's Russian and Iranian-backed forces. On Saturday night, as Russian airstrikes were beginning, U.S.-allied</p>

rebels were told by the Americans not to expect a military intervention on their behalf, according to several rebel commanders.

“The Russian intervention is a flagrant violation of the de-escalation deal,” said Saber Sifer, the political representative of one of Daraa’s largest rebel groups. “They are aware that the regime is not capable of advancing on its own. The airstrikes are targeting civilians and they are trying to intimidate them,” he added.

A Jordanian government official said his country will take the necessary measures to protect its security and is in contact with the all parties to achieve that.

Syria’s pro-regime media said Sunday that government-aligned forces have already captured several rebel-held towns. More than seven years of war have depleted the Syrian regime’s ranks, forcing President Assad to rely on his foreign allies to help claw back swaths of territory lost to rebels. Russia’s direct intervention in late 2015 on behalf of the regime turned the tide of the conflict and Iranian-backed ground forces have seized on the momentum.

In recent weeks, the Syrian regime has disguised Iranian and Iranian-backed foreign fighters as its own by switching uniforms and having them raise Syrian flags, according to multiple rebel commanders and a person briefed on the matter. The battlefield feint is meant to avoid more Israeli airstrikes against Iranian targets in Syria.

U.S. officials say that it remains unclear whether the airstrikes are a prelude for a major offensive to capture the area and instead could be an attempt by President Assad to pressure the U.S. and Jordan to agree to a new diplomatic arrangement, one that would allow the Syrian regime to re-exert its control over the area without a battle.

One Western diplomat in the region said there is consensus that the regime taking control of the southwest was a foregone conclusion and that it would happen with less violence than previous opposition defeats. Battles for control of Homs, Aleppo and the Damascus suburb Eastern Ghouta were won primarily through regime sieges coupled with intense airstrikes, killing hundreds of people and resulting in humanitarian crises as food and medical supplies dwindled.

The United Nations has also warned of the humanitarian and regional effects of a battle in Syria’s south, and says around 6,000 civilians have already fled their homes near the front lines.

Numerous bilateral meetings have been held recently between nations with vested interests in the events unfolding in Syria’s southwest.

And a summit between President Donald Trump and President Vladimir Putin is likely to happen in the coming weeks. The U.S. has told Moscow that increasing violations of the southwest cease-fire agreement wouldn’t create a positive atmosphere for such a meeting.

Many of Syria’s southern rebel factions once received military and logistical aid from the U.S. and its allies. Those shipments of weapons ceased when President Trump ended the covert CIA program last year.

Rebel groups have said they are still committed to the cease-fire agreement but have vowed to fight against a regime offensive.

In the months leading up to this weekend’s airstrikes, Russia vowed not to carry out airstrikes in support of a military offensive in the south. But those promises appear to have been broken by the strikes, which began Saturday night while an Iranian presence in Syria’s southwest threatens to inflame tensions with Israel.

In recent discussions between Israel and Russia, Israeli leaders including Prime Minister Benjamin Netanyahu have sought assurances that Moscow will keep Iran and its proxies away from its border. Yet

Israel is also aware of the Iranian-backed militias disguising themselves as Syrian soldiers, raising the question of whether Israeli forces are willing to attack these positions themselves or wait to see whether the U.S. intervenes before taking military action, according to Amos Yadlin, a former head of Israeli military intelligence and now head of the Tel Aviv-based Institute for National Security Studies.

“The main question,” he said, “is whether Israel will adopt a precision active approach or a passive approach.”

<b>HEADLINE</b>	<b>06/22 Top Iran official: US created ISIS</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/america-created-isis-top-iranian-official-claims-990634">http://www.newsweek.com/america-created-isis-top-iranian-official-claims-990634</a>
<b>GIST</b>	<p>A senior aide to Iran’s Supreme Leader Ayatollah Ali Khamenei has claimed that the U.S. was behind the creation of ISIS and other extremist groups in Syria.</p> <p>Speaking to reporters in Tehran, Ali Akbar Velayati also warned that America’s involvement in the country could prove bloody, the official state Fars news agency said.</p> <p>“The Americans themselves have created the ISIL [ISIS] and the al-Nusra in Syria and now they have come onto the scene and occupied Eastern Euphrates,” Velayati said.</p> <p>This is not the first time an Iranian official has levelled the allegation at the U.S. In March, Khamenei himself claimed America had spawned the terror group to distract the world from the actions of Israel.</p> <p>The conspiracy theory is popular in the Middle East. A 2016 poll showed that one third of Iraqis surveyed believed the U.S. supports terrorism in general or ISIS specifically.</p> <p>The group originated from a merger of Sunni Muslim militant groups that had been formed to oppose the American occupation of Iraq. The merger included al-Qaeda in Iraq, which later broke away from the central leadership and morphed into ISIS.</p> <p>Many of ISIS’ eventual leaders met at Camp Bucca, an American military prison in the south of Iraq. Influential jihadi militants and former Ba’athists used their shared confinement to form alliances and create a blueprint for the group that would rampage across Iraq and Syria a decade later.</p> <p>As the group overran Iraqi positions in 2014, ISIS fighters seized huge amounts of American-made weapons and vehicles. Images of ISIS troops attacking Syrian regime positions using Humvees and M-16 rifles seemed to lend weight to the otherwise unfounded suggestions the Pentagon was directly arming the group.</p> <p>As the war in Syria progressed, the U.S. poured money and weapons into Syria to supply more “moderate” rebel groups. As these forces were absorbed or defeated by more extremist groups like ISIS and al-Nusra—a Syrian al-Qaeda offshoot—jihadis found themselves armed with even more American hardware.</p> <p>President Donald Trump has done little to dispel the myth of direct American support for ISIS since he took office. On the campaign trail in 2016, Trump claimed—without providing any evidence—that President Obama and then-Secretary of State Hillary Clinton co-founded the group and that ISIS “honors” the former president.</p> <p>Velayati also warned that if U.S. troops remain in Syria, the country will become “another Vietnam.” There are approximately 2,000 American soldiers currently in the country working as advisors to local Kurdish and Syrian militias. It is unclear how long they will remain stationed there for.</p> <p>Iran is currently facing pressure to remove its own forces from Syria. Tehran has become one of President Bashar al-Assad’s most important allies and has built a significant military presence. Iranian troops and</p>

	<p>positions have been targeted several times by Israeli airstrikes as the country attempts to roll back Tehran's growing influence.</p> <p>There were reports on Thursday that Hezbollah—the Lebanese militia backed by Tehran—and Iran had begun drawing their forces back from the Israeli and Jordanian borders at the request of Russia, the most significant international backer of the Assad regime.</p>

<b>HEADLINE</b>	<b>06/24 MI5 alert: jihadi leaders set for release</b>
<b>SOURCE</b>	<a href="http://www.dailymail.co.uk/news/article-5878333/MI5-terror-alert-five-jihadi-leaders-linked-London-Bridge-attack-set-let-jail.html">http://www.dailymail.co.uk/news/article-5878333/MI5-terror-alert-five-jihadi-leaders-linked-London-Bridge-attack-set-let-jail.html</a>
<b>GIST</b>	<p>Police and security chiefs fear the high command of an extremist group that inspired a generation of jihadis will soon be free again to preach hate on Britain's streets.</p> <p>Five senior figures in Al-Muhajiroun, whose former members include London Bridge attacker Khuram Butt and Michael Adebolajo, one of Fusilier Lee Rigby's killers, are expected to be released from prison by the end of the year.</p> <p>Among them is Anjem Choudary, who is due for release in October having served less than half of a five-and-half-year sentence for inviting support for IS.</p> <p>It is understood that Choudary, 51, will be kept under curfew in a taxpayer-funded safe house in North London and prevented from spouting extremist views.</p> <p>But astonishingly, no such restrictions are in place for the others.</p> <p>According to a source, MI5 and the police fear that, buoyed by the 'street cred' of serving prison terms, they will set up recruitment stalls in areas such as London and Luton.</p> <p>Up to 80 of the 193 people convicted of terrorism offences between 2007 and 2016 will be eligible for release this year – a situation described as a 'concern' by Home Office Minister Ben Wallace.</p> <p>Choudary is suspected of inspiring at least 100 British jihadis and is denied access to fellow inmates by being kept in a 'prison within a prison' at HM Frankland in County Durham.</p> <p>Once released, it is understood he will be allowed to visit his family in Ilford, East London, during the day but must return to the safe house at night.</p> <p>He will be under 24-hour surveillance and prevented from preaching in person or on the internet.</p> <p>But Choudary's right-hand man, Mohammed Mizanur Rahman, 34, of Whitechapel, East London, who was also convicted of inviting support for IS and is likely to be released in October, faces fewer restrictions.</p> <p>A source claimed Rahman, whose lectures included the condoning of the beheading of British aid worker Alan Henning by IS in Syria, will be able to meet fellow ALM members and preach in public.</p> <p>It is understood the same freedom will be available to Mohammed Ishtiaq Alamgir, 38, the leader of ALM in Luton who is expected to complete his sentence in December for a terrorism offence, and Rajib Khan, 39, also from Luton, who was released earlier this month after completing a five-year jail term.</p> <p>The other ALM members expected to leave prison before the end of the year are Taha Hussain, 21, of Slough, Berkshire, and Mijanul Haque, 23, of Islington, North London.</p>

	<p>Hussain was a friend of Butt and was filmed beside him in the Channel 4 documentary the Jihadis Next Door in 2016.</p> <p>ALM recruitment drives often involved setting up stalls in areas with large Muslim communities.</p> <p>Once enlisted, recruits were taken to secret meetings where jihad was discussed openly.</p> <p>Scotland Yard said it could not comment on individual cases but ‘police and the intelligence community are working tirelessly and at pace to confront the terrorist threat’.</p>

<b>HEADLINE</b>	<b>06/22 UK: woman jailed for aiding plot</b>
<b>SOURCE</b>	<a href="https://www.independent.co.uk/news/uk/crime/isis-plot-all-women-terrorism-act-prison-sentence-islamic-state-uk-westminster-london-a8411701.html">https://www.independent.co.uk/news/uk/crime/isis-plot-all-women-terrorism-act-prison-sentence-islamic-state-uk-westminster-london-a8411701.html</a>
<b>GIST</b>	<p>A woman who helped a friend train for a knife attack at her house has been jailed for failing to alert police to the terror plot.</p> <p>Khawla Barghouthi is one of four members of Britain’s first known all-female Isis cell, which planned an atrocity in Westminster before being thwarted by security services.</p> <p>She was sentenced to two years and four months imprisonment by a judge who said she “failed to disclose information about an imminent attack in which a knife would be used to endanger the life of multiple individuals”.</p> <p>After being released, Barghouthi will face being deported to Tunisia, which she left for Britain with her family a decade ago.</p> <p>The Old Bailey heard how the 21-year-old was friends with Rizlaine Boular, who was to carry out the attack, and let her practice stabbing victims at her home in northwest London.</p> <p>Armed police made their move on 27 April last year after listening in on a conversation where the pair laughed and joked about Boular’s fears that she might “flop so badly” and cut her arm by accident.</p> <p>“How are you going to do it? What if they are faster than you?” Barghouthi was recorded saying, before Boular said she hoped “Allah gives me a heart attack” if she got tasered or shot by police.</p> <p>“Don’t worry come here, want to practice on me again?” Barghouthi responded, before the pair started trying different stabbing techniques.</p> <p>Rizlaine Boular, 22, took over her sister’s terror plot after she was arrested and charged (Metropolitan Police)</p> <p>Shortly afterwards, counter-terror police raided her home and arrested her, shooting Boular as she shouted “f*** you”.</p> <p>Boular has been jailed for life and her mother Mina Dich was sentenced to six years and nine months imprisonment for aiding her daughter’s plot, which was referred to as a “tea party” in coded phone calls.</p> <p>They had taken over plans originally started by Boular’s teenage sister, Safaa, who was arrested for trying to join Isis in Syria before she could carry out her own plans to attack the British Museum.</p> <p>Barghouthi, who is married and was studying at the Open University, claimed that she did not believe the plot was serious.</p>

When questioned on her recorded conversations with Boular, she told the Old Bailey: “I did not believe the person I was with was actually going to go through with anything.

“When I read the transcript I was horrified how it sounds. What I can say, at the time it was extravagant talk and very stupid fooling around.”

But Judge Mark Dennis QC said the discussions showed Barghouthi did believe her friend intended to go ahead with the violence and did nothing to put her off, noting that she possessed extremist material herself.

“There was a growing awareness over a number of days of the nature of the attack by Boular,” the judge added.

“There is no reason, in my view, to doubt that Boular intended to carry out her violent action, even at the cost of her own life.”

Barghouthi previously pleaded guilty to having information about acts of terrorism contrary to section 38 of the Terrorism Act.

Deputy Assistant Commissioner Dean Haydon, of the Metropolitan Police, said: “Working with the security services, we tracked their plans and stopped them before they were able to put them into practice.

“All three women [Rizlaine Boular, Safaa Boular and Mina Dich] were filled with hate and toxic ideology and were determined to carry out a terrorist attack. Had they been successful, it could well have resulted in people being killed or seriously injured.

“But thanks to the work of the security services and counter-terrorism police, their plans never came to fruition.”

Safaa, who at 18 is Britain’s youngest known female terror plotter, will be sentenced at a later date for preparing acts of terrorism.

<b>HEADLINE</b>	<b>06/23 Iraq attacks ISIS leaders meeting Syria</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/06/23/world/middleeast/iraq-syria-isis.html">https://www.nytimes.com/2018/06/23/world/middleeast/iraq-syria-isis.html</a>
<b>GIST</b>	<p>BAGHDAD — The Iraqi military said on Saturday that it had launched an air attack on a gathering of Islamic State leaders in neighboring Syria, killing about 45 members of the militant group.</p> <p>Fighter jets were said to have destroyed three houses on Friday that were connected by a trench in the town of Hajin, just across the border in eastern Syria, where the leaders were apparently meeting.</p> <p>Those killed included high-profile targets such as the Islamic State’s so-called deputy war minister; one of the group’s media gurus; the personal courier of the group’s leader, Abu Bakr al-Baghdadi; and its chief of police, the Iraqi military said in a statement.</p> <p>The Islamic State, also known as ISIS, ISIL or Daesh, which once occupied a third of Iraq’s territory, has largely been defeated in the country, but it still poses a threat along the border with Syria.</p> <p>“Iraqi F-16 jets carried out a successful airstrike that targeted a meeting of Daesh leaders,” the Iraqi Joint Operations Command said, adding, “The operation resulted in the complete destruction of the targets, and the killing of around 45 terrorists.”</p> <p>The Iraqi military has carried out several airstrikes against the Islamic State in Syria since last year, with the approval of the government of President Bashar al-Assad of Syria and of the United States-led coalition fighting the militants.</p>

	Iraq has relatively good relations with Iran and Russia, Mr. Assad's main backers in the Syrian war, and also enjoys strong support from the American-led coalition.

<b>HEADLINE</b>	<b>06/24 Pakistan Taliban's new leader</b>
<b>SOURCE</b>	<a href="https://www.thenational.ae/world/asia/pakistan-taliban-s-new-leader-faces-challenge-to-keep-militants-together-1.743688">https://www.thenational.ae/world/asia/pakistan-taliban-s-new-leader-faces-challenge-to-keep-militants-together-1.743688</a>
<b>GIST</b>	<p>The militant commander and scholar appointed chief of Pakistan's Taliban movement has inherited an organisation that analysts say is in need of a revival having become increasingly fragmented.</p> <p>Mufti Noor Wali Mehsud immediately became Pakistan's most wanted man when the Tehreek-e-Taliban Pakistan (TTP) announced on Saturday he would succeed Mullah Fazlullah, who was killed by a US drone strike earlier this month.</p> <p>The appointment of the 39-year-old – known for his religious education and his squint – returns control of the movement to the Mehsud tribe of South Waziristan, where their terror campaign started more than a decade ago.</p> <p>Militant sources last night said his leadership would have to overcome competing internal factions, and the likely prospect of defections to the patchwork of other extremist groups straddling the border between Pakistan and Afghanistan. The cash-strapped TTP is also struggling to mount operations in Pakistan after fleeing across the border from army campaigns against them.</p> <p>The group finally announced the killing of Fazlullah more than a week after the first reports of his assassination in an American drone strike on June 13 in Afghanistan's Kunar province.</p> <p>A group statement said its former emir had been "a person of strong and high determinations and religious beliefs and was headache for the slaves of US in Afghanistan and Pakistan".</p> <p>Fazlullah became the third consecutive head of the TTP to be killed by a US drone strike, but the group said it was proud its leadership "is being martyred by the head of the infidels".</p> <p>While Fazlullah rose to power on the back of fiery radio diatribes in his native Swat Valley, Mehsud rose up through the ranks in South Waziristan after fighting for the Afghan Taliban and studying in seminaries.</p> <p>Considered better educated than his predecessors, as well as acting as a Taliban judge he has also turned to books, last year publishing a 700-page history of Mehsud militants.</p> <p>A biography included in that book disclosed he had spent months fighting with the Afghan Taliban, firstly against the Northern Alliance north of Kabul in 1996 and then again after the September 11 attacks on the US, in 2001.</p> <p>After climbing the ranks of the Mehsud Taliban faction and then the TTP in South Waziristan, he took charge of operations in Pakistan's largest city and port of Karachi where his militants ran a kidnapping campaign to raise funds. His book also marked the first claim by the TTP that it had killed Benazir Bhutto at an election rally in December 2007, weeks before she was widely expected to be elected once again as Pakistan's prime minister.</p> <p>A source in the Pakistan Taliban described Mehsud as "a religious scholar and also the most brave military commander among the TTP leaders".</p> <p>With the Mehsud tribe making up the bulk of TTP footsoldiers, the leadership had returned to the tribe after four-and-a half years with Fazlullah, the source said. Mehsud's job would now be to reconcile tribal</p>

	<p>splinter factions.</p> <p>But a member of one of those factions said an immediate announcement to replace Fazlullah had not been made because the movement was "facing much internal rivalry".</p> <p>The source said: "The TTP is weak and there is fear of more splits due weak central command. Every unit is working independently and not listening to their central leader."</p> <p>The winners of any further disputes are likely to be other militant groups, particularly the regional franchise of ISIS.</p> <p>Saifullah Mahsud, president of the FATA Research Centre in Islamabad, said: "The TTP is a fragmented group. There's no central command as such. The fact is that most of the factions that go to make up the TTP operate independently of each other."</p> <p>"There's been a steady stream of TTP abandoning it and joining ISIS. That's what ISIS is made of largely, former TTP members.</p> <p>"I wouldn't be surprised if some of the people from Fazlullah's group switched to to go to Islamic State, rather than accept the leadership of Noor Wali."</p> <p>Mehsud's years fighting with the Afghan Taliban mean he apparently enjoys good relations with the groups, several sources said. That in itself could pose problems, a member of another militant group with close ties to the TTP predicted.</p> <p>"The TTP will further split into minor groups because the newly nominated emir is close to the Afghan Taliban, while many of the fighters have sympathies with ISIS. The TTP is very weak financially which is another reason for their splits."</p>

<b>HEADLINE</b>	<b>06/22 Fighting terrorism, money laundering</b>
<b>SOURCE</b>	<a href="https://www.nextgov.com/ideas/2018/06/3-ways-use-data-fight-terrorism-and-money-laundering/149043/">https://www.nextgov.com/ideas/2018/06/3-ways-use-data-fight-terrorism-and-money-laundering/149043/</a>
<b>GIST</b>	<p>The increased severity of domestic security breaches due to terrorist threats and cyber crime poses a strategic challenge for federal and state security services. The strengthening of human resources, now widely deployed around the world, is not enough to meet the challenge alone. Increasing efficiency and speed, controlling the means of communication used by terrorists, but also, and above all, anticipating the lead-up to such actions, are all challenges that persist.</p> <p>In this mass information age, the ability to handle big data—huge volumes of structured and unstructured data—is absolutely crucial. Being able to analyze and extract key information in the fight against cybercrime as quickly as possible will revolutionize the work of organizations mobilized in this struggle. To increase efficiency, they must expand the data sources examined and optimize the interoperability between their systems.</p> <p>Cognitive search and analytics technologies are all about accessing the right information at the right time—for people with the necessary authorization. These tools process big data in near real time to surface patterns and relationships among disparate silos of information. Intelligent data processing combined with machine learning enables computers to learn as they process information to deliver increasingly relevant information. These tools can further the operational efficiency of intelligence services and have the potential to exponentially increase their predictive analysis capacities.</p> <p>Using these tools to become information-driven can help with the fight against terrorism, money laundering and fraud. Here are a few examples:</p>

### Analyzing Text

Cognitive search and analytics tools enable data to be interpreted and similarities in topics and content to be detected, even across disparate vocabularies. They automate and accelerate the creation of networks mapping people, topics, locations, etc., while helping security services identify criminal activity. Even in the case of "lone wolves," it is possible to draw upon the traces inevitably left on the internet or the dark net to detect behavioral patterns, and thus prevent them moving toward taking action.

### Cross Referencing Account, Card Numbers and Fund Transfers

Cognitive search and analytics technologies can also play a role in the fight against money laundering, which is one of the main sources of funding for terrorism. Investigators must accurately identify cyber criminals, drawing upon huge amounts of data in an extremely short period of time. Cognitive technology allows data—in particular financial data such as account and card numbers or fund transfers—to be automatically cross-referenced in order to identify fraudulent activity.

Sparse information can be precisely detected and combined for "mapping" purposes, tracing the links between suspects and movements of capital. Cognitive search and analytics draw upon this interaction mapping to detect traces of illegal activity and track them back to the perpetrators.

### Social Media Monitoring

Monitoring social networks to track organized crime is fundamental to the work of the intelligence services. They use open source intelligence, which includes all the intelligence obtained from public sources of information.

Recent terrorist attacks have shown that responsiveness is the key to effective surveillance. Monitoring social networks, discussion forums, blogs and other digital communication tools is an essential way of detecting radicalizing profiles and gaining real-time insights into potential threats. It allows for identification of behavior posing a threat to domestic security and anticipation of future attacks.

Using advanced technology that is cognitive, proven, and complete is increasingly vital for a modern intelligence service in its fight against terrorism, fraud and money laundering.

<b>HEADLINE</b>	<b>06/24 Search for Titanic: Cold War top secret</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jun/24/robert-ballards-titanic-search-a-cold-war-cover-st/">https://www.washingtontimes.com/news/2018/jun/24/robert-ballards-titanic-search-a-cold-war-cover-st/</a>
<b>GIST</b>	<p>The mission in 1985 was straightforward: Scour the depths of the Atlantic Ocean to locate the resting place of the Titanic.</p> <p>But even some members of the crew had no idea of the top-secret classification of their search or its true aim: to find and inspect the only two U.S. nuclear submarines lost during the Cold War.</p> <p>“We were able to pull it off under the noses of everybody,” said maritime archaeologist Robert Ballard, a former Navy Reserve officer who is credited with finding the legendary ocean liner that sank in 1912.</p> <p>“Titanic: The Untold Story,” a new exhibit at the National Geographic Museum, tells how the Navy directed Mr. Ballard to find two nuclear-powered attack submarines that had sunk in the 1960s: the USS Scorpion and the USS Thresher.</p>

In the 1980s, Mr. Ballard was working at the Woods Hole Oceanographic Institution, a nonprofit research outfit where he designed and created an unmanned robotic camera system capable of using sonar to scan the ocean floor. He called it the Argo.

The Navy turned down his 1982 request for funding for an Argo-led search for the Titanic. Instead, the naval service agreed to finance a reconnaissance mission for its lost submarines, after which Mr. Ballard could look for the sunken cruise ship. He was placed on temporary active naval duty and in charge of the civilian-manned, highly classified search.

“We had people aboard who were not cleared, and they literally were sitting above the Scorpion not knowing it for over a week while we were working in a room that was sealed off,” said Mr. Ballard, 75.

What happened to the Thresher was clear: All 129 on board died when it sank in 1963 during deep-diving trials. Still a mystery was the case of the Skipjack-class Scorpion. The Navy wanted to find out whether foul play was involved when the Scorpion sank in 1968 and whether the Soviets had been to the site and removed nuclear material from the sunken sub.

“What I discovered when I was mapping the Scorpion was that when it imploded, the current carried away the lighter material,” creating a long trail of debris, Mr. Ballard said. “I gambled that the same thing happened to the Titanic, and I thought, ‘Let’s not look for the Titanic. Let’s look for stuff that would have come off of it.’”

Using the Argo, the Ballard expedition discovered the wreck of the Titanic in 1985, the same year President Reagan and Soviet General Secretary Mikhail Gorbachev met for the first time in Geneva in the midst of the Cold War.

The following year, Mr. Ballard told the world that he and his team were building technology to go inside the Titanic and descend its grand staircase. That was a cover for another mission to determine whether the nuclear submarines had released radioactive contaminants into the ocean.

“Embedded in my team were naval personnel that many on our team didn’t know were naval personnel, but I was training them,” Mr. Ballard said.

The Cold War mission is not the only untold story in National Geographic’s latest display, which includes tales about the men and women who survived and died during the Titanic’s maiden voyage in April 1912.

There’s the “lucky” coat Marion Wright Woolcott wore when she stepped into a lifeboat. The young Englishwoman was traveling by herself on the White Star Line to be married in the United States. She was married in the coat she wore during her rescue, and she used it to make Bible covers for each of her three sons before they went off to fight in World War II. All three sons survived.

There’s a fragment from the toy pig Edith Russell clung to as the 1,178 lifeboat spaces for the 2,224 people on the sinking ship began to fill up. A sailor grabbed the pig from under Edith’s arm, said, “If you don’t want to be saved, I’ll save your baby,” and tossed the pig into one of the lifeboats. Thinking of her mother, who gave her the toy, Edith jumped down after it.

“It’s very visceral seeing these personal effects,” said Kathryn Keane, director of the National Geographic Museum. “Every time we open the book, we learn something new.”

HEADLINE	<b>06/24 UK tax agency recorded 5.1M voices</b>
SOURCE	<a href="https://www.bleepingcomputer.com/news/government/uk-tax-agency-recorded-the-voices-of-51-million-brits/">https://www.bleepingcomputer.com/news/government/uk-tax-agency-recorded-the-voices-of-51-million-brits/</a>
GIST	The UK's tax agency —HMRC (Her Majesty's Revenue and Customs)— has collected the voice records of

over 5.1 million Brits, a UK-based privacy and civil liberties group has discovered.

The HMRC collected these voice records via a new service it launched in January 2017. Called Voice ID, the service allows UK citizens to authenticate when calling HMRC call centers via their voice.

When it launched, the HMRC website claimed users would be able to opt out of using this feature and continue to authenticate and prove their identity via the usual methods.

But an investigation by privacy group Big Brother Watch has discovered that there's no opt-out option when calling the HMRC support line, and all callers were forced to record a voice track to use with the Voice ID service.

The only way to avoid creating a voice track was by saying "no" three times during the voice track creation process, something the privacy group's investigators discovered on their own. The process is detailed in the Big Brother Watch investigation.

Unfortunately, the Voice ID system didn't record this option, and it would pester the caller for a voice sample every time they called back.

Big Brother Watch members argue that the HMRC broke user rights by not providing a simple way of opting out.

Furthermore, after a very lengthy and complicated process, users can only opt out from using voice recognition for the authentication process, but users can't have their voice patterns removed from HMRC's database.

Big Brother Watch says it filed freedom of information (FOIA) requests, but HMRC officials refused to reveal how a user could delete his voice recording from HMRC's database. They also declined to reveal with what other third-parties and government agencies they share the voice records. The only detail HMRC officials disclosed was that Voice ID had over 5.1 million users at March 13, 2018.

The privacy group argues that HMRC is in clear violation of GDPR (an EU user privacy directive that's been enacted in the UK) by not prompting Brits for active consent and by not giving them an easy method of revoking consent and having their personal biometric data removed.

<b>HEADLINE</b>	<b>06/23 Russian soldiers occupy Transnistria</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/russian-soldiers-occupy-european-country-and-neighbors-are-trying-get-them-out-992855">http://www.newsweek.com/russian-soldiers-occupy-european-country-and-neighbors-are-trying-get-them-out-992855</a>
<b>GIST</b>	<p>The United Nations General Assembly passed a draft resolution Friday urging Russia to remove its troops from Transnistria, a contested piece of land the international community recognizes as part of Moldova.</p> <p>Moldova, a tiny country sandwiched between Ukraine and Romania in Eastern Europe, gained independence from the Soviet Union and was formally recognized by the United Nations in 1992.</p> <p>But the inhabitants of Transnistria, a tiny strip of land with around 500,000 Russian-speaking inhabitants, wanted a country of their own. They started an armed struggle for independence from Moldova that lasted until a ceasefire was called in July of 1992. Russian troops have been in Transnistria ever since.</p> <p>Moscow claims the troops are a peacekeeping force working to ensure that fighting doesn't break out again. And many of Transnistria's residents say they want the Russians to protect them, claiming that their unique identity would be under siege if they were to integrate fully with Moldova.</p>

<b>HEADLINE</b>	<b>06/25 'Mass hysteria' at e-cigarette plant</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/thermal-circuits-e-cigarette-plant-chlorine-leak-salem-massachusetts-hazmat-sick-workers/">https://www.cbsnews.com/news/thermal-circuits-e-cigarette-plant-chlorine-leak-salem-massachusetts-hazmat-sick-workers/</a>
<b>GIST</b>	<p>Fire and hazmat crews were still working late Sunday night to determine what sparked a panic and sickened about 30 people at an e-cigarette manufacturer in Salem, Massachusetts. A spokesperson for the state's fire services said a hazmat team was assisting the Salem Fire Department at the Thermal Circuits plant and that 15 people had been taken to local hospital while about 15 others made their way to hospitals themselves.</p> <p>A hazmat crew had entered the building and was trying to determine what caused so many to suffer breathing problems and nausea. Jennifer Mieth, spokeswoman for Massachusetts fire services, said the crews on the ground "do not believe that this is connected to an earlier chlorine leak in the building as that process was shut down and had not been restarted."</p> <p>Fire crews were initially called to the plant on Sunday afternoon to respond to that leak, but left saying nobody was injured and the leak had been addressed. Less than two hours after officials gave the all-clear, however, at about 8 p.m., they were called back to the facility to help people suffering from the symptoms described above.</p> <p>"There seemed to be a panic in the building" as workers began running out of the building, Salem Deputy Fire Chief Alan Dionne told CBS Boston. Dionne described it as "mass hysteria" as the employees rushed to get out of the building. CBS Boston said some 450 to 500 people were working at the time of the incident, and people started reporting symptoms not long after a shift change.</p> <p>An official at Salem Hospital told CBS Boston early Monday morning that 20 people were being treated for unspecified illness related to the incident.</p> <p>Acting Salem Fire Chief Gerry Giunta told CBS News later Monday that a total of 29 people were treated, including one who had suffered an apparent seizure and had been transported to a Boston hospital. The majority of the patients were treated and released but some, including the individual believed to have had a seizure, remained hospitalized.</p> <p>Firefighters said they did not detect any chlorine in the plant when they came back the second time. An investigation was expected to take place throughout the night and Mieth said more information would be available later Monday morning.</p> <p>When asked if the business would reopen on Monday, Dionne said the Thermal Circuits plant would "absolutely not" be reopening Monday morning.</p>

<b>HEADLINE</b>	<b>06/25 No NKorea anti-US imperialism rally</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/detente-sign-nkorea-holding-annual-anti-us-rally-56134615?">https://abcnews.go.com/International/wireStory/detente-sign-nkorea-holding-annual-anti-us-rally-56134615?</a>
<b>GIST</b>	<p>North Korea has opted not to hold an "anti-U.S. imperialism" rally marking the anniversary of the start of the Korean War, another sign of detente following the summit between leader Kim Jong Un and President Donald Trump.</p> <p>Last year's event was held on Pyongyang's Kim Il Sung Square with a reported 100,000 people attending. The North even issued special anti-U.S. postage stamps.</p> <p>But for the first time in years, no such rally was planned on Monday.</p>

	Fist-pumping, flag-waving and slogan-shouting masses of North Koreans normally join the annual rally that sets off a month of anti-U.S., Korean War-focused events designed to strengthen nationalism and unity. It all culminates on July 27, which the North celebrates as the day of "Victory in the Fatherland Liberation War."

<b>HEADLINE</b>	<b>06/24 Retailers experiment w/blue lights</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Health/wireStory/retailers-experiment-blue-lights-deter-drug-56119839?cid=clicksource_26_2_hero_headlines_bsq_hed">https://abcnews.go.com/Health/wireStory/retailers-experiment-blue-lights-deter-drug-56119839?cid=clicksource_26_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>Colored bulbs cast an eerie blue glow in the restroom of a convenience store where people who inject heroin and other drugs have been seeking the relative privacy of the stalls to shoot up.</p> <p>The blue lights are meant to discourage people from using drugs in store bathrooms by making it more difficult for them to see their veins. It's an idea that's been around for years but is getting a fresh look as a result of the nation's opioid epidemic.</p>

"The hardest-core opiate user still wants to be accurate. They want to make sure the needle goes in the right spot," said Read Hayes, a University of Florida researcher and director of the Loss Prevention Research Council, a retail industry-supported group that is looking at the lights' effectiveness. The purpose of the blue light is to "disrupt that process" and force people to go somewhere else to take drugs, he said.

Turkey Hill Minit Markets, a 260-store chain based in Lancaster, is one of two convenience store chains and a supermarket chain working with the loss prevention group to field-test the blue bulbs. Hayes, whose group devises methods to combat theft and violent crime at stores, said that the study is still in its infancy, but that initial feedback from stores that have been using them has been positive.

Earlier studies have questioned the lights' deterrent effect, with people who use opioids telling researchers they'd shoot up in blue light if it meant avoiding withdrawal symptoms. Many public health experts oppose the practice, saying blue lights make people more likely to hurt themselves and stigmatize those in the grips of addiction.

And, for people accustomed to injecting themselves, there are ways around the lights.

Someone in withdrawal who obtains heroin is "going to want to use as soon as possible, even if the location is not optimal," said Brett Wolfson-Stofko at the National Development & Research Institutes, who has studied injection drug use in public bathrooms.

Store owners say they have to do something.

Last fall, Sheetz, a convenience-store chain with more than 500 stores in six states, installed a new lighting system in the restroom of its New Kensington store, about 20 miles outside Pittsburgh. The blue lights are "designed to help our customers and employees avoid dangerous situations," said company spokesman Nick Ruffner.

Sheetz, he said, has seen "positive steps in the right direction," and has since installed the blue bulbs at a store in Huntington, West Virginia.

Some health experts encourage interventions that don't involve blue lights.

Installation of needle disposal containers can help protect store employees, the public and people who use drugs, while stall doors that swing outward can make it easier to reach someone who has overdosed and is in need of medical help.

Stores can also work with law enforcement, social service agencies and addiction services to tackle the problem — a step that Hayes, at the loss prevention council, said retailers are looking to take.

Retailers aren't the only ones experimenting with blue lights.

The city of Philadelphia began distributing kits to residents that include a blue bulb for the front porch, no-trespassing signs, a tool to pick up used syringes, a needle disposal box and contact information for social services.

The city — where overdose deaths, fueled by the powerful synthetic opioid fentanyl, surged more than 30 percent to 1,200 last year — has given out more than 100 kits since January.

HEADLINE	06/23 NKorea erasing anti-US propaganda
SOURCE	<a href="https://nypost.com/2018/06/23/north-korea-erasing-most-anti-us-propaganda/">https://nypost.com/2018/06/23/north-korea-erasing-most-anti-us-propaganda/</a>
GIST	Nix the nuclear warheads, cue the doves.

The North Korean government is erasing much of its anti-U.S. propaganda following dictator Kim Jong-un's forays onto the world stage.

Gone are the posters depicting the U.S. as a "rotten, diseased, pirate nation" and promising "merciless revenge" on American forces for an imagined attack on the totalitarian country.

In their place are cheery messages touting praising the prospects for Korean reunification and the declaration Kim signed in April with South Korean President Moon Jae-in promising "lasting peace," according to reports.

Still the most isolated country in the world, very few North Koreans have access to news and information from the outside world. So state propaganda plays a huge role in shaping their views.

Murals, banners and posters displayed throughout the capital, Pyongyang, have for decades depicted the U.S. as a brutal, imperialist aggressor hell-bent on destroying the North Korean regime. South Korea and Japan were also frequently targeted as willing allies of the U.S.

But things started to take an Orwellian turn in the run-up to Kim's June 12 summit with President Donald Trump, with the old posters vanishing since then.

"All the anti-American posters I usually see around Kim Il-sung Square and at shops, they've all just gone," Rowan Beard, a tour manager at Young Pioneer Tours, told Reuters. "In five years working in North Korea, I've never seen them completely disappear before."

Infamous posters and postcards showing North Korean missiles on their way to Washington are a thing of the past. Also removed are the anti-American trinkets that used to be sold to tourists as souvenirs. In their place are items showing themes of Korean reunification.

The change extends to the country's government-controlled media. News reports that once depicted the U.S. as hostile, and its involvement in places like Syria as proof of imperialism, are no longer critical. The Financial Times said the main newspaper, Rodong Sinmun, hasn't featured a direct attack on Trump since March, when he agreed to meet with Kim.

"This is fascinating," Peter Ward, North Korea expert and writer for NKNews, told the BBC. "Generally speaking, neutral or positive coverage is normally reserved for countries that Pyongyang has friendly relations with."

<b>HEADLINE</b>	<b>06/24 Dead bodies in Walmart stores nationwide</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jun/24/walmart-dead-bodies-nationwide-phenomenon/">https://www.washingtontimes.com/news/2018/jun/24/walmart-dead-bodies-nationwide-phenomenon/</a>
<b>GIST</b>	<p>MELBOURNE, Fla. — Peter Unger traveled the world, first in the Navy at the tail end of the Korean War and then as a free spirit searching the ancient paths of India for life's sacred meaning.</p> <p>Toward the end of his life Unger, sporting a flowing white beard and well-off financially thanks to his handcrafted jewelry business, sought sanctuary in the idea of living simply.</p> <p>But in a twist of fate, the 85-year-old who shunned worldly cares was found dead May 7, alone in a nondescript white Ford van that sat parked undisturbed for days at a Walmart, a retail giant seen by many as America's temple of commerce and materialism.</p> <p>Unger was among the growing number of people around the country who drew their last breaths in Walmart parking lots.</p>

It is not that the parking lots are unsafe. In fact, it is the relative safety of the well-lit and busy lots - combined with a welcoming corporate policy - that has drawn more people like Unger to call the Walmart parking lots home, if only temporarily.

And where people live, they also die.

They include those who are homeless, truckers, immigrants, drug-addled, suicidal or ill - all whose bodies are found nationwide in cars, vans and other vehicles in the parking lots of the retail giant. It is the last stop, one that can go unnoticed amid the daily crush of shoppers searching for deals, sometimes focused on the rattle of carts instead of their crowded surroundings.

In Brevard, police have investigated nearly half a dozen such parking lot deaths since 2015, from the badly decomposed remains of a man found inside a fly-swarmed sedan at a beachside Walmart in the simmering July heat to that of a man who suffered from cancer, found the same year in a sport utility vehicle that sat in a far corner of the Walmart lot in Viera. In both cases, it was the pungent smell that first caught the attention of passers-by or workers.

“It’s unfortunate but these do happen. It’s not uncommon,” said Lt. Cheryl Trainer, spokeswoman for the Melbourne Police Department, an agency that has investigated the bulk of the Walmart parking lot deaths on the Space Coast.

In each case, officers turn up in environmental suits and masks, sorting through the grisly discoveries, from pill bottles to notepads and photos left behind, hoping to piece together the lives of people like Unger who ended up in the parking lots.

The bodies - the shell of their physical humanity faded and decomposed by the elements - are carefully removed and turned over to medical examiners. Family members, if any can be found, are contacted.

Across the nation, the stories bear similar refrains:

- In California, a woman missing for months turned up dead. Investigators in the February 2016 case said the woman’s body remained in the car, parked at the retailer, for up to three months.
- In Illinois, the body of a 49-year-old man who was reported missing for more than a month, was found dead May 18, 2018, in a van at a Bradley, Illinois, Walmart. He was seen going into the store on May 1 and then leaving a short time later. He died of natural causes, according to media reports.
- In Ohio, police said a 59-year-old man found April 17, 2018, in a pickup truck at an Airport Thruway Walmart, died of natural causes. The body was in the truck, parked on the side of the retail store since April 8, authorities report.
- Here in Florida, a Walmart employee walking the parking aisles Feb. 22, 2018, at a Tarpon Springs store reported a strong odor. Officers arrived and found an unidentified body. Police suspected suicide.

Walmart has a longstanding corporate policy that anyone is welcome to stay in their parking lots overnight, depending on local laws. The open-lot policies vary from area to area, depending on the store managers.

“Most of the people we see are actually travelers, people in RVs. There’s like a whole society or culture out there. We do go out and check the lots, get the cars and keep an eye out for trash, but our workers aren’t peeping into people’s cars,” said Casey Staheli, a spokesman for Walmart, whose corporate offices are based in Arkansas.

“Unfortunately, they might smell something and that’s when it’s brought to our attention.”

Other retailers besides Walmart see similar deaths in their parking areas. A West Melbourne McDonald’s

	was the site of another gruesome discovery in April 2017 when a man's body was found inside a van. He had overdosed. But none are as pervasive or as consistent as the ones that happen at Walmart, which has about 4,000 stores nationwide.

<b>HEADLINE</b>	<b>06/23 NYC traffic about to get worse</b>
<b>SOURCE</b>	<a href="https://www.yahoo.com/news/major-york-area-traffic-bottleneck-worse-150112230.html">https://www.yahoo.com/news/major-york-area-traffic-bottleneck-worse-150112230.html</a>
<b>GIST</b>	<p>NORTH BERGEN, N.J. (AP) — It is the bane of tourists and truckers, theatergoers and weekday 9-to-5ers: the congested, pothole-strewn roadway that bisects the teeming towns overlooking the Hudson River before descending into the Lincoln Tunnel to New York City.</p> <p>In a region known for its soul-crushing gridlock and delay-prone rail system, the 80-year-old Route 495 viaduct connecting the New Jersey Turnpike to the tunnel is where smooth rides come to die daily for more than 150,000 motorists.</p> <p>And, it's going to get worse.</p> <p>An estimated two-and-a-half-year rehabilitation project to shore up the bridge and replace the roadway surface will close one lane in each direction, 24 hours per day for about two years. The New Jersey Department of Transportation is overseeing the \$90 million undertaking, which it says will extend the life of the bridge by 75 years.</p> <p>Motorists should expect "severe congestion," DOT spokesman Steve Schapiro said. Schapiro didn't provide a date for when the closures would begin, other than to say it was scheduled for mid-summer.</p> <p>The increased gridlock could force truckers — who already have seen the bridge and tunnel toll from New Jersey into New York rise to more than \$100 in recent years — to seek alternate ways into the city, though their choices are little better. The Holland Tunnel, to the south, bars large trucks, and the George Washington Bridge, to the north, is the second-worst truck bottleneck in the nation, according to a study of truck GPS data by the American Transportation Research Institute.</p> <p>"We'll try to do off-hour deliveries as much as possible," said Gail Toth, executive director of the New Jersey Motor Truck Association, an industry advocacy group. "That depends on the type of industries, because not all are open late at night. The ones that can't, you just try to find the best route possible."</p>

<b>HEADLINE</b>	<b>06/22 Lyme disease: an even bigger threat</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/lyme-disease-an-even-bigger-threat-than-you-think-1529672401">https://www.wsj.com/articles/lyme-disease-an-even-bigger-threat-than-you-think-1529672401</a>
<b>GIST</b>	<p>This time of year, the U.S. is crawling with ticks. It's a concern because the rapacious bloodsuckers spread disease when they bite.</p> <p>The most common tick-borne ailment is Lyme disease, but the official case count—which helps public-health authorities formulate prevention strategies and allocate resources—doesn't come close to the actual number.</p> <p>Around 30,000 cases of Lyme disease are documented each year, according to surveillance figures published annually by the Centers for Disease Control and Prevention.</p> <p>The real number, the agency says, is more like 300,000.</p> <p>"We know Lyme disease is underreported," said Kiersten Kugeler, an epidemiologist with the CDC. "It is the most common vector-borne disease by far."</p>

Several things may contribute to the undercount. The perception that the disease is uncommon may cut down on diagnoses. Because the counting methods used in some high-incidence states don't adhere to official surveillance rules, the numbers are discarded. And a new rule requiring most states to produce laboratory evidence of the disease may reduce participation.

"All reportable diseases are subject to underreporting, although we know this is particularly true for common diseases and for those often treated in an outpatient setting," Dr. Kugeler said.

Lyme is one of more than 70 infectious diseases monitored by the CDC's National Notifiable Diseases Surveillance System.

Although the CDC publishes the figures, states collect the data based on rules set by the Council of State and Territorial Epidemiologists.

#### Uptick

The actual number of cases of Lyme disease far outstrips the official case count, the U.S. government says.

Fourteen high-incidence states account for 95% of confirmed cases reported to the CDC. Since 2017, low-incidence states can only report cases with laboratory evidence of infection, while high-incidence states are still able to report cases with the classic rash associated with the disease absent laboratory evidence.

Still, to streamline the process, some high-incidence states have taken a different approach. In New York, counties with the largest Lyme burden investigate only 20% of positive laboratory reports and then extrapolate to estimate the full number of cases. But the CDC won't accept estimates. Consequently, in 2016, New York recorded 6,597 Lyme cases, but the CDC listed only 2,623 for the state.

Such disparities, combined with suspected under diagnosis and differing rules for low-incidence states, have advocates worried.

"Doctors look at the CDC numbers and see low numbers for their areas and aren't vigilant about it," said Mary Beth Pfeiffer, author of "Lyme: The First Epidemic of Climate Change." "The numbers should say to doctors, This is a huge problem with hundreds of thousands of cases."

It's difficult to say precisely what effect the latest rules will have on the surveillance numbers. The first report using them won't be released until fall, but there is already evidence that Lyme is more abundant in some low-incidence states than the surveillance suggests.

In 2016, Fair Health, a nonprofit organization that oversees the nation's largest collection of health-care claims data, examined 23 billion records for more than 150 million privately insured individuals and documented 747,101 claims for Lyme disease.

Nine of the CDC's high-incidence states were among those submitting the largest number of claims—but so were several low-incidence states.

North Carolina reported 32 Lyme cases to the CDC in 2016 but in the same year made 88,539 health-care claims for a Lyme diagnosis. California reported 90 cases to the CDC but had 46,820 claims. Texas reported 31 cases to the CDC but had 31,129 claims. All three are considered low-incidence states.

Fair Health warns that its numbers don't represent individuals with the disease but rather the number of encounters those with a Lyme diagnosis had with the health-care system.

Lyme disease can be treated successfully with antibiotics, but if undiagnosed or inadequately treated, the consequences may be severe.

Researchers from Johns Hopkins estimate that Lyme costs the U.S. health-care system between \$712

	million and \$1.3 billion a year.

<b>HEADLINE</b>	<b>06/23 Protesters target Tacoma tattoo parlor</b>
<b>SOURCE</b>	<a href="https://www.thenewstribune.com/latest-news/article213532784.html">https://www.thenewstribune.com/latest-news/article213532784.html</a>
<b>GIST</b>	<p>About three dozen members of Tacoma Against Nazis protested Friday outside a Tacoma tattoo parlor, carrying signs that read, "Tacoma is for lovers not haters" and "I thought we were done with Nazis tattooing people in 1945."</p> <p>Several politicians were part of the protest, including state Rep. Laurie Jenkins, D-Tacoma, and Tacoma City Council members Catherine Ushka and Justin Camarata.</p> <p>"We want to make sure they know they're not welcomed," Jenkins said. "Their beliefs aren't welcomed."</p> <p>On Thursday, one of the co-owners of the shop in the 1100 block of East 72nd Street told The News Tribune he is not a racist.</p> <p>"I'm not a Nazi," the man said.</p> <p>He urged the newspaper to interview people associated with the Black Lives Matter movement instead.</p> <p>"That's OK, right?" he said. "But if you're white and you have any kind of pride it's a big deal."</p> <p>He declined further comment.</p> <p>Tacoma Against Nazis member Chuck Knigge said the group has multiple pieces of evidence and documentation that show the shop's owners and staff are affiliated with hate groups.</p> <p>"What sold me was the plethora of pictures, the tattoos they've done on people," Knigge said.</p> <p>On occasion, flags associated with white supremacy have flown outside the home of a shop employee, members of the group said.</p> <p>The group said they were under no illusion that the protest would shut the business down. Awareness was its No. 1 goal, spokeswoman Amanda Westbrooke said.</p> <p>"It's awareness for the people of Tacoma that a neo-Nazi hate group has opened up a business in the most diverse neighborhood in Tacoma," Westbrooke said.</p> <p>In February, the website for Puget Sound Anarchists posted a story alleging that the owner and associates of the tattoo shop were members of the Northwest Hammerskins.</p> <p>The Southern Poverty Law Center, an organization that tracks hate groups and hate crimes, lists the Hammerskins as a "Racist Skinhead" hate group.</p> <p>"Racist Skinheads form a particularly violent element of the white supremacist movement," the center writes.</p> <p>The anarchists' website has a photo of one of the shop's co-owners and two people wearing T-shirts with "88" and "Crew 38 logos." Crew 38 is a subset of the Hammerskins.</p> <p>The Anti-defamation League lists the 88 symbol as a white supremacist numerical code for "Heil Hitler." It is widely used across the white supremacist movement and not just neo-Nazis, according to the League.</p>

	<p>Last fall, a series of short-lived white nationalist protests took place in Washington, including in Tacoma. A small group hung a "White Lives Matter" banner from the Delin Street overpass over Interstate 5 for a few minutes in November.</p> <p>The anarchists website alleges the shop's co-owner and his associates were responsible for that incident.</p> <p>On Friday, some passersby honked their car horns and gave thumbs-up to the protesters.</p> <p>The protesters were silent during the hour-long picketing — until the end.</p> <p>"We'll be back," they chanted.</p>

<b>HEADLINE</b>	<b>06/23 Counterfeiters left police a 'to-do' list</b>
<b>SOURCE</b>	<a href="https://www.heraldnet.com/news/lynnwood-police-to-do-list-not-your-every-day-evidence/">https://www.heraldnet.com/news/lynnwood-police-to-do-list-not-your-every-day-evidence/</a>
<b>GIST</b>	<p>LYNNWOOD — If nothing else, the counterfeiters were fastidious planners.</p> <p>When police seized evidence from a Lynnwood motel room in April, they came across remarkably helpful information for the investigation.</p> <p>One of the handwritten documents included the reminder: "Work on \$100 template" and "research where to legally sell guns."</p> <p>Another memo said "make payroll check" and "create identity that we can make bank acct. with."</p> <p>Investigators often locate ledgers and bank records that may reveal evidence of drug trafficking, money laundering or other financial crimes, but these "to-do" lists were "anything but typical," Lynnwood police Cmdr. Sean Doty said.</p> <p>The lists "paint a picture of how much effort and organization these suspects put forth to advance their criminal activity," he said.</p> <p>Detectives also found stolen checks and credit cards as well as a passport. When they contacted the passport's owner, she reported that it had been stolen along with her birth certificate. She'd become a victim of identity theft.</p> <p>Inside the hotel room were scanners and printers. Also found was a can of Easy-Off oven cleaner, though there was neither an oven nor a stove in the room. The spray can be used to wash checks or other documents for counterfeiting, police wrote in an affidavit for a search warrant.</p> <p>A U.S. Secret Service agent examined the handiwork, inspecting several bills made on washed \$1 bills. Other bogus bills were on printer paper.</p> <p>"It was clear the washed bills were going to be made into fake \$100s," police wrote after conferring with the federal agent.</p> <p>It was the cleaning staff who first noticed the suspicious currency. They'd seen what they thought was real money in a trash can. They soon realized it was counterfeit.</p> <p>Police recovered phony \$20, \$50 and \$100 bills.</p> <p>Officers arrested a man, 41, and woman, 22, after the search.</p>

<b>HEADLINE</b>	<b>06/25 Mexico: town's police force arrested</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/entire-towns-police-force-arrested-after-murder-mayoral-candidate-993406">http://www.newsweek.com/entire-towns-police-force-arrested-after-murder-mayoral-candidate-993406</a>
<b>GIST</b>	<p>As Mexico prepares for general elections on July 1, a new wave of violence is rocking the country—and politicians are finding themselves in the cross hairs of powerful and brutal drug cartels.</p> <p>The tentacles of Mexican organized crime are long, and even those charged with protecting the country's citizens and leaders can be corrupted and coerced into support for the cartels.</p> <p>This tragic dynamic has been demonstrated once more in Ocampo, in the western state of Michoacan, where the entire town's police force has been detained on suspicion of the murder of a mayoral candidate, the BBC reported.</p> <p>Fernando Angeles Juarez, 64, was shot dead by unknown gunmen on Thursday outside one of his properties. He is the third politician to be killed in Michoacan in just over a week, and one of more than 100 politicians murdered in Mexico since the beginning of the electoral season in September 2017.</p> <p>Ocampo's whole 27-officer police force were arrested by federal police early Sunday morning on suspicion of involvement in the murder. An initial effort to arrest the suspects was thwarted by local public security secretary Oscar Gonzalez, who ordered his officers to stop federal agents from entering the town.</p> <p>The Federales returned on Sunday with reinforcements. They took Gonzalez and his men into custody, transporting the suspects to state capital Morelia for questioning.</p>

HEADLINE	<b>06/24 Illicit drone flights US-Mexico border</b>
SOURCE	<a href="https://www.washingtonpost.com/world/national-security/illicit-drone-flights-surge-along-us-mexico-border-as-smugglers-hunt-for-soft-spots/2018/06/24/ea353d2a-70aa-11e8-bd50-b80389a4e569_story.html?utm_term=.4a1ef9ef5c9e">https://www.washingtonpost.com/world/national-security/illicit-drone-flights-surge-along-us-mexico-border-as-smugglers-hunt-for-soft-spots/2018/06/24/ea353d2a-70aa-11e8-bd50-b80389a4e569_story.html?utm_term=.4a1ef9ef5c9e</a>
GIST	<p>Smugglers are using video cameras and small drones to spot vulnerabilities along the U.S.-Mexico border, and the Department of Homeland Security is struggling to stop them.</p> <p>Reports of unmanned aircraft flying along the southwestern border have spiked in recent months, with more than three dozen sightings since October, when the fiscal year began. That data point is on a course to quadruple from the previous year, according to U.S. Customs and Border Protection, where officials say they are concerned that criminal groups are using the aircraft for surveillance while seeking paths to traffic drugs and other illicit material into the United States.</p> <p>“They’re probably trying to get eyeballs on agents out in the field and see where soft areas are,” said James Thom, acting operations director for CBP’s Air and Marine Operations Center outside Los Angeles. “To date, I don’t know that we’ve successfully been able to detect and track drone activity.”</p> <p>The growing use of off-the-shelf, hard-to-spot drones is a prime example of the relentless cat-and-mouse game between criminals and Border Patrol agents. Smugglers constantly seek to outsmart U.S. law enforcement. And as part of the Trump administration’s pledge to crack down on the influx of drugs and people entering the country illegally, Homeland Security is scrambling to identify technology and techniques that can thwart them.</p> <p>When it comes to drones though, the true number flying along the border could be much higher than what’s been reported. Such aircraft present a tiny radar cross section. They also give off little to no reflection and tend to fly for short periods at very low altitudes, said Jennifer Gabris, a CBP spokeswoman.</p> <p>“These characteristics make them more difficult to detect using conventional sensor systems,” Gabris said.</p> <p>While most drones are believed to be flying surveillance missions, at least one made it across the U.S. border carrying drugs worth tens of thousands of dollars. In January, a 25-year-old man was sentenced to 12 years in prison for flying a drone over a fence near the bustling checkpoint between San Diego and Tijuana, Mexico. The unmanned aircraft was carrying a plastic bag packed with 13 pounds of methamphetamine.</p> <p>Since 2011, traffickers have made at least 562 illicit flights across the U.S. border in ultralight aircraft such as helicopters, single-engine planes or gyrocopters, Gabris said. Those pilots often fly their aircraft just above the tree line in rugged areas, making it difficult for border agents to detect or track them. The aircraft typically carry about 200 pounds worth of drugs, according to a 2017 Government Accountability Office report warning about the flexible smuggling method.</p> <p>Pilots “don’t even have to land on our side of the border — they’ll take off, drop a package that will get picked up and fly back,” said Henry Willis, a senior policy researcher at the Rand Corporation. “As a smuggling tactic and tool, it can be attractive for a lot of reasons . . . and another one of the ways our borders can be penetrated.”</p> <p>As drone flights picked up in recent years, manned ultralight flights have fallen significantly. In 2011, DHS officials tracked 198 ultralight flights into the United States, most of which took place in California, Arizona and New Mexico. In 2017, 17 such flights were recorded.</p>

<b>HEADLINE</b>	<b>06/23 Seattle cracks down on loud car noises</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/amendment-to-noise-ordinance-could-make-it-easier-for-police-to-cite-loud-cars/">https://www.seattletimes.com/seattle-news/amendment-to-noise-ordinance-could-make-it-easier-for-police-to-cite-loud-cars/</a>
<b>GIST</b>	<p>Crowds soaking in the sun, kids playing in the sand and the roaring sound of engines. It's a common scene along Alki Beach on a sultry summer evening, but not everyone is happy about the noise.</p> <p>"It's difficult for us. We used to be a garage, so if someone passes by with a loud car or motorcycle, it interrupts our service with the guest," said Billy Lake, general manager of Blue Moon Burgers, one of the many businesses lining Alki Avenue Southwest with outdoor seating.</p> <p>Lake isn't alone. Seattle City Councilmember Lisa Herbold, who represents the area, conducted a public safety and health survey a year ago and found the biggest concern among respondents was the excessive noise coming from cars with modified mufflers.</p> <p>Noise from cars within Seattle city limits can't exceed 95 decibels, according to the existing Municipal Code. That's roughly the sound of a lawn mower.</p> <p>In order to measure the sound from car exhausts, police would have to use noise meters to enforce the noise limit. Assistant Police Chief Steve Wilske told a Seattle City Council committee meeting on June 13 that isn't practical and officers don't carry noise meters anyway.</p> <p>As a result, Herbold sponsored an amendment to the noise ordinance that would make it easier for police officers to cite people with excessively loud exhausts on cars and motorcycles. Under the amendment, officers would only have to hear the car from 75 feet away to issue an infraction. The 75-foot rule is already used to cite noise from sound systems.</p>

<b>HEADLINE</b>	<b>06/25 Nigeria: 'deeply unfortunate killings'</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/nigeria-deeply-unfortunate-killings-86-reported-dead-56134531?">https://abcnews.go.com/International/wireStory/nigeria-deeply-unfortunate-killings-86-reported-dead-56134531?</a>
<b>GIST</b>	Scores are dead after vicious weekend clashes in central Nigeria between mostly Muslim herders and Christian farmers, with one report citing police as saying 86 people were killed.

	<p>President Muhammadu Buhari appealed for calm after the "deeply unfortunate killings across a number of communities" in central Plateau State as the military and police tried to end the bloodshed, saying "no efforts will be spared" to find the attackers and prevent reprisal attacks.</p> <p>Nigeria's government has not announced a death toll. The independent Channels Television cited a Plateau State police spokesman, Mathias Tyopev, as saying 86 people had been killed, with at least 50 houses destroyed.</p> <p>Dramatic footage from Jos showed angry people holding machetes and sticks and shouting at passing security forces as they weaved around overturned and burning vehicles. Smoke rose in the distance. Women and children clutching overstuffed bags piled into the back of trucks, seeking a way out.</p> <p>"Please remain calm," said the Plateau State governor, Simon Bako Lalong, as a helicopter whirred overhead. "It is very, very, unfortunate that an incident is happening again like this."</p> <p>Deadly clashes between herders and farmers in central Nigeria are a growing security concern in Africa's most populous country, which is roughly split between Muslims in the north and Christians in the south.</p> <p>The fighting between herders and farmers by some accounts has been deadlier than Nigeria's Boko Haram extremist insurgency, which continues to carry out attacks in the northeast.</p>

<b>HEADLINE</b>	<b>06/24 Teen hospitalized in Everett shooting</b>
<b>SOURCE</b>	<a href="https://q13fox.com/2018/06/24/teen-hospitalized-after-shooting-in-everett/">https://q13fox.com/2018/06/24/teen-hospitalized-after-shooting-in-everett/</a>
<b>GIST</b>	<p>EVERETT, Wash. — A teenager was taken to the hospital early Sunday after he was shot at the Eastmont Park and Ride, according to Everett police.</p> <p>At about 12:45 a.m., officers responded to the 2000 block of El Capitan Way. Officials said shots had been fired after a fight broke out among a group of teenagers.</p> <p>A 17-year-old boy was transported to Providence Regional Medical Center in Everett.</p> <p>No information on the teen's condition has been released, but his injuries are believed to be non-life threatening.</p> <p>Earlier in the night, officers shut down a house party on the 1900 block of 122nd Street Southeast. According to police, roughly 150 people were inside the home at the time.</p> <p>It's believed that the group of people discovered at the park &amp; ride location had attended the house party.</p>

<b>HEADLINE</b>	<b>06/22 Slow down, move over or pay \$214</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/slow-down-move-over-or-pay-214-troopers-say">http://komonews.com/news/local/slow-down-move-over-or-pay-214-troopers-say</a>
<b>GIST</b>	<p>Washington State Patrol says slow down and move over when you see their flashing lights or work zones - or get ready to pay. This weekend, troopers are looking for drivers who don't follow the state's 'Move Over' law.</p> <p>"Get over as soon as you can, don't wait til the last minute and if you can't, that's where that other part comes in. Slow down," said WA State Patrol Trooper Chase Van Cleave.</p> <p>"We don't have eyes in the back of our heads to watch for all of the cars that are passing by us. So we have to trust and hope that the motoring public around us is paying attention and following that law so that we</p>

	<p>don't get hit and hurt on that traffic stop," Van Cleave said.</p> <p>In the last three years, 32 troopers have been hurt and 86 patrol cars have been hit. State Trooper Chase Van Cleave says he's knows what it's like to be hit while trying to do his job.</p> <p>"The driver, for some reason or another, didn't see me, didn't slow down and ran right into the back of my patrol car while I was in it. Fortunately, I wasn't hurt too bad and they weren't hurt too bad."</p> <p>WSP suggests that drivers slow down at least 10 miles per hour when moving past a patrol car, emergency vehicle or a work zone.</p> <p>"We've had cars on the side of the road, with their lights on hit and have people say 'we didn't see the trooper's car.' So, it's really a safety thing," said Trooper Rick Johnson.</p> <p>It'll cost you \$214 if you get a ticket for not slowing down or moving over. And by law, the fine can't be reduced nor can the ticket be dismissed.</p> <p>Over 3,800 drivers were stopped by troopers last year for violating the 'Move Over' law.</p>

<b>HEADLINE</b>	<b>06/24 Migrants call for help; 57 get arrested</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/nation-now/2018/06/24/57-migrants-suffering-dehydration-arrested/728968002/">https://www.usatoday.com/story/news/nation-now/2018/06/24/57-migrants-suffering-dehydration-arrested/728968002/</a>
<b>GIST</b>	<p>PHOENIX — A group of 57 migrants struggling through 108-degree weather Friday were arrested, after crossing the border illegally, when one of the migrants called the Mexican police for help.</p> <p>According to a U.S. Customs and Border Protection statement, "Agents were alerted to the group's location" when one of the migrants called Sonora, Mexico's 911 center.</p> <p>"The callers stated they had crossed the border illegally, and requested assistance," the statement said.</p> <p>After an extensive search, agents located the migrants with "some in distress, including a pregnant female, west of Lukeville Friday afternoon."</p> <p>The group included 21 adults and 36 minors, 17 of which were unaccompanied minors. A 1-year-old child was also in the group. They came from Nicaragua, El Salvador, Guatemala and Honduras, according to the report.</p> <p>Agents treated several people who "appeared to be dehydrated." A pregnant woman was taken to a nearby hospital.</p> <p>Migrants were provided food and water as border patrol agents transported them to the Ajo station to be processed.</p> <p>A zero-tolerance border policy remains in effect along the border. President Donald Trump's executive order signed on Wednesday said that parents and children would not be separated unless there is a concern that detaining the child with their parent "would pose a risk to the child's welfare."</p>

<b>HEADLINE</b>	<b>06/23 Man charged in killings, defends ISIS</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/man-charged-in-nyc-bike-path-killings-invokes-allah-and-defends-isis-in-court/">https://www.cbsnews.com/news/man-charged-in-nyc-bike-path-killings-invokes-allah-and-defends-isis-in-court/</a>
<b>GIST</b>	NEW YORK -- The man charged with murdering eight people on a New York City bike path and injuring many more spoke out in court Friday over a prosecutor's objection, invoking "Allah" and defending the

Islamic State of Iraq and Syria (ISIS). Sayfullo Saipov, 30, raised his hand to speak immediately after U.S. District Judge Vernon S. Broderick set an Oct. 7, 2019 date for the Uzbek immigrant's trial.

Earlier, he had pleaded not guilty through his lawyer to the latest indictment in the Oct. 31 truck attack near the World Trade Center. A prosecutor said the Justice Department will decide by the end of the summer whether to seek the death penalty against Saipov, who lived in Paterson, New Jersey, before the attack.

Speaking through an interpreter for about 10 minutes, Saipov said the decisions of a U.S. court were unimportant to him. He said he cared about "Allah" and the holy war being waged by ISIS.

At the prompting of Assistant U.S. Attorney Amanda Houle, Broderick interrupted Saipov to read him his rights, including that anything he said in court could be used against him.

"I understand you, but I'm not worried about that at all," Saipov said.

"So the Islamic State is not fighting for land, like some say, or like some say, for oil. They have one purpose, and they're fighting to impose Sharia (Islamic law) on earth," he said.

After Saipov spoke more, Assistant U.S. Attorney Andrew Beaty interrupted him to object that the judge was letting Saipov make the kind of statement publicly that special restrictions placed on him in prison would otherwise prevent, including discussing "terrorist propaganda."

The judge said he believed Saipov was nearing the end of his remarks and let him finish before warning him that he was unlikely to let him speak out in court again in a similar manner. Saipov, though, would be given a chance to testify if his case proceeds to trial and, if convicted, could speak at sentencing.

Saipov thanked the judge for letting him speak but added at one point: "I don't accept this as my judge."

<b>HEADLINE</b>	<b>06/24 San Diego: suspect shoots 2 officers</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/suspect-dead-officers-hospitalized-san-diego-shooting/story?id=56118147">https://abcnews.go.com/US/suspect-dead-officers-hospitalized-san-diego-shooting/story?id=56118147</a>
<b>GIST</b>	<p>Two San Diego police officers were shot late Saturday and hospitalized responding to an incident they first thought may be an apartment fire.</p> <p>The suspect who allegedly shot the two officers was pronounced dead at the scene. His identity is not yet known.</p> <p>One officer was last reported in stable condition and the other was in serious but stable condition, police said.</p> <p>When police first arrived on scene, they observed and smelled what appeared to be a fire and called the fire department. When authorities tried to open the door to the apartment, they were met with gunfire. One officer shot back.</p> <p>The firefighter attempting to enter the structure along with the police officers ended up in an adjoining apartment, out of the way of the shooter, authorities said. The firefighter was extracted from that apartment by a SWAT team and didn't suffer any significant injuries.</p> <p>Police said they don't know what type of weapon the suspect used or whether he was wearing any type of body armor. Police have not yet entered the apartment and wouldn't confirm whether a robot was used to investigate.</p> <p>Authorities don't have a motive for the suspect at this time.</p>

<b>HEADLINE</b>	<b>06/23 Convicted cop-killer freed from jail</b>
<b>SOURCE</b>	<a href="http://www.chicagotribune.com/news/local/breaking/ct-met-jackie-wilson-bond-hearing-20180622-story.html">http://www.chicagotribune.com/news/local/breaking/ct-met-jackie-wilson-bond-hearing-20180622-story.html</a>
<b>GIST</b>	<p>Jackie Wilson, one of two brothers convicted in one of Chicago's most infamous cop killings, walked out of Cook County Jail on Friday, a free man for the first time in more than 36 years.</p> <p>The sudden freedom for Wilson, 57, came after Cook County Circuit Judge William Hooks ordered his release a few hours earlier. The judge had tossed out his murder conviction last week after finding that notorious ex-Chicago police Cmdr. Jon Burge and detectives under his command had physically coerced his confession.</p> <p>Saying nearly four decades in prison had aged Wilson "far beyond his chronological age," Hooks held Friday that he did not pose a danger to the community or a risk to flee — factors in whether he could be released.</p> <p>The judge also said special prosecutors "utterly failed" in their arguments to keep Wilson in jail, adding that they appeared to want him to view the case "through the lens of a court sitting in 1982 or 1988 without considering the revelations that have come to light over the last three decades."</p> <p>Scores of African-American men have accused Burge, who is white, and his colleagues of torturing or abusing them during the 1970s and 1980s at a South Side police station. The scandal has stained the city's reputation and cost taxpayers at least \$115 million so far in lawsuit settlements, judgments and other compensation to victims.</p> <p>Relatives of slain Officers Richard O'Brien and William Fahey left the Leighton Criminal Court Building without comment after Hooks' ruling. Special prosecutor Michael O'Rourke said they were understandably upset by the decision.</p>

	<p>Kevin Graham, president of the Chicago Fraternal Order of Police, who attended the hearing, called Hooks' ruling "disgraceful."</p> <p>"I'm very disappointed that a man that is responsible, who was at the scene, that has admitted to being there when two honored police officers of the Chicago Police Department were murdered, gunned down, and he walks out," Graham said.</p>

<b>HEADLINE</b>	<b>06/23 Ex-Vatican diplomat convicted child porn</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/vatican-ex-diplomat-convicted-of-child-pornography-charges-1529766628?mod=hp_major_pos2">https://www.wsj.com/articles/vatican-ex-diplomat-convicted-of-child-pornography-charges-1529766628?mod=hp_major_pos2</a>
<b>GIST</b>	<p>ROME—A former Vatican diplomat to the U.S. was convicted of possessing and distributing child pornography and sentenced to five years' imprisonment, in the first such trial for that crime in Vatican City.</p> <p>The conviction of Msgr. Carlo Alberto Capella came on Saturday, only the second day of his trial, bringing the case to an exceptionally swift end by Vatican standards.</p> <p>The defendant had admitted to the charges in testimony the previous day, while suggesting that a personal crisis at the time of his actions mitigated his guilt.</p> <p>"My errors are clear, and also clear is the fact that they occurred in a period of fragility," Msgr. Capella told the court on Saturday. "I hope that this situation might be considered an incident in the course of my life as a priest, which I love more than ever."</p> <p>The Vatican said Msgr. Capella would be confined in Vatican City for the duration of his imprisonment. Since his arrest in April, he had been held in a cell in the barracks of the Vatican's gendarmerie.</p> <p>The former diplomat was also ordered to pay a fine of €5,000 (about \$5,800). Prosecutors had asked the three-judge panel to sentence him to five years and nine months, and a fine of €10,000.</p> <p>The court noted that the relatively heavy sentence reflected the "considerable quantity" of pornographic material involved. On Friday, an official of the Vatican's gendarmerie testified that he had found or recovered more than 40 child pornography images, including depictions of sexual contact between adults and prepubescent children, on the defendant's mobile phone.</p> <p>It wasn't clear whether the monsignor would appeal his sentence. His lawyer, Roberto Borgogno, didn't immediately reply to a request for comment.</p>

<b>HEADLINE</b>	<b>06/23 Belgium's looted antiquities probe</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/belgium-investigates-brothers-in-possible-trafficking-of-looted-antiquities-from-syria-1529755201?mod=hp_major_pos1">https://www.wsj.com/articles/belgium-investigates-brothers-in-possible-trafficking-of-looted-antiquities-from-syria-1529755201?mod=hp_major_pos1</a>
<b>GIST</b>	<p>BRUSSELS—Belgian prosecutors say they are investigating whether two brothers trafficked antiquities that had been taken from Syria, escalating Belgium's role in an international probe into the prominent dealers of ancient art.</p> <p>Law enforcement and intelligence officials in the U.S. and elsewhere say antiquities have been looted from war-torn Syria and Iraq on a massive scale. But investigations demand patience, they say, because such artifacts take time to surface and confirming objects' provenance can be difficult.</p>

In January 2016, Belgian customs authorities seized two bas-reliefs sent by Phoenix Ancient Art SA to the Brussels Antiques & Fine Art Fair, or Brafa, according to the fair's spokesman. The investigation begun by customs has since been taken up by Belgian prosecutors.

A spokesman for Belgium's federal prosecution service said recently it was investigating two brothers, identified only as Ali A. and Hicham A. under rules barring prosecutors from releasing suspects' full names unless charges are laid.

"It's an ongoing investigation in close cooperation with Swiss authorities about the export of illegally obtained artifacts from Syria," said the spokesman, Eric Van Der Sypt, adding Belgium's effort was part of a Swiss prosecutors' larger investigation.

A Belgian official familiar with the matter said the probe centers on Ali and Hicham Aboutaam, two pre-eminent antiquities dealers who manage Phoenix Ancient Art, according to the company's website.

Neither man has been charged with wrongdoing in the investigations.

A spokesman at Geneva's public prosecutor, asked to confirm whether Swiss prosecutors were investigating Phoenix Ancient Art, said the office was "conducting a procedure for suspicion of concealment and violations of the Federal Law on the International Transfer of Cultural Property." That law is used in Switzerland to prosecute cases of alleged art trafficking. The spokesman declined to specifically name the subject of the investigation or to answer further questions.

The Wall Street Journal reported in May 2017 that Swiss, French and Belgian authorities were looking into whether the brothers had handled Syrian and Iraqi objects looted under the auspices of the extremist group Islamic State.

Didier Bottge, a lawyer acting for the Geneva arm of Phoenix Ancient Art, said his client hadn't been contacted by Belgian authorities. He also said the Swiss "procedure" concerned the law on the international transfer of cultural property and a probe into value-added tax.

"My client formally denies being involved in 'Syrian art trafficking,'" he said in an email.

Richard Emery, a lawyer acting for Hicham Aboutaam, in March described reports of his client's alleged involvement with looted antiquities as containing "fake facts and implying wrongdoing where none exists" and said no authorities had contacted his client.

"My client remains anxious to cooperate with any investigators who contact him; none has," he said. He also said he couldn't corroborate information provided by the Journal about the Swiss and Belgian investigations. "The 'spokespersons' whom you cite will not confirm to us that they said what you say," he said.

The Belgian investigation is one of the first publicly acknowledged probes into allegations of art trafficking from current war zones. Separately, in an unrelated case, Spanish police in March said they were holding two Spanish citizens suspected of trading in antiquities from Libya looted by groups linked to Islamic State.

HEADLINE	<b>06/22 Fighting illegal wildlife trafficking w/dog</b>
SOURCE	<a href="https://www.seattletimes.com/seattle-news/meet-benny-washingtons-newest-weapon-in-the-fight-against-illegal-wildlife-trafficking/">https://www.seattletimes.com/seattle-news/meet-benny-washingtons-newest-weapon-in-the-fight-against-illegal-wildlife-trafficking/</a>
GIST	With his paws perched against towering stacks of furniture, Benny forced his snout between two Saudi Arabian sofas and found a piece of elephant ivory that his handler had hidden as part of a drill.

Smugglers trafficking in elephant ivory — one of the most common illegal animal products shipped to or through Washington — are no match for Benny, the state's first wildlife detection dog. The sleek Labrador retriever's strong sense of smell helps wildlife and U.S. Customs and Border Protection officers seize some of the illegally-trafficked animal products that pass through the state's ports of entry.

The cargo in the warehouse along the Duwamish Waterway has not yet officially entered the United States. It's stored here until it can be inspected for potential consumer safety threats, intellectual property concerns and wildlife-trafficking violations, according to Customs spokesman Jason Givens.

U.S. Customs and Border Protection Agriculture Specialists at Seattle-Tacoma International Airport discovered a variety of prohibited ivory products in the luggage of a husband and wife who arrived on a flight from the Philippines on May 11.

Washington Department of Fish and Wildlife Detective Lauren Wendt, Benny's handler, said a wildlife detection dog makes inspections significantly more efficient — and more fun.

"He's a bright spot in my days," she said.

Benny is certified in detecting elephant ivory, bear gallbladder, shark fin, firearms and spent casings, and will soon be certified to detect rhino horn. Wendt said pangolin — the most trafficked mammal in the world — may be the next addition to Benny's resume.

Illegal wildlife trafficking is the fourth largest transnational organized crime in the world, and the U.S. is a prominent consumer in the black market of wildlife trade, according to the Department of State.

As a major port state, Washington annually sees approximately 5,000 wildlife shipments, both legal and illegal, according to John Goldman, who supervises U.S. Fish and Wildlife Service inspectors in the Pacific Northwest.

Goldman said he has seen a surge in illegally trafficked animal products used in "higher-quality" traditional Asian medicine, including protected species of sea horses, pangolin scales, bear gallbladders and pills and plasters made with leopard.

This rising demand is outgrowing Goldman's five-person team.

"A growing affluence in Seattle, Vancouver, Canada and Portland has created a demand for wildlife products traded on a scale that our staff is challenged with," Goldman said.

The federal wildlife inspection program relies on support from Customs and the state Department of Fish and Wildlife — and now, Benny's well-trained nose.

The two-year-old dog stands tall as he sniffs up a stack of crates, before he dashes off to the next potential treasure site. Following Wendt's hand, Benny weaves through pallets stacked with goods in a fraction of the time that it would take officers to go through the shipments.

When Benny hits on something, he pauses to give a more thorough sniff — as if to double- and triple-check — before sitting down to indicate a discovery to Wendt.

Sometimes, however, Benny struggles to control his excitement. "He's a Lab, so he wants to put his mouth on everything," Wendt said.

Wendt found Benny at a shelter in May 2017, and evaluated him as having a good foundation for a detection dog.

"You look for how willing he'd be to work for his toy or food," Wendt said, noting that Benny is more motivated by toys than treats.

After finding a gun in a stack of crates, Benny sat facing the item he had been trained to identify.

Sitting still is difficult for the energetic dog, but Benny knows that it will lead to a game of tug-of-war with his handler. “It’s his paycheck, so to speak,” Wendt said.

During Benny’s initial training, Wendt hid a toy and a target wildlife product together and trained Benny to sit once he found both. She would eventually remove the toy, with his favorite orange ball only appearing once Benny sat down in front of the target. Their training games have since evolved and Benny now learns odors more quickly.

Wendt and Benny completed 220 hours of training to receive their detection canine certification in September. That included 80 hours of handler training for Wendt.

“The dogs usually pick it up fast. It’s usually the humans that need more training,” she said.

Washington voters overwhelmingly approved a law to criminalize the sale, purchase, and trade of 10 species — including elephants, lions, and tigers — in November 2015.

This was the first voter-approved wildlife trafficking law in the nation, with legislative and outreach efforts spearheaded by the Woodland Park Zoo, the Seattle Aquarium, Point Defiance Zoo & Aquarium, Northwest Trek and the Humane Society of the United States — and bankrolled by Microsoft co-founder Paul Allen’s \$2 million donation.

To enforce this new mandate, Wendt approached her agency with the idea of training the state’s first wildlife detection dog.

When Customs suspects illegal wildlife product in cargo — sometimes based on shipping paperwork or previous trafficking violations from a location — they can call on Benny and Wendt to make their rounds.

The pair mostly searches imported household goods, but they also assist the U.S. Fish and Wildlife Service with inspecting known shipments of wildlife for illegal products. More than 39,000 African trophy animals — including 15 white rhinoceros and nearly 200 elephants — have been legally shipped through Seattle since 1999.

Benny can also search for firearms and spent ammunition in rural, forested areas, and has helped Seattle and Lakewood police search for firearms used in crimes unrelated to poaching.

Though he is state-owned, Benny serves both the state and federal wildlife agencies.

There are only seven federal wildlife detection dogs, based in major ports like Honolulu and Miami, according to Goldman. Approximately 25 other state agencies have wildlife detection canines, Wendt said.

Starting in 2019, the state Legislature will provide \$300,000 annually to the Department of Fish and Wildlife to hire two new enforcement officers who will focus on the trafficking of exotic and native species and to fund other efforts, such as training more dogs like Benny, according to the agency’s legislative liaison Raquel Crosier.

Washington’s most trafficked wildlife products include geoduck, sea cucumber, sturgeon eggs, bear gallbladders, and elk racks, according to Kerston Swartz, public affairs and advocacy manager at the Woodland Park Zoo.

“We have a lot of native species that it’d be great to have a dog trained in,” Wendt said.

<b>HEADLINE</b>	<b>06/23 India: anti-trafficking activists raped</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/23/asia/india-gang-rape/index.html">https://www.cnn.com/2018/06/23/asia/india-gang-rape/index.html</a>
<b>GIST</b>	<p>New Delhi (CNN) — Six men have been accused of rape in connection with a gang rape this week of five female anti-trafficking workers in a village in eastern India, police told CNN on Saturday.</p> <p>Two of the six men have been arrested and charged, while police said they are looking for the other four. A man who helps run a school in the village also has been arrested and charged in connection with abetting the attack.</p> <p>Police said the attack took place Tuesday in Kochang village in Khunti district in the state of Jharkhand, the same region where two teens were raped and then set on fire last month.</p> <p>The anti-trafficking activists who were raped have been discharged from a hospital and are being kept in a safe house, police said. The women have been given police protection and trauma counseling.</p> <p>The five women were performing a street play with three men on the issue of human trafficking when armed men on bikes disrupted the performance.</p> <p>The performers were taken to a nearby forest, where the women were raped and men beaten up. They were</p>

	<p>released about three hours later, police said</p> <p>The attack is the latest high-profile rape case in India, which has been grappling with the scourge of sexual violence.</p> <p>Around 100 sexual assaults are reported to police in India every day, according to the National Crime Records Bureau. There were nearly 39,000 alleged attacks in 2016, an increase of 12% from the previous year.</p>

<b>HEADLINE</b>	<b>06/23 DNA on napkin cracks 32yr-old case</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/22/us/cold-case-killing-1986/index.html">https://www.cnn.com/2018/06/22/us/cold-case-killing-1986/index.html</a>
<b>GIST</b>	<p>(CNN) — DNA evidence from a discarded restaurant napkin was used to identify a suspect in the slaying of a 12-year-old girl in 1986, police in Tacoma, Washington, said Friday.</p> <p>Gary Hartman, 66, was arrested Wednesday and has been charged with murder in the first degree and rape in the first degree, Tacoma Police Chief Don Ramsdell said at a news conference about the cold case. Hartman will be arraigned on Monday.</p> <p>CNN has not been able to determine whether Hartman has a lawyer. He's being held in the Pierce County Jail after a judge set bail at \$5 million.</p> <p>Police say Michella Welch and her two younger sisters went to Puget Park on March 26, 1986. About 11 a.m. Michella rode a bicycle home to get lunch. While she was gone, the sisters went to a business to use the restroom, Ramsdell said.</p> <p>When they returned, they didn't see Michella and continued to play in a gulch until 2 p.m., when they noticed the bicycle and lunch at the spot where they were supposed to meet for a picnic, the chief said. The girls notified their regular baby sitter, who contacted the girls' mother. Police were called and a search began.</p> <p>"A search dog found Michella's body just before 11 p.m. that night in an isolated area in the gulch, more than a quarter mile away from the play area," Ramsdell said. "Michella had been sexually assaulted and murdered."</p> <p>Police collected evidence but did not make any arrests. In August 1986, Jennifer Bastian, 13, was killed. At first, police thought the two killings were related, said Ramsdell, who was a young Tacoma police officer at the time.</p> <p>"The murders of Michella Welch and Jennifer Bastian stunned our community and were among the main reasons we formed a cold case team," Pierce County Prosecutor Mark Lindquist said, according to CNN affiliate KOMO.</p> <p>Police developed a male DNA profile from crime scene evidence, but found no match in state and national databases. In 2016, police began working with a genetic genealogist.</p> <p>"Genetic genealogy uses a DNA technology to identify subjects by matching the unknown profile to a family member," Ramsdell said. "Traditional genealogy is then used to build a family tree from publicly available websites."</p> <p>Two brothers were identified as possible suspects and surveillance began, Ramsdell said. That included Detective Steve Reopelle following Gary Hartman into a restaurant when he met a co-worker for coffee, Ramsdell said.</p>

	<p>"I observed him using the napkin multiple times," Reopelle said. "He crumpled it up, put it into a bag and then crumpled that bag up and voluntarily abandoned that bag as he left the restaurant."</p> <p>The napkin was collected and sent to the Washington State Patrol Crime Laboratory. On Tuesday, the lab told police the DNA on the napkin matched DNA found at the crime scene, Ramsdell said. On Wednesday, police made a traffic stop and took Hartman into custody.</p> <p>KOMO reported that Hartman worked for the state Department of Social &amp; Health Services as a registered nurse. He has worked at Western State Hospital as a community nurse specialist, KOMO said.</p> <p>The DNA inquiry told police that Jennifer Bastian and Michella Welch were killed by different people. Last May, police used DNA evidence to arrest Robert D. Washburn, 60, and charge him with murder in that case, KOMO reported. He has pleaded not guilty.</p>

Regarding PRO/EDR> Cholera, diarrhea & dysentery update (22): Asia (Yemen, Saudi Arabia), archive Number:  
<http://promedmail.org/post/20180621.5868961>, we report the following

event:

On 20 Jun 2018, the public health administration of Jizan Health Directorate was informed of cases of diarrhea at an immigration center in the mountains of Bani Malik at the Saudi-Yemeni border. Field investigation revealed a total of 13 immigrants with acute diarrhea. Rapid *V. cholerae* O1/O139 tests were positive in all of them, and the confirmatory cultures are incubating.

The immigrants crossed the border illegally on 17 and 18 Jun 2018. The dates of onset were 19 and 20 Jun 2018. They were all males and ranged from 22-65 years of age. Six of them required IV hydration, while the others were managed onsite with ORS. They stayed in Yemen before crossing the border for at least a month at different locations. Epidemiological investigation and case management are ongoing. No further cases of diarrhea have been detected since 20 Jun 2018.

Source: The Horse [edited]

<<https://thehorse.com/158874/spanish-equids-test-positive-for-antibodies-against-besnoitia/>>

Spanish researchers have found subclinical (not causing signs of disease) besnoitiosis, a chronic and debilitating illness caused by a protozoan parasite mostly found in the Americas, in a "surprising" number of randomly screened equids in southern Spain. And while the animals aren't yet showing signs of disease, scientists believe clinical cases could soon occur in Europe.

"In the near future, new clinical cases could be expected to be reported (in Europe)," said Gema ?lvarez-Garc?a, PhD, of the Animal Health Department in the Complutense University Faculty of Veterinary Sciences, in Madrid. "Surveillance should be implemented, and harmonized diagnostic procedures and standardized techniques are needed in order to get comparable results and infer reliable conclusions."

?lvarez-Garc?a and her fellow researchers tested blood samples from 553 horses, 85 donkeys, and 83 mules across Andalusia, which is home to more equids than any other region in Spain. They tested the animals for antibodies against *Besnoitia bennetti*, a single-cell protozoan that creates cysts. They also tested for 2 other cyst-generating protozoan species: *Sarcocystis neurona* and *Neospora hughesi*, which are responsible for causing equine protozoal myeloencephalitis (EPM). These protozoa are abundant in North, South, and Central America but have historically been rare [in] other parts of the world.

They found that 7.1 percent of the tested equids were positive for the presence of antibodies against *Besnoitia*. Furthermore, 6.4 percent of the animals were positive for *Neospora* antibodies and 2.8 percent for *Sarcocystis* antibodies, ?lvarez-Garc?a said. Although the animals didn't show clinical signs of disease, the positive results indicate that the animals had been exposed to the pathogens at some point.

"We were surprised concerning the number of seropositive animals detected," she said. "We reported 51 seropositive animals among 721 animals tested. This result contrasts to other previous epidemiological studies carried out in our country in other ungulate species, such as wild ruminant species, where clinical cases are known to occur, and only 2 seropositive animals were found among 4893

animals sampled."

Certain subspecies of *Besnoitia* have been affecting cattle and wild ruminants in Europe for years, she said. But those subspecies are not the kind that usually affect horses, donkeys, mules, and zebras.

In the U.S., besnoitiosis is an emerging equine disease that principally affects donkeys. However, it's important to note that it's not limited to donkeys, *Ivarez-Garc?a* said.

"The disease has been reported in different equid species, such as donkey, horse, mule, and zebra," she said. "However, the clinical disease has been more frequently diagnosed in donkeys."

In their study, they found more positives in the donkey and mule population than in the horse population, she added. But that doesn't mean these equids are more susceptible to the disease. It could be related to how donkeys and mules are managed compared to horses.

The only known case of besnoitiosis in a European equid occurred in a horse in northern France in 1922. However, scientists suspected the disease in a herd of donkeys in more recent years in southern Spain, *Ivarez-Garc?a* said.

Researchers have not yet determined the origin of the protozoa's presence in Europe, but they have theories. "There are 2 feasible explanations," she said. "Animal trade from areas where the disease is endemic or scattered cases from a ruminant species origin (as whether *Besnoitia* species infecting ruminants can also infect equids and vice versa remains to be elucidated)."

The percentages revealed in the study underscore a need for scientists and veterinarians to be more aware of the pathogen and its disease risks in Europe, said *Ivarez-Garc?a*.

"As it happened with bovine besnoitiosis in the past, the disease might be underestimated, taking into account that there is a suspicion of the presence of the disease (at least in our country) and that skin lesions associated with this parasitic disease might be confused with other skin diseases," she said.

"Thus, our recommendation is to carry out surveillance of this parasitic disease by including equine besnoitiosis in the differential diagnosis of skin diseases and conducting serosurveys (blood screenings) at least in those countries where bovine besnoitiosis is present, since it is not known whether this species might infect equids," *Ivarez-Garc?a* said. "Surveillance might help to detect clinical cases that are needed to isolate and genotype the parasite in order to clarify the numerous epidemiological gaps."

The study, "A serosurvey of selected cystogenic coccidia in Spanish equids: first detection of anti-*Besnoitia* spp. specific antibodies in Europe," was published in *BMC Veterinary Research* [see commentary].

Communicated by:  
ProMED-mail  
<promed@promedmail.org>

[The paper discussed (Ref 1) was published in BMC Veterinary Research on 10 May 2017 (received 13 Feb 2017, accepted 4 May 2017). The abstract and conclusions follow:

#### 1. Abstract

"Equine besnoitiosis, caused by *Besnoitia bennetti*, and equine protozoal myeloencephalitis (EPM), caused by *Sarcocystis neurona* and *Neospora hughesi* are relevant equine diseases in the Americas that have been scarcely studied in Europe. Thus, a serosurvey of these cystogenic coccidia was carried out in Southern Spain. A cross-sectional study was performed and serum samples from horses (n = 553), donkeys (n = 85) and mules (n = 83) were included. An in-house enzyme-linked immunosorbent assay (ELISA) was employed to identify a *Besnoitia* spp. infection and positive results were confirmed by an a posteriori western blot. For *Neospora* spp. and *Sarcocystis* spp., infections were detected using in-house ELISAs based on the parasite surface antigens *N. hughesi* rNhSAG1 and *S. neurona* rSnSAG2/3/4. Risk factors associated with these protozoan infections were also investigated."

#### 2. Conclusions

"This study was the 1st extensive serosurvey of *Besnoitia* spp. infection in European equids accomplished by 2 complementary tests and gives evidence of the presence of specific antibodies in these populations. However, the origin of the infection is still unclear. Further parasite detection and molecular genotyping are needed to identify the causative *Besnoitia* and *Neospora* species. Finally, cross-reactions with antibodies directed against other species of *Sarcocystis* might explain the positive reactions against the *S. neurona* antigens."

Clinical signs and lesions caused by *B. bennetti* in donkeys in the USA, are described in references 2 and 3.

Two cases of besnoitiosis in European donkeys, of which one showed clinical signs, suspected to be caused by *B. bennetti*, have been described in a short communication published in 2016 by Belgian and French authors (Ref 4). The short communication follows:

"A 2-year-old male donkey was purchased in May 2016 in poor body condition (cachexia, alopecic areas, pruritus, dirty hair) by the present owner in Le Roeulx (Belgium) from a donkey farm aimed at milk production in Frasnés-lez-Buissenaal (Belgium). Shortly after its purchase, the donkey was shorn and showed crusts, and hyperkeratosis with no other clinical signs except anorexia and cachexia. A treatment with phoxim was given without improvement; a cutaneous biopsy of hyperkeratotic skin was performed in July [2016] and showed a perivascular eosinophilic infiltrate with a large thick walled cyst located in the dermis. The cyst was filled with numerous bradyzoites. This was highly suggestive of besnoitiosis. A daily treatment based on sulfamethaxazole and trimethoprim was given orally and some improvement

was noticed. Further clinical examination performed on August [2016] highlighted scleral pin-head sized cysts in right eye and between nares. Haematologic evaluation was unremarkable. Several skin biopsy samples were obtained for qPCR analysis and confirmed the presence of *Besnoitia* spp.'s DNA. Another 10-year-old female donkey purchased in France and sharing the same accommodation showed a good clinical condition. Punch-biopsy and haematology were realized on July [2016] but were unremarkable. A deepest clinical examination on August [2016] in this 2nd animal showed the presence of cysts on the inner face of upper labial mucosa. Further laboratory diagnosis tests are in progress through sera (Western Blot) and rDNA sequencing to confirm *Besnoitia bennetti* aetiology. To the authors' knowledge, this is the 1st detection of *B. bennetti* in donkeys in Europe."

Clinical expression of *B. bennetti* in horses is yet to be demonstrated.

Source: WNEM (CBS) [edited]  
<<http://www.wnem.com/story/38478869/measles-case-confirmed-in-mi-travelers-could-have-been-exposed>>

A 2nd case of measles has been confirmed in Michigan for 2018, and if you traveled lately, you may have been exposed.

The Michigan Department of Health and Human Services (MDHHS) said this

case is unrelated to Michigan's 1st, which occurred in March 2018. Both are the result of exposure outside of the country and may have exposed other travelers.

The ill individual arrived on 12 Jun 2018 at around 3:45 p.m. at Detroit Metropolitan Wayne County Airport (DTW) at the international arrivals area of the McNamara Terminal. That person was considered contagious at the time, and health officials are working to contact potentially exposed passengers from the flight.

In addition to the possibility of exposing people at the airport, the ill individual was also at locations listed in the URL above.

This year [2018], several countries in Europe are reporting significant measles outbreaks, including France, Italy, Germany, England, Romania, and Ukraine, among others. Recent outbreaks have also been reported in Venezuela, Colombia, and Brazil.

A Mount Laurel, NJ person infected with measles was on walkabout in various areas. Anyone who visited the locations listed at the URL above may have been exposed to measles.

Virtua is currently contacting individuals who may have been exposed. The New Jersey Department of Health is working with health officials to notify anyone who may have been exposed.

[3] Venezuela  
Date: Wed 20 Jun 2018  
Source: Efecto Cocuyo [machine trans. edited]  
<<http://efectococuyo.com/principales/suman-465-casos-de-sarampion-en-el-hospital-elias-toro-en-seis-meses/>>

Measles is being reported in the Dr. Elías Toro Hospital in Caracas.

Since the recurrence of the disease in 2017 until mid-June of this year [2018], pediatric center specialists have confirmed 465 cases in total.

The records were released by the infectious disease specialist Dr. Francisco Valery in the framework of the XIII Congress of Infectology, celebrated this Wed 20 Jun 2018. The specialist pointed out that the death of a child was recorded by the viral infection, and that of the total confirmed cases, 37% had to be hospitalized in the Elías Toro [hospital] after presenting respiratory complications.

Of 465 cases, 170 were hospitalized, and 295 were treated on an outpatient basis," The Galen explained. 144 patients in the hospitalized group had pneumonia, the most common complication of measles in children and the leading cause of death.

Valery added that cases of 9 adolescents with measles were also recorded.

"When vaccination coverage drops, cases of such diseases begin to appear," Valery explained.

Measles, a vaccine-preventable disease, reappeared in Venezuela 15 years after its eradication. In mid-September 2017, the Venezuelan Alliance for Health issued an alert after the confirmation of 8 cases of viral infection in Bolivar state between 22 Aug and 11 Sep 2017.

Since then, measles has expanded to various states in the country. According to the latest epidemiological bulletin published by the Pan American Health Organization (PAHO) dated 8 Jun 2018, Venezuela confirmed 1427 cases of viral disease, a figure with which it duplicates the number of cases reported throughout the year 2017, with 727 records.

The regional agency also revealed that 35 measles deaths were recorded at the national level, 33 of them in the Delta Amacuro state, where there is low vaccination coverage.

"The outbreak continues with active transmission in 17 states, and the Capital district reported confirmed cases. Since the confirmation of the 1st case of measles in SE 26 of 2017 and until SE 19 of 2018, 2154 cases of measles were confirmed," the alert indicates.

The bulletin indicates that the largest number of suspected cases of measles were reported in Bolivar state, followed by the capital district.

[4] Slovakia

Date: 20 Jun 2018

Source: The Slovak Spectator [edited]

<<https://tinyurl.com/yc6ee2t6>>

>>From the original source of infection, the village of Drahnov, the infected, who violated quarantine rules, have spread measles to other places. Six cases also involve medical staffers.

The number of patients sick with measles is still growing in the eastern Slovak area of lower Zemplin. By 14 Jun 2018, there were 38 cases of measles registered in the Michalovce and Sobrance districts, of which 17 are confirmed by laboratories, spokesperson of the Slovak Public Healthcare Office (?VZ) Dasa Rackova told the TASR newswire.

In Drahnov, there are 29 incidences, while in the villages of Falkusovce, Maovske Vojkovce, Trhoviste, Vysoka nad Uhom, Lozin and in the towns of Strazske and Michalovce, there is one case each, as well in the villages of Baskovce in the Sobrance District, and in the city of Kosice.

"A total of 33 patients were hospitalised, all with clinical symptoms but without serious complications," Rackova said, as quoted by TASR.

Of all the cases, 3 are imported, and 6 involve the medical staff of the Michalovce hospital. "All incidences have an epidemiological connection," Rackova added.

Most cases are registered with people aged 15-19 (13 cases), and the same number of patients are between 20 and 54 years of age. Twelve children between one and 14 years of age have been recorded as sick with the disease.

"The increase in measles' cases in eastern Slovakia, despite the ordered anti-epidemic measures, can be ascribed also to those sick coming from poor hygienic living conditions in the Michalovce District," Rackova explained, adding that patients from this community are not responsible enough to continue anti-epidemic measures. She also mentioned previous epidemics earlier recorded in these population groups in eastern Slovakia, the Sme daily wrote.

By the morning of 19 Jun 2018, 6 patients were hospitalised in the infectious diseases' ward of Michalovce hospital under suspicion of measles.

"So far, no serious complication in the course of the sickness has been recorded in patients," Jana Fedakova, of the Svet Zdravia company that operates the hospital, told Sme. She added that since the beginning of June 2018, 3 cases of measles have been confirmed in nurses working in the infectious diseases' ward. "All of them have recuperated from the sickness and returned to work," she mentioned, as cited by the daily. Two other nurses (one from radiology and the other from the paediatric ward) and a doctor of the infectious diseases' ward are awaiting the results of laboratory tests.

Fedakova pointed out that in the Michalovce hospital, strict measures are in effect to protect patients, as well as employees. So far, more than 600 medical staffers of the hospital have been vaccinated against measles, she told Sme.

They must receive mandatory vaccination, the Pravda daily wrote, or else take compulsory days off.

[5] France 2018 and 2020  
Date: Thu 21 Jun 2018  
Source: Eurosurveillance [edited]  
<<http://dx.doi.org/10.2807/1560-7917.ES.2018.23.25.1700796>>

G B?raud, S Abrams, P Beutels et al. Resurgence risk for measles, mumps and rubella in France in 2018 and 2020. Eurosurveillance 23, 1700796 (2018)

-----  
[Study] Conclusion: we estimated a persistent high resurgence risk for mumps and measles and a relatively lower risk for rubella. This risk varies by department and sex. In addition to young infants, primarily teenagers and young adults would be affected by these outbreaks. As part of the efforts to improve vaccination coverage, the public perception of measles, mumps and rubella as generally harmless diseases should be addressed to prevent future outbreaks of these vaccine-preventable diseases.

[6] England (Croydon)  
Date: Fri 22 Jun 2018  
Source: Croydon Advertiser [edited]  
<<https://www.croydonadvertiser.co.uk/news/croydon-news/huge-increase-measles-cases-croydon-1701182>>

There have been more than 20 cases of measles reported in Croydon since the start of the year [2018], a huge increase compared to last year.

Young people heading off on holiday to Europe, where there are large outbreaks of measles, are being encouraged to check whether they have had both MMR doses, as many missed out when vaccination rates dropped in the early 2000s due to unfounded fears over the vaccine.

>>From the start of the year 2018 up to 17 Jun 2018, 23 suspected cases of measles were reported to Public Health England (PHE) in Croydon. Cases across England and Wales have now exceeded 1500 in 2018.

The number of reports is 23 times higher than the one case reported in the same 24 weeks in 2017.

[7] England warning  
Date: Fri 22 Jun 2018  
Source: Outbreak News Today [edited]  
<<http://outbreaknewstoday.com/england-health-officials-advise-mmr-vaccine-europe-travel-measles-count-continues-rise-58059/>>

Health officials in England continue to report additional measles cases in the country this year [2018]. Between 1 Jan 2018 and 18 Jun 2018, there have been 643 laboratory confirmed measles cases in England.

Cases were reported in most areas, with London (225), the South-East (137), West Midlands (82), South-West (79), and Yorkshire and Humberside (74) reporting the most cases.

Cases of measles also continue to rise across England in unvaccinated young adults.

This and the measles outbreak in Europe has prompted them to encourage young adults to make sure they have had both doses of the MMR vaccine before going on holiday to Europe, where there are large outbreaks of measles.

While vaccine uptake levels in the UK in young children are currently very high, coverage levels dipped to a low of 80% in 2003. This means that there are significant numbers of unprotected teenagers and young adults who could catch measles both in Europe and in England, particularly in environments of close mixing such as summer festivals and when they travel abroad for the summer holidays.

The World Health Organization (WHO) recommends that to prevent outbreaks of disease, 95% of people need to have received the MMR vaccine.

The vaccine is available free to anyone who has not received both doses as a child. It protects against measles, mumps and rubella, all of which can be very serious diseases and are highly infectious.

--

[8] New Zealand

Date: Wed 20 Jun 2018

Source: Fisher Business News [edited]

<<https://fisherbusinessnews.com/2018/06/20/got-the-measles-phone-your-doctor-stay-home/>>

Health authorities are urging anyone with measles symptoms to phone but not visit their family doctor. That comes as authorities warn that the latest measles outbreak now affects the entire South Island.

Two adults and a 13-month-old baby who were at Queenstown Airport on 22 Mar 2018 were [infected].

Canterbury Medical Officer of Health Ramon Pink said they were recovering well, but 2 new cases had now also been confirmed among men in their late 30s or early 40s in Nelson and Christchurch.

He said those people flew on flights around the South Island.

It's not known who the source was, but Dr Pink said they had identified the strain involved.

"What we do know is that Queenstown is an international airport, and we know that the strain of this particular measles virus has been also identified circulating in Australia. And so it's highly possible that someone who was unaware that they were infectious travelled to New Zealand, and because it is highly infectious, they could have infected people even just walking through and gathering for a period of time in an airport."

None of the 1st 3 was immunised with the MMR [measles, mumps and rubella] vaccine. Of the 2 latest cases, the one in Christchurch believed he was immunised but was unsure, and the Nelson man was partially immunised, with just one of the required 2 jabs. ...

Dr Pink said technology now enabled the strain of the measles to be identified relatively quickly.

Public health authorities were aware, therefore, that the strain involved in the 1st 3 confirmed cases was also identified in late March-early April 2018 in Australia.

"I understand this particular strain may have been introduced into Australia by a traveller from southeast Asia. It's not a new strain; it's a strain that we have seen before, but we certainly haven't seen it for some time." ...

There were more than 21 000 cases of measles in Europe last year [2017], including 35 deaths, according to information published by the World Health Organization.

Good health services in New Zealand limited the spread of such communicable diseases, which made it easy for people to become complacent about the potential impacts, he said.

"It can impact on our health services, and, therefore, it's a cost to everyone, physically, financially and socially."

[9] Malaysia (Borneo)  
Date: Sat 23 Jun 2018  
Source: The Borneo Post [edited]  
<<http://www.theborneopost.com/2018/06/23/health-dept-to-hold-supplementary-immunisation-against-measles/>>

The Health Department will carry out supplementary immunisation activity (SIA) in Bintulu starting on 2 Jul 2018, following a spike in measles cases there.

In a statement yesterday [22 Jun 2018], director Dr Jamilah Hashim said 84 cases tested positive for measles in Bintulu from January 2018 until 16 Jun 2018. In the same period last year [2017], no measles case was recorded.

"There are 11 areas identified as outbreak areas for measles in Bintulu Division, including housing estates, workers' settlements, and kindergartens. Because of this, the Sarawak State Health Department will implement the supplementary immunisation activity (SIA) to prevent occurrences of more measles cases. It will be conducted door to door from 8 am to 10 pm from Mondays to Sundays, including public holidays. The SIA is a preventive measure, which develops herd immunity against the spread of this disease. Children aged 6 months-15 years old in Bintulu will be screened. Parents are advised to give their fullest cooperation by preparing identity documents and health records of their children, including record of immunisation," she said.

HEADLINE	06/20 Improving safety King Co. courthouse?
SOURCE	<a href="https://www.king5.com/article/news/local/could-ping-pong-food-trucks-improve-safety-around-king-county-courthouse/281-566123125">https://www.king5.com/article/news/local/could-ping-pong-food-trucks-improve-safety-around-king-county-courthouse/281-566123125</a>
GIST	<p>People who fear for their safety around the King County Courthouse have found a sympathetic ear on the Seattle City Council.</p> <p>For the last year, courthouse staff has been sounding the alarm about assaults and hygiene problems outside the King County Courthouse in downtown Seattle.</p> <p>Seattle City Councilmember Sally Bagshaw has decided to take on the problem, and she believes some simple inexpensive changes are enough to fix it.</p> <p>Ping pong tables, outdoor seating, and food trucks at Westlake Park have made it more inviting. Similar changes led to similar improvements at Occidental Park in Pioneer Square.</p> <p>But near the King County Courthouse, would those same changes work at City Hall Park, better known as Muscatel Meadows?</p> <p>"This could be a place where we bring table and chairs like we did at Westlake and Occidental," Bagshaw said Wednesday.</p> <p>Bagshaw has been meeting with the police chief and the parks department to address the problem.</p> <p>"When there are places to be, and there's food, and they can sit, then [the park] gets activated and there's space for everybody," Bagshaw said.</p> <p>That space is shared with other populations, like the homeless and the mentally ill seeking help at the Downtown Emergency Service Center across the street, and all too often, a criminal element who seeks to take advantage of them.</p> <p>Seattle police responded to a stabbing last week, a shooting the week before, and as recently as Tuesday, three people were attacked. In an internal courthouse memo, a staff member reported she was "punched in the stomach," "a lawyer was also punched," and "an unnamed gentleman was 'body slammed'" by an unknown assailant.</p> <p>Bagshaw, a former prosecutor, has heard it all.</p> <p>"Their concern is around the safety of their employees and the jurors coming down," she said.</p> <p>Seattle police agreed to increase bike patrols and visibility near 3rd Avenue and James Street during peak commute hours.</p> <p>Critics argue so-called improvements could displace those who need the services in the area.</p> <p>"I'm not worried about displacement. What I'm looking at is inclusion," Bagshaw said.</p>

	<p>Bagshaw believes the proposed changes could be worked into the current budget and therefore do not need full council approval.</p> <p>The Seattle Police Department is already implemented its emphasis in the area, and Bagshaw expects more to come in the next month.</p>

<b>HEADLINE</b>	<b>06/21 Census: US less white, older, more urban</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-06-21/america-is-less-white-getting-older-and-more-urban-census">https://www.bloomberg.com/news/articles/2018-06-21/america-is-less-white-getting-older-and-more-urban-census</a>
<b>GIST</b>	<p>The nation's over/under age demarcation line rose to 38.0 years, according to 2017 estimates released today from the U.S. Census Bureau. In 2000, the median age was 37.2 years.</p> <p>"Baby boomers, and millennials alike, are responsible for this trend in increased aging," said Molly Cromwell, a demographer at the U.S. Census Bureau. "Boomers continue to age and are slowly outnumbering children as the birth rate has declined steadily over the last decade."</p> <p>By 2035, Americans age 65 and older are forecast to outnumber kids for the first time.</p> <p>While the majority of counties in the U.S. continued to grow older, about half of the counties getting younger were in the Midwest. "Williams County, N.D., had the largest decrease in median age, declining by 7.1 years," Cromwell said.</p> <p>Increasing, the nation's population is living in metropolitan areas.</p> <p>Phoenix-Mesa-Scottsdale, Arizona gained one spot to move ahead of San Francisco as the 11th largest metro area. In the buckeye state, Columbus moved ahead of Cleveland.</p> <p>New York led all states in domestic migration as over million people have left the state since April 1, 2010. From July, 1 2016 to July 1, 2017, 190,508 people left New York and 138,195 left California. But, California was net positive as 164,867 international migrants moved to the state. Net migration was negative in 14 states plus Puerto Rico last year.</p> <p>The populations in eight states plus Puerto Rico shrank in size last year.</p> <p>Diversity Trends</p> <ul style="list-style-type: none"> <li>• America is becoming more diverse by race and ethnicity. Non-Hispanic whites are shrinking in population, while all other race and ethnic groups grew between July 1, 2016, and July 1, 2017.</li> <li>• Non-Hispanic white alone population decreased .02 percent to 197.8 million.</li> <li>• The non-Hispanic white alone population is projected to continue aging and decline in terms of size.</li> <li>• The Hispanic population increased 2.1 percent to 58.9 million, and made up 18.1 percent of the nation's total population in 2017. The gain was primarily due to natural increases (the difference between births and deaths), not net migration.</li> <li>• California had the largest Hispanic population at 15.5 million</li> <li>• More blacks or African-American moved to Clark County, Nevada, the county holding Las Vegas, than to any other county (14,000).</li> <li>• The black or African-American population increased 1.2 percent to 47.4 million.</li> <li>• The Asian population, the fastest-growing racial group in the nation, increased 3.1 percent to 22.2 million. Their increase is primarily due to net migration.</li> <li>• In Hawaii, Asian's represented a majority of the population</li> </ul>

HEADLINE	<b>06/21 Threat of global trade war deepens</b>
SOURCE	<a href="https://www.bloomberg.com/news/articles/2018-06-21/china-reiterates-pledge-to-respond-to-a-u-s-escalation-on-trade">https://www.bloomberg.com/news/articles/2018-06-21/china-reiterates-pledge-to-respond-to-a-u-s-escalation-on-trade</a>
GIST	<p>The global trade war deepened Thursday with China reiterating it will hit back if the latest tariff threats from Donald Trump materialize, while India followed the European Union in slapping retaliatory levies on U.S. goods.</p> <p>China is "fully prepared" to respond to any new list of U.S. tariffs, according to a commerce ministry spokesman, who said the nation will use a combination of quantitative and qualitative measures. Trump on Monday evening ordered up identification of \$200 billion in Chinese imports for additional tariffs of 10 percent -- with another \$200 billion after that if Beijing retaliates.</p> <p>India raised tariffs on a slew of items in retaliation for the U.S. imposing higher levies on some products shipped from the South Asian nation, echoing steps taken by China, the European Union and other trading partners. The import duty on chickpeas and bengal gram, or chana, has been increased to 70 percent and will take effect from Aug. 4.</p> <p>The benchmark Chinese stock index sank 1.4 percent on Thursday, falling for fifth day out of the last six, and other emerging markets also declined, while the dollar strengthened.</p> <p>"If protectionism cements its role in one or two big nations, we will see massive reallocation of resources in an inefficient way," said Raymond Yeung, chief greater China economist for Australia &amp; New Zealand Banking Group Ltd. in Hong Kong. "World growth will be affected."</p> <p>The world's most-powerful central bankers this week warned that escalating international trade tensions have started damaging confidence among companies, threatening the global economic expansion.</p> <p>Case in point: Daimler AG late Wednesday slashed its earnings outlook for the year, saying fewer Chinese consumers will buy Mercedes-Benz SUVs because of tariffs Beijing is slapping on autos imported from the U.S.</p> <p>"Changes in trade policy could cause us to have to question the outlook," Federal Reserve Chairman Jerome Powell said during a panel discussion at a European Central Bank conference in Sintra, Portugal. "For the first time, we're hearing about decisions to postpone investment, postpone hiring."</p> <p>The European Union this week triggered the first phase of retaliation against the U.S. over its metal-import tariffs imposed on national-security grounds, making good on more than three months of threats to hit American goods with tit-for-tat levies.</p> <p>Japan has reserved the right to respond too, although it hasn't yet. Canada's retaliatory measures begin on July 1, and Mexico and other nations have also announced they will respond.</p> <p>"The U.S. abuses tariffs to trigger trade wars everywhere around the globe and that will severely damage the world trade order, hurt the interests of trading partners, and also hurt its domestic companies and people," Ministry of Commerce spokesman Gao Feng said at a regular briefing in Beijing on Thursday. The U.S. "always use other nations as scapegoats for their own problems," he said.</p> <p>The Trump administration this week ratcheted up its accusations that China's trade and intellectual property practices are threatening U.S. economic interests. The two nations are locked in a worsening cycle of retaliation on trade, with no public sign that negotiations are still happening. Both sides have promised to impose tariffs early next month on billions of dollars in goods.</p>

	China had negotiated on agriculture and energy in early June and planned to negotiate on manufacturing and services, Gao said, adding that previous negotiations were in a “positive, constructive” manner.

<b>HEADLINE</b>	<b>06/20 Britain still tied in knots over Brexit</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/two-years-after-brexit-vote-british-leaders-still-tied-in-knots-over-how-to-leave-europe/2018/06/20/53af6192-73ce-11e8-bda1-18e53a448a14_story.html?utm_term=.d6bbe62bbd9c">https://www.washingtonpost.com/world/two-years-after-brexit-vote-british-leaders-still-tied-in-knots-over-how-to-leave-europe/2018/06/20/53af6192-73ce-11e8-bda1-18e53a448a14_story.html?utm_term=.d6bbe62bbd9c</a>
<b>GIST</b>	<p>LONDON — It was two years ago this week that Britain voted in a historic referendum to leave the European Union. And by now, Brexit was supposed to be pretty far along, with “quick” negotiations starting to yield beautiful trade deals and the glimmer of independence.</p> <p>But this uncoupling is turning out to be far more difficult and acrimonious than promised.</p> <p>Nigel Farage, the politician, radio showman and arch-Brexiteer, tweeted a cartoon this week showing frustrated Britons, some with “Leave” buttons and others with “Remain” buttons, shouting as one, “For heaven’s sake, get on with it!”</p> <p>British leaders — both in the governing Conservative Party and the Labour Party opposition — apparently can’t get on with it, though, because they can’t agree what “it” is.</p> <p>A stubborn three-way divide over Brexit persists nine months before it is supposed to go into effect, between supporters of a hard, clean divorce with the European Union and a soft, fuzzy separation — followed by a third alternative, all those who want a do-over in a repeat referendum (these folks don’t want any Brexit at all).</p> <p>On Wednesday, Prime Minister Theresa May narrowly survived a crunch vote, fending off a second attempt by Westminster’s unelected second chamber, the House of Lords, to push through an amendment that would give Parliament the power — “a meaningful vote” is the term of art — to stop Brexit in the case that May and Brussels fail to ink a deal.</p> <p>May cheered the passage of an “E.U. withdrawal bill,” without the constraining amendment, as “an important step in delivering the Brexit people voted for, a Brexit that gives Britain a brighter future, a Britain in control of its money, laws and borders.”</p> <p>In a statement, she said that the day’s votes “show people in the UK, and to the EU, that the elected representatives in this country are getting on with the job, and delivering on the will of the British people.”</p> <p>Yet May hasn’t been able to get support from her own Cabinet on what a Brexit deal should look like, and she is oceans away from meeting the demands of the E.U.</p> <p>Next week, she is headed back to Brussels for what was previously billed as a make-or-break negotiating session with European leaders but will now be much less. Her team delayed the publication of a blueprint on the future U.K.-E.U. relations until July, or whenever, because her Cabinet cannot agree.</p> <p>European officials now say the Brexit deal is unlikely to be hammered out until October, maybe November — alternatively, before Christmas.</p> <p>Absent an agreement with the E.U. on commerce, defense, immigration, monetary and myriad other arrangements, Britain would be free of Europe, yes, but estranged from its largest trading and security partner.</p> <p>This “cliff-edge” Brexit remains a possibility.</p>

HEADLINE	<b>06/19 Is suicide preventable?</b>
SOURCE	<a href="https://health.usnews.com/health-care/for-better/articles/2018-06-19/is-suicide-preventable">https://health.usnews.com/health-care/for-better/articles/2018-06-19/is-suicide-preventable</a>
GIST	<p>A CHERISHED YOUNG friend and colleague took his life almost two weeks ago, the same week the world lost Kate Spade and Anthony Bourdain. About 120 lives are lost to suicide in the United States every day, sometimes involving brilliant accomplished people like these who had abundant empathy for others but couldn't find a way forward for themselves.</p> <p>My dear friend's family and friends and I tried our best to console ourselves that there was nothing more we could have done. I suspect most of us, like others who have lost loved ones to suicide, wondered silently if this was accurate. Surely there were countless things we could have done or done differently. We just don't know which one of those things might have made a difference. The question lingers unanswered for me, a practicing psychiatrist, as it does for everyone else.</p> <p>We know a great deal about risk factors for suicide such as mental health conditions; prior suicide attempts; a history of childhood trauma or combat trauma; being an older white male; relationship problems; legal problems; impending life crises such as eviction; and having access to lethal means such as firearms. However, we still know very little about prediction of suicide at the level of the individual precious life. In the search for clues, researchers continue to scour expansive electronic medical record databases, physiological recordings, blood markers, brain scans and tests of unconscious or implicit bias toward living or dying. It is a still a young science in urgent need of maturing.</p> <p>To call suicide an epidemic may be an overstatement, but rates of suicide have continued to rise in alarming ways. A report released earlier this month by the Centers for Disease Control and Prevention showed that suicide rates in the U.S. rose by over 25 percent since 1999. Here and abroad, more people lose their lives to suicide than to homicide or war. In this country, suicide is one of the 10 leading causes of death. On that top 10 list, suicide is only one of three conditions whose rates continue to rise while deaths from other scourges, including cancer, heart disease, diabetes and kidney disease, have fortunately declined. While we wait for scientists and clinicians to develop more accurate ways to identify and help individuals at imminent risk of suicide, there's still a lot we can do.</p> <p><b>Enhance access to quality mental health services.</b> In 2008, Congress passed the Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act to ensure that insurance coverage for mental illness and addiction is comparable to coverage for other health conditions such as hypertension or asthma. Despite the crucial legislation, go try to find a mental health clinician who is in your insurance network, who has availability in their schedule, is affiliated with the center where you receive other care and who has expertise relevant to your problem. It's typically an overwhelming task even for those in good health; it's a potential disaster for those in crisis. We need to go beyond parity of coverage for mental health care to parity of access. Individuals, elected officials and advocacy groups need to press insurance companies to build truly adequate networks of available, quality providers as well as to encourage health systems to support outpatient, inpatient and urgent care services commensurate with the high need for such services. We must also do everything possible to inspire high school, college, graduate and professional students with the mission of devoting their careers to treatment and research related to mental illness and addiction in order to ensure a pipeline of talented and compassionate future leaders in the field of mental health.</p> <p><b>Promote resilience in schools and workplaces.</b> An increasing range of psychotherapies, from dialectical behavior therapy to mindfulness-based cognitive therapy, offer a rich range of strategies to boost the ability to cope, problem solve and bounce back from adversity. The essential principles and skills at the heart of these approaches are increasingly adaptable to educational and work settings. Although few individuals have access to expert therapists, many individuals – probably most of us – can benefit simply from these basic practical skills and insights that contribute to well-being in a stressful world.</p> <p><b>Value connection.</b> While isolation is often a consequence of mental illness or addiction, even in the</p>

absence of mental health problems, individuals in the 21st century can lead strikingly solitary lives. When feeling depleted, many of us choose "me time" when "we time" might replenish us more. When concerned about a friend or neighbor, our respect for privacy often overrides our inclination to help. While self-sufficiency has its place, a sturdy sense of community should be considered one of the essential pillars for mental health. We need to check in with one another on a regular basis and reach out to those who are struggling. Social engagement provides the necessary emotional, practical and sometimes spiritual support to get through hard times while introducing diverse perspectives that help broaden the tunnel vision that can accompany despair.

**Support research.** Death rates from cancer, heart disease and many infectious diseases such as HIV continue to fall, thanks in no small part to advances in biomedical science combined with growing understanding of the social determinants of health. Suicide remains a stubborn public health challenge we still need to get a better handle on. Research on suicide, and on related problems such as mood disorders, problem substance use and trauma, is a crucial part of this battle and needs philanthropic and federal support fully commensurate with the scope and urgency of the problem.

**For today.** Suicide is not yet fully preventable, but it's far from inevitable. We need to learn more – but we already know enough to begin to wipe suicide off the list of the top 10 leading causes of death. For starters, we can all reach out today to someone we're concerned about. Chances are he or she is not suicidal but will benefit from our caring.

<b>HEADLINE</b>	<b>06/21 NKorea returns US soldiers' remains</b>
<b>SOURCE</b>	<a href="http://time.com/5318121/president-trump-north-korea-war-soldiers-remains/">http://time.com/5318121/president-trump-north-korea-war-soldiers-remains/</a>
<b>GIST</b>	<p>North Korea repatriated the remains of 200 U.S. soldiers missing from the Korean War on Wednesday, according to President Trump, a week after the issue was raised at a landmark summit with North Korean leader Kim Jong Un.</p> <p>"We got back our great fallen heroes, the remains sent back today, already 200 got sent back," Trump told a rally in Duluth, Minnesota Wednesday, according to Reuters.</p> <p>There was no official confirmation of the return from military sources, but anonymous U.S. officials said the previous day that North Korea was returning a "sizable number" of remains, which would be transported to Hawaii's Hickam Air Force Base, Reuters reports.</p>

	<p>In a press conference following a historic U.S.-North Korea summit in Singapore last week, Trump said that Kim agreed to return the remains of deceased American soldiers “quickly.” The recovery of war dead was also included in the agreement signed by the two leaders at the summit’s conclusion.</p> <p>Nearly 7,700 American military service-people are still unaccounted for from the Korean War, according to the Department of Defense POW/MIA Accounting Agency, of which approximately 5,300 are thought to be in North Korean territory. The war lasted from 1950 to 1953 and ended in an armistice rather than a permanent peace treaty.</p> <p>Between 1990 and 2005, North Korea returned 229 caskets containing the remains of American soldiers, and repatriated another six soldiers in 2007. In 2015, North Korea returned the remains of Robert V. Witt, an American soldier who was taken prisoner and died of malnutrition in Jan. 1951, after his identity was confirmed with DNA tests.</p>

<b>HEADLINE</b>	<b>06/21 Strain: retirees grow, workforce shrinks</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/retiring-baby-boomers-leave-the-u-s-with-fewer-workers-to-support-the-elderly-1529553660?mod=hp_lead_pos3">https://www.wsj.com/articles/retiring-baby-boomers-leave-the-u-s-with-fewer-workers-to-support-the-elderly-1529553660?mod=hp_lead_pos3</a>
<b>GIST</b>	<p>The surge of retiring baby boomers is reshaping the U.S. into a country with fewer workers to support the elderly—a shift that will add to strains on retirement programs such as Social Security and sharpen the national debate on the role of immigration in the workforce.</p> <p>For most of the past few decades, the ratio of retiree-aged adults to those of working age barely budged. In 1980, there were 19 U.S. adults age 65 and over for every 100 Americans between 18 and 64, census figures show. That number—called the old-age dependency ratio—barely edged up over the next 30 years, rising to just 21 retiree-aged Americans for every 100 of working age in 2010.</p> <p>But there has been a rapid shift since then. By 2017, there were 25 Americans 65 and older for every 100 people in their working years, according to new census figures released Thursday that detail age and race for every county. The ratio would climb to 35 retiree-age Americans for every 100 of working age by 2030, according to census projections released earlier this year, and 42 by 2060, though currently unforeseen factors could alter that.</p> <p>“You have this top-heavy age distribution that is basically uncharted waters,” said Paul Taylor, author of “The Next America” who has studied the aging population. “The failure to face what’s evident, right in front of our eyes, is a form of generational theft,” he said, referring to the financial consequences for subsequent generations.</p> <p>The new census figures also show that the number of whites who aren’t Hispanic fell slightly in 2017. Revised estimates for 2016 also showed a small decrease. If it is not revised, the overall decrease of about 41,000, or 0.02%, would be the first on record, according to William Frey, a demographer at the Brookings Institution.</p> <p>The finding showcases the long-term aging of the white population due to lower birth rates and shifts in where immigrants come from. In the majority of states, non-Hispanic whites are dying faster than they are being born, according to a recent study by the Applied Population Lab at the University of Wisconsin.</p> <p>The retiree surge, which has been long expected, began when the first baby boomers—whose birth years span 1946 to 1964—turned 65 in 2011. About 10,000 baby boomers turn 65 each day, Mr. Taylor said. Lower birth rates that began in the 1970s thinned the ranks of the working-age population in the generations that followed them. An immigration boom wasn’t enough to offset that.</p> <p>Even as the U.S. ratio grows, it would remain lower than those of many developed nations. In 2025, when</p>

the U.S. ratio is expected to reach 33 older adults per 100 of working age, Canada's would reach 40, Germany's 44 and Japan's 58, according to census projections. By comparison, India's ratio would reach 13, Mexico's 16 and China's 22.

The figures are the latest sign that the U.S. safety net for seniors will become even more stretched for cash. Earlier this month, the trustees for Social Security said the program is dipping into its trust fund for the first time since 1982 to pay benefits. States also face mounting employee pension costs that have led them to pare spending on programs like education and health care.

State pension funds had \$2.6 trillion in assets to cover liabilities of \$4 trillion in fiscal 2016, according to an April analysis of the most recent publicly available data by the Pew Charitable Trusts. The gap between assets and liabilities is up \$295 billion from the prior year and is due in part to investments falling short of states' assumptions, the report said.

<b>HEADLINE</b>	<b>06/20 Hungary criminalizes aiding illegal migrants</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/06/20/world/europe/hungary-stop-soros-law.html?rref=collection%2Fsectioncollection%2Fworld&amp;action=click&amp;contentCollection=world&amp;region=rank&amp;module=package&amp;version=highlights&amp;contentPlacement=2&amp;pgtype=sectionfront">https://www.nytimes.com/2018/06/20/world/europe/hungary-stop-soros-law.html?rref=collection%2Fsectioncollection%2Fworld&amp;action=click&amp;contentCollection=world&amp;region=rank&amp;module=package&amp;version=highlights&amp;contentPlacement=2&amp;pgtype=sectionfront</a>
<b>GIST</b>	<p>The Hungarian Parliament approved a package of laws on Wednesday that criminalizes the act of helping undocumented migrants and creates a parallel court system that some fear will be used for politically sensitive cases, accelerating efforts by Prime Minister Viktor Orban to transform the country into what he calls an “illiberal democracy.”</p> <p>The government named the legislation the “Stop Soros” bill, after the Hungarian-American financier and philanthropist George Soros, who has helped Hungarian rights organizations. It must be signed into law by President Janos Ader before it can take effect.</p> <p>The laws are the first major measures to be passed since Mr. Orban, who campaigned on a nationalist, anti-immigrant platform, led his far-right party, Fidesz, to an increased parliamentary majority in April, in an election that observers said was free but not fair.</p> <p>Their passage came on World Refugee Day, five days after Mr. Orban spoke by telephone with President Trump, who is coming under intense criticism in the United States for his policy of separating migrant children from their parents, and incarcerating them, after they cross the southern American border.</p> <p>Mr. Orban has been Europe's most prominent critic of open-door migration since the Continent's refugee crisis in 2015, putting him at odds with Chancellor Angela Merkel of Germany, whose government welcomed hundreds of thousands of mainly Syrian and Afghan refugees that year.</p> <p>In 2015, over a million asylum seekers landed by boat on European shores, many of them later passing through Hungary on their way to Germany. To stop their passage, Mr. Orban built a fence along Hungary's southern border, a move that foreshadowed Mr. Trump's plans to extend a wall along the American border with Mexico.</p> <p>Under the terms of a new law, helping migrants legalize their status in Hungary by distributing information about the asylum process or providing them with financial assistance could result in a 12-month jail term.</p> <p>In a separate measure, the government changed the Constitution to make it illegal to “settle foreign populations” in Hungary, a rebuke of attempts by the European Union to encourage Hungary to admit small numbers of refugees who had been living in other European countries.</p>

<b>HEADLINE</b>	<b>06/20 India takes direct control of Kashmir</b>
<b>SOURCE</b>	<a href="https://apnews.com/af2b7d4fa4134facb5bc83b4da6785da/India-takes-direct-control-in-Kashmir-after-alliance-ends">https://apnews.com/af2b7d4fa4134facb5bc83b4da6785da/India-takes-direct-control-in-Kashmir-after-alliance-ends</a>
<b>GIST</b>	<p>SRINAGAR, India (AP) — India's federal government took direct control of Kashmir state Wednesday after the ruling Hindu nationalist party ended its long-troubled alliance there with a Kashmiri political party.</p> <p>The shift to direct rule in the disputed region was approved after the Bharatiya Janata Party withdrew its support Tuesday for the People's Democratic Party, following years of feuding and a deteriorating security situation. The BJP also heads the central government, and officials say Prime Minister Narendra Modi was involved in the decision to withdraw from the coalition.</p> <p>Political decisions will now be made by the government in New Delhi, though day-to-day life is unlikely to change significantly for the people of Kashmir.</p> <p>State elections are scheduled for 2020, but a vote could be called before then.</p> <p>The coalition government was formed in 2015 after extended and difficult negotiations, since the two parties hold diametrically opposed views on many major issues, including the law that exempts Indian military personnel from criminal prosecution in the violence-wracked Himalayan region. The People's Democratic Party wants the draconian law scrapped. The BJP supports it. The BJP has consistently advocated a tough government approach in Kashmir while the People's Democratic Party favors reconciliation and dialogue.</p>

	<p>The coalition marked the first time that the Hindu nationalist BJP held a leadership position in the Muslim-majority region.</p> <p>Mehbooba Mufti, the president of the People’s Democratic Party and the state’s top official, resigned after the BJP withdrew its support, paving the way for direct rule.</p> <p>She told reporters that the alliance had been cobbled together “although this was against the sentiments of the people.”</p> <p>“Our aim was reconciliation and dialogue,” she said, adding that politicians had hoped the alliance with Modi’s party would “help in bringing out the state from its situation of turmoil.”</p> <p>Other pro-India political parties said the alliance was bound to collapse, given the two parties’ different political ideologies.</p> <p>“And so it has come to pass,” former chief minister and opposition leader Omar Abdullah said in a tweet, blaming both parties for the security situation.</p> <p>Separatists who challenge India’s sovereignty over Kashmir did not immediately comment on the political developments, though in the past their leaders have consistently ridiculed pro-India politicians as collaborators.</p>

<b>HEADLINE</b>	<b>06/20 Gaza rocket attacks prompt Israel strikes</b>
<b>SOURCE</b>	<a href="https://apnews.com/67216b89c0a44f2891e61a2a26bfa673/Israel-strikes-Hamas-after-heavy-rocket-attacks-from-Gaza">https://apnews.com/67216b89c0a44f2891e61a2a26bfa673/Israel-strikes-Hamas-after-heavy-rocket-attacks-from-Gaza</a>
<b>GIST</b>	<p>JERUSALEM (AP) — Israeli warplanes struck Hamas positions in Gaza after Palestinian militants there fired dozens of rockets and mortars at southern communities early Wednesday, the military said.</p> <p>The Palestinian fire came hours after the Israeli military said it struck Hamas infrastructure in response to “arson balloons” launched from Gaza into Israel.</p> <p>Israel has been battling large fires caused by kites and balloons rigged with incendiary devices or burning rags, launched by Palestinians in Gaza that have destroyed forests, burned crops and killed wildlife and livestock.</p> <p>Fawzi Barhoum, a spokesman for Hamas, praised the rocket attacks calling them “a legitimate right that bombing is met with bombing,” but did not take responsibility for them.</p> <p>The Israeli military said Palestinians fired about 45 rockets and mortars at Israel. Seven projectiles were intercepted by the Iron Dome defense system and at least three fell prematurely, landing inside Gaza, it said. Fighter jets targeted about 25 Hamas targets overnight in response to the heavy Palestinian fire, it said.</p> <p>The exchange early Wednesday was the biggest flare-up between the sides in weeks. However, no casualties were reported in Israel or Gaza.</p> <p>Some Palestinian rockets exploded inside Israel damaging property and peppering homes and cars with shrapnel. One mortar exploded next to an Israeli kindergarten.</p> <p>Israeli police said its bomb disposal unit dealt with a rocket that landed in a populated area.</p> <p>“The Hamas terror organization targeted Israeli civilians throughout the night with a severe rocket attack and is dragging the Gaza Strip and its civilians down a continually deteriorating path,” the military said.</p>

	<p>Military spokesman Lt. Col. Jonathan Conricus said many Israelis spent the night in bomb shelters in communities near Gaza.</p> <p>Conricus wouldn't elaborate on open-fire regulations regarding the kite and balloon threats but said those who launch such devices "are engaged in hostile activity." He said so far the army has fired near those launching the devices and at infrastructure but added Israel has warned it "will not tolerate" the current situation of daily airborne attacks on its territory.</p> <p>Tensions are high along the Gaza border after months of weekly mass rallies led by the Islamic militant group that rules the territory turned violent. Over 100 Palestinians have been killed by Israeli fire since they began.</p> <p>Israel says it is defending a sovereign border and nearby communities and accuses Hamas of using the protests as cover for attempts to breach the border fence and carry out attacks.</p> <p>The protests are aimed in part at drawing attention to the decade-long Israeli-Egyptian blockade on the territory imposed after Hamas, a group sworn to Israel's destruction, seized control of Gaza.</p> <p>Barhoum, the Hamas spokesman, said demonstrations will continue and implied that more incendiary devices will be launched at Israel.</p>

<b>HEADLINE</b>	<b>06/20 Complex mass migration reshapes globe</b>
<b>SOURCE</b>	<a href="https://apnews.com/35d829ab5f754d0883f09f6eda613164/No-easy-path:-Complex-mass-migration-reshapes-globe">https://apnews.com/35d829ab5f754d0883f09f6eda613164/No-easy-path:-Complex-mass-migration-reshapes-globe</a>
<b>GIST</b>	<p>PARIS (AP) — Lined up before dawn, dozens of migrants outside a government office in Italy jostled to be one of the handful allowed inside to request asylum Wednesday.</p> <p>The journeys that brought them to Rome and the sleepless nights wondering if they would be allowed to stay was being repeated in cities and countries around the world on World Refugee Day as millions of people sought to flee persecution, violence, war and poverty.</p> <p>The Rohingya Muslims forced out of Myanmar to Bangladesh; teenagers from Mexico and Central America seeking safety in the United States; Syria's war refugees; men from South Sudan and Nigeria crossing the Mediterranean Sea to feed their families — they are among the human wave roiling every continent.</p> <p>"The international community must work with shared and long-term political choices to manage a phenomenon that involves the entire world," Italian President Sergio Mattarella, whose country is on the receiving end of Europe's immigration front line, said in a World Refugee Day message.</p> <p>While migration to the world's 35 richest countries dropped slightly last year for the first time since 2011, asylum claims rose by 26 percent in the United States, according to a new report from the Organization for Economic Cooperation and Development, which represents the wealthy nations.</p> <p>Meanwhile, the United Nations refugee agency reported this week that nearly 69 million people were forcibly displaced in 2017, a record for the fifth straight year.</p> <p>OECD Secretary-General Angel Gurría insisted that since migration is here to stay, countries need to work to integrate newcomers and to prepare their native-born populations to welcome foreigners instead of resent them. Migration disproportionately affects young men, and he called for support policies, particularly in terms of training and skills development, according to the report.</p>

“The absence of the policy is what’s creating this cacophony,” Gurria said.

In Europe, leaders of European Union member countries are trying anew to come up with continent-wide solutions to a mass migration crisis that has pitted nations and politicians against each other.

The interior minister in Italy’s new populist government, Matteo Salvini, refused a port of entry this month to a rescue boat operated by two nonprofit groups that carried 630 people who were picked up while trying to cross the Mediterranean Sea from Libya.

Italy has been the arriving place of the bulk of migrants who attempt the dangerous sea crossing for a variety of reasons — as seen in the discouraged line outside the Rome immigration office. Salvini is pressing other EU members to share the burden.

Migrants and refugees who were swept off the streets of Paris in recent weeks now occupy a gymnasium, all of them wishing Wednesday to be somewhere else.

Nasir Ahmad, an Afghan living in the Paris gym, spent a year in Germany and has been in France for two years, hoping to get the documents he needs to make France his home.

“I have good energy. I have good energy to do for the work, but nobody used me,” he said. “Nothing changed. Only I changed. I get old.”

German Chancellor Angela Merkel, who faces constant criticism and mounting pressure over her decision to open Germany to refugees in recent year, said how to handle the sheer number of people fleeing violence and persecution is “a central global question of our time.”

Some 700,000 Rohingya fled brutal attacks by government forces and mobs last year in Myanmar, pouring across the border into crowded makeshift refugee camps in Bangladesh. Monsoon rains have begun sweeping through the camps, often leaving the refugees to wade through rivers of mud and water.

At the Kutupalong refugee camp outside of Cox’s Bazaar, Bangladesh, more than 100 Rohingya marched Wednesday to highlight their suffering, demanding that international organizations hold the Myanmar government accountable for the attacks that drove them into exile.

Many wore T-shirts and paper hats proclaiming they are “Not Bengali.” In Myanmar, the Rohingya are often derided as illegal migrants from Bangladesh.

Abdu Shukkur, a 44-year-old refugee, denounced the Myanmar government for refusing to recognize the Rohingya as an ethnic minority and for denying them “the right to citizenship and its privileges.”

In Lebanon, Syrian refugees have begun building lives in similar camps intended to be temporary way-stations. Turkey remains the country with the largest number of Syrian refugees, but tiny Lebanon holds the highest concentration per capita of refugees in the world.

<b>HEADLINE</b>	<b>06/20 States withdraw NG troops from border</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/governors-withdraw-national-guard-troops-over-family-separation-policy/">https://www.cbsnews.com/news/governors-withdraw-national-guard-troops-over-family-separation-policy/</a>
<b>GIST</b>	The governors of multiple East Coast states have announced that they will not deploy National Guard resources near the U.S.-Mexico border, a largely symbolic but politically significant rejection of the Trump administration's "zero-tolerance" immigration policy that has resulted in children being separated from their families.  Maryland Gov. Larry Hogan, a Republican, announced Tuesday morning on his Twitter account that he

has ordered four crewmembers and a helicopter to immediately return from where they were stationed in New Mexico.

"Until this policy of separating children from their families has been rescinded, Maryland will not deploy any National Guard resources to the border," Hogan tweeted.

Massachusetts Gov. Charlie Baker, who like Hogan is a Republican governor in a blue state, on Monday reversed a decision to send a National Guard helicopter to the border, citing the Trump administration's "cruel and inhuman" policy.

On the Democratic side, governors in Connecticut, Delaware, New Jersey, Pennsylvania, Rhode Island, New York and Virginia have all indicated their refusal to send Guard resources to assist with immigration-related issues.

The resources in question from each state are relatively small, so the governors' actions aren't likely to have a huge practical impact. But they are a strong symbolic political gesture, said Mileah Kromer, the director of the Sarah T. Hughes field Politics Center at Goucher College in Towson, Maryland.

In New York, Gov. Andrew Cuomo on Monday reiterated a decision he first made earlier this year to not send Guard resources to the border to assist with immigration-related duties. He's also asked for a federal investigation of the policy relating to the separation of the children from their families.

Delaware Gov. John Carney, a Democrat, said he turned down a request he received on Tuesday to send National Guard troops to the southwest border, while the Democratic governors of Virginia and North Carolina said they would recall Guard members and equipment they already had sent to the border.

<b>HEADLINE</b>	<b>06/20 Distraught relatives slam Indonesia govt.</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/indonesia-ferry-sinks-in-lake-toba-leaving-almost-200-missing-feared-dead/">https://www.cbsnews.com/news/indonesia-ferry-sinks-in-lake-toba-leaving-almost-200-missing-feared-dead/</a>
<b>GIST</b>	<p>TIGARAS, Indonesia -- Distraught relatives slammed Indonesia's government for not enforcing basic safety measures on passenger boats and pleaded Wednesday for a bigger search effort for more than 190 people missing since a ferry sank on a picturesque Sumatran lake early this week. The wooden vessel, overcrowded with passengers as well as dozens of motorbikes, didn't have a manifest and disaster officials have several times raised the number of people it was carrying as family members who rushed to Lake Toba in northern Sumatra provided information.</p> <p>The boat was five times over its passenger capacity of 43 and equipped with only 45 life jackets, National Search and Rescue Agency chief Muhammad Syaugi told a news conference. The latest information is that 192 people are missing, he said.</p> <p>Only 18 survivors have been found -- in bad weather within hours of the sinking Monday evening. It's possible many of the victims were still inside the sunken ferry, said North Sumatra province police chief Paulus Waterpau.</p> <p>"Many survivors told authorities that less than half of them had jumped into the water before the boat sank," he told The Associated Press.</p> <p>Suwarni, whose 20-year-old son and his girlfriend were on the ferry, criticized the search and rescue operation as slow and insufficient.</p> <p>"Millions of questions keep me from sleeping," she said between desperate sobs. "Why a boat for just 50 people is allowed to be loaded with almost 200 people plus dozens of motorcycles," said Suwarni, who uses one name.</p>

"What kind of government is this that can't protect their own people from unnecessary accidents? And after the accident they're not able to find the victims," she said. "I beg help to everyone to quickly find my son and his girlfriend, even if their remains, please find my son, return him to me."

Divers were searching at depths of 82 feet and will deploy an underwater drone to 656 feet below the surface, Waterpau said. The 440-square-mile Lake Toba, formed out of an ancient super volcano, is a popular sightseeing destination on the island of Sumatra. It's more than 1,312 feet deep.

The search and rescue effort involving 350 personnel and at least half a dozen boats has turned up items of clothing, bags and traces of oil from the ferry but just several victims.

Survivor Juwita Sumbayak, from Medan, said she had crossed the lake many times on the same boat but on Monday it was terribly overcrowded because of holidays for the end of the Muslim holy month. In an interview with AP, the distraught mother wept uncontrollably and called out the names of her husband and children who she believes drowned inside the boat.

She said that about 20 minutes into the journey, strong high waves caused the ferry to list to the right and take on water, sparking a panic among passengers. Then it was smacked hard by more waves and an empty small wooden boat. The ferry seemed to shake, Sumbayak said, then suddenly capsized.

"Many passengers without a life jacket jumped into the deep lake, but others drowned with the boat," she said. "I jumped, I cried with fear." She saw dozens of people in the water "but nobody can help."

Cellphone video released earlier in the week by the National Disaster Mitigation Agency showed the crew of another ferry attempting to rescue people struggling in the waters shortly after the sinking but being hampered by bad weather and rough waters.

The disaster has cast a tragic pall over the holidays marking the end of Ramadan when tens of millions of Indonesians return to their hometowns.

Ferry tragedies are common in Indonesia, an archipelago of more than 17,000 islands, with weak enforcement of safety regulations often to blame.

