<b>GIST</b>	<p>Another atmospheric river is headed for Western Washington, bringing warmer temperatures and heavy rain and threatening to raise some rivers close to flood level.</p> <p>The soggy system is expected to smack the region Sunday afternoon, with the brunt of the moisture initially headed north to Vancouver Island. By Monday, though, the fire hose could swing south and drench communities north of Seattle, according to the National Weather Service.</p> <p>Even in Seattle, a half-inch or more of rain is expected by early Tuesday.</p> <p>On the Olympic Peninsula, between 1 and 4 inches of precipitation is likely. Parts of Skagit and Whatcom counties could get 1.4 to 3.6 inches.</p> <p>“It won’t be one, prolonged rain event,” said National Weather Service meteorologist Art Gaebel. “It’ll be: Steady rain. Showers. And steady rain again.”</p>

	<p>And that's on top of a series of systems that already has left the lowlands soaked and the mountains snowbound.</p> <p>Since Jan. 23, the Mount Baker ski area had received 73 inches of snow as of Saturday afternoon, Gaebel said. During the same period, Snoqualmie Pass got 43 inches and Stevens Pass got 37 inches.</p> <p>Sunday will be mostly showery before the storm rolls in, Gaebel said.</p> <p>Depending on where the heaviest rain falls, some rivers and streams could be pushed close to flood level, particularly the Skokomish River in Mason County, the weather service warned Saturday. And the added moisture will boost the risk of landslides.</p> <p>Wind gusts up to 40 mph flared across the Puget Sound region on Saturday, triggering small power outages in Seattle, Bellevue, Mercer Island, Bainbridge Island, Vashon Island and elsewhere. In Tacoma, the winds sent a large tree toppling onto a house near Wright Park. Residents were home, but no one was hurt.</p> <p>Gusts up to 50 mph were recorded in Mason County.</p> <p>By Tuesday the heavy rain will abate, to be replaced by the normal status quo of showers and more showers.</p> <p>"For now," said the NWS forecast discussion for Saturday afternoon, "there is at least a chance of rain each day (next week) although precipitation totals look light."</p>

<b>HEADLINE</b>	<b>01/27 Italy: 800 migrants rescued from sea</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/italy-800-migrants-rescued-bodies-found-mediterranean-52652417?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/italy-800-migrants-rescued-bodies-found-mediterranean-52652417?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>The Italian coast guard says it has helped coordinate the rescue of some 800 migrants on the Mediterranean Sea.</p> <p>The coast guard said they were spotted in five boats, including two rubber dinghies, on Saturday.</p> <p>It said seven children who had water in their lungs were taken by helicopter to the nearest hospital that could treat them, located in Sfax, Tunisia. The coast guard also said two bodies were recovered.</p> <p>Hundreds of thousands of migrants have been rescued at sea in recent years and taken to ports in southern Italy. Some are seeking refuge from armed conflicts, while many others, particularly from sub-Saharan Africa, are economic migrants likely to be found ineligible for asylum in Europe.</p> <p>Human traffickers launch overcrowded, unseaworthy boats from Libya and other countries with Mediterranean coastlines.</p>

<b>HEADLINE</b>	<b>01/26 More lawsuits over opioid crisis</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/882146/more-washington-cities-sue-drugmakers-over-opioid-crisis/">http://mynorthwest.com/882146/more-washington-cities-sue-drugmakers-over-opioid-crisis/</a>
<b>GIST</b>	<p>SEATTLE (AP) — Skagit County and three cities located within it are the latest jurisdictions in Washington state to sue drugmakers over the opioid crisis.</p> <p>Mount Vernon, Burlington and Sedro Woolley joined the county in filing a federal lawsuit in Seattle Friday against Purdue Pharma, Endo and Janssen, three of the primary manufacturers of prescription</p>

	<p>painkillers.</p> <p>The cities of Everett and Tacoma have also filed federal lawsuits against the drug companies, but those cases have been transferred to U.S. District Court in Cleveland, Ohio, which is overseeing dozens of similar cases.</p> <p>Seattle and Washington state have also sued the companies, but in state court.</p> <p>Skagit County Chief criminal deputy prosecutor Rosemary Kaholokula says the companies provided false information to doctors and patients about the safety of the drugs. She notes that more than 125,000 opioid prescriptions were written in Skagit County in 2014 — more prescriptions than there are residents of the county.</p> <p>The drug companies have disputed the allegations.</p>

<b>HEADLINE</b>	<b>01/26 Snohomish Co. homeowners tax spike</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/881848/tax-bill-snohomish-county-27-percent/">http://mynorthwest.com/881848/tax-bill-snohomish-county-27-percent/</a>
<b>GIST</b>	<p>Homeowners in Snohomish County could see a 16-percent increase on their property tax bills when they're mailed out next month.</p> <p>The Daily Herald reports the bill for the average-valued home will increase by \$600 compared to 2017.</p> <p>"I'm trying hard to get information out to the public so they're aware of the changes and aware of the impact," Snohomish County Assessor Linda Hjelle told The Herald. "As soon as we got the numbers, I wanted to get them out to the public."</p> <p>Lake Stevens homeowners will see the biggest increase — 27.7 percent — and Lynnwood, Mountlake Terrace, and Brier will see a 20 percent increase, according to the Daily. In Woodway, where the average home is assessed at \$1.3 million, residents will experience the lowest tax increase at 2.5 percent.</p> <p>Why the drastic change?</p> <p>Snohomish County homeowners are paying an extra 82 cents per \$1,000 worth of assessed property value to pay for changes in state education funding largely fueled by the Supreme Court ruling in the McCleary case, the Daily reports. That and other increases in local municipalities for education levies and fire protection.</p> <p>A little relief is expected in 2019 when a state cap of local levies is supposed to keep the combined state and local tax bill for education below or at 2017 levels in Everett, Mukilteo, Sultan and other school districts, according to the Daily.</p>

<b>HEADLINE</b>	<b>01/26 WA DOL emergency rule takes effect</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/wa-dol-to-stop-requiring-place-of-birth-in-application-process/281-511932313">http://www.king5.com/article/news/local/wa-dol-to-stop-requiring-place-of-birth-in-application-process/281-511932313</a>
<b>GIST</b>	<p>Starting Friday, Washington residents who apply for a standard driver license, instruction permit and ID card will no longer be required to provide their place of birth as part of the application process.</p> <p>Earlier this month, The Seattle Times reported that the Washington Department of Licensing (DOL) had been giving residents' personal information to federal immigration-enforcement officers, who used that information to arrest and deport people under the President Trump's immigration policies.</p>

	<p>A spokesperson for Governor Jay Inslee's Office said until they were questioned by the Times, they hadn't understood the extent of DOL's cooperation with ICE.</p> <p>“We’ve asked them to stop what they’re doing at this point,” spokeswoman Jaime Smith had said.</p> <p>On January 19, DOL filed emergency rule-making to immediately end the collection of information not required by state or federal statute. The change took effect Friday, January 26.</p> <p>The emergency rule lasts 120 days. During that time, DOL plans to permanently eliminate place of birth as a requirement to apply for a driver license or ID card.</p> <p>"DOL is taking these actions to ensure the agency is safeguarding personal information that can be used to determine immigration status and to uphold the intent of Governor Inslee’s Executive Order 17-01, Reaffirming Washington’s Commitment to Tolerance, Diversity, and Inclusiveness," DOL said a press release.</p>

<b>HEADLINE</b>	<b>01/26 State tsunami risks only half-mapped</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/disaster/washington-states-tsunami-risks-only-half-mapped/281-511934103">http://www.king5.com/article/news/local/disaster/washington-states-tsunami-risks-only-half-mapped/281-511934103</a>
<b>GIST</b>	<p>Washington state's tsunami risks are only half-mapped, and more money is needed to finish the job.</p> <p>The Washington Department of Natural Resources is asking for \$543,200 over the next two years to hire three additional staff members to finish mapping the state's tsunami risks. Beyond that, another \$493,200 is needed each year to maintain the mapping project as new fault lines are discovered, and the state's tsunami risks keep evolving.</p> <p>There are a number of tsunami inundation maps for more populated areas along Washington's outer and north coasts. These include Bellingham and other exposed places where a tsunami generated along the Cascadia Subduction Zone near our continental shelf, or other locations around the Pacific Rim, could reach.</p> <p>But there's also believed to be a tsunami risk from the Seattle Fault, which could envelop lowlands in Seattle such as Harbor Island and SODO. Everett and other low-lying lands around Puget Sound are also considered vulnerable.</p> <p>"We need to get full coverage for the entire state," Corina Forson, the state's chief hazard geologist, said.</p> <p>She says while some areas were mapped with federal money at least a decade ago, those scenarios didn't necessarily incorporate worst-case scenarios. Those scenarios include a very large tsunami every 2,500 years. They also include tsunamis waves -- still 100 feet or so high -- from more typical earthquakes off our coast. Those can happen every 250 to 500 years.</p> <p>It so happens January 26, 1700, was our last major earthquake and tsunami -- 318 years ago, Friday. Scientists say the next one could come anytime. Nobody can say.</p> <p>Washington found itself on a tsunami watch on Tuesday after a 7.9 magnitude earthquake in the Gulf of Alaska. Because of the nature of the earthquake on a strike-slip fault, only a tiny tsunami was generated.</p>

<b>HEADLINE</b>	<b>01/26 Massive oil spill East China Sea</b>
-----------------	---

SOURCE	<a href="https://www.reuters.com/article/us-china-shipping-spill/how-sanchis-spill-could-spread-idUSKBN1FF1AK">https://www.reuters.com/article/us-china-shipping-spill/how-sanchis-spill-could-spread-idUSKBN1FF1AK</a>
GIST	<p>(Reuters) - The worst tanker oil spill in decades is unfolding across hundreds of miles of the East China Sea after an Iranian oil tanker carrying more than 100,000 tonnes of toxic oil collided with a freighter and exploded, killing all 32 crew onboard. The ship burned, spewing its cargo, for more than a week before sinking in the waters between China, Japan and South Korea.</p> <p>The Panama-registered Sanchi was carrying the equivalent of nearly 1 million barrels of ultra-light crude, plus its own fuel, to South Korea. According to the International Tanker Owners Pollution Federation, the collision led to the worst tanker spill in 35 years.</p> <p>Authorities have had trouble pinning down how big the spill is, as it changes by the day amid strong ocean currents. But concerns are growing about the potential impact to key fishing grounds and sensitive marine ecosystems off Japan and South Korea, which lie in the projected path of the oil, according to Britain's National Oceanography Centre.</p> <p>"An updated emergency ocean model simulation shows that waters polluted by the sinking Sanchi oil tanker could reach Japan within a month," the center said a report posted on January 16. "The revised simulations suggest that pollution from the spill may be distributed much further and faster than previously thought, and that larger areas of the coast may be impacted."</p>

HEADLINE	<b>01/26 UN: growing malnutrition in Venezuela</b>
SOURCE	<a href="https://www.nbcnews.com/news/latino/malnutrition-crisis-venezuela-rises-unicef-officials-say-n841301">https://www.nbcnews.com/news/latino/malnutrition-crisis-venezuela-rises-unicef-officials-say-n841301</a>
GIST	<p>GENEVA - The United Nations children's agency UNICEF said on Friday it was seeing clear signs of a growing malnutrition crisis in Venezuela, but it lacks data to give precise information and to tackle the problem effectively.</p> <p>"While precise figures are unavailable because of very limited official health or nutrition data, there are clear signs that the crisis is limiting children's access to quality health services, medicines and food," UNICEF spokesman Christophe Boulierac told a regular U.N. briefing in Geneva.</p> <p>Venezuela's government has not published data on wasting - a low weight to height ratio in children under five - since 2009, when the figure was 3.2 percent. Aid agency Caritas put the figure at 15.5 percent last August, UNICEF said.</p> <p>"When it's about fighting child malnutrition, it's not a time for discussing, it's time for action," Boulierac said. "Acting to fight malnutrition requires data, and there's not enough official data right now and there's not enough coordination."</p> <p>He said he had no information to suggest that UNICEF was being prevented from doing its work, and it was not uncommon to have a lack of data.</p> <p>The government of President Nicolas Maduro says Venezuela is fighting a U.S.-led right-wing conspiracy determined to end socialism in Latin America, hobble Venezuela's economy, and steal its oil wealth.</p> <p>But critics say Maduro, who succeeded Hugo Chavez in 2013 and is seeking re-election, has ruined a once prosperous oil economy, turned Venezuela into a dictatorship and skewed the election system to perpetuate power for his Socialist Party.</p>

<b>HEADLINE</b>	<b>01/26 Cop cleared killing unarmed teen</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/protests-after-conn-officer-cleared-in-unarmed-teens-killing/">https://www.cbsnews.com/news/protests-after-conn-officer-cleared-in-unarmed-teens-killing/</a>
<b>GIST</b>	<p>HARTFORD, Conn. -- A Connecticut police officer who killed an unarmed teenager and wounded a man in a traffic stop shooting was cleared of wrongdoing on Friday, sparking protests by relatives and other supporters.</p> <p>Waterbury State's Attorney Maureen Platt said in her investigation report that Bridgeport rookie officer James Boulay was justified when he shot 15-year-old Jayson Negron and 21-year-old Julian Fyffe in May.</p> <p>Supporters of Negron have called for a murder charge against Boulay. They dispute police Chief Armando Perez's account that Boulay opened fire when a stolen SUV driven by Negron suddenly went into reverse and struck Boulay.</p> <p>Fyffe was a passenger in the SUV. He has said he and Negron were left bleeding on the street for nearly 20 minutes before they received medical attention.</p> <p>"Jayson Negron died tragically on May 9, 2017, after being shot by Officer James Boulay," Platt wrote in her report. "However ... Officer James Boulay reasonably believed that the use of deadly force was necessary to defend himself from the use of deadly force - that being the Subaru operated by Jayson Negron."</p> <p>Family and supporters of Negron and Fyffe rallied outside Platt's office Friday and criticized the investigation. Another protest was planned for later in the day.</p>

<b>HEADLINE</b>	<b>01/26 Schools close as flu epidemic spreads</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/as-flu-spreads-schools-close-in-at-least-11-states-1516984718">https://www.wsj.com/articles/as-flu-spreads-schools-close-in-at-least-11-states-1516984718</a>
<b>GIST</b>	<p>Schools in at least 11 states have closed as the worst flu epidemic in nearly a decade intensifies.</p> <p>The dominant strain of flu this season, H3N2, known for being particularly virulent, has resulted in the deaths of at least 37 children and is expected to cause more as the epidemic persists several more weeks, the Centers for Disease Control and Prevention projected on Friday.</p>

Seven children died this week, authorities said. Hospitalizations, a predictor of the death rate, rose to 41.9 people per 100,000, up from 36.9 the week before.

An estimated total number of deaths due to the flu won't be available until next season, according to the CDC. Outpatient hospital visits by people with the flu have been skyrocketing for several weeks, and as of mid-January had surpassed every season except 2009-10, when a new strain of flu caused a global pandemic.

Some states are tracking flu-related deaths. Texas is reporting 2,355 flu-related deaths from October through December. The state expects that number to rise dramatically, but said it was too early to tell if it will exceed last season's flu-related death toll of about 9,500.

The flu is particularly hard to fight this year because the H3N2 strain tends to strike the elderly and children hard. People over age 65, and between the ages of 50 and 64, are being hospitalized at higher rates, the CDC said.

Schools closed anywhere from a day to a week due to widespread absenteeism as administrators try to stop the spread of the virus and disinfect buildings. Several school administrators said they have never seen closures of this scale.

Gulf District Schools in Port St. Joe, Fla., closed its four campuses Friday after about 20% of its 1,900 students missed school on three consecutive days this week due to flulike symptoms.

"We have taken the steps necessary to act in the best interest of children," said Jim Norton, superintendent of Gulf District Schools. About 25% of his staff also was out sick or taking care of sick children. "We're going to do a deep cleaning of the schools."

States with schools that have closed include Texas, Illinois, Oklahoma, Idaho, North Carolina, Tennessee, Florida, Alabama, Kentucky, Michigan and Missouri.

The Melissa Independent School District in Melissa, Texas, plans to stay closed through Monday to disinfect schools. Duncan Middle School in Duncan, Okla., was closed on Friday. The Illinois Mathematics and Science Academy in Aurora, Ill., closed this past Monday for a week due to high levels of influenza cases.

Gunter Independent School District in Gunter, Texas, reopened Wednesday after closing for a week after about 27% of its students, or 253, missed school. A vast majority of students had flu or flu-like symptoms, but some stayed away to avoid getting sick or had other illnesses, said Jill Siler, the district's superintendent.

It was a tough decision to close without notice, Dr. Siler said. "We closed to stop the cycle," she added. "We're talking about almost a third of our population." The time off also allowed a professional company to come in and clean all schools. "Every single piece in every single classroom was disinfected."

<b>HEADLINE</b>	<b>01/27 CDC: flu season worst since 2009</b>
<b>SOURCE</b>	<a href="http://thehill.com/policy/healthcare/371021-cdc-this-flu-season-worst-since-2009-swine-flu-pandemic">http://thehill.com/policy/healthcare/371021-cdc-this-flu-season-worst-since-2009-swine-flu-pandemic</a>
<b>GIST</b>	Federal health officials warned Friday that this year's flu outbreak is more severe than any other since the 2009 swine flu pandemic, and that its intensity is still increasing.  Officials at the Centers for Disease Control and Prevention (CDC) said in a phone call with reporters that the number of people experiencing flu-like symptoms is increasing. Hospitalizations for influenza are also rising.

What's more, flu activity has stayed at the same level nationwide for about three weeks, said Dr. Dan Jernigan, the director of the CDC's Influenza Division. That sets it apart from many flu seasons, in which activity wanes in certain parts of the U.S.

"We often see different parts of the country 'light up' at different times, but for the past 3 weeks, the entire country has been experiencing lots of flu, all at the same time," he said.

The deaths of seven children from the flu were reported to the CDC this week, bringing the total number of child deaths this flu season to 37, CDC Director Dr. Brenda Fitzgerald said.

Perhaps driving the latest increase in those reporting flu-like symptoms is the influx of kids returning to school after winter vacations, Jernigan said, pointing to a higher rate of flu cases in children.

The number of people who have gone to see a doctor for influenza-like illness also rose this week to 6.6 percent. That means that 6.6 percent of all people who went to clinics or emergency rooms had a flu-like illness.

The number of people going to see doctors for such illnesses is at its highest rate since the 2009 swine flu outbreak, when it rose to 7.7 percent, Jernigan said.

Most people with the flu this season are infected with the H3N2 virus, one of the most severe — and deadly — strains of the seasonal flu. What's more, Jernigan said, the 2017 to 2018 flu season likely still has weeks to go.

<b>HEADLINE</b>	<b>01/27 Billionaire Saudi prince out detention</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/01/27/middleeast/saudi-prince-freed/index.html">https://www.cnn.com/2018/01/27/middleeast/saudi-prince-freed/index.html</a>
<b>GIST</b>	<p>(CNN)A billionaire and influential Saudi prince arrested in an anti-corruption sweep nearly three months ago was released Saturday, a source close to the prince told CNN.</p> <p>Prince Alwaleed bin Talal was among 17 princes and top officials arrested November 4 in the Saudi government crackdown.</p> <p>Alwaleed, a grandson of Saudi Arabia's founder, King Abdulaziz Al Saud, was being held at the Ritz-Carlton in Riyadh during his detention.</p>

The prince does not hold a government position.

But his personal fortune is estimated at more than \$17 billion, according to Forbes, and his investment portfolio has made him an important voice inside his home country.

It is not known why and under what circumstances he was released.

Three weeks after the sweep, senior Saudi Prince Miteb bin Abdullah was released, a source close to the government told CNN. An undisclosed financial settlement was agreed to secure the powerful prince's release, the source said. Prince Miteb is the son of Saudi King Salman's predecessor, the late King Abdullah.

King Salman ordered the anti-corruption initiative as part of an "active reform agenda aimed at tackling a persistent problem that has hindered development efforts in the Kingdom in recent decades," a Saudi Ministry of Communications and Information Technology statement said.

After the anti-corruption arrests, the kingdom's top legal official said investigations had revealed that "at least \$100 billion has been misused through systematic corruption and embezzlement over several decades."

Saudi Arabia is using cash recovered from officials and princes arrested in the crackdown to ease the pain of austerity.

The kingdom's anti-corruption committee, headed by Crown Prince Mohammed bin Salman, carried out the arrests. He is seen as a power behind the King and a supporter of reforms.

<b>HEADLINE</b>	<b>01/26 Biggest infrastructure nightmare</b>
<b>SOURCE</b>	<a href="http://money.cnn.com/2018/01/26/news/economy/northeast-corridor/index.html">http://money.cnn.com/2018/01/26/news/economy/northeast-corridor/index.html</a>
<b>GIST</b>	<p>Deep underneath the Hudson River between Manhattan and New Jersey lies a century-old rail tunnel, heavily damaged during Superstorm Sandy, that still carries 200,000 riders per day.</p> <p>Engineers say the tunnel should be replaced as soon as possible, at a cost of \$12.7 billion. In 2015, the Obama administration agreed to supply half the funding for it, and designs are nearly complete. But in December, President Trump's Federal Transit Administration sent a letter to the Port Authority of New York and New Jersey declaring the deal "nonexistent."</p> <p>Local officials were flabbergasted, and are ringing alarm bells about the potential consequences of further delay: A failure could shut down the system for months and throw the region's commuters into chaos.</p> <p>"We already knew we had a capacity problem, and that it was choking economic growth," says Tom Wright, president of the Regional Plan Association, an independent think tank focusing on challenges facing the New York area. "Now we have the imminent threat of losing that connection. It's like playing Russian roulette with the economy of the Northeast."</p> <p>The Gateway project — a collection of upgrades along a 10-mile span including the Hudson Tunnel — is just one among many desperately needed infrastructure priorities that have been in limbo under the Trump administration.</p> <p>But Gateway is also key to the entire rail network from Washington, D.C. to Boston, known as the Northeast Corridor, which carries 800,000 people daily. According to the federally-chartered Northeast Corridor Commission, a shutdown of the service would cost the economy \$100 million per day.</p>

	<p>And the Hudson tunnel isn't the only point of possible failure: A handful of connections, including a bridge over the Susquehanna River in Maryland, and the Baltimore &amp; Potomac tunnel, are in poor shape as well.</p> <p>"Does it matter to the federal government that the Northeast Corridor is a functioning place? I think you could make the argument that it does," says Robert Puentes, director of the nonprofit Eno Center for Transportation. "We don't seem to recognize the disproportionate influence that some projects have. This isn't just a project for New York and New Jersey, this is a project for the country."</p>

<b>HEADLINE</b>	<b>01/27 US, Poland oppose Russia pipeline</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/us-poland-oppose-gas-pipeline-linking-russia-germany-52649375">http://abcnews.go.com/International/wireStory/us-poland-oppose-gas-pipeline-linking-russia-germany-52649375</a>
<b>GIST</b>	<p>The United States and Poland on Saturday took a strong stand against a planned gas pipeline linking Russia to Germany, saying it is part of a Kremlin scheme to politicize energy and undermine attempts to make Europe less dependent on Moscow.</p> <p>U.S. Secretary of State Rex Tillerson and Polish Foreign Minister Foreign Minister Jacek Czaputowicz, after meeting in Warsaw, denounced the pipeline, which would bypass Poland and leave Central Europe vulnerable to Russian pressure.</p> <p>Tillerson said the pipeline was "not a healthy piece of infrastructure" for Europe's energy stability.</p> <p>"Like Poland, the United States opposes the Nord Stream 2 pipeline," Tillerson said at a news conference with his counterpart. "We see it as undermining Europe's overall energy security and stability and providing Russia yet another tool to politicize energy as a political tool."</p> <p>The pipeline would be the second to carry Russian gas directly to Germany and Western Europe via the Baltic Sea instead of through Poland and Ukraine.</p>

<b>HEADLINE</b>	<b>01/27 India army shooting kills 2 in Kashmir</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/police-indian-army-shooting-kills-kashmir-52649295?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/police-indian-army-shooting-kills-kashmir-52649295?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Indian soldiers opened fire on protesters in the disputed region of Kashmir on Saturday, killing two young men and wounding several others, police said.</p> <p>The protesters threw stones at the soldiers as their convoy was passing through a village in southern Shopian, prompting them to open fire, police said. Police said several people were wounded, one critically, and taken to hospitals. Villagers put the number of wounded at nine.</p> <p>As the news of the killings spread, hundreds hit the streets chanting anti-India slogans and demanding an end to Indian rule. Rebel groups demand that Kashmir be united either under Pakistani rule or as an independent country, a view that is widespread even among civilians in the region.</p> <p>Tension in Shopian was already running high after government forces killed two local rebels and a teenage boy during a gun battle Wednesday. One of the slain rebels was from the village where Saturday's shooting took place.</p> <p>India's military said in a statement that the soldiers came under "intense stone pelting" and the crowd caused "extensive damage and tried to set ablaze" four vehicles in the convoy. It said seven soldiers were injured and said protesters also tried to lynch an officer.</p>

	<p>"The army was constrained to open fire in self-defense," the statement said.</p> <p>Separatist leaders who challenge India's sovereignty over Kashmir and fight New Delhi's rule politically called for a general strike Sunday in response to the killings.</p> <p>In recent years, Kashmiris, mainly youths, have displayed open solidarity with anti-India rebels and sought to protect them by engaging troops in street clashes during military operations against the militants.</p>

<b>HEADLINE</b>	<b>01/27 Hindu, Muslim riot northern India</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/indian-police-stop-hindu-muslim-rioting-killed-52647164?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/indian-police-stop-hindu-muslim-rioting-killed-52647164?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Indian police rushed security forces to a northern town where a clash between Hindu and Muslim groups left one person dead and three others injured during India's National Day celebrations, police said Saturday.</p> <p>Uttar Pradesh state police spokesman Rahul Srivastava said the two groups shot guns and attacked each other with rocks on Friday in Kasganj, a small town in the state. The town is nearly 340 kilometers (210 miles) northwest of Lucknow, the state capital.</p> <p>The rioting erupted as members of some hard-line Hindu groups marched through a Muslim-dominated area of the small town. Police closed schools on Saturday and banned the assembly of more than five people in the town.</p> <p>But a fresh round of violence briefly hit the town on Saturday after the funeral of the 16-year-old who was killed the day earlier.</p> <p>A group of people damaged and set fire to at least three shops and one bus before police dispersed them, the state police said. Nine people were arrested for rioting, police said.</p> <p>Muslims comprise nearly 14 percent of India's nearly 1.3 billion people. The two communities largely live peacefully, but simmering tensions lead to clashes at times.</p>

## Cyber Awareness

[Top of page](#)

<b>HEADLINE</b>	<b>01/28 ISIS, other jihadists increase bitcoin use</b>
<b>SOURCE</b>	<a href="http://www.jpost.com/Middle-East/ISIS-Threat/ISIS-other-jihadists-increase-Bitcoin-use-after-fall-of-Caliphate-540079">http://www.jpost.com/Middle-East/ISIS-Threat/ISIS-other-jihadists-increase-Bitcoin-use-after-fall-of-Caliphate-540079</a>
<b>GIST</b>	<p>ISIS and other jihadists' use of the digital currency Bitcoin is a trend that "has been growing and taking shape" in recent months, "and now holds a prominent presence online."</p> <p>This is the conclusion of a report obtained exclusively by The Jerusalem Post. The report was issued by the IDC Herzliya International Institute for Counter-Terrorism's (ICT) cyber desk, with input from ICT deputy director Dr. Eitan Azani and cyber-desk coordinator Nadine Liv.</p> <p>Some of the ongoing ISIS and jihadist use of Bitcoin discussed in the report include fund-raising websites' efforts to stay afloat after the fall of Raqqa in October 2017; terrorist fund-raising in Gaza; a recently busted money-laundering operation in the US; and examples where Bitcoin was used to fund infamous terrorist attacks.</p>

The report starts by recounting that in the summer of 2014, an important article titled “Bitcoin wa Sadaqat al-Jihad” was published in an online blog. The article set forth the various strategic reasons for jihadists to use Bitcoin.

The article “promotes the use of Bitcoin virtual currency as a means of limiting economic support for infidels and circumventing the Western banking system, which limits donations for jihad through restrictions on the financial system.”

It recommends using Bitcoin, “for ideological-religious reasons as well as for its technological characteristics, and insists on the advantages of the system that enables the issuing of this currency.”

It further says the cryptocurrency’s advantages include: “prevention of counterfeiting; it is anonymous and untraceable; it is not subject to legislation; and it has global distribution.”

Jihadists like Bitcoin because through its use they can avoid paying taxes to Western and other non-jihadist governments and avoid legal exposure.

The ICT report notes that Bitcoin is transferred from one user to another “without systemic intercession, such as eBay or PayPal, while relying on a decentralized system; it does not have security weaknesses and cannot be hacked.”

Jumping forward, the report discusses the Akhbar al-Muslimin website, which publishes news from Islamic State. Analysts were asking if ISIS would survive the October 2017 fall of Raqqa; by November 2017, the ISIS propaganda site had launched an online fund-raising campaign.

The site’s operators “attached a link to each published news report encouraging donations using Bitcoin virtual currency for the purpose of operating the site.”

In December, the Meir Amit Intelligence and Terrorism Information Center found that clicking on the link led to a dedicated donations page on a Bitcoin trading site called CoinGate. When ICT independently examined the issue on January 16, it found that the link no longer directs to CoinGate, showing how quickly ISIS’s online arms adapt to avoid being tracked.

ISIS-affiliated groups in Gaza have also increased their online Bitcoin fund-raising efforts, led by the Ibn Taymiyya Media Center which serves as the media wing of the Mujahideen Shura Council in the Environs of Jerusalem.

In mid-January 2018, a new Bitcoin address was identified in a Telegram instant-messaging group affiliated with the ISIS-Gaza group.

The report said that an examination of the address on Blockchain, a digital ledger in which Bitcoin transactions are recorded publicly, revealed a series of 15 transactions from July 1, 2016, to January 12, 2018.

The average Bitcoin transfer through this platform is estimated to be about \$16,700, but some account totals reached close to \$300,000 in transfers.

One ISIS agent, Zoobia Shahnaz of Long Island, New York, used Bitcoin in 2017 to defraud several financial entities and to launder money for ISIS, the report noted.

In mid-December, Shahnaz was indicted in the Federal District Court of Central Islip, New York, for stealing and laundering more than \$85,000 of illegal returns using Bitcoin and other digital currencies.

THE report said the funds were transferred out of the US to shell corporations in Pakistan, China and Turkey on their way to the coffers of ISIS.

	<p>Shahnaz was arrested at JFK Airport in New York as he tried to flee the US for Syria.</p> <p>Work has begun in the US on legislation to grant more resources to Department of Homeland Security to follow terrorist uses of Bitcoin.</p> <p>The report said that terrorists involved in attacks across the globe, from France to Indonesia, have used Bitcoin to fund their attacks in ways that are harder for law enforcement to track than other forms of funding.</p>

<b>HEADLINE</b>	<b>01/29 Cybersecurity in maritime industry</b>
<b>SOURCE</b>	<a href="http://www.hellenicshippingnews.com/cybersecurity-in-the-maritime-industry/">http://www.hellenicshippingnews.com/cybersecurity-in-the-maritime-industry/</a>
<b>GIST</b>	<p>The global shipping industry – much like air, road and rail transportation – is undergoing a technological revolution. From hull cleaning to collision avoidance systems, automation has made incredible advances in recent years. There is more to come, too. Norwegian company Yara has partnered with the engineering group Kongsberg with plans to launch the world’s first automated container ship in 2018. Rolls-Royce is also joining the fray, having revealed plans in September to build autonomous naval vessels.</p> <p>There are good reasons for embracing these innovations. For starters, unmanned ships are thought to be potentially safer and more fuel efficient. Automation also frees seafarers from the drudgery of paperwork. But these benefits come at a cost. One of the key challenges in the coming years (and one of the focal topics of BLG’s Maritime Law Seminar on December 1, 2017), is how the shipping industry will cope with the growing threat from cyber attacks.</p> <p>“Ships have an opening to the outside world,” Chris South, a senior underwriter for West of England P&amp;I, told the audience present at the seminar in Montréal. “And wherever there is an opening there is a vulnerability.”</p> <p>A recent case in point is shipping company Maersk, which suffered \$300 million in damages following a hit by the NotPetya ransomware outbreak in June of 2017. The shipping giant picked up an infection that spread into its global network and was forced to halt operations at dozens of port terminals around the world.</p> <p>“Four factors are at play in the maritime industry”, said South. The first is automation itself, as machinery on vessels is increasingly controlled by software. The second is integration. On any given vessel, there may be multiple systems connected together. The third is the ability of ship-to-shore systems that communicate via remote monitoring. “Ships are now talking to head offices continuously,” says South. The fourth factor is that all these systems are connected through the internet.</p> <p>Virtually any company that now relies on these systems is exposed to a cyber cascade of sorts, South added, “where one part of the industry ends up infecting another.” So a shipping company’s systems might get infected at headquarters. The infection then spreads to the ship and charterers before moving on to ports and terminals, the logistic companies and ultimately the manufacturing plants receiving the merchandise.</p> <p>Too big to cover?</p> <p>The alarming question for insurers in the maritime industry, who view cyber as a growing systemic risk, is “where does the liability stop?” Insurers have voiced concern that the risks are too big for them to cover alone – without government intervention.</p> <p>Understandably, cyber and data risk insurance is limited when it comes to coverage. “A typical cyber risks policy will cover breach costs, such as forensic investigations, legal advice and those associated with notifying customers and regulators”, said South. It will also cover business interruption; repair and</p>

replacement of websites, programs and data caused by hackers; extortion; and the cost to defend and settle claims made for failing to keep customers' personal data secure. "But it does not substitute or replace the covers lost," South warned.

#### New laws on the horizon

One area where governments are stepping in is on the legislative front. Data security breaches are nothing new, but gone are the days when organizations could conveniently sweep them under the rug. "Canada is the latest country about to implement a new breach notification regime", said Éloïse Gratton, a BLG partner and nationally renowned expert in privacy and data protection.

Following recent amendments to Canada's Personal Information Protection and Electronic Documents Act (PIPEDA), private-sector organizations doing business in Canada must report the breach to the Privacy Commissioner and, generally, notify customers if there is a risk of significant harm resulting from a data security breach. Gratton expects regulations prescribing the breach notification process in Canada to be in place as early as during the first quarter of 2018.

"There are record-keeping obligations," she added. "When you have a security incident you're supposed to keep the data." The duration of record keeping is still being decided by the Privacy Commissioner, but could possibly extend to as long as five years. Organizations that suffer a breach must also be mindful of additional provincial breach notification regimes in Québec, Alberta and British Columbia. Additionally, most states in the U.S. also have breach notification laws on the books.