<b>HEADLINE</b>	<b>06/20 Biggest US oil patch nearing capacity</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-06-20/shale-giant-says-permian-oil-faces-shut-ins-on-pipeline-shortage">https://www.bloomberg.com/news/articles/2018-06-20/shale-giant-says-permian-oil-faces-shut-ins-on-pipeline-shortage</a>
<b>GIST</b>	<p>The biggest U.S. shale region will have to shut wells within four months because there aren't enough pipelines to get the oil to customers, the head of one of the industry's largest producers said.</p> <p>The worsening bottleneck in the Permian region that straddles west Texas and New Mexico offers an unexpected fillip to OPEC and other oil producers outside the U.S., who've seen rampant production from America's shale producers grab market share.</p> <p>"We will reach capacity in the next 3 to 4 months," Scott Sheffield, the chairman of Pioneer Natural Resources Co. said in an interview at an OPEC conference in Vienna. "Some companies will have to shut in production, some companies will move rigs away, and some companies will be able to continue growing because they have firm transportation."</p> <p>His comments are the strongest indication yet that the growth in the red-hot shale region is about to slow down soon due to a lack of pipeline capacity. The problem has grown so bad that oil companies have been forced to load crude on to trucks and drive it hundreds of miles to pipelines in other parts of the state.</p>

	<p>The Permian is growing at 800,0000 barrels a day annually and production currently stands at 3.3 million barrels a day, said Sheffield, who first drilled wells in the region in 1979 and is considered one of the architects of the shale revolution. Total pipeline capacity is 3.6 million barrels, so the region will reach capacity in the next three to four months and the bottleneck isn't likely to ease for at least a year, he added.</p> <p>Permian production could remain flat for the next year because of pipeline restraints, Sheffield told a session of the OPEC conference.</p> <p>"The market has been assuming a straight line production growth from the US but infrastructure constraints mean that's clearly not going to be the case," said Amrita Sen, chief oil analyst at consultant Energy Aspects Ltd. "At a time when outages are rising the US is not going to fill the gap either."</p> <p>The lack of pipeline capacity will continue to cause severe dislocation in U.S. oil markets, Sheffield said. Benchmark West Texas Intermediate crude at Midland in the Permian is likely to trade at a \$25-a-barrel discount to price at the industry's hub in Cushing, Oklahoma, he said.</p> <p>The Permian region is accounting for nearly half of the growth in U.S. oil production. America pumped almost 10.5 million barrels a day in March, up 1.4 million barrels a day from a year, according to government data. The annual growth rate is larger than the production of OPEC nations such as Libya.</p>

<b>HEADLINE</b>	<b>06/20 EU retaliatory tariffs on US products</b>
<b>SOURCE</b>	<a href="http://money.cnn.com/2018/06/20/news/economy/europe-tariffs-us-goods/index.html">http://money.cnn.com/2018/06/20/news/economy/europe-tariffs-us-goods/index.html</a>
<b>GIST</b>	<p>European Union tariffs on products from the United States will go into effect on Friday.</p> <p>The European Commission announced Wednesday that it had approved initial retaliatory tariffs on US exports worth €2.8 billion (\$3.2 billion).</p> <p>The tariffs will hit American products including motorcycles, orange juice, bourbon, peanut butter, motor boats, cigarettes and denim. They are a response to the Trump administration's tariffs on steel and aluminum exports from Europe.</p> <p>"We did not want to be in this position," said EU trade official Cecilia Malmström. "The unilateral and unjustified decision of the US to impose steel and aluminum tariffs on the EU means that we are left with no other choice."</p> <p>The European Union has also filed a case at the World Trade Organization.</p> <p>If the trade dispute continues or is not resolved by the WTO, the European Union said a second batch of American exports worth around €3.7 billion (\$4.3 billion) a year could eventually be targeted.</p> <p>That list includes roughly 160 products such as US sunbeds, paper towels, corduroy pants and porcelain tableware.</p> <p>The United States imposed tariffs on steel and aluminum from the European Union, Canada and Mexico last month. The Trump administration justified the move on national security grounds.</p> <p>Canada and Mexico have also announced retaliatory tariffs against the United States.</p>

<b>HEADLINE</b>	<b>06/20 Texas faces flood warnings, watches</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/20/us/houston-flooding-wxc/index.html">https://www.cnn.com/2018/06/20/us/houston-flooding-wxc/index.html</a>

<b>GIST</b>	<p>(CNN)Texas residents still wary after Hurricane Harvey again face the risk of flash flooding Wednesday as heavy rain pounds a wide swath of the state's southeastern coast.</p> <p>Flash flood watches are in effect for areas south of Houston to Brownsville, at the Mexican border, with flash flood warnings popping up as storms flare, CNN meteorologists said. The zone includes Victoria, Corpus Christi and McAllen, where hundreds of migrants seeking entry into the United States await processing at a detention center.</p> <p>Tropical moisture could produce 2 to 3 inches of rain over a short period across the watch area, meteorologists said. Showers and thunderstorms are forecast to continue through Thursday, the National Weather Service tweeted.</p> <p>North of Houston, the city of Port Arthur, which along with Beaumont was devastated in August by Harvey's floods, was swamped again Tuesday by the same weather system now pummeling points south. Video from Port Arthur showed streets turned into raging rivers as cars slowly made their way through them.</p> <p>The storms conjured memories of last summer's flooding, said Damion Robertson, of Port Arthur.</p> <p>"It's concerning. A lot of people just lost a lot of houses ... over Harvey," Robertson told CNN affiliate KBTX. "So, a lot of people are probably nervous about losing their stuff again."</p> <p>The Beaumont Port Arthur airport "broke daily rainfall record (Tuesday), where 5.89 inches of rain fell in a 24-hour period, causing flash flooding in the area," CNN meteorologist Michael Guy said Wednesday.</p> <p>"While rainfall totals will not even come close to the amount that Harvey left in its wake, the region could still suffer damage from flash flooding, downed trees and travel disruptions," he said.</p>

<b>HEADLINE</b>	<b>06/20 Ethics commission clears Sawant</b>
<b>SOURCE</b>	<a href="https://www.king5.com/article/news/politics/sawant-did-no-wrong-in-using-city-copier-for-rally-ethics-commission-finds/281-566018507">https://www.king5.com/article/news/politics/sawant-did-no-wrong-in-using-city-copier-for-rally-ethics-commission-finds/281-566018507</a>
<b>GIST</b>	<p>The Seattle Ethics and Elections Commission says Councilmember Kshama Sawant did not commit a violation when she used a city copier to make posters for a rally.</p> <p>The signed report, released Wednesday, says Sawant and her staff made "thousands" of copies of signs and flyers to wave at the May 12 rally to support the employee hours tax or head tax.</p> <p>The EEC letter says there "several complaints" about the action. Councilmember Sally Bagshaw was the first to openly criticize Sawant's action.</p> <p>But Wayne Barnett, executive director of the Commission, wrote that "Councilmember Sawant was, however acting within the scope of her authority when she determined that the rally was a tool she could use to advance her position in support of the EHT."</p> <p>"I conclude only that Councilmember Sawant's use of City time and equipment did not violate the Ethics Code," Barnett added in dismissing the complaint. "I make no judgment as to whether the use was prudent."</p>

<b>HEADLINE</b>	<b>06/20 Air ambulances saving lives</b>
<b>SOURCE</b>	<a href="http://www.khq.com/story/38472683/air-ambulances-how-they-can-help-save-lives">http://www.khq.com/story/38472683/air-ambulances-how-they-can-help-save-lives</a>
<b>GIST</b>	<p>SPOKANE COUNTY, Wash. - Every second counts in saving a life. That's where helicopter crews can step in when they are needed to help transport seriously ill or injured patients.</p> <p>"I get to take care of patients in likely the worst day of their life and hopefully make a very positive difference in their clinical care," said Dominic Pomponio, Regional Director for Life Flight Network.</p> <p>It's a job that Pomponio has done with Life Flight Network for 10 years. He's a nurse and has helped provide care in places like Washington, Idaho, Montana, and Oregon. He says having an air ambulance is crucial for the community. "We are the service that can provide you that link to the essential services that you may need," said Pomponio.</p> <p>Whether you are in an ATV accident or a car crash, they can get there quickly. The difference between an ambulance on the ground and one in the air is significant. "We fly in a straight line. For example, a flight from Lewiston to Spokane only takes us about 35 minutes. We are able to go from the hospital to another hospital without going on roads to get there," he said.</p> <p>How much does this all cost? "It's not uncommon to see bills from air ambulances be in the \$20,000 to \$30,000 range. It's exceptionally expensive but to be able to offer this service 24 hours a day, 7 days a week and employ the best of the best, it is an expensive service to operate," said Pomponio.</p> <p>He says most insurances cover it. Life Flight Network is the nation's largest not-for-profit air ambulance. "We receive no federal subsidies, no state subsidies," he said.</p> <p>What they do is time sensitive. "Somebody who has a ruptured spleen and they are hemorrhaging into their abdomen and the only way of survival, is getting them to that surgeon, then that is where our service really shines," said Pomponio.</p> <p>It's minutes or seconds that can help save a life.</p>

<b>HEADLINE</b>	<b>06/21 Nat'l park search, rescue cost millions</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/science/2018/06/21/national-park-searches-rescues-costing-millions-figures-show.html">http://www.foxnews.com/science/2018/06/21/national-park-searches-rescues-costing-millions-figures-show.html</a>
<b>GIST</b>	<p>Search and rescue operations in America's national parks cost taxpayers more than \$3 million last year, with the Grand Canyon in Arizona and Yosemite in California leading the way for most reported incidents, according to National Park Service statistics.</p>

The Grand Canyon's 290 search and rescue operations (SARs) were a full 10 percent of those conducted nationwide, while Yosemite's 233 operations were 8 percent of the national total, the statistics showed.

Nationwide, such operations involved more than 71,000 work hours for park service employees, and an additional 12,300 work hours for non-employees, such as volunteers, military personnel or other external resources, the park service figures revealed.

Across the national park system 159 fatalities were reported last year, accounting for 5.5 percent of total SAR incidents. Earlier this month, two climbers fell from Yosemite's El Capitan, a 3,000-foot vertical rock face, Fox News reported, citing information from park officials.

In Utah, the 324 SARs in the state's national parks last year represented a rise of nearly 70 percent since 2014, with men in their 20s being the most likely people to require assistance, the Salt Lake Tribune reported.

Zion and Bryce Canyon, “the granddaddies” of Utah’s national parks, were where most visitors run into trouble. Rangers retrieved 114 people in Zion last year, which marked a 42 percent leap from three years ago, the report said.

Smaller Bryce Canyon saw a sharp rise from 19 SARs in 2014 to 86 such operations last year, the newspaper reported.

For those 86 operations, staffers and volunteers reportedly spent nearly 860 hours searching for or rescuing distressed visitors, costing the park service about \$32,000.

The Beehive State's national park units had 12 fatalities in 2017, which was up from eight in 2014, the Tribune reported.

Nationally, a total of 2,890 SARs were reported last year, with 49 percent (1,174) involving men, and 19.3 percent (656) involving people in their 20s, the NPS reported.

<b>HEADLINE</b>	<b>06/20 Antifa tweets list of ICE employees</b>
<b>SOURCE</b>	<a href="https://www.msn.com/en-us/news/us/antifa-shares-names-and-photos-of-1600-ice-employees/ar-AAyVXQ4">https://www.msn.com/en-us/news/us/antifa-shares-names-and-photos-of-1600-ice-employees/ar-AAyVXQ4</a>
<b>GIST</b>	<p>A Twitter account linked to the Nebraska branch of Antifa has tweeted out a list of ICE employees compiled from LinkedIn.</p> <p>The anti-fascist organization shared a link on Tuesday that includes names, photos, job titles, cities and links to ICE employee’s LinkedIn profiles. “Some enterprising hero archived the ICE employees listed on LinkedIn,” said the tweet from Nebraska Antifa, which claims to share news on trap hunting fascists and racists in Nebraska, Iowa and Kansas.</p> <p>The document was originally compiled by Twitter user Sam Lavigne, who claimed to have “scraped LinkedIn for people that work for ICE.” Lavigne’s original post on Medium has since been removed, but the Nebraska Antifa account linked to an archived version of the list for its followers to access.</p> <p>The Verge spoke to Lavigne, who is a New York-based artist, saying that he was “just trying to pose the question” of who is responsible for implementing ICE policies.</p> <p>“I’ve downloaded and made available the profiles of (almost) everyone on LinkedIn who works for ICE, 1,595 people in total. While I don’t have a precise idea of what should be done with this data set, I leave it here with the hope that researchers, journalists, and activists will find it useful,” Lavigne wrote in his original Medium post, according to a cache visible through Google search at the time of writing.</p>

Lavigne’s post came as ICE and its agents face intense national scrutiny in the wake of President Donald Trump’s hardline immigration policies, which have seen escalating deportations of undocumented immigrants as well as thousands of migrant children separated from their parents along the U.S.-Mexico border. On Tuesday, Trump responded to the national backlash, signing an executive order to halt the separation of families.

The post spread quickly on a Reddit subgroup of far-left activists, which encourages supporters to find, share and spread private details and information about individuals they consider to be neo-Nazis or alt-right. Lavigne also tweeted a screenshot of ICE’s chief technology officer, which featured a photo of the man and his son.

Antifa activists rose to prominence after physically attacking white supremacists at rallies in 2017, but to a much less newsworthy degree than far-right groups. In one high-profile incident, alt-right provocateur Richard Spencer was sucker-punched on the street in Washington, D.C., following Trump’s inauguration. Videos and GIFs of the attack went viral and led a national debate whether it is OK to “punch a Nazi.”

The group argues that it falls back on violence only as a last resort to protect marginalized communities from imminent danger. However, the group has been widely demonized in the media, resulting in several surreal conspiracy theories.

For example, Fox News and other outlets in November reported on the fictional threat of an Antifa-led civil war plot. In January, Spike’s Tactical—a gun company—shared an ad to Facebook that appeared to threaten the leftist group, using the tagline: “not today Antifa.”

“We aren’t violent. Violence is [the] last resort in opposing fascism,” “Nestor,” a spokesman for the group’s Nebraska branch told Newsweek in December. “There aren’t Antifa protesters roaming around the streets carrying baseball bats. That’s not happening.”

<b>HEADLINE</b>	<b>06/20 Tech firms quietly work with ICE</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/tech/tech-news/tech-companies-quietly-work-ice-border-crisis-continues-n885176">https://www.nbcnews.com/tech/tech-news/tech-companies-quietly-work-ice-border-crisis-continues-n885176</a>
<b>GIST</b>	<p>Several high-profile data and tech companies have made millions of dollars from contracts with the U.S. Immigration and Customs Enforcement agency over the past several months — even as some of them publicly disavow the Trump administration’s recent orders to separate immigrant children from their parents.</p> <p>Hewlett Packard Enterprise, Thomson Reuters, Microsoft, Motorola Solutions and Palantir all have active contracts with the agency, known as ICE, according to a public records search conducted by NBC News.</p> <p>The contracts highlight how technology companies, many of which have developed advanced data analysis and tracking capabilities, are putting their innovations to work with the U.S. government in ways that are often not visible to the public.</p> <p>Attorney General Jeff Sessions issued a “zero tolerance policy” on April 6 and in a speech on May 7 said “if you are smuggling a child, then we will prosecute you and that child will be separated from you as required by law.”</p> <p>President Donald Trump signed an executive order on Wednesday ending the separation practice, after insisting for days that Democrats had created the policy and he could not personally end it.</p> <p>ICE has taken a more aggressive stance against undocumented immigrants as a result of the administration’s vow to crack down on illegal immigration. Even before the administration’s zero-</p>

tolerance policy took effect, deportations of non-criminals rose 17 percent in Trump's first year in office.

Palantir, whose chairman Peter Thiel is on the board of directors of Facebook, took in more than \$4.9 million from ICE on May 30, part of a \$39 million contract that began in 2015. According to a government database search, the contract goes towards "operations and maintenance" of FALCON, Palantir's proprietary intelligence database that tracks immigrants' records and relationships.

Palantir, a secretive data firm that tends to stay out of the press, is now used by law enforcement agencies across the country. Some of its programs have come under scrutiny, including the use of data to predict the likelihood that a person will commit or become a victim of violence.

Executives at Facebook, where Thiel is one of nine members of the board, have been vocal in criticizing the Trump administration's policy to separate children from their parents at the U.S. border.

"We need to stop this policy right now," wrote Facebook CEO Mark Zuckerberg on Tuesday. Zuckerberg and fellow Facebook board member Sheryl Sandberg pledged to donate to a multimillion-dollar fundraiser on Facebook for immigrant children this week.

Microsoft has a deal with ICE for use of its Azure cloud computing services, which the company wrote in a January blog post allows ICE employees to "utilize deep learning capabilities to accelerate facial recognition and identification" which is being implemented for "homeland security and public safety." On Wednesday, Microsoft distanced itself from the agency.

"As a company, Microsoft is dismayed by the forcible separation of children from their families at the border," Microsoft said in a statement. "Family unification has been a fundamental tenant of American policy and law since the end of World War II."

Thiel, a confidante of Trump, has supported multiple technology efforts relating to the U.S. border that contrast with Facebook's company positions.

Thiel has reportedly considered supporting a company that wants to make a "virtual border wall" using advanced radar, infrared sensors and cameras to look out for people cross into the U.S. illegally. That company, Anduril, is headed up by Oculus VR founder Palmer Luckey, according to The New York Times. Luckey sold Oculus to Facebook for more than \$2 billion in 2014, but left the company six months after it was revealed he supported a super PAC that spread anti-Hillary Clinton memes.

Neither Facebook nor Palantir responded to NBC's requests for comment about Palantir's work with ICE.

Palantir is not the only big data operation making millions off of ICE's more aggressive policies.

Thomson Reuters Special Services, a subsidiary of the mass-media firm and news agency Thomson Reuters, signed a \$6.8 million contract with ICE in March. The company beat out 13 other companies for the bid, including IBM, Booz Allen Hamilton, PricewaterhouseCoopers and LexisNexis.

The contract stipulates that Thomson Reuters will provide support for ICE's Enforcement and Removal Operations unit in its "mission to locate, arrest, and remove criminal aliens that pose a threat to public safety."

Thomson Reuters Special Services CEO Steve Rubley is also on the Board of Directors of the ICE Foundation, a nonprofit which "supports the men and women of ICE."

A Thomson Reuters spokesperson insisted Reuters' newsgathering is "completely independent of any [of] our commercial relationships." The company declined to comment on the Trump administration's child separation policy.

"[Thomson Reuters Special Services] supplies data to ICE in support of its work on active criminal

investigations with the explicit purpose to focus resources on priority cases involving threats to public safety and/or national security,” the company told NBC News in a statement.

Hewlett Packard Enterprise (HPE), which split off from Hewlett-Packard in November 2015, struck a \$75 million contract with U.S. Customs and Border Protection, which oversees ICE, in September of 2017 for network management of CBP’s network operations center.

HPE has since merged with another company under the name Perspecta, but some operations remain separate. When asked about the \$75 million contract, an HPE spokesperson referred NBC News to Perspecta about the deal.

Perspecta did not respond to a request for comment, but an HPE spokesperson disavowed the administration’s child separation policy.

““HPE provides technology and services across the U.S. government,” the spokesperson said. “However, as a company, we are opposed to any policy that separates children from their families and urge the administration to change its policy to keep families together.”

Motorola Solutions has a continuing a \$13.3 million contract with ICE. The contract, described as a “tactical communications program,” started in late 2017 and is projected to last until late 2019. Motorola Solutions did not respond to a request for comment.

<b>HEADLINE</b>	<b>06/20 Philippines seeks to modernize military</b>
<b>SOURCE</b>	<a href="http://www.businessinsider.com/r-philippines-duterte-approves-56-billion-military-upgrade-2018-6">http://www.businessinsider.com/r-philippines-duterte-approves-56-billion-military-upgrade-2018-6</a>
<b>GIST</b>	<p>MANILA (Reuters) - Philippine President Rodrigo Duterte has approved a five-year plan to spend 300 billion pesos (\$5.6 billion) to modernize the outdated military, defense officials said on Wednesday.</p> <p>A previous 15-year upgrade plan failed to take off in the mid-1990s, leaving the Philippines with outdated hardware, including warships from World War Two and helicopters used by the United States in the Vietnam War.</p> <p>"We have the go signal now to buy brand-new equipment, like fighters, drones, light tanks, radar, an additional frigate and a submarine to boost our defense capability," said a defense official, who declined to be named because he is not authorized to speak to media.</p> <p>The previous administration of Benigno Aquino spent about \$1.7 billion on the military during its 2010-2016 term in office, mostly on secondhand ships and planes.</p> <p>Duterte approved the \$5.6-billion modernization plan at a meeting with top defense and military officials last month.</p> <p>A senior general said Duterte had approved 33 modernization projects, with a focus on domestic security and protecting the vast maritime borders of the archipelago nation.</p>

	<p>"We're putting a premium on unmanned aerial vehicles, long-range patrol aircraft, offshore patrol ships and an electric-diesel submarine," he told Reuters.</p> <p>The military is bent on preventing another Islamic State-inspired insurgency after rebels seized Marawi, the country's only Islamic city, for five months last year.</p> <p>The Philippines also faces a challenge in South China Sea, a strategic waterway most of which is claimed by China, which has built military outposts there.</p> <p>Besides the Philippines, Brunei, Malaysia, Taiwan and Vietnam also have rival claims on the area, through which \$3 trillion worth of sea-borne goods pass every year.</p> <p>Manila had planned to acquire four submarines after 2023, but the plan could be accelerated to boost the navy's regional capabilities, said Arsenio Andolong, a defense department spokesman.</p> <p>"We want to get submarines as soon as possible," he said.</p> <p>Duterte had set aside \$1 billion for new helicopters and light tanks, but no purchases have been made yet.</p> <p>The Philippines has received donated military hardware from Australia, China, Japan, Russia and the United States, mostly to assist in disaster response and fighting militants and pirates.</p>

<b>HEADLINE</b>	<b>06/20 Protesters blockade Portland ICE building</b>
<b>SOURCE</b>	<a href="https://www.msn.com/en-us/news/us/occupy-ice-activists-blockade-portland-building-over-family-separations/ar-AAyVwXI">https://www.msn.com/en-us/news/us/occupy-ice-activists-blockade-portland-building-over-family-separations/ar-AAyVwXI</a>
<b>GIST</b>	<p>After successfully forcing Portland's Ice office to shut down Wednesday, occupying protesters are vowing to stay until so-called "zero tolerance" immigration policies end.</p> <p>The pledge by members of #OccupyICEPDX came as Donald Trump signed an executive order ending his administration's policy of separating migrant children from parents at the border with Mexico. Yet despite the order US official have said there are no immediate plans to reunite children separated from their parents under the "zero tolerance" policy, which has come under heavy criticism from Democrats, Republicans, human rights activists, international leaders and the public.</p> <p>Ice announced this morning that the office would be temporarily closed as a result of "security concerns", and would not reopen until those concerns were addressed.</p> <p>Meanwhile Portland's mayor, Ted Wheeler, announced that the city would not attempt to clear the camps, calling Ice an agency was "on the wrong track".</p> <p>On Wednesday afternoon, in 95F (35C) degree temperatures, a core group of 50 or so protesters kept up their blockade of the federal facility. All expected that, as on the previous two days, the crowds would swell in the evening.</p> <p>Luis Marquez, a local activist, when asked about the shutdown, said: "I think this occupation is a beautiful thing, a wonderful thing. Every single person here is a hero."</p> <p>Like others in the camp he said he would not leave until the "zero tolerance" incarceration of refugees at the border ended.</p> <p>"If I hurt your whole family separately or all together, I am still hurting you."</p> <p>At an evening press conference, the #OccupyICEPDX spokesman Jacob Bureros said that ending the</p>

occupation would depend on satisfying the protesters' four demands: that the Ice facility and Ice operations be removed from the city of Portland, that children separated from their families be returned and receive adequate healthcare, that the US cease incarcerating asylum seekers, and that Ice be totally abolished. "The United States does not need its own gestapo," Bureros said.

By Wednesday the camp consisted of 30 tents and a number of other temporary structures. It had dedicated information and medical stations. Signs called for donations and builders. There were mounds of donated food and water, and makeshift barricades at either end of the camp. In the late afternoon, a local ice cream truck, Fifty Licks, stopped by for a second time to give out free ice cream to protesters.

A range of other cities began occupation camps Wednesday, as the tactic pioneered in Portland appeared to inspire others around the country. Plans for occupations were announced in LA, New York City, and elsewhere.

For the most part, the occupation – promoted on social media with the hashtag #occupyICEPDX – that began on Sunday has been peaceful.

On Tuesday evening, Department of Homeland Security (DHS) vehicles blocked a facing street and moved in on the building's western entrance. About a dozen DHS officers emerged, armed and dressed in riot gear.

Officers parted protesters and entered the building. They re-emerged with more than 20 Ice staff members who had been stuck inside. Officers escorted the staff past protesters on the sidewalk and drove north as a convoy.

<b>HEADLINE</b>	<b>06/20 Puerto Rico privatizes power grid</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/puerto-rico-crisis/puerto-rico-officially-moves-privatize-power-grid-9-months-after-n885111">https://www.nbcnews.com/storyline/puerto-rico-crisis/puerto-rico-officially-moves-privatize-power-grid-9-months-after-n885111</a>
<b>GIST</b>	<p>Puerto Rico is officially moving to privatize and upgrade its outdated power grid exactly 9 months after it was flattened by Hurricane Maria.</p> <p>At a press conference on Wednesday, Governor Ricardo Rosselló signed into law the approved legislation that allows parts of the Puerto Rico Electric Power Authority – known as PREPA in English and by the acronym AEE in Spanish – to be sold to private entities.</p> <p>"Our objective is simple: provide better service, one that's more efficient and that allows us to jump into new energy models," Rosselló said in Spanish.</p> <p>The power authority has been a monopoly that practically abandoned maintenance of the electrical system's infrastructure over the past decade. Over the last five years, the financially strapped entity was operating with a third of its employees, and these were mostly workers in charge of the grid's maintenance.</p> <p>Customers in Puerto Rico have been paying nearly double compared to those in the U.S. for unreliable service that has resulted in multiple blackouts across the island in the past months, even after post-hurricane repairs. Over 5,000 households in Puerto Rico are living without power since Hurricane Maria.</p> <p>With a \$9 billion debt, PREPA is currently the government agency with the biggest share of Puerto Rico's \$72 billion public debt.</p> <p>During his announcement, Rosselló described Puerto Rico's current power system as an expensive, oil-dependent, polluting grid that's three decades older than an average U.S. electrical utility. He said a combination of these factors have hurt economic development efforts in the island for years, so he hopes</p>

to change the pattern with the newly signed law.

The governor explained that privatization efforts are taking place in two stages: power generation and distribution.

“In terms of generation, we’re going to the market to either privatize it or develop a public-private partnership,” Rosselló said. In terms of the power distribution, he said that ideally “the assets would belong to the state and a consortium of companies would be handling the distribution.”

According to the governor, the law would lower energy costs to customers and push half of the island into renewable energy mechanisms or microgrids.

Several public officials at the conference described the move as a “patriotic effort,” saying that this is the first step towards energy reform in Puerto Rico.

But critics of the energy reform law think that privatization efforts will cause increases in energy costs.

<b>HEADLINE</b>	<b>06/20 NKorea Kim ends visit to China</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/20/politics/kim-xi-meeting-trump-summit/index.html">https://www.cnn.com/2018/06/20/politics/kim-xi-meeting-trump-summit/index.html</a>
<b>GIST</b>	<p>Washington (CNN)North Korean leader Kim Jong Un ended a celebratory visit to China's President Xi Jinping on Wednesday with tea, praise, handshakes -- and a message for the US.</p> <p>Amid lingering questions over Pyongyang's willingness to denuclearize and an escalating trade war between the US and China, Kim's trip reinforced the idea that Beijing remains a key player -- a variable that President Donald Trump needs and yet one that remains outside his control.</p> <p>Administration officials have said that they will maintain sanctions on North Korea even as talks continue, and stand ready to intensify that economic pressure should Pyongyang fail to cooperate. But China, North Korea's biggest trading partner, ultimately has power over whether sanctions on Pyongyang truly bite.</p> <p>With tensions climbing between Beijing and Washington over trade, some analysts point to the warmth on display during Kim's visit to Beijing as a warning from Xi that Trump's moves on trade could undermine the most ambitious goal -- peace with North Korea -- on his foreign policy agenda.</p> <p>"I think China is sending a message to Trump: You want to put trade tariffs on us and have our cooperation with North Korea? You can't have both," Bill Richardson, the former US energy secretary, ambassador and repeat US envoy to North Korea, told CNN.</p> <p>Complex relationships</p> <p>Kim's visit was his third pilgrimage to Beijing in as many months and came just days after the North Korean dictator's high-profile June 12 summit with Trump in Singapore.</p> <p>Publicly, Xi has vowed to maintain a constructive role in facilitating efforts toward denuclearization and supported North Korea's commitment to that goal despite issues with the US over trade.</p> <p>But tensions are rising. On Monday, Trump ordered the US trade representative to prepare new tariffs on \$200 billion in Chinese imports. Trump was reacting angrily to Beijing's decision to match \$50 billion in tariffs he placed on Chinese goods on June 15 to protest China's "unfair trade practices."</p> <p>"Again and again the US has been provoking a trade war," China's Foreign Ministry spokesman Geng Shuang said Tuesday. He said China does not wish to fight a trade war, "but is not scared of one."</p> <p>"We advise the US side to return to reason, and stop words and actions that harm itself and others," Geng</p>

said.

On Tuesday, State Department spokesperson Heather Nauert cautioned against conflating disagreements over trade with China's cooperation in talks with North Korea, noting that the US maintains complex relationships with many countries.

"We have areas where we work with China and have -- and we have strong relations, but there are also areas where we're not always in agreement with China, and we will certainly bring those to light," she said, highlighting the "good work that President Xi and the Chinese government have done in helping to bring North Korea to the negotiating table."

"We want to have a constructive relationship with the government of China. In order to do that, we need to repair, make some progress on some issues related to trade," Nauert said.

According to Mintaro Oba, a former Korea desk officer at the State Department under President Barack Obama, it is not yet clear whether trade tensions between the US and China are having an impact on negotiations with North Korea, but he warned that Xi could temper his cooperation if tensions continue to rise.

"The Chinese are still trying to preserve the space to climb down from this," he told CNN. "But if the Trump administration continues to escalate the fight on trade so far that relations sour in a major way, it's possible the Chinese will feel less and less inclined to cooperate on enforcing and generating pressure on the North Korean regime."

China has helped make the Trump administration's "maximum pressure" campaign against North Korea effective, US officials say, but historically Beijing has been slow to apply sanctions against Pyongyang or has looked the other way on Chinese companies doing business with Pyongyang and on North Korean smuggling.

Beijing fears a regime collapse next door that could send desperate refugees flooding across its borders and even worse, the prospect of US troops moving into North Korea as a stabilizing force, bringing them right to Chinese borders.

Looking for leverage

Xi feted Kim during his visit, underscoring the newly warm ties by sending crowds of jubilant children to greet Kim waving Chinese flags and jumping up and down.

The Chinese leader praised Kim for his handling of the US meeting last week in Singapore and conveyed his satisfaction with the results of the summit as well as Pyongyang's goal of economic development, according to Chinese state media CCTV.

As Trump continues to demand credit for his role in making "initial steps toward a deal" with North Korea by establishing a personal rapport with the young dictator, Kim is pulling all the levers available to strengthen his own negotiating position.

His relationship with China is one of them, according to Richardson, who said Xi holds the power to loosen sanctions that are biting the North Korean economy by looking the other way on cross-border smuggling and energy restrictions imposed by the US and United Nations.

"I believe Kim Jong Un is trying to delay denuclearization and do it at his own pace," he said, noting that can be accomplished only with sanctions relief from China -- a step the North Korean leader views as an apt reward for rapprochement with Trump.

"Kim's logic is pretty simple: more options, more leverage," said Oba. "Without engagement with the United States, Kim going to Beijing would make him look desperate and highlight North Korea's

	dependence on China.  "And without China clearly backing North Korea, the United States might feel more free to abandon diplomacy and ramp up pressure. Now he gets to look independent and strong while playing both sides to get the best possible situation for North Korea."

<b>HEADLINE</b>	<b>06/20 Penn. court blocks abuse report release</b>
<b>SOURCE</b>	<a href="http://www.philly.com/philly/news/pa-supreme-court-blocks-grand-jury-report-20180620.html">http://www.philly.com/philly/news/pa-supreme-court-blocks-grand-jury-report-20180620.html</a>
<b>GIST</b>	<p>HARRISBURG — The Pennsylvania Supreme Court has agreed to indefinitely block the release of a grand jury report detailing decades of clergy sex abuse in six of the state’s eight Roman Catholic dioceses.</p> <p>In a two-paragraph order made public Wednesday, the state’s highest court said it granted requests from unnamed individuals or institutions to prevent the public release of the much-anticipated report.</p> <p>“The Honorable Norman A. Krumenacker, III, and the Office of the Attorney General are enjoined from releasing Report No. 1 of the 40th Statewide Investigating Grand Jury pending further order of this Court,” it read, citing the Cambria County judge who has overseen the panel’s work.</p> <p>The order — unsigned and released in the name of the entire court — throws into question the results of a sweeping probe that spanned at least two years and could implicate hundreds of clergy and other officials across the state.</p> <p>The investigation focused on child sex abuse and cover-ups in every Catholic diocese in the state except those in Philadelphia and Altoona-Johnstown — two dioceses that in past years endured similar scrutiny — and was expected to run 800 or more pages long. Some said the report could be unprecedented both by reviewing nearly every diocese in a single state, and by exploring the role that other officials outside the church may have played in enabling or concealing child sex abuse.</p> <p>Attorney General Josh Shapiro, a Democrat whose office spearheaded the probe, has said he had hoped to publicly speak about the grand jury’s investigation by month’s end. “The only thing that could stop these findings from becoming public at that time is if one of the bishops or dioceses would seek to delay or prevent this public accounting,” Shapiro said in a May 21 statement.</p> <p>In response to the Supreme Court order, Shapiro’s office said: “My legal team and I will continue fighting tirelessly to make sure the victims of this abuse are able to tell their stories and the findings of this investigation are made public to the people of Pennsylvania.”</p> <p>Bishops in all six dioceses have stated publicly that they would not block the release of the report. It is not known whether any of the people or groups who petitioned the high court to keep it under wraps are associated with the church.</p> <p>In its order, the Supreme Court did not signal who filed the petition or when, explain its reasoning for granting the request, or say how long it would take to consider the issue.</p> <p>Kimberly Bathgate, a spokesperson for the court, said the justices did not publicly explain their thinking because “all grand jury matters are sealed, including the rationale.”</p>

<b>HEADLINE</b>	<b>06/21 AAA: record 47M travelers 4<sup>th</sup> of July</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-usa-julyfourth-travel-aaa/record-47-million-expected-to-travel-for-u-s-july-fourth-holiday-aaa-idUSKBN1JH0AG">https://www.reuters.com/article/us-usa-julyfourth-travel-aaa/record-47-million-expected-to-travel-for-u-s-july-fourth-holiday-aaa-idUSKBN1JH0AG</a>

GIST	<p>NEW YORK (Reuters) - U.S. travelers will hit the roads, rails and airports in record numbers this Fourth of July holiday, despite higher gasoline prices, the nation's largest automotive advocacy group said on Thursday.</p> <p>Some 46.9 million Americans will travel 50 miles (80 km) over the upcoming July Fourth holiday, the fifth consecutive annual increase and highest travel volume since the group began tracking data 18 years ago, according to the AAA, or American Automobile Association.</p> <p>The holiday period is defined this year as July 3 to July 8.</p> <p>Gas prices have fallen a bit since the 2018 high of \$2.97 a gallon set over Memorial Day weekend, the last weekend in May. The national average gas price was \$2.87 on Wednesday, up 59 cents from a year ago.</p> <p>Despite higher prices, automobile travel is expected to increase for the fourth straight year, rising 5.1 percent or nearly 2 million more than in 2017, to 39.7 million travelers, the AAA said.</p> <p>"Confident consumers with additional disposable income will look to spend on travel this holiday, building on an already busy summer travel season," said Bill Sutherland, senior vice president, AAA Travel and Publishing.</p> <p>Air travel volume will increase to 3.76 million passengers, 7.9 percent more than last year. With the holiday falling on a Wednesday, air travel is helped by enabling more flexibility to fly either before or after the holiday, the group said.</p> <p>U.S. gasoline demand, which accounts for roughly 10 percent of global demand, hit record highs last year thanks in part to a strong summer driving season.</p>

HEADLINE	<b>06/20 Crisis: Central America violence, turmoil</b>
SOURCE	<a href="https://www.nbcnews.com/storyline/immigration-border-crisis/central-america-s-violence-turmoil-keeps-driving-families-u-s-n884956">https://www.nbcnews.com/storyline/immigration-border-crisis/central-america-s-violence-turmoil-keeps-driving-families-u-s-n884956</a>
GIST	<p>AUSTIN, Texas — Patricia de Jesús Flores waited at a homeless shelter on the Mexican side of the U.S. border this week with her 7-year-old son, who she says witnessed a murder on a rooftop — one reason they left their home in Honduras.</p> <p>Flores, 27, was trying to decide whether to seek entry into the U.S., even though she heard parents who crossed the border illegally were being separated from their children.</p> <p>She and other families at the Senda de Vida shelter in Reynosa, Mexico, just across from McAllen, Texas, said their communities in El Salvador, Honduras and Guatemala are so racked with violence, so terrorized by gangs and so infiltrated by drug cartels, they had no choice but to leave.</p> <p>"If my country would be OK, I would be there happily with my child," Flores told NBC News. "I would not try to cross."</p> <p>While forced family separations — which President Donald Trump on Wednesday announced he would end — was a new way by the administration of dealing with illegal immigration on the southern border, the violence, drug cartels, gangs and poverty ravaging Central America have been driving people to the United States for years. It remains to be seen how far immigration legislation that Congress is negotiating will go to address those root problems.</p> <p>White House Chief of Staff John Kelly noted the violence in a May 2017 speech at a forum sponsored by the Atlantic Council, a Washington-based foreign policy think tank.</p>

"There's corruption there. There's terrible intimidation," Kelly said, adding that the cartels "are horrifically violent and they hold neighborhoods, cities in a grip of fear that includes police in many cases."

The conditions in what is known as the Northern Triangle of Latin America — El Salvador, Guatemala and Honduras — came to Americans' attention in full force in 2014, when tens of thousands of children arrived on their own at the U.S. border.

For years, Honduras had the highest homicide rate in the world, peaking at over 91 homicides per 100,000 in 2011, according to a United Nations report. The rate has since declined but remains comparatively high; last year, the rate was 42.8 homicides per 100,000.

Such violence hasn't stopped residents of the Northern Triangle from making the dangerous trek north to an uncertain welcome on the U.S.-Mexican border. According to the Council on Foreign Relations, some 3.4 million people born in El Salvador, Guatemala and Honduras were living in the United States as of 2015, the latest year for which data is available.

The Northern Triangle is home to transnational gangs, such as MS-13 and the 18th Street Gang, both founded in Los Angeles, as well as drug cartels and criminal organizations with origins in the area's civil wars.

Corruption, weak and unstable government institutions and political turmoil make it difficult for Central American countries to combat the gangs and violence. Early this year in Honduras, protests following the re-election of President Juan Orlando Hernandez turned violent when police and troops used excessive force to quell protests, leaving 32 dead. No police or troops were charged, Amnesty International said in a report, The Associated Press reported.

"Based on our interviews with individuals in immigration detention and at the border about the conditions they are fleeing ... the conditions haven't changed, which is why we are seeing these large numbers of people arriving," said Alison Parker, director of the Human Rights Watch's U.S. Program.

Border Patrol apprehensions on the southern border so far this fiscal year, which began in October, total 252,187. That's an increase of nearly 230,000 over the first eight months of 2017, when apprehensions totaled 224,817, according to Customs and Border Patrol statistics.

The unrelenting turmoil of the region appears to still be driving families to flee with their children.

Piedad De Jesús Mejía, a 31-year-old mother from Honduras, had traveled to Reynosa, Mexico, with her four children. She said Tuesday that she had heard about the family separations going on at the border, but "I had to leave without caring about that."

"I left my country because of the crimes and because we were witnesses when two of my husband's cousins were killed and now they are looking for us, too," she said.

In Matamoros, Mexico, Jennifer Figueroa from Honduras held her 3-year-old son, Angel, as she stood on an international bridge leading into Brownsville, Texas.

She had been in Mexico three days hoping to cross into the United States legally and ask for asylum. She said she had left her country because of death threats from the 18th Street gang and had paid a smuggler about \$125 to get to the U.S.

Told of the separations happening at the border, she insisted she would not let her son go. "I'd rather ask them to deport me," Jennifer said.

To deal with the 2014 surge in Central American families and children arriving at the border, the Obama administration and Congress adopted a broad U.S. strategy to address not only what was happening at the

border, but also the corruption and violence of the region, experts said.

The U.S. upped its investment in the region substantially, although not to the extent or as quickly as Obama had wanted. He had asked for a \$1 billion investment at the time.

“It took 18 months to convince Congress to put \$750 million bucks” toward addressing the problems, said Cecilia Muñoz, who served as Obama’s director of the White House Domestic Policy Council. In 2014, the total was about \$317 million.

The administration also created “in-country” programs for adults and to some degree children to apply for asylum from their countries. It called on other countries in the region to “step up” and accept people applying for asylum.

“All of those were policies that were developing, and, of course, they’ve all been dismantled by this administration,” Muñoz said.

Although the Trump administration continues to work with the Northern Triangle countries — Vice President Mike Pence is to visit victims of recent volcanoes in Guatemala next week and met with the Honduran president Wednesday —the region’s problems are “so deep and so endemic they cannot be fixed in a couple years,” said Jason Marczak, director of the Atlantic Council’s Adrienne Arsht Latin America Center.

“People will come either way because they are trying to survive,” Marczak said.

During the 2014 crisis, Mexico took a more active role, working to clamp down on illegal immigration through its southern border. Last year, Mexico coordinated with the Trump administration to organize a conference in Miami on what could be done to push for systemic change in Central America.

But the family separations have produced images and stories that have shocked other parts of the world and are harming the image of the U.S. The controversy could slow efforts to bring about lasting change in the Northern Triangle.

<b>HEADLINE</b>	<b>06/20 UN: US global leader asylum requests</b>
<b>SOURCE</b>	<a href="https://www.aol.com/article/news/2018/06/20/the-united-states-is-now-the-global-leader-in-asylum-requests-the-un-says/23464157/">https://www.aol.com/article/news/2018/06/20/the-united-states-is-now-the-global-leader-in-asylum-requests-the-un-says/23464157/</a>
<b>GIST</b>	<p>The United States fielded more new asylum requests than any other country last year, according to the United Nations Refugee Agency, even as the Trump administration has been employing stricter measures to keep people out.</p> <p>The number of new applications for asylum in the U.S. increased by 27 percent from 2016 to 2017, reaching 331,700, according to the “Global Trends: Forced Displacement in 2017” report. The U.S. surpassed Germany, which fielded 198,300 applications.</p> <p>The U.N. report was published Tuesday before World Refugee Day, which falls on Wednesday.</p> <p>The latest numbers are in line with the steady increase in asylum claims coming from Central America that the U.S. has seen since 2013.</p> <p>“Similar to last year, applicants from the [northern region of Central America] made up 43 percent of all claims, and the number of claims increased by 44 percent, reaching levels not seen since the 1980s,” the study said. The applicants consist mainly of people from El Salvador, Guatemala and Honduras who are fleeing gang violence.</p> <p>The release of these figures comes amid a public backlash against the Trump administration’s zero tolerance policy. The administration seeks to prosecute anybody who attempts to cross the border illegally — an effort that is driving family separations on a massive scale. More than 2,300 children were separated from their parents between May 5 and June 9.</p> <p>Even once people have put in their asylum requests, the system is so backlogged — there were 311,000 pending cases as of January — that a decision can take years. Only 65,600 asylum decisions were made in the U.S. in 2017, the U.N. report said, making the U.S. home to the largest asylum-seeking population in the world.</p> <p>“This backlog has grown by more than 1,750 percent over the last five years, and the rate of new asylum applications has more than tripled,” U.S. Citizenship and Immigration Services said. The agency announced in January that it would be scheduling interviews for more recent applications, prioritizing new entrants over those who have already been waiting years for a decision.</p> <p>“Asylum is a slow process in the U.S. and it’s always been sort of a neglected activity within our judicial system. Never really have adequate resources been allocated to this particular legal component of the work,” said Erol Kekic, executive director of the immigration and refugee program at the Church World Service, a global humanitarian agency.</p> <p>Worldwide, the number of asylum seekers waiting for decisions on their applications spiked about 300,000, to 3.1 million by the end of last year, the U.N. report said.</p> <p>A record 68.5 million people — a jump of almost 3 million in just one year — had also been displaced by the end of 2017. More than 25 million of them fled their countries as refugees. The remainder were internally displaced or seeking asylum.</p>

<b>HEADLINE</b>	<b>06/20 Plastic piling up w/China recycling ban</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/study-plastic-pile-wake-china-recycling-ban-56036809?">https://abcnews.go.com/Technology/wireStory/study-plastic-pile-wake-china-recycling-ban-56036809?</a>
<b>GIST</b>	<p>China's decision to stop accepting plastic waste from other countries is causing plastic to pile up around the globe, and wealthy countries must find a way to slow the accumulation of one of the most ubiquitous materials on the planet, a group of scientists said.</p> <p>The scientists sought to quantify the impact of the Chinese import ban on the worldwide trade in plastic waste, and found that other nations might need to find a home for more than 122 million tons (110 million metric tons) of plastic by 2030. The ban went into effect Dec. 31, 2017, and the stockpiling trend figures to worsen, the scientists said.</p> <p>Wealthy countries such as the United States, Japan and Germany have long sent their plastic recyclables to China, and the country doesn't want to be the world's dumping ground for plastic anymore. The study found China has taken more than 116 million tons (105 million metric tons) of the material since 1992, the equivalent of the weight of more than 300 Empire State Buildings.</p> <p>The change is forcing countries to rethink how they deal with plastic waste. They need to be more selective about what they choose to recycle, and more fastidious about reusing plastics, said Amy Brooks, first author on the study and a doctoral student in engineering at the University of Georgia. In the meantime, Brooks said, more plastic waste is likely to get incinerated or sent to landfills.</p> <p>"This is a wake-up call. Historically, we've been depending on China to take in this recycled waste and now they are saying no," she said. "That waste has to be managed, and we have to manage it properly."</p> <p>The study was published Wednesday in the journal Science Advances. Using United Nations data, it found that China has dwarfed all other plastics importers, accounting for about 45 percent of the world's plastic waste since 1992. The ban is part of a larger crackdown on foreign garbage, which is viewed as a threat to health and environment.</p> <p>Some countries that have seen an increase in plastic waste imports since China's ban — such as Thailand, Vietnam and Malaysia — are already looking to enforce bans of their own because they are quickly becoming overburdened, Brooks said.</p> <p>The study illustrates that plastic, which has a wide array of uses and formulations, is more difficult to recycle than other materials, such as glass and aluminum, said Sherri Mason, who was not involved in the study and is the chair of the geology and environmental sciences department at the State University of New York at Fredonia.</p>

<b>HEADLINE</b>	<b>06/21 International Yoga Day</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/GMA/Wellness/yoga-moves-desk-international-yoga-day/story?id=56012758">https://abcnews.go.com/GMA/Wellness/yoga-moves-desk-international-yoga-day/story?id=56012758</a>
<b>GIST</b>	<p>It's no secret that sitting at a desk for hours each workday is not the best thing for our bodies.</p> <p>"From a posture standpoint, it weakens the legs, can cause tight hips and low back pain, and stiff shoulders and neck," said Michael Gervais, director of group programming for Equinox in New York City. "These are the biggest complaints we see these in our classes, and much of what we do in Western yoga is to counter the effects of this lifestyle."</p> <p>The good news is that doing small movements at your desk, even while seated, can make a difference.</p> <p>"At minimum, you should stand and move around once an hour," Gervais said.</p> <p>Ready for a stretch break? Thursday is International Yoga Day, a reminder to stretch and appreciate what</p>

	<p>our bodies can do.</p> <p>Try these five yoga moves from Gervais to break up your workday.</p> <p>1. Standing cat/cow</p> <p>Use the side of the desk to arch and curl the spine. Inhale arch the spine, exhale round the spine, five to 10 deep breaths.</p> <p>2. Standing twist</p> <p>Use the desk or a wall as leverage and take three big breaths in a twist to each side.</p> <p>3. Crescent lunge variation</p> <p>Put one leg behind you, then reach up with that same arm to stretch the front of the hips. Three breaths each side.</p> <p>4. Chair pose variation</p> <p>With your feet touching, lift your butt a few inches off your chair, so your legs are working.</p> <p>Lift your chest and either keep your hands at your hips, or reach them overhead. Either way, keep opening across the shoulders. Five to 10 breaths.</p> <p>It should feel like work for the legs.</p> <p>5. Standing forward fold variation</p> <p>With the feet hip distance apart, clasp your fingers behind the back and fold forward over the legs.</p> <p>Focus on squeezing your wrists together and opening across the chest. Let your head hang. Five breaths. Come out slowly.</p>

<b>HEADLINE</b>	<b>06/20 World Refugee Day 2018</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/world-refugee-day-2018-record-685-million-forcibly/story?">https://abcnews.go.com/International/world-refugee-day-2018-record-685-million-forcibly/story?</a>
<b>GIST</b>	<p>Record high numbers of men, women and children were driven from their homes across the world last year due to war, violence and persecution, according to a new report by the United Nations' refugee agency.</p> <p>The UNHCR's annual "Global Trends" study found that a staggering 68.5 million people worldwide had been forcibly displaced by the end of 2017.</p> <p>Nearly a quarter of them were uprooted just last year, either for the first time or repeatedly. That's an average of one person displaced every two seconds of the day, the study says.</p> <p>"Now, more than ever, taking care of refugees must be a global -- and shared -- responsibility," Filippo Grandi, the U.N. high commissioner for refugees, said in a statement Wednesday. "It's time to do things differently."</p> <p>"On World Refugee Day, it's time to recognize their humanity in action -- and challenge ourselves, and others, to join them -- in receiving and supporting refugees in our schools, neighborhoods, and workplaces," he continued. "This is where solidarity starts -- with all of us."</p>

The report was published Tuesday ahead of World Refugee Day, amid global outrage over a "zero-tolerance" policy enacted by U.S. President Donald Trump that is forcibly separating immigrant children from their parents at the border with Mexico. Thousands of Central Americans are fleeing violence and poverty in their home countries -- including El Salvador, Guatemala and Honduras -- and are risking their lives to reach the United States.

Zeid Ra'ad al-Hussein, the U.N. high commissioner for human rights, has described the immigration policy as "government-sanctioned child abuse" and urged the U.S. government to end the controversial practice.

"In the past six weeks, nearly two thousand children have been forcibly separated from their parents," al-Hussein said in a statement Monday. "The thought that any State would seek to deter parents by inflicting such abuse on children is unconscionable."

According to the UNHCR report, the humanitarian crisis in the Democratic Republic of Congo, the civil war in South Sudan and the flight of hundreds of thousands of Rohingya refugees from Myanmar into Bangladesh were the leading causes of forcible displacement last year.

The global displacement figure for 2017 includes 25.4 million refugees who fled their countries to escape conflict and persecution, the study says. That's 2.9 million more refugees than the year before -- the steepest increase UNHCR has ever seen in a single year.

The report shows that Turkey hosted the largest number of refugees worldwide for the fourth consecutive year, with 3.5 million people. It was followed by Pakistan, Uganda, Lebanon, Iran, Germany, Bangladesh and Sudan.

"International responsibility-sharing for displaced people has utterly collapsed. Rich countries are building walls against families fleeing war, at the same time as less money is available for aid to people in conflict areas," Jan Egeland, secretary-general of the Norwegian Refugee Council, said in a statement Tuesday.

Halfway through the fiscal year, the Trump administration has admitted less than a quarter of the 45,000 refugees it set as a cap -- already the lowest ceiling in the 43-year history of the U.S. Refugee Admissions Program -- with only 10,548 refugees allowed entry into the United States since October 1, 2017.

In a statement marking World Refugee Day, U.S. Secretary of State Mike Pompeo emphasized that his government provides aid to crises that uproot people from their homes and that "new actors" must step up to the plate to address the rising number of displaced persons.

"As global displacement has reached record levels, it is vital that new actors -- including governments, international financial institutions, and the private sector -- come to the table to assist in the global response to address it," Pompeo said in his statement Wednesday. "The United States will continue to be a world leader in providing humanitarian assistance and working to forge political solutions to the underlying conflicts that drive displacement."

"The United States provides more humanitarian assistance than any other single country worldwide, including to refugees," he added.

The U.N. 1951 Refugee Convention defines a refugee as someone who is forced to leave their home due to "a well-founded fear of persecution." The persecution must be "because of his/her race, religion, nationality, membership in a particular social group, or political opinion," the treaty says.

Other types of forcibly displaced persons include asylum seekers, internally displaced persons, stateless persons and returnees.

<b>HEADLINE</b>	<b>06/20 Italy, Austria hardline axis on migration</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/italy-austria-signal-hard-line-axis-migration-56036303">https://abcnews.go.com/International/wireStory/italy-austria-signal-hard-line-axis-migration-56036303</a>
<b>GIST</b>	<p>A meeting of Italy's anti-migrant interior minister with like-minded Austrian populist leaders on Wednesday in Rome heralded a new hard-line axis forming in Europe on migration issues with pledges to more firmly protect Europe's southern border.</p> <p>Italy's interior minister, Matteo Salvini, leveraged on his recent refusal to allow landfall in Sicily to a ship carrying some 630 migrants rescued at sea off the Libyan coast. The new Socialist government in Spain agreed to take them in, acknowledging Europe had abandoned Italy, after the tiny island nation of Malta also balked.</p> <p>"It is a historic moment because Europe has never had the possibility to change like in these days. We think it can change for the better on the topics of immigration, security and the fight against terrorism. Finally there is a decision to protect the exterior border," Salvini said.</p> <p>Salvini and his Austrian counterparts — vice chancellor Heinz Christian Strache and interior minister Herbert Kickl — signaled their common approach to reinforcing the exterior border while deferring specifics to Austria's EU presidency, and other forums, including an upcoming EU summit. Salvini said he was briefing Premier Conte and vice premier Luigi Di Maio on his proposals later in the day.</p> <p>But Salvini made clear that he would continue to press neighbors to do more. While welcoming Spain's acceptance of the migrants, he noted that Spain has only taken 235 of an agreed-upon EU quota of 3,265. "They can take the next four boats that arrive," he said. He also slammed France, which has only taken 640 of the 9,800 migrants it has pledged to receive.</p> <p>Salvini said he had trust in the Austrian EU presidency to make a difference in discussions about changing the Dublin accords, noting "the mood has changed," but also hinting that Italy would be willing to play hardball, and hold back payments to the EU, if significant changes were not made.</p> <p>Salvini said he wanted to see EU funds better spent, and said he would travel to Libya, the main departure point for migrants heading to Italy, in the coming days to work on stemming the migrant tide as well as economic development issues.</p> <p>While more than 640,000 migrants have arrived in Italy since 2014, the number of arrivals in Italy this year is down over 80 percent, to over 14,500.</p> <p>Austria's interior minister, Kickl, said the message had to go out "that those who rely on traffickers have given up all chances of asylum in Europe."</p>

<b>HEADLINE</b>	<b>06/20 South Sudan's warring leaders meet</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/south-sudans-warring-leaders-set-meet-face-face-56022088?">https://abcnews.go.com/International/wireStory/south-sudans-warring-leaders-set-meet-face-face-56022088?</a>
<b>GIST</b>	<p>South Sudan's warring leaders met face-to-face for the first time in almost two years Wednesday amid efforts to end a five-year civil war, shaking hands but making no public comments.</p> <p>South Sudan President Salva Kiir and opposition leader Riek Machar continued meeting into the night and were expected to continue discussions on Thursday in neighboring Ethiopia, which invited them for talks as pressure grows to end a conflict that has killed tens of thousands of people and created Africa's largest refugee crisis since the 1994 Rwanda genocide.</p>

	<p>A Kiir spokesman, Ateny Wek Ateny, has said "anything that brings peace in South Sudan is wanted."</p> <p>Machar fled South Sudan after new fighting erupted in the capital in July 2016, ending a brief attempt at peace in which he returned to his role as Kiir's deputy. He later was put under house arrest in South Africa, whose presidency on Wednesday welcomed Machar's participation in the talks.</p> <p>The meeting, attended by Ethiopian Prime Minister Abiy Ahmed, was mediated by the East African regional bloc that has led several rounds of failed peace talks. The Intergovernmental Authority on Development last month called for a meeting of Kiir and Machar ahead of an African Union summit on July 1 in Mauritania, saying it would inform a "final decision" on Machar's participation in the peace process.</p> <p>Both sides in South Sudan's civil war have been accused of widespread abuses such as gang rapes against civilians, including along ethnic lines. A number of South Sudan officials have been accused by human rights groups of profiting from the conflict and blocking the path to peace.</p>

<b>HEADLINE</b>	<b>06/21 Canada legalizes pot differently than US</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/legal-pot-roll-differently-canada-us-56049565">https://abcnews.go.com/International/wireStory/legal-pot-roll-differently-canada-us-56049565</a>
<b>GIST</b>	<p>Mail-order weed? You betcha!</p> <p>With marijuana legalization across Canada on the horizon, the industry is shaping up to look different from the way it does in nine U.S. states that have legalized adult recreational use of the drug. Age limits, government involvement in distribution and sales, and access to banking are some big discrepancies.</p> <p>And yes, Canadians will be able to order cannabis online and have it delivered through the mail — something that's illegal in the United States.</p> <p>Prime Minister Justin Trudeau announced Wednesday that marijuana will be legal nationwide on Oct. 17. In the meantime, Canada's provinces and cities are working out issues concerning how cannabis will be regulated.</p> <p>Here's what to expect:</p> <p><b>GOVERNMENT-RUN STORES</b></p> <p>It's up to the provinces and territories to determine how to handle distribution, and they're taking a variety of approaches.</p> <p>Ontario plans to open up to 150 stores run by its Liquor Control Board — a model of public ownership that is unusual in the U.S. The tiny Washington state town of North Bonneville has one city-owned pot shop.</p> <p>British Columbia is planning for a mix of public and privately owned stores, while Newfoundland and Saskatchewan will have only private pot shops. In some remote areas where stand-alone marijuana stores might not be economically feasible, including in the Northwest Territories, cannabis could be sold at existing liquor stores.</p> <p>Just like U.S. states with legal pot, the provinces also differ on home-growing, with many allowing up to four plants and others, including Quebec, barring it.</p> <p>And rather than a minimum age of 21, as U.S. states have set, Canada's federal minimum age to use marijuana will be 18, with most provinces adding an additional year.</p>

The varying approaches make the provinces something of a laboratory for determining the best ways to legalize, said Matt Gray, founder and chief executive of Herb, a Toronto-based news and social media platform for the pot industry.

"It's this amazing case study for countries globally to see the amazing benefits that legalizing cannabis can have on things like the economy, eradicating the black market and getting cannabis out of the hands of minors," he said.

#### PRICING AND TAXES

Whether run by the government or private entities, the stores will obtain their marijuana from federally licensed growers. Officials also will set a minimum price.

Canada's finance ministers have pegged it at about \$10 per gram, but the Yukon minister in charge of marijuana says the government hopes to displace more of the illegal market by setting the base at \$8.

The government wants to tax legal marijuana at either \$1 per gram or one-tenth of a product's price, whichever is greater, plus federal and provincial sales taxes. It's likely to be less than the taxes imposed in the states.

Washington state's tax rate is 37 percent, plus state and local sales taxes. In California, licensed pot businesses are blaming total tax rates that can approach 50 percent for driving people back into the black market.

The Canadian government agreed to give provinces and territories 75 percent of the tax revenue.

#### BANKING

Canada's cannabis businesses have a massive advantage over their American counterparts: access to banks.

Because the drug is still illegal under U.S. law, major banks have been loath to do business with the industry, even in legal marijuana states.

U.S. Treasury Department data show a slow increase in the number of banks and credit unions maintaining accounts for marijuana businesses, with 411 reporting such accounts last spring.

But many of those institutions don't provide full-service banking, making it tough for businesses to get loans.

"The major Canadian banks were slow to warm to this," said Chris Barry, a Seattle-based marijuana business attorney who handles industry transactions in both countries for the law firm Dorsey and Whitney.

He said smaller independent banks, investment banks and brokerage firms got the work started.

"That has pretty much dissolved as a problem," Barry said. "The majors are coming around to participate in the market."

#### THE PRODUCTS

Some consumers are disappointed that store shelves will only stock dried flower, oils and seeds when sales begin — no edibles. The government has said it needs about another year to develop regulations for edibles.

There's also a labeling issue: Health Canada has dictated large warning labels on otherwise plain packages, with strict restrictions on font sizes, styles and colors. The idea is to discourage misuse and to avoid

	<p>appealing to youths, but it also leaves very little room for company logos or branding.</p> <p>"It looks like each bag is housing radioactive waste," said Chris Clay, owner of Warmland Cannabis Centre, a medical marijuana dispensary on Vancouver Island. "It's a tiny logo with this huge warning label. It doesn't leave much room for craft growers that want to differentiate themselves."</p> <p>And that, Clay said, is one of many things that will make it difficult for mom-and-pop growers to thrive. Giant cannabis companies have been entering deals to supply marijuana to the provinces.</p> <p>While micro-producers are allowed, Clay is worried that by the time rules are released, "all the contracts are going to be scooped up."</p> <p><b>POT BY POST</b></p> <p>While getting marijuana by mail may be a novel concept in the U.S., it's nothing new in Canada. Its postal service has been shipping medical marijuana to authorized patients since 2013.</p> <p>"Many of our processes are in place today for medicinal cannabis and will continue for any regulated product sent through Canada Post from licensed distributors," Canada Post said in a written statement.</p> <p>The agency requires proof of age upon delivery and won't leave the package in your mailbox or on your doorstep if you're not home.</p>

<b>HEADLINE</b>	<b>06/20 Charleston apologizes for slavery role</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/charleston-formally-apologizes-role-slavery/story?">https://abcnews.go.com/US/charleston-formally-apologizes-role-slavery/story?</a>
<b>GIST</b>	<p>A southern city is formally apologizing for its dark past.</p> <p>Charleston, South Carolina, has approved a resolution that condemns and apologizes for the centuries of human slavery that were supported and promoted by its former lawmakers. The city council's 12 members voted 7-5 to adopt the symbolic resolution Tuesday night, coinciding with "Juneteenth," the celebratory anniversary of the abolition of slavery in the United States.</p> <p>The port city played a major role in the Atlantic slave trade. Nearly half of the people who were abducted from their homes in Africa and shipped to the United States to be sold into slavery took their first steps on American soil in Charleston. Slaves made up almost half of the city's population before the start of the American Civil War, according to the International African American Museum in Charleston.</p> <p>"This is the modern city council which feels the need to make an apology for the institution of slavery in the city of Charleston," Charleston councilman William Dudley Gregorie, who helped author and shepherd the resolution, told ABC News in a telephone interview before Tuesday's vote.</p> <p>Gregorie, who is also a trustee at the Emanuel African Methodist Episcopal Church in Charleston, said the resolution is a long time coming and a testament to the power of collaboration. He did "extensive research to reach a draft" that was shared with his fellow council members.</p> <p>The language in the three-page resolution explicitly takes responsibility for the "dehumanizing atrocities" that were condoned for hundreds of years.</p> <p>The resolution goes on to detail how the economic success of colonial and antebellum Charleston (formerly Charles Town) "was slave labor" and it prospered "due to the expertise, ingenuity and hard labor of enslaved Africans who were forced to endure inhumane working conditions that produced wealth for many, but which was denied to them."</p>

The document also admits to how the institution of slavery "sought to suppress, if not destroy, the cultural and social values of Africans by stripping Africans of their ancestral names and customs, humiliating and brutalizing them through sexual exploitation, and selling African relatives apart from one another without regard to the connection of the family."

<b>HEADLINE</b>	<b>06/20 Opioid prevention in schools trend up</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/trending-concern-schools-opioid-awareness-prevention/story?">https://abcnews.go.com/US/trending-concern-schools-opioid-awareness-prevention/story?</a>
<b>GIST</b>	<p>As the school year winds down, opioid prevention in schools are trending up.</p> <p>One in 7 high school students in America reported they'd misused prescription opioids, like hydrocodone, in the past year, according to the Centers for Disease Control and Prevention.</p> <p>In Ashland, Kentucky a community of just over 21,000 people along the southern bank of the Ohio River, the epidemic has hit a fever pitch.</p> <p>Boyd County, where Ashland is located, saw 39 opioid-related deaths in 2017, which was an increase from 30 deaths in 2016, according to the local paper The Daily Independent.</p> <p>In one year, local elementary schools found a total of 18 needles in their playgrounds.</p> <p>To combat the epidemic, students from Ashland Middle School came up with a device to keep people safe from syringes discarded on the ground.</p> <p>They designed a working prototype to safely pick up and dispose of syringes and created a database to alert the public where the syringes were found.</p> <p>"We really noticed that this was a big problem in our community and our resource officer came to us and asked if we could figure out a solution," Isaac Crawford, an eighth-grader at Ashland Middle School and one of the 19 students who worked on creating the device, told ABC News.</p> <p>On a recent trip to Washington, D.C., the students showcased their device to lawmakers in Congress. Senate Majority leader Mitch McConnell, from their home state of Kentucky, called it "inspirational."</p> <p>The Ashland police chief saw the prototype and wants it in the hands of every officer "as soon as possible," Crawford said.</p> <p>The students won a nationwide contest sponsored on by Samsung - which supplied the 3D printing technology to create the prototype.</p> <p>The database locates where needles were found and then reports them to police and vice versa. The hope is that they can eventually turn it over fully to the police department.</p> <p><b>The Naloxone Approach in Schools</b></p> <p>As the opioid crisis hits America hard, states have taken a new approach to keeping students safe: putting naloxone in schools, training counselors on how to approach the opioid crisis, and taking a students first approach to education and understanding of the problem.</p> <p>"We need to get [naloxone] out there, it needs to be available in places," Jon DeLena DEA Associate Special Agent in Charge for New England told ABC News. "The amount of lives it has saved is staggering."</p> <p>Maryland Rhode Island have passed laws requiring schools to carry naloxone.</p>

	<p>“Given the scope of the opioid epidemic in our area right now, it’s not outside the realm of possibility that any high school or middle school could have a student on campus who experiences an overdose,” said Rhode Island state Sen. Gayle Goldin in a news release. "Every second matters."</p> <p>Other states like Ohio and New Hampshire leave it up to the individual districts to decide whether to put naloxone in schools or not.</p> <p>Dublin City Schools in Dublin, Ohio, with 17,000 students and 20 buildings, has had naloxone in all of its schools since 2016 in order to be "proactive and prepared."</p> <p>The thought is to have school nurses be able to administer the antidote similarly to an EpiPen. It is something the National Association of School Nurses support.</p> <p>"There's no downside to having it," Tracey Miller, the deputy superintendent of Dublin City Schools, told ABC News. "Only an upside."</p> <p>DeLena said having naloxone in schools, at first, he was taken aback by it, but realized it was forward thinking.</p> <p>"It isn't so much they are worried about a student overdosing, they're worried about someone else on campus overdosing. Whether that's God forbid a teacher, parent at parent pickup or at a game. It could be anybody," he said. "We know this thing is so wide spread, the more I thought about it, it's forward leaning and the schools are trying to get ahead of it."</p> <p>An early start – focusing on youth.</p> <p>In New Hampshire, a state some consider ground zero for the opioid crisis, the Drug Enforcement Agency and community leaders are working with students to help combat the opioid crisis.</p> <p>"Everything we've been doing in New Hampshire has been youth-focused because of the opioid crisis," DeLena said.</p> <p>DeLena, with the help of the Recovery Centers of America and the Mark Whalberg Youth Foundation, put on the New Hampshire Youth Summit on Opioid Awareness - the first event of its kind. The event drew so much attention that Attorney General Jeff Sessions flew in to speak and a former MLB pitcher spoke about his addiction and recovery.</p> <p>The response from students in attendance was positive.</p>

<b>HEADLINE</b>	<b>06/20 Airlines speak out on immigration policy</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/airlines-speak-transportation-undocumented-children-separated-family/story?id=56043080">https://abcnews.go.com/US/airlines-speak-transportation-undocumented-children-separated-family/story?id=56043080</a>
<b>GIST</b>	<p>Before President Donald Trump signed an executive order Wednesday to reverse the administration's family separation policy, the Department of Homeland Security attacked several airlines that said they would not knowingly work with the federal government in cases of transporting children separated from their parents at the border.</p> <p>American Airlines acknowledged an existing contract with the federal government, but the airline said it does not know whom the government flies nor their purpose for traveling.</p> <p>"We have no knowledge that the federal government has used American to transport children who have been separated from their parents due to the recent immigration policy, but we would be extremely</p>

disappointed to learn that is the case," the airline said in a statement. "We have therefore requested the federal government to immediately refrain from using American for the purpose of transporting children who have been separated from their families due to the current immigration policy. We have no desire to be associated with separating families, or worse, to profit from it."

Southwest Airlines and United Airlines released similar statements. The carriers said they were unaware of any previous occurrences but asked the government to no longer use their flights to transport immigrant children.

"We have contacted federal officials to inform them that they should not transport immigrant children on United aircraft who have been separated from their parents," CEO Oscar Munoz said.

Frontier Airlines also said they would not knowingly engage in transporting separated children. Delta Airlines released a statement after the president signed the executive order.

The Atlanta-based airline said "recent reports of families being separated are disheartening and do not align with Delta's core values," but it's pleased with the executive order.

The Association of Flight Attendants expressed concern that tension could pose a "safety and security issue" aboard planes, as passengers and crew react to seeing children board.

"Some are struggling with the question of participating in a process that they feel is deeply immoral," the association said member flight attendants. "We have asked the airlines to communicate with Flight Attendants so that we know what to expect, whether these children could be on our flights, how we will be notified, what special instructions there may be for care of these children if they are on our flights, and how to respond to passengers."

## Cyber Awareness

[Top of page](#)

<b>HEADLINE</b>	<b>06/20 Hacker group targets US satellites</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/hacker-group-china-may-disrupt-us-satellites-cybersecurity-firm-warns-985501">http://www.newsweek.com/hacker-group-china-may-disrupt-us-satellites-cybersecurity-firm-warns-985501</a>
<b>GIST</b>	<p>A cyber-espionage group operating from computers inside China is currently targeting U.S. satellite communications and defense sectors as part of a "wide-ranging" operation. They may soon seek to disrupt critical systems, according to cybersecurity firm Symantec's Security Response Attack Investigation Team.</p> <p>The hacking collective, codenamed Thrip, has been using powerful malware against targets in the U.S. and Southeast Asia, researchers said in a detailed analysis published on Tuesday. Symantec's experts said the team has been active since at least 2013 and is highly motivated by spying. But they warned its tactics could turn nasty by taking a more "aggressive" approach in the future.</p> <p>Thrip, the report said, relies on a cocktail of custom malware and legitimate network administration tools to compromise computers. The campaign has been tied to three computers in China, but Symantec did not elaborate on who is pulling the strings, or if they could potentially be linked to the government. As Russian cybersecurity chief Eugene Kaspersky noted this week, accurate attribution is now harder than ever.</p> <p>Symantec said the hackers appear to be interested in finding out how to infect computers running software that monitors and controls satellites. Another target in the hacking group's latest operation—which was launched in 2017 according to Symantec—was an organization involved in geospatial imaging and mapping. The hackers also targeted computers running Google Earth Server and Garmin imaging software, researchers said. In addition, they targeted three different telecommunications operators located</p>

	<p>in Southeast Asia.</p> <p>While the culprits still remain a mystery, their tools do not. Researchers found malware designed to steal data, log keystrokes and create backdoors. Some had links to “underground Chinese hackers.”</p> <p>“This is likely espionage,” said Greg Clark, chief executive of Symantec. “The Thrip group has been working since 2013 and their latest campaign uses standard operating system tools, so targeted organizations won’t notice their presence. They operate very quietly, blending in to networks, and are only discovered using artificial intelligence that can identify and flag their movements.”</p> <p>He added: “Alarmingly, the group [is] keenly interested in telecom, satellite operators and defense companies. We stand ready to work with appropriate authorities to address this serious threat.”</p> <p>Cybersecurity companies have long tracked China-based cyber-espionage operations, and it is widely believed that North Korea’s hacking groups rely on computer infrastructure in the country.</p> <p>In March this year, experts from FireEye found a suspected Chinese campaign that was targeting engineering and maritime sectors in the U.S. with ties to the South China Sea territory dispute. Back in 2015, China and U.S. agreed to reduce state-sponsored theft of intellectual property. The loose cyber-truce followed the massive hack of federal records from the U.S. Office of Personnel Management (OPM) that was blamed on Beijing. While the results did have an effect, cyber-espionage persists.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>06/20 Cybercrime serious threat at World Cup</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/sports/soccer/worldcup/2018/06/20/world-cup-cyber-crime-very-real-threat-us-fans-experts-say/718308002/">https://www.usatoday.com/story/sports/soccer/worldcup/2018/06/20/world-cup-cyber-crime-very-real-threat-us-fans-experts-say/718308002/</a>
<b>GIST</b>	<p>Cyber crime is the most serious threat for U.S. fans traveling to Russia this summer for the World Cup, security experts say.</p> <p>While headlines before the tournament warned of Russian hooligans possibly causing disruptions and Fox broadcaster Alexi Lalas saying he was confronted by an aggressive and angry fan while on assignment in Moscow, experts say Americans traveling to Russia should be more concerned about using their cell phones and having their personal information confiscated.</p> <p>“Probably the greatest risk is going to be cyber security,” said Larry Pfeiffer, who served as chief of staff to former CIA Director Michael Hayden. “No. 1, Russia is a security state with one of the most advanced intelligence services in the world, and they are going to try to use this event to their advantage.”</p> <p>Russian government agencies with the potential to hack devices are the Federal Security Service (FSB) and the Main Intelligence Administration (GRU), Pfeiffer says.</p> <p>“They’ve got an industrial-sized intelligence community that’s going to have the capability to handle vast amounts of data,” said Pfeiffer, director of the Michael V. Hayden Center for Intelligence, Policy, and International Security at George Mason University. “They will be sweeping up large amounts of data off of telephones being used in the country. Nobody should feel like they’re immune to that.”</p> <p>Julian Sanchez, who studies privacy and national security at the Cato Institute, a Washington think tank, said travelers should bring or purchase a burner phone or other device. But if you can’t afford it, wipe the device before going to Russia.</p> <p>“Back them up, wipe them clean and then bring them in a state with as little information as possible on them,” Sanchez said. “Especially big events like the World Cup, be cautious about what Wi-Fi you are using.”</p>

So far there have been few reports of criminal activity against World Cup visitors. Russian media have reported that police agencies were told not to release details of negative incidents that may affect Russia's reputation during the tournament.

Foreign security services have been known to use phishing, according to the National Counterintelligence and Security Center (NCSC). Phishing is when a person, application or device appears to be trustworthy in order to gain private information. People should not overshare their information with new acquaintances when at the World Cup, according to NCSC.

"Anyone traveling to Russia to attend the World Cup should be clear-eyed about the cyber risks involved," NCSC director William Evanina said in a statement. "If you're planning on taking a mobile phone, laptop, PDA, or other electronic device with you —make no mistake — any data on those devices (especially your personally identifiable information) may be accessed by the Russian government or cyber criminals."

Pfeiffer said U.S. citizens should not trust well-established Wi-Fi networks, such as those in commercial hotels.

"The Russian intel services work closely with hotels and venues like that to be able to monitor communications," Pfeiffer said. "The advice I give is in countries like Russia and China in particular, if you don't have to bring a device, don't bring one."

<b>HEADLINE</b>	<b>06/20 World's most notorious hacker groups</b>
<b>SOURCE</b>	<a href="https://www.computerworlduk.com/security/most-notorious-hacker-groups-3679258/">https://www.computerworlduk.com/security/most-notorious-hacker-groups-3679258/</a>
<b>GIST</b>	<p>Today increasingly sophisticated cyber attacks are crafted, honed, and improved by shady groups of hackers, often using custom tools that are directed at high value people, businesses, or even countries. From daring cyber heists that cause cash machines in the street to give out free money, through to targeting activists, defectors and dissidents, these attacks are often carried out by dedicated groups working in the shadows of states where they are tolerated, encouraged, or even part of the intelligence machinery of countries themselves.</p> <p>Often mysterious, it is only thanks to the dedication of security researchers that we now know a little about how these groups operate, by detecting hints as to who they are, where they're based, how they operate, and why.</p> <p>These groups tend to operate in the domain of advanced persistent threat (APT), a fairly self explanatory term for sophisticated hacking attempts that are continuously ongoing, usually targeting a person, business, or country.</p> <p>APT groups vary in motive: they could be conducting cyber espionage for political or corporate information (usually in sensitive industries or public sector bodies), they could be state-sponsored, they could be directly a function of a state, or they could be simply tolerated within a state. An APT group might be financially motivated, engaging in complex cyber heists. Or they could simply want to spread misinformation and chaos.</p> <p>In any case, they often use customised, proprietary malware tools and have sophisticated means of attack. Often they run their own (sometimes vast) command and control infrastructure, and deliberately make attribution difficult – either by masking the location of the attacks or as a means to plant blame on another potential culprit, in other words, a 'false flag' operation.</p> <p>APT groups are then, by their nature, shady and mysterious – but thanks to the hard work of researchers in the infosec community, we now know details about some of them.</p> <p>Read on for some of the most notorious known hacker groups, from 'Fancy Bear' to 'Reaper'.</p> <p>The Shadow Brokers</p>

It was almost impossible to miss the WannaCry ransomware threat in 2017. WannaCry and what was then a variant of the Petya ransomware, NotPetya, absolutely hobbled infrastructure and businesses the world over.

These attacks were based on an exploit developed internally by America's National Security Agency (NSA), called EternalBlue, which itself exploited Microsoft's Server Message Block protocol (deciding to horde that exploit rather than inform Microsoft).

A group calling itself The Shadow Brokers obtained NSA files back in 2013, believed to have been extracted from an NSA staging server. This included information on all types of exploits that the spying agency had been holding onto.

The group's first published leak was in August 2016, a cache of cyber weapons that it attributed to the 'Equation Group' – an organisation believed to be based in America, possibly behind the infamous Stuxnet code that wrecked Iran's nuclear centrifuges, and that has been suggested to also have ties to the NSA.

Four leaks later and it was 'EternalBlue' – the SMB-based attack that WannaCry and Petya were built on, causing more than 200,000 infections worldwide within the first two weeks of its release. The group claims to have access to more weapons and exploits, and had previously threatened the release of new material every month.

No one knows for sure where the Shadow Brokers group originates, but theories include an insider within the NSA's 'Tailored Access Operations' group.

NSA whistleblower Edward Snowden said that "conventional wisdom indicates Russian responsibility" – adding that he believed the releases were a warning to America.

"This leak looks like somebody sending a message that an escalation in the attribution game could get messy fast," he tweeted.

### Lazarus Group

The mysterious Lazarus Group could be behind the \$81 million dollar bank heist from the Central Bank of Bangladesh in 2016. Not much is known about this organisation, who is in it, or where it operates from, but security vendor Kaspersky had its researchers attempt to trace the shady group for over a year.

It found from the 'forensic analysis of artefacts' the group left in attacks on south-east Asian and European banks a 'deep understanding' of the group and how it operates – noting that it attacked financial institutions, casinos, software developers and cryptocurrency businesses around the world.

The typical anatomy of a Lazarus attack, according to Kaspersky, comes in four stages. First is the initial compromise where a single system in a target is breached with remotely accessible code, or through an exploit planted on a website. An employee downloads the malware, allowing the group to place additional malware on the compromised system.

Then, Lazarus hackers would migrate to other bank hosts and place backdoors throughout the organisation. After this, it would undertake a recon mission to learn about and map out the network, flagging valuable internal resources such as backup servers with credentials or authentication information stored in it.

Lastly, the group deploys malware specially designed to bypass the victim's security, and then issued transactions from there.

No one knows for sure where Lazarus operates from. However, by studying a collection of malware samples Kaspersky found a strange connection to a command and control server – lasting just momentarily – from a "very rare" IP address in North Korea.

But as with a lot of attribution that is educated guesswork, with the vendor conceding that it could mean a number of things – that attackers really did connect from North Korea, it was a "carefully planned" false

flag operation, or that someone in North Korea accidentally visited the command and control URL.

The group is still on the move. Read more of Kaspersky's research [here](#).

### Equation Group

Credited by Kaspersky with the dubious honour of 'crown creator of cyber espionage', Equation Group refers to the shadowy Tailored Access Operations unit within America's NSA.

The group was most famously associated with Stuxnet, a highly sophisticated attack (especially for its time) that successfully wrecked Iran's nuclear centrifuges, although it's suspected that the unit informed the attack rather than perpetrated it.

Kaspersky has a brief expose of what's known about the group [here](#). It is, the vendor says, "unique almost in every aspect of their activities" – using tools that are extremely complicated and expensive to develop, as well as exfiltrating data and hiding their work in an "outstandingly professional way".

As mentioned in the Shadow Brokers entry – some of the most damaging cyber attacks the world has ever seen originated from a single NSA exploit. The group has an extensive library of trojans that are known and probably many more that aren't.

And it appears to use more traditional spying methods to worm its way onto the systems of victims too, in one instance intercepting a CD-ROM that was being mailed out to the attendees of a science conference in Houston, and replacing it with a copy that was infected with the group's DoubleFantasy worm.

The group maintains a large command and control server infrastructure located in more than 100 servers and 300 domains, including hosts in countries like the US, the UK, Panama, Costa Rica, Colombia, Germany and the Netherlands.

Its victims [appear](#) to be highly targeted, including (but not limited to) government and diplomatic institutions, telecoms, aerospace, energy, nuclear research, oil and gas, military, nanotechnology, Islamic activists and scholars, the media, transport, finance, and businesses working on encryption.

### Carbanak/Fin7

A group codenamed Carbanak had been wanted by international policing agencies for at least five years due to its successfully stealing as much as \$1 billion from a series of cyber heists and hacked ATM networks.

Europol in March 2018 believed it had fingered the ringleader for the notorious gang, still unnamed, arresting the figure in Alicante, Spain, after a joint international investigation.

Carbanak (also nicknamed Fin7) sent out highly targeted phishing campaigns – in other words, spear phishing – to trick bank employees into downloading malware. Since late 2013, the gang had used its own type of malware, Anunak and Carbanak, then later utilising a modified version of security testing software called Cobalt Strike, reports *Fortune*.

The first targets were mostly in Russia, but it then moved on to the USA, Germany, China, and Ukraine.

They targeted banks in more than 40 countries, affectively accounting for a one-gang cyber-heist crimewave. The modified Cobalt attack allowed Carbanak to steal as much as €10 million per heist.

Its ingenious ATM hacks allowed the group to instruct cash machines to dispense currency without even interacting with the terminal. This would then be picked up by mules who transferred it to the SWIFT financial network, and then from there into the attackers' accounts.

[FireEye](#) noted that the group pointed its phishing campaign at the US Securities and Exchange Commission.

### APT37/Reaper

According to extensive research from American security vendor FireEye, a cyber espionage unit based in North Korea (Advanced Persistent Threat 37 – nicknamed Reaper) upped its operations in early 2018 and continues to engage in recon missions targeting nation states and state-adjacent organisations.

In 2017, the group targeted a Middle Eastern business that was working with North Korea on a joint project to increase telco services in the country. It also honed in on a Vietnamese trading company, and even individuals working in Olympic organisations.

FireEye states that in addition to nation state-based espionage operations, it also targets defectors from the DPRK, suggesting that it is closely affiliated with the country.

‘Reaper’ attackers made use of vulnerabilities in the Hangul Word Processor, which is widely used in the RoK – South Korea. In addition, it had a cache of zero-days and used them in spear phishing and ‘web compromise operations’, according to FireEye.

The command and control infrastructure made use of compromised servers as well as cloud service providers to muddy attribution and avoid detection, and it also placed malware payloads on compromised but legitimate websites. Email accounts used to leverage attacks evolved from domains associated with South Korea to other providers like Gmail, and Russian services such as Yandex.

FireEye – whose report you can read [here](#) (PDF) – says it has assessed with “high confidence” that the group acts “in support of the North Korean government and is primarily based in North Korea”. The researchers came to this conclusion for a number of different reasons, from who the group was targeting through to “probably links to a North Korean individual believed to be the developer of several of APT37’s proprietary malware families”.

### Iron Tiger APT

Possibly emerging from a series of sophisticated and highly targeted attacks in the Asia Pacific region, focusing on politicians and government agencies in China, Hong Kong, the Philippines, and Tibet, the group nicknamed ‘Iron Tiger’ was said to have pivoted towards targets in America, including US government contractors in aerospace, energy, intelligence, telecoms and nuclear.

A Trend Micro [report](#) suggested that the attacks originated from China because VPN servers used to launch the attacks were mostly based in the region, the file names and passwords used were Chinese, text resources and language ID in malware binaries were set to simplified Chinese, and Whois data pointed to domains registered to physical addresses in China. The vendor also pointed the finger at a person called Guo Fei, a Shanghai resident, who it believed was instrumental to the group’s success.

BitDefender in February 2018 discovered variants of the Gh0st RAT trojan used in the Iron Tiger operation for new attacks first flagged in July 2017 – a customised piece of malware called PZChao, suggesting a potential return of the group that had been quiet for several years. A forensic analysis of that new variant is detailed in a [whitepaper](#) from the vendor, available for download [here](#).

### Fancy Bear/APT28

No list of advanced persistent threat groups would be complete without ‘Fancy Bear’, which was alleged to have played a major part in the hacking of the US Democratic National Committee in the run up to America’s elections (although this was disputed by ‘Guccifer 2.0’, who took credit).

The group, says [CrowdStrike](#), has been on the scene since 2008 and has targeted all the usual sensitive sectors – defence, energy, government, and media – as well as dissidents. It’s widely believed to be at the very least state sponsored, with vendors observing the most likely culprit is Russia. It is able to run simultaneous operations concurrently and has created its own implant tools, as well as

	<p>droppers, which are cross-operating systems and can be pointed at mobile devices too.</p> <p>Fancy Bear was linked with attacks on the German parliament, as well as campaigns to hijack traffic inbound to a Nigerian government website. The group had also developed malware to target Apple devices, which was capable of reading text messages and secretly recording audio – a useful espionage tool in any nation’s arsenal.</p> <p>For the long list of prominent attacks and campaigns head over to the Wikipedia page <a href="#">here</a>, where you can read about the attack on the Bundestag, and even an attempt to cripple Ukraine’s artillery.</p>

<b>HEADLINE</b>	<b>06/20 FIFA World Cup tech security challenges</b>
<b>SOURCE</b>	<a href="https://www.zdnet.com/article/world-cup-2018-the-tech-security-challenges-behind-the-big-event/">https://www.zdnet.com/article/world-cup-2018-the-tech-security-challenges-behind-the-big-event/</a>
<b>GIST</b>	<p>One of the biggest sporting events in the world has arrived in the form of the 2018 FIFA World Cup taking place in Russia, with 32 nations competing over the next month in a tournament which is expected to be watched by billions of viewers around the globe, on television, mobile and online.</p> <p>While events like the World Cup are viewed by many as an opportunity to enjoy sporting drama, there are some who see high-profile events such as this as an opportunity to conduct espionage and hacking campaigns.</p> <p>For example, one high-profile sports event to already attract the interest of hackers this year was the Winter Olympics in South Korea. A cyber attack against the opening ceremony caused IP televisions in the main press centre to malfunction.</p> <p>Dubbed Olympic Destroyer, the malware was designed to be destructive, but it was also designed to confuse, with a trail left implicating North Korean hackers. And while some have blamed Russia for the attack it's still not clear who was really behind it.</p> <p>Major sporting and cultural events like this are tempting targets for groups looking to create high-profile cyber incidents.</p> <p>"Certainly, with high-profile events, if a threat actor has a desire to cause disruption, we know by looking at the actions of malware such as Olympic Destroyer that they have the capability," Martin Lee, technical lead at Cisco Talos told ZDNet. "Often it's not clear who is behind particular attacks or what their objectives are and now that analysis is becoming more difficult by threat actors attempting to actively muddy the waters".</p> <p>But while attributing cyber attacks remains a difficult task, many in the cyber security sector are under no illusion that the high-profile nature of the World Cup means it is going to attract attention from attackers of all varieties, ranging from low-level scammers to nation-state backed threat actors.</p> <p>"There's always a cyber element to all these big events, whether it's the World Cup or the Olympics. Just with so many countries involved and the political ramifications, there's always an information gathering element to it," George Kurtz, CEO of CrowdStrike told ZDNet.</p> <p>"They're going to gather information in person, they're going to gather information through traditional methods and they're going to gather information through a cyber component. There's going to be a lot of countries involved in gathering information, not just one."</p> <p>Still, that the World Cup is taking place in Russia creates something of an unusual dynamic when it comes to potential nation-state hacking.</p> <p>Western governments have been quick to point to the Kremlin-backed hacking groups as a threat, but</p>

with the event taking place in Russia itself, it is perhaps more likely that visitors rather than the infrastructure of the event will be the target.

Last week a US intelligence official warned travellers to the World Cup that their smartphones or laptops could be targeted by Russian hackers or cyber criminals.

"Corporate and government officials are most at risk, but don't assume you're too insignificant to be targeted," William Evanina, an FBI agent and the director of the U.S. National Counterintelligence and Security Center told Reuters.

"Some of those groups we attribute to nations like Russia may be restructuring their target list because they now have strategic targets that are in the country rather than having them abroad in different countries and government buildings," Jens Monrad, principal intelligence analyst at security company FireEye told ZDNet.

Andrea Little Limbago, chief social scientist at security firm Endgame told ZDNet that one group that might be targeted while in Russia would be the foreign media. However, she added that the deception element could come into play here, with other nations attempting to make attacks trying to shift the blame.

"That doesn't mean that other folks won't, or that other groups won't masquerade as Russia. That's one of the trends we're seeing, the masquerading and deception that's going on and that's only going to advance".

But while nation-states may end up using Russia as an arena for playing the grand game of international geopolitics, they're not going to be the only players looking to flex their muscles -- some cyber criminal groups could look to cash in, too.

"But we do in fact also see countries like Russia being heavily impacted by organised crime which has historically targeted them. There could also be an escalation in these groups which are motivated because they have a global audience," said Monrad.

"Maybe visitors are bringing devices or computer equipment that's easier to compromise because they're at an event and they're lowering their defensive bars," Monrad said.

<b>HEADLINE</b>	<b>06/21 Claim: 50,000 ships vulnerable to attack</b>
<b>SOURCE</b>	<a href="http://delano.lu/d/detail/news/why-50000-ships-are-so-vulnerable-cyberattacks/182756">http://delano.lu/d/detail/news/why-50000-ships-are-so-vulnerable-cyberattacks/182756</a>
<b>GIST</b>	<p>The 50,000 ships sailing the sea at any one time have joined an ever-expanding list of objects that can be hacked. Cybersecurity experts recently displayed how easy it was to break into a ship's navigational equipment. This comes only a few years after researchers showed that they could fool the GPS of a superyacht into altering course.</p> <p>Once upon a time objects such as cars, toasters and tugboats only did what they were originally designed to do. Today the problem is that they all also talk to the internet.</p> <p><b>The story so far</b></p> <p>Stories about maritime cybersecurity are only going to proliferate. The maritime industry has been slow to realise that ships, just like everything else, are now part of cyberspace. The International Maritime Organisation (IMO), the UN body charged with regulating maritime space, has been late and somewhat slow in considering appropriate regulation when it comes to cybersecurity.</p> <p>In 2014, the IMO consulted their membership on what maritime cybersecurity guidelines should look like. Two years later they issued their interim cybersecurity risk management guidelines, which are broad and not particularly maritime specific. And now, unsurprisingly, ships are being hacked.</p>

### **Complexity of the maritime industry**

There are several core issues that make cybersecurity for the maritime industry particularly challenging to address.

First, there are many different classes of vessel, all of which operate in very different environments. These vessels tend to have different computer systems built into them. Significantly, many of these systems are built to last over 30 years. In other words, many ships run outdated and unsupported operating systems, which are often the ones most prone to cyber-attacks.

Second, the users of these maritime computer systems are constantly in flux. Ship crews are highly dynamic, often changing at short notice. As a result, crew members are often using systems they are unfamiliar with, increasing the potential for cybersecurity incidents relating to human error. Further, the maintenance of onboard systems, including navigational ones, is often contracted to a variety of third parties. It is perfectly possible that a ship's crew have little understanding of how onboard systems interact with each other.

A third complexity is the linkage between onboard and terrestrial systems. Many maritime companies stay in constant communication with their vessels. The cybersecurity of the ship is also dependent, then, on the cybersecurity of the land-based infrastructure that makes this possible. The implications of such dependencies was made clear in 2017 when a cyber-attack on the systems of A.P. Moller-Maersk resulted in cargo delays across their entire fleet. This is particularly challenging for the IMO who can govern the likes of port regulations, but have very little control over the wider systems and processes of maritime operators.

<b>HEADLINE</b>	<b>06/20 Germany: Russia in energy firms hack</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-germany-cyber-russia/german-intelligence-sees-russia-behind-hack-of-energy-firms-media-report-idUSKBN1JG2X2">https://www.reuters.com/article/us-germany-cyber-russia/german-intelligence-sees-russia-behind-hack-of-energy-firms-media-report-idUSKBN1JG2X2</a>
<b>GIST</b>	<p>BERLIN (Reuters) - Russia was probably behind a widespread cyber attack on German energy providers disclosed last week, the head of Germany's BfV domestic intelligence agency told the RND newspaper chain.</p> <p>Hans-Georg Maassen told the newspaper group there were several reasons to believe Russia was involved, including the way the cyber attack was executed.</p> <p>"The modus operandi is in fact one of multiple indications that point to Russian control of the attack campaign," the group quoted Maassen as saying.</p> <p>Russia has repeatedly denied trying to hack into other countries' infrastructure. Asked to comment on Maassen's accusations, Kremlin spokesman Dmitry Peskov said: "We don't know what he was talking about."</p> <p>"They should give facts," said Maria Zakharova, spokesman for the Russian foreign ministry.</p> <p>Germany's BSI federal cyber protection agency disclosed the cyber attack dubbed "Berserk Bear" on June 13, citing efforts by hackers to penetrate the computer networks of many German energy and electricity providers.</p> <p>The agency, which first warned about such possible attacks a year ago, said the attack had managed to breach only the office networks of a few companies.</p> <p>Maassen did not identify how many companies were targeted in the attack, which BSI has said is now under control.</p>

	<p>The United States in March also blamed Russia for a campaign of cyber attacks on the U.S. power grid that Washington said began in March 2016 or possibly earlier.</p> <p>Foreign Minister Heiko Maas in April also said Germany had to assume that Russia was behind a cyber attack on the foreign ministry that was discovered in December.</p>

<b>HEADLINE</b>	<b>06/21 Algeria shuts internet access nationwide</b>
<b>SOURCE</b>	<a href="http://time.com/5318096/algeria-internet-cheating-exams/">http://time.com/5318096/algeria-internet-cheating-exams/</a>
<b>GIST</b>	<p>Algeria is resorting to a drastic measure in an effort to rein in rampant cheating on national exams: it is shutting off internet access across the country during certain times this week.</p> <p>Both mobile and wired internet connections will go dark for an hour after the beginning of national high school graduation exams, the BBC reports. The outages will continue throughout the exam season, which began Wednesday and lasts until June 25.</p> <p>Facebook will also be blocked throughout Algeria for the entire duration of the exam period, Education Minister Nouria Benghabrit told Annahar newspaper, according to the BBC. Benghabrit added that, while the measure was not optimal, “We should not passively stand in front of such a possible leak”.</p> <p>Surveillance cameras and devices to jam mobile phones have also been installed at printing presses that publish the exam, Benghabrit said, in an effort to keep the test under wraps until it hits students’ desks.</p> <p>Over 700,000 Algerian students will sit for their high school diploma exams over the next week, with results expected the following month. The clampdown this year follows reports of widespread cheating in 2016, when test questions were published online, forcing more than half a million students to retake the exam a week later. Subsequent efforts to restrict social media access through internet service providers proved insufficient, according to the BBC.</p> <p>Algeria isn’t the only country to turn off the digital taps in an effort to curb cheating. Ethiopia undertook a similar measure last year after activists published the university entrance exam online in 2016, according to the Guardian, while Iraq shut off internet access for a few hours in 2015 and 2016 to coincide with sixth-grade national exams.</p> <p>Uzbekistan also blocked mobile internet and SMS services in 2016 during university entrance exams. “We have run out of mini-phones, use your head to take your exam,” said ads posted in an electronics market in the Uzbek capital Tashkent at the time, according to Radio Free Europe/Radio Liberty.</p>

<b>HEADLINE</b>	<b>06/21 Traffic sign near ICE HQ hacked</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/traffic-sign-near-ice-headquarters-hacked-with-abolish-ice-message/">https://www.hackread.com/traffic-sign-near-ice-headquarters-hacked-with-abolish-ice-message/</a>
<b>GIST</b>	<p>For the last few years, hacking a traffic sign or an electronic billboard has become a trend. Some hack it for fun and some do it to display their political affiliation and in some cases, these signs are hacked to register protest against police brutality.</p> <p>However, now, to express their anger at ICE someone hacked a traffic sign in Southwest Portland and defaced it with “Abolish ICE” message. Although it is unclear exactly when the defacement was carried out the snapshot of the defaced traffic sign was shared by Marilyn Deutsch, a Portland-based TV news reporter at KPTV – FOX 12.</p> <p>“Someone hacked the reader board near ICE headquarters in SW Portland,” tweeted Deutsch.</p>

If you are not aware of what ICE is then it stands for U.S. Immigration and Customs Enforcement. ICE is a law enforcement agency working under the Department of Homeland Security (DHS) however under Trump's administration, the agency has been making headlines for all the wrong reasons especially after planning to deport individuals who entered the United States Deferred Action for Childhood Arrivals (DACA) program – According to MIC, the movement to abolish ICE is growing.

As for hacking a traffic sign, it is easy since invariably the control panel is protected by a default password and instructions on how to power-on the console, power-off the sign display, activate quick message and create custom messages are available to view.

That is the reason why there is a sudden surge in hacking incidents involving billboards and traffic signs. For example, last year street signs in Texas were hacked with pro-Bernie Sanders slogan and anti-Clinton and Trump messages. In another incident, a billboard in Indonesia was hacked and defaced with live Japanese porn.

<b>HEADLINE</b>	<b>06/20 Attackers spy, steal from financial firms</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/attackers-spy-and-steal-from/">https://www.infosecurity-magazine.com/news/attackers-spy-and-steal-from/</a>
<b>GIST</b>	<p>In an attempt to steal sensitive data, cyber-criminals have been targeting financial firms by building hidden tunnels in order to break into networks. According to a report released today by Vectra, these attack behaviors are the same as those that led to the 2017 Equifax breach.</p> <p>According to a new report, 2018 Spotlight Report on Financial Services, attackers are able to gain remote access through the use of command-and-control (C&amp;C). In the data analyzed, attackers had established nearly 30 web shells accessible from approximately 35 different public IP addresses, which allowed them to exfiltrate data while going undetected.</p> <p>Attackers often leverage hidden tunnels to infiltrate networks with strong access controls because legitimate applications also use hidden tunnels to bypass security controls that can sometimes compromise full functionality. That's why it's a successful attack method.</p> <p>"Every industry has a profile of network and user behaviors that relate to specific business models, applications and users," said Chris Morales, head of security analytics at Vectra. "Attackers will mimic and blend in with these behaviors, making them difficult to expose."</p> <p>In this latest discovery, Vectra detected more hidden C&amp;C tunnels and more than twice as many hidden data-exfiltration tunnels per 10,000 devices in financial services than all other industries combined.</p> <p>To evade firewalls, attackers use special tunneling tools to move laterally, stockpiling data from database after database as they go. They were able to amass so much data that it then needed to be divided into smaller stockpiles so that no alarm bells went off during exfiltration.</p> <p>"All this points to one painful fact: The largest enterprise organizations in the world remain lucrative targets for sophisticated cyber-attackers. Security breaches across multiple industries forge ahead in an upward trajectory, and the financial services industry is no exception," the report said.</p>

<b>HEADLINE</b>	<b>06/20 Tesla saboteur spotlights insider threats</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/tesla-saboteur-trains-spotlight-on-insider-threats/article/774976/">https://www.scmagazine.com/tesla-saboteur-trains-spotlight-on-insider-threats/article/774976/</a>
<b>GIST</b>	Tesla's recent revelation that an employee turned saboteur messed with code and exfiltrated data underscores the continuing challenge and complexity of insider threats and the difficulty ferreting them

out before they can do harm.

"Taking things at face value, this is basically a smorgasbord of cybercrime, and it could have affected any company anywhere," said Raytheon CTO of Cybersecurity Michael Daly. "You have an insider threat. You have altered data affecting the factory operating system. You have leaked proprietary data. You have credential theft. And you have it all, apparently, at the hands of a disgruntled employee."

Disgruntled employees, like Tesla's Martin Tripp, who the company sued on Wednesday, will always be of concern at companies, said Saryu Nayyar, CEO of Gurukul. "Even progressive companies that can afford the best cybersecurity protection can be taken down by one malicious insider."

But insiders often get short shrift in organizations, which are inundated with threats from multiple attack vectors.

Andy Smith, vice president of product marketing at Centrify to the 2017 Insider Threat Report by Crowd Research Partners, which found that "74 percent of companies feel that they are vulnerable to insider threats, with seven percent reporting an extreme vulnerability."

Likewise, a recent Raytheon-commissioned survey of IT security professionals found that "insider threats ranked low on the CISOs' priority lists. Only 36 percent said they consider malicious or criminal insiders to be a high risk," said Daly. "It's time to change that stat and make insider threat a top priority."

That's particularly important when companies give their employees access – deliberately or inadvertently – to sensitive data. "In a recent report, we found that 41 percent of companies had at least 1,000 sensitive files open to all employees," said Ken Spinner, vice president of global engineering at Varonis, referring to the situation as the rule rather than the exception.

"Companies are doing and creating, but they're not locking down their data. Think about it is way: If you had a meeting with top executives to discuss a brand-new game-changing product, you wouldn't hold it in the middle of lunchroom, would you?" he said. "The same thing goes for your data: You have to protect it from curious and malicious employees."

Businesses can take [steps] to prevent unwarranted access to control systems by exercising access control," agreed Tim Roddy, vice president of cybersecurity product strategy, Fidelis Cybersecurity. "By changing logs and setting up approvals for any code changes you can add an additional layer of security to protect critical code." said Tim Roddy, vice president of cybersecurity product strategy, Fidelis Cybersecurity.

Noting that Gartner pegged privileged access as the top project for organizations in 2018, Joseph Carson, chief security scientist at Thycotic, said, "organizations continue to fail at the most important aspect on restricting privileged access which is proactively discovering privileged accounts in the environment."

It appears, he said, "that Telsa has failed to do that most important step in least privilege: discovering and detecting unapproved privileged access." Telsa likely has learned a major lesson from the incident, though Carson said he hoped the sabotage "is not related to the recent accidents with their vehicles which I am sure the regulators will be looking into if they are related."

Centrify's Smith favors a zero trust model, which "assumes that the bad actors are already on the inside, so no one is to be trusted, even if they've proven to be trustworthy in the past," he said. "By staying vigilant and requiring employees to verify who they are, validate their device, and then limiting their access and privilege, organizations can reduce exposure from internal and external security threats."

The Tesla employee "was able to make 'direct code changes to the Tesla Manufacturing Operating System under false usernames, potentially damaging several aspects of the business operations simply by having too much access and privilege," Smith said, something that a zero trust approach wouldn't have allowed. "Tesla employees would have been verified through multiple factors of authentication, granted only the

minimal amount of access necessary to do their job, and their access and activity would have been captured and reviewed. That's the essence of Zero Trust Security.”

To protect against exfiltration of highly sensitive data, Roddy said, “Data Loss Prevention on endpoints and primary network services is not enough. Organizations need to analyze all ports and protocols to prevent any blind spots.”

Putting a greater emphasis on analyzing behavior can help organizations thwart insider threats, but that “challenge is compounded by the dynamics of our IT environments where everyday users change behaviors for innocuous reasons,” said Seth Goldhammer, senior director of product marketing at LogRhythm.

While tracking each network or user behavior anomaly is both impractical and costly, it can and mask those anomalies that bear scrutiny. “To remain efficient, organizations are challenged to discover anomalies that also include security relevancy,” said Goldhammer. “Once a relevant security anomaly is discovered, organizations need to follow procedural steps to vet, qualify, and eventually mitigate the discovered threat.”

<b>HEADLINE</b>	<b>06/20 'Kardon Loader' new malware strain</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/hacking-forum-ad-peddles-new-kardon-loader-malware/">https://www.bleepingcomputer.com/news/security/hacking-forum-ad-peddles-new-kardon-loader-malware/</a>
<b>GIST</b>	<p>Security researchers have spotted a new commercial malware product that's been put up for sale on hacking forums for the lowly price of only \$50, paid in Bitcoin.</p> <p>Named Kardon Loader, this is a new malware strain, currently still under development, in a "beta" stage according to its author.</p> <p>Based on its advertised features Kardon is a "malware loader," also known as a "malware downloader" or "dropper," which is a type of malware strain that cyber-criminals usually deploy as the first stage of their operations.</p> <p>A malware loader's main role is to infect victims, gain persistence on a user's computer, and then report back to a command and control (C&amp;C) server.</p> <p>Each victim of a malware loader is called a "bot," as the malware assembles all infected computers in a giant botnet.</p> <p>The inevitable future of every bot is that at one point or another, the "loader" will download a second-stage payload, usually a more potent malware, such as a banking trojan, a password-dumper, a backdoor trojan, or ransomware.</p> <p>Cybercriminals normally use malware loaders in two ways. They either incorporate them in their own custom multi-stage malware infection chains, for their own benefits, or they sell "bot space" to other crooks, who then infect users with the second-stage malware of their choice.</p> <p>In the past two decades, we've seen malware downloaders such as Andromeda, Nemucod, Quant Loader, or Smoke Loader, being very active on the market.</p> <p>Crooks have made good money selling these types of tools to other crooks, and especially "bot space." It is this bot-space-selling niche that a relatively new malware author is trying to break into.</p> <p>According to an Arbor ASERT report published yesterday, a malware author named Yattaze started selling a new malware downloader named Kardon Loader last April.</p>

"Kardon is a lot smaller of an operation than some of the well-known loaders out there like Smoke and Quant," TJ Nelson, Security Research Analyst for Arbor, told Bleeping Computer via email.

"However, where its predecessors started adding mining and credential stealing features, Kardon Loader has limited those 'extras' and added control panel features [so buyers can] start their own botshop," Nelson told us.

The researcher is referring to a somewhat unique Kardon Loader feature promoted in its advertisement.

Usually, malware loaders come with a backend panel that lets buyers interact with their bots and send a second-stage malware. On top of this standard C&C panel, Kardon also includes a fully-fledged botshop, a much rarer feature, which allows buyers of the original Kardon Loader to open an online store where they can sell access to the bots they collect.

But for now, the malware is not a threat, as it still a newcomer on the market, and has fewer buyers. Arbor says it didn't find any active Kardon samples deployed in the wild.

<b>HEADLINE</b>	<b>06/20 New phishing scam reels in Netflix users</b>
<b>SOURCE</b>	<a href="https://threatpost.com/new-phishing-scam-reels-in-netflix-users-to-tls-certified-sites/132976/">https://threatpost.com/new-phishing-scam-reels-in-netflix-users-to-tls-certified-sites/132976/</a>
<b>GIST</b>	<p>Researchers are warning of a new Netflix phishing scam that leads victims to sites with valid Transport Layer Security (TLS) certificates.</p> <p>Johannes Ullrich, dean of research at the SANS Technology Institute, said Wednesday that there's been an uptick in Netflix phishing mails using TLS-certified sites.</p> <p>The bad actors behind the attacks will take advantage of unpatched installs or plugins, or weak passwords, to compromise usual-suspect CMS software, like WordPress or Drupal, said Ullrich. From there, they can create phishing sites that could be mistaken for real Netflix domains. In some cases, they're using wildcard DNS records.</p> <p>"With a wildcard DNS record, *anything.domain.com will point to the same IP address," the researcher said in a post. "The attacker will just use a subdomain/hostname to launch the attack. But I have also seen them use specific domain names registered for the phish."</p> <p>The attacker can then obtain a TLS certificate for a host name that is Netflix-related, such as netflix.domain.com or netflix.login.domain.com; this helps the site evade being flagged by safe-browser software.</p> <p>The initial spoofed emails are the weak part of the campaign, and are easy to spot, said Ullrich.</p> <p>"The email was marked as spam, and the email is not worded that well," he said. "In this case, the link went to hxxps://www.safenetflax.com, a domain registered just to impersonate Netflix. This domain no longer resolves."</p> <p>After clicking on the link, Ullrich found that the websites appear believable and look very much like the real Netflix: "The only modification I can spot is that the alternative login methods like Facebook are missing," he said.</p> <p>While Netflix accounts aren't particularly valuable (Ullrich said he has seen them offered from \$0.20-0.50 per account), the attack may be enticing to cyber-criminals as it can be easily automated – and hard for victims to spot, he said.</p>

<b>HEADLINE</b>	<b>06/20 Bitcoin exchanges keep getting hacked</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/the-switch/wp/2018/06/20/why-bitcoin-exchanges-keep-getting-hacked-and-how-to-protect-yourself/?utm_term=.000108738529">https://www.washingtonpost.com/news/the-switch/wp/2018/06/20/why-bitcoin-exchanges-keep-getting-hacked-and-how-to-protect-yourself/?utm_term=.000108738529</a>
<b>GIST</b>	<p>The price of bitcoin took a tumble early Wednesday after a major South Korea-based cryptocurrency exchange, Bithumb, admitted that hackers made off with more than \$31 million worth of virtual currency. The incident is the latest in a long string of thefts at the online portals where investors trade cash for digital coins such as bitcoin and ether. Bithumb has not said how the attack occurred.</p> <p>But what makes exchanges vulnerable to these sorts of attacks in the first place?</p> <p>For starters, cryptocurrency experts blame lax security at the hacked exchanges, as well as the booming popularity of digital currencies more generally.</p> <p>"Bitcoin and other cryptocurrencies have risen dramatically in popularity and value over the past few years," said John Sedunov, an assistant professor of finance at Villanova University. "This fast run-up may have caught some exchanges off-guard, and they may not have had the capital on hand, time, or even the technical ability to ramp up security features fast enough to ward off potential attackers."</p> <p>In other words, hackers love going after exchanges because they're a rewarding and often easy targets. In this respect, exchanges are little different from health care providers with lucrative medical data, or credit reporting bureaus who hold Social Security numbers.</p> <p>But unlike those types of institutions, cryptocurrency exchanges are purpose-built to move actual assets from one person to another. And that can raise additional risks.</p> <p>"It's frustrating to see people lose money to this consistent mistake," wrote user PM_ME_YOUR_NANO on a recent thread. "No one should be losing even 10% of their available coins because an exchange is bad. Cryptocurrency is about being trustless. Exchanges are trusted systems without great regulation."</p>

<b>HEADLINE</b>	<b>06/20 How phone companies share your data</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/how-phone-companies-share-your-data-1529500086?mod=hp_lista_pos3">https://www.wsj.com/articles/how-phone-companies-share-your-data-1529500086?mod=hp_lista_pos3</a>
<b>GIST</b>	<p>Three big U.S. wireless carriers said Tuesday they would stop sharing customers' locations with two data middlemen after discovering the information had been mishandled. Carriers like Verizon Communications Inc. and AT&amp;T Inc. get requests for their customers' whereabouts from all sorts of places. How they handle them depends on who is asking:</p> <p><b>INVESTIGATORS:</b> Law-enforcement officers can request a customer's current or past location from a cellphone provider through a subpoena, warrant or other official request. Each carrier has a dedicated legal team that evaluates the requests.</p> <p><b>911 CALLS:</b> Emergency calls are routed to public-safety answering points, which can obtain the caller's location without affirmative consent. This is so that first responders can quickly find people who are unable to describe their location.</p> <p><b>COMPANIES:</b> Middlemen like LocationSmart and Zumigo can access information on cellphone users' whereabouts in situations where the company seeking the information might not know which carrier to ask. Trucking companies, e-commerce websites, jail wardens and online lotteries all pull the data though these aggregators but are supposed to seek the device user's consent before doing so.</p>

	<p><b>MARKETERS:</b> Carriers also sell bulk data on groups of cellphone users to marketers. This allows a fast-food chain to send ads to a user who has driven past a restaurant several times, for instance. Carriers usually opt their customers into these programs by default.</p> <p><b>APPS:</b> Software companies like Google and Uber Technologies keep tabs on their users another way. Instead of asking carriers for data gleaned from cell-tower interactions, they get users to share their location through cellphone software that uses GPS and Wi-Fi signals to more accurately pinpoint customers. Carriers aren't involved in this data sharing.</p>

<b>HEADLINE</b>	<b>06/20 Hidden exfiltration tunnels to pilfer data</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/cyberattackers-use-hidden-tunnels-to-pilfer-data-from-financial-services-firm/article/774734/">https://www.scmagazine.com/cyberattackers-use-hidden-tunnels-to-pilfer-data-from-financial-services-firm/article/774734/</a>
<b>GIST</b>	<p>Sophisticated cyberattackers are using hidden tunnels to spy on financial firms and pilfer sensitive data and personally-identifiable information (PII) – and they're doing it at a higher rate than in other industries.</p> <p>Researchers at Vectra discovered 23 hidden exfiltration tunnels disguised as encrypted web traffic for every 10,000 devices in the financial services sector compared to 11 tunnels per 10,000 in other industries overall, according to the company's 2018 Spotlight Report on financial services, which is based on analysis anonymized metadata from Vectra customers who agreed to share detection metrics.</p> <p>Between August 2017 and January 2018, the Vectra detected an uptick in the number of hidden exfiltration tunnels posing as unencrypted web traffic in financial services from seven per 10,000 devices to 16.</p> <p>“Attackers mimic and blend in with” behaviors related to users, applications and business models identified and profiled by different industries, said Chris Morales, Vectra's head of security analytics.</p> <p>“It's not the behavior that surprises me” since financial services will always be a high-value target to attackers “but it's the frequency of that behavior,” said Morales.</p> <p>Even heavy investments in security and “really restricted networks,” don't make the financial industry immune to hidden tunnel attacks, that they simply may not be aware of.</p> <p>“They have a hard time answering if they even know tunnels exist,” said Morales, who commended financial companies for the work they've done so far and suggested they take a lifecycle approach to tracking behavior and attacks.</p>

<b>HEADLINE</b>	<b>06/19 Websites, apps under constant barrage</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/most-websites-and-web-apps-no-match-for-attack-barrage/d/d-id/1332092">http://www.darkreading.com/attacks-breaches/most-websites-and-web-apps-no-match-for-attack-barrage/d/d-id/1332092</a>
<b>GIST</b>	<p>No matter how large or small, websites and web applications are under a constant barrage of attacks. Two new studies out today put a finer point on the numbers, showing just how frequently attacks hit the average website and how this constant pressure is yielding a huge number of compromised websites and web apps.</p> <p>According to the Sitelock Website Security Insider Q1 2018 report, the average website today is attacked 50 times per day, with the vast majority of attacks coming through automated means. The study shows that 88% of traffic filtered by firewalls is from bad bots seeking to compromise sites.</p> <p>By casting a very wide and automated net, attackers who hit their marks even a slim percentage of the time stand to compromise a huge volume of sites. The study shows that about 1% of sampled sites studied by</p>

analysts are infected with malware. That means at any given moment, 18.7 million sites around the world are infected by some form of malware.

"Based on the numbers we've seen, it has become clear that no website is too small to hack," says Jessica Ortega, a web security research analyst at SiteLock. "As cybercriminals become more sophisticated and continue to hone their craft, small businesses will need to keep up by taking a proactive, holistic approach to website security."

In addition to studying websites, the SiteLock study surveyed small business owners about their attitudes with regard to website security and found that they may not understand the severity of the danger. Approximately 42% of the respondents said their biggest website security fear is defacement — but most security veterans know this kind of attack is the least of a website's worries. The study shows that only about 18% of site infections have anything to do with that. More common are backdoor files being placed on the site — 44% of the time — or filehacker files designed to modify or create additional malicious files, at 49% of the time.

And, of course, the 1% incidence rate of infection is only an average. Plenty of risk factors can greatly increase infection rates. For example, WordPress sites are two times more likely to be infected than non-CMS sites, according to SiteLock.

In a separate study released today by Positive Technologies, 96% of all web applications were found to have some form of vulnerability that could be turned against their users — with one in two apps vulnerable to unauthorized access. In addition, approximately 44% of web apps today place users' personal data at risk of theft, with 70% vulnerable to leaks of information critical to the business.

<b>HEADLINE</b>	<b>06/20 Mylobot malware brings new sophistication</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/vulnerabilities---threats/mylobot-malware-brings-new-sophistication-to-botnets/d/d-id/1332100">http://www.darkreading.com/vulnerabilities---threats/mylobot-malware-brings-new-sophistication-to-botnets/d/d-id/1332100</a>
<b>GIST</b>	<p>Cybercriminals looking to maximize their investments are using evermore sophisticated software techniques and increasingly aggressive steps against their fellow malware authors. Those are among the conclusions by researchers at Deep Instinct about a new strain of malware found within the last two months.</p> <p>The new malware, dubbed Mylobot, pulls together a variety of techniques to gain a foothold and remain undiscovered. Among the strategies employed are:</p> <ul style="list-style-type: none"> <li>•Anti-VM techniques</li> <li>•Anti-sandbox techniques</li> <li>•Anti-debugging techniques</li> <li>•Wrapping internal parts with an encrypted resource file</li> <li>•Code injection</li> <li>•Process hollowing (a technique where an attacker creates a new process in a suspended state and replaces its image with the one that is to be hidden)</li> <li>•Reflective EXE (executing EXE files directly from memory, without having them on disk)</li> <li>•A 14-day delay before accessing its C&amp;C servers.</li> </ul> <p>"On a daily basis we come across dozens of highly sophisticated samples, but this one is a unique collection of highly advanced techniques," says Arik Solomon, vice president of R&amp;D at Deep Instinct. "Each of the techniques is known and used by a few malicious samples, but the combination is unique."</p> <p>Solomon noted that Mylobot — named for a researcher's dog — is a downloader: It can be purposed to download and install any type of payload, from spambot or DDoS engine to keylogger or banking Trojan. "I think that what we see here is the productization or even industrialization of malware techniques," says Tom Nipravsky, security researcher at Deep Instinct.</p>

That industrialization aspect fits with what Solomon sees as the driving force behind this new malware. "It always comes down to money," he says. And that's especially true given one of Mylobot's behaviors: It seeks out and shuts down competing botnet software.

"We see the capability to make sure you have no competition," Solomon says, noting that in the highly unregulated world of malware, having more infected systems at your disposal than the competition can offer might be a matter of millions of dollars.

Mylobot leverages several techniques to make sure no other botnet is active on a machine it infects. "Usually we see this behavior when malware tries to shut down defensive software," Solomon notes. "In this case, it's fighting against its competition."

Though the researchers have been looking at Mylobot for several weeks, they aren't yet ready to say who the author is. There are some clues, though, including the fact that Mylobot scans for keyboard layout of an infected machine and doesn't execute if it finds an Asian character set and layout in use. Niprasky says this could have to do with encryption algorithms, but it might well speak to the geographical nexus of the malware.

The researchers say it's important to note that Mylobot was found in the wild, at a Tier 1 data communication and telecommunication equipment manufacturer, not in a proof-of-concept demonstration.

"It's a relatively good representative of what we see on the Dark Web where people are selling platforms for others to use," Solomon says. Customers of the botnet can rent time to download and run their own payloads, making this a very efficient use of malware technology.

<b>HEADLINE</b>	<b>06/20 Syria girls exploit WhatsApp to learn</b>
<b>SOURCE</b>	<a href="https://nakedsecurity.sophos.com/2018/06/20/the-girls-who-used-whatsapp-to-learn-under-the-noses-of-is/">https://nakedsecurity.sophos.com/2018/06/20/the-girls-who-used-whatsapp-to-learn-under-the-noses-of-is/</a>
<b>GIST</b>	<p>It's a constant drumbeat, and it goes like this: "Give us a backdoor to slip past encryption. We won't break anything. It will be secure. Access will only be granted with probable cause and warrants."</p> <p>We've heard it from FBI chiefs Christopher Wray and James Comey, Assistant Attorney General Rod Rosenstein, from recently departed UK Home Secretary Amber Rudd, and former prime minister David Cameron, who floated the idea of banning encrypted messaging apps in 2015... to name a few.</p> <p>In March 2017, following a media report that Khalid Masood had sent a WhatsApp message two minutes before launching his terror attack in London on March 22, Rudd singled out WhatsApp and other encrypted messaging apps, insisting that police have access to messages in order to thwart terrorism.</p> <p>Of course, this is an old story: politicians have had a burning desire to punch a hole through Apple's encryption ever since Apple made it a default on the iPhone in September 2014.</p> <p>As far as apps go, many, if not most, governments bare their fangs when it comes to WhatsApp, the messaging app with end-to-end encryption. That's encryption that stops police from intercepting messages exchanged by the terrorists and drug dealers who sit on one end of a privacy-seeking spectrum that also includes political dissidents, journalists, victims of domestic abuse and... schoolgirls.</p> <p>Syrian schoolgirls, to be precise. Which brings us the most recent example of all the people whose safety – in this case, their very lives – are protected by encryption.</p> <p>On Tuesday, the BBC published the story of a group of girls whose "basic right to learn," in the words of one of them, was taken away when the Islamic State took over their hometown in Syria.</p>

They weren't just banned from attending school. They were beaten if they were found to be carrying books or paper, even if it was nothing but blank sheets. One of the girls from the BBC's video:

*They even used to break pens and rulers.*

The group of friends came up with a plan: they would pretend to go shopping in a nearby town, Yalda, but would instead attend school. Once there, they relied on their mobile phones and on WhatsApp to smuggle out knowledge. Namely, the teens would take photos of what the teacher wrote on the board. They would also hide notes in their headscarves and in their boots – “anywhere that [IS] wouldn't find it.”

If they did find the materials, IS soldiers would tear them up, they said. A friend of one of the girls was beaten when she was found carrying blank writing paper.

One of the teens:

*We couldn't all go together, so whoever reached the town would take photos on her mobile and share with the others via WhatsApp so we could study.*

The Syrian government was trying to take the area back. With bombs falling, the BBC reports, the mobile coverage was patchy, to say the least. But regardless of the bombs, the girls would climb from the ground floor on up to the fifth floor, to get a better connection. Once they'd downloaded the material, they'd bring it down to study.

They had no choice, they said. Without books, all they had was what they could get with their mobile phones:

*Education is everything, and it's our weapon.*

It didn't work out all the time, one of them told the BBC, but they kept going. Since rebels were defeated in southern Damascus, Syrian forces have been rejoicing, and the schoolgirls have also won a battle in the struggle to get the education that IS tried to steal from them. With the help of the United Nations, the teenagers were able to take their exams: the equivalent of the UK's General Certificates of Secondary Education (GCSEs).

They're now nervously awaiting exam results.

As far as we're concerned, we now have poster girls for unbreakable encryption. They wear niqabs.

We don't know if the girls are aware that they were protected by end-to-end encryption when they used WhatsApp. Maybe they would have still done what they did with less secure tools, if that's all they had. Perhaps they used WhatsApp simply because they already had the app, which can be used to take and send photos for free.

But the fact remains that they were protected by end-to-end encryption, and that it shielded them from anyone discovering what they were up to by intercepting their internet traffic.

Weakening that encryption so it's easier to catch terrorists also means weakening it so that it's easier to catch little girls who dare to get an education.

HEADLINE	06/20 New app helps EMS save lives
SOURCE	<a href="http://www.khq.com/story/38472732/new-app-helps-medical-personnel-save-lives">http://www.khq.com/story/38472732/new-app-helps-medical-personnel-save-lives</a>
GIST	SPOKANE COUNTY, Wash. - A new app is helping save lives with the touch of a button. The app allows

	<p>hospitals and first responders to call for a lifesaving air ambulance transport. Prompt medical attention can mean the difference between life and death.</p> <p>The app is specifically designed for medical personnel, with just one touch of a button on their cell phone, it then sends vital information to flight crews. The app sends information like the GPS location of where the emergency is happening and then dispatches Life Flight Network crews.</p> <p>Once a flight call has been made using the app, users can view a real-time progress tracker that shows the aircraft's location while en route and when it's expected to arrive. The app is called LFN Respond and has only been around for about a month and it's already proving to be helpful.</p> <p>"We've had a few activations since we've rolled it out. It's a huge difference. If you are a very rural EMS provider and you have a sick patient in front of you and you are trying to care for them, it allows them to just take one quick pause, activate and then go right back to caring for the patient. There's not a number of phone calls or radio calls that have to be made. It's just very seamless," said Dominic Pomponio, Regional Director for Life Flight Network.</p> <p>Hospitals, first responders, fire departments, ski patrols and other qualified agencies use the app. The focus of the technology is to help everyone work together better and more efficiently to get people the emergency care they need as quickly as possible.</p>

<b>HEADLINE</b>	<b>06/20 Russia likely hacked election systems</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/politics/2018/06/20/obama-cyber-czar-russia-likely-scanned-all-50-state-election-systems/717652002/">https://www.usatoday.com/story/news/politics/2018/06/20/obama-cyber-czar-russia-likely-scanned-all-50-state-election-systems/717652002/</a>
<b>GIST</b>	<p>WASHINGTON — Russian hackers likely scanned the election systems of all 50 states for vulnerabilities in 2016 — not just the 21 states confirmed as targets by homeland security officials last year, the cybersecurity czar for former President Barack Obama told a Senate panel Wednesday.</p> <p>"I think it is highly likely," Michael Daniel replied in answer to a question from Sen. Susan Collins, R-Maine, about whether Russian cyber actors at least scanned the election systems of every state. "It is more likely that we hadn't detected it than that it didn't occur."</p> <p>States have been scrambling to improve their cyber security after Homeland Security officials revealed last year that Russian hackers tried to breach election systems in at least 21 states in 2016. Although no actual votes were changed, hackers broke into Illinois' voter registration database.</p> <p>Not all states had the technical ability to detect that Russian hackers scanned their election systems — which include vote tabulation systems as well as voter registration databases.</p> <p>Daniel told the Senate Intelligence Committee that the federal government should invest more money in cybersecurity for state election systems. Congress recently took a first step by approving \$380 million in state grants for election security.</p> <p>"Maintaining state and local control of elections is very important, but it's not realistic to expect them on their own to go up against nation-state actors," he testified.</p> <p>Daniel, who served as Obama's cybersecurity coordinator from 2012 to 2017, said that "understanding what happened in 2016 is really critical to protecting ourselves in future elections," including the congressional elections this November.</p> <p>He said Russia is not the only threat, and that the U.S. must protect its elections from potential meddling by China, Iran, terrorists and hacktivists.</p>

"All of them are discovering that cyberspace is a great place to try to advance their agenda," Daniel said.

Daniel testified along with Victoria Nuland, who served as assistant secretary of state for European and Eurasian Affairs during the Obama administration. The committee is seeking to learn what the administration did — and could have done better — to respond to Russian interference in the 2016 election.

The panel is investigating Russian meddling and possible collusion between the Trump campaign and the Kremlin in 2016. The senators are expected to issue a final report on their investigation later this year. It will include a section on the Obama administration's response to Russia's cyber attacks and the Kremlin's other efforts to influence the U.S. election.

Nuland and Daniel said the Russians appeared to change course after Obama confronted Russian President Vladimir Putin at a G-20 Leaders' Summit in China in September 2016. Obama warned Putin to stop meddling in the U.S. presidential race. Still, the Kremlin's efforts picked back up again in October.

"I think it may have led them (the Russians) to shift focus to social media rather than to continue going after election systems," Daniel said.

The Russians — in an effort not fully understood until Congress began investigating last year — exploited social media platforms such as Facebook and Twitter to create false groups and sow discord among U.S. voters on such divisive issues as race, gay rights, and gun control.

Nuland said the U.S. needs to work more closely with social media companies to expose false information that Russians and other foreign adversaries are putting out over social media.

She said France, using knowledge learned from the 2016 U.S. election, was able to quickly inform French voters about fake polls and other misinformation that the Russians were putting out to try to influence the 2017 French presidential race.

"The French were able to blunt the Russians' weapon," she said. "We've got to be in the same position."

<b>HEADLINE</b>	<b>06/20 Pentagon: can't win global cyberwar</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/joint-chiefs-cyberspace-internet-national-security/2018/06/20/id/867362/">https://www.newsmax.com/newsfront/joint-chiefs-cyberspace-internet-national-security/2018/06/20/id/867362/</a>
<b>GIST</b>	<p>The Joint Chiefs of Staff admitted in a new report the United States cannot gain superiority in cyberspace because of the complex and vast nature of the platform.</p> <p>The lengthy report released earlier this month drew conclusions to the global battle to gain the upper hand in the virtual world.</p> <p>"Permanent global cyberspace superiority is not possible due to the complexity of cyberspace," the report reads. "Even local superiority may be impractical due to the way IT is implemented; the fact U.S. and other national governments do not directly control large, privately owned portions of cyberspace; the broad array of state and non-state actors; the low cost of entry; and the rapid and unpredictable proliferation of technology."</p> <p>The Washington Free Beacon reported on the findings.</p> <p>One challenge the Pentagon recognized is identifying who is behind cyberattacks. That, the report found, can often determine the response to the attack or threat.</p> <p>"The ability to hide the sponsor and/or the threat behind a particular malicious effect in cyberspace makes</p>

	<p>it difficult to determine how, when, and where to respond," the report reads. "The design of the Internet lends itself to anonymity and, combined with applications intended to hide the identity of users, attribution will continue to be a challenge for the foreseeable future."</p> <p>The military dedicates significant manpower and resources to cybersecurity through the Army Cyber Command. Last fall, the National Guard debuted a cyber brigade that has nearly 1,000 members.</p> <p>Russia, North Korea, and China are among the countries U.S. authorities have accused of conducting some level of cyberwarfare.</p>

<b>HEADLINE</b>	<b>06/20 Instagram unveils new video service</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/instagram-unveils-video-service-challenge-youtube-56035261">https://abcnews.go.com/Technology/wireStory/instagram-unveils-video-service-challenge-youtube-56035261</a>
<b>GIST</b>	<p>Facebook's Instagram service is loosening its restraints on video in an attempt to lure younger viewers away from YouTube when they're looking for something to watch on their smartphones.</p> <p>The expansion announced Wednesday, dubbed IGTV, will increase Instagram's video time limit from one minute to 10 minutes for most users. Accounts with large audiences will be able to go as long as an hour.</p> <p>Video will be available through Instagram or a new app called IGTV. The video will eventually give Facebook more opportunities to sell advertising.</p> <p>It's the latest instance in which Instagram has ripped a page from a rival's playbook in an effort to preserve its status as a cool place for young people to share and view content. In this case, Instagram is mimicking Google's YouTube. Before, Facebook and Instagram have copied Snapchat — another magnet for teens and young adults.</p> <p>Instagram, now nearly 8 years old, is moving further from its roots as a photo-sharing service as it dives headlong into longer-form video.</p> <p>Instagram CEO Kevin Systrom told The Associated Press that he hopes IGTV will emerge as a hub of creativity for relative unknowns who turn into internet sensations with fervent followings among teens and young adults.</p> <p>That is what's already happening on YouTube, which has become the world's most popular video outlet since Google bought it for \$1.76 billion nearly 12 years ago. YouTube now boasts 1.8 billion users.</p> <p>Instagram, which Facebook bought for \$1 billion six years ago, now has 1 billion users, up from 800 million nine months ago.</p> <p>More importantly, 72 percent of U.S. kids ranging from 13 to 17 years old use Instagram, second to YouTube at 85 percent, according to the Pew Research Center. Only 51 percent of people in that group now use Facebook, down from 71 percent from a similar Pew survey in 2014-15.</p> <p>That trend appears to be one of the reasons that Facebook is "hedging its bets" by opening Instagram to the longer-form videos typically found on YouTube, said analyst Paul Verna of the research firm eMarketer.</p>

## Terror Conditions

[Top of page](#)

HEADLINE	<b>06/20 Times Sq. plotter: mentally ill or terrorist?</b>
SOURCE	<a href="https://globalnews.ca/news/4274935/canadian-isis-plot-new-york/">https://globalnews.ca/news/4274935/canadian-isis-plot-new-york/</a>
GIST	<p>To Khdiga Metwally, the medical records spread across her kitchen table are more than a chronicle of her son’s history of addiction and mental illness; they are proof he is not a terrorist.</p> <p>Abdulrahman El Bahnasawy, a 20-year-old Canadian, faces a possible life sentence when he appears in a New York courtroom as early as next month for plotting a 2016 bombing at Times Square for the so-called Islamic State.</p> <p>But his mother insists the case is not what it seems.</p> <p>“Actually, it’s not a terrorist case, it’s a mental illness problem,” Metwally said in an interview at her home in an Oakville, Ont. suburb.</p> <p>“We have all the reports that confirm that my son was sick.”</p> <p>Those reports describe brain damage, bipolar disorder, obsessiveness and drug use beginning at age 14 that led to “huffing” — inhaling air fresheners, bug spray and anything else he could get his hands on.</p> <p>In many ways, El Bahnasawy’s story is familiar: a youth radicalizes online and decides to kill in the name of ISIS. But medical records from four countries obtained by Global News make it more complicated.</p> <p>The documents are an unprecedented and intimate look at the psyche of a young man who plotted mass killings in the West under the guidance of ISIS.</p> <p>And they raise complicated questions.</p> <p>To what extent does mental health explain the actions of some terrorists? Should terrorists with a history of mental illness be treated differently? Is a person with a mental illness, who engages in terrorism, still a terrorist?</p> <p><b>THE TEEN ADDICT</b></p> <p>“Abdulrahman has an extensive history of mental health problems and poor function, dating back to childhood,” according to a report by New York psychologist Katherine Porterfield, who reviewed El Bahnasawy’s medical files, met his family and spent 50 hours with him over nine months in 2017.</p> <p>The medical records date back to the day he was born. In the delivery room in Kuwait City, his mother had a severe uterine rupture. The baby was delivered “swiftly,” according to the hospital report, but the traumatic birth may have deprived the infant of oxygen, possibly causing brain damage.</p> <p>El Bahnasawy did not speak until he was four, according to Porterfield’s report for the U.S. legal defence team. He was an average student, “described as an anxious, hyperactive, and inattentive child.”</p> <p>“His most consistent trait was his tendency to fixate or obsess about certain topics or interests,” Porterfield wrote. The solar system, soccer, computers and atheism all monopolized his attention during stages of his childhood. And once he tried marijuana, it became the latest of his all-encompassing obsessions.</p> <p>He began “incessantly” talking about it. He researched how to grow it and droned on about how much he loved it. He argued with his parents about its benefits. “He essentially showed no interest in any other activities,” the psychologist wrote.</p> <p>To get him away from what they saw as Canada’s “permissive society,” and hoping he would benefit from being closer to relatives, his parents returned the family to Kuwait. But even in the conservative Gulf state, El Bahnasawy had no trouble finding drugs.</p> <p>He became addicted to chemical inhalants. When using them, he would hear a man’s voice that he thought</p>

came to him over radio waves. “He became one of my only friends and every time I wanted to talk to him I would get high and he was always there,” El Bahnasawy wrote in a letter to the judge hearing his case.

His parents got him into a Kuwait City hospital, where he was diagnosed with substance addiction and depression. To discourage him from relapsing, his father Osama El Bahnasawy videotaped him shaking from withdrawal.

He stayed for 40 days.

But as soon as he got out, he went right back to drugs.

The family returned to Toronto and, after El Bahnasawy disclosed multiple suicide attempts and thoughts of throwing himself off the apartment balcony, the Centre for Addiction and Mental Health (CAMH) admitted him.

CAMH records list the substances he had used: heroin, cannabis, LSD, mescaline, amphetamines, crack and ecstasy, among others. His files indicate he “did well” at the facility. But when he was discharged, he returned to drugs.

The family next tried a private addiction clinic in Alexandria, Egypt. The Alriyada Hospital thought the underlying problem was bipolar disorder, along with “fits of obsession together with psychotic symptoms,” records show. After seven months, he came out in June 2015, finally off drugs.

El Bahnasawy was 17 when he returned to Toronto and he knew nobody. The medication he was taking seemed to work but it made him gain weight and he stopped taking it. His mother tried slipping it into meals but he found out.

Although he hadn’t previously identified as a Muslim, El Bahnasawy rediscovered the faith after his parents forced him to attend a Mississauga Islamic school, which they felt would not tolerate drug use.

But like everything else, he took it to the extreme. He dropped out of school and did nothing but sit in his room exploring violent jihadist Internet content and chatting online with ISIS supporters.

“Much as he had done with drugs, Abdulrahman put all of his energy and focus into this activity online, even speaking compulsively to his parents and sister about his new beliefs,” Porterfield wrote.

#### THE PLOT

In the fall of 2015, ISIS members in Syria were desperately trying to launch attacks in Western countries. Abu Saad al-Sudani was one of them. U.S. prosecutors called him a “high-level ISIS recruiter and attack planner” active in plotting terrorism in the U.S., Canada and Britain.

Alone in his bedroom in suburban Ontario, El Bahnasawy, began to correspond with al-Sudani. He told al-Sudani he wanted to join ISIS. Al-Sudani said El Bahnasawy would need to prove himself first, so he bought cellphones and collected \$500, which he sent to a list of names and addresses al-Sudani had provided.

Having passed his initiation, El-Bahnasawy was encouraged by al-Sudani to help ISIS achieve its ultimate fantasy: an attack on U.S. soil. The target was to be New York City, and the killings were to take place in June or July 2016, to coincide with the Muslim holy month of Ramadan.

A U.S. citizen living in Pakistan named Talha Haroon joined the attack plot and they agreed the operation would involve bombings and mass shootings at a concert venue or the subway, prosecutors alleged. Then a third plotter joined in, a U.S.-based member of the ISIS online network.

The conspirators “repeatedly declared their allegiance to ISIS” and said they wanted their attack to be like those in Paris and Brussels, prosecutors said. El Bahnasawy said he wanted to carry out the next 9/11.

“These Americans need an attack,” he wrote.

To prepare for the big day, El Bahnasawy bought bomb-making materials and components in Ontario, including 40 pounds of hydrogen peroxide, and shipped them to his U.S. contact.

On May 1, 2016, he sent the U.S.-based conspirator images and maps of the New York subway system that showed the routes the attackers would take and the subway lines they would strike, the prosecutors said.

Needing more money to see the operation through, El Bahnasawy consulted al-Sudani, who put him in touch with “The Doctor,” a Philippine citizen named Russell Salic, who allegedly wired \$423 on May 11, 2016.

In the final weeks, El Bahnasawy made plans to travel to New York, using his parents as decoys. He told his U.S. contact he would be arriving “under the guise” of a family vacation. “I will be masked behind my parents back,” he wrote.

The day before the road trip, Haroon wrote that Times Square would be the perfect target. “We have to make an ocean out of their blood,” he wrote, “scar them for life knowing the soldiers of Allah are everywhere.”

The attack was to be a suicide mission, which Porterfield thought was telling. In her report, the psychologist said the hopelessness El Bahnasawy felt about beating addiction had led him to contemplate suicide. And the messaging of the extremist community offered him a path to that end.

“It is my clinical opinion that, below the surface of his submission to Islam and embrace of enslavement to the law of Allah there lurked a self-destructiveness,” she wrote.

“Essentially, Abdulrahman was engaged in a fantasy, the ultimate ending of which was his own destruction. As frightening as his ideas were, they can best be understood as psychological in nature — the terribly misguided thinking of a depressed young person who could not beat addiction.”

#### THE ROAD TRIP

The holiday in New York was planned for the Victoria Day long weekend. Osama said he felt it would be good for the family and there was reason to celebrate.

After months of being turned away by psychiatrists who either did not treat bipolar disorder or weren’t taking new patients, they had finally found a doctor for their son. The appointment was set for the Tuesday after the long weekend. El Bahnasawy had also agreed to go back to school.

They had no trouble crossing the border and saw nothing out of the ordinary on the drive. They got to the hotel in Cranford, New Jersey at about 10 p.m. and pulled into the parking lot.

That was when three cars surrounded them.

“We thought they were gangs. We didn’t know what was going on,” Osama said. “They said, ‘No, no, no, we are the FBI,’ and they showed us their cards.”

They searched the car and took the 18-year-old away.

#### THE PRISONER

The family was in the courtroom the next day when El Bahnasawy was indicted. Metwally said they were all crying so much she had trouble hearing the seven counts of terrorism being read into the court record.

Like many before him, El Bahnasawy had been brought down by an undercover counter-terrorism

operation. The U.S.-based co-conspirator was actually an FBI informant. All their conversations had been monitored.

That October, El Bahnasawy phoned home to say he was on his way to court to plead guilty. Metwally said she begged him not to do it. “I was like screaming, crying, and he was like, ‘Mom, calm down.’”

Although records show a U.S. Bureau of Prisons doctor had assessed El Bahnasawy as having “unspecified schizophrenia and other psychotic disorder,” the judge found him “competent and capable” of pleading guilty.

“In the spring of 2016, I agreed with others to carry out an attack in Times Square, to support ISIL,” he said in his plea. “Specifically, we agreed to try to set off a bomb in Times Square. I used the Internet and sent materials through the mail in furtherance of the conspiracy, and I also travelled from Canada to the United States.”

“Was one of the targets of your activities, intended targets, the New York City subway system?” the judge asked.

“Yes,” El Bahnasawy said.

His mother doesn’t think he was aware of the consequences of his guilty plea. She believes he only did it because he was scared, not taking his medication and wanted to get out of solitary confinement, where he had been sent for drug use and writing pro-ISIS graffiti on his cell wall.

Metwally doesn’t believe he would have gone through with an attack. She believes he needed mental health treatment, not an undercover investigation and prosecution.

She blames the FBI for what she sees as the entrapment of a sick youth. She blames the RCMP, which cooperated with the investigation, for not intervening before her son left Canada.

“I think my son is a victim,” Osama added. “By ISIS, this guy Sudani, by the FBI agent and by the RCMP.”

The RCMP declined to comment on the case.

In court filings, the U.S. Attorney for the Southern District of New York, Geoffrey Berman, dismissed the notion the undercover agent lured El Bahnasawy, saying the plot was already well underway when it was infiltrated by the FBI.

Nor was El Bahnasawy the “weak-willed and vulnerable victim” the defence made him out to be, Berman said, rejecting a reduced sentence on mental health grounds and noting that El Bahnasawy was not using drugs during the time of the plot.

He said that during the investigation, the FBI was unaware of El Bahnasawy’s medical history, but said mental illness and addiction did not explain or justify what he did.

“Indeed, it is likely that such potential mental instabilities only heightened the threat that El Bahnasawy posed to this country,” Berman wrote.

“El Bahnasawy may be polite, soft-spoken, and articulate, but make no mistake — behind that veil is a dangerous and calculating man who displayed a knowing, willing, and steadfast desire to kill.”

His parents intend to be at the courthouse for the sentencing. Originally scheduled for June 27, it was adjourned last Friday until July or September. Depending on how it goes, El Bahnasawy may never leave prison. They don’t believe the life sentence sought by U.S. prosecutors is appropriate.

	<p>“Of course not,” Metwally said.</p> <p>“Whatever intention, whatever happened, my son is sick and he was manipulated in a very cruel, unfair way.”</p>

<b>HEADLINE</b>	<b>06/20 Alabama man jailed 15yrs for ISIS</b>
<b>SOURCE</b>	<a href="http://www.alabamaneews.net/2018/06/20/alabama-man-sentenced-to-15-years-for-isis-involvement/">http://www.alabamaneews.net/2018/06/20/alabama-man-sentenced-to-15-years-for-isis-involvement/</a>
<b>GIST</b>	<p>Aziz Ihab Sayyed, 23, of Huntsville, was sentenced today to 15 years in prison followed by lifetime supervised release for attempting to provide material support to the Islamic State of Iraq and al-Sham (ISIS), a designated foreign terrorist organization.</p> <p>Assistant Attorney General for National Security John C. Demers, U.S. Attorney Jay E. Town for the Northern District of Alabama, and Special Agent in Charge Johnnie Sharp Jr. of the FBI’s Birmingham field office, made the announcement after sentencing by U.S. District Judge Abdul K. Kallon.</p> <p>“We will not tolerate threats to our national security from terrorist groups like ISIS, which continues to radicalize and encourage terrorists through the internet,” said Assistant Attorney General Demers. “The defendant, a citizen of this country, plotted to carry out attacks on his fellow Americans in our country, but was thwarted by the close cooperation of our partners in law enforcement. This successful outcome</p>

should send a clear message to any other would-be terrorists that the National Security Division will find them and bring them to justice.”