Another game changer, said Gratton, is the coming into force in May 2018 of the European Union's General Data Protection Regulation (GDPR), which applies to any processing of personal data, namely its collection, use, disclosure or storage. Under the GDPR, organizations that suffer a breach must notify the relevant national data protection regulator as well as anyone who has been affected, and where the breach is likely to result in high risk to their rights and freedoms. Fines for non-compliance are considerable — up to 4 percent of an organization's annual worldwide turnover or €20m. The GDPR also creates a right of private action against data controllers and data processors.

"Complicating matters further", Gratton said, "the EU regulation has extra-territorial reach". It applies to organizations that offer goods and services to European residents or who monitor their behaviour, through the use of persistent cookies for instance. That includes businesses based outside of the EU.

How far liability extends will also depend in part on the contractual terms. Contractors are increasingly required to meet cybersecurity standards, and can be held liable for damages to a company's systems as a result of a virus or malware introduced by an agent or employee.

#### Being prepared and mitigating the damage

To safeguard ships from cyber threats, companies should follow International Maritime Organization approved guidelines on cyber risk management, which focus on identifying the systems, data and capabilities that pose a risk to operations, when these are disrupted. To do that, companies must implement risk control processes and have the ability to detect cyber events in a timely manner. They must also be able to back-up and restore systems necessary for shipping operations or services impaired following a cyber event.

To mitigate the damage that can result from a breach, Gratton urges organizations to have a breach incident response plan in place well in advance. "You have to know who your internal core team is, and who your external team is," she said. That includes legal, forensic, PR, and information security experts.

<b>HEADLINE</b>	<b>01/29 YouTube new victim of cryptojacking</b>
<b>SOURCE</b>	<a href="https://www.gizbot.com/news/youtube-is-the-new-victim-cryptojacking-047573.html">https://www.gizbot.com/news/youtube-is-the-new-victim-cryptojacking-047573.html</a>
<b>GIST</b>	<p>Internet has always been used by some unwanted cyber scams artist for making cyber thefts and other crimes. Even the tech giant Google has been targeted many times by unwanted scams and malwares. Google's internet video platform YouTube is the latest victim of one such cyber crime called Cryptojacking.</p> <p>Cryptokacking is claimed to be a new malware infecting the devices using YouTube to gain the access of a target's CPU to collect Cryptocurrencies. As per some reports some bad actors are inserting a piece of JavaScript into websites and advertisements on the YouTube network for cryptocurrency information. With Google's YouTube being affected by the scam this is a situation one needs to be extra cautious while surfing the internet.</p> <p>The reports further suggest that users on social media began complaining that YouTube ads were stirring their antivirus software up. A script from a service called CoinHive was being specifically recognized by the antivirus software. The main agenda of the attackers behind this attack was to allow sites to make some extra income using a visitor's CPU processing power for mining Monero which is a type of cryptocurrency. The YouTube's ads that were running the script reportedly used 80 percent of a users CPU and neither the user nor YouTube were not informed what was happening. This caused a user's computer to crash.</p>

<b>HEADLINE</b>	<b>01/29 Cryptocurrency markets juicy targets</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-01-29/cryptocurrency-markets-are-juicy-targets-for-hackers-timeline">https://www.bloomberg.com/news/articles/2018-01-29/cryptocurrency-markets-are-juicy-targets-for-hackers-timeline</a>
<b>GIST</b>	The \$500 million <u>heist</u> of digital tokens from Japanese exchange <u>Coincheck Inc.</u> on Friday is remarkable

for its sheer size, but thefts in the lightly regulated world of cryptocurrencies are woefully frequent.

In less than a decade, hackers have stolen \$1.2 billion worth of Bitcoin and Ether, two of the most popular digital currencies, according to Lex Sokolin, global director of fintech strategy at Autonomous Research LLP. If measured at today's elevated prices, the figure would be much higher.

Here's a look at some of the biggest thefts since 2012.

#### **December 2017**

- NiceHash, a crypto-mining marketplace based in Slovenia, said on its Facebook page that its payment system was compromised and as much as \$63 million worth of Bitcoin was stolen. The firm added extra security measures and sought the community's help to analyze the breach.
- Youbit said it would file for bankruptcy hours after losing 17 percent of its assets in a cyberattack. The South Korean exchange had suffered what it called an "accident" in April and its owner encouraged clients to keep their tokens in a safer form. South Korean investigators are looking into North Korea's possible involvement in the hack.

#### **November 2017**

- A security hole in the Parity Wallet resulted in losses of about \$155 million, including in Ether and other tokens.
- The company behind Tether said a "malicious" attacker stole \$31 million worth of the cryptocurrency and sent them to an unauthorized Bitcoin address.

#### **July 2017**

- A group calling itself the White Hat Group exploited a bug in the Parity Wallet software and attempted to launder stolen Ether, valued at about \$30 million according to Security Week, through exchanges.
- Just minutes after CoinDash's launch of an initial coin offering, hackers made off with as much as \$6.6 million worth of Ether. The Israel-based firm terminated its token sale.

#### **April 2017**

- A Bithumb contract worker's personal computer that stored customers' data files was hacked, resulting in the leak of personal and trading information of more than 30,000 users. The South Korean crypto-exchange was fined 58.5 million won (\$55,000) by the local regulator for the breach.

#### **August 2016**

- Bitfinex said hackers took 119,756 Bitcoin, valued at about \$65 million. In April 2017, the exchange said it had repaid all customers.

#### **June 2016**

- Decentralized Autonomous Organization, a leaderless venture-capital fund and what was then the highest-profile project using Ethereum, was hacked. About \$50 million of members' contributions to the fund were siphoned off.

#### **May 2016**

- Hong Kong-based Gatecoin had about \$2 million in Bitcoin and Ether stolen following a cyberattack.

#### **March 2015**

- Two former U.S. federal agents who helped probe the illegal Silk Road Internet drug emporium were charged with wrongfully pocketing hundreds of thousands of dollars in Bitcoin.

#### **January 2015**

- Bitstamp's Chief Executive Officer reassured customers that the bulk of their Bitcoins were safe after \$5 million the coins were stolen, according to a Fortune report.

	<p><b>February 2014</b></p> <ul style="list-style-type: none"> <li>Mt. Gox, once the world's biggest Bitcoin exchange, reported that tokens valued at about \$480 million had gone missing. The firm filed for bankruptcy in Japan and the U.S., and said the disappearance was probably the result of a "<u>massive theft</u>."</li> </ul> <p><b>September 2012</b></p> <ul style="list-style-type: none"> <li>BitFloor, based in New York, lost about \$250,000 in Bitcoin after it was hacked. Months later in April 2013, the exchange announced it would <u>shut</u> and refund customer deposits, Bitcoin Magazine reported.</li> </ul>

<b>HEADLINE</b>	<b>01/28 Hackers steal \$900K from Texas county</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/phishing-scam-hackers-steal-900000-from-county-office/">https://www.hackread.com/phishing-scam-hackers-steal-900000-from-county-office/</a>
<b>GIST</b>	<p>Another day, another phishing scam – This time Harris County, Texas wired almost \$900,000 after falling for a phishing email.</p> <p>In normal circumstances, cybercriminals take advantage of the lack of knowledge of their victims but in this phishing attack, they have touched new lows by making a profit out of the devastation caused by hurricane Harvey.</p> <p>It all started on September 21st, 2017 when an estimated 30 percent of Harris County, Texas was submerged due to hurricane Harvey. The auditor's office of the county received an email from a woman going by the supposed name of Fiona Chambers in which she posed as an accountant for D&amp;W Contractors, Inc.</p> <p>D&amp;W Contractors, Inc. is a legitimate company that happened to be working that day to fix the damage caused by the hurricane in the county. In the email, Chambers asked the office to transfer a sum of \$888,000 to the new bank account of the Contractors as part of its contract.</p> <p>"If we can get the form and voided check back to you today would it be updated in time for our payment?"</p>

according to the email content mentioned by Houston Chronicle.

In return, the county transferred \$888,000 to the bank account provided by Chambers without verifying if the bank account actually belonged to D&W Contractors, Inc. or not. The very next day, it turned out that the county has fallen for a tricky phishing scam and that there was no one by the name of Fiona Chambers in the company neither was there a bank account belonging to the contractors.

Now, the incident is being investigated by the FBI (Federal Bureau of Investigation) and their prime suspect is a group that is known for targeting local governments worldwide. On the other hand, the county has learned its lesson and vows to increase its cybersecurity and overhaul and learn from how it handled the situation.

“We live in a rapidly changing world of technology that you can’t just sit pat and expect that the bad guys aren’t going to come after you. I think we need to look at all of our systems to be sure that somebody can’t get in and steal taxpayer money” said Harris County Judge Ed Emmett said.

<b>HEADLINE</b>	<b>01/26 Claim: BitPaymer linked to Dridex authors</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/researchers-trace-bitpaymer-ransomware-back-to-dridex-developers/article/739904/">https://www.scmagazine.com/researchers-trace-bitpaymer-ransomware-back-to-dridex-developers/article/739904/</a>
<b>GIST</b>	<p>A relatively new ransomware that infected Scottish hospitals last summer appears to be created by the same developers who are responsible for the dreaded Dridex banking trojan.</p> <p>Commonly known as BitPaymer, the ransomware has now earned the moniker FriedEx due to its newfound affiliation, with which its shares similar code and techniques to conceal information about its behavior, according to researchers from ESET.</p> <p>Just like its banking Trojan cousin, BitPaymer “resolves all system API calls on the fly by searching for them by hash, stores all strings in encrypted form, looks up registry keys and values by hash, etc.,” states Michal Poslusny, ESET malware researcher, in a company blog post. “The resulting binary is very low profile in terms of static features and it’s very hard to tell what the malware is doing without a deeper analysis.”</p> <p>Upon further investigation, ESET learned that FriedEx code also uses many of the same functions as Dridex does (including one for generating a unique UserID identifier for victimized machines), and even orders these functions within the malware binaries the same way.</p> <p>ESET also found samples from both malwares that use the same PDB (Program Database) path. Moreover, certain Dridex and FriedEx samples have the same or nearly synchronous date-of-compilation timestamps, with identical randomly generated constants – which suggests that they were likely compiled concurrently.</p> <p>If that weren’t enough proof that the two are related, both malwares are compiled in Visual Studio 2015.</p> <p>“With all this evidence, we confidently claim that FriedEx is indeed the work of the Dridex developers,” the blog post concludes. “This discovery gives us a better picture of the group’s activities – we can see that the group continues to be active and not only consistently updates their banking Trojan... [but] also follows the latest malware trends, creating their own ransomware.”</p> <p>According to ESET, FriedEx/BitPaymer is focused on high-profile targets and companies, and is typically delivered through an RDP (Remote Desktop Protocol) brute force attack. Discovered in July 2017, the ransomware would soon after infected several hospitals operated by Scotland’s NHS Lanarkshire health care board.</p> <p>Dridex first debuted in 2014, and it is estimated that the trojan is directly responsible for hundreds of</p>

	millions of dollars in losses over the years. The Trojan recently evolved to include support for webinjects into Chrome version 63, and to perform a code injection technique called AtomBombing.

<b>GIST</b>	<p>A wave of attacks leveraging the popular third-party services Google+, Pastebin, and bit.ly is targeting individuals and organizations within the Palestinian Territories.</p> <p>Dubbed “TopHat” the campaign uses Arabic language decoy documents related to current political events to lure victims into opening the documents and subsequently infecting themselves with malware from the “Scote” family, Palo Alto Networks Unit 42 researchers said in a Jan. 26 blog post.</p> <p>“The ultimate payload is a new malware family that we have dubbed “Scote” based on strings we found within the malware samples, researchers said in the post. “Scote provides backdoor access for an attacker and we have observed it collecting command and control (C2) information from Pastebin links as well as Google+ profiles.”</p> <p>The malware uses bit.ly links obscured the C2 URLs so victims could not evaluate the legitimacy of the final site prior to clicking it. The attacks spotted by researchers began in early September 2017 and in a few instances, original filenames of the identified samples were written in Arabic.</p> <p>Attacks are deployed using four different techniques, two of which involve malicious RTF files, one involving self-extracting Windows executables, and a final using RAR archives.</p>

<b>HEADLINE</b>	<b>01/28 Data Privacy Day</b>
<b>SOURCE</b>	<a href="https://staysafeonline.org/data-privacy-day/about/">https://staysafeonline.org/data-privacy-day/about/</a>
<b>GIST</b>	<p>Data Privacy Day began in the United States and Canada in January 2008 as an extension of the Data Protection Day celebration in Europe. Data Protection Day commemorates the Jan. 28, 1981, signing of Convention 108, the first legally binding international treaty dealing with privacy and data protection. Data Privacy Day is observed annually on Jan. 28.</p> <p>The National Cyber Security Alliance (NCSA) officially leads the Data Privacy Day campaign and is advised by a distinguished advisory committee of privacy professionals to help the campaign align with the most current privacy issues in a thoughtful and meaningful way.</p> <p>Data Privacy Day is the signature event in a greater privacy awareness and education effort. Year-round, NCSA educates consumers on how they can own their online presence and shows organizations how privacy is good for business. NCSA’s privacy awareness campaign is an integral component of STOP. THINK. CONNECT.™ – the global online safety, security and privacy campaign.</p>

<b>HEADLINE</b>	<b>01/28 Report: cyber incidents doubled in 2017</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/report-number-of-cyber-incidents-doubled-in-2017-yet-93-percent-could-easily-have-been-prevented/article/739932/">https://www.scmagazine.com/report-number-of-cyber-incidents-doubled-in-2017-yet-93-percent-could-easily-have-been-prevented/article/739932/</a>
<b>GIST</b>	Out of nearly 160,000 reported cyber incidents affecting businesses in 2017, 93 percent could have been prevented by following basic security measures such as regularly updating software, blocking fake email messages, using email authentication, and training employees, a new report claims.

The overall number of reported incidents nearly doubled 2016's total of 82,000 incidents, according to the Online Trust Alliance (OTA), an Internet Society initiative, which released its 2017 Cyber Incident & Breach Trend Report on Jan. 25, in advance of Data Privacy Day. For the purposes of its research, OTA defines an incident as any unauthorized action resulting in system or device access, data extraction or manipulation, business disruption, or financial/reputational harm.

Basing its findings on threat intelligence data gleaned from various sources, OTA reports that the majority of data breaches, 52 percent, were reportedly the result of actual malicious hacking. The next most common causes included an absence of proper security software (15 percent), credit card skimming (11 percent), a lack of internal controls (11 percent), and phishing attacks (eight percent).

OTA also found that there were 134,000 ransomware attacks on businesses in 2017, compared to roughly half that amount in 2016.

<b>HEADLINE</b>	<b>01/28 Report: Intel told China before US govt.</b>
<b>SOURCE</b>	<a href="http://www.foxbusiness.com/features/2018/01/28/intel-warned-chinese-companies-chip-flaw-before-u-s-government.html">http://www.foxbusiness.com/features/2018/01/28/intel-warned-chinese-companies-chip-flaw-before-u-s-government.html</a>
<b>GIST</b>	<p>In initial disclosures about critical security flaws discovered in its processors, Intel Corp. notified a small group of customers, including Chinese technology companies, but left out the U.S. government, according to people familiar with the matter and some of the companies involved.</p> <p>The decision raises concerns, security researchers said, as it potentially could have allowed information about the chip flaws, dubbed Spectre and Meltdown, to fall into the hands of the Chinese government before being publicly divulged. There is no evidence any information was misused, the researchers said.</p> <p>Weeks after word of the flaws first surfaced, Intel's choices about whom would receive advance warning continue to ripple through the security and tech industries.</p> <p>The flaws were first identified in June by a member of Google's Project Zero security team. Intel had planned to make the discovery public on Jan. 9 -- people working to protect systems from hacks often hold off on announcements while fixes are devised -- but sped up its timetable when the news became widely known on Jan. 3, a day after U.K. website the Register wrote about the flaws.</p> <p>Because the flaws can be leveraged to sneak sensitive data out of the cloud, information about them would be of great interest to any intelligence-gathering agency, said Jake Williams, president of the security company Rendition Infosec LLC and a former National Security Agency employee. In the past, Chinese state-linked hackers have exploited software vulnerabilities to get leverage on their targets or expand surveillance.</p> <p>It is a "near certainty" Beijing was aware of the conversations between Intel and its Chinese tech partners, because authorities there routinely monitor all such communications, Mr. Williams said.</p> <p>Representatives from China's ministry in charge of information technology didn't respond to requests for comment. The country's foreign ministry has in the past said it is "resolutely opposed" to cyberhacking in any form.</p> <p>An Intel spokesman declined to identify the companies it briefed before the scheduled Jan. 9 announcement. The company wasn't able to tell everyone it had planned to, including the U.S. government, because the news was made public earlier than expected, he said.</p> <p>Intel's tricky path -- inform enough big customers to head off significant damage while keeping the information as contained as possible to limit potential leaks -- continues to weigh on smaller companies</p>

that weren't given an early nod.

Joyent Inc., a U.S.-based cloud-services provider owned by Samsung Electronics Co., is still playing catch-up, said Bryan Cantrill, the company's chief technology officer.

"Other folks had a six-month head start," he said. "We're scrambling."

In the months before the flaws were publicly disclosed, Intel worked on fixes with Alphabet Inc.'s Google unit as well as "key" computer makers and cloud-computing companies, Intel said in an emailed statement to The Wall Street Journal.

An official at the Department of Homeland Security said staffers learned of the chip flaws from the Jan. 3 news reports. The department is often informed of bug discoveries in advance of the public, and it acts as an authoritative source for information on how to address them.

"We certainly would have liked to have been notified of this," the official said.

The NSA was similarly in the dark, according to Rob Joyce, the White House's top cybersecurity official. In a message posted Jan. 13 to Twitter, he said the NSA "did not know about these flaws." A White House spokesman declined to comment further, referring instead to the tweet.

Chinese computer maker Lenovo Group Ltd. was among the large tech companies, including Microsoft Corp., Amazon.com Inc. and ARM Holdings in the U.K., that were notified of the flaws beforehand.

Lenovo was able to issue a statement Jan. 3 advising customers on the flaws because of "the work we'd done ahead of that date with industry processor and operating system partners," a spokeswoman said in an email.

Alibaba Group Holding Ltd., China's top seller of cloud-computing services, also was notified ahead of time, according to a person familiar with the company.

A spokeswoman for Alibaba's cloud unit declined to comment on when the company was informed. She said any idea that the company might have shared information with Chinese authorities was "speculative and baseless."

A Lenovo spokeswoman said Intel's information was protected by a nondisclosure agreement.

Despite the security concerns, an early heads up to a select number of large global companies made sense, said Dave Aitel, chief executive of Immunity Inc., a company that sells security services. "They're going to tell as few people as possible" to contain possible leaks, he said.

<b>HEADLINE</b>	<b>01/28 Iran 'halal' internet means more control</b>
<b>SOURCE</b>	<a href="https://www.yahoo.com/news/iran-halal-internet-means-more-control-unrest-103821258.html">https://www.yahoo.com/news/iran-halal-internet-means-more-control-unrest-103821258.html</a>
<b>GIST</b>	<p>DUBAI, United Arab Emirates (AP) — Guns drawn, Iranian intelligence agents rushed into the apartment of a Washington Post reporter and his journalist wife in Tehran.</p> <p>Threatening to kill Jason Rezaian in front of his wife, Yeganeh, the 20 agents in the July 2014 raid tore through their belongings and rifled through drawers, clothes and valuables for an hour.</p> <p>But perhaps their most eagerly sought target wasn't exactly inside the house: They forced the couple to hand over the passwords to their email and social media profiles.</p> <p>That raid demonstrated how much of a threat Iran's theocratic government sees in the internet. It has long sought to strictly control cyberspace and social media — and, thereby, the flow of information to the public.</p> <p>But the Islamic Republic's relationship with the world wide web is far more complicated than simple repression. Over the past four years, authorities have encouraged wider use of the internet among Iranians, hoping to generate the benefits of a more modern economy. As a result, nearly half the population have in their pockets a tool that the state is struggling to constrain: smartphones, with cameras and internet links that let anyone broadcast to the world.</p> <p>Those smartphones helped spread the startling burst of protests across Iran that opened 2018. The government succeeded in suffocating the flare-up in part by shutting off key social media and messaging apps, but the lesson was clear: The same oxygen that can resuscitate commerce can also give breath to potential revolt.</p> <p>Authorities' solution has been to create a so-called "halal net," Iran's own locally controlled version of the internet aimed at restricting what the public can see.</p> <p>As Iran approaches the 40th anniversary of the revolution that brought its cleric-led rule to power, how it handles the power of cyberspace will be crucial to its future, determining whether it moves to greater</p>

openness or seals itself off from the world.

"The Islamic Republic is not black and white. It shows a myriad of contradictions and its internet policy I think is one of the great examples of those contradictions," said Sanam Vakil, an associate fellow at Chatham House who studies Iran. "The government has taken the internet and effectively used it for its own purposes and also has realized the dangers of it as well."

—

Since the 1979 Islamic Revolution, how information spreads across mass media has been tightly controlled.

All television and radio broadcasts within Iran are from state-run stations. Satellite dishes remain ostensibly illegal, though they are plentiful, drawing occasional attacks from bat-wielding government enforcers. Journalists face restrictions in what they can cover and where they can travel across a country of 80 million people that's nearly two-and-a-half times the size of Texas.

The internet helped collapse that distance. During Iran's 2009 protests surrounding the disputed re-election of hard-line President Mahmoud Ahmadinejad, still nascent social media spread word of the events among Iranians and brought videos of the shooting death of 26-year-old Neda Agha Soltan to the world.

Iran's government, overseen by Supreme Leader Ayatollah Ali Khamenei, violently suppressed the demonstrations. The crackdown killed dozens and saw thousands imprisoned, with some tortured by their jailers.

Even before the 2009 protests, Iran blocked access to YouTube. Twitter and Facebook followed amid the unrest, as did many other sites later. Some in Iran began using virtual private networks, or VPNs, which allow users to bypass government censorship.

The chief difference between then and the protests that rocked the country coming into 2018 was the massive proliferation of smartphones. As recently as 2014, only an estimated 2 million Iranians possessed one. Today, estimates suggest Iranians own 48 million.

That explosive growth was spurred by the administration of President Hasan Rouhani, a cleric who is a relative moderate within Iran's system. His officials allowed more mobile phone service providers to offer 3G and 4G internet, suddenly making sharing photos and images possible. Home internet connections became faster. The encrypted messaging platform Telegram spread like wildfire. Over 40 million Iranians are estimated to use it, for everything from benign conversations to commerce and political campaigning.

In the recent unrest, protesters used Telegram's mass-messaging channels to share information and videos across 75 cities and towns where demonstrations erupted. Some showed people openly in the streets shouting, "Death to Khamenei!" It shocked many, especially as such cries could bring a death sentence.

When the government temporarily blocked Telegram as well as Instagram, it helped smother the protests within days. Notably, however, Telegram's silencing quickly brought complaints from businesspeople who use its channels to promote and sell their goods.

Even after the unrest, Rouhani argued it was futile trying to shut off an indispensable tool of modern life.

"If you want cyberspace to be useful to the community, come forward with a solution using it to promote the culture instead of blocking it," he said, noting that past Iranian government tried to stop people from listening to the radio "but this prevention was useless."

—

The danger — and potential — of the internet as a weapon came into focus for Iran when it faced the

world's first cyberweapon almost a decade ago.

At the height of tensions between Tehran and the West over its nuclear program, thousands of centrifuges enriching uranium at Iran's underground Natanz facility suddenly began spinning themselves to death. They had been hit by the Stuxnet computer virus, widely believed to be an American and Israeli creation.

Material leaked by Edward Snowden, the former National Security Agency contractor who exposed U.S. government surveillance programs in 2013, suggested Iran at the time was the country where American spies collected the most electronic data.

Beginning in 2011, Iran worked to strike back.

Among the most spectacular cyberattacks attributed to Iran is Shamoon, a virus that hit the state-run giant Saudi Arabian Oil Co. and Qatari natural gas producer RasGas, deleting hard drives and displaying a picture of a burning American flag on computer screens. Saudi Aramco ultimately shut down its network and destroyed over 30,000 computers. A later iteration of Shamoon in late 2016 caused even more damage.

The U.S. blames Iranian hackers for a denial-of-service attack that overwhelmed six major American banks in 2012. U.S. prosecutors in 2016 accused hackers believed to be backed by Iran of attacking dozens of banks and a small dam near New York City. They also have been suspected of targeting the email and social media accounts of Obama administration officials.

Analysts and security experts believe many of these hackers likely receive backing from Iran's Revolutionary Guard, a powerful paramilitary and economic force in the country answerable only to Khamenei himself.

The Guard employs more direct means as well, like its wresting away of the passwords of Rezaian and his wife, recounted in a lawsuit he filed against the Guard and Iran in U.S. federal court.

Similarly, it seized control of the Facebook and email accounts of Iranian-American dual national Siamak Namazi, who remains detained in Iran along with his octogenarian father Baquer. The Guard then pretended to be Namazi in correspondence with U.S. government officials and others, like New Yorker journalist Robin Wright, tricking them into opening a file that gave the hackers access to their computers.

Cyberespionage is even used in Iran's internal rivalries, with attacks on members of the government, particularly officials in Rouhani's Foreign Ministry, including Zarif, according to a recent report by the Carnegie Endowment for International Peace.

"The targeting of members of government — individuals that have already been vetted by the regime — reflects the importance of cybersurveillance as a tool of the hard-line security establishment to monitor potential rivals for power," the report said.

Then Iran moved to target the internet itself.

—

The idea of Iran setting up its own "halal," or "permissible," internet first came in 2011 in the wake of the 2009 protests. It's evolved into what's known as the National Information Network.

It is essentially a net neutrality supporter's nightmare: The network has some 500 government-approved national websites that stream content far faster than those based abroad, which are intentionally slowed, according to a recent report by the Campaign for Human Rights in Iran. Service providers offer cheaper packages to customers accessing only the NIN websites. Search results also are gamed within the network, allowing the government to censor what users find.

	<p>One of the principal designers of the network is the Iran Telecommunications Co., owned by proxies of the Guard.</p> <p>It resembles in a way China's "Great Firewall," which blocks access to thousands of websites, from Facebook to Twitter to some news outlets. Chinese internet users also find access to websites outside of the country slower.</p> <p>"Iran's National Information Network may lack the name cachet of the 'Great Firewall,' but its performance in strangling access to opposition content during the most recent protests proved that Iran is hard on China's heels in terms of controlling the flow of information," the private U.S. intelligence firm Stratfor wrote in a Jan. 17 analysis.</p> <p>Firuzeh Mahmoudi, the executive director of the San Francisco-based group United for Iran, said authorities have had success in getting businesses to operate on the NIN. The more they do so, he warned, "the easier it will be for them to shut down or throttle the real internet when they want to."</p> <p>Hard-liners have suggested removing Iran entirely from the internet and creating its own at home.</p> <p>"Cyberspace was the kindling in the fire of the battle," hard-line cleric Ayatollah Ahmad Khatami recently told worshippers at Friday prayers in Tehran. "When cyberspace was closed down, the sedition was stopped. The nation does not support a social network that has its key in the hands of the United States."</p>

<b>HEADLINE</b>	<b>01/27 ATM makers warn of 'jackpotting' hacks</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-cyber-atms-usa/atm-makers-warn-of-jackpotting-hacks-on-u-s-machines-idUSKBN1FG0WU">https://www.reuters.com/article/us-cyber-atms-usa/atm-makers-warn-of-jackpotting-hacks-on-u-s-machines-idUSKBN1FG0WU</a>
<b>GIST</b>	<p>(Reuters) - Diebold Nixdorf Inc and NCR Corp, two of the world's largest ATM makers, have warned that cyber criminals are targeting U.S. cash machines with tools that force them to spit out cash in hacking schemes known as "jackpotting."</p> <p>The two ATM makers did not identify any victims or say how much money had been lost. Jackpotting has been rising worldwide in recent years, though it is unclear how much cash has been stolen because victims and police often do not disclose details.</p> <p>The attacks were reported earlier on Saturday by the security news website Krebs on Security, which said they had begun last year in Mexico.</p> <p>The companies confirmed to Reuters on Saturday they had sent out the alerts to clients.</p> <p>NCR said in a Friday alert that the cases were the first confirmed "jackpotting" losses in the United States. It said its equipment had not been targeted in the recent attacks, but that it was still a concern for the entire ATM industry.</p> <p>"This should be treated by all ATM deployers as a call to action to take appropriate steps to protect their ATMs against these forms of attack," the alert said.</p> <p>Diebold Nixdorf said in a separate Friday alert that U.S. authorities had warned the company that hackers were targeting one of its ATM models, known as Opteva, which went out of production several years ago.</p> <p>A confidential U.S. Secret Service alert sent to banks said the hackers targeted stand-alone ATMs typically located in pharmacies, big box retailers and drive-thru ATMs, Krebs on Security reported.</p> <p>Diebold Nixdorf's alert described steps that criminals had used to compromise ATMs. They include gaining physical access, replacing the hard drive and using an industrial endoscope to depress an internal</p>

	<p>button required to reset the device.</p> <p>Reuters was unable to obtain a copy of the Secret Service report and an agency representative declined comment. Officials with the Federal Bureau of Investigation could not immediately be reached.</p> <p>Russian cyber security firm Group IB has reported that cyber criminals remotely attacked cash machines in more than a dozen countries across Europe in 2016. Similar attacks were also reported that year in Thailand and Taiwan.</p>

<b>HEADLINE</b>	<b>01/27 Inside social media black market</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/interactive/2018/01/27/technology/social-media-bots.html">https://www.nytimes.com/interactive/2018/01/27/technology/social-media-bots.html</a>
<b>GIST</b>	<p>THE REAL JESSICA RYCHLY is a Minnesota teenager with a broad smile and wavy hair. She likes reading and the rapper Post Malone. When she goes on Facebook or Twitter, she sometimes muses about being bored or trades jokes with friends. Occasionally, like many teenagers, she posts a duck-face selfie.</p> <p>But on Twitter, there is a version of Jessica that none of her friends or family would recognize. While the two Jessicas share a name, photograph and whimsical bio — “I have issues” — the other Jessica promoted accounts hawking Canadian real estate investments, cryptocurrency and a radio station in Ghana. The fake Jessica followed or retweeted accounts using Arabic and Indonesian, languages the real Jessica does not speak. While she was a 17-year-old high school senior, her fake counterpart frequently promoted graphic pornography, retweeting accounts called Squirtamania and Porno Dan.</p> <p>All these accounts belong to customers of an obscure American company named Devumi that has collected millions of dollars in a shadowy global marketplace for social media fraud. Devumi sells Twitter followers and retweets to celebrities, businesses and anyone who wants to appear more popular or exert influence online. Drawing on an estimated stock of at least 3.5 million automated accounts, each sold many times over, the company has provided customers with more than 200 million Twitter followers, a New York Times investigation found.</p> <p>The accounts that most resemble real people, like Ms. Rychly, reveal a kind of large-scale social identity theft. At least 55,000 of the accounts use the names, profile pictures, hometowns and other personal details of real Twitter users, including minors, according to a Times data analysis.</p> <p>Jessica Rychly, whose social identity was stolen by a Twitter bot when she was in high school. “I don’t want my picture connected to the account, nor my name,” Ms. Rychly, now 19, said. “I can’t believe that someone would even pay for it. It is just horrible.”</p> <p>These accounts are counterfeit coins in the booming economy of online influence, reaching into virtually any industry where a mass audience — or the illusion of it — can be monetized. Fake accounts, deployed by governments, criminals and entrepreneurs, now infest social media networks. By some calculations, as many as 48 million of Twitter’s reported active users — nearly 15 percent — are automated accounts designed to simulate real people, though the company claims that number is far lower.</p> <p>In November, Facebook disclosed to investors that it had at least twice as many fake users as it previously estimated, indicating that up to 60 million automated accounts may roam the world’s largest social media platform. These fake accounts, known as bots, can help sway advertising audiences and reshape political debates. They can defraud businesses and ruin reputations. Yet their creation and sale fall into a legal gray zone.</p> <p>“The continued viability of fraudulent accounts and interactions on social media platforms — and the professionalization of these fraudulent services — is an indication that there’s still much work to do,” said Senator Mark Warner, the Virginia Democrat and ranking member of the Senate Intelligence Committee, which has been investigating the spread of fake accounts on Facebook, Twitter and other platforms.</p>

Despite rising criticism of social media companies and growing scrutiny by elected officials, the trade in fake followers has remained largely opaque. While Twitter and other platforms prohibit buying followers, Devumi and dozens of other sites openly sell them. And social media companies, whose market value is closely tied to the number of people using their services, make their own rules about detecting and eliminating fake accounts.

Devumi's founder, German Calas, denied that his company sold fake followers and said he knew nothing about social identities stolen from real users. "The allegations are false, and we do not have knowledge of any such activity," Mr. Calas said in an email exchange in November.

The Times reviewed business and court records showing that Devumi has more than 200,000 customers, including reality television stars, professional athletes, comedians, TED speakers, pastors and models. In most cases, the records show, they purchased their own followers. In others, their employees, agents, public relations companies, family members or friends did the buying. For just pennies each — sometimes even less — Devumi offers Twitter followers, views on YouTube, plays on SoundCloud, the music-hosting site, and endorsements on LinkedIn, the professional-networking site.

The actor John Leguizamo has Devumi followers. So do Michael Dell, the computer billionaire, and Ray Lewis, the football commentator and former Ravens linebacker. Kathy Ireland, the onetime swimsuit model who today presides over a half-billion-dollar licensing empire, has hundreds of thousands of fake Devumi followers, as does Akbar Gbajabiamila, the host of the show "American Ninja Warrior." Even a Twitter board member, Martha Lane Fox, has some.

At a time when Facebook, Twitter and Google are grappling with an epidemic of political manipulation and fake news, Devumi's fake followers also serve as phantom foot soldiers in political battles online. Devumi's customers include both avid supporters and fervent critics of President Trump, and both liberal cable pundits and a reporter at the alt-right bastion Breitbart. Randy Bryce, an ironworker seeking to unseat Representative Paul Ryan of Wisconsin, purchased Devumi followers in 2015, when he was a blogger and labor activist. Louise Linton, the wife of the Treasury secretary, Steven Mnuchin, bought followers when she was trying to gain traction as an actress.

Devumi's products serve politicians and governments overseas, too. An editor at China's state-run news agency, Xinhua, paid Devumi for hundreds of thousands of followers and retweets on Twitter, which the country's government has banned but sees as a forum for issuing propaganda abroad. An adviser to Ecuador's president, Lenín Moreno, bought tens of thousands of followers and retweets for Mr. Moreno's campaign accounts during last year's elections.

Kristin Binns, a Twitter spokeswoman, said the company did not typically suspend users suspected of buying bots, in part because it is difficult for the business to know who is responsible for any given purchase. Twitter would not say whether a sample of fake accounts provided by The Times — each based on a real user — violated the company's policies against impersonation.

"We continue to fight hard to tackle any malicious automation on our platform as well as false or spam accounts," Ms. Binns said.

Unlike some social media companies, Twitter does not require accounts to be associated with a real person. It also permits more automated access to its platform than other companies, making it easier to set up and control large numbers of accounts.

"Social media is a virtual world that is filled with half bots, half real people," said Rami Essaid, the founder of Distil Networks, a cybersecurity company that specializes in eradicating bot networks. "You can't take any tweet at face value. And not everything is what it seems."

Including, it turns out, Devumi itself.

Last year, three billion people logged on to social media networks like Facebook, WhatsApp and China's Sina Weibo. The world's collective yearning for connection has not only reshaped the Fortune 500 and upended the advertising industry but also created a new status marker: the number of people who follow, like or "friend" you. For some entertainers and entrepreneurs, this virtual status is a real-world currency. Follower counts on social networks help determine who will hire them, how much they are paid for bookings or endorsements, even how potential customers evaluate their businesses or products.

High follower counts are also critical for so-called influencers, a budding market of amateur tastemakers and YouTube stars where advertisers now lavish billions of dollars a year on sponsorship deals. The more people influencers reach, the more money they make. According to data collected by Captiv8, a company that connects influencers to brands, an influencer with 100,000 followers might earn an average of \$2,000 for a promotional tweet, while an influencer with a million followers might earn \$20,000.

Genuine fame often translates into genuine social media influence, as fans follow and like their favorite movie stars, celebrity chefs and models. But shortcuts are also available: On sites like Social Envy and DIYLikes.com, it takes little more than a credit-card number to buy a huge following on almost any social media platform. Most of these sites offer what they describe as "active" or "organic" followers, never quite stating whether real people are behind them. Once purchased, the followers can be a powerful tool.

"You see a higher follower count, or a higher retweet count, and you assume this person is important, or this tweet was well received," said Rand Fishkin, the founder of Moz, a company that makes search engine optimization software. "As a result, you might be more likely to amplify it, to share it or to follow that person."

Twitter and Facebook can be similarly influenced. "Social platforms are trying to recommend stuff — and they say, 'Is the stuff we are recommending popular?'" said Julian Tempelman, the co-founder of Smyte, a security firm that helps companies combat online abuse, bots and fraud. "Follower counts are one of the factors social media platforms use."

Search on Google for how to buy more followers, and Devumi often turns up among the first results. Visitors are greeted by a polished website listing a Manhattan address, displaying testimonials from customers and a money-back guarantee. Best of all, Devumi claims, the company's products are blessed by the platform for which they are selling followers. "We only use promotion techniques that are Twitter approved so your account is never at risk of getting suspended or penalized," Devumi's website promises.

To better understand Devumi's business, we became a customer. In April, The Times set up a test account on Twitter and paid Devumi \$225 for 25,000 followers, or about a penny each. As advertised, the first 10,000 or so looked like real people. They had pictures and full names, hometowns and often authentic-seeming biographies. One account looked like that of Ms. Rychly, the young Minnesota woman.

But on closer inspection, some of the details seemed off. The account names had extra letters or underscores, or easy-to-miss substitutions, like a lowercase "l" in place of an uppercase "I."

The next 15,000 followers from Devumi were more obviously suspect: no profile pictures, and jumbles of letters, numbers and word fragments instead of names.

In August, a Times reporter emailed Mr. Calas, asking if he would answer questions about Devumi. Mr. Calas did not respond. Twitter forbids selling or buying followers or retweets, and Devumi promises customers absolute discretion. "Your info is always kept confidential," the company's website reads. "Our followers look like any other followers and are always delivered naturally. The only way anyone will know is if you tell them."

But company records reviewed by The Times revealed much of what Devumi and its customers prefer to conceal.

Most of Devumi's best-known buyers are selling products, services or themselves on social media. In

interviews, their explanations varied. They bought followers because they were curious about how it worked, or felt pressure to generate high follower counts for themselves or their customers. “Everyone does it,” said the actress Deirdre Lovejoy, a Devumi customer.

While some said they believed Devumi was supplying real potential fans or customers, others acknowledged that they knew or suspected they were getting fake accounts. Several said they regretted their purchases.

“It’s fraud,” said James Cracknell, a British rower and Olympic gold medalist who bought 50,000 followers from Devumi. “People who judge by how many likes or how many followers, it’s not a healthy thing.”

Ms. Ireland has over a million followers on Twitter, which she often uses to promote companies with whom she has endorsement deals. The Wisconsin-based American Family Insurance, for example, said that the former model was one of its most influential Twitter “brand ambassadors,” celebrities who are paid to help promote products.

But in January last year, Ms. Ireland had only about 160,000 followers. The next month, an employee at the branding agency she owns, Sterling/Winters, spent about \$2,000 for 300,000 more followers, according to Devumi records. The employee later made more purchases, he acknowledged in an interview. Much of Ms. Ireland’s Twitter following appears to consist of bots, a Times analysis found.

A spokeswoman said that the employee had acted without Ms. Ireland’s authorization and had been suspended after The Times asked about the purchases. “I’m sure he thought he was fulfilling his duties, but it’s not something he should have done,” said the spokeswoman, Rona Menashe.

Over two years, the Democratic public relations consultant and CNN contributor Hilary Rosen bought more than a half-million fake followers from Devumi. Ms. Rosen previously spent more than a decade as head of the Recording Industry Association of America. In an interview, she described the purchases as “an experiment I did several years ago to see how it worked.” She made more than a dozen purchases of followers from 2015 to 2017, according to company records.

Other buyers said they had faced pressure from employers to generate social media followers. Marcus Holmlund, a young freelance writer, was at first thrilled when Wilhelmina, the international modeling agency, hired him to manage its social media efforts. But when Wilhelmina’s Twitter following didn’t grow fast enough, Mr. Holmlund said, a supervisor told him to buy followers or find another job. In 2015, despite misgivings, he began making monthly Devumi purchases out of his own pocket.

“I felt stuck with the threat of being fired, or worse, never working in fashion again,” said Mr. Holmlund, who left in late 2015. “Since then, I tell anyone and everyone who ever asks that it’s a total scam — it won’t boost their engagement.” (A Wilhelmina spokeswoman declined to comment.)

Several Devumi customers acknowledged that they bought bots because their careers had come to depend, in part, on the appearance of social media influence. “No one will take you seriously if you don’t have a noteworthy presence,” said Jason Schenker, an economist who specializes in economic forecasting and has purchased at least 260,000 followers.

Not surprisingly, Devumi has sold millions of followers and retweets to entertainers on the lower and middle rungs of Hollywood, such as the actor Ryan Hurst, a star of the television series “Sons of Anarchy.” In 2016 and 2017, he bought a total of 750,000 followers, about three-quarters of his current count. It cost less than \$4,000, according to company records. Mr. Hurst did not respond to multiple requests for comment.

Devumi also sells bots to reality television stars, who can parlay fame into endorsement and appearance fees. Sonja Morgan, a cast member on the Bravo show “The Real Housewives of New York City,” uses her Devumi-boosted Twitter feed to promote her fashion line, a shopping app and a website that sells

personalized “video shout-outs.” One former “American Idol” contestant, Clay Aiken, even paid Devumi to spread a grievance: his customer service complaint against Volvo. Devumi bots retweeted his complaint 5,000 times.

Mr. Aiken and Ms. Morgan did not respond to requests for comment.

More than a hundred self-described influencers — whose market value is even more directly linked to their follower counts on social media — have purchased Twitter followers from Devumi. Justin Blau, a popular Las Vegas-based D.J. who performs as 3LAU, acquired 50,000 followers and thousands of retweets. In an email, Mr. Blau said a former member of his management team bought them without his approval.

At least five Devumi influencer customers are also contractors for HelloSociety, an influencer agency owned by The New York Times Company. (A Times spokeswoman said the company sought to verify that the audience of each contractor was legitimate and would not do business with anyone who violated that standard.) Lucas Peterson, a freelance journalist who writes a travel column for The Times, also bought followers from Devumi.

Influencers need not be well known to rake in endorsement money. According to a recent profile in the British tabloid The Sun, two young siblings, Arabella and Jaadin Daho, earn a combined \$100,000 a year as influencers, working with brands such as Amazon, Disney, Louis Vuitton and Nintendo. Arabella, who is 14, tweets under the name Amazing Arabella.

But her Twitter account — and her brother’s — are boosted by thousands of retweets purchased by their mother and manager, Shadia Daho, according to Devumi records. Ms. Daho did not respond to repeated attempts to reach her by email and through a public relations firm.

While Devumi sells millions of followers directly to celebrities and influencers, its customers also include marketing and public relations agencies, which buy followers for their own customers. Phil Pallen, a brand strategist based in Los Angeles, offers customers “growth & ad campaigns” on social media. At least a dozen times, company records show, Mr. Pallen has paid Devumi to deliver those results. Beginning in 2014, for example, he purchased tens of thousands of followers for Lori Greiner, the inventor and “Shark Tank” co-host.

Marketing consultants sometimes buy followers for themselves, too, in effect purchasing the evidence of their supposed expertise. In 2015, Jeetendr Sehdev, a former adjunct professor at the University of Southern California who calls himself “the world’s leading celebrity branding authority,” began buying hundreds of thousands of fake followers from Devumi.

He did not respond to requests for comment. But in his recent best-selling book, “The Kim Kardashian Principle: Why Shameless Sells,” he had a different explanation for his rising follower count. “My social media following exploded,” Mr. Sehdev claimed, because he had discovered the true secret to celebrity influence: “Authenticity is the key.”

Scattered around the web is an array of obscure websites where anonymous bot makers around the world connect with retailers like Devumi. While individual customers can buy from some of these bare-boned sites — Peakerr, CheapPanel and YTbot, among others — they are less user-friendly. Some, for example, do not accept credit cards, only cryptocurrencies like Bitcoin.

But each site sells followers, likes and shares in bulk, for a variety of social media platforms and in different languages. The accounts they sell may change hands repeatedly. The same account may even be available from more than one seller.

Devumi, according to one former employee, sourced bots from different bot makers depending on price, quality and reliability. On Peakerr, for example, 1,000 high-quality, English-language bots with photos costs a little more than a dollar. Devumi charges \$17 for the same quantity.

The price difference has allowed Mr. Calas to build a small fortune, according to company records. In just a few years, Devumi sold about 200 million Twitter followers to at least 39,000 customers, accounting for a third of more than \$6 million in sales during that period.

Last month, Mr. Calas asked for examples of bots The Times found that copied real users. After receiving the names of 10 accounts, Mr. Calas, who had agreed to an interview, asked for more time to analyze them. Then he stopped responding to emails.

Ms. Binns, the Twitter spokeswoman, said the company did not proactively review accounts to see if they were impersonating other users. Instead, the company's efforts are focused on identifying and suspending accounts that violate Twitter's spam policies. In December, for example, the company identified an average of 6.4 million suspicious accounts each week, she said.

All of the sample accounts provided by The Times violated Twitter's anti-spam policies and were shut down, Ms. Binns said. "We take the action of suspending an account from the platform very seriously," she said. "At the same time, we want to aggressively fight spam on the platform."

The company also suspended Devumi's account on Saturday after the Times article was published online.

Yet Twitter has not imposed seemingly simple safeguards that would help throttle bot manufacturers, such as requiring anyone signing up for a new account to pass an anti-spam test, as many commercial sites do. As a result, Twitter now hosts vast swaths of unused accounts, including what are probably dormant accounts controlled by bot makers.

Former employees said the company's security team for many years was more focused on abuse by real users, including racist and sexist content and orchestrated harassment campaigns. Only recently, they said, after revelations that Russia-aligned hackers had deployed networks of Twitter bots to spread divisive content and junk news, has Twitter turned more attention to weeding out fake accounts.

Leslie Miley, an engineer who worked on security and user safety at Twitter before leaving in late 2015, said, "Twitter as a social network was designed with almost no accountability."

Some critics believe Twitter has a business incentive against weeding out bots too aggressively. Over the past two years, the company has struggled to generate the user growth seen by rivals like Facebook and Snapchat. And outside researchers have disputed the company's estimates for how many of its active users are actually bots.

"We're working with completely unregulated, closed ecosystems that aren't reporting on these things. They have a perverse incentive to let it happen," said Mr. Essaid, the cybersecurity expert. "They want to police it to the extent it doesn't seem obvious, but they make money off it."

In January, after almost two years of promoting hundreds of Devumi customers, the fake Jessica Rychly account was finally flagged by Twitter's security algorithms. It was recently suspended.

But the real Ms. Rychly may soon leave Twitter for good.

"I am probably just going to delete my Twitter account," she said.

HEADLINE	01/26 DHS cyber info-sharing tool reboot
SOURCE	<a href="http://www.defenseone.com/technology/2018/01/dhs-cyber-info-sharing-tool-get-reboot-year/145517/?oref=d-channeltop">http://www.defenseone.com/technology/2018/01/dhs-cyber-info-sharing-tool-get-reboot-year/145517/?oref=d-channeltop</a>
GIST	The Homeland Security Department plans to update its system for automatically sharing cybersecurity

threat information with companies, critical infrastructure providers and other federal agencies this coming summer or fall, a top official said Thursday.

More than 200 organizations have signed up to automatically receive the indicators, but most of them aren't using that information to automatically block malicious traffic into their networks, Jeanette Manfra, assistant secretary in Homeland Security's Office of Cybersecurity and Communications, said.

Generally, that's because customer organizations say the indicators don't include enough information for them to determine what's truly relevant, Manfra told an audience at the industry group US Telecom's cybersecurity policy forum.

Homeland Security hopes to remedy that with the update, she said.

"If you're not automating the whole ... process, it's not really getting us to that next level of automated defense," Manfra said.

Homeland Security launched its automated indicator sharing program in March 2016, after it was authorized by Congress in a major 2015 cybersecurity bill. The list of indicator recipients includes all major federal agencies.

The update will also include a capability for customers to provide automated feedback to Homeland Security about what they're doing with the cyber threat indicators the department passes along and how useful they are, Manfra said.

The automated indicator sharing update will come at roughly the same time as an update to the technical standards, known as STIX and TAXII, that define how the government and other organizations share cyber threat information, Manfra said.

STIX stands for "Structured Threat Information eXpression" and TAXII stands for "Trusted Automated eXchange of Indicator Information."

## Terror Conditions

[Top of page](#)

<b>HEADLINE</b>	<b>01/27 Terror organization: Haqqani Network</b>
<b>SOURCE</b>	<a href="http://www.timesnownews.com/international/article/kabul-ambulance-attack-bomb-blast-afghanistan-haqqani-network-taliban-pakistan-us-india/192955">http://www.timesnownews.com/international/article/kabul-ambulance-attack-bomb-blast-afghanistan-haqqani-network-taliban-pakistan-us-india/192955</a>
<b>GIST</b>	<p>Afghanistan on Saturday blamed a devastating suicide bomb attack in Kabul that killed at least 95 people and wounded 158 others on the Taliban-affiliated Haqqani Network, former CIA assets now considered one of the most dangerous factions fighting US-led NATO forces in Afghanistan.</p> <p>Led by Sirajuddin Haqqani, who doubles as the Afghan Taliban's deputy leader, the extremist group has been blamed for spectacular attacks across Afghanistan since after the US invasion.</p> <p>Kabul ambulance bomb attack: 95 killed, 163 wounded; Afghanistan govt holds Haqqani network responsible</p> <p>Long suspected of links to Pakistan's shadowy military establishment, the network was described by US Admiral Mike Mullen in 2011 as a "veritable arm" of Pakistani intelligence.</p> <p>"When you hear US officials, including in private settings, talking about what worries them the most, they always talk about the Haqqanis," said analyst Michael Kugelman, of the Wilson Center in Washington.</p> <p>Who are they?</p> <p>The group was founded by Jalaluddin Haqqani, an Afghan mujahideen commander fighting the Soviet occupation of Afghanistan in the 1980s with the help of the US and Pakistan.</p>

Jalaluddin gained notoriety for his organisation and bravery, garnering attention from the CIA and a personal visit from US congressman Charlie Wilson.

A fluent Arabic speaker, Jalaluddin also fostered close ties with Arab jihadists including Osama Bin Laden who flocked to the region during the war. Later, Jalaluddin became a minister in the Taliban regime.

Now designated a terrorist group by the US, the Haqqanis are known for their heavy use of suicide bombers.

They were blamed for the truck bomb in the heart of Kabul in May that killed around 150 people -- though Sirajuddin later denied the accusation in a rare audio message.

The network has also been accused of assassinating top Afghan officials and holding kidnapped Westerners for ransom.

That includes recently released Canadian Joshua Boyle, his American wife Caitlan Coleman, and their three children -- all born in captivity -- as well as US soldier Bowe Bergdahl, who was released in 2014.

Where are they now?

Following the US invasion of Afghanistan, Taliban fighters flooded across the border into Pakistan, where they regrouped before launching an insurgency against the Americans.

That included the Haqqanis, who coordinated attacks on NATO from across the border in their stronghold of Miran Shah, the biggest town in North Waziristan, one of Pakistan's semi-autonomous border tribal areas.

The US has launched repeated drone attacks targeting the group while Pakistan's military has conducted successive clearing operations, though sceptical Afghan officials have noted they always seemed to miss the Haqqanis.

Pakistan intensified a military operation in the area in 2014, however, and some militant sources say the pressure has forced many of the Haqqanis underground or over the border into their Afghan strongholds, claims that AFP could not confirm.

Why are they linked to Pakistan?

Pakistan sees its arch-nemesis to the east, India, as an existential threat, and has long sought influence over Kabul as a bulwark against Delhi.

The Haqqanis have frequently been accused of targeting Indian installations in Afghanistan, spurring speculation they were overseen by Pakistani intelligence agencies.

"For Pakistan, the calculus comes down to India," said Kugelman.

"It views the Haqqanis and also more broadly the Afghan Taliban as a useful asset to help push back against the presence of India in Afghanistan."

Politicians and retired military officials in Islamabad acknowledge privately that having open channels with the Haqqanis is vital.

Some stressed the nature of the connection. "There's a difference between contact and supporting them or being part of them," Mehmood Shah, a retired brigadier who worked in Pakistan's tribal areas, told AFP.

What does the US want Pakistan to do?

Washington has long pressured Pakistan to crack down on militant groups, with the Haqqanis a top priority.

US President Donald Trump turned up the heat last summer when he accused Pakistan of playing a double game in Afghanistan and upbraided Islamabad for sheltering "agents of chaos".

Islamabad has repeatedly denied the claims and accused Washington of ignoring the thousands of Pakistani lives lost in its struggle with militancy.

The recovery of Boyle, Coleman, and their children came weeks later, with Pakistan using its role in securing their freedom to urge the US to trust it is doing its best.

But -- Pakistan's desire for strategic depth aside -- a crackdown on the Haqqanis might not be easy in a tribal society where social relations matter, warned Pakistani political analyst Imtiaz Gul.

"You can't simply pluck out somebody because they've gone politically incorrect," he said.

<b>HEADLINE</b>	<b>01/28 Study: ISIS media network</b>
<b>SOURCE</b>	<a href="http://www.terrorism-info.org.il/en/isiss-media-network-era-fall-islamic-state/">http://www.terrorism-info.org.il/en/isiss-media-network-era-fall-islamic-state/</a>
<b>GIST</b>	<p>This study analyzes ISIS's media network in view of rise and the fall of the Islamic State and to an essential change in ISIS's nature (the transition from the Islamic State to a terrorist organization).</p> <p>The loss of territories and resources, which accelerated in 2017, struck a hard blow to ISIS's media network. At the same time, there have been signs of a recovery in recent months, at the beginning of the new era after the fall of the Islamic State.</p> <p>The signs of the blow dealt to ISIS's media network include the hiatus in the activities of its media platforms or their irregular appearance; a significant reduction in the volume of publications produced; the inferior quality and reduced quantity of publications and the changes in their contents. The changes included shorter reports; a defensive tone; late reporting and late claims of responsibility; inaccuracies and exaggerations; problems with the translation of titles and headlines from Arabic to English and in the quality and quantity of videos and pictures. However, there was also an increase in the number of calls to ISIS operatives around to globe to carry out attacks and calls to operatives in Syria and Iraq to be patient and persevere in the struggle, in view of the difficulties facing ISIS.</p> <p>The height of ISIS's media activities was in 2014 and 2015. During that era, which began when ISIS was established and split from al-Qaeda, the organization's morale rose and its military and financial situation improved, peaking with the conquest of the city of Mosul in Iraq and the establishment of the Islamic State (June 2014). At that time ISIS established a media network that was of high quality, effective and centralized, operated by the Islamic State's "Central Media Department." It employed skilled professionals, some of whom came to Syria from Western countries. At the time they produced very high-quality videos that resounded greatly around the globe.</p> <p>At its height, the media network went from local to global. Traditional channels were increased to include extensive media activity that sought to reach target audiences around the globe. They also used languages other than Arabic, primarily English. European languages were complemented with languages spoken by Muslims countries and communities, such as Turkish, Indonesian, the Turkic language spoken by the Uyghur minority in China and Pashto, spoken in Afghanistan. Extensive activity was also conducted on the social networks, particularly Twitter, used as a platform to disseminate ISIS media materials. At ISIS's height its media products dealt with boasting about the Islamic State's governance and its conduct as a living, functioning body that dealt with civilian life as well as fighting. It also encouraged operatives from around the globe to enlist in the ranks of the Islamic State and represented the "new Caliphate" as the</p>

embodiment of pure, utopian Islam.

In 2016 and 2017, as the Islamic State suffered blow after blow, there was a gradual, significant decline in the quantity and quality of ISIS's publications. Some of the reasons were the following: the killing of some of its senior media figures; the general lack of financial resources, which influenced the resources allotted for its media; and the Islamic State's loss of territory and population centers (especially the fall of al-Raqqā and Mosul, where the media network's main centers were located). In addition, even at the height of its activity, ISIS was forced to deal with intensive activity conducted against it by the managements of Twitter, Facebook and YouTube, and with cyber attacks that toppled sites.

Only towards the end of 2017, at the beginning of the post-Islamic State era, did ISIS's media network begin showing significant signs of recovery. ISIS reconstructed most of its websites and its affiliated propaganda institutions, and began issuing more updated and better quality products. Its recovery is noticeable both in its central media outlets (which continue to be dominant) and in the local media materials disseminated by its provinces in Syria, Iraq, and abroad. It is evident in the provinces in Syria and Iraq where, after the fall of Islamic State, it again conducts guerrilla and terrorist activities. Most prominent are its media activities in the Sinai and Khorasan (Afghanistan/Pakistan) Provinces, in full adaption with its intensive attacks in those provinces. However, the extent and quality of ISIS's current media have not yet returned to the status quo ante.

Below are ISIS's propaganda platforms operating today (updated to the middle of January 2018). Some of them officially belong to ISIS. Most of them do not but their contents are clearly affiliated with ISIS.

- ISIS's news agencies: the most important is the A'maq News Agency. Others include Moata, the provinces' news network (WNN) and al-Qarar.
- Institutions for the production and distribution of propaganda material: the most important institution is al-Hayat, the production wing of the Central Media Department. Others include al-Furqan Media Foundation, al-Ajnad Foundation for Media Production and the Rimah Foundation.
- ISIS-affiliated websites: the most important is Akhbar al-Muslimin. Another is al-Sawarim.
- Internet magazines: ISIS's main internet magazine is the weekly al-Nabā'. A less important one is al-Anfāl.
- ISIS's internet radio station: Radio al-Bayan.
- Local media offices in the various provinces: In the past such offices were responsible for the dissemination of most of ISIS's media material. At least some of them continue to operate.

In addition, there are media platforms, some of them important, which ceased their operations. They include the Haqq website, the monthly magazine Rumiyaḥ, the magazine Dabiq, the al-I'tisam Media Foundation and the al-Ansar site. Some of the platforms will return to operations as ISIS reconstructs its operational and propaganda capabilities.

Even at the height of its power ISIS's media network was forced to reduce and later completely end its presence on popular social networks such as Twitter, Facebook and YouTube. That was mainly the result of activity taken against them by the networks' managements. As a result ISIS and its supporters often use the encrypted Telegram application, which enables groups of ISIS operatives to communicate anonymously. That provides a certain solution for communication with ISIS operatives and provinces around the globe, but at the price of the difficulty of disseminating propaganda to a larger audience and spreading its messages through general discussions on the social networks.

The materials produced by ISIS's media network indicate that even after the fall of the Islamic State, ISIS remains, in its own eyes and those of its provinces, a global jihadist organization whose activity is not limited to Iraq and Syria (still its core states). ISIS regards its local and global media network as very important for the following reasons: it enables ISIS to remain relevant as one an important jihadist

organization; it enables ISIS to maintain ties with operatives and provinces abroad, to continue issuing information about its operational activity, to send ideological messages to its supporters and to Muslim communities around the globe and to wage a campaign of incitement whose objective is to motivate Muslim supporters to carry out local terrorist attacks (ISIS-inspired attacks).

The threat of ISIS's global terrorism did not end with the fall of the Islamic State, and it is possible that it will grow in the future. That is because ISIS is not currently staggering under the load of the routine management of the Islamic State, defending its borders and providing for the needs of the inhabitants. Moreover, now that the Islamic State has fallen, ISIS and its provinces will be motivated to prove they are still relevant. ISIS's recovering media network is a vital branch in the structure of the provinces in Syria, Iraq and abroad. ISIS can use it to call on its supporters in the Muslim countries around the globe to carry out independent terrorist attacks. That incitement, to which ISIS gives an important place in its publications for foreign audiences, has proven itself as fruitful and fueled the ISIS-inspired attacks around the globe, especially in the West.

<b>HEADLINE</b>	<b>01/27 Group helps identify fleeing ISIS</b>
<b>SOURCE</b>	<a href="http://www.cbc.ca/news/world/sound-and-picture-identifies-isis-fighters-1.4503905">http://www.cbc.ca/news/world/sound-and-picture-identifies-isis-fighters-1.4503905</a>
<b>GIST</b>	<p>As ISIS militants flee their falling strongholds, a Syrian human rights group is trying to track them and make sure they don't infiltrate other parts of the world.</p> <p>"We want to get justice," says Mohammad Kheder, 31, CEO of Sound and Picture, which works with the Free Syrian Army (FSA) to identify ISIS fighters.</p> <p>But human rights observers are concerned about whether suspected militants get due process.</p> <p>Kheder, who was a math teacher, lived under ISIS for a year after the militant group took control of his hometown al-Bukamal, near the Iraqi border, in 2014. Then he moved his family to Turkey, where they</p>

spent a few months, before being granted asylum in Germany in 2016.

Sitting at his home now, with a Syrian flag on the wall behind him, Kheder reminisces over what his city and many others looked like before ISIS took over.

"They were very beautiful cities, very colourful cities. After that, ISIS came and stole those cities. They made it black," Kheder said via Skype. "We just want to give the justice to those people who suffered under ISIS control."

Kheder founded Sound and Picture in January 2015 to document human rights abuses by ISIS and other extremist groups — information it provides to media and NGOs free of charge.

Kheder's brother Aghiad was among the organization's first 24 members, who began operating on the ground in Raqqa and Deir ez-Zor, and in the countryside of Hasakah, Aleppo and Homs, covering almost half of the country in the east. The group has grown to a network of 75 and extended its coverage to ISIS-controlled territories in Iraq.

"We believe that if we want to fight against the radical ideology of ISIS, we have to fight it all over their territories," says Kheder.

Using WhatsApp to ID militants

Between June and October 2017, when the U.S.-backed forces drove ISIS out of Raqqa, many of the militants headed for Aleppo and across the border to Turkey.

When the Turkish-backed FSA established roadside checkpoints in the area, guards set up a group chat with Sound and Picture using the WhatsApp messaging service.

"They needed to know who is [an] ISIS member and who is just civilian," Kheder said.

Every man who arrives at one of the checkpoints has his name and photo taken, which guards send to the WhatsApp group.

"We have to be 100 per cent sure before saying anything," says Kheder.

Kheder understands the implications of his organization's work and says great care is taken in making identifications, requiring input from multiple Sound and Picture members on the ground.

"We don't take the information from one source," he explains.

The group has built a database by collecting as much information as possible about each suspected ISIS member. And the intelligence gathering isn't limited to men. About 30 per cent of Sound and Picture's members are female and trained to collect information on women.

Sound and Picture says it has identified hundreds of ISIS members trying to flee through FSA checkpoints — most of them are locals, but there are also nationals from Egypt, Morocco, Saudi Arabia, Tunisia and France.

In June 2017 when a Montreal woman contacted Sound and Picture about her daughter, Kheder recognized the daughter's husband — a German ISIS fighter known by the nom de guerre Abu Salaheddin.

"He was in al-Bukamal, and since I am originally from al-Bukamal, we could identify the neighbourhood he was in," explains Kheder.

Abu Abd al-Rahman, a commander of the FSA group Ahrar al-Sharqiya, confirmed to CBC News, via WhatsApp, that his group arrests suspected ISIS fighters identified by "trusted sources."

Sound and Picture's involvement ends with the identification. Any suspected ISIS members are taken into custody — and that's where things get murky. The FSA is the only group Sound and Picture works with, but it isn't the only rebel group on the ground.

Areas in Northern Syria are controlled by various FSA, Syrian Democratic Forces and Turkish-backed rebel groups, who are often in conflict with one another. No one group has jurisdiction.

Because of the patchwork of jurisdictional control, it's unclear what happens to the detainees.

Nadim Houry, director of the terrorism and counterterrorism program at Human Rights Watch (HRW), has visited a detention centre in a Kurdish-run part of Syria. While he declined to speak specifically about Sound and Picture, he says it's fine to use civilian tips to identify ISIS members, but he's concerned about due process.

"The question is, will there be a local process to check this information, a chance for the person to defend themselves, cross-check it, make sure the information is accurate?" says Houry.

"There is a huge need for justice and accountability in these areas," he says. "There have been a lot of abuses committed by all sorts of different parties. And there's a danger that in the absence of real justice mechanisms, we end up with various revenge mechanisms."

Kheder is also cognizant about the pitfalls of this process.

"Even ISIS members have to be dealt with in a civilized way," he says. "If we deal with former ISIS members in the same way that ISIS members dealt with civilians, then we are the same."

Kheder says detainees in this part of the world aren't treated the way they are in Western countries, and he too worries about human rights abuses in detention centres.

<b>HEADLINE</b>	<b>01/29 Terror plotter seeks deportation not jail</b>
<b>SOURCE</b>	<a href="https://apnews.com/cf624e392bcb4a65824eea887d4e1cd9/Man-accused-in-terror-plot-asked-for-deportation-over-prison">https://apnews.com/cf624e392bcb4a65824eea887d4e1cd9/Man-accused-in-terror-plot-asked-for-deportation-over-prison</a>
<b>GIST</b>	<p>COLUMBUS, Ohio (AP) — A man accused of plotting an attack on a federal medical facility in Texas asked a judge in December to deport him instead of sending him to prison, saying he didn't deserve to spend time behind bars, records show.</p> <p>Abdirahman Sheik Mohamud told federal Judge Michael Watson that he didn't want to leave his family but called his proposal "completely fair and just."</p> <p>"I truly don't believe I deserve prison at all," Mohamud said in the Dec. 12 letter, filed in the official court record on Thursday.</p> <p>He added: "So if the concern is risk assessment then deportation would set everyone's hearts at ease."</p> <p>Mohamud, who was born in Somalia and came to the U.S. at 2 years old, may eventually get his wish.</p> <p>After Mohamud was sentenced to 22 years in prison last week, the local Homeland Security Investigations office said it would seek to strip him of his citizenship and deport him to Somalia.</p> <p>At sentencing on Jan. 22, Mohamud told Watson that he knew what he'd done was wrong and that he'd fallen into the trap of radicalization while abroad.</p>

Mohamud, 26, tried to fire his attorney in a second letter dated Dec. 15, saying they weren't communicating well. A handwritten note on the letter says Mohamud's request was withdrawn Jan. 9 in court.

His attorney, veteran Columbus defense lawyer Sam Shamansky, declined to comment.

Mohamud planned to fly to Texas and attack the Federal Medical Center Carswell in Fort Worth in an attempt to free Aafia Siddiqui, a Pakistani scientist convicted of shooting at two U.S. soldiers in Afghanistan, Watson said as he outlined the allegations against Mohamud.

According to the government, Mohamud applied for a passport to travel abroad only a week after he became a U.S. citizen in 2014.

He bought a ticket to Greece with a stop in Turkey, where he disembarked before going to Syria, prosecutors said in court documents. They said he never intended to go to Greece.

Mohamud trained with al-Nusra Front, an extremist organization affiliated with al-Qaeda, prosecutors said.

Mohamud was arrested in 2015 and pleaded guilty a few months later. The attacks were never carried out.

Shamansky asked for leniency, saying Mohamud didn't have his father around when he was growing up, was brainwashed while abroad "by professional head twisters" but later realized his error and abandoned his plot.

Prosecutors noted Mohamud contacted others from jail after his arrest and told them not to say anything.

<b>HEADLINE</b>	<b>01/28 Report: Iran funds weapons, terrorism</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/01/28/iran-spends-billions-on-weapons-programs-terrorism-while-ignoring-iranians-basic-needs-report-finds.html">http://www.foxnews.com/world/2018/01/28/iran-spends-billions-on-weapons-programs-terrorism-while-ignoring-iranians-basic-needs-report-finds.html</a>
<b>GIST</b>	<p>Iran is spending billions of dollars on its weapons programs and supporting terrorism around the globe while it ignores the basic needs of its people, a new report asserts.</p> <p>The report, issued by the National Council of Resistance of Iran (NCRI), states that this month's uprising against the regime was due to what it states are the "grueling high prices and economic strains on an array of social sectors."</p> <p>It claims that this is a result of the regime putting its resources, "toward domestic suppression, warmongering and expansion of terrorism abroad," which the report points out has led to poverty and deprivation among Iranians.</p> <p>The report is titled "Primary Causes of Poverty and Popular Uprisings in Iran." It says the report is based on a "high-level assessment" which revealed that the annual minimum cost to Iranians of keeping the "clerical regime in power" is about \$55 billion.</p> <p>The national council says on its website it is a "broad coalition of democratic Iranian organizations, groups, and personalities" that "was founded in 1981 in Tehran, Iran, on the initiative of Massoud Rajavi, the leader of the Iranian Resistance."</p> <p>The report claims that half of those funds came from "money channeled to military and security-related activities and export of terrorism, funded by revenues obtained from institutions controlled by the supreme leader's office and the IRGC." The report indicates that the other half of the funds is from the official state budget and is earmarked for military- and security-related affairs and the export of terrorism.</p>

The report also describes how during the height of this month's anti-regime protests, shouted comments were made against Supreme Leader Ayatollah Ali Khamenei.