“Aziz Sayyed was inspired by ISIS to kill or harm Americans and he has earned every bit of his prison term,” said U.S. Attorney Town. “This case, and this investigation, serves as the gold standard for what is possible when federal, state and local law enforcement agencies work together. The FBI did an outstanding job ensuring this investigation was successful by cultivating those layers of law enforcement necessary in cases like this.”

“The FBI’s Joint Terrorism Task Force is dedicated to identifying and bringing to justice those individuals who attempt to provide material support to foreign terrorist organizations, promote violent extremism, and threaten our national security,” said Special Agent in Charge Sharp. “Today’s sentence is a culmination of the tireless efforts of our JTTF, and the invaluable partnership we have with the Huntsville Police Department.”

Sayyed pleaded guilty in March to the terrorism charge. According to Sayyed’s plea agreement with the government, he attempted to provide services and personnel, namely himself, to ISIS. He acknowledged that he bought bomb-building ingredients in 2017, that he stated his aspirations to conduct ISIS-inspired attacks on police stations and Redstone Arsenal in Alabama, and that he attempted to form a cell to conduct violent acts within the United States.

Between January and June of 2017 in Madison County, Sayyed, a U.S. citizen, obtained and viewed ISIS propaganda videos depicting ISIS forces committing bombings, executions by gunshot and beheading, and other violent acts. Sayyed shared the videos and expressed his support for ISIS and for ISIS terrorist attacks around the world, according to his plea agreement.

Sayyed researched and learned how to make triacetone triperoxide (TATP), a highly volatile and extremely dangerous explosive material. He then purchased the necessary ingredients for the explosive, and professed his aspiration to use TATP in an explosive belt or a car bomb.

On June 13, 2017, Sayyed met with an individual he understood to be an ISIS member. In fact, the person was an undercover employee of the FBI. Sayyed and the undercover employee discussed the danger of TATP, ISIS’s preference for the use of certain explosives, and Sayyed’s desire to assist ISIS, according to the plea agreement. In that meeting, Sayyed offered to personally carry out attacks on behalf of ISIS.

<b>HEADLINE</b>	<b>06/20 Europol: 205 terror attacks in Europe</b>
<b>SOURCE</b>	<a href="https://www.standard.co.uk/news/world/revealed-europe-faced-205-terror-attacks-last-year-and-more-than-half-were-reported-in-the-uk-a3867996.html">https://www.standard.co.uk/news/world/revealed-europe-faced-205-terror-attacks-last-year-and-more-than-half-were-reported-in-the-uk-a3867996.html</a>
<b>GIST</b>	<p>More than 200 terrorist attacks took place, were foiled or failed in Europe last year, an official report has found.</p> <p>Over half of the cases were recorded in the UK, according to figures compiled by Europol.</p> <p>Nine member states reported a total of 205 terrorist attacks that were either stopped, failed or completed, the EU’s law enforcement agency said - up from 142 in 2016.</p> <p>The UK experienced the highest number with 107, which includes 88 security-related incidents in Northern Ireland, the EU terrorism situation and trend report said.</p> <p>It comes after Londoners fell silent yesterday to honour the victims of the Finsbury Park terror attack one year after Darren Osborne ploughed a van into a crowd of Muslims as they left a mosque during Ramadan.</p> <p>France recorded the second largest number, with 54, followed by Spain (16), Italy (14), and Greece (8).</p>

Researchers said attacks in EU countries killed 68 victims and left 844 injured last year, with nearly all the reported fatalities and casualties resulting from jihadist atrocities.

The number of jihadist terrorist attacks increased from 13 in 2016 to 33 in 2017, while ethno-nationalist and separatist attacks accounted for the largest proportion of the incidents, with 137.

The report said the violent right-wing extremist spectrum is expanding, "partly fuelled by fears of a perceived Islamisation of society and anxiety over migration".

The failed, foiled and completed attacks on the EU in 2017

United Kingdom - 107

France - 54

Spain - 16

Italy - 14

Greece - 8

Belgium - 2

Germany - 2

Sweden - 1

Finland - 1

Five foiled, failed or completed attacks attributed to right-wing extremism were reported - all of them by the UK.

On Islamic State, the assessment said the degradation of the group's organisational structures may reduce its attractiveness. But it warned that this may not affect the threat of jihadist terrorism, noting that disaffected IS members and sympathisers could be drawn to other groups such as al Qaida.

By 2017 more than 150 social media platforms were identified as being abused by terrorists for propaganda dissemination, according to the paper.

It said: "Online propaganda continues to be an essential part of jihadist terrorist attempts to reach out to EU audiences for recruitment, radicalisation and fundraising."

While the outflow of individuals travelling from the EU to fight with terrorist groups has slowed, Europol underlined that IS, al Qaida and other jihadist groups continue to pose a major threat.

British European commissioner for security Sir Julian King said the report shows Europe continues to be a target for terrorism.

He said: "We need to keep our collective eye on the ball, and strengthen our efforts at EU level to deny terrorists the means they need to carry out attacks including arms, explosives and funding; work on evolving areas such as CBRN (Chemical, Biological, Radiological and Nuclear) threats; and continue to tackle radicalisation and all types of violent extremism."

Europol executive director Catherine De Bolle said: "The numbers in this report are not just statistics. We must never forget that behind every number, there is an innocent victim."

<b>HEADLINE</b>	<b>06/20 Iraq fighters threaten attacks US, Israel</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/iraqi-fighters-threaten-attacks-against-us-israel-after-deadly-syria-strikes-987186">http://www.newsweek.com/iraqi-fighters-threaten-attacks-against-us-israel-after-deadly-syria-strikes-987186</a>
<b>GIST</b>	Iraqi paramilitary groups have threatened to launch attacks against the U.S. and Israel after yet unclaimed airstrikes reportedly killed a number of Iraqi militiamen battling the Islamic State militant group (ISIS) on

the Syrian side of the Iraqi border.

Kataib Hezbollah and Asaib Ahl al-Haq, two powerful Shiite Muslim factions within the larger Iran-backed Popular Mobilization Forces of Iraq, issued warnings Tuesday saying they were ready to retaliate against Monday's deadly attacks that have been blamed on both the U.S. and Israel. The U.S.-led coalition battling ISIS in both countries has denied responsibility for the strikes, which reportedly killed dozens near the border town of Al-Bukamal, while Israel has declined to comment.

"This terrible crime will reopen the confrontation with the Zionist entity and the American project, and we in the Kataib Hezbollah, we will not hesitate to go towards this confrontation," the group's statement read, calling President Donald Trump an "idiot" and Israeli Prime Minister Benjamin Netanyahu a "moron" for their military incursions in the region.

"The mujahideen are the elite of men, and their blood is dearest of all. We will not let the crime of targeting them pass unnoticed, and we will know in the coming days the criminals who extended their sinful hands to commit aggression on our Iraqi border and then take a position commensurate with the size of this crime," the group, considered a terrorist organization by the U.S., added.

Asaib Ahl al-Haq, which also deeply opposes the continued U.S. military presence in Iraq after the country declared victory over ISIS last year, released its own statement Tuesday condemning "the treacherous act of cowardice" committed by aircraft "whose identity is limited to America and Israel."

The group called on Iraq to take a tougher stance against the U.S., who has been active in the country since invading and overthrowing the previous government led by Iraqi President Saddam Hussein in 2003. The ensuing chaos gave rise to a Sunni Muslim insurgency that helped spawn ISIS, which ultimately took advantage of a West-backed 2011 uprising in Syria to spread there in 2013.

The U.S. and its foe, Iran, both supported Iraq as it fought off the jihadis that took half the country by 2014. With ISIS defeated, however, voices calling for a U.S. withdrawal have risen within Iraq and May's election gave a surprise victory to a political bloc led by Shiite Muslim cleric Muqtada al-Sadr. Sadr helped organize Shiite Muslim militias to resist the post-2003 U.S. occupation, but he has yet to officially ask the U.S.-led coalition against ISIS to leave.

Syria, however, has proven a different theater entirely. When the U.S. began bombing ISIS there in 2014, it did so without the authorization of the Syrian government, who the CIA had been funding rebels to fight since at least 2012. Russia and Iran have helped Syrian President Bashar al-Assad overcome both jihadis and insurgents in campaign separate from that of the U.S.-led coalition offensive against ISIS.

Monday's strikes were the latest example of violence targeting forces fighting on behalf of Assad, who the U.S. and Israel charge with war crimes and with allowing Iranian influence to spread through the country.

The official Syrian Arab News Agency quickly condemned Monday's attack in which it cited an official military source as saying there "were several martyrs and others were wounded." The U.S.-led coalition denied responsibility, but CNN and the Agence France-Presse cited unnamed U.S. officials claiming Israel was the true culprit. Israel routinely neither confirms nor denies responsibility for attacks in Syria, but has admitted to targeting Iran and pro-Iran forces, albeit often near Syria's western and southwest regions.

Iraq, who considers itself an ally of both the U.S.-led coalition and the Russia-Iran-Syria axis, expressed "its rejection and condemnation" of the attacks in a foreign ministry statement Tuesday that warned such actions were tantamount to "support for ISIS." The Syrian Observatory for Human Rights, a pro-opposition monitor based in the U.K., reported Tuesday that up to 55 pro-Syrian government fighters were killed and the warplanes involved flew in "the same airspace used by the International Coalition warplanes, and the death toll is expected to rise because there are some people in critical situation."

When pressed for answers, U.S.-led coalition spokesman Army Colonel Sean Ryan again said that the multinational force was not behind the strikes and claimed to not have any knowledge of any parties

	<p>involved. He confirmed only that Iraq was not behind the attack and, when asked about Israel's potential involvement, he said: "As far as I know, we don't discuss any military operations with the Israelis at all.</p> <p>"We have ISR [intelligence, surveillance and reconnaissance] in that area, but we can't determine, you know, who fired it, nor is that our military goal," he added. "That's an intelligence question, and I can't divulge that information, even if I had it, which I don't."</p>

<b>HEADLINE</b>	<b>06/21 Africa: rise in Islamist militant attacks</b>
<b>SOURCE</b>	<a href="https://www.herald.co.zw/sharp-rise-in-number-of-islamist-militant-attacks-in-africa-report/">https://www.herald.co.zw/sharp-rise-in-number-of-islamist-militant-attacks-in-africa-report/</a>
<b>GIST</b>	<p>ABUJA. – Sub-Saharan Africa suffers under a sharp rise in the number of Islamist militant attacks. In its report “Changing Patterns in Terrorism and the Threat to Business, Control Risks”, the specialist global risk consultancy, finds that the number of incidents rose from 317 in 2013 to 1,549 for the period April 2017 to April 2018.</p> <p>While some of the attacks are inspired by the so-called Islamic State (IS) that is losing its grip in its Middle Eastern heartland, the drivers behind this rise in sub-Saharan Africa are more complex.</p> <p>Jean Devlin, Partner and Head of African Analysis at Control Risks, explains: “Many factors lie behind this, including the local dynamics of long-standing conflicts and insurgencies. In East and West Africa, the increase in attacks has several drivers.</p> <p>“Although security forces in affected countries have for the most part been able to reduce the capability of militant groups to hold onto and control territory, this has pushed them to engage in asymmetric warfare against civilian ‘soft targets’. Security forces are struggling to comprehensively degrade the capability of these groups, and as a result the threat is proving resilient despite gains made.”</p> <p>Somalia, which witnessed 879 incidents over the period, accounted for over half of the Islamist militant incidents recorded across sub-Saharan Africa; the only other East African country affected during the period was Kenya, with 79 incidents.</p> <p>In West Africa, where 36 percent of the incidents were reported, Nigeria suffered most (220 incidents), followed by Mali (194) and Cameroon (96).</p> <p>Although the total number of Islamist militant attacks in Southern Africa was relatively low – 56 incidents in total; 43 in the Democratic Republic of Congo, 12 in Mozambique, 1 in South Africa – the rise in attacks particularly in Mozambique, where the first attack was recorded on 5 October 2017, is concerning.</p> <p>Looking at all types of terrorist activity, government, military and security forces, and their installations typically top target lists across the world.</p>

	<p>Retail and road top the list of civilian sectors affected by Islamist militancy globally – something that is mirrored in sub-Saharan Africa where vehicles and road infrastructure such as bridges are most targeted, particularly in Nigeria, Mali, Kenya and Somalia.</p> <p>The hospitality sector comes in second (with most incidents in Somalia and Mali), followed by retail. Targeting these areas allows Islamist militants to hit civilians and government/ security forces alike, as the latter congregate in the respective facilities or use the infrastructure for movements.</p> <p>The many shades of political and ideological violence and militancy in play across the globe are part of a complex picture of risk and opportunity facing businesses and organisations. Combined with other threats such as cyber security, kidnap and general criminality, these create a complex security environment for international business.</p>

<b>HEADLINE</b>	<b>06/20 TSA scrutinizes powder in carry-on bags</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/tsa-steps-up-scrutiny-of-powders-in-carry-on-bags/">https://www.cbsnews.com/news/tsa-steps-up-scrutiny-of-powders-in-carry-on-bags/</a>
<b>GIST</b>	<p>Air travelers will face a new level of attention at airport checkpoints starting Wednesday. The TSA will now inspect passengers' carry-on bags for powdered material.</p> <p>TSA officers will start asking passengers in the standard security lines to remove containers holding at least 350 milliliters of powder – roughly the size of a soda can – from their carry-on bags for additional screening. The rules are similar to those already in place for liquids and gels.</p> <p>The TSA is checking a range of items like powder cosmetics, baby powders and drink mixes. Passengers will be encouraged but not required to pack those larger containers in their checked luggage. Similar to food items, officers may recommend smaller containers of powder also be removed from carry-on bags for separate screening.</p> <p>The new regulations are meant to reduce the chances that explosive material or a debilitating agent like pepper spray are smuggled on board an airplane. Powder can look like explosive material on an X-ray machine and lead to extended bag searches.</p> <p>What passengers are going to hear from the TSA now is they would prefer large containers of powder to be checked. If not, passengers will need to take them out of their carry-on at the checkpoint.</p> <p>This new policy will not apply to flyers in the TSA Pre program.</p>

<b>HEADLINE</b>	<b>06/20 Europol: few ISIS fighters return home</b>
<b>SOURCE</b>	<a href="http://www.businessinsider.com/r-few-islamic-state-fighters-return-but-home-grown-attacks-rise-europol-says-2018-6">http://www.businessinsider.com/r-few-islamic-state-fighters-return-but-home-grown-attacks-rise-europol-says-2018-6</a>
<b>GIST</b>	<p>THE HAGUE (Reuters) - Europeans who went off to fight on behalf of Islamic State have not flooded back in large numbers since losing strongholds in Syria and Iraq, Europe's police agency said on Wednesday, but they have inspired a growing number of home-grown attacks.</p> <p>Tracking battle-hardened fighters is still the main concern of Western counter-terrorism officials, though a big influx did not materialize, Manuel Navarrete, head of Europol's Counter Terrorism Centre, told reporters at its Hague headquarters.</p> <p>"The main threat is coming from foreign terrorist fighters even though the numbers ... that are returning are quite low," he said, referring to outsiders who traveled to Syria and Iraq to fight alongside militants</p>

there.

There has been a spike in recent years in IS-inspired attacks by "lone wolves" using little more weaponry than a knife or car. Most have been less deadly than strikes by former fighters, but they are harder for police to stop, he said.

The number of attacks and foiled plots in Europe more than doubled last year to 205, killing 62 people, Europol's annual report showed.

"Even though we suffer more attacks, they were less sophisticated," Navarrete said.

Of more than 5,000 Europeans - most from Britain, France, Germany and Belgium - who joined the ranks of fighters in Syria and Iraq, some 1,500 have returned and 1,000 were killed, according to the EU intelligence-sharing body. There is only limited intelligence available about the fate of the rest.

Many fighters have been detained. Some traveled to Malaysia, the Philippines and Libya. Others are thought to be laying low or in third countries like Turkey, he said.

Tougher border controls, surveillance and prosecution in Europe have also dissuaded some from returning, with EU nations making more than 700 arrests linked to jihadi activity in 2017, he said.

The suicide bomber who killed 22 people at an Ariana Grande concert in the English city of Manchester in May 2017 had just returned from Libya. But most recent attacks have been carried out by home-grown jihadists who never went to conflict zones.

As the Islamic State was routed last year from Mosul in Iraq and Raqqa in Syria, it urged followers to carry out attacks at home, rather than travel to its self-declared caliphate.

"Now the message of the Islamic State has changed ... to being more negative and asking for retaliation," Navarrete said.

While lone actors often use tactics that result in fewer victims, they pose a threat that is difficult to prevent. In 2016, a man killed 86 people by driving a truck into a crowd in the Mediterranean city of Nice, France.

"You have to be very, very close to a person in order to take action on the police level to prevent this," Navarrete said. "And the closest you can be to a person right now is not going to the front door, it is going to Facebook, to Twitter."

<b>HEADLINE</b>	<b>06/20 Military: al-Shabab not getting any stronger</b>
<b>SOURCE</b>	<a href="https://www.voanews.com/a/al-shabab-militant-group-getting-lucky-not-stronger-in-somalia-/4446627.html">https://www.voanews.com/a/al-shabab-militant-group-getting-lucky-not-stronger-in-somalia-/4446627.html</a>
<b>GIST</b>	<p>Somalia's most dangerous terror group is likely not getting any stronger despite a series of deadly attacks, including one that claimed the life of a U.S. special operations soldier earlier this month.</p> <p>The assessment, by U.S. military and counterintelligence officials, runs contrary to the conclusions of some analysts and comes as al-Shabab has been flexing its military might in recent weeks, highlighting attacks on both Somali and African Union forces.</p> <p>One of the most publicized of these was a brazen June 8 attack on an outpost under construction two kilometers north of the town of Sanguni, in the Lower Jubba region of Somalia.</p> <p>The al-Qaida-linked militants skirmished with a force of 800 Somali and Kenyan forces accompanied by</p>

U.S. special operations soldiers, one of whom was killed by mortar fire.

U.S. officials are still trying to determine the size of the al-Shabab force at the time of the attack but say there is no indication of any increased capability.

“It was a lucky shot,” a U.S. military official told VOA on condition of anonymity. “I wouldn’t consider this a well-executed attack.”

Another military official said, in many ways, the deadly attack was typical of al-Shabab operations.

“Historically, al-Shabab has been willing to engage large forces, often using surprise and asymmetric tactics to improve their chances for success,” said Lt. Cmdr. Desiree Frame, a spokesperson for U.S. Africa Command. “We expect to see more conflict in southern Somalia as Somali Government Forces, AMISOM, and their partners make in-roads into al-Shabab-held territory.”

Still, accounts from Somalia indicate the al-Shabab forces were not deterred by the presence of U.S. special operations forces using armored vehicles and armed drones, as the June 8 deadly mortar strike was part of a three-day long assault on the outpost that included a failed attack using a vehicle-borne bomb.

“They know our movements,” an official with the Somali forces in Sanguni told VOA Somali. “It’s an open secret.”

Another Somali commander said al-Shabab also took advantage of the terrain, striking after recent flooding forced the Somali, Kenyan and U.S. forces to build the outpost in the open.

U.S. counterterrorism and military officials say there is no doubt the group remains the biggest threat to security in Somalia. But they have resisted attributing the increased pace of al-Shabab attacks to anything more than their annual Ramadan campaign.

“We do not assess that al-Shabab has recently increased their capabilities or their willingness to engage their enemies,” according to Africa Command’s Frame.

A senior U.S. counterterrorism official described al-Shabab’s activity as routine, noting its public statement “promote the virtue of waging jihad during Ramadan.”

Still, some analysts warn it is wrong to downplay the strides al-Shabab has made since being kicked out of its last urban stronghold, the port city of Kismayo, in 2012.

“It’s clear that we’re not just seeing a spike in attacks related to the Ramadan campaign,” said Daveed Gartenstein-Ross, a senior analyst at the Washington-based Foundation for Defense of Democracies. “It’s clear that the organization has gotten stronger.”

And while Gartenstein-Ross thinks it is unlikely al-Shabab is strong enough to consistently challenge U.S. forces in the region, it has shown it can be potent against both Somalia and African Union forces in the area.

“They’ve been able to kill very high numbers and you didn’t see that five years ago. They’ve been able to actually overrun bases at times,” he said. “The danger is as African Union forces draw down, they may retake major urban areas. I think there’s a good chance of that.”

**HEADLINE** 06/20 Feds: ISIS supporter dangerous crook

**SOURCE** <https://www.detroitnews.com/story/news/local/detroit-city/2018/06/20/terror-suspect-lied-bomb-stole-airport-worker-id-feds-allege/71742800/>

GIST

Federal prosecutors are troubled that an Ypsilanti man amassed an arsenal of weapons and bomb components and stole a U.S. Department of Homeland Security employee's all-access pass at an airport, according to court records.

The details were revealed in a federal court filing Tuesday by prosecutors who portray Yousef Ramadan, 29, as a violent, dangerous crook obsessed with weapons and the Islamic State. The portrait clashes with defense claims that Ramadan is a law-abiding citizen merely curious about violence in the Middle East.

Prosecutors want Ramadan to remain in jail pending trial in the latest counter-terrorism case involving a Metro Detroiter accused of supporting the Islamic State. U.S. District Judge Marianne Battani will consider releasing Ramadan on bond July 10, along with defense requests to suppress evidence and statements made to investigators.

The filing raises questions about whether Ramadan was planning a domestic terror attack before federal agents yanked him off a flight last year at Detroit Metropolitan Airport, searched his luggage and found pepper spray, knives, a stun gun, black masks, two-way radios, a gas mask, a tactical vest and photos of a homemade pipe bomb.

"Ramadan is also a danger given his activities associated with bomb-making," Assistant U.S. Attorney Ronald Waterstreet wrote. "Pipe bombs have no peaceful purpose. No socially acceptable use. They are tools used to indiscriminately wound, destroy, and kill."

The case against Ramadan, a naturalized U.S. citizen born in the Palestinian territories, dates to August 2017. That's when he was removed from a Royal Jordanian Airlines flight at Detroit Metropolitan Airport before flying to Amman, Jordan, with the ultimate destination of Israel. Before the plane could depart, investigators searched his checked baggage and found the items.

Ramadan said he was a photojournalist and needed the items for personal safety.

A secondary inspection uncovered numerous electronic devices, including laptops, iPhones and storage devices.

Investigators found videos of Ramadan shooting pistols and rifles, including a sniper rifle.

Ramadan had multiple YouTube channels. One, named "WB.88Guns," contained seven videos posted between November 2016 and February 2017.

Investigators also found photos and videos of pipe bombs and propaganda videos and photos related to the Islamic State, including videos of fighters wearing black masks similar to those found in Ramadan's luggage, according to FBI Special Agent Ryan Schanberger.

FBI agents showed Ramadan a photo obtained from one of his electronic devices. The photo showed what appeared to be a homemade, improvised explosive device, or pipe bomb, according to the filing.

"Ramadan said the bomb was like a large firework that would make a loud bang when detonated, and that these items were sometimes used to throw at soldiers overseas," Waterstreet wrote.

Ramadan told investigators he downloaded the bomb photo from the Internet, according to court records. But investigators analyzed metadata from the image that showed where the bomb was photographed.

"Ramadan's home in Bethlehem, Israel," the prosecutor wrote.

Prosecutors claim Ramadan stole a federal law enforcement employee's identification.

Ramadan took pictures of a U.S. Customs and Border Protection employee's uniform and patch, government identification card, and security identification card, prosecutors allege.

"The San Diego Airport security identification card grants the holder full access to the airfield, commuter and freight aircrafts, the terminals and all ramps," Waterstreet wrote.

Ramadan also was questioned about the Islamic State propaganda videos and photos found on his electronic devices.

"Ramadan stated that he likes and watches all aspects of combat footage," the agent wrote. "He claimed that he does support ISIS' goal of establishing ... an Islamic State, but that he does not support their methods of violence to achieve that goal, instead preferring a peaceful approach to converting non-believers into the Muslim religion and/or forming an Islamic State."

Investigators told Ramadan that watching violent ISIS videos could prompt him to commit a violent act.

"Ramadan responded by saying that if he ever wanted to commit an attack he certainly would not have to travel overseas to do it," the agent wrote. "Ramadan stated that he would do it in the United States as it would be much easier to accomplish than overseas."

Days after questioning Ramadan at the airport and preventing him from flying overseas, the FBI's counter-terrorism unit sought a search warrant for Ramadan's storage unit in Ann Arbor.

Agents searched the storage unit Aug. 23 and found two rifles, a handgun, components of an AR-15 rifle and two semi-automatic handguns.

"Additionally, the FBI found various components that could be used to construct a bomb: black powder fireworks, wires, an electric wire tester, cell phones (used as remote electric igniters), and items that can be used as shrapnel," Waterstreet wrote.

Ramadan later was indicted on two counts of knowingly possessing a firearm with an obliterated serial number, a five-year felony.

Ramadan should be released from jail pending trial, his lawyer Andrew Densemose said.

HEADLINE	<b>06/20 Mystery: 3 died during late night swim</b>
SOURCE	<a href="https://www.washingtonpost.com/news/post-nation/wp/2018/06/20/3-people-died-during-a-late-night-swim-at-a-closed-pool-and-police-cant-figure-out-why/?utm_term=.edde23753959">https://www.washingtonpost.com/news/post-nation/wp/2018/06/20/3-people-died-during-a-late-night-swim-at-a-closed-pool-and-police-cant-figure-out-why/?utm_term=.edde23753959</a>
GIST	<p>The trio probably hopped the fence around the pool late at night, sliding into the water as most of the people at the Chapel Tower apartment complex were sleeping.</p> <p>Neighbors found their bodies floating in the water around 3:30 a.m., long after CPR could do any good.</p> <p>But authorities in Durham, N.C., are still trying to find answers to the biggest mystery surrounding their sudden deaths: What would render the three swimmers unable to save themselves or each other?</p> <p>Police identified the victims as Abril Yuliana Flores-Ojeda, 15; Brian Manuel Benites, 16; and Luis Enrique Delgado-Romero, 21, all of Durham. They did not live at the apartment complex.</p> <p>They were all pronounced dead shortly after being pulled from the pool Tuesday morning by police and three men who live at the complex.</p> <p>Durham police spokeswoman Kammie Michael said in a news release that it doesn't appear that the victims were electrocuted, though the investigation is continuing.</p> <p>The pool, which remained closed Wednesday, is a summertime focus for the complex. One resident called it the "life of the place." Now, residents are voicing concerns.</p> <p>"The kids always want to get in the water and have fun," Sandra Henderson, who lives at Chapel Tower in Durham, told Raleigh, N.C., NBC-affiliate WRAL. "I just hate that this happened. I really do. I hope and pray that living in a community, everybody will be watchful."</p> <p>Investigators told the news station that a total of four people slipped into the pool early Tuesday. Police were interviewing the survivor to determine what happened, but have not disclosed what the person told them.</p> <p>Chapel Tower is a short distance from Duke University and markets heavily to people connected to the school — even offering student discounts and furnished apartments. It's on the Duke transit loop, including a program that gives people safe rides from the university late at night.</p> <p>But a key amenity is the complex's pool, which is eight feet at its deepest. The surrounding area also has free WiFi.</p> <p>The swimming spot, however, is not just popular with the people who live at Chapel Tower. Teenagers routinely climb the fence and go for late-night dips, residents told WRAL.</p> <p>The pool also has 24-hour security, but no one reported seeing anyone climb the fence or get into the water overnight.</p> <p>A maintenance worker told the Raleigh News &amp; Observer that the pool is closed Mondays and the gate had been locked since at least that morning.</p> <p>Hours later, a resident said, someone was running from apartment to apartment, banging on doors and screaming. The neighbor, who did not disclose his name to the newspaper, said he called 911, then looked outside. There, he said, a man and a police officer were pulling a body from the water.</p> <p>The neighbor hopped the pool fence, pulled a person who appeared to be a teenager out of the water and attempted CPR, but the teen was not responsive, the News &amp; Observer reported.</p>

	<p>Investigators said the cause of death was drowning, but were conducting autopsies to determine what may have happened to the victims just before.</p> <p>Images from local news broadcasts showed police and crime scene investigators scouring the pool area with flashlights and searching behind blue lawn chairs. At one point, an investigator removed what appeared to be clothing and placed it into a brown evidence bag. They also found beer cans.</p> <p>Less than two weeks ago, John Williams with the Durham County Health Department had inspected the apartment complex's pool, WRAL said, and found that it was "in very good condition."</p>

<b>GIST</b>	<p>At least twice this year, the Syrian military fired Iranian-made artillery shells filled with a chlorine-like substance that oozed poison slowly, giving victims just a few minutes to escape.</p> <p>In another attack, Syrian forces dropped a chemical bomb on the top-floor balcony of an apartment building, killing 49 people, including 11 children. Their skin turned blue.</p> <p>These details and others blaming Syria for atrocities in eastern Ghouta, a suburb of Damascus, were uncovered by a United Nations commission investigating and documenting possible war crimes in the seven-year-old conflict. But when the commission issued a report on Wednesday, the details were omitted.</p> <p>Seven pages that had been in an earlier draft, provided to The New York Times, were summarized in two</p>

paragraphs in the final document.

The commission's report examined how the government of President Bashar al-Assad recaptured eastern Ghouta, the rebel stronghold near the capital, in the first four months of 2018. Mr. Assad's forces laid siege to the area, using bombardments, mass starvation and chemical weapons.

The materials in the leaked draft paint a far more frightening picture of chemical weapons use in eastern Ghouta than had been previously reported. And they assert without qualification that Syrian forces and their allies were responsible, rebutting repeated denials by Mr. Assad's government and his backers in Russia and Iran.

A member of the commission explained the omissions, saying that many of the details in the early draft needed additional corroboration or clarification and might be included in another report, perhaps by September. There was no outside pressure to withhold the information, said the member, Hanny Megally, an Egyptian human rights lawyer.

"We thought we need to do some more work on this, it's an ongoing investigation," Mr. Megally said. "So we thought, let's keep it short."

But the conclusions in the omitted information seemed unambiguous.

The leaked draft stated:

"In one of the most grim patterns of attack documented during the period under review, Government forces and/or affiliated militias continued to use chemical weapons in densely populated civilian areas throughout eastern Ghouta."

In meticulous detail, the draft enumerated six chemical weapons assaults on civilians from January through April 7, the date of the deadliest assault. In what appeared to be a first, it implicated Iranian-supplied weaponry.

In attacks on Jan. 13, Jan. 22 and Feb. 1, the draft said, government forces fired chemical agents, "most probably chlorine," into a residential part of eastern Ghouta's Douma neighborhood, near a sports stadium, roughly 800 yards from the front lines, between 5 a.m. and 6:30 a.m.

Some witnesses described a "slow-acting agent" that smelled like chlorine, the draft said, and they had sufficient time "to rouse the victims, obtain wet cloths to serve as makeshift face masks, and evacuate the affected areas."

In the Jan. 22 and Feb. 1 attacks, the draft said, the commission had evidence identifying the bomb delivery devices as surface-to-surface industrially produced Iranian artillery rockets, "only known to have been used by Government forces and, rarely, affiliated militias."

"In relation to the munitions used on 22 January and 1 February, the Commission obtained and assessed material evidence including metadata analysis, and identified a surface-to-surface craft-produced rocket (IRAM). While IRAMs have been employed by a range of actors across Syria, the particular design of observed during these two attacks is only known to have been used by Government forces and rarely, affiliated militias. Specifically, IRAMs documented were built around industrially-produced Iranian artillery rockets known to have been supplied to Syrian Government forces."

The draft said that the eastern Ghouta attacks had followed "a pattern previously documented by the Commission concerning the use of chemical weapons by Government forces," and that none of them had suggested "the involvement of armed groups."

Thirty-one people, including 11 children, were sickened in the first three attacks, but none died. Two other episodes of possible chlorine use, on Feb. 25 and March 7, caused more extensive casualties, killing two

children, including an infant, and injuring 18 civilians.

The worst was yet to come, following the collapse of negotiations between Russian military officials and an insurgent group, Jaish al-Islam, to evacuate the Douma neighborhood and end the siege. On April 7, the draft said, an improvised explosive delivered from the air hit a multistory residential building roughly 200 yards from the Rif Damascus Hospital, the last functioning hospital in Douma.

The draft described the explosive as a “single industrial gas cylinder” with fins that struck the top-floor balcony and appeared to have “rapidly released large amounts of a substance into the interior space of the residential apartment building.”

“Positions and physical symptoms displayed by victims of the attack support witness claims that the agent acted rapidly,” the draft stated, “and likely indicate that a high concentration of the chemical sank downwards.”

Based on witness statements and “material evidence received and analyzed by the Commission,” the draft stated, the dead showed “an array of symptoms consistent with exposure to a choking agent, including signs of foaming at the mouth and nose, blue skin indicating impaired blood circulation, meiosis (constriction of the pupils), as well as some cases of dilated (wide open) pupils.”

“Statements and material evidence received and analysed by the Commission in relation to the deceased within the apartment building revealed an array of symptoms consistent with exposure to a choking agent, including signs of foaming at the mouth and nose, blue skin indicating impaired blood circulation, meiosis (constriction of the pupils), as well as some cases of dilated (wide open) pupils. Numerous victims unable to flee the building collapsed shortly after exposure.”

Mr. Megally declined to go into detail over why such information was withheld from the report published on Wednesday. But he said that with the April 7 attack in particular, more information was needed, including precisely what killed the 49 people.

“If we’re not sure what the cause of death was, we may be looking in the wrong place,” he said. “It’s better we finish the investigation, rather than release it in dribs and drabs.”

The official version of the report was far more cautious about the chemical weapons incidents in question. In two attacks, for example, the report said the commission was “unable to obtain sufficient material evidence to conclusively identify the weapons delivery systems.”

While the circumstances in the April 7 attack were “largely consistent with the use of chlorine,” it said, the symptoms were more consistent with the use of “another chemical agent, most likely a nerve gas.”

The official version also condemned rebel forces for indiscriminate shelling of civilian areas.

The commission, which has been compiling evidence of atrocities in the Syria conflict since shortly after the war began in 2011, has developed an extensive array of ways to gather information, even though Mr. Assad has not allowed its investigators into the country. Led by Paulo Sérgio Pinheiro, a Brazilian diplomat and rights activist, the commission has even compiled a confidential list of Syrian officials and others who may be held accountable in a court some day.

The earlier draft of its report on eastern Ghouta was shared by a person close to the commission, who had been consulted on the report and who declined to be identified.

The leak suggested some internal dissension in the commission about the strength of its evidence concerning the Syrian government’s use of chemical weapons in eastern Ghouta. It was also possible that the commission wanted to exercise caution ahead of an expected report on the April 7 attack in Douma by the Organization for the Prohibition of Chemical Weapons, which sent investigators to the site.

Chemical weapons are banned by an international treaty that Mr. Assad signed under pressure in 2013, when his government was first accused of having used chemical weapons in the conflict — also in eastern Ghouta.

The April 7 attack in Douma caused widespread international fury, particularly because many victims appeared to have been children shown gagging and choking, based on videos disseminated by witnesses and activists. The attack drew retaliatory missile attacks and airstrikes by Britain, France and the United States.

Mr. Assad’s government, backed by Russia and Iran, sought to cast doubt about the Douma attack, suggesting it had been faked or carried out by insurgents.

The Syrian government and its allies took control of eastern Ghouta two months ago after imposing what the commission’s report described as “the longest siege in modern history,” displacing more than 140,000 people from their homes and unleashing bombardments that destroyed hospitals, markets and schools, and forced residents to live in cellars and basements.

Those bombardments — mainly airstrikes by Syrian and Russian planes — killed 1,100 civilians and injured 4,000 others in a period of less than a month from Feb. 18, the commission said in its report, which is to be delivered to the United Nations Human Rights Council next week.

Tens of thousands of those who fled are still being held unlawfully by the government, which pursued a policy of blanket internment that the panel called “reprehensible.”

Sieges are permitted under international humanitarian law. But, in a departure from established practice, the panel said it considered the way pro-government forces had conducted the siege of eastern Ghouta unlawful.

“Certain acts perpetrated by pro-government forces during the siege laid to eastern Ghouta, including the deliberate starvation of the civilian population as a method of warfare, amount to the crime against humanity of inhumane acts, causing serious mental and physical suffering,” the panel concluded.

<b>GIST</b>	<p>The Thurston County Sheriff’s Office is asking for the public’s help after the tongue of an adult female horse was cut out in Yelm on Tuesday.</p> <p>A deputy found the completely severed tongue in a pasture in the 9500 block of Bridge Road Southeast.</p> <p>The 28-year-old horse named Annie can no longer swallow food, so it will be euthanized to minimize the animal’s suffering, according to the sheriff’s office.</p> <p>The incident is thought to have happened between 10:30 a.m. and 1 p.m. Tuesday.</p>

<b>HEADLINE</b>	<b>06/20 Reports: I-5 shooter near Mount Vernon</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1024540/shooter-i-5-mount-vernon/">http://mynorthwest.com/1024540/shooter-i-5-mount-vernon/</a>
<b>GIST</b>	<p>Drivers in Mount Vernon reported that someone was shooting from an overpass on I-5 on Wednesday morning.</p> <p>One driver thought his car had been hit around 9:30 a.m., but the Washington State Patrol says there was</p>

	<p>no damage done to his vehicle. A trooper responding to an unrelated, disabled vehicle nearby heard three shots fired.</p> <p>No injuries were reported.</p> <p>The shooter is only described as a man in dark clothing “with a rifle shooting down on I-5 from the Blackburn overpass,” said trooper Heather Axtman.</p> <p>Troopers don’t believe he is in the area. Troopers aren’t ruling out the possibility this is related to a shooting on SR 509 in Sea-Tac last week. That shooter is still on the loose.</p>

<b>HEADLINE</b>	<b>06/20 NKorea side of DMZ: change in the air</b>
<b>SOURCE</b>	<a href="https://apnews.com/5dff5cf8d8a40659419701350b3d6de/On-North-Korean-side-of-DMZ,-it's-change-in-the-air">https://apnews.com/5dff5cf8d8a40659419701350b3d6de/On-North-Korean-side-of-DMZ,-it's-change-in-the-air</a>
<b>GIST</b>	<p>PANMUNJOM, North Korea (AP) — Lt. Col. Hwang Myong Jin has been a guide on the northern side of the Demilitarized Zone that divides the two Koreas for five years. He says that since the summits between North Korean leader Kim Jong Un and the presidents of South Korea and the United States, things have quieted down noticeably in perhaps the last place on Earth where the Cold War still burns hot.</p> <p>“A lot of things have changed. Listen to how quiet it is,” he said as he stood on the balcony of a large building overlooking the blue and white barracks and concrete demarcation line that mark the boundary between North and South.</p> <p>“The South used to blast psychological warfare propaganda at us,” he said. “But since the summits, they have stopped. Now there is a peaceful atmosphere here.”</p> <p>Indeed, all is quiet — deceptively so — in the DMZ these days.</p> <p>On Wednesday, as Kim Jong Un was in Beijing for his third summit with Chinese President Xi Jinping, the northern part of the zone was buzzing with busloads of Chinese tourists taking selfies and eating ice cream cones outside the surprisingly well-stocked souvenir shop near the DMZ entrance.</p> <p>A group of ethnic Korean high school students from Japan filed out of their tour bus as North Korean People’s Army soldiers watched disinterestedly with automatic rifles slung over their shoulders. Inside the souvenir shop, still more tourists, from Europe, looked over hand-painted propaganda posters. American tourists are still banned from visiting North Korea under an order issued last year by President Donald Trump that restricts all non-essential travel.</p> <p>Though the DMZ has taken on something of a tourist trap atmosphere over the years — the South side is also a popular tourist destination and also has its share of kitschy souvenirs — Lt. Col. Hwang stressed that it remains first and foremost a military site.</p> <p>“It’s not that we want tourists to come, but people want to see,” he said. “There are dangers.”</p> <p>The dangers are, in fact, all around the DMZ, though they are invisible to the throngs of day-tripping tourists.</p> <p>While world attention tends to focus on the North’s development of nuclear weapons, North Korea has for decades stationed most of its conventional fire near its border with the South. South Korea’s capital, Seoul, is only about 80 kilometers (50 miles) away from the DMZ and would be vulnerable to a heavy artillery attack, potentially augmented by chemical shells, that could cause hundreds of thousands of casualties.</p>

Getting North Korea to agree to move at least some of its big guns away from the border will likely be a key topic of negotiations in the months ahead, particularly now that the U.S. and South Korea have agreed to halt their next set of annual war games, which never fail to outrage the North and heighten tensions on the peninsula.

Hwang generally follows a strongly patriotic and unapologetic script as he shows visitors around the usual spots — the building where the armistice that ended the 1950-53 Korean War was signed, a giant stone engraved with North Korean founder Kim Il Sung’s last words, various other spots where talks took place. He still stays strongly on message — his job is to get the North’s position across to the tourists, even if they aren’t especially interested in listening.

But he also pointed out a tree planted by Kim Jong Un and South Korean President Moon Jae-in when they held their first summit here in April, and the pavilion where Kim hosted Moon when he came to the North’s side last month. And when speaking to an American journalist, Hwang also seemed a tad less belligerent — or perhaps just a bit more relaxed — on Wednesday.

“War only brings disaster to our people. Nobody wants a war,” he said. “We held military talks with the South here, too. The talks are moving in the direction of what humanity wants. That’s peace. That’s a positive thing.”

<b>HEADLINE</b>	<b>06/20 Fake opioid pills flooding illicit market</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1024128/fake-opioid-pills-flooding-illicit-market-laced-with-fentanyl/">http://mynorthwest.com/1024128/fake-opioid-pills-flooding-illicit-market-laced-with-fentanyl/</a>
<b>GIST</b>	<p>People in the grip of opioid addiction don’t just turn to heroin, but to pills like oxycodone.</p> <p>They can be easily crushed then snorted or smoked. But pills bought illegally are not always what they seem.</p> <p>At the Washington State Patrol Crime Lab, forensic scientist Mark Strongman works to figure out what’s really in pills seized by police.</p> <p>He showed us the testing process that is increasingly discovering dangerous ingredients in pills that are stamped to look like pharmaceuticals.</p> <p>“You just really can’t tell from the look. You think you can and then you’re surprised,” Strongman said.</p> <p>“We’re starting to see an increase in mimic pharmaceuticals so they’ll be stamped and look like a pharmaceutical grade oxycodone, but when it’s actually tested, it’s coming out as fentanyl or heroin,” said Mary Kellar of the State Patrol.</p> <p>“Counterfeit opioids are of major concern to the DEA, especially fentanyl,” said Keith Weis, the special agent in charge of the DEA’s Seattle division.</p> <p>Weis said fentanyl often comes from China to clandestine laboratories in Mexico, where pills are pressed and then smuggled into the U.S. to be sold cheaply.</p> <p>“Anytime we encounter it on the street, it’s a major concern,” Weis said.</p> <p>In April, investigators in Centralia intercepted a truck hauling a load of Starbucks products.</p> <p>Stuffed in the sleeper cab, agents say they found meth, heroin and several thousand oxycodone pills.</p> <p>Agents also raided a home in Kennewick last week as part of an investigation of fentanyl-laced drugs.</p>

	<p>The DEA estimates the illicit drug market in Washington State is worth \$2 billion dollars.</p> <p>Because fentanyl is a synthetic opioid up to 50 times more powerful than heroin, more people are dying of overdoses.</p> <p>Public Health Seattle and King County reports 23 fentanyl-related deaths in 2016, 33 in 2017, and 17 just in the first three months of 2018.</p> <p>“We probably lose three or more people in the state every day from overdoses,” Weis said.</p>

<b>HEADLINE</b>	<b>06/20 What airlines know about passengers</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/what-the-airline-knows-about-the-guy-in-seat-14c-1529499085">https://www.wsj.com/articles/what-the-airline-knows-about-the-guy-in-seat-14c-1529499085</a>
<b>GIST</b>	<p>Your flight attendant wishes you happy birthday. Is that cute or creepy?</p> <p>Airlines know a lot about you, from date of birth and home address to travel patterns, vacation preferences, beverage purchases and whether your last flight was good or bad. Now the latest generation of hand-held devices used by flight crews has an overhead bin full of information about each passenger.</p> <p>Carriers are using it in an effort to improve customer service. They can congratulate customers on reaching 3 million lifetime miles or toast a couple’s wedding anniversary. At some airlines, they can tell if you really paid extra for that extra-legroom seat or are traveling on a restricted basic economy ticket. Someday soon it may be, “Having the usual vodka tonic tonight, Scott?”</p> <p>Right now, airlines are trying to figure out when personalized interactions could be considered invasive, amid growing concerns about how companies like Facebook and others are using personal data. While many travelers are pleased to see their loyalty acknowledged, they’d all rather have upgrades. And plenty of others prefer a bit of anonymity once they get on an airplane and leave town.</p> <p>United rolled out a new app to its flight attendants earlier this year with so much information about people, the airline has been reluctant to turn on all the functionality. The tool can show flight attendants information on each frequent flier’s five previous flights—green if it was a good flight, yellow or red if something went wrong, like a delay. But United is worried some customers might consider that stalking.</p> <p>“There’s a point where you don’t want to make people feel like, ‘Gee they know everything about me and they’re tracking everything I do,’ ” says John Slater, United’s senior vice president of inflight services.</p> <p>Personal milestones like birthdays are left to the judgment of flight attendants. They can decide whether they think a customer would appreciate the recognition or recoil, he says.</p> <p>The information is added to phones and tablets used to charge customers for food and beverage purchases. The devices can give flight attendants real-time information on tight flight connections for passengers, confirm whether a wheelchair has been ordered for a customer and help keep track of unaccompanied minors.</p> <p>Many now allow flight attendants to offer instant compensation for maladies like spilled coffee or broken entertainment screens.</p> <p>Better service onboard in coach will go to those with higher status. Top-tier frequent fliers, as well as those with special needs, will get more personalized attention, airlines say.</p> <p>Carriers say they don’t flag “problem” passengers—perhaps frequent complainers or people involved in confrontations in the past. Airlines do ban people from their flights for altercations or abuses, and the</p>

Transportation Security Administration flags problem travelers.

But airlines are making it easier for flight crews to report problems with passengers. Instead of paperwork completed after a trip, American Airlines' third-generation handhelds can submit all kinds of reports, from catering goofs to onboard incidents, says Jill Surdek, vice president for flight service.

Alaska Airlines says that earlier this month it gave its flight attendants an app on their hand-held devices specifically to report sexual harassment, making it quicker and easier to alert the company to problem passengers. Alaska has had several high-profile issues involving passengers accused of harassing flight attendants, as well as a case of a passenger accused of harassing another passenger.

The airline investigates every situation, says Andy Schneider, Alaska's vice president of people, and decides whether to take action, including banning someone from flights either temporarily or permanently.

United's new system has a color-coded seat map showing status—a black seat is a Global Services frequent flier, United's top tier. The seat map has icons for wheelchairs and lap children. A seat with a dog face means the customer has a pet onboard. Million-mileage levels are also depicted—seat 7C has “3M” on it for 3 million miles.

Connecting flight information can be shown. Green seats have good connections, yellow seats have connections that could be in jeopardy and red is reserved for very tight connections.

Letting flight attendants know something about each passenger “allows them to engage with customers in a meaningful way,” United's Mr. Slater says.

JetBlue uses tablets mounted on the top of beverage-service carts so flight attendants get a hands-free visual picture of who's who. “The ability for crew members to view a customer's name is huge, especially in coach,” says Chris McCloskey, JetBlue's director of inflight experience.

The seat map will show a birthday cake in a celebrant's seat. Flight attendants can offer a complimentary buy-onboard product or a card signed by the crew.

More personalization is coming. One goal: tracking onboard purchases. If a customer orders the same drink repeatedly, offer the usual.

“There is definitely an opportunity for us to leverage the data that we have on customers a little bit more,” Mr. McCloskey says. At the same time, the airline is analyzing how far it can go.

Airlines acknowledge the devices have made the job more complex for flight attendants. Sara Nelson, president of the Association of Flight Attendants union, says the devices can reduce situational awareness. If flight attendants have to study the screen to correctly recognize each customer, they may not be spending as much time staying alert to what's going on in the cabin.

She says flight attendants generally like these new tools because they let them do their jobs more effectively.

Still, Ms. Nelson says, “I'm a little shocked there hasn't been more backlash. I think the public has generally decided they like the personalized service, they like to be able to resolve their issues faster, not have to tell people as much. And they've sort of sacrificed their privacy for those conveniences.”

**HEADLINE** 06/20 Yellowstone geyser keeps erupting

**SOURCE** <https://www.cbsnews.com/news/yellowstones-steamboat-geyser-keeps-erupting-scientists-want-to-know-why/>

GIST	<p><b>YELLOWSTONE NATIONAL PARK</b> -- Steamboat Geyser, the world's tallest and far more powerful than Old Faithful, is roaring back to life.</p> <p>Often dormant for decades, it has now erupted nine times in the past few months. It can do what Kilauea has done on Hawaii's Big Island, only much bigger.</p> <p>Because the geyser field at Yellowstone National Park lies on top of an active volcano, with multiple chambers of magma from deep beneath the earth, the same energy that causes geysers to blow could spew an ash cloud as far as Chicago and Los Angeles.</p> <p>"It's amazing to think of the scale of these eruptions," said Mike Poland, the scientist in charge of the Yellowstone Volcano Observatory.</p> <p>The eruption that created the park was 70,000 years ago, and there are no signs of that happening anytime soon. But scientists do want to know what's behind the most recent activity.</p> <p>"We see gas emissions. We see all kinds of thermal activity. That's what Yellowstone does. That's what it's supposed to do. It's one of the most dynamic places on earth," Poland said.</p> <p>The least predictable geyser in the park is Steamboat. It could erupt in five minutes, five years -- even 50 years from now. Yet no one visiting Yellowstone wants to turn away from the sight.</p> <p>"That would be the chance of a lifetime," one visitor said. "I would be amazed."</p> <p>Timing is everything, and only a lucky few get to see it. Poland's team of volcanologists are using thermal-imaging equipment to track the temperature of the 50-mile-wide magma field. They also monitor 28 seismographs since a super volcano would include major earthquake activity.</p>

HEADLINE	<b>06/20 Report: industrial chemicals more toxic</b>
SOURCE	<a href="https://abcnews.go.com/Health/wireStory/report-finds-industrial-chemicals-toxic-thought-56042986?">https://abcnews.go.com/Health/wireStory/report-finds-industrial-chemicals-toxic-thought-56042986?</a>
GIST	<p>A family of industrial chemicals turning up in public water supplies around the country is even more toxic than previously thought, threatening human health at concentrations seven to 10 times lower than once realized, according to a government report released Wednesday.</p> <p>The chemicals are called perfluoroalkyl and polyfluoroalkyl. They were used in such goods as fire-suppressing foam, nonstick pans, fast-food wrappers, and stain-resistant fabric and carpet, but are no longer used in U.S. manufacturing. Water sampling has found contamination in water around military bases, factories and other sites.</p> <p>Exposure at high levels is linked to liver damage, developmental problems and some forms of cancer, among other risks.</p> <p>A draft of the report, by the Department of Health and Human Services' toxicology office, had set off alarms within the Trump administration earlier this year. A January email from a White House official, released under the Freedom of Information Act, referred to the findings as a "potential public relations nightmare."</p> <p>The draft went under months of government review before Wednesday's publication, but the key finding — that the chemicals are dangerous at specific levels much lower than previously stated — was not changed.</p> <p>The EPA, which scheduled a series of hearings on the chemicals, said last month that it would move</p>

	<p>toward formally declaring the two most common forms of PFAS as hazardous substances and make recommendations for groundwater cleanup, among other steps.</p> <p>U.S. manufacturers agreed in 2006 to an EPA-crafted deal to stop using one of the most common forms of the chemical in consumer products.</p> <p>The findings will likely lead state and local water systems with the contaminant to boost filtering.</p> <p>"The more we test, the more we find," Olga Naidenko, a science adviser to the Environmental Working Group nonprofit, said Wednesday.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>06/20 World Cup fans drinking Moscow dry</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/world-cup-fans-drinking-moscow-dry-straining-bars/story?">https://abcnews.go.com/International/world-cup-fans-drinking-moscow-dry-straining-bars/story?</a>
<b>GIST</b>	<p>Fans partying at the World Cup in Moscow are downing so much beer that they are nearly drinking parts of the city dry, with some bars saying they get close to running out each night.</p> <p>For almost a week, tens of thousands of foreign and local fans have been turning the heart of Moscow into a street party each night, gathering in the area around the Kremlin in a huge tide of chanting, dancing and drinking, which doesn't recede until the very early hours of the morning.</p> <p>"They drink half a tonne of beer each night!" said Evgeny Gorbanov, a bouncer at Let's Rock Bar, whose establishment has been overflowing with fans every night since the month-long tournament began.</p> <p>Half a dozen bars said they had almost ran out of beer in the first few days of the competition and had had to quickly increase orders to keep up with the demand.</p> <p>"We hadn't counted on it," said Nikolai Vladik, manager at Ketch-Up, a burger bar. "On the first day, it got pretty tough. But we've prepared now," he said.</p> <p>Like many residents in Moscow, the bar staff said they had been caught off guard by the avalanche of fans and the scale of the partying. At Kamchatka, an all-night bar that sells beers in plastic cups, staff said they had sharply increased their beer orders. At the restaurant Dante, manager Nadia Desyatelik said fans were drinking 200 liters a night, compared to the 30 they normally sell.</p> <p>Some bar staff said they were nervous that beer suppliers might miss vital deliveries.</p> <p>But Baltika, the Russian unit of Carlsberg told Reuters that while there was increased risk of supply disruption during the World Cup, their business was so far able to handle demand. Heineken also told Reuters sales were strong and the brewer did not yet see any challenges to its supply.</p> <p>The party has surprised Muscovites all the more because few can remember anything like it in the city. Drinking on the street is illegal in Russia, carrying a fine of between \$7 - \$23.</p> <p>A growing emphasis from the Kremlin on public discipline, combined with an official suspicion towards street gatherings, has made wild public displays unwise.</p> <p>But those rules seem to have been suspended for the World Cup. Russian police have stood by and watched as fans have clambered up lamp posts and hung flags from buildings. On Nikolskaya Street, Argentinian fans have covered a monastery with team banners. Riot police, usually dour, have been addressing people with rare politeness at security points.</p> <p>Russians are marveling at the new light-touch approach. Many are also delighted by the party atmosphere on the streets. The revelry has so far been good-natured - with few reports of trouble.</p>

<b>HEADLINE</b>	<b>06/20 Probe: paramedics thought alive teen dead</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/paramedics-investigated-covering-teenager-sheet-mistakenly-believing-dead/story?">https://abcnews.go.com/US/paramedics-investigated-covering-teenager-sheet-mistakenly-believing-dead/story?</a>
<b>GIST</b>	<p>The Chicago Fire Department is investigating why paramedics mistakenly thought a teenager who was shot in the head was dead and left his body lying in the street covered in a sheet until bystanders saw his arms and legs twitching.</p> <p>Paramedics left Erin Carey, 17, unattended next to a gutter as they treated other victims in the shooting early Monday in the University Village area of Chicago. Once the paramedics were told the teenager was still breathing, they began cardiopulmonary resuscitation and rushed him to a local hospital, officials said.</p> <p>He died at 1:19 a.m. Tuesday, about 20 hours after he was shot twice in the head, officials said.</p> <p>"I do understand that paramedics looked at him, believed him to be deceased, covered him with that sheet and moved on to another individual who was nearby who was also shot. They saw motion, movement underneath the sheet. Officers who were present notified paramedics, this man is still alive," Chicago Police First Deputy Anthony Riccio said at a press conference.</p> <p>Officials did not release the names of the paramedics or say how many were at the scene.</p> <p>It was not immediately clear how long Carey was lying in the street before paramedics realized he was still alive. The Chicago Tribune reported he was in the street under a sheet for an hour before bystanders saw his arms and legs, which were exposed, twitching.</p>

## Crime, Criminals

[Top of page](#)

<b>HEADLINE</b>	<b>06/20 Seattle police dog sniffs out child porn</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1024817/the-seattle-police-dog-who-has-famously-sniffed-out-child-porn/?">http://mynorthwest.com/1024817/the-seattle-police-dog-who-has-famously-sniffed-out-child-porn/?</a>
<b>GIST</b>	<p>If there is such thing as a celebrity police dog, Seattle Police Department's black lab mix, Bear, may be it. The five year old electronic storage detection (ESD) dog led police to devices containing child porn inside the home of former Subway spokesman Jared Fogle. He also found incriminating electronic devices in the home of Olympics gymnastics coach Marvin Sharp, who was later charged with child pornography charges.</p> <p>Those cases were in 2015, and Bear was living in Indiana with the firefighter who trained him. But shortly after, he was purchased by the Seattle Police department, plucked up by his new partner, Detective Ian Polhemus.</p> <p>Both Detective Polhemus and Bear work with the Internet Crimes Against Children Task force to find hidden evidence in a suspect's home.</p> <p>"Actually, he does not track down child porn," said Detective Polhemus. "He simply tracks down electronic devices. He doesn't care what's on the devices, he only cares about finding them. Then it's up to the investigators and the forensic examiners to conduct the analysis and figure out whether or not there's anything of evidentiary value on those devices that he finds."</p> <p>So how does Bear find thumb drives and hard drives and phones and laptops? Detective Polhemus says forensic scientists did a chemical analysis, and isolated the only non-toxic chemical that these devices have in common.</p>

“That odor was isolated and that’s the one odor that has been introduced to Bear as being an odor that we want him to be able to detect. Because Bear is a food reward dog, he’s highly motivated. So what that means is the only time he eats is when he’s working.”

Therefore, Bear loves to work. Detective Polhemus feeds him three cups of food throughout the day, whether he’s out on a real case or doing his daily trainings.

“I’ve got the three training boxes here and only one of them has a device in it that he should indicate on. So as I work him through the boxes, ideally he’s going to skip the two boxes that don’t have anything in it. When he gets to the box that has the device in it, Bear is a passive indicator which means he’ll sit. I’ll give him a supplemental command and then he’ll shove his nose in the hole and his tail will wag and he’ll sit there and hold his nose in the hole until I reward him with the food.”

Bear was only the third dog in the country to be trained in electronic storage detection, and he’s one of 25 ESD dogs in the country. Thumb drives and SD cards are tiny and often very well hidden, so Bear is brought in to search for what humans couldn’t find. Detective Polhemus describes a case they worked on in Olympia.

“After the investigators got done with the search, Bear and I went into the area to do a secondary sweep. In a matter of about three or four minutes, Bear came up with five devices that had been missed. It’s my understanding that at least two or three of those devices contained child exploitation material.

Detective Polhemus takes Bear home every night, and I wondered how he keeps him from constantly retrieving electronic devices from around the house.”

“Bear, like any true veteran police officer, only works when he knows he’s getting paid. So in Bear’s case, payment is food. He has learned through training and repetition that if he were to, for instance, indicate on the cell phones I have on the table right now, he would receive no reward for doing so. Therefore he just ignores it. In order for him to actually indicate on those cell phones, he has to go through a series of verbal and visual cues that I have to give him.”

Bear is a super excitable, hyper, sweet and shiny lab, which is why he’s perfect for the job. ESD dogs require a lot of energy, and are often snatched up by police when they fail out of guide dog school.

<b>HEADLINE</b>	<b>06/20 Border policies help organized crime?</b>
<b>SOURCE</b>	<a href="https://www.insightcrime.org/news/analysis/trumps-border-policies-strengthen-organized-crime-heres/">https://www.insightcrime.org/news/analysis/trumps-border-policies-strengthen-organized-crime-heres/</a>
<b>GIST</b>	<p>The Trump administration’s stated purpose of “zero tolerance” of illegal immigration on US borders is to lower crime rates, but research shows that the net effect may be the opposite.</p> <p>The policy is to prosecute all those who cross the border illegally and the Trump administration has taken the unprecedented step of separating children from their parents in order to deter families from making the journey. (Soon after this story was published, President Trump signed an Executive Order taking steps to keep families together while in detention. “It is...the policy of this Administration to maintain family unity, including by detaining alien families together where appropriate and consistent with law and available resources,” the order read.)</p> <p>The so-called zero tolerance approach is supposed to act as a deterrent. Administration officials have also doubled-down on the strategy by shutting off individual’s access to request asylum (at least until after they have been prosecuted for crossing into the country illegally), and by blaming parents for putting their children in danger by taking the risky journey through places like Mexico where they are routinely victimized by criminal organizations and officials alike.</p>

The Trump administration's policy, however, is shortsighted, in part because research shows that it may, in the long run, strengthen criminal groups.

Here are five ways that happens:

### 1. It Pushes People Into the Illegal Market

As the United States and other countries around the world have worked to stiffen border enforcement, organized crime groups that thrive from it have gotten stronger. Human smuggling — once the purview of small-time, mostly family run organizations — has become one of the most lucrative businesses in the underworld at an estimated \$35 billion per year in earnings. Its criminal derivative, human trafficking, is also hugely lucrative, with a market value of \$32 billion, according to the United Nations.

In Mexico, large, sophisticated criminal groups like the Zetas and the Gulf Cartel have made it a core revenue stream. It can also move in the other direction: several prominent Central American drug trafficking groups had their origins in human smuggling and then transitioned into trafficking other illicit goods because they already had the infrastructure, contacts and control over the routes. More powerful criminal groups means more corruption, more instability and, contrary to the Trump administration's wishes, more migration.

Guadalupe Correa-Cabrera, a professor at George Washington and the author of a recent book on the Zetas, says stricter borders "help" groups like the Zetas. "It's just going to magnify what we have already seen," she told InSight Crime, referring to the steady growth of these criminal groups.

This criminal activity is not limited to places south of the US border. In the United States, people are also victimized by criminal groups who have a clear understanding that going to the authorities is not an option. From the street venter who is extorted by gangs in Long Island to the California day laborer who thought he was going to do some landscaping only to find himself offloading marijuana on the coast, criminal groups take advantage of enforced anonymity.

### 2. It Raises the Price for Criminal Services

Part of the reason these criminal groups move into markets like human smuggling is that zero tolerance doesn't just raise the number of clients organized crime groups have, it raises the prices for their criminal services. More enforcement equals more risk, as well as more sophistication and resources needed to succeed in any criminal venture.

Estimates along the Mexico border illustrate this tendency. In a study published by the US Department of Homeland Security in 2010, researchers using four different data sources found that prices for human smuggling rose as enforcement increased.

### 3. It Sets the Table for Future Criminal Activity

Numerous academic and news responses to the Trump administration's policy of separating children from parents at the border stated that it leads to trauma, as well as physical and cognitive effects. Researchers in other parts of the world have shown that it could also lead to criminal activity.

Gang researchers on this side of the ocean, such as James Vigil, who wrote the seminal book on Latino gangs in Los Angeles, have also surmised that this is one of a number of factors that often leads to criminal activity. Vigil calls his theory multiple marginality, and it includes other factors inherent in the Trump administration's policies approach towards migrant communities.

This is something we also noticed while doing our three-year study on the Mara Salvatrucha (MS13) in the region. We talked to dozen of past and current gang members. Family upheaval was always part of a gang member's personal story.

What’s more, deportations along the border also push many into the criminal ranks, says Angelica Durán-Martínez, a professor at the University of Massachusetts, Lowell, and the author of a recent book on the politics of drug violence in Colombia and Mexico.

“While not all deportees end up engaging in criminal activities, a portion of them do, given that they are often released into border areas where OC (organized crime) has a strong presence, and where they have little social networks or possibilities for legal employment,” she told InSight Crime in an email exchange.

#### 4. It Destroys Trust Between Authorities and Migrant Communities Where Organized Crime and Gangs are Prevalent

There are two ways to measure this. The first is anecdotal. In this case, police chiefs in the United States working on the front lines to lower gang violence and crime rates say that vilifying migrant communities cuts off important channels of intelligence, as well as lowers chances that witnesses and potential collaborators will assist investigations.

The second is via proxy data. For example, there has been a drop in complaints about domestic abuse coming from Latino communities since President Donald Trump came into office. Domestic abuse complaints are relatively static.

#### 5. It Reduces Remittances, Which Could Increase Crime Rates

Trump’s overall strategy — which includes ending measures such as Temporary Protected Status for Hondurans and El Salvador — could greatly reduce the number of undocumented migrants in the United States. These migrants send money back to their countries. Reduce their numbers, and you reduce these remittances.

Remittances are, as this World Bank study notes, a mixed bag. They can help to reduce poverty and inequality, but they can deplete the local labor supply and “income-generating capacity” of the migrant households.

But a recent Inter-American Bank study also concluded that remittances “reduce homicide rates.” This, the authors argue, is partly the result of reducing poverty, increasing family investment in education, and creating jobs.

<b>HEADLINE</b>	<b>06/20 FBI: pre-attack behaviors active shooters</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/post-nation/wp/2018/06/20/active-shooters-usually-get-their-guns-legally-and-then-target-specific-victims-fbi-says/?utm_term=.9bd57d7247d8">https://www.washingtonpost.com/news/post-nation/wp/2018/06/20/active-shooters-usually-get-their-guns-legally-and-then-target-specific-victims-fbi-says/?utm_term=.9bd57d7247d8</a>
<b>GIST</b>	<p>The terror of an armed gunman opening fire in public places has become an all-too-common occurrence, affecting American schools, churches, offices, holiday parties, government facilities and movie theaters.</p> <p>While the attacks differ in location, level of carnage and the community affected, an FBI study released Wednesday found that a common element of the attacks lies with the shooters, who are frequently motivated by grievances in their lives, wielding guns they obtained legally and targeting specific victims when they open fire.</p> <p>The study, which examined dozens of active shooters between 2000 and 2013, found that contrary to</p>

the public perception of the episodes as being fueled by mental health issues — an assertion frequently given voice by politicians, including President Trump — law enforcement officials were only able to verify that about 25 percent of the attackers had diagnosed mental health issues.

The attackers, who almost always were men or boys, typically attacked places that were familiar to them. They had acted in ways that concerned the people around them ahead of the attacks, with many expressing a desire to carry out violent acts. And most used guns they acquired legally, oftentimes buying the weapons specifically for their attacks, the study concluded.

“Offenders don’t snap,” Andre Simons, supervisory special agent of the FBI’s Behavioral Analysis Unit and a co-author of the study, said in a telephone interview. “They don’t wake up one morning and suddenly decide to attack.”

Rather, the decision is part of “a long process,” Simons said. The study found that 77 percent of attackers spent a week or longer planning their violence, which “does take some forethought and design on the part of the offender,” he said.

The new study, a copy of which was provided to The Washington Post before it was published, examined 63 cases, focusing on the shooters and the actions that led up to their attacks. It is a sequel of sorts to a 2014 report the FBI released examining active shootings during the same time frame. That report identified 160 incidents fitting the definition of “an individual actively engaged in killing or attempting to kill people in a confined and populated area” — and it found that such attacks had become more frequent during that 13-year period.

Since then, the bureau has continued studying shooting rampages, and its findings have been grim. In 2017, the massacres at a concert in Las Vegas and inside a church in Sutherland Springs, Tex., were among 30 active shootings the FBI found nationwide, the most it has tracked in a single year.

After attacks like those or the rampages at high schools this year in Parkland, Fla., and Santa Fe, Tex., attention often turns to what could have prevented the bloodshed and what red flags might have been missed. Other research has found that most attacks came after people close to the shooters noticed worrisome behavior.

“Some of these concerning behaviors do presage violence,” said James Silver, a criminal justice professor at Worcester State University, one of the FBI study’s three authors.

The FBI study found that on average, each active shooter it examined “displayed four to five concerning behaviors over time.” About 1 in 3 shooters had made threats or confronted people they later targeted. More than half of them revealed their intentions to do something violent, a phenomenon called “leakage.”

Some of these attackers did not share their intentions with their eventual victims, but instead expressed a broader desire to hurt others. One shooter spoke to a gas station clerk about killing “a family,” the study found; another cited a desire to be a sniper. Others had shown concerning behavior or had multiple stresses in their lives, including one shooter who the study said was being abused at home, had conflicts with his peers and was facing discipline for abusing a teacher.

The study’s authors write that there was “no single warning sign, checklist, or algorithm for assessing behaviors that” suggest a potential rampage shooter. But they say the study is meant in part to help members of the public keep an eye out for warning signs.

“One of the biggest findings for me is that there was one person in every active shooter’s life who noticed some sort of concerning behavior,” said Sarah Craun of the FBI’s Behavioral Analysis Unit, the study’s third author. “Most of them had multiple concerning behaviors, between four and five. These were people who were already known to be struggling a little bit. There are actually some signs out there that people can see.”

The warning signs included threats and physical aggression, and the study found that most of the shooters “had a history of acting in an abusive, harassing, or oppressive way.” Others had abused their intimate partners or stalked people, highlighting again the recurrence of domestic violence in the lives of shooters before their violent attacks in public places.

The study’s authors say their work is unique among studies of rampage shooters because it relies “almost exclusively” on law enforcement files, rather than court records and media accounts. It examines a smaller pool of attacks than the 2014 study because it focused on the incidents where the FBI could obtain files with evidence including interviews with people who knew the shooters, personal writings or school and work records.

The files counter claims that rampage shooters must be mentally ill. Trump has been among those giving voice to this belief after shootings, calling the alleged Parkland shooter “mentally disturbed” and the Sutherland Springs attacker a “mental health problem.” The study found confirmed diagnoses of mental illnesses in 25 percent of the attackers, with some others exhibiting depression, anxiety and paranoia. But the authors noted that many Americans experience such symptoms, and say more thought should be given before concluding that a shooting has its roots in mental illness.

“Mental health does not automatically equate to violence, so we need to be very careful when we approach the motivations or the causes behind any active shootings,” Simons said. “Simply saying that all [shooters] must be mentally ill because it’s such a horrific and incomprehensible act is probably not accurate or helpful.”

Other research has similarly found tenuous links connecting shooting rampages and mental illness. In a 2015 study, Michael Stone, a clinical psychiatry professor at Columbia University, examined 235 people who carried out or attempted to carry out mass killings, and he concluded that about 22 percent could be considered mentally ill. An article published the same year in the academic journal *Annals of Epidemiology* found that “the large majority of people with mental disorders do not engage in violence against others, and that most violent behavior is due to factors other than mental illness.”

Experts have said that what mass killers often share is a sense of victimization and believe they are being persecuted or treated unfairly. The new FBI study reported similar findings. Most of the shooters examined were fueled by a grievance that “may not have been reasonable or even grounded in reality, but it appeared to serve as the rationale for the eventual attack, giving a sense of purpose to the shooter.”

In some cases, this grievance could stem from something like losing a job or being romantically rejected. Silver, the criminal justice professor, said most people would be upset in those situations, but their strongest feelings eventually dissipate.

“It’s the people for whom it doesn’t dissipate, and the people for whom that action, which may seem reasonable to everyone else in the world, becomes for the active shooter a cause, in that they have been unfairly, unjustly wronged,” Silver said. “It’s not the action itself, it’s their reaction to it that turns it into a grievance.”

HEADLINE	<b>06/19 Austin Texas vows to curtail arrests</b>
SOURCE	<a href="http://www.latimes.com/nation/la-na-austin-freedom-city-2018-story.html">http://www.latimes.com/nation/la-na-austin-freedom-city-2018-story.html</a>
GIST	Ever since the Texas legislature last year passed one of the country’s most aggressive “anti-sanctuary city” laws, some enclaves have fought officials over the extent to which police can ignore federal immigration law.

The state regulation known as Senate Bill 4 has been described by opponents as the “show your papers” law for allowing officers to ask about the immigration status of anybody arrested or detained.

Amid the controversy over sanctuary cities, Austin this month took its fight against strict immigration law enforcement a step further by declaring itself to be the first “freedom city” in Texas. City Council members unanimously passed two resolutions last week that will restrict police attempts to question immigrants about their status and curtail arrests for nonviolent crimes.

One of the new city resolutions requires officers who question immigrants about status to also say that their questions about immigration need not be answered. The other resolution directs police to avoid arrests for misdemeanors, including those for smoking marijuana, having drug paraphernalia, and taking part in petty theft — crimes that city data shows frequently end in arrests of black and Latino residents.

While Austin is among the country’s first so-called freedom cities, it’s part of a wider movement around decriminalizing low-level offenses and decreasing arrests. According to Local Progress, a national network of progressive city officials, some council members in El Paso and Dallas are also considering “freedom city” proposals.

“Poor people of color in our city are over-punished and over-incarcerated,” said Greg Casar, an Austin City Councilman who pushed for the resolutions. “If people are being arrested less, we can also prevent people from being put in the deportation pipeline.”

“We found that black and Latino residents comprised 75% of discretionary arrests for driving with licenses invalid in the city even though they are 45% of the population of the city,” Casar said. “Black residents are seven times more likely to be arrested for low-level marijuana violations despite having comparable rates of usage of marijuana to white residents.”

Casar said the new rules could prevent up to 1,000 low-level arrests each year. Austin police arrest around 30,000 people a year.

Austin’s new rules passed Friday after more than 100 residents spoke about them at a City Council meeting. While support was wide, groups differed on the need for the “freedom city” title, and what effect it will have.

Ken Casady, the Austin Police Assn. president, said that although the police union supported reducing arrests, misleading data were cited to garner support for the resolutions.

“We do arrest more blacks and Hispanics but the problem we have is that people do not want to look at the reasons why,” said Casady.

He said he thought marijuana usage in public was higher among among black and Latino residents. That, he believed, leads to disproportionate arrests even if overall usage by white residents was comparable.

“We will not tolerate being called racists,” Casady said. He added that officers do not regularly ask for immigration information when making arrests or writing tickets. “To us, this is a symbolic move,” he said of the freedom city vote.

Nelson Linder, president of the Austin chapter of the National Assn. for the Advancement of Colored People, said the new moniker largely amounted to city branding.

“We appreciate the gesture and the idea,” said Linder. “This city has a history of symbolic overtures, but has been inconsistent in providing the kind of leadership that will implement its own resolutions.”

“While the vote has been applauded, the Austin NAACP will continue to work toward more meaningful and substantial changes,” he said.

	<p>The group has focused on combating segregation and gentrification in the city, as well as boosting education and employment for African Americans in the city and Travis County. The region is still also recovering from a series of mail bombings this year that seemed to target black families. In March, a suspect in the bombings blew himself up as he was being chased by police.</p> <p>Many city activists celebrated the council’s decision.</p> <p>“These policies will protect the constitutional rights of immigrants and make sure that Austin is a safe place to live for everyone regardless of race or immigration status,” José Garza, director of the local nonprofit Workers Defense Project, said in a statement.</p> <p>Grassroots Leadership, an Austin nonprofit that pushed the initiative, said in a statement that the council’s move was an “important first step.”</p>

<b>HEADLINE</b>	<b>06/20 Spokane man jailed 21yrs for child porn</b>
<b>SOURCE</b>	<a href="http://www.khq.com/story/38473251/spokane-man-sentenced-to-21-years-for-production-of-child-pornography">http://www.khq.com/story/38473251/spokane-man-sentenced-to-21-years-for-production-of-child-pornography</a>
<b>GIST</b>	<p>SPOKANE COUNTY, Wash. - 22-year-old Freedom Woody of Spokane was sentenced Wednesday after having pleaded guilty to production of child pornography.</p> <p>According to information disclosed during court proceedings, investigators found Woody and a 13-year old girl from Oregon in a homeless camp near the Spokane River after the girl’s grandmother reported her missing. When interviewed by officers, Woody admitted having sex with her. A search of Woody’s phone revealed child pornography images of seven additional minor aged victims. Woody enticed the minors to engage in sexual activity with him, produced child pornography, and distributed several of the images.</p> <p>According to the U.S. Department of Justice, Woody was sentenced to a 21-year term of imprisonment, followed by a 30-year term of court supervision after he is released from federal prison. Upon release from prison, Woody will be required to register as a sex offender for the rest of his life.</p>

<b>HEADLINE</b>	<b>06/20 Child immigrants Va. center allege abuse</b>
<b>SOURCE</b>	<a href="https://www.apnews.com/afc80e51b562462c89907b49ae624e79/Young-immigrants-detained-in-Virginia-center-allege-abuse">https://www.apnews.com/afc80e51b562462c89907b49ae624e79/Young-immigrants-detained-in-Virginia-center-allege-abuse</a>
<b>GIST</b>	<p>WASHINGTON (AP) — Immigrant children as young as 14 housed at a juvenile detention center in Virginia say they were beaten while handcuffed and locked up for long periods in solitary confinement, left nude and shivering in concrete cells.</p> <p>The abuse claims against the Shenandoah Valley Juvenile Center near Staunton, Virginia, are detailed in federal court filings that include a half-dozen sworn statements from Latino teens jailed there for months or years. Multiple detainees say the guards stripped them of their clothes and strapped them to chairs with bags placed over their heads.</p> <p>“Whenever they used to restrain me and put me in the chair, they would handcuff me,” said a Honduran immigrant who was sent to the facility when he was 15 years old. “Strapped me down all the way, from your feet all the way to your chest, you couldn’t really move. ... They have total control over you. They also put a bag over your head. It has little holes; you can see through it. But you feel suffocated with the bag on.”</p> <p>In addition to the children’s first-hand, translated accounts in court filings, a former child-development specialist who worked inside the facility independently told The Associated Press this week that she saw kids there with bruises and broken bones they blamed on guards. She spoke on condition of anonymity because she was not authorized to publicly discuss the children’s cases.</p> <p>In court filings, lawyers for the detention facility have denied all allegations of physical abuse.</p> <p>Many of the children were sent there after U.S. immigration authorities accused them of belonging to violent gangs, including MS-13. President Donald Trump has repeatedly cited gang activity as justification for his crackdown on illegal immigration.</p> <p>Trump said Wednesday that “our Border Patrol agents and our ICE agents have done one great job” cracking down on MS-13 gang members. “We’re throwing them out by the thousands,” he said.</p> <p>But a top manager at the Shenandoah center said during a recent congressional hearing that the children did not appear to be gang members and were suffering from mental health issues resulting from trauma that happened in their home countries — problems the detention facility is ill-equipped to treat.</p> <p>“The youth were being screened as gang-involved individuals. And then when they came into our care, and they were assessed by our clinical and case management staff ... they weren’t necessarily identified as gang-involved individuals,” said Kelsey Wong, a program director at the facility. She testified April 26 before a Senate subcommittee reviewing the treatment of immigrant children apprehended by the Homeland Security Department.</p> <p>Most children held in the Shenandoah facility who were the focus of the abuse lawsuit were caught crossing the border illegally alone. They were not the children who have been separated from their families under the Trump administration’s recent policy and are now in the government’s care. But the facility there operates under the same program run by the U.S. Office of Refugee Resettlement. It was not immediately clear whether any separated children have been sent to Shenandoah Valley since the Trump administration in April announced its “zero tolerance” policy toward immigrant families, after the lawsuit was filed.</p> <p>The Shenandoah lockup is one of only three juvenile detention facilities in the United States with federal</p>

contracts to provide “secure placement” for children who had problems at less-restrictive housing. The Yolo County Juvenile Detention Facility in California has faced litigation over immigrant children mischaracterized as gang members. In Alexandria, Virginia, a board overseeing the Northern Virginia Juvenile Detention Center voted this week to end its contract to house federal immigration detainees, bowing to public pressure.

The Shenandoah detention center was built by a coalition of seven nearby towns and counties to lock up local kids charged with serious crimes. Since 2007, about half the 58 beds are occupied by both male and female immigrants between the ages of 12 and 17 facing deportation proceedings or awaiting rulings on asylum claims. Though incarcerated in a facility similar to a prison, the children detained on administrative immigration charges have not yet been convicted of any crime.

Virginia ranks among the worst states in the nation for wait times in federal immigration courts, with an average of 806 days before a ruling. Nationally, only about half of juveniles facing deportation are represented by a lawyer, according to Justice Department data.

On average, 92 immigrant children each year cycle through Shenandoah, most of them from Mexico and Central America.

Wong said many of the 30 or so children housed there on any given day have mental health needs that would be better served in a residential treatment unit. But such facilities are often unwilling to accept children with significant behavioral issues, she said.

Wong and other managers at the Shenandoah center, including Executive Director Timothy J. Smith, did not respond to phone and email messages seeking comment this week. A city manager on the local commission that oversees the facility referred questions to an official at the Refugee Resettlement agency, who did not respond to a phone message.

Financial statements reviewed by AP shows the local government commission that operates the center received nearly \$4.2 million in federal funds last year to house the immigrant children — enough to cover about two-thirds of the total operating expenses.

The lawsuit filed against Shenandoah alleges that young Latino immigrants held there “are subjected to unconstitutional conditions that shock the conscience, including violence by staff, abusive and excessive use of seclusion and restraints, and the denial of necessary mental health care.”

The complaint filed by the nonprofit Washington Lawyers’ Committee for Civil Rights and Urban Affairs recounts the story of an unnamed 17-year-old Mexican citizen apprehended at the southern border. The teen fled an abusive father and violence fueled by drug cartels to seek asylum in the United States in 2015.

After stops at facilities in Texas and New York, he was transferred to Shenandoah in April 2016 and diagnosed during an initial screening by a psychologist with three mental disorders, including depression. Besides weekly sessions speaking with a counselor, the lawsuit alleges the teen has received no further mental health treatment, such as medications that might help regulate his moods and behavior.

The lawsuit recounts multiple alleged violent incidents between Latino children and staff at the Shenandoah center. It describes the guards as mostly white, non-Spanish speakers who are undertrained in dealing with individuals with mental illness. The suit alleges staff members routinely taunt the Latino youths with racially charged epithets, including “wetback,” “onion head” and “pendejo,” which roughly translates to dumbass in Spanish.

A 16-year-old who said he had lived in Texas with his mother since he was an infant ended up at Shenandoah in September after a police officer pulled over a car he was riding in and asked for ID, which he couldn’t provide. As one of the few Latino kids who is fluent in English, the teen would translate for other detainees the taunts and names the staff members were calling them. He said that angered the guards, resulting in his losing such modest privileges as attending art classes.

“If you are behaving bad, resisting the staff when they try to remove you from the program, they will take everything in your room away — your mattress, blanket, everything,” he said. “They will also take your clothes. Then they will leave you locked in there for a while. This has happened to me, and I know it has happened to other kids, too.”

The immigrant detainees said they were largely segregated from the mostly white juveniles being held on criminal charges, but they could see that the other housing units had amenities that included plush chairs and video gaming consoles not available in the Spartan pods housing the Latinos.

In their sworn statements, the teens reported spending the bulk of their days locked alone in their cells, with a few hours set aside for classroom instruction, recreation and meals. Some said they had never been allowed outdoors, while the U.S.-born children were afforded a spacious recreation yard.

The Latino children reported being fed sparse and often cold meals that left them hungry, though meals of American fast food were occasionally provided. Records show Shenandoah receives nearly \$82,000 a year from the Agriculture Department to feed the immigration detainees.

The lawsuit said the poor conditions, frequent physical searches and verbal abuse by staff often escalated into confrontations, as the frustrated children acted out. The staff regularly responded “by physically assaulting the youth, applying an excessive amount of force that goes far beyond what is needed to establish or regain control.”

In the case of the Mexican 17-year-old, the lawsuit said a staff member who suspected him of possessing contraband threw him to the ground and forcibly tore off his clothes for an impromptu strip search. Though no forbidden items were found, the teenager was transferred to “Alpha Pod,” described in the lawsuit as a unit within the facility designated for children who engage in bad behavior.

The lawsuit said Latino children were frequently punished by being restrained for hours in chairs, with handcuffs and cloth shackles on their legs. Often, the lawsuit alleged, the children were beaten by staff while bound.

As a result of such “malicious and sadistic applications of force,” the immigrant youths have “sustained significant injuries, both physical and psychological,” the lawsuit said.

After an altercation during which the lawsuit alleged the Mexican teenager bit a staff member during a beating, he was restrained in handcuffs and shackles for 10 days, resulting in bruises and cuts. Other teens interviewed as part of the court case also reported being punished for minor infractions with stints in solitary confinement, during which some of the children said they were left nude and shivering in cold concrete cells.

Academic studies of prison inmates kept in solitary confinement have found they often experience high anxiety that can cause panic attacks, paranoia and disordered thinking that may trigger angry outbursts. For those with mental health issues, the effects can be exacerbated, often worsening the very behaviors the staff is attempting to discourage.

A Guatemalan youth sent to the center when he was 14 years old said he was often locked in his tiny cell for up to 23 hours a day. After resisting the guards, he said he was also restrained for long periods.

“When they couldn’t get one of the kids to calm down, the guards would put us in a chair — a safety chair, I don’t know what they call it — but they would just put us in there all day,” the teen said in a sworn statement. “This happened to me, and I saw it happen to others, too. It was excessive.”

A 15-year-old from Mexico held at Shenandoah for nine months also recounted being restrained with a bag over his head.

“They handcuffed me and put a white bag of some kind over my head,” he said, according to his sworn statement. “They took off all of my clothes and put me into a restraint chair, where they attached my hands and feet to the chair. They also put a strap across my chest. They left me naked and attached to that chair for two and a half days, including at night.”

After being subjected to such treatment, the 17-year-old Mexican youth said he tried to kill himself in August, only to be punished with further isolation. On other occasions, he said, he has responded to feelings of desperation and hopelessness by cutting his wrists with a piece of glass and banging his head against the wall or floor.

“One time I cut myself after I had gotten into a fight with staff,” the teen recounted. “I filled the room with blood. This happened on a Friday, but it wasn’t until Monday that they gave me a bandage or medicine for the pain.”

The lawsuit alleges other immigrant youths held at Shenandoah have also engaged in cutting and other self-harming behaviors, including ingesting shampoo and attempting to choke themselves.

A hearing in the case is set for July 3 before a federal judge in the Western District of Virginia.

<b>HEADLINE</b>	<b>06/20 Uganda unveils crime fighting measures</b>
<b>SOURCE</b>	<a href="http://www.businessinsider.com/r-ugandan-president-unveils-measures-to-curb-crime-wave-criticizes-police-2018-6">http://www.businessinsider.com/r-ugandan-president-unveils-measures-to-curb-crime-wave-criticizes-police-2018-6</a>
<b>GIST</b>	<p>KAMPALA (Reuters) - Uganda's President Yoweri Museveni accused some members of the security forces of conniving with criminals on Wednesday as he announced measures including the collection of DNA from all Ugandans to help curb surging crime.</p> <p>A flurry of unsolved murders and kidnappings for ransom has eroded Ugandans' trust in law enforcement bodies. The failure of police to issue an annual crime report since 2013 has fueled suspicions they are trying to conceal the scale of the problem.</p> <p>"Negligence and even collusion with the criminals by some elements in the security forces has been part of the problem," Museveni said during a special address to parliament on the state of national security.</p> <p>Museveni, in power since 1986, also said the police needed to show greater vigilance.</p> <p>"If you analyze recent murders there are always clues that sometimes are not followed," he said.</p> <p>Museveni said his government would organize the collection of DNA samples from the whole population to facilitate the identification of suspects. It would also require motor vehicles and motorcycles to buy electronic license plates.</p> <p>"This will enable us to know which vehicles or motorcycles were in which area if a crime is committed in different areas," he said, adding that the police would also be provided with drones to help track down criminals.</p> <p>Among recent crimes, unidentified men riding on motorcycles shot and killed a ruling party lawmaker with his bodyguard on June 8 near his home in a suburb of the capital Kampala.</p> <p>The assassination followed last year's killings of a senior police officer and at least 20 women whose bodies were dumped on road sides in Kampala. Several Muslim leaders have also been assassinated in recent years in different parts of the country.</p> <p>Last week an army general, Kale Kayihura, who was sacked as head of the police in March this year, was</p>

	arrested and the state media said his detention was in connection with the murder of a police official last year. He is yet to be charged.

<b>HEADLINE</b>	<b>06/21 Europe court rejects Breivik appeal</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-norway-breivik/european-human-rights-court-rejects-appeal-by-norwegian-mass-killer-idUSKBN1JH0UB">https://www.reuters.com/article/us-norway-breivik/european-human-rights-court-rejects-appeal-by-norwegian-mass-killer-idUSKBN1JH0UB</a>
<b>GIST</b>	<p>OSLO (Reuters) - The European Court of Human Rights rejected on Thursday an appeal by Norwegian mass killer Anders Behring Breivik who says his near-isolation in prison amounts to inhuman and degrading treatment.</p> <p>Breivik, who has legally changed his name to Fjotolf Hansen, killed 77 people in a car bombing in central Oslo and shooting spree on Utoeya island in 2011, the worst act of violence in the Nordic country since World War Two.</p> <p>The Strasbourg-based court “rejected the application as inadmissible for being manifestly ill-founded”, according to a ruling by a committee of three judges.</p> <p>“The decision is final,” it said.</p> <p>Breivik, an anti-Muslim right-wing fanatic, says his near-isolation in a three-room cell violates a ban on inhuman or degrading treatment and a right to privacy and family life under the European Convention on Human Rights.</p> <p>Oslo district court agreed with him in a 2016 ruling, but it was overturned by an appeals court in March 2017. Norway’s Supreme Court declined to hear his appeal in the case.</p> <p>Norway says that draconian measures, including hundreds of strip searches and no contact with other inmates, are justified for an unrepentant 39-year-old far-right extremist who could be attacked by other prisoners.</p> <p>Breivik is serving Norway’s longest sentence — 21 years with the possibility of an extension. His only contacts are lawyers and professionals such as guards and health workers.</p>

<b>SOURCE</b>	<a href="https://abcnews.go.com/US/pennsylvania-police-kill-17-year-fleeing-traffic-stop/story?id=56023716&amp;cid=clicksource_81_2_hero_headlines_headlines_hed">https://abcnews.go.com/US/pennsylvania-police-kill-17-year-fleeing-traffic-stop/story?id=56023716&amp;cid=clicksource_81_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>Police shot and killed an unarmed 17-year-old boy who fled from them near Pittsburgh Tuesday after he was pulled over in a car believed to have been connected to an earlier shooting that night, authorities said.</p> <p>The initial shooting was reported in North Braddock at 8:27 p.m., the Allegheny County Police Department said Wednesday.</p> <p>Responding officers found a 22-year-old man wounded, struck in the abdomen, police said.</p> <p>The shooter had fired nine rounds at the man from a passing car, police said. The victim also returned fire at the passing car, police said.</p> <p>The man was taken to a hospital and later released, police said.</p> <p>"Witnesses described the vehicle involved in the shooting, and the description was broadcast" to officers in</p>

	<p>the area, the Allegheny County police said in a news release Wednesday.</p> <p>An East Pittsburgh police officer spotted a car matching the description -- a silver Chevy Cruze -- and pulled the car over at 8:40 p.m., police said.</p> <p>The driver, 20, was ordered out of the car and directed to the ground, police said.</p> <p>But two other people who were in that car fled on foot, police said.</p> <p>The officer shot three times at one of the fleeing people -- the 17-year-old -- and struck him three times, police said.</p> <p>The 17-year-old, Antwon Rose, was taken to a hospital where he died, the medical examiner's office said.</p> <p>Rose did not have a weapon on him and none of the three suspects fired at officers, police said, adding that "two firearms were later recovered from the suspect vehicle."</p> <p>The driver was detained and later released, police said.</p> <p>But the other person who fled the silver Chevy Cruze remains at large, police said. That person's identity is unknown.</p>

The principle of 'Fair Use' was established as law by Section 107 of The Copyright Act of 1976. 'Fair Use' legally eliminates the need to obtain permission or pay royalties for the use of previously copyrighted materials if the purposes of display include 'criticism, comment, news reporting, teaching, scholarship, and research.' Section 107 establishes four criteria for determining whether the use of a work in any particular case qualifies as a 'fair use'. A work used does not necessarily have to satisfy all four criteria to qualify as an instance of 'fair use'. Rather, 'fair use' is determined by the overall extent to which the cited work does or does not substantially satisfy the criteria in their totality. If you wish to use copyrighted material for purposes of your own that go beyond 'fair use,' you must obtain permission from the copyright owner.

HEADLINE	06/17 State moves toward REAL ID compliance
SOURCE	<a href="https://www.seattletimes.com/seattle-news/changes-coming-to-washington-drivers-license-to-comply-with-feds/">https://www.seattletimes.com/seattle-news/changes-coming-to-washington-drivers-license-to-comply-with-feds/</a>
GIST	<p>In little more than two weeks, Washington residents renewing their driver's licenses will notice a small but important change.</p> <p>The state will begin marking standard driver's licenses, as well as identification cards, as not meeting federal standards.</p> <p>In the upper right side of a driver's license the words "Federal limits apply" will appear starting July 1. And those words could disrupt your travel plans starting Oct. 1, 2020. That's because the standard license or I.D. won't be accepted as identification if you want to board a commercial airliner.</p> <p>To fly, gain entry to military bases and enter certain other federal facilities, you'll need an enhanced license.</p> <p>It's a step toward meeting the Real ID Act passed by Congress in 2005, which heightened requirements for accepting documents at the federal level.</p> <p>While enhanced driver's licenses and I.D. cards have been available for years, most people have opted for the standard license or I.D. card, which will still be available. The state Department of Licensing has planned a public education program to explain the differences, but here are a few of the basics:</p> <p>What's the difference between a standard driver's license/I.D. card and an enhanced one?</p> <p>The standard driver's license will still provide identification and allow the operation of a motor vehicle but won't be accepted at airports by the Transportation Security Authority (TSA) after Sept. 30, 2020.</p> <p>The enhanced driver's license provides identification and allows the operation of a motor vehicle access to military bases and other federal facilities and will be accepted at airports for domestic travel. It also allows for re-entry into the U.S. at land and sea borders between the U.S., Canada, Mexico and the Caribbean.</p> <p>The same provisions apply to identification cards and enhanced I.D. cards, the difference being they don't allow driving.</p> <p>You can tell the two kinds of cards apart because language in the top right corner will state either "Federal limits apply" or be labeled "Enhanced" for the expanded privileges.</p> <p>A standard driver's license or I.D. card costs \$54. An enhanced driver's license or I.D. card will cost \$78. All are valid for six years.</p> <p>In order to obtain an enhanced document, you'll need documents providing your citizenship, identity, residence and a Social Security number. All documents must be originals or government-certified copies.</p> <p>Proof of citizenship can be a passport or passport card, a certificate of naturalization or citizenship, or a birth certificate. For identity, a U.S. passport, driver's license, state-issued I.D. card, U.S. military I.D. or</p>

	<p>government employee I.D. will work.</p> <p>To verify your Social Security number, you can bring a Social Security card or a pay stub or W-2 form with your Social Security number visible.</p> <p>You need two documents to prove residence in Washington state. Those can be a Washington school transcript or report card from a previous or current school year, a bill dated within two months, a Washington voter card, a pay check or stub within two months or several other documents. The full list can be found at <a href="http://www.dol.wa.gov">www.dol.wa.gov</a>.</p>

<b>HEADLINE</b>	<b>06/17 Midwest flash flooding, heat wave</b>
<b>SOURCE</b>	<a href="https://apnews.com/81072ccf03df48cda62bfc910a4db266/Midwestern-states-endure-flash-flooding,-heat-wave">https://apnews.com/81072ccf03df48cda62bfc910a4db266/Midwestern-states-endure-flash-flooding,-heat-wave</a>
<b>GIST</b>	<p>SUPERIOR, Wis. (AP) — Lines of thunderstorms crawled across northern Minnesota and northern Wisconsin on Sunday after overnight flash flooding washed out roads and highways, as a heat wave sent temperatures into the high 90s elsewhere in the Midwest.</p> <p>The National Weather Service issued flood warnings from east-central Minnesota across northwestern Wisconsin because of the potential for rainfall rates exceeding 2 inches per hour in some places.</p> <p>U.S. Highway 2, a major thoroughfare across northwestern Wisconsin, washed out early Sunday about 10 miles west of Ashland, the Bayfield County Sheriff’s Office reported. The Wisconsin Department of Transportation said a lengthy detour was in place. KBJR-TV reported that the waters surrounded an animal shelter along the highway in Ashland, forcing the owners to evacuate 15 dogs and four cats to a nearby farm.</p> <p>Storm runoff moving down the Nemadji River after two days of heavy rain and thunderstorms also raised concerns in Superior, Wisconsin. Mayor Jim Paine said officials expected the river to continue rising and flood U.S. Highway 2 on the east side of the city, which would require a “very lengthy detour” that he said may be impractical for most people, Minnesota Public Radio reported.</p> <p>“Residents of the Allouez and Itasca areas should prepare immediately as your way in and out of the rest of Superior may be cut off soon,” Paine said on Facebook late Sunday morning.</p> <p>Parts of Wisconsin Highway 35 were closed south of Superior in Douglas County due to flooding. And U.S. Highway 63 was shut down by flooding in the Drummond, Wisconsin, area, where the National Weather Service says more than 11 inches of rain fell overnight.</p> <p>In Minnesota, State Highway 23 was closed for repairs where it washed out at the Nemidji River bridge in Carlton County, about 14 miles southwest of Duluth, the Carlton County Sheriff’s Office said. The sheriff’s office said highway crews were also working Sunday on several other washouts and flooded roads.</p> <p>Temperatures reached the high 90s Sunday in Chicago, approaching if not surpassing the hottest June 17 on record — 96 degrees in 1957. Much of the region that wasn’t enduring storms was experiencing a similar heat wave.</p>

<b>HEADLINE</b>	<b>06/14 FBI vows bias training for employees</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jun/14/fbi-orders-bias-training-employees-after-latest-em/">https://www.washingtontimes.com/news/2018/jun/14/fbi-orders-bias-training-employees-after-latest-em/</a>

GIST

The FBI will make its employees undergo bias training, Director Christopher A. Wray promised Thursday, after a devastating report found the bureau made bad decisions, has a culture of leaking sensitive information, and may have skewed campaign-season decisions because of bias.

New text messages released by the Justice Department inspector general showing conversations between Deputy Assistant Director Peter Strzok and paramour FBI lawyer Lisa Page suggest a deep anti-Trump sentiment.

In one exchange, Ms. Page wanted reassurance that then-candidate Donald Trump couldn't win the election. Mr. Strzok replied: "No. No he's not. We'll stop it."

The inspector general also said the FBI was rife with people leaking to the press, or holding other cozy relationships that should worry the bureau. Some employees accepted sports tickets, went on golf outings, or had their dinners paid for by reporters.

That was in addition to the leaks themselves.

Only four FBI employees at headquarters are approved to speak directly to the press without specific authorization, but investigators said that was "widely ignored." They even drew up charts showing specific unnamed reporters' contacts with the press.

One reporter had more than 110 contacts with 18 different bureau employees, including special agents in charge, deputy assistant directors, lawyers and analysts, according to the chart.

"These leaks highlight the need to change what appears to be a cultural attitude among many in the organization," the audit concludes.

The FBI has been under fire for its operations during the 2016 campaign, when it was conducting several investigations into matters surrounding Democratic candidate Hillary Clinton, and also began a probe into Republican candidate Mr. Trump.

Mr. Trump fired FBI Director James B. Comey for his handling of the probe, and others have also been disciplined.

The new report said that while bias didn't appear to affect the big decisions in the handling of the initial investigation into Mrs. Clinton's email practices, they couldn't rule out a role for bias in pushing the FBI to focus on the Russia probe in October 2016, rather than go back to review a new set of emails found on the laptop of Anthony Weiner, who was married to Mrs. Clinton's top personal aide, Huma Abedin.

Mr. Wray said he's ordered a review of FBI procedures and how agents mix their political duties with personal opinions.

That, he said in his official reply to the report, "will further include political bias training."

At a press conference later, Mr. Wray said while the report exposed problems, it shouldn't be seen as a black mark on the FBI more broadly.

"Nothing — nothing in this report — impugns the integrity of our workforce as a whole, or the FBI as an institution," he said.

He added: "We're going to learn from this report and we're going to be better and stronger as a result."

Mr. Wray said the bureau has taken steps to try to get a handle on problems. Some people have been reassigned and cases have been referred to the FBI's internal personnel department for review.

He wouldn't say who was referred, saying it "would not be appropriate." But the inspector general's report

	<p>signaled</p> <p>“Once that process is complete we will not hesitate to hold people accountable,” Mr. Wray said.</p> <p>He also said the bureau has a new media policy to clamp down on leaks, and said he’s asked the personnel office to look at whether they need to increase penalties on those who do leak.</p> <p>He vowed “intensive training” for everyone to make it “painfully” clear what the standards and rules are.</p> <p>“We accept the findings of the report and the recommendations,” Mr. Wray said.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>06/16 US Navy seeks end BMD patrols</b>
<b>SOURCE</b>	<a href="https://www.defensenews.com/naval/2018/06/16/the-us-navy-is-fed-up-with-ballistic-missile-defense-patrols/">https://www.defensenews.com/naval/2018/06/16/the-us-navy-is-fed-up-with-ballistic-missile-defense-patrols/</a>
<b>GIST</b>	<p>The U.S. Navy’s top officer wants to end standing ballistic missile defense patrols and transfer the mission to shore-based assets.</p> <p>Chief of Naval Operations Adm. John Richardson said in no uncertain terms on June 12 that he wants the Navy off the tether of ballistic missile defense patrols, a mission that has put a growing strain on the Navy’s hard-worn surface combatants, and the duty shifted towards more shore-based infrastructure.</p> <p>“Right now, as we speak, I have six multi-mission, very sophisticated, dynamic cruisers and destroyers — six of them are on ballistic missile defense duty at sea,” Richardson said during his address at the U.S. Naval War College’s Current Strategy Forum. “And if you know a little bit about this business you know that geometry is a tyrant.</p> <p>“You have to be in a tiny little box to have a chance at intercepting that incoming missile. So, we have six ships that could go anywhere in the world, at flank speed, in a tiny little box, defending land.”</p> <p>Richardson continued, saying the Navy could be used in emergencies but that in the long term the problem demands a different solution.</p> <p>“It’s a pretty good capability and if there is an emergent need to provide ballistic missile defense, we’re there,” he said. “But 10 years down the road, it’s time to build something on land to defend the land. Whether that’s AEGIS ashore or whatever, I want to get out of the long-term missile defense business and move to dynamic missile defense.”</p> <p>The unusually direct comments from the CNO come amid growing frustration among the surface warfare community that the mission, which requires ships to stay in a steaming box doing figure-eights for weeks on end, is eating up assets and operational availability that could be better used confronting growing high-end threats from China and Russia.</p> <p>The BMD mission was also a factor in degraded readiness in the surface fleet. Amid the nuclear threat from North Korea, the BMD mission began eating more and more of the readiness generated in the Japan-based U.S. 7th Fleet, which created a pressurized situation that caused leaders in the Pacific to cut corners and sacrifice training time for their crews, an environment described in the Navy’s comprehensive review into the two collisions that claimed the lives of 17 sailors in the disastrous summer of 2017.</p> <p>Richardson said that as potential enemies double down on anti-access technologies designed to keep the U.S. Navy at bay, the Navy needed to focus on missile defense for its own assets.</p> <p>“We’re going to need missile defense at sea as we kind of fight our way now into the battle spaces we need to get into,” he said. “And so restoring dynamic maneuver has something to do with missile defense.</p>

The Navy has had some success with land-based BMD with its AEGIS Ashore system in Romania, which uses what looks like a cruiser superstructure with SPY arrays and missiles to create a missile defense shield. Another AEGIS Ashore is planned for Poland in 2020 and last year Japan announced plans to buy the system, which could relieve some of the pressure on 7th Fleet ships once operational.

AEGIS Ashore installations are run around the clock by three shifts of 11 personnel each.

Defense Secretary Jim Mattis has been outspoken about the need for the Navy to become less predictable and more agile to respond to an evolving security environment. Mattis thinks the kind of predictable rotational deployments that dispatch carriers to predictable locations such as the Persian Gulf are not appropriate with near-peer competitors making moves globally.

Instead, Mattis wants the Navy to pursue a concept called “dynamic force employment,” having the Navy deploy at odd times and show up in unexpected places, all the while spending less time underway to preserve surge readiness for a major conflict.

But BMD missions work against that kind of unpredictability and consume an out-sized portion of readiness the Navy generates through its deployment model.

Defense Secretary Jim Mattis has made clear as the military’s top civilian that he has a very different vision for how the military will be used in the future. Recent comments have hinted at big changes on the horizon for the Navy and how it deploys.

<b>HEADLINE</b>	<b>06/16 China warns airlines over territories</b>
<b>SOURCE</b>	<a href="http://www.latimes.com/business/la-fi-travel-briefcase-china-airlines-20180616-story.html">http://www.latimes.com/business/la-fi-travel-briefcase-china-airlines-20180616-story.html</a>
<b>GIST</b>	<p>A demand by China that all air carriers worldwide refer to Taiwan, Hong Kong and Macau on online maps and drop-down menus as Chinese territories — not as independent regions — is being ignored by the U.S.’s biggest airlines.</p> <p>At least for now.</p> <p>The order from Beijing came in May, and dozens of foreign-based carriers have already fallen in line.</p> <p>Earlier this week, the Associated Press confirmed that 20 carriers, including Air Canada, British Airways and Lufthansa, were referring to Taiwan as a part of China on their global websites. China claims democratic Taiwan as part of its territory, but the two have been ruled separately since the Chinese civil war of the 1940s.</p> <p>In a statement, China’s Foreign Ministry spokesman Geng Shuang said: “Foreign enterprises operating in China should respect China’s sovereignty and territorial integrity, abide by China’s law and respect the national sentiment of the Chinese people.”</p> <p>The White House, however, blasted the order, calling it “Orwellian nonsense.”</p> <p>Among those carriers that continue to include the name “Taiwan” on their maps or list of destinations are American, Delta, United and Hawaiian Airlines.</p> <p>American Airlines requested a 60-day extension — until July 25 — from the Chinese order. An American Airlines spokesman declined to discuss the matter except to say: “We are consulting with the U.S. government on the matter.”</p> <p>In a statement, Delta said: “We are reviewing the Civil Aviation Administration of China’s request and</p>

	<p>will remain in close consultation with the U.S. Government throughout this process.”</p> <p>China has yet to say what punishment it may impose on airlines that defy its order. But a financial penalty or other punishment could create complications for China because the biggest U.S. airlines that fly to Taiwan and other Chinese destinations often do so through partnerships with China-based carriers such as Shanghai Airlines, China Airlines and China Eastern Airlines.</p>

<b>HEADLINE</b>	<b>06/15 Seattle clears unsanctioned I-90 camp</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1021137/seattle-clears-homeless-camp/">http://mynorthwest.com/1021137/seattle-clears-homeless-camp/</a>
<b>GIST</b>	<p>Seattle police officers with the Navigation Team spent Friday clearing about a dozen people from an unsanctioned homeless camp near I-90 and Rainier Avenue.</p> <p>The city acknowledges more than 400 unsanctioned homeless camps.</p> <p>KIRO 7 was on the scene and asked why this camp, why now, and what happens to the people being cleared out.</p> <p>“We have to remove the encampments that pose the most significant public health and safety impacts,” Navigation Team spokesperson Will Lemke told KIRO 7 anchor John Knicely, who then asked what makes this camp fit the criteria. “For this one it’s obstructing public right of way, it is exposed to vehicular traffic, there is trash accumulation especially to the south here.”</p> <p>Lemke also says people living in the camp routinely crossed an I-90 on-ramp to access it.</p> <p>The vast majority of the unsanctioned homeless camps meet the city’s criteria to be removed, but the Navigation Team says the lack of available shelter is stopping it.</p> <p>“We can’t remove an encampment unless we have space in our shelter system,” Lemke said. “So, depending on the capacity, dictates how many encampments we can close down.”</p> <p>The city identified 20 open spots in area shelters on Friday. That’s enough for everyone living there, including eight spots at First Presbyterian.</p>

<b>HEADLINE</b>	<b>06/15 USDA: Calif. virulent Newcastle disease</b>
<b>SOURCE</b>	<a href="http://www.dvm360.com/virulent-newcastle-disease-found-backyard-chickens-california">http://www.dvm360.com/virulent-newcastle-disease-found-backyard-chickens-california</a>
<b>GIST</b>	<p>In mid-May, the USDA Animal and Plant Health Inspection Service (APHIS) confirmed virulent Newcastle disease in a small flock of backyard exhibition chickens in Los Angeles County, according to an agency release. Since that time, the disease has also been found in flocks in San Bernardino County.</p> <p>These are the first cases of virulent Newcastle disease, formerly called exotic Newcastle disease, in the United States since 2003, the release states.</p> <p>Virulent Newcastle disease is a contagious and fatal viral disease that affects the respiratory, nervous and digestive systems of birds and poultry, the release states. It is so virulent that many birds and poultry die without showing clinical signs, and a death rate of almost 100 percent can occur in unvaccinated flocks. It can even infect and kill vaccinated poultry.</p> <p>Besides sudden death, clinical signs of the disease include sneezing; gasping for air; nasal discharge; coughing; greenish, watery diarrhea; decreased activity; tremors; drooping wings; twisting of the head and neck; circling; complete stiffness; and swelling around the eyes and neck, the release states. Images</p>

	<p>of some of these signs are available here.</p> <p>APHIS notes that no human cases of the disease have ever occurred from eating poultry products and that properly cooked poultry products are safe to eat. In very rare cases, people working directly with sick birds can become infected, though symptoms are usually mild and limited to conjunctivitis or influenza-like symptoms. The use of personal protective equipment can easily prevent infection in humans, the release says.</p>

<b>HEADLINE</b>	<b>06/16 Greece: stage set for historic accord</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/world/greek-prime-minister-survives-no-confidence-vote-parliament-n883946">https://www.nbcnews.com/news/world/greek-prime-minister-survives-no-confidence-vote-parliament-n883946</a>
<b>GIST</b>	<p>ATHENS — Greek Prime Minister Alexis Tsipras survived a no-confidence motion in parliament on Saturday, setting the stage for the signing of a historic accord with neighboring Macedonia to settle a long dispute over the latter's name.</p> <p>The motion brought by the opposition New Democracy party was rejected by 153 MPs, with 127 in favor. Political opponents had accused Tsipras of making too many concessions over the deal, due to be signed on Sunday.</p> <p>Thousands of Greeks protested outside parliament against the accord with Macedonia, calling for Tsipras to resign. Police used stun grenades and tear gas to prevent them from entering the building.</p> <p>"This is a deal I believe that every Greek prime minister would want," Tsipras told the chamber earlier.</p> <p>Had he lost, the leftist elected in 2015 would have had to relinquish his mandate to the country's president, signaling early elections. He is already trailing center-right New Democracy in opinion polls.</p> <p>Greece had been in dispute with Macedonia since 1991 over the former Yugoslav republic's name, arguing it could imply territorial claims over the Greek province of Macedonia and an appropriation of ancient Greek culture and civilization.</p> <p>The subject is a deeply emotional one for many Greeks. On Saturday, protesters outside the parliament building shouted "traitor, traitor!" as lawmakers debated inside.</p> <p>"I'm just furious," said Theologos Ambotis, 69, a monk. "Conceding on the name is conceding on territory. Macedonia and Alexander the Great is Greek history and culture, and they are just giving it away to Skopje."</p> <p>Under the terms of the accord, the country will be known as "Republic of North Macedonia" and Greece will lift its objections to the renamed nation joining the European Union and the NATO military alliance.</p> <p>Greek foreign minister Nikos Kotzias and his Macedonian counterpart Nikola Dimitrov will sign the pact in the border lake region of Prespes on Sunday morning. Tsipras and Macedonian premier Zoran Zaev will also be present.</p> <p>It will require ratification by both national parliaments and approval in a Macedonian referendum, which is not assured.</p> <p>The president of Macedonia has said he will not endorse the pact, while in Greece, Tsipras's right-wing coalition partners have said their lawmakers will reject it when it is brought for ratification. That is expected to occur by the end of the year.</p> <p>Protests were scheduled on both sides of the border on Sunday.</p>

	<p>One lawmaker with the right-wing Independent Greeks, Tsipras's coalition partner, sided with New Democracy on the motion, bringing applause from opposition politicians. He was promptly expelled by the party's leader.</p> <p>The expulsion brings Tsipras's majority in parliament to 153 MPs out of a total in the chamber of 300. New Democracy leader Kyriakos Mitsotakis called the accord an affront, and the Tsipras government a 'nightmare'.</p> <p>"This government should go before it does more damage, this time national damage," he said.</p>

<b>HEADLINE</b>	<b>06/15 FEMA rejects 60% Puerto Rico requests</b>
<b>SOURCE</b>	<a href="https://slate.com/technology/2018/06/hurricane-maria-aftermath-fema-rejects-60-percent-of-assistance-requests.html">https://slate.com/technology/2018/06/hurricane-maria-aftermath-fema-rejects-60-percent-of-assistance-requests.html</a>
<b>GIST</b>	<p>Many Puerto Ricans have a jaundiced view of the federal response to Hurricane Maria: Federal aid was slow to materialize compared with aid to Texas, and President Trump appeared at times glib and dismissive of the island's plight. High on the ledger of residents' catalog of grievances is the hefty number of people who have been rebuffed for repair grants from FEMA: In March, lawyers and community groups said that the agency had denied about 60 percent of household applications in Puerto Rico, often because families could not prove ownership of their homes.</p> <p>FEMA's denial rate for individual assistance is always high— about 30 percent of Texans were rejected for Harvey-related requests by January. But as of March, FEMA grant denials in Puerto Rico after Maria nearly double that number. In a series of interviews, lawyers and residents told me that FEMA presided over a poorly managed process that failed to account for the island's unique customs.</p> <p>In the early days of the disaster response, FEMA's appraisal efforts were flanked by errors. Contract inspectors assessing property damage on the island had limited Spanish-speaking ability and struggled in an unfamiliar terrain. Puerto Ricans living in remote mountainous regions waited months for FEMA assessors to arrive. The application process itself was taxing for residents—without working cellphones and internet access, merely asking for help was a hurdle.</p> <p>Veronica Gonzalez, a lawyer who assisted residents claiming aid, characterized the initial response as poorly tailored to the island: "Inspectors would arrive unannounced and unidentified," she says. Because of Spanish-language limitations, they "sometimes couldn't explain to people why they were there."</p> <p>But even as those problems eased, another issue persisted: residents' inability to produce deeds showing home ownership. In the aftermath of a hurricane, when people lose their homes, they also tend to lose bank documents and housing deeds that were stored in those homes. As a condition of approval for individual assistance, lawyers told me that FEMA often insisted on formal proof of title that was unworkable.</p> <p>In the aftermath of a hurricane, when people lose their homes, they also tend to lose bank documents and housing deeds that were stored in their homes.</p> <p>FEMA's demand for proof of ownership was also an insurmountable barrier for thousands of Puerto Ricans who live in informal settlements: sprawling cliques of houses clustered in rural areas outside San Juan and in coastal stretches bordering the capital city. And Puerto Rico maintains property traditions that are distinct from the mainland—homes and land are often inherited without a formal transfer of title or deed.</p> <p>Accordingly, only about 65 percent of properties on the island are officially registered with the</p>

government in the first place. And many unregistered homes were seriously damaged or destroyed in Maria's wake.

As concerns mounted, FEMA took steps to lessen documentation requirements, including considering sworn affidavits from people without deeds. But several lawyers who spoke to me say that the change occurred late in the game, and that some applications bolstered by affidavits are still getting denied. Natasha Bannan, an attorney with LatinoJustice, an organization that helped to coordinate a behemoth effort to provide legal assistance to Puerto Ricans seeking aid after Maria, offered a frank assessment of FEMA's performance: "It was wholly inadequate," she said. "It's been a really piecemeal approach to systemic issues."

Locals I spoke with argue that the next time a disaster hits Puerto Rico, FEMA should ease documentation requirements from the start, hire locals more quickly, and train staff so that information is accessible and standards are applied consistently.

Several lawyers on the island told me that declarative statements signed under penalty of perjury should count toward meeting FEMA's standards to show occupancy in addition to notarized affidavits. And my conversations with residents yielded a common refrain: FEMA should offer a way to apply for aid unshackled from internet or phone access in a sustained power outage. Spanish-speaking staff must fan out through the island early, helping people to fill out applications and assisting with inspections.

Still, residents say that the size of the federal grants FEMA typically gives out in many cases isn't sufficient to address their pleas for succor. FEMA's average award in Puerto Rico is just a few thousand dollars, a fraction of the agency's upper limit for grants under the program.

The last day for Puerto Ricans affected by Maria to register to apply for individual disaster assistance from FEMA is Monday, June 18.

<b>HEADLINE</b>	<b>06/15 Nicaragua no closer to ending violence</b>
<b>SOURCE</b>	<a href="https://www.npr.org/2018/06/15/620467411/after-nationwide-strike-nicaragua-looks-no-closer-to-bloodsheds-end">https://www.npr.org/2018/06/15/620467411/after-nationwide-strike-nicaragua-looks-no-closer-to-bloodsheds-end</a>
<b>GIST</b>	<p>On Thursday, after nearly two months of violence and upheaval, some residents who ventured into Nicaragua's city streets Thursday discovered something that had become something of a rarity: quiet.</p> <p>A 24-hour nationwide strike left thoroughfares deserted and storefronts empty — and though even the massive walkout couldn't prevent several deadly clashes, the day at least tempered some of the violence between security forces and the demonstrators protesting President Daniel Ortega.</p> <p>Then, it ended.</p> <p>Friday brought fresh clashes between riot police and protesters, adding more sorrow to a ledger that has been mounting since mid-April, when Ortega's government introduced — then quickly retracted — a group of widely unpopular pension reforms. Despite their hasty reversal, the attempted reforms prompted a largely student-led protest movement that is calling for expedited elections, in hopes of ousting the longtime president.</p> <p>What began as a series of peaceful protests was met with a brutal state response, and soon deteriorated into outright bloodshed.</p> <p>Local human rights groups say the number of people killed in the unrest since April 18 could range as high as at least 165. That toll includes a 15-year-old altar boy shot dead Thursday in the city of Leon by pro-Ortega paramilitary fighters, according to local journalists.</p> <p>The Inter-American Commission on Human Rights called for the dismantling of such armed paramilitary gangs, sometimes called "Sandinista mobs," which have been attacking protesters with the tacit approval of government forces.</p> <p>"The Nicaraguan State must take urgent measures to immediately end arbitrary attacks on the lives and personal integrity of all Nicaraguans, with no distinctions whatsoever, including their political views," Antonia Urrejola, the commission's rapporteur for Nicaragua, said in a statement Thursday.</p> <p>"The State has an obligation to seek a peaceful solution for the country's situation," he added, " and to investigate and punish the people responsible for all acts of violence."</p> <p>Students with homemade mortars stand guard behind makeshift shields and barricades Tuesday at the National University in Managua, which has been occupied by protesters for more than a month.</p> <p>For those seeking such a peaceful resolution, Friday brought a small measure of hope.</p> <p>Powerful Catholic clergy gathered Friday for mediation talks — resuming them after the conference of Catholic bishops called the dialogue off late last month in response to a particularly bloody crackdown on a massive march. Late Friday night, the group called for the government to consider acceding to the</p>

	<p>protesters' demand for an early general election, Reuters reported.</p> <p>Still, progress was halting. Government officials demanded that protesters tear down their barricades, while opposition groups expressed reservations at making any concessions while the violence was ongoing.</p> <p>"Every bullet that kills a young person on the street also strikes this discussion," said one activist, according to AFP, "and ends the dialogue."</p>

<b>HEADLINE</b>	<b>06/16 Fear of unfolding trade war</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/06/16/business/tariffs-trade-war.html">https://www.nytimes.com/2018/06/16/business/tariffs-trade-war.html</a>
<b>GIST</b>	<p>LONDON — Only a few months ago, the global economy appeared to be humming, with all major nations growing in unison. Now, the world's fortunes are imperiled by an unfolding trade war.</p> <p>As the Trump administration imposes tariffs on allies and rivals alike, provoking broad retaliation, global commerce is suffering disruption, flashing signs of strains that could hamper economic growth. The latest escalation came on Friday, when President Trump announced fresh tariffs on \$50 billion in Chinese goods, prompting swift retribution from Beijing.</p> <p>As the conflict broadens, shipments are slowing at ports and airfreight terminals around the world. Prices for crucial raw materials are rising. At factories from Germany to Mexico, orders are being cut and investments delayed. American farmers are losing sales as trading partners hit back with duties of their own.</p> <p>Workers in a Canadian steel mill scrambled to recall rail cars headed to the United States border after Mr. Trump this month slapped tariffs on imported metals. A Seattle customer soon canceled an order.</p> <p>"The impact was felt immediately," said Jon Hobbs president of AltaSteel in Edmonton. "The penny is really dropping now as to what this means to people's businesses."</p> <p>The Trump administration portrays its confrontational stance as a means of forcing multinational companies to bring factory production back to American shores. Mr. Trump has described trade wars as "easy to win" while vowing to rebalance the United States' trade deficits with major economies like China and Germany.</p> <p>"Just talking about protectionism is causing trouble," said Marie Owens Thomsen, global chief economist at Indosuez Wealth Management in Geneva. "It's an existential risk to the world economy."</p> <p>After two years of expansion, airfreight traffic was flat over the first three months of the year, according to the International Air Transport Association. Dips have been especially pronounced in Europe and Asia.</p> <p>Container ships, the workhorses of global commerce, have seen no growth in freight since last fall in seasonally adjusted terms, according to a key index.</p> <p>A gauge of world trade tracked by Oxford Economics, a research firm in London, recently registered its weakest showing since early 2017.</p> <p>"Let us not understate the macroeconomic impact," the managing director of the International Monetary Fund, Christine Lagarde, warned this past week about trade conflicts. "It would be serious, not only if the United States took action, but especially if other countries were to retaliate, notably those who would be most affected, such as Canada, Europe and Germany."</p>

Threats to trade are emerging just as the global economy contends with other substantial challenges.

The Trump administration's decision to reinstate sanctions on Iran has lifted oil prices, adding pressure to importers worldwide. Europe's economy is weakening, with Germany — the continent's largest economy — especially vulnerable. Central banks in the United States and Europe are withdrawing the cheap money they sent coursing through the global financial system after the crisis of 2008, lifting borrowing costs.

The Trump administration has embroiled the United States in increasingly acrimonious conflicts with huge trading partners.

The United States last year imported more than \$600 billion in goods and services from Canada and Mexico, the two other nations in the North American Free Trade Agreement — a deal Mr. Trump has threatened to blow up. Americans bought more than \$500 billion in wares from China, and another \$450 billion from the European Union. Collectively, that amounts to nearly two-thirds of all American imports.

“If you seriously disrupt any of these three, you're going to feel the effects,” said Adam Slater, lead economist at Oxford Economics. “If you disrupt all three at once, you're going to feel it quite severely.”

In Houston, still recovering from the devastation inflicted by Hurricane Harvey, the steel tariffs loom like another storm on the horizon.

The Greater Port of Houston, a network of nearly 200 terminals lining 25 miles of channel, is one of the busiest seaborne cargo hubs on the planet. It is also a major local employer, and the largest importer of steel in North America. Steel imports have been surging, especially pipes used by the energy industry.

Sixteen years ago, when President George W. Bush put tariffs on steel, imports fell substantially. Such memories now stoke modern-day fears.

“We're kind of in a wait-and-see mode,” said Roger Guenther, executive director for the Port of Houston Authority.

For companies that make steel and aluminum, the American tariffs have presented a direct and menacing challenge to their businesses.

At Alta, the steel mill in Edmonton, the metals tariffs delivered an immediate crisis. Roughly one-fifth of the company's business involves shipping steel to American customers.

Suddenly, the border separating Canada from the United States was effectively enshrouded in fog. The company redirected rail cars destined for customers in the United States, incurring extra freight charges reaching 100,000 Canadian dollars (about \$76,000).

Lawyers for some of Alta's customers have suggested that certain products might be classified to avoid tripping the American tariffs, which apply only to specific types of steel. Yet for now, the company is waiting for rulings from overwhelmed American customs officials.

“We do not know when we will get an answer out of the U.S. government,” Mr. Hobbs said. “Nobody, including the U.S. border protection agency, knows what to do.”

Across Europe, steel makers fret about an indirect consequence of Mr. Trump's tariffs — cheap Chinese steel previously destined for the United States, now redirected to their continent.

“We have seen increases,” said Mathias Ternell, international affairs director at Jernkontoret, a Swedish steel industry association in Stockholm. “This is what Swedish companies and European companies worry about the most.”

Mr. Trump portrays trade hostilities as a necessary corrective to the United States' trade deficits with other nations. But economists and business leaders note that many imports are components that are used to manufacture goods at American factories.

For buyers of steel and aluminum inside the United States, the tariffs have increased prices, discouraging investment.

Electrolux, the Swedish manufacturer of household appliances, recently postponed plans to upgrade a stove factory in Tennessee, citing uncertainties created by the tariffs.

In the suburbs of Austin, Tex., Matt Bush, vice president of a small company that makes structures used in office buildings and retail spaces, said steel tariffs would force his company to pay as much as \$50,000 a month extra for metal.

"You have to imagine all the people who are purchasing raw steel and aluminum for input into their business are in the same predicament," he said. "And it's probably staggering how far that reaches."

Spain has emerged from a depression to become one of the fastest growing economies in Europe. Trade conflict is directly challenging that trajectory.

In the Spanish city of Toledo, Extol, a company that makes parts for the automobile and railroad industries, has recently seen customers demand supply contracts lasting no more than three months, rather than the usual one-year duration. With the price of aluminum rising, buyers are reluctant to commit, said the company's chief executive, Fernando Busto.

"We are watching events with enormous worry," Mr. Busto said. "The political decisions of Donald Trump are resulting in turbulence and volatility."

Far beyond the realm of metal, the impact of trade skirmishes are rippling out, hitting small businesses and consumers.

In Mexico, anxiety about trade has persisted ever since Mr. Trump took office, given his threats to tear up the North American Free Trade Agreement, and his designs on constructing a wall along the border. Ordinary Mexicans have absorbed the hit as the peso has plunged in value, raising the cost of everyday goods from the United States.

"That president is driving us to bankruptcy," said Gustavo Ferreyra Olivares, a fruit seller who has operated a stall at a covered market in Mexico City for 35 years. "Trump is the one who has raised the prices."

Most of the fresh fruit at his stall was grown in Mexico. But Granny Smith apples nestled in molded cardboard bore the USA label. So did a pile of glistening Gala apples, and neat lines of Red Delicious.

Under Nafta, Mexico has grown into the world's largest importer of American apples. But sales are down because the price has gone up by nearly one-fifth in the past week alone.

The Mexican government recently imposed 20 percent tariffs on American apples in response to Mr. Trump's duties on steel. That will make it harder for Mr. Ferreyra to sell his American produce. He envisions farmers hurting on the other side of the border, too.

"Mexico is a big importer of apples," he said. "If we decide to boycott them, they will all have to stay up there."

Global commodities markets are wrestling with the impacts of trade conflict, especially as China seeks alternatives to American suppliers.

	<p>In recent years, as the ranks of China's middle class have grown, so has the national appetite for pork. Raising growing numbers of pigs has forced China to import increasing volumes of American soybeans.</p> <p>But China has taken direct aim at American farms in retaliation for Mr. Trump's metals tariffs, threatening duties on soybeans from the United States. Chinese pork producers have turned their sights to Brazil and Argentina, the only countries that now produce enough soybeans to offer a potential alternative to the American supply.</p>

<b>HEADLINE</b>	<b>06/18 US details \$38B tariffs; Beijing retaliates</b>
<b>SOURCE</b>	<a href="https://www.zdnet.com/article/us-details-tariffs-to-hit-34b-of-chinese-goods-beijing-retaliates/">https://www.zdnet.com/article/us-details-tariffs-to-hit-34b-of-chinese-goods-beijing-retaliates/</a>
<b>GIST</b>	<p>China and the United States have kicked off a tit-for-tat exchange of trade tariffs, with the US introducing a 25 percent tariff on \$38 billion worth of Chinese goods to take effect from July 6.</p> <p>Over the weekend, Beijing hit back with tariffs on the same dollar amount of American goods.</p> <p>In April, the Trump administration outlined around 1,300 products worth \$50 billion that would be hit with the proposed tariff. On Friday, that list had been reduced to 1,102 items of the same value, with 818 items worth \$34 billion set to be hit with tariffs from July, and the \$16 billion remainder to undergo further review and a public hearing on July 24 before a final determination is made.</p> <p>"We must take strong defensive actions to protect America's leadership in technology and innovation against the unprecedented threat posed by China's theft of our intellectual property, the forced transfer of American technology, and its cyber attacks on our computer networks," said United States Trade Representative Robert Lighthizer.</p> <p>"China's government is aggressively working to undermine America's high-tech industries and our economic leadership through unfair trade practices and industrial policies like 'Made in China 2025'. Technology and innovation are America's greatest economic assets, and President Trump rightfully recognises that if we want our country to have a prosperous future, we must take a stand now to uphold fair trade and protect American competitiveness."</p> <p>For its part, China said it "doesn't want a trade war" but has to "fight back strongly", a Commerce Ministry statement said on Saturday.</p> <p>In a statement on Friday, US President Donald Trump promised further action if Beijing hit back.</p> <p>"The United States will pursue additional tariffs if China engages in retaliatory measures, such as imposing new tariffs on United States goods, services, or agricultural products; raising non-tariff barriers; or taking punitive actions against American exporters or American companies operating in China," Trump said.</p> <p>Australian Trade Minister Steve Ciobo said the trade war between China and the United States will hurt global growth and job creation.</p> <p>"None of this is good for global trade. These moves will provide a further drag on global growth, and that's a net negative," Ciobo told reporters in Sydney on Saturday.</p> <p>Ciobo said it is too early to say how the tariffs would affect Australia.</p> <p>"As we see these tariffs go up on both sides -- China-USA , Canada-USA, Mexico-USA, Europe-USA -- these are drags on global growth, they're drags on opportunities to create employment," he said.</p>

	<p>The trade minister said a third of Australia's GDP growth had come from new export markets opened up in China, Japan, Korea, and Singapore thanks to free trade deals.</p> <p>Washington began the process of installing tariffs on certain Chinese imports in March.</p> <p>"We have a trade deficit, depending on the way you calculate, of \$504 billion, now some people would say it is really \$375 billion," Trump said at the time. "Many different ways of looking at it, but any way you look at it, it is the largest deficit of any country in the history of our world -- it's out of control.</p> <p>"We are doing things for this country that should have been done for many, many years -- we've had this abuse by many other countries and groups of countries that were put together in order to take advantage of the United States, and we don't want that to happen, we're not going to let that happen."</p> <p>After Washington slapped a seven-year ban on Chinese telecommunications equipment giant ZTE in May, Trump reversed course and the US has now reached a deal with ZTE that will see it pay a \$1 billion fine and change its board.</p> <p>White House trade adviser Peter Navarro said last week the deal was a personal favour to the Chinese president, and said if the company fell foul of the US one more time, it would be shut down.</p>

<b>HEADLINE</b>	<b>06/18 US port infrastructure limits oil sector</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Energy-News/2018/06/18/US-oil-sector-limited-by-port-infrastructure/5821529317457/?utm_source=fp&amp;utm_campaign=ts_eng&amp;utm_medium=22">https://www.upi.com/Energy-News/2018/06/18/US-oil-sector-limited-by-port-infrastructure/5821529317457/?utm_source=fp&amp;utm_campaign=ts_eng&amp;utm_medium=22</a>
<b>GIST</b>	<p>June 18 (UPI) -- Without improvements to port facilities, the U.S. crude oil market could find itself increasingly landlocked, a market analyst said.</p> <p>The Organization of Petroleum Exporting Countries in their monthly market report, published last week, said non-OPEC supply in the second half of the year is expected to increase by 2 million barrels per day over last year. Of that, the United States is the main contributor to growth, with an estimated 1.4 million barrels per day.</p> <p>The United States is now an oil exporter, though infrastructure necessary to move the oil to the market can't keep up with production trends. A report from consultant group IHS Markit found it was the lack of infrastructure, not the lack of spending on exploration and production, that presented a growth challenge for the U.S. energy sector.</p> <p>Last week, officials at the Port of Corpus Christi said they secured nearly \$23 million from the U.S. Army Corps of Engineers to help deepen and widen the waterway. More funding is expected for a project slated for completion by the early part of the next decade.</p> <p>Sandy Fielden, the director for oil and products research at Morningstar, told UPI that new pipelines from inland shale basins will increase the flow of crude oil to the port by more than 1.5 million bpd by the second half of next year.</p> <p>"Without the channel improvements the Port of Corpus Christi seeks, the next congestion point will invariably be export docks at Corpus," he said during the weekend.</p> <p>A report from the U.S. Energy Information Administration found export levels are increasing even though terminals on the southern U.S. coast can't load the largest types of carriers. Those vessels, dubbed Very Large Crude Carriers, are the most economic for crude oil transportation.</p> <p>"The inability to fully load larger and more cost-effective vessels has pricing implications for U.S. crude oil exports," the EIA's report read. "Using a number of smaller ships requires a wider price spread between</p>

	<p>U.S. crude oil and international crude oil prices to compensate for the lower economies of scale."</p> <p>The spread is the difference in price between West Texas Intermediate, the U.S. benchmark, and Brent, the global benchmark. The spread as of Monday morning was \$9.48 per barrel with the premium for Brent.</p> <p>Most ports on the Gulf of Mexico can only accommodate vessels with a capacity of 500,000 barrels. Larger classes can carry twice that amount.</p>

<b>HEADLINE</b>	<b>06/17 Texas BP facility houses children</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/inside-united-states-border-patrol-facility-mcallen-texas-tour-today-2018-06-17/">https://www.cbsnews.com/news/inside-united-states-border-patrol-facility-mcallen-texas-tour-today-2018-06-17/</a>
<b>GIST</b>	<p>McALLEN, Texas -- Inside an old warehouse in South Texas, hundreds of children wait in a series of cages created by metal fencing. One cage had 20 children inside. Scattered about are bottles of water, bags</p>

of chips and large foil sheets intended to serve as blankets.

One teenager told an advocate who visited that she was helping care for a young child she didn't know because the child's aunt was somewhere else in the facility. She said she had to show others in her cell how to change the girl's diaper.

The U.S. Border Patrol on Sunday allowed reporters, including CBS News correspondent David Begnaud, to briefly visit the 55,000-square foot facility.

Begnaud said the facility "felt very sterile" and there were "chain-link fences from the floor to the ceiling with netting at the very top." He said that detentions in the facility lasted between 12 to 36 hours.

The facility holds families arrested at the southern U.S. border, sparking new criticism and protests over the Trump administration's "zero tolerance" policy and resulting separation of families.

More than 1,100 people were inside the large, dark facility that's divided into separate wings for unaccompanied children, adults on their own, and mothers and fathers with children. The cages in each wing open out into common areas to use portable restrooms. The overhead lighting in the warehouse stays on around the clock.

The Border Patrol said close to 200 people inside the facility were minors unaccompanied by a parent. Another 500 were "family units," parents and children. Many adults who crossed the border without legal permission could be charged with illegal entry and placed in jail, away from their children.

Reporters were not allowed by agents to interview any of the detainees or take photos. Begnaud pointed out that there were people in the facility wrapped in foil blankets.

Begnaud took copious notes during the tour of the facility and said that he didn't see anyone crying or yelling and there were little bits of entertainment available (including a couple TV screens). He noted that there were people with snacks.

Nearly 2,000 children have been taken from their parents since Attorney General Jeff Sessions announced the policy, which directs Homeland Security officials to refer all cases of illegal entry into the United States for prosecution. Church groups and human rights advocates have sharply criticized the policy, calling it inhumane.

Stories have spread of children being torn from their parents' arms, and parents not being able to find where their kids have gone. A group of congressional lawmakers visited the same facility Sunday and were set to visit a longer-term shelter holding around 1,500 children -- many of whom were separated from their parents.

"Those kids inside who have been separated from their parents are already being traumatized," said Democratic Sen. Jeff Merkley of Oregon, who was denied entry earlier this month to children's shelter. "It doesn't matter whether the floor is swept and the bedsheets tucked in tight."

In Texas' Rio Grande Valley, the busiest corridor for people trying to enter the U.S., Border Patrol officials argue that they have to crack down on migrants and separate adults from children as a deterrent to others.

"When you exempt a group of people from the law ... that creates a draw," said Manuel Padilla, the Border Patrol's chief agent here. "That creates the trends right here."

Agents running the holding facility -- generally known as "Ursula" for the name of the street it's on -- said everyone detained is given adequate food, access to showers and laundered clothes, and medical care. People are supposed to move through the facility quickly. Under U.S. law, children are required to be turned over within three days to shelters funded by the Department of Health and Human Services.

Padilla said agents in the Rio Grande Valley have allowed families with children under the age of 5 to stay together in most cases.

An advocate who spent several hours in the facility Friday said she was deeply troubled by what she found.

Michelle Brane, director of migrant rights at the Women's Refugee Commission, met with a 16-year-old girl who had been taking care of a young girl for three days. The teen and others in their cage thought the girl was 2 years old.

"She had to teach other kids in the cell to change her diaper," Brane said.

Brane said that after an attorney started to ask questions, agents found the girl's aunt and reunited the two. It turned out that the girl was actually 4 years old. Part of the problem was that she didn't speak Spanish, but K'iche, a language indigenous to Guatemala.

"She was so traumatized that she wasn't talking," Brane said. "She was just curled up in a little ball."

Brane said she also saw officials at the facility scold a group of 5-year-olds for playing around in their cage, telling them to settle down. There are no toys or books.

Dr. Colleen Kraft, the head of the American Academy of Pediatrics, said that she visited a small shelter in Texas recently, which she declined to identify. A toddler inside the 60-bed facility caught her eye -- she was crying uncontrollably and pounding her little fists on mat.

Staff members tried to console the child, who looked to be about 2 years old, Kraft said. She had been taken from her mother the night before and brought to the shelter.

The staff gave her books and toys -- but they weren't allowed to pick her up, to hold her or hug her to try to calm her. As a rule, staff aren't allowed to touch the children there, she said.

"The stress is overwhelming," she said. "The focus needs to be on the welfare of these children, absent of politics."

<b>HEADLINE</b>	<b>06/17 China's Pacific push worries US</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/features/2018-06-17/china-s-pacific-islands-push-has-the-u-s-worried">https://www.bloomberg.com/news/features/2018-06-17/china-s-pacific-islands-push-has-the-u-s-worried</a>
<b>GIST</b>	<p>In the gritty, steamy streets of Papua New Guinea's capital Port Moresby, signs of China's push into the Pacific island nation are inescapable.</p> <p>A Chinese worker stencils a logo for China Railway Group outside the new national courthouse it's building; China Harbor Engineering Group laborers tar roads under the searing midday sun.</p> <p>"Little by little they are taking slices of our businesses," said Martyn Namorong, who campaigns to protect local jobs and communities as China ramps up infrastructure spending in the resource-rich nation, often bringing its own workforce. "My people feel we can't compete."</p> <p>The nation of 8 million people is the latest frontier in Beijing's bid for global influence that's included building artificial reefs in the South China Sea, a military base in Africa and an ambitious trade-and-infrastructure plan spanning three continents.</p> <p>China's thrust into the Pacific islands region, a collection of more than a dozen tiny nations including Fiji, Niue and Timor Leste scattered across thousands of miles of ocean, has the U.S. and its close ally</p>

Australia worried. The region played a key role in World War II and remains strategically important as Western powers seek to maintain open sea lines and stability. For Beijing, it offers raw materials, from gas to timber, and a clutch of countries who could voice support for its territorial claims.

“We’ve seen a huge surge in China’s state-directed economic investment and mobilization of an enormous amount of capital in the Pacific which clearly has a strategic intent,” said Eric B. Brown, a senior fellow in Asian affairs at Washington-based think tank the Hudson Institute.

“The sovereignty of these nations could be compromised by these predatory economic methods. And that could create a military threat to countries such as Australia and effect the ability of the U.S. Navy and its allies to maintain freedom and order in the Pacific.”

#### Debt Trap

China’s lending practices related to the Belt and Road Initiative have raised concerns among the International Monetary Fund and the Trump administration that poorer countries wouldn’t be able to repay heavy debts. Sri Lanka is considered an example of what could go wrong for developing nations: China received a 99-year lease for a strategic port after the government in Colombo couldn’t repay loans.

Indeed China has overtaken Japan as Papua New Guinea’s largest bilateral creditor and by the end of the year PNG will owe it about \$1.9 billion in concessional loans — almost a quarter of its total debt burden. Standard & Poor’s in April lowered the nation’s sovereign credit rating to B from B+, citing rising costs of servicing debt that’s climbed above 30 percent of gross domestic product and is expected to reach about 40 percent by 2021.

The IMF warns that other recipients of Chinese money in the region — tiny nations such as Samoa, Tonga and Vanuatu — have moderate to high risks of debt distress.

While the largess flowing into the Pacific from Beijing is a fraction of the \$350 billion of Chinese aid distributed globally since 2000, it’s still big money for the nations, most with populations under 1 million. In April, the French Polynesian government approved construction of a \$320 million Chinese fish farm.

#### Military Presence

Hugh White, a professor of strategic studies at the Australian National University in Canberra, says “there’s no doubt” China could seek to establish a military presence in the Pacific in the future, cashing in its influence with “one of these small, vulnerable states.”

“It intends to become the primary power in east Asia and the western Pacific,” White said.

Governments in the region have sought to strike a balance between accepting China’s cash and resisting moves that would raise concern among Western military powers. Vanuatu in April denied media reports that China had approached it to build a permanent military base in one of its harbors.

The office of PNG’s Prime Minister Peter O’Neill, who’s due to meet President Xi Jinping in China later this week, didn’t reply to repeated requests for comment. When O’Neill visited Beijing in 2016, he pledged support for China’s military build up in the South China Sea. In December, a month after China promised to construct \$3.5 billion of roads, O’Neill said PNG will continue to be a “staunch partner.”

Beijing’s push into the Pacific islands risks further straining ties with key trading partner Australia — which views the region as its own diplomatic backyard and has been increasingly critical of China’s economic and military muscle-flexing.

During a visit to the region this month, Foreign Minister Julie Bishop said “we want to continue to be the partner of choice for nations in the Pacific.” Her government on June 13 signed an agreement to build a new undersea telecommunications cable to the Solomon Islands, squeezing out a bid by China’s Huawei Technologies Ltd.

Papua New Guinea has traditionally looked to Australia — from which it won independence in 1975 — for a helping hand. Outside of the capital, the nation’s woeful roads network has helped push prices of food staples beyond what many can afford. It’s also struggling with an illiteracy rate of 35 percent, poor tax collection and endemic corruption.

Australia is still its largest donor, contributing more than three-quarters of total aid and loans compared to China’s 14 percent. Yet the majority is directed to improving corporate governance, while Beijing has focused on infrastructure and major works.

‘Red Carpet’  
Nursing a cool drink at a sports club in Port Moresby, British-born business adviser Paul Barker said China was stepping into a vacuum left by the west.

“The government in Beijing has rolled out the red carpet and our leaders seem to be a bit intoxicated by the experience,” said Barker, who’s lived in his adopted nation for more than four decades.

Australia’s assistant trade minister Mark Coulton acknowledged the merits of China’s investment as he sat in one of Port Moresby’s few five-star hotels near the Beijing-gifted convention center where APEC leaders will meet in November.

“You can’t deny your neighbor if someone is looking to build something they really need,” he said. “Our role is to give the PNG government and people the ability” to “handle influxes of foreign aid like those that are now occurring.”

China’s foreign ministry, which didn’t respond to a request for comment, in April said Pacific island nations weren’t in the “sphere of influence of any country” and called on Australia not to interfere.

Wang Dong, an international relations professor at Peking University, dismissed concerns that large concessional loans leave nations vulnerable to “debt-trap diplomacy” and said China’s expanded role in the Pacific is a natural consequence of its growing economic clout.

“It’s scaremongering to think this will lead to any military design or ambition in the Pacific,” Wang said in a phone interview from Beijing. “We will see China increase its presence there and it will keep helping these countries build their infrastructure.”

China is in the region to stay, said Jonathan Pryke of the Lowy Institute, a Sydney-based think tank.

“China has entered the Pacific in a significant way,” said Pryke. “It’s upended the status quo and caused anxiety, because no-one knows what its end-game is.”

<b>HEADLINE</b>	<b>06/18 Age of climate change begins</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/ap-age-climate-change-begins-55969022">https://abcnews.go.com/Technology/wireStory/ap-age-climate-change-begins-55969022</a>
<b>GIST</b>	<p>On June 23, 1988, a top NASA scientist told Congress and the world that global warming had arrived. NASA scientist James Hansen predicted that 1988 would be the world's hottest year on record, thanks to the burning of fossil fuels that released heat-trapping gases.</p> <p>The Associated Press is republishing a version of its report on the testimony to mark the 30th anniversary.</p> <p>_____</p> <p>WASHINGTON (AP) — The "greenhouse effect" global warming of the earth is here, but the current drought and heat wave over much of the United States can't be blamed on it, a scientist told a Senate panel Thursday.</p>

However, similar heat waves and droughts can be expected much more often as a result of future warming, said James E. Hansen, a climatologist at the National Aeronautics and Space Administration's Goddard Institute for Space Studies in New York City.

Hansen told the Senate Energy and Natural Resources Committee there is only a 1 percent chance that he is wrong in blaming rising temperatures around the world on the buildup of manmade gases in the atmosphere.

For unknown reasons, the earth has been getting warmer for more than a century, though with cooler intervals. The four warmest years on record have been recorded in the 1980s — and without what Hansen called an improbable cooling for the rest of the year, 1988 will break all records.

Though there has been much speculation by scientists around the world that the warming resulted from the greenhouse effect, Hansen's statement is the most definite yet.

Syukuro Manabe, soil specialist at the Geophysical Fluid Dynamics Laboratory of the National Oceanic and Atmospheric Administration, said it was more likely that the current drought was the result of natural fluctuations than the greenhouse warming.

"It is an example of the kind of drought that will occur more frequently as the global warming become larger," he said.

Many studies have said global warming could bring drastic changes in weather, including more rainfall at low and high latitudes and more drought in between, with drastic shifts in possible crop patterns.

A major report from the World Meteorological Organization and the United Nations Environment Program earlier this month concluded that without a major effort to fight warming, global temperatures could increase by 0.54 degrees Fahrenheit per decade until the middle of the next century, and sea levels could rise by a foot.

Tropical temperatures wouldn't change much at all, but in Canada the change could be two or three times as large as the average.

Extreme temperatures would occur more often. Hansen earlier calculated that instead of the typical one day a year with temperatures above 100 degrees Fahrenheit in Washington — it reached 101 on Wednesday — the year 2030 could see 12 days. Dallas would see 78 such days instead of 19.

Gases emitted by modern civilization — notably carbon dioxide from the burning of fossil fuels but also methane, nitrous oxide and the chlorofluorocarbon gases that major nations agreed last year to reduce — trap heat from the earth's surface that normally would be radiated out to space just as the glass over a greenhouse traps the sun's heat inside.

Carbon dioxide concentrations in the atmosphere are 10 percent above 1958 levels and 25 percent above concentrations believed to prevail in 1790, when the industrial revolution brought the first widespread burning of coal in industry to fire the new steam engines.

"If we could magically reduce (annual) emissions (of carbon) by about 3 billion tons, we could stabilize the content of the atmosphere," said George M. Woodwell, director of the Woods Hole Research Center in Massachusetts. "It is well within reach, no question about that."

"The problem ... has the potential for turning the world into a form of chaos not greatly different from that produced by global war," he said.

Sen. Wendell Ford, D-Ky., concerned about his state's coal industry, asked physical chemist William R. Moomaw of the World Resources Institute, a Washington-based policy research organization, if

	<p>technology could not reduce the harmful emissions.</p> <p>"I'm trying to find a way to use a resource we have," Ford said.</p> <p>Moomaw replied, "I would argue the resource we have in most abundance is the potential for using fossil fuels more efficiently at much lower cost than building any form of power generation."</p>

<b>HEADLINE</b>	<b>06/17 Sea convoy reaches Spain amid turmoil</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/1st-boat-aquarius-convoy-630-migrants-docks-spain-55952736?cid=clicksource_76_4_article%20roll_articleroll_hed">https://abcnews.go.com/International/wireStory/1st-boat-aquarius-convoy-630-migrants-docks-spain-55952736?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>An aid group's ship and two Italian military vessels docked Sunday at the Spanish port of Valencia, ending a weeklong ordeal for hundreds of people who were rescued from the Mediterranean Sea only to become pawns in a European political fight.</p> <p>The Italian coast guard vessel Dattilo was the first of the boats in the convoy bearing 630 migrants to touch land, pulling in just before 7 a.m. The 274 rescued people on board disembarked after medical staff made a preliminary inspection.</p> <p>The rescue ship Aquarius came in four hours later carrying another 106 migrants. Aid workers awaiting their arrival clapped and cheered as the first passengers walked down the gangway. An Italian navy ship, the Orione, came in shortly after 1 p.m. with the remaining 250.</p> <p>The Aquarius, operated by the aid groups SOS Mediterranean Sea and Doctors Without Borders, was stuck off the coast of Sicily on June 9 when Italy's new populist government refused it permission to dock and demanded that Malta do so. Malta also refused.</p> <p>After days of bickering and food and water running low on the ship, Spain stepped in and granted the rescue boat entry with a plan called "Operation Mediterranean Hope." The 1,500-kilometer (930-mile) journey across the Mediterranean from Sicily to Valencia took nearly a week.</p> <p>After Spain invited the Aquarius to land, Italy sent the Dattilo and Orione to help transport the migrants.</p> <p>David Noguera, the head of Doctors Without Borders in Spain, said he was glad Spain welcomed the ship's passengers, who were picked up off the coast of Libya. He said he is worried that more European nations will close their ports to migrants who are rescued at sea.</p>

GIST	<p>A strong earthquake knocked over walls and set off scattered fires around metropolitan Osaka in western Japan on Monday, killing at least three people and injuring more than 210.</p> <p>A 9-year-old girl was killed by a falling concrete wall at her school, and the two other fatalities were men in their 80s.</p> <p>The Fire and Disaster Management Agency said 214 people were treated for injuries at hospitals. Most of the injured were in Osaka — Japan's No. 2 city bustling with businesses. Osaka officials did not give details, but the injuries reported in Kyoto and three other neighboring prefectures were all minor.</p> <p>The Osaka prefectural government's disaster management department confirmed the girl's death and the death of an older man. The third victim died in the nearby city of Ibaraki.</p> <p>A falling concrete wall knocked down Rina Miyake as she walked by at her elementary school in Takatsuki. NHK public television aired footage showing the collapsed upper half of the high wall, which was cheerfully painted with trees, flowers and blue sky and surrounded the school swimming pool.</p> <p>Takatsuki Mayor Takeshi Hamada apologized over her death because of the wall's collapse. The structure was old and made of concrete blocks — a known risk in earthquakes.</p> <p>A man in his 80s died in the collapse of a concrete wall in Osaka city. An 84-year-old man in nearby Ibaraki died after a bookshelf fell on top of him at home, according to city officials. Many homes and buildings, including a major hospital, were temporarily without power, though electricity was restored at most places by midafternoon.</p> <p>The magnitude 6.1 earthquake struck shortly after 8 a.m. north of Osaka at a depth of about 13 kilometers (8 miles), the Japan Meteorological Agency said. The strongest shaking was north of Osaka, but the quake rattled large parts of western Japan, including Kyoto, the agency said.</p> <p>The quake knocked over walls, broke windows and set off scattered building fires. It toppled book shelves in homes and scattered goods on shop floors. It also cracked roads and broke water pipes, leaving homes without water.</p>

SOURCE	<a href="https://abcnews.go.com/US/train-derailment-explosion-prompts-evacuations/story?id=55967198">https://abcnews.go.com/US/train-derailment-explosion-prompts-evacuations/story?id=55967198</a>
GIST	<p>A freight train derailment in Indiana on Sunday caused a loud explosion and calls for mandatory evacuations in the area.</p> <p>The Gibson County Sheriff's Office and emergency service personnel issued a mandatory resident evacuation within a one mile radius in Princeton, Indiana, on Sunday evening following the train derailment and explosion.</p> <p>According to the Gibson County Sheriff, at approximately 7:19 p.m. local time Gibson County Central Dispatch received numerous 911 calls regarding a train derailment and explosion in the area of Old US 41 and Caniff Trailer Court.</p> <p>No one was injured in the derailment, but a large fire sent thick, black smoke high into the sky.</p> <p>Emergency responders conducted door-to-door evacuation announcements.</p> <p>CSX Corporation, which operated the train, said the train had two locomotives, 89 loaded railcars and nine</p>

	<p>empty railcars. The loaded cars were carrying propane, CSX said.</p> <p>"CSX is working closely with local firefighters and other first responders to assess the situation, and the safety of the community and everyone on site is our top priority as we develop a recovery plan," CSX said in a statement.</p>

<b>HEADLINE</b>	<b>06/17 Seattle official sponsor Special Olympics</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/local/city-of-seattle-now-an-official-sponsor-of-2018-special-olympics/771750243">https://www.kiro7.com/news/local/city-of-seattle-now-an-official-sponsor-of-2018-special-olympics/771750243</a>
<b>GIST</b>	<p>SEATTLE - The City of Seattle is now an official sponsor of the 2018 Special Olympics coming to town in July. The event will flood the city with tens of thousands of people over six days.</p> <p>Initially, the council planned to pass an ordinance Monday that would have waived all the fees associated with the event, as long as the Special Olympics meets its permit requirements. It would have saved the event some money, but the council tweaked its approach at the last minute. Instead, Councilmember Rob Johnson offered a resolution, which passed unanimously. Seattle is giving the Special Olympics \$30,000 as an official sponsor of the event.</p> <p>It's a decent investment given that the estimated economic impact to Seattle is \$50 million.</p> <p>A total of \$15,000 will come from the council and another \$15,000 will come from the mayor's office. The money is being pulled from the legislative departments consulting and agenda budget. The resolution also directs city departments to submit reports to the council by Aug. 10, 2018, detailing fees and costs, staff time, and any waived fees.</p> <p>The organization is the largest in the world dedicated to sporting events for people with intellectual disabilities. The 2018 Special Olympics USA Games will come to Seattle July 1-6, and will bring about 3,500 athletes with it. Not to mention support, family, audiences, and others associated with the games.</p> <p>The Special Olympics organization says that this will add up to "1,000 coaches, 10,000 family members, 10,000 volunteers and an estimated 50,000 spectators" taking part in the "premier national sports competition, showcasing the power and joy of sports at the highest levels."</p> <p>The city will host 16 Olympic-type individual and team sports. There are also special events planned.</p> <p>The opening ceremony will be at Husky Stadium and boasts Grammy nominated singer Charlie Puth, DJ Marshmello, and actor Taye Diggs. Also attending are Seattle hip-hop artists Massive Monkees, Heart's Ann Wilson, and singer-songwriter Allen Stone. Governor Jay Inslee and Microsoft CEO Satya Nadella will make an appearance. And Microsoft President Brad Smith will be the Honorary Chairman of the event.</p> <p>The games are expected to take over venues at the University of Washington, Seattle University, Seattle Pacific University, Seattle Center, Westlake Park, Safeco Field, and Lake Union Park.</p> <p>The organization says that the 2018 event will be the most "significant sporting event to come to Seattle since the 1990 Goodwill Games."</p>

HEADLINE	<b>06/17 Seattle could hit 90's during week?</b>
SOURCE	<a href="https://www.king5.com/article/weather/blog/seattle-could-soar-into-the-90s-this-week/281-563306518">https://www.king5.com/article/weather/blog/seattle-could-soar-into-the-90s-this-week/281-563306518</a>
GIST	<p>A large area of high pressure pushed highs up into the upper 70s and low 80s on Father's Day – the warmest it has been since May 23. But this may only be the start.</p> <p>The long-range models keep a large, warm ridge of high pressure over the west coast through most of this week. This should push us well into the 80s and may give us some 90s on Tuesday, Wednesday, Thursday, which is the official start of summer. This will depend on offshore flow, etc. As always, the devil is in the details!</p> <p>If there is cooling later in the week, it will be gradual, according the meteorologist Rich Marriott. It should stay warm though the following weekend.</p> <p>The record for most 90-degree days in a summer is 12 days, which was set in 2015. Ten of those days happened in July.</p> <p>The warm weather is in line with NOAA's Climate Prediction Center that calls for a June with above normal temperatures and below normal rainfall for Washington state. In the Pacific Northwest, average summer temperatures trend around 70 degrees for June, 75 degrees for July, and 76 degrees for August. Average rainfall for June is 1.57 inches, July is 0.77 inches, and August is 0.88 inches.</p>

HEADLINE	<b>06/18 Trust in social media falls</b>
SOURCE	<a href="https://www.wsj.com/articles/trust-in-social-media-fallsraising-concerns-for-marketers-1529312580?mod=hp_lista_pos4">https://www.wsj.com/articles/trust-in-social-media-fallsraising-concerns-for-marketers-1529312580?mod=hp_lista_pos4</a>
GIST	Russia's alleged interference in the U.S. elections, the spread of fake news on social media and the recent

Facebook data scandal are all contributing to the distrust that people world-wide have developed for social media, according to a new study being released Monday.

Edelman, the world's largest independent public-relations firm, was prompted to field new research to figure out why people's trust in social-media platforms was declining.

The firm's annual Trust Barometer study in November had found only 41% of the people around the world trusted social media as a source for general news and information, down from 47% in 2015. The fallout in the U.S. was more pronounced with only 30% trusting the platforms, down from 35% in 2015.

Almost 70% of the study participants pointed to identity scams, cyberbullying, hate speech and fake news among the reasons for their low confidence in social-media sites.

The new study, which polled 9,000 people in nine countries, also found that 60% of people don't trust social-media platforms to manage the information they collect about consumers responsibly—a fallout likely attributable to the Cambridge Analytica scandal. The U.K.-based data firm allegedly obtained data improperly on tens of millions of Facebook users.

In recent years, advertisers have come to rely heavily on social-media sites such as Facebook to help them reach their customers to sell their goods and services. Privacy concerns and the lack of trust could have implications for brands if consumers' trust falls so low that people pull back on sharing or using social-media sites.

So far, the crises haven't dented Facebook's ability to attract new users or ad dollars. Its first-quarter revenue rose nearly 50% from a year earlier to \$11.97 billion. Moreover, advertisers are expected to increase their spending on social-media ads in the U.S. by 17% this year to \$25.24 billion, according to eMarketer.

Still, consumers want the issues fixed. "People want the platforms to change," and it is in the best interest of "brands to demand that change," says Richard Edelman, chief executive of Edelman.

Many of the people polled said brands—the companies that support social-media platforms with their ad dollars—should use their influence and pocketbooks to force change, the research says.

About 70% said brands should pressure social networks to do more to combat fake news, while 71% agreed brands should also play that role in ensuring personal data is protected and used ethically.

People "are looking to brands to incentivize and compel social-media companies to change," Mr. Edelman says. He points to how the video giant YouTube made changes to its service after major brands such as Procter & Gamble Co., PepsiCo Inc. and HP Inc. boycotted the site after ads appeared adjacent to inappropriate content. YouTube is part of Alphabet GOOGL -0.07% -owned Google.

In February, Unilever PLC, one of the world's largest advertisers, threatened to pull back on advertising on YouTube and Facebook if the companies didn't do more to combat the spread of fake news and divisive content.

With regard to government intervention, 62% of those polled agreed that governments should do more to regulate social media. People in the U.K., China and India were among the most supportive. Some 73% of Indians agreed government should do more, compared with 71% of Chinese and 68% of Britons. In the U.S., 48% of respondents agreed.

The Cambridge Analytica scandal has only added to growing scrutiny of technology companies by regulators around the world. Many regulators are looking to Europe for direction on how to pressure firms over their privacy policies, market power and other issues. In Europe, sweeping new privacy laws known as the General Data Protection Regulation came into effect in late May.

The issues currently facing social-media platforms—in particular, consumers' growing concern with the

use of their data—pose a worrisome trend for digital marketers and for the platforms themselves. Digital marketing rests largely on marketers’ ability to harness consumer data to better target and craft relevant ads. Marketers, tech companies and ad agencies have long touted that consumers are willing to surrender some of their personal information so they can be served more personalized ads.

However, the Edelman study suggests that consumers may no longer be amenable to such a trade-off. The problems “are now calling into question the things marketers have taken for granted,” Mr. Edelman says. “In a sense we are going backwards because of the perceived violation of people’s rights.”

Almost half of those polled said they were not willing to sacrifice some of their data privacy in return for a more personalized shopping experience, though younger people were less opposed: About 41% of people 18 to 34 years of age were willing to fork over some data for more personalized pitches.

Some people also expressed concern with some of the marketing practices that have become a standard part of the digital-ad ecosystem. For example, 47% said it wasn’t OK for companies to use cookies, the tiny pieces of code that marketers deploy on web browsers to track people’s online movements, to remember them and what they like. More than half of the people polled weren’t OK with companies learning their interests by tracking websites they visit. And more than half also weren’t eager to have companies use location information from a person’s mobile phone to offer discounts at businesses nearby.

With consumers now questioning how their personal information is being used, brands must be “more transparent with what data they are collecting and how it’s being used,” says Mr. Edelman. “People don’t want some little box on the bottom of their screen that gives away their rights on data privacy.”

<b>HEADLINE</b>	<b>06/15 DHS: Typeframe new NKorea malware</b>
<b>SOURCE</b>	<a href="https://www.engadget.com/2018/06/15/dhs-north-korea-malware-typeframe/">https://www.engadget.com/2018/06/15/dhs-north-korea-malware-typeframe/</a>
<b>GIST</b>	<p>Even though Donald Trump is on good terms with North Korea, the Department of Homeland Security is still following that country's ongoing cyberattack campaign (which it's dubbed "Hidden Cobra"). Now CNN reports there's a new variant of North Korean malware to look out for: Typeframe.</p> <p>In a report released yesterday, the DHS says it's able to download and install additional malware, proxies and trojans; modify firewalls; and connect to servers for additional instructions. These are attacks we've seen in plenty of malware variants, Typeframe is just the latest addition.</p> <p>Since last May, the DHS has issued a slew of alerts and reports about North Korea's malicious cyber activity. The department also pointed out that North Korea has been hacking countries around the world since 2009. And of course, don't forget that the US also labeled that country as the source of Wannacry cyberattack, which notably held data from the UK's National Health Service hostage, and wreaked havoc across Russia and Ukraine.</p>

<b>HEADLINE</b>	<b>06/15 China cyberattacks on Taiwan rising</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-taiwan-china-cybersecurity/chinese-cyber-attacks-on-taiwan-government-becoming-harder-to-detect-source-idUSKBN1JB17L">https://www.reuters.com/article/us-taiwan-china-cybersecurity/chinese-cyber-attacks-on-taiwan-government-becoming-harder-to-detect-source-idUSKBN1JB17L</a>
<b>GIST</b>	<p>TAIPEI (Reuters) - Cyber attacks from China on Taiwan’s government computers are becoming more difficult to detect, a source close to government discussions said, as hackers increasingly use online platforms such as search engines to break into systems.</p> <p>While the frequency of attacks by China’s cyber army has declined, the success rate of such incursions is rising, the source said.</p>

“Taiwan’s official departments suffer from hundreds of successful internet attacks each year, more than half of which come from assaults by China’s cyber army,” the person, who is not authorized to speak to the media and declined to be identified, told Reuters.

China has strongly denied accusations of engaging in cyber warfare or hacking, and has said it is itself one of the world’s biggest victims of such incidents.

Both China’s Taiwan Affairs Office and the Cyberspace Administration of China did not immediately respond to a request for comment.

The alleged cyber attacks come as Beijing increases diplomatic and economic pressure on the self-ruled island, which China claims as its own and considers a wayward province.

The source said hackers are adopting new techniques to conceal their activities.

“They frequently go through online platforms like Google and blogs, to hide themselves and give investigators the impression it is a normal platform or tool, and thus to ignore its background actions,” the person said.

Taiwan’s governmental departments face “frequent cyber attacks and scanning of their vulnerabilities, with the attack volume reaching 10 million a month,” the source said.

The majority of attacks targeted non-core service systems, were low-level in nature, and included activities such as changing websites and tampering with information. However, there have also been more serious attacks on core systems.

The source also said the Taiwan government had evidence that some of the attacks had targeted departments and their websites by intruding into servers and stealing account passwords.

Taiwan’s foreign offices abroad have also been targeted through methods such as taking screen snapshots, keylogging, and unpacking related information, the source said.

Many of the attacks were now routed through other countries, making it increasingly difficult to trace.

Since Taiwan President Tsai Ing-wen of the left-leaning Democratic Progressive Party took office in 2016, China’s hostility to the island has increased.

China fears Tsai wants to push for formal independence, although she says she wants to maintain the status quo and is committed to peace.

Analysts expect the cyber attacks will continue to form a headache for the Taiwan government.

“Taiwan has very good cyber defense and investigation skills and capacity. However, under such a huge amount of attacks and the special relationship across the Strait, it is really hard to prevent 100 percent,” said Lennon Chang, a senior lecturer in criminology at Monash University in Melbourne.

Taiwan is expected to release its information security and national security strategy later this year.

HEADLINE	<b>06/16 UK: watchdog oversees intel warrants</b>
SOURCE	<a href="http://www.itv.com/news/2018-06-16/seismic-shift-as-new-watchdog-starts-overseeing-intelligence-warrants/">http://www.itv.com/news/2018-06-16/seismic-shift-as-new-watchdog-starts-overseeing-intelligence-warrants/</a>
GIST	Britain’s spy agencies will need a judge to sign off requests to hack into suspects’ electronic devices or listen to their phone calls under a strengthened authorization regime that will take effect within days.

The head of a watchdog set up to scrutinize the activities of MI5, MI6, GCHQ and law enforcement agencies told the Press Association the new approach represents a “seismic change”.

In his first interview since being appointed Investigatory Powers Commissioner last year, Lord Justice Sir Adrian Fulford confirmed that his office would begin receiving warrants relating to the work of the intelligence services this month.

Under the “double lock” system introduced by the Investigatory Powers Act, requests to use the most intrusive techniques require approval from a judicial commissioner as well as a senior Government minister before they can take effect.

The process is being phased in, starting with warrants relating to equipment interference and targeted interception.

Equipment interference is the official term for operations where authorities interfere with electronic devices such as smartphones and PCs to obtain data as part of serious crime or national security investigations.

Agencies seek targeted interception warrants where they wish to access the content of a communication, such as listening to a phone call or reading an email or text message.

Requests to sweep up data in bulk will fall under the new regime from next month.

By the end of this year it is expected that the majority of investigatory powers and the hundreds of public bodies that use them will be subject to the Commissioner’s oversight.

Sir Adrian highlighted the range of activity that now needs judicial approval and the creation of a single oversight body – there were previously three separate watchdogs – as key changes in the IP Act.

“That is a seismic change really in the way this country goes about this kind of work,” he said.

Fifteen senior judges will weigh up warrants, with reserve commissioners on standby in case there is a sudden spike in requests.

Sir Adrian said: “The first warrants will start to come through under the Act this month and we are starting to increase the number of commissioners on duty at any one time to ensure we have got sufficient capacity to turn round the applications extremely quickly.”

The Commissioner’s office has “unfettered” access to agencies’ records to ensure the powers are being used properly.

Sir Adrian said: “All of the indications I’ve had so far are that the security agencies and law enforcement take their responsibilities extremely seriously in this field.”

The commissioner acknowledged that the new approach represents a “very considerable change” for the intelligence services.

“They are undoubtedly very keenly aware that there are going to be some skeptical and probing judges looking at all of the aspects of their work which relate to investigatory powers,” he said.

“I think that has brought about not a change of culture, but it has made them focus in much greater detail than perhaps was the case before as to the justification that could be provided for everything that they do. “We will be going in some real detail into the files and records of all of the bodies that have got investigatory powers to make sure they are not inappropriately hoovering up information.”

	<p>No targets will be set for approvals or rejections of warrants.</p> <p>“It doesn’t matter whether there have been a lot of terrorist outrages or none, the commissioners will look at each application on its own merits, completely unaffected by what may or may not be a period of national emergency”, Sir Adrian said.</p> <p>“There isn’t going to be any tendency either to grant or refuse.”</p> <p>He noted that by the time they reach commissioners’ desks, warrants will have gone through many stages already.</p> <p>“So if there’s a high percentage of warrants being granted, I will not see that in any way as being an indicator that my office is not providing the kind of scrutiny that’s required,” he said.</p> <p>Sir Adrian expressed confidence that provision to sanction the use of powers without prior judicial approval in emergency cases would not be misused, pointing out that warrants could still be revoked later.</p> <p>“In addition, if I thought the provisions were being improperly used, it would not take me very long to raise this at the highest level with the head of whichever agency was responsible and if necessary with the Prime Minister,” he said.</p> <p>“I don’t anticipate that this is going to happen.”</p> <p>Passed in November 2016, the IP Act was drawn up following controversy sparked by Edward Snowden’s revelations about intelligence techniques.</p> <p>Sir Adrian said: “We are now as a country I think in a much better place in terms of there being really full understanding of the extent of and the limits of the opportunities which the security services have to go into areas of our lives which ordinarily we would consider to be private and sacrosanct.”</p>

<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/hacker-breaches-syscoin-github-account-and-poisons-official-client/">https://www.bleepingcomputer.com/news/security/hacker-breaches-syscoin-github-account-and-poisons-official-client/</a>
<b>GIST</b>	<p>A hacker gained access to the GitHub account of the Syscoin cryptocurrency and replaced the official Windows client with a version containing malware.</p> <p>The poisoned Syscoin Windows client contained Arkei Stealer, a malware strain specialized in dumping and stealing passwords and wallet private keys. This malware is also detected as Trojan:Win32/Feury.B!cl.</p> <p>Syscoin developers are now warning Syscoin users who downloaded version 3.0.4.1 of the Syscoin client between June 09th, 2018 10:14 PM UTC and June 13th, 2018 10:23 PM UTC that their systems might be infected with malware.</p> <p>The affected files are (version number included in the file name is 3.0.4, but they install version 3.0.4.1):</p> <p>syscoincore-3.0.4-win32-setup.exe syscoincore-3.0.4-win64-setup.exe</p> <p>Only Syscoin Windows client affected</p> <p>Hackers only tampered with the Windows client and no other files available in the v3.0.4.1 release, which also included Mac and Linux clients, along with the adjacent source code.</p> <p>The Syscoin clients are installed on an operating system and allow users to run a Syscoin node, which they can use to mine new Syscoin cryptocurrency or manage Syscoin funds.</p> <p>The incident came to light yesterday when the Syscoin team received a warning from users that Windows Defender SmartScreen was marking downloads of the Syscoin Windows client as malicious.</p>

<b>HEADLINE</b>	<b>06/15 Europol busts notorious hacker group</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/europol-dismantles-one-of-the-internets-oldest-hacker-groups/">https://www.bleepingcomputer.com/news/security/europol-dismantles-one-of-the-internets-oldest-hacker-groups/</a>
<b>GIST</b>	<p>Europol, French, UK, and Thai police arrested eight people they suspect to have been involved or to have been part of a notorious hacker group known as Rex Mundi (Latin for "King of the World").</p> <p>The group has been active since at least 2012. Its modus operandi revolved around hacking into companies' networks, stealing private information, and later contacting the victims to request the payment of a ransom fee.</p> <p>Hackers demanded fees for not disclosing the hacks, but sometimes also asked for higher sums of money for revealing the security flaw they used to enter the victim's network.</p> <p>While the date the group formed is unknown, the earliest reports of Rex Mundi hacks go back to the summer of 2012.</p>

In the early 2010s, when hacker groups like Anonymous or LulzSec were a bit more brash about their hacks, Rex Mundi often bragged about their recent victims, announcing hacks on Twitter, and often dumping data when companies didn't pay.

According to a trail of hacks documented on Softpedia's Security News section, past victims included—in chronological order— AmeriCash Advance, Webassur, Drake International, Buy Way, Hoststar, Websolutions.it, Numericable, Habeas, AlfaNet, Domino's Pizza, and Banque Cantonale de Geneve (BCGE).

But as law enforcement started arresting hackers and hacktivists left and right, the group changed its modus operandi and eventually went underground. Rex Mundi abandoned its flashy mode of operation and continued to work in the shadows, without announcing their hacks online, to reporters, or leaking data when companies failed to pay.

The group continued to operate until last year, according to Europol. The hack that undone them was of a British-based firm, whose network they'd breached, stole data from, and later attempted to extort.

Days after this hack, Rex Mundi contacted the company via telephone and requested their usual ransom. According to Europol, a French-speaking person demanded payments in Bitcoin equivalent to €580,000 (\$675,000) for not disclosing the hack and €825,000 (\$960,000) for also revealing how they broke in. For each day the company failed to respond, Rex Mundi would add another €210,000 (\$245,000) on top of the ransom fee.

These sums are far from the initial ransom demands of \$5,000 - \$10,000 the group used to make in the early 2010s.

The British company declined to pay, and instead contacted authorities. Information gathered by UK police led to the arrest of five French nationals a month later, in June 2017.

One of these persons, the leader, admitted his role in the extortion scheme, while also revealing they didn't do any of the hacking but hired hackers on the Dark Web to do this instead.

French police arrested two of these hackers in October 2017, and Thai police arrested a third in May 2018, effectively putting an end to one of the longer lasting hacking groups of this decade.

<b>HEADLINE</b>	<b>06/16 Expert: trick fooling users w/crapware</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/mobile/android-app-devs-find-clever-trick-for-fooling-users-into-installing-their-crapware/">https://www.bleepingcomputer.com/news/mobile/android-app-devs-find-clever-trick-for-fooling-users-into-installing-their-crapware/</a>
<b>GIST</b>	<p>An expert in Android security is warning users that some developers of crappy Android apps have come up with a new trick for fooling users into installing their apps.</p> <p>The trick relies on app devs registering Google Play Store developer accounts that mimic install counts, instead of their real name, such as "1 million installs," "Installs 1,000,000," "100,000,000 Downloads," "5,000,000+," "1,000,000,000" and other similar formats.</p> <p>The idea is that the official Google Play Store lists an app entry by displaying the app's icon, name, developer name, and a star rating.</p> <p>By replacing the developer name with a faux install count, some developers are trying to fool users into thinking the app is extremely popular, and hence, somewhat safe to use.</p> <p>But in reality, they are not. According to ESET malware researcher Lukas Stefanko, most of the apps</p>

using this trick that he analyzed were mostly adware. The majority were just empty shells, with little to no functionality except for showing ads on top of other apps or the user's screen.

Furthermore, Stefanko also noticed another similar trick employed by some malicious app developers.

While they didn't use developer accounts with misleading names that contained install counts, some app devs put the fake install counts in the app's icon that shows up in Play Store search results.

This misleading image is intended to work the same way as the fake install counts inserted in the dev's account name and give users a false sense of confidence for apps that are clearly ill-intended.

"The tricks are simple, yet potentially effective, ways to mislead users, particularly those who choose apps based on popularity," Stefanko explains. "While none of these apps were outright malicious, these techniques could easily be misused by malware authors in the future. Fortunately, the tricks are also simple to spot, if you know what to focus on."

<b>HEADLINE</b>	<b>06/17 Gaming companies remove analytics app</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/gaming/gaming-companies-remove-analytics-app-after-massive-user-outcry/">https://www.bleepingcomputer.com/news/gaming/gaming-companies-remove-analytics-app-after-massive-user-outcry/</a>
<b>GIST</b>	<p>Several gaming companies have announced plans to remove support for an analytics app they have bundled with their games.</p> <p>The decision to remove the app came after several Reddit and Steam users noticed that many game publishers have recently embedded a controversial analytics SDK (software development kit) part of recent updates to their games.</p> <p>The program bundled with all these games, and at the heart of all the recent controversy is RedShell, an analytics package provided by Innervate, Inc., to game publishers.</p> <p>Game makers are supposed to embed this SDK within their games and run social marketing programs with specific affiliate IDs. If a new user buys and installs a game via one of these campaigns, the RedShell SDK embedded in the game pings back the publishers about the source of the new install.</p> <p>But in several recent online discussions, users are complaining that besides logging the source of a new game install, the app also creates fingerprints for each gamer, with information about their online personas and gaming rigs.</p> <p>Furthermore, many game studios have not told users that this SDK is now part of their games, or if they did, they made it an opt-out package instead of opt-in, as most privacy laws across the globe dictate.</p> <p>Angry gamers file complaints with game makers</p> <p>For the past two weeks, gamers have been spending their time digging through their games' files looking for the presence of RedShell files and processes, and then filing official complaints with the game publishers via online forums, Reddit, Steam, or official websites.</p> <p>Following this concentrated effort from the online gaming community, many gaming studios have responded to criticism and have removed or pledged to remove RedShell from their products.</p>

<b>HEADLINE</b>	<b>06/15 Surge port 8000 traffic: Satori botnet</b>
-----------------	---

SOURCE	<a href="https://www.bleepingcomputer.com/news/security/all-that-port-8000-traffic-this-week-yeah-thats-satori-looking-for-new-bots/">https://www.bleepingcomputer.com/news/security/all-that-port-8000-traffic-this-week-yeah-thats-satori-looking-for-new-bots/</a>
GIST	<p>The mystery of the recent surge in port 8000 scan activity has been solved today by security researchers from Qihoo 360 Netlab, who tracked this week's mystery traffic to an old foe —the Satori IoT botnet.</p> <p>According to researchers, the publication of proof-of-concept (PoC) code on June 8 for a popular web server software package drew the attention of the Satori crew, who integrated that particular exploit into their botnet's attack routine.</p> <p>The PoC code was for a buffer overflow vulnerability (CVE-2018-10088) in XionMai uc-httpd 1.0.0, a lightweight web server package often found embedded inside the firmware of routers and IoT equipment sold by some Chinese vendors.</p> <p>The exploit allows an attacker to send a malformed package via ports 80 or 8000 and execute code on the device, effectively taking it over.</p> <p>Scans for devices that had port 8000 exposed via their WAN interface started a day after the PoC's publication but picked up yesterday, June 14. The sudden surge in port 8000 activity turned the heads of multiple security experts specialized in botnet tracking, as it came out of nowhere and at an incredible scale.</p> <p>According to honeypot data from Qihoo 360 Netlab and SANS ISC, port 8000 scans started to die down today. Unfortunately, it wasn't because Satori was failing to infect devices, but because the botnet's authors added support for a second exploit.</p> <p>This second exploit is also based on PoC code published online, but last month. The PoC is for a vulnerability affecting D-Link DSL-2750B routers, which can be exploited via ports 80 and 8080.</p> <p>Naturally, scan activity targeting these two ports also grew similarly to the one seen on port 8000, and the Satori crew is trying to corral as many routers as it can before other botnets join the fold.</p> <p>After previously targeting GPON routers, and with the addition of these two new exploits, Satori continues to grow with every day. The botnet has already survived a takedown attempt last December, and its authors seem intent on continuing on their current path.</p>

HEADLINE	<b>06/15 Bitcoin price market manipulation?</b>
SOURCE	<a href="https://nakedsecurity.sophos.com/2018/06/15/shock-horror-surprise-bitcoin-priceplosion-may-have-been-market-manipulation/">https://nakedsecurity.sophos.com/2018/06/15/shock-horror-surprise-bitcoin-priceplosion-may-have-been-market-manipulation/</a>
GIST	<p>Last year's meteoric rise in the value of Bitcoin and other cryptocurrencies might well have been artificially inflated, according to a paper released on Wednesday by University of Texas finance professor John Griffin and graduate student Amin Shams.</p> <p>The suspected culprit: people using Tether, one of the most-traded cryptocurrencies, to buy bitcoin when the price dips:</p> <p><i>Tether seems to be used both to stabilize and manipulate Bitcoin prices.</i></p> <p>Bitcoin hit a 16 December 2017 peak of \$19,343 before it bumped and thumped on down to USD \$6,591.94 (the current price as of writing).</p> <p>That's a massive deflation, but it's looking like the inflation itself might have been based on little besides hot air and market manipulation. According to Griffin, the drive up to nearly \$20,000 was likely manipulated by coordinated purchases of bitcoin when they were selling low at exchanges. And according</p>

to the New York Times, Griffin knows what he's talking about: he has a history of spotting financial fraud.

The paper, which attempts to causally determine if price manipulation is taking place, suggests that a concentrated campaign may account for half of last year's spiked cryptocurrencies prices.

Griffin came to this conclusion after studying the flow of digital tokens in and out of Bitfinex, once the world's largest bitcoin-dollar exchange. He identified several distinct patterns that suggest that someone, or someones, at Bitfinex managed to push up prices when they sagged at other exchanges. They did it by buying up other cryptocurrencies with Tether: a virtual currency created and sold by Bitfinex's owners.

*...entities associated with the Bitfinex exchange use Tether to purchase Bitcoin when prices are falling. Such price supporting activities are successful, as Bitcoin prices rise following the periods of intervention. These effects are present only after negative returns and periods following the printing of Tether. ... The buying of Bitcoin with Tether also occurs more aggressively right below salient round-number price thresholds where the price support might be most effective.*

For months, virtual currency investors have been worried that prices have been artificially jacked up by Bitfinex, which has a history of problems.

The exchange was robbed in 2016 of nearly 120,000 bitcoins – worth up to \$72 million at the time.

Beyond the bitcoin loss, Bitfinex has a history of trouble with regulators: in December, it was reportedly subpoenaed by the US regulatory agency Commodity Futures Trading Commission (CFTC) along with Tether. Tether is the exchange's so-called “stablecoin,” with a value pegged to traditional money – specifically, the US dollar. One Tether token is worth USD \$1.

According to Coindesk, online critics have long alleged that Tether has been issuing more tokens than it has dollars in the bank in order to drive up the price of bitcoin.

Weiss Ratings – an established investment research firm that recently began evaluating cryptocurrencies – claims that Tether poses a risk to the entire cryptocurrency ecosystem. While many exchanges use Tether as an equivalent to the USD, it has reportedly never been audited. The people behind Tether claim that the tokens are backed 100% by actual dollars.

Tether's trading volume “regularly exceeds that of its market cap.” That's not good, according to the research firm:

*This means the entire Tether supply changes hands regularly, sometimes more than once a day... This is important to know because it tells us that Tether is used for trading A LOT. It's one of the main sources of liquidity in the cryptomarkets.*

Has this liquid virtual currency been used to artificially pump up cryptocurrency prices?

Griffin thinks his research points to “You betcha.” The Times quotes him:

*There were obviously tremendous price increases last year, and this paper indicates that manipulation played a large part in those price increases.*

Bitfinex has denied such allegations in the past. Griffin and Shams, meanwhile, have no smoking gun: no incriminating emails or documents to show that Bitfinex knew about or brought about price manipulation.

All they have are the public ledgers of virtual currency transactions – in particular, that of Tether – and the patterns that have emerged. What they found: half of the 2017 increase in Bitcoin's price can be traced to the hours immediately after Tether flowed to a handful of other exchanges, generally when its price was falling.

	<p>The value of other virtual currencies that can be purchased with Tether – including Ether and Zcash – rose even faster than that of Bitcoin during those periods. The authors also found that prices rose much more quickly on exchanges that accepted Tether than on those that didn't. When Bitfinex stopped issuing new Tether this year, the authors found that the pattern halted.</p> <p>The Times spoke with multiple experts who said that Griffin's work seems credible.</p>

<b>HEADLINE</b>	<b>06/15 New banking trojan targets Androids</b>
<b>SOURCE</b>	<a href="https://threatpost.com/new-banking-trojan-can-launch-overlay-attacks-on-latest-android-versions/132858/">https://threatpost.com/new-banking-trojan-can-launch-overlay-attacks-on-latest-android-versions/132858/</a>
<b>GIST</b>	<p>Researchers have discovered a new Android banking trojan that holds striking similarities to the infamous Lokibot – but packed with new tricky features, most notably its ability to implement an overlay attack on Android 7 and 8.</p> <p>Researchers at ThreatFabric, who discovered the trojan, said MysteryBot was running on the same C&amp;C server as the LokiBot Android banker discovered in 2017, suggesting that it's either an update to the earlier malware or was developed by the same actor. The new trojan is still under development and is not widely spread, they said.</p> <p>The bot comes with generic Android banking trojan functionalities – once a device is infected, for instance, the bad actor can use MysteryBot modules to make phone calls, scrape contact list info, copy keystrokes and encrypt files on external storage devices.</p> <p>However, researchers said there's much more to the story: “This bot has most generic Android banking trojan functionalities, but seems to be willing to surpass the average. The overlay, key-logging and ransomware functionalities are novel,” they said in a post. “Looking at the bot commands, we first thought that LokiBot had been improved. However, we quickly realized that there is more going on: the name of the bot and the name of the panel changed to ‘MysteryBot,’ [and] even the network communication changed.”</p> <p>A ThreatFabric spokesperson told Threatpost that at the moment the trojan is spread via phishing while side-loading the payload. “The commonly fake Flash Player social-engineering trick is used in the distribution campaign,” said the spokesperson.</p> <p>ThreatFabric discovered MysteryBot two weeks ago, and while researchers can't say that it has been very active (less than 200 infections), they told us they believe that it will be properly spread once it is fully functional.</p>

<b>HEADLINE</b>	<b>06/15 FBI charges Wannacry kill switch hero</b>
<b>SOURCE</b>	<a href="https://threatpost.com/wannacry-kill-switch-hero-faces-new-charges-but-code-evals-say-little/132863/">https://threatpost.com/wannacry-kill-switch-hero-faces-new-charges-but-code-evals-say-little/132863/</a>
<b>GIST</b>	<p>A fresh FBI charge against Marcus Hutchins has led to the Kronos banking trojan and the UPAS Kit backdoor being linked in the news over the past week.</p> <p>However, a fresh analysis this week shows that, at least on a code level, the similarities (and differences) between the two are far from conclusive.</p> <p>Hutchins (a.k.a. “MalwareTech”) came to public attention in May of last year after discovering a hardcoded “kill switch” for the WannaCry ransomware that stopped the infamous campaign in its tracks.</p>

	<p>He was hailed a hero by the security community, given that WannaCry was at the time wreaking havoc in more than 150 countries, impacting large and small companies alike and causing millions in damages worldwide.</p> <p>The accolades didn't last long: The FBI in August 2017 hit the kill switch hero with cybercrime charges, for contributing to the development of the Kronos malware. Kronos has been around since June 2014, according to Malwarebytes, and began life as a banking trojan with ties to the leaked Zeus source code, as its name suggests. More recently, according to an analysis from Proofpoint, criminals have been seen using it as a downloader for follow-on malware, like point-of-sale skimmers.</p> <p>Hutchins, who is living in California on bail while he awaits his court date, was then handed fresh charges last week; the FBI is now alleging that he conspired with the same person who first advertised Kronos on the Dark Web – one Russian-speaking “Vinnyk,” according to Malwarebytes and the indictment – to distribute the UPAS Kit malware, which is a backdoor spy-bot that is mainly used in the wild to download other malicious components.</p>

<b>HEADLINE</b>	<b>06/18 States tighten election security</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/US/2018/06/18/Dozens-of-states-tighten-election-security-by-going-back-to-paper/5601528861198/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=1">https://www.upi.com/Top_News/US/2018/06/18/Dozens-of-states-tighten-election-security-by-going-back-to-paper/5601528861198/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=1</a>
<b>GIST</b>	<p>June 18 (UPI) -- As key midterm elections approach, contests that could set off an enormous shift in Washington, D.C., U.S. authorities are taking measures to make sure they are secure and free of foreign influence.</p> <p>For years, a number of polling places have gone more high tech with electronic voting machines. Fears about vulnerabilities in the systems in an increasingly interconnected world, however, is now turning eyes to a strikingly original idea -- paper ballots.</p> <p>The United States largely moved away from paper ballots after the 2004 Help America Vote Act replaced lever and punch-card voting machines with Direct Recording Electronic, or DRE, systems. The reform was a direct result of the notoriously contested 2000 presidential election, which triggered weeks of recounts and multiple complaints about the paper ballots in Florida.</p> <p>With Russia's purported interference in the 2016 vote, though, many election officials now believe the old way of doing things don't look quite so bad anymore.</p> <p>In May, the Senate intelligence committee issued a report that concluded Russian cyber actors surveilled about 20 state election systems with the intent of undermining confidence in the U.S. voting process two years ago.</p> <p>The committee said many of the electronic voting systems are now outdated, and recommended all states go back to paper ballots -- or, at the very least, mandate that electronic machines produce a paper hard copy that can be audited.</p> <p><b>Why Go Back to Paper?</b></p> <p>Nearly two dozen states and the District of Columbia have already said they will use only paper ballots in November, according to Verified Voting, and several more are considering the switch.</p> <p>While DRE voting machines were once viewed as a substantial upgrade over paper that avoids the potential pitfalls of lever and punch-card machines, it's becoming clear the newer machines may have been a bit short-sighted in their design. Advances in computer technology and greater global Internet accessibility have made those devices susceptible to hacking.</p>

"If an electronic voting system is connected to the Internet or has wireless connectivity capability, then it's easy to understand how and why the voting equipment is vulnerable to hacking," Liz Howard, counsel for the Brennan Center for Justice at the New York University School of Law, told UPI. "Even machines not connected to the Internet are hackable through compromised memory cards used to set up the voting machine before each specific election or remote access software."

Howard said all states using DRE machines should switch back to paper-based systems. Further, she said all states already using paper also ought to implement robust post-election audits.

"One benefit of transition to paper-based voting systems is that the paper trail can be accessed and audited if any concerns -- ranging from hacking, software bugs to programming errors -- are raised," Howard said. "Further, the adoption of periodic routine post-election audits increases public confidence in election outcomes and acts as a deterrent to would-be bad actors."

Since the 2016 election, Virginia is the only state to decertify and replace all of its paperless systems.

This fall, 41 states will use voting systems at least a decade old and officials in 33 of those states said they must replace their machines by 2020, according to a report by the Brennan Center.

"Some voting machines are using outdated software that is no longer supported, which means that vendors may no longer issue security patches for the software, which may result in significant vulnerabilities," said Howard. "We have voting systems in use that are hackable and do not create an auditable paper trail, which is a big concern."

Fourteen states, though, still use electronic machines that don't print a paper receipt as their primary mode of voting. Five of those states -- Delaware, Georgia, Louisiana, Mississippi, New Jersey, South Carolina -- use the paperless machines statewide.

Six states -- Pennsylvania, Florida, Indiana, Kentucky, Tennessee and Texas -- use both paper ballots and paperless DRE machines.

<b>HEADLINE</b>	<b>06/17 'Domain jacker' jailed 20yrs for heist</b>
<b>SOURCE</b>	<a href="https://www.telegraph.co.uk/news/2018/06/17/internet-domain-jacker-jailed-20-years-armed-website-heist/">https://www.telegraph.co.uk/news/2018/06/17/internet-domain-jacker-jailed-20-years-armed-website-heist/</a>
<b>GIST</b>	<p>A man has been jailed for 20 years over the first known instance of armed "domain hijacking" in which he sought to gain control of a website at gunpoint.</p> <p>Sherman Hopkins Jr, 43, broke into the apartment of an internet entrepreneur in Cedar Rapids, Iowa, wearing pantyhose on his head, dark sunglasses, and brandishing a stolen handgun.</p> <p>He demanded that Ethan Deyo, 26, get on his computer and transfer ownership of the internet domain name DoItForState.com from one account to another.</p> <p>After being pistol-whipped and repeatedly targeted with a Taser, Deyo gained control of the handgun during which he was shot in the leg.</p> <p>He then shot Hopkins several times in the chest and called police.</p> <p>Hopkins, who survived the incident in on June 21 last year, pleaded guilty to one count of "interference and attempted interference with commerce by threats and violence".</p> <p>The sentence was the result of a plea deal with prosecutors as he had previously been charged with more serious offences including kidnapping and use of a firearm during a violent crime.</p>

DoItForState.com had already been inactive for a month before the attempted "domain jacking".

The website had emerged from the University of Iowa as a forum for college students to post images of parties and wild antics.

Before it was taken down the website described itself as showing "College stories, College Life, College Snaps."

A local police spokesman said the domain name was "valuable" and Hopkins had wanted it "transferred back" to a third party. It was not clear who the third party was.

When Hopkins broke into his home Deyo, who previously worked for a company that hosts domain names, locked himself in a bedroom but the the home invader broke down the door.

A criminal complaint from the US Attorney's Office in Iowa said: "Hopkins pulled out a piece of paper from his pocket, which contained a series of directions on how to change an internet domain name from one account to another account.

"Hopkins put the firearm against the victim's head and ordered him to follow the directions on the piece of paper. Hopkins also took the victim's cell phone and threw it so that he could not call for help."

When Deyo asked for a postal address and phone number, because they were required to transfer ownership of the domain name, Hopkins pistol-whipped him, then pulled out the Taser and used it several times.

The complaint said: "Hopkins then cocked the gun. Fearing for his life, the victim quickly turned to move the gun away from his head. The victim then managed to gain control of the gun, but during the struggle he was shot in the leg.

"The victim shot Hopkins multiple times in his chest. He then contacted law enforcement."

So-called "domain hijacking" is when someone gets control over a website illegally and it has happened many times, but the Iowa incident was thought to be the first time it has been done by an armed assailant.

Sentencing Hopkins in Iowa, US District Senior Judge Linde Reade said his actions had been "brutal and senseless".

<b>HEADLINE</b>	<b>06/17 Group: Bitcoin could break internet</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-06-17/bitcoin-could-break-the-internet-central-banks-overseer-says">https://www.bloomberg.com/news/articles/2018-06-17/bitcoin-could-break-the-internet-central-banks-overseer-says</a>
<b>GIST</b>	<p>The Bank for International Settlements just told the cryptocurrency world it's not ready for prime time -- and as far as mainstream financial services go, may never be.</p> <p>In a withering 24-page article released Sunday as part of its annual economic report, the BIS said Bitcoin and its ilk suffered from "a range of shortcomings" that would prevent cryptocurrencies from ever fulfilling the lofty expectations that prompted an explosion of interest -- and investment -- in the would-be asset class.</p> <p>The BIS, an 88-year-old institution in Basel, Switzerland, that serves as a central bank for other central banks, said cryptocurrencies are too unstable, consume too much electricity, and are subject to too much manipulation and fraud to ever serve as bona fide mediums of exchange in the global economy. It cited the decentralized nature of cryptocurrencies -- Bitcoin and its imitators are created, transacted, and accounted</p>

for on a distributed network of computers -- as a fundamental flaw rather than a key strength.

In one of its most poignant findings, the BIS analyzed what it would take for the blockchain software underpinning Bitcoin to process the digital retail transactions currently handled by national payment systems. As the size of so many ledgers swell, the researchers found, it would eventually overwhelm everything from individual smartphones to servers.

“The associated communication volumes could bring the Internet to a halt,” the report said.

Researchers also said that the race by so-called Bitcoin miners to be the first to process transactions eats about the same amount of electricity as Switzerland does. “Put in the simplest terms, the quest for decentralized trust has quickly become an environmental disaster,” they said.

The BIS is weighing in at pivotal moment in the cryptocurrency story. Even as Goldman Sachs Group Inc., the New York Stock Exchange, and other institutions take steps to offer clients access to the new marketplace, the U.S. Securities and Exchange Commission is cracking down on the offerings of new digital tokens, which it has found are rife with ripoffs. At the same time, cyber-attackers are hitting crypto exchanges regularly -- just last week, Bitcoin nosedived after a South Korean exchange reported it was hacked. It fell 0.9 percent to \$6,438 as of 10:40 a.m. in Sydney on Monday.

The value of the cryptocurrency market has plunged 53 percent this year to \$280 billion, according to CoinMarketCap.

<b>HEADLINE</b>	<b>06/17 US Cyber Command on the offensive</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/us-cyber-command-cyberattacks-pentagon-hacking/2018/06/17/id/866673/">https://www.newsmax.com/newsfront/us-cyber-command-cyberattacks-pentagon-hacking/2018/06/17/id/866673/</a>
<b>GIST</b>	<p>The United States Cyber Command has quietly taken a significantly more aggressive approach to defending against cyberattacks, a shift in strategy by the Pentagon that could heighten the risk of conflict with adversaries that sponsor menacing hacking groups, The New York Times reported on Sunday.</p> <p>The change from a largely defensive posture came in the spring, as the Pentagon ordered nearly daily raids on foreign networks in an attempt to disable cyberweapons before they can be used against the U.S., according to strategy documents, as well as military and intelligence officials.</p> <p>The change in approach came as a result of both the greater authority given to military commanders overall by President Donald Trump and the recognition that the U.S. has not been defending itself adequately against the increasing number of attacks.</p> <p>This is especially so since U.S. intelligence agencies have for several years identified cyberthreats as the No. 1 risk facing the country, greater even than terrorism.</p> <p>However, it is unclear how carefully the administration has taken into consideration the various risks involved if the plan is acted on in classified operations, particularly how to avoid an unforeseen escalation against nuclear-armed nations as it wields its growing cyberarsenal.</p> <p>The risks of escalation, which could lead to retaliatory strikes against American banks, dams, financial markets or communications networks, are considerable, according to officials.</p> <p>Another factor that has to be taken into consideration is that such aggressive actions against an adversary often requires secretly operating in the networks of an ally, which frequently made the Obama administration think carefully about doing so.</p> <p>But under the Trump administration, the traditional structure of White House oversight of cyberactivities</p>

is being taken apart, as new national security adviser John Bolton eliminated the position of White House cybercoordinator, who had overseen the complex mix of cyberactivities run by the government.

This new aggressive approach comes as a special authority is helping Cyber Command to streamline and expedite its recruitment and hiring processes in order to add the necessary personnel, according to the Department of Defense.

The objective of the overall strategy, according to the new "vision statement" quietly issued by the command, is to "contest dangerous adversary activity before it impairs our national power," the Times reported.

Pushing American defenses "as close as possible to the origin of adversary activity extends our reach to expose adversaries' weaknesses, learn their intentions and capabilities, and counter attacks close to their origins," the document says. "Continuous engagement imposes tactical friction and strategic costs on our adversaries, compelling them to shift resources to defense and reduce attacks."

<b>HEADLINE</b>	<b>06/15 Germany: suspected biological terror plot</b>
<b>SOURCE</b>	<a href="https://www.bbc.com/news/world-europe-44494010">https://www.bbc.com/news/world-europe-44494010</a>
<b>GIST</b>	<p>German police are searching flats in a Cologne tower block where a Tunisian man is suspected of having kept highly toxic ricin.</p> <p>The 29-year-old man, named in German media only as Sief Allah H, is being questioned by police.</p> <p>Police stormed his flat on Tuesday and found a chemical which turned out to be ricin. He is suspected of planning a biological terror attack.</p> <p>Ricin is a poison found naturally in castor beans.</p> <p>German security sources quoted by RP news, which is based in the Cologne region, said the quantity of ricin found was enough for up to 1,000 toxic doses.</p> <p>Police have sealed off the apartment block in Cologne-Chorweiler district. They are searching two flats rented by the suspect, as well as six other empty flats and some public areas in the building.</p> <p>The authorities say there is no immediate danger to the other residents.</p> <p>Experts from the Robert Koch Institute - a prestigious scientific research centre - are with police at the scene.</p> <p>Germany's top constitutional protection official, Hans-Georg Maassen, said it was "very probable that a terror attack was foiled here".</p> <p>Ricin made headlines internationally when it was found to have killed a Bulgarian dissident, Georgi Markov, in an infamous umbrella stabbing in London during the Cold War.</p> <p>The exiled writer and BBC journalist, an opponent of Bulgaria's then-Communist government, was stabbed in the thigh in 1978. Later a tiny 1.7mm platinum pellet with a ricin-filled cavity was found in his body.</p> <p>There is no antidote to ricin poisoning. Because of its high toxicity it is listed among biological weapons.</p>

	Tiny doses can be fatal if administered by injection or inhaled as a powder.

<b>HEADLINE</b>	<b>06/15 Finland: first terrorism crime sentencing</b>
<b>SOURCE</b>	<a href="https://yle.fi/uutiset/osasto/news/finlands_first_terror_attack_life_sentence_for_turku_stabber/10257371">https://yle.fi/uutiset/osasto/news/finlands_first_terror_attack_life_sentence_for_turku_stabber/10257371</a>
<b>GIST</b>	<p>The District Court of South-West Finland has found a Moroccan man guilty on two counts of murder with terrorist intent and eight counts of attempted murder with terrorist intent, and sentenced him to life in prison. This marks the first time that a crime in Finland has been legally classified as terrorism.</p> <p>The court declared that the attacks were carried out in a premeditated and exceptionally cruel manner.</p> <p>The court in Turku, where Abderrahman Bouanane carried out the assault last summer, handed down its ruling on Friday afternoon. The defence may appeal the decision.</p> <p>The 23-year-old admitted to killing two women and injuring eight other people on and near Turku's main square in August. His trial proceedings began in April.</p> <p>Psychological testing determined that he was sane at the time of the stabbings.</p> <p>The main question during the five weeks of hearings and deliberations centred on whether his acts were motivated by terrorism, making it the first case of its kind in Finland.</p> <p>The prosecutors argued – successfully – that the attacks constituted murder with terrorist intent and attempted murder with terrorist intent. The defence claimed that they fit the standard definition of manslaughter and attempted manslaughter – despite the fact that their client himself described the attacks as terrorism.</p> <p>Bouanane released a video before the stabbing spree, claiming it in the name of ISIS. The terror group has not claimed responsibility for the attack.</p> <p>The man arrived in Finland in 2016 as an asylum seeker, but his application was rejected later that year. He has been in prison in Turku since the attack.</p> <p>The average length of a 'life sentence' in Finland is just over 14 years. A convict may be eligible for release after 12 years, while the longest prison term ever lasted 22 years.</p>

<b>HEADLINE</b>	<b>06/15 Wisconsin woman jailed for terrorism</b>
<b>SOURCE</b>	<a href="https://www.jsonline.com/story/news/crime/2018/06/15/cudahy-mom-charged-promoting-isis-attacks-held-without-bail/702851002/">https://www.jsonline.com/story/news/crime/2018/06/15/cudahy-mom-charged-promoting-isis-attacks-held-without-bail/702851002/</a>
<b>GIST</b>	<p>A Cudahy woman charged with promoting the terrorist group ISIS and giving specific instructions on how to carry out attacks was ordered held without bail in federal court in Milwaukee Friday.</p> <p>Waheba Issa Dais, a 45-year-old homemaker and mother of seven, was arrested this week by the FBI on a charge of attempting to provide material support or resources to a foreign terrorist organization.</p> <p>The criminal complaint says that in recent months Dais had hacked other people's social media accounts and used them to give instructions on how to carry out attacks in the name of the Islamic State, also known as ISIS.</p> <p>Dais, who pledged her allegiance to ISIS, suggested attacking churches, street festivals and "celebrations</p>

in summer" where there was a likelihood of many civilian deaths. She also suggested attacking "a government post" and public water sources with the highly toxic compound ricin, the complaint said.

When an undercover FBI employee posing as a supporter of ISIS wrote to Dais that he had no experience in making bombs, Dais responded, "No problem. Making bombs is easy, and you can also start with poisons. I have a (social media) Channel you may benefit from ... I advise you start with poison," the complaint said.

Dais came to this country from Jerusalem in 1992 and is a lawful permanent resident. Five of her seven children were living with her in what was described by the prosecutor as deplorable conditions in a home in Cudahy.

In arguing for detention, Assistant U.S. Attorney Greg Haanstad said Dais created a virtual online library with instructions on how to make poison, explosive vests and bombs, and encouraged attacks.

"She has shown a disregard for human life," Haanstad said, adding she offered to assist "in mass killing."

Haanstad also said the father of Dais' younger children told FBI agents that Dais showed her 5-year-old son beheading videos. That father is no longer living with the family and was described as estranged from Dais.

The children have been placed by protective services and Dais has been assigned an attorney for proceedings in Milwaukee County Children's Court related to placement.

Dais has been diagnosed as having depression and is bipolar, but is not taking prescribed medication, Haanstad said. She talked to the FBI for three hours after her arrest. A son told the FBI that he knew what his mother was doing and told her to stop, Haanstad said.

Defense attorney John Champion, a federal public defender, said Dais should be released to care for her children and because she has no criminal record. He said Dais cooks for her family every day, denying that there was no food in the house. He said she is strapped for money and does not work outside the home, counting on help from family.

"This is a person who is very likely to be cooperative," he said.

Champion said if Dais was such a risk, the government would have arrested her immediately after she posted suggestions about the attack. Haanstad countered that such investigations take time.

U.S. Magistrate Judge Nancy Joseph said she ordered detention because of the seriousness of the charges, which carry a maximum penalty of up to 20 years in prison, the fact that Dais went so far as to hack accounts and that she posted repeatedly.

<b>HEADLINE</b>	<b>06/15 NATO: women's role in terror groups</b>
<b>SOURCE</b>	<a href="https://www.theguardian.com/public-leaders-network/2018/jun/15/nato-terrorist-groups-women-food-water">https://www.theguardian.com/public-leaders-network/2018/jun/15/nato-terrorist-groups-women-food-water</a>
<b>GIST</b>	<p>Terrorist groups are using gender dynamics more effectively to get women involved in violent action than those trying to battle extremism, according to Nato.</p> <p>Clare Hutchinson, the Nato secretary general's special representative for women, peace and security since January, told a conference of female politicians in Vilnius that global terrorism is a transnational threat that requires a transnational approach, while avoiding simplistic assumptions about the role of women.</p>

“We have to dismantle the assumption that women are always good and never bad,” she said, citing a long history of women being involved in terrorism since 1878, when Russian revolutionary Vera Zasulich shot the governor of St Petersburg and became the first person to be tried for terrorism.

Many of today’s terrorist groups, said Hutchison, are building direct connections with women, who are often drawn into groups because they are in dire need. When there is no other support left for basics like water or food, and women can get that support only from a terror group, they take it and get drawn in, she said, adding that counter-terrorism projects are in danger of failing to see this, and that women’s involvement in terror is not always political. “Sometimes, it’s the simple fact that they need to feed their children,” she said.

Hutchinson said many groups exploit gender dynamics, especially online, using the tendency of women to communicate and connect. “They are building a direct connection with women,” she said.

Fauziya Abdi Ali, founder and president of Women in International Security in Kenya, agreed that violent extremists in countries were increasingly harnessing support from women and girls, often because in return they were helped.

It can also be difficult for women and girls who had been captured by extremists to return to their normal way of life. “In Nigeria, women may undergo a rehabilitation programme, but can end up returning to groups like Boko Haram, because they are going back to the same economic situation they left,” she said.

A 2017 study concluded that women are playing an increasingly significant role in terrorism, and Islamic State has been using increasing numbers of women to spearhead attacks. In early June, teenager Safaa Boular was found guilty of terrorist offences. Boular, who had plotted an attack on the British Museum in London, was part of the first all-female terrorist cell linked to Isis in the UK. Detectives involved in the case said it showed that young women within radicalised networks were no longer simply passengers or victims, but determined perpetrators of violence in their own right.

Cheryl Frank, head of the transnational threats and international crime division at the Institute for Security Studies, said women needed to play a larger role in policy-making to prevent terrorism. “Women continue to be relegated to the role of community-based actors,” she said. “We need to bring women’s voices into policy and public spaces. That is not happening at the moment.”

Frank also warned that millions of pounds are being poured into counter-terrorism preventive programmes, but more needs to be done to share information and learning around the world on the most effective ways to tackle terrorism.

Mara Marinaki, principal gender adviser at the EU external action service, said it was important not just to focus on the role of women, but to reconfigure traditional notions of violence and masculinity, that they were somehow entwined in being a “real” man.

She said there was an opportunity to reframe the rights and role of women and girls. “Countering violent extremism is a feminist agenda.”

<b>HEADLINE</b>	<b>06/16 London: mother, daughter jailed for terror</b>
<b>SOURCE</b>	<a href="http://ewn.co.za/2018/06/15/mother-and-daughter-jailed-in-uk-after-admitting-terrorism-charges">http://ewn.co.za/2018/06/15/mother-and-daughter-jailed-in-uk-after-admitting-terrorism-charges</a>
<b>GIST</b>	LONDON - A mother and daughter “filled with hate and toxic ideology” were jailed on Friday for planning terrorist attacks in London, including a likely knife rampage.  Rizlaine Boular, 22, and her mother Mina Dich, 44, had earlier admitted preparing terrorist acts after having been tracked by police as they drove around carrying out reconnaissance of potential targets in

	<p>central London in April last year.</p> <p>The following day, the pair went to a supermarket in Wandsworth, southwest London where they bought a pack of three kitchen knives, police said.</p> <p>After their arrest, detectives recovered electronic devices from both Rizlaine's and Mina's address, on which they found Islamist extremist content.</p> <p>"(They) were filled with hate and toxic ideology and were determined to carry out a terrorist attack," said Deputy Assistant Commissioner of London police Dean Haydon.</p> <p>"Had they been successful, it could well have resulted in people being killed or seriously injured," he added in a statement.</p> <p>Boular was sentenced at the Old Bailey court to life imprisonment with a minimum term of 16 years. Dich received an extended sentence of 11 years and nine months.</p>

<b>HEADLINE</b>	<b>06/15 Eiffel Tower fence nears completion</b>
<b>SOURCE</b>	<a href="https://www.bbc.com/news/world-europe-44502949">https://www.bbc.com/news/world-europe-44502949</a>
<b>GIST</b>	<p>Paris is to unveil its newly built perimeter defences around the Eiffel Tower to protect against terror threats.</p> <p>Temporary barriers were placed around the tower in June 2016, and are now being replaced with more permanent measures.</p> <p>Set to be completed in mid-July, the fences cost nearly €35 million (\$40.1m; £30.1m). More than 240 people have died in terror attacks in France since 2015.</p> <p>Bernard Gaudillère, president of the Société d'Exploitation de la Tour Eiffel (SETE) which runs the iconic monument, said the new walls were "rock-solid for absolute security".</p> <p>Glass walls measuring 6.5cm (2.5in) thick will form two sides of the square, with the other two blocked off by 3.24m (10.6ft) high metal barriers, exactly one-hundredth the height of the tower.</p> <p>To prevent vehicle attacks, 420 blocks will be placed in front of the glass walls as an added protection. The forecourt under the Eiffel tower has been closed to the public since June 2016, with anti-terror troops regularly patrolling the site.</p> <p>Mr Gaudillère said the temporary walls would be replaced with something "infinitely nicer and more romantic", as part of a €300m renovation of the tower ahead of the 2024 Olympic Games in Paris.</p> <p>Up to seven million tourists are expected to visit the tower in 2018 alone. Yet residents are not happy about the added security features.</p> <p>A group called Les Amis du Champ de Mars posted a statement online in May last year complaining about the lack of consultation with residents, the "exorbitant cost" of the fences, and the difficulty of access for buses and people with disabilities.</p> <p>They also allege the city used special measures afforded it by the state of emergency to push through the security changes without assessing their impact or the public interest.</p> <p>The country introduced tough anti-terror laws in October 2017 after almost two years of the national state of emergency imposed by then-President Francois Hollande in the wake of the Paris attacks.</p>

<b>HEADLINE</b>	<b>06/15 France: 2 terror bombing plots thwarted</b>
<b>SOURCE</b>	<a href="http://www.france24.com/en/20180615-france-police-thwart-terror-plots-swingers-club-gays?ref=tw_i">http://www.france24.com/en/20180615-france-police-thwart-terror-plots-swingers-club-gays?ref=tw_i</a>
<b>GIST</b>	<p>French police have thwarted two terror attacks, including one at a swingers' club, sources close to the investigations said Thursday.</p> <p>The prevented plots come weeks after a knifeman killed a man in Paris and as the country remains on high alert following a string of jihadist assaults since 2015 that have claimed more than 240 lives.</p> <p>One suspect, a 38-year-old "radicalised convert" to Islam, was arrested in the Indre region in the centre of the country.</p> <p>"An improvised explosive device was found at his home and the man admitted that he wanted to use it to target a swingers' club," the source told AFP.</p> <p>The man, originally from the Loiret region, was charged and taken into custody on May 17 for "associating with terrorist criminals" and "preparing an act of terrorism", a judicial source said.</p> <p>Hours earlier police sources said two other men had been charged on suspicion of planning an attack in the name of the Islamic State group which may have targeted gay people.</p> <p>Sources close to the probe said the men, described as friends aged 21 and 22, were arrested Saturday in the Seine-et-Marne region east of Paris.</p> <p>Searches found two knives, a detonation system and IS propaganda material in their possession, a source said.</p> <p>"Their plan was still ill-defined at this stage, but there were elements to suggest they planned to attack homosexuals," one source added.</p> <p>The two men, said to be unknown to security services, were charged on Tuesday by an anti-terrorism judge and detained.</p>

<b>HEADLINE</b>	<b>06/15 DPS iWatchTexas: see, say something</b>
<b>SOURCE</b>	<a href="https://www.sanmarcosrecord.com/news/new-app-helping-texans-report-suspicious-activity">https://www.sanmarcosrecord.com/news/new-app-helping-texans-report-suspicious-activity</a>
<b>GIST</b>	<p>AUSTIN — The Department of Public Safety is making it easier for Texans who see something to say something.</p> <p>The DPS recently launched iWatchTexas, a mobile application (app) the public can use to report suspicious activities or behaviors that may indicate ongoing or future criminal or terrorist activity.</p> <p>The iWatch Texas program was created as a partnership between communities and law enforcement, and utilizes public tips related to criminal activity. DPS developed the new iWatchTexas mobile app at the direction of Governor Greg Abbott to make it easier for the public to report suspicious activity in Texas, including criminal, terroristic or school safety-related threats.</p> <p>"The new iWatchTexas mobile app is one of several solutions that Texas is implementing immediately to identify and report those who may pose a threat to our schools and to our communities," Abbott said. "Our law enforcement officers often rely on vigilant Texans to help keep communities safe, and this</p>

	<p>new tool will give everyone the ability to quickly and easily communicate with authorities and help prevent future tragedies.”</p> <p>The app is now available for iPhone users on the Apple App Store (iWatchTexas) and for Android users on Google Play (iWatchTexas).</p> <p>“Amid the growing threats to public safety by malicious actors, we want to remind the public that they can be law enforcement’s greatest resource to combat those intent on harming others, including innocent schoolchildren and administrators,” DPS Director Steven McCraw said. “By launching this new mobile app at the direction of Gov. Abbott, we are providing an additional and easy way for the public to report any illegal or suspicious behavior, which may ultimately help save lives.”</p> <p>The public can report suspicious behaviors through the iWatch Texas program via the new mobile app, online or by calling 1-844-643-2251. A report usually takes fewer than five minutes to complete, and once submitted, each report is reviewed by law enforcement analysts. All reports are confidential (providing contact information, which is optional, will allow for follow-up questions).</p> <p>Preparations for crime, terrorist attacks and threats to school safety may often be seen but not reported. When in doubt, speak up.</p>

<b>HEADLINE</b>	<b>06/15 Ethiopia pardons hundreds for 'terrorism'</b>
<b>SOURCE</b>	<a href="https://www.aljazeera.com/news/2018/06/ethiopia-pardons-hundreds-sentenced-terrorism-charges-180615162548089.html">https://www.aljazeera.com/news/2018/06/ethiopia-pardons-hundreds-sentenced-terrorism-charges-180615162548089.html</a>
<b>GIST</b>	<p>The government of Ethiopia has said it will release more than 304 prisoners, including 289 convicted on "terrorism" charges, according to state media.</p> <p>The move is part of a raft of reforms pledged by authorities after violent unrest broke out three years ago, sparked by an urban development plan for the capital, Addis Ababa, that critics said would trigger land seizures in the surrounding Oromia region.</p> <p>The demonstrations quickly spread to other parts of the country, with protesters demanding wider political</p>

	<p>freedom and equality, as well as an end to human rights abuses.</p> <p>Those pardoned on Friday include three Kenyans, who were released following an agreement between the two countries to strengthen bilateral relations, according to a statement sent to state-affiliated Fana by Ethiopia's attorney general.</p> <p>More than 1,000 prisoners have been released or slated for release since Prime Minister Abiy Ahmed came to power in April.</p> <p>Abiy took office after his predecessor, Hailemariam Desalegn, abruptly resigned amid widespread anti-government protests that claimed the lives of several hundred people, mainly in the restive Oromia and Amhara regions.</p> <p>Among those freed in recent months are several senior opposition leaders accused of charges such as "terrorism" or incitement to topple the government.</p> <p>One of them is Andargachew Tsige who was found guilty of "terrorism" and sentenced to death in absentia in 2009 over his role in the opposition group Ginbot 7.</p> <p>The father of three was arrested during a stopover at a Yemen airport in June 2014 and taken to Ethiopia. Last month, Ethiopia lifted its state of emergency and Abiy has been making numerous changes in a country considered highly repressive by rights groups</p> <p>The East African state has also made moves towards repairing relations with rival and neighbour, Eritrea.</p>

<b>GIST</b>	<p>A U.S.-backed Syrian force says it has captured an important village near the Iraqi border from the Islamic State group.</p> <p>The Kurdish-led Syrian Democratic Forces said on Sunday that its fighters captured Dashishah in the northeastern province of Hassakeh, a major crossing point between Iraq and Syria when IS ran its self-styled caliphate.</p> <p>The group, which has been among the most effective in fighting IS in Syria, added that SDF fighters also entered the town of Naserah and are about 3 kilometers (2 miles) from the Iraqi border.</p> <p>The Britain-based Syrian Observatory for Human Rights, a war monitor, said the SDF captured 22 villages and farms in the area during two weeks of fighting. It added that 49 extremists have been killed since the SDF's offensive on Hassakeh's IS-held area.</p>

<b>HEADLINE</b>	<b>06/17 Suicide bomber targets Taliban fighters</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/death-toll-suicide-bombing-afghanistan-climbs-36-55953865?cid=clicksource_76_4_article%20roll_articleroll_hed">https://abcnews.go.com/International/wireStory/death-toll-suicide-bombing-afghanistan-climbs-36-55953865?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>A suicide bomber struck in Afghanistan's eastern city of Jalalabad on Sunday, killing at least 19 people in the second attack in as many days targeting Taliban fighters, security forces and civilians celebrating a holiday cease-fire. The Taliban later rejected an extension of the cease-fire.</p> <p>Najibullah Kamawal, director of the provincial health department, said another 60 people were wounded in the attack, which struck a crowd of people as they left the governor's compound.</p> <p>Saturday's attack, which also took place in Jalalabad, killed at least 36 people and wounded 65, according to Kamawal, director of the provincial health department.</p> <p>No one has claimed the attacks, but they appeared to be the work of the Islamic State group, which is not included in the cease-fire and has clashed with the Taliban in the past. The local IS affiliate has a strong presence in the province.</p> <p>The bomber on Saturday targeted a gathering of Taliban fighters who were celebrating a three-day truce coinciding with the Eid al-Fitr holiday.</p> <p>After the attack, Afghan President Ashraf Ghani announced a nine-day extension of the cease-fire.</p>

<b>GIST</b>	<p>Afghanistan's Taliban has rejected an extension to a three-day cease-fire coinciding with the Eid al-Fitr holiday.</p> <p>Afghan President Ashraf Ghani announced a nine-day extension of the cease-fire after a suicide bombing killed 36 people on Saturday, in hopes that the Taliban would respond in kind.</p> <p>But on Sunday the Taliban announced that their cease-fire had ended and that they have no intention of extending it. "The cease-fire was announced by the Taliban for just the three days of the Eid holidays which have come to an end this Sunday evening," said Taliban spokesman Zabihullah Mujahid in a statement. "All Mujahidin (Taliban) should continue their operations against foreign invaders and their puppets,"</p> <p>The Taliban's statement added that their cease-fire for their fighters to celebrate the holiday peacefully and not in response to the government's cease-fire announcement.</p>

<b>HEADLINE</b>	<b>06/18 Syria: US-led strike hits govt. troops</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/syria-us-led-strike-hits-troops-east-us-55968188?cid=clicksource_76_4_article%20roll_articleroll_hed">https://abcnews.go.com/International/wireStory/syria-us-led-strike-hits-troops-east-us-55968188?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Syrian state media reported Monday that an airstrike against pro-government forces in the far east of the country caused casualties, while Iraqi officials said 20 Shiite paramilitaries were killed just across the border.</p> <p>The Syrian state TV report said the airstrike occurred around midnight in the village of al-Hari, to the southeast of the border town of Boukamal, and was carried out by the U.S.-led coalition battling the Islamic State group. But a coalition spokesman said it had not carried out any strikes in the area.</p> <p>The state TV report, quoting an unnamed military official, gave no breakdown of the casualties other than saying there "were several martyrs and others were wounded."</p> <p>In Baghdad, Iraqi officials said Popular Mobilization Forces — the mostly Shiite state-sanctioned paramilitaries — came under attack south of the town of Qaim, just across the border from Boukamal. They said 20 fighters were killed and dozens were wounded, adding that the cause of the attack was not immediately clear. The Iraqi officials spoke on condition of anonymity because they were not authorized to speak to the media.</p> <p>U.S. military spokesman Col. Sean Ryan said the coalition was looking into the reports.</p> <p>"We are aware of the strike near Boukamal, however there have been no strikes by U.S. or coalition forces in that area," he said. "We're looking into who that could possibly be but it wasn't the U.S. or the coalition."</p> <p>Syrian and Iraqi forces have driven IS from virtually all the territory it once held in both countries, but the militants still control some remote areas along the border.</p>

	<a href="#">marawi-55969024?cid=clicksource 76 4 article%20roll articeroll hed</a>
GIST	<p>A Philippine military official says airstrikes and ground assaults have targeted a group of Islamic State group-linked militants, including their leader, who helped lead a five-month siege in southern Marawi city last year.</p> <p>Army Col. Romeo Brawner says the military received reports that at least five militants were killed in Sunday's offensive but the deaths haven't been confirmed. The offensive sparked gunbattles between troops and the extremists in mountainous areas of Lanao del Sur province. Hundreds of villagers fled from nearby towns as the offensive got underway.</p> <p>Brawner said Monday the offensive targeted about 40 militants led by Owayda Benito Marohombsar, who uses the nom de guerre Abu Dar. He was among those who led the attack on Marawi, but managed to escape before troops quelled the uprising in October.</p>

HEADLINE	06/17 Bangladesh deadly drug crackdown
SOURCE	<a href="https://www.wsj.com/articles/bangladesh-launches-deadly-drug-crackdown-as-rohingya-crisis-fuels-smuggling-1529236803?mod=hp_major_pos1">https://www.wsj.com/articles/bangladesh-launches-deadly-drug-crackdown-as-rohingya-crisis-fuels-smuggling-1529236803?mod=hp_major_pos1</a>
GIST	<p>DHAKA, Bangladesh—Hundreds of police officers toting carbines swarmed a gritty Dhaka slum recently, overturning beds in homes, riffling through the wallets and bags of cafe patrons and eventually shoving 50 suspected drug users into the back of police vans.</p> <p>It was a regular night in a new crackdown on drugs in Bangladesh, marked by an aggressive campaign since mid-May in which police have arrested some 13,000 people and killed more than 100 in raids, according to the government.</p> <p>Odhikar, a Bangladeshi human rights group, accused the security forces of carrying out 149 extrajudicial killings in May, most of them in connection with the drug crackdown, compared with an average of less than 20 a month in the first four months of the year, according to its statistics.</p> <p>Hasanul Haq Inu, Bangladesh's minister of information, said that the expanded campaign was necessary to disrupt drug distribution networks, and that the killings involved situations where armed drug criminals shot at police.</p> <p>The antidrug campaign stems from an influx of a cheap methamphetamine concoction known as yaba finding its way into Bangladesh, fed in large part by the turmoil since some 700,000 Rohingya were driven from their homes in Myanmar by the military last August into Bangladesh, according to Bangladeshi police.</p> <p>Yaba is mainly produced in lawless regions of northern Myanmar, where rebel militias that rely on drug revenue have long held sway and fed markets in Thailand and Cambodia. But the security breakdown in western Myanmar since the Rohingya, a persecuted Muslim minority in the Buddhist-majority country, were expelled last year is giving the traffickers an expanded opportunity, Bangladeshi police say.</p> <p>"Only Myanmar is pushing yaba," said Jamil Hasan, deputy commissioner of the detective branch of the Dhaka Metropolitan Police, observing as police pushed suspected yaba users into vans during a roundup. Though the United Nations antinarcotics agency has said that Myanmar and Bangladesh could foil trafficking networks if their border police worked together, Hasanul Haq Inu, Bangladesh's minister of information, said the Rohingya crisis had created tensions that made coordinating the forces difficult.</p> <p>"Cooperation in stopping the yaba trade is a little bit cumbersome and slow," Mr. Inu said. His</p>

government has repeatedly asked Myanmar’s authorities to shut down yaba labs.

Police Col. Aung Myat Moe, head of the Myanmar police force in Rakhine State, where the Rohingya lived, said police have established more than 80 land and sea checkpoints to intercept drug traffickers but said they didn’t know who was behind the yaba trade.

Jeremy Douglas, regional representative of the U.N. Office on Drugs and Crime for Southeast Asia, said that skilled chemists working for rebel groups in northern Myanmar have scaled up yaba production in recent years, even as demand has peaked in traditional markets.

“They have extra supply and they’re dumping it into Bangladesh at a low price point,” Mr. Douglas said. The gangs prefer making and distributing yaba over opium, used in the region’s older heroin trade, because it cuts out poppy farmers and concentrates profits in their hands.

Bangladeshi police say drug traffickers are using young Rohingya men in the camps, who lack employment opportunities, as drug runners. Rohingya have been arrested by Bangladeshi authorities as part of the antidrug campaign, including a recent case where a 12-year old boy was compelled to ingest a load of yaba capsules and bring them into Dhaka, the capital, before members of the ring that recruited him were arrested.

The violent antidrug campaign is drawing comparisons by human-rights groups with similar crackdowns in the region, where the Philippines war on drugs launched by President Rodrigo Duterte has led to thousands of deaths.

“Bangladesh deserves to be commended for its tremendous support for Rohingya refugees, setting an example for the world,” U.N. High Commissioner for Human Rights Zeid Ra’ad Al Hussein said, in a statement condemning the drug killings. “I urge the government to build on this respect for human rights in other areas, including in its fight against drug-related crimes.”

<b>HEADLINE</b>	<b>06/15 Panhandlers pose as Buddhists monks</b>
<b>SOURCE</b>	<a href="https://www.kgw.com/article/news/local/seattle-buddhists-concerned-by-panhandlers-dressed-as-monks/283-564683063">https://www.kgw.com/article/news/local/seattle-buddhists-concerned-by-panhandlers-dressed-as-monks/283-564683063</a>
<b>GIST</b>	<p>Members of the Seattle Buddhist community are concerned by a years-long issue - fake monks reportedly panhandling downtown.</p> <p>“This is happening all over the world, in major U.S. cities,” said Steve Wilhelm, editor of NW Dharma News.</p> <p>Wilhelm has been practicing Buddhism for more than 30 years and has met plenty of monks.</p> <p>“None of them would be doing this, none of them would be out in the street,” he said. “They’re not out in the street asking for anyone to do anything.”</p> <p>The purported monks often approach people in heavily trafficked areas. Wilhelm said it’s common for them to slip a beaded bracelet on someone’s wrist or hand them a gold card reading, “Word Smoothly, Lifetime Peace.” Then they ask for payment.</p> <p>One monk was observed removing the bracelet from someone’s wrist when she appeared to politely refuse.</p> <p>Miriam Martinez often sees men in robes outside the store she manages on 1st Avenue, Simply Seattle.</p> <p>“It does make me uncomfortable because I don’t know how much money they ask for,” she said. “People</p>

do fall for it every single time. I see people give them money every single day.”

“I honor the fact that anyone feels generous enough that they want to donate to such a purported effort,” Wilhelm said. “That’s to people’s credit. But they should just know monastics would not be out in the street asking for money. Monks don’t do that. So if someone does that, they’re not a monk.”

That’s why he recommends asking basic questions about where the money goes. Wilhelm approached one man in robes panhandling near the Pike Place Market to do just that. When approached by the Wilhelm and a KING 5 camera, the man walked away.

“What monastery are you from?” Wilhelm asked. The man did not respond. Another person in similar robes began to walk away across the street.

“He’s just a guy conning people,” Wilhelm said.

That behavior did not inspire confidence in Martinez.

“That does say a lot,” she said. “If you were actually raising money for a cause or congregation, you would stop and explain yourself, but if you’re hiding something, obviously you want to run away and get out of the situation. That doesn’t speak well of them at all.”

A spokesperson for Seattle police said the department receives several complaints about the monks every year and has been aware of it for some time. However, he said they don’t believe the act itself is illegal – though officers could issue an aggressive panhandling ticket if a situation escalated or potentially arrest someone for pedestrian interference.

KING 5 did not observe any men in monk’s robes become aggressive, but Wilhelm said he’s seen confrontations escalate before when they’re questioned.

He said the situation still frustrates him and wishes there would be more enforcement.

“Well, it’s sad,” he said. “They’re misrepresenting themselves, scamming people. It’s sad. Begging on the street, that’s OK, but they shouldn’t make believe that they’re someone else, and they shouldn’t prevent the tradition of the Dharma.”

<b>HEADLINE</b>	<b>06/15 PCSO: man loses \$5,400 to scam artists</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/06/15/pierce-county-man-loses-5400-to-scam-artists/">http://q13fox.com/2018/06/15/pierce-county-man-loses-5400-to-scam-artists/</a>
<b>GIST</b>	<p>PIERCE COUNTY, Wash. – A 25-year-old Spanaway man is out \$5,400 and his mother nearly coughed up another \$3,000 as part of a well-oiled and somewhat complicated scam, the Pierce County sheriff’s department said.</p> <p>Before we get to the nuts and bolts, a piece of advice: If somebody on the other end of the phone has bad news and is demanding gift cards to make it go away, it’s extremely likely you’re talking to a scammer.</p> <p>In this case, the scammers used phone-number-spoofing technology and two separate cons to try to pry money out of the mother and son.</p> <p>In the mother’s case, they told her that they’d kidnapped her son. They spoofed his number when they called her, demanding that she buy \$3,000 worth of gift cards and give them the codes over the phone.</p> <p>Fortunately, alert employees at the Albertsons on Canyon Road pieced together what was happening and called 911 before she could buy the cards.</p>

	<p>In the son's case, they scammers spoofed the phone number for the sheriff's department, told the man there was an arrest warrant for him because he'd missed jury duty, and said he needed to buy more than \$5,000 in gift cards to get out of it. Unfortunately for him, he bought the cards.</p> <p>Here's where this scam gets scary.</p> <p>While talking to the woman, she asked them to prove they had her son and demanded to talk to him. So, the scammers got the man on the phone as part of his scam, conferenced him in with his mom, and convinced her it was legit.</p>

<b>HEADLINE</b>	<b>06/16 Report: Minn. officers directed ketamine</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/06/16/us/ketamine-minneapolis-police.html">https://www.nytimes.com/2018/06/16/us/ketamine-minneapolis-police.html</a>
<b>GIST</b>	<p>Minneapolis police officers asked emergency medical workers dozens of times over three years to inject suspects and others with the powerful anesthetic ketamine, including some who were already restrained, The Star Tribune reported on Friday.</p> <p>In some cases, the drug caused heart or breathing failure and required those injected to be revived or intubated, according to the newspaper.</p> <p>The Star Tribune said it had obtained a draft report of an investigation by the <u>Office of Police Conduct Review</u>, a division of the city's Department of Civil Rights.</p> <p>Ketamine has for decades been used as an anesthetic for humans and animals as well as abused as a recreational hallucinogenic drug known as Special K. Researchers have also explored its therapeutic uses in treating depression.</p> <p>The Star Tribune, citing the draft report, said the number of documented injections of ketamine during police calls increased to 62 last year from three in 2012, including four times on the same person.</p> <p>In one case, officers and emergency medical workers responded to a call about a man who appeared to be in a mental health crisis.</p> <p>Four officers and two medical responders arrived and decided to sedate the man, according to the report authors, who reviewed body camera footage, The Star Tribune reported.</p> <p>Upon seeing the needle, the man said he did not want the shot. "Whoa, whoa, that's not cool!" he pleaded, according to the newspaper. "I don't need that!"</p> <p>He was injected with the drug twice and secured to a chair. "Shortly after, he became nonverbal and unintelligible, prompting one officer to remark, 'He just hit the K-hole,' a slang term for the intense delirium brought on by ketamine," the newspaper reported.</p> <p>Until last month, the police had no policy for using the drug, which the department manual classified as a "date rape drug" because it is a powerful sedative that can erase or alter memory.</p> <p>Side effects of the drug can include changes in blood pressure and heart rate, delirium, agitation, confusion and hallucinations, said Dr. Scott Krakower, assistant unit chief of psychiatry at Zucker Hillside Hospital in Glen Oaks, N.Y. If it is not administered properly, it could lead to cardiac and respiratory problems and potentially worsen agitation, he added.</p> <p><u>John B. Gordon</u>, the executive director of the A.C.L.U. of Minnesota, said on Friday he first learned of the injections from The Star Tribune report.</p>

	<p>If officers directed medical responders to administer the drug, it amounted to a “horrible abuse of power,” he said.</p> <p>Members of <u>Hennepin Healthcare</u>, the main emergency medical service provider in Minneapolis, are authorized to use ketamine when a patient is “profoundly agitated,” unable to be restrained and a danger to themselves or others, according to its policy, The Star Tribune said, adding that the draft report found cases in which emergency medical workers used it on people who did not appear to fit those criteria.</p> <p>Around the time the draft report was completed last month, Police Cmdr. Todd Sauvageau issued an order that officers “shall never suggest or demand” that emergency medical personnel sedate a person. “This is a decision that needs to be clearly made by EMS personnel, not MPD officers,” the order said.</p> <p>In a statement on Friday, Police Chief Medaria Arradondo emphasized that the draft report was incomplete “and devoid of any input from medical personnel,” and that releasing its contents “before its completion was irresponsible.”</p> <p>The report has not been made public and remained a “work in progress,” a spokesman for the Police Department, John Elder, said on Friday.</p> <p>Hennepin Healthcare said in a statement on Friday that it heard in early April that officers were asking that ketamine be used and relayed its concerns to the police on May 3.</p> <p>“While a police request for ketamine may occur, the final decision is always made by professional medical personnel,” the agency said. “Last year, ketamine sedations were used on 0.095 percent of our 81,500 EMS calls for service.”</p> <p>Hennepin Healthcare said that the drug had been used by its emergency medical services since 2008, and that it had asked an independent agency to review eight specific cases cited in the report.</p>

<b>HEADLINE</b>	<b>06/15 India faces worsening water crisis</b>
<b>SOURCE</b>	<a href="https://www.bbc.com/news/world-asia-india-44492994">https://www.bbc.com/news/world-asia-india-44492994</a>
<b>GIST</b>	<p>The <u>Niti Aayog report</u>, which draws on data from 24 of India's 29 states, says the crisis is "only going to get worse" in the years ahead.</p>

It also warns that 21 cities are likely to run out of groundwater by 2020 despite increasing demand. This would also threaten food security as 80% of water is used in agriculture.

Indian cities and towns regularly run out water in the summer because they lack the infrastructure to deliver piped water to every home.

Rural areas are also badly affected by a lack of access to clean water. They cannot rely on groundwater due to erratic rains and the fact that the groundwater is increasingly used for farming when monsoon rains are delayed or insufficient.

Around 200,000 Indians die every year because they have no access to clean water, according to the report.

Many end up relying on private water suppliers or tankers paid for the by the government. Winding queues of people waiting to collect water from tankers or public taps is a common sight in Indian slums.

As cities and towns grow, the pressure on urban water resources is expected to increase - the report estimates that demand will be twice as much as available supply by 2030. Water scarcity would also account for a 6% loss in India's gross domestic product (GDP).

Some Indian states, however, are doing a better job than others in managing their water. Gujarat in the west topped the report's rankings. It was closely followed by Madhya Pradesh in central India and Andhra Pradesh in the south.

Fifteen of the 24 states scored better than they did the previous year, leading to one of the report's conclusions that "water management is improving across-the-board".

But what remains alarming is that the states that are ranked the lowest - such as Uttar Pradesh and Haryana in the north or Bihar and Jharkhand in the east - are also home to nearly half of India's population as well the bulk of its agricultural produce.

But, the report said, policymakers face a difficult situation because there is not enough data available on how households and industries use and manage water.

HEADLINE	<b>06/18 IRS private debt collectors program</b>
SOURCE	<a href="https://www.cbsnews.com/news/irs-most-serious-problem-private-debt-collectors/">https://www.cbsnews.com/news/irs-most-serious-problem-private-debt-collectors/</a>
GIST	<p>Last year the IRS reactivated a program using private debt collectors to collect unpaid taxes from individuals with delinquent tax debts. According to the National Taxpayer Advocate, the IRS' Private Debt Collection (PDC) program is a "most serious problem."</p> <p>A troubling finding of a recent report was that taxpayers, whose tax debts were assigned to private collection agencies, entered into installment agreements that they are unable to afford, with approximately 43 percent earning income below their allowable living expenses.</p> <p>To make matters worse, the program costs the U.S. Treasury more than the money it brings in. Part of the reason may be that the private collection agencies can keep up to 25 percent of what they collect.</p> <p>The taxpayers most likely to be contacted by the program's private debt collectors are those identified by the IRS to have an inactive tax receivable. A tax debt is deemed to be "inactive" when the IRS removes it from their active case list for lack of resources or inability to locate the individual, or if more than a year has passed since the taxpayer had any interaction with the IRS for the collection of the over-due tax.</p> <p>Private collection agencies will first request full payment of the debt. If the taxpayer can't immediately</p>

	<p>pay, the agency will then offer an installment agreement.</p> <p>Beware of phone scams There have been many reports of phone scams by individuals who claim to represent the IRS and demand payment for tax debts, so it's important to know the difference between these scams and a legitimate IRS collection program.</p> <p>Taxpayers should know that the legitimate collection agencies will not call you. Instead, the IRS will send a letter on official IRS letterhead, called a Notice CP40. This will explain that your tax debt has been assigned to one of the private debt collection firms. A separate letter from the private collection agency will confirm the tax case has been assigned to them.</p> <p>The four private debt collection agencies selected by the IRS to operate the program are the only firms that should be legitimately contacting taxpayers. They are: CBE Group in Cedar Falls, IA; Conserve in Fairport, NY; Performant in Livermore, CA; and Pioneer in Horseheads, NY.</p> <p>Finally, the IRS cannot assign a tax debt to private collections in cases involving a deceased tax payer, an individual under age 18, or military in a designated combat zone. Also exempt are folks who are a victim of tax-related identity theft, classified as an innocent spouse, and currently involved in an exam, installment agreement, or offer in compromise.</p>

<b>HEADLINE</b>	<b>06/16 Report: Lyme disease on rise</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/health/lyme-disease-on-rise-misdiagnose-imitates/2018/06/16/id/866576/">https://www.newsmax.com/health/lyme-disease-on-rise-misdiagnose-imitates/2018/06/16/id/866576/</a>
<b>GIST</b>	<p>The federal government reports that cases of Lyme disease are on the rise, but many patients and researchers are finding that physicians are skeptical in diagnosing the deer tick-borne disease.</p> <p>"It's very serious," Marina Makous, a family medicine doctor in Exton, Pennsylvania, told NBC News. She is a former fellow at the Neuroinflammatory Diseases Center at Columbia University's Lyme and Tick-Borne Diseases Research Center.</p> <p>"There is an underappreciation of the seriousness of this illness, especially when [physicians] don't treat patients with Lyme disease on a daily basis," she said.</p> <p>The Centers for Disease Control and Prevention issued an updated warning last month that insect-borne diseases, especially those spread by ticks, are on the rise, having more than doubled from 2004 to 2016.</p>

	<p>Warmer weather is an important cause of the increased cases reported to the agency, according to The New York Times.</p> <p>"You can think of ticks as dirty needles," Makous told NBC. "They carry multiple pathogens and can transmit other things that make it more difficult for the immune system to fight off Lyme disease."</p> <p>Lyme disease is caused by a spiral-shaped bacteria called <i>Borelia burgdorferi</i>. It is found in the saliva of the blacklegged tick, more commonly known as a deer tick.</p> <p>The bacteria spreads rapidly and has complex survival mechanisms, according to the NBC report.</p> <p>Though most physicians believe it can be eradicated with antibiotics, the bacteria has been shown to return after treatment in the blood and tissue of animals and humans.</p> <p>Numerous patients say they live with chronic, persistent symptoms — and have had difficulty being diagnosed by their doctors.</p>

<b>HEADLINE</b>	<b>06/17 Kent: woman found dead near trail</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/06/17/kent-police-investigate-death-of-woman-found-near-trail/">http://q13fox.com/2018/06/17/kent-police-investigate-death-of-woman-found-near-trail/</a>
<b>GIST</b>	<p>KENT, Wash. — Police say they're investigating after a woman was found fatally injured along a wooded trail in Kent.</p> <p>The woman was unresponsive and having trouble breathing when officers arrived about 7:42 p.m. Saturday. Authorities say they tried to save her but she was pronounced dead at the scene.</p> <p>The trail was in the area of 24600 26th Pl S.</p>

	Police did not immediately disclose the nature of her injuries. They said detectives were questioning witnesses and collecting evidence and that they considered the circumstances suspicious.

<b>HEADLINE</b>	<b>06/16 London: knife, violent attacks soaring</b>
<b>SOURCE</b>	<a href="https://www.news-mail.com.au/news/welcome-to-lawless-london-home-of-zombie-knives-mo/3443310/">https://www.news-mail.com.au/news/welcome-to-lawless-london-home-of-zombie-knives-mo/3443310/</a>
<b>GIST</b>	<p>ZOMBIE knives, bloodstained streets, young people wearing stab proof vests, and a rising death toll.</p> <p>This is the grim reality of life in London where everything from "machine gun" murders to moped crime gangs are part of a crime wave that has seen the city overtake New York's murder rate.</p> <p>Knife and violent attacks are soaring, and city and government leaders are struggling to come up with a solution to end the carnage. Stabbings are occurring almost daily and there have been 70 murders this year, the most recent a 35-year-old who was stabbed to death at the weekend over a suspected drug debt.</p> <p>On Monday, three others - including a teenager - survived knife attacks in broad daylight. Of the London murders, 46 were the results of stabbings.</p> <p>Many blame the attacks on years of austerity that has seen police numbers reduced and welfare budgets cut. London Mayor Sadiq Khan this week met with Home Secretary Sajid Javid to discuss the crisis as public concern grows.</p> <p>"It's not rocket science. You can't cut thousands of police officers and close services without it having an impact on crime ... this is now a national emergency," Mr Khan said.</p> <p>In a tweet before the meeting, the Mayor said families and communities were "gripped by anger and despair" from the "devastating" crime.</p> <p>Mr Javid, who is in charge of Britain's internal security, promised action to stop the "senseless" violence. He denied shrinking police numbers were solely to blame, and promised a range of measures including a further clampdown on weapons, increasing the fight against drug gangs and early intervention to prevent vulnerable young people turning to crime.</p> <p>The statistics tell a frightening story and show why the British capital has been dubbed Lawless London. Latest figures show 19,385 moped crimes in the past nine months alone - that's 60 every single day.</p> <p>The speed and ease of mopeds in Londons's traffic chocked streets are thought to be behind the rise of the gangs. They have been fuelled by the easy access to drugs like cocaine and acid, and when combined with simmering gang tensions, have resulted in the staggering increase in attacks.</p> <p>Met Police officers have taken to going undercover as takeaway delivery drivers to try and catch moped gangs. Part of the problem for officers has been confusion over the law around pursuits, with many worried about being blamed if a moped rider died during the chase.</p> <p>New police powers are already being discussed - and it can't come soon enough.</p> <p>A former moped gang member boasted to The Sun cops were powerless. "Because you're on a moped, it's not going to work, you'll kill us so you're just gonna have to leave us to drive - try and get the helicopter out or something."</p>

A graphic illustration of how bad things are in London came earlier this month when the city was rocked by a "machine gun" shooting, barely 20 minutes after another man was knifed in a bloody attack.

Witnesses to the shooting said the victim was sitting in his car when he was shot a number of times - terrifyingly it sounded like rapid machine gun fire.

Knives are increasingly the weapon of choice by assailants, and the ones they are arming themselves with are truly disturbing. Dubbed 'zombie knives' because the long blades are frequently seen in zombie movies. They can be purchased online for less than \$20.

The knives almost seem comical - but they are no laughing matter. They usually come in bright colours with the words "slayer" and "zombie killer" and are marketed so the buyer can survive the "Zombie apocalypse".

This month, footage emerged of a road rage incident involving a zombie knife. A cyclist used the knife to try and stab a motorist through a car window. The horrified motorist was then forced to run for his life while the attacker battered the car with the giant blade.

As well as the knives, giant machetes and swords have been confiscated by police during random searches.

In February 250 knives and swords were seized across London in just one week.

The fear of being stabbed is fueling paranoia in some British youth, particularly London males. Some are now wearing stab proof vests on the streets to protect themselves from the violence.

Trauma experts at city hospitals are seeing first-hand the tragic results.

Dr Duncan Bew, of Kings College Hospital, said there had been a 75 per cent increase in knife crime injuries over the past 18 months.

This has seen another worrying trend emerge. Young people are reportedly not going to hospital to be treated for their wounds out of fear of being linked with gang life. Some say they are simply carrying for protection - others have more sinister motives.

Dr Bew confirmed the trend to The Times after teens told him they were scared of being branded gang members. "We need to reassure people that if they come to hospital they will not be labelled," he said.

Superintendent Nick Davies, the borough commander of London's Camden and Islington police, told news.com.au he did not believe the "backstreet clinics" patching up knife victims was widespread.

"It would be stupid thing to not go to hospital and be treated," he said.

Supt Davies said a lot of work was being done to protect the community, including returning to a stop and search strategy [that allows police to search someone if they have 'reasonable grounds' to suspect a weapon is being carried].

"We make no apologies for that ... These tactics will continue," he said.

Met Police statistics showed a 5 per cent rise in violent crime in the past year. The figures show 35 youth homicides in the last 12 months - up 25 per cent, a 30 per cent surge in the rate of muggings and an 18 per cent rise in knife crime offences.

A leaked Home Office report linked the crime wave with a huge supply of cocaine and crack cocaine caused by a bumper harvest in Colombia.

The purity of crack cocaine had also risen dramatically, from 30 to 70 per cent, according to the report

which stated that "crack seems to have a particular link to serious violence". Tests on arrested people have shown a 42 per cent increase in cocaine use.

"First, the psychoactive effects are more associated with violence than [other] drugs ... Second, crack has a shorter high, which makes transactions more frequent, sparking more violence," the report stated.

Violent crime isn't just restricted to London. Statistics show knife attacks up 22 per cent and robberies up 33 per cent across the United Kingdom.

In Ipswich, a town in Suffolk, in southeast England which is 131km from London, a 16-year-old was left fighting for life after being stabbed at a McDonald's. It was the fourth knife attack there in the past two weeks, including the fatal stabbing of a 17-year-old on June 2.

Supt Davies told news.com.au a particular focus for police was the "wraparound" support for young offenders and their families. That meant zeroing in on the social and health services in a bid to break intergenerational gang involvement.

"We're getting good results. There are some hardened gang members you can't save," he said.

But others could be - and seeing their mates being attacked, or narrowly surviving themselves, was sometimes the catalyst to push them away from crime.

<b>HEADLINE</b>	<b>06/15 Charge: homeless man attacked tourist</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/crime/man-accused-of-unprovoked-attack-on-a-tourist-near-space-needle/">https://www.seattletimes.com/seattle-news/crime/man-accused-of-unprovoked-attack-on-a-tourist-near-space-needle/</a>
<b>GIST</b>	<p>A 47-year-old man has been charged with misdemeanor assault, accused of attacking a tourist from Arizona earlier this month as the man and his family were headed to the Space Needle, according to the Seattle City Attorney's Office.</p> <p>Michael Lee Person, who told police he was homeless and moved to Seattle from Colorado nine months ago, has remained jailed in lieu of \$10,000 bail since his arrest June 2, jail and court records show.</p> <p>According to a Seattle police report, the 20-year-old victim was with his girlfriend, brother, mother and mother's boyfriend when they parked next to Person's tent near Denny Way and Third Avenue around 2:30 p.m. They saw Person peek out at them, became uncomfortable with their vehicle's proximity to a cluster of tents and moved the car into a bank parking lot, the report says.</p> <p>As the family got out of the vehicle, Person came up behind the 20-year-old and his girlfriend, who tried to walk away because Person's "demeanor was threatening and scared them," says the police report. Person punched the man from behind and used a rope in an apparent attempt to strangle him, the report says.</p> <p>A police officer would later note the victim had a six-inch long rope burn from his Adam's apple to his right shoulder.</p> <p>The 20-year-old and his girlfriend got away and caught up with the rest of the family. They saw Person run back to his tent and "thought they were safe," according to the police report. As the family was about to cross the street, Person ran north on Third Avenue, turned the corner onto Denny Way and again attacked the 20-year-old, repeatedly punching him in the head and face, says the report.</p> <p>Officers arrived and stopped the attack.</p> <p>It was the family's last day in Seattle but the 20-year-old told police he is willing to return for trial, according to the report.</p>

	The intake form filled out by jail staff says Person has a history of assault convictions, is unemployed, receives food stamps and usually stays in a tent in the Kent area, court records show. He moved to Seattle nine months ago from Colorado, where he lived for two years, to be closer to a son or grandson, the records say.

<b>HEADLINE</b>	<b>06/15 India: prominent journalist killed</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/world/articles/2018-06-15/police-in-indias-kashmir-arrest-suspect-after-editor-shot-dead">https://www.usnews.com/news/world/articles/2018-06-15/police-in-indias-kashmir-arrest-suspect-after-editor-shot-dead</a>
<b>GIST</b>	<p>SRINAGAR, India (Reuters) - Police in India's Kashmir investigating the killing of a prominent journalist and two of his security guards arrested a suspect on Friday, an official said.</p> <p>Syed Shujaat Bukhari, editor of the Rising Kashmir newspaper, was leaving his office in Srinagar, the summer capital of India's Jammu and Kashmir state, when he was shot at close range on Thursday by gunmen on motorbikes.</p> <p>The suspect, named as Zubair Qadri, was seen in a video stealing the pistol of one of the guards shot dead with Bukhari, Inspector General of Kashmir S.P. Pani told reporters.</p> <p>"The pistol has since been recovered and he is being questioned about his presence at the scene of the crime. So far, he has not been able to give any convincing answers," Pani said.</p> <p>Pani, who described the killing of the journalist as a terror attack, said the identities of the three other gunmen were still being ascertained.</p> <p>Militant groups Lashkar-e-Taiba and United Jihad Council also condemned the killing and denied involvement. Instead, they blamed "Indian agencies".</p> <p>Bukhari had been a strong advocate of peace in disputed Kashmir, at the heart of decades of hostility between India and Pakistan, both of which claim the Muslim majority region.</p>

	<p>More than 130 people have been killed this year in militant violence in Kashmir.</p> <p>India has long accused Pakistan of training and arming militants and helping them infiltrate across the Line of Control that separates the two sides in the region, a charge Islamabad denies.</p>

<b>HEADLINE</b>	<b>06/15 Concerns: police use of pre-crime tech</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/government/police-use-of-minority-report-style-pre-crime-tech-raises-inaccuracy-concerns/">https://www.bleepingcomputer.com/news/government/police-use-of-minority-report-style-pre-crime-tech-raises-inaccuracy-concerns/</a>
<b>GIST</b>	<p>Pre-crime, is a vast potpourri of information, on everyday activities, used to try to predict and prevent future behavior. In “predictive” policing, computer algorithms identify signs of pre-crime in a realm in which we are all potential suspects. Similar to the state of affairs depicted in the 2002 movie, “Minority Report,” psychic “precogs” discern which “criminals” to pursue before they commit a crime.</p> <p>Hartford, CT is now using what some say looks an awful lot like pre-crime technology. "Like cities across the country, we've been grappling with ways to use this technology to make our residents safer and our communities stronger," Hartford Mayor Luke Bronin said in an interview with Vice News. "At the same time we're being very sensitive to concerns about civil liberties."</p> <p>BriefCam, An Israeli-American cyber business, provides video search technology that is now being utilized in Hartford. BriefCam's video analysis software compresses hours of video into more compact presentations, referred to as "events." In cities comparable to Hartford, with at least 700 surveillance cameras accessible to police, this software reduces to minutes results that would normally take days to process.</p> <p>Law enforcement's foray into utilizing this type of technology is not without its critics. Local residents and state chapters of the ACLU are uneasy with police departments' use of technology for which they say the endgame seems disturbingly clear.</p> <p>Currently being employed in Fresno, CA, one example of the use of pre-crime technology is described by the Washington Post:</p> <p><i>"...officers raced to a recent 911 call about a man threatening his ex-girlfriend, a police operator in headquarters consulted software that scored the suspect's potential for violence the way a bank might run a credit report.</i></p> <p><i>The program scoured billions of data points, including arrest reports, property records, commercial databases, deep Web searches and the man's social- media postings. It calculated his threat level as the highest of three color-coded scores: a bright red warning.</i></p> <p><i>The man had a firearm conviction and gang associations, so out of caution police called a negotiator. The suspect surrendered, and police said the intelligence helped them make the right call — it turned out he had a gun."</i></p> <p>In Chicago, the police have been applying machine learning and predictive analytics to police data sets, including crime incidents, arrests, and weather data. When data such as previous arrest records is combined with real-time IoT data, (i.e. sensor-influenced cameras that detect gunshots) it becomes easier to ascertain problem locations. Known as the ‘pre-crime’ initiative, it was implemented through collaboration between the Chicago Police Department and Chicago University Urban Labs.</p> <p>The software used is HunchLab, a geographic prediction tool that employs data modeling to predict risk in specific areas across the city. At-risk regions are highlighted on-screen, while recommendations for action are displayed alongside the at-risk region information. The information is then collated into a ‘decision support system’ and made accessible to individual police officers on the beat.</p> <p>Adoption of pre-crime tech is beginning to trend in the US. PredPol, one of the leading systems on the market, is already being used by law enforcement in California, Florida, Maryland and other states.</p>

Aside from civil liberties concerns, however, a flaw found in the design of the type of software used indicates that predictive algorithms are to blame for a whole new set of problems.

For example, when researchers in the US examined how PredPol predicts crime, they found something disturbing. The software apparently sets off a “feedback loop” that leads to law enforcement being dispatched repeatedly to certain neighborhoods--regardless of the actual crime rates in those neighborhoods.

According to New Scientist's article on the research:

*"The problem stems from the logic that PredPol uses to decide where officers should be sent. If an officer is sent to a neighbourhood and then makes an arrest, the software takes this as indicating a good chance of more crimes in that area in future.*

*What this means, says Matt Kusner at the Alan Turing Institute in London, is that the PredPol system seems to be learning from reports recorded by the police – which may be higher in areas where there are more police – rather than from underlying crime rates."*

“That’s how dangerous feedback loops are,” Joshua Loftus, Assistant Professor of Information, Operations and Management Sciences, said. These loops are only part of how PredPol makes its predictions, he said, but they may explain why predictive policing algorithms have sometimes appeared to recreate exactly the type of biases the software developers say they overcome.

So, the crime rate in one neighborhood is overestimated, without taking into account the possibility that more crime is observed there due to the fact that more officers have been sent there. It's essentially a computerized version of confirmation bias.

It may be possible to terminate the feedback loop, though. New Scientist noted that, "the authors also modeled a different system, in which the algorithm only sent more officers to a neighborhood if the area’s crime rate was higher than expected. This led it to distribute officers in a way that much more closely matched the true crime rate."

Loftus also indicated there are several other issues that need to be resolved before policing algorithms can truly be considered unbiased. “Human decisions affect every aspect of the design of the system,” he cautioned.

<b>HEADLINE</b>	<b>06/18 Concern: police use of facial recognition</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/police-use-of-drivers-license-databases-to-nab-crooks-spurs-privacy-concerns-1529233200">https://www.wsj.com/articles/police-use-of-drivers-license-databases-to-nab-crooks-spurs-privacy-concerns-1529233200</a>
<b>GIST</b>	<p>Police in the small Maryland city of Hagerstown used a cutting edge, facial recognition program last week to track down a robbery suspect, marking one of the first such instances of the tactic to be made public.</p> <p>In the process of identifying a possible suspect, investigators said they fed an Instagram photo into the state's vast facial recognition system, which quickly spit out the driver's license photo of an individual who was then arrested.</p> <p>This digital-age crime-solving technique is at the center of a debate between privacy advocates and law-enforcement officials: Should police be able to use facial recognition software to search troves of driver's license photos, many of which are images of people who have never been convicted of a crime?</p> <p>An increasing number of police departments across the country are running images through driver's license databases in their investigations. But the Hagerstown case is one of the few resulting in an arrest that has become public, experts in the field say.</p> <p>Thirty-one states now allow police to access driver's license photos in facial-recognition searches in addition to mug shots, according to the Center on Privacy and Technology at the Georgetown University Law Center. Roughly one in every two American adults—117 million people—are in the facial-recognition networks used by law enforcement, according to a 2016 report by the center.</p> <p>Civil liberties advocates say that giving police unfettered access to photos of people who have committed no crimes infringes on those civilians' privacy.</p> <p>"People provide their photo for a driver's license database so they can drive," said Jennifer Lynch, an attorney with the Electronic Frontier Foundation, a nonprofit privacy organization. "They should not become suspects in a criminal investigation."</p>

Law-enforcement officials who advocate for using facial recognition searches of driver's license photos argue that it is a valuable tool for finding potential suspects who have no criminal past.

"This is no different than if I laid out all those photos in front of me...and said 'No, that doesn't look like him, that doesn't look like him, here we go, that's him,' " said Sheriff Bob Gualtieri of Pinellas County, Fla. "The only thing is I am doing it in a different way, a more automated way, a more efficient way."

Sheriff Gualtieri, who launched a facial recognition system in 2001 that is now used by police around Florida, said that it isn't uncommon for investigators to get a match on a driver's license photo in his state.

In New York City, police say they want to get access to driver's license photos in their facial-recognition searches, which are currently limited to mug shots, but have faced opposition from privacy advocates.

In Maryland, police use what they call the Maryland Image Repository System to compare images with more than 7 million driver's license photos and more than 3 million mug shots.

In a December report, Stephen Moyer, Maryland Secretary of Public Safety and Correctional Services, assured state lawmakers that people's privacy was being protected.

With the technique now being more widely used across the U.S., Ms. Lynch, of the EFF, said there should be more checks and balances because of the risk of mis-identifying suspects using facial recognition software, which is less accurate with darker faces, according to a recent MIT Media Lab study.

In the Hagerstown case, Raven Dennis reported that a former co-worker came to her apartment and allegedly stole her iPhone 8 and \$650, according to the police department's probable cause statement. When she chased after him, the man threatened her with a handgun, she said.

Ms. Dennis told police that she only knew the man's first name, Aamir, but the two had been in touch on social media, so she sent two Instagram photos to investigators. When a detective ran a screenshot through the state's facial recognition system, the first image that came back was a Motor Vehicle Administration photo of Aamir Watson-Jones, according to the probable cause statement.

Mr. Watson-Jones was arrested and charged with armed robbery, robbery, theft, and a handgun violation. He has yet to enter a plea.

An attorney for Mr. Watson-Jones and the Hagerstown detective on the case didn't return calls seeking comment.

Joseph Michael, deputy state's attorney in Washington County, Md., where the case unfolded, said facial recognition is useful for police, but it can't be the sole source of identifying a suspect. "You still need a positive identification, as happened in this case," he said.

Mr. Michael said he understands the privacy concerns, but noted that "the expectation of privacy ends when you sit down and smile at the government desk."

<b>HEADLINE</b>	<b>06/18 Van kills 1 at Dutch music festival</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-netherlands-concert-bus/van-kills-one-at-dutch-music-festival-suspect-arrested-idUSKBN1JE0B9">https://www.reuters.com/article/us-netherlands-concert-bus/van-kills-one-at-dutch-music-festival-suspect-arrested-idUSKBN1JE0B9</a>
<b>GIST</b>	AMSTERDAM (Reuters) - A van struck four people at the Netherlands' largest music festival in the early hours of Monday, killing one of them and injuring the others before driving off, police said.  Officers said it was not clear whether the van driver had hit the group at the Pinkpop event intentionally or by accident. Later in the morning, officers said they had found the vehicle and arrested a suspect.

	<p>The white van struck around 4 a.m. (0200 GMT), police said, four hours after the headline act, R&amp;B artist Bruno Mars, had performed in front of 70,000 people.</p> <p>“This investigation is still underway and we cannot say whether this was something intentional or an accident,” said police spokesman Hub Haenen.</p> <p>Militants have driven vehicles into crowds of people in attacks in London, Berlin, Barcelona and other European cities in recent years.</p> <p>Pinkpop is held in Landgraaf, a small town near the German and Belgian borders, 220 km (140 miles) southeast of Amsterdam. A sold-out crowd came to see Pearl Jam, the Foo Fighters and others. Mars closed the three-day-festival shortly before midnight.</p> <p>A police statement said the street where the incident took place, one of two exits from the concert grounds, had been closed for forensic investigation.</p>

<b>HEADLINE</b>	<b>06/12 Dark underside Dubai’s golden sands</b>
<b>SOURCE</b>	<a href="https://www.occrp.org/en/goldensands/dubais-golden-sands">https://www.occrp.org/en/goldensands/dubais-golden-sands</a>
<b>GIST</b>	<p>The emirate of Dubai — one of seven entities that make up the United Arab Emirates (UAE) — was once among the world’s most barren, inhospitable lands.</p> <p>In more recent years, it has transformed itself into an extravagant metropolis where the police drive Lamborghinis and edible gold ice cream costs US \$800 a scoop.</p> <p>It’s a success story that’s inextricably linked with the globalization of organized crime and corruption.</p> <p>Whether it’s smuggling conflict gold out of Africa, facilitating funding for Al Qaeda and ISIS, or helping organized crime groups like India’s Dawood gang, Dubai’s secretive offshore financial system seems to play a role in almost every international corruption scandal.</p> <p>“Dubai basically would not be as developed as it is right now if it didn’t allow all the illicit money to end up there,” says Sayed Ikram Afzali, executive director of Integrity Watch Afghanistan, an organization that has helped document Afghanistan’s massive capital outflows to the emirate.</p> <p>The Tax Justice Network labels Dubai as the ninth most secretive jurisdiction in the world, and its location halfway between London and Singapore, with more than 1.5 billion people just a three-hour flight away, makes it an ideal business hub.</p> <p>So it’s no surprise that the emirate has a large and mostly legitimate business sector.</p> <p>But its lack of transparency, light regulations, and seeming disinterest in the origins of the money that lands there have made Dubai a haven for organized crime groups, terrorists, despots, and many others who have profited from crime and corruption around the world — as long as they have cash and don’t embarrass the government.</p> <p>As a result, it functions as a one-stop shop where the world’s wealthy can avoid taxes, dodge sanctions, launder money, or hide their assets from police or taxpayers back home.</p> <p>The city’s crown jewel is its booming real estate market, which has drawn wealthy investors from around the world to enjoy not the opportunity to invest in luxury properties, but to do so in the secrecy Dubai has always afforded.</p>

Until now.

A leaked database of property and residency data compiled by assorted real estate professionals, obtained by the non-profit group C4ADS, and provided to the Organized Crime and Corruption Reporting Project (OCCRP) pierces the veil to reveal the names of many who have sought the emirate's secrecy.

The database contains about 54,000 addresses with 129,000 owners from 181 countries.

Many of these people are not accused of any wrongdoing, though the investments of politicians and other wealthy people on the list bear scrutiny.

The database also contains large numbers of sanctioned individuals, organized crime figures, fugitives from the law, and others whose inclusion demonstrates the extent to which Dubai has become a haven for shady characters.

#### A Free-wheeling Tradition

The Al Maktoum royal family, which rules Dubai, has complete control over the economy and the policies that govern it. The family's interests are not always understood, but it does have a huge stake in maintaining the status quo.

And these policies aren't new.

Dubai was the region's first "free port," with a history of deliberate laissez-faire policies that stretch back to the nineteenth century, says Christopher Davidson, a professor in Middle East politics at Durham University in the United Kingdom.

"Aiming to create a low-cost and low-tax environment for the re-exporting of goods from Asia to Europe, its business-savvy rulers have always understood the need to provide the right conditions including, when necessary, a no-questions-asked approach," Davidson said.

The plan transformed the emirate into one of the most robust and diversified economies in the oil-dependent Middle East. This is what has attracted so much wealth.

The UAE has joined the US, Canada and Australia as one of the strongest magnets for the world's rich, according to a study by New World Wealth, a South Africa-based research center that has been tracking millionaire migrations since 2013.

In large part due to Dubai, the UAE in 2017 had a total inflow of 5,000 millionaires, which increased the size of its millionaire population by almost 6 percent.

Some of the services available for these wealthy people include:

- Money laundering through Dubai's notoriously secretive banking system;
- High-end real estate for anyone who needs to park large amounts of cash with few questions, if any, asked about its origin;
- Gem and gold trading that obscures the questionable provenance of stolen or blood-drenched minerals;
- Cash-based remittance systems such as hawala that allow traders to move money around the world without regulatory scrutiny;
- Loosely regulated free-trade zones that allow cigarette and other smugglers to avoid customs and tariffs; and
- A government that favors few regulations and enacts little oversight.

Experts say the international community lacks the political will to pressure the monarchy to address these issues.

	Ultimately, it is the combination of these services all in one opaque location that makes Dubai so good to the bad.

<b>HEADLINE</b>	<b>06/17 Texas: BP high-speed chase ends in crash</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/immigration-border-crisis/five-undocumented-immigrants-killed-after-high-speed-chase-texas-n884096">https://www.nbcnews.com/storyline/immigration-border-crisis/five-undocumented-immigrants-killed-after-high-speed-chase-texas-n884096</a>
<b>GIST</b>	<p>Five undocumented immigrants were killed Sunday after a high-speed chase with authorities in Texas, authorities said.</p> <p>The driver of the vehicle — an unidentified suspected smuggler and United States citizen — survived the crash, Dimmit County Sheriff Marion Boyd told reporters.</p> <p>Fourteen people were in the Chevrolet Suburban when a Border Patrol agent began pursuing it, he said.</p> <p>In a statement, Customs and Border Patrol said the agent saw what appeared to be three vehicles involved a smuggling operation on a rural highway at 11 a.m. local time.</p> <p>Agents stopped two of the vehicles and made multiple arrests, the statement said, but the Suburban drove away.</p> <p>At speeds topping 100 mph, Boyd said, the SUV careened off the road near the town of Big Wells, southwest of San Antonio, about 40 or 50 miles from the U.S.-Mexico border.</p> <p>The Suburban "caught gravel and tried to recorrect," he said. "That caused the vehicle to turn over several times."</p> <p>Twelve undocumented immigrants were ejected on impact, Boyd said. Four were pronounced dead at the scene. A fifth person died at a hospital in San Antonio.</p> <p>An unidentified passenger and U.S. citizen whose condition wasn't immediately clear was also in the SUV.</p> <p>Boyd said the sheriff's office had "handled" the driver during an encounter last week when he appeared to be scouting for a smuggling operation.</p> <p>The sheriff added that chases involving smugglers are routine occurrences in Dimmit County.</p> <p>"Every day, my deputies are getting into pursuits," he said.</p>

<b>HEADLINE</b>	<b>06/17 France: woman injures 2 w/box cutter</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/woman-injures-southern-france-box-cutter-55955805?cid=clicksource_76_4_article%20roll_articleroll_hed">https://abcnews.go.com/International/wireStory/woman-injures-southern-france-box-cutter-55955805?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>A woman crying "Allahu akbar" — "God is great" in Arabic — injured two people with a box cutter Sunday at a supermarket in southern France before she was detained.</p> <p>A customer in the store in the maritime town of La Seyne-sur-Mer was injured in the chest and hospitalized. A woman working the cash register was hurt less seriously, French radio station Europe 1 quoted the prosecutor in nearby Toulon as saying.</p> <p>Prosecutor Bernard Marchal said the suspect may have mental health problems. She has not been identified. Police were searching her home.</p>

	<p>"It's apparently an isolated case involving a person with psychiatric issues," the prosecutor told Le Monde newspaper quoted the prosecutor as saying. However, that does not exclude the possibility that the suspect was radicalized, Marchal added.</p> <p>"There is a presumption of attempted murder and ... of a crime with terrorist implications," Marchal was quoted as saying.</p>

<b>HEADLINE</b>	<b>06/17 Moscow: taxi driver hits pedestrians</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/taxi-driver-questioned-injuring-red-square-55954670?cid=clicksource_76_4_article%20roll_articleroll_hed">https://abcnews.go.com/International/wireStory/taxi-driver-questioned-injuring-red-square-55954670?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>The suspect in a taxi crash near Red Square that injured two Mexican soccer fans and six other pedestrians as Russia hosts the World Cup told interrogators he fell asleep at the wheel, Moscow city police said Sunday.</p> <p>The police released a video of an interrogation session with a man the Moscow force identified as the taxi driver. In the recording, he says he briefly dozed off and accidentally hit the gas. It was unclear whether the man spoke under duress.</p> <p>The man in the video says he hadn't slept in 20 hours and wasn't drunk, and ran away after the accident because he was afraid that angry bystanders would kill him. He was later detained.</p> <p>The Moscow city traffic authority identified the driver as 28-year-old Chyngyz Anarbek, who is from Kyrgyzstan.</p> <p>Speaking to The Associated Press from the town of Muras Ordo in Kyrgyzstan, Anarbek's older brother said only had been working as a taxi driver for a month. He said his sibling was in "stress, shock, horror" after what happened.</p> <p>"Let people say what they want, but my brother is clean, not guilty. He was never and could never be a terrorist," Almazbek Anarbek said.</p> <p>The younger Anarbek won a bronze medal last year in the world championship of Pankration, an ancient sport combining skills of boxing and wrestling</p> <p>Videos circulating on Russian social media and some news websites after the incident showed the taxi veering onto the sidewalk Saturday and striking pedestrians. The accident took place on Ilinka Street, about 200 meters (650 feet) from Red Square and Moscow's famous GUM shopping arcade, an area popular with tourists.</p> <p>Moscow police would not comment on whether the crash would affect security measures for soccer's World Cup, which is being held in 11 Russian cities over the next month. Among the security concerns has been the possible use of vehicles as weapons.</p> <p>Russia has also been working with law enforcement from other countries to secure the tournament.</p> <p>"The sense we are getting is that (the taxi crash) is not football-related," Mark Roberts, head of U.K. soccer policing, told the AP. "At the moment, everything we are being told is that it was just a run-of-the-mill event."</p>

<b>HEADLINE</b>	<b>06/17 New Jersey art festival erupts in gunfire</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/injured-shooting-night-trenton-art-show/story?id=55955575">https://abcnews.go.com/US/injured-shooting-night-trenton-art-show/story?id=55955575</a>
<b>GIST</b>	<p>One man was killed and 22 people were injured when gunfire erupted early Sunday between rival neighborhood gangs at what was supposed to be a family-oriented all-night art festival in New Jersey that was created in part to stop violence in the city, officials said.</p> <p>Police responding to a gunfight involving multiple suspects about 2:45 a.m. at the Art All Night event in Trenton shot and killed one of the alleged gunmen, Mercer County Prosecutor Angelo Onofri told ABC News. Another suspected gunman was in critical condition, he said.</p> <p>Of the 22 people injured, 17 were struck by gunfire, including a 13-year-old boy, Onofri said.</p> <p>He said the gunfire erupted inside the old Roebling Wireworks building, where the art festival was being held.</p> <p>"Prior to the shooting there were numerous physical altercations that took place inside and outside of the venue," Onofri said.</p> <p>Due to the fighting, the Trenton Police Department had ordered organizers to shut down the event.</p> <p>"Police began dispersing individuals. Those individuals, however, continued to loiter and additional fights broke out, and then the shooting occurred," Onofri said at a news conference Sunday afternoon that was attended by New Jersey Gov. Phil Murphy.</p> <p>Onofri identified Tahij Wells, 33, as the alleged gunman who was killed by police. He said Wells had been released from prison in February after serving a sentence on homicide-related charges.</p> <p>He also identified Amir Armstrong, 23, as another suspect involved in the shootout. Armstrong was wounded and in critical condition Sunday evening, Wells said.</p> <p>He said police believe at least three men, possibly more, opened fire inside the venue where hundreds of</p>

	<p>people were attending the art festival. He said that when the shooting broke out, people ran in all directions seeking cover.</p> <p>"We believe it was multiple suspects shooting at each other," Onofri said.</p>

<b>GIST</b>	<p>SPOKANE, Wash. - On Sunday, just after 7 pm, Spokane Police responded to a stabbing call in the 600 block of E Providence Ave in Northeast Spokane. Officers arrived on scene in about two minutes, and located an adult female victim who was suffering from a stab wound. Officers immediately began providing first aid to the victim until SFD and AMR paramedics could take over care. The victim was transported to an area hospital with non-life threatening injuries.</p> <p>The suspect was located a few blocks away, as well as a knife believed to have been used in the attack. 23-year-old Ariel Ricco was booked into Spokane County Jail for assault 2nd degree. The incident does not appear to be random; early information indicates the assault stemmed from a dispute regarding living arrangements at a residence in the area. SPD is not currently looking for anyone else involved, and there is no on-going threat to the public.</p>

<b>HEADLINE</b>	<b>06/17 Tumwater: civilian shoots, kills gunman</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/06/17/shooting-at-walmart-in-tumwater/">http://q13fox.com/2018/06/17/shooting-at-walmart-in-tumwater/</a>
<b>GIST</b>	<p>TUMWATER, Wash. -- A shooting outside a Walmart Supercenter in Tumwater Sunday evening was the end result of a crime spree from the now deceased gunman, police said. That gunman was killed by an armed civilian in the Walmart parking lot.</p> <p>Tumwater Police spokeswoman Laura Wohl said it all happened just after 5:30 p.m. when officers responded to an erratic driver. When officers were en route to that location they received reports of shots fired near Tumwater High School.</p> <p>Upon arriving, officers found a 16-year-old girl suffering from minor injuries. It also appeared that her car had been stolen.</p> <p>"As we were speaking to witnesses at that scene, we get another call of shots fired here at Walmart," Wohl said.</p> <p>Tumwater Police said the suspect tried to carjack two cars in the Walmart parking lot at 5900 Littlerock Rd SW.</p> <p>One driver was shot when he refused to give up his car, Wohl said. He was airlifted to Harborview Medical Center. His condition is unknown at this time.</p> <p>As the suspect tried to take a second car a "bystander here in the parking lot shot the suspect," Wohl said.</p> <p>According to a police release, two armed civilians initially approached the suspect.</p> <p>Police believe the gunman is the suspect in all three incidents. He has not been identified. There are no other suspects in the carjacking incidents or reported shootings.</p> <p>Police said there is no danger to the public.</p> <p>Before attempting the carjackings, Tumwater Police said the suspect went into the Walmart and fired at a display case. No customers or employees were injured.</p>

The principle of 'Fair Use' was established as law by Section 107 of The Copyright Act of 1976. 'Fair Use' legally eliminates the need to obtain permission or pay royalties for the use of previously copyrighted materials if the purposes of display include 'criticism, comment, news reporting, teaching, scholarship, and research.' Section 107 establishes four criteria for determining whether the use of a work in any particular case qualifies as a 'fair use'. A work used does not necessarily have to satisfy all four criteria to qualify as an instance of 'fair use'. Rather, 'fair use' is determined by the overall extent to which the cited work does or does not substantially satisfy the criteria in their totality. If you wish to use copyrighted material for purposes of your own that go beyond 'fair use,' you must obtain permission from the copyright owner.

Epidemiological update detection of Sabin type 3 vaccine poliovirus in a case of acute flaccid paralysis [15 Jun 2018]

-----  
Situation summary  
-----

The following is an updated information on the case of acute flaccid paralysis (AFP) with detection of Sabin type 3 vaccine poliovirus, previously reported in the PAHO/WHO Epidemiological Update of [8 Jun 2018] (\*).

The case is a 34-month-old male, unvaccinated, resident of an indigenous community in Delta Amacuro [Orinoco Delta], Venezuela, with paralysis onset on [29 Apr 2018]. The clinical-epidemiological investigation carried out indicated that the flaccid paralysis of a lower limb persisted as of [11 Jun 2018]. Other children from the same community were vaccinated in April [2018] with a bivalent oral polio vaccine, so the case may have contracted the infection through the fecal-oral route.

The laboratory tests (genetic sequencing) recently performed in the regional reference laboratory confirmed the detection of Sabin type 3 poliovirus vaccine in the viral isolate obtained from this patient's sample collected on [30 Apr 2018]. The results of the isolated poliovirus sequencing showed that the virus did not present genetic variation with respect to the prototype vaccine strain (Sabin type 3), thus ruling out a vaccine derived poliovirus (VDPV).

The final classification of the case of AFP (to define whether or not it is associated with the vaccine) will be based on clinical and virological criteria; for this reason the evaluation of the residual neurological deficit is expected 60 days after the onset of the paralysis [28 Jun 2018].

Preliminary results of the field investigation carried out in the community where the case occurred had identified an 8-year-old girl with a vaccine history of at least 1 dose of tOPV (trivalent oral polio vaccine), suspected as AFP. The clinical evaluation subsequently carried out by health professionals has ruled out that this is a case of AFP.

No additional AFP cases have been identified to date through active search for AFP cases carried out in the community.

\* PAHO/WHO. Detection of Sabin type 3 vaccine poliovirus in a case of Acute Flaccid Paralysis. 8 Jun 2018, Washington, DC: PAHO/WHO; 2018; available at <<https://bit.ly/2JBfJod>>

Advice to national authorities

The Pan American Health Organization / World Health Organization (PAHO/WHO) reiterates to Member States the importance of reaching and maintaining polio vaccination coverage of more than 95 percent in each

district or municipality, maintaining high quality of epidemiological surveillance, and updating the national poliovirus outbreak response plans.

Communicated by:  
ProMED-mail  
<[promed@promedmail.org](mailto:promed@promedmail.org)>

[This timely PAHO update rules out the possibility of more than one case of AFP in the community where this OPV3 associated AFP case resides, as well as reinforces the background information of recent introduction of bOPV (bivalent OPV including OPV1 and OPV3 viruses) into this community, preceding the onset of paralysis of this child.

We await further information as it becomes available.

A map showing the Orinoco Delta region of Venezuela, where the involved community is located, can be found at <[https://geographic.org/geographic\\_names/name.php?uni=-1405762&fid=6621&c=venezuela](https://geographic.org/geographic_names/name.php?uni=-1405762&fid=6621&c=venezuela)>.

Poliovirus weekly update, 13 Jun 2018, World Health Organization  
New wild poliovirus cases reported this week: 1  
New cVDPV cases reported this week: 0

## Headlines

- In response to media reports about a polio case in Venezuela which emerged last week [week of 4 Jun 2018], the Global Polio Eradication Initiative (GPEI) wishes to clarify that these reports cannot be confirmed at this time. An acute flaccid paralysis (AFP) case, a symptom which is caused by a number of different diseases (polio being just one of them), is currently being investigated. The child is 34

months old, and had onset of paralysis on [29 Apr 2018], from an under-immunized community in Orinoco delta, Delta Amacuro state. A Sabin type 3 poliovirus was isolated from stool samples of the AFP case, and is being further analyzed, including to determine if the paralysis was caused by the isolated strain. Final laboratory results are expected next week. Isolation of Sabin 3 poliovirus is not unusual, and can be expected in children and communities immunized with bivalent oral polio vaccine, which contains both attenuated type 1 and type 3 Sabin strains. As part of global polio surveillance efforts, every year more than 100 000 AFP cases are detected and investigated worldwide. WHO's Pan American Health Organization (PAHO) and the GPEI continue to support local public health authorities in conducting an epidemiological and field investigation into this event.

#### Summary of newly-reported viruses this week

Pakistan: 1 new wild poliovirus type 1 (WPV1) case reported

#### Afghanistan

- No new cases of wild poliovirus type 1 (WPV1) have been reported this week. The total number of WPV1 cases in 2018 remains 8.
- The most recent case (by date of onset) occurred in Kandahar province, with onset of paralysis on [27 Apr 2018].
- During the May [2018] immunization campaign, vaccinators worked to reach over 9.6 million children with bivalent oral polio vaccine.

#### Pakistan

- 1 new case of wild poliovirus type 1 (WPV1) was reported this week, bringing the total number of officially reported WPV1 cases in Pakistan in 2018 to 3. This latest case had onset of paralysis on 18 May [2018], from Duki, Balochistan.
- During the May [2018] immunization campaign, vaccinators worked to reach over 20 million children with bivalent oral polio vaccine.

#### Nigeria

- No new cases of wild poliovirus type 1 (WPV1) were reported in the past week.
- The total number of WPV1 cases for 2016 is 4 and no cases have been reported in 2017 or 2018. The most recent WPV1 case (by date of onset) was reported in Monguno local government area, Borno state, with onset on [21 Aug 2016].
- Circulating vaccine-derived poliovirus type 2 (cVDPV2) is confirmed in Jigawa state. cVDPV2 has been isolated from environmental samples and 1 AFP case with onset of paralysis on [15 Apr 2018].
- Since confirmation of cVDPV2 in Nigeria, the country has conducted additional acute flaccid paralysis surveillance strengthening activities including enhanced active surveillance visits, and community sampling. The programme has also carried out extensive search for type 2 containing vaccines (tOPV/mOPV2) in the areas surrounding where the virus was detected.
- The GPEI is working with Regional and country counterparts and partners to supporting the local public health authorities to conduct outbreak response. This includes the implementation of 2 rounds of mOPV2 vaccination in May and June [2018] covering part of Jigawa, Gombe, Bauchi, and Sokoto.

#### Lake Chad Basin

- The detection of wild poliovirus type 1 (WPV1) and circulating vaccine-derived poliovirus type 2 (cVDPV2) in Nigeria continue to pose a risk to the neighbouring countries of the Lake Chad basin.
- Emergency outbreak response efforts continue across the Lake Chad basin, together with activities to fill subnational surveillance gaps across the region.
- These activities include efforts to vaccinate children at markets, in internally displaced persons and refugee camps, and at international borders.
- In May [2018], 2 polio vaccination campaigns with bOPV took place, targeting vulnerable island populations in Lake Chad. These special vaccination activities concerned 8 health districts in Chad: Bagasola, Bol, Isseirom, Karal, Kouloudia, Liwa, Mani, and Ngouri.

#### Central Africa

- No new cases of circulating vaccine-derived poliovirus type 2 (cVDPV2) were reported in the past week in the Democratic Republic of the Congo (DRC).
- The total number of officially reported cVDPV2 cases in the DRC in 2018 remains 4.
- The most recent case (by date of onset) was reported in Kikula district, Haut Katanga province, with onset on [19 Feb 2018].
- The Ministry of Health, supported by WHO and partners of the Global Polio Eradication Initiative, remains fully committed to outbreak response in the affected provinces, including use of monovalent oral polio vaccine type 2 (mOPV2) across the country, in line with internationally-agreed outbreak response protocols.
- Surveillance and immunization activities are being strengthened in neighbouring countries.

#### Horn of Africa

- Since the beginning of this outbreak response, there has been no isolation of either cVDPV3 or cVDPV2 from acute flaccid paralysis cases or their contacts in either Somalia or Kenya. Virus has been isolated from environmental samples only.
- Outbreak response to both strains is currently being implemented, in line with internationally-agreed guidelines. Large-scale supplementary immunization activities (SIAs) have been implemented in Banadir, Lower Shabelle and Middle Shabelle regions, Somalia, with additional SIAs planned in the affected zones of the Horn of Africa. Special surveillance activities are being undertaken to determine the origin of the viral circulation.
- WHO and partners continue to support local public health authorities across the Horn of Africa in conducting field investigations and risk assessments.

#### Middle East

- No new cases of circulating vaccine derived poliovirus type 2 (cVDPV2) were reported in the past week in Syria.
- The total number of officially reported cVDPV2 cases in Syria in 2017 remains 74. There are no cases reported in 2018.
- The most recent case (by date of onset) was reported in Boukamal district, with onset on [21 Sep 2017].
- IPV vaccination continued in Raqqa governorate in April [2018] as part of the outbreak response. A total of 9257 children aged 2-23

months who were not covered during the February [2018] round were vaccinated in Tell Abyad district.

- In addition, Raqqa city was accessed for the 1st time with IPV. A total of 7215 children aged 2-23 months were vaccinated, representing 95 percent of the total target.

Officially reported wild poliovirus cases as of 12 Jun 2018

-----  
Total global cases in 2018: 11 (compared with 6 for the same period in 2017)

- Total in endemic countries in 2018: 11 (compared with 6 for the same period in 2017)

- Total in non-endemic countries in 2018: 0 (compared with 0 for the same period in 2017)

- Afghanistan: 8 cases in 2018 (compared with 4 for the same period in 2017), onset of paralysis of most recent case: 27 Apr 2018

- Pakistan: 3 cases in 2018 (compared with 2 for the same period in 2017), onset of paralysis of most recent case: 18 May 2018

- Nigeria: 0 case in 2018 (compared with 0 for the same period in 2017), onset of paralysis of most recent case: 21 Aug 2016

Total global cases in 2017: 22

- Total in endemic countries: 22

- Total in non-endemic countries: 0

Officially reported cVDPV cases as of 12 Jun 2018

Total global cases in 2018: 5 (compared with 6 for the same period in 2017)

- Syrian Arab Republic: 0 case in 2018 (compared with 2 for the same period in 2017), onset of paralysis of most recent case: 21 Sep 2017

- Democratic Republic of the Congo: 4 cases in 2018 (compared with 4 for the same period in 2017), onset of paralysis of most recent case: 19 Feb 2018

- Nigeria: 1 case in 2018 (compared with 0 for the same period in 2017), onset of paralysis of most recent case: 15 Apr 2018

Total global cases in 2017: 96

- Total in endemic countries: 0

- Total in non-endemic countries: 96

ProMED-mail

<promed@promedmail.org>

[The report above officially confirms the earlier media report of an additional WPV1 case in Dukki district of Balochistan, Pakistan (also confirmed by the EpiCore Global Surveillance Project), now bringing the total number of WPV1 associated cases of polio during 2018 to 11, almost double that reported as of this date in 2017. Is this a true increase in cases? Or is this due to enhanced surveillance activities capturing closer to the true occurrence of cases? It is notable there is no mention of positive environmental samples during the past week. If this is not due to delayed surveillance reports, this may be a positive sign of interruption of WPV1 circulation in areas where

environmental sampling is being done. It also does not mention newly identified positive environmental samples involving cVDPVs....time will tell.

As for the situation in Venezuela, see the PAHO update in section [1] above. It is notable that there is no mention of the additional AFP cases mentioned in the media report...and that the focus of the investigation involves the solitary case with a reported OPV3 virus isolated from specimens taken from the case. In the original PAHO update (see Poliomyelitis update (19): Venezuela, vaccine virus found, VAPP susp <http://promedmail.org/post/20180609.5848416>), there was mention of a recent vaccination campaign held in the community, during April 2018, preceding the onset of paralysis in the suspected case mentioned above. It appears that reporting of the situation has been somewhat complicated by the local political situation, with incentives and disincentives for reporting among the different factions in the country.

HealthMap/ProMED map of Duki, Balochistan, Pakistan:

[3] Venezuela: GPEI update late Fri 15 Jun 2018

Date: 15 Jun 2018

Source: Global Polio Eradication Initiative

<<http://polioeradication.org/news-post/update-on-suspected-polio-case-in-venezuela/>>

Following unconfirmed reports on [8 Jun 2018] of suspected polio re-emergence in Venezuela, final laboratory testing has confirmed the cause of the paralysis is not wild poliovirus or vaccine-derived poliovirus.

A 34-month old child had presented with symptoms of acute flaccid paralysis (AFP) on [29 Apr 2018], from a community with low vaccination coverage in Orinoco delta, Delta Amacuro state.

A Sabin type 3 poliovirus was isolated from stool samples of the child. Isolation of Sabin type 3 poliovirus can be expected in children and communities immunized with bivalent oral polio vaccine, which contains attenuated (weakened) type 1 and type 3 Sabin strains. Final laboratory analysis received today has confirmed that the AFP symptoms are not associated with wild or vaccine-derived poliovirus.

A number of conditions or infections can lead to AFP, poliovirus being just one of them. As part of global polio surveillance efforts, every year more than 100 000 AFP cases are detected and investigated worldwide. Clinical evaluation of the child is underway to determine the cause of the paralysis. The most important point is that the child should be provided with appropriate care and support.

While wild and vaccine-derived polio have both been ruled out as the cause of this child's symptoms, this area of Venezuela is experiencing vaccination coverage gaps. It is critical that countries maintain high immunity to polio in all communities, and strong disease surveillance, to minimize the risk and consequences of any eventual poliovirus

re-introduction or re-emergence.