The report states that over the years Khamenei has taken over the "bulk of Iran's economy." It claims the organizations and institutions, including the Islamic Revolutionary Guard Corps (IRGC), show that Khamenei-controlled-companies make up over 50 percent of Iran's gross domestic product, or GDP.

The report compares what it calls funding for "warmongering and suppression" against other state expenditures.

It claims Iran's total health care budget for 2018 is \$16.3 billion, which is a third of its total war budget.

The report also reveals that for the last six years the total spent on its Syrian activities is around \$15-20 billion a year. It describes how protesters shouted during the January protests, "Leave Syria, think about us," and "Neither Gaza or Lebanon, I dedicate my life to Iran."

The report compares paltry welfare payments made to those living under absolute poverty with the larger sums of money paid to Afghan mercenaries bankrolled by Iran to fight in Syria.

According to statements made by Afghan mercenaries during interviews with state-run media, each mercenary is paid between \$600-700 a month. Doing the math, nearly 20,000 Afghan mercenaries cost the regime between \$12-\$14 million a month. Compare that to the nearly \$70 monthly stipend Iranians living under the absolute poverty line receive, according to the report.

<b>HEADLINE</b>	<b>01/29 Military: troops won't withdraw Manbij</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/01/29/politics/general-votel-syria-manbij-commitment-intl/index.html">https://www.cnn.com/2018/01/29/politics/general-votel-syria-manbij-commitment-intl/index.html</a>
<b>GIST</b>	<p>(CNN)US troops will not withdraw from Manbij, a strategically important city in northern Syria, a leading US military figure told CNN Sunday.</p> <p>This means that US troops risk being caught up in Turkey's military push into northern Syria should Ankara follow through with a pledge to advance into the area.</p> <p>Gen. Joseph Votel, commander of the United States Central Command, said that withdrawing US forces from Manbij is "not something we are looking into."</p> <p>Manbij is a key flashpoint in northern Syria -- located northeast of Aleppo and around 40 kilometers (25 miles) south of Jarabulus, which sits on the Syrian-Turkish border.</p> <p>Turkey launched a ground operation across the border into Syria a week ago in an attempt to drive US-allied Kurdish militia from the area. The military incursion has raised tensions between Turkey and the United States, which supports and openly arms Kurdish militias fighting ISIS.</p> <p>The confirmation of US commitment to Manbij comes as parties involved in the conflict prepare to meet in Russia-hosted peace talks in the Black Sea resort of Sochi.</p> <p>The Syrian National Dialogue Congress will take place over Monday and Tuesday, and will be attended by up to 1,500 delegates from across the Syrian political landscape, Russian state media says.</p> <p>The UN's special envoy for Syria, Staffan de Mistura, will attend, the world body confirmed.</p>

<b>HEADLINE</b>	<b>01/29 ISIS claims Kabul military academy attack</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/gunbattle-occurring-afghan-military-academy-52674189?">http://abcnews.go.com/International/wireStory/gunbattle-occurring-afghan-military-academy-52674189?</a>
<b>GIST</b>	<p>Militants attacked an Afghan army unit guarding a military academy in the capital of Kabul on Monday, killing at least five soldiers and wounding 10, officials said. Hours later, the Islamic State group claimed responsibility for the assault.</p> <p>The attack was the latest in a wave of relentless violence in Kabul this month unleashed by the Taliban and rival Islamic State militants that has killed scores and left hundreds wounded.</p> <p>Monday's attack started around 4 a.m., witnesses said, and fighting continued long after daybreak.</p> <p>A suicide bomber first struck the military unit responsible for providing security for the academy, followed by a gunbattle with the troops, said Dawlat Waziri, spokesman for the Afghan defense ministry.</p> <p>At least five insurgents were involved in the morning assault, according to Waziri. Two of the attackers were killed in the gunbattle, two detonated their suicide vests and one was arrested by the troops, he said.</p> <p>All roads leading to the military academy were blocked by police, which only allowed ambulances access to the site to transfer the wounded to hospitals.</p> <p>After the gunbattle ended, the security forces resumed control of the area. They also confiscated one suicide vest, an AK-47 and some ammunition, Waziri said.</p> <p>"The attack was against an army unit providing security for the academy and not the academy itself," he insisted.</p>

<b>HEADLINE</b>	<b>01/29 Reports: Yemen clashes continue in Aden</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/yemen-news-agency-12-killed-132-wounded-aden-52676822?">http://abcnews.go.com/International/wireStory/yemen-news-agency-12-killed-132-wounded-aden-52676822?</a>
<b>GIST</b>	<p>Yemen's state-run news agency says 12 people have been killed and over 130 wounded in clashes between separatists and pro-government forces in the southern port city of Aden, where the government is based.</p> <p>The clashes in Aden erupted on Sunday, after a deadline issued by the separatists for the government to resign expired. The separatists are backed by the United Arab Emirates, a key partner in the Saudi-led coalition supporting Yemen's internationally recognized government in its war since 2015 against the country's Houthi rebels.</p> <p>Meanwhile, the international aid organization OXFAM says the violence forced it to shut down its offices in Aden and the city of Taiz.</p> <p>Coalition spokesman Col. Turki al-Malki said late Sunday the coalition's priority is to deliver humanitarian aid, declining to comment on the violence.</p>

<b>HEADLINE</b>	<b>01/28 Turkey: will clean entire Syria border</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-mideast-crisis-syria-turkey/erdogan-says-turkey-will-clean-entire-syrian-border-idUSKBN1FH0MH">https://www.reuters.com/article/us-mideast-crisis-syria-turkey/erdogan-says-turkey-will-clean-entire-syrian-border-idUSKBN1FH0MH</a>
<b>GIST</b>	ANKARA/BEIRUT (Reuters) - President Tayyip Erdogan said on Sunday that Turkey will "clean" its entire border with Syria in a sign that the Turkish offensive on the Syrian Kurdish YPG group in northern

	<p>Syria's Afrin region could be extended further.</p> <p>Since Turkey's assault in Afrin began nine days ago, it has increased tensions between Ankara and the United States, which has supported the YPG in other parts of Syria in the fight against Islamic State.</p> <p>"Step by step, we will clean our entire border," Erdogan said in a speech after the army said it had captured Jebel Bursaya, a hill that Turkish media had described as a critical position in recent days.</p> <p>Erdogan said last week that Turkey might conduct operations eastwards inside Syria all the way to Iraq to clear the YPG from its frontier. Syrian Kurdish officials have pledged to meet any wider Turkish assault with an "appropriate response".</p> <p>More than a week into their offensive, however, Turkey and allied Syrian rebel groups have made only modest progress fighting into hilly terrain against entrenched foes.</p> <p>The U.S.-backed Syrian Democratic Forces, an alliance of militias of which the YPG is the strongest, had said earlier on Sunday that there was intense fighting in the area.</p> <p>A war monitor, the Syrian Observatory for Human Rights, said Turkey and its allied rebel groups had taken the hill, which overlooks the major Syrian town of Azaz, which they also hold.</p>
<p><a href="#">Return to</a> <a href="#">Top</a></p>	

<b>HEADLINE</b>	<b>01/27 Turkey: US agrees to stop arming YPG</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-mideast-crisis-syria-turkey/turkey-says-u-s-has-promised-to-stop-arming-ypg-warns-washington-on-manbij-idUSKBN1FG0P4">https://www.reuters.com/article/us-mideast-crisis-syria-turkey/turkey-says-u-s-has-promised-to-stop-arming-ypg-warns-washington-on-manbij-idUSKBN1FG0P4</a>
<b>GIST</b>	<p>ANKARA/BEIRUT (Reuters) - The United States has pledged to stop supplying weapons to a Kurdish militia in Syria, Turkey said on Saturday, calling on Washington to immediately remove its troops from a Syrian town of Manbij that Turkish forces plan to target.</p> <p>Turkey's air and ground offensive in northwest Syria's Afrin region against the Kurdish YPG militia has opened a new front in the seven-year, multi-sided Syrian civil war and strained ties with NATO ally Washington.</p> <p>Ankara views the YPG as terrorists and as an extension of the outlawed Kurdistan Workers Party (PKK) and has been infuriated by U.S. support, including arms and training, for the militia. The Kurdish fighters have played a prominent role in U.S.-led efforts to combat the hardline Islamic State in Syria.</p> <p>Since the start of the eight-day-old incursion, dubbed "Operation Olive Branch" by Ankara, President Tayyip Erdogan has said Turkish forces would push east toward the town of Manbij, potentially putting them in confrontation with U.S. troops deployed there.</p> <p>U.S. National Security Adviser H.R. McMaster told Erdogan's spokesman, Ibrahim Kalin, in a telephone call that the United States would no longer provide weapons to the YPG, the Turkish presidency said on Saturday.</p> <p>"It was emphasized that Turkey's legitimate security concerns must be paid attention to. It was agreed that close coordination would be carried out in order to avoid misunderstandings," it said.</p> <p>The agreement is likely to be seen by Ankara as a substantial diplomatic victory from the incursion, where Turkish troops and their Syrian rebel allies appear to have made modest advances, as heavy rain and poor weather have hampered air strikes and progress on the ground.</p> <p>Turkey's foreign minister said the United States needed to follow up its promise with concrete action, including the immediate withdrawal of its troops from the vicinity of Manbij.</p>

HEADLINE	<b>01/27 Musicians get 'counterterrorism briefing'</b>
SOURCE	<a href="https://www.rollingstone.com/music/news/musicians-add-counterterrorism-briefing-to-pre-grammy-schedule-w515827">https://www.rollingstone.com/music/news/musicians-add-counterterrorism-briefing-to-pre-grammy-schedule-w515827</a>
GIST	<p>In light of the recent attacks on concerts in Manchester, Las Vegas and Paris, this year's Grammy weekend will feature a new component: a counterterrorism briefing for musicians with State Department and European Union officials.</p> <p>The all-day training, held in a Times Square hotel suite on Saturday, will include briefings to a number of high-profile Grammy attendees, including Pink, Little Big Town, Chris Stapleton, Run the Jewels and Young Thug, among others. While venues typically provide standard security briefings ahead of each event, and the Recording Academy provides some guidance to its members, this off-site briefing is the first to provide non-event-specific best practices from US State Department and European Union officials directly to the musicians themselves.</p> <p>An official from the State Department's Overseas Security Advisory Council (OSAC) who asked to remain anonymous says that advice given to musicians and their teams on Saturday will include creating situational awareness, identifying vulnerable points and times of increased risk, avoiding time and place predictability and crafting a contingency plan. Two former State Department officials are among the group of experts that will address the group.</p> <p>"Behind arms, music and entertainment are the largest Western exports, and musicians and entertainers serve as ambassadors around the world. Attacks against them generate a lot of coverage, and send a powerful message. It makes sense that they would be targeted," Dr. Amir Bagherpour, an ISIS expert who served as the first Director of Analytics in the U.S. State Department under President Obama, tells Rolling Stone. Bagherpour is affiliated with Progress Humanity, the Washington, D.C., non-profit organization hosting the pre-Grammy briefing, and will be one of the briefing's expert trainers.</p> <p>"Since 9/11, there have been only three major attacks on concerts, one of which wasn't ISIS or so-called 'Muslim terrorism' but a lone wolf shooter," Bagherpour said. "But it only takes one 9/11 to change how people respond to each other."</p> <p>Scott Ialacci, better known as DJ Skribble, is an actor and DJ who will be performing at the pre-Grammy briefing. He says he isn't particularly engaged with his security protocols now, but recent events have made him want to learn more about how to protect himself.</p> <p>Ialacci will be attending the briefing to get insight that he can implement when he tours later in the spring. "I have been touring for over 30 years all over the world, so I have watched the evolution of security needs from being much more casual to now, needing to take concerns like terrorists at concerts into consideration," Ialacci says. "I'm coming to the briefing, DJ'ing there and inviting other touring artists I know to join because I feel we should all keep up-to-date with safety opportunities for the sake of ourselves, our crews and our fans."</p> <p>"We have great security teams who do their best," he adds. "But if we can get extra information, why not take it?"</p> <p>Marcel Altenburg, one of the world's leading crowd scientists and a former captain in the German military, tells Rolling Stone that it's not enough to simply look at a venue's immediate vicinity when preparing security protocols. Altenburg has consulted on dozens of arenas, sporting events, concerts and airports around the world, most famously in Washington, D.C., during the 2017 presidential inauguration. He preaches that the potential targets for a venue begin at attendees' front doors and follows them until they've gone to the event and returned home.</p>

"We always ask, where does it begin to become apparent that this group of people is going to your event?" Altenburg says from his office at Manchester Metropolitan University. "Is it on the subway or a bus an hour away? Is it in an overflow parking lot? You have to think it all the way through. At what point will they be visible as a crowd and identified as connected to you?"

It's a concern shared by James Barbour, spokesperson for the European Union delegation in the United States, who will be briefing musicians on steps the EU is taking to protect them and their performances. This type of briefing is new to Barbour, but he says it's similar to ones he might give any group concerned about their security in Europe. "Terrorism doesn't discriminate," he says. "It doesn't care if you're a musician or a group of doctors at a conference, or students, or circus clowns."

During the pre-Grammy briefing, experts are expected to urge performers be cautious, but not allow fear to change the way they engage with their music, and their fans.

"You're more likely to be hit by lightning - twice - than you are to be attacked at a concert," Bagherpour says. "It's not something in which the general public should be in constant fear of. But this is how terrorism works, by instilling hypervigilance."

<b>HEADLINE</b>	<b>01/28 Iraq: coalition operation kills 6 police</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/01/27/middleeast/iraq-police-killed-coalition-operation/index.html">https://www.cnn.com/2018/01/27/middleeast/iraq-police-killed-coalition-operation/index.html</a>
<b>GIST</b>	<p>(CNN)Eight people were killed and 20 others were wounded in an Iraq military operation and US airstrikes Saturday, the town's injured mayor told CNN.</p> <p>Sharhabil al-Obaidi, the mayor of al-Baghdadi in Anbar province, said a bodyguard, a civilian and six police officers were killed after Iraqi military and special police forces raided a house. The bodyguard and civilian died during the raid.</p> <p>Iraq's Joint Operations Command said Iraqi forces were going after a terrorist leader.</p> <p>Iraqi local police officers and local tribesmen rushed to the scene, thinking the Iraqi troops who raided the house could be ISIS militants dressed as Iraqi troops, according to the mayor. ISIS militants are known to have carried out many attacks and ambushes on Iraqi security forces and civilians while posing as Iraqi troops.</p> <p>After the troops detained the suspect, and while they were searching the house, "the force was attacked by a hand grenade from one of the neighboring houses, prompting a quick response, and then the forces pulled back to their headquarters," the Joint Operations Command said.</p> <p>The joint command statement said Iraqi forces on the ground called in air support when they saw the police, believing them to be "a group of gunmen gathering without coordination with the assigned force." Obaidi said an airstrike hit the gathering, killing the six police officers and wounding 20 others, including security officers, the mayor and town's police chief.</p> <p>"We demand Iraqi government to investigate the attack and give an explanation on why such operation was conducted without informing local authorities," Obaidi said.</p> <p>"Those security officers who were killed in the airstrikes had fought ISIS militants before," al-Obaidi added.</p> <p>Col. Ryan Dillon, a US Army spokesman for the Combined Joint Task Force, said the incident is under investigation but US warplanes give support when requested and approved by the Iraqi military.</p>

<b>HEADLINE</b>	<b>01/27 Turkey offensive into Syria Kurd enclave</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/syria-opposition-group-boycott-sochi-conference-52647327?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/syria-opposition-group-boycott-sochi-conference-52647327?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Fighting raged in northwestern Syria Saturday as Turkish troops and allied militiamen tried to advance their week-long offensive in a Kurdish-controlled enclave, Syrian opposition activists said.</p> <p>The bombardment could be heard a few miles away from Afrin in the Turkish-controlled town of Azaz, where Associated Press journalists were on a media trip organized by the Turkish government and escorted by Turkey-backed Syrian opposition fighters taking part in the offensive.</p> <p>Azaz is one of the fronts from where Turkish troops and allied Syrian fighters of the so-called Free Syrian Army have launched a push into Afrin to clear the area of a Syrian Kurdish militia which Ankara considers to be a national security threat. The militia known as the People's Protection Units, or YPG, has been a partner of the United States in the fight against the Islamic State group in Syria.</p> <p>Kurdish and other activists said Saturday's fighting concentrated around the Rajo area in Afrin, amid heavy shelling and airstrikes by the Turkish forces. The Britain-based Syrian Observatory for Human Rights, which monitors the Syria war through a network of activists on the ground, said Turkish helicopters were attacking the town of Rajo, struggling to make progress after a week of attacks.</p> <p>Turkey's official news agency said rockets fired from the Afrin region in Syria hit a house in the border province of Kilis, injuring two people. Another rocket fired was fired and struck the town of Reyhanli, in Hatay province, slightly injuring one child, the Anadolu news agency reported.</p> <p>The Turkish military said in a statement that two Turkish soldiers and two allied Syrian fighters were killed Saturday. It claimed 447 YPG militants were "neutralized" since Jan. 20.</p>

<b>GIST</b>	<p>BAGHDAD – Two senior Iraqi army officers say a U.S. military plane has mistakenly fired at a gathering of tribal fighters and civilians west of Anbar, killing seven and wounding 11 others.</p> <p>The officers said Saturday the U.S. forces had thought the victims in the al-Baghdadi area were militants.</p> <p>An investigation is underway.</p> <p>The incident came after U.S.-backed Iraqi forces earlier Saturday arrested an Islamic State group operative at his home, the officers said. At the time of the raid, a man in a nearby house tossed a grenade at the troops who returned fire, injuring him and his wife.</p> <p>The officers spoke on condition of anonymity because they were not authorized to speak to media.</p>

<b>HEADLINE</b>	<b>01/27 Mali: militants storm army camp; 31 dead</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/14-killed-jihadist-attack-army-camp-northern-mali-52649376?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/14-killed-jihadist-attack-army-camp-northern-mali-52649376?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Islamic militants stormed an army camp in northern Mali early Saturday, killing at least 14 soldiers in the worst attack on security forces in the West African country in more than a year, the army said.</p> <p>Army spokesman Col. Diarran Kone confirmed the attack in the Timbuktu region and said the bodies of 17 assailants remained at the scene. The base was again under the control of the Malian military, he said.</p> <p>Mali recently marked the five-year anniversary of a French military mission to oust Islamic extremists from power in the major towns of the north. That operation, however, merely dispersed the jihadists into the surrounding desert.</p> <p>In the years since they have launched frequent attacks on the Malian military as well as U.N. peacekeeping forces trying to stabilize the country.</p> <p>Last January, at least 54 people died in the eastern city of Gao in the bombing of a camp that housed hundreds of former fighters from armed groups. The former fighters, who were signatories to Mali's 2015 peace agreement, had agreed to join forces with the military in battling extremist groups in Mali's north.</p>

<b>GIST</b>	<p>Former Afghanistan hostage Joshua Boyle will undergo a comprehensive psychiatric assessment.</p> <p>Boyle faces a string of charges, including sexual assault, following his release from captivity. Boyle and his wife Caitlan Coleman of Stewartstown, Pennsylvania, were taken hostage in 2012 by a Taliban-linked group and freed last year.</p> <p>His lawyer Lawrence Greenspon told an Ontario court Friday that an initial evaluation found his client fit to stand trial. But Greenspon added he would benefit from a fuller assessment at a mental health center.</p>

	<p>Boyle's next court appearance is scheduled for March 26.</p> <p>He was arrested by Ottawa police late last month.</p> <p>The purported acts allegedly occurred between Oct. 14 and Dec. 30 after Boyle returned to Canada. A publication ban bars reporting information that could identify the alleged victims.</p>

<b>HEADLINE</b>	<b>01/28 Building along Viaduct targeted?</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/possible-bb-gun-shooter-targeting-building-along-viaduct/690800362">http://www.kiro7.com/news/local/possible-bb-gun-shooter-targeting-building-along-viaduct/690800362</a>
<b>GIST</b>	A new building along the Alaskan Way Viaduct is apparently being targeted by someone with a B.B. gun

who has been shooting out the windows for the past three months.

A risk management group tweeted Saturday, saying they are trying to identify whoever is using a B.B. gun to repeatedly damage the building.

The company, Seattle Risk Management, also known as Intravaia tweeted that someone is “driving up and down the Alaskan Way Viaduct, using a BB gun to repeatedly shoot out building windows, which started in November, 2017 to present. Approximate amount of damage is well over \$750,000.”

The Seattle Police Department could not confirm a B.B. gun was causing the damage, but says it has responded multiple times to 450 Alaskan Way, most recently in January. It says each time the scenario is almost exactly the same.

SPD says if someone is intentionally breaking the windows, the crime would be a felony.

<b>HEADLINE</b>	<b>01/27 Mexico warms up to legalizing pot</b>
<b>SOURCE</b>	<a href="http://www.latimes.com/world/mexico-americas/la-fg-mexico-marijuana-20180127-story.html">http://www.latimes.com/world/mexico-americas/la-fg-mexico-marijuana-20180127-story.html</a>
<b>GIST</b>	<p>For decades, marijuana flowed in one direction across the U.S.-Mexico border: north.</p> <p>These days, drug enforcement agents regularly seize specialty strains of retail-quality cannabis grown in the United States being smuggled south.</p> <p>Widespread legalization in the U.S. is killing Mexico's marijuana business, and cartel leaders know it. They are increasingly abandoning the crop that was once was their bread and butter and looking elsewhere for profits, producing and exporting drugs including heroin and fentanyl and banking on extortion schemes and fuel theft.</p> <p>So when Mexico's tourism secretary this week boldly declared his hopes that Mexico will legalize marijuana for recreational use in an effort to reduce growing violence across the nation, some balked at the notion that marijuana was driving the bloodshed.</p> <p>"Avocados are a bigger industry than marijuana," said security expert Alejandro Hope. "And the number of homicides connected to marijuana are very small."</p> <p>"It is naive to believe that legalizing marijuana will reduce crime rates," tweeted Margarita Zavala, a presidential candidate.</p> <p>Still, that a Cabinet member was willing to advocate such a policy marks a dramatic shift from a time when Washington dictated a hard-line drug policy across Latin America. Mexican leaders have increasingly been taking more liberal stances on marijuana, in part to stay in step with other countries in the region and in part because they are at a loss about how to stem Mexico's rising violence, much of which is centered around the drug trade.</p> <p>The legalization debate comes amid Mexico's bloodiest wave of violence yet. There were more than 29,000 homicide victims in 2017, more than in any year since the government began releasing homicide records two decades earlier.</p> <p>The drug trade generates between \$6 billion and \$8 billion a year for Mexico, according to the RAND Drug Policy Research Center, which estimates that 15% to 26% of that comes from marijuana. Advocates of legalization say it would allow law enforcement officers to focus on more important work. Few in Mexico have touted legalizing harder drugs.</p> <p>The tourism secretary, Enrique de la Madrid, told reporters at a tourism conference Thursday that he</p>

thinks "it is absurd that we have not taken the step" toward legalization of cannabis. He said legalization should start first in Quintana Roo and Baja California Sur, states home to the resorts of Cancun and Los Cabos, both of which have seen a dramatic increase in homicides in recent years.

"I am convinced that we must discuss it as part of the solution to violence and insecurity in Mexico," De la Madrid said later in a tweet, which also clarified that his views on the subject were his own, and not an official government position.

But De la Madrid, a member of the ruling Institutional Revolutionary Party, is one of a growing number of Mexican leaders who have called for pot legalization.

In 2016, President Enrique Peña Nieto proposed a bill that would allow Mexicans to carry up to an ounce of marijuana, arguing that Mexico and the U.S. should not pursue divergent policies on the drug.

The bill stalled in Congress, but lawmakers did approve another measure that allows the use of medical marijuana in some cases.

Legalization has been the trend across the Americas.

In the U.S., marijuana is legal in some form in a majority of states and will soon be permitted for recreational use in eight. Cannabis is already legally sold for recreational use in Uruguay and will be later this year in Canada. Several Latin American countries, including Chile, Brazil, Peru, Costa Rica and Colombia, have changed laws to make marijuana more available for either medical or recreational use.

Full legalization faces an uphill battle in Mexico, where a majority of voters and the Catholic Church are opposed to the idea. A 2015 poll conducted by the newspaper El Universal found that two-thirds of Mexicans oppose decriminalizing cannabis, although 63% said they backed a debate on the issue.

Amid talk of legalization, all signs suggest Mexico's marijuana market is on the decline.

Seizures of marijuana by U.S. Customs and Border Patrol have been falling for a decade. Last year, 861,231 pounds of marijuana were seized at U.S. ports of entry, down from 2.4 million pounds in 2013 and 4.3 million pounds in 2009.

Mexico has also been eradicating fewer marijuana fields over the last decade. In 2006, federal forces wiped out 74,531 acres of marijuana crops, according to the Mexican government. In 2016, a total of 13,537 acres were destroyed.

Increasingly, growers are moving on to other crops, such as poppies, which can be found flowering across violence-plagued states such as Michoacan and Guerrero. Drug traffickers are also switching to synthetic drugs such as fentanyl, which is easier to traffic than marijuana because it is much more potent, with just a few milligrams amounting to a fatal dose.

In the coastal resort city of Ensenada, 85 miles south of San Diego, Mexican police recently seized a drug shipment that included 100 pounds of fentanyl, 914 pounds of crystal methamphetamine, 88 pounds of cocaine and 18 pounds of heroin. There was no marijuana in the shipment.

"Cartels know their ability to compete in the U.S. marijuana market is diminishing," said John M. Walsh, director for drug policy at the think tank Washington Office on Latin America. "U.S. consumers have better options."

Marijuana's profitability has been greatly reduced, with farmers receiving much less than they used to for cultivating the plant. At the same time, Mexico remains one of the world's top producers of the drug, Walsh said.

He said he supports legalization in Mexico. Even if it wouldn't end Mexico's violence, it could put a dent

	in it, he said.  "The role that cannabis plays in terms of contributing to violence is fuzzy," Walsh said. "But illegal markets facilitate violence. Every little bit helps."

<b>HEADLINE</b>	<b>01/26 Treating contaminated drinking water costly</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/radium-water-contamination-how-to-treat-at-home/">https://www.cbsnews.com/news/radium-water-contamination-how-to-treat-at-home/</a>
<b>GIST</b>	<p>A glass of water may seem harmless enough, but communities around the country are increasingly faced with a concerning reality: contaminants are turning up in their drinking water – and getting them out may be a lot harder than you think. A report by the non-profit Environmental Working Group (EWG) found that water supplied by at least some utilities in all 50 states contained a known carcinogen called radium, reports CBS News correspondent Anna Werner.</p> <p>In Brandon, South Dakota, resident Spencer Schenk and wife Laura worry about their public water supply that contains radium.</p> <p>"It's something that's really concerning to us, a known cancer-causing agent in our water," Schenk said.</p> <p>The radioactive substance can occur naturally, and it's been in the city's water for decades. It's also not uncommon across the country. An analysis by EWG found 170 million people exposed to radium from drinking water in 22,000 utilities nationwide.</p> <p>Brandon's radium level does not exceed federal guidelines, but many health experts say there is no "safe" level of that carcinogen. To get that level down to zero would mean expensive modifications to the city's water treatment system and city administrator Bryan Read said residents would have to decide to foot that bill.</p> <p>"We are striving to get the lowest radium levels we can at a reasonable cost. ... You can probably get all the radium out of all the water if you're willing to spend enough money," Read said.</p> <p>Radium is just one of hundreds of contaminants found in drinking water systems nationwide like arsenic, cadmium, pesticides and metals including hexavalent chromium and lead.</p>

	<p>The approach to treating them can vary from city-to-city, state-to-state. In Newburgh, New York, the state is building a brand new water treatment plant to remove a toxic chemical known as PFOS from the water supply.</p> <p>The price tag? \$50 million.</p> <p>The pollution came from a nearby Air National Guard base.</p> <p>"It's a very big deal. New York state is leading the nation, frankly. We're one of the first states in the nation to actually regulate these contaminants," said Martin Brand, New York State Department of Environmental Conservation's deputy commissioner for remediation.</p> <p>But not all cities can afford a major overhaul of their treatment systems. So what's a consumer to do, if they want cleaner, safer water at home?</p> <p>"I think it can be really daunting for consumers to try to understand these issues with water," Rick Andrew said. He works for NSF International, a group that tests and certifies products including water filtration systems. Asked how much it would cost to treat the water at home, Andrew said it could be "a wide, wide range."</p> <p>A simple filtering water pitcher could be \$30. A whole-house system could be a couple thousand dollars.</p> <p>It's also important to find out from your utility which contaminants are in your water and get the right system.</p> <p>"It's definitely not a 'one size fits all' thing when you start to get into water treatment. And so some technologies are good at one type of contaminant, but they not very effective on others. So often times, people end up with a multistage system," Andrew said.</p>
<p><a href="#">Return to</a></p> <p><a href="#">Top</a></p>	

<b>HEADLINE</b>	<b>01/26 Seattle now 6<sup>th</sup> costliest city in US</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/seattle-gets-more-expensive-now-6th-costliest-us-city/689883030">http://www.kiro7.com/news/local/seattle-gets-more-expensive-now-6th-costliest-us-city/689883030</a>
<b>GIST</b>	<p>The cost of living in Seattle has visitors saying no thanks.</p> <p>"I couldn't imagine living up here with the cost of things up here. It's insane," said Tom Hoffman, visiting from Vancouver, Washington.</p> <p>Seattle is now the sixth most expensive city to live in, jumping up three spots in quarter three of 2017, compared to quarter two.</p> <p>"Yeah, it's expensive," said Margaret Darcher, who works in South Lake Union. "That feels like it's in line with what I experience."</p> <p>The cost of living index has hundreds of organizations shop, and collect data every quarter across the US for the past 50 years. The first part of that sentence makes no sense.</p> <p>"It allows cities to see what does it really cost to live here. And I think it's beneficial to local stakeholders as they try to attract residents and businesses," said Jennie Allison, program manager at the Center for Regional Competitiveness.</p> <p>One category where Seattle ranks most costly - is miscellaneous goods and services. That includes things like haircuts; Seattle is the most expensive place in America to get a cut, costing \$31 dollars on average here, compared to \$28 in San Francisco, and \$23 in Manhattan. The category does not include beauty salons, which have their own category.</p>

	<p>Seattle is also the most expensive city to grab a burger - an average hamburger costs \$6.26. Compare that to \$3.49 for a burger in Phoenix.</p> <p>Seattle is also the most expensive city for dry cleaning, with an average bill of nearly \$19. The bill averages to \$8.43 in Jacksonville.</p> <p>Seattle ranks 14th most expensive in the country for housing, but a spokesperson for the survey results says housing price increases, actually played a big part in boosting Seattle's cost-of-living rank.</p> <p>“The housing really stands out,” Allison said. “Housing price alone accounts for 20 percent of the composite index.”</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>01/26 Report: NKorea slush fund running out</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/01/26/kim-jong-uns-slush-fund-running-out-fuel-after-numerous-missile-nuclear-tests-report-says.html">http://www.foxnews.com/world/2018/01/26/kim-jong-uns-slush-fund-running-out-fuel-after-numerous-missile-nuclear-tests-report-says.html</a>
<b>GIST</b>	<p>Kim Jong Un's trigger-happy antics have nearly depleted a critical slush fund the North Korean despot uses to run his isolated country -- and the Hermit Kingdom's participation in the upcoming Winter Olympics is merely a scheme to refill his coffers, according to a report.</p> <p>Two Chinese sources with ties to top North Korean government officials told Radio Free Asia that Kim has nearly exhausted his slush fund due to missile and nuclear weapon and tests, as well as vanity projects, such as the much-publicized Masikryong Ski Resort.</p> <p>“Due to Kim Jong Un’s extravagant spending, the slush fund from his father, Kim Jong Il, is running out,” one of the sources told the news agency. “It won’t be easy to control North Korea’s high-level executives, who are [cunning] like raccoons.”</p> <p>The source said he is “well-acquainted” with Office No. 39, a shadowy organization under the ruling North Korean Workers’ Party that generates up to a billion dollars annually for Kim and his cronies through illicit activities, including counterfeiting and drug production.</p> <p>Around 100,000 North Koreans working abroad also send back around \$500 million in earnings annually, Radio Free Asia reported, citing a U.N. estimate.</p> <p>“I heard them worrying about insufficient funds in Office No. 39 a number of times,” the source added, noting that four of the six nuclear tests carried out by North Korea have been done under Kim’s watch.</p> <p>“We can speculate that he spent a lot of money from the number of missile [and nuclear weapons] tests he carried out,” the source said. “Most of the funding for nuclear weapon and missile development is coming from Kim Jong Un’s slush fund.”</p> <p>The other source told Radio Free Asia that North Korea’s participation in the Winter Olympics, scheduled to be held in Pyeongchang, South Korea, is a way to solicit charity while appearing to mend relations.</p> <p>“North Korea’s warm gestures toward South Korea have underlying intentions: to use the Pyongchang Winter Olympics that will be held there from Feb. 9 as a breakthrough for their financial difficulties,” the source said.</p> <p>But the source warned that “it won’t be easy for the South to help the Kim Jong Un regime [these days] because of international sanctions.”</p>

HEADLINE	<b>01/27 Turkey: new \$11B Istanbul airport</b>
SOURCE	<a href="https://www.nbcnews.com/storyline/airplane-mode/erdogan-flexes-political-muscle-new-11b-airport-istanbul-n840886">https://www.nbcnews.com/storyline/airplane-mode/erdogan-flexes-political-muscle-new-11b-airport-istanbul-n840886</a>
GIST	<p>LONDON — For centuries it has been at the crossroads of Europe and Asia. Now Istanbul is making a bid to be a global meeting place with a new \$11 billion airport that aims to overtake Atlanta as the world’s busiest.</p> <p>Next month, Turkish President Recep Tayyip Erdogan’s jet will be the first to land at the airport — the latest in a string of high-profile public projects that he hopes will boost an economy weakened by terrorism and a failed coup in 2016 as the country faces a crucial election next year.</p> <p>Called simply New Istanbul Airport, the project follows the commission of a 250-mile toll freeway, the opening of a \$1.2 billion rail-and-road bridge stretching 1.4 miles across the Bosphorus and the \$66.5 million landmark Camlica mosque, the largest in Turkey.</p> <p>Also planned is a 27-mile canal running parallel to the Bosphorus, which Erdogan calls his personal “dream.” If built, it will turn the European side of Istanbul into an island.</p> <p>Experts say Erdogan hopes to secure not just economic growth but also his position as Turkey’s most important leader since the modern republic’s founder, Mustafa Kemal Ataturk.</p> <p>“He loves his big projects, and the airport is perhaps the grandest,” said Nigel Rendell, a London-based analyst with Medley Global Advisors. “It allows him to show he is delivering on his promises, right at the time he is trying to extend his powers.”</p> <p>The new hub is on the site of a former forest 22 miles northwest of the city. It will replace the existing chronically congested Ataturk Airport — the scene of a 2016 terrorist attack that killed 45 people — when it opens to the public in October.</p> <p>It will have the world’s largest single terminal building, covering 1.3 million square feet and capable of handling 90 million passengers a year. That number will rise to 150 million when more terminals are added, which could see it leapfrog Los Angeles International, Beijing and even Atlanta Hartsfield-Jackson — which handled 104 million in 2016.</p> <p>Officials aim to strengthen Istanbul against rival Middle Eastern mega-hubs such as Dubai and Doha, and help Turkish Airlines — a partner in the Star Alliance alongside United Airlines — compete with the so-called ME3 giants — Emirates, Qatar and Etihad — for long-haul connecting traffic. It may also attract new services from U.S. carriers, none of whom currently serve Istanbul.</p> <p>Designers hope the airport will prove a more popular place to layover than Dubai or Abu Dhabi.</p> <p>The duty free and shopping areas cover more than half a million square feet — bigger than 10 football fields — and there are 26 miles of baggage belts, capable of handing almost 30,000 bags an hour.</p> <p>Ministers believe the new airport will support 225,000 jobs and contribute about \$19.5 billion to the economy — equivalent to 5 percent of the country’s gross national product. And if only one in 10 passengers visits Turkey as a tourist, a further \$7 billion will flow in.</p> <p>The airport itself might have a slow start; its distance from the city, almost at the Black Sea, means many passengers will have to rely on a new subway line for which construction began only last year. Airport officials did not respond to questions about whether it would be finished in time for the airport’s slated Oct. 18 opening.</p>

HEADLINE	<b>01/27 Record number women eye politics</b>
SOURCE	<a href="https://www.nbcnews.com/politics/first-read/i-want-my-voice-heard-women-plot-runs-office-record-n841131">https://www.nbcnews.com/politics/first-read/i-want-my-voice-heard-women-plot-runs-office-record-n841131</a>
GIST	<p>WASHINGTON — In November 2016, Debbie Walsh was worried.</p> <p>Walsh, the director of the Center for American Women and Politics at Rutgers University, feared that attendance at the group’s upcoming campaign crash course for female political candidates was about to plummet. After all, the first female presidential nominee of a major party — a former First Lady, senator and secretary of state, to boot — had just been defeated by a man with no previous political experience and a well-documented record of demeaning comments about women.</p> <p>“After the election, I was concerned that no women would want to come. I thought maybe they’d just be too discouraged by the outcome,” she says.</p> <p>But by springtime, organizers of the nonpartisan "Ready to Run" program faced a different problem. They had to move the yearly summit to a larger venue due to exploding demand. New registrations for the program doubled over previous years, and similar events in states as far-flung as Utah and Oklahoma reported the same deluge.</p> <p>Now, a new flood of women — many of them Democrats who watched the election of Donald Trump with horror and disbelief — are raising their hands to run for office in 2018, signaling a potential reprise of a “Year of the Woman” that could make 1992’s election of two dozen new women to the U.S. House pale in comparison.</p> <p>They’re on track to break almost every record on the books. As of last week, 325 women were non-incumbent candidates for the United States House, along with 72 female members seeking reelection, according to data compiled by Walsh’s organization. Thirty-eight women not currently serving in the United States Senate are aiming for the upper chamber, along with 12 incumbents running again. And 75 women have set their sights on the nation’s governorships — plus four female incumbents fighting to keep their seats.</p> <p>In 2016, a high water mark for female candidates overall, there were 167 female major party nominees for the United States House and 16 for the Senate — well fewer than half the number of candidates vying for one of those spots now.</p> <p>Emily’s List, an organization dedicated to electing Democratic female candidates who support abortion rights, also saw an unprecedented number of inquiries from women seeking state or local office after the election. In the month after Election Day 2016, 1000 women contacted the group for guidance about running for office, more than the 920 who sought out the organization in the entire 2015-2016 campaign cycle. Now, organizers say, their ranks are 26,000 strong — and growing.</p> <p>One trend that extends to female candidates on both sides of the aisle is the rejection of what activists call outdated notions of a woman’s path to elected office. While many women once considered a long career in local government or an advanced degree to be prerequisites to run, the new crop of contenders features first-timers who range from military veterans to pediatricians to community business leaders.</p> <p>“We need a diversity of perspectives to get good policies, a diversity of professions, life experiences, race and geography,” says Shriock. “We’ve been waiting for this moment. We’ve encouraged teachers and nurses and scientists and businesswomen. We sometimes have to remind women that you don’t need a law degree to run for office.”</p> <p>In 1992, commentators declared the midterm elections “The Year of the Woman” when a record two dozen women won election to the House for the first time and the three women newly elected to the Senate tripled the number of female lawmakers in the upper chamber.</p>

	<p>Jennifer Lawless, the director of the Women and Politics Institute at American University, sees strong parallels between that year’s female candidates — many of whom were galvanized by Anita Hill’s 1991 grilling by an all-male Senate panel about her allegations of sexual harassment against Supreme Court nominee Clarence Thomas — and those motivated by the #metoo movement of today.</p> <p>Then and now, Lawless says, “there is this general call that women would be able to legislate in a way that was more honest and trustworthy because they are political outsiders, that there are these entrenched men who have generated a whole bunch of scandals and are behaving very badly.”</p> <p>“It’s a very explicit male-vs-female dynamic,” she adds.</p>

<b>HEADLINE</b>	<b>01/26 ICE contract: license plate database</b>
<b>SOURCE</b>	<a href="https://www.theverge.com/2018/1/26/16932350/ice-immigration-customs-license-plate-recognition-contract-vigilant-solutions">https://www.theverge.com/2018/1/26/16932350/ice-immigration-customs-license-plate-recognition-contract-vigilant-solutions</a>
<b>GIST</b>	<p>The Immigration and Customs Enforcement (ICE) agency has officially gained agency-wide access to a nationwide license plate recognition database, according to a contract finalized earlier this month. The system gives the agency access to billions of license plate records and new powers of real-time location tracking, raising significant concerns from civil libertarians.</p> <p>The source of the data is not named in the contract, but an ICE representative said the data came from Vigilant Solutions, the leading network for license plate recognition data. “Like most other law enforcement agencies, ICE uses information obtained from license plate readers as one tool in support of its investigations,” spokesperson Dani Bennett said in a statement. “ICE is not seeking to build a license plate reader database, and will not collect nor contribute any data to a national public or private database through this contract.”</p> <p>Reached by The Verge, Vigilant declined to confirm any contract with ICE. “As policy, Vigilant Solutions is not at liberty to share any contractual details,” the company said in a statement. “This is a standard agreement between our company, our partners, and our clients.”</p> <p>While it collects few photos itself, Vigilant Solutions has amassed a database of more than 2 billion license plate photos by ingesting data from partners like vehicle repossession agencies and other private groups. Vigilant also partners with local law enforcement agencies, often collecting even more data from camera-equipped police cars. The result is a massive vehicle-tracking network generating as many as 100 million sightings per month, each tagged with a date, time, and GPS coordinates of the sighting.</p> <p>ICE agents would be able to query that database in two ways. A historical search would turn up every place a given license plate has been spotted in the last five years, a detailed record of the target’s movements. That data could be used to find a given subject’s residence or even identify associates if a given car is regularly spotted in a specific parking lot.</p> <p>“Knowing the previous locations of a vehicle can help determine the whereabouts of subjects of criminal investigations or priority aliens to facilitate their interdiction and removal,” an official privacy assessment explains. “In some cases, when other leads have gone cold, the availability of commercial LPR data may be the only viable way to find a subject.”</p> <p>ICE agents can also receive instantaneous email alerts whenever a new record of a particular plate is found — a system known internally as a “hot list.” (The same alerts can also be funneled to the Vigilant’s iOS app.) According to the privacy assessment, as many as 2,500 license plates could be uploaded to the hot list in a single batch, although the assessment does not detail how often new batches can be added. With sightings flooding in from police dashcams and stationary readers on bridges and toll booths, it would be hard for anyone on the list to stay unnoticed for long.</p>

Those powers are particularly troubling given ICE's recent move to expand deportations beyond criminal offenders, fueling concerns of politically motivated enforcement. In California, state officials have braced for rumored deportation sweeps targeted at sanctuary cities. In New York, community leaders say they've been specifically targeted for deportation as a result of their activism. With automated license plate recognition, that targeting would only grow more powerful.

For civil liberties groups, the implications go far beyond immigration. "There are people circulating in our society who are undocumented," says senior policy analyst Jay Stanley, who studies license plate readers with the ACLU. "Are we as a society, out of our desire to find those people, willing to let our government create an infrastructure that will track all of us?"

The new license plate reader contract comes after years of internal lobbying by the agency. ICE first tested Vigilant's system in 2012, gauging how effective it was at locating undocumented immigrants. Two years later, the agency issued an open solicitation for the technology, sparking an outcry from civil liberties group. Homeland Security secretary Jeh Johnson canceled the solicitation shortly afterward, citing privacy concerns, although two field offices subsequently formed rogue contracts with Vigilant in apparent violation of Johnson's policy. In 2015, Homeland Security issued another call for bids, although an ICE representative said no contract resulted from that solicitation.

As a result, this new contract is the first agency-wide contract ICE has completed with the company, a fact that is reflected in accompanying documents. On December 27th, 2017, Homeland Security issued an updated privacy assessment of license plate reader technology, a move it explained was necessary because "ICE has now entered into a contract with a vendor."

<b>HEADLINE</b>	<b>01/27 Russia threat real or hysteria?</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/01/26/europe/russia-threat-real-or-hysteria-intl/index.html">https://www.cnn.com/2018/01/26/europe/russia-threat-real-or-hysteria-intl/index.html</a>
<b>GIST</b>	<p>(CNN)The Russians are coming! Except they aren't. Though they already have a bit. And they might well be coming a bit more soon.</p> <p>This is how very bad things happen.</p> <p>The threat posed by Russia to Western interests is unlike anything seen since the 1990s. It has forces or proxies deployed in Syria, Ukraine and, don't forget, parts of what's still called Georgia. There is smoke, but there is also fire and daily there is a lot of fuel being added.</p> <p>Dutch state media revealed this week that Dutch cyber spies -- the Joint Sigint Cyber Unit (JSCU) -- were able to hack into the closed-circuit television of the building where a Russian hacking organization known as Cozy Bear worked, and observe them coming and going from offices where they hacked the Democratic National Committee in the US. The Dutch told the Americans, touching off the US investigations.</p> <p>According to the Dutch, the Americans then helpfully told the media they were tipped off by a Western intelligence agency, prompting the Russians to turn off the Cozy Bear CCTV hack.</p> <p>There was also a shrill warning from new UK Defense Secretary Gavin Williamson, who, amid a budget row and internal leadership posturing, chose Friday to unleash a barrage of concerns about "thousands and thousands and thousands" -- yes, that many -- deaths that Russia could cause in Britain, if it successfully hacked the electricity grid.</p> <p>Williamson told the Daily Telegraph: "Why would they [the Russians] keep photographing and looking at power stations, why are they looking at the interconnectors that bring so much electricity and so much energy into our country? They are looking at these things because they are saying, "These are the ways we can hurt Britain." His officials have also alleged Russia may target the transatlantic cables that ferry the</p>

internet to the UK.

These new claims were met with the now-predictable Russian derision. Russian defense spokesman Igor Konashenkov said Williamson had "lost understanding of what is reasonable in his fierce fight for the banknotes in the military budget," and that his "phobia" belonged in "children's comic books" or an episode of "Monty Python's Flying Circus."

Kremlin spokesman Dmitri Peskov dubbed the Dutch report "anti-Russian hysteria," saying "if the Dutch newspapers want to supply the coal to the furnace of anti-Russian hysteria which is currently takes place in America, well... let's say it's not the most noble thing to do."

Russophobia is a familiar and disturbing theme. Foreign Minister Sergey Lavrov recently called it "unprecedented."

"We never saw this during the Cold War. Back then, there were some rules, some decorum... Now, all decorum has been cast aside," Lavrov told Russian daily Kommersant in an interview published on January 21.

Some Russian state rhetoric is designed to paint a picture of an outside world that hysterically harnesses fear of a resurgent Russia, when really the country means no harm. It is designed to try and distance Russians from an outside world they can increasingly see, even if only through the slanted prism of Russian state media.

The xenophobia, homophobia and sometimes outright racism that has grown in Russian society also stem from the idea of a people -- a narod -- under threat. Russophobia, that argument goes, happens because "they want us gone, but also because they fear us, as we refuse to lie down." I saw it in the eyes and anger of many ethnic Russians embattled in eastern Ukraine. They felt abandoned, scorned, left outside the rest of Ukraine, and had to turn to Russia to protect their Russianness.

Some of Russia's urban elite has seen too much of the outside world to buy this reductive message. But its nationalists and beholden state employees embrace it, and much of rural Russia hasn't seen the glittering globe beyond. Life remains tough there, with even state figures accepting that just under 14% of Russians live below "the minimum cost of living," according to Tass.

Into this narrative of "them and us" come these increasingly vociferous Western claims of the Russian threat. In the partisan fury of US or UK politics, it is hard to know at times whether Russia did ingeniously undermine the entire US electoral process and infiltrate Team Trump, or just ended up having clumsy hackers steal some emails, and allow some of its sympathizers to get too close to some of Trump's less savvy or wholesome staff.

It is hard to know, with Russian-backed tanks still in Donetsk and jets in Syria, whether we are seeing an expansionist Moscow intent on soon probing the Baltic states or switching off the lights in London, or a nervous Russia that is just checking threats it sees in its near abroad.

The most troubling point is that the distinction doesn't really matter. This perception of Russophobia (or a real Russian threat) is either what the Kremlin wants, to justify its more aggressive schemes, or it is what the Kremlin feels it has to respond to, as to not appear weak.

Vladimir Putin has long surrounded himself not with tech-age visionaries, but with men who stem from the same age as him, a period he called the "greatest geopolitical catastrophe of the 20th century" -- the fall of the Soviet empire. He still feels it personally, wishes to see the shift in power partially redressed and must surely be bemused at how the US public has elected a president so capable of diminishing US influence the world over.

The Kremlin takes things personally. It may seem disproportionate to the slight, but not when compared with the extraordinary suffering of the Soviet era and the brutal collapse of the 1990s. But by recognizing

	Russia as the threat it increasingly shows itself to be, Western figures are also ensuring Moscow has little choice but to fulfill the prophecy.

<b>SOURCE</b>	<a href="https://patch.com/washington/seattle/woman-dies-after-stabbing-rainier-beach-police">https://patch.com/washington/seattle/woman-dies-after-stabbing-rainier-beach-police</a>
<b>GIST</b>	<p>SEATTLE, WA - A 34-year-old woman died after stabbing in a Rainier Beach parking lot Saturday night. The suspect, also a 34-year-old woman, was at the scene and has not yet been arrested.</p> <p>The stabbing happened around 11 p.m. Saturday just east of the Safeway along Rainier Avenue South. Police found the victim with several stab wounds and she was treated at the scene by Seattle fire medics. She died later that night at Harborview.</p> <p>Meanwhile, the suspect showed up at the scene and told police she was injured in an altercation with the victim. The two women know each other, according to Seattle police.</p> <p>Homicide detectives interviewed the suspect but have released her. Police are still investigating the incident and working with the King County prosecutor on whether to charge the suspect.</p>

<b>HEADLINE</b>	<b>01/27 Report: inmates held past release date</b>
<b>SOURCE</b>	<a href="https://apnews.com/bc32cd2b476c453bbc37d2cd85415f8d/New-Mexico-holds-hundreds-of-inmates-past-their-release-date">https://apnews.com/bc32cd2b476c453bbc37d2cd85415f8d/New-Mexico-holds-hundreds-of-inmates-past-their-release-date</a>
<b>GIST</b>	<p>ALBUQUERQUE, N.M. (AP) — Joleen Valencia resisted the temptation to count her days to freedom, knowing that tracking the time only worsened the anxiety of serving a two-year drug-trafficking sentence inside a New Mexico prison.</p> <p>After her sentence started in the spring of 2015, she wanted nothing more than to return to her family’s home amid mesas on a reservation north of Albuquerque and stay clean after recovering from a heroin addiction. Especially after her mother died and granddaughter had been born.</p> <p>But rather than agonize, she kept busy, working daily dishwashing shifts to earn 10 cents an hour and eventually enough “good time” for a new parole date: July 13, 2016.</p> <p>“They would tell you, don’t count your days, because it’s going to make it hard,” said Valencia, 50. But she couldn’t resist as her parole date neared, making it all the more frustrating when the day came and went.</p> <p>For three more months, Valencia remained incarcerated, one of more than 1,000 inmates identified in New Mexico Corrections Department documents as serving what’s known as “in-house parole.”</p> <p>An expensive and long-running problem, it routinely has resulted in corrections officials holding inmates for all or part of their parole terms — often because they are unable to find or afford suitable housing outside prison. Sometimes, missing paperwork or administrative backlogs also can rob them of the freedom they’ve earned.</p> <hr/> <p>This report is part of the CJ Project, an initiative to broaden the news coverage of criminal justice issues affecting New Mexico’s diverse communities, created by the Asian American Journalists Association with funding from the W.K. Kellogg Foundation. For more information: <a href="http://www.aaaja.org/cj-project">http://www.aaaja.org/cj-project</a></p> <hr/> <p>The problem of in-house parole isn’t unique to New Mexico. Numerous states have histories of holding inmates past their expected parole dates, with some responding to the issue with reforms.</p> <p>But in New Mexico, the problem persists despite efforts to address it. In an email, Mahesh Sita, a corrections spokesman, said reducing the number of release-eligible inmates — the department’s term for those on in-house parole — is a priority, despite figures showing a struggle to overcome the problem.</p> <p>A review of state data obtained through public records requests found there were 165 inmates on in-house parole at the start of the fiscal year beginning July 1, amounting to slightly more than the average monthly total since January 2014.</p> <p>Overall, an analysis of the data found the state spent an estimated \$10.6 million to incarcerate the thousand inmates who found themselves in the most recent fiscal year on in-house parole — a status some on the list had for years.</p> <p>“Imagine someone sitting there all those years thinking about that date,” said Sheila Lewis, a defense attorney in Santa Fe and former director of the New Mexico Women’s Justice Project.</p>

“I think it’s psychologically cruel to tell somebody that if you follow all the rules and you don’t lose any of your good time, you’ll be out in time for your son’s graduation from high school and they look forward to it,” she said. “And they miss it.”

More than three years’ worth of state documents showed the primary driving factor of in-house parole has been a shortage of housing and resources for felons, who must arrange for a place to live as a condition of their release on parole.

Their limited options include trying to pursue a coveted spot often paid for by a charity or the state at a residential treatment program. They can also apply for a bed at one of the state’s privately operated halfway houses, which frequently require security deposits or other payment up front.

An average of three-dozen inmates approved for release by the parole board each month over a three-year period ending in mid-2017 remained incarcerated because they were awaiting a bed in a residential treatment program or halfway house.

Women, who comprised just more than 10 percent of the prison population, faced tougher odds in winning a timely release, with officials holding them on in-house parole at two and a half times the rate of men in the recent fiscal year.

Officials attributed this, in part, to a surge in women’s incarceration rates overall and fewer community-based housing options for them as they prepare to re-enter society.

But state documents and studies also show that other factors beyond housing have further complicated the problem, including administrative backlogs and incomplete parole files.

In the most extreme cases, offenders can spend their entire parole term behind bars, going from prisons directly to neighborhoods without the services or supervision that experts say can help with transitioning back into society.

The Corrections Department in the past has acknowledged this can pose a public safety problem. “Simply put, it is not in the interest of public safety,” the department said in a 2016 blog for lawmakers.

Numerous inmates, like Valencia, saw their release dates come and go, often because prison caseworkers and parole officers, who are woefully understaffed, failed to prepare their parole plans for the parole board to review or fell behind in doing so.

The parole board, which operates independently of the Corrections Department, reviews inmates’ appeals for release each month.

“They get scratched from the docket when we’re missing paperwork,” said Joann Martinez, the parole board’s executive director. “If we don’t have that for the parole board, the case can’t move forward.”

Long-lasting solutions have been elusive, though the state has invested in more housing for parolees. Recently, for example, the Corrections Department contracted with charities to add more beds for inmates in re-entry programs, adding 30 for women in Los Lunas, south of Albuquerque.

The Corrections Department also seemed to become more diligent about penalizing private prison corporations, which records show housed roughly half of New Mexico’s 7,000 inmates last year.

In July 2016, documents exchanged between CoreCivic and the state showed the multi-billion dollar corporation was fined \$19,150 for keeping 15 women, including Valencia, inside the Northwestern New Mexico Correctional Facility beyond their release date.

Valencia’s last day as a prisoner finally came Oct. 17, 2016.

	<p>She's now serving her final months of parole in Albuquerque, while preparing to spend more time again with her family at San Felipe Pueblo once her parole ends.</p> <p>Valencia for years felt too ashamed of her addiction, and the depths she would go for it, to face her family and own children. Now, she hopes the chance to be more involved in their lives again will help her overcome the grief and frustration that's lingered since prison and her time on in-house parole.</p> <p>"It's messed me up but it's still not going to take me down that road of destructive behavior," she said.</p>

<b>HEADLINE</b>	<b>01/28 Military rape conviction tossed; unfair jury</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jan/28/women-packed-court-gets-coast-guard-rape-convictio/">https://www.washingtontimes.com/news/2018/jan/28/women-packed-court-gets-coast-guard-rape-convictio/</a>
<b>GIST</b>	<p>The nation's highest military court has thrown out the 2012 rape conviction of a Coast Guard enlisted man because admirals and prosecutors packed the seven-member jury with five women, four of whom held jobs as advocates for victims of sexual assault.</p> <p>In a 5-0 ruling that could change how the military conducts sex abuse trials, the U.S. Court of Appeals for the Armed Forces unleashed caustic criticism of all involved.</p> <p>From the Coast Guard commandant down to an appellate court to the original trial judge, the high court said all contributed to a "stain on the military justice system." The military has been under intense pressure to wipe out sexual harassment and assault, the five civilian judges noted.</p> <p>The opinion, delivered by Judge Margaret A. Ryan, said the four admirals who played a role in assembling the officer and enlisted jury pool produced an illegal "gender-based court stacking." She suggested that the admirals' role amounted to unlawful command influence, which military law analysts see as the enemy of fair trials for service members.</p> <p>The court ruling said the trial judge "failed to conduct even a rudimentary investigation" into defense attorneys' complaints of an unfair jury.</p> <p>It also said the Coast Guard Court of Criminal Appeals failed in its duty to protect against unlawful command influence as it "rationalized the error away as a benign effort to seek inclusiveness."</p>

<b>HEADLINE</b>	<b>01/28 Police: largest fentanyl bust NJ history</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/01/28/men-had-enough-fentanyl-to-kill-entire-population-new-york-city-new-jersey-combined-police-say.html">http://www.foxnews.com/us/2018/01/28/men-had-enough-fentanyl-to-kill-entire-population-new-york-city-new-jersey-combined-police-say.html</a>
<b>GIST</b>	<p>Two men arrested in the largest fentanyl bust in New Jersey history were sentenced to prison Friday, after authorities said they had enough lethal doses to kill the entire population of New Jersey and New York City combined.</p> <p>Jesus Carrillo-Pineda, a 31-year-old Philadelphia resident, received a 10-year sentence while Daniel Vasquez, a 28-year-old Somerton, Ariz., resident, received a six-year term, the New Jersey Attorney General's Office announced.</p> <p>The two men were among four charged after nearly 100 pounds of the synthetic opioid was seized by New Jersey State Police last June, which could have yielded more than 18 million lethal doses.</p> <p>"Many lives were undoubtedly saved as a result of this record-setting fentanyl seizure by the New Jersey</p>

	<p>State Police,” New Jersey Attorney General Gurbir Grewal said in a statement. “The 100 pounds of fentanyl trafficked into our state by these drug dealers could have generated enough lethal doses to kill the entire populations of New Jersey and New York City combined.”</p> <p>The charges against one of the other suspects were dropped this week, according to the attorney general's office, while another man identified as 38-year-old Omar Zeus Rodriguez remains a fugitive.</p> <p>Fentanyl is one of the deadliest opioids, with a potency that is 50 times greater than heroin. A dose as small as 2 to 3 milligrams can be fatal, according to police.</p> <p>The previous state record for a fentanyl bust was 14 kilograms of fentanyl seized in Camden in March.</p>

<b>HEADLINE</b>	<b>01/28 Mexico to send troops to stem violence</b>
<b>SOURCE</b>	<a href="https://ca.news.yahoo.com/least-25-killed-mexico-over-bloody-weekend-191833147.html">https://ca.news.yahoo.com/least-25-killed-mexico-over-bloody-weekend-191833147.html</a>
<b>GIST</b>	<p>MEXICO CITY (Reuters) - Mexican officials said on Sunday the government was set to unleash a new wave of troops to crack down on criminal groups in regions where a surge in violence led to more than 25,000 murders last year.</p> <p>National Security Commissioner Renato Sales said federal police troops will work with local officials to round up known major criminals and bolster investigations.</p> <p>The aim was "to recover peace and calm for all Mexicans," he said. He did not provide details on the number of federal police to be deployed.</p> <p>More than 25,000 murders were recorded last year as rival drug gangs increasingly splintered into smaller, more blood-thirsty groups after more than a decade of a military-led campaign to battle the cartels.</p> <p>Violence is a central issue ahead of the presidential election in July. Mexican President Enrique Pena Nieto's ruling Institutional Revolutionary Party is trailing in third place in recent polls.</p> <p>Sales said federal police troops would be deployed in the states of Colima and Baja California Sur, the resort town of Cancun and the border city of Ciudad Juarez, among others. He said more details would be forthcoming within days.</p>

<b>HEADLINE</b>	<b>01/26 Study: Arizona crime rate high w/illegals</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jan/26/illegals-commit-crimes-double-rate-native-born-stu/">https://www.washingtontimes.com/news/2018/jan/26/illegals-commit-crimes-double-rate-native-born-stu/</a>
<b>GIST</b>	<p>The crime rate among illegal immigrants in Arizona is twice that of other residents, Attorney General Jeff Sessions said Friday, citing a new report based on conviction data.</p> <p>The report, from the Crime Prevention Research Center, used a previously untapped set of data from Arizona that detailed criminal convictions and found that illegal immigrants between 15 and 35 are less than 3 percent of the state's population, but nearly 8 percent of its prison population.</p> <p>And the crimes they were convicted of were, on the whole, more serious, said John R. Lott Jr., the report's author and president of the research center.</p> <p>His findings also challenge the general narrative that immigrants commit fewer crimes. Those past studies usually don't look at legal versus illegal populations, Mr. Lott said.</p> <p>Mr. Lott said the Arizona data is able to peek behind that curtain, and the differences between the populations were stark.</p>

“There appears to be a huge difference between the two groups,” Mr. Lott said. “The type of person who goes through the process to legally immigrate in the United States appears to be very law-abiding versus even the U.S.-born population. The reverse is true for undocumented immigrants — they are committing crimes, and more serious crimes.”

Among nearly 4,000 first- and second-degree murder convictions, undocumented immigrants accounted for nearly 13 percent — significantly higher than their percentage of the population. Legal immigrants, by contrast, were less than 1 percent of convicts. Native-born made up the rest.

Undocumented immigrants also accounted for five times the rate of convictions for money laundering and kidnapping, and were three times more likely to be convicted of drive-by shootings.

The data covered from 1985 to 2017. For his data purposes, Mr. Lott defined undocumented immigrants as those who weren’t U.S. citizens or green card holders, signaling permanent residency.

He said the crime rates of the undocumented who were ages 18 to 35 was particularly important, given the ongoing debate over legalizing illegal immigrant “Dreamers.” He said the Arizona data showed that population had crime rates 250 percent higher than their share of the population would have predicted.

The Washington Times had asked several experts to look at Mr. Lott’s research paper but some didn’t respond, while one said he was unable to get Mr. Lott’s data and had questions about Mr. Lott’s methodology.

Mr. Lott said told The Times that the data belonged to Arizona and his agreement was that he wouldn’t give out the raw data without their approval.

Mr. Sessions’ citation of the data Friday inserted the information directly into the ongoing immigration debate.

“They’re more likely to be convicted of sexual assault, robbery, and driving under the influence. They’re more than twice as likely to be convicted of murder,” Mr. Sessions said in remarks prepared for a speech in Norfolk, Virginia.

He continued: “Tens of thousands of crimes have been committed in this country that would never have happened if our immigration laws were enforced and respected like they ought to be.”

**HEADLINE** **01/28 Penn. car wash shooting: 5 killed**

**SOURCE** <https://www.cbsnews.com/news/5-killed-in-shooting-at-car-wash-in-melcroft-pennsylvania/>

**GIST** MELCROFT, Pa. -- State police say at least five people were killed in a shooting at a Pennsylvania car wash.

The shooting happened overnight at a car wash in the small town of Melcroft in Fayette County about 55 miles southeast of Pittsburgh, CBS Pittsburgh reports.

The victims were identified only as three men and two women. At least one other person was wounded and was taken to a hospital, but further details on that person's condition were not immediately released.

Authorities were trying to determine if the shooter was among those found at the scene.

A motive for the shooting remains under investigation.

<b>HEADLINE</b>	<b>01/26 Ex-firefighter jailed in human trafficking</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/former-everett-firefighter-charged-with-human-trafficking/689935318">http://www.kiro7.com/news/local/former-everett-firefighter-charged-with-human-trafficking/689935318</a>
<b>GIST</b>	<p>A former Everett firefighter is jailed in Wyoming, charged with two counts each of human trafficking and sexual servitude of a minor.</p> <p>Prosecutors allege David Peter Vier, 63, drove two girls, ages 12 and 14, from Seattle to Wyoming and stopped along the way to demand sexual contact.</p> <p>On January 20, when Vier went to rent a motel room at Little America off Interstate 80, investigators say the girls escaped to call 911.</p> <p>Court papers indicate the girls said they were running away from their mother in Seattle to their grandmother in Kansas when they met Vier in Seattle.</p> <p>Wyoming investigators plan to search Vier's truck and his phone which they say contained "a vast amount of data pertaining to nonconsensual sexual acts."</p> <p>Court papers indicate the girls said they were running away from their mother in Seattle to their grandmother in Kansas, who planned to meet them halfway at Little America.</p> <p>"These were young girls, they were not somebody who were familiar with Vier, so I think the nature of this case points out the hallmark, the danger of sex trafficking," said Daniel Erramouspe, Sweetwater County Attorney.</p> <p>Court papers indicate Vier first met the girls in a Seattle-area parking lot, took them for sandwiches and pizza and, at an Idaho Walmart, bought them makeup.</p> <p>Court papers say in Oregon, Vier drove the girls to a heavily wooded area and demanded sexual contact.</p> <p>Vier was arrested in 2014 in Seattle for arranging to pay for sex with an undercover police officer posing as a 15 year old girl and later pleaded guilty.</p> <p>A spokesperson for the Washington Department of Corrections wrote "He was never in prison, but was under supervision for one count of Communication with Minor for Immoral Purposes from July 31, 2015, to January 22, 2017."</p>

<b>HEADLINE</b>	<b>01/27 Germany: sex harassment military jump</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/world/2018/01/27/sexual-harassment-increases-german-armed-forces-80-2017-reports-say/1071886001/">https://www.usatoday.com/story/news/world/2018/01/27/sexual-harassment-increases-german-armed-forces-80-2017-reports-say/1071886001/</a>
<b>GIST</b>	<p>Germany's armed forces and its civil administration and procurement authorities, the Bundeswehr, reported 14 cases of rape or attempted rape in 2017, a near three-fold increase on the previous year when five cases were reported, according to a report published in the Saturday newspapers by the Funke media group in Germany.</p> <p>In 2016, there had been 128 initial reports of sexual offenses. In 2017, the number increased to 234.</p> <p>According to the Funke reporting, the increase in cases reported represented heightened sensitivity to the issue, an increase in suspicion, earlier reporting and the re-opening of some older cases.</p>

	Defense Minister Ursula von der Leyen said last year that she did not interpret the figures as meaning that the volume of sexual assaults had gone up, but rather that there had been an increase in reporting incidents that might previously have gone unreported.

<b>HEADLINE</b>	<b>01/26 Army to pay \$4M to families in murders</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/army-pays-4-million-to-families-for-murders-committed-by-wa-soldier/281-511846854">http://www.king5.com/article/news/local/army-pays-4-million-to-families-for-murders-committed-by-wa-soldier/281-511846854</a>
<b>GIST</b>	<p>The federal government has agreed to pay \$4 million to the families of a young couple killed in 2011 by a group of renegade U.S. Army soldiers, led by a private from Washington State.</p> <p>The payment includes \$1.7 million to the mother of Michael Roark, of Marysville, who was killed outside of Fort Stewart in 2011. \$2.3 million will be paid to the family of Roark's 17-year-old girlfriend Tiffany York, who was killed alongside him in the woods outside the Georgia Army post.</p> <p>"We believe that (the settlement) is as close as we are going to get to an apology or admission of guilt for their failure to act on the information they knew," said Roark's mother, Tracy Jahr of Marysville.</p> <p>Jahr and York's family sued the government in federal court in Seattle claiming that the Army ignored numerous warning signs that the leader of a small, anti-government militia growing in its ranks was dangerous.</p> <p>The suit detailed records showing that the Army suspected PVT Isaac Aguigui, from Cashmere in central Washington, of murdering his wife in July of 2011 – months before Roark and York were executed.</p> <p>In spite of that suspicion, the Army allowed payment to Aguigui from a \$500,000 insurance policy. Aguigui used that money to purchase tens of thousands of dollars of firearms in Washington State for his plot to attack government installations.</p> <p>"They didn't just let this guy go free (after his wife's death), they financed terrorism," said the attorney for the victim's family, Brian C. Brook of New Jersey.</p> <p>Brook says an Aguigui family member tipped the FBI to concerns that Aguigui was part of a group of anti-government soldiers who were arming themselves to attack the government, which the group believed was no longer serving the American people.</p> <p>Aguigui had also confessed early in 2011 to a separate plot to murder a civilian drug dealer. Although he admitted to purchasing a shotgun for the deed, the Army never took significant action against him.</p> <p>"It's hard to imagine that an institution that is built on a framework of discipline and order could ever allow someone like this to be in the armed forces so long," said Brook.</p> <p>Aguigui led a secret militia called FEAR, Forever Enduring Always Ready, which consisted of about a dozen soldiers and their friends and family members.</p> <p>Roark was a private in the Army who was a friend of some FEAR members. He left the Army and was coming home to Marysville.</p> <p>Three days after his separation from the armed forces, Aguigui asked Roark to join him for some target shooting in the Georgia woods. Roark brought York with him.</p> <p>The young couple were shot in the back of their heads by FEAR members as they stepped out of their car.</p> <p>Several former soldiers are serving jail sentences.</p>

Aguigui was convicted of the murders in the woods and, later, the July 2011 murder of his wife Deidre and unborn baby.