[The above "late breaking" information from the GPEI just came to my attention, hours after this post was prepared by me. To read between the lines, an interpretation of this report is consistent with the PAHO report in section [1] above, stating that the OPV3 virus isolated from this AFP case was a "pure" OPV3 virus, without genetic changes that might be consistent with a VDPV that had reverted in neurovirulence and its ability to continued transmission among a susceptible population. The confusion I have, is whether this is a definitive ruling out of this AFP case being classified as a VAPP (vaccine associated paralytic polio) case in a contact? Again, we await further information and clarification. - Mod.MPP]

E. coli O157:H7 Infections Associated with Exposure to Animal Manure  
in a Rural Community -- Arizona and Utah, June-July 2017

-----  
On 26 Jun 2017, a hospital in southern Utah notified the Utah Department of Health of Shiga toxin-producing Escherichia coli (STEC) [also referred to as enterohemorrhagic E. coli - EHEC - Mod.LL] O157:H7 infections in 2 children from a small community on the Arizona-Utah border. Both children developed hemolytic uremic syndrome, characterized by hemolytic anemia, acute kidney failure, and thrombocytopenia and died within a few days of illness onset. Over the next few days, several more EHEC-associated illnesses were reported in residents of the community. A joint investigation by local and state health agencies from Arizona and Utah and CDC was initiated to identify the outbreak source and prevent additional cases; a total of 12 cases were identified, including the 2 children who died. Investigators initially explored multiple potential sources of illness; epidemiologic and environmental information revealed cow manure contact as the likely initial cause of the outbreak, which was followed by subsequent person-to-person transmission. One of the outbreak strains was isolated from bull and horse manure collected from a yard near a community household with 2 ill children. Local health agencies made recommendations to the public related to both animal contact and hand hygiene to reduce the risk for EHEC transmission. Animal or animal manure contact should be considered a potential source of EHEC O157:H7 during outbreaks in communities where ruminants are kept near the home.

Epidemiologic Investigation

-----  
A case of EHEC O157:H7 infection was defined as an illness in a resident of the Centennial Park/Colorado City/Hildale community with onset of diarrhea after 1 Jun 2017, with 1) culture-confirmed EHEC O157:H7 with one of three novel pulsed-field gel electrophoresis (PFGE) pattern combinations or 2) physician-diagnosed postdiarrheal hemolytic uremic syndrome. Cases were classified as secondary if contact with another case occurred 3 or more days before illness onset. Local health care facilities identified potential cases via syndromic surveillance and reported them to the Southwest Utah Public Health Department and the Mohave County (Arizona) Health Department. The Southwest Utah Public Health Department created several social media posts advising community residents with diarrhea to see a doctor because local health officials were concerned that adults in this community would not seek health care for themselves.

12 cases were identified, including 5 classified as secondary, from 8 separate households. Illness onset dates for the 12 patients ranged

from 10 Jun 2018 to 9 Jul 2017 (Figure 1 [for figures and table, see original URL - Mod.LL]). The median age of patients was 3 years (range equal to 1-28 years), and 11 were aged 6 years or older. Five cases occurred in females; 9 patients were hospitalized, 4 had hemolytic uremic syndrome, and 2 died.

All patients or their guardians were interviewed using a hypothesis-generating questionnaire containing questions about foods eaten, food source locations, travel, recreational water exposure, sources of drinking water, and animal contact during the week before illness onset. All 12 patients or their guardians reported shopping at grocery store A, and guardians of 6 of 7 patients with primary cases reported purchasing ground beef. The prevalence of ground beef consumption was significantly higher than that reported in the Foodborne Diseases Active Surveillance Network Population Survey (FoodNet; <<https://www.cdc.gov/foodnet/index.html>>) (86 percent versus 40 percent;  $p$  equal to 0.04) (1); however, local health officials suspected a higher typical ground beef consumption rate in this community than in the nation overall. Thus, other potential hypotheses were explored in a focus group discussion with 5 guardians of 4 ill children. Beef and watermelon consumption, contact with domestic and companion animals, and multiple exposures to recreational water emerged as common exposures.

A 1:3 matched case-control study was designed based on information from the focus group discussion. Guardians of 16 healthy children were recruited through an online survey posted to a closed Facebook group of current and past community residents. The voluntary survey included screening questions to determine their children's eligibility for participation. Community health workers used a focused questionnaire containing questions about consumption of ground beef and fresh produce, as well as all animal contact during the exposure period to interview the guardians of 6 of 7 patients with primary cases and guardians of 16 healthy age-matched controls. 3 of 6 ill children and three of 16 controls reported playing in an area that had animal manure (matched odds ratio equal to 7.7; 95 percent confidence interval equal to 0.8-71.3) (Table).

Contact tracing identified friendships, working relationships, or familial relationships between persons in all 8 households. Illness onset dates were consistent with hypothesized person-to-person contact (Figure 2). The 3 patients with the earliest illness onset dates (patients A, B, and C), including the 2 patients who died, lived in the same multifamily household with approximately 40 persons. After the 2nd patient died, the house was voluntarily vacated, and many persons moved within the community. Contact with animal manure was the hypothesized source of the initial illnesses, with further spread via secondary person-to-person transmission.

#### Laboratory Investigation

-----  
Officials from the Utah Department of Health and the Mohave County (Arizona) Health Department collected food, water, animal feed and manure, and environmental samples from various locations in the community. The Utah Public Health Laboratory and Arizona State Public Health Laboratory tested 143 samples for EHEC.

A total of 35 samples from grocery store A included ground beef and environmental samples from the meat grinder, meat preparation areas, and meat storage areas. Officials also collected samples of frozen ground beef from households and samples of animal manure from cattle (23), goats (5), horses (17), dogs (11), and other animals (6) in the Centennial Park/Colorado City/Hildale community. Drinking and recreational water samples (12) were collected from surrounding farms and creeks. Stool specimens were obtained from 11 patients.

EHEC was not isolated from any of the food or environmental samples from grocery store A. However, EHEC was isolated from the 11 patient specimens and 3 animal manure samples (2 horses and 1 bull). All isolates were further characterized by whole genome sequencing. Bioinformatic analysis (2) performed at the Utah Public Health Laboratory indicated the 11 clinical isolates, 1 bull manure isolate, and 2 horse manure isolates formed a single monophyletic clade with short branch lengths and high statistical support based on bootstrap statistical analysis of 1000 replicates. This finding indicated that all the isolates were highly related genetically and shared a common molecular evolutionary history. High-quality single-nucleotide polymorphism (hqSNP) analysis performed at CDC (3) indicated that the 11 clinical isolates, 1 bull manure isolate, and 2 horse manure isolates differed by 0-4 hqSNPs, suggesting that they were highly related genetically. EHEC O157:H7 was not isolated from samples from the source farms or animal feed.

#### Public Health Response

-----

This multijurisdictional investigation involved daily collaboration among national, state, and local agencies facilitated by an incident command structure. Public communication and educational materials were developed by the Southwest Utah Public Health Department and disseminated by investigation partners, including a public health nurse who was a member of the community. Educational information focused on hygiene related to livestock, safe cooking, increased vigilance for gastrointestinal symptoms, and prevention of secondary transmission. No additional EHEC cases with the outbreak strain have been reported from this community since the conclusion of the investigation.

#### Discussion

-----

In this outbreak, playing in an area with animal manure was associated with illness. The 5 ill children with the earliest illness onset dates lived in close proximity to one another and the culture-positive animal manure. EHEC can be shed intermittently by colonized animals, so additional animals might have carried the outbreak strain despite the lack of isolation from manure. Unlike ruminants, horses are not considered reservoirs for EHEC O157:H7 (4,5). The hypothesis is that the 2 horses were infected with the outbreak strain while living in proximity to the bull.

This investigation highlights the use of multiple epidemiologic methods, including hypothesis-generating questionnaires, focus group interviewing, a case-control study, and contact tracing in concert

with environmental and clinical testing in identifying the source of an outbreak. These methods were used to generate and test hypotheses regarding four modes of disease transmission: person-to-person, food, drinking and recreational water, and animal contact.

This investigation also highlights the importance of communication and outreach efforts to successful, sensitive public health investigations. The inclusion of a local public health nurse in the investigation team enhanced communication and facilitated both the focus group and contact tracing efforts within a community that had been wary of government officials during previous public health interventions.

The findings in this report are subject to at least three limitations. 1st, this outbreak spread through secondary person-to-person transmission, limiting the number of primary cases available for assessment of exposure frequencies for hypothesis generation. 2nd, for all methods used to investigate hypotheses, ill children or their guardians were contacted 1-6 weeks after the illness began, which could have resulted in inaccurate recall of food and animal contact. Finally, low health care utilization among members of the adult population might have resulted in unidentified cases. These limitations might have decreased the likelihood of statistically significant epidemiologic findings despite positive identification of the outbreak strain in animal manure.

Based on the epidemiologic and environmental data, it is likely that the initial source of this outbreak was contact with animals or their environments. Certain behaviors in the patients with primary cases might have contributed to initiation of the outbreak, such as lack of awareness of the risk for disease, inadequate hand washing, and hand-to-mouth behaviors. Subsequent person-to-person transmission resulted in a large, severe outbreak that included challenges in identifying the source. Strong multijurisdictional partnerships and a combination of epidemiologic methods were necessary to identify an outbreak source. Promoting adequate sanitation and hand washing practices around animal and manure exposure is critical to prevent future outbreaks.

<<https://www.urdupoint.com/en/health/third-case-of-polio-in-2018-surfaces-from-bal-366733.html>>

3rd case of polio in 2018 surfaces from Balochistan  
-----

A fresh case of polio has surfaced from Duki district of Balochistan. According to sources in the provincial health department, an 18 month old boy from Killi Babran of Duki fell victim to the virus that was diagnosed in him on Friday [8 Jun 2018] morning.

Sources in the health department said [the boy] was administered the anti-polio vaccine only once during the last 6 months. He was not found present at home 5 times during the polio drive.

This is the 3rd case of polio virus from Balochistan and all over Pakistan in 2018.

Prior to [this boy], 2 other children were diagnosed with polio from the same district, Duki, in March and May [2018]. In 2017, 3 cases of polio surfaced from Balochistan, while 2 were reported in 2016.

In 2015, 7 cases of polio virus surfaced from the province, while in 2014 the count was 25. The year 2013 saw no cases of the virus from Balochistan, while 4 were reported in 2012 and 73 in 2011. This makes the total number of cases from Balochistan 117 during the last 8 years.

[byline: Rukhshan Mir]

--

communicated by:  
ProMED-mail from HealthMap Alerts  
<promed@promedmail.org>

[As stated in the media report above, this is now the 3rd case of polio reported from Duki district, Balochistan during 2018 (see prior ProMED-mail postings referenced below in the see also section for further details]. While the virus type involved in this case is not mentioned, given the preceding 2 cases with WPV1 isolated, it is highly likely this case will be due to a WPV1 infection. Once official confirmation is received, this will represent the 3rd case of polio confirmed in Pakistan during 2018, and the 11th case this year (2018).

Duki district in Balochistan borders with Afghanistan and is known to be an area with ongoing tribal conflicts. Female literacy is reported to be less than 10 per cent, with male literacy around 30 per cent. (<[https://en.wikipedia.org/wiki/Duki\\_District,\\_Pakistan](https://en.wikipedia.org/wiki/Duki_District,_Pakistan)>).

More information on the poliovirus isolated would be greatly appreciated. - Mod.MPP

Rift Valley fever, Kenya  
-----

Information received on [and dated] 8 Jun 2018 from Dr Obadiah Nyaga  
Njagi, director of veterinary services, Directorate of Veterinary  
Services, State Department of Livestock, Ministry of Agriculture,  
Livestock and Fisheries, Nairobi, Kenya

Summary  
Report type: immediate notification  
Date of start of the event: 3 Jun 2018  
Date of confirmation of the event: 6 Jun 2018  
Report date: 8 Jun 2018  
Date submitted to OIE: 8 Jun 2018  
Reason for notification: recurrence of a listed disease  
Date of previous occurrence: 18 Nov 2017  
Manifestation of disease: clinical disease  
Causal agent: Rift Valley fever virus  
Nature of diagnosis: suspicion  
This event pertains to a defined zone within the country

New outbreaks (1)

Summary of outbreaks

Total outbreaks: 1

Outbreak 1: Basir, Wajir

Date of start of the outbreak: 3 Jun 2018

Outbreak status: continuing (or date resolved not provided)

Epidemiological unit: farm

Total animals affected

Species / Susceptible / Cases / Deaths / Killed and disposed of / Slaughtered

Camelidae / 250 / 25 / 17 / 0 / 0

Affected population: the suspected cases were reported in a pastoral area which was experiencing floods due to heavy rainfall.

Outbreak statistics [rates apparent, in percentages]

Species / Morbidity rate / Mortality rate / Case fatality rate /

Proportion susceptible animals lost\*

Camelidae / 10 / 6.8 / 68 / 6.8

\*Removed from the susceptible population through death, destruction, and/or slaughter

Epidemiology

Source of the outbreak(s) or origin of infection: vectors

Epidemiological comments

The area has experienced rainfall above normal and increased mosquito population. Human cases have been reported in the region. The Ministry of Health and the Ministry of Livestock have started a joint investigation. Further news will be reported in follow-up reports.

Control measures

Measures applied: movement control inside the country, surveillance within containment and/or protection zone, quarantine, vector surveillance, ante- and postmortem inspections, vaccination permitted (if a vaccine exists), no treatment of affected animals

Measures to be applied: no other measures

Diagnostic test results

Central veterinary investigation laboratory (national laboratory)

Species / Test / Test date / Result

Camelidae enzyme-linked immunosorbent assay (ELISA) / 6 Jun 2018 / Inconclusive

Future reporting

The event is continuing. Weekly follow-up reports will be submitted.

[The location of the outbreak can be seen on the interactive map at the source URL above.]

communicated by:

ProMED-mail

<promed@promedmail.org>

[Although the laboratory results from animals were inconclusive, human cases in that same area have been reported and confirmed. Based on the

epidemiological comments, "the area has experienced rainfall above normal and increased mosquito population. Human cases have been reported in the region."

Simultaneously with the reporting of RVF in animals in Wajir (located in Kenya's former North Eastern Province, inhabited mainly by Somalis), the zoonotic virus has, according to the media, caused clinical disease in humans with 4 reported mortalities so far (<http://promedmail.org/post/20180609.5847216>). Those should not surprise: an alert was issued by the Kenyan Government on 21 May 2018, "for a possible outbreak of the deadly Rift Valley fever in the wake of prolonged rainfall." The joint statement from the Ministries of Health and Agriculture identified 17 flood prone counties, among them Mombasa, Baringo, and Nairobi, to be at higher risk. According to the published alert, at that point in time no case of the zoonotic disease was yet identified in livestock or humans (see <http://promedmail.org/post/20180531.5830703> and <https://www.standardmedia.co.ke/health/article/2001281213/state-issues-alert-on-rift-valley-fever-outbreak>).

According to OIE's Terrestrial Manual, "Camels have been regularly involved in the RVF epidemics in East Africa, Egypt, and more recently Mauritania. Clinical disease is usually not seen in adult camels, but sudden deaths, abortion and some early post-natal deaths have been observed."

After the initial identification of RVF virus as the cause of a significant disease in humans and sheep, in Kenya (1931), the disease was considered, during more than 30 following years, to affect, among domestic animals, 3 species: sheep (most susceptible), cattle and (least susceptible) goats.

In 1963, camels were added to the list, when infection was reported in them for the 1st time, during an RVF event in north eastern Kenya in 1962 (ref 1). The report said: "Early in 1962 abortions in camels were reported. The camels were 6-8 months pregnant and there were no other signs of illness." Serological investigations in 60 sera samples from 2 affected locations, Wajir (the site of the current event) and Marsabit (30 camels sampled in each), revealed that 27 camels (45 per cent) had neutralising antibodies for RVF. The incidence in camels from Wajir was 43 per cent. and in those from Marsabit 47 per cent. The authors stated: "Virtually the whole of the 1962 crop of camel foals was lost, but whether the abortions were caused by RVF virus can never be known. Nevertheless, the similarities in the incidences in the various age groups suggest that a recent widespread epidemic had occurred in the Northern Frontier Province of Kenya and that the disease was not endemic."

Later, several events of RVF involving dromedary camels (East Africa, Mauritania) and alpacas (South Africa) confirmed clinical RVF in camelidae.

For a paper describing morbidity and mortality due to RVF in dromedary camels in Mauritania, with pictures presenting the observed clinical signs, see ref 2.

Outbreaks of RVF are closely associated with periods of heavy rains and prolonged flooding, as those driven by the warm phase of the El Niño/Southern Oscillation (ENSO) phenomenon, increasing habitat suitability for vector populations. In East Africa, RVF epidemics take place periodically every 10-15 years; the last major outbreak occurred in 2006-2007. RVF is more likely to affect small ruminants and cattle.

Detection of Sabin type 3 vaccine poliovirus in a case of acute  
flaccid paralysis

-----  
Situation summary

On [7 Jun 2018], the World Health Organization (WHO) International Health Regulations (IHR) Regional Contact Point received an unofficial report on the detection of Sabin type 3 vaccine poliovirus in a sample of a Venezuelan patient with acute flaccid paralysis (AFP). The same day [7 Jun 2018], a request for verification was sent to the Venezuela IHR National Focal Point (NFP).

On [8 Jun 2018], PAHO/WHO received updated information. The case is child aged 2 years and 10 months, with no history of vaccination, resident of an under-immunized indigenous community in Delta Amacuro, Venezuela; with paralysis onset on [29 Apr 2018]. As of [31 May 2018], the flaccid paralysis persisted in a lower limb. A Sabin type 3 vaccine poliovirus was isolated and typified by the national reference laboratory, the National Institute of Hygiene "Rafael Rangel" (INHRR), in the sample of this patient obtained on [30 Apr 2018]. The sample will be sent to a regional reference laboratory for confirmatory testing. Other children from the same community were vaccinated in April 2018 with oral bivalent polio vaccine.

The ongoing field investigation identified an 8 year old girl, resident of the same community with a vaccine history of at least 1 dose of tOPV, who presented flaccidity in a lower limb. No additional AFP cases have been identified to date through active search for AFP cases carried out in the community.

#### Advice to national authorities

PAHO/WHO reiterates to member states the importance of reaching and maintaining polio vaccination coverage of more than 95 per cent in each district or municipality, maintaining high quality of epidemiological surveillance, and updating the national poliovirus outbreak response plans.

[2] Comment

Date: Thu 7 Jun 2018

From: T Jacob John, <[tjacobjohn@yahoo.co.in](mailto:tjacobjohn@yahoo.co.in)>

The polio could be VAPP following infection with Sabin 3 in OPV. This is to supplement your comment that it could be WPV3 or cVDPV-3.

Sabin 3 is the commonest cause of VAPP in OPV-given children. It is usually sporadic, since PV-3 is a very inefficient spreader. Hope we will have a clear picture very soon.

--

T Jacob John  
Retired Prof and Head of Department of Clinical Virology  
Christian Medical College, Vellore  
India  
<[tjacobjohn@yahoo.co.in](mailto:tjacobjohn@yahoo.co.in)>

[The above information provides more detailed technical description on the reported case of acute flaccid paralysis in Venezuela. From the information provided it appears as though this child's illness would be classified as a case of VAPP -- vaccine-associated paralytic poliomyelitis -- in a contact of a recently vaccinated individual. VAPPs can occur in recipients of the OPV (oral poliovirus vaccine) or in close contacts of recently vaccinated individuals. The incidence of VAPP cited by WHO is approximately 1 per 2.7 million doses. Cases of VAPP are distinctly different from those associated with cVDPV where the virus has undergone significant changes in neurovirulence and have

not been reported to cause outbreaks.

When I was involved with polio surveillance as an Epidemic Intelligence Service [EIS] officer at the Centers for Disease Control and Prevention (many moons ago), in the era when the USA was using OPV as the primary vaccine for polio prevention, the overwhelming majority of polio cases confirmed in the USA were cases of VAPP in both recipients as well as contacts (usually parents of recently vaccinated children). As always, Professor T Jacob John was right on target with his excellent reminder comment in response to my original post. Unfortunately in my haste to post on the media report, I got as far as the VDPV discussion but neglected to mention the possibility of this being a VAPP, which Prof T Jacob John rightfully reminded me and to whom I am very grateful.

The disconcerting information in the above report (and in the media report we posted on 7 Jun 2018) is the mention of a possible 2nd case of AFP in this community. The other disconcerting information from the original media report was the noticeable absence of mention of a vaccination campaign in the affected community preceding the onset of illness, but rather a comment that there had been no vaccination in the community since 2016. An apparent manipulation of the facts.

We await further information on confirmatory testing by the reference laboratory as well as additional information on this 2nd AFP case.

A map showing the Orinoco Delta region of Venezuela, where the involved community is located, can be found at  
<[https://geographic.org/geographic\\_names/name.php?uni=-1405762&fid=6621&c=venezuela](https://geographic.org/geographic_names/name.php?uni=-1405762&fid=6621&c=venezuela)>.

USDA confirms additional cases of virulent Newcastle disease in backyard birds in California

-----  
The United States Department of Agriculture's (USDA) Animal and Plant

Health Inspection Service confirmed 3 additional cases of virulent Newcastle disease in backyard birds in San Bernardino County, California.

A complete list of confirmed cases is available on our website at <[www.aphis.usda.gov/animalhealth/vnd](http://www.aphis.usda.gov/animalhealth/vnd)>.

Virulent Newcastle disease has not been found in commercial poultry in the United States since 2003.

In this update:  
[1] Venezuela, 1 case PV3, RFI - media report  
[2] Global, Pakistan 1 new case - GPEI

\*\*\*\*\*

[1] Venezuela, 1 case PV3 RFI - media report  
Date: Thu 7 Jun 2018 11:11 am  
Source: El Pitazo [in Spanish, trans. Mod.MPP, edited]  
<<https://elpitazo.com/ultimas-noticias/confirman-un-caso-de-poliomielitis-en-delta-amacuro/>>

[The information below comes from the media report, with the elimination of political overtones and interpretations as our primary concern at ProMED-mail is to communicate technical information. - Mod.MPP]

Confirmed polio case in Delta Amacuro  
The Regional Health Directorate of the Delta Amacuro area detected 2 more children with the symptoms of the disease, of which 1 had the incomplete vaccination scheme.

A new epidemic is beginning to resurface in the country due to the [lower] vaccination coverages in the population. The Venezuelan Society of Public Health and National Epidemiology Network Defenders reported that at least 4 cases were diagnosed with acute paralysis (poliomyelitis) in La Playita del Volcan, a community in the Delta Amacuro state. [note that only 3 cases are described in this article. -Mod.MPP] The affected individuals belong to the indigenous ethnic Warao group.

The virus that causes this condition [polio] resurfaced 3 weeks ago. According to the information that was provided unofficially, the 1st case corresponding to a 5-year-old boy with no history of having received polio vaccine, who during the month of April [2018] presented with a flu-like picture. "He was evaluated for inability to walk, and lower back pain without a history of trauma; previously he had been admitted to an emergency department with the impression of lumbar trauma, hip arthritis, and was evaluated by a pediatrician during 3 days, who identified that the child was unable to sit up and had flaccid [paralysis] of both lower extremities, and the diagnosis was changed to acute flaccid paralysis, having ruled out [the diagnosis of] Guillain-Barre syndrome, "according to the communication from the organizations".

They specified that the Regional Epidemiology Department of the Ministry of Health was notified of the case and the specimens were sent for diagnosis. The patient was treated with immunoglobulin and steroids. The specimens were processed by the Rafael Rangel National

Hygiene Institute and confirmed that the child was infected with a type 3 polio virus [no mention if virus is WPV3 or a cVDPV3 - see Moderator comment below. - Mod.MPP]. It was known that the patient is clinically stable and is receiving physiotherapy.

When the Regional Epidemiology team went to Playita del Volcan, it identified 2 more children with acute flaccid paralysis in a house near where the child under 5 years of age who was diagnosed with [polio] lives. The specialists of the medical organizations indicated that it was known that one of the other [identified suspected] cases had a history of having an incomplete vaccination scheme, while the other was taken to another community in the state.

The cases of poliomyelitis begin to resurface in Delta Amacuro, [a state that was suffering from a measles epidemic] which has claimed the lives of more than 100 patients, mostly children. This state also reported suspected and confirmed cases of diphtheria a disease that returned to the country in 2016, 24 years after it had been eliminated [in the country].

The country [Venezuela] has not reported cases of polio since 1989.

The community where the cases were detected have registered low immunization coverages through the National Expanded Program of Immunizations [EPI] of the Ministry of Health. "It is very likely that the affected population and the entire state of Delta Amacuro also has low vaccination coverages," the doctors of the organizations highlighted in their statement, which also emphasized that the population of the community has not received any polio vaccine. since January 2016. For that year [2016], the national vaccination coverage with polio vaccine reached only 67 percent, well below the universal coverage of 95 percent recommended by the World Health Organization (WHO). [there is mention that estimates based on the less than 1-year-old vaccination coverages, between 2008 and 2017, the number of children now susceptible to poliomyelitis is 2 600 000.

[Byline: Armando Altuve]

ProMED-mail  
<promed@promedmail.org>

[While the media report mentions a poliovirus type 3 has been isolated from the 5-year-old boy, there is no mention as to whether the virus is a wild poliovirus (WPV) or a circulating vaccine derived poliovirus (cVDPV), or a vaccine derived poliovirus (VDPV). The last officially documented polio case due to WPV3 infection in Asia had a date of onset 18 Apr 2012 in Pakistan and in Africa had a date of onset on 10 Nov 2012 in Nigeria (see Kew OM, Cochi SL, Jafari HS, et al. Possible Eradication of Wild Poliovirus Type 3 - Worldwide, 2012. MMWR, November 14, 2014 / 63(45);1031-1033 available at: <<https://www.cdc.gov/mmwr/preview/mmwrhtml/mm6345a4.htm#Fig1>>). The most recent environmental samples positive for WPV3 were on 7 Oct 2010 in Pakistan and 11 Nov 2012 in Nigeria. Since November 2012, no WPV3 has been isolated anywhere in the world.

With respect to WPV3 circulation in the Americas, the most recent isolation of WPV3 in the Americas was in 1993 and involved isolation from asymptomatic individuals (21 (47 percent) of 45 individuals tested) in Alberta Canada belonging to a religious group that did not accept vaccinations, with ties to a similar religious group in the Netherlands experiencing an ongoing outbreak of polio at that time. (see CDC. Isolation of Wild Poliovirus Type 3 Among Members of a Religious Community Objecting to Vaccination -- Alberta, Canada, 1993. MMWR May 07, 1993 / 42(17);337-339. available at <<https://www.cdc.gov/mmwr/preview/mmwrhtml/00020490.htm>>.) Prior to 1993, there was WPV3 identified in Mexico in 1990, and in South America (Brazil) in 1988. (see Kew OM et al referenced above).

Given the apparent interruption of WPV3 transmission, with no isolations of the virus from either individuals or environmental samples since 2012, one hopes that this current poliovirus type 3 isolated in Venezuela is a vaccine derived poliovirus, and not a reappearance of a WPV3 having circuated undetected for the past 5.5 years. We await further information on the genetic typing of the poliovirus type 3 isolated.

The Warao are an indigenious ethnic group found in the northeast of Venezuela, Trinidad and Tobago, Guyana and Suriname. The total estimated population of this group in 20100 was 36 000. The name Warao means "the boat people". The majority of the Warao population live in the Venezuelan Orinoco Delta region. They live in wall-less thatched-roof huts built on stilts (to protect against floods), and sleep on hammocks. Canoes are their main form of transportation. They use 2 types of canoes. Bongos, which can carry up to 5 people, or another smaller one that seats 3 people and is used to find food sources on a daily basis. The Bongo is made from a large tree that is identified by the male leaders of each household, the tree is identified and killed at the beginning of the dry season. It is cut down and hollowed out and flattened with stone tools or local shell tools and fire. While they live in relatively inaccessible regions, HIV was introduced into the community, where male to male sex is practiced prior to marriage. In some communities the prevalence of HIV has reached 33 percent (see <<https://www.nytimes.com/2018/05/07/world/americas/aids-venezuela-indigenous-people-threatened.html>>).

(Information on the Warao community can be found at <[https://en.wikipedia.org/wiki/Warao\\_people#Dwellings](https://en.wikipedia.org/wiki/Warao_people#Dwellings)>).

A map showing the Orinoco Delta region of Venezuela can be found at: <[https://geographic.org/geographic\\_names/name.php?uni=-1405762&fid=6621&c=venezuela](https://geographic.org/geographic_names/name.php?uni=-1405762&fid=6621&c=venezuela)>.

The HealthMap/ProMED map of Venezuela can be found at: <<http://healthmap.org/promed/p/29>>. - Mod.MPP]

## Poliovirus Weekly Update as of 6 Jun 2018, WHO

-----

New wild poliovirus cases reported this week: 1

New cVDPV cases reported this week: 0

Type of Virus: 2017 / 2018 (to date) / new this week

WPV: 22 / 10 / 1

cVDPV: 96 / 5 / 0

Summary of newly-reported viruses this week:

Pakistan: 1 new wild poliovirus type 1 (WPV1) case

Afghanistan: 1 new WPV1-positive environmental sample

### Afghanistan

- No new cases of wild poliovirus type 1 (WPV1) have been reported this week. The total number of WPV1 cases in 2018 remains 8.
- 1 new WPV1-positive environmental sample was reported in the past week, from Kunar province, collected on [Tue 24 Apr 2018].
- During the May [2018] immunization campaign, vaccinators worked to reach over 9.6 million children with bivalent oral polio vaccine.

### Pakistan

- 1 new case of wild poliovirus type 1 (WPV1) was reported this week, bringing the total of officially reported WPV1 cases in Pakistan in 2018 to 2. This latest case had onset of paralysis on [Sun 15 Apr 2018], from Dukki, Balochistan.
- No new WPV1-positive environmental samples were reported in the past week.
- During the May [2018] immunization campaign, vaccinators worked to reach over 20 million children with bivalent oral polio vaccine.

### Nigeria

- No new cases of wild poliovirus type 1 (WPV1) were reported in the past week.
  - The total number of WPV1 cases for 2016 is 4 and no cases have been reported in 2017 or 2018. The most recent WPV1 case (by date of onset) was reported in Monguno Local Government Area, Borno State, with onset on [21 Aug 2016].
  - Circulating vaccine-derived poliovirus type 2 (cVDPV2) is confirmed in Jigawa state. Circulating VDPV2 has been isolated from environmental samples and one AFP case with onset of paralysis on [Sun 15 Apr 2018].
  - Following notification of the initial cVDPV2 isolates from January and February [2018], the programme conducted enhanced vaccination activities using IPV in 13 high-risk wards (target population approximately 55 000 children).
  - Since confirmation of cVDPV2 in Nigeria, the country has conducted additional acute flaccid paralysis surveillance strengthening activities including enhanced active surveillance visits, and community sampling. The programme has also carried out extensive search for type 2 containing vaccines (tOPV/mOPV2) in the areas surrounding where the virus was detected.
  - The GPEI is working with Regional and country counterparts and partners to supporting the local public health authorities to conduct a field investigation and thorough risk assessment, and to discuss
-

needs for immunization response.

#### Lake Chad Basin

- The detection of wild poliovirus type 1 (WPV1) and circulating vaccine-derived poliovirus type 2 (cVDPV2) in Nigeria continue to pose a risk to the neighbouring countries of the Lake Chad basin.
- Emergency outbreak response efforts continue across the Lake Chad basin, together with activities to fill subnational surveillance gaps across the region.
- These activities include efforts to vaccinate children at markets, in internally displaced persons camps, and at international borders.

#### Central Africa

- No new cases of circulating vaccine-derived poliovirus type 2 (cVDPV2) were reported in the past week in the Democratic Republic of the Congo (DRC).
- The total number of officially reported cVDPV2 cases in the DRC in 2018 remains 4.
- The most recent case (by date of onset) was reported in Kikula district, Haut Katanga province, with onset on [Mon 19 Feb 2018].
- The Ministry of Health, supported by WHO and partners of the Global Polio Eradication Initiative, remains fully committed to outbreak response in the affected provinces, including use of monovalent oral polio vaccine type 2 (mOPV2) across the country, in line with internationally-agreed outbreak response protocols.
- Surveillance and immunization activities are being strengthened in neighbouring countries.

#### Horn of Africa

- No circulating vaccine derived poliovirus were reported in the past week.
- There has been no isolation of either cVDPV3 or cVDPV2 from acute flaccid paralysis cases or their contacts in either Somalia or Kenya. Virus has been isolated from environmental samples only.
- Outbreak response to both strains is currently being implemented, in line with internationally-agreed guidelines. Three large-scale supplementary immunization activities (SIAs) have been implemented in Banadir, Lower Shabelle and Middle Shabelle regions, Somalia, with additional SIAs planned in the affected zones of the Horn of Africa. Special surveillance activities are being undertaken to determine the origin of the viral circulation.
- WHO and partners continue to support local public health authorities across the Horn of Africa in conducting field investigations and risk assessments.

#### Middle East

- No new cases of circulating vaccine derived poliovirus type 2 (cVDPV2) were reported in the past week in Syria.
- The total number of officially reported cVDPV2 cases in Syria in 2017 remains 74. There are no cases reported in 2018.
- The most recent case (by date of onset) was reported in Boukamal district, with onset on [21 Sep 2017].

Officially reported wild poliovirus cases as of 5 Jun 2018

Total global cases in 2018: 10 (compared with 5 for the same period in 2017)

- Total in endemic countries in 2018: 10 (compared with 5 for the same period in 2017)
- Total in non-endemic countries in 2018: 0 (compared with 0 for the same period in 2017)

- Afghanistan: 8 cases in 2018 (compared with 3 for the same period in 2017), onset of paralysis of most recent case: 27-Apr-18
- Pakistan: 2 cases in 2018 (compared with 2 for the same period in 2017), onset of paralysis of most recent case: 15-Apr-18
- Nigeria: 0 case in 2018 (compared with 0 for the same period in 2017), onset of paralysis of most recent case: 21-Aug-16

Total global cases in 2017: 22

- Total in endemic countries: 22
- Total in non-endemic countries: 0

Officially reported cVDPV cases as of 5 Jun 2018

Total global cases in 2018: 5 (compared with 6 for the same period in 2017)

- Syrian Arab Republic: 0 case in 2018 (compared with 2 for the same period in 2017), onset of paralysis of most recent case: 21-Sep-17
- Democratic Republic of the Congo: 4 cases in 2018 (compared with 4 for the same period in 2017), onset of paralysis of most recent case: 19-Feb-18
- Nigeria: 1 case in 2018 (compared with 0 for the same period in 2017), onset of paralysis of most recent case: 15-Apr-18

Total global cases in 2017: 96

- Total in endemic countries: 0
- Total in non-endemic countries: 96

Communicated by:

ProMED-mail

<[promed@promedmail.org](mailto:promed@promedmail.org)>

[The newly confirmed case in Pakistan was reported in a media report in late May 2018 (see Poliomyelitis update (15): Pakistan (BA) RFI <http://promedmail.org/post/20180529.5825949> from 29 May 2018). The media coverage of polio cases in Pakistan is a sign of the heightened awareness of the country on polio in general and in Pakistan in specific. The identification of a WPV1 in Kunar province Afghanistan is a bit of concern, as cases have not been reported from that province recently.

One thought that came to mind while reviewing the weekly report was the situation in the Democratic Republic of the Congo. The most recent reported case of polio associated with the cVDPV was reported in late March/Early April 2018, approximately one month preceding the identification of ebolavirus disease (EBV) in Equateur Province. One can't help but wonder what impact the ongoing EBV outbreak is having on the surveillance activities associated with the cVDPV2 outbreaks in Haut Lomami, Haut Katanga and Tanganyika provinces.

A map showing the locations of WPV1 and cVDPV(2) cases can be found at <<http://polioeradication.org/polio-today/polio-now/>>.

<b>HEADLINE</b>	<b>06/05 Iran launches plan to boost enrichment</b>
<b>SOURCE</b>	<a href="http://time.com/5302600/iran-centrifuge-enrichment-plant-natanz/">http://time.com/5302600/iran-centrifuge-enrichment-plant-natanz/</a>
<b>GIST</b>	<p>Iran announced it was building a new centrifuge production plant at its Natanz nuclear facility, indicating a possible future restart to enrichment activity following the U.S.'s withdrawal from the 2015 nuclear agreement.</p> <p>Iran has vowed to limit enrichment of nuclear material to sub-weapons grade levels under the Joint Comprehensive Plan of Action (JCPOA), but the new plant suggests that the country could be bolstering its ability to ramp up nuclear activity should the agreement collapse further, according to the New York Times.</p> <p>President Donald Trump confirmed that the U.S. would abandon the deal last month, calling it "defective at its core" and reimposing sanctions on Iran's central bank chief. Trump also warned Iran against restarting its nuclear program, threatening "very severe consequences." Other signatories, including Germany, France, and the U.K., are now trying to salvage the deal.</p> <p>Ali Akbar Salehi, the head of the Atomic Energy Organization of Iran, told Iranian state television that the new centrifuge facility remained "in line with our safeguard commitments" under the deal, according to the Times. In a speech Monday, Ayatollah Ali Khamenei, Iran's supreme leader, called on the country's atomic agency to begin preparations to increase uranium enrichment capacity, reports the Tehran Times. Though he reiterated that the country would abide by the accord's constraints, which limits uranium enrichment to 3.67%.</p> <p>Iran's nuclear facilities are regularly monitored by the International Atomic Energy Agency (IAEA) under the 2015 agreement.</p> <p>It remains unclear if or when the facility will begin making new centrifuges. An IAEA spokesperson said Tuesday that they received a letter from Iran declaring a "tentative schedule" to start production of uranium hexafluoride, the raw material for the centrifuges, the BBC reports.</p>

<b>HEADLINE</b>	<b>06/06 India's water taps running dry</b>
<b>SOURCE</b>	<a href="http://time.com/5302661/water-crisis-drinking-india-drought-dry/">http://time.com/5302661/water-crisis-drinking-india-drought-dry/</a>
<b>GIST</b>	<p>Towards the end of May, one of India's most popular summer retreats nearly ran out of water.</p> <p>Shimla, a historic hill town in the northern state of Himachal Pradesh, is the latest addition to a list of Indian towns and cities that are starved for water. Earlier this year Bangalore, home to the country's information technology sector, made it to a list of world cities most likely to run out of drinking water. It joins other parched metropolises like Cape Town, Jakarta and Sao Paulo.</p> <p>Residents of Shimla had to wait nearly four days to get water, with many lining up with buckets to collect water from tankers. The situation worsened over the following week, pushing authorities to close state</p>

schools for five days and to ask tourists to stay away.

India is reeling under a sustained water crisis that shows no signs of abating. Excessive demand coupled with mismanaged water resources, erratic weather patterns and climate change have led to a sad state of affairs.

Water disputes abound within the country and among its neighbors. Six Indian states are involved in battles over the river waters of the Yamuna in the north, the Narmada in the midwest and the Cauvery in the south. Meanwhile, India is also dealing with Pakistan and Bangladesh over water usage.

There is not a single Indian city that can provide potable water from its taps. In fact, a 2018 report from global advocacy group WaterAid put India at the top of its list of countries with the worst access to clean water close to homes—163 million Indians live this way.

The country's dependence on agriculture, which forms a significant part of its economy and employs about 800 million people, cripples water management even further—especially given the unpredictable monsoons.

With the rainy season just beginning in India, here's a look at the water crisis in the world's second most populous country.

How bad is it?

According to government data, the average annual per capita water availability fell 15% between 2001-2011. It's predicted to fall another 13% by 2025 and 15% again by 2050, which means that in another 30 years each Indian household will have about 1.1 million liters of water per year, down from 1.8 million liters in 2011. (A country is considered to be suffering from water scarcity when availability is less than 1 million liters per capita per year.)

The news doesn't get better when you consider that India's burgeoning population could grow to 1.8 billion, if current fertility rates continue, and that agriculture is a major part of the Indian economy.

Already farmer suicides are a common occurrence. Farmers usually take heavy loans to purchase seed for sowing and many take their lives when they are unable to pay their debtors if their crops fail. A common cause of this is drought and lack of access to irrigation facilities. A 2017 study found that nearly 60,000 farmers had committed suicide in the past three decades due to climate change. The study found that even a 1cm increase in rainfall led to a 7% drop in suicides.

Drastic measures are being taken to deal with the crisis. In the past, armed guards have been stationed at reservoirs to prevent water theft and trains have been used to transport water to suffering areas. In March this year, the state of Gujarat stopped the supply of irrigation water from a major dam to ensure there was enough for drinking purposes.

Unfortunately, unchecked pollution has turned thousands of water sources into bodies of filth and disease. The Ganges, one of India's most famous and important rivers, is in such a terrible state that Prime Minister Narendra Modi has set up a special task force to clean it up. In the south, Bangalore's Bellandur Lake is so toxic that methane fires are often seen on its surface.

Why is it so bad?

To put it simply, there's too much demand and not enough supply. India's burgeoning population woes aside, climate change is seen as a major factor in the country's water crisis. Scorching summers and shortened winters have resulted in reduced snow cover and retreating glaciers in the Himalayas—the ice melt from these areas is what feeds the country's northern rivers. Add to that fickle monsoons that threaten to disrupt long-established crop patterns and you have a recipe for disaster in many parts of the country.

Then there's agriculture, which, by some estimates, accounts for 90% of India's water consumption. Farmers are sometimes slow to change what they sow and continue to grow thirsty crops like rice and

sugarcane in parched regions. They meet these irrigation demands by indiscriminately extracting groundwater, which some say accounts for a quarter of the world's groundwater usage.

This has led to a substantial drop in the levels of India's water table, which is a major concern. There has been a 61% decline in the country's water levels from 2007 to 2017. Rajendra Singh, a well-known water conservationist nicknamed "India's waterman," has said that over 70% of the country's groundwater is in "overdraft", implying that more water is consumed than is replenished.

Water pollution and poor resource management have also contributed to limited availability. A study of Delhi's piped water systems a few years ago found that 40% of the city's water is lost due to pipe leaks and thefts via unauthorized connections.

What's the solution?

For starters, India can look to Israel and Singapore.

Israel is a poster child for sustainable water consumption in the world. The largely arid country has implemented a centralized water management system, set up desalination plants, encouraged the use of treated waste water for farming and propagated the idea of drip irrigation, which involves dripping water onto the roots of crops rather than flooding entire fields.

Similarly, Singapore has been very smart about meeting its water needs efficiently. In addition to desalination and the use of recycled waste water, the city-state gives priority to building reservoirs and catchments to collect as much natural water as possible. According to the government, water catchment areas now cover two-thirds of Singapore's surface area, up from half in 2011.

It might also be time to reconsider what is grown and investigate if there are better ways to cultivate those crops. Many of India's important agricultural products, such as rice, wheat, sugarcane and cotton, are incredibly water-intensive, but their propensity for a high yield makes them more popular than other environmentally friendly options.

Steps are being taken to alleviate water problems. Last year, Prime Minister Narendra Modi announced an \$87 billion plan to link 60 rivers across India in an attempt to provide better irrigation sources and reduce flooding, though its efficacy remains to be seen. Some Indian states, like Maharashtra—the home state of Mumbai—have chosen to implement Israel's drip irrigation method for entire crops like sugarcane. In the same state, cultivators have dug "farm pools" to harvest rainwater for sustained irrigation purposes in small areas.

There is some cause for optimism. WaterAid, the NGO that ranked India among the worst country for household drinking water access, has also ranked it one of the most-improved nations in terms of the numbers of people able to access clean water as a result of initiatives made since 2000. But major changes need to be made to save the world's second most populous nation from running dry.

<b>HEADLINE</b>	<b>06/05 Recall: Naloxone injection</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jun/5/fda-issues-recall-naloxone-injection-hospitals/">https://www.washingtontimes.com/news/2018/jun/5/fda-issues-recall-naloxone-injection-hospitals/</a>
<b>GIST</b>	<p>A recall for naloxone was issued by the Food and Drug Administration over fear that products from the company Hospira Inc. contain potentially dangerous loose particles.</p> <p>The company said in a statement that the threat of harm from ingesting the particles is low, as directions for use require checking syringe solution before being administered, but adverse effects can include irritation, allergic reaction, toxicity, among others.</p> <p>The product, a syringe injection, was distributed to hospitals and institutions across the U.S., Puerto Rico and Guam between February 2017 to February 2018.</p>

	<p>The recall comes at a time where naloxone stocking is of the utmost importance in the battle against deaths from opioid overdoses. A few states have made it mandatory that first responders carry the overdose reversal medication, as deaths climbed over 64,000 in 2016 with many from opioids and illicit drugs.</p> <p>Police officers, firemen, school teachers and everyday citizens are also being urged to carry the overdose reversal medication. Narcan, a naloxone nasal spray, is developed by the pharmaceutical company ADAPT Pharma and was not involved in the recall.</p>

<b>HEADLINE</b>	<b>06/05 Social Security running deficit; insolvency</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jun/5/social-security-now-running-deficit/">https://www.washingtontimes.com/news/2018/jun/5/social-security-now-running-deficit/</a>
<b>GIST</b>	<p>Social Security will spend more than it collects this year, the program’s trustees said Tuesday, marking the first time in more than 35 years that it will run an annual deficit as it slides toward insolvency by 2034.</p> <p>Medicare’s main trust fund is in even worse shape, scheduled to hit insolvency in 2026 — three years earlier than last year’s estimate, the trustees said.</p> <p>The twin warnings add even more pressure to a budget already strained by last year’s tax cuts and this year’s deal to boost spending on defense and basic domestic needs, leaving few bright spots in the federal fiscal picture.</p> <p>The news also produced the usual finger-pointing among Democrats and Republicans, but budget watchdogs said the news was so grim that it should cut through the bipartisan bickering.</p> <p>“It would be a nice change if this year Congress and the president actually took these warnings seriously enough to do something,” said Robert L. Bixby, executive director of the Concord Coalition.</p> <p>Social Security has been struggling for years and turned cash-negative this decade, meaning the government paid out more in benefits each year than it collected from the payroll tax.</p> <p>But some analysts had said it was still running a surplus because of interest on the money credited to the trust fund. Now, even that crutch is gone, as even with interest revenue included the program will pay out more this year than it collects.</p> <p>It’s the first time since 1982 that the program has shown an overall annual deficit.</p> <p>The program is slated to take in \$828.2 billion this year, with most of that coming from payroll taxes. It will pay out \$853.6 billion in benefits and administrative costs. That will cut the cumulative trust fund from \$2.820 trillion to \$2.795 trillion — a small but symbolic slide.</p> <p>The Old-Age and Survivors Insurance program, the main part of the trust fund, will have its assets depleted in 2034, at which point benefits will have to be cut by more than 20 percent, the trustees said.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>06/05 Mexico details list of retaliatory tariffs</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/mexico-details-its-list-of-retaliatory-tariffs-against-u-s-adds-bourbon-1528217507">https://www.wsj.com/articles/mexico-details-its-list-of-retaliatory-tariffs-against-u-s-adds-bourbon-1528217507</a>
<b>GIST</b>	<p>MEXICO CITY—The Mexican government published Tuesday its detailed list of U.S. goods that will face import tariffs in retaliation for the U.S. decision to place duties on Mexican steel and aluminum, including American staples such as cranberries, apples and bourbon.</p>

The Economy Ministry said the tariffs will remain in effect as long as the U.S. continues to charge duties on Mexican steel and aluminum, and that Mexico could at any time modify the list of products targeted. The ministry estimates the value of the tariffs at about \$3 billion, representing close to 1.5% of annual trade between the two countries.

The administration of U.S. President Donald Trump last week ended the exemptions to the steel tariffs for Mexico, Canada and the European Union, prompting them to threaten tit-for-tat measures while challenging the U.S. tariffs at the World Trade Organization.

The U.S. tariffs went into effect after negotiations with Mexico and Canada to redraw the North American Free Trade Agreement hit snags over content rules for the auto industry, and over controversial U.S. demands to eliminate dispute settlement mechanisms in the pact and introduce a so-called sunset clause under which Nafta would expire in five years unless explicitly renewed by its members.

Mexico on Tuesday slapped a 25% import tariff on a wide range of steel products from the U.S., matching the U.S. steel duty. The retaliatory measures also include 20% on pork products, 20% and 25% duties on cheeses, and a 25% duty on bourbon. Cranberries made the list, as did U.S. apples, with a 20% duty.

Economy Minister Ildefonso Guajardo said last week in a televised interview that some targeted goods come from U.S. districts that have key lawmakers who have been pointing out to the Trump administration the need to be careful in handling such trade decisions.

“Somehow it’s sending a clear message that this sort of thing benefits no one, and affects all of us,” he said.

Fearing an influx of steel into Mexico from world suppliers affected by the U.S. tariffs, Mexico also raised duties it had imposed between 2015 and 2017 on steel imports from countries with which it doesn’t have free trade agreements.

Those tariffs, which aimed to counter damage suffered by the Mexican steel industry from cheap Asian imports, were also seen discouraging triangulation of steel through Mexico into the U.S. under Nafta. The tariffs led to greater steel imports from countries with which Mexico has free trade agreements, and less from countries with which it doesn’t, the government said.

Mexico ran up a \$3.6 billion steel trade deficit with the U.S. in the past two years, according to the local steel industry chamber.

<b>HEADLINE</b>	<b>06/05 Nicaragua descends into violence</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/nicaraguas-political-crisis-descends-into-dark-days-1528235963">https://www.wsj.com/articles/nicaraguas-political-crisis-descends-into-dark-days-1528235963</a>
<b>GIST</b>	<p>MANAGUA, Nicaragua—A surge of violence has snuffed out economic activity and dimmed prospects to peacefully resolve a political crisis here that began as a protest against tax increases and turned into a revolt against Nicaragua’s longtime leader Daniel Ortega.</p> <p>Since mid-April, more than 100 people have been killed in confrontations with police during mass protests and what human-rights groups say are paramilitary gangs aligned with Mr. Ortega’s government.</p> <p>Among them were 15 people killed at a peaceful Mother’s Day protest march last month in Managua and 11 people by paramilitary groups and police in the predominantly indigenous city of Masaya this past weekend, including a 15-year-old protester who witnesses say was executed by a policewoman.</p> <p>On Tuesday, violence flared in the quaint colonial city of Granada, home to hundreds of American retirees.</p>

“We are going through very dark days,” said Humberto Belli, a former education minister. “The people are out in the street demanding that Ortega leave, but he has shown an unexpected ability to kill. We see more blood every day—three, four, five people killed on a daily basis. This has no end.”

The Organization of American States on Tuesday approved a mildly worded resolution calling for an immediate end of the violence and asking all parties to participate in peaceful dialogue. The resolution, co-sponsored by the U.S. and Nicaragua, was much weaker than declarations made Monday by Secretary of State Mike Pompeo, who accused Nicaraguan police and armed pro-government groups of killing dozens of protesters.

“It was a wishy-washy resolution, Nicaragua demands more urgent attention from the OAS than it’s gotten,” said Michael Shifter, president of the Inter-American Dialogue, a Washington-based think tank.

The U.S. ambassador to the OAS, Carlos Trujillo, said the OAS declaration marks the beginning of the organization’s engagement with “the grave situation” in Nicaragua. He blasted the government, saying it “has committed grave crimes” against peaceful protesters.

Nicaragua’s government denies links to paramilitary groups and says the unrest is the result of an opposition plot to overthrow it. Police haven’t addressed the alleged police shooting of the teen.

Nicaragua “is committed to stability amidst this wave of criminal violence generated by certain groups of the opposition which conspire from the darkness...to terrorize families,” Luis Alvarado, Nicaragua’s representative to the OAS, said Monday.

Mr. Ortega, a former guerrilla leader who played a central role in the overthrow of the Somoza family dictatorship in 1979, was re-elected by a landslide in 2016 after 16 years out of power. He ran largely unopposed after maneuvering to ban any real contenders.

Until the recent spate of violence, Nicaragua had enjoyed far lower levels of violent crime than its Central American neighbors El Salvador and Honduras. Mr. Ortega also had been able to deliver high economic growth and apparent political stability. Most Nicaraguans appeared content or resigned to the *quid pro quo*—until now.

But many Nicaraguans say they are fed up with Mr. Ortega and his wife, the unpopular Vice President Rosario Murillo, who they say have usurped democratic institutions and snuffed out political opposition. Government plans to confiscate large tracts of land to build a commercial waterway to rival the Panama Canal have cost the Ortegas rural support.

The country’s capital of Managua, a sprawling city of modest malls, street vendors and office towers mixed with open pastures, is now largely deserted. Shops are closed and vandalized. Few people venture out at night. Walls are covered with graffiti calling Mr. Ortega a murderer. A group of police officers stand guard by a monument to the late Venezuelan leader Hugo Chávez, erected by Mr. Ortega, after protesters tried to knock it down during recent demonstrations.

Throughout Nicaragua, barricades have sprung up, blocking roads and snarling traffic, and making the key Pan American highway that links many of the country’s cities impassable. Tourism has been hit hard, hotel managers say, with occupancies at major hotels plunging and some international airlines paring back flights.

Analysts say the surge in violence has set back any hope of a peaceful resolution. A dialogue between Mr. Ortega’s government and the opposition, sponsored by the influential Catholic Church, has been shelved. Nicaragua’s business class, which until recently worked closely with Mr. Ortega, is demanding new elections.

“My sense is that the situation will continue to deteriorate and the government will continue its repression,” said Eric Farnsworth, who heads the Washington office of think tank Council of the

	Americas.

<b>HEADLINE</b>	<b>06/05 Delaware cashes-in on sports betting</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/delaware-cashes-in-on-sports-betting-1528243389">https://www.wsj.com/articles/delaware-cashes-in-on-sports-betting-1528243389</a>
<b>GIST</b>	<p>WILMINGTON, Del.—Shortly after 1:30 p.m. Tuesday, professional sports handicapper Tom Barton slapped down \$1,000 at the Casino at Delaware Park here, making him among the first people in the state to take advantage of a recent U.S. Supreme Court decision legalizing sports betting.</p> <p>“One thousand dollars on the New York Yankees to win the World Series,” Mr. Barton shouted, drawing whoops from a casino teller wearing a striped referee jersey.</p> <p>Delaware became the first state outside Nevada to allow bets on individual sports games, as its three casinos simultaneously launched full-scale sports gambling.</p> <p>Several other states are expected to follow, hoping to tap new gambling revenue in a saturated casino market. The rush to cash in on sports wagering comes after the high court ruled last month in favor of New Jersey, which had challenged a 1992 federal law that had prohibited wagers on individual sports games in all states except Nevada.</p> <p>The betting offered Tuesday in Delaware included single-game and championship wagering on professional baseball, football, basketball and soccer. Delaware Park drew dozens of bettors, many clutching paper betting sheets and scrutinizing the odds board that fills a wall next to a snack bar.</p> <p>Several people said they had previously taken part in Delaware’s limited sports betting, which was restricted to wagers on three or more NFL games at a time.</p> <p>Mr. Barton, managing director at the firm Sports Garten, said it was a welcome change. Before, he said, “anyone that’s a serious sports bettor had to fly to Vegas, or risk your nose with Tony down the street, or do offshore sports betting, which is not the most reputable.”</p> <p>Despite the hype, casino operators say expectations are modest. William Fasy, president of Delaware Park, said sports betting wasn’t likely to be a big moneymaker. Still, he said he was “super excited” because of the potential to entice more people to the casino and horse track.</p> <p>The World Cup should attract a younger, more ethnically diverse crowd, he said. “And college football? It’s going to be nuts on a Saturday” in the fall, he said, adding that he hopes those visitors will also play slots and bet on horse races.</p> <p>The casino industry could use a boost. Delaware, like other East Coast states that were early to adopt casino gambling, has been hit hard by more recent competition from other states such as Pennsylvania and Maryland. Mr. Fasy said Delaware Park’s slots revenue was 40% of what it was in 2006.</p> <p>Baye Larsen, vice president-senior credit officer for Moody’s Investors Service, said revenue would depend on whether states were able to lure people away from underground gambling, which is estimated to be a \$150 billion market. The major factors will be how expensive it is for people to place legal bets, which will depend on the tax rates states set, as well as how easy it is for gamblers to place wagers, she said.</p> <p>In New Jersey, lawmakers are set to hold final votes Thursday on legislation to regulate sports wagers. In-person betting could start immediately after the bill is signed into law, and online betting within 30 days, said Assemblyman John Burzichelli, a Democrat. New Jersey Treasurer Elizabeth Muoio told lawmakers that sports betting would likely generate \$13 million in additional revenue for the state next fiscal year.</p>

	<p>Other states, including Mississippi and West Virginia, passed sports-betting legislation ahead of the Supreme Court decision, and officials in those states said they were working now to get regulations in place so operators could begin accepting wagers in time for football season.</p> <p>West Virginia will allow people located within the state to wager online and via smartphone apps in addition to in-person at its five casinos. State lawmaker Gary Howell said he expected an influx of gamblers to cross the border to place bets. “I think it’s going to bring a lot of revenue into the state, especially until other states come online,” he said.</p> <p>Danielle Boyd, managing general counsel for the West Virginia Lottery Commission, said conservative estimates projected \$5 million in revenue for state in the first year.</p> <p>In Mississippi, sports betting could begin in late July or early August, according to Allen Godfrey, executive director of the Mississippi Gaming Commission.</p> <p>Lawmakers in other states are beginning discussions on legalizing sports betting. In Connecticut, Gov. Dannel Malloy has been negotiating with the Mashantucket Pequot and Mohegan tribes to allow sports betting at their casinos without violating a slot-revenue sharing agreement between the tribes and the state. State lawmakers would then have to pass legislation permitting sports betting.</p>

<b>HEADLINE</b>	<b>06/05 Wildfire burns through Hanford complex</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1009707/wildfire-burns-through-hanford-nuclear-complex/">http://mynorthwest.com/1009707/wildfire-burns-through-hanford-nuclear-complex/</a>
<b>GIST</b>	<p>RICHLAND, Wash. (AP) — A wildfire burned about 4.4 square miles (11.4 square kilometers) of the decommissioned Hanford nuclear production complex in Washington.</p> <p>The Tri-City Herald reports Rae Moss, spokeswoman for Mission Support Alliance, the Hanford contractor in charge of the Hanford Fire Department, says no radiologically contaminated areas or buildings were burned.</p> <p>Officials say the fire was spotted around 6:45 p.m. Sunday. It apparently was caused by a lightning strike.</p> <p>The fire burned between Route 4 South and Route 2 South, which come together to form a “V” near the secure entrance. Officials say the roads helped keep the fire from spreading farther.</p>

<b>HEADLINE</b>	<b>06/05 Mexico slaps 20% tariff US apples</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1009709/mexico-slaps-20-percent-tariff-on-us-apples/">http://mynorthwest.com/1009709/mexico-slaps-20-percent-tariff-on-us-apples/</a>
<b>GIST</b>	<p>SPOKANE, Wash. (AP) — The Washington Apple Commission says Mexico will immediately slap a 20 percent tariff on apples from the United States in response to the Trump administration’s tariffs on aluminum and steel.</p> <p>The commission said Tuesday that Washington state is the nation’s leading apple producer and Mexico is their biggest export market.</p> <p>The state’s 1,300 growers are the source for almost all the U.S. apples sent to Mexico.</p> <p>Last year, Washington growers shipped 13.7 million 40-pound cartons valued at more than \$215 million to Mexico.</p> <p>During the current season, shipments have been 13 percent ahead of last year and were on track to exceed 15 million bushels.</p>

	The Apple Commission says the new tariff puts that goal in doubt.

<b>HEADLINE</b>	<b>06/05 More severe western Wash. wildfires</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1010019/western-washington-wildfire/">http://mynorthwest.com/1010019/western-washington-wildfire/</a>
<b>GIST</b>	<p>Eastern Washington traditionally receives the bulk of attention during wildfire season. But state officials are focusing more on the wildfire season in Western Washington this summer, as the region's fires are expected to dramatically increase.</p> <p>Following one of the driest Mays on record, the state is shifting the way it prepares for Western Washington wildfire season. Aaron Schmidt with the Department of Natural Resources explains as much in a Facebook video with Commissioner of Public Lands Hilary Franz. He says DNR is staging three helicopters west of the Cascades — a move that has never been needed before.</p> <p>“Historically, Western Washington has had really benign fire activity. In the last five years, that’s been a categorical shift,” Schmidt said. “So much so that we are staging three helicopters in Western Washington this year.”</p> <p>Schmidt says there are a number of things contributing to the rise in wildfire activity in Western Washington.</p> <p>“Western Washington is seeing drier fuel conditions, we are seeing different onshore flows, our marine moisture layer is not there like it usually has been,” Schmidt said. “We are seeing multiple 100-acre fires in southwest Washington, and northwest Washington, which is very atypical. It lends itself to a changing fire environment.”</p> <p>Commissioner of Public Lands Hilary Franz said that wildfires in Washington are evolving and becoming more severe.</p> <p>“Washington state, like many of our states across the United States, is seeing more significant wildfires,” Franz said. “We’ve seen on our landscape, especially starting from 2014 through 2016, a longer and larger fire season than historically.”</p> <p>In 2014-16, Washington burned more than 1 million acres which cost the state more than half a billion dollars, Franz said. There was progress last year with officials keeping most fires below 10 acres. But Franz notes that Washington has about 2.7 million acres of forests in “poor health” and the fires are getting worse.</p> <p>“The fires we see today are nothing like we had 20 years ago, and we know that 20 years from now we’re likely to see even more significant fire landscapes,” Franz said. “We’re not only seeing fire on our landscape in the eastern and central part of our state, which has been more traditional, we are seeing it more significantly on our west side.”</p>

<b>HEADLINE</b>	<b>06/05 EU nations split over asylum</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/germany-arrests-syrians-suspected-human-trafficking-55652902?">https://abcnews.go.com/International/wireStory/germany-arrests-syrians-suspected-human-trafficking-55652902?</a>
<b>GIST</b>	<p>European Union countries remained deeply divided Tuesday over how to reform EU rules for managing the influx of refugees and migrants, as U.N. agencies reported that an estimated 112 people died over the weekend when a smuggler's boat sank as it tried to reach Europe.</p> <p>The estimated toll made the shipwreck off Tunisia the deadliest this year in the dangerous route from North Africa across the Mediterranean Sea to Europe.</p> <p>EU migration ministers, meeting in Luxembourg, were pessimistic that new proposals to update the bloc's asylum system would be accepted by many of the 28 member states.</p> <p>Well over 1 million people, mostly Syrians fleeing war at home, entered Europe in 2015, overwhelming Greece and Italy and surprising Germany, which took in hundreds of thousands of refugees. Their arrival strained relations among EU neighbors and fueled anti-migrant sentiment, especially in central and eastern Europe.</p> <p>EU leaders have insisted that the deadlock over how to handle migrants and refugees must be broken this month.</p> <p>In his first policy address, Italian Prime Minister Giuseppe Conte declared Europe's immigration policy a "failure" and demanded that it be renegotiated. Italy has been the primary entry point for thousands of migrants to Europe via the Mediterranean this year.</p>

	<p>Conte insisted the rest of the EU must take on a greater burden of accepting refugees, as well as negotiating with migrants' home countries to return those who don't qualify for asylum.</p> <p>Germany's deputy interior minister, Stephan Mayer, said "there are still considerable deficits" in the proposals to overhaul EU immigration, while Dutch Migration Minister Mark Harbers said there are "a lot of member states that still have points of discussion."</p> <p>"First we have to fix the front door, fix the back door," Belgian Migration Minister Theo Francken told reporters. "Then we can find a compromise on who's doing what. When we don't have a solution for the massive influx of illegal aliens in our Europe, Europe will end, and we will never get out of this crisis."</p> <p>Denmark's prime minister, however, predicted that a new European asylum system could be in place as soon as next year and said asylum-seekers whose applications have been rejected could be sent to a country "that is not on the migrant's wish list."</p> <p>Prime Minister Lars Loekke Rasmussen gave no further details Tuesday besides that fact that several European countries have discussed the plan.</p> <p>Most of the disagreements focus on who should look after the migrants when they arrive and for how long. Under current rules, people must register for asylum in the European country they first arrive in. This has meant that Greece and Italy have carried most of the burden. But some nations — Hungary and Poland notably — have refused to honor any migrant quotas shared among European nations.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>06/05 Fire dept. warns: hoses in summer</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/06/05/fire-department-warns-of-hoses-in-summer-posts-photo-of-baby-scalded-by-water/">http://q13fox.com/2018/06/05/fire-department-warns-of-hoses-in-summer-posts-photo-of-baby-scalded-by-water/</a>
<b>GIST</b>	<p>LAS VEGAS – Las Vegas Fire Rescue posted pictures of a burned baby Monday, warning residents of the hazards of using garden hoses during hot weather.</p> <p>“Here in Las Vegas, a garden hose exposed to direct sunlight during summer can heat the water inside the hose (not flowing) to 130-140 degrees,” fire rescue wrote, “which can cause burns, especially to children &amp; animals. Let the water flow a few minutes to cool before spraying on people or animals.”</p> <p>The department posted a picture of an infant with burns from a garden hose... The photo was apparently shared in the past by a mother living in a different city who wanted to warn others.</p> <p>“It’s a file photo, we use it every year to show just how serious a burn can occur to a toddler,” Las Vegas Fire Rescue Public Information Officer Tim Szymanski said. “We got a ton of tweets back from people (saying) ‘I never thought about that,’ and that’s why we do it.”</p> <p>Fire and Rescue sent out the tweet during an excessive heat warning in Las Vegas, when temperatures were expected to rise above 106 degrees.</p> <p>“Sometimes the people don’t realize that for the length of the hose all that water is going to be hot water,” Szymanski said.</p> <p>He warned that it takes just seconds to cause a bad burn on a child or animal, and people should take care to let the water run cold during the summer.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>06/05 Seattle-area home prices record highs</b>
-----------------	--

SOURCE	<a href="https://www.seattletimes.com/business/real-estate/seattle-area-home-prices-reach-record-highs-but-increasing-inventory-offers-a-ray-of-hope/">https://www.seattletimes.com/business/real-estate/seattle-area-home-prices-reach-record-highs-but-increasing-inventory-offers-a-ray-of-hope/</a>
GIST	<p>Single-family home prices continue to reach new highs despite increasing inventory in May, according to monthly home-sales data released Tuesday by the Northwest Multiple Listing Service.</p> <p>The median price of a single-family home in King County was \$726,275 in May, surpassing the record high of \$725,000 set in April and up 15 percent compared to the previous year.</p> <p>Seattle’s median home price of \$830,000 is up 14 percent from a year ago and sets a new record after holding steady at the previous high of \$819,000 in March and April.</p> <p>Another record was established on the Eastside with a median home price of \$960,000, eclipsing the previous high of \$950,000 reached in February and up 10 percent year-over-year.</p> <p>The news isn’t all bad for home buyers, however, as total active listings in King County went up for the second month in a row after years of declining inventory, increasing 36 percent in May compared to the previous year. The Northwest Multiple Listing Service said the increase in listings marks only the third time since October 2016, and the first time since last September, that King County has more than a month’s supply of homes (meaning the number of listings is greater than the number sold in a month).</p> <p>While the increase in inventory may provide some minor relief, it isn’t enough to substantially ease competition among buyers and is still well below the five months of inventory needed for a balanced market, said Mike Grady, president of Coldwell Banker Bain.</p> <p>“The job market in Seattle continues to push higher demand for homes than what we have in inventory being formed,” Grady said. “There’s a little relief, meaning buyers don’t have to write an offer within the first hour.</p> <p>“Now they have maybe a day.”</p> <p>Grady said he doesn’t see inventory even coming close to meeting demand in the next two years.</p> <p>The story is the same in other areas, with both Pierce and Kitsap counties reaching new record highs in May. The median home price of \$355,000 in Pierce County surpassed its previous high of \$350,000 set in March and was up 15 percent over the previous year. And Kitsap County surpassed its previous high of \$341,000 set in March with a median home price of \$360,000, up 16 percent from a year ago.</p> <p>Snohomish County came in slightly below its record high of \$506,000 in April, but the median home price of \$500,000 in May still represents an 11 percent year-over-year increase.</p> <p>The ever-increasing home prices continue to complicate the buying process with a high rate of bidding wars and a median down payment that has surpassed \$100,000 in King County.</p>

<b>HEADLINE</b>	<b>06/06 South America economies sputtering</b>
<b>SOURCE</b>	<a href="https://www.bloombergquint.com/global-economics/2018/06/05/south-american-economies-dive-south-as-growth-outlook-dims">https://www.bloombergquint.com/global-economics/2018/06/05/south-american-economies-dive-south-as-growth-outlook-dims</a>
<b>GIST</b>	<p>(Bloomberg) -- Pro-business leaders in South America's largest economies are struggling to spark growth as their policies run head-on into domestic crises and emerging market turbulence.</p> <p>Brazil and Argentina have seen their 2018 growth estimates cut from around 3 percent earlier this year to 2.2 percent and 1.3 percent, respectively, according to economists surveyed by their central banks. More downside revisions are on tap, with JPMorgan Chase &amp; Co. recently lowering its Brazil call to a mere 1.2 percent this year. Some analysts say Argentina may even fall into a brief recession.</p> <p>Brazil and Argentina were expected to regain momentum this year after emerging from recession in 2017 under the market-friendly policies of presidents Michel Temer and Mauricio Macri. But their fortunes were reversed when global market volatility exacerbated their domestic problems. An unsustainable budget deficit forced Argentina to seek help from the IMF while political uncertainty is on the rise in Brazil ahead of its election in October.</p> <p>On top of that, a severe drought made things worse for Argentina, while a massive trucker strike paralyzed the Brazilian economy. The Argentine peso has slid more than 20 percent so far this year, even after the central bank raised rates to 40 percent, while the Brazilian real has accumulated losses of more than 10 percent.</p> <p>"We expect the Argentine economy to continue to decelerate markedly in the coming months," Itau economists Juan Carlos Barboza and Diego Ciongo wrote in a note to clients, citing the impact of the drought, tighter macro policies and lower real wages. "The international environment, including Brazil's growth and financial conditions, is also less supportive."</p> <p>Other South American economies are faring better so far. Chile grew at its fastest pace in more than five years in April, buoyed by the return of market-friendly President Sebastian Pinera. The Colombian economy is also seen accelerating toward a 3 percent growth rate in 2019.</p> <p>Still, that may not be enough to overcome the drag from the region's largest economies.</p> <p>"The impact on the region is significant as Brazil and Argentina account for more than half of South America's economy," said Pedro Tuesta, senior economist with 4Cast Ltd consultancy in Washington.</p>

<b>HEADLINE</b>	<b>06/05 Kitsap Co. deputy saves 7 from fire</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/quick-acting-deputy-saves-7-lives-from-kitsap-co-house-fire">http://komonews.com/news/local/quick-acting-deputy-saves-7-lives-from-kitsap-co-house-fire</a>
<b>GIST</b>	<p>PORT ORCHARD, Wash. - A Kitsap County sheriff's deputy on routine patrol jumped into action and saved the lives of seven people early Tuesday after he spotted a home on fire.</p> <p>The drama unfolded at about 5:10 a.m. as Deputy B. Harrin was patrolling in the 1600 block of SE Holman Road in south Kitsap County.</p>

	<p>He saw flames and smoke billowing from the home and immediately ran there, waking up the residents and helping them to escape the fire.</p> <p>In all, seven residents were rescued from the home, including one person with disabilities.</p> <p>Crews from the South Kitsap Fire District arrived on scene and extinguished the blaze, but the damage was extensive and the home was declared a total loss.</p> <p>The cause of the fire is under investigation.</p>

<b>HEADLINE</b>	<b>06/04 Seattle breaks up homeless camp clusters</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/homeless/42000-pounds-of-garbage-seattle-quietly-cleaning-up-clearing-out-hot-spots-for-people-living-in-vehicles/">https://www.seattletimes.com/seattle-news/homeless/42000-pounds-of-garbage-seattle-quietly-cleaning-up-clearing-out-hot-spots-for-people-living-in-vehicles/</a>
<b>GIST</b>	<p>The city of Seattle has launched a new effort to clean up, and potentially break up, clusters of homeless vehicle campers with trash bags and, if necessary, tow trucks.</p> <p>The program, which quietly started in mid-May, has resulted in the collection of almost 42,000 pounds of garbage and waste from cleanups around RVs and other vehicles parked in Sodo, Georgetown, Ballard and the Central District.</p> <p>But in the meantime, residents of these vans and RVs continue to play a cat-and-mouse game with the city to avoid getting towed. At a cleanup in Sodo last week, several RV and camper residents simply moved a few blocks away from where they had originally parked.</p> <p>The new initiative comes as King County’s annual homeless Point in Time count found, once again, that homeless vehicle camping outpaced homeless people sleeping in tents. The snapshot count found more than 3,300 people sleeping in vehicles in the county, a 46 percent increase from the previous year.</p> <p>The cleanup program started on a smaller scale in Sodo in November but has been expanded citywide, in an effort to address serious public-health hazards around vehicles doubling as people’s homes.</p> <p>Until this program, that was largely done on a case-by-case basis, said Stephanie Formas, communications director for Mayor Jenny Durkan.</p> <p>City officials reiterated they aren’t trying to force people out of their vehicles or make them move out of a neighborhood. The concern is trying to address the vehicles that are generating large amounts of waste and other public-health hazards.</p> <p>In eight cleanups planned since May 11, Seattle has towed seven vehicles, while 101 others left voluntarily. In fact, the city canceled two of those cleanups because all the vehicles had pre-emptively moved and left behind no trash, Formas said.</p> <p>One person living in a towed vehicle moved into a tiny-house village, the city said.</p> <p>Seattle has struggled for years to address the needs of people living in vehicles — caught between businesses and neighborhood leaders who want the city to consistently enforce parking laws, and advocates for homeless people who say those vehicles are a last resort in a city with increasingly high rents and home prices.</p> <p>Currently, Seattle has just one lot where the city allows a handful of vehicles to park long-term without fear of being ticketed or towed.</p> <p>Formas, with the mayor’s office, emphasized the new cleanup program is separate from the city’s strategy</p>

to deal with vehicle residency. Durkan said last week she's studying safe-parking programs in other cities, including a program in San Diego featured in a recent Seattle Times story.

The tension over vehicle residency was highlighted in a King County Superior Court ruling in March, when a judge said that, because a vehicle can be defined as someone's home, imposing high towing fees and attaching a lien to the vehicle violated the U.S. Constitution and the state homestead act. Seattle is appealing.

By 9 a.m. last Wednesday morning, police officers, public-utilities workers and cleanup crews had gathered near the intersection of Sixth Avenue South and South Snoqualmie Street, a spot where vehicle campers had been living for months.

Five days earlier, the city had posted a notice there announcing an area cleanup. Vehicles that had been parked on the block for more than 72 hours, in violation of a city parking rule, were tagged with orange stickers, warning them to move by the day of the cleanup. Otherwise, they'd be towed.

The pilot program, a city blog post said, is designed to "engage RV occupants to voluntarily move their RVs," allowing city crews to remove trash and "immobile vehicles left behind." The post, however, does not explicitly say that vehicles could be towed as part of the program.

"The goal is to encourage cleanup around the vehicles," Formas said. "This is also to make sure people's belongings aren't improperly cleaned up," and they have time to move their possessions. Anything left behind, she said, is assumed to be garbage.

Sites are selected based on the number of vehicles clustered in the location, and "safety" and "health" conditions, including fire-damaged RVs, documented criminal activity in the area, needles, rats or the presence of human or chemical waste.

These are similar to rules set by Seattle to justify cleaning up unsanctioned tent encampments. Unlike residents of tent camps, there is no requirement that vehicle residents be offered shelter.

And also, unlike tent camps, the city's Navigation Team — a collection of outreach workers and police officers who connect campers to shelter — isn't involved in the vehicle cleanups unless there are tents nearby, the city said. Instead, Seattle police officers will do outreach at the sites.

At Wednesday's cleanup, most vehicles parked along Sixth Avenue were gone when city workers from an alphabet soup of departments — utilities, parks, police, transportation and administrative services — showed up.

For the few campers that remained, it was a race to get their RVs running before tow trucks arrived.

One man with a beat-up green minivan helped tow away two of his friends' RVs. Another couple got help from a friend who hitched up their blue and white camper to his pickup. Down the block, two men used jumper cables to help another man get his RV started.

"If people would keep their area clean, we probably wouldn't have as bad a problem as we have," said a woman who asked to be referred to only by Sheila, whose RV was towed out by the man in the green minivan.

"We all move in the same area. We all stay together. We all help each other out," Sheila said.

Many of the vehicles simply relocated farther north along Sixth Avenue, finding another curb along which to park.

Just before 11 a.m., the first Lincoln Towing truck arrived.

	<p>Calvin Hawk had been living in a Chevrolet Astro minivan along Sixth for the last two months. But the battery was dead and the van had a steering-wheel problem. He was out of luck.</p> <p>Getting it back was unlikely. His sister gifted him the van. He didn't have the title.</p> <p>Vehicles that are towed can be retrieved after the owner pays impound and storage fees, but that requires proof of ownership. Often people living in the vehicles don't actually hold the titles, buying them in under-the-table deals.</p> <p>"I knew they were coming today," Hawk said of the cleanup. "I didn't know exactly when. I didn't know if someone was going to help me move it. So I didn't have all my stuff prepared."</p> <p>A worker with Seattle Public Utilities stood beside him, trying to help him find shelter and decide what items he wanted to keep or discard. He shrugged. Maybe he'd just abandon all of it, he said.</p>

<b>HEADLINE</b>	<b>06/05 Seattle PD change tactics w/protesters</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/crime/slaying-the-sleeping-dragon-seattle-police-change-tactics-to-counter-traffic-blocking-protesters/">https://www.seattletimes.com/seattle-news/crime/slaying-the-sleeping-dragon-seattle-police-change-tactics-to-counter-traffic-blocking-protesters/</a>
<b>GIST</b>	<p>In March, opponents of King County's new juvenile detention center were able to bring Friday traffic to a grinding halt for about six hours and shed light on their cause by <u>simply lying down</u> in the middle of a downtown Seattle intersection.</p> <p>They resisted easy arrest by employing a tactic called the "sleeping dragon," in which participants form a human chain, hand to hand, with arms linked while inside a piece of PVC tubing.</p> <p>Sometimes protesters in sleeping dragons are handcuffed to one another inside the tubing, which can be encased in concrete — or wrapped in chicken wire and duct tape, as was the case on Tuesday morning <u>when people opposing immigration policies employed the technique while lying in the street at Second Avenue and Madison Street.</u></p> <p>Simply cutting off the tubing runs the risk of injuring protesters, slowing the removal.</p> <p>"Removing these devices is slow, deliberate work." Seattle police tweeted during Tuesday's protest. "The safety of all involved is paramount."</p> <p>But members of the department's new Apparatus Removal Team (ART) were able to separate the nine protesters and take them into custody in about an hour and a half.</p> <p>Seattle police spokesman Sgt. Sean Whitcomb said creation of the team was in direct response to the earlier protest. "The March demonstration was new to us," he said Tuesday. "So we provided traffic management and supported the event as it unfolded, planning for it to end by the evening commute.</p> <p>"We learned from that experience and have adapted accordingly," he added. "As they change their tactics, our training, tactics and equipment change, too."</p> <p>Seattle police typically handle about 300 demonstrations a year. Most are non-disruptive and peaceful, but in the past couple of months, Whitcomb said protesters have employed sleeping dragons to slow their dispersal and disrupt the rush-hour commute.</p> <p>He said members of ART are specially trained officers who have the knowledge, experience and equipment to cut through plastic and metal without hurting protesters. Because sleeping dragons vary in composition, the team relies on different tools, he said.</p>

Whitcomb was cautious about revealing too many details about the tools and tactics used by officers on the ART.

On Tuesday, a lieutenant first gave the immigration protesters with the Northwest Detention Center Resistance and activist group Mijente a two-minute warning to disperse and clear the road or face arrest. When the six men and three women ignored the order, members of the team then used large pliers and a Dremel rotary tool to cut into the sleeping dragon.

Police say once they cut into the tubing they slip a brightly colored piece of plastic inside so it rests against the protesters' skin. When they continue to cut or drill into the tubing the plastic shavings alert officers when they are getting close to skin.

Once the officers had the protesters separated into one- or two-person sections, they were carried off the street and onto the sidewalk. There, officers worked more slowly and carefully to disconnect each individual as street traffic resumed.

The nine were booked into the King County Jail for investigation of pedestrian interference. They selected the site because the U.S. Department of Homeland Security Immigration and Customs Enforcement and immigration court is housed at 1000 Second Ave.

“Although Seattle and King County claim to be “sanctuaries” for immigrants, the Seattle Police Department and the King County Sheriff actively collaborate on joint task forces with this branch of ICE leading to prosecutions and deportations. These collaborations must end,” Mijente said in a news release. Organizers of the No New Youth Jail Coalition, which staged the March protest, have acknowledged that their strategy includes disrupting traffic to bring attention to their cause.

“We have won so much today,” coalition organizer Julianna Alson said in March. “We shut down the streets, we shut down business as usual, we shut down rush hour, we shut down the status quo.”

Whitcomb said the ART officers will be busy as long as the sleeping dragon is used in protests.

“This is fundamentally civil disobedience. They recognize they may be arrested but they didn't sign up to be injured,” he said of protesters. “We want to get them out of the road, but we have to be a very careful and methodical dismantling these devices.”

<b>HEADLINE</b>	<b>06/05 No charges NJ officers beach beating</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/nation-now/2018/06/05/beach-punch-video-new-jersey-officers-wont-face-charges/675851002/">https://www.usatoday.com/story/news/nation-now/2018/06/05/beach-punch-video-new-jersey-officers-wont-face-charges/675851002/</a>
<b>GIST</b>	<p>Three police officers who were videotaped arresting a Philadelphia woman at a New Jersey beach, one of whom was filmed punching her in the back of the head, <u>will not face criminal charges</u>, prosecutors announced Tuesday.</p> <p>A video of the May 26 arrest, which only captured part of the encounter and included a Wildwood officer apparently punching 20-year-old Emily Weinman, went viral shortly after the arrest. Body camera footage that city police later released appeared to show Weinman backing away from an officer who tried to handcuff her, then shove him in the torso.</p> <p>The Cape May County Prosecutor's Office determined the officers had not broken any state laws governing use of force and referred the investigation back to the city police department's internal affairs office, prosecutor Jeffrey H. Sutherland wrote in a prepared statement. The prosecutor's office's Professional Standards Unit will monitor the city investigation.</p> <p>Police officers had originally questioned Weinman about alcohol when they approached her on the beach.</p>

They administered a breath test and one officer can be heard saying in part of the body camera footage that they would have Weinman or her group pour out alcohol at the scene. The officers changed their minds at some point and decided to take Weinman into custody.

In a prepared statement at the time police released their footage, Wildwood Police Chief Robert N. Regalbuto said that Weinman "forcibly struck" an officer trying to arrest her, turning off his body camera, but that the camera reactivated as a struggle ensued. The three officers involved in the arrest — Thomas Cannon, John Hillman and Robert Jordan — were put on administrative duty pending the outcome of the internal affairs investigation, police announced the day after the incident.

"As county prosecutor, I recognize that the video footage has raised a lot of questions regarding the officers' actions. A decision such as this is not based on emotion; it is based upon applying the proper laws, policies and directives that govern law enforcement," Sutherland wrote in his statement. "Members of the public should understand that no matter what your opinion is regarding the subject event, it is not based on a full review of the evidence."

Weinman's attorney, Stephen P. Dicht, took a different view.

"My only comment is, of all the participants in that scuffle, OK, the only one that was charged was the one who was beaten on the head," Dicht told the Asbury Park Press in a phone interview.

Police charged Weinman with two counts of aggravated assault on a police officer, aggravated assault by spitting bodily fluids at or on a police officer, disorderly conduct, resisting arrest, obstruction and underage possession of alcohol, they announced May 27. Her attorney said she intended to fight the charges in court.

<b>HEADLINE</b>	<b>06/05 Groups decry beating by Oregon deputy</b>
<b>SOURCE</b>	<a href="http://sanfrancisco.cbslocal.com/2018/06/05/oregon-deputy-suspect-beating-caught-camera/">http://sanfrancisco.cbslocal.com/2018/06/05/oregon-deputy-suspect-beating-caught-camera/</a>
<b>GIST</b>	<p>Civil rights groups in Oregon are calling for an investigation after a video showed police punching a prone man in the head at least 16 times.</p> <p>The video shows four officers converging on a man standing on a street, then pulling him to the ground, with three officers holding his limbs and one straddling his back. As one officer appears to struggle to force one of the man's arms behind his back, another begins punching him in the head.</p> <p>Through the punches, the man, identified as 28-year-old Kevin Straw, repeatedly shouts "I am not resisting." The video was shot by Portland, Oregon, TV station KGW.</p> <p>The American Civil Liberties Union and the state chapter of the Council on American-Islamic Relations both called for investigations.</p> <p>The Marion County Sheriff's Office said the arrest happened Monday after Straw repeatedly shouted at officers involved in the search for two missing fishermen in the Detroit, Oregon, area. The sheriff's office said it's reviewing the officers' use of force, and that an outside agency would perform an additional review.</p> <p>The release also said Straw had been contacted earlier by crisis intervention specialists after reports he had been yelling at passers-by in the area.</p> <p>In the video, an officer forces Straw's right arm behind his back, and another grabs his left arm. But as the officers together lower the man toward the ground, face down, Straw extends his left arm in front of himself. As Straw is punched, an officer can be heard saying, "get your hand behind your back."</p>

After the punches are delivered, a fifth officer jogs to the scene and puts his knee on Straw's head. Aside from extending his arm, Straw does not appear to struggle in the video, and is eventually handcuffed.

In a later release, the sheriff's office identified the five deputies involved in the arrest and said one, Jake Thompson, had been reassigned to non-patrol duties pending the outcome of the review.

David Rogers, head of the American Civil Liberties Union in Oregon, said it wasn't clear why officers used force on the prone man.

"It looked like they were in pretty complete control, and yet a deputy proceeded to punch this man in the face 14 or 15 times," Rogers said. "It was incredibly disturbing."

Amy Queen, a spokeswoman for the Marion County district attorney said the office is consulting with the sheriff's office, but is not independently investigating the incident.

<b>HEADLINE</b>	<b>06/05 Hawaii: 12,000 quakes in 30 days</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/05/us/hawaii-volcano-by-the-numbers/index.html">https://www.cnn.com/2018/06/05/us/hawaii-volcano-by-the-numbers/index.html</a>
<b>GIST</b>	<p>(CNN)From earthquakes to seeping lava, Hawaii's Big Island has seen plenty from nature since the first eruptions of Kilauea volcano. And the lava keeps spewing, swallowing homes and igniting fears of more destruction to come.</p> <p>Here's what the disaster looks like, by the numbers:</p> <p><b>12,000 earthquakes</b> Since May 4, there have been more than 12,000 earthquakes, according to US Geological Survey geologist Janet Babb. The quakes can be felt right near the Kilauea summit, Babb said. The Big Island usually gets its fair share of quakes. But activity in the last 30 days has far outpaced its historical monthly average of 1,000. The biggest was a 6.9-magnitude temblor on May 4.</p> <p><b>30,000 feet</b> The tallest ash plume at the summit of Kilauea volcano reached 30,000 feet above sea level, the USGS says.</p> <p><b>'Hundreds' of homes</b> At least 117 homes had earlier been reported destroyed in the four weeks since lava began flowing, according to Hawaii Civil Defense Administrator Talmadge Magno. Overnight Monday, "hundreds" more were destroyed in Kapoho Beach Lots and Vacationland, said Janet Snyder, a Hawaii Civil Defense Service spokeswoman. The number is sure to grow because assessments aren't finished, Magno said.</p> <p><b>7.7 square miles</b> About 7.7 square miles are covered by lava, which is about 0.2% of Hawaii Island, according to the USGS.</p> <p><b>250 feet</b> The highest lava fountain measured so far has reached 250 feet. That's a lot of lava, but flow volumes can be extraordinarily difficult to measure, the USGS said.</p>

<b>HEADLINE</b>	<b>06/05 More open jobs than job seekers</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/the-u-s-now-has-more-open-jobs-than-job-seekers/">https://www.cbsnews.com/news/the-u-s-now-has-more-open-jobs-than-job-seekers/</a>

GIST

WASHINGTON - For the first time on record, the number of job openings in the U.S. exceeds the number of unemployed Americans -- a trend that may soon give workers more leverage to demand pay raises.

With employers struggling to fill openings, the number of available jobs in April rose 1 percent to 6.7 million from 6.6 million in March, the Labor Department said Tuesday. That's the most since records began in December 2000.

The figures underscore the consistent strength of the nation's job market. The unemployment rate has reached an 18-year low of 3.8 percent. Employers have added jobs for a record 92 straight months. And the abundance of openings suggests that hiring will continue and the unemployment rate will fall even further. Not since December 1969, when the rate was 3.5 percent, has unemployment been lower than it is now.

Employers appear confident about the economic outlook and growth. Analysts expect faster consumer spending to help accelerate growth to roughly a 3.5 percent annual rate in the April-June quarter, after growth had lagged slightly in the first three months of the year.

In July 2009, just as the Great Recession was officially ending, there were on average 6.7 unemployed people for each job. Now, that figure has fallen to just 0.95 jobless people per opening.

The sharpest increase in openings in April was in a category called professional and business services, which includes a range of occupations such as accountants, architects and engineers. Increased openings were also especially evident among manufacturers and at hotels and restaurants.

Regionally, the largest increases in available jobs in April were in the Midwest and West. Open jobs in the Northeast and South barely changed.

Yet it's not clear that employers are trying very hard to fill all their open jobs. Online job boards and software that makes it easier to scan resumes for keywords also make it easier for employers to post openings and initially screen applications, even if they're not actually prepared to hire.

The surest sign that employers were scrambling for workers would be steady pay gains, as businesses bid higher for the workers they need. Yet wage increases remain sluggish, compared with previous periods when the unemployment rate was this low.

Hourly pay rose 2.8 percent in May on average for all workers, excluding managers, compared with a year earlier. In April 2000, the last time the unemployment rate was as low as it is now, hourly pay jumped nearly 4 percent from the previous year.

That may indicate that employers aren't as desperate to hire as the robust number of job openings would suggest. For example, data from the Federal Reserve Bank of Atlanta show that workers who switch jobs are starting to enjoy healthier pay gains. That's a sign companies are willing to pay more to lure workers from other companies.

But by historical standards, pay increases are relatively low -- even for job-switchers. In April, wages for job-switchers rose 4 percent, on average. But in December 2000, near the peak of the late 1990s boom, they were receiving raises of 6.5 percent.

Martha Gimbel, director of economic research at job-listing site Indeed, points out that pay increases for Americans who remain in their jobs are actually falling. Wages for job-stayers were up just 2.9 percent in April, compared with 3.7 percent six months earlier.

Separate research from the Federal Reserve Bank of Kansas City, released last month, shows that 14.5 percent of people who remained in their jobs in early 2018 received no pay increase from a year earlier. That figure was just 11 percent before the Great Recession began in late 2007.

	"That is really astonishing to me at this point in the recovery," Gimbel said. "That just signals that employers are not worried about their employees being poached."

<b>HEADLINE</b>	<b>06/05 Separated migrant kids stuck at border</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/hundreds-migrant-kids-separated-parents-are-stuck-border-stations-n878696">https://www.nbcnews.com/news/us-news/hundreds-migrant-kids-separated-parents-are-stuck-border-stations-n878696</a>
<b>GIST</b>	<p>WASHINGTON — Border agents and child welfare workers are running out of space to shelter children who have been separated from their parents at the U.S. border as part of the Trump administration's new "zero tolerance" policy, according to two U.S. officials and a document obtained by NBC News.</p> <p>As of Sunday, nearly 300 of the 550 children currently in custody at U.S. border stations had spent more than 72 hours there, the time limit for immigrants of any age to be held in the government's temporary facilities. Almost half of those 300 children are younger than 12, according to the document, meaning they are classified by the Department of Homeland Security as "tender age children."</p> <p>The stations, run by the Border Patrol and meant only as the first stop for children detained at the border, often lack adequate bedding or separate sleeping rooms for children.</p> <p>"It would be highly inappropriate and even unsafe to hold children for extended periods in these short-term border facilities because they often lack the adequate medical and nutritional resources for these young people," said Greg Chen, director of government relations for the American Immigration Lawyers Association. "It would place these children at risk of harm if they are housed with adults without the proper privacy that children should have."</p> <p>A spokesman for DHS did not respond to a request for comment.</p> <p>The overstays at border stations are a result of a backlog at U.S. Health and Human Services (HHS), the agency responsible for sheltering migrant children longer term and matching them with relatives or foster parents in the U.S. The agency's Administration for Children and Families has 11,200 unaccompanied children in its care and takes 45 days on average to place a child with a sponsor, according to a spokesperson.</p> <p>HHS officials will soon tour military installations near the border in Texas as they search for more space to house children while they wait for placement. The officials will tour Dyess Air Force Base, Goodfellow Air Force Base, and Fort Bliss, the spokesperson said.</p> <p>"HHS will make the determination if they will use any of the three sites for UAC (unaccompanied alien children) operations," the spokesperson said.</p> <p>A Defense Department spokesperson said HHS was the lead agency and referred NBC News to HHS.</p> <p>Military bases have been used to house migrant children in the past, but only as a last resort, according to an Obama administration official.</p> <p>In May, the Trump administration began enforcing a "zero tolerance" policy on the southern border, prosecuting any adult who entered the country illegally in order to crack down on the surge in the number of immigrants crossing the border.</p> <p>Parents traveling with children are separated from their kids while they face legal proceedings. Two U.S. officials said HHS was not given proper warning of the new policy and was caught unprepared at the influx of children.</p> <p>"What's happening now is a broad indication of a total lack of planning or forethought for the policy they</p>

	<p>enacted," said Peter Boogaard, a former DHS and White House official in the Obama administration who is now a spokesman for the immigration reform group FWD.us. "They didn't think this through at all — what it would mean for kids, for their parents and for the operational challenges."</p> <p>"Instead of having Border Patrol agents at the border, you have them taking care of kids at border stations."</p>

<b>HEADLINE</b>	<b>06/05 US warns against financial deals w/Iran</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/world/u-s-warns-allies-against-financial-dealings-iran-n880311">https://www.nbcnews.com/news/world/u-s-warns-allies-against-financial-dealings-iran-n880311</a>
<b>GIST</b>	<p>WASHINGTON — The United States warned governments and the private sector on Tuesday to crack down on what it described as Iranian efforts to exploit them to fund its support for terrorism, destabilizing actions in the region and rights abuses at home.</p> <p>The appeal, in a speech by the senior U.S. Treasury official for terrorism and financial intelligence, follows U.S. President Donald Trump's May 8 decision to abandon the 2015 Iran nuclear deal and to reimpose U.S. sanctions on the Islamic Republic.</p> <p>"You must harden your financial networks, require your companies to do extra due diligence to keep them from being caught in Iran's deceptive web, and make clear the very significant risks of doing business with companies and persons there," Under Secretary of the Treasury Sigal Mandelker said.</p> <p>"Companies doing business in Iran face substantial risks, and those risks are even greater as we reimpose nuclear-related sanctions," she added. "We will hold those doing prohibited business in Iran to account."</p> <p>The U.S. decision to leave the pact, under which Iran agreed to limit its nuclear program in return for relief from economic sanctions, has antagonized its other parties: Britain, China, France, Germany and Russia.</p> <p>With U.S. sanctions returning between now and Nov. 4, it is not clear how enthusiastic U.S. allies or other nations such as China may be to comply with those sanctions, particularly those requiring foreign firms to reduce their imports of Iranian oil.</p> <p>The weight of the U.S. financial system and the reality of companies having to choose between selling to Iran or to the vast U.S. market, is likely to force many private firms to comply.</p>

<b>HEADLINE</b>	<b>06/05 Seattle 22% nation's bikeshare bikes</b>
<b>SOURCE</b>	<a href="https://www.king5.com/article/news/local/seattle-has-22-percent-of-the-countrys-bikeshare-bikes-l-geekwire/281-561579312">https://www.king5.com/article/news/local/seattle-has-22-percent-of-the-countrys-bikeshare-bikes-l-geekwire/281-561579312</a>
<b>GIST</b>	<p>There were 10,000 dockless bike share bikes scattered across Seattle at the end of 2017, nearly a quarter of all units nationwide.</p> <p>That was one of the findings in a new study of Seattle's bike sharing program released Monday by the Seattle Department of Transportation. It comes as the city is determining long-term regulations for dockless bike sharing companies. The study found that the 10,000 bikes from Spin, LimeBike, and Ofo were ridden 468,000 times from July 2017 to the end of the year.</p> <p>The study underscores the rapid growth of bike sharing in Seattle and the city's status of a nationwide proving ground for the concept. The program only kicked off last summer, when the city granted permits to Spin and LimeBike starting with 500 bikes a piece, a threshold that was increased later in the year. In August, Chinese bike share company Ofo jumped into the fray.</p>

<b>HEADLINE</b>	<b>06/05 Suicide warning signs</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/nation/2018/06/05/suicide-warning-signs-prevention-help/675748002/">https://www.usatoday.com/story/news/nation/2018/06/05/suicide-warning-signs-prevention-help/675748002/</a>
<b>GIST</b>	<p>The <a href="#">apparent suicide of fashion icon Kate Spade</a> is raising awareness about prevention.</p> <p>About 39,500 people died of suicide in 2011. That's more deaths than from murder, prostate cancer or car accidents, according to the American Association of Suicidology.</p> <p>Some of the most frequently cited risk factors for suicide include mental disorders, depression, a prior suicide attempt, family history and exposure to other people's suicidal behavior, according to the <a href="#">National Institutes of Health</a>.</p> <p>So how do you know when a loved one needs help?</p> <p><b>Warning signs</b> According to the <a href="#">American Foundation of Suicide Prevention</a>, some of the warning signs of suicide are:</p> <ul style="list-style-type: none"> <li>• Talking about wanting to die. About 50%-75% of people who attempt suicide tell someone about it first.</li> <li>• Finding ways to kill themselves, like hoarding medicine or buying a gun.</li> <li>• Insomnia</li> <li>• Losing interest in things and becoming withdrawn from family and friends.</li> </ul> <p><b>What to do</b> If you know someone who is thinking about suicide, you should not leave them by themselves. Also, remove anything that might be harmful to the person, such as guns, according to NIH.</p> <p>"Try to get your loved one to seek immediate help from his or her doctor or the nearest hospital emergency room, or call 911," <a href="#">NIH says on its website</a>.</p> <p>You can also call the <a href="#">National Suicide Prevention Lifeline</a> at 1-800-273-TALK (8255).</p>

<b>HEADLINE</b>	<b>06/05 Nasdaq closes at record high</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/finance/markets/nasdaq-stocks-market-dow/2018/06/05/id/864317/">https://www.newsmax.com/finance/markets/nasdaq-stocks-market-dow/2018/06/05/id/864317/</a>
<b>GIST</b>	<p>The Nasdaq closed at a record high for the second day in a row with help from the technology and consumer discretionary sectors, while the S&amp;P 500 edged higher as investors eyed solid U.S. economic data.</p> <p>However, bank stocks declined along with U.S. Treasury yields, and investors appeared to favor bonds over defensive equity sectors such as utilities and consumer staples.</p> <p>The U.S. services sector activity accelerated in May, pointing to robust economic growth in the second quarter, although trade tariffs and a shortage of workers posed a threat to the outlook.</p> <p>"The economy continues to be a very strong foundation for the stock market. What seems to be concerning markets today is the possibility for a slowdown outside of the United States," said Tracie McMillion, head of global asset allocation strategy for Wells Fargo Investment Institute, in Winston-Salem, North Carolina.</p> <p>The Dow Jones Industrial Average fell 13.71 points, or 0.06 percent, to 24,799.98, the S&amp;P 500 gained 1.93 points, or 0.07 percent, to 2,748.8 and the Nasdaq Composite added 31.40 points, or 0.41 percent, to 7,637.86.</p>

The Nasdaq's biggest boost was from Amazon.com, which rose 1.9 percent, also leading gains in the S&P consumer discretionary index. Apple rose 0.8 percent, contributing the biggest point gains to the technology index and the second biggest for the Nasdaq.

The Cboe Volatility Index, the most widely followed barometer of expected near-term volatility for the S&P 500, closed down 0.34 point at 12.4, its lowest close since Jan. 26. The financial sector was the S&P's biggest drag with a 0.4 percent decline. Bank of America and Citibank fell around 0.9 percent. Banks often trade in line with Treasury yields as higher rates can boost their profits.

<b>HEADLINE</b>	<b>06/06 Report: Medicare finances worsening</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Health/wireStory/trustees-report-warns-medicare-finances-worsening-55676730?">https://abcnews.go.com/Health/wireStory/trustees-report-warns-medicare-finances-worsening-55676730?</a>
<b>GIST</b>	<p>Medicare will run out of money sooner than expected, and Social Security's financial problems can't be ignored either, the government said Tuesday in a sobering checkup on programs vital to the middle class.</p> <p>The report from program trustees says Medicare will become insolvent in 2026 — three years earlier than previously forecast. Its giant trust fund for inpatient care won't be able to fully cover projected medical bills starting at that point.</p> <p>The report says Social Security will become insolvent in 2034 — no change from the projection last year.</p> <p>The warning serves as a reminder of major issues still languishing while Washington plunges deeper into partisan strife. Because of the deterioration in Medicare's finances, officials said the Trump administration will be required by law to send Congress a plan next year to address the problems, after the president's budget is submitted.</p> <p>Treasury Secretary Steven Mnuchin said in a statement that there's time to fix the problems. "The programs remain secure," Mnuchin said. Medicare "is on track to meet its obligations to beneficiaries well into the next decade."</p> <p>"However, certain long-term issues persist," the statement added. "Lack-luster economic growth in previous years, coupled with an aging population, has contributed to the projected shortages for both Social Security and Medicare."</p> <p>Social Security recipients are likely to see a cost of living increase of about 2.4 percent next year, said government number-crunchers who produced the report. That works out to about \$31 a month.</p> <p>At the same time, the monthly Medicare "Part B" premium for outpatient care paid by most beneficiaries is projected to rise by about \$1.50, to \$135.50.</p> <p>Both the cost-of-living increase and the Medicare outpatient premium are not officially determined until later in the year, and the initial projections can change.</p> <p>More than 62 million retirees, disabled workers, spouses and surviving children receive Social Security benefits. The average monthly payment is \$1,294 for all beneficiaries. Medicare provides health insurance for about 60 million people, most of whom are age 65 or older.</p> <p>Together the two programs have been credited with dramatically reducing poverty among older people and extending life expectancy for Americans. Financed with payroll taxes collected from workers and employers, Social Security and Medicare account for about 40 percent of government spending, excluding interest on the federal debt.</p> <p>But demands on both programs are increasing as America ages.</p>

Unless lawmakers act, both programs face the prospect of being unable to cover the full cost of promised benefits. With Social Security that could mean sharply reduced payments for retirees, many of whom are already on tight budgets. The report said the total annual cost of Social Security is projected to exceed total annual income in 2018 for the first time since the Reagan era, meaning the program will have to tap into reserves.

For Medicare, insolvency would mean that hospitals, nursing homes and other providers of medical care would be paid only part of their agreed-upon fees.

<b>HEADLINE</b>	<b>06/06 Post-traumatic stress disorder or PTSD</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Health/post-traumatic-stress-disorder/story?">https://abcnews.go.com/Health/post-traumatic-stress-disorder/story?</a>
<b>GIST</b>	<p>For people suffering distress after experiencing a serious trauma, it can be hard to find any relief. Post-traumatic stress disorder has been reported to feel like being trapped in a room without any exits and can cause trouble with everyday activities like sleeping or functioning at work.</p> <p>Even the singer Ariana Grande said she suffers from the troubling disorder known as PTSD after the Manchester Arena bombing during her concert on May 22, 2017 killed 22 people.</p> <p>She said she doesn't think she'll ever be able to talk about the bombing without crying.</p> <p>"It's hard to talk about because so many people have suffered such severe, tremendous loss," Grande said. "But, yeah, it's a real thing."</p> <p>What is PTSD?</p> <p>Post-traumatic stress disorder is a form of anxiety that can happen after experiencing or witnessing actual or near death, serious injury like car accidents or natural disasters, war-related violence, terrorism or sexual violence, according to the American Psychiatric Association.</p> <p>While most people typically connect this disorder to military veterans or refugees, it can happen to anyone.</p> <p>PTSD is not a sign of weakness and people can be affected by PTSD, even when they were not directly part of the traumatic event.</p> <p>The exposure can happen to witnesses of a traumatic event in person, like for Ariana Grande, and to people who learn that the traumatic event happened to a loved one. Repeated or extreme exposure to details of a traumatic event, such as pictures or movies, can also cause PTSD.</p> <p>What are the symptoms?</p> <p>PTSD symptoms usually start after the traumatic event, but they may not appear until months or years later, according to the National Center for PTSD. They also may come and go over many years. Symptoms may last longer than one month, cause great distress, or interfere with a person's work or home life.</p> <p>Most people have four types of symptoms after the event and may not be the same for all: reliving the event, avoiding people or places, having more negative feelings and being in a state of hyper-arousal.</p> <p>PTSD sufferers often relive the traumatic event over and over through bad memories, nightmares or flashbacks.</p> <p>They may avoid people, places or things that are reminders of the traumatic event.</p>

Over time, PTSD can also affect the way sufferers think about themselves and others. They often report having more negative beliefs and feelings. This can include feeling guilt or shame, losing interest in previously enjoyed activities, losing trust in others or even finding it hard to be happy.

Some PTSD sufferers enter a state of hypervigilance or hyperarousal, during which they are easily startled, overly alert and "on edge." They can sometimes be more aggressive or irritable and engage in reckless, self-destructive behavior. These states can also cause difficulty with concentration and sleeping.

How common is the disorder?

About 8 percent of people in the United States and Europe are affected by PTSD, according to the National Center for PTSD. There are some things that make it more likely to be affected by the disorder such as having a long-lasting trauma, getting hurt, or having a strong reaction to the event.

PTSD is more than twice as common in women, according to the National Center for PTSD, possibly because women are more likely to experience sexual violence, and at least half of Americans have had a traumatic event in their lives.

How is PTSD treated?

PTSD treatment can be life-changing even if people have been struggling for years. Treatments are targeted at reducing the symptoms and "disturbances." There are two main types of treatment: psychotherapy, either counseling or "talk" therapy or medication.

Psychotherapy involves meeting with a therapist and sometimes a group. There are several approaches including trauma-focused therapy, prolonged exposure therapy and others, including group therapy. Eye Movement Desensitization and Reprocessing (EMDR) involves focusing on hand movements and sounds while recalling past trauma and can help the brain work through traumatic memories.

Medications such as antidepressants are a first-line treatment that can reduce the symptoms, but may take six to eight weeks to begin working.

Activities such as mindfulness, deep breathing exercises, stretching and yoga can sometimes ease symptoms.

<b>HEADLINE</b>	<b>06/05 Ethiopia accepts peace deal w/Eritrea</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/ethiopia-accepts-peace-deal-longtime-rival-eritrea-55670514?">https://abcnews.go.com/International/wireStory/ethiopia-accepts-peace-deal-longtime-rival-eritrea-55670514?</a>
<b>GIST</b>	<p>Ethiopia has announced it will fully accept the terms of a peace agreement with neighboring Eritrea in a major step toward calming deadly tensions with its decades-long rival, as dramatic reforms under a new prime minister continue.</p> <p>The development Tuesday night came as the ruling party also announced that the East African nation, one of Africa's fastest-growing economies, will open up parts of state-owned enterprises in sectors such as energy, aviation and telecoms to private investment and others, such as railways and hotels, to full privatization.</p> <p>The news came just hours after Ethiopia lifted a state of emergency in what had been the biggest reform yet under new Prime Minister Abiy Ahmed, who has promised change after more than two years of deadly anti-government protests demanding greater freedoms in Africa's second most populous country.</p> <p>But it is the prospect of peace with reclusive Eritrea that comes as the latest, and largest, surprise.</p>

The peace agreement signed in 2000 ended a two-year border war that claimed the lives of tens of thousands of people, but a no-peace-no-war situation continued, with the two countries skirmishing from time to time. Ethiopia had refused to accept the deal's handing of key locations, including Badme, to Eritrea and continues to control that town.

Ethiopia's ruling party now accepts that agreement without conditions and calls on Eritrea's government to do the same, the state-affiliated Fana Broadcasting Corporate reported.

Tiny Eritrea is one of the world's most closed-off nations, ruled by President Isaias Afwerki since gaining independence from Ethiopia in 1993 after years of rebel warfare. Eritrea has become a major source of migrants fleeing toward Europe, Israel and African nations in recent years as human rights groups criticize its harsh military conscription laws.

When the 42-year-old Abiy was installed as Ethiopia's prime minister in April his inaugural speech mentioned the need for reconciliation with bitter rival Eritrea, raising hopes of peace.

"We are fully committed to reconcile with our Eritrean brothers and sisters and extend an invitation to the Eritrean government to start dialogue and establish rapport," he said in his address to Parliament.

Since Abiy took power his government has released several thousand prisoners and tensions in restive areas have dramatically declined. Foreign-based opposition parties have been invited to return home in an effort to create a national consensus in the country of nearly 110 million people.

But Ethiopia's economy had suffered as companies, including foreign ones, found themselves targeted in the anti-government protests. Tuesday's announcement on easing state-owned monopolies is "an effort to boost and modernize," the chief of staff said.

<b>HEADLINE</b>	<b>06/06 Singapore to host US, NKorea summit</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/singapore-gears-host-trump-kim-summit/story?">https://abcnews.go.com/International/singapore-gears-host-trump-kim-summit/story?</a>
<b>GIST</b>	<p>The on-again, off-again and now on-again summit between President Donald Trump and North Korea's leader Kim Jong Un is set for next week on a secluded island off the coast of Singapore, in southeast Asia.</p> <p>Both delegations have been in the small city-state nation since the end of May preparing for the historic June 12 meeting, which the White House said Tuesday would take place at the Capella Hotel, a five-star luxury resort on Sentosa Island.</p> <p>Luxury and seclusion</p> <p>The American team has already set up shop at the Capella Hotel, a short drive away from the main business center of the country. Joe Hagin, the White House deputy chief of staff, has reportedly met the leader of the North Korean delegation, Kim Chang Son, at the Capella to discuss the details of the summit. The two are finalizing the security, protocol and logistical details.</p> <p>The luxurious main reception area and guest villas were designed by Sir Norman Foster, a famous British architect who restored the former colonial buildings that once were used to house the British military during Imperial rule.</p> <p>The Capella has already stopped accepting bookings for the summit period, according to an executive in the hospitality industry, an early indication the hotel would be either where Trump would stay or the site of the summit.</p> <p>The Capella, which sits on 30 acres of lawn and rainforest, has banned journalists from entering the</p>

property since the U.S. delegation arrived. A Washington Post reporter was expelled from the grounds after trying to speak to the diplomats.

#### Kim Jong Un's hotel

The North Korean delegation has been seen coming and going from the Fullerton Hotel, an old colonial building that was once the main post office.

The hotel has a stunning position on the marina surrounded by modern skyscrapers that have sprung up on reclaimed land in the past decade.

#### Who's paying?

Singapore is picking up the costs of the massive security that will be required to host the event.

Local media reports helicopters and planes will patrol the air and hundreds of police will monitor the various venues. Singaporean Defense Minister Ng Eng Hen told reporters over the weekend, "It's a cost we're willing to bear to play a small part."

The Washington Post reported last week that the summit discussion has included how the North Korean delegation will cover the costs of their accommodations and security. The international sanctions against North Korea make access to hard currency difficult and legally challenging.

The State Department has denied that the American government will help pay the costs of the delegation from North Korea.

"We are not paying for the DPRK delegation and we are not asking others to do so," State Department spokesperson Heather Nauert told ABC News Sunday, using the acronym for North Korea's official name, the Democratic People's Republic of Korea.

#### Where will the media go?

Five thousand members of the media have requested access to cover the summit, though the site of possible media briefings is still unknown.

The Formula One pit stop area or the country's Convention Center are both large enough to accommodate, but nothing has yet been confirmed by the government of Singapore.

Many have guessed the summit would be held at the Shangri-La Hotel, and there's still a chance it could play a role in some way, as thousands of people descend on Singapore for the historic event.

<b>HEADLINE</b>	<b>06/06 New evacuations near Guatemala volcano</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/evacuations-guatemala-volcano-set-off-panic-55680314?">https://abcnews.go.com/International/wireStory/evacuations-guatemala-volcano-set-off-panic-55680314?</a>
<b>GIST</b>	<p>Frightened people living near the Volcano of Fire fled with their children and few possessions when fresh flows of super-heated debris were announced, taking no chances after authorities gave them little time to evacuate before a deadly eruption over the weekend.</p> <p>Traffic came to a standstill on choked roads Tuesday and those without vehicles walked, even in central Escuintla, which was not under an evacuation order. Businesses shuttered as owners fled, memories still fresh of Sunday's blast, which left at least 75 people dead and 192 missing, and reduced a once verdant area to a moonscape of ash.</p>

	<p>A column of smoke rose from the mountain Tuesday afternoon and hot volcanic material began descending its south side, prompting new evacuation orders for a half dozen communities and the closure of a national highway. The country's seismology and vulcanology institute said the smoke billowing from the volcano's top could produce a "curtain" of ash that could reach 20,000 feet (6,000 meters) above sea level, posing a danger to air traffic.</p> <p>Rescuers, police and journalists hurried to leave the area as a siren wailed and loudspeakers blared, "Evacuate!"</p> <p>When the panic set off by the new evacuations became clear, disaster officials called for calm.</p> <p>In the community of Magnolia, which was under the new evacuation order, residents fled carrying bundles, bags of clothing and even small dogs in their arms.</p> <p>Many walked along the side of the highway because vehicular traffic had stalled on the only road out.</p> <p>By Tuesday the images of Sunday's destruction were familiar to everyone. What was once a collection of green canyons, hillsides and farms was reduced to grey devastation by fast-moving avalanches of super-heated muck that roared into the tightly knit villages on the mountain's flanks.</p>

<b>HEADLINE</b>	<b>06/06 Myanmar, UN sign Rohingya pact</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/myanmar-sign-pact-initial-steps-rohingya-return-55682219?">https://abcnews.go.com/International/wireStory/myanmar-sign-pact-initial-steps-rohingya-return-55682219?</a>
<b>GIST</b>	<p>Myanmar and U.N. agencies signed an agreement Wednesday that could lead to the return of some of the 700,000 Rohingya Muslims who fled brutal persecution by the country's security forces and are now crowded into makeshift camps in Bangladesh.</p> <p>The memorandum of understanding promises to establish a "framework of cooperation" that aims to create conditions for "voluntary, safe, dignified and sustainable" repatriation of Rohingya refugees.</p> <p>Myanmar's security forces have been accused of rape, killing, torture and the burning of Rohingya homes in western Rakhine state, where most Rohingya lived. The U.N. and U.S. have described the army crackdown that began in August last year as "ethnic cleansing."</p> <p>Myanmar and Bangladesh agreed in November to begin repatriating Rohingya. But refugees feared their lives would be at risk in Myanmar without international monitoring while Myanmar insisted they have identity documents, which most Rohingya have been denied.</p> <p>Knut Ostby, U.N. Resident and Humanitarian Coordinator in Myanmar, said the agreement is an important first step toward resolving the crisis.</p> <p>"There is a lot of work to be done. This task should not be underestimated," Ostby said. "We are talking about approximately 700,000 people who don't only have to return, but the conditions have to be right for them to return ... in terms of their identity in society, in terms of their safety and also in terms of services, livelihoods, a place to live, infrastructure."</p> <p>The U.N. has said the agreement provides for its refugee and development agencies to be given access to Rakhine state.</p>

HEADLINE	<b>06/05 Milwaukee council investigates police dept.</b>
SOURCE	<a href="https://abcnews.go.com/US/milwaukee-common-council-investigating-police-withheld-sterling-brown/story?">https://abcnews.go.com/US/milwaukee-common-council-investigating-police-withheld-sterling-brown/story?</a>
GIST	<p>The Milwaukee Common Council has launched an investigation after the police department apparently withheld different body-camera footage of Sterling Brown's January arrest that top city officials didn't see until it aired on television.</p> <p>According to Council President Ashanti Hamilton, the council and Mayor Tom Barrett didn't see the newly released videos of the arrest, obtained by ABC affiliate WISN.</p> <p>"I think it's clear that the videos didn't show the police department in the best light," Hamilton told ABC News. "I don't know if there were any rule violations or procedural violations in it."</p> <p>Barrett told WISN he wants to know why police didn't show him all the footage.</p> <p>"They need to be better trained and they need to change the way they operate," Barrett told WISN. "They have to learn that this is going to be something that's going to be released to the public and they should do it all at once."</p> <p>Last month, the Milwaukee Police Department released one version of the body-camera video depicting the night of the arrest.</p> <p>Brown walked out of a Milwaukee Walgreens around 2 a.m. on Jan. 26 toward the parking lot and was confronted by officers who asked him why he parked horizontally across two handicapped spots.</p> <p>The officers repeatedly tell Brown to back up and one of them says, "I will do what I want all right? I own this right here."</p> <p>Other officers arrived on the scene and can be seen talking to Brown near his vehicle when one of the officers shouts for Brown to take his hands out of his pockets.</p> <p>A scuffle breaks out and an officer yells, "Taser! Taser! Taser!" Brown can be heard moaning on the ground.</p> <p>After Brown was brought to the ground and hit with one of the officer's stun guns, they continued to stand</p>

	<p>around him even though he was handcuffed.</p> <p>In new video of the incident, officers can be heard expressing concern among themselves about a potential backlash from the arrest.</p> <p>"The bureau is coming out for this? ... We're trying to protect ourselves because he plays for the Bucks, and if he makes a complaint, it's going to be a [expletive] and then any little [expletive] thing that goes wrong is going to be, 'Ooh, the Milwaukee Police Department is all racist,'" the officer said sarcastically.</p> <p>In another one of the videos, officers can be heard asking Brown -- who is lying prone on the ground after being hit with the stun gun -- if he plays for the Bucks, and Brown responds that he must look familiar to them.</p> <p>In the end, Brown was not charged with anything and was issued a parking violation.</p> <p>Brown's representatives said he plans to file a civil lawsuit against the Milwaukee Police Department.</p> <p>Milwaukee Police Chief Alfonso Morales said at a news conference May 23 that the officers involved "acted inappropriately" and they all received suspensions.</p> <p>Hamilton said that the decision to investigate came after meeting with the police department yesterday. They'll be looking at all activity from the night of the arrest and decide if what, if any, "remedies" can be implemented in the future.</p>

<b>HEADLINE</b>	<b>06/05 Top fashion designer apparent suicide</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/fashion-designer-kate-spade-found-dead-apparent-suicide/story?id=55664239&amp;cid=clicksource_81_2_hero_headlines_bsq_hed">https://abcnews.go.com/US/fashion-designer-kate-spade-found-dead-apparent-suicide/story?id=55664239&amp;cid=clicksource_81_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>Fashion designer Kate Spade -- who started her namesake company in 1993 and grew it into a massive empire including clothes, jewelry, perfume and furniture -- was found dead in her New York City apartment Tuesday morning after apparently taking her own life, police sources said.</p> <p>The 55-year-old's body was found around 10 a.m. at her Park Avenue apartment on the Upper East Side of Manhattan by a housekeeper, the sources said. She apparently hanged herself on her bedroom doorknob using a scarf.</p> <p>A suicide note was left at the scene, but police officials declined to disclose its contents.</p> <p>"The contents of that note, as well as the physical state of the apartment and the comments of the witness, lend to the credibility that it is an apparent suicide," said Dermot Shea, chief of detectives for the New York City Police Department.</p> <p>Spade's former company issued a statement saying her death was "incredibly sad news."</p> <p>"Although Kate has not been affiliated with the brand for more than a decade, she and her husband and creative partner, Andy, were the founders of our beloved brand," the company's statement reads. "Kate will be dearly missed. Our thoughts are with Andy and the entire Spade family at this time."</p> <p>Spade and her husband, the brother of actor and comedian David Spade, have a 13-year-old daughter.</p>

<b>HEADLINE</b>	<b>06/05 Unlicensed software cybersecurity threat</b>
<b>SOURCE</b>	<a href="http://www.dw.com/en/unlicensed-software-a-huge-cybersecurity-threat/a-44086311">http://www.dw.com/en/unlicensed-software-a-huge-cybersecurity-threat/a-44086311</a>
<b>GIST</b>	<p>Businesses should assess the software on their networks and eliminate unlicensed copies to reduce the risk of cyberattacks, researchers from the US-based The Software Alliance (BSA) said in a study on Tuesday.</p> <p>The advocate for the global software industry noted in its 2018 Global Software Survey that too often, companies' efforts to improve their businesses were "hampered by the widespread use of unlicensed software and the often-crippling security threats" that accompanied it.</p> <p>The survey quantified the volume and value of unlicensed software installed on personal computers in more than 110 nations and regions and included nearly 23,000 responses from consumers, employees and chief information officers (CIOs).</p> <p>Slow progress</p> <p>"Organizations around the world are missing out on the economic and security benefits that well-managed software provides," the BSA survey said.</p> <p>"Businesses should establish software asset management (SAM) programs to evaluate the software on their network, which in turn reduces the risk of debilitating cyberattacks and helps grow their revenues."</p> <p>The study showed that the use of unlicensed software was only down slightly in 2017 (-2 percent), still accounting for 37 percent of software installed on PCs.</p> <p>Firms incur huge costs</p> <p>The survey showed that unlicensed software was spread most widely in a number of emerging economies. In Libya, an estimated 90 percent of all software installed on PCs in 2017 was pirated (Venezuela: 89 percent; Nicaragua: 81 percent).</p> <p>The study calculated that malware from pirated software cost companies worldwide some \$359 billion (€307 billion).</p> <p>BSA researchers concluded that companies "can take meaningful steps today to improve software management and to achieve as much as 30 percent savings in annual software costs by implementing a robust SAM and software license optimization program."</p>

<b>HEADLINE</b>	<b>06/05 Lewis Co. IT official: not getting easier</b>
<b>SOURCE</b>	<a href="http://www.govtech.com/security/Lewis-County-Wash-IT-Official-Cybersecurity-Is-Not-Going-to-Get-Any-Easier.html">http://www.govtech.com/security/Lewis-County-Wash-IT-Official-Cybersecurity-Is-Not-Going-to-Get-Any-Easier.html</a>
<b>GIST</b>	<p>(TNS) — Lewis County, Wash., is putting extra focus on preventing cyberbreaches, following a dramatic uptick in threats, Information Technology Services Director Steve Wohld told area leaders Friday.</p> <p>"There's an over 300 percent increase in endpoint user attacks [on agencies in Washington state]" Wohld said. "The attacks on Lewis County are significant and much higher than they ever were."</p> <p>Wohld spoke to leaders from throughout the county at Friday's Mayors' Meeting, a monthly event hosted by the Board of Lewis County Commissioners, urging them to make sure their cities and agencies are using safe cybersecurity practices.</p> <p>Since last year, Lewis County's IT Services department has moved from spending 10 to 15 percent of its time on cybersecurity to devoting 40 percent of its time to the issue. Part of the concern is that hackers are</p>

increasingly not just going after networks, but targeting county employees to try to infiltrate the system.

“The point is getting this out in front and letting our users know that the target has changed,” Wohld said. “The primary target now is the endpoint user.”

In other words, county employees who use unsafe passwords, click on dubious email links or plug in untrusted USB devices could be exposing the entire network to risk. One risk that has become more common is ransomware, in which a hacker takes over a system and demands payment to regain access or data.

The city of Atlanta recently failed to pay a \$50,000 ransom and ended up paying \$2.6 million in efforts to recover compromised systems. That case is an extreme version of a problem that has also hit Washington state.

“Agencies across the state are paying out serious money recently, and we’re trying to avoid that,” Wohld said.

Recently, Lewis County Treasurer Arny Davis received a suspicious email from a treasurer in another county whose account had been hacked. He notified IT Services instead of opening the link in the email.

“If Arny would have clicked on it, his account would have been compromised,” Wohld said.

That was among many stories mentioned by Wohld and others about the importance of being vigilant. Commissioner Edna Fund said she had recently received an email on a work account from a personal friend whose email had been hacked. She also received notice of false charges on her account, only to be led to a site that tried to obtain her Social Security number. She logged onto Facebook, only to find another account claiming to be her.

“I’m becoming very vigilant,” she said. “From all different vantage points, I was getting hit.”

Even as he warns county employees to be more careful, Wohld conceded that the increased threats will likely cause the county issues, although it hasn’t lost any data yet.

“We’ve had some close calls,” he said. “I really think it’s a matter of time. We will have a loss; we will have a failure.”

IT Services is preparing for such a compromise, storing physical backups of data in a vault. And it’s working to “educate [county employees] on how to think differently about their computer and the power it has over the rest of us.”

Long-term, the department is implementing the Center for Internet Security’s 20-step series of Critical Security Controls. This year’s priorities include creating an inventory and control of hardware and software assets, establishing continuous vulnerability management and controlling use of administrative privileges.

Wohld said it will take three to five years to implement the full list of controls. He told the assembled local leaders to bring cybersecurity awareness back to their employees, and to communicate if they believe they’ve been compromised, which can prevent the problem from infiltrating more agencies.

“We really need people to be honest and come forward,” he said. “It’s not about shaming anybody, it’s about responding.”

**HEADLINE** 06/05 Big bank blunder from Down Under

<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/big-bank-blunder-from-down-under/">https://www.infosecurity-magazine.com/news/big-bank-blunder-from-down-under/</a>
<b>GIST</b>	<p>Despite the awareness that they are dutybound to protect the sensitive information of their customers, banks continue to suffer data breaches as the result of human error, as was the case for the Commonwealth Bank of Australia (CBA). The Sydney Morning Herald reported that CBA breached the privacy of 10,000 customers by sending their data to the wrong email addresses.</p> <p>After conducting an information security investigation, the bank learned that 651 internal emails were incorrectly sent to email addresses at the wrong domain from 2016 to 2017. The sender inadvertently omitted the ".au" on the end of the intended domain, cba.com.au.</p> <p>In order to prevent these human errors, CBA purchased the domain name in April 2017; however, the investigation looked into events that would have occurred prior to the takeover when the domain was used by a US cybersecurity firm.</p> <p>CBA revealed that the 651 emails were indeed sent during that time frame and contained the data of 10,000 customers. "An extensive and detailed investigation by CBA confirmed the contents of all 651 internal emails were automatically deleted by the cba.com domain owner's system, which only collected information on CBA sender and recipient email addresses and the subject of the email," the bank wrote in a 1 June 2018 statement.</p> <p>The bank's investigation confirmed that no customer data was compromised as a result of the mistake, but it accepted responsibility and acknowledged that customers want to be informed about data security and privacy issues. To that end, the bank has started to notify affected customers.</p>

<b>HEADLINE</b>	<b>06/06 Mirai variants continue to spawn</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/mirai-variants-continue-spawn-vulnerable-iot-ecosystem">https://www.securityweek.com/mirai-variants-continue-spawn-vulnerable-iot-ecosystem</a>
<b>GIST</b>	<p>Mirai is the archetypal IoT botnet, first achieving infamy with a 665 Gbps DDoS attack against the KrebsOnSecurity website in September 2016. Within days, a second Mirai attack targeted the French hosting firm, OVH, with an attack that peaked at nearly 1 Tbps. These were, at the time, the largest DDoS attacks ever recorded.</p> <p>But within a few more days, before the end of September 2016, the Mirai developer released the source code. It can now be found on GitHub. The developer closed his 'readme' file with a criticism of MalwareMustDie and the comment, "Just as I forever be free, you will be doomed to mediocracy forever."</p> <p>He didn't remain free for very long. In January 2017, Brian Krebs identified Paras Jha as authoring Mirai; and in December 2017 the DoJ unsealed a plea-bargained guilty plea by Paras Jha for the development and use of Mirai. But it was too late to stop Mirai, because the code was in the public domain -- and it has ever since been used as the basic building block for other criminals to develop Mirai variants for their own use.</p> <p>IoT ExploitsNetwork performance firm Netscout Arbor has taken a close look at four of the current Mirai variants: Satori, JenX, OMG and Wicked. Its Arbor Security Engineering &amp; Response Team (ASERT) published in a recent blog post, describing how each of these botnets start from the basic building blocks of Mirai and add to and sometimes remove from the original Mirai functionality -- adding, says, ASERT, "their own flair."</p> <p>Mirai itself spread by scanning for other internet-connected IoT devices (IP cameras and home routers) and 'brute-forcing' access via a list of default vendor passwords. Since so few consumers ever change the password that comes with the device, the process is remarkably successful. Paras Jha claimed that he had 380,000 bots in Mirai at the time of the Krebs attack.</p> <p>Satori (or at least the 3rd variant of Satori) uses the same configuration table and the same string obfuscation technique as Mirai. However, says ASERT, "We see the author expanding on Mirai source</p>

code to include different exploits such as the Huawei Home Gateway exploit." The exploit was CVE-2017-17215. In December 2017, Check Point reported that hundreds of thousands of attempts to exploit this vulnerability had been made on Huawei HG532 home routers attempting to download and execute the Satori botnet.

The underlying code for JenX also comes from Mirai, again including the same configuration table and the same string obfuscation technique. However, JenX hard codes the C2 IP address while Mirai stores it in the configuration table. JenX has also removed the scanning and exploitation functions of Mirai, with this being handled by a separate system.

"Currently," writes ASERT, "it appears JenX only focuses on DDoS attacks against players of the video game Grand Theft Auto San Andreas, which has been noted by other researchers."

OMG is described by ASERT as one of the most interesting of Mirai variants. While it includes all Mirai's functionality, "the author expanded the Mirai code to include a proxy server." This allows it to enable a SOCKS and HTTP proxy server on the infected IoT device. "With these two features, the bot author can proxy any traffic of its choosing through the infected IoT device, including additional scans for new vulnerabilities, launching additional attacks, or pivot from the infected IoT device to other networks which are connected to the device."

Fortinet discussed OMG in February 2018. "This is the first time we have seen a modified Mirai capable of DDOS attacks as well as setting up proxy servers on vulnerable IoT devices. With this development, we believe that more and more Mirai-based bots are going to emerge with new ways of monetization," it concluded.

Wicked is the latest Mirai variant. "Similar to Satori variant 3," writes ASERT, "Wicked trades in Mirai's credential scanning function for its own RCE scanner. Wicked's RCE scanner targets Netgear routers and CCTV-DVR devices." When vulnerable devices are found, "a copy of the Owari bot is downloaded and executed."

However, an analysis of the same bot by Fortinet in May 2018 comes to a slightly different conclusion. The string 'SoraLOADER' suggests a purpose to distribute the Sora botnet. Further analysis showed that in practice it attempted to download the Owari botnet, but actually downloaded the Omni botnet. "We can essentially confirm that the author of the botnets Wicked, Sora, Owari, and Omni are one and the same. This also leads us to the conclusion that while the WICKED bot was originally meant to deliver the Sora botnet, it was later repurposed to serve the author's succeeding projects," says Fortinet.

The Mirai developer may have been apprehended, but in making his source code public, Mirai and Mirai variants continue to grow. The IoT ecosphere that Mirai and its variants target and exploit is still in its infancy. There were nearly 17 billion connected devices in 2017; but this is expected to rise to around 125 billion by 2030 according to a new analysis from IHS Markit. Vendors continue to rush their products in order to get early market share, but often at the cost of built in security.

"Malware authors will continue to leverage IoT based malware in automated fashion, quickly increasing the botnet size through worm-like spreading, network proxy functionality, and automated exploitation of vulnerabilities in internet facing devices. It is important for organizations to apply proper patching, updates, and DDoS mitigation strategies to defend their organizations," warns ASERT.

HEADLINE	<b>06/05 Cybercriminals phish Booking.com users</b>
SOURCE	<a href="https://www.scmagazine.com/cybercriminals-phish-bookingcom-customers-after-possibly-breaching-partner-hotels/article/771091/">https://www.scmagazine.com/cybercriminals-phish-bookingcom-customers-after-possibly-breaching-partner-hotels/article/771091/</a>
GIST	Cybercriminals recently launched a phishing campaign targeting Booking.com customers whose information was illegally obtained, possibly by breaching certain partner hotels, according to multiple

	<p>reports.</p> <p>According to a June 3 report from The Sun, users have received WhatsApp and text messages warning them to change their passwords following a supposed security breach. By clicking on the accompanying malicious link, victims are unknowingly giving the adversaries access to their bookings.</p> <p>Users are then reportedly sent an additional message demanding that they send an advance payment for their booked vacations to a bank account belonging to the cybercriminals. These messages look like the real deal because they include stolen personal information such as names, addresses, phone numbers, dates, booking prices, and reference numbers.</p> <p>Booking.com reportedly told the Sun that the information was likely obtained by breaching certain hotels that it works with via a portal website separate from the travel company's main systems.</p> <p>"In this case, there has been no compromise on Booking.com systems," a Booking.com spokesperson told the Independent. "A small number of properties have been targeted by phishing emails sent by cybercriminals and by clicking on those emails, the properties compromised their accounts. All potentially impacted guests have been notified and because we value our customers at Booking.com, we are supporting impacted guests to compensate for any losses incurred, and reclaim these from the property."</p>

<b>HEADLINE</b>	<b>06/05 List: Florida worst cyber hygiene</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/florida-leads-list-of-states-with-worst-cyber-hygiene-new-hampshire-the-safest/article/771129/">https://www.scmagazine.com/florida-leads-list-of-states-with-worst-cyber-hygiene-new-hampshire-the-safest/article/771129/</a>
<b>GIST</b>	<p>When it comes to cyber hygiene people who live in the Northeast are marginally more likely to have good habits, while those with poor habits are scattered liberally across the country, according to a new Webroot report.</p> <p>Working in conjunction with the Ponemon Institute, Webroot analyzed the cyber behavior of people in all 50 states and the District of Columbia and ranked them according to their cyber hygiene score. The states receiving a classification of "safest" were New Hampshire, Massachusetts, Utah, Rhode Island, Minnesota and Nebraska. Florida, Wyoming, Montana, New Mexico, Illinois and California were on the other end of the spectrum being considered the "riskiest" states.</p> <p>Looking at the survey results it was very easy to understand why those states in the riskiest category, ignoring even basic safety measures like having antivirus software installed on their device, said Tyler Moffitt, Webroot's senior threat research analyst.</p> <p>The survey asked respondents a series of questions related to infection incidents, identity theft, password habits, computer sharing, software update habits, antivirus/internet security usage, backup habits and an understanding of phishing.</p> <p>Breaking down the five riskiest states Webroot found many people did not learn from their past mistakes. Even after suffering an identity theft most people refused to change their basic online usage habits in order to make themselves safer. In addition, 45 and 50 percent of those residing in these states do not bother installing security software; 47 percent never back up their data and 72 percent said they share their passwords. All of this helps explain why these states suffer the higher per person rate, 28 percent, of having experienced 10 or more malware infections in the last year.</p> <p>Not surprisingly residents in states deemed safest basically do the exact opposite of the folks in Florida. When having their identity stolen 80 percent alter their online habits and 60 percent change their passwords, most people report running a paid for internet security program as opposed to running freeware or not using any at all. About 43 percent automatically update their operating system and 35 percent back up their data on a daily or continuous basis. Finally, 88 percent of those surveyed said they did not share</p>

	<p>their passwords with others.</p> <p>Looking at the country as a whole the study shows many Americans still do not take their cybersecurity very seriously. Fifty-four percent do not use any type of credit monitoring service, 50 percent said they use some type of antivirus software with 46 percent of these respondents opting for freeware and 20 percent do not bother to update their security software on a regular basis.</p> <p>While the safest states do utilize proper password hygiene, nationwide the story is much different. Only 36 percent said they never shared their password, while 45 percent said they did so, but rarely, and the remaining 19 percent they shared this information frequently. When it comes to password diversity 36 percent use between one and five passwords for their various accounts. Another 28 percent use six to 15 and 36 percent use 16 or more passwords. Password managers are also not playing much of a role with 75 percent of the respondents saying they do not use one.</p>
<a href="#">Return to</a> <a href="#">Top</a>	

<b>HEADLINE</b>	<b>06/05 MyHeritage alerts users to data breach</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/myheritage-alerts-users-to-data-breach/d/d-id/1331966">http://www.darkreading.com/myheritage-alerts-users-to-data-breach/d/d-id/1331966</a>
<b>GIST</b>	<p>MyHeritage, a platform designed to investigate family history, learned of a data breach on June 4, 2018. It reports the incident affected email addresses and hashed passwords of nearly 92.3 million users who signed up for the site before and including Oct. 26, 2017, the date of the incident.</p> <p>A security researcher discovered a file named "myheritage" containing email addresses and passwords on a private server outside the site. Further analysis found the file was legitimate, with the data originating from Myheritage. No other data was detected on the server, and there was no evidence of account compromise. MyHeritage handles billing through third parties and stores sensitive data such as DNA and family trees on segregated servers with added security.</p> <p>The site notes it doesn't store user passwords but instead uses a one-way hash of each password, meaning the hash key is different for each user. Anyone who stole or accessed the hashed passwords did not have the actual passwords.</p>

<b>HEADLINE</b>	<b>06/05 Dark web marketplaces dissolve</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/threat-intelligence/dark-web-marketplaces-dissolve-post-alphabay-hansa-takedown/d/d-id/1331971">http://www.darkreading.com/threat-intelligence/dark-web-marketplaces-dissolve-post-alphabay-hansa-takedown/d/d-id/1331971</a>
<b>GIST</b>	<p>One year after Operation Bayonet took down AlphaBay in 2017, the marketplace model of cybercrime continues to decline -- but it's not a sign for security teams to sit back and relax. The risk to businesses and consumers is alive and well. It's simply taking a different form.</p> <p>The operation that shuttered AlphaBay and Hansa led to multiple subsequent arrests, says Rafael Amado, strategy and research analyst at Digital Shadows. For a period of time after the takedown, many people didn't understand what was going on. When they did, they panicked.</p> <p>"They thought it was an exit scam, or technical difficulties," he says. "There were all these different rumors flying about ... it started to sow the seeds of mistrust, suspicion, cynicism."</p> <p>AlphaBay's seizure meant thousands of vendors and buyers in the English-speaking cybercrime community had to look elsewhere to conduct their illicit business. The marketplace consisted of more than 40,000 vendors and generated more than \$1 billion in trade, Digital Shadows reports in "Seize and Desist?," a new report examining cybercrime marketplaces post-AlphaBay.</p> <p>"It cemented the issue of mistrust in the cybercriminal community ... it made people really, really</p>

suspicious of established marketplaces, and new ones as well," he continues.

AlphaBay's demise left a gap, though it wasn't as large as experts expected -- the marketplace was just one player among many on the underground. However, other markets like Dream and Olympus failed to capitalize on the gap. Instead, cybercriminals found new and stealthier means of continuing their businesses while evading the watchful eye of law enforcement.

#### Find Me on the Forums

Cybercriminals, increasingly suspicious of marketplaces, began to retreat into older and specialized platforms to buy and sell. Peer-to-peer networks and chat channels have grown more popular, a trend that predates Operation Bayonet but has evolved in its wake.

Over the past six months, Digital Shadows researchers have observed more than 5,000 Telegram links shared across criminal forums and Dark Web sites. Of these, 1,667 were invitation links to join new groups. Discord, another private messaging app, is seeing greater adoption but to a lesser extent, with 743 invites shared within the same timeframe.

The centralized marketplace has dissolved into a decentralized model as wary threat actors err on the side of caution, opting for subtle transactions over markets that require plentiful resources to operate. New tech, processes, and peer-to-peer (P2P) communication give cybercriminals greater anonymity and make them even harder to pin down.

"Your account information and payment card details, along with counterfeit documents, ID scans, banking Trojans ... those things are still being traded," Amado explains. "They're not being sold on marketplaces, they're being sold on forums."

Specialized forums cater to buyers and sellers in the market for specific purposes: credit card numbers, malware, hacking tools. Buyers post what they're looking for; sellers post what they have. They share Telegram, Discord, or Jabber info and slip into private messages. People generally want to directly communicate with the actors they're buying from, he adds. Forums serve as a complete log of conversation and are easier targets for law enforcement.

The future of Telegram as hackers' preferred tool is uncertain, Amado points out. It recently came to light that Apple has blocked updates since April, when Russia blocked Telegram and demanded its removal from the Apple App Store because it refused to provide decryption keys for users' communication with Russian security agencies.

"We'll see if Telegram will be forced to comply and if they are, you'll see people move away from Telegram as a communication method of choice," he expects.

#### Hackers Buckle Down on Forum Security

Forum administrators have been integrating processes to facilitate trust among their users. Blockchain DNS, user vetting, site access restrictions, and domain concealment supplement the use of P2P networks to build a sense of security.

Tralfamadore is an example of a decentralized market that uses blockchain to store databases and code to support front-end user interfaces. Transactions are done in cryptocurrency and are permanently recorded; this way, if one user attempts to scam another, it can be identified.

Cybercriminals using forums are wary of law enforcement posing as users. Some forums regulate activity with "forum lifecycles," which limit new users' access and set posting restrictions until they reach a certain level of activity. New users might require positive feedback from other members until these limitations are lifted.

	Some forums require members to pay for premium subscriptions or have multiple referral invitations from established participants. Others create a hierarchy: the longer you're a member and more you prove your legitimacy, the more you're allowed to post.

<b>HEADLINE</b>	<b>06/05 Financial sector sophisticated threats</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/financial-services-organizations-face-more-sophisticated-threats-than-others/d/d-id/1331974">http://www.darkreading.com/attacks-breaches/financial-services-organizations-face-more-sophisticated-threats-than-others/d/d-id/1331974</a>
<b>GIST</b>	<p>The better than average defenses that financial companies have been able to mount against modern cyber threats has become a bit of a double-edged sword for organizations in the sector.</p> <p>While financial companies are able to detect and block a lot more malware than others, they face considerably more sophisticated threats as a result as well.</p> <p>A new report this week from Lastline based on an extensive malware analysis shows that threat actors typically elevate their attacks when going after financial companies.</p> <p>For the report, Lastline analyzed 30 days worth of threat data targeted specifically at financial service companies and finance departments at enterprises. Lastline then compared those results with data on more generalized threats that the security vendor had reported on previously.</p> <p>The exercise showed that the proportion of malware displaying advanced behavior was 20% higher in the financial sector than elsewhere. For the report, Lastline defined malware as displaying advanced behavior if it is packed to avoid detection by static signature-based tools, evade dynamic analysis, steal credentials, and remain stealthy.</p> <p>One in 10 of the financial sector malware that Lastline analyzed integrated all four behaviors, compared to the 1 in 12 global average for advanced threats in other industry verticals. Overall, the percentage of total files that Lastline found to be malicious was 47% higher than the global data.</p> <p>One reason could be that the financial sector's more effective security measures require a more sophisticated effort on the part of malware writers, says Andy Norton, author of the report and Lastline's director of threat intelligence.</p> <p>"The finance industry is facing a more sophisticated threat than is encountered by a wider audience," Norton says. "They need to understand that more stringent security doesn't make the threat go away; it only changes the nature of the threat."</p> <p>To remain ahead of emergent threats financial organizations and finance groups at enterprise need to incorporate controls for inspecting the behavior of objects entering the internal environment rather than relying simply on existing controls and user awareness, he says.</p> <p>The Lastline report comes just weeks after an Accenture study showing that cybersecurity has become a major issue for financial services organizations. The Accenture study, done in collaboration with the Ponemon Institute, found that the average number of breaches at financial services companies has more than tripled, from 40 in 2012 to 125 breaches in 2017.</p> <p>The average annual costs of cybercrime for financial services companies has also increased sharply, rising from \$12.97 million per firm in 2014 to \$18.28 million last year, compared to an average of \$11.7 million for organizations across other industries. Between 2016 and 2017 alone, spending on security breaches increased 10% among financial organizations.</p>

<b>HEADLINE</b>	<b>06/05 Feds: gift cards hacked; \$800,000 stolen</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1009978/feds-5-hacked-target-gift-cards-stole-nearly-800000/">http://mynorthwest.com/1009978/feds-5-hacked-target-gift-cards-stole-nearly-800000/</a>
<b>GIST</b>	<p>SEATTLE (AP) — Authorities say five people have been indicted on charges they hacked Target Corp. gift cards to the tune of nearly \$800,000.</p> <p>The U.S. Attorney's Office in Seattle says the group devised an algorithm that could identify a gift card's bar code, then used the company's automated customer service telephone system to find cards with balances. According to investigators, the suspects loaded those balances onto electronic wallet or mobile phone apps, redeemed them at Target stores, and sold the items they purchased for bitcoin.</p> <p>Prosecutors say the thefts took place at stores in Washington, Oregon, California, Nevada and Colorado. Target changed its gift card system last December in response.</p> <p>Two defendants pleaded not guilty Tuesday, and one is in state custody on other charges. Authorities say they are searching for two other defendants, 22-year-old Kennady Weston and 26-year-old Derrick Quintana, both of Everett, Washington.</p>

<b>HEADLINE</b>	<b>06/06 Malware hits Australia HR firm PageUp</b>
<b>SOURCE</b>	<a href="https://www.zdnet.com/article/malware-hits-hr-software-firm-pageup-with-possible-data-compromise/">https://www.zdnet.com/article/malware-hits-hr-software-firm-pageup-with-possible-data-compromise/</a>
<b>GIST</b>	<p>Australia-based human resources firm PageUp has confirmed it found "unusual" activity on its IT infrastructure last month, which has resulted in the potential compromise of client data.</p> <p>On May 23, the SaaS provider said it immediately launched a forensic investigation after malware was spotted on its system. Five days later PageUp said its suspicions were confirmed, with investigations revealing "some indicators" that client data may have been compromised.</p> <p>"If any personal data has been affected it could include information such as name and contact details. It could also include identification and authentication data e.g. usernames and passwords which are encrypted (hashed and salted)," the company said in a statement.</p> <p>"There is no evidence that there is still an active threat, and the jobs website can continue to be used. All client user and candidate passwords in our database are hashed using bcrypt and salted; however, out of an abundance of caution, we suggest users change their password."</p> <p>The company said that signed employment contracts and resumes are stored on different infrastructure to that which was affected; it said there is no evidence that the document storage infrastructure has been compromised.</p> <p>The statement, penned by CEO and co-founder Karen Cariss, said PageUp has been working with international law enforcement, government authorities, and independent security experts to "fully investigate" the matter.</p>

<b>HEADLINE</b>	<b>06/05 Zip Slip vulnerability impacts archived files</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/zip-slip-vulnerability-affects-thousands-of-projects-across-multiple-ecosystems/">https://www.bleepingcomputer.com/news/security/zip-slip-vulnerability-affects-thousands-of-projects-across-multiple-ecosystems/</a>
<b>GIST</b>	<p>Security researchers have disclosed today details about a critical vulnerability impacting open source coding libraries that handle archived files.</p> <p>Discovered by the researchers from Synk, the "Zip Slip" vulnerability is an issue in the way coders, plugins, and libraries have implemented the process of decompressing an archived file.</p> <p>Numerous archive formats, including tar, jar, war, cpio, apk, rar, and 7z, are affected, meaning this is more of a theoretical issue, rather than a specific coding bug.</p> <p>Vulnerability leads to files being unzipped in the wrong places</p> <p>According to researchers, Zip Slip is a combination between an "arbitrary file overwrite" and "directory traversal" issues that can lead to situations where an attacker can unzip files outside the normal unzip path and overwrite sensitive files, such as critical OS libraries or server configuration files.</p> <p>"The two parts required to exploit this vulnerability is a malicious archive and extraction code that does not perform validation checking," the Synk team said today in a security advisory.</p> <p>Researchers said they found this flaw in April, and they have been working with the maintainers of several open-source libraries that were vulnerable to this attack.</p> <p>Multiple open-source libraries affected</p> <p>The Synk team has published a list of libraries affected by Zip Slip on GitHub.</p> <p>While libraries written in several programming languages are known to be affected —such as JavaScript, Python, Ruby, .NET, Go, and Groovy—, the issue mainly affects the Java ecosystem because there's no official library recommended for handling archived files.</p> <p>Instead, developers have created and used an assortment of libraries for this purpose, most of which are vulnerable to Zip Slip. Furthermore, the issue is so widespread that even some of the code shared on StackOverflow was found to be vulnerable to Zip Slip, meaning that many desktop, mobile, or web apps written in Java may be vulnerable to Zip Slip without developers even knowing.</p> <p>To help developers understand the Zip Slip attack and aid them in detecting if their apps are vulnerable, the Synk team has published a technical paper detailing the Zip Slip bug in much more depth.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>06/05 Google 'weird' 1975 text message bug</b>
<b>SOURCE</b>	<a href="https://nakedsecurity.sophos.com/2018/06/05/google-says-fix-for-weird-1975-text-message-bug-is-on-the-way/">https://nakedsecurity.sophos.com/2018/06/05/google-says-fix-for-weird-1975-text-message-bug-is-on-the-way/</a>
<b>GIST</b>	<p>If you want to see your recent text messages on an Android device in the normal world, you just type “show me my texts” in the Google search bar...</p> <p>But why be normal? If you want to get weird – as Redditor Krizastro discovered last week – you can also see your Android texts by typing in “the1975..com”.</p> <p>Krizastro: <i>It's like just about the weirdest glitch I have come by.</i></p> <p>Krizastro was curious: Were others experiencing the glitch?</p> <p>They certainly were. At the time of writing, Androids were still glitching out, given that the promised fix hadn't been rolled out yet. But it gets even weirder...</p> <p>Others confirmed that the “the1975..com” string – it needs those two periods to work if you give it a try – was indeed serving up their recent texts, as were these strings:</p> <ul style="list-style-type: none"> <li>•“Vizela viagens” (a travel agency in somebody's hometown; this string didn't produce text messages for everybody who tried it out, though)</li> <li>•“Vizel viagens”</li> <li>•“Izela viagens”</li> <li>•“Zela viagens”</li> </ul> <p>Those search terms were still glitching as of Monday:</p> <p>Users reported experiencing the issue with the default Google Pixel launcher, as well as with Android devices made by Moto, OnePlus, Samsung, LG and Huawei.</p> <p>Google sent out a statement explaining that the inappropriately triggered texts show-and-tell is due to a “language detection bug” in the Google Search app for Android that “erroneously interpreted certain phrases as a request to view recent text messages.”</p> <p>The company said the app could only display text messages if it had been given permission to do so.</p> <p>A company spokesperson said that as of Friday, a fix for the bug had been implemented and would roll out “over the next few days.”</p>
	<p><a href="#">Return to</a></p> <p><a href="#">Top</a></p>

<b>HEADLINE</b>	<b>06/05 Bizarre Chrome, Firefox flaw</b>
<b>SOURCE</b>	<a href="https://nakedsecurity.sophos.com/2018/06/05/bizarre-chrome-and-firefox-flaw-exposed-facebook-details/">https://nakedsecurity.sophos.com/2018/06/05/bizarre-chrome-and-firefox-flaw-exposed-facebook-details/</a>
<b>GIST</b>	<p>Researchers have discovered a weakness in the way Chrome and Firefox interact with Cascading Style Sheets 3 (CSS3) that could have caused them to leak usernames, profile pictures and likes from sites such as Facebook.</p> <p>The chance discovery was made by researcher Ruslan Habalov when he visited Pinterest and noticed it was “displaying my Facebook name and picture inside an iFramed Facebook button.”</p> <p>Probing deeper, they discovered that the problem was CSS3's mix-blend-modes, introduced in 2016 and fully supported by Chrome desktop/mobile version 49 from March 2016 onwards, and Firefox desktop/mobile version 59 in March this year.</p> <p>By rights, browser same-origin policy security should have disallowed access to cross-origin iframe</p>

content. However, the proof-of-concept (PoC) they developed to exploit the weakness in – mix-blend-modes – shorted this.

Mix-blend-modes don't sound like a promising target through which to leak data, but as Weißer explained:

*We cannot access the iframe's content directly. However, we can put overlays over the iframe that do some kind of graphical interaction with the underlying pixels. Since these overlays are controlled by the attacker's site, it is possible to measure how long these graphical interactions take.*

This is extremely involved – the mix-blend-mode is being used to infer the content of 1×1 pixels in the iFrame to reveal the presence and colour of that pixel on the user's screen. Do this for the whole iFrame and (as long as the user is logged in of course) it becomes possible to reconstruct some of its content.

That does make inferring different types of content potentially time consuming, with a user name becoming clear in around 20 seconds but five minutes being needed to generate that user's much larger profile picture.

The outcome of an attacker exploiting this using a malicious website would have been to deanonymize logged-in visitors not just on Facebook but on any site embedding itself on third parties, on the condition that users can be kept on the site for long enough.

*Other use cases include leaking private images, API responses and text files of other sites as these often require to be logged-in but don't come with an enabled iframe protection.*

The researchers describe the bug as a side-channel weakness. All this means is that they found a way to capture data not from a software flaw but as a side effect of a system working as it was designed to.

<b>HEADLINE</b>	<b>06/05 Pentagon's AI missile detection research</b>
<b>SOURCE</b>	<a href="http://news.trust.org/item/20180605100040-29saq">http://news.trust.org/item/20180605100040-29saq</a>
<b>GIST</b>	<p>WASHINGTON, June 5 (Reuters) - The U.S. military is increasing spending on a secret research effort to use artificial intelligence to help anticipate the launch of a nuclear-capable missile, as well as track and target mobile launchers in North Korea and elsewhere.</p> <p>The effort has gone largely unreported, and the few publicly available details about it are buried under a layer of near impenetrable jargon in the latest Pentagon budget. But U.S. officials familiar with the research told Reuters there are multiple classified programs now under way to explore how to develop AI-driven systems to better protect the United States against a potential nuclear missile strike.</p> <p>If the research is successful, such computer systems would be able to think for themselves, scouring huge amounts of data, including satellite imagery, with a speed and accuracy beyond the capability of humans, to look for signs of preparations for a missile launch, according to more than half a dozen sources. The sources included U.S. officials, who spoke on condition of anonymity because the research is classified.</p> <p>Forewarned, the U.S. government would be able to pursue diplomatic options or, in the case of an imminent attack, the military would have more time to try to destroy the missiles before they were launched, or try to intercept them.</p> <p>"We should be doing everything in our power to find that missile before they launch it and make it increasingly harder to get it off (the ground)," one of the officials said.</p> <p>The Trump administration has proposed more than tripling funding in next year's budget to \$83 million for just one of the AI-driven missile programs, according to several U.S. officials and budget documents. The boost in funding has not been previously reported.</p>

While the amount is still relatively small, it is one indicator of the growing importance of the research on AI-powered anti-missile systems at a time when the United States faces a more militarily assertive Russia and a significant nuclear weapons threat from long-time foe North Korea.

"What AI and machine learning allows you to do is find the needle in the haystack," said Bob Work, a champion of AI technology who was deputy defense secretary until last July, without referring to any individual projects.

One person familiar with the programs said it includes a pilot project focused on North Korea. Washington is increasingly concerned about Pyongyang's development of mobile missiles that can be hidden in tunnels, forests and caves. The existence of a North Korea-focused project has not been previously reported.

While that project has been kept secret, the military has been clear about its interest in AI. The Pentagon, for example, has disclosed it is using AI to identify objects from video gathered in its drone program, as part of a publicly touted effort launched last year called "Project Maven."

Still, some U.S. officials say AI spending overall on military programs remains woefully inadequate.

### AI ARMS RACE

The Pentagon is in a race against China and Russia to infuse more AI into its war machine, to create more sophisticated autonomous systems that are able to learn by themselves to carry out specific tasks. The Pentagon research on using AI to identify potential missile threats and track mobile launchers is in its infancy and is just one part of that overall effort.

There are scant details on the AI missile research, but one U.S. official told Reuters that an early prototype of a system to track mobile missile launchers was already being tested within the U.S. military.

This project involves military and private researchers in the Washington D.C. area. It is pivoting off technological advances developed by commercial firms financed by In-Q-Tel, the intelligence community's venture capital fund, officials said.

In order to carry out the research, the project is tapping into the intelligence community's commercial cloud service, searching for patterns and anomalies in data, including from sophisticated radar that can see through storms and penetrate foliage.

Budget documents reviewed by Reuters noted plans to expand the focus of the mobile missile launcher program to "the remainder of the (Pentagon) 4+1 problem sets." The Pentagon typically uses the 4+1 terminology to refer to China, Russia, Iran, North Korea and terrorist groups.

### TURNING TURTLES INTO RIFLES

Both supporters and critics of using AI to hunt missiles agree that it carries major risks. It could accelerate decision-making in a nuclear crisis. It could increase the chances of computer-generated errors. It might also provoke an AI arms race with Russia and China that could upset the global nuclear balance.

U.S. Air Force General John Hyten, the top commander of U.S. nuclear forces, said once AI-driven systems become fully operational, the Pentagon will need to think about creating safeguards to ensure humans - not machines - control the pace of nuclear decision-making, the "escalation ladder" in Pentagon speak.

"(Artificial intelligence) could force you onto that ladder if you don't put the safeguards in," Hyten, head of the U.S. Strategic Command, said in an interview. "Once you're on it, then everything starts moving."

Experts at the Rand Corporation, a public policy research body, and elsewhere say there is a high probability that countries like China and Russia could try to trick an AI missile-hunting system, learning to hide their missiles from identification.

There is some evidence to suggest they could be successful.

An experiment <http://www.labsix.org/physical-objects-that-fool-neural-nets> by M.I.T. students showed how easy it was to dupe an advanced Google image classifier, in which a computer identifies objects. In that case, students fooled the system into concluding a plastic turtle was actually a rifle.

Dr. Steven Walker, director of the Defense Advanced Research Projects Agency (DARPA), a pioneer in AI that initially funded what became the Internet, said the Pentagon still needs humans to review AI systems' conclusions.

"Because these systems can be fooled," Walker said in an interview.

<b>HEADLINE</b>	<b>06/05 Unlicensed software in Canada problematic</b>
<b>SOURCE</b>	<a href="https://www.itworldcanada.com/article/large-amount-of-desktop-software-in-canada-is-unlicensed-and-a-major-threat-industry-study/405941">https://www.itworldcanada.com/article/large-amount-of-desktop-software-in-canada-is-unlicensed-and-a-major-threat-industry-study/405941</a>
<b>GIST</b>	<p>The amount of unlicensed and unsupported software in the desktop computers of Canadians continues to slowly drop but still poses a great risk to users, says an industry survey released Tuesday.</p> <p>The survey by BSA The Software Alliance — which includes giants like Adobe, Microsoft, IBM, Oracle and Symantec — 22 per cent of software installed on PCs in this country in 2017, worth an estimated \$819 million, was not licensed. That continues a steady drop from the first global survey in 2011, when 27 per cent of Canadian computers were estimated to have unlicensed software.</p> <p>By comparison, 15 per cent of PCs in the U.S. had unlicensed software last year. Globally the number was 37 per cent, which the report called “alarming.”</p> <p>The software industry loses a lot of money from unlicensed applications, but the hammer it uses is that this unsupported software is a security risk by allowing malware to exploit unpatched vulnerabilities. So the report urges CIOs to thoroughly inventory the software on their machines “so they can reduce the risk of harmful cyber attacks and boost the bottom line.”</p> <p>“Organizations now face a one-in-three chance of encountering malware when they obtain or install an unlicensed software package or buy a computer with unlicensed software on it,” the report estimates.</p> <p>“Each malware attack can cost a company US\$2.4 million on average and can take up to 50 days to resolve. To the extent that the infection leads to company downtime, or lost business data, it can also seriously affect the company’s brand and reputation. The cost for dealing with malware that is associated with unlicensed software is growing too. It can now cost a company more than \$10,000 per</p>

infected computer, and cost companies worldwide nearly US\$359 billion a year. Avoiding the security threats from malware is now the number one reason CIOs cite for ensuring the software on their network is fully licensed.”

The report also quotes market research firm IDC — which did much of the research for this report — estimating that when companies take pragmatic steps to improve their software management, they can boost their bottom line by as much as 11 per cent.

Among the countries with high rates of unlicensed software are China (66 per cent) and Russia (62 per cent).

The report is based on calculations of software sold around the world, a global survey of more than 22,500 home and enterprise PC users, and a survey of 2,300 IT managers in 23 countries.

<b>HEADLINE</b>	<b>06/05 Civil groups: FBI misled on encryption</b>
<b>SOURCE</b>	<a href="https://www.nextgov.com/cybersecurity/2018/06/civil-liberties-groups-urge-ig-investigation-faulty-fbi-encryption-stats/148736/">https://www.nextgov.com/cybersecurity/2018/06/civil-liberties-groups-urge-ig-investigation-faulty-fbi-encryption-stats/148736/</a>
<b>GIST</b>	<p>The Justice Department’s internal watchdog should investigate how the FBI ended up using inaccurate figures to bolster its case that warrant-proof encryption was making Americans unsafe, according to a Monday letter from 20 civil society groups.</p> <p>The FBI acknowledged last month that it could not support the claim made by top officials, including Attorney General Jeff Sessions, that encryption blocked law enforcement from retrieving evidence from 7,775 devices during the 2017 fiscal year.</p> <p>Associate Deputy Director Paul Abbate insisted, however, that end-to-end encryption systems remain a major barrier to investigations and could result in the bureau failing to stop a terrorist attack before it happens or find an abducted child.</p> <p>Officials blamed the erroneous figure on a flawed methodology the bureau used to count encrypted devices. The FBI has not yet determined the correct figure, Abbate said.</p> <p>The erroneous figure was the second major blow this year to the FBI’s four-year-old battle against end-to-end encryption systems, which top officials say allow terrorists and criminals to “go dark” online. The bureau did not explore all possible options before asking a judge to legally compel Apple to help it crack into an encrypted iPhone used by San Bernardino shooter Syed Farook in 2015.</p> <p>Apple fought that effort and the FBI eventually withdrew the request after an unnamed third-party offered its own technical fix.</p> <p>Investigating the FBI’s erroneous claims about inaccessible devices would be a useful and necessary follow up to that earlier report, according to Monday’s letter from groups including the New America think tank, the American Civil Liberties Union and the Center for Democracy and Technology.</p> <p>The dispute centers on end-to-end encryption systems, which shield the contents of communication from anyone—including the service provider—except the sender and recipient. In other encryption implementations, the communications provider has an encryption key and can share decrypted communications in response to a warrant.</p> <p>The problem, according to tech companies and most security experts, is that any technical solution that allows government access to end-to-end encryption systems could also be exploited by criminal hackers. That would make all technology users less secure, they say.</p>

	<p>“Given the severe negative effects of an encryption backdoor mandate, the FBI’s miscalculation is particularly concerning,” the civil liberties groups write.</p> <p>The inspector general should investigate both how the FBI came to rely on the faulty figures and why top officials continued to cite the figures during the first weeks after the FBI learned they were erroneous.</p>

<b>HEADLINE</b>	<b>06/05 Charges: hacking Minn. govt. databases</b>
<b>SOURCE</b>	<a href="https://www.sfgate.com/news/crime/article/Man-allegedly-angry-over-Castile-case-is-charged-12970157.php">https://www.sfgate.com/news/crime/article/Man-allegedly-angry-over-Castile-case-is-charged-12970157.php</a>
<b>GIST</b>	<p>MINNEAPOLIS (AP) — A man who allegedly hacked into Minnesota government databases last year because he was angry over the acquittal of the officer who shot and killed Philando Castile was charged in an indictment unsealed Tuesday.</p> <p>According to an indictment, Cameron Thomas Crowley, who goes by "Vigilance," faces multiple charges, including three counts of intentional access to a protected computer, one count of intentional damage to a protected computer, and one count of aggravated identity theft.</p> <p>After the breeches, a person tweeting as Vigilance taunted authorities by writing, "Where am I? Clock is ticking." The person tweeted that the Minnesota databases were targeted in retaliation for the acquittal of former St. Anthony police officer Jeronimo Yanez, who was found not guilty of manslaughter and other charges in the 2016 shooting of Castile, a black motorist.</p> <p>Crowley, 19, of Lino Lakes, was ordered held Tuesday during an initial appearance in U.S. District Court. He was appointed a federal defender and is scheduled for an arraignment Friday.</p> <p>According to the indictment, Crowley accessed the state's databases in June 2017 and intentionally transmitted programs, codes and commands to state computer servers, causing damages and a loss to the state of more than \$5,000. Crowley is also charged with accessing databases at two unnamed universities and an unnamed school district.</p>

<b>HEADLINE</b>	<b>06/05 Amazon yanks 'smart toy' off shelves</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/amazon-will-stop-selling-connected-toy-filled-with-security-issues/">https://www.cbsnews.com/news/amazon-will-stop-selling-connected-toy-filled-with-security-issues/</a>
<b>GIST</b>	<p>That soft teddy bear seems harmless -- until hackers can use it to spy on your kids.</p> <p>Amazon said it has pulled CloudPets, a smart toy that researchers said was riddled with security flaws, from its online store. Last week, Walmart and Target stopped selling the toy. Amazon began removing CloudPets on Tuesday morning.</p> <p>The decision comes a day after Mozilla contacted Amazon with research showing new vulnerabilities on CloudPets.</p> <p>"In a world where data leaks are becoming more routine and products like CloudPets still sit on store shelves, I'm increasingly worried about my kids' privacy and security," Ashley Boyd, Mozilla's vice president of advocacy, said in a statement.</p> <p>Walmart and Target did not respond to a request for comment.</p> <p>This isn't the first time that Amazon has stopped selling products over privacy concerns. Last July, the online retailer giant suspended Blu phones -- its top selling phone at the time -- because researchers found spyware on the popular devices.</p>

	<p>Connected devices tend to be open to attacks for a multitude of reasons, whether it's default passwords, developers who never send security updates or owners who never install them. The US Consumer Product Safety Commission opened an investigation into the dangers of connected gadgets, also known as the Internet of Things, in March, while lawmakers introduced a bill to regulate smart devices.</p> <p>That's a particular problem when it comes to selling connected toys to children, since it opens up a new field of privacy concerns for parents. After advocates pointed out that the toy "My Friend Cayla" violated privacy rules by recording conversations without parental consent, Germany banned the doll and asked any parents who still owned it to destroy it.</p> <p>CloudPets, made by Spiral Toys, is a talking toy that's connected online, uses voice recordings and an online app through Bluetooth.</p> <p>But in 2017, hackers were able to access CloudPets' database, containing email addresses, passwords and voice recordings from children, which cybercriminals held for ransom at least twice. The breach affected more than 800,000 people.</p> <p>Mozilla worked with cybersecurity research firm Cure53 to see what vulnerabilities CloudPets still has after the original breach in 2017. They found that CloudPets' Bluetooth vulnerabilities first demonstrated more than a year ago are still open.</p>

<b>HEADLINE</b>	<b>06/05 Facebook gave access to China firms</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/facebook-reportedly-gave-data-access-chinese-company-huawei-officials-call-security-risk/">https://www.cbsnews.com/news/facebook-reportedly-gave-data-access-chinese-company-huawei-officials-call-security-risk/</a>
<b>GIST</b>	<p>Facebook has given access to user data to four Chinese manufacturers, including one that U.S. intelligence officials consider a security threat, according to The New York Times. The Times the social media giant has had an agreement with telecommunications company Huawei since at least 2010.</p> <p>Facebook said it plans to wind down its deal with Huawei by the end of the week, the Times reports. The three other partnerships with Chinese device makers include Lenovo, Oppo and TCL. The Times reports the deals helped Facebook solidify its position in the mobile market before Facebook apps worked well on mobile phones.</p> <p>Facebook told the Times that the data shared with Huawei stayed on its phones, rather than the company's servers.</p> <p>Late Tuesday, Facebook's vice president of mobile partnerships Francisco Varela, told CBS News in a statement that the social media company's integrations with the Chinese manufacturers "were controlled from the get go -- and we approved the Facebook experiences these companies built."</p> <p>"Huawei is the third largest mobile manufacturer globally and its devices are used by people all around the world, including in the United States. Facebook along with many other U.S. tech companies have worked with them and other Chinese manufacturers to integrate their services onto these phones," Varela said in an email. "Facebook's integrations with Huawei, Lenovo, OPPO and TCL were controlled from the get go -- and we approved the Facebook experiences these companies built. Given the interest from Congress, we wanted to make clear that all the information from these integrations with Huawei was stored on the device, not on Huawei's servers."</p> <p>Sen. Mark Warner, D-Virginia, told the Times that he looks forward to "learning more about how Facebook ensured that information about their users was not sent to Chinese servers."</p> <p>In February, senior U.S. intelligence officials advised consumers to avoid purchasing phones</p>

	<p>manufactured by Huawei.</p> <p>FBI Director Christopher Wray cited the security risks of Huawei during a Senate Intelligence Committee hearing that month. Wray said the U.S. government is "deeply concerned" about the risks of allowing companies that are " beholden to foreign governments that don't share our values" to gain "positions of power" inside the U.S. telecommunications network.</p>

<b>HEADLINE</b>	<b>06/05 Bitfinex resumes operations after DDoS</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-06-05/crypto-exchange-bitfinex-suspects-it-s-being-attacked-again">https://www.bloomberg.com/news/articles/2018-06-05/crypto-exchange-bitfinex-suspects-it-s-being-attacked-again</a>
<b>GIST</b>	<p>Bitfinex, one of the largest cryptocurrency exchanges, said it has resumed normal operations after suffering a so-called denial-of-service attack earlier.</p> <p>“The Bitfinex exchange was the target of a Distributed Denial of Service (DDoS) attack this morning,” Kasper Rasmussen, head of marketing, said in an e-mailed statement. “The exchange was offline for an hour following the DDoS attack; however, the exchange is back online now. The attack only impacted trading operations, and user accounts and their associated funds/account balances were not at risk at any point during the attack.”</p> <p>Bitcoin touched a low for the day, dropping as much as 2.2 percent to \$7,360, as the attack prevented users from accessing the exchange. The largest cryptocurrency reversed losses and is now gaining less than 1 percent.</p> <p>The exchange suffered multiple DDoS attacks late last year. In August 2016, the exchange said it was hacked for a loss of \$68 million. The British Virgin Islands-based company had been down as it went through “unplanned maintenance” earlier.</p>

## Terror Conditions

[Top of page](#)

<b>HEADLINE</b>	<b>06/06 Jihadi networks in Switzerland</b>
<b>SOURCE</b>	<a href="https://isnblog.ethz.ch/security/jihadi-networks-in-switzerland-regional-clusters-and-their-transnational-links">https://isnblog.ethz.ch/security/jihadi-networks-in-switzerland-regional-clusters-and-their-transnational-links</a>
<b>GIST</b>	<p>On 25 May 2018, the Center for Security Studies at ETH Zurich, together with the Austrian Institute for International Affairs (oiip) and the University of Lucerne, hosted a conference on “Jihadi Networks in Switzerland: Regional Clusters and Transnational Links”. Experts from academia and politics discussed the similarities, differences and connections of jihadist networks in Switzerland, Austria, Germany, France, Belgium, Italy and the Balkans.</p> <p>Four years after the proclamation of the caliphate in Syria and Iraq, the “Islamic state” (IS) is largely defeated militarily. The pace of its terrorist operations as well as its media activities have decreased significantly. Experts’ fears that IS would retreat into a “virtual caliphate” have not yet materialized.</p> <p>Yet, even though the jihadist dream of an extremist utopia seems to have burst for the time being and IS has lost some of its appeal, radicalized individuals and small groups still pose a considerable threat. Accordingly, Switzerland’s third TETRA report (2017) assumes that attacks carried out by individuals or small groups with minimal logistical effort represent the greatest challenge for Switzerland.</p> <p>Along similar lines, Switzerland’s Federal Intelligence Service (FSI) notes in its current report (2018) that in addition to the consumption of jihadist content on the Internet, personal networks and contacts play a</p>

central role when it comes to radicalization. These contacts are increasingly formed outside the confines of institutions such as mosques. Further, the core of these cross-border networks is often comprised of a few charismatic, radicalized individuals who aim to recruit others from within their own social circles.

The topic of jihadist extremism has occupied CSS researchers for quite some time. As early as 2013, the CSS published a comprehensive study on “Jihadist Radicalization in Switzerland.” Further analyses on jihadist foreign fighters and Swiss security (CSS Analysis No. 199, Bulletin 2014), the difficulties of dealing with jihadist returnees (CSS Analysis No. 210) and the engagement of Muslim organizations in Switzerland against violent extremism (Bulletin 2017) followed. Adding to this body of knowledge, the aim of the May 2018 conference was to take stock of the current research on jihadist networks in Switzerland and their transnational links.

#### Insights from the Conference

Radicals with North-African and Middle-Eastern backgrounds have long dominated domestic networks in Switzerland. However, jihadis with Balkan backgrounds – especially Bosnia-Herzegovina and Kosovo – currently represent more than one-third of all jihadi foreign fighters from Switzerland. The influence of radical preachers from the Balkans is also on the increase.

The emergence of local clusters, which are often characterized by pre-existing social ties, facilitates jihadi networking in Switzerland. The disproportionately high number of foreign fighters from cities like Winterthur or Lausanne indicates the existence of several such jihadi recruitment grounds within the country. While these clusters serve as epicenters for networks within the French, German and Italian-speaking regions in Switzerland, they do not maintain close national ties.

However, this does not mean these clusters constitute isolated islands within the center of Europe. Switzerland’s regional jihadi clusters are often linked to broader transnational networks in neighboring countries such as Germany, Austria, France, Belgium, and Italy. Furthermore, diasporic ties to radical communities in the homeland – as observed in the cases of Bosnia- Herzegovina or Kosovo – present ample evidence for the internationalization of the “Swiss Jihad.”

In order to take this internationalization of the Swiss jihadist problem into account, the conference brought together experts from Switzerland, Austria, Germany, France, Belgium, Italy and Bosnia-Herzegovina. Over the course of four panel discussions, participants looked at the various linguistic-ethnic networks and their respective international contacts. While the causes and motives for radicalization and violence continue to be heterogeneous and complex, there was a general consensus among most participants that personal networks and their transnational connections pose a threat that should not be underestimated.

With its recently adopted Counter Terrorism Strategy (2015), Switzerland is now relatively well prepared to combat jihadist-motivated terrorism. Nonetheless, the conference indicated that certain domestic networks continue to pose a significant threat. In order to better understand better how these networks operate, closer cooperation between national authorities in Europe is essential.

#### What the Future Holds

Unlike other countries, Switzerland does not appear to be a focal point for jihadist terrorism. Yet, no one knows which organizations and networks will emerge from the ties and contacts jihadists have formed in Syria and Iraq. The 11 September 2001 terrorist attacks have already shown that decades may pass between the initial formation of networks during a conflict and an actual attack. As a result, the threat posed by jihadist networks and returnees will almost certainly remain at the top of Switzerland’s security agenda.

<b>SOURCE</b>	<a href="https://www.straitstimes.com/asia/se-asia/indonesias-anti-terror-sweep-nets-96-suspects">https://www.straitstimes.com/asia/se-asia/indonesias-anti-terror-sweep-nets-96-suspects</a>
<b>GIST</b>	<p>AKARTA/PEKANBARU • Indonesian police revealed yesterday that 96 people allegedly involved in terror activities have been captured or killed as part of a crackdown on terrorist networks in the country.</p> <p>National Police chief General Tito Karnavian said they were striving to uncover terrorist networks in Indonesia following a riot at the police's Mobile Brigade headquarters detention centre in Depok, West Java, which took the lives of five police officers last month.</p> <p>"Fourteen of (those 96 people) were gunned down by the police force for attempting to resist arrest," Gen Tito said during a joint coordination meeting at National Police headquarters.</p> <p>He said terrorist networks existed in most Indonesian provinces. Some of them were sleeper cells now, but others were active.</p> <p>Learning from the Surabaya bombings, Gen Tito said, sleeper cells were more prone to committing terrorist acts than active ones. But it was also important to keep an eye on the active terrorist cells.</p> <p>In the latest arrests, counter-terrorism squad Densus 88 on Sunday captured three alleged terrorists in Pringsewu regency of Lampung, Sumatra. The suspects were identified only as US, 43, IN, 37, and IM, 42. They stand accused of being involved with the Jamaah Ansharut Daulah (JAD) terrorist group, which pledges allegiance to the Islamic State in Iraq and Syria.</p> <p>Meanwhile, universities across Indonesia are tightening supervision of student activities following the arrest of suspected terrorists at a state university.</p>

<b>HEADLINE</b>	<b>06/05 DHS tests Vehicle Face System</b>
<b>SOURCE</b>	<a href="https://www.engadget.com/2018/06/05/dhs-facial-recognition-scan-travelers-at-border/">https://www.engadget.com/2018/06/05/dhs-facial-recognition-scan-travelers-at-border/</a>
<b>GIST</b>	<p>Last year, the Department of Homeland Security (DHS) put out a notice, saying it was looking for a facial recognition system that could work with images taken of people inside their cars. The idea was that such a system could be used to scan people entering and leaving the country through the US/Mexico border and match them to government documents like passports and visas. Now, The Verge reports that DHS will be launching a test of a system aiming to do just that.</p> <p>The Vehicle Face System, as it's called, is scheduled for an initial deployment in August and it will be installed at the Anzalduas border crossing. The test will take place over one year and will aim to take images of passengers in every car that enters or leaves the US through the crossing. Those images will be matched to government documents and travelers will be verified before they get to the border checkpoint, in theory.</p> <p>While car windshield reflections have typically prohibited facial recognition systems from being effective with images taken through windshields, those behind these tests are hoping to get around that problem. They're using sensors that can capture images at multiple focal lengths, which might allow the system to differentiate people from reflections.</p> <p>The work is part of a larger biometric data project that currently includes ongoing facial recognition pilots in eight airports including the Hartsfield-Jackson Atlanta International Airport, Washington Dulles International Airport, JFK International Airport and Chicago O'Hare International Airport.</p> <p>There are, of course, concerns over how this technology will be implemented. "This is a way for the federal government to track people -- monitoring who goes where and what they do there," ACLU attorney Mitra Ebadolahi told The Verge. "In a free society, we should all be able to safely live our lives without being watched and targeted by the federal government."</p>

HEADLINE	<b>06/06 Iran role in backing, advising Taliban?</b>
SOURCE	<a href="https://www.washingtonpost.com/world/asia_pacific/days-after-taliban-assault-in-western-afghanistan-allegations-of-an-iranian-role/2018/06/05/a65ec934-605d-11e8-b656-236c6214ef01_story.html?utm_term=.8c211128a915">https://www.washingtonpost.com/world/asia_pacific/days-after-taliban-assault-in-western-afghanistan-allegations-of-an-iranian-role/2018/06/05/a65ec934-605d-11e8-b656-236c6214ef01_story.html?utm_term=.8c211128a915</a>
GIST	<p>FARAH, Afghanistan — No one here believes the fight is over.</p> <p>Two weeks after hundreds of Taliban insurgents invaded this provincial capital in western Afghanistan, the sidewalk bazaars are back in business, piled with sandals and blankets and soap, but a Humvee or armored vehicle stands guard every two blocks. Afghan troops have delivered voter registration forms for parliamentary elections in October, but few people are showing up to apply.</p> <p>Afghan and U.S. officials declared a decisive victory after driving out the insurgents with airstrikes and troop reinforcements, but residents and officials say the city remains vulnerable to attack. Security forces are stretched thin across Farah province, a huge, rugged and sparsely inhabited region where Taliban fighters still move freely in many districts and enjoy support from some fellow ethnic Pashtuns.</p> <p>Even as Afghan officials last week put on an impressive display of weapons confiscated during the 36-hour street battle, some complained that arms are being sold back to the insurgents, that political feuds are weakening the government's side, and that Iran — which shares a lengthy border with the province — is backing and advising the Taliban.</p> <p>The war for this remote but strategic region, some say, has become captive to domestic and foreign self-interests.</p> <p>“The biggest challenge we have is that people here won’t help us,” said Gen. Noorullah Qaderi, the regional army commander. “They hide the Taliban in their homes and then we can’t go after them. They have relations with them from a long time back.” Other security officials said these ties include trading and smuggling of drugs and weapons between Afghanistan and Iran.</p> <p>Qaderi said he is “100 percent certain” that Iran is supporting the Taliban directly and indirectly, largely as a foil to the Islamic State. The extremist Sunni group, known here as Daesh, has been attacking Afghan Shiite communities for several years. The attacks have included suicide bombings in Kabul and Herat, a major Shiite center near the Iran border.</p> <p>“They want to use the Taliban in the border areas against Daesh,” Qaderi said.</p> <p>An intelligence officer, who spoke on the condition of anonymity because he is not authorized to discuss the matter publicly, described the Farah attack as a meticulously planned operation involving more than 2,800 fighters who traveled from as far as Helmand province and Pakistan. He declined to discuss the possible role of Iran but said that many local police officers had fled their posts and that if U.S. Special Operations forces did not remain in the area, the insurgents would strike again.</p> <p>Several other officials, including Farah’s governor, Abdul Basir Salangi, also were cautious in their comments, saying they did not have “documented proof” that Iran is aiding the insurgents. A powerful neighbor and major economic partner of Afghanistan, Iran has denied interfering in the country’s conflict and has demanded solid evidence to back up the allegations.</p> <p>U.S. officials have said they would not rule out the possibility that Iran was behind the Farah attack, the most ambitious by the Taliban in months. Dana White, a Pentagon spokeswoman, said afterwards that “Iran remains the most destabilizing factor in the Middle East. . . I don’t think you can ever rule out their mischief.”</p> <p>U.S. relations with Iran’s Shiite regime have plummeted since early last month, when President Trump</p>

renounced the 2015 nuclear deal that the Obama administration and five other world powers had painstakingly negotiated with Tehran.

Some residents of Farah city said they had little doubt that Iranian hands were involved in the relentless insurgent push to take over Farah province, a potential gateway north to the large border city of Herat and east toward the rest of Afghanistan.

In the main market, jittery merchants pointed out fresh bullet holes and char marks on storefronts, and they described seeing bodies of Taliban fighters strewn on the streets. In the local agronomy school, the halls were lined with colorful posters illustrating tree grafting and bee pollination, but several classrooms were burned black.

“If the situation stays the same, the Taliban will be back,” said a day laborer named Rashid, 28. “It’s a complicated fight. Around here, one brother is with the Taliban and another one is with the government. But the weapons are definitely coming from Iran.”

In some parts of Farah province, political and personal feuds among local officials have also strengthened the insurgents’ hands. Porchaman, a district once considered relatively safe, was initially reported Sunday to have fallen to the Taliban. By Monday officials said it was under government control, but local leaders described an ongoing rivalry between current and former district officials, one of whom threatening to join the Taliban fight.

Elsewhere, residents and officials said the construction of dams had created a second motive for Iranian interference. Iran depends heavily on water from Afghan rivers, and the two countries have been negotiating over water rights for months. Meanwhile, though, Afghanistan has completed a large dam in Herat province and is building a second in Farah.

“No matter how many soldiers they bring here to defend us, everyone agrees that Iran has the power to do this,” said one official in Anar Dara, a remote and drought-stricken district that Taliban fighters overran last month, shooting the police chief dead in his office. “They want to fight Daesh, and they want to stop the dams.”

Last week, Afghan army officials invited several journalists to visit Anar Dara, where they landed in a helicopter and were escorted to the town center by a convoy of war-battered Humvees. Local police officers lined up along the deserted highway, where the officials praised their bravery and handed each an envelope with a cash bonus worth about \$12.

Later, in a meeting with local leaders, Qaderi tried hard to persuade local ex-soldiers and police officers to enlist in a new regional security force, which the central government is trying to build so national troops will not have to rush from one flare-up to the next.

“You can enlist from any village, on any mountaintop,” Qaderi said, addressing a group of elders and urging them to send their sons back into battle. “You will have the same benefits as regular forces. You will get your pay from the bank.”

The general thanked the local forces for not requesting any more weapons, saying he had none to send. Then he raised his hands in prayer and added solemnly, “I pray that God will save you and your families from violence and misfortune.”

The elders were polite but skeptical. One complained that the local schools were 70 percent short on books and that the only clinic ran out of medications far too quickly, in part because they were being sold illegally. Another said most wealthy residents had already moved to Herat for safety.

“If we don’t get better security here, everyone will leave,” he said.

HEADLINE	<b>06/04 US-style military uniforms for sale</b>
SOURCE	<a href="https://www.stripes.com/news/us-style-military-uniforms-like-those-used-in-kabul-attack-are-freely-sold-in-afghan-markets-1.530983">https://www.stripes.com/news/us-style-military-uniforms-like-those-used-in-kabul-attack-are-freely-sold-in-afghan-markets-1.530983</a>
GIST	<p>KABUL, Afghanistan — Outfits that look the same as the U.S. Army-style combat uniform worn by a gunman in an attack last week on Afghanistan’s Interior Ministry can easily be found for sale in the capital.</p> <p>At the Kabul market known as “Bush Bazaar,” shops sell military goods of suspect origins — everything from what U.S. troops wear on their backs to what they put in their bellies, and more. The mall, which brings together hundreds of vendors, is named for the former U.S. president who ordered the 2001 invasion, which brought in thousands of troops and the supplies to support them.</p> <p>Most of a convincing counterfeit Army uniform can be had there for about \$60 or less. Some of the uniforms and accessories seem genuine or are very good knockoffs.</p> <p>Not long ago it was common for attackers to don friendly military disguises, but Wednesday’s attack marked the first such assault in more than a year, said Gen. John Nicholson, commander of U.S. and allied forces in the country.</p> <p>After a run of such attacks in 2012, including a deadly September assault on Helmand province’s Camp Bastion that left two Marines dead and eight fighter jets damaged or destroyed, Kabul police began cracking down on the unauthorized sale of military and police uniforms.</p> <p>As far as the police were concerned last week, those efforts had been effective.</p> <p>“Selling uniforms is not allowed,” police spokesman Hashmat Stanekzai told Stars and Stripes. “If someone is caught with selling those items, he gets jailed and the shop is shuttered.”</p> <p>They might be sold in secret, he said, but not openly, as it’s “strictly banned.”</p> <p>Yet shopkeepers displayed plenty of military-style clothing for sale, and on a recent visit boasted that some items were the same as those worn by the country’s commandos, the elite troops who work closely with American special operations forces and often conduct night raids against insurgents and terrorist groups.</p> <p>Some Afghan forces and other coalition troops wear uniforms based on or difficult to distinguish from current or past U.S. uniforms.</p> <p>When asked, some merchants claimed they sold uniforms only to military or security personnel, though they showed no reservations about offering military clothing to civilians before the question was raised.</p> <p>Even if not worn to military standards, garb that passably disguises the enemy as friendly forces could cause confusion in an attack or create a few moments of hesitation, allowing a suicide bomber to get closer to military bases or patrols and inflict heavier damage.</p> <p>During Wednesday’s assault, the tactic proved largely unsuccessful. The gunmen wore outdated U.S. digital camouflage uniforms, known as the Universal Camouflage Pattern, which raised the gate guards’ suspicions and led them to confront the attackers, Nicholson told Pentagon reporters last week.</p> <p>That pattern of uniform was harder to find at the bazaar and cost about one-third more than what appeared to be brand-new military outfits resembling those currently worn by the Army and recently adopted by the Air Force.</p> <p>Priced at about \$30 and found in several shops, not all those in the newer print known as Operational Camouflage Pattern seemed authentic. But without a close inspection, it was sometimes hard to tell.</p>

<b>HEADLINE</b>	<b>06/05 US: Manbij to be governed by 'locals'</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/latest-russians-withdraw-syria-lebanon-border-55654595?">https://abcnews.go.com/International/wireStory/latest-russians-withdraw-syria-lebanon-border-55654595?</a>
<b>GIST</b>	<p>The United States says the Syrian town of Manbij will be governed by "locals" who are "mutually agreeable" to the U.S. and Turkey following the withdrawal of U.S.-backed Syrian Kurdish forces from the city.</p> <p>Senior U.S. officials say that a U.S.-Turkey deal for Kurdish-led troops to withdraw from the strategic city includes "estimated timelines" but no hard-and-fast deadlines for steps to be taken. They say implementation will be timed based on events on the ground.</p> <p>The officials say that the Syrian Kurdish militia known as the People's Protection Units or YPG will move to the east of the Euphrates River. They say eventually, joint U.S-Turkish patrols will be dispatched along a line of demarcation.</p> <p>The officials weren't authorized to be identified by name and requested anonymity.</p> <p>_____</p> <p>4 p.m.</p> <p>Turkish Foreign Minister Mevlut Cavusoglu says Syrian Kurdish fighters will have to give up their weapons when they retreat from the key northern Syrian town of Manbij, as part of a deal reached with the United States.</p> <p>Speaking to reporters on Tuesday, Cavusoglu also said that Turkish and U.S. officials would begin working on a plan within the next 10 days and the Syrian Kurdish militia's withdrawal would be complete within six months.</p> <p>There was no immediate comment from the Syrian Kurdish fighters on having to surrender arms when leaving Manbij.</p>

	A Turkish official says the withdrawal will be according to a U.S. plan, to be completed next week, then Turkey will review the withdrawal before a new council to administer the town is set up. The official spoke on condition of anonymity because he was not authorized to talk to reporters.

<b>HEADLINE</b>	<b>06/04 Somalia: US airstrike kills 27 militants</b>
<b>SOURCE</b>	<a href="https://www.voanews.com/a/us-airstrike-somalia-kills-al-shabab-extremists/4424060.html">https://www.voanews.com/a/us-airstrike-somalia-kills-al-shabab-extremists/4424060.html</a>
<b>GIST</b>	<p>A U.S. airstrike in northern Somalia Saturday killed 27 al-Shabab militants, the U.S. Africa Command said.</p> <p>It posted a Twitter message Monday saying the strike near Bosaso, in semi-autonomous Puntland state, was carried out in coordination with the Somali government.</p> <p>U.S. commanders said no civilians were killed.</p> <p>“U.S. forces will continue to use all authorized and appropriate measures to protect U.S. citizens and to disable terrorist threats,” the command said.</p> <p>Targets will include terror training camps and safe havens throughout Somalia and the region. Another U.S. airstrike killed 12 al-Shabab militants Thursday south of Mogadishu.</p> <p>Saturday’s airstrike came after al-Shabab extremists attacked a military base in Puntland, claiming to have killed five soldiers, wounding seven and destroying Somali military equipment.</p> <p>Al-Qaida-affiliated al-Shabab is fighting to topple Somalia’s Western-backed government. It is blamed for countless terrorist attacks, including an October truck bombing in Mogadishu that killed more than 500 people.</p>

<b>HEADLINE</b>	<b>06/05 Libya military strongman: victory is near</b>
<b>SOURCE</b>	<a href="https://english.alarabiya.net/en/News/north-africa/2018/06/05/Libya-strongman-Haftar-says-victory-near-against-Derna-extremists.html">https://english.alarabiya.net/en/News/north-africa/2018/06/05/Libya-strongman-Haftar-says-victory-near-against-Derna-extremists.html</a>
<b>GIST</b>	<p>Libyan military strongman Khalifa Haftar said Monday that victory was near for his forces in Derna, the eastern city held by ISIS since the 2011 armed uprising.</p> <p>Haftar’s self-styled Libyan National Army launched an offensive on May 7 to “liberate” the coastal city, home to about 150,000 people and held by extremists since the uprising that ousted dictator Moamer Kadhafi.</p> <p>“Victory is near,” Haftar said in a video published on YouTube, adding that his forces had “cleaned up” suburbs of the city.</p> <p>LNA forces have laid siege to Derna for nearly two years, making it difficult for residents to access humanitarian aid.</p> <p>The city is the only part of eastern Libya out of the LNA’s control. It is held by a ragtag coalition of ISIS militants, including groups close to Al-Qaeda.</p> <p>Haftar said that after its “liberation” his forces would deploy across the city to take control of all areas and infrastructure. But he called on them to ensure the safety of residents and to put up defense barriers for additional security.</p>

	<p>The strongman whose forces are backed by the United Arab Emirates and Egypt also prohibited his troops from taking “revenge”, in particular against “terrorists” who surrender and give up their arms.</p> <p>“It is necessary to respect legal procedures concerning prisoners and to deliver them to the competent organs,” Haftar said.</p> <p>Some members of Haftar’s forces have been implicated in war crimes, including Mahmud al-Werfalli, a commander of the Al-Saiqa brigade based in Libya’s second city of Benghazi.</p> <p>On the humanitarian front, the situation in Derna is critical, according to the International Organization for Migration. Since fighting began in Derna more than three weeks ago, “continued shelling and clashes” have forced at least 425 families -- about 2,125 people -- to flee the city, the IOM’s Displacement Tracking Matrix said on Monday.</p> <p>On Friday, the UN mission in Libya said at least 17 civilians, including two children, have been killed and 22 others, including seven children, have been wounded in the fighting since May 16.</p> <p>It said the escalation in the fighting reached “unprecedented levels” last week and was getting increasingly close to densely populated areas.</p>

<b>HEADLINE</b>	<b>06/05 Niger: bombers kill 10 in mosque attack</b>
<b>SOURCE</b>	<a href="http://www.africanews.com/2018/06/05/niger-female-suicide-bombers-kill-10-in-mosque-attack/">http://www.africanews.com/2018/06/05/niger-female-suicide-bombers-kill-10-in-mosque-attack/</a>
<b>GIST</b>	<p>Three suicide bombers killed 10 people at a mosque in Niger’s southeastern city of Diffa who had gathered after breaking the Ramadan fast, an army spokesman said on Tuesday.</p> <p>The area around Diffa, close to Lake Chad and the borders with Nigeria, Chad and Cameroon, is a stronghold for two factions of militant group Boko Haram, which have been fighting to establish an Islamic state in the region.</p> <p>“It was last night that these three people exploded their charges during a religious service,” the spokesman said. He later said the three bombers were female.</p> <p>It was last night that these three people exploded their charges during a religious service.</p> <p>Southeast Niger has seen sporadic attacks by militants loosely linked to Boko Haram. The Islamist group has gradually split into two factions, one of which has pledged allegiance to Syria-based Islamic State. Troops from Niger and the United States killed 11 Islamist militants from that Islamic State affiliate in a firefight last December.</p> <p>Boko Haram sometimes use female suicide bombers in their campaigns against security forces and civilians, in part because they attract less suspicion.</p> <p>More than 15,000 people have been killed and millions displaced by the conflict in the Lake Chad region. After a deadly assault on the Nigerien town of Bosso in June 2016 killed 32 soldiers, Chad sent 2,000 troops to help Niger, but they were withdrawn in October last year.</p>

<b>HEADLINE</b>	<b>06/05 UK: holiday destinations terror risk</b>
<b>SOURCE</b>	<a href="https://www.mirror.co.uk/news/uk-news/your-holiday-destination-safe-government-12648338">https://www.mirror.co.uk/news/uk-news/your-holiday-destination-safe-government-12648338</a>
<b>GIST</b>	The holiday season is in full flow and summer getaways are on most people's agendas in the coming months.

But tourists have been warned to avoid certain areas unless it's essential, with the threat of terror attacks in several places in Europe and beyond.

Where is safe to go and where should you avoid travelling to? What precautions should you take while travelling?

Here we take a look at the UK Government's travel advice for destinations across the globe.

**Turkey:** The Foreign and Commonwealth Office (FCO) advises against all travel to within 10 km of the border with Syria and to the city of Diyarbakir. The FCO said: "Fighting in Syria continues in areas close to the Turkish border and there remains a heightened risk of terrorism in the region." They warned that presidential and parliamentary elections will take place on 24 June 2018 which "may result in rallies and demonstrations around the country".

"You should avoid large gatherings and follow the advice of the local authorities," the advice added. Added security measures may apply to flights from Turkey to the UK.

**Egypt:** Terrorists are "very likely" to try to carry out attacks in Egypt, the FCO says. People have been told they should always be vigilant and follow advice of Egyptian authorities and travel companies. Threats to western nationals, institutions and businesses have been posted on websites and social media. The FCO has advised against travel - unless it's essential- to the Governorate of South Sinai with the exception of the area within the Sharm el Sheikh perimeter barrier, which includes the airport and the areas of Sharm el Maya, Hadaba, Naama Bay, Sharks Bay and Nabq. But people have been advised against all but essential travel by air to or from Sharm el Sheikh.

Places to avoid also include the area west of the Nile Valley and Nile Delta regions, excluding the coastal areas between the Nile Delta and Marsa Matruh.

**Spain:** Barcelona and other areas in the region of Catalonia have seen large gatherings because of the political developments in the region. And the Government has warned more demonstrations could take place. "They may occur with little or no warning and even demonstrations intended to be peaceful can escalate and turn confrontational," the FCO says. "You should exercise caution if you're in the vicinity. "Demonstrations may also cause some disruption and delays to transport services."

The FCO have also urged people to not take unnecessary risks, especially when under the influence of alcohol after several deaths as a result from people falling from balconies. They also warned people to be aware of the existence of street crime as thieves tend to target money and passports.

**Greece:** Terrorist attacks in Greece can't be ruled out, the FCO says. Brits have been told to apply for a free European Health Insurance Card and to carry their passport or photo ID showing British nationality at all times. Some medical costs are not covered by the European Health Insurance Card so people have been told to get comprehensive medical and travel insurance before going to Greece.

The FCO says: "Greek police won't accept rowdy or indecent behaviour, especially where excessive drinking is involved. "Greek courts impose heavy fines or prison sentences on people who behave indecently. "Your travel insurance may not cover you after drinking."

**France:** It is "very likely" that terrorists carry out attacks in France, according to the Government. The country has had ongoing threats by Islamist terrorist groups. The French government has advised the public to be vigilant and has reinforced its security measures. People should also be aware that a number of strikes are being planned on SNCF trains until June 28 and should check travel advice.

**USA:** Terror attacks in the USA are "very likely" and could be indiscriminate, the Government has warned. People should be vigilant and check reports in the press. The US Department of Homeland Security is to start implementing separate enhanced security screening procedures for all commercial

	<p>flights to the US.</p> <p>Tunisia: A state of emergency is in place in Tunisia. This was put into effect after a suicide attack on a police bus on November 24, 2015. It's been extended several times, most recently on March 12, 2018 by seven months. The FCO has advised against all travel to the Chaambi Mountains National Park and the designated military operations zones of Mount Salloum, Mount Sammamma and Mount Mghila.</p> <p>They have also advised against travel to the militarised zone south of El Borma and Dhehiba, anywhere within 20km of the rest of the Libya border area north of Dhehiba and Ben Guerdane and its immediate surrounding area.</p> <p>Advise against all but essential travel has been advised for places south of, and including, the towns of Nefta, Douz, Médenine, Zarzis.</p> <p>Also, within 30km of the border with Algeria south of and including the town of Jendouba. People should also not go to Kasserine, including the town of Sbeitla, unless it's absolutely necessary.</p>

<b>HEADLINE</b>	<b>06/05 Singer's PTSD after Manchester bombing</b>
<b>SOURCE</b>	<a href="https://www.today.com/health/what-ptsd-ariana-grande-reveals-struggle-disorder-t130305">https://www.today.com/health/what-ptsd-ariana-grande-reveals-struggle-disorder-t130305</a>
<b>GIST</b>	<p>Singer Ariana Grande revealed this week she's struggling with symptoms of post-traumatic stress disorder more than a year after a suicide bomber targeted one of her concerts.</p> <p>The aftermath was gruesome: 22 people, including children, were killed in the attack at Britain's Manchester Arena on May 22, 2017; dozens were wounded.</p> <p>The pop star recently called the anniversary a "challenging day"...</p> <p>"It's hard to talk about because so many people have suffered such severe, tremendous loss. But, yeah, it's a real thing," Grande told British Vogue.</p> <p>"I know those families and my fans, and everyone there experienced a tremendous amount of it as well. Time is the biggest thing. I feel like I shouldn't even be talking about my own experience — like I shouldn't even say anything. I don't think I'll ever know how to talk about it and not cry."</p> <p><b>WHAT IS PTSD?</b></p> <p>PTSD can strike people who have experienced a shocking, frightening or dangerous event, according to the National Institute of Mental Health. That may include going through or witnessing combat, a natural disaster, a car accident or an assault. The unexpected death of a loved one can also trigger the disorder.</p> <p>It's normal to have upsetting memories or feel jittery after a traumatic event, but most people start to recover after a few weeks or months, the National Center for PTSD noted. For some, the trauma lingers: They may feel stressed or frightened even when they are not in danger.</p> <p>If the symptoms continue for more than a month and interfere with a person's ability to function, he or she may have PTSD. About 7-8 percent of the U.S. population will experience the disorder at some point in their lives, with women more likely to develop it than men.</p>

<b>HEADLINE</b>	<b>06/06 Afghan official: Taliban attack army post</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/attack-army-post-afghanistan-kills-soldiers-55683789?">https://abcnews.go.com/International/wireStory/attack-army-post-afghanistan-kills-soldiers-55683789?</a>

<b>GIST</b>	<p>An Afghan official says the Taliban have attacked an army post in the western Badghis province, killing six soldiers and wounding seven.</p> <p>Abdul Aziz Beg, head of the provincial council, said the attack late Tuesday set off a two-hour gunbattle, with the insurgents stealing ammunition and two army vehicles. No one immediately claimed responsibility for the attack.</p> <p>In the northern Baghlan province, police say a roadside bomb killed a civilian and wounded three others.</p> <p>Afghan security forces have struggled in recent years to combat the Taliban and a local Islamic State affiliate, both of which carry out near-daily attacks across the country.</p>

HEADLINE	<b>06/05 Texas prison guards planted evidence?</b>
SOURCE	<a href="http://www.foxnews.com/us/2018/06/05/texas-prison-guards-fired-amid-planted-evidence-allegations.html">http://www.foxnews.com/us/2018/06/05/texas-prison-guards-fired-amid-planted-evidence-allegations.html</a>
GIST	<p>A Texas prison supervisor has resigned and four guards have been fired amid allegations they orchestrated the planting of two screwdrivers in an inmate's cell.</p> <p>Texas Department of Criminal Justice spokesman Jeremy Desel told the Houston Chronicle that the planted evidence "appears to be an isolated incident" at the W.F. Ramsey Unit in Brazoria County. Desel said the scheme began with one supervisor but that all parties involved didn't show integrity.</p> <p>The newspaper obtained copies last month of an email from Capt. Reginald Gilbert that ordered a quota for officers to write inmate disciplinary reports. Gilbert said any sergeants who missed their quota would face disciplinary consequences.</p> <p>The email said the new policy was effective March 10, 2018, but prison officials abandoned the quota system weeks later. The department launched an investigation after the newspaper's reports.</p> <p>Desel said Monday that the evidence-planting investigation is unrelated to the quota system.</p> <p>An inmate's mother sent a letter to the department's Office of the Inspector General on May 25, alleging that her son had been set up by guards at the Ramsey Unit. The agency began investigating and determined the mother was likely correct, Desel said.</p> <p>Major Juan Jackson resigned under investigation. Gilbert, who wrote the email ordering a disciplinary report quota, was later demoted, Desel said.</p> <p>Jennifer Erschabek of Texas Inmate Families Association said the departures confirm their suspicions. "We've been claiming in the past that family members are being set up with these cases, but it's been so hard to prove — and we finally have the proof," she said.</p> <p>The Office of the Inspector General's investigation into the matter is ongoing. The state's criminal justice agency is also conducting an internal investigation into the Ramsey Unit and its prison culture.</p>

HEADLINE	<b>06/05 UN: 60+ nations ban single-use plastic</b>
SOURCE	<a href="https://www.cbsnews.com/news/over-60-countries-introduced-bans-fees-single-use-plastic-waste/">https://www.cbsnews.com/news/over-60-countries-introduced-bans-fees-single-use-plastic-waste/</a>
GIST	<p>Increasingly aware of the scope of plastic pollution, governments in more than 60 countries have introduced levies and bans to combat single-use plastic waste, according to <u>U.N. Environment</u>, an agency of the United Nations.</p> <p>"A growing number of governments are taking action and demonstrating that all nations, whether rich or poor, can become global environmental leaders," Erik Solheim, the agency's head, said in a <u>report released</u></p>

Tuesday about sustainable solutions to single-use plastics.

With its release timed for U.N. World Environment Day, the report noted that rules limiting the use of plastic bags had decreased their use in places such as Morocco, Rwanda and parts of China, sometimes significantly.

"Rwanda, a pioneer in banning single-use plastic bags, is now one of the cleanest nations on earth," Solheim said in the report.

But elsewhere, things haven't gone so well. Poor follow-through has left many such bans ineffective. In New Delhi, for instance, a ban on disposable plastics has had only limited impact "because of poor enforcement," the report said. The city has tried repeatedly over the past decade to ban the use of thin plastic bags, most recently announcing a heavy fine for rule-breakers. But the bags remain ubiquitous across the city, blowing in the wind, piled in ditches and readily offered in hundreds of thousands of shops.

Elsewhere in India, including the states of Sikkim and Himachal Pradesh, there have been better results. Solheim praised India, which is hosting this year's Environment Day, for its growing focus on environmental protection. But he also noted that while traveling in the country he'd seen "some of the most beautiful scenic places, but destroyed by plastic pollution."

In its report, the U.N. made a series of recommendations to make plastics bans more effective, from encouraging more cooperation from businesses to improving waste management practices to offering incentives. Governments must finance more development and research of alternative materials, as well as raise awareness among consumers, among other actions, the report said.

By some estimates, as many as 5 trillion plastic bags are used worldwide every year, the report noted. "To meet the rising tide of plastics, we urgently need strong government leadership and intervention," it added.

Solheim said, however, that plastic -- which has saved "countless lives" in the health sector and revolutionized safe food storage -- isn't the problem.

"It's what we do with it," he said. "And that means the onus is on us to be far smarter in how we use this miracle material."

<b>HEADLINE</b>	<b>06/05 Va. police pursue stolen armored vehicle</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/virginia-state-police-chase-stolen-military-vehicle-95/story?">https://abcnews.go.com/US/virginia-state-police-chase-stolen-military-vehicle-95/story?</a>
<b>GIST</b>	<p>Virginia State Police were involved in an unusual police chase Tuesday evening as a stolen military vehicle sped down Interstate 95 at 40 mph.</p> <p>Police received word of the stolen vehicle Tuesday evening around 8 p.m. local time, and began pursuing the armored personnel vehicle down a highway, according to Corinne N. Geller, public relations director for the Virginia State Police.</p> <p>The vehicle was stolen by a soldier and driven off Fort Pickett, according to Virginia State Police Sgt. Keeli Hill said in a press conference. The vehicle is the property of the Virginia National Guard, and was not equipped with any weaponry.</p> <p>Virginia State Police pursued the vehicle from Nottoway County, where Fort Pickett is located, to the city of Richmond, where the suspect stopped on his own accord and surrendered at roughly 9:40 p.m. local time.</p> <p>Police blocked exit ramps during the chase for the safety of the public, Hill said. There were no injuries or accidents related to the pursuit.</p> <p>The suspect is now in state custody with charges pending. The incident is under investigation.</p>

HEADLINE	<b>06/05 Deputy in standoff charged w/assault</b>
SOURCE	<a href="https://www.seattletimes.com/seattle-news/crime/deputy-in-standoff-charged-with-assault-after-seattle-police-exposed-to-pepper-spray/">https://www.seattletimes.com/seattle-news/crime/deputy-in-standoff-charged-with-assault-after-seattle-police-exposed-to-pepper-spray/</a>
GIST	<p>The King County sheriff's deputy who prompted a 13-hour standoff with Seattle police last week has been charged with three counts of third-degree assault, accused of using pepper spray to temporarily force responding officers to back off, according to prosecutors.</p> <p>Deputy Berdon Parsons, 30, was arrested May 30 after a SWAT team breached the doors into his Capitol Hill apartment and found Parsons in the bathroom, a police spokesman said at the time. Parsons remains jailed in lieu of \$15,000 bail, jail records show.</p> <p>Just before 2 a.m. on May 30, Parsons' boyfriend went to the Seattle Police Department's East Precinct and reported that Parsons had gripped his arms and attempted to keep him from leaving their apartment after an argument, charging papers say. The boyfriend told police Parsons was a law-enforcement officer with tactical training, likely had access to guns and was possibly in crisis, the charges say.</p> <p>When a police sergeant reached Parsons by phone, "Parsons told officers he had a shotgun and he refused to come out and speak with officers voluntarily," charging papers say. Several officers stood in the hall outside Parsons' unit as they awaited a warrant to arrest Parsons on investigation of domestic-violence assault, the charges say.</p> <p>Parsons sprayed an orange liquid identified in the charges as pepper spray or OC (oleoresin capsicum) spray through the seams of his apartment door, and it dispersed in the hallway where officers were standing, the charges say.</p> <p>"Officers reported coughing, sneezing, watery eyes, running noses, and burning sensations in their throats, all consistent symptoms of exposure to OC spray," the charges say.</p> <p>Officers later found a can of pepper spray in Parsons' apartment, along with a firearm and ammunition, the charges say.</p> <p>It does not appear that Parsons has been charged with assault in connection with the incident involving his boyfriend. The three counts of third-degree assault involve the three police officers who were exposed to pepper spray.</p> <p>Parsons has been on paid administrative leave since March, pending an evaluation of his fitness for duty, Sheriff's Office spokesman Ryan Abbott said this past week.</p>

HEADLINE	<b>06/05 Colorado officials become crime victims</b>
SOURCE	<a href="https://www.splcenter.org/hatewatch/2018/06/05/public-officials-became-crime-victims-antigovernment-terrorism">https://www.splcenter.org/hatewatch/2018/06/05/public-officials-became-crime-victims-antigovernment-terrorism</a>
GIST	<p>Public officials in Colorado — including prosecutors, judges and sheriffs — found themselves in the unique position of being crime victims during a barrage of criminal activity by a group of antigovernment sovereign citizens.</p> <p>Details how the elected officials, who usually enforce the law, reacted as crime victims surfaced at the recent sentencing of Bruce Allen Doucette.</p>

He was identified as the ringleader of a Colorado-based sovereign citizen, common-law court gang, giving himself the exalted title of “Superior Court Judge of the Continental uNited States of America”

The 57-year-old former computer repair shop owner from Littleton, Colorado, and eight other sovereign citizens formed their own common law court system, something they called the “People’s Grand Jury of Colorado” that operated between 2014 and 2017.

The criminal enterprise, likened to organized crime, targeted at least 37 public officials in five Colorado counties – Denver, Boulder, Gilpin, Jefferson and Pueblo, court filings indicate.

Doucette also traveled to other states, helping fellow sovereign citizens set up their own systems of filing bogus paperwork and liens against public officials.

In Colorado, members of the group made “true threats” against the public officials, sometimes even violating protective orders intended to prevent contact. Judges, prosecutors and law officers who became involved with the group subsequently were inundated with a plethora of bogus paperwork from the sovereign gang.

The government officials, most of them elected by the citizens they serve, reacted variously — some in actual fear for their lives, but almost all concerned about the potential personal financial impact they faced.

The case was investigated as domestic terrorism by the FBI. The investigative results were forwarded to the Colorado State Attorney General’s Office which obtained a 40-count grand jury indictment citing violations of state law, in 2017.

The case revealed Doucette’s “People’s Grand Jury” acted generally after a member of common-law enterprise was named in an actual state, municipal or federal court case — even something as minor as a traffic ticket. In an attempt to derail or jam-up the government or judicial process, the bogus “grand jury” or its “court administrator” would file fictitious legal documents against the public officials involved.

If those filings didn’t get attention and influence the public officials, the Doucette “grand jury” would then attempt to extort them with financial threats and retaliation. The group had its own “marshals” with authentic-looking badges and were looking for a sympathetic county sheriff to assist in making actual arrests.

“What made this enterprise so concerning was its widespread net of threats it was casting,” First Assistant Attorney General Robert Shapiro said in a Denver courtroom last month when Doucette was sentenced to 38 years in prison.

Doucette’s group filed “criminal complaints” and “consensual commercial liens” against many of the public officials and, when those were ignored, served them with a “collections demand” threatening them with a “negative credit report” if the bogus judgements weren’t paid.

The actions “clearly put many of these public servants — some of whom are armed law enforcement officers — in fear of their economic livelihood being impacted and, at times, their physical safety,” Shapiro said in court.

Before the four-year investigation was concluded, even Shapiro himself was personally targeted in a lawsuit filed against him in U.S. District Court. It was eventually dismissed as frivolous, but only after Shapiro and attorneys representing him went through the trouble, time and cost of seeking dismissal.

At the receiving end of Doucette’s operation were more than three dozen public officials holding various county-level offices in Colorado.

Many of those public official-victims either testified during Doucette's two-week criminal trial in March or completed "victim-impact" statements forwarded to District Court Judge Michael Spear, the trial jurists from Colorado's 18 Judicial District.

"I believe the defendant threatened my life and my freedom, based upon my oath to uphold the United States and Colorado constitutions," Boulder County Judge Karolyn Moore said in her victim statement read in court at Doucette's sentencing on May 22 in Denver.

Because of the defendant's actions, the judge said, "I continue to be fearful for my safety, the safety of my family, and of my community. I continue to be hypervigilant regarding my surroundings, and I continue to utilize precautions to keep my family and I safe."

Doucette was convicted of two crimes against the judge – attempting to influence a public servant and retaliation against the judge.

She called him "a threat to me, to the citizens of Colorado, and to the rule of law. He is a domestic terrorist."

Another of Doucette's victims, Gilpin County Sheriff Bruce Hartman is used to dealing with hard-core criminals and was caught somewhat off-guard when he was targeted by the common-law court gang, the sentencing judge was told.

"I can't really quantify what we went through," Hartman said in a statement read into the public record by Shapiro, the assistant attorney general.

Because the jury unanimously convicted Doucette beyond a reasonable doubt on all counts, the sheriff said he viewed that as a "strong statement" deserving of a correspondingly harsh prison sentence.

Another Gilpin County public official, treasurer Alynn Huffman, also was a victim of criminal extortion by Doucette's gang. She was impacted, she told the court, "mainly [by] the stress of thinking I had done something wrong."

"The fear of one of these men coming to the Treasurer's Office and threatening my staff" also affected her, Huffman told the court. "I took steps to protect my office" because she felt like she was a "sitting duck."

Shapiro told the court that Doucette and his followers seem to "take joy and glee in causing" the type of stress the county treasurer experienced, hoping their "ideology would dictate and be of influence, extortive and retaliatory against these public officials."

Doucette was convicted of both criminal extortion and attempting to influence a public servant related to acts taken by him and the gang against Boulder County Sheriff Joseph K. Pelle.

Instead of personal worry, the sheriff asked the court to fashion a tough prison term for Doucette as a deterrent to others.

"In terms of sentencing considerations, these people are intentionally target officials for simply doing our jobs," the sheriff told the court in his statement read by Shapiro. "Sentencing must consider deterring this behavior in the future by others."

Doucette was given consecutive sentences on five counts: participating in a racketeering enterprise, 20 years; retaliation against a judge, four years; retaliation against a judge, five years; attempting to influence a public servant, five years; and retaliation against a judge, four years, for a total of 38 years. Sentences for 29 other counts were imposed concurrently with the 38-year term.

In handing out those sentences, Judge Spear made frequent references to the victims' testimony or

impact statements.

On one count, the sentencing judge made note that the victim was fellow Colorado Judge Kim Karn.

“I can well remember the dismay and problems that the actions of the [Doucette] organization caused Judge Karn,” Spear said in court, facing the shackled defendant.

Judge Karn, facing retaliation by the sovereign gang, “had to take unusual steps, not only concerned about her child but also concerned about her elderly parents living close by,” the sentencing judge said.

Karn “was very concerned that this organization had her [home] address, knew where she lived and that fact that she’s not home for most of the day with a teenage daughter in the house and elderly parents in a nearby house.”

“This resonated with the court, and frankly, not just because she’s a judge but because she’s having to deal with this grave concern that she had for others,” Spear said from the bench.

But other public officials, like Gilpin County Attorney James Petrock expressed dismay at being targeted by the sovereign group but told the court that he “has a fairly thick skin ... and didn’t seem to be too distressed.”

In contrast, Deputy District Attorney Catherine Kirk, who has previously prosecuted sovereign citizens, “truly was amazed” when she saw members of Doucette’s group being disruptive in a courtroom outburst as they attempted to influence Judge Alfred Harrell.

The deputy prosecutor “reacted much like [others did] and took extra steps to keep herself safe and really became more a ware of her surrounding to a degree that usually you only consider in situations where there is a constant threat,” Spear said, adding that he was very concerned that public officials should be so fearful of merely doing their jobs.

Denver County Sheriff Patrick Firman, like other law enforcement officers who were targeted, “has developed a very thick skin over the course of his career” and “wasn’t too dismayed” when he was targeted by the Doucette gang.

“He was more dismayed about the extra protection that he had to provide to the various public officials in the courthouse,” Spear said of the sheriff, recalling that he “was somewhat dumbfounded that anybody would think of doing this stuff.”

In Pueblo County, Judge Deborah Eyler was targeted by Doucette and five other members of the group who were charged with attempting to influence a public servant.

Instead of being fearful, Eyler testified during that trial that she wasn’t highly concerned.

“I was struck by the fact,” Spear said at the sentencing hearing, “that many public officials, if anything, made jokes about the fact that they are receiving such serious threats to their personal safety and the safety of others around them.”

“Certainly, Judge Eyler was a classic example of somebody who made light of the whole situation,” the sentencing judge said. “I can remember her mentioning the fact, in a very comical way during trial, that this gave her husband an opportunity to purchase another gun.”

At his sentencing, Doucette made a “Yahweh” reference sometimes used by white separatists but had very little to say and expressed no remorse for his antigovernment crime wave.

“Everything that I did was done in honor and integrity to lawfully and peaceably remove the corruption from this government and from these courts,” the gray-haired Doucette told the judge. “May Yahweh

	have mercy on your souls when he judges you.”

<b>HEADLINE</b>	<b>06/06 Italy official: mafia spreading abroad</b>
<b>SOURCE</b>	<a href="https://www.thelocal.it/20180606/italian-mafia-is-spreading-abroad-investigator-warns">https://www.thelocal.it/20180606/italian-mafia-is-spreading-abroad-investigator-warns</a>
<b>GIST</b>	<p>Italy's anti-mafia chief warned Tuesday that the mafia is not just an Italian problem but a "globalizing" phenomenon whose influence is seeping into several European countries.</p> <p>"Organized crime is moving abroad, globalizing," said Giuseppe Governale, the head of Italy's anti-mafia investigative unit DIA during a meeting with the foreign press in Rome.</p> <p>Governale said that although the notorious Sicilian Cosa Nostra has "always been present in the United States, Canada and Australia", the influence of the Calabrian mob, known as the 'Ndrangheta, was "underestimated".</p> <p>"The 'Ndrangheta ... is an extraordinarily powerful organization," warned Governale. He said criminal organizations have contacts all over the world in countries where they operate, but insisted 'Ndrangheta "tends to replicate abroad the structures it has established in Calabria".</p> <p>In Brussels, for example, "they don't buy just buildings but entire neighbourhoods".</p> <p>Governale added that Cosa Nostra, a notoriously ruthless criminal organization responsible for perpetrating deadly attacks in the past, was today "in great organizational difficulty after suffering substantial blows".</p> <p>Most of the mob's upper ranks have been arrested, with the exception of kingpin Matteo Messina Denaro. Fugitive Denaro has been on the run since 1993, with police closing in on his closest aides, but Governale said he was no longer considered the mob's supreme leader.</p> <p>He warned, however, that the death in prison in November 2017 of Cosa Nostra's former kingpin, Totò Riina, could prompt the organization to name a new head.</p> <p>Governale said Cosa Nostra has been weakened, but "unfortunately, the conditions linked to its environment and that allow its development still exist".</p> <p>"The mafia will be defeated by an army of schoolteachers," he said, referencing a line from the Italian poet and writer Gesualdo Bufalino, who died in 1996.</p>

<b>HEADLINE</b>	<b>06/05 UK police chiefs: public safety at risk</b>
<b>SOURCE</b>	<a href="https://www.theguardian.com/uk-news/2018/jun/05/police-chiefs-say-cuts-are-putting-safety-of-public-at-risk-in-england-and-wales">https://www.theguardian.com/uk-news/2018/jun/05/police-chiefs-say-cuts-are-putting-safety-of-public-at-risk-in-england-and-wales</a>
<b>GIST</b>	<p>The three most senior police officers in England and Wales have expressed concerns that funding cuts and pressure on resources are hampering their ability to tackle serious crime.</p> <p>Appearing before the home affairs select committee, Cressida Dick, the Metropolitan police commissioner; Lynne Owens, the director general of the National Crime Agency; and Sara Thornton, the National Police Chiefs' Council chairwoman, gave examples of how cash shortages were posing a risk to public safety.</p> <p>Dick said it would be "naive" to suggest reductions in police officers was having no impact on rising crime. She added: "It is having a massive strain on our people and it cannot go on. We are in the middle of the largest change programme the Met has ever been through. It cannot go on without hard choices – either</p>

more money, smaller mission, greater risk of attack.”

Owens said: “The whole system needs a different approach to funding to make sure we are as good as we all want us to be.”

Thornton added: “There is undoubtedly a capacity issue in neighbourhood policing ... it does need some extra investment.”

Asked to state their biggest concern, all three highlighted the challenge posed by the rise in digital data and cybercrime.

The amount of data that Met officers have to deal with doubles every 18 months, Dick said. She admitted that officers were struggling with the extra workload.

She said it was not unusual for 18 officers to work 200 hours over a weekend to trawl through Facebook accounts to ensure that a trial was fair with regard to disclosure.

Thornton said the reduction in the number of sexual offence cases reaching court in the last two years suggested resources were being overstretched.

She said: “There is cause for concern. It is resource-intensive. We are shifting people. I am concerned about how many cases might be caught in the system.”

She added: “We are 17% down on the number of detectives we’d like in an ideal world, so we are trying to push resources into an area where we are already short.”

The chair of the committee, Yvette Cooper, asked Dick to give a single message to the home secretary, Sajid Javid. Dick said: “Support my people. They need to be well-led, they need to be well-equipped, they do need to be well-resourced and they need to have a public who feel confident. They need to be given the benefit of the doubt when things go wrong and not have point finger of blame.”

She also urged the Home Office to show greater trust in police officers. She said: “It sometimes feels like there is not much central push, it’s kind of ‘get on with it, good luck’, but at the same time it has felt a bit parent-child. We are in this together for our public and we would love to work ever more closely with the Home Office so that they feel even more confident in us and they can project that to others.”

Dick, Owens and Thornton also claimed the way English and Welsh policing was organised into 43 separate forces was hampering coordination on national crime issues.

Thornton said: “If you did a poll of chief constables, most would say for operational reasons it would make sense to have a fewer number of larger forces. But the issue is political. We are constantly trying get people to collaborate to cooperate in the public interest. We are making progress. Sometimes the progress is glacial.”

Owens said she was concerned forces were “going to be get left behind” on national issues such as cybercrime, fraud and child sexual abuse, because of the current division of forces.

Labour seized on the officers’ concerns over resourcing. Louise Haigh, the shadow policing minister, said: “The most senior police officers in the land have called out the dangerous Tory delusion on police cuts.

“In the face of overwhelming evidence from senior officers and their own officials, it appears that the only people in the country who now believe the loss of 21,000 officers hasn’t made the blindest bit of difference to community safety is Theresa May’s government.”

HEADLINE	<b>06/05 Police: deemed paranoid; he kills 6 later</b>
SOURCE	<a href="https://www.washingtonpost.com/news/post-nation/wp/2018/06/05/he-was-deemed-paranoid-and-psychotic-years-later-he-killed-six-in-arizona-police-say/?utm_term=.322969aaf67c">https://www.washingtonpost.com/news/post-nation/wp/2018/06/05/he-was-deemed-paranoid-and-psychotic-years-later-he-killed-six-in-arizona-police-say/?utm_term=.322969aaf67c</a>
GIST	<p>By 2009, Dwight Lamon Jones's 21-year marriage was cascading into violent chaos.</p> <p>He and his wife had been fighting a lot, court records say, and at one point, he fractured her rib cage. On May 6, 2009, Jones threatened to kill his wife in front of their 12-year-old son, screaming expletives and telling the boy his mother didn't care about him.</p> <p>"I'll take you out to the ... pool and drown you," Jones told his wife, according to court records.</p> <p>Connie Jones called police that day. Less than a week later, she filed for divorce.</p> <p>Her husband was arrested and taken to two psychiatric hospitals, where he stayed for several days. He was discharged, even though doctors found that his mental state was deteriorating. Dwight Jones "will continue to unravel ... he will become increasingly paranoid, likely psychotic, and pose an even greater risk of perpetrating violence," according to an assessment by Steven Pitt, a prominent forensic psychiatrist who had consulted in several high-profile criminal cases.</p> <p>And unravel Jones did.</p> <p>He spent the past several years living in hotel rooms, embittered by his divorce and consumed with long-held grudges, police say.</p> <p>In hours-long, rambling videos posted in a YouTube channel called "exposing lowlifes," Jones railed against his perceived enemies — judges, psychiatrists, lawyers, counselors, and his ex-wife — whom he accused of conspiring to paint him as an abusive and troubled man, to deprive him of his son. He claimed that his former spouse was the abuser, and she had concocted a dubious tale of a battered wife.</p> <p>His anger boiled over last week, in a violent rampage that sent police on a days-long manhunt and rattled Scottsdale, Ariz., a Phoenix suburb known for its golf courses, resorts and nightlife. Police say Jones swiftly targeted people who had been involved in his divorce proceedings, including the forensic psychiatrist who had examined him. The killing spree would end in Jones's death, police say, after the 56-year-old wanted for killing six people shot himself inside a hotel room.</p> <p>Connie Jones, 52, described her ex-husband as a "very emotionally disturbed person."</p> <p>"As a medical professional and a citizen I am deeply saddened by the tragedy caused by my ex-husband ... Personally, I have feared for my safety for the past nine years," Jones, who is a doctor, said in a brief statement. "I cannot express the emotions I feel for the innocent families touched by this senseless violence."</p> <p>Jones's rampage began Thursday, when police say he shot and killed Pitt. The 59-year-old psychiatrist was killed in broad daylight outside his office on the outskirts of Scottsdale.</p> <p>Less than 24 hours later, Jones went to the law firm his wife had retained during the divorce. There, police say, he shot Veleria Sharp, 48, and Laura Anderson, 49, two paralegals who worked for the firm in downtown Scottsdale. With a gunshot wound to her head, Sharp made her way out of the office and flagged a bus driver for help before she died. Police followed her blood trail back to the office and found Anderson.</p> <p>The next victim was psychologist Marshall Levine, 72, who was not tied to Jones's divorce case but happened to share an office space with someone who was: another psychologist Jones's son was required to see as part of the divorce proceedings. Levine's girlfriend found his body just after midnight Saturday, police said.</p>

By midnight Monday, police found two more bodies. Mary Simmons, 70, and Bryon Thomas, 72, were shot to death in their home in Fountain Hills, a town outside Phoenix. Investigators believe Jones went to that home Sunday afternoon and killed the two, though they have not said why.

Jones killed himself inside an Extended Stay hotel room, where he had been living, as tactical team members closed in Monday morning. Police have not said what kind of weapon Jones used in the killings, or how he got it.

For days, the attacks placed many in the legal and mental-health communities on edge and raised speculations that Pitt, the most well-known of the victims, may have been killed because of his profession, which required him to study the minds of criminals. Some feared that the attacker was indiscriminately killing people involved in the criminal justice and court system.

Police said they received more than a hundred tips about the attacks. One came from Connie Jones and her husband, a retired detective who recognized some of the victims' connections to the divorce case, Connie Jones said in her statement.

Little is known about Dwight Jones. He had a GED but no college degree. He and his ex-wife were married in 1988 in Fayetteville, N.C. Their son was born nine years later, in 1997. For much of their marriage, Dwight Jones stayed at home and took care of their son, while Connie Jones worked. Her substantial salary as a radiologist afforded them a house in Scottsdale, two Mercedes-Benz cars and a Toyota.

By 2009, Dwight Jones had descended into troubling behavior. In January of that year, his son's school in Scottsdale sought harassment orders against him after he assaulted administrators, the Arizona Republic reported. The boy was transferred to another school. In April of that year, he attacked his wife in front of their son because she asked the boy to turn down the TV. Jones pinned his wife down on the couch, with his knee pressed against her chest. If she disrespected him, Jones said, "she would be found at the bottom of the pool," according to court records cited by the Republic.

The abuse led to a police standoff on May 6, 2009, when Connie Jones secretly called 911. After police arrived, Dwight Jones refused to come out of the house, and the boy was inside with him, court records say. He told his son that his mother was a whore.

"She's got these cops out there ready to kill me ... your mom wants me to die ... she wants you to die," Jones told his son, according to court records.

Jones was charged and later pleaded guilty to disorderly conduct, a misdemeanor, public records show.

Pitt, the psychiatrist, testified during the divorce proceedings that Jones had anxiety and mood disorders, that he was antisocial, narcissistic and paranoid. He lacked remorse and frequently suspected his ex-wife of infidelity, even without justification. He had no friends or confidants, but had a "grandiose sense of self importance" and required "excessive admiration," court records say.

He had made egregious claims that Connie Jones sexually abused their son. He also was often armed. According to a psychologist's report, Dwight Jones "always had a weapon because of a disagreement he had with the landscape company."

Jones, though, loved his son "very deeply," court records say. And at one point after his parents separated, the boy was missing his father. The divorce left the child traumatized, staring into space or falling asleep during sessions with counselors.

The marriage was dissolved in 2010, and Connie Jones was given sole custody of the son. A judge allowed supervised visits every week, despite Jones's abusive behavior and experts' assessments that he was mentally unstable.

	<p>Before the attacks, he is believed to have created several “narrated” YouTube videos, said Sgt. Ben Hoster, spokesman for the Scottsdale Police Department. Some were posted as recently as a week ago. None of the videos showed his face; some just showed a white mask as a man’s voice can be heard talking about a corrupt court system he claimed had been rigged against him, according to the Arizona Republic’s description of the videos.</p> <p>YouTube has since suspended the channel, and the videos have been replaced with a message in a red banner: “This account has been terminated due to multiple or severe violations of YouTube’s policy against spam, deceptive practices, and misleading content or other Terms of Service violations.”</p>

<b>HEADLINE</b>	<b>06/05 Missing teens vulnerable sex trafficking</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/local/many-washington-teens-are-missing-vulnerable-to-sex-trafficking/763759488">https://www.kiro7.com/news/local/many-washington-teens-are-missing-vulnerable-to-sex-trafficking/763759488</a>
<b>GIST</b>	<p>SEATTLE - For weeks, media outlets reported on a Bonney Lake teenager who disappeared on May 9 and is safe tonight. But many more teens are still missing, including these three girls whose cases did not receive the same level of attention. All three disappeared around the same time, late April and early May. And they are still missing.</p> <p>Kyra Doubek was 15 when she ran away. She does not talk easily about her years as a runaway on the streets of Washington state. It is an experience, she says, that can leave a lifetime of shame, much of it hidden.</p> <p>"Kids go missing all the time," she says, "and very rarely do they make it actually like into the spotlight, on the news."</p> <p>She says most teenagers believe they are running towards something better, some place safer. She was asked if they find greater safety when they leave home.</p> <p>"Very rarely, very, very rarely do youth who run away find a safer place to be," she said. "I didn't that's for sure."</p> <p>What did she find?</p> <p>"I found substances," she said. "I found older men who were willing to provide me with a place to stay but there was this unspoken agreement in exchange for a sex act."</p> <p>Seattle police say on any day, they have 50 to 60 active missing persons cases; about half involve children.</p> <p>According to the advocacy group REST or Real Escape from the Sex Trade, one in three runaways is recruited by a pimp within 48 hours of leaving home. The average age of these runaways? Just 15 years old.</p> <p>And most often, says Doubek, they are found by predators trolling the internet even before they leave home.</p>

"They look for these people posting sad posts," she says. "It's not that they're bad kids. As my colleague says they're sad kids, they're not bad kids."

The Washington State patrol posts pictures and information about children missing in this state.

Sixteen-year-old Shianna Victoria Elkins ran away from Mount Vernon on April 19. Elkins is described as a "chronic runaway." Seven days later, Ximena Delgado ran away from her Spokane home. Police believe the 16-year-old is with her boyfriend. Seventeen-year-old Hannah Turkington from Vancouver, Washington, ran away two days after the Bonney Lake teen. Police describe her, too, as a "chronic runaway."

All of it, says Pierce County prosecutor Mark Lindquist, is sobering.

"It isn't just runaways and vulnerable girls who are lured into this world," Lindquist said. "Sometimes these pimps are going after middle class girls as well."

Kyra Doubek finally made it off the streets when she was 26.

"We do get better," she said.

Now she is devoting her life to helping those who have been there, too.

"My whole goal with everything is to hopefully get people to dream again," she said, smiling, "and then help them smash those dreams out of the park."

She wants law enforcement to target men who buy sex from children. Moreover society needs to make the stigma so great they will stop.

And parents, she says, need to give their undivided attention to their children, know the people their children are meeting in person and online.

<b>HEADLINE</b>	<b>06/06 Multi-state drug trafficking bust</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/federal-pages/dhs/ice/11-indicted-multi-state-drug-trafficking-case-ice-hsi-investigation/">https://www.hstoday.us/federal-pages/dhs/ice/11-indicted-multi-state-drug-trafficking-case-ice-hsi-investigation/</a>
<b>GIST</b>	<p>Eleven individuals are facing federal drug charges in multiple indictments unsealed May 30 targeting a large, multi-state drug trafficking organization based in Mississippi, following a joint investigation by U.S. Immigration and Customs Enforcement (ICE) Homeland Security Investigations (HSI), the Drug Enforcement Administration and the Mississippi Bureau of Narcotics.</p> <p>According to court documents, the indictments resulted from an extensive Organized Crime Drug Enforcement Task Force (OCDETF) investigation dubbed Operation Highlife. The Mississippi-based drug trafficking organization is charged with distributing more than 40 kilograms of methamphetamine, more than 3 kilograms of cocaine and over 100 pounds of marijuana illegally smuggled into the U.S. from Mexico across numerous states to include Alabama, Mississippi, Georgia, Texas, Tennessee and California.</p> <p>"Methamphetamine has devastated countless communities due to the dramatic health and public safety consequences that typically accompany its introduction into an area," said Special Agent in Charge Jere T. Miles of Homeland Security Investigations in New Orleans. "Today's arrests mark the culmination of an extensive joint effort by HSI, the Mississippi Bureau of Narcotics, and the Drug Enforcement Administration to dismantle a drug trafficking organization that decimated parts of Mississippi and Alabama with illegal drugs smuggled into the U.S. from Mexico. This operation is a testament to the</p>

	seamless partnership between federal, state and local law enforcement, which HSI sincerely appreciates in the combined effort to improve the lives of law-abiding residents throughout Mississippi and Alabama.” Miles oversees a five-state area of operations to include Mississippi, Alabama, Arkansas, Louisiana and Tennessee.

<b>HEADLINE</b>	<b>06/06 South Sudan civil war atrocities</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/06/06/south-sudans-latest-civil-war-atrocities-kept-out-sight.html">http://www.foxnews.com/world/2018/06/06/south-sudans-latest-civil-war-atrocities-kept-out-sight.html</a>
<b>GIST</b>	<p>KINSHASA, Congo – The accounts are horrific. A young girl strangled and gang-raped. Children burned alive as government soldiers blocked the door of their hut and set it aflame.</p> <p>These are some of the atrocities revealed in 14 reports, seen by The Associated Press, that have not yet been released by the independent body charged with monitoring a failed cease-fire imposed in December in South Sudan, where civil war is now well into its fifth year.</p> <p>The reports should have been released last month at a meeting led by the Joint Monitoring and Evaluation Commission but South Sudan's government did not attend, preventing the accounts of abuses from being made public because there was not a quorum.</p> <p>"The reports contain evidence that soldiers continue to kill, rape and destroy property. The decision to keep these ongoing atrocity crimes secret sends the wrong message," Jehanne Henry, senior Africa researcher for Human Rights Watch, told the AP. Only five such reports have been released this year.</p> <p>The African Union and the East African regional bloc that mediates South Sudan's peace talks should take action, said Edmund Yakani, executive director for the local advocacy group Community Empowerment for Progress Organization.</p> <p>"Silence on the violations only encourages further violations," he said.</p> <p>While people attending the meeting said copies of the reports on atrocities were distributed to diplomats from the United States, the United Nations, Britain and elsewhere, none have released them publicly or made public the reports of abuses.</p> <p>South Sudan's government didn't respond to multiple requests for comment on why it didn't attend last month's meeting.</p> <p>The unpublished reports describe violations by both government and opposition forces but most of the accounts blame government troops for instigating attacks and deliberately targeting civilians.</p> <p>During an attack in February on a school in the town of Modit, children fled into a hut to hide. Government soldiers blocked the door and set it on fire, burning the children to death, said one report.</p> <p>A young girl fetching water from a river in the town of Yei was strangled before she and her mother were gang-raped by government soldiers, another report said. More than 30 cases of sexual assault were recorded in Yei and surrounding areas in the three months following December's cease-fire agreement.</p> <p>And in the nearby town of Morobo, a woman was raped and beaten so badly that she lost sight in one eye. A disabled woman, unable to flee the fighting, was thrown into a burning house by government soldiers, the report said.</p> <p>The group that compiled the reports, the Ceasefire and Transitional Security Arrangements Monitoring Mechanism, told the AP its mandate doesn't require it to publish reports and that releasing them had been the task of its parent body, the Joint Monitoring and Evaluation Commission. The commission reports to</p>

	<p>the East African regional bloc, the Intergovernmental Authority on Development. Neither responded to several AP requests for comment.</p> <p>The concealing of the atrocities comes as the international community loses patience with South Sudan's civil war, which has killed tens of thousands and created Africa's largest refugee crisis since the Rwandan genocide in 1994. The U.S., South Sudan's largest aid donor, has increased pressure on the Juba government amid widespread allegations that its officials are profiting from the conflict instead of working to end it.</p> <p>Last week the U.N. Security Council adopted a U.S.-sponsored resolution that warns of an arms embargo and sanctions against six high-ranking officials if the fighting doesn't stop.</p>

<b>HEADLINE</b>	<b>06/05 Ohio immigration sting: 100+ arrests</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-06-05/urgent-immigration-agents-arrest-114-in-landscaper-sting">https://www.bloomberg.com/news/articles/2018-06-05/urgent-immigration-agents-arrest-114-in-landscaper-sting</a>
<b>GIST</b>	<p>Sandusky, Ohio (AP) -- More than 100 workers at an Ohio gardening and landscaping company were arrested Tuesday when about 200 federal officers descended on the business and carried out one of the largest workplace immigration raids in recent years.</p> <p>The operation was part of the White House's increasing focus on businesses that hire people in the country illegally amid a broad range of immigration crackdowns under President Donald Trump that include stepped-up deportations, targeting of sanctuary cities and zero-tolerance border policies.</p> <p>The 114 arrests occurred at two locations of Corso's Flower &amp; Garden Center, one in Sandusky, a resort city on Lake Erie, and another in nearby Castalia. U.S. Immigration and Customs Enforcement said it expected criminal charges including identity theft and tax evasion.</p> <p>No criminal charges were filed against the company, but the employer is under investigation, authorities said. Two locations were searched, and Khaalid Walls, an agency spokesman, said "a large volume of business documents" were seized.</p> <p>The operation drew criticism over its heavy show of force that involved aircraft surveillance and a large contingent of federal agents to round up workers at a family business. It also highlights a tightrope President Donald Trump's administration is walking as it seeks to please immigration hawks but risks alienating business-friendly Republicans struggling to find enough workers in a tight job market.</p> <p>In April, agents made about 100 worker arrests at a meatpacking plant in rural Tennessee, another high-</p>

profile show of force reminiscent of President George W. Bush's administration. No criminal charges have been filed against the employer.

Tuesday's operation was carried out with quiet efficiency. At the Castalia facility — covered with trees, flowers and greenhouse tarps — no workers were seen running as about 100 law enforcement officials established a perimeter. A voice on a radio called attention to specific employees who might try to flee, but none did.

The investigation into Corso's began in October 2017 when the U.S. Border Patrol arrested a woman who gave stolen identity documents to job applicants in the country illegally, said Steve Francis, head of U.S. Immigration and Customs Enforcement's Homeland Security Investigations unit in Detroit.

The document vendor led investigators to the landscaping company, where they examined documents in its files for irregularities, Francis said. Some Social Security numbers belonged to dead people.

Of the 313 employees whose records were examined, 123 were found suspicious and targeted for arrest and criminal charges of identity theft and, in nearly all cases, tax evasion. Francis said the identity theft targeted U.S. citizens who had no idea their information was being used at the Ohio business.

"We verified that a lot of U.S. persons were obviously unaware of this. It's caused them a lot of hardship," Francis said.

Immigration officials have sharply increased audits of companies to verify their employees are authorized to work in the country. There were 2,282 employer audits opened between Oct. 1 and May 4, nearly a 60 percent jump from the 1,360 audits opened between October 2016 and September 2017. Many of those reviews were launched after audits began at 100 7-Eleven franchises in 17 states in January.

<b>HEADLINE</b>	<b>06/05 Federal Way: arrest in SUV explosion</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/police-investigating-reported-explosion-in-federal-way-neighborhood">http://komonews.com/news/local/police-investigating-reported-explosion-in-federal-way-neighborhood</a>
<b>GIST</b>	<p>A man was arrested after an SUV explosion rocked a Federal Way neighborhood Tuesday night, according to police. It happened around 6:00 p.m. along 4th Ave. SW, between SW 297th and SW 299th Streets, just off Dash Point Road.</p> <p>"It was louder than a shotgun, it was good and loud," said neighbor Tony Wilson.</p> <p>He said he was inside his garage when he heard a loud blast. "I thought a piece of my roof had blown off," he said. "I just thought it was the wind to begin with, you know a big gust of wind blow something, a few little pieces of my roof."</p> <p>Wilson said he went outside to find his sidewalk littered with pieces of the SUV and part of his yard were on fire. "The pickup (truck) over there was pretty well destroyed, with pieces all over," said Wilson. "I quickly whipped out my camera. Then my neighbors were more active than me and came and got my hose to put out my yard fire."</p> <p>The neighbors also helped dose a small fire that had started on Wilson's roof.</p> <p>He said he found pieces of the SUV on his roof and another smoldering in his backyard.</p> <p>"I've never had a car blow up like that. I've seen some burned," said Wilson. According to South King Fire and Rescue, there are no reports of injuries.</p> <p>Police said the man was arrested for, "malicious explosion of a substance in the 2nd degree" due to the</p>

	obvious explosion of the vehicle.
	Detectives are still trying to figure out how it all happened. Agents from the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) have now joined the investigation.

<b>HEADLINE</b>	<b>06/05 Kentucky: hatchet attack suspect caught</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/nation-now/2018/06/05/hatchet-attack-suspect-tennessee/675897002/">https://www.usatoday.com/story/news/nation-now/2018/06/05/hatchet-attack-suspect-tennessee/675897002/</a>
<b>GIST</b>	<p>The search ended Tuesday night for a man suspected of using a hatchet to kill a gym owner, police said.</p> <p>Domenic Micheli <u>was arrested by Kentucky State Police</u> on Interstate 65 near Bowling Green, according to the Metro Nashville Police Department. Bowling Green is roughly 80 miles northeast of Nashville. Nashville police detectives were en route to Kentucky Tuesday night, police said.</p> <p>Micheli was found driving a Toyota Prius, the vehicle he was seen driving before Monday's attack at a Belle Meade strip mall.</p> <p>Police have been searching for Micheli since Monday after the slaying of Joel Paavola, who owned the Balance Training location in Belle Meade, southwest of Nashville.</p> <p>Authorities said that Micheli formerly worked for Paavola, who fired Micheli from the gym 14 months ago.</p> <p>Police said that Paavola was brutally killed with a hatchet and another "cutting instrument."</p> <p>"Just a senseless, brutal, violent attack this morning on Mr. Paavola as he was there in the business," Metro Nashville Police Department spokesman Don Aaron said Monday.</p> <p>Before his capture, the 36-year-old suspect was last seen at an urgent care facility in Gallatin, Tenn., on Monday morning. Gallatin police said Micheli asked the urgent care workers for a suture kit but was not willing to wait or provide any personal information.</p> <p>Micheli left without receiving any treatment or medical supplies, police said.</p> <p>Micheli was arrested outside of the White House in April by the U.S. Secret Service after driving his car up to a checkpoint and refusing to move it.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>06/05 White House contractor arrested</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jun/5/martese-maurice-edwards-nsc-contractor-arrested-wh/">https://www.washingtontimes.com/news/2018/jun/5/martese-maurice-edwards-nsc-contractor-arrested-wh/</a>
<b>GIST</b>	<p>A man with a White House pass was arrested outside the presidential home on a charge of attempted murder — reportedly weeks after the warrant was issued.</p> <p>Martese Maurice Edwards, 29, had been working as a contractor for the National Security Council in the Old Executive Office Building. According to NBC News, he had a White House pass.</p> <p>According to a Secret Service statement, the Suitland, Maryland, man was arrested when he reported for work Tuesday, one day after the Service learned of the warrant.</p> <p>“On June 5, 2018, Edwards was promptly arrested by Secret Service Uniformed Division Officers at a</p>

checkpoint outside of the White House complex when he was reporting to work as a contractor. Edwards was transported to MPD Second District for processing,” a Secret Service spokesperson told The Washington Times.

Mr. Edwards is accused of first-degree attempted murder.

While details on that charge were not made public by the White House, there was no immediate indication that Mr. Edwards is suspected of trying to kill someone at the White House, or that the charge is directly related to politics or his job.

But according to NBC News reporter Geoff Bennett, there was a several-week lag between the warrant for Mr. Edwards’ arrest and the Secret Service learning about it.

“Secret Service says it learned of the arrest warrant when it was entered into the national Criminal Justice Information System on June 4. But 2 law enforcement officials say warrant was issued in mid-May, raising questions about why Maryland authorities didn’t enter it earlier,” he wrote on Twitter.

<b>HEADLINE</b>	<b>06/05 Killing spree suspect ranting on YouTube</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/dwight-lamon-jones-arizona-killing-spree-suspect-ranted-about-divorce-in-youtube-videos/">https://www.cbsnews.com/news/dwight-lamon-jones-arizona-killing-spree-suspect-ranted-about-divorce-in-youtube-videos/</a>
<b>GIST</b>	<p>SCOTTSDALE, Ariz. -- The man who police say killed six people in the Phoenix area spent hours online griping about his ex-wife and the family court system that sided with her in a contentious divorce years ago. Dwight Lamon Jones spoke in a series of YouTube videos posted in May about the judge, counselor and prominent forensic psychiatrist in the case.</p> <p>The psychiatrist, Steven Pitt, who also assisted in the JonBenét Ramsey mystery in Colorado, was called a "scumbag" by Jones in one of the videos. He was killed Thursday.</p> <p>Jones was divorced in 2010 and his ex-wife was awarded custody of their son. Pitt had evaluated Jones and testified that year that he had anxiety and mood disorders and symptoms of a paranoid personality.</p> <p>A hunch from a retired detective helped lead police to Jones and link the victims, some of whom were connected to the divorce case, authorities said after the assailant killed himself inside a Scottsdale hotel Monday with officers closing in.</p> <p>In an unexpected twist, the suspect's ex-wife, Connie Jones, said her current husband, a retired police detective, made the connection between her divorce and the crime scenes and notified police of his suspicion Saturday night.</p> <p>The victims included Pitt, two paralegals who worked for the law office that represented Jones' wife, and a marriage-and-divorce counselor who was apparently targeted in a case of mistaken identity.</p> <p>Authorities have since named two other victims found shot dead early Monday in their Fountain Hills home as 70-year-old Mary Simmons and 72-year-old Bryon Thomas. Police said they had probable cause to link all six killings to the dead suspect, but they have not disclosed a connection between Jones and the victims in Fountain Hills.</p> <p>CBS affiliate KPHO reports that Jones was already on investigators' radar Monday when they saw him dumping a bag that contained a gun that had been stolen from the Fountain Hills home.</p> <p>Connie Jones said in a statement that her ex-husband was a "very emotionally disturbed person."</p> <p>In the YouTube videos, Jones appeared to be resentful about the divorce and accused his ex-wife and her</p>

	attorney of spreading lies. Jones posted a total of 18 videos, some of them nearly an hour long, KPHO reports. They've since been removed.

<b>HEADLINE</b>	<b>06/05 Local law enforcement in ICE crackdown</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/eye-on-america-feds-enlist-local-law-enforcement-in-ices-immigration-crackdown/">https://www.cbsnews.com/news/eye-on-america-feds-enlist-local-law-enforcement-in-ices-immigration-crackdown/</a>
<b>GIST</b>	<p>Six counties in Georgia have joined a federal program known as 287(g) that deputizes local law enforcement to effectively act as U.S. Immigration and Customs Enforcement (ICE) agents. CBS News went to the Gwinnett County Jail to see how the program is working.</p> <p>"Under the Trump administration, right now we're going by all law, immigration laws," one deputy said. "So you come in for jaywalking, we find out that you're illegal, we hand you over to ICE. We work for ICE. We do not deport anybody."</p> <p>Just north of Atlanta, Gwinnett County accounted for 20 percent of all 287(g) encounters last year, by far the most nationally.</p> <p>Nationwide, 78 local law enforcement agencies in 20 states participate in the 287(g) program, through which ICE deported close to 6,000 illegal immigrants last year -- 653 from Gwinnett County alone.</p> <p>"If you're in a country illegally, the least you can do is obey that country's laws," said Butch Conway, Gwinnett County sheriff.</p> <p>But some people are questioning the impact of the program.</p> <p>"We are one of the worst states to be an undocumented individual," said Aisha Yaqoob, the policy director for Asian Americans Advancing Justice. "Our communities are targeted based on what they look like. Police officers pulling people over for something as simple as a broken tail light or driving without a license."</p> <p>Is it profiling, or is that them just doing their job?</p> <p>"So just the thought of dealing with someone who is an undocumented person gives them a little bit extra push to maybe take them to the jail and see what they can do," Yaqoob said.</p> <p>We asked Conway what he says to the critics who argue the county is arresting nonviolent offenders and sending them over to ICE.</p> <p>"Well, they're wrong," Conway said. "I've known illegal aliens personally for many years. They work in the community, they live in the community, they're great people. If they're going to be here illegally, you drive, you're taking a chance."</p>

<b>HEADLINE</b>	<b>06/06 EU warns on multi-million euro scam</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-china-trade-greece-hungary/eu-warns-uk-centered-china-import-scam-may-shift-to-europes-silk-road-idUSKCN1J20U3">https://www.reuters.com/article/us-china-trade-greece-hungary/eu-warns-uk-centered-china-import-scam-may-shift-to-europes-silk-road-idUSKCN1J20U3</a>
<b>GIST</b>	<p>BRUSSELS (Reuters) - European Union anti-fraud investigators suspect Greece and Hungary may have become the main EU centers of a multi-million-euro scam involving imports of Chinese clothing and footwear that uses the infrastructure of China's new "Silk Road".</p> <p>The large-scale fraud, which consists in underdeclaring the value of imported goods to pay lower duties</p>

	<p>and sales taxes, was first uncovered in Britain, where it had gone on for years, prompting the European Commission this year to demand that London pay 2.7 billion euros (\$3.1 billion) worth of lost customs duties to the EU budget.</p> <p>Officials at the EU anti-fraud agency OLAF said they now suspected the scam could have shifted to Hungary and to the port of Piraeus in Athens, which has been majority-owned by China's state-owned COSCO Shipping (601919.SS) since 2016.</p> <p>Hungarian and Greek customs data show a surge of undervalued clothing and footwear imports from China over the past two years, OLAF officials told Reuters. They stressed that this trend had coincided with a drop in undervalued Chinese imports into Britain.</p> <p>Customs duties in EU countries are a direct revenue for the bloc's budget. They are collected by national authorities before being sent to Brussels.</p> <p>OLAF officials said the trend was "worrying" and that monitoring of import flows would be enhanced.</p> <p>Reuters exclusively reported in April that Italian authorities were investigating suspected import fraud by Chinese criminal gangs at Piraeus port, the largest in Greece.</p>

HEADLINE	<b>05/31 Tariffs could be blow to national security</b>
SOURCE	<a href="https://www.cnbc.com/2018/05/31/trumps-tariffs-a-blow-to-key-us-allies-and-us-national-security.html">https://www.cnbc.com/2018/05/31/trumps-tariffs-a-blow-to-key-us-allies-and-us-national-security.html</a>
GIST	<p>The U.S. military could be caught in the crosshairs following President Donald Trump's move to slap tariffs on some of the nation's closest allies.</p> <p>The Trump administration imposed new duties on steel and aluminum imports from the European Union, Canada and Mexico on Thursday citing national security concerns. The tariffs of 25 percent on steel imports and 10 percent on aluminum imports are slated to take effect at midnight Thursday despite Secretary of Defense James Mattis' recommendation of targeted tariffs.</p> <p>Stephen Biddle, adjunct senior fellow for defense policy at the Council on Foreign Relations, argues that the fresh round of tariffs will undermine America's ability to leverage allies to support U.S. interests.</p> <p>"The U.S. grand strategy for multiple generations has been premised on the idea that we are going to collaborate with rich and powerful allies that our enemy doesn't have and that this will advance American national security in a variety of ways," Biddle said. "The allies in question are precisely the ones that we are now engaged in these trade disputes with."</p> <p>In a Department of Defense memo related to the proposed tariffs, Mattis said that while the Pentagon "concur[s] with the Department of Commerce's conclusion that imports of foreign steel and aluminum based on unfair trading practices impair the national security," the U.S. military requirements for steel and aluminum each only represent about 3 percent of U.S. production. Mattis cited concerns about the "negative impact on our key allies" and said that therefore "targeted tariffs are more preferable than a global quota or global tariff."</p> <p>Speaking from the Pentagon on Thursday, chief spokeswoman Dana White said the department has yet to evaluate the policy. "As that just came out, we just need some time to take a look at it," White said. Meanwhile, the European Union, Canada and Mexico have announced plans to target a variety of U.S. products with equivalent measures.</p> <p>What's more, the Trump administration will also place quotas on other countries, such as South Korea, Argentina, Australia and Brazil, instead of tariffs. "This is clearly bad for our allies and partners," said Andrew Hunter, director of the Defense-Industrial Initiatives Group at the Center for Strategic and International Studies.</p> <p>"It's kind of a perverse dynamic that we end up targeting our partners and allies who aren't actually driving the overcapacity that is hurting the U.S. industry, but they are the ones that are going to pay these tariffs," Hunter said.</p> <p>Biddle, who is also a professor of international and public affairs at Columbia University, noted that America's allies will "re-evaluate how trustworthy the United States is as a partner on all sorts of things."</p> <p>"If the United States is willing to exploit a loophole in a trade negotiation," Biddle said, "what's to say the United States wouldn't find some legalistic excuse for not acting in some other way our allies need us to act on?"</p> <p>Similarly, Remy Nathan, vice president for international affairs at the Aerospace Industries Association, told CNBC in a prior interview that "oftentimes trade is political and security cooperation is political and the two intertwine."</p>

	"When we are enjoying good trade relations with other countries we have positive foreign relations, positive security cooperation, and they are oftentimes more interested in purchasing U.S. defense equipment and working with our military," Nathan said. "The opposite is also true."

<b>HEADLINE</b>	<b>05/31 NKorea official to deliver 'personal letter'</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/politics/2018/05/31/pompeo-says-north-korean-official-to-deliver-personal-letter-from-kim-jong-un-to-white-house.html">http://www.foxnews.com/politics/2018/05/31/pompeo-says-north-korean-official-to-deliver-personal-letter-from-kim-jong-un-to-white-house.html</a>
<b>GIST</b>	<p>Secretary of State Mike Pompeo said Thursday that North Korean official Kim Yong Chol will travel to Washington to deliver a "personal letter" from the rogue regime's leader Kim Jong Un, while saying talks for a potential summit are moving in the "right direction."</p> <p>Pompeo, after holding meetings with the visiting senior official in New York City, said the North Korean envoy will hand off the letter on Friday in D.C. It is presumably the formal response to President Trump's letter last week canceling the summit.</p> <p>But since then, planning discussions have resumed, including Pompeo's high-level meetings these past two days in New York. Pompeo told reporters a summit in Singapore is "expected."</p> <p>"I am confident we are moving in the right direction," Pompeo said, noting that both nations had teams in Singapore to prepare for a summit between Trump and Kim, which was initially slated for June 12. Trump had called it off last week in response to threatening rhetoric from the DPRK.</p> <p>Pompeo said it was unclear whether the meeting would actually take place on June 12, but said that "real progress" has been made in meetings with North Korean officials this week.</p>

<b>HEADLINE</b>	<b>05/31 New north police HQ bldg. still on hold</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/homeless-camp-off-table-but-new-police-precinct-still-on-hold-in-north-seattle">http://komonews.com/news/local/homeless-camp-off-table-but-new-police-precinct-still-on-hold-in-north-seattle</a>
<b>GIST</b>	<p>SEATTLE – People living in the Haller Lake neighborhood cheered during a community meeting Thursday night over the announcement that siting another homeless camp off Aurora Avenue is off the table for now. Still, many are concerned that plans for a new police precinct remain in limbo.</p> <p>The city owns an empty lot at N 128th Street and Stone Avenue where police headquarters were supposed to go. More recently, the property has been discussed as a possible location for a tiny house village.</p> <p>"Thirty-six percent of the crime in this city happens in north Seattle and yet our police station was put on hold," said Cathy Moray, one of 150 neighbors who came out to hear the panel discussion.</p> <p>Like many of the people who live in the area, Moray said police need a new building to provide effective public safety throughout the north end.</p> <p>The plan the city had for a new north precinct got scrapped when the price tag soared to \$160 million. In the past several weeks, talk of siting a tent encampment or tiny house village gained steam.</p> <p>City leaders heard the concerns and assured people at the meeting that the land won't house homeless people - at least in the immediate future.</p> <p>"Having said that, I also want to be really clear, I'm not willing to say never, only in part because I'm not clear where we're going to be a year from now on homelessness," said Seattle Deputy Mayor Michael</p>

	Fong.  As for a new police headquarters, that's on hold until a new chief is hired, which should happen by July. However, there are further discussions on whether the north precinct is too big and should be divided in two, thereby requiring two separate headquarters.

<b>HEADLINE</b>	<b>05/31 Hamas facing crisis in Gaza</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/as-hamas-faces-a-crisis-it-tries-to-turn-up-pressure-on-israel/2018/05/31/ff0553e2-5e9f-11e8-b656-236c6214ef01_story.html?utm_term=.b6d761723095">https://www.washingtonpost.com/world/as-hamas-faces-a-crisis-it-tries-to-turn-up-pressure-on-israel/2018/05/31/ff0553e2-5e9f-11e8-b656-236c6214ef01_story.html?utm_term=.b6d761723095</a>
<b>GIST</b>	<p>GAZA CITY — The Islamist Hamas movement, which rules the Gaza Strip, is facing its worst crisis in years as it confronts a severe cash shortage, a loss of regional allies and no obvious way to ease a blockade that is crippling local living conditions and stoking popular discontent.</p> <p>As it wrestles with this predicament, Hamas is trying to turn up the pressure on Israel — most notably by encouraging weekly mass protests along the Gaza border fence — without provoking an all-out military response that analysts say the group might be too weak to withstand. The immediate aim, analysts say, is to loosen the years-old blockade imposed on Gaza by Israel, Egypt and the rival Palestinian Authority, which controls the West Bank.</p> <p>Some Hamas leaders have also seen the protests as a chance for Gazans to vent and direct their anger at Israel. But as the Palestinian death toll in the protests has mounted with each passing week, so has public dismay with the militant group.</p> <p>Hamas, which the United States considers a terrorist organization, is also trying to strike an awkward balance between its traditional strategy of armed resistance against Israel and the imperative to preserve enough calm in Gaza so the group can govern it.</p> <p>On Tuesday, another militant Palestinian group, Islamic Jihad, fired scores of mortar shell and rockets from Gaza into southern Israel, a dramatic escalation that analysts say could not have happened without Hamas's knowledge and perhaps support. Israel responded with airstrikes.</p> <p>Hamas's armed wing asserted joint responsibility for the shelling, and its compounds were struck by Israeli jets overnight. But the group's political leadership swiftly announced a cease-fire after talks with Egyptian mediators — widely seen as a sign that Hamas has no interest in going to war.</p> <p>At the same time, the group's leadership is considering concessions to Israel and the Palestinian Authority, according to the Israeli media, Arab press reports and analysts. The aim would be to win an easing of restrictions on Gaza that could improve conditions for its 2 million inhabitants.</p> <p>Unemployment in the territory is running at more than 40 percent, and the infrastructure is collapsing, with residents getting only four hours of electricity a day and hospitals reporting shortages of medicine and other crucial supplies. According to the United Nations, the territory will be “unlivable” by 2020.</p> <p>“Hamas is really under pressure. They have very limited options. They are ready to commit to any security arrangements,” said Ibrahim al-Madhoun, a columnist at the Hamas-affiliated journal al-Risala. To alleviate suffering in Gaza and retain power, he said, Hamas would be willing even to halt attacks on Israel.</p> <p>Madhoun said the current protests are a “last resort” for Hamas. “They didn't have a choice,” he said. “It was the only way for them to try to get out of this deep crisis in Gaza.”</p> <p>Violent confrontation would only deepen Gaza's misery, and Hamas, which could have trouble replenishing its weapons stocks, might not survive another war with Israel, analysts say.</p>

	<p>Hamas's leader in Gaza, Yehiya Sinwar, said the group "will continue in the path of popular resistance and will do everything possible to prevent the demonstrations from spilling into armed conflict." Speaking in a May interview with Al Jazeera news channel however, he suggested that Hamas would escalate its actions if more Palestinians were killed. "It will demand a response from us," Sinwar said.</p> <p>The decision to support the demonstrations was a major shift for an organization otherwise known for deadly suicide bombings and rocket attacks on Israeli towns.</p> <p>The protests on the border fence started as a grass-roots initiative among students and local activists unaffiliated with Hamas. But the group soon signed on, providing transportation and other logistical support, and Hamas members were among the protesters.</p> <p>Since late March, mostly unarmed protesters have thronged to the border fence every Friday. More than 100 Palestinians have been fatally shot by Israeli soldiers, Gaza health officials report.</p> <p>Some Gazans have complained bitterly that the Hamas-backed protests have produced so many deaths and that living conditions ultimately have not improved.</p> <p>"The situation is already hard enough, and the demonstrations made it harder," said Fares al-Alami, 30, a shop owner in Gaza City's market district. "It wasn't the right time for such protests. But I don't think this government [in Gaza] has any solutions for us."</p> <p>The decline of Hamas's power has marked a stunning turn of fortunes for a movement once seen as an irresistible force in Gaza, where it fought three wars with Israel and has ruled for more than a decade.</p>

<b>HEADLINE</b>	<b>06/01 Spain PM ousted from office</b>
<b>SOURCE</b>	<a href="http://time.com/5298301/sanchez-rajoy-spain-prime-minister-vote/">http://time.com/5298301/sanchez-rajoy-spain-prime-minister-vote/</a>
<b>GIST</b>	<p>(MADRID) — Opposition Socialist leader Pedro Sanchez has won a vote to replace Mariano Rajoy as prime minister, in the first ouster of a serving Spanish leader by parliament in four decades of democracy.</p> <p>Sanchez won the no-confidence vote with 180 votes, a slim majority in the 350-seat lower house. There were 169 no votes and one lawmaker abstained.</p> <p>Rajoy, one of Europe's longest-serving heads of government, lost the vote following corruption convictions last week involving former members of his conservative Popular Party.</p> <p>The 46 year-old Sanchez is now the prime minister in waiting. Spain's King Felipe VI still has to swear him in.</p> <p>Following the vote, Rajoy went over to Sanchez in the chamber and shook the incoming leader's hand.</p>

<b>HEADLINE</b>	<b>05/31 India economic expansion outpaces China</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/indias-economic-expansion-outpaces-rival-china-1527779172">https://www.wsj.com/articles/indias-economic-expansion-outpaces-rival-china-1527779172</a>
<b>GIST</b>	<p>NEW DELHI—India's economic expansion accelerated to the fastest pace in nearly two years, pulling further ahead of rival China in the race to be the world's fastest-growing economy, as the effects fade from the government's crackdown on cash and adoption of a new tax.</p> <p>Gross domestic product in Asia's third-largest economy grew 7.7% in the three months through March compared with a year earlier, according to government data issued Thursday. That was better than</p>

economists' prediction of 7.4% and stronger than the 7% expansion in the preceding quarter.

India has now held the position as the world's fastest-growing big economy for the second quarter in a row, a title that China had wrested from it about a year ago. China's economy grew 6.8% in the past two quarters.

During the full fiscal year, India's economy grew 6.7%, which was slower than the previous year's 7.1% expansion.

India's economy had been disrupted by Prime Minister Narendra Modi's sudden move to ban India's high-value currency notes—known as demonetization—and the bumpy rollout of a new nationwide value-added tax.

"It's a healthy number and confirms that the economy is in a recovery mode," said Anubhuti Sahay, head of South Asia economic research at Standard Chartered Bank. "Growth should move up to 7.2% this fiscal year, bringing us back to the pre-demonetization levels."

The data in India showed broad-based strengthening. The growth rate in construction nearly doubled to 11.5%. Output of public administration and defense services also rose 13.3%, while manufacturing grew 9.1%.

Although the headline figures look impressive, much of the burden of driving the economy forward has been shouldered by demand. Private investments, essential to create new jobs, are lagging. Exports remain sluggish, and demand in the country's rural areas hasn't fully recovered amid heavy indebtedness of farmers.

As next year's general elections near, pressure is growing on Mr. Modi to get the economy firing on all cylinders. Criticism is mounting that not enough jobs are being generated for the more than 10 million Indians joining the workforce each year.

"While growth has accelerated, many voters, particularly in the rural community, aren't feeling the benefits," said Shailesh Kumar, director for Asia at Eurasia Group. But he added that Mr. Modi's policies have helped bring down inflation, ensuring "support for him remains intact."

GDP growth dipped to a three-year low early last year after Mr. Modi's high-value currency ban, aimed at reining in corruption, hurt demand. A quick implementation of a national tax on goods and services in July left businesses struggling to understand its complicated rules.

While these moves initially caused pain, the outlook has brightened as businesses gradually get accustomed to the new system.

However, threats to the South Asian economy have also grown lately with global oil prices rising sharply.

Mr. Modi benefited during much of his first four years in office from low oil prices, which allowed him to raise taxes. But with oil near 3.5-year highs, prices at retail fuel outlets have surged, stoking public anger and pressure on the government to slash taxes.

<b>HEADLINE</b>	<b>05/31 Starbucks racial bias training</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/starbucks-racial-bias-training-uncomfortable-and-enlightening-employees-react-1527807677">https://www.wsj.com/articles/starbucks-racial-bias-training-uncomfortable-and-enlightening-employees-react-1527807677</a>
<b>GIST</b>	Some Starbucks employees said they found this week's company training on racial bias eye-opening. But others said they felt uncomfortable and were left unsure how to apply the lessons to their daily jobs, suggesting the coffee chain has a difficult task ahead.

“By the end of it I was very exhausted. These are conversations I don’t ever have at work,” said Jaime Prater, a biracial shift supervisor at a Starbucks in Rancho Cucamonga, Calif., who participated in the four hours of exercises and discussions. “I don’t think Starbucks realized how uncomfortable it would be for people of color to have to watch these videos and talk about this. But sometimes we need to be uncomfortable.”

Krystie Ward, a barista in Patchogue, N.Y., said Tuesday’s training was enlightening, particularly a short documentary produced for Starbucks by filmmaker Stanley Nelson Jr. that detailed the history of access to public spaces for African-Americans. It featured a black man describing how he is often followed around stores by employees who suspect he is going to steal something. He said he has to be aware of the way he acts every time he leaves his house, like making sure to keep his hands visible in certain places.

“That was really powerful to me, because I couldn’t imagine living my life like that,” said Ms. Ward, who is white.

At the more-than-8,000 company-owned cafes that closed for business Tuesday afternoon, employees divided into groups and huddled around iPads to watch a series of videos featuring diversity experts, Starbucks executives and the hip-hop artist Common talking about the nature of bias and why it is important to create a welcoming environment for all guests at Starbucks.

They also listened to a series of audio recordings of Starbucks employees describing interactions they have had with customers in which their own biases became apparent.

In one, an employee recalled seeing a scruffy-looking man approach a woman in line and hold out his hand to her, after which the woman got money out of her purse. The employee said she went up to the man and told him panhandling isn’t allowed in the store. The woman informed her the man was her husband.

After listening to each clip, the employees discussed how they would have reacted.

The Wall Street Journal reached out to dozens of baristas across the country and was connected to some employees by the company.

Cordell Lewis, manager of the Ferguson, Mo., Starbucks, was among the employees who said the training seemed to make some African-Americans uncomfortable. He said he could see employees’ shoulders tighten as they leaned forward in their chairs. Mr. Lewis, who is biracial, also said the emphasis on relations between black and white people left some employees feeling excluded, something he raised with company leaders. “I have trans partners and Philippine partners, and they were like, ‘What about me?’”

Still, Mr. Lewis, introduced to the Journal by Starbucks, said the training was the “most dynamic and diverse” he has received in over 15 years in retail management.

Carla Ruffin, Starbucks’ regional-operations director for the New York metro area, also introduced to the Journal by the coffee chain, said employees shouldn’t feel burdened. “There is no price to being gracious and having a smile and wanting to improve someone’s day. It doesn’t take sweat.”

Ms. Ruffin, who is African-American, said that when members of her exercise group were asked to discuss the first time they remembered experiencing bias, everyone said middle school. She said that was an example of how people are more alike than different—and that it showed how little she knew about her colleagues.

Starbucks decided to hold the training sessions after a store manager in Philadelphia called the police in April about two black men who hadn’t bought anything and allegedly didn’t leave the store when asked. Starbucks said the police never should have been called and has since issued a policy saying its company-operated stores in the U.S. are open to all visitors, whether or not they make a purchase.

Some employees said they felt Tuesday’s training wasn’t substantive enough.

“It’s just to save face. It doesn’t really mean anything,” said an African-American Starbucks barista in Connecticut. He said he has never encountered a racist incident in any of the stores at which he has worked in Connecticut or Maryland.

A barista in Ohio who is white said he found the training “wishy-washy.” He added: “I went in with an open mind. I was hoping we’d go through scenarios of how customers might feel in certain scenarios and how to make them not feel that way.”

Starbucks says there will be continuing education around diversity and bias, but the company hasn’t shared details of what that will entail.

Mr. Prater, the supervisor in Rancho Cucamonga, said it is admirable of Starbucks to start a dialogue about race relations but that asking overworked, hourly employees to consider their biases every time they interact with customers is a tall order.

“The baristas are already doing five or 10 things, including taking out the garbage and cleaning the bathrooms,” he said. “We’re already struggling to provide the bare minimum of customer service, so when you throw in this, how do we even do this? This is a lot.”

<b>HEADLINE</b>	<b>05/31 US tariffs prompt anger from trade allies</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/u-s-slaps-steel-aluminum-tariffs-on-canada-mexico-european-union-1527774283">https://www.wsj.com/articles/u-s-slaps-steel-aluminum-tariffs-on-canada-mexico-european-union-1527774283</a>
<b>GIST</b>	<p>WASHINGTON—The Trump administration raised the prospect of a global trade war by imposing tariffs on imports from the closest U.S. neighbors and allies, who swiftly pledged to retaliate with duties of their own.</p> <p>President Donald Trump is pursuing an aggressive strategy to win economic concessions from neighbors and allies in an effort to cut the U.S. deficit in merchandise trade.</p> <p>The new tariffs—on steel and aluminum imports from Canada, Mexico and the European Union—come as the U.S. is studying global levies on autos and auto parts. The administration also plans tariffs on industrial supplies from China. Beijing has promised to retaliate with its own duties.</p> <p>Financial markets fell early on Thursday before partly recovering later, with the Dow Jones Industrial Average closing down 1% to 24415.84.</p> <p>The move follows months of U.S. threats to impose tariffs, part of a push to negotiate new trade terms. The Trump administration is negotiating with virtually all of its major trading partners around the globe, including with Mexico and Canada over the North American Free Trade Agreement.</p> <p>Those initiatives have generally failed to bring the large, quick victories Mr. Trump has promised.</p> <p>Administration officials said they were still open to deals to drop the metals tariffs. “We continue to be quite willing and indeed eager to have further discussions with all of those parties,” Commerce Secretary Wilbur Ross told reporters Thursday.</p> <p>The reaction from allies was swift and severe. Canadian Prime Minister Justin Trudeau said his government would impose a 25% tariff on steel imports from the U.S. and a 10% tariff on aluminum and a wide range of other U.S. goods, including some food and agricultural products. Ottawa said it would hold consultations for two weeks before imposing the tariffs on July 1.</p> <p>Mexico’s Economy Ministry said it would target a number of U.S. goods, including some steel and pipe</p>

products, lamps, berries, grapes, apples, cold cuts, pork chops and various cheese products “up to an amount comparable to the level of damage” linked to the U.S. tariffs.

The EU has said it is also planning to hit back with its own duties on U.S. exports worth €6.4 billion (\$7.5 billion), including on steel, motorcycles and some agricultural products. Up to €2.8 billion of that could go into effect starting June 20. The EU said it would also launch a case against U.S. measures at the World Trade Organization on Friday.

Trade pressure on farmers has helped fuel the latest talks between U.S. and China aimed at lifting tariffs on soybeans, hogs and more. Here, an American farmer and a steelworker explain how tariffs are impacting their livelihoods.

#### How Will Allies Respond to Trump’s Tariffs?

Will President Donald Trump's decision to impose tariffs on steel and aluminum for the EU and others cause U.S. allies to retaliate? The Wall Street Journal's Gerald F. Seib explains. Photo: Getty  
 “This is protectionism, pure and simple,” the EU’s top executive, European Commission President Jean-Claude Juncker, said Thursday. “We will defend the Union’s interests, in full compliance with international trade law.”

Some participants in the U.S. steel industry, which Mr. Trump has vowed to protect, applauded the move. “The president’s trade actions have already begun putting steelworkers back to work in Ohio and Illinois,” said Tom Gibson, president of the American Iron and Steel Institute.

However, the United Steelworkers union, which includes Canadian members, broke with the Trump administration, criticizing the tariffs.

Mr. Trump’s “America first” economic message continues to appeal to a wide swath of voters, especially in the industrial Midwest, which he credits for his victory in the 2016 presidential election.

“I’ve supported steel tariffs from the beginning, because China’s cheating has cost too many Ohio steelworkers their jobs,” said Sen. Sherrod Brown (D., Ohio). “I’m open to carving out allies who are not part of the problem, but steel overcapacity is a global problem that needs a global response.”

Washington announced unilateral, global steel and aluminum tariffs in March, but Canada, Mexico and the European Union, which includes the U.K., had been offered temporary exemptions to the duties. All three economies received an extension a month ago. On Thursday, Mr. Ross told reporters the exemptions won’t be renewed, subjecting their metals exports to the tariffs.

The move capped a week of intensifying pressure on trading partners. On Tuesday, the White House revived a plan it had previously suspended to place tariffs on \$50 billion in industrial imports from China, and it is studying whether tariffs should be imposed on imported cars and auto parts.

The Trump administration is citing national security to justify the tariffs, arguing that America’s allies and rivals are employing unfair trade policies to undermine the viability of critical U.S. industries, starting with steel and aluminum. The administration says the national security justification comports with U.S. law and a special security exception at the WTO.

On Thursday, the White House said the “steel and aluminum tariffs have already had major, positive effects on steel and aluminum workers and jobs.”

The policy risks higher prices on imports, painful retaliation against U.S. exports and longer-term strife with allies if the Trump administration alienates politicians in allied democracies.

Republican lawmakers were quick to voice their disapproval. “This is dumb,” said Sen. Ben Sasse, a Nebraska Republican. “Europe, Canada, and Mexico are not China, and you don’t treat allies the same

way you treat opponents.”

Rep. Kevin Brady, the Republican chairman of the House committee that oversees trade, said the Trump administration “will need to come to Capitol Hill to provide answers about the indiscriminate harm these tariffs are causing our local businesses.”

Sen. Orrin Hatch of Utah, chairman of the Senate Finance Committee, said: “Tariffs on steel and aluminum imports are a tax hike on Americans and will have damaging consequences for consumers, manufacturers and workers. I will continue to push the administration to change course.”

The countries hit by tariffs include some of the biggest suppliers of metals.

Canada accounts for about half of the raw aluminum imported by the U.S. and about 21% of the finished steel imports by the U.S. It is a major provider of steel plate and hot-rolled coil steel used widely in manufacturing.

Mexico supplies 9% of finished steel imports and 11% of semifinished steel. These are generally big slabs of steel that U.S. mills buy to make finished products like sheet steel and pipe.

EU countries provide 17% of the steel imported by the U.S. The EU is a major supplier of stainless steel, high-value steel used by the automotive industry.

Canada Foreign Minister Chrystia Freeland said Ottawa was considering its strongest retaliatory action since World War II, due to “a very bad U.S. decision.”

Canadian officials made a last-ditch effort this week to get the exemption extended. Ms. Freeland visited U.S. Trade Representative Robert Lighthizer to plead Ottawa’s case, and Canada’s government issued a new policy late Wednesday to prevent the dumping of cheap foreign steel into North America.

Mr. Ross, who is leading the reviews of steel, aluminum and auto-industry imports, said countries aren’t being singled out as national-security threats but instead evaluated through a broader economic lens.

<b>HEADLINE</b>	<b>05/31 Growing: homeless living in vehicles</b>
<b>SOURCE</b>	<a href="https://crosscut.com/2018/05/number-homeless-living-vehicles-could-fill-mccaw-hall">https://crosscut.com/2018/05/number-homeless-living-vehicles-could-fill-mccaw-hall</a>
<b>GIST</b>	<p>The number of people struggling with homelessness in King County has increased, again. It’s a pattern that’s continued since 2012, spurring the declaration of a State of Emergency in 2015 that’s in place today.</p> <p>There may be some comfort in the fact that this year’s increase was smaller than in past years. The new numbers, collected from a volunteer-driven count on Jan. 26, as well as subsequent surveys of shelters and youth and young adults, show a 4 percent increase, from 11,643 last year, to 12,112 people in shelters or on the streets this year.</p> <p>The methodology for the count changed last year, so comparing numbers pre-2017 is difficult. But a 4 percent jump is less than the double digit increases of years’ past.</p> <p>The count also shows a slight decrease in homelessness among families with children. Veteran homelessness is down by a solid 31 percent.</p> <p>Still, no one was celebrating. "These numbers are always sobering," said Kyra Zylstra, director of King County's All Home.</p> <p>The proportion of people living on the streets relative to those in shelters increased from last year: For the first time, those living outside outnumbered those inside.</p>

That spike is largely driven by people living in cars and RVs — up 46 percent from last year to 3,372. That's enough to fill McCaw Hall in Seattle, home of Seattle Opera and the Pacific Northwest Ballet, and leave 400 people waiting outside. Seattle and King County have struggled to create a comprehensive approach to people in vehicles. A parking lot, outfitted with water and electricity, was closed due to exorbitant costs. A proposal from Seattle Councilmember Mike O'Brien to offer more leniency on parking fines and to do more outreach to people in vehicles has languished.

Also contributing to the increased number of people on the streets are the city's sanctioned tent encampments. While the report found unsanctioned tent encampments decreased, the number of nonprofit-run encampments more than doubled in the last year, with the operations now hosting nearly 400 people.

The survey also shows a 28 percent jump in the number of people considered "chronically homeless" — defined by the U.S. Department of Housing and Urban Development as people with a disabling condition — mental issues, chronic health problems, drug dependency or other barriers to holding down a job — who've been homeless for a year or more or have had four or more incidents of homelessness.

This year's survey confirms what the City of Seattle already concluded last year: Most of the homeless population lost its stable housing while living in Seattle. That's not to say everyone is from the region originally, but it challenges the pervasive belief that people are moving to Seattle and King County specifically for homeless services.

Respondents reported losing a job to be the No. 1 reason for falling into homelessness. That's followed by alcohol and drug use, evictions and mental illness.

As has been long the case, significant disparities still exist between races, with Black, Latino and multi-racial people making up a disproportionate number of those struggling with homelessness. LGBTQ youth and young adults are also overrepresented. The number of Native people experiencing homelessness declined from last year, from 6 percent of the total to 3 percent. Nevertheless, that number is high compared to the countywide population of just 1 percent.

The numbers released Thursday reflect the number of people struggling with homelessness on a given night. But the actual population is more fluid. Zylstra said Thursday they estimate about 30,000 people were homeless at some point over 2017. Compared to 2013, said Zylstra, service providers moved twice the number of people into housing. According to the Seattle Human Services Department, Seattle has housed 3,030 people in the first quarter, either by providing housing or preventing them from become homeless.

But the need is growing faster.

<b>HEADLINE</b>	<b>05/31 Wash. gets blame: blocking fuel exports</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1005239/washington-state-blamed-for-holding-up-fossil-fuel-exports/">http://mynorthwest.com/1005239/washington-state-blamed-for-holding-up-fossil-fuel-exports/</a>
<b>GIST</b>	<p>BILLINGS, Mont. (AP) — Republican lawmakers from Western states and industry executives on Thursday accused Washington state officials of unfairly blocking fossil fuel projects and dictating winners and losers among U.S. companies seeking to export products to Asia.</p> <p>Republican U.S. Sen. Steve Daines of Montana and others singled out Washington Gov. Jay Inslee, a Democrat, for blocking increased coal exports from Wyoming and Montana, the nation's top coal-producing region.</p> <p>U.S. coal mining contracted sharply over the past decade as natural gas and renewables captured a larger share of the electricity-generation market. Companies seeking to pivot to customers in Asia have been frustrated by the cancellation and blockage of proposed coal export terminals on the West Coast.</p>

Under Inslee, Washington state regulators have blocked a coal export terminal in Longview that could export up to 44 million tons annually and an oil-by-rail facility that would transfer oil from the Northern Plains to barges for shipment to West Coast refineries.

“The state of Washington is a barrier in the way of getting Montana resources exported around the world, including to Asia,” Daines said during an energy conference in Billings he helped organize.

U.S. Sen. John Barrasso predicted during the conference that Washington’s attempt to “weaponize the regulatory process” by blocking permits for fossil fuel projects would have consequences in upcoming elections.

Inslee spokeswoman Tara Lee declined to respond directly to the lawmakers’ comments. She said Washington officials were confident the state will prevail in pending lawsuits over the Longview terminal.

“Any proposal for a project like this goes through a rigorous but objective environmental review process,” Lee said. “We feel confident that our lead agency is making sound decisions based on the science, as they should. Some projects meet the requirements, some don’t.”

In denying permits for the Longview terminal, the Washington Department of Ecology said there were too many major harmful impacts including air pollution, rail safety and vehicle traffic.

BNSF Railway Chairman Matt Rose and mining company president Everett King with Lighthouse Resources, which is sponsoring the Longview coal terminal, also criticized obstruction from Washington state. They said the targeting of fossil fuel exports would undermine attempts under the administration of President Donald Trump to achieve U.S. energy dominance on the global stage.

U.S. coal exports to Asia more than doubled in 2017, to about 33 million short tons, according to the U.S. Energy Information Administration. However, most of that coal was funneled through two cities on the East Coast, Norfolk, Virginia, and Baltimore, Maryland, with high transportation costs a barrier to further growth in exports.

West Coast ports provide a potentially shorter route for the fuel.

Attorneys general from six states including Montana and Wyoming have argued in one of the lawsuits involving the stalled port that the case could impact a range of commodities, including grains and other fuels.

In a ruling Wednesday, U.S. District Judge Robert J. Bryan rejected a bid by Washington state to dismiss the case.

<b>HEADLINE</b>	<b>05/31 Port Olympia executive director is out</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1005529/port-of-olympia-executive-director-on-leave-officially-out/">http://mynorthwest.com/1005529/port-of-olympia-executive-director-on-leave-officially-out/</a>
<b>GIST</b>	<p>OLYMPIA, Wash. (AP) — The longtime executive director of the Port of Olympia who was placed on administrative leave is officially out.</p> <p>The Olympian reports the port commission unanimously approved an agreement with Ed Galligan that had him resign Thursday.</p> <p>Under the agreement, Commission President E.J. Zita says Galligan will be available to serve as a consultant as necessary.</p> <p>Other terms of the agreement were not released.</p>

	<p>When Galligan was placed on leave in April, commissioners said they wanted a change in leadership. Commissioner Joe Downing told The Olympian it wasn't because of some error by Galligan.</p> <p>Galligan's time at the port since late 2005 was marked by building projects on the Port Peninsula but also controversy over the shipment of fracking sand and military cargo.</p> <p>The port's airport director Rudy Rudolph will continue to oversee the port while a search is done for a new director.</p>

<b>HEADLINE</b>	<b>05/31 New Dept. of Licensing head appointed</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1005664/gov-inslee-appoints-new-head-of-department-of-licensing/">http://mynorthwest.com/1005664/gov-inslee-appoints-new-head-of-department-of-licensing/</a>
<b>GIST</b>	<p>OLYMPIA, Wash. (AP) — Gov. Jay Inslee has appointed Teresa Berntsen as head of the Washington Department of Licensing.</p> <p>Berntsen's appointment was announced Thursday. She replaces Pat Kohler, who is stepping down at the end of June. Some Latino and community groups had been calling for Kohler's removal following revelations in January that the agency was routinely sharing residents' personal information with immigration-enforcement authorities. But in an April 27 resignation letter, Kohler said the loss of her brother has caused her to reevaluate her priorities.</p> <p>Berntsen is currently the director of the Office of Minority and Women's Business Enterprises. Previously, she served as deputy director of the Department of Licensing for more than four years. She also served as a policy adviser to former Gov. Chris Gregoire on statewide transportation issues.</p>

<b>HEADLINE</b>	<b>05/31 King Co. homeless population rises</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1005210/king-countys-homeless-population-continues-to-increase/">http://mynorthwest.com/1005210/king-countys-homeless-population-continues-to-increase/</a>
<b>GIST</b>	<p>The homeless population in King County increased again over the past year, and more than half are unsheltered.</p> <p>The latest point-in-time count from All Home on Jan. 26 found 469 more homeless people living in the county than in 2017. An estimated total of 12,112 people were homeless earlier this year.</p> <p>All Home is the county's homelessness coordinating agency.</p> <p>Additionally, there were more people living unsheltered during the homeless count this year than last year. People are considered living unsheltered even if they are in sanctioned camps, or vehicles.</p> <p>All Home notes there are more unsheltered people living in vehicles than previous years. On Jan. 26, there were an estimated 3,372 people living in vehicles; well over the 2,314 estimated in 2017.</p> <p>There were nearly as many people sleeping in vehicles as there were people sleeping in emergency shelters during the count, according to the report from All Home.</p> <p>The unsheltered population not living in vehicles, meanwhile, decreased.</p> <p>Of the 6,320 unsheltered population, 4,488 were living in Seattle at the time.</p> <p>Interim Director of All Home Kyra Zylstra told KIRO 7 that, compared to previous years, a 4 percent increase is progress.</p>

“It’s not the kind of progress we all want to see,” Zylstra told KIRO 7. “But our performance data shows that the resources that we are investing in are housing people faster.”

And some segments of the homeless population decreased significantly. The number of veterans experiencing homelessness decreased by 31 percent. And the number of homeless families with children decreased by 7 percent.