The U.S. Army referred all questions to the United States Attorney's Office in Seattle, which referred questions to Department of Justice headquarters in Washington DC.

"Thank you for reaching out. The DOJ respectfully declines to comment," spokesperson Kerri Kupec wrote in an emailed response to KING 5.

<b>HEADLINE</b>	<b>01/26 London: record number acid attacks</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/01/26/europe/london-acid-attacks-2017-intl/index.html">https://www.cnn.com/2018/01/26/europe/london-acid-attacks-2017-intl/index.html</a>
<b>GIST</b>	<p>London (CNN)There was a record number of acid attacks in London in 2017, police data shows, as perpetrators turn to household cleaning products as weapons.</p> <p>In response to a freedom of information request by CNN, data from the London Metropolitan Police showed a sharp rise in attacks, with 465 recorded in 2017, up from 395 the previous year and 255 in 2015. The attacks increased six-fold over six years.</p> <p>London has become the world capital for acid attacks on young men, and street gangs are increasingly using "face melters" against their targets.</p> <p>Several cases that left victims with life-changing injuries last year prompted debate in the UK Parliament, where MPs are mulling banning the sale of highly corrosive liquids to minors and overhauling laws around possession of acid. Police say easy-to-obtain products such as drain and oven cleaners are often used in attacks.</p> <p>UK Home Secretary Amber Rudd earlier called for a life sentence for serious acid attacks, arguing that such assaults often ruin victims' lives.</p> <p>Additional police data from the first 11 months of 2017 show that the attacks are predominantly a problem among young males.</p> <p>More than 75% of suspected attackers and around 60% of victims were between the ages of 10 and 29. In terms of gender, 71% of attackers and 72% of victims were also male.</p> <p>This is where London bucks the global trend. In many other parts of the world with high numbers of acid attacks, such as South Asia, the act is overwhelmingly carried out by men against women they know.</p> <p>While the new figures show a dramatic rise in London acid attacks in recent years, they also show that previous records had been exaggerated.</p> <p>Detective Superintendent Mike West, who leads the Met Police on acid attacks, explained that previous police data had included cases where someone possessed acid or threatened to use it as a weapon, but did not actually do so.</p> <p>He said that while acid was being used by street gangs, it was still on a relatively small scale.</p> <p>"We do see around 25% of offenses in the robbery category, and this tends to be with ammonia-based substances that, whilst (they) cause injury, are less likely to be life changing. Other drivers have been drug disputes and general disputes between parties," he said.</p> <p>The Met Police is creating a prevention and awareness campaign to be delivered in schools this year, in</p>

	<p>partnership with other emergency services, West said.</p> <p>"We are training all of our officers to deal with first aid of victims and have placed treatment kits in all response cars across London."</p>

<b>HEADLINE</b>	<b>01/26 Weapons recovered w/student threat</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/police-recover-guns-machetes-room-teen-allegedly-plotted/story?id=52632427&amp;cid=clicksource_81_4_article%20roll_articleroll_hed">http://abcnews.go.com/US/police-recover-guns-machetes-room-teen-allegedly-plotted/story?id=52632427&amp;cid=clicksource_81_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Police recovered multiple guns and machetes from a Pennsylvania high school student's bedroom Thursday night after a classmate allegedly overheard the student threatening a mass shooting, officials said.</p> <p>The alleged plot -- which was uncovered Thursday -- called for an attack to take place today, just days after high school shootings in Kentucky and Texas this week, officials said.</p> <p>The investigation began Thursday night when Pennsylvania State Police received a report that a teen on a school bus discussed killing four students he didn't like at Uniontown Area Senior High School, Fayette County District Attorney Richard Bower said at a news conference.</p> <p>The teen who reported the threat had overheard the conversation and recorded it, Bower said.</p> <p>State police responded to the 14-year-old suspect's home where they took statements from the student and parents, determining that the student was "threatening to come to school today with weapons with rifles and shoot four students," Bower said.</p> <p>Bower said, "He indicated that it would be extremely easy to sneak a gun into the school in his backpack. And he also indicated that he could use a sniper rifle from a distance, or use a shotgun for mass casualties."</p> <p>A search warrant was obtained and police found multiple weapons in the teen's bedroom: a semi-automatic rifle, a shotgun, two machetes, throwing knives, two lever-action rifles, a revolver, a cross bow, "and bulk ammunition for all of the weapons," Bower said.</p> <p>The teen was taken into custody Thursday night and remains in custody with juvenile authorities, Bower</p>

	<p>said, adding that his parents are cooperating. He is being charged with terroristic threats, possession of a firearm by a minor and criminal attempt to commit catastrophe at the high school, Bower said.</p> <p>"A catastrophe" was likely "averted today," Bower said. "Thank God" the parent and child called, he added.</p>

## NjRat secures top spot as most active network malware in 2017

From ZDNet (01.23.2018) Charlie Osbourne

On Tuesday, security professionals from AlienVault posted the results of research into the top 10 malware threats that were recorded as active on networks in 2017, which includes a range of Trojans, ransomware, and malware which is tailored for stealing financial data. Based on malware domains observed most frequently by Cisco's Umbrella DNS, the malware families with the highest numbers of individual samples and the malware most detected by the cybersecurity firm's customers, the njRat Trojan has come out on top.

\*NjRat: Particularly popular in the Middle East, this Remote Access Trojan (RAT) is a simple .NET backdoor is a favorite with amateurs. The bulk of users are low-level criminals and is often delivered in drive-by downloads or through phishing attacks. Variants of the Trojan often contain custom packets (.PDF) for avoiding traditional antivirus solutions and once deployed, the malware is able to hijack infected systems.

\*Netwire: Netwire came out as the second most persistent threat on networks in 2017. This malware, another Trojan, is primarily used to steal banking details such as credit card data. However, unlike other kinds of malicious code which target Point-of-Sale (PoS) systems, Netwire attempts to steal credentials through keylogging modules.

\*Bancos: An old Windows Trojan, Bancos attempts to replace Windows host files to redirect victims from pre-determined legitimate domains to malicious alternatives controlled by attackers.

\*PhaseBot: First spotted in 2015, PhaseBot uses PowerShell to run components that are encoded scripts it has hidden in the registry of a compromised system in order to conduct 'fileless' attacks.

\*Pushdo: Pushdo is a so-called downloader Trojan used as a conduit to download and execute additional payloads on infected systems. The malware is commonly found in mass-email phishing campaigns.

\*Asprox: Asprox finds its way onto a vulnerable system through phishing campaigns and drive-by downloads. If a system is exploited, it is joined into a botnet for the purposes of harvesting login credentials, enabling DDoS attacks, driving fake advertising traffic, and conducting SQL injections on unsecured sites.

\*Dunihi worm: This worm is commonly obfuscated and spreads through removable drives. Also known as Houdini, the malware connects to a C&C server to receive commands from its operators.

\*Ramnit: This prolific malware, connected to the theft of Facebook credentials in the past, the worm is described as a "multi-component malware family which infects Windows executable as well as HTML files" able to "steal sensitive information such as stored FTP credentials and browser cookies".

\*Gh0stRat: Variants of the Gh0stRat Trojan are also commonly active, targeting victims in the enterprise as well as core industrial players. The Trojan is used for surveillance, collecting system information, encrypting the collected information and sending it to C&C servers.

\*Locky: Locky, ransomware which keeps coming back time and time again, spreads through phishing campaigns and drive-by downloads. When executed on a vulnerable system, the malware encrypts files and demands a ransom payment in return for a decryption key. [Link](#)

\*Paradise Ransomware strikes again

From Acronis (01.22.2018)

The Paradise ransomware that was active in September 2017 is back with a new round of attacks, starting at the beginning of January 2018. Leveraging the Ransomware as a Service (RaaS) model, the Paradise strain provides an unbreakable encryption scheme by using the RSA cipher for file encryption – which is an unusual cipher choice. The ransomware’s executable file is archived and spread via spam email as a zip attachment. To become infected, a user opens the attachment, unpacks it, and executes the extracted application. The ‘DP\_Main.exe’ ransomware file is a .NET compiled executable and requires .NET Framework 3.5 to start on a user’s machine. The Paradise ransomware encrypts ALL files on fixed, removable, and network drives. Paradise silently deletes Windows shadow copies, like many other ransomware variants currently in the wild. Paradise silently deletes Windows shadow copies, like many other ransomware variants currently in the wild. The C2 server is geographically located in St. Petersburg, Russia. There is no way to restore encrypted files other than to pay a ransom. [Link](#)

\*Seagate Patches Flaws in Personal Cloud, GoFlex Products

From Security Week (01.23.2018) Eduard Kovacs

Seagate recently patched several vulnerabilities discovered by researchers in the company’s Personal Cloud and GoFlex products, but some weaknesses impacting the latter remain unfixed. In late September 2017, researcher Aditya K. Sood discovered vulnerabilities that can be exploited for cross-site scripting (XSS) and man-in-the-middle (MitM) attacks in Seagate’s GoFlex Home network-attached storage (NAS) product. GoFlex users are provided a web service that allows them to remotely manage the product and upload files to the cloud. The service can be accessed using the name of the device, a username, and a password. An HTTP server present in the GoFlex firmware requires port forwarding on the user’s router in order to connect to the web service. Sood discovered that the embedded server still supports SSLv2 and SSLv3, and the seagate.com service supports SSLv3. SSLv2 and SSLv3 are obsolete protocols that are known to be vulnerable to MitM attacks, including via the methods known as DROWN and POODLE. The expert has identified more than 50,000 Seagate devices – hosted on unique IP addresses – that have SSLv2 and SSLv3 enabled. Sood also noticed that the unique name (device\_id) of each device is not difficult to find. During the tests he conducted, the expert managed to collect more than 17,000 unique device IDs. While Seagate has fixed the XSS vulnerability, the company told Sood it does not plan on addressing the issue related to the use of SSLv2 and SSLv3. [Link](#)

Dell Advising All Customers to Not Install Spectre BIOS Updates

From Bleeping Computer (01.23.2018) Lawrence Abrams

The Spectre & Meltdown mess continues with Dell now recommending their customers do not install the BIOS updates that resolve the Spectre (Variant 2) vulnerabilities. These updates have been causing numerous problems for users including performance issues, boot issues, reboot issues, and general system instability. Due to this, Dell EMC has updated their knowledge base article with the following statement advising customers to not install the BIOS update and to potentially rollback to the previous BIOS if their computers are exhibiting "unpredictable system behavior". In order to facilitate the rolling back to a previous BIOS version, Dell has a table listing the Spectre fix BIOS versions that customers should not use and the recommended BIOS versions that a customer should roll back to. This news comes on the heels of Linus Torvalds' remarks on how he felt the Linux patches for Spectre are "utter garbage". [Link](#)

Insider Threat: Ex-IBM employee from China gets five years prison for stealing code

From Reuters (01.19.2018) Brendan Pierson

A former software engineer for IBM in China was sentenced to five years in prison after he pleaded guilty to stealing proprietary source code from the company, prosecutors announced on Friday. Jiaqiang Xu, 32, was sentenced on Thursday in White Plains, New York, according to a statement from the office of U.S. Attorney Geoffrey Berman. Xu pleaded guilty in May 2017 to economic espionage and theft of a trade secret. Xu worked as a systems software developer for International Business Machines Corp from 2010 to 2014, according to a public LinkedIn profile. Xu was arrested in December 2015 after meeting with an undercover officer at a White Plains hotel, where authorities said he was recorded saying he used proprietary IBM code to make software to sell to customers, according to prosecutors. Prosecutors said the proprietary computer code Xu stole was related to a clustered file system, which facilitates faster computer performance. [Link](#)

U.S. cloud-computing failure could cause up to \$19 billion in losses

From Reuters (01.23.2018) Suzanne Barlyn

A cyber problem that temporarily shuts down a top U.S. cloud computing provider could trigger as much as \$19 billion in business losses, only a fraction of which would be insured, Lloyd's of London said in a report on Tuesday. The report, co-written with modeling firm AIR Worldwide, examined potential losses stemming from disruptions to business that depend on cloud computing in the event that cyber incidents such as hacking, lightning strikes, bombing of data centers and human errors "completely disrupt" U.S. cloud service to all of a provider's customers. An incident that takes one of the top-three cloud service providers offline for three to six days would result in total losses of between \$5.3 billion and \$19 billion. Insured losses would total between \$1.1 billion and \$3.5 billion, according to the Lloyd's-AIR report. Cloud computing has grown rapidly in recent years as businesses move their operations to public clouds, the big computer data centers that are displacing traditional customer-owned computer systems. The Lloyd's report, based on scenarios involving the top 15 U.S. cloud providers, does not identify those providers. Current estimates of the cloud environment indicate that Amazon holds 31.8 percent of the market, followed by Microsoft at 13.9 percent and Google with 6 percent. Studies suggest that a cyber incident that knocks out even one of the smaller U.S. cloud providers for three to six days could still cause between \$300 million and \$1.5 billion in losses. Analyzing the TRITON industrial malware

From Midnight Blue Labs (01.16.2018)

TRITON is the first publicly known example of malware targeting industrial safety controllers, an escalation with serious potential consequences compared to previous ICS-focussed incidents. It has been deployed against at least one victim in the Middle East with no indications of victims outside of the Middle East so far. TRITON is a framework for implanting Schneider Electric Triconex safety controllers with a passive backdoor through which attackers can, at a later point in time, inject potentially destructive payloads. Safety controllers are typically a kind of Programmable Logic Controller (PLC) designed to high standards with redundant modules and tend to have components that allow for safe failure in case the main processor fails or power is lost. Traditionally, SIS connectivity is limited and systems are segregated from the rest of the Operational Technology (OT) environment which would limit the potential impact of safety controller security issues. But over the years, as part of a broader trend in embedded systems in general, this isolation has made way for more and more connectivity and systems integration. While this integration comes with benefits in terms of cost, usability and process insights for business intelligence purposes, the flip side is that it exposes systems that were never designed for secure connectivity in the first place to the wider OT and IT environments and by extension to whatever the wider network itself is exposed to. The potential implications of a malicious SIS-compromising attacker are serious and could range from shutting down a process to allowing for unsafe states and manipulating other parts of the OT environment to create such a state which might result in financial losses, damage to equipment, products and the environment or human safety and

loss of life. [Link](#)

## Operational Outages

Power outage at Hopkins Airport in Ohio might affect flights

From Cleveland (01.23.2018) Cliff Pinckard

Hopkins International Airport is reporting a partial power outage Tuesday morning that it says could affect some flights. The airport did not say what caused the power outage, although thunderstorms did move through the region overnight. As of 5:45 a.m., a Delta flight to Minneapolis and a United flight to New York were listed as delayed, while a Southwest flight to Milwaukee was canceled, according to the airport's website. There were no delays or cancellations on arriving flights. However, the airport is urging travelers to check with airlines about the status of flights. Lights on streets and parking lots at the airport were not working and some escalators and elevators were affected, the airport said. [Link](#)

## Aviation Tech

Lufthansa Technik equips Boeing 737 MAX with broadband antennas

From AeroBuzz (01.22.2018)

In view of the rapidly growing fleet of Boeing 737 MAX aircraft, Lufthansa Technik intends to build up its maintenance and overhaul capacities for this model. It starts with the installation of broadband antennas for the reception of Internet on board. Internet on board is an increasingly important factor in the choice of airline passengers. Therefore, more and more airlines equip their aircraft with appropriate facilities to meet the communication needs of their passengers. Lufthansa Technik has now received an order from an unnamed customer to equip its brand-new Boeing 737 MAX standard-hull aircraft with equipment that allows passengers to connect on board. From mid-2018, the company will now make the modifications at its location in Budapest. For the conversion, the technicians in Hungary need five days per aircraft. They install a broadband antenna on the back of the fuselage, put in the required cabling and install the required equipment in the cabin. Then they play the software on the system, test it and release the aircraft for flight operations. Following completion of the modification program, Lufthansa Technik intends to set up complete overhaul capacities for the new Boeing 737 MAX at the

Budapest location over the next few months. Thereafter, these skills should be transferred to other LH technology locations. [Link](#)

## Legislation & Regulation News

Taiwan stymies new China flights amid route dispute

From Reuters (01.19.2018) Jeanny Kao

Taiwan's Civil Aeronautics Administration has stalled applications for new flights from China Eastern Airlines and Xiamen Airlines amid a row between Beijing and the self-ruled island over air routes, a regulatory official said on Friday. Taiwan had not yet approved the applications to add flights during the approaching Lunar New Year holiday because in recent weeks the airlines had used four disputed air routes close to the island. This month China opened several disputed air routes, including a northbound M503 route in the Taiwan Strait, without informing Taiwan, contravening what the democratic government in Taipei said was a 2015 deal to first discuss such flight paths. Taiwan has expressed concern the new routes are too close to existing routes that link it to airports on two groups of Taiwan-controlled islands lying close to China, and are a threat to flight safety. China has denied safety could be affected, saying it had no need of Taiwan's approval for new routes. China Eastern Airlines had applied to add 106 flights while Xiamen Airlines, majority-owned by China Southern Airlines, had applied for 70, the official said. The Civil Aviation Administration of China condemned the move, saying again there were no safety issues with the M503 route and warning Taiwan that it would "bear the consequences" of its decision. But Taiwan's Mainland Affairs Council said in a statement there were real safety risks for flights to Taiwan's offshore islands, calling for China to accept technical talks on the issue. [Link](#)

## Physical Security News

Kurdish Protesters Initiate Huge, Violent Brawl at Hannover Airport in Germany

From The Express (01.22.2018) Chloe Kerr

A huge fight involving almost 200 people broke out at Hannover Airport in Germany, police have confirmed as officers used pepper spray to try to quell the violence after passengers clashed with protesters. According to news site Haz, the fight broke out during a Kurdish demonstration over Turkish military action in Syria. It is thought violence sparked in Terminal B when the protesters were confronted by Turkish passengers. Dramatic footage shows brawlers punching each other and using flags as weapons while other holidaymakers fled to safety. A tweet by Hannover police said: "According to initial information, there is currently a major dispute at Hannover Airport. We are already on our way with many forces!" Photos from the scene show police surrounding protests waving flags. NeuePress reports the trouble started beside the Turkish Airlines check-in desk. A Kurdish demonstration was planned for between 4 and 6pm this evening in the city center. Turkey launched a large-scale offensive against Kurdish forces in northwestern Syria on Saturday. [Link](#)

Police taser knife-wielding man at Atlanta Airport

From Fox 5 (01.22.2018) Morse Diggs

A man threatened a female worker with a knife at Atlanta's Hartsfield-Jackson Airport on Saturday morning, according to a police report. When officers ordered the man to drop his knife, with a three-inch blade, the man refused and turned aggressive toward them. The man's motive for the strange behavior is not known. The woman said she encountered the suspect outside the women's restroom. The victim said the man complained she was "blocking the entrance", according to the report. Officers successfully led the man away from a busy area in the atrium, and again shouted orders regarding the knife. The man refused and seconds later was struck by projectiles from two Tasers. Jackie Patterson, a former officer who is now an attorney, praised the airport officers for showing restraint. He said deadly force could have been used because the man allegedly moved toward one of the officers. The suspect is Antonio Malcolm Broussard. [Link](#)

Miscellaneous News

## Seoul Incheon Airport's new Terminal 2 Preps for Olympic Influx

From USA Today (01.22.2018) Harriet Baskas

South Korea's Incheon International Airport (ICN) near Seoul officially opened its high-tech new Terminal 2 on Thursday. The facility debut comes just in time to welcome visitors headed to the 2018 PyeongChang Winter Olympic Games, which begin February 9 and take place about 100 miles east of Seoul. The five-story new terminal can serve about 18 million passengers a year. For now, it's being used by just four airlines, all SkyTeam alliance members: South Korea's flag carrier Korean Air, Delta Air Lines, Air France and KLM Royal Dutch Airlines. More than 80 other airlines flying to and from Incheon will continue to operate out of Terminal 1. Beyond a soaring glass ceiling and loads of natural light, Incheon's new Terminal 2 is filled with "smart" technology, original art, an observation deck with a café and interactive activities, and many other welcoming amenities. Airlines in T2 offer passengers the opportunity to use dozens of self-check-in machines. Korean Air, encourages passengers to make use of its large bank of Smart bag-drop machines. Korean Air also offers its first and business class passengers separate check-in lounges. A fleet of robots has been deployed inside the airport to help passengers find their ways. Word has it the robots are even programmed to lead individual passengers to their gates. Photovoltaic panels on the roof and natural greenery inside the terminal help keep the air fresh and lower heating and ventilation costs. [Link](#)

## Legazpi Airport temporarily shut down due to Mayon Volcano Eruption

From Inquirer.Net (01.22.2018) Frances Mangosing -

Legazpi Airport (LGP) in the Philippines has been temporarily shut down until further notice amid threats from the restive Mayon volcano. "The Civil Aviation Authority of the Philippines said in its advisory said that effective 2:21 p.m. Monday, operations of Legazpi Airport is temporary closed until further advice. Affected flights are Cebu Pacific's Manila-Legazpi and Mactan-Legazpi," CAAP said in a statement. CAAP also issued a notice to airmen (Notam) after Alert Level 4 in Mayon Volcano was raised by the Philippine Institute of Volcanology and Seismology. It also erupted at 10:35 a.m., sending a volcanic ash cloud into the air. The Notam is effective from 12:06 p.m. on January 22 until 9 a.m. on Jan. 23. CAAP also advised pilots flying near the area to exercise extreme caution, as ash from volcanic eruption can be hazardous to the aircraft. [Link](#)

IAG 'disappointed' after losing Niki to rival bidder

From Flight Global (01.23.2018)

British Airways parent IAG has confirmed that its bid for Austrian carrier Niki has not succeeded, following a change of insolvency proceedings for the Air Berlin operation. Niki has been widely reported as having been sold to Laudamotion, a company controlled by former Formula 1 racing driver and aviation entrepreneur Niki Lauda. The reports cite the carrier's administrators. IAG had agreed to acquire the assets of Niki for €20 million (\$24 million) at the end of last year. But the insolvency proceedings were re-opened in Austria in mid-January and led to a new sales process. While IAG resubmitted its bid on 19 January, it says it has been advised that the bid "was unsuccessful". IAG says it is "disappointed" that it will not be able to develop Niki and enable the carrier to "grow stronger" as part of the airline group. It had intended to use a newly-created subsidiary of its Spanish budget operation Vueling to acquire Niki, and provide additional liquidity to the airline. [Link](#)

U.S. Department of Transportation Crisis Management Center Daily Report

Commercial In-Flight Incidents

\*SkyWest 3019, CRJ7

- January 23, 2018 at 12:00 AM EST
- Enroute from Los Angeles, CA (Los Angeles International Airport) to Tucson, AZ (Tucson International Airport)
- Flight control indicator problem
- Diverted to Phoenix, AZ (Phoenix Sky Harbor International Airport); landed without incident at 12:19 AM EST

\*American 179, A321

- January 22, 2018 at 1:27 PM EST
- Enroute from New York, NY (John F. Kennedy International Airport) to San Francisco, CA (San Francisco International Airport)

- Crew medical incident
- Diverted to Chicago, IL (Chicago O'Hare International Airport); landed without incident at 1:56 PM EST

\*United 1164, B739

- January 22, 2018 at 11:18 AM EST
- Enroute from Denver, CO (Denver International Airport) to Fort Lauderdale, FL (Fort Lauderdale–Hollywood International Airport)
- Engine problem
- Returned to Denver, CO; landed without incident at 11:31 AM EST

\*American 1087, B738

- January 22, 2018 at 10:38 AM EST
- Enroute from Chicago, IL (Chicago O'Hare International Airport) to Los Cabos, Mexico (Los Cabos International Airport)
- Noise on takeoff
- Returned to Chicago, IL; landed without incident

\*American 1591, B738

- January 22, 2018 at 10:14 AM EST
- Enroute from San Juan, PR (Luis Muñoz Marín International Airport) to Dallas, TX (Dallas/Fort Worth International Airport)
- Crew medical incident
- Diverted to Miami, FL (Miami International Airport); landed without incident at 11:24 AM EST

## Ground Incidents

\*Minneapolis, MN, Minneapolis–Saint Paul International Airport

- January 22, 2018 at 8:06 PM EST
- Delta 2003, MD90 from St. Louis, MO (St. Louis Lambert International Airport) and Delta 1960, B712 from Philadelphia, PA (Philadelphia International Airport)
- 3 hours tarmac rule violated; snow and ice conditions
- Aircrafts taxied to terminal; passengers deplaned

<b>HEADLINE</b>	<b>01/22 UN: 56 peacekeepers killed in 2017</b>
<b>SOURCE</b>	<a href="http://www.xinhuanet.com/english/2018-01/23/c_136916630.htm">http://www.xinhuanet.com/english/2018-01/23/c_136916630.htm</a>
<b>GIST</b>	<p>UNITED NATIONS, Jan. 22 (Xinhua) -- The United Nations said Monday that 2017 saw the highest number of peacekeeper fatalities through violent acts in over two decades, with 56 peacekeepers killed.</p> <p>"Peacekeeping is a risky activity. A certain number of casualties may occur even if all necessary preventive measures are taken. But since 2013, casualties have spiked. One hundred and ninety-five personnel in United Nations peacekeeping missions have been killed by acts of violence, more than during any other 5-year period in history," according to "Improving Security of United Nations Peacekeepers: We need to change the way we are doing business," a report directed by the UN secretary-general.</p> <p>"These numbers go beyond a normal or acceptable level of risk, and they are likely to rise even higher. Something needs to change to reverse the trend," the report said.</p> <p>Since 1948, more than 3,500 personnel have lost their lives serving in UN peace operations with 943 due to acts of violence. During the past four years (2013 - 2017) a consistent increase in peacekeeper fatalities due to violent acts resulted in 195 deaths, the report said.</p> <p>In an effort to reverse this trend and improve the safety and security of UN peacekeepers, the secretary-general in November 2017 appointed Lieutenant General (retired) Carlos Alberto dos Santos Cruz of Brazil to carry out an in-depth review of peacekeeping fatalities and injuries due to hostile acts.</p> <p>The report aims to identify why the UN has had so many casualties caused by acts of violence in recent years and what should be done to reduce these casualties.</p> <p>In the course of the review, the team visited UN peacekeeping operations in the Democratic Republic of the Congo, Central African Republic, Mali and South Sudan, accessed relevant internal UN data and conducted 160 interviews to inform their work.</p> <p>The report, which was submitted to the secretary-general, stated that with the influx of armed groups, extremists, organized crime, and other criminal elements and threats, the UN flag no longer offers "natural" protection to peacekeepers.</p>

<b>HEADLINE</b>	<b>01/23 Winter storm howls thru Midwest</b>
<b>SOURCE</b>	<a href="https://apnews.com/f0e1d8f15caa4cc08b36626670fd7ba6/Winter-storm-howls-through-Midwest">https://apnews.com/f0e1d8f15caa4cc08b36626670fd7ba6/Winter-storm-howls-through-Midwest</a>
<b>GIST</b>	<p>MINNEAPOLIS (AP) — Heavy snow and strong winds pushed across the Midwest on Monday, prompting highway closings in Kansas and South Dakota, school cancellations in Minnesota and grounding of flights in Denver and Minneapolis.</p> <p>In Minnesota, Gov. Mark Dayton called out the National Guard to help stranded motorists, the Star Tribune reported.</p> <p>The National Weather Service said more than 10 inches (26 centimeters) of snow has already fallen on North Platte in western Nebraska. In southern Minnesota, the storm dumped 17 inches (43 centimeters) near Owatonna by late afternoon Monday. Dozens of school districts in Minnesota canceled classes.</p> <p>Weather service meteorologist Bill Borghoff in Minnesota says the storm started brewing Saturday night over Nebraska and spread to Michigan's Upper Peninsula. He called it "a very classically developed winter storm," with widespread heavy snow on its northern end.</p>

Transportation officials lifted a no travel advisory for parts of southwest Minnesota, but advised motorists that blowing snow was still a problem. Winds were gusting up to 40 mph (64 kilometers), Borghoff said.

“If you don’t have to travel, don’t travel,” Borghoff said. Statewide the Minnesota State Patrol reported nearly 200 crashes and nearly 300 spinouts as well as 30 jackknifed semis by late Monday afternoon.

About a dozen flights were canceled or delayed at Denver International Airport on Monday, partly due to a storm hitting Minneapolis. Airlines are working to catch up a day after about 200 flights from Denver, about 15 percent of the day’s schedule, were canceled because of snow. Minneapolis-St. Paul International Airport reported more than 400 cancellations by Monday afternoon, with average delays of about six hours, Metropolitan Airports Commission spokesman Pat Hogan said.

“It’s really a tough day at the airport,” Hogan said.

The storm brought blizzard conditions to much of Nebraska and forced the Woodbury County Courthouse to close in Sioux City, Iowa.

South Dakota transportation and public safety officials closed north and southbound lanes of Interstate 29 from around Sioux Falls south to the Iowa border because heavy snow and strong winds made travel nearly impossible.

The Department of Transportation said numerous vehicles, including jackknifed semis, are stuck along the interstate, which is closed from Tea south to Iowa.

<b>HEADLINE</b>	<b>01/22 What is the World Economic Forum?</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/best-countries/articles/2018-01-22/what-is-the-world-economic-forum-in-davos-and-why-does-it-matter">https://www.usnews.com/news/best-countries/articles/2018-01-22/what-is-the-world-economic-forum-in-davos-and-why-does-it-matter</a>
<b>GIST</b>	<p>The 2018 World Economic Forum (WEF) officially kicks off in Davos, Switzerland, on Tuesday.</p> <p>The four-day annual meeting draws in a number of the world's power players – from key politicians and heads of state to private sector executives and philanthropists – to discuss economic and diplomatic issues in an elite gathering in the Swiss mountains. This year, the theme "Creating a Shared Future in a Fractured World" will run as a thread throughout speeches, panel discussions and seminars.</p> <p>Here's what you need to know about the event:</p> <p>What Is the WEF?</p>

The forum began 47 years ago when founder Klaus Schwab first organized a small conference on management. The organization's scope broadened in the 1980s and today it draws some of the biggest names in the business sector, government, international organizations, civil society, academia, media and the arts to the small Swiss ski resort of Davos. The conference is meant to address political, economic and societal challenges, according to WEF.

Sessions at the forum will confront a number of social, environmental and economic global issues with meetings focusing on topics such as reconnecting refugees, the Paris climate agreement and promoting free trade.

#### Why Does It Matter?

The meeting is taking aim at the debate around globalization at a time when domestic politics in the U.S. and across Europe are pushing back against what many perceive as a leading cause of inequality, wage stagnation and job loss in wealthy countries. As the WEF itself states, "the global context has changed dramatically." The meeting, organizers say, operates with a mission "to improve the state of the world."

The forum includes more than 400 sessions focusing on international collaboration as a way to approach and solve crucial global challenges. The gathering is also seen as an exclusive networking opportunity.

#### Who's Attending?

More than 2,500 global decision-makers from more than 100 different countries will attend the conference. Representatives from the United Nations, as well as from major companies – such as Carlos Ghosn of Renault-Nissan-Mitsubishi – will attend.

France's Emmanuel Macron, Germany's Angela Merkel, the United Kingdom's Theresa May, Canada's Justin Trudeau, Israel's Benjamin Netanyahu, Zimbabwe's Emmerson Mnangagwa and India's Narendra Modi are expected to be among the world leaders participating in the meetings.

U.S. President Donald Trump also is expected to attend the meeting in a break from recent presidential tradition – Trump's appearance would mark the first time a sitting president has attended the annual forum since Bill Clinton in 2000. Some are watching the U.S. president with particular interest as Trump's hallmark "America First" approach to foreign affairs has shaped his global leadership and reputation. Critics claim the stance is at odds with global cooperation.

<b>HEADLINE</b>	<b>01/23 Govt. shutdown over—for now</b>
<b>SOURCE</b>	<a href="http://time.com/5113727/trump-bill-shutdown-ends/?xid=homepage">http://time.com/5113727/trump-bill-shutdown-ends/?xid=homepage</a>
<b>GIST</b>	<p>(WASHINGTON) — President Donald Trump signed a bill reopening the government late Monday, ending a 69-hour display of partisan dysfunction after Democrats reluctantly voted to temporarily pay for resumed operations. They relented in return for Republican assurances that the Senate will soon take up the plight of young immigrant “dreamers” and other contentious issues.</p> <p>The vote set the stage for hundreds of thousands of federal workers to return on Tuesday, cutting short what could have become a messy and costly impasse. The House approved the measure shortly thereafter, and President Donald Trump later signed it behind closed doors at the White House.</p> <p>But by relenting, the Democrats prompted a backlash from immigration activists and liberal base supporters who wanted them to fight longer and harder for legislation to protect from deportation the 700,000 or so younger immigrants who were brought to the country as children and now are here illegally.</p> <p>Democrats climbed onboard after two days of negotiations that ended with new assurances from Senate Majority Leader Mitch McConnell that the Senate would consider immigration proposals in the coming</p>

weeks. But there were deep divides in the Democratic caucus over strategy, as red-state lawmakers fighting for their survival broke with progressives looking to satisfy liberals' and immigrants' demands.

Under the agreement, Democrats provided enough votes to pass the stopgap spending measure keeping the government open until Feb. 8. In return, McConnell agreed to resume negotiations over the future of the dreamers, border security, military spending and other budget debates. If those talks don't yield a deal in the next three weeks, the Republican promised to allow the Senate to debate an immigration proposal — even if it's one crafted by a bipartisan group and does not have the backing of the leadership and the White House, lawmakers said. McConnell had previously said he would bring a deal to a vote only if President Donald Trump supported it.

Sixty votes were needed to end the Democrats' filibuster, and the party's senators provided 33 of the 81 the measure got. Eighteen senators, including members of both parties, were opposed. Hours later the Senate passed the final bill by the same 81-18 vote, sending it to the House, which quickly voted its approval and sent the measure on to President Donald Trump.

White House press secretary Sarah Sanders predicted that operations would return to normal by Tuesday morning.

The plan is far from what many activists and Democrats hoped when they decided to use the budget deadline as leverage. It doesn't tie the immigration vote to another piece of legislation, a tactic often used to build momentum. It also doesn't address support for an immigration plan in the House, where opposition to extending the protections for the dreamers is far stronger.

The short-term spending measure means both sides may wind up in a shutdown stalemate again in three weeks.