<b>HEADLINE</b>	<b>05/31 Seattle boasts housing homeless success</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1005629/2018-success-seattle-homeless/">http://mynorthwest.com/1005629/2018-success-seattle-homeless/</a>
<b>GIST</b>	<p>The City of Seattle is reporting a considerable increase in the number of people it has moved off the street and under a roof in one year. But not all the numbers are an improvement.</p> <p>“We’re encouraged by the increases in placing people in housing and in the investments to enhance shelters with more services,” said Human Services Department Interim Director Jason Johnson.</p> <p>The city is boasting new numbers comparing the first quarter of 2017 with the first quarter of 2018. A total of 3,030 households moved into permanent housing or maintained their housing in the first quarter of 2018. This is much higher than in 2017 — an increase of 1,241 households.</p> <p>The city also increased the rate at which it places people into permanent housing between the first quarters of 2017 and 2018.</p> <ul style="list-style-type: none"> <li>• Seattle’s diversion program (primarily helps people avoid emergency shelters) placed 19 percent more people into permanent housing in early 2018 than in 2017.</li> <li>• The rapid rehousing program got 10 percent more people into permanent housing; it also had a success rate of 83 percent. Funding for this program went from \$4.3 million in 2017 to \$7.2 million in 2018.</li> <li>• Permanent supportive housing is mostly for chronically homeless people. It has had a success rate of 99 percent, helping people maintain housing or leave supportive housing. In the first quarter of 2017, it was 98 percent. Funding for this program went from \$9.3 million in 2017 to \$13.2 million in 2018.</li> <li>• Seattle also found out that enhanced shelters helped five times more people move into permanent housing than basic shelters. Enhanced shelters have extended hours with case management from social workers. Basic shelters placed people into housing at a rate of 3.8 percent in the first quarter of 2018. Enhanced shelters had a success rate of 20.5 percent during that same time. These enhanced shelters increased their rate of placement into permanent housing by 3.7 percent between 2017 and 2018.</li> </ul> <p><b>Other Seattle homeless numbers</b></p> <p>Data from the first quarter of 2018 wasn’t all good news. Seattle’s seven tiny house villages provide spaces for more than 300 people every night. They are at capacity. The city was able to place 17 percent of households into permanent housing through the villages in the first quarter of 2018. This is a 1 percent decrease from the same quarter in 2017. Officials expect this rate to be on the rise with new investments in case management at the villages.</p> <p>Prevention programs also saw a decrease in exits to permanent housing. That rate went from 94 percent in the first quarter of 2017 to 89 percent in 2018. The city notes that this program takes 90 days to offer support services, so some data may be missing from the first quarter numbers.</p>

	<p>Seattle is slated to spend \$71 million toward homelessness in 2018. That money will go toward 155 contracts across 39 agencies to provide services to people experiencing homelessness.</p> <p>“We are working with agencies every day to oversee the city’s public investments to help people experiencing homelessness,” Johnson said. “We compile quarterly data to help us understand how our investments are performing as part of a system of support for people.”</p>

<b>HEADLINE</b>	<b>06/01 Today is National Donut Day</b>
<b>SOURCE</b>	<a href="http://time.com/money/5295680/national-donut-day-2018-free-doughnuts/">http://time.com/money/5295680/national-donut-day-2018-free-doughnuts/</a>
<b>GIST</b>	<p>When is National Donut Day 2018? You’re in luck—it’s today, Friday, June 1. And as we’ve all come to expect, National Donut Day—first created by the Salvation Army before World War II—is loaded with free doughnut deals from coast to coast.</p> <p>Dunkin Donuts, Krispy Kreme Doughnuts, LaMar’s Donuts, Duck Donuts, and many other shops and convenience stores are giving away free doughnuts on June 1 to celebrate National Donut Day 2018—or National Doughnut Day 2018, if you prefer the original spelling of “doughnut.”</p> <p>Even Papa John’s is jumping on the National Donut Day free donut bandwagon, giving away orders of its brand new doughnut holes for free on Friday. Walmart has free doughnuts for all customers too.</p> <p>Here are all the places with free doughnuts on National Donut Day 2018, along with the details on how to get free doughnuts.</p> <p><b>Dunkin Donuts</b> To take advantage of the National Donut Day 2018 deal at Dunkin Donuts, just purchase any beverage and you’ll get a free donut of your choice, all day long.</p> <p><b>Krispy Kreme Doughnuts</b> Krispy Kreme is celebrating National Doughnut Day 2018 by giving every guest a free doughnut, no purchase necessary.</p> <p><b>Walmart</b> Every Walmart location in the U.S. is giving out free doughnuts to customers on Friday for National Donut Day. Walmart says it expects to give away 1.2 million whole glazed doughnuts.</p> <p><b>LaMar’s Donuts</b> At LaMar’s Donuts, everyone gets a free doughnut, no purchase required, on National Donut Day 2018.</p> <p><b>Duck Donuts</b> Duck Donuts is giving away one free classic donut to every customer on Friday, June 1.</p> <p><b>Fractured Prune Doughnuts</b> Customers at participating Fractured Prune Doughnuts locations get a free OC Sand Doughnut—honey-glazed, covered in cinnamon and sugar—on National Doughnut Day 2018.</p> <p><b>Honey Dew Donuts</b> Purchase any beverage (medium size or larger) at Honey Dew Donuts on National Donut Day, and you’ll get a free S’More Donut.</p> <p><b>Papa John’s</b> Yes, pizza seller Papa John’s is getting in on the action for National Donut Day 2018. Starting June 1, Papa John’s is adding doughnut holes to its menu. They are coated in cinnamon and sugar and caramel crème, and will normally cost \$4.99 for a 10-piece order—but on National Donut Day on Friday,</p>

	<p>customers get a free order of doughnut holes with any online pizza purchase.</p> <p><b>Cumberland Farms</b> From 5 a.m. to 10 a.m. on Friday, June 1, customers at Cumberland Farms' renovated convenience stores throughout the Northeast and Florida get a free doughnut with the purchase of any dispensed beverage—such as coffee or a fountain drink.</p> <p><b>Sugar Shack Donuts</b> If you make any purchase on National Donut Day at the Washington, D.C.-area locations of Sugar Shack Donuts (in Arlington and Alexandria, Va., and the Shaw neighborhood in D.C.), you'll get a special Donuts4Good promo card. It's good for a free donut, and Sugar Shack encourages you to give it someone who has done a good deed and deserves a treat. Anyone wearing Sugar Shack gear on Friday, June 1, gets a free house donut as well.</p> <p><b>Factory Donuts</b> The Philadelphia doughnut shop Factory Donuts is giving each customer not one but two free doughnuts on Friday, June 1.</p> <p><b>Edible Arrangements</b> At 1,200 Edible stores worldwide, customers can get one of the chain's fruit "donuts"—actually a cored Granny Smith apple covered in chocolate and other toppings—for free on National Donut Day 2018.</p>

<b>HEADLINE</b>	<b>05/31 Report: US oil output jumps to record</b>
<b>SOURCE</b>	<a href="https://www.oilandgasinvestor.com/report-us-oil-output-jumps-record-high-march-1704031">https://www.oilandgasinvestor.com/report-us-oil-output-jumps-record-high-march-1704031</a>
<b>GIST</b>	<p>U.S. crude oil production jumped 215,000 barrels per day (bbl/d) to 10.47 million bbl/d in March, the highest on record, the Energy Information Administration (EIA) said in a monthly report on May 31.</p> <p>Production in Texas rose by 4% to almost 4.2 million bbl/d, a record high based on the data going back to 2005. The Permian Basin, which stretches across West Texas and eastern New Mexico, is the largest U.S. oil field.</p> <p>Output from North Dakota held around 1.2 million bbl/d, while output in the federal Gulf of Mexico declined 1.1% to 1.7 million bbl/d.</p>

	<p>The agency also revised February oil production down by 5,000 bbl/d to 10.26 million bbl/d.</p> <p>U.S. natural gas production in the Lower 48 states rose to an all-time high of 88.8 billion cubic feet per day (Bcf/d) in March, up from the prior record of 87.7 Bcf/d in February, according to EIA's 914 production report.</p> <p>Output in Texas, the nation's largest gas producer, increased 1.3% in March to 22.7 Bcf/d, the most since April 2016.</p> <p>In Pennsylvania, the second biggest gas producing state, production dipped to 16.4 Bcf/d in March, down 0.6% from February's record high of 16.5 Bcf/d. That compares with output of 14.8 Bcf/d in March 2017.</p>

<b>HEADLINE</b>	<b>05/31 Ecuador: Assange can stay in embassy</b>
<b>SOURCE</b>	<a href="https://www.theguardian.com/media/2018/may/31/julian-assange-ecuador-president-lenin-moreno">https://www.theguardian.com/media/2018/may/31/julian-assange-ecuador-president-lenin-moreno</a>
<b>GIST</b>	<p>Lenín Moreno, the president of Ecuador, has said Julian Assange's asylum status in the country's London embassy is not under threat – provided he complies with the conditions of his stay and avoids voicing his political opinions on Twitter.</p> <p>However, in an interview with Deutsche Welle on Wednesday, Moreno said his government would “take a decision” if Assange didn't comply with the restrictions.</p> <p>“Let's not forget the conditions of his asylum prevent him from speaking about politics or intervening in the politics of other countries. That's why we cut his communication,” he said. Ecuador suspended Assange's communication's system in March.</p> <p>Moreno's statements come two weeks after an investigation by the Guardian and Focus Ecuador revealed the country had bankrolled a multimillion-dollar spy operation to protect and support Assange, employing an international security company and undercover agents to monitor his visitors, embassy staff and even the British police.</p> <p>Over more than five years, Ecuador put at least \$5m (£3.7m) into a secret intelligence budget that protected him while he had visits from Nigel Farage, members of European nationalist groups and individuals linked to the Kremlin.</p> <p>Earlier this month, Moreno withdrew additional security assigned to the Ecuadorian embassy in London, where the WikiLeaks founder has remained for almost six years.</p> <p>Moreno has previously described Assange's situation as “a stone in his shoe” and repeatedly hinted that he wants to remove the Australian from the country's London embassy.</p> <p>Assange had tweeted in support of the Catalan independence movement and challenged the UK's accusation that Russia was responsible for the poisoning of a Russian former double agent Sergei Skripal and his daughter.</p> <p>“Liberty must be used with a lot of responsibility,” Moreno said, without confirming whether or not Assange's access to the internet would be restored.</p> <p>Rafael Correa, Moreno's predecessor who approved of the operation, defended the security measures as “routine and modest”.</p>

<b>HEADLINE</b>	<b>05/31 US ratchets up rhetoric South China Sea</b>
-----------------	--

SOURCE	<a href="https://www.cnn.com/2018/05/31/politics/us-warning-south-china-sea/index.html">https://www.cnn.com/2018/05/31/politics/us-warning-south-china-sea/index.html</a>
GIST	<p>Washington (CNN)The Pentagon on Thursday ratcheted up rhetoric about China's militarization of islands in the South China Sea, even as the Trump administration presses China for cooperation on North Korea.</p> <p>When asked by a reporter about the ability of the US to "blow apart" one of China's controversial man-made islands, Lt. Gen. Kenneth McKenzie, director of the Joint Staff, told reporters, "I would just tell you that the United States military has had a lot of experience in the Western Pacific taking down small islands."</p> <p>His comments come amid growing tension in the hotly contested region, as the US ramps up freedom of navigation operations in response to China's steady militarization of its artificial islands.</p> <p>The US Navy sailed two warships within 12 nautical miles of the disputed Parcel Islands in the past week, the first time it has used more than one vessel in the operations, which are meant to demonstrate the right of free passage in international waters.</p> <p>On Wednesday, Adm. Harry Harris, outgoing head of the US Indo-Pacific Command, said China was the US's "biggest long-term challenge" in the region. "Without focused involvement and engagement by the United States and our allies and partners China will realize its dream of hegemony in Asia," he said.</p> <p>The Chinese government has reacted furiously to the recent US statements. At her regular press conference on Thursday, Chinese Foreign Ministry spokeswoman Hua Chunying said the US accusing China of militarizing the region was "like a thief crying, 'Stop thief!'."</p> <p>"Why does the US choose to sail every now and then close to Chinese South China Sea islands and reefs? What is the US trying to do?" she said.</p> <p>As one of the most senior officers in the Pentagon, McKenzie's words carry particular weight.</p> <p>He serves as a top official for Gen. Joseph Dunford, chairman of the Joint Chiefs of Staff, and frequently is in meetings with both Dunford and US Defense Secretary James Mattis. On Thursday, McKenzie made clear the US military is "prepared" to "protect US and allied interests in the region."</p> <p>McKenzie said the United States had a lot of experience "taking down small islands that are isolated," referencing US military operations during World War II where thousands of US troops died as they fought their way across several islands in the Pacific.</p> <p>"So that's a core competency of the US military that we've done before; shouldn't read anything more into that than a simple statement of historical fact," he said.</p> <p>The United States regularly conducts freedom of navigation operations in the South China Sea. During the latest operation, the US said a Chinese ship operated in an unprofessional manner close to the US Navy ships.</p> <p>McKenzie indicated the US would not back off, saying that "we will continue to conduct freedom of navigation operations as is allowed by international law. And we're going to continue to do the things that we're doing."</p> <p>Mattis said earlier this week that China had not lived up to its claim that it wasn't militarizing the area. "They have done exactly that, moving weaponry in that was never there before."</p> <p>US surveillance has shown the movement of Chinese anti-ship and anti-aircraft missiles onto their artificial islands during recent drills. And earlier this month, Chinese state media announced that a nuclear-capable Chinese bomber had landed on an island for the first time.</p> <p>Mattis also said the "steady drumbeat" of naval operations in the region would continue.</p>

"We are also going to confront what we believe is out of step with international law, out of step with international tribunals that have spoken on the issue, and part of this is we maintain a very transparent military activity out in the Pacific," he said.

<b>HEADLINE</b>	<b>06/01 Lessons learned 2017 hurricane season</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/06/01/us/hurricane-season-5-things-learned-wxc/index.html">https://www.cnn.com/2018/06/01/us/hurricane-season-5-things-learned-wxc/index.html</a>
<b>GIST</b>	<p>(CNN)Today marks the official beginning of the 2018 Atlantic hurricane season, which got off to an early start with Subtropical Storm Alberto making landfall in Florida on Monday.</p> <p>While we anxiously await what's in store in the 2018 season, which experts believe could be above normal, take a look back at five lessons from the record 2017 hurricane season in the Atlantic.</p> <p><b>Inland flooding is often the worst impact from a landfalling storm.</b> Though top wind speeds get the headlines and determine the hurricane's "intensity" via the Saffir-Simpson hurricane scale, it is often flooding that causes the most death and destruction.</p> <p>According to the National Oceanic and Atmospheric Administration, inland flooding accounts for more than 50% of hurricane-related deaths each year.</p> <p>The impacts often surprise residents because they can occur far from where a storm makes landfall and well after it has weakened.</p> <p>Hurricane Harvey became the most extreme example of the threat that inland flooding presents when it dumped unprecedented amounts of rain (up to 60 inches) in and around the Houston area after making landfall along the Texas coast in late August.</p> <p>Harvey's damage exceeded \$125 billion, according to NOAA, ranking second only to Hurricane Katrina; it displaced more than 30,000 residents and damaged or destroyed over 200,000 homes and businesses.</p> <p>Unfortunately, only about one-third of those losses were insured, according to Monica Ningen, head of property underwriting for the United States and Canada with the reinsurance company Swiss Re.</p> <p>"Many people were likely surprised by the fact that a lot of the damage came from flooding rather than wind damage," Ningen said. "This lack of awareness may be one of the reasons why 85% of American homeowners don't currently have flood insurance."</p> <p><b>Don't focus on the center of the cone.</b> Hurricane Irma provided a valuable reminder of often-repeated advice from the National Hurricane Center: "Don't focus on the skinny black line" at the center of the the agency's forecast hurricane track.</p> <p>"The NHC forecast cone provides some information about where the center of the storm is likely to move based on our track forecast errors over the past five years," according to Michael Brennan, senior hurricane specialist at the National Hurricane Center.</p> <p>"The cone doesn't provide any information about impacts from storm surge, wind, rain or other hazards, which often occur well outside the area included in the cone," Brennan said.</p> <p>But many still focus on the center of the cone and the black line that connects the projected positions, basing their preparations and evacuations on only that information.</p> <p>When powerful Category 5 Hurricane Irma was approaching Florida in early September, the forecast path from three or four days out showed the center of a major hurricane tracking up the eastern coast of the</p>

state.

Initial evacuations included Miami-Dade, Broward and Palm Beach counties on the eastern coast -- and a number of residents in those counties evacuated to the northern and western parts of the state.

But as the forecast evolved, the track shifted west, and it became evident Irma's center would track more up the western flank of Florida, prompting evacuation orders for Naples, Fort Myers and Tampa.

"During Irma, too much attention was paid to small changes in the official track forecast of the center as it shifted from the east coast to the west coast of Florida," Brennan recalled.

"Even 48 hours out, average track forecast errors are about 80 miles, and the southern Florida peninsula is only 50 or 60 miles wide, so everyone in southern Florida and the Florida Keys was at risk of seeing direct impacts from the core of a major hurricane."

Many on the west coast of Florida were surprised by the shifted track and were not prepared to evacuate. Evacuations were further complicated by the added traffic from those who had evacuated southeastern portions of the state and found themselves still in the path of the dangerous storm.

"That's why everyone under a hurricane or storm surge watch/warning needs to prepare and follow the advice of their local government officials, even if the exact track forecast doesn't go right over their area," Brennan advised.

**Underdeveloped areas are far more vulnerable to a hurricane's impacts.**

Hurricane Maria, which moved through the southern Caribbean and made a direct hit on Puerto Rico, "was comparable to Irma in its maximum wind damage, but also similar to Harvey in the feet of rain it dumped across Puerto Rico," according to NOAA.

But the widespread devastation it left in its wake and the long-lasting toll it took on the island's infrastructure were unparalleled elsewhere in the United States during the 2017 season.

"Maria essentially crippled the entire infrastructure system in Puerto Rico, including the island's power grid, its water, transportation and communications networks and its energy facilities," Ningen said.

"The poor suffer disproportionately when a disaster strikes," writes Marcelo Guigale, director of financial advisory and banking for the World Bank. "They are more exposed, more vulnerable, and less able to recover."

Even before the hurricane, Puerto Rico was mired in economic despair, having filed the largest municipal bankruptcy just months before the hurricane ravaged the island.

The socioeconomic hardships endured by Puerto Ricans meant they were unprepared for a disaster like Maria.

Ningen says the focus needs to be on avoiding damage (securing roofs and protecting and maintaining infrastructure) as well as mitigating the impact (having insurance and financial reserves to cover post-storm efforts).

Though power returned to most customers in Florida a couple of days after Irma, it took months for Puerto Rico after Maria. In fact, six months after Maria hit, there were still over 100,000 Puerto Ricans in the dark.

**Just because you get hit by one storm doesn't mean you won't get hit again.**

If there was one theme to the 2017 Atlantic hurricane season, it might be "Oh, no, not again!"

Starting with Harvey in late August and lasting through Nate in October, hurricanes affected land

seemingly nonstop. And several places in the Caribbean and US Gulf Coast had to deal with more than one.

The US and British Virgin Islands endured back-to-back Category 5 hurricanes in Irma and Maria within two weeks of each other.

The tiny Caribbean island of Barbuda, part of the nation of Antigua and Barbuda, was devastated by Hurricane Irma when it was at peak intensity of 185 miles per hour and then had to be completely evacuated only four days later as Hurricane Jose approached.

It was the first time the island had been without people in over 300 years, said the country's US ambassador, Ronald Sanders.

#### **Building codes matter.**

Floridians who lived through Hurricane Andrew in 1992 have horrible memories of surviving one of the strongest storms ever to hit South Florida, which left parts of the state devastated. There are now stricter building codes, such as prohibiting particle board and requiring fasteners on roofs.

"For the 2004 and 2005 hurricane seasons, we found that homes built to code in Florida experienced up to 70% lower wind losses compared to homes not built to code," said James Done, a project scientist with the National Center for Atmospheric Research's Mesoscale & Microscale Meteorology Laboratory.

Florida has some of the strictest building codes in the state, costing home builders an extra 45%, but the peace of mind may be worth it.

Take Irma: The category 4 storm was one of the most powerful Atlantic hurricanes on record. It blew across the Florida Keys with 126-mph sustained winds before slamming into Marco Island with 111-mph sustained winds. "We had flood experts and underwriters on the ground after the events, and it was striking to see images of how much better the newer buildings, built with stricter codes, fared," Ningen said.

Certain homes were total losses, while others a block away look untouched, roofs perfectly intact.

"Strong and well-enforced building codes are even more important, and maybe even more cost-effective, in this new era of stronger hurricanes," Done said.

<b>HEADLINE</b>	<b>05/31 Deadly storms Mid-Atlantic region</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/deadly-storm-north-carolina-virginia-flash-flooding-severe-weather-latest-forecast-today-2018-05-31/">https://www.cbsnews.com/news/deadly-storm-north-carolina-virginia-flash-flooding-severe-weather-latest-forecast-today-2018-05-31/</a>
<b>GIST</b>	<p>CHARLOTTESVILLE, Va. -- At least three people are dead as remnants of Subtropical Storm Alberto, the first named storm of the season, pounds the mid-Atlantic Thursday night with flash floods possible. Two people were killed Wednesday by a mudslide in North Carolina while another died in a flood in central Virginia.</p> <p>Search and rescue teams from across Virginia spent the day combing an area outside of Charlottesville looking for a couple who were swept away during Wednesday night's violent storm.</p> <p>"There is one vehicle still unaccounted for and they haven't found it down the creek anywhere yet," said Captain Allen Carwile of the Lynchburg Fire Department.</p> <p>Search-and-rescue teams think that the car that's missing would have been swept off of a road into Ivy Creek. Crews are going step by step with sticks checking piles of debris. They are looking for any signs of the two people that were believed to be inside the missing car.</p>

	<p>CBS News has learned that 6 to 10 inches of rain came down very fast and created a flash flood and a lot of water inundated the road. The debris is waist high and well above the creek bed. It was a torrent of water that would have come on in a flash.</p> <p>Authorities have declared a local emergency after powerful flood waters washed out large portions of county roads.</p> <p>Police in Boone, North Carolina, say heavy rains caused a hillside to give way causing a massive mudslide which led to a gas explosion leaving one house in splinters. Two people were killed.</p>

<b>HEADLINE</b>	<b>06/01 Italy forms populist gov; first for Europe</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/world/italy-gets-western-europe-s-1st-populist-government-n879111">https://www.nbcnews.com/news/world/italy-gets-western-europe-s-1st-populist-government-n879111</a>
<b>GIST</b>	<p>MILAN — Italy's anti-establishment 5-Star Movement and the right-wing League succeeded Thursday in forming western Europe's first populist government, which will be headed by a political novice.</p> <p>League leader Matteo Salvini and 5-Star leader Luigi Di Maio agreed to shuffle the proposed roster of government ministers amid a financial market scare. They moved Paolo Savona, the 81-year-old euroskeptic economist vetoed by Italy's president from overseeing the economy ministry, to a European affairs Cabinet post. Savona had said previously that Italy should have a contingency plan to abandon the euro.</p> <p>After the fits, starts and financial turbulence of recent days, the realization of a 5-Star-League coalition government put its populist posture on full display in Salvini's first public remarks. He returned from Rome to address a crowd of supporters in his northern home region of Lombardy.</p> <p>"I want to make Italy a protagonist in Europe again. With good manners and without creating confusion. But I am fed up of governments with the hat in their hand," Salvini said to cheers. "We are second to no one."</p> <p>Just a short time earlier, President Sergio Mattarella's office announced that the new premier, University of Florence law professor Giuseppe Conte, and his ministers would be sworn in Friday afternoon.</p> <p>It was a stunning comeback from Sunday evening, when Conte — the premier-designate at the time — left a meeting with Mattarella empty-handed and returned to his teaching job.</p> <p>Emerging from a similar meeting with a different ending Thursday night, Conte read off his Cabinet list and pledged that "we will work with determination to improve the quality of life of all Italians."</p> <p>The Cabinet includes Di Maio— architect of the government's proposed basic income for struggling Italians — as welfare minister and Salvini — who has pledged to expel hundreds of thousands of migrants — as interior minister.</p>

<b>HEADLINE</b>	<b>06/01 Vegas casino workers prepare for strike</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/possible-las-vegas-casino-workers-strike-looms-contracts-set-expire-n879086">https://www.nbcnews.com/news/us-news/possible-las-vegas-casino-workers-strike-looms-contracts-set-expire-n879086</a>
<b>GIST</b>	<p>The labor contracts of 50,000 workers at Las Vegas' Strip and downtown casinos expired at midnight Thursday, raising the prospect of a strike.</p> <p>They include bartenders, food and cocktail servers, porters and cooks at 34 casino resorts who are members of the Culinary Union. By 4:30 a.m. ET on Friday, the union had not called for an actual</p>

walkout.

Last week, 25,000 unionized workers voted 99 percent in favor of authorizing a strike should their contracts expire.

Caesars Entertainment Corporation and MGM Resorts International — as well as other properties including Caesars Palace, the Bellagio, the MGM Grand, Excalibur and Luxor — are all potentially affected.

If a large-scale strike is called, it would be the first in more than three decades.

The Culinary Union said in a statement early Friday that hospitality workers were now "preparing for a citywide strike" and planned to begin making "thousands of strike picket signs."

The union added that negotiations were ongoing with Caesars Entertainment regarding a new contract.

On Thursday, union spokeswoman Bethany Khan said no more meetings had been scheduled with MGM.

MGM Resorts International said in a statement Thursday that "we are confident that we can resolve the outstanding contract issues and come to an agreement that works for all sides."

Caesars Entertainment issued a similar statement saying that it "continues to meet with the Culinary Union to finalize a new 5-year contract," and "we are confident that we will achieve a tentative agreement without a work stoppage."

The union has failed to come to terms with management over a new contract, citing grievances like wages, training, sexual harassment by guests, and the fear of various positions being replaced by robots or automation.

They've asked MGM and Caesars for annual raises of about 4 percent for the next five years while the casinos have countered with 2.7 to 2.8 percent, documents released by the union say.

Around 24,000 workers are affected under the MGM contract and 12,000 are under the Caesars contract, the union said.

The average hourly wage of Las Vegas Strip workers is \$23, including benefits such as premium-free health care, a pension and a 401(k) retirement savings plan, and \$20,000 down-payment assistance for first-time homebuyers.

Downtown casino and resort properties could be affected as well. The union says the expiring contracts affect workers at the Golden Nugget, the D, Binion's and El Cortez, among others.

The last time there was a city-wide strike involving casino workers was in 1984. That strike spanned 67 days. During that time, union members lost an estimated \$75 million in wages and benefits, while the city lost a similar amount in tourism revenue, the Associated Press reported. Millions more were lost in gambling income.

The Culinary Union released an analysis from UNITE HERE Gaming Research on Wednesday that estimated a one-month strike could cost MGM Resorts International and Caesars Entertainment Corporation over \$300 million in operating profits.

Gambling is big business in Las Vegas. Around 42 million people are estimated to have visited the city in 2017, according to the Las Vegas Convention and Visitors Authority. The authority says spending sourced to those 42 million visitors was estimated at \$34.8 billion that same year.

In Clark County, where Las Vegas is located, gaming revenue was around \$9.5 billion in fiscal year 2017,

	<p>with more than \$6 billion of that coming from the Las Vegas Strip, according to a Nevada Gaming Control Board report released in January (those numbers are before expenses are taken into account).</p> <p>And the Las Vegas Golden Knights hockey team, which are in the Stanley Cup playoffs in their first year, have home games scheduled in Las Vegas against the Washington Capitals beginning June 7, adding to the potential loss in tourist and casino revenue.</p> <p>The union has called on visitors to not patronize hotels and casinos if a strike is called, and are urging people not to cross picket lines if there is a labor action.</p>

<b>HEADLINE</b>	<b>05/31 Hawaii workers bulldoze escape path</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/2018/05/31/hawaii-volcano-bulldozing-emergency-evacuation-route-lava/659222002/">https://www.usatoday.com/story/news/2018/05/31/hawaii-volcano-bulldozing-emergency-evacuation-route-lava/659222002/</a>
<b>GIST</b>	<p>Contractors on Hawaii's Big Island have begun bulldozing an emergency evacuation route through an old lava flow over fears the ongoing eruption could trap thousands of people by destroying existing roads.</p> <p>Highlighting the urgency, authorities on Thursday morning called for new evacuations of the Vacationland coastal area as lava approached, warning of possible inundation.</p> <p>To create the new evacuation route, workers are removing cold, hardened lava from a section of Chain of Craters road, which runs from the coast up the flank of the volcano Kilauea through Volcanoes National Park. The road – initially built in 1965 – has been repeatedly covered by lava flows, including the ones that destroyed the town of Kalapana in 1990.</p> <p>Re-opening the road would give residents in the town of Pahoa, the Leilani Estates and coastal areas a new escape route if the current flow continues to block and threaten roads. The primary escape routes are to the northeast. The new road would provide a southwestern evacuation route.</p> <p>The Hawaii Department of Transportation and Volcanoes National Park said in a joint statement that rough grading and other reconstruction efforts to make the road passable are expected to take two weeks or less.</p> <p>"The route is for evacuation purposes only, and will not be an alternate route for travel to and from the Kalapana area," the statement said.</p> <p>The kind of hardened lava left by Kilauea's flows is relatively easy to remove with heavy equipment, and officials say contractors started work on Wednesday. This section of road is already mostly passable except for a short section blocked by lava flows in 2015 and 2016.</p> <p>The current lava flows east of Pahoa have forced the evacuation of thousands of residents and destroyed close to 100 structures, including at least 41 homes. Residents say they expect the toll to be far higher when authorities can properly inspect the area.</p>

<b>HEADLINE</b>	<b>05/31 Claim: Parkland cops stymied paramedics</b>
<b>SOURCE</b>	<a href="http://www.miamiherald.com/news/local/community/broward/article212296004.html">http://www.miamiherald.com/news/local/community/broward/article212296004.html</a>
<b>GIST</b>	<p>During the chaos of the Parkland school shooting, paramedics from Coral Springs-Parkland Fire Department were desperate to go inside the building where students were wounded and dying.</p> <p>Michael McNally, deputy chief for Coral Springs fire-rescue, asked six times for permission to send in specialized teams of police officers and paramedics, according to an incident report he filed after the Feb.</p>

14 Marjory Stoneman Douglas High School shooting that left 17 people dead.

But every time McNally asked to deploy the two Rescue Task Force teams — each made up of three paramedics and three to four law enforcement officers — the Broward Sheriff's Office captain in charge of the scene, Jan Jordan, said no.

"The [BSO] incident commander advised me, 'She would have to check,' " McNally wrote in the report released Thursday by Coral Springs. "After several minutes, I requested once again the need to deploy RTF elements into the scene to ... initiate treatment as soon as possible. Once again, the incident commander expressed that she 'would have to check before approving this request.' "

Even after the shooter had been arrested, the answer remained the same.

It's not known whether paramedics, who arrived at Stoneman Douglas within minutes of the shooting, could have saved lives. Thirty-four people had been shot inside the school's freshman building. Gunshot wound victims can bleed out quickly, meaning fast action is necessary. The special RTF teams allow paramedics to treat victims under the protection of police officers in situations where a shooter has been pinned down or fled but has not necessarily been captured.

SWAT medics went in instead, although it's not clear exactly how many or when.

The RTFs were denied entry, a command decision first reported by Fox News, because authorities weren't sure where shooter Nikolas Cruz was and didn't want to put the paramedics in danger. At one point, commanders were relying on school security footage that showed Cruz still in the freshman building. But the footage was — unknown to them — running on a 20-minute delay. Cruz had actually fled roughly six minutes after opening fire at 2:21 p.m.

"I'm not saying the [RTFs] would have made a difference and I'm not saying they wouldn't have made a difference, but it would have been more medics and more hands helping out," Coral Springs Fire Chief Frank Babinec said in an interview Thursday.

Veda Coleman-Wright, a spokeswoman for BSO, said in an email Thursday evening that medics are only sent in "after it has been confirmed the threat is mitigated."

The video confusion was one of many mistakes that hampered law enforcement's response to the worst school shooting in Florida history.

Instead of having extra paramedics in the building, law enforcement officers brought injured victims — sometimes on golf carts — to a medical staging area hastily assembled nearby. Then they were sent to hospitals. Fifteen of the 17 mortally wounded victims died at the school. Another 17 people survived their injuries.

In his report, McNally, who had been ordered to act as a liaison between Coral Springs fire command and BSO, also claimed BSO's command post was severely dysfunctional. Communication was difficult, McNally said, because he often could not locate Jordan, BSO's district commander for Parkland.

"The command post was inundated with too many people and made it impossible to establish and function," McNally wrote, echoing criticisms of the disorganization and lack of a unified command structure that plagued BSO's response to a deadly shooting at the Fort-Lauderdale-Hollywood International Airport last year.

At least three additional fire-rescue incident reports released Thursday by Coral Springs confirmed that BSO had denied requests to send in the rescue teams. Coral Springs provides fire service in the city of Parkland. BSO provides law enforcement.

In his report, McNally acknowledged that RTF teams may not have helped in the end — but he said

Jordan couldn't have realized that when she repeatedly denied his requests.

"Later, it was determined that the RTF element may not have aided in any additional care to patients," McNally wrote. "However, this information was not known at the time of the requests."

BSO Sheriff Scott Israel has faced criticism for his leadership since the shooting. He handpicked Jordan, a former colleague from the Fort Lauderdale Police Department, to head the relatively trouble-free Parkland district.

As criticism of the response to the Parkland massacre has intensified, Coral Springs and BSO have pointed fingers at each other. The Florida Department of Law Enforcement is investigating the overall law enforcement performance.

The decision by Jordan to keep the paramedics sidelined is not the only criticism of her that day. At least four BSO deputies were on campus as Cruz was still firing, but they said they were unable to figure out where the shooting was happening, even as an unarmed school security guard and Coral Springs police officers rushed toward the building. When Jordan arrived on scene, her only recorded command was for deputies to form a perimeter around the school, although BSO says that's because her radio failed as the county's communications system overloaded.

Medical air rescue was also denied because Cruz, who would be arrested off campus more than an hour after the shooting began, had not yet been captured.

After Cruz's arrest off campus at 3:40 p.m. — when it would have been safe for RTFs to operate — McNally said he again asked Jordan to deploy the special teams. Again, she refused.

Babinec, the Coral Springs chief, said by that time all patients had been treated so there would have been nothing for the teams to do.

<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/indonesias-merapi-volcano-ejects-towering-column-ash-55577736?">https://abcnews.go.com/Technology/wireStory/indonesias-merapi-volcano-ejects-towering-column-ash-55577736?</a>
<b>GIST</b>	<p>Indonesia's Mount Merapi shot a towering plume of ash about 6 kilometers (4 miles) high Friday in an eruption authorities said lasted two minutes.</p> <p>The National Disaster Mitigation Agency said the volcano's alert status, raised last month from the lowest level, is unchanged and a 3-kilometer (1.8-mile) no-go zone around the crater remains in force.</p> <p>It said the eruption at 8.20 a.m. caused no panic and nearby Adi Sucipto Yogyakarta International Airport is still open to flights.</p> <p>The mountain is about 30 kilometers (18 miles) from center of Yogyakarta city on the densely populated island of Java.</p> <p>About a quarter million people live within a 10-kilometer (6-mile) radius of the volcano.</p> <p>Merapi's last major eruption in 2010 killed 347 people.</p>

<b>HEADLINE</b>	<b>05/31 Oregon officials extend water alert</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Health/wireStory/oregon-officials-extend-water-alert-capital-city-55571379">https://abcnews.go.com/Health/wireStory/oregon-officials-extend-water-alert-capital-city-55571379</a>

GIST	<p>The National Guard will hand out free water to residents who can't drink tap water contaminated by an algae bloom in the Salem, Oregon, area, and state law enforcement authorities are looking into claims of price gouging after officials extended an emergency drinking water advisory.</p> <p>Gov. Kate Brown's office said Thursday the water will be distributed to people at 10 locations in the state's capital and Stayton because of toxins created by a bloom at Detroit Lake, a municipal reservoir.</p> <p>Officials had earlier warned young children and people with compromised immune systems against drinking tap water in the area. At a press conference Thursday, Salem water quality supervisor Lacey Goeres-Priest said a best-case scenario would see the advisory lifted no earlier than after collecting safe water samples both Friday and Saturday.</p> <p>"This is a living thing," Powers said, referring to the algae that creates the toxins. "We're not going to speculate as to whether it's going to get better or get worse."</p> <p>State law enforcement authorities are also looking into claims of price gouging on bottled water in the area, said Kristina Edmunson, a spokeswoman for the Oregon Department of Justice. Officials have received more than a dozen complaints so far and expect more as consumers become aware they can report the incidents.</p> <p>Alan Torga, of Salem, was one person who complained after he said employees at a supermarket asked his mother for \$25 for a case of 36 bottles of water.</p> <p>"She picked up on it and called me," Torga said, adding that he told his mother not to pay the price. Later, at another supermarket, she saw employees selling gallons of water for about \$13, he added. "It's really unfortunate that people are getting gouged like this."</p> <p>Brown declared a localized state of emergency in part to empower the attorney general to look into the complaints, said Bryan Hockaday, a spokesman for the governor.</p> <p>The developments follow earlier confusion generated when officials used a wireless alert system to blast a cryptic warning Tuesday to "Prepare for Action" onto cellphones around the city, referring only to a "Civil Emergency." Officials blamed the truncated message on a computer glitch that cut off crucial information: The alert was only for a limited water advisory.</p> <p>An update was issued about 30 minutes after the first alert, but shelves at many local grocery stores were stripped bare of bottled water within hours, and residents relayed stories of anxiously waiting to determine exactly what kind of civil emergency they faced.</p>

HEADLINE	<b>05/31 Puerto Rico: up to 2mo. to restore power</b>
SOURCE	<a href="https://abcnews.go.com/International/wireStory/official-months-restore-power-puerto-rico-55565003?">https://abcnews.go.com/International/wireStory/official-months-restore-power-puerto-rico-55565003?</a>
GIST	<p>It could take up to another two months to fully restore power in Puerto Rico as crews across the U.S. territory prepare to strengthen its electrical grid amid a new hurricane season, the power company director told The Associated Press on Thursday.</p> <p>Walter Higgins, the new CEO of Puerto Rico's Electric Power Authority, said the company just awarded a \$500 million contract to Florida-based MasTec to help with power restoration efforts and plans to build a better, more efficient grid. Another \$900 million contract was recently awarded to Cobra Energy, and a third contract is still being finalized, he said.</p> <p>"We all wish we were further along," he said of efforts to restore power to the more than 11,000 customers who remain in the dark more than eight months after Hurricane Maria hit Puerto Rico as a Category 4</p>

	<p>storm.</p> <p>Higgins estimated it could take \$5 billion to \$8 billion to strengthen the grid and said the islands of Vieques and Culebra would be first places where the grid would be built to modern standards, starting within four months. This would include installing new poles, wires and transformers as well as smart meters and renewable power sources for an estimated \$150 million to \$160 million.</p> <p>He said it will take years to modernize and strengthen Puerto Rico's electrical grid, and that it's too early to say what will happen if and when the power company or its operations are privatized. The island's Senate approved a bill late Wednesday that would allow for the privatization of assets of the Electric Power Authority, which carries \$9 billion in public debt and relies on infrastructure nearly three times older the industry average. The bill has not yet been signed by the governor.</p> <p>"The Senate is starting to modernize Puerto Rico's electrical system, a process that should have started years ago," said opposition Sen. Eduardo Bhatia.</p> <p>Higgins said he feels it would be best to privatize the generation of energy and then award one concession for transmission and distribution. If a company were to simply buy the Electric Power Authority, the federal government has the right to demand it be repaid for the more than \$3.8 billion it has invested so far in reconstruction efforts, he said, adding that the U.S. government has agreed to pay for all emergency power restoration efforts for another three months.</p> <p>In addition, private utilities cannot get federal aid in the wake of a natural disaster, and if a company were unable to deal with storm-related losses, it could claim bankruptcy, Higgins warned.</p> <p>"Puerto Rico was lucky that with this disaster, it was able to get the aid," he said. "This is working out both opportunistically and financially. ... If you're going to have to have this crisis, this is probably the way it should happen. I hate to say that."</p>

<b>HEADLINE</b>	<b>05/31 Israel to invest in neglected neighborhoods</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/israel-invest-neglected-palestinian-areas-jerusalem-55566263?">https://abcnews.go.com/International/wireStory/israel-invest-neglected-palestinian-areas-jerusalem-55566263?</a>
<b>GIST</b>	<p>The Israeli government on Thursday unveiled what it billed as a groundbreaking program to invest hundreds of millions of dollars in long-neglected Palestinian neighborhoods of east Jerusalem.</p> <p>The "Leading Change" program aims to reduce the huge social gaps between the Palestinian neighborhoods and the overwhelmingly Jewish western part of the city. Palestinian neighborhoods suffer from poor infrastructure, neglect and subpar public services, and nearly 80 percent of the city's Palestinian families live in poverty.</p> <p>The program will invest 2 billion shekels, or \$560 million, in three core areas: education, infrastructure and helping Palestinian women enter the work force. The money will be spent on a variety of programs, including nine pilot projects, in the coming five years, with the aim of attracting further government and private investment down the road.</p> <p>Various government ministries, along with the city of Jerusalem, will carry out the program, which was launched at a ceremony at President Reuven Rivlin's official residence on Thursday.</p> <p>Rivlin, a proponent of coexistence, praised what he called "the most comprehensive attempt by the government to date to narrow the gaps and to develop the economy" of east Jerusalem.</p> <p>He said east Jerusalem has experienced "lost generations" over the decades. "I very much hope that the near future will ensure hope for change, and ensure that we not give up on future generations."</p>

	Israel captured east Jerusalem in the 1967 Mideast war and annexed the area in a move that is not internationally recognized. Israel considers east Jerusalem an inseparable part of its capital, while the Palestinians seek the area as the capital of a future state.

<b>HEADLINE</b>	<b>05/31 NKorea complains of 'US hegemonism'</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/russia-foreign-minister-arrives-talks-north-korea-55552209?">https://abcnews.go.com/International/wireStory/russia-foreign-minister-arrives-talks-north-korea-55552209?</a>
<b>GIST</b>	<p>North Korean leader Kim Jong Un complained of "U.S. hegemonism" to Russia's visiting foreign minister on Thursday, as one of his top lieutenants was in New York trying to pave the way for a summit with President Donald Trump.</p> <p>Kim told Sergey Lavrov that he hopes to boost cooperation with Russia, which has remained largely on the sidelines in recent months as Kim has reached out diplomatically to the United States as well as to South Korea and China.</p> <p>"As we move to adjust to the political situation in the face of U.S. hegemonism, I am willing to exchange detailed and in-depth opinions with your leadership and hope to do so moving forward," Kim told Lavrov.</p> <p>Kim has previously made harsher comments and even threatened to launch nuclear attacks on the United States numerous times. But his comments Thursday come at a sensitive moment, when a senior North Korean official was in New York for talks with U.S. Secretary of State Mike Pompeo on the planned summit.</p> <p>After his meeting with North Korean senior envoy Kim Yong Chol, Pompeo said "real progress" has been made in the last three days toward setting the conditions needed for Trump and Kim Jong Un to have a successful summit in Singapore. Still, Pompeo said he doesn't yet know whether the meeting will proceed on the announced date of June 12 and that he believes North Korea's leaders are contemplating a different path forward that would allow their nation to more fully integrate into the international community.</p> <p>Kim Yong Chol, the highest-level North Korean official to visit the United States in 18 years, plans to travel to Washington to convey a personal letter by Kim Jong Un to Trump.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>06/01 UN, Myanmar reach agreement 'next step'</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/agencies-agree-return-rohingya-myanmar-55560864?">https://abcnews.go.com/International/wireStory/agencies-agree-return-rohingya-myanmar-55560864?</a>
<b>GIST</b>	<p>Myanmar and the United Nations agreed to take steps to create conditions for the safe return of about 700,000 Rohingya Muslims who have fled military-led violence into Bangladesh.</p> <p>The agreement announced by the government and two U.N. agencies on Thursday calls for a framework of cooperation that will lead to the "voluntary, safe, dignified and sustainable" repatriation of Rohingya refugees "to their places of origin or of their choosing."</p> <p>The U.N. refugee agency said that the conditions for voluntary return are not conducive yet. The memorandum of understanding — which is expected to be signed next week — "is the first and necessary step to support the government's efforts to change that situation and is also intended to support recovery and resilience-based development for the benefit of all communities living in Rakhine state," UNHCR said in a statement.</p> <p>Myanmar and Bangladesh agreed in November to begin repatriating the Rohingya, but the refugees</p>

expressed concern that they would be forced to return and would face unsafe conditions in Myanmar if the process is not monitored by international aid groups.

The government said in a statement that it initialed the agreement with the U.N. Development Program and UNHCR for their assistance so that verified displaced people "can return voluntarily in safety and dignity."

The U.N. said the agreement also provides for the two agencies to be given access to western Rakhine state, where most of the violence against the Rohingya has occurred since August.

It said that will allow the refugee agency to assess the situation, carry out protection activities, and provide information to refugees about conditions in their home areas so that they can better decide whether they want to return.

Myanmar's security forces have been accused of rape, killing, torture and the burning of Rohingya homes. The United Nations and the United States have described the army crackdown as "ethnic cleansing." The government has denied the accusations, instead blaming the violence on Rohingya insurgents who attacked security posts that triggered the reprisals and the latest exodus of the population that has long been denied citizenship and other basic rights.

The government of predominantly-Buddhist Myanmar says Rohingya are illegal migrants from Bangladesh, even though some have lived in the country for generations.

Myanmar has said so far it will only allow refugees with identity documents — which most Rohingya lack — to return.

<b>HEADLINE</b>	<b>06/01 South Sudan faces UN arms embargo</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/vote-sanctions-south-sudan-55562836?">https://abcnews.go.com/International/wireStory/vote-sanctions-south-sudan-55562836?</a>
<b>GIST</b>	<p>The U.N. Security Council adopted a U.S.-sponsored resolution Thursday that threatens an arms embargo on South Sudan and sanctions against six people including the country's defense chief if fighting doesn't stop and a political agreement reached.</p> <p>The resolution received just the minimum 9 "yes" votes, with six countries abstaining: Russia, China, Bolivia, Kazakhstan, Equatorial Guinea and Ethiopia.</p> <p>The resolution asks Secretary-General Antonio Guterres to report by June 30 on whether fighting is taking place and "a viable political agreement" has been reached.</p> <p>If he reports fighting or lack of an agreement, it says the Security Council will consider imposing an arms embargo or sanctions against the six officials — or both measures within five days.</p> <p>There were high hopes that South Sudan would have peace and stability after its independence from neighboring Sudan in 2011. But the country plunged into ethnic violence in December 2013 when forces loyal to President Salva Kiir, a Dinka, started battling those loyal to Riek Machar, his former vice president who is a Nuer.</p> <p>A peace deal signed in August 2015 didn't stop the fighting, and a cessation of hostilities agreement this past Dec. 24 was broken within hours.</p> <p>The African Union's eight-nation Intergovernmental Authority for Development, which is holding a summit in Addis Ababa, Ethiopia, has been trying to revive the failed peace agreement.</p>

<b>HEADLINE</b>	<b>06/01 Rival Koreas resume peace talks</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/rival-koreas-resuming-high-level-peace-talks-55575817?">https://abcnews.go.com/International/wireStory/rival-koreas-resuming-high-level-peace-talks-55575817?</a>
<b>GIST</b>	<p>North and South Korea on Friday resumed senior-level peace talks Seoul sees as an important step in building trust with Pyongyang amid a U.S.-led diplomatic push to persuade the North to give up its nuclear weapons.</p> <p>The meeting at the inter-Korean border village of Panmunjom follows a meeting in New York between U.S. Secretary of State Mike Pompeo and senior North Korean envoy Kim Yong Chol where they discussed a potential summit between President Donald Trump and North Korean leader Kim Jong Un. American delegations are also meeting with North Koreans in Panmunjom and Singapore as part of efforts to confirm the summit that may take place on June 12 in Singapore.</p> <p>South Korea's Unification Ministry said the Korean senior officials during the morning session of their meeting exchanged views on setting up a liaison office in the North Korean border town of Kaesong and arranging a joint event to commemorate the "June 15 Declaration" for peace adopted after the first inter-Korean summit in 2000. The North said agreed that the liaison office should be established as quickly as possible and proposed the event celebrating the June 15 Declaration to be held in the South, the ministry said.</p> <p>South Korea also proposed military talks on reducing tensions across their heavily armed border and Red Cross talks to resume reunions of families separated by the 1950-53 Korean War, the ministry said. There could also be discussions about fielding combined teams in some sports at the Asian Games in August.</p> <p>South Korean President Moon Jae-in, who met with Kim Jong Un twice in the past two months, has said progress in inter-Korean reconciliation will be a crucial part of international efforts to resolve the nuclear standoff with North Korea because Pyongyang wouldn't give up its nuclear program unless it feels its security is assured.</p> <p>Ri Son Gwon, chairman of the North's agency that deals with inter-Korean affairs, told Cho at the start of the meeting that the rivals should work on building "trust and consideration for each other" to carry out the agreements of the recent inter-Korean summits.</p>

<b>HEADLINE</b>	<b>05/31 Female truckers sue long-haul company</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/sexual-harassment-lawsuit-long-haul-trucking-company-age/story?id=55542493">https://abcnews.go.com/US/sexual-harassment-lawsuit-long-haul-trucking-company-age/story?id=55542493</a>
<b>GIST</b>	<p>"Jane" thought driving a truck would be her ticket into the middle class. She had been working two full-time jobs – one at the local McDonald's, the other as a housekeeper in a hotel – but money was still tight.</p> <p>"I got so tired of it," she said. "I was always going. I'd get maybe an hour's sleep on the bus and be at the next job."</p> <p>She decided she was ready for a change, so she took a job as a driver at CRST, Expedited Inc., one of the largest team trucking companies in the country with more than 3,500 drivers and average revenues of \$1.5 billion per year, where she would receive a bigger salary, full benefits and paid vacations.</p> <p>But Jane is a minority within the male-dominated trucking industry. According to the Bureau of Labor Statistics, only 6 percent of the nation's 3.5 million truck drivers are women, and CRST drivers work in teams, meaning there are two drivers in each cab with bunk beds to sleep in. Teams can cover more ground in a shorter period of time -- 1,100 miles in 24 hours – because the drivers take turns driving the truck, reducing the number of stops and breaks.</p>

In June 2017, Jane said she had to fend off unwanted sexual advances from another driver who entered her truck while she was parked at the CRST terminal in Riverside, Calif. “He went and closed the curtain and started grabbing on me, trying to kiss on me,” said Jane, whose name has been changed to protect her identity. “Pulled off my clothes. Like, a constant battle of no, no, get off me, no.”

She filed a report with CRST human resources and received a follow-up letter from an employee relations representative. According to the letter, CRST “conducted an investigation” and took “appropriate action.” Jane said she does not know if the other driver was disciplined.

“Somebody I went to school with as well, they said, yeah, they see him on the roads,” Jane told ABC News. “It’s always a worry of mine that I will run into him.”

Jane soon learned that she wasn’t alone. CRST has faced allegations of widespread sexual harassment for years. In addition to a case brought by the Equal Employment Opportunity Commission (EEOC) in 2007 which was dismissed, three women filed a lawsuit in October 2015, alleging systemic gender discrimination, including “hostile work environment harassment based on sex; and retaliation for complaining about harassment in the workplace.”

On March 30, 2017, the judge in the case ruled that the case could move forward as a class action lawsuit.

According to Joshua Friedman, lead attorney in the case, between 2015 and 2017, nearly 300 women employed or formerly employed by CRST also filed complaints with the company, alleging a range of offenses, from propositions for sex, to allegations of assault and rape. At CRST, new drivers are required to pair with a trainer, also known as a lead driver, and go out on the road for 28 days of driving instruction. The trainer’s recommendation and documentation influence whether or not a trainee passes and becomes a CRST driver. Critics say this creates a vulnerability for female trainees, as male trainers have enormous power in determining if they are able to start careers in trucking. Trainers can also damage the women’s financial stability, as trainees who do not pass and enter an eight month employment contract often have to refund the company the cost of training.

“One of the most common complaints is from women trainees, who make up the overwhelming majority of the class, who were made to understand that their passage--that is being able to move on to be drivers and receive actual pay--was dependent on providing sexual favors. That could be either explicit or implicit,” said Friedman. “Another common form of sexual harassment was using very vulgar sexual speech...occasionally going so far as to say this is what I’d like to do to you or this is what I am going to do you.”

The company, in its answer in the lawsuit, denies wrongdoing. In a letter to ABC News, David Rusch, CEO of CRST, refutes Friedman’s claims that the company refused to believe accusers unless there was a witness to the alleged misconduct.

“It is not and has never been CRST’s policy to require a witness or an admission in order to corroborate an allegation of sexual harassment,” Rusch defended his company’s handling of sexual harassment complaints. Rusch claimed that even when a complaint is not corroborated, the alleged harasser is addressed, retrained on the company’s sexual harassment policy, and barred from driving with women.

Rusch detailed new policies to help women who have felt threatened. According to him, since the lawsuit has been filed, CRST has added personnel to its investigative staff and sought feedback from drivers and industry experts. Addressing concerns that women who leave their truck due to harassment face financial ramifications, Rusch wrote, “CRST implemented a new category of paid leave especially for employees who complain of sexual harassment.”

Friedman said these actions are not enough. He encouraged CRST’s clients, some of the largest retailers in the country, to hold the company accountable.

## Cyber Awareness

[Top of page](#)

HEADLINE	<b>05/31 How states respond to cyber threats</b>
SOURCE	<a href="https://gcn.com/articles/2018/05/31/state-cybersecurity-approaches.aspx">https://gcn.com/articles/2018/05/31/state-cybersecurity-approaches.aspx</a>
GIST	<p>What: "Cybersecurity for the States: Lessons from Across America," a report from New America</p> <p>Why: With their responsibility to protect databases full of citizens' personal information, secure critical infrastructure, support local government and train the next generation of workers, states must be "laser focused" on information technology and cybersecurity.</p> <p>Findings: States are responding to the cybersecurity threat in a number of ways. The report highlights three mature, scalable state programs that demonstrate different approaches toward cybersecurity.</p> <p><b>Arizona</b> is using a community approach. It has partnered with the Arizona Cyber Threat Response Alliance to facilitate cyber threat information sharing. The partnership with ACTRA acts as a buffer between the state and the private sector that encourages participation and "engenders faith in the anonymity and effective dissemination of information," the authors said.</p> <p><b>New Jersey</b> has applied a bureaucratic superstructure approach. Its New Jersey Cybersecurity and Communications Integration Cell is a central operations center that coordinates cybersecurity monitoring and incident response services with internal and external stakeholders. The shared services model has increased the breadth and quality of monitoring services, expanded information sharing and offered state and external partners a single point of contact for cyber concerns.</p> <p><b>Washington</b> uses a multidisciplinary model that extends cybersecurity responsibility beyond the IT offices to state-based emergency management and military departments. The state's use of the National Guard to improve the defensive posture of critical infrastructure has also contributed to broader avenues for information sharing prior to incidents.</p>

HEADLINE	<b>05/31 Atlanta denies FOIA access to hack files</b>
SOURCE	<a href="http://www.cbs46.com/story/38319989/atlanta-officials-deny-requests-for-records-amid-cyber-attack">http://www.cbs46.com/story/38319989/atlanta-officials-deny-requests-for-records-amid-cyber-attack</a>
GIST	<p>ATLANTA (CBS46) - It has been more than two months since the City of Atlanta was crippled by a massive cyber attack. While some city services have recovered, other departments have not. The city continues to pay millions of dollars to outside contractors to help with the response.</p> <p>When the CBS46 Bulldog went digging for answers, the city refused to hand over critical information about the attack.</p> <p>The list of questions for city officials is long.</p> <ul style="list-style-type: none"> <li>• How long will the cyber attack last?</li> <li>• What exactly has been lost?</li> <li>• What attempts have been made to resolve it?</li> <li>• How much money have taxpayers spent on the response?</li> <li>• How have departments and leaders responded in private?</li> </ul> <p>The city hasn't provided answers for any of those questions, and there is no sense of when anyone will get those answers. That's because Freedom of Information Act requests related to the cyber attack are being denied.</p>

A spokesman for the city told CBS46 in a statement:

*Due to ongoing security concerns, and still-active investigations, and on the recommendation of our counsel, security vendors, and federal partners, we cannot provide any responsive documents at this time.*

The Freedom of Information Act does allow for exemptions during open investigations, but with such a blanket denial, the city has taken it upon itself to potentially exploit those exemptions at its discretion.

Richard Griffiths, an expert on the First Amendment, says:

*There are going to be some things always that have to be private and in process, but the results should always come out, should always be made public.*

In the meantime, the city's 8,000 employees and thousands of residents don't really know a thing about the attack, and they may not for a while.

<b>HEADLINE</b>	<b>05/31 Recent NKorea hacks w/ActiveX zero-day</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/activex-zero-day-discovered-in-recent-north-korean-hacks/">https://www.bleepingcomputer.com/news/security/activex-zero-day-discovered-in-recent-north-korean-hacks/</a>
<b>GIST</b>	<p>A North Korean cyber-espionage group has exploited an ActiveX zero-day to infect South Korean targets with malware or steal data from compromised systems, local media and security researchers have reported.</p> <p>The perpetrators of these attacks are known as the Andariel Group. According to a report authored by South Korean cyber-security firm AhnLab, the Andariel Group is a smaller unit of the larger and more well-known Lazarus Group —North Korea's cyber-espionage apparatus, believed to be a unit of its military.</p> <p>The recent wave of attacks has started last month. Local media reports that Andariel hackers deployed at least nine separate ActiveX vulnerabilities for their attacks, including a new zero-day.</p> <p>The preferred method of action is via watering-hole attacks —hacking legitimate sites, hosting exploit code, and infecting all incoming site visitors until a high-value target is compromised.</p> <p>Andariel attackers usually deploy a backdoor trojan on infected hosts, which they use to search and gather information.</p> <p>"The zero-day vulnerability has been found in these attacks," a government official from the Korea Internet &amp; Security Agency (KISA) told local media [translated quote].</p> <p>North Korean hackers, and particularly the Andariel Group, have a history of using ActiveX vulnerabilities, according to both local media and Simon Choi, a South Korean security researcher and founder of the Cyber Warfare Intelligence Center.</p> <p>A South Korean security researcher who did not want his name revealed told Bleeping Computer the ActiveX zero-day is connected to attacks on Samsung SDS Acube installations.</p> <p>Acube is a desktop-based groupware application developed by Samsung's enterprise division. The application is popular with South Korean enterprises, and also supports ActiveX controls.</p> <p>ActiveX is a software framework created by Microsoft. It was developed to support a wide range of interactive features and has been embedded across time in popular apps such as Internet Explorer, Office, and others.</p>

	<p>But until more details emerge about this mysterious ActiveX zero-day, the main point to take from these reports is that cyber-attacks carried out by North Korean hackers have continued unabated in spite of the ongoing peace talks between North and South Korean officials.</p> <p>Security experts expected a slowdown of North Korea's cyber-espionage activity in South Korea, similar to the slowdown of Chinese hacking ops after the US and China signed a diplomatic cybersecurity agreement in late 2015.</p> <p>But it has not been so. Five cyber-security vendors —Dell SecureWorks, McAfee, Symantec, FireEye, and Recorded Future— have recently shared their observations of North Korea's recent cyber-activity in a Cyberscoop report, highlighting that the North's cyber-espionage campaigns have either remained at the same level, or grown in recent weeks.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>05/31 Shodan: search for everything on internet</b>
<b>SOURCE</b>	<a href="https://www.csoonline.com/article/3276660/security/what-is-shodan-the-search-engine-for-everything-on-the-internet.html">https://www.csoonline.com/article/3276660/security/what-is-shodan-the-search-engine-for-everything-on-the-internet.html</a>
<b>GIST</b>	<p>Shodan is the search engine for everything on the internet. While Google and other search engines index only the web, Shodan indexes pretty much everything else — web cams, water treatment facilities, yachts, medical devices, traffic lights, wind turbines, license plate readers, smart TVs, refrigerators, anything and everything you could possibly imagine that's plugged into the internet (and often shouldn't be).</p> <p>The best way to understand what Shodan does is to read founder John Matherly's book on the subject. The basic algorithm is short and sweet:</p> <ol style="list-style-type: none"> <li>1. Generate a random IPv4 address</li> <li>2. Generate a random port to test from the list of ports that Shodan understands</li> <li>3. Check the random IPv4 address on the random port and grab a banner</li> <li>4. Goto 1</li> </ol> <p>That's it. Find all the things, index all the things, make searchable all the things. It's a thing, and it's called Shodan.</p> <p>How Shodan works</p> <p>Services running on open ports announce themselves, of course, with banners. A banner publicly declares to the entire internet what service it offers and how to interact with it. While Shodan does not index web content, it does query ports 80 and 443.</p> <p>Other services on other ports offer service-specific information. That's not a guarantee that the published banner is true or genuine. In most cases, it is, and in any event publishing a deliberately misleading banner is security by obscurity.</p> <p>Some enterprises block Shodan from crawling their network, and Shodan honors such requests. However, attackers don't need Shodan to find vulnerable devices connected to your network. Blocking Shodan might save you from momentary embarrassment, but it is unlikely to improve your security posture.</p> <p>Shodan freaks people out</p> <p>Let's address the elephant in the room: Shodan totally freaks people out.</p> <p>Shodan terrifies non-technical people who don't understand how the internet works. CNN called it the "scariest search engine on the internet" in 2013. How can you let hackers know where all the power plants</p>

are so they can blow them up? This is awful!

This is, of course, hyperbole caused by ignorance. Attackers intent on causing harm don't need Shodan to find targets. That's what botnets running zmap are for. The real value of Shodan lies in helping defenders gain greater visibility into their own networks.

You can't play defense if you don't know what you must defend, and this is true equally at both the enterprise level and society as a whole. Shodan gives us greater visibility into the insecure, interconnected cyberphysical world in which we all now live.

#### Playing defense with Shodan

The modern enterprise typically exposes more to the internet than they would like. Employees plug things into the network to get their job done, and voila! Multiply that across all of shadow IT, and you've got a growing attack surface to manage.

Shodan makes it easy to search a subnet or domain for connected devices, open ports, default credentials, even known vulnerabilities. Attackers can see the same thing, so batten down the hatches before they decide to attack.

Many devices publicly announce their default passwords in their banner. Many Cisco devices, for example, advertise a default username/password combo of "cisco/cisco." Finding devices like this on your network before attackers do seems like it would be a good idea.

Shodan also lets you search for devices vulnerable to specific exploits, such as Heartbleed. In addition to helping defenders identify their own devices to secure, this aids penetration testers during the information gathering phase; using Shodan is faster and stealthier than noisily nmap'ing your client's entire subnet.

Paid members have access to the API, and can even create alerts when new devices pop up on the subnet(s) they want to monitor — a cheap and effective way to keep an eye on what your folks are plugging into the internet.

#### Stop putting sh\*t on the internet

The most remarkable aspect of Shodan, however, might be the public awareness it brings to the vast quantity of insecure, critical cyberphysical infrastructure that has somehow gotten plugged into the internet. Shodan's internet cartography helps quantify the systemic security issues the internet faces, and enables journalists to write about, and policymakers to wrangle with, solutions to problems at this scale. (Full disclosure: This reporter has a paid Shodan membership and finds it a mighty useful tool for investigative journalism.)

Take things like ICS/SCADA, for example. Industrial control systems predate the internet and were designed on purpose with no security in mind. They were never intended to be plugged into a global internet, after all, and physical security controls were considered more than sufficient to prevent a malicious attacker from, say, dumping raw sewage into your fresh water supply.

That's changed, and critical infrastructure that was never intended to be on the internet is now a few hops away from every attacker on the planet. Shodan makes it easy to find these systems and raise the alarm. Should water treatment facilities, dams, crematoriums, yachts — you name it — should these things ever be connected to the internet under any circumstances? Probably not, and Shodan makes raising awareness of the issue much easier.

Likewise, a flood of insecure IoT devices is drowning the market, everything from connected coffeemakers to sex toys to refrigerators to, again, you name it. The market has clearly failed to select for strong cybersecurity for these devices, and regulators have, with some notable exceptions, failed to step in to demand stronger cybersecurity controls. Worse, IoT manufacturers go out of business or simply

abandon support of the devices they manufacture, leaving consumers stranded with insecure — and unsecurable — devices that then get slaved into botnet armies. The systemic risk this poses to the entire internet cannot be understated.

The initial gasp of "omg" from non-technical folks on discovering Shodan is best targeted at the market and regulatory forces that enable this situation to flourish.

Nuts and bolts

Shodan is free to explore, but the number of results is capped with a free account. Advanced filters require a paid membership (USD \$49/lifetime). Developers and enterprise users needing a real-time data stream of the whole shebang can get that too.

Defending your organization from embarrassment may have public relations value, but no security value. Shodan gives organizations visibility into their external security posture, and those of other organizations.

The internet continues to incur greater and greater security debt. Shodan lets us see the problem clearly, no matter how uncomfortable that may make some non-technical people.

<b>HEADLINE</b>	<b>05/31 Officials: suspect Vevo hackers arrested</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/paris-police-arrests-alleged-vevo-hackers/">https://www.hackread.com/paris-police-arrests-alleged-vevo-hackers/</a>
<b>GIST</b>	<p>According to French officials, two hackers identified as “Nassim B.” and “Gabriel K.A.B.,” also known by their respective online handles of “Prosox” and “Kuroi’ish.” According to Variety, both hackers were charged with six and five criminal counts respectively, one of which related to fraudulent data modification “in an automated data processing system.”</p> <p>The hackers are accused of gaining access to the YouTube account maintained by Vevo, an American multinational video hosting service that is headquartered in Manhattan. Nassim B. and Gabriel K.A.B. defaced multiple music videos, including “Despacito” by Luis Fonsi and Daddy Yankee, and other videos by Selena Gomez, Taylor Swift, Katy Perry, Chris Brown, and Shakira.</p> <p>Vevo has since removed all changes the hackers made on its YouTube videos. Manhattan District Attorney Cyrus R. Vance, Jr., praised the international cooperation between his office and French authorities.</p> <p>“Since 2010, my Office has honed its expertise and invested in the resources needed to take on complex cyber investigations,” said District Attorney Vance. “Moreover, our secondment program with the Paris Prosecutor’s Office enables embedded prosecutors to provide on-the-ground support when it comes to malicious cyber activity that affects individuals and organizations in New York and Paris alike.</p> <p>“I thank our international partners for their collaboration and extraordinary work on this case, and look forward to more and more investigations benefitting from this type of seamless, cross-border coordination.”</p> <p>This is not the first time that hackers hit the YouTube. In April 2014 hackers from OurMine hacking team hacked accounts displaying posts with titles that begin “#OurMine” and feature the description “Hey, it’s OurMine, don’t worry we are just testing your security, please contact us for more information”.</p> <p>As for one of the accused hackers Kuroi’ish, he has a long history of targeting high-profile websites. Some of his successful hacks from the past include defacing of South Korea’s Asiana Airlines website, defacement of Google Brazil and Google Morocco domains and defacing of the United States based Uniformed Services University in which he leaked thousands of login credentials online.</p>

<b>HEADLINE</b>	<b>05/31 NKorea linked group stops targeting US</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/north-korea-linked-group-stops-targeting-us">https://www.securityweek.com/north-korea-linked-group-stops-targeting-us</a>
<b>GIST</b>	A threat actor linked to North Korea's Lazarus Group has stopped targeting organizations in the United

States, but remains active in Europe and East Asia.

The group, tracked by industrial cybersecurity firm Dragos as Covellite, has been known to target civilian electric energy organizations in an effort to collect intellectual property and information on industrial operations.

Unlike some of the other actors whose activities have been monitored by Dragos, Covellite does not currently have the capability to disrupt industrial control systems (ICS). However, the security firm does see it as a primary threat to the ICS industry.

Covellite's campaigns have been aimed at organizations in Europe, East Asia and North America. One of the operations, conducted in September 2017, targeted U.S. electric companies and involved phishing emails and malicious Word documents designed to deliver a piece of malware.

FireEye analyzed those attacks and linked them to an actor affiliated with the North Korean government. The security firm published a report in October 2017 and noted that the actor appeared to lack the ability to disrupt power supply.

A blog post published by Dragos on Thursday does not mention North Korea, but researchers pointed out that Covellite's infrastructure and malware are similar to ones associated with the group known as Lazarus and Hidden Cobra.

"Technical analysis of COVELLITE malware indicates an evolution from known LAZARUS toolkits. However, aside from technical overlap, it is not known how the capabilities and operations between COVELLITE and LAZARUS are related," explained Sergio Caltagirone, director of threat intelligence at Dragos.

According to Dragos, Covellite has been around since 2017 and is still active, but it has recently stopped targeting organizations in North America, while continuing to attack entities in Europe and East Asia.

While Covellite may no longer be targeting organizations in the United States, that does not mean all North Korea-linked groups have done the same. Several cybersecurity firms told CyberScoop this week that North Korea has still launched attacks on businesses in the U.S.

Dragos has published brief reports on several of the groups that pose a threat to ICS, including Iran-linked Chrysene, Russia-linked Allanite, and Xenotime, the group believed to be behind the Triton/Trisis attacks.

<b>HEADLINE</b>	<b>05/31 Federal report: guidance beating botnets</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/analytics/new-federal-report-gives-guidance-on-beating-botnets/d/d-id/1331940">http://www.darkreading.com/analytics/new-federal-report-gives-guidance-on-beating-botnets/d/d-id/1331940</a>
<b>GIST</b>	<p>In May 2017, the Trump administration issued Executive Order 13800, "Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure." Yesterday, one response to that order was made public as the secretaries of Commerce and Homeland Security jointly released "A Report to the President on Enhancing the Resilience of the Internet and Communications Ecosystem Against Botnets and Other Automated, Distributed Threats."</p> <p>The report, at 51 pages, is a relatively concise look at the state of defense against botnets and similar threats. Reports such as these "are important in terms of being able to assess what the current state of cybersecurity is, what we're able to do, and what we need to be able to do about it," says Chris Pierson, CEO of Binary Sun Cyber Risk Advisors.</p> <p>More than the specifics of the assessment, the level of the report is important, says Chris Wysopal, founder and CTO of CA Veracode. "This looks at the whole system development life cycle, from planning through end of life," he says. He argues that the level of conversation is critical because consumers buy products with gaping security holes — and will continue to do that until vendors make safe products an economic priority.</p> <p><b>Five Goals</b></p> <p>The report is based on five goals for improving security. The five broad goals are:</p> <ul style="list-style-type: none"> <li>•Goal 1: Identify a clear pathway toward an adaptable, sustainable, and secure technology marketplace.</li> <li>•Goal 2: Promote innovation in the infrastructure for dynamic adaptation to evolving threats.</li> <li>•Goal 3: Promote innovation at the edge of the network to prevent, detect, and mitigate automated, distributed attacks.</li> <li>•Goal 4: Promote and support coalitions between the security, infrastructure, and operational technology communities, domestically and around the world.</li> <li>•Goal 5: Increase awareness and education across the ecosystem.</li> </ul> <p>The goals are important because they give guidance to a variety of stakeholders on which steps they should be taking to secure their systems and networks. The real question is whether any of those</p>

stakeholders will take meaningful action.

#### A History of Reports

"Look up the '2004 NIAC Hardening the Internet Report and Recommendations.' About 80% of that report is reflected in this report," says Andy Ellis, CSO of Akamai. That isn't entirely a reflection on the skills or dedication of IT security professionals, though. "It's because a lot of the problems are really hard," explains Ellis.

"The issues are, 'what are the action items, who owns the action items, and what dollars are being put behind fixing them?'" says Pierson. Now, he says, it's time to move forward. "Given 10 years of describing the risk, what are the low-hanging fruits, what are we going to do about it, and who's going to pay for it?"

At the federal level those questions are critical, given the just-released "OBM Federal Cybersecurity Risk Determination Report and Action Plan," in which 71 of 96 federal agencies were shown to be at risk or at high risk for cybercrime issues. "We're talking about the bad things that are happening, but when are we going to take about solving them? How do we solve them, when do we solve them, who solves them?" asks Pierson.

#### Steps Ahead

There's at least one step that would be direct, if not necessarily easy to implement. "The government could just change their procurement to follow the recommendations. That would incent vendors to change their practices if they wanted government business," says Wysopal.

"Everyone who's in the industry should read through the list and see what they can work on," says Ellis. As an example, he mentions the recommendation that education for every engineering and technical discipline have a cybersecurity component, instead of waiting until young professionals are in the field to begin their training on the subject.

Ultimately, though, Ellis sees real value in the process. "I think that the important thing is that this represents the work of a lot of groups that have come together. It's not a final product but part of a process to make things better," he says.

Pierson acknowledges the value of the process but has a stark assessment of the progress made so far. "It's 10 years later and we're still at the same place."

<b>HEADLINE</b>	<b>05/31 UW bomb prank livestreamed online</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1005772/arab-andy-livestream-bomb-prank-uw/">http://mynorthwest.com/1005772/arab-andy-livestream-bomb-prank-uw/</a>
<b>GIST</b>	<p>A livestreamer who goes by the name "Arab Andy" filmed an alleged bomb prank at the University of Washington that sent students fleeing from their classroom. The entire incident was captured live on YouTube.</p> <p>As a result, Savery Hall at UW was evacuated at around 5:30 p.m. The Quad at UW was briefly blocked off as police and firefighters investigated to determine there was no bomb. The Quad was reopened at 6:22 p.m.</p> <p>The online streamer goes by the handle "<a href="#">Arab Andy</a>." He accepts financial donations while he streams his activities. In return, donators can play audio on speakers as he walks around. Or their text messages are translated into audio on the speakers. Previous videos show him walking around "trolling Seattle," playing bomb sounds. He is frequently asked to leave markets, and other public places.</p> <p>On Thursday, Arab Andy allegedly walked around the University of Washington campus disrupting classrooms, acting like he was late to class or just lost — all on live video that lasted nearly an hour and 16</p>

minutes. The livestream shows him walking into the back of a classroom where his speakers play the sound effect of a bomb being activated. This caused students to run from the room and police to respond. He continued to stream until police found him. [The Daily reports](#) that university police made the arrest.

“You’re going to arrest me for nothing bro,” Arab Andy can be heard on the live video as police detain him. “Come on stop, bro. That’s not fair bro. Bro? Bro stop. Listen bro. I’m sorry, listen bro. This is, like, assault, bro. This is a YouTube livestream bro. It was a donation. It was a donation to media. Somebody donated two bucks and it played some \*\*\*\*.”

The live video shows “Arab Andy” walking around the University of Washington campus the evening of Thursday, May 31, 2018. The video features him talking with people who are watching and commenting on his livestream. It shows him walking into classes as audio clips with racial epithets are played over his speakers. One teacher tosses the livestreamer out of his class.

Eventually, at about 39 minutes into the live video, he walks into a sociology classroom and sits down in the back.

“Hi guys, sorry I’m late,” he whispers to the people in the room.

“Is this where you are supposed to be?” a person off camera asks him.

“I think so,” he responds.

His speakers then play an audio clip that the entire room hears: *“Attention. C4 has been successfully activated. Bomb detonation countdown successfully started.”*

A series of beeps can then be heard on the video as students flee the room. More donations to his stream are noted in the video.

“Oh my God,” he giggles after the room is cleared. “We got to go guys .... Dude, you cannot get a better reaction than that ... That was not on purpose. Not playing guys ... I just made a whole crowd run for their lives.”

He then walks out of the building where he sees people in the quad talking about the incident. He giggles and acts oblivious as people discuss what just happened in the building. He then walks off campus.

“Yo Arab Andy ... Sorry bro. Stay safe LOL,” a donator’s comments are announced on the speakers. Police and fire trucks begin to arrive. Arab Andy films it all.

“Holy \*\*\*\* dude. It’s not even a bomb guys,” he can be heard saying on the stream. “Prank gone wrong guys. It wasn’t even a prank dude.”

The video shows police officers finding him at University Avenue and 42<sup>nd</sup> Street.

“Hey! Get on the ground right now! Don’t make any sudden movements,” an officer yells.

“What’s going on? I’m recording bro, if you are going to shoot me,” Arab Andy says. “What are you doing, bro? Put the gun down. What are you doing, bro?”

“That’s fine ... record all you want. That’s totally fine,” an officer says. “You are being contacted for a bomb threat ... on the ground. Lay on the ground.”

“That was DTS, that was a donation,” Arab Andy says.

“On the ground,” the officer continues to say and instructs him to put his hands behind his back.

	<p>“Come on bro, I didn’t do anything,” Andy says on the video. “Bro? Look at the video bro, I recorded it.”</p> <p>“Good,” the officer says.</p> <p>“This is F***** bro. You’re going to arrest me for nothing bro. Come on, stop bro. That’s not fair bro. Bro? Bro stop. Listen bro. I’m sorry, listen bro. This is like assault bro. This is a YouTube livestream bro. It was a donation. It was a donation to media. Somebody donated two bucks and it played some *****.”</p> <p>The video goes blank as officers take his camera. Audio can still be heard as Andy is told that he is being detained and that someone followed him out of the building and reported him to police.</p> <p>As Andy is being detained, viewers in the livestream begin commenting that cops are racists and that Arab Andy did nothing. They play anti-cop music. Other commenters play “Bomb countdown started” audio clips. Other audio clips continue, telling the cops to kill themselves and that they are pigs.</p>

<b>HEADLINE</b>	<b>05/31 Target: Australia real estate agents</b>
<b>SOURCE</b>	<a href="https://www.zdnet.com/article/australian-real-estate-agents-a-trending-target-for-cybercrime/">https://www.zdnet.com/article/australian-real-estate-agents-a-trending-target-for-cybercrime/</a>
<b>GIST</b>	<p>Cybercriminals are inserting themselves into real estate transactions and making off with the money. They've been targeting Australia since late 2017, the problem is growing, and you'll soon be heading a lot more about it, according to Alex Tilley, a senior security researcher with Dell SecureWorks' Counter Threat Unit Research Team.</p> <p>These attacks are yet another example of an organisation's staff or individuals being manipulated into sending money to cybercriminals. The Australian Federal Police (AFP) calls them "CEO impersonation" or "senior executive impersonation" attacks, and the US Federal Bureau of Investigation (FBI) calls them "business email compromise" (BEC).</p> <p>The AFP has been warning that these attacks have been getting smarter, more subtle, and better organised for at least two years now. They continue to rise in both frequency and severity, and corporate victims are now losing millions of dollars in single transactions.</p> <p>Targeting residential property transactions means that the money is often coming from individuals rather than large organisations. Individual consumers are unlikely to detect the fraudulent emails. Even if the criminals fail to mimic the real estate agent's communication style, the documents are often based on standard invoice templates, or even just ordinary email. For many potential victims, it might even be the first such transaction they've executed.</p> <p>There's "a lot of implicit trust" in the real estate sales process, Tilley told ZDNet, and "that's the way the system's always worked". No one is ever told to cross-check the account details, even when they do come from the correct email address.</p> <p>"Since late last year I'm hearing about more and more of it, and I'm sure the banks hear more and more of it as well. The ones that I'm hearing about have been successful, which means that they'll be coming back," he said.</p> <p>The cybercriminals could potentially capture smaller, regular transactions, such as rental payments, or rental bond returns, but the cases Tilley is familiar with have been at the higher end. Individuals stand to lose their deposit when buying a home -- or perhaps in the case of buying a property outright, their life savings.</p> <p>"When it does start to become more publicly known it's going to be heartbreaking."</p>

The cybercriminals will usually start by breaking into a real estate agent's Outlook Web Access (OWA) account, Tilley told the AusCERT Cyber Security Conference on Australia's Gold Coast on Thursday. They'll send a single test email to confirm that they're in, and to see if they're detected. If not, they'll wait 30 days -- the default log rotation period -- for the evidence of their hack to be erased.

They'll then log back in, check for scheduled sales settlements, begin emailing both parties, and eventually send the altered account details for the funds transfer.

<b>HEADLINE</b>	<b>05/31 Ticketfly shuts down; investigates hack</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/ticketfly-temporarily-shuts-down-to-investigate-hack/">https://www.bleepingcomputer.com/news/security/ticketfly-temporarily-shuts-down-to-investigate-hack/</a>
<b>GIST</b>	<p>Eventbrite-owned ticket distribution service Ticketfly has taken its website offline today after a hacker defaced its frontpage and stole a part of its customer database.</p> <p>The hack has taken place late yesterday night (US timezones), on May 30. At that time, users trying to purchase tickets reported that the Ticketfly website was showing a defacement message with the now infamous "V for Vendetta" character, the symbol of the Anonymous hacker collective.</p> <p>"Ticketfly HacKeD By IsHaKdZ," read the website, and "Your Security Down im Not Sorry."</p> <p>Ticketfly admins did eventually discover the hack, but before they took down the defacement message and put the site in maintenance mode, a user also noticed that many CSV files containing user data were also freely accessible via one of the site's URLs.</p> <p>Since then, that URL has been taken down, and the data is not accessible anymore. Furthermore, Ticketfly replaced the original maintenance message with one admitting to the hack (image above).</p> <p>"Following a series of recent issues with Ticketfly properties, we've determined that Ticketfly has been the target of a cyber incident," the message now available on Ticketfly's homepage reads.</p> <p>"Out of an abundance of caution, we have taken all Ticketfly systems temporarily offline as we continue to look into the issue. We are working to bring our systems back online as soon as possible. Please check back later."</p> <p>The site's abrupt downtime caused issues with bars and event organizers selling tickets through the Ticketfly service. Users can't buy tickets either, as all Ticketfly servers are now down.</p> <p>The hacker behind the Ticketfly defacement and database theft is named IsHaKdZ. Zone-H, a website that archives site defacements includes entries attributed to this nickname going back as far as 2010, albeit it is unclear if it's the same hacker or someone who is misusing an older pseudonym.</p> <p>IsHaKdZ also left an email address on the defaced website, but the hacker did not respond to a request for comment on the hack before this article's publication.</p> <p>But the hacker did reply to a CNET reporter, revealing that he asked Ticketfly to pay a 1 Bitcoin ransom to not release the site's data online. Ticketfly did not confirm the ransom demand.</p>

<b>HEADLINE</b>	<b>05/31 Claim: EC planning not to comply GDPR</b>
<b>SOURCE</b>	<a href="https://nakedsecurity.sophos.com/2018/05/31/european-commission-doesnt-plan-to-comply-with-gdpr-well-sort-of/">https://nakedsecurity.sophos.com/2018/05/31/european-commission-doesnt-plan-to-comply-with-gdpr-well-sort-of/</a>

<b>GIST</b>	<p>Yet another email containing the letters GDPR dropped into our mailbox today.</p> <p>This one was a bit different – it wasn't a company explaining how it wanted us to help it comply, nor a company slapping itself on the back for having done what it was expected to do anyway.</p> <p>This wasn't even an article about non-compliance that named and shamed someone who hadn't bothered to get ready in time.</p> <p>It was about a statutory body that, unlike the rest of us, apparently doesn't have to comply: the European Commission (EC) itself.</p> <p>In the curious and orotund way that newspapers sometimes have with words, today's GDPR email told us that:</p> <p><i>The Telegraph can reveal today that Brussels bureaucrats, who pushed for the stricter rules around how companies and governments use data, don't plan to comply with their own laws.</i></p> <p>That seems weird, but you can imagine that there may be all sorts of legal absurdities that might arise by directly applying GDPR to a pan-European executive arm of government.</p> <p>Which country's regulator would apply, and how, for example?</p> <p>Apparently, the EC is planning to subject itself to a regulation that will work like GDPR, even though it hasn't yet done so.</p> <p>That makes the Telegraph sound a bit OTT when it remarks that "Brussels bureaucrats [...] don't plan to comply with their own laws," if indeed their intention is to comply with a regulation that is substantially similar.</p> <p>As many companies have found, GDPR is more of a digital lifestyle guide, admittedly with teeth in the form of fines, although the EU's various regulators seem determined not to use GDPR as a revenue mill.</p>

<b>HEADLINE</b>	<b>05/31 Nocturnal Stealer budget malware</b>
<b>SOURCE</b>	<a href="https://threatpost.com/nocturnal-stealer-lets-low-skilled-cybercrooks-harvest-sensitive-info/132422/">https://threatpost.com/nocturnal-stealer-lets-low-skilled-cybercrooks-harvest-sensitive-info/132422/</a>
<b>GIST</b>	<p>The Nocturnal Stealer malware has crept into the Dark Web like a thief in the night, offering criminals a lucrative payday for a small price — and little effort.</p> <p>It's a commodity malware, debuting on an underground forum in March for the low price of \$25. It steals things, including 28 different kinds of cryptocurrency wallets, saved FTP passwords within FileZilla, and Chrome and Firefox browser information (such as login credentials, cookies, web data, autofill data and stored credit cards). It also zips up system data, including IP address and language, machine ID, date/time, installation location, operating system, architecture, username, processor type, video card info and a list of all running processes, to send to the C2 server.</p> <p>According to Proofpoint researchers, Nocturnal Stealer's detection evasion techniques set it apart from other budget-ware.</p> <p>"[It] uses several anti-[virtual machine] and anti-analysis techniques, which include but are not limited to: environment fingerprinting, checking for debuggers and analyzers, searching for known virtual machine registry keys and checking for emulation software," they explained in an analysis published Wednesday. "We commonly observe this step in some mainstream crimeware, but it is unusual for [this class of malware]."</p>

In the wild, Nocturnal Stealer was seen copying stolen information into plaintext files with the obvious names “information” and “passwords”. The system data goes into the former, and the browser, cryptocurrency and FTP data goes into the latter. After that, it cranks up the communication with the C2 server, sending the stolen info in a multi-part HTTP POST form.

“It [also] utilizes an HTTP POST method for the initial check-in to report the infected machine information to the C&C server,” the researchers said. “This POST uses the User-Agent ‘Nocturnal/1.0’ which contains the name and the version of the stealer. This may indicate that this is the first major version of this Nocturnal Stealer to be observed in the wild.”

When its nefarious work is done, it runs a simple command to end its processes and delete itself off the victim machine – it is, in other words, a “one-shot” code, and the victim may be completely unaware that his or her information has been lifted.

Proofpoint researchers noted that while Nocturnal Stealer is a fairly simple weapon, it “provides a glimpse into the evolving criminal markets that continue to produce new variations on the crimeware we see every day.” Specifically, it gives wings to the trend of entry-level cybercriminals gaining the ability to carry out advanced attacks, in this case to harvest and exfiltrate sensitive data. The Dark Web ad hawks Nocturnal Stealer’s anonymity, and offers server setup services (incidentally a savvy technique that gives the malware authors access to all stolen data lifted by their clients).

“Nocturnal Stealer and other malware like it provide a would-be cybercriminal with the means to cause damage and harm to people and companies easily and cheaply,” the researchers said, something that should be a real concern for defenders.

<b>HEADLINE</b>	<b>05/31 ICANN launches GDPR lawsuit</b>
<b>SOURCE</b>	<a href="https://threatpost.com/icann-launches-gdpr-lawsuit-to-clarify-the-future-of-whois/132427/">https://threatpost.com/icann-launches-gdpr-lawsuit-to-clarify-the-future-of-whois/132427/</a>
<b>GIST</b>	<p>The WHOIS internet domain directory is at the center of a GDPR-related lawsuit that should clarify at least one of the many unknowns when it comes to achieving compliance with the data-privacy regulation.</p> <p>The suit was filed last week by ICANN, the nonprofit body responsible for administering the assignment of a large portion of domain names on the internet. ICANN is also the keeper of WHOIS, which serves a phonebook-like purpose of making contact information available for those who have registered domains. ICANN contractually requires the collection of three sets of contact data by over 2,500 registrars and registries: administrative and technical contacts as well the registrant’s personal details, including name, email and telephone number.</p> <p>Given the “data minimization” tenet of the EU’s General Data Protection Regulation (GDPR), which went into effect last Friday, the WHOIS data governance practices are one of the gray areas that exist when it comes to implementing the law. The GDPR requires that organizations collect only as much data as it needs for a specific business purpose, no more; as such, collecting three sets of potentially overlapping data may violate the law.</p> <p>Thanks to the uncertainty, some European DNS registrars have decided to no longer collect WHOIS information, for fear of drawing a hefty fine from regulators in an enforcement action. One of those is, EPAG, a Germany-based, ICANN-accredited registrar that is part of the Tucows Group; it said that ICANN’s contract “not only required us to collect and share information we didn’t need, it also required us to collect and share people’s information where we may not have a legal basis to do so. What’s more, it required us to process personal information belonging to people with whom we may not even have a direct relationship, namely the admin and tech contacts.”</p> <p>It argued that in most cases, the admin and tech details are the same as the registrant’s, making the extra data collection “meaningless.”</p>

In response, and with a stated goal of gaining clarity around the law, ICANN filed injunction proceedings against EPAG, seeking a court ruling to ensure the continued collection of all three sets of WHOIS data.

“EPAG recently informed ICANN that when it sells new domain name registrations it would no longer collect administrative and technical contact information, as it believes collection of that data would violate the GDPR rules,” ICANN said in a statement. “ICANN requires that information to be collected, via its contract with EPAG which authorizes it to sell generic top-level domain name registrations.”

### Modernizing WHOIS?

WHOIS data, which has been collected for decades, has been a boon to law enforcement during cyber-threat investigations and is often a crucial tool when it comes to protecting intellectual property rights. But that public good isn’t outweighed by the privacy concerns, the EU told ICANN back in April, when it rejected an interim WHOIS refurb. Regulators also took issue with a lack of specificity in ICANN’s proposal.

“Providing ‘legitimate access’ to ‘accurate, reliable and uniform registration data,’ for example, does not amount to a specified purpose within the meaning of article 5(1)b GDPR, as it does not allow to determine what kind of processing is or is not included, nor does it enable a subsequent assessment of compliance or compatibility in case access is provided,” regulators said in a letter.

Removing most WHOIS information from public view is one idea, they added: “The WP29 welcomes the proposal to significantly reduce the types of personal data that shall be made publicly available, as well as its proposal introduce alternative methods to contact registrants or administrative and technical contacts, without public disclosure of registrants’ personal email addresses (referred to as ‘anonymized email, web form, or other technical means’).”

Trying to satisfy the requirements, ICANN released a new Temporary Specification last Friday regarding how WHOIS data should be collected and which parts may be published, which ICANN “believes is consistent with the GDPR.”

It still requires registry operators and registrars to collect all registration data, but a public query will return only “thin” data in return, which includes “technical data sufficient to identify the sponsoring registrar, status of the registration, and creation and expiration dates for each registration, but not personal data.” Those submitting queries will also get anonymized email address or a web form to facilitate email communication with the relevant contact for that registration.

Third parties – such as law enforcement – has a legitimate interest in gaining access to the non-public data, they can “can look up the sponsoring registrar and contact them, and they are obligated to respond to you in a reasonable time.”

However, this can be problematic.

“To the casual observer, it makes sense to remove WHOIS from the public, or at the very least, hide data deemed personal,” said Brandon Dixon, vice president at RiskIQ. “In doing so, these changes make it difficult for cyber-threat analysts to differentiate between legitimate, compromised and malicious domains. Additionally, without point-of-contact information for a domain owner, it’s even more difficult to communicate when a website may be compromised or infringing on a company’s trademarks or brand.”

One proposal to minimize WHOIS disruption, while still respecting privacy concerns, would be requiring individual email addresses to be hashed using the same encrypted hash algorithm across databases, he added.

“The idea being that the registrant email would be hashed uniformly allowing for analysts to pivot off it, while still obscuring the personal email address itself,” Dixon said, but added, “There is no consensus that

	<p>providing this pivoting mechanism in a public WHOIS directory would be GDPR-compliant, as it may allow connections to be drawn that would identify a person not otherwise identifiable.”</p> <p>The lawsuit should clarify many of the discussions around WHOIS, and could result in WHOIS effectively being killed in Europe. In any event, ICANN has asked the court for guidance.</p>

<b>HEADLINE</b>	<b>05/31 WhatsApp hoaxes deadly in India</b>
<b>SOURCE</b>	<a href="https://www.thestar.com/news/world/2018/05/31/fake-news-on-whatsapp-are-getting-people-killed-in-india.html">https://www.thestar.com/news/world/2018/05/31/fake-news-on-whatsapp-are-getting-people-killed-in-india.html</a>
<b>GIST</b>	<p>MUMBAI, INDIA—Police officers in a district of southern India had an unusual assignment. They travelled from village to village early this month to tell people that some messages that had gone viral on the WhatsApp service were fake.</p> <p>The messages claimed that a gang from northern India had arrived to kidnap children. One showed two photographs of a man being taken away by police with the text: “Please take care of your children. Don’t send them alone.”</p> <p>S.P. Pakalavan, police superintendent in the Vellore district of Tamil Nadu state, ordered officers at the 57 stations under his jurisdiction to dispel the rumour. Travelling by motorbike and auto rickshaw, some with speakers mounted on top, they covered nearly 700 villages over four days, Pakalavan said.</p> <p>“That was the only way to pacify the panic-stricken residents,” he said.</p> <p>Other parts of Tamil Nadu were not so fortunate. Two people were killed in the state on May 9 by mobs that believed they were child traffickers. A man was beaten and hanged from a bridge, and separately a 63-year-old woman was lynched when she and her relatives, while travelling to a temple, reportedly stopped to hand candies to children.</p> <p>Police say there was no truth to the rumours and that WhatsApp has become a vehicle for mayhem and fake news in India, its biggest market with 200 million active users. Law enforcement officials say they are struggling to combat the spread of false information on the popular platform, especially messages that preach communal hatred or encourage violence.</p> <p>Shirish Inamdar, a former deputy police commissioner in the western state of Maharashtra, said in an interview that the messaging service has become “a monster” as uneducated users lack the awareness to verify rumours and educated users use the platform to spread hate.</p> <p>Officials with the Menlo Park-based company, which is owned by Facebook, say that policing false information is challenging because unlike Facebook, WhatsApp messages are private and encrypted and the company does not read content unless a user reports it for being offensive. The company says it is trying to educate users to be more vigilant about potentially harmful messages.</p> <p>“WhatsApp has made communications easier and more reliable for millions of Indians, including community organizations and local police. Though sadly, some people also use WhatsApp to spread harmful misinformation,” the company said in a statement to The Times.</p> <p>“We’re stepping up our education efforts so that people know about our safety features and how to spot fake news and hoaxes.”</p> <p>According to police, at least five people were killed in southern India over the past two weeks in connection with rumours on WhatsApp of child kidnapping gangs, including some that “smash skulls and devour brains.” Another 10 people were beaten in related cases, police said.</p>

In Karnataka state, the messages involved violence, including videos of mobs dragging a bloodied man through the street and roughing up two unidentified men before handing them over to police.

An accompanying message claimed that 400 child traffickers had arrived in Bangalore, the state capital, and said in English: “Be on high alert. 3 kids were kidnapped from my friend’s area this morning. There were 10 guys giving biscuits and people from that area have caught all 10, and five more based on their information.”

Another message accused transgender people of being involved in child trafficking. Over the weekend, in the southern city of Hyderabad, a mob attacked a group of transgender women, killing one and seriously injuring two.

When police arrived, onlookers reportedly attacked their vehicle, accusing them of protecting kidnapers. Some officers were injured. More than 20 suspected attackers were arrested, and police said they were placing members of the transgender community, homeless people and others at risk of beatings into shelters, or asking them to leave the city temporarily.

Hyderabad police launched a campaign to urge people not to believe the social media content “which is creating unnecessary panic.”

They were not the first instances of violence related to WhatsApp messages, authorities said. In May 2017 in the northern state of Jharkhand, police said seven innocent men were killed after messages spread about a kidnapping gang from other parts of India. Two men were arrested in the killings.

In September 2015, Hindu extremists in the northern state of Uttar Pradesh spread word that a Muslim man had killed a cow—which is sacred to orthodox Hindus—and kept it in his refrigerator. A mob subsequently barged into his house and lynched him. Police filed charges in the killing against nearly 20 people, most of whom are out on bail.

Indian political parties have used WhatsApp to rally followers, and radical groups are using it to promote communal hatred in a country increasingly divided between majority Hindus and members of minority communities, including Muslims.

In a recent state election in Karnataka, party workers were among those blamed for circulating fake polls, hoaxes about the killings of Hindu activists and false claims that a Muslim lawmaker had promised “unending bloodshed of Hindus” if voted into power.

Amid the growing outcry, and with national elections due next year, WhatsApp said this month that it had instituted new features for its group messaging option—one of the most common ways that hoaxes spread rapidly—giving administrators greater control over membership in the group. The company is also expected to introduce a feature that will make it more obvious when a new message has been forwarded by another user, in a bid to encourage the reader to think twice about its content.

<b>HEADLINE</b>	<b>05/31 Teens get rich playing FIFA e-sport</b>
<b>SOURCE</b>	<a href="http://bleacherreport.com/articles/2778556-meet-the-teenagers-who-are-getting-rich-playing-fifa?utm_source=cnn.com&amp;utm_medium=referral&amp;utm_campaign=editorial">http://bleacherreport.com/articles/2778556-meet-the-teenagers-who-are-getting-rich-playing-fifa?utm_source=cnn.com&amp;utm_medium=referral&amp;utm_campaign=editorial</a>
<b>GIST</b>	<p>Head ducked, his face almost completely hidden by his flat-peak cap, the 16-year-old cut a timid shape in a far-from-roomy hotel elevator as we descended for breakfast.</p> <p>It was January in Barcelona. The hotel was swarming, playing host to more than 100 FIFA players who had flown in for a tournament. "Are you a FIFA player?" he squeaked at me. "No. Are you?" He didn't carry himself the way the other professional gamers do—imbued with confidence, at times accompanied by entourages, patrolling around in expensive trainers—and he looked so young he could have been</p>

mistaken for 12 or 13.

His name? Donovan Hunt. Or "DhTekkz." This was his first-ever major tournament, first-ever LAN event on FIFA, a relative stranger to the scene. Within days, he would be known to everyone in the esports community.

Hunt went on to wipe the floor with almost every opponent at the tournament, including Nicolas99fc—regarded by several pros as the world's best FIFA player—by six goals in the final. He did so thanks in part to a trick now known as the "driven drop-goal kick," where the goalkeeper backs toward his own goal line, ball in hands, then sprints to the edge of the box and lets loose, the ball taking a trajectory that delivers it to a winger in acres of space.

"It was literally something no one had ever seen before," says Colin Johnson, the manager of AS Roma's FIFA team. "He scored about 10 or 12 goals with it throughout the event. He was scoring against the best [in the world]."

"I don't think I remember seeing someone come to an event and introduce something that changes the meta of a tournament in the way that his driven goal kick did."

It changed Hunt's life, too. He earned \$22,000 for the tournament, promising his mother they'd use it for the holiday they'd long been wishing for. His Twitter following exploded from 300 to more than 40,000, and he indulged the media for hours and stopped for selfies with all comers.

Within a month, he found himself at the center of a bidding war between major gaming organizations and top-tier professional football clubs, all vying to sign him as their official FIFA player. The likes of Ajax, UNILAD and Roma were in the running. F2Freestylers won out. The money on offer was serious. Team management sources in the industry confirm Hunt accepted an annual salary that would put him among the top five earners in the sport—the most high-profile of whom pull in six figures.

And he's only one of the several who have jumped on this money train.

While Hunt's \$22,000 January prize pot may seem gaudy, it pales in comparison to the sort of money (and perks) others have already pulled in. Hunt is a shooting star, but he's shooting toward guys who have already won gargantuan amounts in one sitting.

In May 2017, Paris Saint-Germain's Rocky scooped up \$160,000 for winning a tournament in Berlin. The runner-up, UNILAD Shellzz, pocketed \$80,000—a nice consolation prize considering he lost the final due to an agonising 89th-minute goal that could quite easily have been avoided.

Four months later, FaZe Gorilla pulled in \$200,000 for winning the eWorld Cup final in London. He did it in front of a two-storey crowd, a watching cast of footballers including Alvaro Morata, and was handed tickets to The Best FIFA Football Awards. There, he met Cristiano Ronaldo, Lionel Messi, Neymar, Dani Alves and more.

Those are the big ones, but there are events most weekends players can travel to. Scandinavia offers a plethora of tournaments to play in, as does central Europe and the United Kingdom. Examples include the Gfinity Elite Series, which gave teams a weekly battle ground to fight on and a chance to win close to \$35,000; V4 Festival, which offered a prize pool of more than \$115,000; and the GSA Cup, worth nearly \$100,000 to the winner.

If you're an incredible FIFA player, the chance to win thousands arises almost every week—and it can land you some serious silverware too. FUTWIZ Dubzje triumphed at ESWC in Paris in March and was handed a trophy so big, he had to count it as his hand luggage and check his bag.

And tournaments aren't the only way people are making money playing FIFA. There are around 50 full-time professional players in the world—a number that grows with every passing month—and they earn a

standard living wage at least.

"In France, Germany, the UK, you wouldn't be surprised to see a player make what a teacher makes. A livable wage," Johnson says. "They don't have to rely on prize pools. And they can subsidize their income."

The options to subsidize are fairly broad. Most players create content on YouTube or stream on Twitch, monetizing their free time in the process. Some are becoming extremely popular figureheads—a fact evidenced not only by their social media followings, but also by their channel donations and subscriber numbers.

Reigning world champion FaZe Gorilla has more than 500,000 YouTube subscribers, Hashtag Harry around 370,000, FaZe Tass almost 250,000. German players Expert Mo\_Aubameyang and Fokus Stylo are Twitch stream masters, at times holding between 4,000 to 5,000 concurrent viewers on their games at once, many of whom are donating cash in real time. For reference, most FIFA pros hold a few hundred at a time.

For many, watching personalities on Twitch or YouTube has essentially replaced television—and they compensate directly to their heroes. What these views and subscriptions amount to differs in every case.

FUTWIZ Zelonius offers paid coaching sessions that are streamed on Twitch. He charges members of the public £20 per hour or three games for £50, speaks to them on the phone throughout and then wraps up with a to-do list to improve their skills. It's two birds with one stone; he generally batters them, enhancing his reputation and building a followership, and then collects money via two avenues in the process.

Personal endorsement and branding deals are becoming more common, too. Red Bull is one of several major companies to enter the scene and handpick players to represent it at tournaments, with more than 10 players donning their colors, badge or merchandise.

August Rosenmeier (Hashtag Agge) was signed first back in November 2015, and teammate Ryan Pessoa (Hashtag Ryan) followed suit this February, having engaged in close to three months of talks to make it happen. Pessoa is a professional gamer, a Hashtag representative and a Red Bull athlete, and he juggles all of this while studying for a degree at the University of Surrey.

"It's very difficult trying to balance everything," Pessoa says. "Generally, I tend to prioritize FIFA during qualification months or when there are events; however, if there are exams for me to sit, I prioritize studying for those. If FIFA and exams clash, I have to ask the university if I can sit them at a later date."

He takes branding seriously, showing up to lunch with B/R with his Red Bull cap on. His responsibilities include repping such merchandise, being the face of major events...and drinking Red Bull. "I do that anyway," he assures.

It's on a far smaller scale, but Pessoa's affiliation with Red Bull is directly comparable with Lionel Messi's Adidas sponsorship or Cristiano Ronaldo's Nike deal. They all represent a brand, wear their merchandise and represent the practical "face" of the company—and they all get paid to do it.

Things don't always align for Pessoa, though. In the last week of May, the biggest FIFA tournament of the season so far rolled around—everything he's been working toward since September—and it clashed with his end-of-second-year exams. He was told he could not delay them, that he'd have to choose.

He chose the play-offs.

It's a surely a dilemma few—if any—other students face. Correspondingly, few—if any—other students are making as much money as Pessoa is. It won't surprise you to learn his chosen degree is business management.

It might only be a matter of years before FIFA players start earning at the rate that, say, poker players do—i.e. millions per year. Prize pools for the game still lag far behind those in other esports—esport management sources confirmed there are Danish Counter-Strike players who pull in more than \$20,000 per month—but it's progressing fast, and this is a game sponsors will fall over themselves to be associated with, given its close affiliation to the world's most popular sport.

"There's going to be a wage explosion," one manager in charge of a club's esports team tells B/R. "It's scary, really. It's bonkers. We already have ridiculous numbers thrown at us in negotiations."

Negotiations for players are already becoming difficult. Not only do individual affiliations such as those with Red Bull actually disrupt or scupper deals between players and clubs, but agents and middle men cloud things too, offering out professional players' services for ludicrous amounts.

The same source says: "There's one guy, he offered me two players last summer. One for €12,000 (\$14,000) per month, one for €100,000 a year (\$120,000). I said, 'You're crazy, mate.'"

He might be spurning these offers, but others aren't. Kids are hitting the jackpot, earning tonnes to represent football clubs or gaming organisations.

As the players' personalities, reputations and social channels grow, so will their bank balances. A number will earn more money than they'll know what to do with; a select few already have.

I saw Hunt again in April, this time in Manchester for another tournament, another \$22,000 on the line. There was no mistaking him this time. Clad in a custom gray tracksuit emblazoned with "F2 Tekkz," flanked by two freestylers who together have clocked up 7.5 million YouTube subscribers thanks to their penchant for flicks, tricks and skills, he strode more confidently, no longer hiding beneath his cap.

In a matter of three months, he'd gone from an everyday school kid to a superstar, posing for photos with people he'd never met and rubbing shoulders with professional footballers. It wasn't the stride of arrogance—more the stride of a kid whose life had been transformed for the better.

He was the player everyone was watching in Manchester—the name fans looked out for, the point of intrigue hooking many into competitive FIFA. One player who drew Hunt in the group stage reacted by saying, "Tekkz? Oh s--t! That's the one game I didn't want!" He lost heavily.

"His rise has been very, very fast," Johnson says. "He was a fairly reserved guy. He, like a lot of kids, was quite shy, didn't want to speak that much. But the second they're feeling comfortable, they come out of their shell. I think you've seen him come out of his shell a lot more since stepping onto the world stage."

"There's clearly something about him. A buzz. An aura," another team manager says.

It will only grow from here.

## Terror Conditions

[Top of page](#)

HEADLINE	<b>05/31 Canadian thief faces US extradition</b>
SOURCE	<a href="https://www.thestar.com/news/canada/2018/05/31/alberta-judge-orders-edmonton-man-extradited-to-the-us-to-face-terrorism-charges.html">https://www.thestar.com/news/canada/2018/05/31/alberta-judge-orders-edmonton-man-extradited-to-the-us-to-face-terrorism-charges.html</a>
GIST	EDMONTON—An alleged Edmonton jewelry store thief who is accused of trying to pawn stolen loot to fund his friends and cousins to fight with Daesh is one step closer to extradition to the United States.  On Thursday, Justice John Little ordered that Abdullahi Ahmed Abdullahi, 33, be committed for extradition, meaning he will be held in custody until the federal justice minister makes a final decision.

“You know damn well I don’t support ISIS,” Abdullahi shouted, along with a series of expletives, after Little delivered his decision in court in Edmonton.

Abdullahi was ordered to be committed for extradition to the U.S. to face charges of providing and conspiring to provide material support for terrorists, which would most closely correspond to a charge of facilitating terrorist activity under the Canadian Criminal Code.

While an extradition hearing is not a trial and the arguments presented have not been proven, court heard how the Federal Bureau of Investigation (FBI) obtained email drafts from an account allegedly shared by Abdullahi and his alleged co-conspirators — cousins and friends who either had travelled to Syria to fight with Daesh or expressed interest in doing so — where the accused described robbing a jewelry store in Edmonton to fund their efforts.

A witness named only as “John Doe” in court files, who is said to be a cousin of Abdullahi’s and who pledged allegiance to Daesh in 2014 with other Somali youth in Minneapolis, Minn., is said to have identified Abdullahi from surveillance images showing three suspects robbing Vj Jewellers near 92 Street and 34 Avenue with a gun on Jan. 9, 2014.

The email drafts supposedly written by Abdullahi using the nickname “Phish” reportedly describe how Abdullahi robbed the store so he could help pay for Hanad Mohallim, Douglas McCain and Hamsa Kariye — who have since all died — to travel to Syria to fight with Daesh, but was having trouble pawning the loot.

He had done so after being encouraged by a co-conspirator to rob the “kuffar,” a word for non-Muslims, to fund their efforts.

Other messages allegedly described Abdullahi sending \$2,800 to Kariye using Kariye’s credit card after Kariye had left to join Daesh, and how he sent \$3,000 to McCain to pay for McCain and Mohallim to fly to Turkey before crossing the border into Syria, among other transactions.

The FBI has allegedly obtained 50 such messages, some reported to describe killing enemies, heated battles and their skill at using firearms.

These emails were also said to be verified by McCain’s widow.

American investigators also plan to present records from Western Union that are said to show wire transfers between Abdullahi and his alleged co-conspirators, and records from Turkish Airlines that allegedly include flight itineraries for some of his supposed associates.

Akram Attia argued on behalf of Abdullahi that the evidence was unreliable as “John Doe” faced “extreme jeopardy” as an alleged co-conspirator caught up in the FBI’s investigation and that a statement from McCain’s widow amounted to something “worse” than hearsay and would be inadmissible under Canadian law.

However, Justice Little said in his decision that for the purposes of an extradition hearing, the threshold is simply whether there is enough evidence on which a jury could convict, not whether or not a jury should convict based on the evidence.

“Even if the evidence of ‘John Doe’ and Mrs. McCain alone could and should be rejected, I find the evidence as a whole, including the Western Union money transfer records, could be used by a properly instructed jury to conclude that the mental element of the offence had been proven,” said Little, adding he believes prosecution would be justified.

<b>HEADLINE</b>	<b>05/31 ISIS supporter: kill Prince George</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/isis-supporter-admits-urging-jihadis-kill-prince-george-terror-attack-his-950732">http://www.newsweek.com/isis-supporter-admits-urging-jihadis-kill-prince-george-terror-attack-his-950732</a>
<b>GIST</b>	<p>A supporter of the Islamic State militant group (ISIS) has admitted encouraging jihadis to target Prince George in a terror attack at the young royal's school.</p> <p>Husnain Rashid, 32, from Lancashire in the U.K., changed his plea two weeks into a trial for multiple terrorism offences, after originally denying all the allegations against him.</p> <p>He has now pleaded guilty at London's Woolwich Crown Court to three counts of engaging in conduct in preparation of terrorist acts and one count of encouraging terrorism.</p> <p>Rashid was accused sharing an image of the eldest son of Prince William and Kate Middleton, along with the address of his school in Battersea, London, to fellow extremists via the encrypted messaging service Telegram.</p> <p>One of the pictures he shared of the young royal, who is third in line to the throne, was a superimposed image of the 4-year-old next to a silhouette of two jihadi fighters along with the caption: "Even the royal family will not be left alone."</p> <p>During the trial, it was heard that Rashid posted more than 300,000 messages on Telegram urging a lone wolf attack. Prosecutors said Rashid ran a "prolific" Telegram channel called Lone Mujahid, in which he provided an "e-toolkit for terrorism."</p> <p>Police said Rashid shared a list of popular British sports stadiums, suggested injecting poison into supermarket ice creams and urged Jewish areas of the UK to be targeted in a terror attack.</p> <p>Rashid also allegedly posted a map of New York's Sixth Avenue along with the caption: "New York Halloween Parade. Have you made your preparations? The Countdown begins," as well as popular tourist destinations and train stations across Europe.</p> <p>Sky News reports the 32-year-old urged jihadis to "fight and spill the blood to the apes in your land" adding: "Start planning, start scouting targets, start monitoring entry/exit routes, start preparing tools and weapons/explosive."</p> <p>Following Rashid's change of plea, Judge Andrew Lees told the defendant: "For the past week I have listened to the most disturbing allegations," reports the BBC.</p> <p>"You have admitted these allegations of encouraging others to commit terrorist activities and publishing statements to encourage the killing of others.</p> <p>"It is inevitable that you will receive a very lengthy prison sentence and there will be a consideration of a life prison sentence."</p> <p>He added: "The question of your future dangerousness and the protection of the public is a matter that I will have to give very careful consideration."</p> <p>Rashid will be sentenced for terrorism offenses at the same court on June 28.</p>

<b>HEADLINE</b>	<b>05/31 What is terrorism?</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/05/31/world/americas/what-is-terrorism.html">https://www.nytimes.com/2018/05/31/world/americas/what-is-terrorism.html</a>
<b>GIST</b>	Two masked bombers walked into a crowded restaurant near Toronto and detonated a homemade explosive that wounded at least 15 people. In Belgium, a temporarily freed prisoner went on a deadly

rampage, stabbing and shooting people and taking hostages before the police killed him.

In both attacks, each carried out in recent days, civilians were the victims. But it was only the Belgium attack — in which the assailant screamed “Allahu akbar!” (God is great!) — that the police quickly described as a possible act of terrorism.

The comparison cuts to the core of a protracted debate over what constitutes terrorism, who is a terrorist and what such designations actually mean. An attack viewed as terrorism in one part of the world may be seen as a common crime elsewhere. The debate has grown more complex and intense in the years since the attacks of Sept. 11, 2001, but it dates back many years.

“You’re never going to win on this,” said Charles Kurzman, a professor of sociology at the University of North Carolina and a co-director of the Carolina Center for the Study of the Middle East and Muslim Civilizations. “There’s a legal definition which differs by country. Common definitions are going to vary.”

Here is a look at some of the issues that make the term terrorism so nebulous and tricky.

### **How did the term originate?**

It is derived from the Latin “terrorem,” which translates as “panic,” “alarm” and “great fear.” The term’s use widened with the 1793-94 period of the French Revolution known as the “Reign of Terror,” when the revolutionary government conducted mass executions to intimidate suspected opponents.

### **How does the dictionary define terrorism?**

The Oxford Dictionary calls terrorism “the unlawful use of violence and intimidation, especially against civilians, in the pursuit of political aims.” Merriam-Webster calls it the systematic and coercive use of terror, defined as “violent or destructive acts (such as bombing) committed by groups in order to intimidate a population or government into granting their demands.”

Such definitions are not universally accepted and can be interpreted in different ways. Under the dictionary criteria, some experts would argue, the revolutionary colonist soldiers who slaughtered Native Americans allied with the British were terrorists, as were John Brown’s abolitionists who indiscriminately killed civilians in pro-slavery states before the Civil War. Palestinians regarded as terrorists by Israel are seen by their supporters as resistance fighters opposed to an occupation.

Still, some scholars say the word terrorism can still be used objectively.

“I think it can be defined with a fair degree of precision, which doesn’t necessarily entail judging or taking a position,” said Todd Gitlin, a professor at the Columbia Journalism School. “My definition of terrorism, which I don’t think is unusual, is a violent act in order to strike terror in the hearts of a population toward a political end.”

### **Has terrorism taken on a new meaning?**

Acts of violence have become so ubiquitous that sometimes the terrorism label is applied — as in the Belgium case — even without an obvious ideological purpose. But sometimes the label is not applied — as in the Canada example — and that is where the confusion comes in.

### **Why are the restaurant bombers not considered terrorists by Canada?**

Part of the reason may lie in simple geography and recent history. Unlike Europe, Canada has not suffered the repeated attacks attributed to extremist groups like the Islamic State, and the police may be less likely to assume such a possibility without more facts.

Although the targeted restaurant was Indian, suggesting a possibly ethnic-based bias attack, experts cautioned that the identities of the assailants and their motives remained unclear.

“Until you know who did it, it’s problematic to be categorized as a terrorist attack,” said Victor Asal, a political-science professor at the University at Albany-SUNY and a researcher at the National Consortium

for the Study of Terrorism and Responses to Terrorism.

“If it’s going to be terrorism it’s got to be politically or ideologically motivated,” he said. “If I’m killing you because you sleep with my wife, that’s not terrorism.”

#### **Why was the Belgium attack almost immediately assumed to be terrorism?**

While few details were immediately available about the masked bombers in the Canada attack, much was known about the assailant in Belgium, a 35-year-old Belgian prisoner with a history of assault, drug and theft offenses who had been granted a 48-hour leave. Officials in Belgium said Wednesday that he might have been converted by Islamist extremist cellmates. And the Islamic State militant group belatedly exalted him as a martyred disciple.

Nonetheless, terrorism experts were not all convinced. Some theorized that the assailant was a career criminal who might have used the guise of adherence to Islamist extremism to justify the attack.

“It looks like an act of terrorism, but here’s where things get a bit murky,” said Brian M. Jenkins, a senior adviser at the RAND Corporation. “He may or may not have been radicalized in prison. People are complicated — invariably there is a variety of motivations.”

Mr. Jenkins pointed to the case of Esteban Santiago, an Iraq war veteran who had been hearing voices and behaving erratically in the year before he killed five people at the Fort Lauderdale airport in January 2017 — an attack that was initially thought to have been terrorism.

“There was a lot of evidence of mental illness,” Mr. Jenkins said. “Do I have a terrorist here, or do I have evidence of a mental disorder?”

#### **If the Canada bombers had yelled ‘Allahu akbar,’ would they have been seen as terrorists?**

Against the backdrop of what rights groups have described as rising anti-Muslim bigotry in the West, the answer is almost certainly yes.

“The perception is that terrorism isn’t really terrorism unless a Muslim is somehow involved,” said Ibrahim Hooper, a spokesman for the Council on American-Islamic Relations, the nation’s leading Muslim advocacy organization. “We’ve seen that time and time again.”

He pointed to a study published by the Journal of Communication that showed that American television viewers see far more images of Muslims as domestic terrorists than what is reflected in actual law enforcement statistics. The study found that among those described as domestic terrorists in 146 news reports between 2008 and 2012, 81 percent were identifiable as Muslims, but that F.B.I. reports from those years showed that only 6 percent of domestic terrorism suspects were Muslim.

#### **Why aren’t mass shootings like the Las Vegas massacre considered acts of terrorism?**

Many supporters of gun control in the United States argue that they should be. The Las Vegas casino gunman, Stephen Paddock, who killed 58 people and wounded hundreds before taking his own life, had prepared meticulously for the attack last October and appeared to know exactly what he was doing.

But the glaring hole in the police investigation is an understanding of why he did it. Other than what appeared to have been a preoccupation with guns and possible anger over gambling losses, Mr. Paddock’s reasons died with him.

“Insofar as we know, there’s no political content, no evidence of a political motive — it’s not as though he was trying to compel the government to do something,” Mr. Jenkins said. “This was a shooter.”

#### **Why even distinguish between acts of terrorism and other violent crimes?**

The difference between terrorism and other acts of violence matters because terrorism — regardless of how it’s defined around the world — is considered far more serious as a threat to national security and will provoke a more aggressive government response.

	<p>It is also a term often used to influence public opinion.</p> <p>“If Americans and others are more afraid of terrorism, they’re going to vote in a certain way,” Mr. Kurzman said. “There’s going to be a sense of insecurity that other acts of violence don’t often generate.”</p>

<b>HEADLINE</b>	<b>05/31 US, Russia forces nearly come to blows</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/us-russia-military-came-close-fighting-each-other-syria-assad-says-951675">http://www.newsweek.com/us-russia-military-came-close-fighting-each-other-syria-assad-says-951675</a>
<b>GIST</b>	<p>Syrian President Bashar al-Assad said the U.S. and Russia have nearly come to blows over their separate military campaigns in his country, where Moscow supports the government and Washington works outside of it.</p> <p>The U.S. has struck Syrian government targets in defiance of Russian warnings and killed Russian volunteer fighters, but the seven-year conflict has yet to see any direct confrontations between the U.S. and Russia. In an exclusive interview aired Thursday by Russia's state-owned RT news channel, Assad credited Russia with defusing what could have been a clash between the world's leading military powers as the Islamic State militant group (ISIS) was defeated and both local and international rivalries deepened.</p> <p>"In reality, we were close to have direct conflict between the Russian forces and the American forces, and fortunately, it has been avoided, not by the wisdom of the American leadership but by the wisdom of the Russian leadership, because it is not in the interest of anyone, anyone in this world, and first of all the Syrians, to have this conflict," Assad told RT.</p> <p>"We need the Russian support, but we need at the same time to avoid the American foolishness in order to be able to stabilize our country," he added.</p> <p>The U.S. was an early supporter of efforts to overthrow Assad as he faced a 2011 uprising also backed by Sunni Muslim monarchies and Turkey. As the Syrian opposition became increasingly jihadi in nature and ISIS emerged from a post-U.S. invasion insurgency in Iraq, the U.S. formed a coalition to battle the militants as they spread across the two Arab countries in 2014. Iran, an ally of both the Iraqi and Syrian governments, helped fight the jihadis by mobilizing Shiite Muslim militias and, in 2015, Russia entered the fight in support of Assad.</p> <p>Russian and Iranian support has helped the Syrian leader reclaim most major cities and provinces seized by rebels and jihadis, save for the territories now in the hands of the U.S.-backed Syrian Democratic Forces, a mostly Kurdish alliance that includes Arabs and ethnic minorities as well. Both factions have succeeded in nearly wiping out ISIS altogether, and Kurdish fighters have worked both alongside and against pro-Syrian government forces at times, but Assad warned Thursday he would not hesitate to use force to retake what they control if they refused to negotiate.</p> <p>In response to Assad's remarks, chief Pentagon spokeswoman Dana W. White told a press briefing Thursday that the U.S. mission "remains to defeat ISIS in Syria, our desire is not to get involved in the Syrian civil war." Assad rejected the term "civil war" in the RT interview, describing the conflict "as mercenaries, Syrians, and foreigners being paid by the West in order to topple the government"</p> <p>Marine Corps Lieutenant General Kenneth F. McKenzie Jr. also weighed in on the potential of a conflict between U.S.-led coalition and the Syrian military during Thursday's briefing, saying "any interested party in Syria should understand that attacking U.S. forces or our coalition partners would be a bad policy."</p> <p>The first confirmed incident between Syrian and U.S. forces took place in Deir Ezzor in September 2016, when U.S. airstrikes killed dozens of Syrian soldiers besieged by ISIS in what the Pentagon said was an accident. As President Donald Trump came to office, he called for the U.S. to focus on battling ISIS and</p>

quit funding anti-Assad rebels. This changed in April 2017, however, when he ordered a series of cruise missile strikes on a Syrian military airport in response to allegations of a chemical attack in Idlib.

That summer saw a number of clashes between pro-Syrian government fighters, consisting of various militias, and the Syrian Democratic Forces. The U.S. unilaterally declared the southern border crossing of Al-Tanf to be a deconfliction zone and launched several aerial assaults on forces fighting on behalf of Assad, including the downing of a Syrian Su-22 that the Syrian Democratic Forces accused of bombing their positions. Following this June 19 incident, Russia warned it would treat U.S. aircraft flying in its designated area of operations as "targets."

The most serious battle took place in February. Hundreds of pro-Syrian government fighters, including Russian citizens, were reportedly killed after the U.S.-led coalition claimed they launched a massive assault on Syrian Democratic Forces positions in Deir Ezzor. Russia said its nationals were not fighting on behalf of the armed forces, but Syria called for the United Nations to condemn the U.S.

The U.S. struck a second time days later when it hit a Russian-built T-72 tank that reportedly approached Syrian Democratic Forces positions. Defense Secretary James Mattis said in March that a third incident was avoided through the use of a deconfliction line maintained between the U.S. and Russian militaries.

Two months later and shortly after he suggested he would soon withdraw U.S. troops from Syria, Trump again ordered military action against the Syrian government in response to an alleged toxic gas attack last month. Russia denied Assad's culpability and some officials had even threatened to shoot down U.S. missiles along with the ships and aircraft firing them if Russians lives were put at risk.

The April 13 attack saw the U.S., France and the U.K. blast three Syrian state-run research centers suspected of developing chemical weapons. During his RT interview, Assad said that he had information suggesting Trump had planned "a comprehensive attack all over Syria," but that Russia's threat "pushed the West to make it on a much smaller scale."

Despite the occasional hostilities, the U.S. and Russia have maintained regular contact in Syria, and U.S.-led coalition spokesman Colonel Ryan Dillon said last month that the coalition even provides Russia with information on potential ISIS positions on the western side of the Euphrates River that divides the two campaigns. The U.S. has called for Assad's other ally, Iran, to withdraw.

The U.S., Israel and Saudi Arabia are opposed to Iran's growing influence in Iraq and Syria, where Iran-backed militias have grown increasingly powerful after working alongside government troops. Israel has launched airstrikes against Iranian and pro-Iran positions in Syria and has threatened to escalate its offensive. Iran has refused even Russian calls to withdraw, and Syria has said it continues to welcome both Russian and Iranian support in the conflict, while calling for the U.S. and Turkey to withdraw immediately.

As the resurgent Syrian military prepares for a new offensive in the south, near the Israeli and Jordanian borders, international powers have scrambled to prevent an all-out war. The U.S., Russia and Jordan are reportedly attempting to broker a deal between Iran, Israel and Syria that would see all Syrian and non-Syrian militias withdraw from the southern border region and allow for the Syrian military to regain control. Such a deal may also reportedly include the dismantling of the U.S. base at Al-Tanf, where Syria, Russia and Iran accuse the U.S. of supporting jihadi groups.

HEADLINE	<b>05/31 Pentagon warns Syria of hitting US troops</b>
SOURCE	<a href="https://www.washingtontimes.com/news/2018/may/31/bashar-assad-warned-against-hitting-us-troops-in-s/">https://www.washingtontimes.com/news/2018/may/31/bashar-assad-warned-against-hitting-us-troops-in-s/</a>
GIST	The Pentagon is warning the Syrian regime to refrain from attacking U.S.-backed forces in the country, shortly after Syrian President Bashar Assad demanded U.S. forces depart and threatened to launch attacks

on territory held by American-backed Kurdish paramilitary units in northeast Syria.

The threats come amid a scramble among several nations and factions in the Syrian civil war, as the Assad government consolidates control of the major cities but faces pressure over the postwar balance of power.

“Any interested party in Syria should understand that attacking U.S. forces or our coalition partners will be a bad policy,” Joint Staff Director Lt. Gen. Kenneth McKenzie told reporters Thursday.

Gen. McKenzie spoke shortly after Mr. Assad told the Russian RT news channel in an interview that the estimated 2,000 U.S. special forces believed to be posted in Syria to combat Islamic State and back up U.S.-allied forces cannot stay in Syria.

“Somehow, they are going to leave,” Mr. Assad said Thursday.

American military advisers and their counterparts in the Syrian Democratic Forces — a coalition of Arab and Kurdish militias battling the Islamic State — have operated from the Syrian city of Deir-ez-Zour and the surrounding Euphrates River Valley for most of the war against the terror group.

A deconfliction zone, recognized by Moscow and Washington, has thus far protected American forces and their allies from Mr. Assad’s push to bring the entire country back under his control.

“We would view very gravely any actions that tended to change that,” Gen. McKenzie told reporters during a Pentagon briefing.

Tensions between Washington and Damascus boiled over in April, when U.S. and allied warplanes launched a series of airstrikes against suspected chemical weapons facilities in Syria. The strikes were in retaliation for the Assad regime’s use of the weapons against anti-government forces near the rebel stronghold of Aleppo.

Syrian forces, backed by Russian air power and Iranian-backed militias, will “liberate by force” rebel- and Islamic State-held territory, Mr. Assad said. Those comments have raised concerns that U.S.-supported forces could end up in the Syrian government’s crosshairs in the near future.

<b>HEADLINE</b>	<b>06/01 Military killed 70+ Taliban leaders in month</b>
<b>SOURCE</b>	<a href="https://www.circa.com/story/2018/06/01/world/us-forces-killed-off-more-than-70-taliban-leaders-in-the-last-month">https://www.circa.com/story/2018/06/01/world/us-forces-killed-off-more-than-70-taliban-leaders-in-the-last-month</a>
<b>GIST</b>	<p>WASHINGTON (Circa) -- Taliban leadership has suffered some serious casualties in the last week and a half due to a series of raids and strikes across Afghanistan, which have led to the deaths of more than 70 of the group's commanders.</p> <p>The most deadly of these strikes came last Thursday, when a U.S. rocket strike destroyed a Taliban command post, killing at least 50 Taliban commanders inside.</p> <p>"We are still assessing the specific names and positions, but what it looks like it was is a group of commanders meeting in part to discuss the operation in Farah many of them had just participated in," said Army Gen. John Nicholson, the commander of the U.S. Forces in Afghanistan, while briefing reporters on Wednesday.</p> <p>Farah, a city in Western Afghanistan, was temporarily overrun by Taliban forces earlier this month. Afghan special forces eventually cleared the Taliban out, but not before they killed 30 people.</p> <p>While Nicholson noted the strike would likely not have a significant strategic impact, he did note that U.S. forces believe one high value target was among the dead.</p> <p>"The senior Taliban leader who was there was the deputy shadow governor of Helmand," said Nicholson, adding that "a number of other leaders beneath him" were also killed.</p> <p>The Taliban operates a shadow government across Afghanistan as part of its attempt to de-legitimize and degrade the internationally-backed government in the capital of Kabul. Governors and other leaders are appointed to most Afghan provinces, where they act similarly to a real government; collecting taxes, conscripting fighters, and even installing Sharia courts to administer justice, according to a 2009 report on Afghanistan by retired Army Gen. Stanley McChrystal.</p> <p>A separate strike the same day killed the Taliban "Red Unit" commander for Helmand province, according to the Afghanistan Times. Also known as the Red Group or Danger Group, the Red Unit is the Taliban's elite force of 300 commandos responsible for special operations, including night raids, cutting off roads, and supply lines. Unlike many Taliban forces, they are highly trained and employ advanced technology like night vision.</p>

	<p>More than 70 Taliban leaders have been killed in the series of strikes thus far, with last Thursday's attack being responsible for the largest portion.</p> <p>Despite the strikes, the Trump administration's goal in Afghanistan is still, ostensibly, to reach a political settlement. Nicholson has confirmed that there have been some "off stage" discussions between the Afghan government and some Taliban leaders.</p> <p>"A number of channels of dialogue have opened up between the various stakeholders in the peace process," said Nicholson.</p> <p>He added that the recent strikes should not get in the way of reaching the ultimate goal.</p> <p>"I call this talking and fighting," said Nicholson. He invoked Secretary of Defense James Mattis noting "violence and progress can coexist, and that's what we're seeing."</p> <p>But not everyone agrees that there has been much progress in Afghanistan. The Taliban controls or influences 59, or 14.5 percent, of Afghanistan's districts, according to the Long War Journal, citing data from the Special Investigator General for Afghanistan Reconstruction (SIGAR). Another 29.2 percent of districts are contested between the Taliban and government forces. But LWJ claims that SIGAR's data is dated, and that their numbers show that the Taliban controls or contests 239 districts, or 59 percent.</p>

<b>HEADLINE</b>	<b>05/31 Court: Romania, Lithuania secret CIA jails</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/european-court-romania-lithuania-hosted-cia-secret-jails-55554320">https://abcnews.go.com/International/wireStory/european-court-romania-lithuania-hosted-cia-secret-jails-55554320</a>

## GIST

The European Court of Human Rights ruled Thursday that Romania and Lithuania allowed the detention and abuse of a Saudi and a Palestinian at secret U.S. prisons.

The Strasbourg, France-based court said Thursday that Abd al-Rahim Al Nashiri, a Saudi national later sent to Guantanamo Bay, was detained and abused in Romania between Sept. 2003 and Oct. 2005, and urged Romania to investigate and punish perpetrators.

The court concluded that Al-Nashiri was blindfolded, hooded, shackled, kept in solitary confinement, and subjected to loud noise and bright light during his detention at the CIA prison in Romania.

Romania denies hosting such CIA facilities. There was no immediate reaction from the government.

The court said Al Nashiri and Zubaydah were both considered "high-value detainees" taken by the CIA at the start of the U.S.-led "war on terror."

Al Nashiri's lawyer, Amrit Singh, called the ruling "a sharp rebuke to Romania's shameful attempts" to conceal its hosting of a secret CIA prison. She was the lead lawyer on the case with the New York-based Open Society Justice Initiative.

Singh also noted the court's decision in light of the appointment of new CIA Director Gina Haspel, who supervised a covert detention site in Thailand where terror suspects, including al-Nashiri, were waterboarded, an interrogation technique that simulates drowning.

"The European court's ruling is critical for upholding standards of international law — that torture is absolutely prohibited and those involved in torture must be held to account," said Singh. "It stands in stark contrast to the United States' decision to promote Gina Haspel to CIA Director despite her role in my client's torture."

The court also said that Lithuania hosted a secret CIA detention facility from February 2005 to March 2006 where Abu Zubaydah, a Palestinian suspected of being a planner for the Sept. 11 attacks, was detained.

It ruled that Lithuania allowed him to be moved to another CIA detention site in Afghanistan, "exposing him to further ill-treatment." He is currently detained at Guantanamo Bay and has not been charged.

Lithuanian authorities said they would consider appealing the court's decision and may also investigate the claims again.

Justice Minister Elvinas Jankevicius told reporters that "we will take a decision after carefully examining," the ruling. Vytautas Bakas, the chairman of the parliamentary committee for national security and defense, said he would propose opening a new probe.

Lithuanian President Dalia Grybauskaite, however, contradicted the justice minister and said in a statement that the small Baltic country's "reputation damage is done," adding that Lithuania "thus will have to execute a court judgment" and pay Zubaydah 130,000 euros (\$152,000). She has regularly clashed with the Lithuanian government and forced a minister to resign after expressing her distrust.

Amnesty International called the rulings "a key milestone in holding European governments accountable for their involvement in illegal CIA activities in the aftermath" of the 9/11 attacks.

Roisin Pillay, director of the International Council of Jurists' Europe and Central Asia Program claimed that "many other European governments colluded with the U.S. to illegally transfer, 'disappear' and torture people during rendition operations and must also be held accountable."

<b>HEADLINE</b>	<b>06/01 Malaysia: 15 suspected militants detained</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/student-housewife-15-terror-suspects-held-malaysia-55577205?">https://abcnews.go.com/International/wireStory/student-housewife-15-terror-suspects-held-malaysia-55577205?</a>
<b>GIST</b>	<p>Malaysian police said Friday they have detained another 15 suspected militants, including several foreigners, for smuggling firearms and plotting attacks on places of worship.</p> <p>National police chief Mohamad Fuzi Harun said six Malaysians, six Filipinos, a Bangladeshi restaurant owner and a couple from a north African country were detained between March and May.</p> <p>Among the Malaysians was a 17-year-old student who made six Molotov cocktails he planned to use against entertainment outlets, churches and Hindu temples in Kuala Lumpur, Fuzi said. The student, a suspected Islamic State member, tested one of his devices in an open area and was detained in April, an hour after he produced a video on social media warning of the attacks, he said.</p> <p>The police chief said a 51-year-old Malaysian woman was held on May 9 during general elections for planning to ram a car into non-Muslims at a voting center. "In addition, the suspect also planned to drive into non-Muslim worship places using a car filled with gas cylinders as explosives," he said.</p> <p>Fuzi's statement said a 33-year-old Malaysian was detained after he was deported by Turkey for trying to slip into Syria to join the Islamic State. Two other Malaysians had planned to kidnap and kill police officers and also attack places of worship, it said.</p> <p>Fuzi said the African couple, both in their early 20s and suspected of having IS ties, were detained in April and since have been deported. Their specific home country wasn't disclosed.</p> <p>The 41-year-old Bangladeshi was believed to be involved in smuggling weapons for terrorists.</p> <p>Another Malaysian and six Filipinos, aged between 22 and 49, were held in April in Sabah state on Borneo island for being part of a militant cell collecting firearms to wage "jihad" in Marawi city in the Philippines, he said. Marawi was the scene of a six-month militant siege last year.</p> <p>Hundreds of people suspected of having ties to the Islamic State have been detained in Malaysia in the past few years.</p>

HEADLINE	<b>05/31 UN: Mexico security forces complicit</b>
SOURCE	<a href="https://www.nbcnews.com/news/latino/u-n-says-mexican-security-forces-are-likely-behind-disappearances-n878941">https://www.nbcnews.com/news/latino/u-n-says-mexican-security-forces-are-likely-behind-disappearances-n878941</a>
GIST	<p>The U.N. human rights office has “strong indications” that Mexican federal security forces are behind a series of disappearances around Nuevo Laredo, a city on the U.S.-Mexico border, officials said on Wednesday.</p> <p>In a statement, United Nations High Commissioner for Human Rights Zeid Ra’ad Al Hussein urged the Mexican government to “take urgent measures to stop the wave of forced disappearances in Nuevo Laredo and surrounding areas,” amid allegations that federal security forces in Mexico are behind such disappearances.</p> <p>The U.N. Human Rights Office in Mexico documented the disappearance of 21 men and two women in Nuevo Laredo from February until May 16, but local human rights organizations said there have been at least 40 disappearances in this period. “Many of these people are reported to have been arbitrarily detained and disappeared while going about their daily lives,” Zeid said.</p> <p>A series of testimonies received at the the U.N. human rights office suggest that people currently missing were reportedly detained by uniformed personnel as they walked or drove along public roads, and several burnt out and bullet-ridden vehicles were found by the roadside, the statement said.</p> <p>“It is particularly horrific that at least five of the victims are minors, with three of them as young as 14. These crimes, perpetrated over four months in a single municipality, are outrageous,” said Zeid.</p> <p>The U.N. report is the latest finding by international groups highlighting alleged abuses by the government in its decadelong battle against criminal gangs. More than 35,000 people have gone missing since President Felipe Calderón sent military forces to battle drug gangs in late 2006.</p> <p>There have been more than 200,000 murders since then, with a record number last year fueling widespread anger with President Enrique Peña Nieto’s ruling party ahead of a July 1 presidential election. Mexican authorities had ample information and evidence about the Nuevo Laredo disappearances but had made little progress in investigating — leaving the burden of the search to the family and friends of some of the people missing, the U.N. noted. “Families have undertaken their own searches, without any protection, and relatives have to date found the bodies of at least six victims. Several witnesses have been subjected to threats, and one was disappeared for two days,” the statement read.</p> <p>Mexico’s National Human Rights Commission, better known by their Spanish acronym CNDH, released a statement on Wednesday saying they initiated an investigation looking into the disappearances and described efforts such as asking the Navy and other officials to protect the population of Tamaulipas, the Mexican state where Nuevo Laredo is, though at least three disappearances had happened since then.</p> <p>While CNDH’s statement detailed steps the government was taking, it didn’t include any findings or potential leads that could possibly give families of the victims some closure.</p> <p>“It is vital the Mexican authorities carry out an effective search for those whose whereabouts are still unknown and to conduct a diligent, independent and complete investigation to find out what happened, identify those responsible and ensure they are brought to justice,” Zeid said.</p>

HEADLINE	<b>06/01 Study: cellphone spying near White House</b>
SOURCE	<a href="https://www.washingtonpost.com/news/the-switch/wp/2018/06/01/signs-of-sophisticated-cell-phone-spying-found-near-white-house-say-u-s-officials/?utm_term=.fafbed33074a">https://www.washingtonpost.com/news/the-switch/wp/2018/06/01/signs-of-sophisticated-cell-phone-spying-found-near-white-house-say-u-s-officials/?utm_term=.fafbed33074a</a>
GIST	<p>A federal study found signs that surveillance devices for intercepting cellphone calls and texts were operating near the White House and other sensitive locations in the Washington area last year.</p> <p>A Department of Homeland Security program discovered evidence of the surveillance devices, called IMSI catchers, as part of federal testing last year, according to a letter from DHS to Sen. Ron Wyden (D-Ore.) on May 22. The letter didn't specify what entity operated the devices and left open the possibility that there could be alternative explanations for the suspicious cellular signals collected by the federal testing program last year.</p> <p>The discovery bolsters years of independent research suggesting that foreign intelligence agencies use sophisticated interception technology to spy on officials working within the hub of federal power in the nation's capital. Experts in surveillance technology say that IMSI catchers - sometimes known by one popular brand name, Stingrays - are a standard part of the toolkit for many foreign intelligence services, including for such geopolitical rivals as Russia and China.</p> <p>A DHS spokesman confirmed the contents of the letter to Wyden but declined further comment.</p> <p>"This admission from DHS bolsters my concern about stingrays and other spying devices being used to spy on Americans' phones," Wyden said in a statement on Thursday. "Given the reports of rogue spying devices being identified near the White House and other government facilities, I fear that foreign intelligence services could target the president and other senior officials."</p> <p>The DHS letter came in response to a meeting last month in which Wyden pushed for more aggressive federal response to cellular system insecurity. IMSI catchers are widely used by local, state and federal police, as well as foreign intelligence agencies.</p> <p>The devices work by simulating cell towers to trick nearby phones into connecting, allowing the IMSI catchers to collect calls, texts and data streams. Unlike some other forms of cell-phone interception, IMSI catchers must be near targeted devices in order to work.</p> <p>When they are in range, IMSI catchers also can deliver malicious software to targeted devices for the purpose of stealing information stored on them or conducting longer-term monitoring of communications.</p> <p>The same May 22 letter revealed that DHS was aware of reports that a global cellular network messaging, called SS7, was being used to spy on Americans through their cell phones. Such surveillance, which can intercept calls and locate cell phones from anywhere in the world, are sometimes used in conjunction with IMSI catchers.</p> <p>ESD America, a defense and law enforcement technology contractor based in Las Vegas, has reported detecting IMSI catchers throughout the Washington area while conducting testing for private clients.</p> <p>The company, which said it has federal contracts, declined to comment on work it has done for the U.S. government but said in a statement, "ESD America has several corporate and foreign government clients whom we have assisted in the detection of potential IMSI Catcher operation across many cities including Washington, D.C."</p> <p>In the DHS tests, which took place over the past three years, the company said it had detected signs of IMSI catchers near the White House, the FBI headquarters, the Senate, the Pentagon, the Russian Embassy and along the collection of other foreign embassies in an area known as Embassy Row in Northwest Washington.</p> <p>The Washington area's dense collection of U.S. officials and sensitive facilities makes it prime real estate</p>

for cellular interception, experts say.

“For any large intelligence agency, the United States, especially now, is a high-value target,” said Thomas Rid, a political science professor at the John Hopkins School of Advanced International Studies. “They get paid to go after high-value targets. It’s their job... It’s a complete no-brainer.”

The letter said DHS officials, during a pilot program last year, “did observe anomalous activity that appeared consistent with IMSI catcher technology” within the Washington area, including near the White House. It cautioned that DHS “has neither validated nor attributed such activity to specific entities, devices or purposes” and said that some of the suspicious signals may have been “emanating from legitimate cell towers.”

Experts on cellular interception say that various IMSI catchers have distinctive designs, making it clear from the resulting cellular signals and behavior whether they were made by American companies or by manufacturers in other countries.

Civil liberties groups have long warned that IMSI catchers are used with few limits by U.S. authorities, who collect calls, texts and other data from innocent bystanders as they conduct surveillance on criminal suspects or other legitimate targets. Increasingly, though, critics have sought to portray the technology as posing threats to national security because foreign intelligence services use them on Americans, both while in the United States and abroad.

"This is a huge concern from a national security perspective," said Laura Moy, deputy director of Georgetown Law's Center on Privacy & Technology. "People have been warning for years... that these devices were used by foreign agents operating on American soil."

The surveillance devices are hard to counteract, though encrypted calling and messaging apps -- such as Signal, WhatsApp or Apple's FaceTime -- provide protection against IMSI catchers. Some experts advocate wider deployment of such encrypted communication tools within the U.S. government, along with a move away from traditional cellular calling and texting.

Wyden and others also have called on the Federal Communications Commission, which along with DHS oversees the security of American cellular networks, to institute stronger protections against IMSI catchers, including possible technical fixes that cellular carriers or device makers could implement to resist surveillance.

The FCC said in response to questions about the discovery of IMSI catchers in Washington, "We continue to monitor reports of the use of IMSI devices and to coordinate closely with our counterparts at DHS, DOJ, and the FBI. The FCC strenuously enforces its rules against the unauthorized use of licensed radio spectrum and harmful interference with licensed users of the airwaves."

<b>HEADLINE</b>	<b>05/31 FAA reopens Paine Field assessment</b>
<b>SOURCE</b>	<a href="https://www.heraldnet.com/business/flights-delayed-faa-revisits-air-passenger-service-impact/">https://www.heraldnet.com/business/flights-delayed-faa-revisits-air-passenger-service-impact/</a>
<b>GIST</b>	<p>EVERETT — The much-anticipated start of commercial air service at Paine Field, which was expected to begin this fall with completion of a passenger terminal, could be delayed by renewed Federal Aviation Administration scrutiny.</p> <p>In a surprise move, the agency has begun what it calls a supplemental environmental assessment of the effect of up to 24 flights per day by three airlines. A 2012 assessment, which approved of passenger service at Everett’s county-owned airport, involved different airlines and only up to 12 flights per day.</p> <p>Airline interest in Everett has intensified since. The more ambitious scope of passenger operations at Paine Field necessitated another look, an FAA spokesman said Thursday.</p>

The agency could not say how extensive the study might be, but supplemental environmental assessments typically take six to 18 months, the agency said. That time frame includes a public comment period.

Paine Field spokesman Scott North said commercial passenger operations “will begin when the FAA completes its regulatory process. If the FAA approves it, we expect operations to begin late in 2018.”

Everett-based Propeller Airports, under contract with Snohomish County, has invested some \$40 million in developing the two-gate terminal, which is now under construction.

Propeller CEO Brett Smith said the unique circumstances of launching passenger service in Everett mean all of the involved parties are in somewhat uncharted territory — including the federal government.

“There is some ambiguity around this because this hasn’t been done in a while,” Smith said. “Commercial airline service doesn’t get added to general aviation airports very often. So the FAA, the airlines and Propeller Airports all want this done correctly.”

Alaska Airlines, United Airlines and Southwest Airlines have proposed a combined 24 flights per day to cities throughout the West.

Because the three airlines weren’t involved in the original proposal of a dozen daily flights, they can’t simply elect to fly 12 or fewer flights, the FAA said. The agency only reviews the proposals as they are submitted.

When passenger service at Paine Field was first proposed, there was vocal opposition. An organization called Save Our Communities and the city of Mukilteo were involved in a series of unsuccessful court battles to stop the terminal. Last summer, the state Supreme Court declined to hear their case, bringing the lawsuit against Propeller and airport owner Snohomish County to an end.

Propeller points out the currently planned service mostly involves smaller, quieter jets than those in the 2012 proposal.

Southwest Airlines eagerly awaits the completion of the terminal and the FAA environmental authorization, the company told The Herald. Alaska Airlines and United Airlines did not respond to requests for comment.