<b>HEADLINE</b>	<b>01/22 US ill-equipped to handle China spying?</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jan/22/jerry-chun-shing-lees-arrest-sets-cia-fbi-debate-o/">https://www.washingtontimes.com/news/2018/jan/22/jerry-chun-shing-lees-arrest-sets-cia-fbi-debate-o/</a>
<b>GIST</b>	<p>A ferocious debate has erupted within the CIA and FBI over the scope of China's penetration of the American intelligence community in the wake of last week's arrest of a Chinese-American former CIA case officer accused of spying for Beijing.</p> <p>The charging of Jerry Chun Shing Lee, 53, in federal court last week with possessing personal notebooks full of CIA asset names and phone numbers was hailed by many as a huge U.S. counterintelligence success against China.</p> <p>But high-level intelligence sources say media coverage of the case has been rife with unverified speculation about Mr. Lee and the extent of his role in a breach that might have betrayed as many as 20 clandestine CIA informants in China back in 2010 and 2011. The informants were imprisoned and in some cases executed.</p> <p>Two sources who spoke with The Washington Times cast doubt on the whole narrative about the reported crackdown, as well as the extent of Mr. Lee's involvement, suggesting instead that Chinese disinformation — and penetration into America's spy agencies — may have played a role that is still not fully appreciated.</p> <p>"It would be a pity to scapegoat Jerry Lee and say, 'Look, there was a big mole and we caught him and now the Chinese espionage problem is solved,'" said one of the sources, a former official with extensive intelligence experience in East Asia. "Some people are trying to do that with this case, which I think is dangerous."</p>

A second source with 20 years of counterintelligence experience said there was a “heated debate within the intelligence community over the extent of Chinese penetration and whether there are other moles,” and whether Jerry Lee was the major one.

The Chinese state-owned Global Times newspaper fed into the mystery of the case, calling Mr. Lee’s arrest a witch hunt with grave and unjust consequences for other Americans of Chinese descent.

“The U.S. seems to be mobilizing a mass movement to chase down Chinese ‘spies’ and ‘penetrators,’” the online news source said in an editorial last week. “If this continues, many Chinese will be wronged and the whole Chinese community will come under much pressure, tangible or not. This will undermine their human rights.”

Uncertainty and secrecy over the Lee affair builds on a legacy of mistrust that reaches back generations.

U.S. officials have engaged in an unknown number of China-related counterintelligence investigations during the years since the notorious case of Larry Wu-Tai Chin, a Chinese translator who sold classified documents to Beijing while working for the CIA for nearly 35 years from about 1950 through the mid-1980s. Chin was convicted in 1986 but killed himself before sentencing.

“The thing people need to remember is that the CIA and the FBI are and have been the No. 1 targets for the Chinese for a long time,” according to one of the sources, who said both agencies believe one of Beijing’s central goals is to “penetrate us so they can get the information needed to schwack their own guys who are working with us inside China.”

Ill-equipped to counter China?

U.S. authorities arrested Mr. Lee after he arrived at John F. Kennedy International Airport in New York on Jan. 15. A naturalized U.S. citizen who worked as a CIA case officer from 1994 to 2007, Mr. Lee is also known by his Chinese name, Zhen Cheng Li.

At the time of his arrest, Mr. Lee had been living in Hong Kong and for the past 20 months was a security specialist employed by the global auction house Christie’s.

He was charged Tuesday in federal court in Virginia with violating the Espionage Act — the culmination of an FBI-led counterintelligence investigation that sources say began more than five years ago when the bureau discovered two small notebooks belonging to Mr. Lee that contained classified information.

Court documents say the books were found in August 2012 when FBI counterspies carried out a covert search of a Honolulu hotel room where Mr. Lee was staying. An FBI affidavit specifically claims the books contained the “true names and phone numbers of assets and covert CIA employees, as well as the addresses of CIA facilities.”

Mr. Lee faces a 10-year prison term if convicted, but some major questions remain unanswered.

For instance, the FBI affidavit makes no specific mention of China. It also offers no information about where the CIA employees, assets and facilities listed in Mr. Lee’s notebooks were located.

No reason was given why — if FBI counterintelligence found the notebooks in 2012 — it took more than five years for the agency to move on Mr. Lee. Was it because he was living in Hong Kong? Or was the agency simply sitting on the case in the hope that surveillance of Mr. Lee might lead to a bigger mole?

Some argue that U.S. intelligence agencies are simply ill-equipped to counter Chinese espionage methods.

“We don’t dedicate enough resources to counterintelligence against Chinese operations, influence operations, espionage against U.S. government secrets or economic espionage,” said Michael Pillsbury, a Mandarin-speaking analyst who has worked on China policy and intelligence issues for every U.S.

administration since Richard Nixon.

“Whether it’s human intelligence or cyberactivity, we just don’t have anywhere near the resources necessary,” Mr. Pillsbury said in an interview, adding that Congress should require the White House to produce an annual report on the scope of Chinese spying so Capitol Hill can begin to address the lack of resources.

‘A lot of unknowns’

The CIA and FBI declined requests for comment on the Lee case. Other former high-level intelligence officials, both with CIA experience in China, were not willing to discuss its implications even on an off-the-record basis.

But the two other sources who did speak on background said the case has exposed how limited Washington’s grasp is of China’s potential penetration into the intelligence community.

“There are a lot of unknowns,” said one of the sources. “This stuff is very sensitive, and right now the veil of secrecy has been lifted a teeny, tiny bit.”

It’s still not known when Mr. Lee started working for Beijing or if his alleged espionage overlapped with his CIA tenure.

“If he actually started spying and giving Beijing intel back in the 2004-2006 time frame, when he was still at the agency, he would have had access to active data,” the source said. “The hunch is that this wasn’t the case — it’s that he started sharing intel after he left. The reason for this is that if he had been active back in 2006, he wouldn’t have left the agency the way he did. Beijing would have made it worth his while to stay.”

Another lingering question is why Mr. Lee would have kept such incriminating notebooks in his possession.

“It could be that he’s just a doofus who messed up,” one source said.

But it could also be that it took the FBI so long to pin a case on Mr. Lee because “he was so well-trained in countersurveillance techniques that his activity was not detected,” said the source. “A second possibility is he is not a spy for China but had some other reason for carrying classified data in his notebooks years after leaving CIA, where his 13 years’ experience could be the basis of appointment as a consultant to meet assets again.”

“Some are asking, ‘Why did it take so long for the FBI to charge him?’” said the source. “The better question is, ‘Why did it take so long for such a little charge?’ If they had all this other stuff on him, why isn’t there any mention of it?”

Mr. Lee has not been charged with spying for China, and so far the government has brought only a single charge of unlawful retention of national defense information.

FBI Special Agent Kelly O’Brien’s affidavit in the arrest states that the government is withholding its full knowledge of Mr. Lee’s activities. Ms. O’Brien stated outright in the document that her statements were “intended to show merely that there is sufficient probable cause for the requested criminal complaint and warrant.”

“It does not set forth all of my knowledge about this matter,” she wrote.

SOURCE	<a href="http://crosscut.com/2018/01/seattle-human-resources-department-toxic-workplace-anxiety-crying-jenny-durkan/">http://crosscut.com/2018/01/seattle-human-resources-department-toxic-workplace-anxiety-crying-jenny-durkan/</a>
GIST	<p><b>This is the second article in a two-part <u>series</u>.</b></p> <p>Before the stroke, there were the migraines. Linda Leong had spent nearly 30 years working in the City of Seattle’s Human Resources Department as a compensation administrator, a job she loved. But the micromanaging, the reprimands, the yelling, the confusion and the fear of the past several years were building in layers, and so were her headaches. Co-workers started to notice her paling and not smiling as much.</p> <p>It happened one day in the office. As she was being scolded in a meeting with her bosses for working past her pre-approved hours, the tension that had built over months and years finally found the weak spot in her brain. Part way through the meeting, she began to hyperventilate, her whole body shaking, before she slumped in her chair. She recalls hearing what was happening around her, but couldn’t speak.</p> <p>Co-workers speak glowingly of Leong, 56. “She is the most dedicated employee anyone could ask for, an elegant, hardworking, knowledgeable woman,” one colleague told Crosscut. Her performance reviews were positive and, after so much time in the city, Leong believes she’d streamlined the process for updating compensation processes.</p> <p>But the way her supervisors lurked near her desk, occasionally slamming notepads down when frustrated, the way her work was being second guessed, and the confusion of new structures inside the department soured the job Leong says she loved to do. She blames it all for causing the stroke.</p> <p>The story of Leong’s health issues spread through the department, as had other stories of perceived mistreatment. For many, she was not an outlier, but in fact symbolic of what employees repeatedly described as a “toxic” work environment, one pushed to the breaking point as former Mayor Ed Murray and former director of the department Susan Coskey sought to reshape a decades old approach to HR in the City of Seattle.</p> <p>In accounts from more than 20 current and former Human Resources employees and city employees who work directly with the department, a picture emerges of an office wrought with discontent, frustration, anxiety and even fear. Talking with Crosscut, employees (most of whom requested anonymity) tell of a place where people are hired to do one thing but asked to do something entirely different; where staff feel their jobs are perpetually at risk; where expectations are unclear; and where criticizing the leadership team is intolerable.</p> <p>Turnover there in the last two years is rampant: In a department of roughly 100 employees, there have been 72 departures since 2014. In that period, according to public records provided to Crosscut, 18 people stayed for less than a year. After being introduced in an all-staff meeting and going desk to desk visiting workers, one high-profile leadership hire, brought on to coordinate the consolidation effort, stayed for only six weeks.</p> <p>Thanks to the office’s climate, employees recall crying on a daily basis and witnessing co-workers do the same. Multiple employees described heightened and sustained anxiety, with several taking medical leave, others receiving anxiety medication, still others seeing therapists for their stress. Two employees confirmed to Crosscut they perceived the environment as so “hostile” they’d taken their complaints to the city’s ethics department, which, they said, was sympathetic but hamstrung.</p> <p>At least one employee filed a complaint of age discrimination, an outstanding case which was found credible enough to warrant further investigation. In one HR unit, there were so many complaints that former Director Susan Coskey brought in a former investigator for the U.S. Attorney’s Office in Brooklyn, New York, to conduct interviews with employees on their way out.</p> <p>“HR is not there for employees; HR is there to protect the city,” said one former Seattle Department of Human Resources employee, who left after only a year due to the stress. “I would not trust HR to</p>

investigate anyone. I would get a lawyer.”

When Leong was diagnosed with a transient ischemic attack — a mini-stroke that wouldn’t have permanent repercussions but can often be a warning of a larger incident — she decided to retire, even if it was early. It “was the right decision to take care of my health,” she says.

On her final day, Leong received an emailed reprimand for staying beyond her pre-approved hours the night before. And as she lingered into her final evening, cleaning her desk, management called security to escort her away. “That was a shock and gave me the message that I was an unwanted employee being fired for cause rather than a valued employee going into retirement,” she said.

Although Coskey later issued an apology to Leong and gave her a hug, her unceremonious exit reinforced a building cache of evidence that there was nowhere worse in the City of Seattle to work than its own HR department.

HR in the City of Seattle is a disparate system, in which many individual departments run their own offices. These run parallel to the city’s central Seattle Department of Human Resources, which does citywide administrative tasks and handles personnel issues for smaller departments.

Mayor Jenny Durkan is dissatisfied with this structure amid concerns that the diffuse system leads to inconsistent implementation of policies, a lack of accountability for how employees are treated and such poor record-keeping that the mayor told Crosscut that she doesn’t even know how many people have filed accusations of sexual harassment and gender bias.

“At any given time as the mayor if I said — ‘Do we have a problem with sexual harassment? How many complaints have been brought?’ — no one could answer that,” Durkan said. “They were settling things in darkness.”

Durkan comes into office uniquely positioned to shape the direction of human resources in the City of Seattle. When she was inaugurated in November, the city was already in transition: Her predecessor, Ed Murray, began a process of transferring all HR authority out of individual departments and into the city’s centralized Department of Human Resource. The task is incomplete, delayed until 2019.

Durkan says she supports continuing consolidation as a means to make the city’s policies and procedures more consistent. Frustrated by the lack of any unifying approach to HR, she’s already instructed all departments to give the centralized personnel department 30-days notice if they intend to settle a sexual harassment complaint.

And as Crosscut reported Thursday, the idea of consolidating HR into one department is appealing to employees who have felt their harassment complaints have fallen on deaf ears.

But considering complaints from employees in the central HR department, the new mayor may find herself caught between what is now a diffuse and opaque system, where employees receive inconsistent service and complaints are settled in secrecy, and a centralized personnel department with a frustrated workforce, unconvinced it is structured to handle HR adequately.

The environment at the central HR department wasn’t always this way. Employees who’d been around since before 2010 describe an office that functioned with relative ease, if not the occasional struggles encountered by any large department. “We had a great unit when I began in the Workers’ Compensation Unit eight years ago,” one employee wrote in an exit survey. “I had people tell me they were jealous of how great of a team we had and that we were happily working.”

But as consolidation began early in Mayor Murray’s tenure, there was a marked shift in how the department was run. Units were restructured, supervisors were laid off and new people put into place.

The changes were ordered by Murray, but carried out by Coskey. She came to lead the department from a

long and successful career as an attorney, then as a personnel consultant. With the firm Seabold Consulting Group, she uncovered improper spending at the Port of Seattle. She also worked for Bright Spring Consulting, which has contracts with Amazon, the Bill & Melinda Gates Foundation and Microsoft.

Under her leadership, things became more strict. Written reprimands, once a rarity, were being “handed out like candy.” Employees recount witnessing colleagues being yelled at in public places by their superiors.

The drive toward consolidation was so intense, employees began to fear ever disagreeing publicly. One member of the department’s leadership team described colleagues withholding criticism for fear of disagreeing with Coskey and the direction set out by the mercurial, sometimes overbearing Murray.

“If management makes a decision, you go along,” said another employee. “If you speak up, you’re treated terribly.”

Meanwhile, new employees described feeling shocked at how tense everyone was. “It’s all this nebulous, secret communication,” said another former employee. “If you send an email to someone above your manager, you’ll get yelled at. It feels really scary.”

Frustrated workers describe doing months of research on a project, making a recommendation and then watching as the leadership team decided to go their own direction. “In nine months, I probably did four hours of work” that resulted in anything, said one employee who resigned after less than a year due to stress.

Coskey declined to be interviewed on the record for this story.

The tension within the department was evident in employees’ mental state and the pace of turnover. “I was told by my physician I needed to quit my job or that it would kill me because of the anxiety and stress that the environment was producing,” reads the exit interview of the employee whose unit had once functioned so well. “When I said I couldn’t yet is when I was placed on medication so that I could show up to work. . . . When I shared this with others, I found that 80% of my unit was also on medication for the same. When I spoke to others in the department but different units, the message was the same, they left or were on medication. Since leaving the City I have been able to stop taking medication.”

“I can count on both hands the number of people who had to leave for work-related stress,” another former employee who worked closely with Coskey told Crosscut. “I took an extended vacation this summer and then said I’ll try to make it to the end of the year. I lasted three weeks. My anxiety started to get out of control. I started to have panic attacks away from work. I’m a social person, but I stopped going out.”

There was an irony to the angst within the department: This was the personnel department, where the city’s mission for diversity and employee satisfaction was supposed to originate. But as leadership preached equity, four former and current employees of color in the department complained to Crosscut of being treated poorly. “They want diversity, but they don’t know how to deal with us,” said one woman, calling people of color the “bellwethers” for deeper issues. “They preach a gold standard, but they do the opposite.”

Two employees told Crosscut they took their complaints to the city’s ethics department and said that others had as well. But employees were told that toxicity was not an ethics violation in and of itself. Head of the Seattle Ethics and Elections Department Wayne Barnett declined to comment.

In one troubled unit, Coskey’s former employer, Seabold Group, was brought in to interview exiting employees. A former investigator for the U.S. Attorney’s Office in Brooklyn, Kris Cappel, started conducting hour long interviews, asking staff about their direct supervisors, work environment and even Coskey. “It felt like an hour therapy session. They wanted names, scenarios,” said one employee who was interviewed. “It was kind of questions that built on questions.” Cappel did not respond to a request for

comment.

Durkan has been conducting outreach to city employees, including via a citywide email request for feedback. At least three HR employees have forwarded complaints, either sent to Crosscut as well or obtained through public records requests, directly to her office.

Reads one message sent to Durkan: “Had we simply done what was originally envisioned and conducted a thorough internal review of policy/procedure through an equity lens and developed a system for close communication between department based HR and [the central Seattle Department of Human Resources] we would already be up and running and would have saved countless hours and dollars.”

In an interview with Crosscut, Durkan said she was committed to the consolidation, convinced that the city’s current de-centralized system does not serve the city well enough. If there are workplace issues, she said, then those can be addressed. “How do we continue to move the consolidation of HR so we can continue to meet our goals while at the same time address those people that are unhappy in the workplace and figure out if there are things we need to change?” says Durkan.

Shortly after Durkan became mayor, Coskey resigned. In a statement at the time, Durkan said Coskey had “served our City well for years.” Melissa Beatty became the acting director after her exit.

In an internal email announcing her resignation, Coskey thanked her staff for the “efforts to promote excellence in HR and greater equity for all our employees through citywide programs and strategies, including HR Consolidation (which I know for some has required more than a small leap of faith!). In leaving, I have full confidence in the City HR leadership and teams who remain to continue moving the City forward, and I thank you in advance for supporting their ongoing efforts.”

For now, it’s a wait-and-see period for many employees.

Although Durkan ultimately supports the consolidation, she says she’s not so dogmatic about it that she wouldn’t pause and adjust as necessary. “It’s kind of like stepping in a river that’s flowing and the dam’s three quarters of the way built,” says Durkan of inheriting the process from her predecessor. “I’m not a person who’s going to reinvent the wheel if I don’t have to. I’m going to see what’s working, but not be afraid to change how we implement it if we need to.”

<b>HEADLINE</b>	<b>01/22 America first? Not for foreign tourists</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/america-first-not-for-foreign-tourists/">https://www.cbsnews.com/news/america-first-not-for-foreign-tourists/</a>
<b>GIST</b>	<p>America and Turkey have something in common: They're the only two countries to suffer from a decline in long-haul travel since 2015.</p> <p>Top tourism destinations such as the U.K., Australia and Italy have all benefited from an increase in visitors during the last two years, but America and Turkey haven't shared in the expansion, according to data from the U.S. Travel Association.</p> <p>The sharp decline in foreign visitors to the U.S. has alarmed several industries that rely on tourism, ranging from hotels to retailers. So they're banding together to create a new coalition called Visit U.S. that aims to reverse the two-year trend. President Donald Trump's policies on immigration and his "America First" platform may be turning off foreign visitors, although the U.S. Travel Association pointed out that the decline began in 2015, well before Mr. Trump won the presidential election.</p> <p>"It would be erroneous to lay that that the president's feet, but that being said, rhetoric and messaging have a part of play in this," said Jonathan Grella, the trade group's executive vice president of public affairs. "Sadly, we're in the situation where travel is growing around the world, and America is in the company of Turkey in losing share, and they aren't typically our peer."</p>

The decline in foreign visitors is having a significant impact on the U.S. economy, according to the Visit U.S. coalition. Global travel increased 7.9 percent from 2015 to 2017, while the American share of that market declined from 13.6 percent to 11.9 percent.

If the U.S. had maintained its market share from 2015, America would have added \$32.2 billion in additional spending and created 100,000 additional jobs, the group said.

If the Trump administration's rhetoric isn't the only thing causing tourists to look outside of U.S. borders for vacation destinations, what else could be causing the problem? For one, the strong dollar, which makes the U.S. a less appetizing -- and pricier -- vacation spot for foreign travelers.

America's aging infrastructure and the rise of low-cost airlines in Europe may also be playing into the decline. The U.S. doesn't have one airport among the top 20 world airports rated by the International Airport Review. Instead, airports in Asia and Europe grab the top rankings. Plus, several U.S. airports earn low ratings from passengers for travel experience, including New York's LaGuardia and JFK airports.

"They're starved of infrastructure funding," Grella said of U.S. airports. "Europe continues to grow more connected and add more low-cost carriers and has more choice. Those things can affect demand."

He added, "If you have the choice to go somewhere efficiently and cost efficiently, you might choose that over a less pleasant travel experience."

The Visit U.S. coalition's goal is to encourage the Trump administration and lawmakers to enact policies that are more traveler-friendly, such as expanding the visa waiver system and adding messaging that reassures foreign travelers that they're wanted in the U.S.

That might be a tough sell, at least on the face of it. President Trump's rhetoric, such as questioning why the U.S. is accepting people from "sh\*thole" countries, as well as scaling back legal protections for immigrants from several nations, may signal to foreign travelers that border policies aren't as open as they once were.

"With each limiting security announcement, we need to offset it with a deliberate welcoming message so America can help reclaim its market share," Grella noted. "Trump is a legendary brander and understands that America's brand matters."

Still, the challenges to burnishing America's image outside its borders are very real. The Pew Research Center found that the nation's image has suffered in countries where people say their confidence in the U.S. president has declined. Favorability ratings for the U.S. declined across the globe, according to Pew, which found that this measure increased in just two countries: Russia and Vietnam.

<b>HEADLINE</b>	<b>01/22 AAA: January gas prices hit 4yr high</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/finance/markets/gasoline-price-oil-crude/2018/01/22/id/838527/">https://www.newsmax.com/finance/markets/gasoline-price-oil-crude/2018/01/22/id/838527/</a>
<b>GIST</b>	<p>Gas prices are having the most expensive start to the year since 2014, AAA said.</p> <p>To be sure, the AP reported that the average price of a gallon of regular-grade gasoline jumped 4 cents nationally over the past two weeks to \$2.58.</p> <p>Industry analyst Trilby Lundberg of the Lundberg Survey said Sunday that the increase is due to higher crude oil costs.</p> <p>The current gas price is 22 cents above where it was a year ago.</p>

	<p>Gas in San Francisco was the highest in the contiguous United States at an average of \$3.26 a gallon. The lowest was in Tucson, Arizona, at \$2.16 a gallon.</p> <p>The U.S. average diesel price is \$2.99, up 5 cents from two weeks ago.</p> <p>"It has been anything but a normal January for prices at the pump," said Mark Jenkins, spokesman, AAA - The Auto Club Group. "Normally, demand slips and supplies build. However, this story so far this year has been a rally in oil prices.</p> <p>"Oil prices strung together three weeks of significant gains, raising the cost of producing gasoline," Jenkins continued.</p> <p>"As a result, gas prices for the month of January have been the most expensive in four years. Fortunately, prices at the pump plateaued late last week, after the momentum for oil stalled out. While gas prices will continue to be steered by the price of oil, they will soon face additional pressure from refinery maintenance season," he said.</p> <p>"During the next few months, refineries will reduce output as they conduct maintenance on their equipment and switch to summer-blend gasoline. This usually leads to tighter supplies and forces gas prices higher. However, there is still lingering hope that U.S. oil production will ramp-up sooner than later, which would boost inventories and push energy prices lower."</p>

<b>GIST</b>	<p>BEIJING — Beijing has a message for the Trump administration: The more ships you send to the contested waters of the South China Sea, the more we will bolster our presence there.</p> <p>The warning, delivered in a People’s Daily commentary published Monday, came days after the USS Hopper sailed within 12 nautical miles of Scarborough Shoal, a reef China seized from Philippine control in 2012. “A U.S. ship wantonly provoking trouble is reckless,” it read.</p> <p>It is not the first time Beijing has tried to blame Washington for maritime tensions — it’s a bit of a recurring theme — but the ship’s operation and the blustery response may signal an ominous shift in U.S.-China ties.</p> <p>In his first year in office, President Trump was focused getting China to rein in North Korea and said little about the South China Sea. But many analysts predicted that his administration would take a tougher line in 2018 — and that may now be underway.</p> <p>The United States called last week’s operations “routine and regular,” but from a Chinese perspective, the timing and the location are significant.</p> <p>This was the first so-called Freedom of Navigation Operation (FONOP) in months and the first such passage near Scarborough Shoal. It also took place on the eve of the release of the National Defense Strategy — a document replete with warnings about China.</p> <p>In the wake of the operation, China showed no sign of changing or softening its stance. Over the weekend, the Chinese Foreign Ministry said that Beijing was “strongly dissatisfied” with the Hopper’s passage and that China will take necessary measures to “firmly safeguard its sovereignty.”</p> <p>Monday’s editorial put it this way: “If the relevant party once more makes trouble out of nothing and</p>

causes tensions, then it will only cause China to reach this conclusion: to earnestly protect peace in the South China Sea, China must strengthen and speed up the building of its abilities there.”

Ian Storey, an expert on the South China Sea and a senior fellow at the ISEAS-Yusof Ishak Institute in Singapore, said the timing seemed calibrated to show China that the United States is ready to “do something a bit different.”

“I was quite surprised when I read it had taken place at Scarborough Shoal,” he said. “I suppose this took China by surprise as well and it was designed to throw them off balance a bit.”

China claims nearly all of the South China Sea, including Scarborough Shoal, a feature just off the coast of Luzon, not far from the former U.S. base at Subic Bay.

In 2016, an international tribunal ruled that China’s expansive claims had no legal basis, a finding welcomed by much of the region, but largely ignored by Beijing. In the years since, China has pressed ahead with land reclamation and building in the area.

A White House effort to shake up U.S. strategy in the South China Sea will test both U.S.-China and U.S.-Philippine ties — especially because the Philippines, which used to control the shoal, appears to have lost interest in contesting it.

The Philippines, a longtime U.S. ally, used to challenge Chinese claims to the South China Sea. Since coming to power in 2016, however, President Rodrigo Duterte has taken a softer line with Beijing.

Responding to reports of the FONOP near Scarborough Shoal, Duterte’s spokesman, Harry Roque, told local media outlets that it was “America’s problem.”

“We have reached a point where we have independent foreign relations, and a problem of America is no longer a problem of the Philippines,” he said.

Jay L. Batongbacal, director of the University of the Philippines’ Institute for Maritime Affairs and Law of the Sea, said the Duterte government’s response could help China and hinder the United States by lending credence to Beijing’s claims.

The Duterte administration “washing its hands of this incident and not saying anything about China’s assertion of sovereignty is a problem because it could be interpreted as acquiescence to China’s statement,” he said.

“If I were China, I would use the Philippines’ silence as evidence against their claims.”

<b>HEADLINE</b>	<b>01/22 US: embassy in Jerusalem in 2019</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/World-News/2018/01/22/Pence-says-US-will-open-Israeli-embassy-in-Jerusalem-in-2019/3651516624527/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=1">https://www.upi.com/Top_News/World-News/2018/01/22/Pence-says-US-will-open-Israeli-embassy-in-Jerusalem-in-2019/3651516624527/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=1</a>
<b>GIST</b>	<p>Jan. 22 (UPI) -- The United States will transfer its Israeli embassy to Jerusalem and open a new facility next year, U.S. Vice President Mike Pence told Israeli lawmakers on Monday.</p> <p>Pence made the remarks in an address to the Knesset, Israel's Parliament.</p> <p>President Donald Trump announced the plan to relocate the embassy on Dec. 9, which prompted widespread condemnation in the Arab world for derailing any attempt at peace between Israelis and Palestinians. The Palestinian Authority, which is boycotting Pence's visit to the Middle East, also regards Jerusalem as its capital, should a two-state solution bring statehood to Palestine.</p>

"In the weeks ahead our administration will advance its plan to open the U.S. embassy in Jerusalem, and that United States embassy will open before the end of next year," Pence said. He added that Trump had directed the State Department to "immediately begin preparations" for the transfer from Tel Aviv.

The establishment of an embassy in Jerusalem will be the first by a foreign government in Israel.

Pence's remarks were met with opposition by several Arab members of the Knesset.

Knesset member Ayman Odeh of the Joint Arab List party called Pence "a dangerous man with a messianic mission that includes the destruction of the entire region."

Monday's opposition followed demonstrations Sunday in the West Bank city of Bethlehem, where protesters burned a photograph of Pence. His planned visit to the West Bank was canceled because the Palestinian Authority pledged to boycott his visit.

<b>HEADLINE</b>	<b>01/22 UN envoy views Calif. homelessness</b>
<b>SOURCE</b>	<a href="https://www.theguardian.com/us-news/2018/jan/22/un-rapporteur-homeless-san-francisco-california">https://www.theguardian.com/us-news/2018/jan/22/un-rapporteur-homeless-san-francisco-california</a>
<b>GIST</b>	<p>Leilani Farha was being given a walking tour in central San Francisco. Near a thronged artisanal grocery store and a food-truck park, she saw something under a freeway that gave her pause.</p> <p>A young homeless man sat on the ground. He wore two pairs of jeans and had a hood pulled over his long brown hair. Before him was a crockpot filled with burning paper, over which he was heating tortillas in a dirty skillet. As cars, cyclists and tech commuter buses rushed past, white smoke poured into the darkening air.</p> <p>"The last time I saw cooking on a sidewalk," Farha said, "was in Mumbai."</p> <p>Farha, 49, is a Canadian lawyer. She is also the United Nations special rapporteur on adequate housing, charged with probing deplorable living conditions and assessing compliance with international human rights law. Her latest project is a report on "informal settlements" – shanties, favelas, tent cities – which will be presented at the UN general assembly.</p> <p>In Mexico City, she spent time in a slum by a railway line. In Manila and Jakarta, she visited decrepit and makeshift houses. San Francisco has a median home value of \$1.3m and would seem an incongruous next stop. Farha had come on an unofficial visit, at the invitation of academics and advocates.</p> <p>"The situation is unacceptable in light of the wealth of the country," she said, adding that she was "deeply, deeply concerned" by the homelessness she saw.</p> <p>Poverty in the US is an established UN focus; last month, another rapporteur was dismayed by visits to Skid Row in Los Angeles and hookworm-afflicted deep south communities.</p> <p>In 2011, a UN representative visited Sacramento. After discovering that homeless people were defecating into plastic bags, the official wrote to the city's mayor. Such circumstances, she said, could amount to "cruel, inhuman or degrading treatment".</p> <p>Farha squatted by the man with the cooking fire. His name was Eric Hoch, and he was 30.</p> <p>The Minnesotan told her he had been homeless in San Francisco for two or three years. He complained of an old gunshot wound and said he did not understand the welfare system. He does not have a tent – he sleeps bundled in a blanket on the street.</p> <p>"I'm going to ask kind of personal questions," Farha said. "What do you do if you have to go the</p>

bathroom?”

Hoch described how he timed his bowel movements to the opening hours of restrooms in surrounding businesses.

“Did you know you have a right to housing?” she asked, referring to article 25 of the Universal Declaration of Human Rights. How would he react if the government offered him somewhere to live with no strings attached?

“That’d probably be something I’d hop, skip and jump to,” Hoch said.

“That’s something your government is supposed to do,” Farha said. “I hate to tell you, you’re being ripped off.”

Homelessness is on the rise in the US for the first time since the great recession. In San Francisco, about 7,500 homeless people were counted last year, more than two-thirds suffering from health conditions including brain injuries and HIV/Aids.

It would be easy to dismiss such extreme poverty as a product of human frailty. Ben Carson, secretary of housing and urban development, has described poverty as a “state of mind”. Farha takes a contrary view.

“If I turned to San Francisco and there were 100 people who were homeless, I might say, ‘Hmm, this is probably about psychological disability, drug dependence, a history of sexual abuse in their childhood’ or something like that. I might be able to say that it is very individualized.

“But when you’re seeing the numbers of people who are homeless here and in every other city, you just know it’s structural.”

There is almost nowhere in the US that is affordable for those earning minimum wage. The country is short about 7.5m homes for extremely low-income renters. In San Francisco, the waitlist to get into a homeless shelter is more than 1,000 names long.

“In international human rights law,” Farha said, “providing shelter to people who are homeless is the absolute minimum standard for any country, regardless of resources.”

The next day, in Oakland, she saw one kind of stopgap. In the shadow of several freeways, the city had installed a scattering of sheds, housing about 35 people on a bare patch of gravel. The sheds do not come with electricity, plumbing or insulation. Each has one small window.

Such “tiny homes” are increasingly used in western cities when permanent housing is unavailable. Experts fear they could pave the way for American shantytowns.

The alternative was evident a mile or two away, in a string of shacks built from discarded materials. Farha picked her way through one, an immense, rickety warren of tarps and wood, the floor sodden and covered with broken glass. The inhabitant, Mavin Carter-Griffin, told Farha she sometimes felt she had created a Burning Man-style art project. Other times, it felt like a trap.

“There’s this abject humiliation and embarrassment,” she said. “I’m astounded that my life is here.”

Outside, there was a portable toilet serving dozens of people. It was overflowing, said a member of Farha’s team who used it.

Farha was struck by the stories she heard of homeless people losing their few possessions in encampment sweeps, and laws that criminalize sitting on sidewalks or food sharing. “There’s a cruelty here that I don’t think I’ve seen,” she said.

	<p>Next she was heading to Los Angeles, where thousands live in conditions that do not meet standards set for refugee camps.</p> <p>“I’m slightly terrified to go to LA,” Farha said, “because everyone says LA is even worse.”</p>

<b>HEADLINE</b>	<b>01/22 Tacoma top city for small conventions</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/south-sound-news/tacoma-is-rated-the-top-small-city-for-conventions/687873984">http://www.kiro7.com/news/south-sound-news/tacoma-is-rated-the-top-small-city-for-conventions/687873984</a>
<b>GIST</b>	<p>Want to hold a convention? According to MeetingSource.com, the number one city to choose is Tacoma -- as long as it's a small convention of one thousand people or less.</p> <p>“When you get those kinds of accolades and recognition, I like to say it gives you a seat at the table,” said Travel Tacoma President and CEO Bennish Brown. “People listen.”</p> <p>The city made the top 10 for small conventions last year, coming in at number four.</p> <p>Now the City of Destiny tops the list of smaller convention venues.</p> <p>MeetingSource.com cites things like safety for visitors, walkability around downtown, mild weather and affordable hotel rooms.</p> <p>The ranking comes as Travel Tacoma reports 2017 as another record year for hotel occupancy with revenue soaring by more than 9 percent and topping \$127 million over 2016.</p> <p>And then there is this: Sunset magazine recently listed Tacoma as one of the nation's best small towns in which to live.</p> <p>Brown says it all adds up to a promising new year for the South Sound.</p> <p>“Tacoma has found itself, and once you’ve found yourself, you know that you can be the best self you can be. I think that’s where we are with Tacoma,” Bennish said.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>01/22 King Co. homeless campaign numbers</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/king-county-homeless-campaign-releases-staggering-numbers/281-510666941">http://www.king5.com/article/news/local/king-county-homeless-campaign-releases-staggering-numbers/281-510666941</a>
<b>GIST</b>	<p>King County and some area cities hosted their first discussion on ways to solve the regional problem of homelessness Monday.</p> <p>Last month, they announced the campaign called "One Table" -- a high-level workgroup from different jurisdictions. The roomful of people who met in South Seattle came from various disciplines, including housing, behavior health, and the criminal justice system.</p> <p>Monday's meeting covered the data on how bad the homeless issue is in the county, and some of the actual numbers were quite staggering.</p> <p>In the last five years, the number of people entering homelessness in the county has almost doubled, from 16,502 in 2012, up to 29,462 in 2016.</p> <p>In the last two years, the number of people becoming homeless far exceeded the number people finding a way to get out of it. In 2017, for example, 25,372 entered homelessness, whereas 18,971 exited.</p>

The increase in the number of people experiencing homelessness correlated with rising rents for a one bedroom studio apartment. In 2007, the average studio rental was \$792.; In 2017, it was \$1,370.