<b>HEADLINE</b>	<b>05/31 Starbucks windows NOT shatterproof</b>
<b>SOURCE</b>	<a href="https://nakedsecurity.sophos.com/2018/05/31/hoax-alert-starbucks-is-not-inviting-you-to-test-its-shatterproof-windows/">https://nakedsecurity.sophos.com/2018/05/31/hoax-alert-starbucks-is-not-inviting-you-to-test-its-shatterproof-windows/</a>
<b>GIST</b>	<p>Anarchists, you might need a lot of caffeine to stoke your mayhem, but Starbucks is not going to give it to you as a reward for smashing their windows.</p> <p>According to a hoax post that’s been making the rounds on <a href="#">Facebook</a> and anarchist forums such as <a href="#">Nerdica.net</a>, Starbucks is installing new shatterproof windows that scientists have been working on for the past three years.</p> <p>Just try to break the windows with a brick or rock, the hoaxsters are urging people. If you succeed, Starbucks will reward you with a free year of coffee!!!!</p> <p>...Or not. <a href="#">Snopes</a> debunked the beverage fantasy after Starbucks confirmed via email that the meme is pushing fabricated news.</p> <p>The image started circulating last week. As Snopes notes, Starbucks has in the past taken precautions</p>

against vandalism at its flagship roastery in Philadelphia, having boarded up its Capitol Hill store and closed multiple stores early in anticipation of annual May Day labor protests.

According to the Associated Press, in early May, vandals broke windows and spray-painted walls in nine Starbucks stores in the company's home city of Seattle. This year marked the anniversary of riotous World Trade Organization protests in 2017.

At any rate, if you want an ample supply of arguably decent coffee, jail probably isn't the place to get it. Starbucks most certainly isn't the place to get it for free, either, so don't expect them to give up the goods in exchange for smashing up their stores.

Don't fall for the hoax. Leave the brick on the ground, leave the coffee company's windows unmolested, and stay out of jail!

<b>HEADLINE</b>	<b>05/31 Renton PD: traffic cams not a deterrence</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/renton-police-say-traffic-cameras-not-deterring-red-light-runners">http://komonews.com/news/local/renton-police-say-traffic-cameras-not-deterring-red-light-runners</a>
<b>GIST</b>	<p>RENTON, Wash. - It's a problem that surprised Renton police: drivers speeding through red lights even though new cameras are watching.</p> <p>The cameras were setup at three intersections on May 1, after police received several complaints at South Puget Drive and Talbot Road - which is known for crashes, Park Avenue North and Logan Avenue North, and Talbot Road South and South Grady Way.</p> <p>When police started looking at those videos they said the number of red-light runners was far worse than expected.</p> <p>"Once we started reviewing the warning videos we were really surprised by the number of motorists running the lights. It was far worse than we expected," said Renton Police Commander Karlewicz. "In the first three weeks of monitoring the warning violations there were two and a half times more violations at those three intersections as there was in the rest of the city in an entire month."</p> <p>Driver, Sheri Hines said she sees the benefit of cameras.</p> <p>"It's a great idea, it's not perfect," said Hines.</p> <p>But ironically, she got a warning for running a red light while turning at one of the problem intersections last week.</p> <p>"If I was allowed to turn but I did a California stop, then yeah, I deserve it, it was my fault," said Hines.</p> <p>Driver Jocelyn Alexander-Shaw also got a warning violation.</p> <p>"Out here it I think that's kind of unfair if there's no signage posted it does come off like a, 'gotcha,'" said Alexander-Shaw.</p> <p>They both agree with police giving drivers more time to adjust to the intersections and understand the dangers.</p> <p>But, others argue with so many red light runners, now is the time to ticket them.</p> <p>"The warning that I got, it actually would have been a ticket if they didn't extend it, but I didn't even know that they were there," said Hines.</p>

	<p>Usually drivers get a 30-day grace period after the cameras are installed, but they're getting an extra two weeks so the grace period ends June 13.</p> <p>“I just know that people get up in arms if they’re not notified about something beforehand,” said driver Jessica Lowery. “I agree a red light is a red light and people shouldn’t be running it to begin with so.”</p> <p>After June 13th police said the fine for running a red light is up to \$250.</p> <p>Police said by state law, the red light camera ticket violations aren’t part of a driver’s driving record.</p> <p>However, if a driver doesn’t pay for the ticket or respond to a hearing, the violation will be reported to the Department of Licensing.</p>

<b>HEADLINE</b>	<b>05/31 PCSO: 35 tons of waste at homeless camp</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/05/31/pierce-county-cleans-up-35-tons-of-waste-at-homeless-encampment-sheriffs-department-says/">http://q13fox.com/2018/05/31/pierce-county-cleans-up-35-tons-of-waste-at-homeless-encampment-sheriffs-department-says/</a>
<b>GIST</b>	<p>PUYALLUP, Wash. — Some business owners in Puyallup are thanking the county after a homeless encampment thought to contribute to a theft problem was removed earlier this month.</p> <p>Pierce County sheriff’s deputies said multiple agencies worked to clean up the encampment in the area of Canyon Road and State Route 512. The encampment was a source of crime and waste, deputies said.</p> <p>“This week we are hoping you will also notice a decrease in criminal activity and solid waste in the same area,” deputies said in a Facebook post.</p> <p>Cleanup of the area took about 300 man hours and 35 tons of solid waste was removed, deputies said. Deputies said the particular encampment was targeted due to a “high volume of calls and complaints” from businesses.</p> <p>“In 2017 our deputies responded to 90 calls for service at just one of the stores for crimes including shoplifting, vehicle prowls, loitering/panhandling, littering, trespassing, people sleeping in cars, dumped vehicles, and people urinating on sidewalks,” deputies said.</p> <p>Business owners in the area praised the cleanup, saying theft in the area had long been a problem spot.</p> <p>“The theft has been an issue,” said Michael Mecklemberg of McLendon Hardware in Puyallup. “They’ll steal axes, machetes, camping gear, a lot of camping gear.”</p> <p>The encampment was there for well over a year, Mecklemberg said, but it really started to become troublesome about six months ago.</p> <p>“It would catch on fire,” Mecklemberg said of the encampment.</p> <p>Business have seen less theft in the area since the cleanup, Mecklemberg said.</p> <p>“In our eyes we’re thrilled with it,” he said. “It’s not like they’re just kicking them out. They’re asking them if they want help, they’re asking if they want jobs.”</p>

<b>HEADLINE</b>	<b>05/31 Lawsuit: CBP took \$58K from Ohio man</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/nation-world/ohio-man-sues-after-customs-takes-life-savings-from-">https://www.seattletimes.com/nation-world/ohio-man-sues-after-customs-takes-life-savings-from-</a>

	<a href="#"><u>his-carry-on/</u></a>
GIST	<p>A 64-year-old Cleveland, Ohio, man is suing U.S. Customs and Border Protection after agents strip-searched him at an airport in October and took more than \$58,000 in cash from him without charging him with any crime, according to a federal lawsuit filed this week in Ohio.</p> <p>Customs agents seized the money through a process known as civil asset forfeiture, a law enforcement technique that allows authorities to take cash and property from people who are never convicted or even charged with a crime. The practice is widespread at the federal level. In 2017 federal authorities seized more than \$2 billion in assets from people, a net loss similar in size to annual losses from residential burglaries in the United States.</p> <p>Customs says it suspects that the petitioner in the case, Rustem Kazazi, was involved in smuggling, drug trafficking or money laundering. Kazazi strongly denies those allegations and says that the agency is violating federal law by keeping his money without filing any formal complaint against him.</p> <p>Kazazi is a retired officer with the Albanian police who relocated with his family to the United States in 2005 after receiving visas through the State Department’s lottery program. They became U.S. citizens in 2011. After more than a decade away, Kazazi planned a trip to Albania last fall to visit relatives, make repairs on a family property and potentially purchase a vacation home.</p> <p>He took \$58,100 in U.S. currency with him, the product of 12 years of savings by Kazazi, his wife, Lejla, and his son Erald, who is finishing a chemical engineering degree at Cleveland State University, according to the lawsuit. The family lives in Parma Heights, a suburb of Cleveland.</p> <p>In an interview translated by his son, Rustem Kazazi said safety concerns prompted him to take cash on his trip, rather than wire the funds to a local bank.</p> <p>“The crime [in Albania] is much worse than it is here,” he said. “Other people that have made large withdrawals [from Albanian banks] have had people intercept them and take their money. The exchange rates and fees are [also] excessive.”</p> <p>Albanian contractors often prefer dollars and euros over the local currency, Kazazi said. For those reasons, he said, many expatriates who return to visit Albania bring large amounts of cash with them.</p> <p>On Oct. 24, Kazazi arrived at Cleveland Hopkins International Airport to begin the first leg of his journey, which would take him to Newark to connect with an international flight. He carried the cash in three counted and labeled bundles in his carry-on bag, he said, along with receipts from recent bank withdrawals and documentation pertaining to his family’s property in Tirana, the Albanian capital.</p> <p>According to a translated declaration that Kazazi provided to the court as part of the lawsuit, TSA employees discovered the cash in his bag during a routine security check and alerted Customs and Border Protection.</p> <p>“They asked me some questions, which I could not understand as they spoke too quickly,” according to Kazazi’s declaration. “I asked them for an interpreter and asked to call my family, but they denied my request.”</p> <p>The CBP agents led Kazazi to a small windowless room and conducted multiple searches of him and his belongings, he said. According to Kazazi’s declaration, the agents asked him to remove all of his clothing and gave him a blanket to cover the lower portion of his body. Kazazi said that a man wearing rubber gloves then “started searching different areas of my body.”</p> <p>Kazazi characterized the search as a “strip search” in an interview translated by his son. “I felt my rights violated,” he said.</p> <p>The searches turned up nothing – no drugs, no contraband, no evidence of any illegal activity, according to</p>

the lawsuit. But the agents took Kazazi's money. Even more alarming to Kazazi was that the receipt the agents handed to him did not list the dollar value of his cash.

"I began to worry that they were trying to steal the money for themselves," he said in his court declaration.

After being released, Kazazi called his wife and explained what had happened. None of it made sense to either of them, but Lejla Kazazi told her husband that it had to be some sort of misunderstanding and that he should continue on his trip and let her and Erald sort it out at home.

Seven months later, Customs still has the money.

The Kazazis have been caught up in a broader struggle over civil asset forfeiture, a law enforcement practice that allows police to seize and permanently keep cash and other property on the suspicion of wrongdoing. Defenders of the practice, such as Attorney General Jeff Sessions, say it's a valuable tool for fighting drug cartels and other criminal enterprises in cases where a criminal conviction is difficult to obtain. But media outlets such as The Washington Post and civil liberties groups such as the ACLU have found that the process is ripe for abuse.

"The government can just take everything from you," said Wesley Hottot, the Kazazi family's lawyer. Hottot is with the Institute for Justice, a civil liberties law firm working to overturn civil forfeiture. People wishing to challenge a civil forfeiture must essentially demonstrate their innocence in court, Hottot said, turning the dictum of "innocent until proven guilty" on its head.

"You have to affirmatively show you're not a criminal to get your own money back," Hottot said. "You have to effectively prove a negative."

Federal authorities haul in billions in cash and property from forfeiture every year, a tally that doesn't include additional billions seized in state and local forfeiture actions.

The Kazazi family didn't hear anything about their cash or why it was taken until more than a month after it was seized, when Customs finally sent a seizure notice to their home.

"This is to notify you that Homeland Security Investigations (HSI) seized the property described below at Cleveland, OH on October 24, 2017: \$57,330 in U.S. Currency," the notice states. "Enforcement activity indicates that the currency was involved in a smuggling/drug trafficking/money laundering operation."

The first thing the Kazazis noticed was that the dollar amount listed was \$770 less than the amount that Kazazi said he took with him. The family said that the cash was all in \$100 bills, making it impossible for it to add up to \$57,330.

Hottot said these types of "errors" are common in forfeiture cases, and that it's "always in the same direction": government receipts coming up a few hundred or a few thousand dollars short of what defendants say they had.

The Kazazis said they were also flabbergasted by the allegation of "smuggling/drug trafficking/money laundering." There was no indication of how the officers arrived at that conclusion. "This was the most offensive thing I've ever seen," Erald Kazazi said. "They provide no evidence. They list three different things without even saying which one it is."

In a statement, a CBP spokesman said that "pursuant to an administrative search of Mr. Kazazi and his bags, TSA agents discovered artfully concealed U.S. currency. Mr. Kazazi provided inconsistent statements regarding the currency, had no verifiable source of income and possessed evidence of structuring activity," that is, making cash withdrawals of less than \$10,000 to avoid reporting requirements.

Hottot denies that Rustem Kazazi was trying to conceal the cash – he had wrapped it in paper, labeled it

and sent it through the scanner in his carry-on bag. The “inconsistent statements” were a result of Kazazi’s poor English language comprehension, Hottot said.

Hottot also noted that the structuring allegation was not included in the seizure notice. “They’ve never mentioned structuring before,” he said. “I think what were really seeing here is some creative Monday morning quarterbacking by CBP, trying to justify the unjustified.”

The CBP spokesman also noted that there are disclosure requirements for traveling internationally with sums of cash greater than \$10,000. “Failure to declare monetary instruments in amounts more than \$10,000 can result in fines or forfeiture and could result in civil and or criminal penalties,” he said.

Hottot said Kazazi was well aware of those requirements and planned file his disclosure form during his four-hour layover in Newark. The form instructs travelers to file the paperwork “at the time of departure from the United States with the Customs officer in charge at any Customs port of entry or departure.”

“If he’s gonna follow the law on this he’s gonna have to do it in Newark on the way out of the country,” Hottot said.

The CBP seizure notice gave the Kazazis a number of options for proceeding with the case. They could abandon the cash completely, or they could make an “offer in compromise” – letting CBP keep a certain percentage of the seized cash if they returned the rest. There were also options for challenging the seizure administratively through internal CBP channels or letting the case proceed in federal court. The Kazazis opted for federal court.

Under federal forfeiture law, the government was required to initiate a forfeiture case within 90 days after the Kazazis responded to the seizure notice. If they failed to initiate a forfeiture case within that window, they would be required to promptly return the money to the claimants.

That deadline passed over a month ago, on April 17. CBP has not filed a forfeiture complaint; nor has it returned the money. Erald Kazazi said he has called CBP several times was told that the case was now with the U.S. attorney’s office in Ohio and that they had no additional information on it. So this week the Kazazis filed their own lawsuit, demanding the immediate return of their property.

The U.S. attorney’s office for the Northern District of Ohio declined to comment on the record.

<b>HEADLINE</b>	<b>05/31 More drivers killed under influence of drugs</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/health-care-news/articles/2018-05-31/more-drivers-killed-under-the-influence-of-drugs-than-alcohol">https://www.usnews.com/news/health-care-news/articles/2018-05-31/more-drivers-killed-under-the-influence-of-drugs-than-alcohol</a>
<b>GIST</b>	<p>SOME 22.3 PERCENT OF fatally injured motorists who were tested for drugs tested positive for marijuana in 2016, a figure that researchers say has "increased substantially" in recent years as states have legalized the drug for recreational or medicinal use, according to a new report.</p> <p>The finding, in a study released Thursday by the Governors Highway Safety Association, was one of several regarding the growing prevalence of drugs in vehicle fatalities. The report also found that 44 percent of drivers killed in automobile accidents in 2016 who were tested for drugs tested positive for one or more substances – a number that was up 28 percent from 10 years prior. That figure eclipsed the 37.9 percent who were known to have been tested for alcohol and tested positive – a figure that actually fell in the last decade, from 41 percent in 2006.</p> <p>The report was intended to draw attention to the need to incorporate a drug message into programs that encourage motorists not to drive while impaired. It noted that marijuana was the most commonly found drug. Jim Hedlund, author of the study, says "marijuana use has become more normalized" as states across the country decriminalize the drug.</p>

	<p>"If use is up, use by drivers is up," Hedlund says.</p> <p>Hedlund attributes the decline in alcohol-related deaths to the "broad societal consensus" that drunk driving is wrong. There's a "strong societal consensus. It's [drunk driving] is bad," he says. "Everyone knows it's bad." However, this way of thinking hasn't caught up to drug-impaired driving yet. That's where education comes in.</p> <p>"That's the next step. Precisely to provide that education," Hedlund says.</p> <p>The report suggests that some of the strategies used to decrease drunk driving can be applied to prevent people from driving while on drugs. However, several challenges come with that. A driver can consume a vast number of drugs that would be difficult to test for. Additionally, no nationally accepted method exists for testing drug-impaired drivers, and different drugs have different effects on different people.</p>

<b>HEADLINE</b>	<b>05/31 Counting buildings in South China Sea</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-backstory-southchinasea/backstory-using-satellites-to-count-buildings-in-south-china-sea-idUSKCN1IW351">https://www.reuters.com/article/us-backstory-southchinasea/backstory-using-satellites-to-count-buildings-in-south-china-sea-idUSKCN1IW351</a>
<b>GIST</b>	<p>HONG KONG - Shrouded in Chinese military secrecy and hidden from the eyes of journalists, Beijing's build-up of man-made islands on reefs deep in the maritime heart of Southeast Asia is a vexing story to report.</p> <p>Reuters deputy head of graphics Simon Scarr, based in Singapore, had previously dealt with private sector satellite imagery providers but always felt more could be done within the highly competitive field.</p> <p>Late last year in a conversation with Earthrise Media, an independent group helping journalists obtain and analyze satellite data, Scarr wondered if it would be possible to count buildings on China's seven man-made islands in the Spratly archipelago of the hotly contested South China Sea.</p> <p>During a six-week period, Earthrise digitally scrutinized hundreds of images dating back to 2014 when China started rapidly building up those islands. Reuters journalists checked the data with a range of military and academic contacts.</p> <p>On a spread sheet of figures confirming extensive construction across the South China Sea, one number stood out – Subi reef was home to nearly 400 buildings, more than expected and nearly double the number on similar islands.</p> <p>"It was great data to have, and it really helped us build-up the webpage, with imagery and information from other sources, too," Scarr said.</p> <p>The Subi information helped journalists in Hong Kong, Beijing and Sydney research the story that would anchor the package on the islands.</p> <p>It also provided insight into possible Chinese intentions for military bases on islands that Beijing once described as mostly civilian. The buildings on Subi, along with extensive facilities on Fiery Cross and Mischief reefs, appeared to match military bases inside China and could house up to 2,400 personnel.</p> <p>Subi is the largest of China's seven man-made outposts in the Spratlys. The so-called "Big Three" of Subi, Mischief and Fiery Cross reefs all share similar infrastructure – including emplacements for missiles, 3km runways, extensive storage facilities and a range of installations that can track satellites, foreign military activity and communications.</p> <p>Determined to use the package to test their innovations, a Reuters RTV team headed to the Hong Kong</p>

	coast to shoot footage that would be overlaid with animation to illustrate the development. “This was one of the most elaborate things we’ve done,” said senior producer Ryan Brooks.

<b>HEADLINE</b>	<b>05/31 Jury: \$4 verdict police shooting death</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/my-heart-just-dropped-4-verdict-shocks-family-man-killed-n879026">https://www.nbcnews.com/news/us-news/my-heart-just-dropped-4-verdict-shocks-family-man-killed-n879026</a>
<b>GIST</b>	<p>Four dollars.</p> <p>When Monique Davis heard that was the amount a jury believed her fiancée's mother and three children deserved for his death in a police shooting, she didn't bother to listen to the rest of the verdict. She walked out of the courtroom, shaken.</p> <p>"My heart just dropped," Davis recalled. "It was like, are y'all serious?"</p> <p>Four years earlier, her fiancée, Gregory Vaughn Hill Jr., who was black, had been shot behind his closing garage door by Christopher Newman, a white Florida sheriff's deputy responding with a partner to a complaint of loud music. A grand jury declined to indict Newman, who said Hill had pulled a gun. Hill's mother then filed a wrongful death lawsuit against Newman and his boss, St. Lucie County Sheriff Ken Mascara. The case went to trial this month, and on May 24 a jury cleared Newman, assigned a small bit of blame to Mascara and said Hill was almost entirely at fault because he was drunk.</p> <p>The jury tallied up the damages: \$1 for funeral expenses to Hill's mother, and \$1 each to Hill's three children, aged 7, 10 and 13.</p> <p>The decision astonished the family's lawyer, John Phillips.</p> <p>"I'd have rather seen a zero than have to tell the children that their pain and suffering for losing their father is only a dollar," he said Thursday.</p> <p>Which is what the family will probably get in the end.</p> <p>Because the jury assigned just 1 percent of negligence to Mascara, that \$4 in damages was automatically reduced to 4 cents, Phillips said. But even that was made irrelevant by the jury's finding that Hill's intoxication made him 99 percent negligent. In doing so, the jury effectively erased any damages, Phillips said.</p> <p>That convoluted verdict left Phillips wondering whether the jury, after about 10 hours of deliberations, understood what it was doing — and if so, whether the jurors saw the damage amount as some sort of punishment.</p> <p>"Either it was punitive or they viewed these children's pain as virtually worthless," Phillips said.</p> <p>Answers to those questions may never come. None of the jurors has spoken publicly, and they are not required to justify their verdict.</p> <p>Newman and his partner, Deputy Edward Lopez, responded to Hill's Fort Pierce home on Jan. 14, 2014 after someone from a school across the street called to complain of loud music, police have said. The deputies knocked, and Hill, 30, on disability leave from a Coca-Cola warehouse, pulled open the garage door. Seeing the officers, he started to close the door — and pulled out a gun, police said. Newman opened fire, his bullets piercing the door. Hill was found dead inside with an unloaded gun in his back pocket.</p> <p>Phillips disputed that Hill raised the gun toward the officers, questioning how the weapon ended up in his</p>

back pocket before he died.

Phillips is preparing file a motion for a new trial, based on what he says were inconsistencies in the way Hill's gun was used as evidence during the trial, and prosecutors' revealing that Hill had been on probation at the time of the shooting for a drug charge.

After the verdict, Mascara released a statement saying his office was "pleased to see this difficult and tragic incident come to a conclusion." Newman, he added, "was placed in a very difficult situation, and like so many law enforcement officers must do every day, he made the best decision he could given the circumstances he faced."

Lawyers who represented Newman and Mascara did not respond to a request for comment.

Davis, 35, has been raising Hill's three children — the two oldest of whom she had with him — with her boyfriend.

After last week's verdict, she went home, and for two days could hardly get out of bed, wondering how she was going to explain it to the kids. She finally tried, and she said the children were struggling with it in their own ways.

Davis wants the police to admit they did something wrong, that they reacted too quickly, and she wants them to change the way they handle such situations.

"I won't give up until proper justice is served," she said.

How that might happen, she isn't sure.

<b>HEADLINE</b>	<b>05/31 Calif. distributing fentanyl test strips</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/california-experiments-distributing-fentanyl-tests-55568841?">https://abcnews.go.com/Technology/wireStory/california-experiments-distributing-fentanyl-tests-55568841?</a>
<b>GIST</b>	<p>California health officials are experimenting with distribution of test strips that allow people to check their drugs for the presence of the powerful opioid fentanyl, which is causing numerous overdoses and deaths nationwide.</p> <p>The state health department has been paying about half of California's 45 needle exchanges to distribute the strips and has spent about \$57,000 on the program so far, the Los Angeles Times reported Thursday.</p> <p>Fentanyl can be mixed into other drugs such as heroin and cocaine without the user knowing.</p> <p>The tests are conducted by mixing a bit of a drug with water and then dipping a strip into the fluid for a few seconds. The strip shows a single line for a positive result and two lines if it is negative.</p> <p>New York state and several overdose prevention programs across the country also are using the test strips, the Times said. The strips developed by the biotechnology company BTNX based in Toronto, Canada, are only sold to governments and harm reduction programs. CEO and founder Iqbal Sunderani said the state of California is his biggest customer.</p>

<b>HEADLINE</b>	<b>05/31 Russian reporter describes fake slaying</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/ukraine-reporters-fake-murder-involved-swine-blood-morgue-55560274?">https://abcnews.go.com/International/wireStory/ukraine-reporters-fake-murder-involved-swine-blood-morgue-55560274?</a>

GIST

To mimic gore, they used makeup and pig's blood. They shot bullet holes in one of his sweatshirts. And to top off Arkady Babchenko's staged murder, they even took him to the morgue.

The journalist revealed Thursday how Ukrainian security services faked his murder to thwart a contract hit allegedly arranged by Babchenko's native Russia.

Police said Tuesday night that Babchenko had been shot and killed in his apartment building. The next day, he showed up alive in front of journalists and authorities revealed that it all had been a ruse and said that the organizer of the planned assassination had been arrested.

At a news conference, Babchenko himself wasn't clear on why the security services thought the elaborate deception was necessary.

"They probably had their reasons. Maybe they wanted to collect proof that would be 100 percent solid," he told reporters.

One of Russia's best-known war reporters and a vehement Kremlin critic, the 41-year-old Babchenko fled the country in February 2017 because of what he described as death threats. He said Ukrainian agents came to him about a month ago and said that Russian security services had put out an order for his slaying.

"I said: 'Great. Why have you been waiting for a month?'" he recounted.

To make the staged murder look genuine, Babchenko said, security officers took his sweatshirt and shot holes in it. Babchenko said he put on the shirt and got smeared with pig's blood.

"I took a mouthful of it and spit it out," he said. One of the officers also told him how to fall down to appear to have been genuinely shot.

His wife called an ambulance and he was taken to a hospital intensive care unit, where a forensic expert "documented" his death. After that, he ended up in a morgue that he said was "freezing as hell."

Once inside the morgue, Babchenko said he was "resurrected," taking off the blood-stained clothes. "I just sat there watching the news about what a great guy I was," he added.

Babchenko said Thursday he had told his "closest relatives" about the sting operation in advance, although on Wednesday, he said he had apologized to his wife "for the hell she had to go through in the past two days."

The Russian Foreign Ministry denounced the Ukrainian government, saying it was "fanning anti-Russian hysteria." Relations between the two countries have been strained since 2014, when Russia annexed Crimea and separatists backed by Moscow in eastern Ukraine have fought government troops in a conflict that has killed more than 10,000 people.

Babchenko's faked death caused real shock in Ukraine, where other journalists have been killed in recent years. It also brought widespread criticism from press freedom groups.

Sergei Tomilenko, head of the Ukrainian Journalists Union, complained that authorities had presented no evidence that an assassination plot actually existed or that Russia was involved. Without such evidence, he said, the deception could be considered politically motivated, "which discredits not only journalists, but the image of Ukraine."

Added Pauline Ades-Mevel of the group Reporters Without Borders: "We condemn the use of these means to protect journalists."

But Interior Minister Arsen Avakov lashed out at the criticism.

	<p>"What would you want? That Babchenko had been killed?" he said.</p> <p>Babchenko said he is staying in a secure location for the time being and his immediate plans are to try to overcome the stress he's endured.</p> <p>"I'm planning to have a good sleep, get drunk and fall asleep while drunk and think about nothing for the next two or three days," he said.</p> <p>On Wednesday, when Babchenko's stunning appearance in front of journalists brought whoops and applause, Ukrainian Security Service chief Vasyl Gritsak said a Ukrainian citizen who allegedly was paid \$40,000 by the Russian security service to organize and carry out the hit had been arrested. The man in turn allegedly hired an acquaintance to be the gunman.</p> <p>The alleged organizer, Boris German, was arraigned Thursday night and ordered held in custody for two months. German told the court he had been working with Ukrainian counter-intelligence because a friend living in Russia who planned to cause disorder in Ukraine had approached him.</p> <p>Prosecutor-General Yuriy Lutsenko said the man contacted by German to kill Babchenko informed authorities of the plot. At a subsequent meeting of German and the proposed triggerman, German said he had orders for about 30 other killings, including that of a former officer of Russia's Federal Security Service, Lutsenko said on Ukraine's Inter TV channel.</p> <p>News reports said German's lawyer has identified him as the executive director of a joint venture in Ukraine with German arms-maker Schmeisser.</p>

<b>HEADLINE</b>	<b>05/31 Seattle robbers halted in rush hour traffic</b>
<b>SOURCE</b>	<a href="https://patch.com/washington/seattle/seattle-guitar-center-robbers-halted-rush-hour-traffic">https://patch.com/washington/seattle/seattle-guitar-center-robbers-halted-rush-hour-traffic</a>
<b>GIST</b>	<p>SEATTLE, WA - The heavy traffic along the Mercer Street "Mercer mess" in South Lake Union is known for thwarting the commutes of thousands of drivers daily. Now it's known for maybe thwarting a robbery.</p> <p>For whatever reason, three people on Wednesday decided to rob the South Lake Union Guitar Center at the peak of rush hour. And they chose to escape in two different vehicles, and they chose to escape down clogged Mercer Street.</p> <p>They only made it to the intersection of Dexter Avenue, about three block east of the Guitar Center. Seattle police reported that the robbers began chasing each other in their cars until they crashed, backing up traffic even worse on Mercer.</p> <p>That's not all: after crashing, one of the robbers pulled out a machete and threatened his co-conspirator. Then that robber pulled a gun on the robber holding the machete. That's when Seattle police arrived and arrested the two robbers. The third, a woman, was also arrested.</p> <p>The robbers snatched a guitar from the Guitar Center worth an estimated \$1,600. Police returned the instrument to the store.</p>

<b>HEADLINE</b>	<b>05/31 More police patrol Alki ahead of summer</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/more-officers-patrolling-alki-to-crackdown-on-crime-as-summer-gets-closer">http://komonews.com/news/local/more-officers-patrolling-alki-to-crackdown-on-crime-as-summer-gets-closer</a>

<b>GIST</b>	<p>SEATTLE - For 21 years, Nancy Adams has watched the cars racing, the motorcyclists popping wheelies, drivers revving their engines and the occasional traffic collision from her balcony.</p> <p>Adams said Alki has always been a chaotic scene as the warm weather kicks in.</p> <p>“It’s turned in to an all-afternoon fracas of noise, loud motorcycles, Harleys, the small foreign cars they soup up,” Adams said Thursday.</p> <p>Although she has complained to Seattle police in the past, she said that she finally has hope something will change.</p> <p>Seattle police Capt. Pierre Davis, who heads the Southwest Precinct, said police try every year to address the chaos at Alki, but they haven’t found a permanent solution. He said that after talking with residents and business owners they have come up with a new strategy.</p> <p>“They will see a number of foot beat officers who are walking the beach lines, checking out the businesses and two to four officers that are solely in patrol cars that are conducting traffic stops,” Davis said.</p> <p>Police started rolling out a light version of this emphasis a few weeks ago. The number of officers and hours they’re on Alki will expand as the warm weather kicks in, Davis said.</p> <p>Davis said police will not only have officers from the Southwest Precinct on the emphasis patrol, but officers from across the city. Some, Davis said, working overtime.</p> <p>Adams said she has already seen a difference.</p> <p>“I’ve seen, parked over here, a cruiser he was just sitting there and as traffic was coming around the corner everyone was driving by him nice as pie,” she said, motioning outside.</p> <p>Cindy Reynolds, whose condo is on the same floor as Adams’, said she hopes the strategy will help. She said that during the summer she closes her windows and doors, cranks her television all the way up and can still hear the traffic noise on the fifth floor.</p> <p>“I just want to scream at them ‘people live here’,” Reynolds said, exasperated.</p> <p>Davis said that while people will see more officers, it shouldn’t keep them from coming to the beach.</p> <p>“They can come and partake all they want if they behave themselves accordingly, but if they don’t they’re going to be dealing with my officers there,” he said.</p>

<b>HEADLINE</b>	<b>05/31 Mexico City: violence surges; worst 20yrs</b>
<b>SOURCE</b>	<a href="https://mexiconewsdaily.com/news/violence-surges-in-mexico-city-worst-in-20-years/">https://mexiconewsdaily.com/news/violence-surges-in-mexico-city-worst-in-20-years/</a>
<b>GIST</b>	<p>Mexico City has recorded its most violent first four-month period of any year of the past two decades with 382 intentional homicides between January 1 and the end of April.</p> <p>The figure is 14% higher than the 335 recorded in the same period last year and 24% higher than the murder rate registered in the first four months of 1998, when there were 309 homicides.</p> <p>There have not been more than 300 murders in Mexico City in the January-April period of any other year in the past 20.</p> <p>Based on National Public Security System (SNSP) statistics, the average daily homicide rate in the capital to April 30 was 3.1.</p>

The SNSP data, which compiles statistics provided by the Mexico City Attorney General's office (PGJ), shows that the number of murders has increased in the first four months of every year since 2015.

Compared to 2014 — when homicides fell to 241 in the first four-month period from 256 the previous year — the crime has increased by 58%.

In the past 20 years, the lowest number of homicides recorded in a first four-month period was in 2006, with 207.

According to Mexico City authorities, most of the murders committed this year were not linked to organized crime and are not indicative of an outbreak of violence on the streets of the capital.

PGJ statistics reveal that eight out of every 10 homicides were the result of personal fights or attacks in revenge, in which alcohol consumption and/or firearms were involved.

However, a report published today in the newspaper Milenio said that homicides have increased since authorities began security operations against criminal organizations dedicated to narcomenudeo, or retail drug dealing.

Milenio cited the Tláhuac Cartel in the southern borough of the same name, Los Rodolfos in Xochimilco and La Unión de Tepito and La Fuerza Anti-Unión in the central borough of Cuauhtémoc among the organizations authorities have targeted.

The marines, backed up by police, carried out an operation in July last year that resulted in the death of the boss of the Tláhuac Cartel, known by the alias "El Ojos."

Narco-blockades made an unprecedented appearance in Mexico City following the death of the gang leader and seven of his sicarios, or hitmen.

Mexico City Mayor José Ramón Amieva admitted yesterday that criminal gangs with "links all over the country" use locations in the capital to store and sell drugs but rejected any suggestion that drugs are grown or processed the city.

<b>HEADLINE</b>	<b>05/31 Inauguration Day rioting charges dropped</b>
-----------------	---

SOURCE	<a href="https://www.washingtonpost.com/local/public-safety/prosecutors-withdraw-inauguration-day-rioting-charges-against-7-people/2018/05/31/2dbb824c-6404-11e8-99d2-0d678ec08c2f_story.html?utm_term=.ec1c0fd4e677">https://www.washingtonpost.com/local/public-safety/prosecutors-withdraw-inauguration-day-rioting-charges-against-7-people/2018/05/31/2dbb824c-6404-11e8-99d2-0d678ec08c2f_story.html?utm_term=.ec1c0fd4e677</a>
GIST	<p>Federal prosecutors Thursday dropped their cases against seven people charged with rioting during President Trump’s inauguration after a D.C. judge determined that the government intentionally misrepresented information and withheld evidence from the defense.</p> <p>Assistant U.S. Attorney Jennifer Kerkhoff had repeatedly told the court and defense attorneys that her office possessed a single video of a protest-planning meeting, secretly recorded by a conservative group that had infiltrated the meeting. But on Wednesday, the U.S. Attorney’s Office acknowledged in an email to defense attorneys that 69 such undercover videos or audio recordings existed. Prosecutors wrote that they had turned over evidence they deemed relevant to the cases.</p> <p>During a hearing Thursday in D.C. Superior Court, Judge Robert E. Morin pressed prosecutors about the omission.</p> <p>“It was intentional. Your office represented there was only one video,” Morin said. “The government has not offered any explanation as to why they did not inform the court of these additional videos.”</p> <p>A week before the case was to go to trial, Assistant U.S. Attorney Ahmed Baset said prosecutors would withdraw charges, with the option of reinstating them. He did not offer an explanation. Over Baset’s objection, Morin dismissed the cases with prejudice, meaning the charges cannot be reinstated.</p> <p>The dismissals marked the latest turmoil in criminal cases stemming from the mass arrests on Jan. 20, 2017. More than 200 people were accused of smashing windows and rioting for some 16 city blocks in downtown Washington.</p> <p>Authorities say the group used “black bloc” tactics — wearing dark clothing and hiding their faces by wearing masks and goggles.</p> <p>Defense attorneys have strenuously pushed back, saying that most people who joined protests that day were demonstrating legally and that only a small group peeled off to vandalize.</p> <p>Defense attorneys on Thursday praised Morin for holding the government accountable for the discrepancy in evidence. They said that their clients had been deprived of the opportunity to examine all the video evidence and that it would have been unfair to proceed to trial.</p> <p>“In making his decision, Chief Judge Morin had to figure out how to rebalance the scales of justice, which, for our trial group, he succeeded in doing,” said attorney Andrew O. Clarke. “We have been fighting for the First Amendment rights to protest for more than a year with these cases.”</p> <p>Clarke’s client Dylan Petrohilos, 29, who had been charged with rioting, said he and others had faced unfair prosecution.</p> <p>“This happens often in this city to poor people and people of color. But we were able to expose it,” Petrohilos said.</p> <p>Kerkhoff was not present for the hearing before Morin because she was in a separate trial in the rioting case. Her colleague Baset told the judge that the government meant it had only one video from that particular planning meeting, but Morin responded that that was not what Kerkhoff told the court. Baset then said he could not speak on her behalf.</p> <p>Jessie K. Liu, the U.S. attorney for the District of Columbia, declined to comment on the issue.</p> <p>Legally, prosecutors must provide their evidence to the defense at the earliest possible time, even if that evidence weakens their case. Failure to do so can be considered misconduct and a violation of a 1963 rule</p>

based on the U.S. Supreme Court case *Brady v. Maryland*.

Careful prosecutors will often turn over as much material as possible to the defense because they recognize that their cases could be jeopardized later if they fail to turn over some information.

An inherent problem with the system, according to former federal prosecutor Barak Cohen, is that it asks “the fox to guard the henhouse.”

“Even a well-intentioned prosecutor is less likely to think creatively and aggressively about what might be exculpatory than a defense lawyer fighting to protect a client,” said Cohen, now a white-collar defense lawyer with Perkins Coie.

Concerning the scale of the material withheld, Cohen said that “even a small violation of *Brady* is problematic, but the bigger the misconduct, the more it calls into question the prosecution’s tactics.”

In all, 234 people were charged in connection with the Inauguration Day disturbances. Twenty of those people have pleaded guilty, and prosecutors dropped cases against 20 in early reviews.

<b>HEADLINE</b>	<b>06/01 Mexican Mafia iron grip on Calif. jails</b>
<b>SOURCE</b>	<a href="https://www.thedailybeast.com/the-mexican-mafias-iron-grip-on-californias-jails?ref=home">https://www.thedailybeast.com/the-mexican-mafias-iron-grip-on-californias-jails?ref=home</a>
<b>GIST</b>	<p>To the jailers of California, the Mexican Mafia is known as the gang of gangs.</p> <p>Any member of a Latino street gang sent to prison or jail in California likely has to abide by the rules and dictates of the gang while in prison.</p> <p>Even to the point of making peace with their long-time hated rivals.</p> <p>“They have the ability to turn gangs that are historically sworn enemies that fight on the streets into allies when they come inside our jail system,” said Commander Joseph Dempsey of the Los Angeles County Sheriff’s Department.</p> <p>Author and former Los Angeles Times reporter Sam Quinones has chronicled the Mexican Mafia and associated Latino street gangs of California for two decades. Quinones says the gang’s power extended as its 30-year reputation for viciousness in the jail system won the allegiance of Latino street gangs throughout Southern California.</p> <p>“The Mexican Mafia’s influence and importance to Southern California goes far far beyond the prisons now,” Quinones told The Daily Beast. “I came to understand the Mexican Mafia was as important to many towns and communities as the mayor. They had an enormous effect in certain areas of Southern California, particularly the Latino barrios—an effect on the crime rate, the murder rate, and how drugs were sold.”</p> <p>Two federal indictments unsealed May 23 in Los Angeles vividly affirm the immense power wielded by the gang of gangs in the jails and prisons of California.</p> <p>The court documents allege members of the Mexican Mafia divided up control of the drug trade in nearly every jail and prison in the state, imposing “taxes” and meting out violent discipline to inmates who didn’t follow the gang’s rules.</p> <p>One of the indictments goes as far as to characterize the gang’s activity as “an illegal government” inside what is the largest jail system in the country.</p> <p>What’s more, the indictments assert what cops and crooks in Los Angeles have been saying for years, that the gang’s system of discipline and “taxation” extended far beyond the walls of the state’s prisons and into</p>

nearly every community in the Los Angeles area where Latino street gangs were active.

“Members of such gangs are expected to, and are proud to, carry out the orders of the Mexican Mafia member in control of their neighborhood or custody facility, because doing work for the Mexican Mafia increases the gang member’s status and reputation,” reads one of the unsealed indictments.

The two indictments, part of a three-year investigation, charge a total of 83 people as part of a criminal conspiracy that involved murder, kidnapping, robbery, extortion, drug trafficking, witness tampering, money laundering, and identity theft.

“The Mexican Mafia appears to be the most powerful prison gang in California,” Thom Mrozek, spokesperson for the U.S. attorney’s office, told The Daily Beast. “It wields considerable influence over many Hispanic street gangs in Southern California.”

The Mexican Mafia is often referred to as La Eme, Spanish for the letter M, which is the 13th letter of the alphabet. Mrozek said that the Mexican Mafia’s scope and power are reflected in the fact that a number of gangs demonstrate allegiance to the group by adding a “13” to their names, including MS-13.

Altogether, the court filings in the case lay out an elaborate system in which gang members rely on trusted associates to carry out orders and manage the criminal enterprise.

Full members of the Mexican Mafia, known as *carnales* or “brothers,” are relatively few; the indictment estimates there are only about 140, most of whom are incarcerated in prisons or jails in California. To become a Mexican Mafia member requires establishing a reputation for “putting in work” for the gang, which, according to the indictment, means a demonstrated willingness to murder or assault gang enemies, provide financial assistance to gang members, and follow gang rules inside and outside of prison.

To exercise their power in prisons, they rely on subordinates, including trusted lieutenants known as *shot-callers*, and *messengers*, *enforcers*, *smugglers*, and *money launderers*.

The first indictment unsealed in Los Angeles alleges that a select few incarcerated members of the Mexican Mafia, led by 55-year-old Jose Landa-Rodriguez, divided up control of nearly every jail and prison in California, and functioned as “an illegal government” inside the L.A. County jail system, which houses around 15,000 inmates on a daily basis.

Landa-Rodriguez is accused of carrying out a host of criminal activities including authorizing murders, assaults, and the kidnapping and planned murder of the relative of a gang member who had defied him.

A second Mexican Mafia member, Luis Vega, 33, is charged with having ordered a murder and directed assaults against gang associates who showed disrespect or failed to follow Mexican Mafia rules. According to the indictment, Vega used secret handwritten messages, known as “*kites*,” to order that a gang associate be stabbed 13 times as discipline for supposedly disrespecting Vega.

These are but a few of the hundreds of crimes alleged in the government’s case.

A second indictment targets Michael “Pomona Mike” Lerma, an alleged gang member accused of running criminal rackets with an iron fist in the city of Pomona.

The indictments go into details seemingly made for a TV prison drama. They explain how gang members during the period of the investigation allegedly used wives and girlfriends and other influential women, referred to as “*secretaries*,” as *go-betweens* to transmit orders regarding discipline and other sensitive information. One defendant named in the indictment is a lawyer accused of using his attorney-client privilege to convey messages and orders related to the gang’s criminal activity.

The jail indictment lists numerous instances in which trusted gang associates allegedly smuggled cocaine, methamphetamine, and heroin by the ounce into jails and prisons. It also explains other systems of

“taxation” behind bars, including one alleged extortion scheme in which “all Latino inmates were required to contribute a percentage of their commissary spending on food and hygiene items into a ‘kitty’ that generated additional income for the Mexican Mafia member when the kitty was sold to an inmate.”

The court filings say that in the gang’s prison hierarchy, Latino inmates are divided into three categories: Sureños, a term for Latino gang members loyal to the Mexican Mafia; Paisas, Mexican nationals who have no gang affiliation; and Residents, who are of Latin American descent and, like Paisas, have no prior gang affiliation.

The name of the federal investigation, Operation “Dirty Thirds,” was taken from an alleged practice of the Mexican Mafia to collect a “thirds” tax on all drugs smuggled in L.A. County jails. According to the indictment, it meant that one-third of all illegal drugs smuggled into jails or prisons had to be “broken off” and given to the senior Mexican Mafia member or shot-caller in charge. Such was the extent of the gang’s power that if the Mexican Mafia member in charge decided to sell the “thirds-tax” portion of the drugs, other inmates were barred from selling drugs of their own until the member’s drugs were completely sold.

Quinones has interviewed dozens of Sureños. He even met “Pomona Mike” Lerma on a reporting trip to Pelican Bay State Prison. “He was cooking cocoa on his little hot plate in the cell,” Quinones recalled. “Seemed nice enough. He was about 5’4” and wan, almost pale. They get very little sun.”

Quinones says the Mexican Mafia began somewhat modifying the way it operated about 10 years ago, ordering associates to keep a lower profile in the L.A. area—less violence, lower visibility—and focus instead on growing the lucrative income from drug-trafficking and identity theft.

“These gangs have become business entities more than what they were for years, which was defenders of turf, which terrified and blighted a whole region and was a huge problem for decades,” Quinones said.

He says a federal crackdown like the one announced last week shows that despite the gang’s lower profile on the streets, La Eme remains a powerful force, especially in Southern California.

“On the one hand, they don’t exist because you go around these neighborhoods and you don’t see them anymore. It doesn’t mean they aren’t still active.”

<b>HEADLINE</b>	<b>05/31 Pirates of Caribbean, Africa and Asia</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/best-countries/articles/2018-05-31/piracy-at-sea-in-2017-increased-off-africa-across-latin-america">https://www.usnews.com/news/best-countries/articles/2018-05-31/piracy-at-sea-in-2017-increased-off-africa-across-latin-america</a>
<b>GIST</b>	<p>The men who work aboard the ships in the global commercial maritime industry are a reticent group. Moving cargo by sea is hard work that offers long hours and few thanks, shaping the deckhands into people who avoid complaining while focusing on the job to be done.</p> <p>Still, the Rev. Stephen Miller has witnessed a lot of trauma from ship crews over the years, and he is succinct about what raises the anxiety levels of the seafarers he meets across Asia.</p> <p>"If they are leaving to go toward Africa or East Africa, they are worried because of the hostage situation," says Miller, the Hong Kong-based East Asia regional director for The Mission to Seafarers, an international Christian charity serving merchant crews.</p> <p>Those worries are borne out in a recently released report, which provides a stark reminder about how deadly large swathes of the high seas remain in the second decade of the 21st century. While the number of incidents involving pirates around the world declined in 2017 compared with the previous year, the number increased off the coasts of Africa, South America and in the Caribbean, according to the annual "State of Maritime Piracy" report released by One Earth Future, a nonprofit organization that studies piracy. The NGO's Oceans Beyond Piracy (OBP) program released the report.</p>

"Pirate activity in 2017 clearly demonstrates that pirate groups retain their ability to organize and implement attacks against ships transiting the region," says Maisie Pigeon, the report's lead author. OBP defines incidents as including attacks, hijackings and kidnappings.

Of particular concern: The number of incidents in the Horn of Africa between ships and pirates sharply increased in 2017 compared with the previous year, according to both the OBP report and the International Maritime Bureau's annual report on piracy. Piracy incidents in the Horn doubled in 2017, particularly off the coast of Somalia, a focus of international headlines on piracy as recently as 2012. Incidents also were recorded off the coast of Yemen, a country torn since 2011 by a political crisis that has led to a protracted civil war and an impotent government.

"Pirates never went away," says Pigeon, noting that in recent years many seagoing criminals increasingly moved ashore to focus on illicit activity with drugs, arms and wildlife.

Elsewhere, piracy remains a problem on the other side of Africa, according to the OBP report. Threats remain in the Gulf of Guinea despite countermeasures implemented by coastal states such as Nigeria and maritime security companies.

In Latin America and the Caribbean, pirate incidents increased by 160 percent in 2017 compared with the previous year, according to OBP. The report singles out Venezuela and Suriname as countries that experienced upticks in piracy.

The surges in pirate incidents off Africa and in the Western Hemisphere come after years of good news about improved safety on the open waters for the shipping industry, which by one estimate generates more than \$500 billion annually in revenue. Attacks on commercial ships by pirates have been on the decline overall, thanks to better tracking, more responsive navies and increased readiness by the crews aboard cargo ships.

The news is especially upbeat across Asia, where pirates have long bedeviled the commercial maritime industry. The region still accounts for the greatest number of pirate incidents in the world, but it saw an overall drop in reported incidents of 23 percent in 2017 from 2016 and a 51 percent decrease from 2015, according to the OBP report. Kidnap-for-ransom incidents, for example, decreased by 80 percent, according to the report.

Cooperation between countries in the region has been key to fighting pirates, says Pigeon, who points to the agreement between Indonesia, Malaysia and the Philippines to launch joint patrols in waters known to harbor pirates as key to lowering the overall number of attacks.

Type of maritime vessel also affects whether a ship may come under attack, Miller says.

"The seafarers we see in Hong Kong are not going to be affected a lot by this because they are on big container ships," he says. "Most of this is happening on small tankers where they are coming out, they're robbing the ships, the ships are slow-moving ships, the guys will come on board, they'll stick a gun in the face of the crew and they'll say, 'Give us what you got onboard.'"

What is the lesson from 2017? Increased vigilance and communication, Pigeon says. A perception of increased safety may have lulled some governments into false security, she says. NATO wrapping up its naval missions in the Indian Ocean also may have encouraged pirates, she adds.

Piracy is "a crime of opportunity," she says. "Criminals are increasingly adaptive and that needs to be factored in."

SOURCE	<a href="https://www.washingtontimes.com/news/2018/may/31/eric-conn-case-feds-offer-27-year-plea-deal-billio/">https://www.washingtontimes.com/news/2018/may/31/eric-conn-case-feds-offer-27-year-plea-deal-billio/</a>
GIST	<p>Prosecutors have offered a plea deal to the man who ran the largest disability scam in U.S. history, agreeing to a total of 27 years in prison to account for the fraud, plotting retaliation against a whistleblower, and for jumping bail to flee the country ahead of his sentencing.</p> <p>Eric C. Conn would serve out the 12-year sentence for the Social Security disability scheme, then get another 15 years tacked on for various conspiracy charges stemming from the retaliation and escape, according to outlines of the deal the government shared with one of the victims in the case, whistleblower Sarah Carver.</p> <p>For Ms. Carver and others whose lives were upended by the scam, which already tops \$1 billion in potential fraud, and by what they describe as a bungling government response, the sentence isn't nearly enough.</p> <p>"I am so furious," Ms. Carver told The Washington Times. "The DOJ has failed me as a victim in many ways. There is such a thing as victim's rights and they have violated almost all of them."</p> <p>Ned Pillersdorf, a lawyer for hundreds of people who were snared in the scam, also said Conn should get more time.</p> <p>"While I philosophically dislike long sentences for nonviolent white collar criminals, the exceptions are the Bernard Madoff class of con artists who do incalculable damage to unsuspecting individuals on a mass scale," Mr. Pillersdorf said. "Conn and Madoff are in the same class and ought to share a cell and have the same release date."</p> <p>Mr. Madoff is serving a 150-year sentence after pleading guilty to running a multi-billion dollar Ponzi scheme that sapped investments and savings from thousands of clients.</p> <p>Conn pleaded guilty last year to his part in a fraud ring that saw him recruit clients, then pay off doctors to fabricate medical or psychological evaluations signaling a disability. Conn then submitted those applications to Social Security judges who he also was plying with cash or gifts, and who rubber-stamped potentially thousands of bogus disability cases.</p> <p>After pleading guilty, Conn was slated to testify against a psychologist who was part of the scam, then was to be sentenced himself.</p> <p>He'd been out on bond during his own case, and even after he pleaded guilty — and despite him having repeatedly said he would flee the country — the judge and the government didn't revoke his bond. Just before he was to testify last June against the psychologist, Conn cut off his ankle bracelet and ran for the U.S.-Mexico border, escaping to Central America.</p> <p>He was recaptured in December at a Pizza Hut in Honduras.</p>

HEADLINE	<b>05/31 Task force w/Native Tribes target drugs</b>
SOURCE	<a href="https://www.washingtontimes.com/news/2018/may/31/ryan-zinke-interior-has-formed-task-force-with-nat/">https://www.washingtontimes.com/news/2018/may/31/ryan-zinke-interior-has-formed-task-force-with-nat/</a>
GIST	<p>Interior Secretary Ryan Zinke said Thursday that his agency has been working with Native American tribes suffering under an influx of opioids and other hard drugs.</p> <p>"The reservations, a lot of them, are land-based," Mr. Zinke said on Fox News. "A lot of them are millions of acres. It's hard to patrol."</p>

He said his agency formed a task force of 4,000 officers with tribal leaders and police. The most current operation targeted drug dealers in Arizona, but they've already performed sting operations in Minnesota, North Carolina and Washington.

Mr. Zinke said that since these tribal nations are sovereign, the agency works very closely with them to coordinate these operations. The goal is to target the source of the drugs and find where they are hidden.

"As the president has said, this is a war on opioids. It's destroying communities," he said.

<b>HEADLINE</b>	<b>05/30 Struggling to stop mail-order opioids</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/05/30/us/politics/drug-smuggling-mail-order-opioids.html">https://www.nytimes.com/2018/05/30/us/politics/drug-smuggling-mail-order-opioids.html</a>
<b>GIST</b>	<p>WASHINGTON — Federal agents are struggling to stop opioid smugglers who are reaping vast profits, according to interviews and documents, as the number of Americans dying from drug overdoses continues to rise.</p> <p>Officials at the Department of Homeland Security say the drugs are shipped in such minute amounts that detecting them among cargo in a tractor-trailer is close to impossible. That the drugs increasingly are bought online and shipped directly to buyers — either through the Postal Service or commercial couriers like FedEx and UPS — makes inspections all the more difficult.</p> <p>"The sheer logistical nature of trying to pick out which packages contain opioids makes it much more challenging," said Robert E. Perez, an acting executive assistant commissioner at United States Customs and Border Protection, an arm of the department.</p> <p>China is the largest source of illegal fentanyl for American buyers, officials said, and buyers are increasingly paying with digital currencies for drugs that are shipped through other countries — often Mexico or Canada — to reduce the risk of the opioids being tracked and seized by customs officials.</p> <p>"When you're dealing with very small, minute quantities, it's kind of like death by a thousand cuts," said Patrick J. Lechleitner, the special agent in charge of the Washington office of Homeland Security Investigations, a division of Immigration and Customs Enforcement.</p> <p>"You used to have the tractor-trailer running up the interstate, with its contraband, that had to be met by someone and distributed," Mr. Lechleitner said. "Now, you have an individual sitting somewhere in middle America ordering this thing, and it arrives as a parcel at their house."</p> <p>A few years ago, officials said they rarely, if ever, encountered smuggled fentanyl or other opioids. Last year, Customs and Border Protection officers and Border Patrol agents found more than 1,485 pounds of fentanyl at American ports of entries. Already this year, customs officers and border agents so far have seized 1,060 pounds of fentanyl.</p> <p>The drugs are potent in small doses. Fentanyl is 50 times more potent than heroin and 100 times more potent than morphine. It is often mixed with heroin or cocaine and used by consumers who are unaware they are taking fentanyl. Though far more opioids are smuggled across the southwest border, officials said, those that are shipped by mail tend to be far more potent.</p> <p>According to the Centers for Disease Control and Prevention, opioids were linked to 42,249 deaths in the United States in 2016, the latest data available show. More than half were attributed to fentanyl and fentanyl analogues, and the numbers continue to rise, the data show.</p> <p>It is unclear how many deaths were attributed to prescriptions by doctors and how many were from synthetic opioids smuggled into the country, officials said. The going market wholesale price for a kilogram of cut fentanyl is about \$80,000, and can be turned around and sold for a profit of about \$1.6</p>

million, according to the Drug Enforcement Administration. That is about 20 times more profitable than heroin.

“This is what makes the opioid crisis so unique and dangerous,” said Peter Vincent, who led ICE’s international operations during the Obama administration. “Traditionally, law enforcement has focused on large quantities of drugs like marijuana and cocaine. But very small amounts of opioids can bring tremendous profits.”

Officials at Customs and Border Protection and Homeland Security Investigations said they have made significant gains in locating illegal opioids at land borders and at international mail facilities. They are increasingly relying on hand-held sensors that can peek inside packages and detect potent, but tiny, shipments of opioids. The customs agency has also trained a number of dogs to detect fentanyl and other opioids.

Each day, dozens of officers at the National Targeting Center comb through passenger lists for all flights arriving in the United States and cargo manifests of ships. Matching them to law enforcement and intelligence databases, the officers identify people and cargo that should be stopped or examined at the borders.

Homeland Security Investigations agents and analysts scour the dark web for sites that sell opioids. Agents also use software to analyze digital currency transactions to search for the identities of those behind them.

Additionally, undercover operations infiltrate suspected networks of opioid smugglers, officials said. Homeland Security Investigations is providing dark web investigations and digital currency training to state and local law enforcement agencies.

Homeland security officials said these efforts have led to the opening of hundreds of investigations of suspected opioid smugglers. In April, the authorities accused 45 people of participating in a drug trafficking ring that attempted to sell more than 30 kilograms of fentanyl in New Hampshire, Massachusetts and Maine.

In March, two men and a woman were arrested in Ohio after the authorities seized a package of fentanyl destined for Texas. During the same time, two Chicago-area men were charged with importing fentanyl from China; officials said the drugs were shipped through the mail to 19 addresses.

In January, President Trump approved spending \$9 million on screening devices and other drug detection tools for Customs and Border Protection officers at land-based ports of entry, airports and international mail facilities.

Congress provided the agency with an additional \$284 million in April for port and drug inspection technologies — \$71 million of which was specifically for opioid detection.

Officials at border agencies said they are working with law enforcement officials abroad to stem the flow of opioids into the United States, including a case against a smuggler in China who was suspected of shipping opioids overseas, Mr. Perez said.

Customs and Border Protection is ramping up coordination with China’s customs organizations to share more shipping data, said Kevin McAleenan, the agency’s commissioner. He said data sharing on shipment tracking has brought a 65 percent increase over the past year in the number of intercepted packages of fentanyl.

Still, tracking and arresting smugglers remains a challenge. A staffing shortage at the southwest border, where Mr. Trump is cracking down on illegal immigration, has pulled Customs and Border Protection officers from airports.

The agency is understaffed at ports of entry by an estimated 4,000 officers, according to a May report by

the Democratic staff of the Senate Homeland Security Committee. Ports in San Diego and Tucson, which account for 57 percent of all of the opioids seized by customs officers between 2016 and 2017, have assigned temporary staff to fulfill personnel needs.

The Trump administration's proposed 2019 budget calls for drastically increasing Border Patrol and ICE staff, but does not add additional officers at ports of entry. Officials at Customs and Border Protection said they have increased staffing at the six main international mail facilities by 20 percent over the past six months.

Officials at Homeland Security Investigations also are squeezed by the opioid crisis. Steve Francis, the special agent in charge in Detroit, said he has shifted some agents from Michigan to Ohio, which has been particularly hard hit by the epidemic.

Unintentional drug-related overdoses involving fentanyl caused the deaths of 2,357 Ohio residents in 2016, state records show. Senator Rob Portman, Republican of Ohio, credits agencies like Homeland Security Investigations for stepping up investigations to combat the problem.

But, he added, "There's no doubt that more funding is an important component if we're going to make real progress."

<b>HEADLINE</b>	<b>05/31 More arrests Everett motel shooting</b>
<b>SOURCE</b>	<a href="https://www.heraldnet.com/news/police-arrest-2-more-suspects-in-everett-motel-shooting/">https://www.heraldnet.com/news/police-arrest-2-more-suspects-in-everett-motel-shooting/</a>
<b>GIST</b>	<p>EVERETT — A woman recruited two men to help her break into a motel room to steal drugs and money, leading to a shooting earlier this month that left a man with 24 entry and exit wounds from gunshots, according to police reports released Thursday.</p> <p>Misty Marie Krum, aka Misty Eggen, was arrested in Seattle this week, according to Everett police. She's accused of plotting the robbery that nearly killed a man, 39, on May 16 at the Farwest Motel on Evergreen Way.</p> <p>An alleged accomplice, Devon Skye Evans, 23, was arrested near downtown Everett. Last week police released photos of Evans and Krum and asked the public for tips about their whereabouts. Both were booked into the Snohomish County Jail on Wednesday.</p> <p>The suspected shooter, 24, of Marysville, was arrested within hours of the attack. He remains behind bars. As of Wednesday, charges had not been filed in Snohomish County Superior Court.</p> <p>Krum, 28, reportedly told the others that a guest at the motel had her car. She told them he had a lot of money and about 2 kilograms of drugs in his motel room and said they'd get some of the loot, according to court papers.</p> <p>Around 10:30 a.m., the trio intercepted the motel guest as he walked into his room. The gunman ordered him to get on the floor and told a 20-year-old woman in the room to put her face in a pillow.</p> <p>"I told you not to (expletive) with me!" Krum shouted, according to court papers. "This is what you get!"</p> <p>The robbers demanded all of the stuff from the victims. Court papers say Evans searched the room and went through their clothing. The armed man repeatedly pistol-whipped the motel guest. Then he ordered him to go to the bathroom to clean up, but the man wouldn't go, fearing he'd be shot. Instead, he charged at the gunman, who opened fire, police said.</p> <p>The man suffered a gunshot to the head, two to the chest, one to the lower abdomen, at least one to the back, a shattered femur and gunshots to his hips and arms. He tried to crawl or roll away, but the shooter</p>

“just kept shooting,” according to a report from the woman he was with.

An ambulance rushed the man to Providence Regional Medical Center Everett. Once he could talk, he told police Krum was one of the robbers. Security footage showed a woman who looked like Krum leaving the room, with numerous bags that she didn’t have when she arrived.

The suspected shooter later told police he’d hidden in a yard until the resident found him and called 911. A police officer caught him trying to run across a field, with a cast on his leg, around 3 p.m. at Madison Elementary School. The gun had been disassembled and tossed in a bush behind Value Village.

Krum and Evans, meanwhile, were gone. Tips from the public led police to them this week. Everett officer Aaron Snell said that was good detective work.

Bail was set Thursday at \$250,000 for Krum and Evans.

<b>HEADLINE</b>	<b>06/01 ‘Delta 5’ trespassing convictions upheld</b>
<b>SOURCE</b>	<a href="https://www.heraldnet.com/news/court-affirms-trespassing-convictions-of-everetts-delta-5/">https://www.heraldnet.com/news/court-affirms-trespassing-convictions-of-everetts-delta-5/</a>
<b>GIST</b>	<p>EVERETT — State Court of Appeals judges have upheld trespassing misdemeanors for activists who blocked freight trains four years ago in an effort to draw attention to climate change.</p> <p>A three-judge panel ruled Tuesday that Snohomish County District Court handled the case correctly. The arrests received national attention in progressive media outlets, who dubbed the defendants the “Delta 5” — for the Delta train yard in Everett where their act of civil disobedience took place.</p> <p>“I don’t think anybody has any regrets or concerns about what we did,” Jackie Minchew, a retired teacher from Everett, said earlier this week. “We feel good about the whole action.”</p> <p>Minchew was among the four activists who pursued the appeal. They included fellow Everett resident Michael Lapointe, as well as Abigail Brockway and Patrick Mazza, both of Seattle. A fifth woman who was convicted in the case dropped out of the appeal.</p> <p>The remaining appellants are considering whether to pursue the case — and a disputed defense strategy at the center of it — to the state Supreme Court, Minchew said.</p> <p>On Sept. 2, 2014, more than two dozen activists entered the Delta yard of BNSF Railway in north Everett without permission. They set up a tripod over an at-grade crossing, idling a long train of oil tank cars.</p> <p>Police arrested five people — the future “Delta 5” — who were on the tripod or attached to it. Prosecutors charged them with obstructing or delaying a train and second-degree trespassing, both misdemeanors.</p> <p>The case went to trial in early 2016. Dozens of spectators packed the small courtroom daily in Snohomish County District Court in Lynnwood. TV cameras recorded the proceedings. Bloggers, national reporters and two documentary film crews chronicled the events.</p> <p>The accused had hoped to use a so-called necessity defense, arguing that civil disobedience was their only option for addressing the harm that fossil fuels are causing the planet. They also sought to highlight dangers to railroad workers.</p> <p>District Court Judge Anthony Howard allowed testimony to support the use of a necessity defense. Witnesses included a retired chemistry and oceanography professor, a physician who works as a public health officer and a director from the Seattle-based Sightline Institute.</p> <p>In the end, Howard refused to allow the jury to consider a necessity defense. The judge ruled that the</p>

	<p>defendants failed to demonstrate they had no reasonable alternative to breaking the law.</p> <p>A jury acquitted the defendants of obstructing a train but found them guilty of trespassing. They were sentenced to probation and ordered to pay restitution. Four of them later lost an appeal in Snohomish County Superior Court.</p>

<b>HEADLINE</b>	<b>05/31 Loopholes in deadly arsonist early release</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/1005470/martin-pang-early-release-laws/">http://mynorthwest.com/1005470/martin-pang-early-release-laws/</a>
<b>GIST</b>	<p>It seems unjust that a man responsible for the deaths of four firefighters and the destruction of part of Seattle's International District gets to be released early from prison. But that's the situation with Martin Pang.</p>

Many in Seattle are asking how and why this is possible. Martin Pang committed arson in 1995. He set his family's building on fire in the International District with the goal of collecting insurance money. Four firefighters died responding to that fire.

Pang fled to Brazil before authorities brought him back to face charges. And that one point — Brazil — is why Martin Pang has been playing by different rules and laws ever since. And it is why he faces possible early release from prison in September.

"If you commit arson in Brazil and someone dies, you are not going to be charged with murder," former Washington state Attorney General Rob McKenna told KIRO Radio's Dave Ross. "They refused to extradite Mr. Pang. So prosecutors from King County had to fly down there and negotiate for his extradition. Finally, they successfully negotiated to have him returned to the United States, but only to face manslaughter charges and not felony murder charges."

"A similar situation comes up with murders who escape to Canada," he said. "Canada will not extradite murderers to Washington state where they might be charged with capital murder, in other words, face the death penalty .... Canadian law doesn't recognize the death penalty, Brazil doesn't recognize the felony murder rule."

Pang fled to Brazil. The only way to get him back to face his crime was to downgrade the charges. It is that lesser conviction that Pang has been subject to ever since. His sentencing has therefore been less than what many would expect.

#### Martin Pang sentencing

State courts used to have a wider range of options when it came to sentencing. They could take circumstances of the crime into consideration. Under that system, Martin Pang would have the four firefighters' deaths factored into his sentence. But in an effort to be more objective, that discretion was taken away from the courts.

"He's getting out early because we having something called the sentencing guidelines system in this state that are designed to ensure that offenders who commit similar crimes and have similar criminal histories receive similar sentences," McKenna said.

"And manslaughter is not treated as seriously under the sentencing guidelines as murder," he said. "He was convicted of manslaughter 1, which the standard is recklessness. He was not convicted of felony murder, which would have resulted in much longer sentences and even possibly life without parole."

"Under the guidelines it doesn't matter who the victims were, even though they were trying to save property and possibly save people's lives," he added. "It doesn't matter. They just follow this formula."

<b>HEADLINE</b>	<b>05/31 Coded text for help saves kidnapped girl</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/nation-now/2018/05/31/coded-text-message-kidnapped-girl/662276002/">https://www.usatoday.com/story/news/nation-now/2018/05/31/coded-text-message-kidnapped-girl/662276002/</a>
<b>GIST</b>	<p>PENSACOLA, Fla. — A Florida girl who was allegedly kidnapped by a man she had been messaging on Facebook and was rescued after sending a coded text message for help, according to authorities.</p> <p>The girl's name, age and relationship to a woman who reported her missing are redacted from the Escambia County Sheriff's Office report on the incident. The woman gave police information on the girl's phone and the man who had been allegedly "stalking" her.</p> <p>A convicted sex offender, Alaric Balfour Brown, 32, of Milton was arrested and charged with simple assault and kidnapping in connection with the case.</p> <p>Sexual battery charges were also referred to the Milton Police Department's jurisdiction, according to Brown's arrest report.</p> <p>The woman reported the girl missing on May 26, saying she came home to find a note saying the girl was sorry and she "did this because she loved her."</p> <p>The woman said the girl had been talking to someone known to her as "Twist Brown" for several months and the man had been texting the girl and showing up to her cheerleading games.</p> <p>The woman showed deputies text messages between the man and the girl about meeting in person someday, according to the report.</p> <p>Further, the woman said she and the girl agreed to use a code word if the girl was in trouble. The woman said she received a text message earlier that day with the code word — "blueberry pie" — along with a message telling her to call police.</p> <p>Deputies began working to locate the girl's phone. The girl then sent text messages saying "Twist" had taken her in a car that broke down on the side of the road, according to the report.</p> <p>Authorities found the girl and Brown on Interstate 10, the report states.</p> <p>The girl told police Brown came to her house, ordered her to leave and said if she didn't, she would get hurt. She told authorities he took her to Milton, raped her and threatened her afterward as they drove back toward Pensacola before the car broke down.</p> <p>The girl said that after the car broke down, she was able to retrieve her phone and secretly send the text message.</p>

<b>HEADLINE</b>	<b>05/31 Denmark bans burqa, niqab</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/denmark-joins-european-nations-banning-burqa-niqab-55554043?cid=clicksource_76_2_hero_headlines_headlines_hed">https://abcnews.go.com/International/wireStory/denmark-joins-european-nations-banning-burqa-niqab-55554043?cid=clicksource_76_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>Denmark joined some other European countries in deciding Thursday to ban garments that cover the face, including Islamic veils such as the niqab or burqa.</p> <p>In a 75-30 vote with 74 absentees, Danish lawmakers approved the law presented by the center-right governing coalition. The government says that it is not aimed at any religions and does not ban headscarves, turbans or the traditional Jewish skull cap.</p> <p>However, the law is popularly known as the "Burqa Ban" and is mostly seen as being directed at the dress worn by some conservative Muslim women. Few Muslim women in Denmark wear full-face veils.</p> <p>Justice Minister Soeren Pape Poulsen said that it will be up to police officers to use their "common sense" when they see people violating the law that enters into force Aug. 1.</p> <p>The law allows people to cover their face when there is a "recognizable purpose" like cold weather or complying with other legal requirements, such as using motorcycle helmets under Danish traffic rules.</p> <p>First-time offenders risk a fine of 1,000 kroner (\$156). Repeat offenses could trigger fines of up to 10,000 kroner or a jail sentence of up to six months.</p> <p>Anyone forcing a person to wear garments covering the face by using force or threats can be fined or face up to two years in prison.</p> <p>Austria, France and Belgium have similar laws.</p>

**FAIR USE Notice** - All rights to these copyrighted items are reserved. Articles and graphics have been placed within for educational and discussion purposes only, in compliance with 'Fair Use' criteria established in Section 107 of the Copyright Act of 1976. The principle of 'Fair Use' was established as law by Section 107 of The Copyright Act of 1976. 'Fair Use' legally eliminates the need to obtain permission or pay royalties for the use of previously copyrighted materials if the purposes of display include 'criticism, comment, news reporting, teaching, scholarship, and research.' Section 107 establishes four criteria for determining whether the use of a work in any particular case qualifies as a 'fair use'. A work used does not necessarily have to satisfy all four criteria to qualify as an instance of 'fair use'. Rather, 'fair use' is determined by the overall extent to which the cited work does or does not substantially satisfy the criteria in their totality. If you wish to use copyrighted material for purposes of your own that go beyond 'fair use,' you must obtain permission from the copyright owner.

Hackers deface Airport screens in Iran with anti-government messages

From Hack Read (05.26.2018)

On Thursday 24th May, the airport screens at Mashhad city in northeast Iran were hacked and defaced by an unknown group of hackers with messages against the Iranian government. The hackers left images on the arrival and departure monitor screens at the airport displaying statements against the Iranian government and military's activities and presence in the Middle East. According to Radio Farda, the messages were left in the Persian language which when translated into English accused the Iranian government of wasting Iranian lives and resources in Lebanon, Syria, and Gaza. "Wasting Iranians lives and financial resources in Gaza, Lebanon, and Syria by the Islamic Revolution Guards Corps (IRGC)," said the deface message. Moreover, hackers hacked into the official email account of Mohsen Eidizadeh, the head of Mashhad airport civil aviation and used it to spread the word about their hack. Additionally, the group urged Iranians to take snapshots of deface screens and use social media platforms to spread the word using the hashtag "Protests\_alloverthecountry." [Link](#)

### Cobalt Hacking Group Still Active Despite Leader's Arrest

From Bleeping Computer (05.28.2018) Catalin Cimpanu

Despite its leader's arrest in Spain two months ago, the Cobalt hacker group that's specialized in stealing money from banks and financial institutions has remained active, even launching a new campaign. "Cobalt is still active: its members continue attacks on financial organizations and other companies worldwide," said Dmitry Volkov, the Chief Technical Officer of Group-IB, the company who detected this new Cobalt operation. This new campaign was set in motion last week, May 23, when the company's security experts discovered one of Cobalt's phishing emails, aimed at banks in Russia and other former Soviet states. According to a report that Group-IB plans to release tomorrow but shared with Bleeping Computer, this spear-phishing email was designed to look like a security alert sent out by fellow Russian cyber-security firm Kaspersky Lab. Victims were urged to access a link to read and answer to a complaint that Kaspersky received about an alleged criminal act supposedly committed by the victim. The spear-phishing email was an obvious ruse to lure users on a malicious site where they'd be infected with the CobInt trojan, Group-IB says. CobInt is a malware strain that was historically used only by the Cobalt group, a clear indicator that the rest of the Cobalt members weren't deterred or phased by their leader's arrests, and appear to have no plan of stopping from hacking banks any time soon. The group, in spite of its leader's arrest, still remains a force to be reckoned with, and one of the most successful hacker groups known to date. [Link](#)

## Two Canadian Banks Announce Hacks Over the Weekend

From Bleeping Computer (05.29.2018) Catalin Cimpanu

Two Canadian banks put out statements on Monday announcing separate cyber-incidents affecting their customers. The two are Simplii Financial, a subsidiary of CIBC, and the Bank of Montreal —two of Canada's biggest banks. Simplii Financial said it discovered over the weekend that "fraudsters may have electronically accessed certain personal and account information for approximately 40,000 of Simplii's clients." The bank is currently investigating if the claim is true, but in the meantime, it says it deployed "enhanced online fraud monitoring and online banking security measures" to prevent abuse of customers' data. Simplii also said there's no evidence that customers of CIBC —its parent company— were affected, and the incident seems to be contained in its branch only. An hour after Simplii put out its statement, Bank of Montreal put out a similar announcement. The bank said it was contacted on Sunday by the hackers themselves, claiming to be in possession of customer data. Bank of Montreal did not reveal how many customers might have had their data compromised but said it believes to have closed the hackers' point of entry into its systems. Bank officials also added that they believe the hack originated from outside the country, albeit they did not elaborate on this claim with any other information. [Link](#)

## \*Flaws in IBM QRadar Allow Remote Command Execution

From Security Week (05.29.2018) Eduard Kovacs

Three vulnerabilities discovered by a researcher in IBM's QRadar product can be chained for an exploit that allows a remote and unauthenticated attacker to bypass authentication and execute arbitrary commands with root privileges. IBM QRadar is an enterprise security information and event management (SIEM) product designed to help security analysts identify sophisticated threats on their network and improve incident remediation. Independent researcher Pedro Ribeiro discovered that IBM QRadar is affected by three potentially serious vulnerabilities, which he reported to the tech giant through Beyond Security's SecuriTeam Secure Disclosure program. According to IBM, the security holes impact QRadar SIEM 7.3.0 to 7.3.1 Patch 2, and QRadar SIEM 7.2.0 to 7.2.8 Patch 11. Patches are included in versions 7.3.1 Patch 3 and 7.2.8 Patch 12. IBM has assigned a CVSS score of only 5.6 to the vulnerabilities, which it collectively tracks as CVE-2018-1418. However, the issues seem serious and an advisory in NIST's National Vulnerability Database (NVD) shows a score of 9.8, which indicates a "critical" severity rating. According to Beyond Security, QRadar has a built-in application for performing forensic analysis on files. While the application is disabled in the Community Edition, the code is there and part of it still works. The application has two components: a Java servlet and the main component, which uses PHP. The first component is affected by a vulnerability that can be exploited to bypass authentication, while the second has a flaw that can be leveraged to download and execute a shell. [Link](#)

## Researchers Develop Attack to Bypass AMD's Virtual Machine Encryption

From Security Week (05.29.2018) Ionut Arghire

A group of German researchers has devised a new attack method capable of bypassing AMD's Secure Encrypted Virtualization (SEV). Used by AMD data-center processors, SEV is a hardware feature that provides secure encryption of virtual machines (VMs) to protect VM memory from physical attacks and cross-VM and hypervisor-based attacks. Fraunhofer AISEC researchers present an attack carried out from a malicious hypervisor and capable of "extracting the full contents of main memory in plaintext from SEV-encrypted virtual machines." Named SEVered, the attack requires a remote communication service running in the VM. The researchers say their attack can be used to extract all memory contents, even if the targeted VM is under high load. SEVered's effectiveness was tested on a recent AMD SEV-enabled server platform running various services, in encrypted virtual machines. SEV can transparently encrypt individual VMs using a Secure Processor (SP), where an individual key is used to encrypt the memory of each protected VM within the SP. The implementation in hardware is meant to protect the system against memory attacks, while also preventing hypervisors (HVs) from accessing sensitive VM data. The researchers claim SEVered is feasible in practice and could allow an attacker to extract the entire memory from a SEV-protected VM within reasonable time. They also say that the attack manages critical aspects such as noise during the identification and the resource stickiness well, but note that there is room for improvements. [Link](#)

## \*Critical RCE Flaw Discovered in Blockchain-based EOS Smart Contract System

From The Hacker News (05.28.2018) Swati Khandelwal

Security researchers have discovered a series of new vulnerabilities in EOS blockchain platform, one of which could allow remote hackers to take complete control over the node servers running the critical blockchain-based applications.

EOS is an open source smart contract platform, known as 'Blockchain 3.0,' that allows developers to build decentralized applications over blockchain infrastructure. Discovered by Chinese security researchers at Qihoo 360—Yuki Chen of Vulcan team and Zhiniang Peng of Core security team—the vulnerability is a buffer out-of-bounds write issue which resides in the function used by nodes server to parse contracts. To achieve remote code execution on a targeted node, all an attacker needs to do is upload a maliciously crafted WASM file (a smart contract) written in WebAssembly to the server. As soon as the vulnerable process parser reads the WASM file, the malicious payload gets executed on the node, which could then also be used to take control over the supernode in EOS network—servers that collect transaction information and pack it into blocks. The researchers believe the new type of vulnerabilities affect not only EOS alone but also other types of Blockchain platforms and virtual currency applications. [Link](#)

## ICAO Rallies Support for Cybersecurity Coalition at Bucharest Summit

From Aviation Today (05.21.2018) Nick Zazulia

Cybersecurity is a prominent issue in aviation. That's why the ICAO hosted a summit to unite civil aviation stakeholders from Europe, the Middle East and Africa in trying to solve it. "In an industry as interconnected as air transport, we cannot lose sight of the fact that a single cyber incident will likely impact multiple companies and stakeholders," said ICAO Secretary General Fang Liu, while kicking off the event. Highlighting that recent insurance sector assessments have identified the combined threats from cyber-crime, IT failure and database breaches as their No. 3 global business risk for 2017, Liu noted that ICAO is hard at work on a policy to address cybersecurity in civil aviation and that the organization's new global aviation security plan will greatly facilitate the global coordination and information sharing so fundamental to successfully addressing these threats. She added that several updates to ICAO's guidance materials had already been completed and that it was ICAO's view "that the secure and resilient exchange of information required to cope with the needs of evolving aviation activities can be enabled through a trust framework." "This would consist of coordinated standards, procedures, methods and agreements for the digital exchange of information between ground-ground, air-ground and air-air systems, as well as to regulate an identity system," Liu added. "These provisions, in turn, will support the ongoing implementation of performance-based navigation (PBN), aeronautical information management (AIM), air traffic flow management (ATFM) or any other current or projected air transport capability requiring the digital exchange of information between systems in a secure environment." The Bucharest event featured a series of tabletop exercises on airport cybersecurity, jointly organized by Airports Council International (ACI) in conjunction with ICAO and the governments of Romania and Finland. ## Aviation Tech

### Advanced Connectivity and Upgraded Cyber Security Module Added to SD Pro Platform

From Aviation Pros (05.29.2018)

Satcom Direct, the business aviation connectivity, software and hardware provider, is showcasing enhancements to its digital flight operations platform SD Pro. Two new modules further supporting on-board connectivity management and giving even greater control of cyber security threat management. SD's new Advanced Connectivity module enables users to generate a predictive connectivity map for the flight. The illustrative graphic highlights network coverage, and any associated issues along the route enabling users to adjust travel-plans accordingly. The feature aims to prevent loss of connectivity as it highlights dead zones and regional areas where data may be at threat from intrusion. With cyber-threats to aircraft at all altitudes on the increase, SD has also enhanced the SD Pro Threat Monitoring module. In addition to the existing services, the latest upgrade gives flight departments more visibility into the types of threats identified as well as the ability to view and sort threats by category. Analyzing

the type of threat in real time allows customers to apply sorting and filtering features to distinguish between the variety of threats e.g malware, active intrusion, phishing, etc. With this data, flight departments can make better informed connectivity decisions about user behaviors and security policies, and stay ahead of any potential vulnerabilities. When combined with SD hardware, SD Pro also gives users more insight and control over their onboard connectivity and how it is functioning. [Link](#)

### Ultrasonic Sound Waves Are the New Paper Boarding Pass?

From Flyer Talk (05.29.2018) Jeff Edwards

An Ohio-based tech firm believes that sound waves could hold the solution to nearly all of the current pitfalls associated with using a smartphone instead of a paper boarding pass at the airport. When everything works exactly like it is supposed to, using a mobile device at the airport rather than printing a boarding pass is considerably more convenient and much less stressful than trying to keep track of a paper ticket, but when technological glitches occur, it can make even the most tech-savvy air traveler long for the thick card stock airline tickets of yesteryear. Lisnr, a Cincinnati-based startup, believes it has solved nearly every single issue associated with paperless travel. The tech firm uses a proprietary sound wave technology to securely transmit data (including boarding passes, concert tickets and other credentials) between devices using only speakers and microphones those devices are in most cases already equipped with. The company says, the near-ultrasonic sound waves employed by the technology are in nearly most cases inaudible to the human ear. According to Lisnr, the sound wave tickets use less battery than any of the current methods of paperless ticketing. Company officials say that because airlines rely on QR codes – even for paper boarding passes – a sound wave boarding pass is actually more secure than even a traditional printed airline ticket. The company says that the technology performed flawlessly during live trials conducted in partnership with Ticketmaster. The use of the Lisnr system reportedly reduced ticket fraud to an unheard of “zero percent” in a recent case study. [Link](#)

### Legislation & Regulation News

Several airlines defy Chinese government orders and hold off listing Taiwan as part of China

From The Daily Mail (05.29.2018) Ted Thornhill

Several international airlines still listed Taiwan as a separate country on their websites on Friday despite a deadline set by Beijing for carriers to refer to the self-governed island as a Chinese territory. The Chinese Civil Aviation Administration sent a notice to 36 foreign airlines last month, asking them to comply with Beijing's standards of referring to Taiwan, Hong Kong and Macau as Chinese territories, in a move described by the White House as 'Orwellian nonsense.' According to a copy of the letter

circulating on Chinese social media, it was dated April 25 and gave carriers 30 days to comply, indicating a deadline of May 25. But AFP found at least eight foreign airlines were still listing Taiwan as a country on their websites as of Friday, including United, American Airlines, Cathay Pacific, All Nippon Airways and Qantas. A spokesperson for Qantas told AFP that Chinese authorities have given the Australian carrier 'additional time to further clarify how we refer to Chinese territories'. Around a dozen other airlines including Air Canada, Air France, British Airways and Germany's Lufthansa list Taiwan as a Chinese territory, though it is unclear when they started referring to the island that way. China's Civil Aviation administration declined to comment on when the deadline was or how many airlines have complied with their request. The letter did not clarify the punishment for non-compliance, only saying it would be deemed as 'serious discreditable conduct'. [Link](#)

Industry meets to review European flight time and fatigue rules

From Air Transport World (05.28.2018) Helen Massy-Beresford

Some 180 aviation industry representatives participated in a workshop on flight time limitation (FTL) rules and fatigue risk management (FRM), giving their views on European rules which have been in force for more than two years. The event, held May 24, was organized by the European Aviation Safety Agency (EASA) and was the third to be held. European crew members, airlines and authorities gave feedback and insights on the implementation of the rules and into how authorities oversee the region's airlines' FTL schemes. EASA flight standards director Jesper Rasmussen said, "In the past, flight time rules have often created tension, between employers and employees and between airlines and authorities. EASA said it would continue to support implementation of FTL rules and had established a dedicated FTL/FRM expert group of national authority inspectors that will further share good practices and promote a common understanding of the European FTL/FRM framework. In addition, EASA will continue to focus on FTL related issues during its standardization activities of EU Member States, the agency said. The workshop touched on issues including ensuring safe and efficient crew planning, individual FTL schemes and how they work in practice, the process involved in approving a deviation from the FTL scheme as well as fatigue risk management schemes and best practices regarding fatigue training for air crew and airlines. Saudi Arabia destroys Houthi drone near Abha Airport

From Gulf Business (05.27.2018) Robert Anderson

Saudi air defenses destroyed a Houthi drone headed to Abha International Airport, the Saudi coalition said on Saturday. The unmanned aerial vehicle was spotted at 1:45pm by the unit assigned to the airport, which "dealt with the threat and destroyed it", according to a statement to Saudi Press Agency.

Coalition spokesperson colonel Turki al-Malki said an inspection of the wreckage found that it was an Iranian Ababil drone that was attempting to attack the airport. He added that there was minimal damage caused by the drone's destruction and no injuries. "The Joint Forces Command of the Coalition, through continuous thorough monitoring and surveillance, targeted the unit responsible of assembly and rigging the UAVs following their exit of one of their workshops in Sa'dah governorate," al-Malki said. Al-Maliki clarified that inspections carried out by specialists in the coalition's joint forces revealed that the wreckage belonged to the Houthi militias' unmanned aerial vehicle with specifications of Iranian UAV "Ababil." A number of other drone attacks have been detected previously, including one last month that targeted a facility belonging to Saudi Aramco in Jizan. [Link](#)

Japan's airports face security staff shortage ahead of 2020 Olympics

From The Japan Times (05.29.2018) Junko Horiuchi

Major airports in Japan are struggling to retain luggage inspectors due to low wages and long hours, leaving authorities concerned about anti-terrorism efforts ahead of the 2020 Tokyo Olympics. With the number of foreign visitors to Japan expected to continue its trend of record annual rises, in line with government policy and the expansion of low-cost carriers, Japanese airports have been planning further physical expansions. Besides the Olympic and Paralympic Games in 2020, Japan will also host the 2019 Rugby World Cup. But the country's aviation workforce, which plays a crucial role in preventing attacks, is not immune to the labor shortages caused by the declining working population. "We are facing a serious issue, where 20 to 30 percent of safety officers who are working on the front line of airport security are leaving," said Makoto Natsume, president and chief executive officer of Narita International Airport Corp. Of around 940 staff who worked as safety inspectors at Narita International Airport, Japan's main gateway to the world, as of April 2016, more than a quarter — or some 240 — have left the job, according to Narita International Airport Corp. Data from the transport ministry also show that while airport users rose by around 40 percent to 184 million in the five years through 2016, the number of airport workers has not risen, staying at around 40,000. Lightning Strike Causes Flight Delays at London Stansted Airport

From Fortune (05.27.2018)

A lightning strike temporarily knocked out the fueling system Sunday morning at London Stansted airport, the biggest base for Ryanair Holdings Plc, causing flight delays and cancellations. Engineers restored the system, though flights may still be delayed, diverted or canceled at the airport about 40 miles (64 kilometers) north of central London, according to a statement on Stansted's Twitter account.

Stansted is the third-busiest airport in London and a key hub for the discount airline Ryanair. The Irish carrier canceled a number of flights and is advising customers of their options, including a full refund or a free transfer to the next available flight, it said in an emailed statement. "We apologize to all customers affected by these disruptions, which are entirely beyond our control," Ryanair said in the statement, declining to quantify the cancellations. [Link](#)

## Chinese Gaining Influence over Foreign Airports

From Aviation International News (05.29.2018) Jennifer Meszaros

China's economic weight and influence continue to effect change in the air transport industry as a growing number of Chinese firms look beyond its borders for investment opportunities in foreign airports. The most recent wave of outbound investment appears some 30 miles outside Cambodia's tourist town of Siem Reap, where contractors have begun preparing a 1,700-acre site for a new international airport. Under an exclusive 55-year build, operate and transfer (BOT) concession, the greenfield project—spearheaded by China's state-run Yunnan Investment Holdings—will materialize in three phases. During the first and second phase, the company plans to invest \$500 million to build a 4E class airport, which will allow for short- to medium-haul aircraft. It plans to allocate another \$300 million for the third phase, with the possibility of expanding to 4F compliance, meaning the airport could accommodate long-haul aircraft. The new Siem Reap airport accounts for one of three major airport projects in planning stages. Earlier this year, the Cambodian government approved plans for a \$1.5 billion, 6,500-acre airport, some 18 miles south of the capital Phnom Penh. A joint venture between Cambodia's State Secretariat of Aviation (SSCA) and local conglomerate Overseas Cambodia Investment Corporation (OCIC), the project has drawn a reported \$1.1 billion commitment from the state-run China Development Bank. China has become a critical source of policy bank finance and sovereign wealth funds for the development and maintenance of a number of airports in Africa, Latin America, and the Caribbean. Across Europe, Chinese firms are more likely to partially or wholly own global hubs and second-tier airports. [Link](#)

## U.S. Department of Transportation Crisis Management Center Daily Report

### Commercial In-Flight Incidents

\*American 2738, B738

- o May 28, 2018 at 8:42 PM EDT
- o Enroute from Miami, FL (Miami International Airport) to Philadelphia, PA (Philadelphia International Airport)
- o Fuel problem

- o Returned to Miami, FL; landed without incident at 8:54 PM EDT

\*Southwest 1028, B737

- o May 28, 2018 at 7:36 PM EDT

- o Enroute from Cancún, Mexico (Cancún International Airport) to Denver, CO (Denver International Airport)

- o Fuel problem

- o Diverted to Albuquerque, NM (Albuquerque International Sunport); landed without incident

\*Delta 2169, B752

- o May 28, 2018 at 2:16 PM EDT

- o Enroute from Las Vegas, NV (McCarran International Airport) to Atlanta, GA (Hartsfield–Jackson Atlanta International Airport)

- o Throttle problem

- o Diverted to Dallas, TX (Dallas/Fort Worth International Airport); landed without incident at 2:34 PM EDT

\*American 991, B763

- o May 28, 2018 at 9:44 AM EDT

- o Enroute from Miami, FL (Miami International Airport) to Belo Horizonte, Brazil (Tancredo Neves International Airport)

- o Cracked windshield

- o Returned to Miami, FL; landed without incident at 10:52 AM EDT

\*American 70, B772

- o May 27, 2018 at 9:05 PM EDT

- o Enroute from Dallas, TX (Dallas/Fort Worth International Airport) to Frankfurt, Germany (Frankfurt Airport)

- o Passenger medical incident

- o Diverted to New York, NY (John F. Kennedy International Airport); landed without incident at 9:10 PM EDT

\*United 1728, B753

- o May 27, 2018 at 8:24 PM EDT

- o Enroute from Kahului, HI (Kahului Airport) to San Francisco, CA (San Francisco International Airport)

- o Generator problem

---

- o Diverted to Honolulu, HI (Honolulu International Airport); landed without incident at 9:23 PM EDT

#### Ground Incidents

\*Mobile, AL, Mobile Regional Airport

- o May 27, 2018 at 8:39 AM EDT
- o Jet blast from Jetstream International 5228, CRJ9, blew baggage cart into Delta 1355, MD88 scheduled to Atlanta, GA (Hartsfield–Jackson Atlanta International Airport)
- o Aircraft dented and angle-of-attack wind vane damaged
- o 0 fatalities; 1 injury (ground worker)

## توجه توجه

ما گروه «تهدیدگان» در یک انعام اعتراض آمیز در این لحظات بر مانیورهای فرودگاه مسلط شده ایم.

خواهران و برادران، پنج ماه گذشته و سیاه پاسداران همچنان جان و بیت المال مردم ایران را در غزه، لبنان و سوریه به تباهی میدهند.

تا کی؟!؟

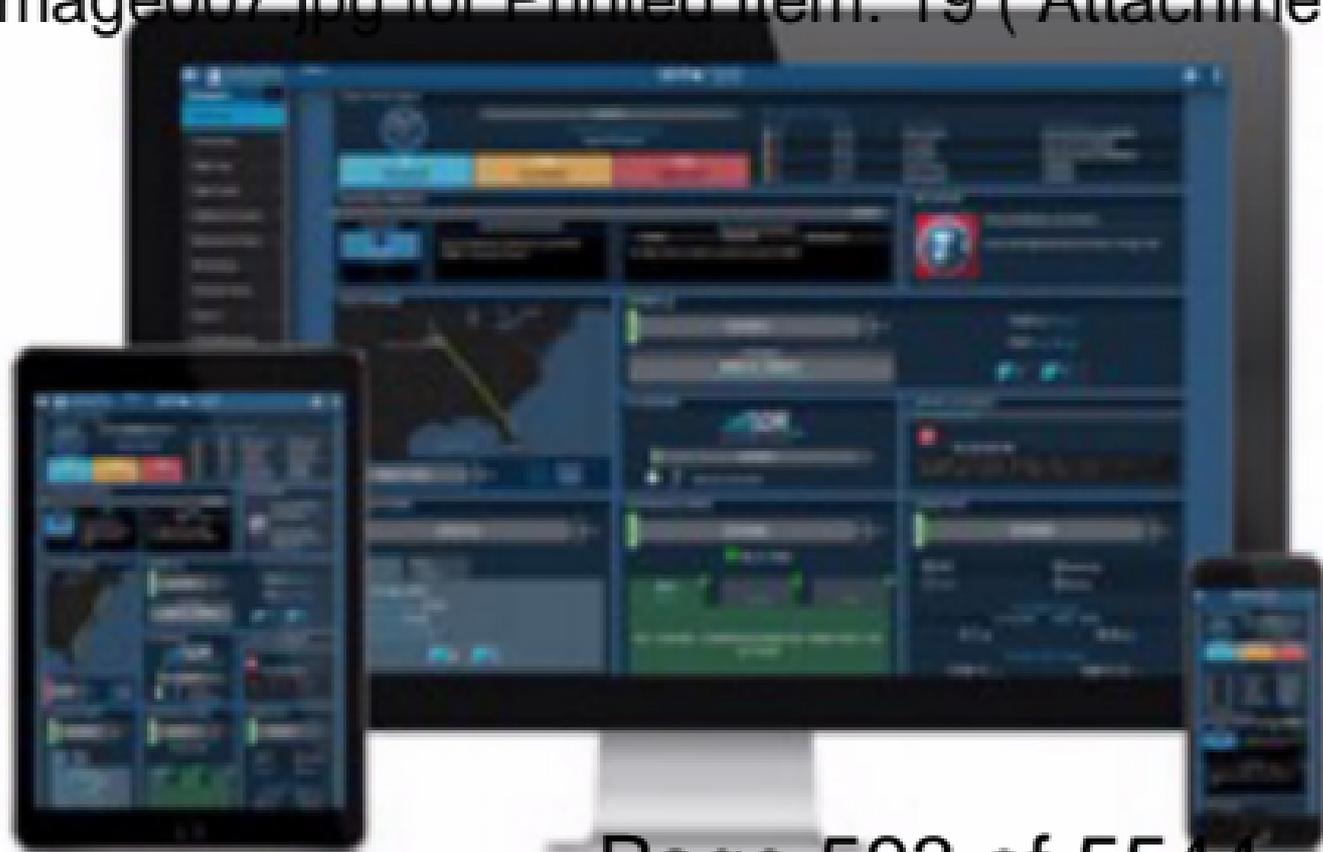

دیگر صدایمان را در گلو خفه نخواهند کرد! ما به مردم شریف کازرون می پیوندیم. این فقط آغاز اقدامات ماست! اگر با ما همراهید، عکس بگیرید و به اشتراک بگذارید.

HEADLINE	<b>05/21 Iran rejects Russia call; will stay in Syria</b>
SOURCE	<a href="http://www.newsweek.com/iran-goes-against-russia-says-its-staying-syria-us-military-threatens-new-937522">http://www.newsweek.com/iran-goes-against-russia-says-its-staying-syria-us-military-threatens-new-937522</a>
GIST	<p>Iran has rejected its ally Russia's call for all foreign troops to leave Syria, saying it is the U.S. and Turkey who are deployed there illegally and should withdraw their forces.</p> <p>In the wake of a 2011 uprising backed by the West, Turkey and Gulf Arab states, Syrian President Bashar al-Assad appealed to Russia and Iran to support his embattled armed forces against rebels and jihadi groups, which have mostly been defeated. Russian President Vladimir Putin congratulated Assad on his victories during a meeting Friday in Sochi and said that all foreign forces should eventually leave Syria, a remark that has opened a rare public rift between Moscow and Tehran.</p> <p>"No one can force Iran to do anything, Iran is an independent country that determines its own policies," Iranian Foreign Ministry spokesman Bahram Qasemi told reporters at a daily press conference Monday.</p> <p>"The presence of Iran is at the invitation of the Syrian government to fight against terrorism and defend the territorial integrity of Syria, and will last as long as the Syrian government wants Iran to help it," he added. "Those who have entered the country without the consent of the Syrian government must leave Syria."</p> <p>Damascus and Tehran have enjoyed close relations since the 1979 Islamic Revolution that overthrew the pro-West monarchy in Iran, and the Islamic Republic's Shiite Muslim leadership offered support to Assad against an uprising that increasingly featured prominent jihadist groups. The U.S., which had been covertly backing Syrian rebels since at least 2012, gathered a multinational coalition to enter the country two years later to battle the Islamic State militant group (ISIS). Russia entered in 2015, supporting Syrian troops and Iran-backed militias with heavy airpower as they fought insurgents and ISIS.</p> <p>With help from Russia and Iran, the Syrian government has reclaimed nearly every major city in the country and forced anti-government fighters to either reconcile or be displaced to shrinking pockets of control elsewhere in the country. These gains have increased the foothold of groups such as Iran's elite Revolutionary Guard Corps and Iran-backed Lebanese Shiite Muslim Hezbollah movement in Syria. Both groups have antagonistic relationships with Israel.</p> <p>Suspected Israeli airstrikes have long struck positions held by Iran and its supporters in Syria, but a recent rocket salvo targeting Israeli forces in the occupied Golan Heights was met with the largest Israeli attack on Syria since the two countries went to war in 1973. The U.S. quickly sided with Israel after the aerial assault, while Russia urged both sides to show restraint in an attempt to maintain relations with the two longtime foes and avoid a wider regional war.</p> <p>As Syrian, Iranian and various allied militias are increasingly targeted by Israeli and Western airstrikes, the Syrian and Iranian governments have called for the U.S. and Turkey to immediately withdraw their troops. President Donald Trump has also expressed support for leaving Syria, but he and his administration have also indicated a tougher, potentially explosive approach to taking on Iran.</p>

The flare-up between Israel and its Iranian and Syrian foes earlier this month took place shortly after Trump withdrew the U.S. from a 2015 nuclear deal that was still supported by Iran as well as fellow signatories China, France, Germany, Russia and the U.K. In his first major policy speech, Secretary of State Mike Pompeo justified Trump's decision by saying the agreement did not go far enough to curb Iran's support for militias across the Middle East, and vowed Monday to impose "the strongest sanctions in history" against Tehran.

The Pentagon has warned it may even go further. Pentagon spokesman Colonel Robert Manning told reporters Monday that it is "going to take all necessary steps to confront and address Iran's malign influence in the region," according to Reuters.

"We are assessing if we are going to double down on current actions or implement new actions," he added.

<b>GIST</b>	<p>Secretary of Homeland Security Kirstjen Nielsen has announced the release of Fiscal Year (FY) 2018 Notices of Funding Opportunity for eight Department of Homeland Security (DHS) preparedness grant programs totaling more than \$1.6 billion.</p> <p>The grant programs provide funding to state, local, tribal, and territorial governments, as well as transportation authorities, nonprofit organizations, and the private sector, to improve the nation's readiness in preventing, protecting against, responding to, recovering from and mitigating terrorist attacks, major disasters and other emergencies.</p> <p>The grants reflect the Department's focus on funding for programs that address our nation's immediate security needs and ensure public safety in our communities.</p> <p>"The administration remains committed to strengthening the security and resilience of our state and local communities," said Secretary Nielsen.</p> <p>The FY 2018 grant guidance will continue to focus on the nation's highest risk areas, including urban areas that face the most significant threats.</p> <p>For FY 2018, the Urban Area Security Initiative (UASI) will enhance regional preparedness and capabilities by funding 32 high-threat, high-density urban areas.</p> <p>This represents Congressional intent to limit FY 2018 UASI funding to those Urban Areas that represent up to 85 percent of the nationwide risk, as stated in the Explanatory Statement accompanying the Department of Homeland Security Appropriations Act, 2018 (Pub. L. No. 115-141).</p> <p>Consistent with previous grant guidance, dedicated funding is provided for law enforcement and terrorism prevention throughout the country to prepare for, prevent and respond to pre-operational activity and other crimes that are precursors or indicators of terrorist activity.</p> <p>Grant recipients are encouraged to use grant funding to maintain and sustain current critical core capabilities through investments in training and exercises, updates to current planning and procedures, and lifecycle replacement of equipment.</p> <p>New capabilities that are built using homeland security grant funding must be deployable if needed to support regional and national efforts.</p> <p>All capabilities being built or sustained must have a clear linkage to the core capabilities articulated in the</p>

National Preparedness Goal.

Preparedness Grant Program Allocations for Fiscal Year 2018:

Emergency Management Performance Grant (EMPG)—provides more than \$350 million to assist state, local, tribal, territorial governments in enhancing and sustaining all-hazards emergency management capabilities.

Homeland Security Grant Program (HSGP)—provides more than \$1 billion for states and urban areas to prevent, protect against, mitigate, respond to, and recover from acts of terrorism and other threats.

State Homeland Security Program (SHSP)

Provides \$402 million to support the implementation of risk-driven, capabilities-based State Homeland Security Strategies to address capability targets. States are required to dedicate 25 percent of SHSP funds to law enforcement terrorism prevention activities.

Urban Area Security Initiative (UASI)

Provides \$580 million to enhance regional preparedness and capabilities in 32 high-threat, high-density areas. States and Urban Areas are required to dedicate 25 percent of UASI funds to law enforcement terrorism prevention activities.

Operation Stonegarden (OPSG)

Provides \$85 million to enhance cooperation and coordination among local, tribal, territorial, state and federal law enforcement agencies to jointly enhance security along the United States land and water borders.

Since the enactment of the 9/11 Act, the Federal Emergency Management Agency (FEMA) has required states to ensure that at least 25 percent of the total funds awarded to them under SHSP and UASI are dedicated toward law enforcement terrorism prevention activities (LETPA).

The total LETPA allocation can be satisfied from SHSP, UASI or both.

Additionally, states must obligate at least 80 percent of the funds awarded under SHSP and UASI to local or tribal units of government within 45 days of receipt of the funds.

Tribal Homeland Security Grant Program (THSGP)—provides \$10 million to eligible tribal nations to implement preparedness initiatives to help strengthen the nation against risk associated with potential terrorist attacks and other hazards.

Nonprofit Security Grant Program (NSGP)

Provides \$60 million to support target hardening and other physical security enhancements for nonprofit organizations that are at high risk of a terrorist attack. This year, \$50 million is provided to nonprofits in UASI-designated urban areas, and \$10 million is provided to nonprofits located in any state or territory.

Intercity Passenger Rail – Amtrak (IPR) Program

Provides \$10 million to protect critical surface transportation infrastructure and the traveling public from acts of terrorism and increase the resilience of the Amtrak rail system.

Port Security Grant Program (PSGP)

Provides \$100 million to help protect critical port infrastructure from terrorism, enhance maritime domain awareness, improve port-wide maritime security risk management, and maintain or reestablish maritime security mitigation protocols that support port recovery and resiliency capabilities.

Transit Security Grant Program (TSGP)

Provides \$88 million to owners and operators of transit systems to protect critical surface transportation and the traveling public from acts of terrorism and to increase the resilience of transit infrastructure.

	<p>Intercity Bus Security Grant Program (IBSGP) Provides \$2 million to owners and operators of intercity bus systems to protect critical surface transportation infrastructure and the traveling public from acts of terrorism and to increase the resilience of transit infrastructure.</p> <p>All preparedness Notices of Funding Opportunities can be found at <a href="http://www.grants.gov">www.grants.gov</a>.</p>

<b>HEADLINE</b>	<b>05/22 NKorea media returns to angry tone</b>
<b>SOURCE</b>	<a href="https://apnews.com/bf7425a138aa47c5be4b17ee5f2029db/As-summit-looms,-North-Korean-media-return-to-angry-tone">https://apnews.com/bf7425a138aa47c5be4b17ee5f2029db/As-summit-looms,-North-Korean-media-return-to-angry-tone</a>
<b>GIST</b>	<p>TOKYO (AP) — North Korean media stepped up their rhetorical attacks on South Korea and joint military exercises with the United States, warning Tuesday that a budding detente could be in danger.</p>

State media unleashed three strongly worded commentaries slamming Seoul and Washington for the maneuvers and demanding Seoul take action against defectors it claimed were sending anti-North Korea propaganda leaflets across the border.

The official media had until recently taken a relatively subdued tone amid the North's diplomatic overtures to its neighbors, including a summit with South Korea's president last month and plans for leader Kim Jong Un to meet U.S. President Donald Trump in Singapore on June 12.

That first changed last week, when it lashed out against the maneuvers, cut high-level contacts with Seoul and threatened to "reconsider" the Trump summit.

One of the reports on Tuesday, which came as North Korea allowed an airplane full of foreign journalists into the country to cover the dismantling of its nuclear test site this week, accused Seoul of teaming up with Washington for military drills intended as a show of force and as a "war drill" against it.

It's not unusual for North Korea's official media to turn to hyperbole to make a point and the rhetorical barrage coincides with a visit to Washington by South Korean President Moon Jae-in. Strongly worded messages don't necessarily mean it is backing away from diplomatic negotiations.

But the North's abrupt sharpening of its words has raised concerns the Trump summit may prove to be a bumpy one — or that it could even be in jeopardy. Trump has suggested he is willing to walk away if Kim isn't willing to have a fruitful meeting and it appears both sides have agendas that remain far apart from each other.

There has been no indication that North Korea will cancel plans to dismantle the test site, an important gesture of goodwill. The North has also not suggested it will go back on its promise to halt underground testing and launches of intercontinental ballistic missiles.

But it did ban South Korean journalists from the trip to the nuclear site. And the language Tuesday offered a veiled threat that talks could be harmed.

"Dialogue and saber-rattling can never go together," said the commentary published in Minju Josen, one of the country's four main daily newspapers.

<b>HEADLINE</b>	<b>05/21 US, China agree to suspend tariffs</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/treasury-secretary-says-u-s-china-have-suspended-tariffs-1526908176">https://www.wsj.com/articles/treasury-secretary-says-u-s-china-have-suspended-tariffs-1526908176</a>
<b>GIST</b>	<p>The U.S. suspended its threat to put tariffs on \$150 billion in imports of Chinese goods while negotiations with China continue, but President Donald Trump could still impose the tariffs if a deal between the two countries doesn’t progress, Treasury Secretary Steven Mnuchin said.</p> <p>“Both parties have agreed to suspend the tariffs,” Mr. Mnuchin said Monday in an interview on CNBC, echoing remarks he gave over the weekend.</p> <p>If the negotiations aren’t successful, however, “the president can always put tariffs back on,” he said.</p> <p>Liu He, the Chinese vice premier who led Beijing’s delegation to Washington last week, has also said China is holding off on tariffs for now. “Both sides agreed to avert a trade war and to stop imposing tariffs on each other,” Mr. Liu said, according to the official Xinhua News Agency over the weekend.</p> <p>The U.S. negotiations were focused on proposed tariffs on \$150 billion of imported Chinese goods that followed an investigation from the U.S. Trade Representative on China’s trade practices. These tariffs, which have now been placed on hold, never formally went into effect. Other U.S. tariffs that are in effect, such as those on steel and aluminum, would need to be reversed through a formal process.</p> <p>Similarly, China had a prospective list of tariffs on \$50 billion in U.S. goods that hadn’t been formally imposed, but China also has existing tariffs on a number of U.S. exports that are formally in place.</p> <p>There is no specific timetable for the next steps in the negotiations, Lawrence Kudlow, the director of the National Economic Council, said on Monday.</p> <p>“Tariffs are suspended right now, that’s a good thing,” Mr. Kudlow said, also speaking on CNBC. “But you cannot remove tariffs as a negotiating tool or an enforcement tool from this process.”</p> <p>Trade officials say that any surge in U.S. agriculture exports to China depends on settling the trade dispute and on China substantially easing tariffs and other trade barriers on U.S. exports of pork and corn, among</p>

	<p>other products. Farm groups now are dealing with Chinese tariffs on sorghum and other products imposed after the U.S. levied tariffs on Chinese steel and aluminum.</p> <p>Mr. Ross of the Commerce Department will travel soon to China to discuss Beijing's commitment to buy more agriculture and energy exports from the U.S.</p>

<b>HEADLINE</b>	<b>05/21 Starbucks clarifies guest policy</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/starbucks-says-drug-use-sleeping-unacceptable-as-it-clarifies-guest-policy-1526918854">https://www.wsj.com/articles/starbucks-says-drug-use-sleeping-unacceptable-as-it-clarifies-guest-policy-1526918854</a>
<b>GIST</b>	<p>Starbucks Corp. tried to dig itself out of controversy Monday by attempting to clarify a policy toward nonpaying guests that generated an onslaught of weekend criticism.</p> <p>The Seattle-based retailer on Saturday had said it would allow all guests in its U.S. company-owned stores to use its cafes, including its restrooms, whether or not they make a purchase. That announcement, which attracted some support, also drew complaints that cafes wouldn't have enough seats for paying customers and would turn into homeless shelters and drug havens.</p> <p>On Monday, Starbucks revealed more about the policy, telling The Wall Street Journal that employees now have detailed instructions on what to do if someone is behaving in a disruptive manner, such as smoking, using drugs or alcohol, using restrooms improperly or sleeping.</p> <p>At issue, in essence, is whether Starbucks views itself as a business that caters to customers, or a quasi-public place generally welcome to all. The uproar, which follows the arrest last month of two black men who wanted to use a Starbucks bathroom in Philadelphia, demonstrates the unusual spot that the nation's biggest coffee chain holds in American culture.</p> <p>While many other restaurants and retailers also must manage the issue of lingering customers and nonpaying guests who come in to use restrooms, Starbucks has promoted itself as providing a "third place" between home and work where people can freely exchange ideas. It essentially pioneered the idea that is now generating controversy.</p> <p>Other restaurants and cafes have followed suit in recent years. McDonald's Corp. and Panera Bread now offer free Wi-Fi and encourage customers to linger. Panera didn't respond to a request for comment, and McDonald's—which is almost entirely franchised—said it lets its franchisees determine how to best serve their customers.</p> <p>"The whole Starbucks situation has opened up a can of worms. In most cases restaurants leave it up to the discretion of the individual restaurant and most are too busy to enforce a policy," said Joe Pawlak, managing principal at restaurant consulting firm Technomic Inc.</p> <p>Starbucks's piecemeal messaging on the issue and the outpouring of commentary that ensued shows the challenges firms can face in an era when every corporate move can be immediately telegraphed and then dissected by the public at large.</p>

<b>HEADLINE</b>	<b>05/21 UNESCO: Seattle 'City of Literature'</b>
<b>SOURCE</b>	<a href="https://crosscut.com/2018/05/seattle-city-literature-so-now-what">https://crosscut.com/2018/05/seattle-city-literature-so-now-what</a>
<b>GIST</b>	<p>Come mid-June, people walking through the streets of Kraków will chance upon something never before seen in the Polish city — a poem by a Seattle writer, projected onto the side of a building. "The sand travels / through the hour glass / &amp; Oya tells me prepare for change," it begins.</p>

Penned by Seattle Civic Poet Anastacia-Renee, its appearance is part of the cultural festivities surrounding the annual meeting of UNESCO's Creative Cities Network, an erudite worldwide alliance (sort of like the "Avengers," but for arts and culture) that Seattle has recently joined. Writ large, some 5,300 miles from home, the projected poem serves as an apt metaphor for the global connections Seattle hopes to forge with its new status as a City of Literature.

Since 2004, UNESCO has designated 180 Cities of Literature, Music, Film, Crafts and Folk Arts, Design, Gastronomy and Media Arts — which in total, constitute the Creative Cities Network. These cities are expected to cooperate across borders toward a common goal: making sure cultural industries and creativity are prioritized in civic development plans.

There are 28 Cities of Literature, including Dublin, Reykjavik, Barcelona, Prague and, as of late last fall, Seattle. (Iowa City is the only other City of Literature in the U.S.) On May 22, at the Seattle Central Library downtown, the public is invited to celebrate the prestigious designation.

It's been a long time coming.

The Seattle City of Literature story began in 2013 when author Ryan Boudinot formed a nonprofit to begin the arduous application process. No one could have predicted the plot twists that ensued. Boudinot went down in a viral literary fracas, his entire board resigned and the bid submitted in 2015 failed.

Regrouping happened.

A second bid was submitted. President Trump announced his intention to pull out of UNESCO membership (a chapter that is to be continued...). On Oct. 31, 2017, Seattle earned UNESCO's blessing. But the designation required mayoral sign-off, and at that moment — surprise! — Seattle's mayor was merely interim, serving a 71-day term.

"Yeah. It took a while to make it official," says Stesha Brandon, current Board President of Seattle City of Literature. (The nonprofit is entirely volunteer-run; Brandon's day job is Literature & Humanities Program Manager at Seattle Public Library.)

But now that our status is finally, firmly secured, inquiring minds want to know: What should a City of Literature look like?

Tree Swenson, who as director of Richard Hugo House writing center was heavily involved in the UNESCO bid process, has a vision. "If this plays out right, people will be coming from all over," she says. "They'll be looking for readings, visiting bookstores, making pilgrimages to our downtown library — they'll know about all the things we have to offer. Once that positive reinforcement loop gets going, it becomes a self-fulfilling prophecy." Looking farther out, she posits, "It could be that 20 years from now, Seattle will be known worldwide as a place for tech and literature."

Creating such a city will take a lot of work. But that's where the global superhero alliance comes in. Last month, Brandon attended the Cities of Literature conference in Iowa City, where her international colleagues shared plans and best practices.

She says some of the most exciting exchanges were about creative ways cities are giving literature a civic spotlight. "Many of the cities are working on engaging people with literature out in the community — on the sidewalks, at markets, on buildings — rather than expecting them to go to a reading or a bookstore," Brandon says. In Edinburgh, excerpts from a short story were projected on a downtown building every day for a month. In Ljubljana, Slovenia, a writer-in-the-park residency was accompanied by a series of free outdoor events. "These cities had such great ways to activate people's imaginations and show how story is essential to our lives."

But it's not all about inventing fun literary happenings. UNESCO has 17 Sustainable Development Goals

— such as quality education, reduced inequalities, peace and justice — which Cities of Literature are charged with working toward. At the Kraków conference, which Brandon will attend in June, part of the discussion will be about urban development and how to maintain sustainable housing for artists. “This is an issue that is definitely relevant to Seattle,” Brandon says. “How do we make sure the city is affordable for the writers who live here, and who help the city thrive?”

In addition to collaborating with global partners to answer this question, Brandon will be seeking local advice, reconvening Seattle literary organizations that helped with the bid to determine priorities and next steps. We know how strong our literary community already is, she says, but we want to know: “Is there something missing?”

Paul Constant, writer and co-founder of the Seattle Review of Books, thinks so. “We have such a huge literary scene here, and nobody within it knows what the other people are doing,” he says. Despite the wealth of local writers across sci-fi, comics, literary fiction, translation, YA and poetry, Constant says, “There’s no intermixing.” He hopes that eventually the City of Literature will have a person (“or half a person, depending on how fundraising goes”) whose job is to build community across genres. “Then writers could learn about each other’s disciplines, share ideas and get new ideas. That is really exciting to me.”

Some Seattle City of Literature initiatives are already underway. The nonprofit worked with the city to establish the Seattle Civic Poet position in 2015. Claudia Castro Luna was first to hold the position, from 2015-2017 (she’s now Washington State Poet Laureate). “We are a world city ourselves,” she says, reflecting on the global implications of UNESCO status. “There are so many languages spoken here — and readings in those languages — we have this richness and interest in literature from across the world.”

Looking outward, Luna nods to experiences like the Seattle City of Literature cultural exchange wherein her poems were published in New Zealand literary journal Catalyst. “It was unbelievable to have my words and concerns have a stage elsewhere!” she says. “It made me feel like a world citizen.”

That global-citizen feeling is precisely what UNESCO hopes to engender with the Cities of Literature — to spin a web around the world that strengthens cross-cultural connections. Brandon says the Seattle organization’s next steps include diversifying the board, fundraising and setting priorities with guidance from the literary community.

<b>HEADLINE</b>	<b>05/21 Pierce Co. eyes workers credit tax</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/995408/pierce-county-seattle-employee-credit/">http://mynorthwest.com/995408/pierce-county-seattle-employee-credit/</a>
<b>GIST</b>	<p>Just a week after the Seattle City Council passed a head tax, charging big businesses \$275 per employee, Pierce County is doing the opposite.</p> <p>County officials will announce on Tuesday a plan to create new, family-wage jobs with a \$275 employee tax credit. How the credit will actually work has yet to be decided. Each city will determine its application of the credit.</p> <p>The idea comes on the heels of other outreach from Pierce County organizations pointing out that the region does not have a head tax. They even made a video about it.</p> <p>Among county officials on hand for the Tuesday afternoon announcement will be Bruce Dammeier, Pierce County executive; Victoria Woodards, City of Tacoma mayor; Mark Martinez, Pierce County Building &amp; Construction Trades Council executive secretary; Bruce Kendall, Economic Development Board for Tacoma-Pierce County president &amp; CEO; and Mike Courts, City of Dupont mayor.</p> <p>Former Tacoma Mayor and current Seattle Chamber of Commerce CEO Marilyn Strickland voiced her opposition to Seattle’s head tax before and after the vote.</p>

Meanwhile, several Seattle businesses, including Amazon, are preparing an initiative that would repeal the head tax. They would need just under 22,000 signatures to qualify for the ballot.

Seattle Mayor Jenny Durkan signed the law in effect on May 16; it'll go into effect on Jan. 1, 2019.

<b>HEADLINE</b>	<b>05/21 Pilot-hungry airlines raid flight schools</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/wonk/wp/2018/05/21/pilot-hungry-airlines-are-raiding-flight-schools-creating-a-shortage-of-instructors-to-train-the-next-generation/?utm_term=.f473dbf3a977">https://www.washingtonpost.com/news/wonk/wp/2018/05/21/pilot-hungry-airlines-are-raiding-flight-schools-creating-a-shortage-of-instructors-to-train-the-next-generation/?utm_term=.f473dbf3a977</a>
<b>GIST</b>	<p>Airlines' insatiable demand for pilots threatens to sabotage flight schools' ability to train new ones. Carriers are raising wages and hoarding every available pilot — including the instructors schools rely on to teach incoming students.</p> <p>The very pilot pipeline that is supposed to meet decades of projected labor shortfalls is being squeezed. According to a report from the Government Accountability Office (GAO), some schools have been forced to scale back operations or turn down qualified students because they do not have enough instructors.</p> <p>Michael Farley has been teaching at Bridgewater State University in Massachusetts for 18 years. Applications for his program are up, but the aviation department chair is so short on instructors that he has had to cap the number of students in his program.</p> <p>“In my tenure, this is unprecedented,” Farley said, reflecting on the speed with which airlines were hiring recent graduates.</p> <p>The problem is rooted in how collegiate aviation is structured. Classroom courses such as meteorology and aviation law are taught by academic faculty, but flight instructors are usually experienced students or graduates looking to gain flight hours before heading off to the commercial big leagues.</p> <p>Details vary between vocational, two-year and four-year schools, but an aspiring pilot at a typical accredited institution needs about 250 to 300 hours to become a certified instructor. Those 250 hours used to be all you needed to join an airline as a co-pilot. In some countries, it still is.</p> <p>Since 2013, most students have had to fly between 1,000 and 1,500 hours to qualify for work at a passenger airline. Even before that, the GAO report found, airlines expected as much as 2,000 hours of experience from entry-level employees, depending on the job market.</p> <p>So, where do young pilots get the other 1,000 hours or so? Some do aerial photography or fly banners, but the overwhelming majority work at their aviation college or an affiliated institution as a flight instructor. It is built into their career path.</p> <p>In an ideal world, a pilot works first as an instructor at her flight school, then as a co-pilot and pilot at a regional airline (such as Cape Air or SkyWest Airlines) and finally as a co-pilot and pilot at a major airline (such as Southwest Airlines or United Airlines).</p> <p>Demand for pilots swings hard. In 2009, as American families and businesses slashed their air-travel budgets amid the Great Recession and furloughs swept the industry, major airlines hired just 30 pilots, according to pilot-advisory service FAPA.aero. That number soared to 5,000 in 2017. In 2018, it will be even higher.</p> <p>When the market was slow, students stuck around, and instructors were cheap and abundant. But when hiring took off, they vanished into jobs flying passenger or cargo jets.</p> <p>When employees complain about worker shortages, the obvious reply is employees would not be so hard</p>

to find if businesses just offered more money.

The aviation job market is complicated by strict federal regulations and what FAPA's president, Louis Smith, called the "poach chain."

Flight-school instructors are almost all flight-school students, which means they came into aviation because they wanted to sit in the cockpit of a mammoth Boeing or Airbus with "Delta" or "American" stamped on the side, not babysit their peers in a single-engine Cessna.

From Day 1, they are focused on getting to a major airline and building seniority, the all-important number that rules everything from route assignments and pay scales to standby tickets. Those major airlines poach from the regional airlines, and regional airlines poach from flight schools.

Life is hard at the bottom of the poach chain, where flight schools compete for instructors. U.S. Aviation Academy, a large training outfit that partners with Tarrant County College in Texas, offers new instructors a \$2,500 bonus and between \$27 and \$35 an hour — a wage it has been forced to raise about 15 percent in recent months.

Their pay is competitive with regional airlines, where new pilots earn an estimated \$50,000 to \$60,000 a year. But when a 21-year-old instructor gets poached, the schools are not competing with the regional carrier. They are competing with the promise of a 44-year career in a high-profile, lionized position that can pay north of \$200,000 a year and offers excellent benefits.

As flight schools pay instructors more, they are raising their prices to compensate. It is a fraught decision in an industry that worried it is charging too much to attract the quantity and diversity of students that airlines need.

Federal student aid, while available at many aviation schools, typically does not stretch to cover flight-school costs, which are boosted by investments in aircraft, fuel and facilities — not to mention the instructors. The GAO found that most pilot programs charge more than \$50,000 for flight training alone.

Not all students have access to the wealth or credit needed to fill the gap between student aid and the flight-school bill, even if they can be reasonably sure — in this job market, at least — they will earn it back. Schools told the GAO that, after instructor attrition, their biggest obstacle to training enough pilots was their own high price tag.

Glass's first choice of flight school — Embry-Riddle Aeronautical University, where he went to aviation camp and learned the ropes from student instructors — costs \$48,000 a year. That does not include the cumulative \$40,000 to \$60,000 the school expects students to spend on flight training while they are there.

"If you don't have the financial backing, it's difficult," Glass said.

<b>HEADLINE</b>	<b>05/21 Russia floating nuke power plant in Arctic</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-russia-nuclear-greens/russias-first-sea-borne-nuclear-power-plant-arrives-in-arctic-idUSKCN1M1A9">https://www.reuters.com/article/us-russia-nuclear-greens/russias-first-sea-borne-nuclear-power-plant-arrives-in-arctic-idUSKCN1M1A9</a>
<b>GIST</b>	<p>MOSCOW (Reuters) - Russia's first-floating nuclear power plant arrived in the Arctic port of Murmansk over the weekend in preparation for its maiden mission, providing electricity to an isolated Russian town across the Bering Strait from Alaska.</p> <p>The state company behind the plant, called the "Akademik Lomonosov", says it could pioneer a new power source for remote regions of the planet, but green campaigners have expressed concern about the risk of nuclear accidents. Greenpeace has called it the "nuclear Titanic".</p>

	<p>Russian state nuclear company Rosatom, which developed the floating power plant, said that it docked the unit in Murmansk on Saturday where it was towed from St Petersburg, the city where it was built.</p> <p>In Murmansk it will take on board a supply of nuclear fuel. It will then will be towed to the town of Pevek in the Far Eastern region of Chukotka, separated from the U.S. state of Alaska by the 86-km (53 miles) wide Bering Strait. It will start operations there next year.</p> <p>The plant will replace a coal-fired power plant and an aging nuclear power plant supplying more than 50,000 people with electricity in Chukotka, Rosatom said.</p> <p>Rosatom has long planned to launch the sea-borne power units, which, with their mobile, small capacity plants, are best suited to remote regions. It says they can help the environment by reducing greenhouse gas emissions blamed for global warming.</p> <p>The small plants were designed to make it possible to supply electricity to hard-to-reach areas of Russia. They can operate non-stop without the need for refueling for 3-5 years.</p>

<b>HEADLINE</b>	<b>05/21 Where Americans are going hungry</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/where-americans-are-going-hungry/">https://www.cbsnews.com/news/where-americans-are-going-hungry/</a>
<b>GIST</b>	<p>Food insecurity -- or not having enough food because of a lack of money or other resources -- is a way of life for almost 1 in 8 Americans. And that rate remains higher than before the recession, when the numbers were slightly more than 1 in 10, according to data from the U.S. Department of Agriculture.</p> <p>Hunger has never truly left America since President Lyndon Johnson's "war on poverty" in the 1960s, which led to the development of government programs such as food stamps. While the kind of abject hunger that was shockingly captured 50 years ago by the CBS Reports documentary "Hunger in America" may be largely a thing of the past, food insecurity remains widespread today, touching every county of every state in the nation, according to the nonprofit Feeding America.</p> <p>Residents of some counties are suffering more than others, according to Feeding America's research. Rural counties are among the worst-hit, comprising 79 percent of the counties with the highest food insecurity rates, even though they make up only 63 percent of all U.S. counties.</p> <p>The economy might be improving, but the benefits aren't always reaching these Americans, said Erin McDonald, vice president of Feeding America's Center for Applied Research in Action.</p> <p>"The overall numbers for unemployment are lower and there are jobs ... but people are making choices around paying for utilities, rent and other costs," McDonald said. "Food is a basic need where maybe they are going without or cutting back."</p> <p>Food insecurity is defined as not having enough food because of a lack of money or other resources. It's a way of life today for almost 1 in 8 Americans, according to U.S. Department of Agriculture data, up from more than 1 in 10 before the recession.</p> <p>Their report comes as lawmakers in Congress consider a farm bill that would add work requirements to the federal food stamp program. If adults who are able-bodied and don't have dependents aren't working at least 20 hours a week, they wouldn't be able to receive food stamps. (A GOP faction's revolt during a House floor vote May 18 defeated the farm bill by a count of 198 for and 213 against, but the legislation is widely expected to be reconsidered before a September government funding deadline.)</p> <p>Anti-hunger activists warn that adding the more stringent requirements may worsen hunger in America. And already, according to Feeding America, many of those food insecure households don't qualify for food stamps.</p>

The issue might not be how to cut back the Supplemental Nutrition Assistance Program (SNAP), the formal name for food stamps, but how to expand it, said Craig Gundersen, lead researcher on the report and a professor at the University of Illinois.

"SNAP is this amazingly successful program, so instead of trying to find ways to cut SNAP or change the way it's structured, it would be great if we could talk about how to expand who is eligible" and how to boost benefits, he said.

He added, "Central to this is we know the households who are suffering from food insecurity have higher health care costs."

In other words, helping families avoid food insecurity and hunger could lower long-term health problems, a relatively inexpensive way to stem chronic health conditions that are linked with a lack of food. Food insecure households spend about 45 percent more on medical care a year than people in food-secure homes, according to the Center on Budget and Policy Priorities, a left-leaning think tank.

Because the food stamp program has income and asset thresholds, some families that are struggling to put food on the table don't qualify for the program. Almost half of those 41 million Americans who are food insecure don't qualify for food stamps, Feeding America found.

"Food insecurity is often times invisible," Gundersen said. "If you want to talk to one group that sees it, it's teachers at the elementary school level. They see children coming in without having breakfast -- one group on the front lines that just goes without food."

Food insecurity doesn't only impact health, but children's ability to learn and thrive in school, McDonald said. And food insecurity is more commonplace with children than in adults, with one in six children suffering from lack of reliable food.

A 2017 study in the journal *Child Development* found that children who suffered from food insecurity were predicted to have lower cognitive and social-emotional skills in kindergarten. The researchers recommended boosting the availability of food to children under 2 years old to give poor children a better chance at succeeding in school.

Some of those families rely on food pantries to help stock their shelves, but the network of local and state charities can't provide enough meals to feed all the food insecure people in the U.S., said McDonald.

"SNAP provides 12 meals for every one meal we serve," said McDonald. "While every food bank and agency will step up, there are finite resources they have to meet that gap."

Even so, food stamps aren't designed to pay for a household's entire grocery budget. In the program's early days, food stamps were limited to one-third of a household's grocery spending. Today, a majority of recipients tap their own bank account as well as their food stamp benefits to buy groceries.

Food stamp benefits may not be as generous as some believe. The average benefit is about \$1.40 per person per meal, according to the CBPP.

"If people lose their food benefits or if they are reduced, it's clear that food insecurity would go up," said Stacy Dean, "That's why so many of us are concerned about the proposal" to introduce work requirements.

Below are the 10 states where food insecurity is the highest, according to data from Feeding America. The percentages of residents who are classified as food insecure are in parentheses.

1. Mississippi (20.1%)
2. Arkansas (17.2%)
3. Louisiana (16.7%)

	<p>4. Alabama (16.5%)  5. Oklahoma (16.2%)  6. New Mexico (15.8%)  7. Kentucky (15.5%)  8. North Carolina (15.4%)  9. Texas (15.4%)  10. Georgia (15.1%)</p>

<b>HEADLINE</b>	<b>05/21 New Zealand's homelessness crisis</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-newzealand-economy-budget/left-behind-why-boomtown-new-zealand-has-a-homelessness-crisis-idUSKCN1I0UG">https://www.reuters.com/article/us-newzealand-economy-budget/left-behind-why-boomtown-new-zealand-has-a-homelessness-crisis-idUSKCN1I0UG</a>
<b>GIST</b>	<p>WELLINGTON (Reuters) - New Zealand's dairy-fuelled economy has for several years been the envy of the rich world, yet despite the rise in prosperity tens of thousands of residents are sleeping in cars, shop entrances and alleyways.</p> <p>The emerging crisis has created a milestone that New Zealanders won't be proud of: the highest homelessness rate among the 35 high-income OECD countries.</p> <p>It's a curious problem afflicting boom towns where some residents get pushed onto the streets as they can no longer afford the rocketing rents in a flourishing economy - let alone purchase a house as the price of property has soared.</p> <p>"I have no assets at the moment," said 64-year-old Victor Young, who spoke to Reuters at a soup kitchen in New Zealand's capital, Wellington.</p> <p>"It's not a kind country, it's not an easy country. I slept in my car 20 days last year. I worked 30 hours a week."</p> <p>That sentiment is something the country's popular Prime Minister Jacinda Ardern would like to reverse. Last Thursday, across town from the Sisters of Compassion Soup Kitchen, her Labour-led government unveiled its first budget with an ambitious plan to build social infrastructure.</p> <p>The government has allocated NZ\$3.8 billion (\$2.62 billion) of new capital spending over a five-year period. This includes an extra NZ\$634 million for housing, on top of the NZ\$2.1 billion previously announced to fund Kiwibuild, a government building program to increase affordable housing supply.</p> <p>Much is expected of the charismatic 37-year-old prime minister, after her party put fixing the housing crisis at the heart of its successful election campaign in September. Arden's challenge is to not allow her spending plan blow a hole in the strong finances her government inherited.</p> <p>But experts say the government's first budget underwhelms on the radical reforms the wider public wanted.</p> <p>"They're a long way down a hole that was created by somebody else and they haven't really got a great or easy solution," said John Tookey, professor of construction management at Auckland University of Technology.</p> <p>He said the government's much-vaunted Kiwibuild could come unstuck because there weren't enough skilled workers to deliver on its ambitious target to build 100,000 homes in the next decade.</p> <p>Even the budget's extra social housing spend was unlikely to alleviate the signs of families living in cars, caravans and garages that Salvation Army policy analyst Alan Johnson sees around his South Auckland neighborhood.</p>

“The Minister of Finance suggested it was transformational and I think it’s a long way short of that,” Johnson said.

New Zealand is on a six-year economic winning streak, underpinned by a strong dairy sector, booming tourism and migration.

That golden run is expected to continue, with Treasury expecting economic growth to hit a peak of 3.8 percent in 2019 - well above the 2 percent growth the International Monetary Fund forecasts developed economies to achieve.

But infrastructure in New Zealand has not kept pace.

A housing crunch, traffic jams, and hospital staff shortages led to an abrupt shift in public sentiment away from the seemingly unbeatable center-right National Party at the 2017 election.

Some, of course, enjoyed the fruits of the boom, particularly in the past decade. Others were squeezed.

Maoris, the indigenous people of New Zealand, account for a third of the homeless though they make up only 15 percent of the population.

A Yale study of OECD data found that New Zealand had the highest rate of homelessness among member nations, with almost 1 percent of its population living without a permanent shelter in 2015.

The situation has likely deteriorated since the study, analysts said, with the number of people eligible for government housing support doubling since 2015. And wage growth has significantly lagged house price growth of over 60 percent in the past decade, highlighting how even those with a roof over their heads are getting squeezed.

Homelessness is at its worst in New Zealand’s most populated city, Auckland, which has also experienced the most severe housing crunch, with prices jumping 90 percent in the past decade, according to property researcher Quotable Value.

<b>HEADLINE</b>	<b>05/21 Paraguay opens embassy in Jerusalem</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/guatemala-opens-embassy-jerusalem-us-guatemala-55320007?cid=clicksource_76_4_article%20roll_articleroll_hed">https://abcnews.go.com/International/wireStory/guatemala-opens-embassy-jerusalem-us-guatemala-55320007?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Paraguay opened its new embassy in Jerusalem on Monday, following in the footsteps of the United States and Guatemala.</p> <p>President Horacio Cartes dedicated the embassy, making Paraguay the third country to transfer its diplomatic mission in Israel from Tel Aviv to Jerusalem.</p> <p>Romania, the Czech Republic and Honduras have said they are also considering doing the same.</p> <p>President Donald Trump's announcement on Jerusalem in December was welcomed by the Israeli government. But it infuriated the Palestinians, who claim Israeli-annexed east Jerusalem as their future capital.</p> <p>The U.S. Embassy move added fuel to the weekly Palestinian protests in Gaza demanding the right of return to Israel and the lifting of a decade-old naval blockade. The protests culminated last Monday, when Israeli forces killed nearly 60 Palestinians in clashes along the border.</p> <p>But the U.S. Embassy move has also sparked others to rally in support of Israel.</p>

	<p>The entrance to Jerusalem was lined with the flags of Paraguay on Wednesday and Israel's Prime Minister Benjamin Netanyahu said at the ceremony that he was there to "salute" a great friend.</p> <p>The opening of the embassy was "a great day for Israel, a great day for Paraguay, a great day for our friendship," Netanyahu said.</p>

<b>HEADLINE</b>	<b>05/21 Foster care crisis in opioid epidemic</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/local/opioid-epidemic-is-causing-foster-care-crisis/754188461">https://www.kiro7.com/news/local/opioid-epidemic-is-causing-foster-care-crisis/754188461</a>
<b>GIST</b>	<p>Being a foster parent to any child takes dedication, patience, and time, but children coming out of homes where there is substance abuse often have a whole other set of challenges, including behavioral issues.</p> <p>There aren't enough foster parents in general and certainly not enough for kids who need specialized care.</p> <p>Cheryl Butler has raised four daughters who now have sons and daughters of their own. So she decided to raise a few more, and a few more has become half a dozen.</p> <p>"They've just become part of the family, they are the family, everybody is treated the same," Butler said.</p> <p>Butler has opened her home to high risk teen girls as a foster parent for four years.</p> <p>"You have to deal with that anger when they come, but they're still just kids," she said.</p> <p>Butler said they're kids who have often left behind lives they'd rather not return to.</p> <p>"I don't know of a case that does not involve drugs, I can't think of one. They're all some drugs in the cases and that just leads to neglect, very severe neglect," Butler said.</p> <p>Butler's experience is not the exception, it's the standard.</p> <p>"We are experiencing a crisis in the foster care system right now. We have too few homes for the number of children who need care. Part of that is attributed to the opioid epidemic," explained Terry Pottmeyer, the CEO of Friends of Youth.</p> <p>The non-profit provides transitional housing, youth shelters, drop-in centers and foster homes.</p> <p>"Our capacity is 30 to 35 children in any given year however we are seeing nationally that there's an increase in the number of children in need of care," Pottmeyer said.</p> <p>Since 2012 Friends of Youth has seen a 20 percent increase in the number of kids coming into their care.</p> <p>According to the Washington state Department of Social and Health Services, since 2012 there's been a 26 percent jump in the number of kids who are removed from home due to parental drug abuse.</p>

	<p>The number of foster homes is up slightly year over year from 4,656 in 2015 to 5,032 in 2018 but that increase is nominal compared to the need.</p> <p>“Increasingly when there isn’t a foster care placement that is right for them the state is struggling to find what things to do. I know that children have unfortunately been staying in hotel rooms with social workers from the state. Increasingly we have more children being placed outside the state of Washington,” said Pottmeyer.</p>

<b>HEADLINE</b>	<b>05/21 Seattle searches for transportation director</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/transportation/seattle-begins-search-for-new-transportation-director/">https://www.seattletimes.com/seattle-news/transportation/seattle-begins-search-for-new-transportation-director/</a>
<b>GIST</b>	<p>The city of Seattle has launched a national search to find a permanent director for the Seattle Department of Transportation, Mayor Jenny Durkan announced Monday.</p> <p>Goran Sparrman, who has been running SDOT on an interim basis, will continue in his role through the end of August, Durkan said.</p> <p>Sparrman took over from former SDOT Director Scott Kubly, who left in December in a “mutual decision,” soon after Durkan took office. Sparrman had also been interim director in 2014 and was deputy director of the agency before that.</p> <p>Durkan’s office set up a public survey to gather input on what people would like to see in the agency’s next director. The city will hire a national search firm next month and then launch a committee to review applicants and recommend finalists, Durkan’s office said.</p> <p>Sparrman also announced a reshuffling of the agency’s internal structure, with new roles for several senior leaders.</p> <p>“The interim director believes the former structure placed SDOT executives in leadership roles that weren’t complementary to their skills and talents,” spokeswoman Mafara Hobson said, “while the new structure better aligns senior leadership to more appropriate functions and organizational teams.”</p> <p>The mayor praised Sparrman for working “with the utmost accountability and transparency.”</p> <p>Since Sparrman took over, the agency has been trying to keep up with ambitious projects and overly optimistic promises from the previous administration. Durkan halted work on the First Avenue streetcar project after The Seattle Times reported that SDOT may have undersold the costs of running the new system by as much as 50 percent. Durkan will likely make a decision on the project’s future next month.</p> <p>And the 2015 Move Seattle transportation levy, the largest in the city’s history, won’t be able to deliver all the projects that were promised, SDOT recently said, as project costs are more than anticipated.</p> <p>“With a number of significant projects in the pipeline our next SDOT leader must be ready to deliver on investments and protect taxpayer dollars,” Durkan said in a prepared statement. “Our residents and businesses expect our officials to make progress and deliver results, and this administration will continue to be accountable to the people we serve.”</p>

<b>GIST</b>	<p>PAHOA, Hawaii (Reuters) - Molten lava from the erupting Kilauea Volcano on Hawaii’s Big Island crept onto a geothermal power plant site on Monday, as workers rushed to shut down the facility to prevent the uncontrollable release of toxic gases.</p> <p>Crews worked into the night to cap the 11th and final well at the Puna Geothermal Venture (PGV) plant, which provides about 25 percent of the Big Island’s power, as lava from an active fissure flowed 200 to 300 yards from the nearest well pad, county and federal officials said.</p>

	<p>“County, state, and federal partners have been collaborating closely to monitor the situation and work with PGV to ensure the safety of the surrounding communities,” the county said.</p> <p>The race at the site marked the latest challenge facing authorities as they cope with what geologists rank as one of the biggest upheavals in a century from one of the world’s most active volcanoes.</p> <p>The plant has been closed since shortly after lava began erupting on May 3 through newly opened fissures in the ground running through neighborhoods and roads on the far eastern flank of Kilauea.</p> <p>Within a week, some 60,000 gallons (227,124 liters) of the highly flammable chemical pentane, which was stored at the plant, were moved from harm’s way. The state said last week it was pumping cold water into the wells and would cap them with iron plugs.</p> <p>The plant’s wells run 6,000 to 8,000 feet (1,829-2,438 meters) underground to tap into extremely hot water and steam used to run turbines and produce electricity.</p>

<b>HEADLINE</b>	<b>05/21 US threatens ‘strongest’ sanctions on Iran</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-iran-nuclear-usa/pompeo-says-u-s-to-impose-tough-sanctions-on-iran-idUSKCN1IM1DE">https://www.reuters.com/article/us-iran-nuclear-usa/pompeo-says-u-s-to-impose-tough-sanctions-on-iran-idUSKCN1IM1DE</a>
<b>GIST</b>	<p>WASHINGTON/ANKARA (Reuters) - The United States on Monday demanded Iran make sweeping changes — from dropping its nuclear program to pulling out of the Syrian civil war — or face severe economic sanctions as the Trump administration hardened its approach to Tehran.</p> <p>Iran dismissed Washington’s ultimatum and one senior Iranian official said it showed the United States is seeking “regime change” in Iran.</p> <p>Weeks after President Donald Trump pulled out of an international nuclear deal with Iran, his administration threatened to impose “the strongest sanctions in history,” and vowed to “crush” Iranian operatives abroad, setting Washington and Tehran further on a course of confrontation.</p> <p>U.S. Secretary of State Mike Pompeo demanded sweeping changes that would force Iran effectively to reverse the recent spread of its military and political influence through the Middle East to the shores of the Mediterranean Sea.</p> <p>The speech added to the tension between the two countries, which grew notably when Trump this month withdrew from the 2015 international agreement aimed at preventing Tehran from obtaining a nuclear weapon.</p> <p>If Washington sees tangible shifts in Iran’s policies, it is prepared to lift sanctions, Pompeo said.</p> <p>“These will be the strongest sanctions in history by the time we are done,” he added.</p> <p>The European Union largely dismissed Pompeo’s speech and said it remained committed to the full implementation of the nuclear deal.</p>

<b>HEADLINE</b>	<b>05/21 US reinforces East Asia missile defense</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-northkorea-missiles-milius-japan/u-s-reinforces-east-asia-ballistic-missile-defense-as-trump-kim-summit-nears-idUSKCN1IN009">https://www.reuters.com/article/us-northkorea-missiles-milius-japan/u-s-reinforces-east-asia-ballistic-missile-defense-as-trump-kim-summit-nears-idUSKCN1IN009</a>
<b>GIST</b>	YOKOSUKA, Japan (Reuters) - The USS Milius, one of the U.S. Navy’s most advanced guided missile

destroyers, arrived in Japan on Tuesday to reinforce defenses against any ballistic missile attacks by North Korea, or anyone else in East Asia.

The warship's arrival at Yokosuka Naval Base comes three weeks before an unprecedented meeting is supposed to take place in Singapore between U.S. President Donald Trump and North Korean leader Kim Jong Un.

The show of force is a reminder of the military pressure that can be brought to bear on North Korea as the United States seeks to press it to abandon its nuclear weapons and its ballistic missile program.

The Milius will "support security and stability in the Indo-Pacific region by bringing enhanced missile defense capabilities as a ballistic missile defense platform", the U.S. Navy said in a statement.

The Milius's dockside welcome in Yokosuka, which is the headquarters of the U.S. Seventh Fleet, comes after doubts emerged last week over whether the Trump-Kim meeting will go ahead.

The deployment of the Milius to Japan was delayed by almost a year so it could undergo upgrades to its Aegis air defense system to enhance its ability to detect and target missiles.

Armed with missiles designed to shoot down warheads in space, the Milius will be part of a naval destroyer force that would be the first U.S. line of defense against any long-range ballistic missiles fired at it by North Korea.

It joins two other ships in the Seventh Fleet with similar upgrades and brings the fleet's destroyer unit back to full strength after two other U.S. warships in the region were crippled in collisions with commercial ships last year.