Leaders of King County, Seattle, and Auburn addressed the questions about the possibility of new sales or property taxes to pay for the problem.

"That is going be one of the main outcomes of this conversation," said King County Executive Dow Constantine. "What we need to do and what we're willing to do to get to that prevention side of the equation."

But Auburn Mayor Nancy Backus said raising taxes should not be the first consideration.

"We should not take taxes as the number one way of how we're going to solve this issue," said Backus. "We need to look at what are we currently doing that might not be working, how can we better utilize the resources we currently have."

Dealing with mental health and drug use will undoubtedly be part of the price tag. Of the 8,080 households assessed in the county in the last year, 63 percent had mental health or substance abuse problems.

Seattle Mayor Jenny Durkan hopes for solutions to a regional problem.

"It may even include having a joint agency that has the ability, the resources to tackle this rather than trying to do it in pockets," Durkan said.

<b>HEADLINE</b>	<b>01/22 Western Wash. firefighters need help w/tools</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/01/22/western-washington-firefighters-need-your-help-to-save-lives-extrication-training-group-loses-practice-tools/">http://q13fox.com/2018/01/22/western-washington-firefighters-need-your-help-to-save-lives-extrication-training-group-loses-practice-tools/</a>
<b>GIST</b>	<p>PUYALLUP, Wash. — A group who's dedicated their lives to helping others, the Puyallup Extrication Team, needs the public's help to continue their training program.</p> <p>Since 2000, the team has been training first responders in the art of extrication. This often includes training on how to use the 'Jaws of Life' to rescue people trapped as a result of car crashes.</p> <p>"We've taught thousands of firefighters over the course of 20 years," said Jeff Pugh, president of the Puyallup Extrication Team.</p> <p>Until recently, the nonprofit group of volunteers used a donated 'Jaws of Life' tool set to conduct their training. However last year, the company loaning the tools decided they could no longer continue to lend the tools out, so they took them back.</p> <p>"Losing these tools that support that's behind us is huge for us. We still would continue our efforts, but it's not going to be what it could be. It should be. It has been," said Pugh.</p> <p>That's why the group has decided to take their fate into their own hands and purchase their own set of 'Jaws of Life' tools to train with. They need about \$30,000 to purchase the tools, and as of Monday night, they're far from reaching their goal.</p> <p>The Puyallup Extrication Team trains fire department and firefighters both here locally, domestically and internationally. Often they're providing training departments don't or can't offer. Their goal is to make first responders better and faster at extrication.</p> <p>A good example of the situation the Puyallup Extrication Team trains for happened last month when an</p>

Amtrak train derailed on I-5 in DuPont. Three people were killed and dozens more injured. First responders used the 'Jaws of Life' to pry open the train cars and rescue survivors. Pugh said his group trained some of the agencies that responded to the derailment.

The team's 'Jaws of Life' training class in March is already sold out. Pugh said they hope to borrow tools to teach the class, but if they can't, they'll teach without.

If you would like to help out, there are two ways to donate to the group: either go to their website, [www.thepxteam.org](http://www.thepxteam.org) or on their 'Go Fund Me' page [www.gofundme.com/jaws-of-life-purchase](http://www.gofundme.com/jaws-of-life-purchase).

HEADLINE	<b>01/22 Many homeowners property taxes to rise</b>
SOURCE	<a href="http://q13fox.com/2018/01/22/many-homeowners-will-see-higher-property-taxes-to-pay-for-education/">http://q13fox.com/2018/01/22/many-homeowners-will-see-higher-property-taxes-to-pay-for-education/</a>
GIST	<p>SNOHOMISH COUNTY, Wash. — The Legislature's plan to fully fund public education is about to have a real impact on homeowners in Puget Sound.</p> <p>Last year, lawmakers made a deal to spend \$2 billion more for education.</p> <p>This came after the state Supreme Court held legislators in contempt for not performing their paramount duty of fully funding public education.</p> <p>The ruling, known as the McCleary decision, came down in 2012.</p> <p>Lawmakers last year finally passed a plan that relies on property taxes.</p> <p>On Monday, Snohomish County released some of the first property assessments.</p> <p>If you live in a single family home valued at \$400,000, you can expect to pay about \$330 more per year for just the education portion.</p> <p>When it comes to overall taxes, it will all depend on what neighborhood you live in.</p> <p>Take, for example, in Woodway, an average homeowner can expect to pay nearly \$1,200 more per year while Lake Stevens and Edmonds will see about an \$800 increase.</p> <p>Marysville will see property taxes jump nearly \$400.</p> <p>Snohomish is coming in at about \$550 and Lynnwood is about \$770.</p> <p>Pierce County says an average single-family home valued at \$321,000 can expect to pay about \$330 more per year.</p> <p>If you think those hikes are big, King County is expected to be higher.</p> <p>"It will be a significant increase," King County Property Assessor John Wilson said.</p> <p>Wilson says the Legislature's deal is putting the heaviest burden on King County homeowners.</p> <p>"Massive tax shifts from King County taxpayers into the state coffers, to fund education to pay for elsewhere across the state," Wilson said.</p> <p>Last year, some lawmakers predicted property taxes would fall in some parts of South King County but Wilson says that is just not true.</p>

	<p>“I would love to live in the rich fantasy world they live; in mine, (they) show property taxes going up throughout the county,” Wilson said.</p> <p>Wilson is expecting angry calls, although his office didn’t make the rules.</p> <p>“We’ve warned our staff about that, some people are going to take it out on us,” Wilson said.</p> <p>The King County Assessor says they are still crunching the exact numbers. The notices are expected to go out late February.</p> <p>Homeowners will start paying higher bills starting in April.</p>

<b>HEADLINE</b>	<b>01/22 Legislature appeals public records case</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/politics/legislature-appeals-to-state-supreme-court-in-public-records-case/">https://www.seattletimes.com/seattle-news/politics/legislature-appeals-to-state-supreme-court-in-public-records-case/</a>
<b>GIST</b>	<p>OLYMPIA — The Washington Legislature wants to take its public-records lawsuit straight to the top.</p> <p>Attorneys for the Legislature on Monday asked the state Supreme Court to weigh in on lawmakers’ long-running exemption from Washington’s Public Records Act, according to state records.</p> <p>The appeal comes after a Thurston County judge Friday ruled that legislative leaders had violated Washington’s Public Records Act by declining requests for records.</p> <p>For decades, lawmakers and the Legislature’s administrative offices have claimed they are exempt from the state Public Records Act.</p> <p>That exemption has allowed lawmakers and legislative officials to withhold work calendars, emails and harassment complaints against elected officials, among other documents.</p> <p>Those are the types of documents that local governments, state agencies and the governor’s office routinely make public.</p> <p>In Friday’s ruling, Judge Chris Lanese wrote that, “The plain and unambiguous language of the Public Records Act applies to the offices of senators and representatives ...”</p> <p>Lanese, however, ruled that Washington’s records act doesn’t apply to the Legislature’s administrative offices, such as those of the chief clerk of the House and secretary of the Senate.</p> <p>Before the state Supreme Court hears the case, its justices must first decide to accept it, according to Wendy Ferrell, a spokeswoman for the courts.</p> <p>The justices could instead transfer the case to an appeals court.</p> <p>That decision will likely take several months, Ferrell wrote in an email.</p> <p>In September, 10 news organizations, including The Seattle Times and The Associated Press, filed the legal challenge to the Legislature’s public-records exemption.</p>

<b>HEADLINE</b>	<b>01/22 Deluge rain, snow in western Washington</b>
-----------------	--

SOURCE	<a href="https://www.seattletimes.com/seattle-news/are-you-ready-here-comes-a-deluge-of-rain-snow-across-western-washington/">https://www.seattletimes.com/seattle-news/are-you-ready-here-comes-a-deluge-of-rain-snow-across-western-washington/</a>
GIST	<p>Meteorologists are warning of slick roads and limited visibility Tuesday as a winter storm sweeps Western Washington, drenching the lowlands with rain and dumping up to 3 feet of snow on Mount Rainier.</p> <p>From Snohomish to Lewis counties, the National Weather Service issued a “winter storm watch” in the North Cascades, urging drivers to take precaution with oncoming snow and sleet beginning Tuesday morning.</p> <p>Elevations above 2,000 feet could accumulate 1 to 2 feet of snow, with Mount Rainier seeing more.</p> <p>Meanwhile, cities across the western lowlands will accumulate various amounts of rain, including up to 1 inch possible across the Seattle area, said Johnny Burg, a meteorologist for the service.</p> <p>“It’s going to be wet tomorrow, and in the Cascades, it’s going to be a lot snow,” said Johnny Burg, a meteorologist for the service. “Travel will be affected.”</p> <p>Drivers in the mountains, such as Stevens Pass and Snoqualmie Pass, should prepare for difficult conditions by packing an emergency kit, including flashlights and a spare cellphone charger, among other essentials. Call 511 or check the Washington Department of Transportation’s website for the latest roadway conditions.</p> <p>Meteorologists expect the heaviest snow in the afternoon and evening, with Mount Rainier tallying the most. Paradise could receive some 3 feet by Wednesday morning, the winter-storm watch says.</p> <p>Also, strong winds between 20 to 35 mph, with gusts near 45, could challenge drivers and threaten power lines and trees in San Juan County and the Admiralty Inlet area Tuesday, according to the service.</p> <p>The storm’s moisture in Seattle Tuesday will kick off a series of wet and cloudy days, as the forecast calls for a chance of rain, at least in the form of showers, through Sunday.</p> <p>In addition to rain, meteorologists expect wind speeds between 7 to 9 mph on Tuesday and 13 to 15 mph, with gusts up to 21 mph, on Wednesday.</p> <p>High temperatures for the week will mostly be in the upper 40s, according to the service’s forecast.</p> <p>This weather comes after an unusually dry and sunny series of days last week, snapping records for warmth, including the highest temperature ever recorded by the service in January, 64 degrees.</p>

HEADLINE	<b>01/23 High gas prices ‘new normal’?</b>
SOURCE	<a href="https://www.upi.com/Energy-News/2018/01/23/High-gas-prices-could-be-the-new-normal/8021516704899/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=3">https://www.upi.com/Energy-News/2018/01/23/High-gas-prices-could-be-the-new-normal/8021516704899/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=3</a>
GIST	<p>Jan. 23 (UPI) -- Abnormal trends for U.S. retail gasoline prices so far could point to higher prices for the year, but there may be short-term relief in store, analysts said.</p> <p>Motor club AAA reports a national average retail price of \$2.54 per gallon for Tuesday, a slight increase from the previous day and about 10 cents per gallon, or 4 percent, higher than one month ago.</p> <p>Jeanette Casselano, a spokeswoman for AAA, said gas prices usually drop by as much as 20 cents during the first few weeks of January as holiday demand sloughs off, but this year the trend is reversed.</p> <p>"For consumers, the question is how high are gas prices going to go in 2018," she said in a statement.</p>

Crude oil prices, a major factor in the price at the pump, continue to flirt with four-year highs because of lower production from members of the Organization of Petroleum Exporting Countries and expectations of economically-driven demand pressure. The U.S. Bureau of Economic Analysis releases its estimate of fourth quarter gross domestic product on Friday.

On Monday, the International Monetary Fund said global economic growth has been strengthening at least since 2016, but warned of complacency because of lop-sided growth and cyclical momentum.

By market, the West Coast in the United States continues to be the most expensive in the country, with California taking the top mark with \$3.19 per gallon, though that's skewed slight by a new fuels tax that went into effect last year. Nearby Washington, however, is close behind with \$2.94 per gallon.

Gas prices in the region or more or less stable and could move lower. The inventory for gasoline in the market is at a four-year high, federal data show.

The Great Lakes market, meanwhile, is the most volatile, with Indiana and Michigan both posting declines in retail gasoline prices from last week of more than 10 cents. Compared with this time last year, however, those same states are paying 30 cents or more for a gallon of gas and are at the top of the list for yearly increases.

Patrick DeHaan, a petroleum analyst at GasBuddy, said the region is vulnerable to a few refineries and a phenomenon he calls "price cycling," a situation where retail stations drop their prices to compete, but are forced to drive them up again to make money.

"Great Lakes refinery issues continue to flare up with no warning and gas prices there may continue to be more volatile in coming weeks," he said in a statement.

He said last week that there may be some relief in sight for gas prices as a while as refineries start making a summer blend of gasoline and sell off their winter stocks at a bargain, but that relief might last only through the middle of February.

Federal data show the average retail price for a gallon of regular unleaded gasoline was \$2.42 last year and should be about 15 cents per gallon higher for all of 2018.

<b>HEADLINE</b>	<b>01/22 More people bring animals on planes</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/animalia/wp/2018/01/22/fur-and-fury-at-40000-feet-as-more-people-bring-animals-on-planes/?utm_term=.8835021cb472">https://www.washingtonpost.com/news/animalia/wp/2018/01/22/fur-and-fury-at-40000-feet-as-more-people-bring-animals-on-planes/?utm_term=.8835021cb472</a>
<b>GIST</b>	<p>When Marlin Jackson arrived at his row on a Delta flight from Atlanta to San Diego in June, the middle seat was already occupied by a man with a sizable dog on his lap. Jackson squeezed by them to his window seat, and the Labrador mix lunged at his face. The attack lasted about 30 seconds, according to Jackson's attorney, and left him with facial wounds that required 28 stitches and scars that are still visible today.</p> <p>The mauling, which Delta said was inflicted by a canine identified as an "emotional support" animal, was among the thousands of incidents that just pushed the nation's largest airline to tighten rules for passengers flying with service or comfort animals. In announcing the changes Friday, Delta said it flew 250,000 animals in those categories last year, up 150 percent from 2015, while "incidents" such as biting or defecating had nearly doubled since 2016.</p> <p>Delta emphasized safety concerns in detailing the increased documentation owners that will be required to provide about their animals. But its action also was spurred by a widespread perception among airlines and disability rights advocates that some fliers are fraudulently taking advantage of federal law to bring untrained pets of myriad species into crowded cabins.</p>

Though the Americans With Disabilities Act defines service animals as trained dogs or miniature horses, airlines are bound by the more liberal Air Carrier Access Act of 1986, which allows free travel for “any animal” that is trained to assist a person with a disability or that provides emotional support. Airlines can require passengers with creatures in the second category to produce a letter from a physician or mental-health professional, but the documents are easily forged or obtained from websites that provide cursory, questionnaire-style “exams.”

The result, airline officials complain, has been a surge in poorly trained animals that has turned some flights into airborne menageries, with dogs blocking beverage carts, cats urinating on seats and ducks wandering the aisles.

“It’s created a real issue on our planes,” said Taylor Garland, a spokeswoman for the Association of Flight Attendants, which applauded Delta’s changes. Garland said one union member was asked to administer oxygen to a dog that, according to its owner, was having anxiety midflight. Others have been bitten. “The aircraft cabin is a unique space, and ... we need to recognize the limitations that exist when you’re flying in the air in a metal tube.”

Other airlines have not released their own figures, and the Department of Transportation says it does not collect data on service and support animals on U.S. flights. But the agency’s reports on disability-related complaints show that those involving service animals nearly quadrupled between 2012 and 2016, when more than 2,300 were filed. Scrutiny of service animals is also sharpening on the ground: Nineteen states now have laws that criminalize passing off pets as service animals.

Airlines have pushed for new federal rules to reduce fraud, and the transportation agency plans to begin taking comments on proposed regulations in July.

But the outcry is not limited to airline officials. People with allergies to pet dander, who are also protected under federal disability laws, often think that their concerns are trumped by those of passengers with animals, said Sanaz Eftekhari of the Asthma and Allergy Foundation of America, which has started collecting stories from its members. And service-animal groups say that an increase in what are clearly pets on planes has led to heightened scrutiny of working animals — and even endangered some.

Gillian Lindt, 86, is blind and flies regularly with her guide dog between Washington, France and her main residence in Florida. She said she always requests a window seat so Stella’s tail does not stretch into the aisle, and the 54-pound dog always wears a harness and sits quietly at her owner’s feet.

On a recent flight, Lindt said, a woman sat next to her in the middle seat and plopped a small, barking dog onto the tray table. The woman said it was an emotional support animal and suggested that the two dogs could play together. Lindt was aghast.

“I’m trying to explain that, unfortunately, my dog would love to play, but they’re trained not to, because this is work,” she said. The woman was moved across the aisle, and an apologetic flight attendant wiped down the tray; the little dog barked on and off through the flight. “My dog knows she must never, ever bark when she’s in a harness,” Lindt added.

In 2016, the Transportation Department convened a panel of disability advocates and airline industry officials to propose new regulations on service animals, as well as on two disability-related issues relating to plane restrooms and in-flight entertainment. Several participants said they expected the animal topic to be the easiest to negotiate, but it was the only one on which the committee failed to reach consensus after nearly seven months.

Published documents show disagreement on many details. The airlines were hoping to align practices with the ADA by limiting permitted species. Some disability advocates suggested defining emotional support animals as only dogs and cats; others wanted to allow rabbits and household birds. Service-animal organizations wanted the department to recognize “psychiatric service animals” — typically dogs, which

can be trained to perform tasks such as turning on lights for individuals with post-traumatic stress disorder — as working animals that don't require a medical letter.

Several participants backed tougher questioning at the time of ticket purchase to deter those trying to present pets as service or support animals — perhaps in part to avoid the travel charge of \$100 or more they'd otherwise face.

"I'm not sure how big an effect it would have, but it keeps the honest people honest," said Jenine Stanley, the consumer relations coordinator for the Guide Dog Foundation for the Blind and America's VetDogs, who co-chaired the committee and praised Delta's revised rules.

The National Alliance on Mental Illness wanted any requirements to apply across the board to both service and support animals, said Angela Kimball, its national director of advocacy and public policy, who called the negotiations "so politically fraught." But the group did not want changes to create "undue burdens" that could prevent people with disabilities from traveling. Obtaining a letter from a mental-health professional can be expensive and time-consuming, Kimball noted.

"Under current regulations, there's a disparate response to emotional support animals ... and we think that it's essentially a form of discrimination against a set of disabilities that are not visible," she said. "Any time you marginalize or create different conditions for a set of people, it's very disconcerting and stigmatizing."

Delta's new requirements, which take effect March 1, retain those distinctions. Passengers with trained service animals will need to submit a veterinary health form at least 48 hours before travel to the airline's new "Service Animal Support Desk." Customers with emotional-support animals or psychiatric service animals must do the same but also must provide a letter from a doctor or mental-health professional and a signed document saying the animal is trained to behave in public. (Delta also recently expanded its list of prohibited critters, including "farm poultry," hedgehogs and anything with tusks.)

The rise in emotional-support animals has coincided with growing publicity on the mental-health benefit of pets — an idea researchers say is poorly substantiated through studies but widely embraced by the public. Many owners say they, like service animal users, greatly depend on their emotional-support animals and face undue suspicion because of fakers.

Douglas Kidd, executive director of the National Association of Airline Passengers, said that much of the blame for the problems lies with Congress, which wrote too broad a law, and air carriers that have overbooked flights, reduced legroom and poorly treated animals that fly in the cargo bay. He argued that airlines should designate more spacious rows for passengers with true service or support animals.

"It's certainly a difficult situation to navigate," acknowledged J. Ross Massey, the lawyer Jackson hired soon after being mauled on that 2017 Delta flight. But in that instance, Massey said, the airline's middle-seat placement of a passenger traveling with a large dog was a "recipe for disaster." The 44-year-old Jackson, a government employee who lives near Mobile, Ala., is now preparing for plastic surgery to correct some of the damage. He also is mulling legal action, according to Massey.

"There are competing interests. Obviously, anybody with the need for a service animal should have one," he said. "But the other 99 percent of people on the plane would also like to rest easy being able to know that ... this animal is trained to go into such a stressful situation."

HEADLINE	<b>01/22 Flu season continues to worsen</b>
SOURCE	<a href="https://www.wsj.com/articles/flu-season-continues-to-worsen-1516661186">https://www.wsj.com/articles/flu-season-continues-to-worsen-1516661186</a>
GIST	The number of people sick with the flu is continuing to climb, and transmission is now the most intense it has been since the 2009 pandemic, Centers for Disease Control and Prevention officials said Monday.

The federal agency continued to track and respond to the epidemic despite the government shutdown. Its flu laboratories were working Monday, and “we are continuing to look at data we have received from states so that public-health officials can know about their community and influenza,” CDC Director Brenda Fitzgerald said in an interview.

CDC officials said earlier this month that they had hoped flu cases were peaking. But the percentage of outpatient visits for flu-like illnesses climbed in the week ending Jan. 13, according to the agency’s weekly update, released Friday. The level surpassed every season except 2009-2010, when a new strain of flu to which no one had immunity swept around the world.

The influenza virus behind most infections this year, called H3N2, is notorious for causing bad flu seasons, and the flu is widespread in every state in the continental U.S. The District of Columbia is an exception. H3N2 usually hits the very young and elderly hard; this season, many people between the ages of 50 and 65 are also sick, for reasons that aren’t clear. “People in that age range should be very careful to protect themselves from being exposed,” Dr. Fitzgerald said.

This season still isn’t as severe as 2014-2015, though, when more people were hospitalized from the flu, the CDC said.

Dr. Fitzgerald said it is hard to know when the transmission will let up. “It appears that we are nearing the peak, but when the exact peak will be we certainly do not know.”

Exactly why the flu has struck so intensely in the past few weeks isn’t known, said Daniel Jernigan, director of the CDC’s influenza division. “Everybody seems to be getting influenza at the same time this year,” he said. Gatherings during the holidays, the cold weather or characteristics of this year’s dominant virus are possible factors, he said. “There are just a lot of issues that are a little hard to explain at this point, but we’ll be looking at that as the season goes on,” he said.

The flu can be hard to distinguish from other winter bugs and has to be confirmed by a test. Flu symptoms include sore throat, cough, fever and muscle aches, a key feature, said Dr. Jernigan. But some people have the flu without a fever, he said.

Dr. Fitzgerald urged precautions such as a vaccine, frequent hand washing, covering mouths during coughing, using wipes to clean around an airplane seat, and other steps, calling them particularly important now because of how active this flu season is.

“We want you to take action to protect yourself and to protect others from the flu,” she said. “For those who are thinking, ‘oh, I’ll just go to work anyway,’ remember that flu might make you miserable for a few days, but it could be deadly to someone else.”

<b>HEADLINE</b>	<b>01/22 Texas grass fires prompt evacuations</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/major-grass-fires-north-texas-prompt-evacuations-parker-county-flower-mound-willow-park/">https://www.cbsnews.com/news/major-grass-fires-north-texas-prompt-evacuations-parker-county-flower-mound-willow-park/</a>
<b>GIST</b>	<p>FLOWER MOUND, Texas -- Crews are fighting a string of grass fires in North Texas that's now led to evacuations in some areas, CBS Dallas/Fort Worth reports. A major grass fire just east of Willow Park in Parker County has burned more than 200 acres and is growing.</p> <p>The wind has been gusting at 30 to 35 miles per hour and troopers shut down Interstate 20 eastbound just past 1187 at 2:15 p.m. There have been no reports of injuries.</p> <p>Several local schools were affected by the blaze. Walsh Elementary evacuated to Daniel Ninth Grade Campus and McCall Elementary evacuated to Aledo High School.</p>

	<p>Parker County Judge Mark Riley signed a disaster declaration that will allow for more resources to fight the fire. Multiple departments are fighting the fire in the area of Fox Hunt Trail.</p> <p>Homes near Indian Camp Road and Ranch House Road are being evacuated according to Willow Park officials. The fire is moving east and is unpredictable.</p>

<b>HEADLINE</b>	<b>01/23 Japan volcano eruption, avalanche kills 1</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/volcano-japan-mount-kusatsu-shirane-erupts-killing-solider-skiers-avalanche/">https://www.cbsnews.com/news/volcano-japan-mount-kusatsu-shirane-erupts-killing-solider-skiers-avalanche/</a>
<b>GIST</b>	<p>TOKYO -- At least 16 people skiing on the slopes of a volcano in central Japan were injured by flying rocks during a surprise eruption and a subsequent avalanche Tuesday, and one person later died.</p> <p>Six skiers, including the man who died, were among 30 Japanese soldiers who were participating in ski training when they were buried by the avalanche about a half hour after the volcanic eruption, fire department and defense officials said.</p> <p>Only the crater had been off-limits because of low-level volcanic activity before Mount Kusatsu-Shirane erupted with rocks and ash around 10 a.m. The Japan Meteorological Agency has since banned access to the mountain, and a large swath of the snow-covered volcano was covered by dark gray ash later in the day.</p> <p>The agency also said the eruption and the avalanche could not be linked immediately. Snow conditions and seismic activity are some of the potential causes of an avalanche.</p> <p>Five of the civilian skiers suffered serious injuries such as broken bones, but none of the injuries were life-threatening, said a regional fire department official, Hayato Tobe.</p>

<b>HEADLINE</b>	<b>01/22 China speaks out on US naval patrols</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-southchinasea-china/as-u-s-goes-quiet-on-close-naval-patrols-china-speaks-out-idUSKBN1FC0JK">https://www.reuters.com/article/us-southchinasea-china/as-u-s-goes-quiet-on-close-naval-patrols-china-speaks-out-idUSKBN1FC0JK</a>
<b>GIST</b>	<p>HONG KONG/BEIJING (Reuters) - While the Pentagon plays down patrols close to Chinese-controlled reefs and islands in the South China Sea, Beijing is sounding the alarm about them, seeking to justify what experts say will be an even greater presence in the disputed region.</p> <p>Chinese officials publicized the latest U.S. “freedom of navigation patrol”, protesting the deployment last week of the destroyer USS Hopper to within 12 nautical miles of Scarborough Shoal, an atoll west of the Philippines which Beijing disputes with Manila.</p> <p>It was the second time in recent months that confirmation of a patrol came from Beijing, not Washington, which had previously announced or leaked details.</p> <p>Bonnie Glaser, a security expert at Washington’s Center for Strategic and International Studies, said while the administration of U.S. President Donald Trump had a policy of keeping the patrols regular but low key, China was willing to publicly exploit them to further their military ends.</p> <p>“It is difficult to conclude otherwise,” she said. “Even as it pushes ahead with these (patrols), I don’t think the Trump administration has really come to terms with what it will tolerate from China in the South China Sea, and what it simply won’t accept, and Beijing seems to grasp this.”</p>

In official statements, Chinese foreign ministry official Lu Kang said China would take “necessary measures to firmly safeguard its sovereignty” in the resource-rich sea.

Some regional diplomats and security analysts believe that will involve increased Chinese deployments and the quicker militarization of China’s expanded facilities across the Spratlys archipelago.

While U.S. officials did not target China in their comments, couching freedom-of-navigation patrols as a “routine” assertions of international law, Beijing was quick to cast Washington as the provocateur.

The Communist Party’s official People’s Daily newspaper on Monday accused the U.S. of upsetting recent peace and co-operation and “wantonly provoking trouble”, saying China had must now strengthen its presence in the strategic waterway.

In recent years, China has built up several reefs and islets into large-scale airstrips and bases as it seeks to assert and enforce its claims to much of the sea, through which some \$3 trillion in trade passes annually. The Philippines, Vietnam, Malaysia and Brunei, as well as Taiwan, hold rival claims.

Chinese coastguard and People’s Liberation Army navy ships patrol vast swathes of the South China Sea, routinely shadowing U.S. and other international naval deployments, regional naval officers say.

Zhang Baohui, a mainland security analyst at Hong Kong’s Lingnan University, told Reuters he believed Beijing was rattled by Trump’s sharpening Asia strategy and they might be tempted to react in the South China Sea, even after months of relative calm.

“We can perhaps expect the Chinese to push ahead with militarization as retaliation,” he said.

A new U.S. national defense strategy unveiled last week stressed the need to counter the rising authoritarian powers of China and Russia, outlining a need to better support allies and newer partners against coercion.

While most analysts and regional envoys believe China remains keen to avoid an actual conflict with the significantly more powerful U.S. navy in the South China Sea, it is working to close the gap.

The latest patrol was at least the fifth such patrol under the Trump administration and the first to Scarborough - one of the more contentious features in the region.

Scarborough, once a U.S. bombing range, was blockaded by the Chinese in 2012, prompting the Philippines to launch its successful legal case in the Hague against China’s excessive territorial claims.

China allowed Filipino fishermen back to Scarborough’s rich waters last year, but it remains a potential flashpoint as both sides claim sovereignty and China maintains a steady presence of ships nearby.

While experts and regional envoys expect China to ramp up operations from the Spratlys, none expect it to build on Scarborough - something widely believed to be a red line that would provoke the United States, given its long-standing security treaty with the Philippines.

Shi Yinhong, who heads the Center for American Studies at Beijing’s Renmin University, said China had “lived with” U.S. patrols for several years but the key facts on the ground remained in China’s favor and broader tensions had “improved remarkably”.

“These islands, especially those with reclaimed land and military capability already deployed, they’re still in Chinese hands,” Shi, who has advised the Chinese government on diplomacy, told Reuters.

“I don’t think Trump has the stomach and the guts to change this fundamental status quo.”

<b>HEADLINE</b>	<b>01/22 Vermont legalizes recreational pot</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/vermont-marijuana-legalized-recreational-pot/2018/01/22/id/838745/">https://www.newsmax.com/newsfront/vermont-marijuana-legalized-recreational-pot/2018/01/22/id/838745/</a>
<b>GIST</b>	<p>Vermont became the ninth U.S. state and third in the Northeast to legalize recreational marijuana use Monday when Republican Governor Phil Scott signed a bill passed by the legislature earlier this month.</p> <p>The law legalizes possession of up to 1 ounce of the drug, two mature plants and up to four immature plants by people 21 and older beginning July 1. It does not legalize trade in the drug.</p> <p>"Today, with mixed emotions, I have signed H. 511," Scott said in a statement, referring to the measure by its legislative number.</p> <p>He noted he had vetoed an earlier version of the bill that would have opened up sales of the drug, saying a state commission would have time for further study before allowing a retail trade in recreational pot.</p> <p>Neighboring Massachusetts, nearby Maine, and six other states have legalized marijuana use as a result of voter initiatives.</p>

<b>HEADLINE</b>	<b>01/23 Philippines volcano spews lava; 56K flee</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Technology/wireStory/philippine-volcano-spews-fountains-lava-big-ash-plumes-52535733?cid=clicksource_79_2_hero_headlines_headlines_hed">http://abcnews.go.com/Technology/wireStory/philippine-volcano-spews-fountains-lava-big-ash-plumes-52535733?cid=clicksource_79_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>The Philippines' most active volcano spewed fountains of red-hot lava and massive ash plumes anew Tuesday in a dazzling but increasingly dangerous eruption that has sent 56,000 villagers fleeing to evacuation centers.</p> <p>Lava fountains gushed up 700 meters (2,300 feet) above Mount Mayon's crater and ash plumes rose up to 3 kilometers (1.9 miles) at night and at least twice Tuesday, according to the Philippine Institute of Volcanology and Seismology. An explosive eruption at noon Monday was the most powerful since the volcano started acting up more than a week ago.</p> <p>"We couldn't sleep last night because of the loud rumblings. It sounded like an airplane that's about to land," Quintin Velardo, a 59-year-old farmer, told The Associated Press at an evacuation center in Legazpi city where he took his wife, children and grandchildren on Tuesday.</p>

	<p>Despite the danger, he said he needed to return to his village, about 8 kilometers (5 miles) from the erupting volcano, to take his cow and water buffalo to safety. A few minutes later, the volcano belched a massive column of grayish ash that punched through white clouds into the blue sky.</p> <p>"There it goes again," Velardo said, his family huddled near him.</p> <p>Authorities warned a violent eruption may occur in hours or days, characterized by more rumblings and pyroclastic flows — superheated gas and volcanic debris that race down the slopes at high speeds, vaporizing everything in their path.</p> <p>After Monday's explosion, officials raised Mayon's alert level to four on a scale of five, and the danger zone was expanded to 8 kilometers (5 miles) from the crater, requiring thousands more residents to be evacuated, including at least 12,000 who returned to their homes last week as Mayon's rumblings temporarily eased and then scrambled back to the emergency shelters this week.</p> <p>At least 56,217 people were taking shelter in 46 evacuation camps Tuesday and army troops and police were helping move more villagers from their homes, officials said.</p>

<b>HEADLINE</b>	<b>01/23 Strong quake shakes Indonesia's Java</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/quake-shakes-indonesias-java-buildings-sway-capital-52541241?">http://abcnews.go.com/International/wireStory/quake-shakes-indonesias-java-buildings-sway-capital-52541241?</a>
<b>GIST</b>	<p>A moderately strong earthquake shook the Indonesian island of Java on Tuesday, damaging buildings near the epicenter and shaking office buildings in the country's capital.</p> <p>There were no immediate reports of injuries and no tsunami was generated.</p> <p>According to the U.S. Geological Survey, the magnitude 6.0 quake was centered off western Java at a depth of about 43 kilometers (27 miles). The epicenter was about 153 kilometers (95 miles) southwest of Jakarta, the capital.</p> <p>Zainal, who heads Banten province's search and rescue agency, said the quake damaged houses and other buildings in Lebak district, including a high school and hospital, and a mosque in Pandeglang district collapsed.</p> <p>Buildings in the capital swayed for 10 to 20 seconds and some ordered evacuations, sending streams of people into the streets.</p> <p>TVOne television showed workers and shoppers running out of a mall in central Jakarta in panic.</p> <p>Witnesses told TVOne that houses were damaged in coastal areas of West Java, where many people ran to higher ground, fearing a tsunami.</p> <p>Indonesia's Department of Meteorology, Climate and Geophysics said the quake didn't have the potential to generate a tsunami and no warning was issued.</p>

<b>HEADLINE</b>	<b>01/22 Study: pollution cooling environment</b>
<b>SOURCE</b>	<a href="https://www.scientificamerican.com/article/cleaning-up-air-pollution-may-strengthen-global-warming/">https://www.scientificamerican.com/article/cleaning-up-air-pollution-may-strengthen-global-warming/</a>
<b>GIST</b>	<p>Pollution in the atmosphere is having an unexpected consequence, scientists say—it's helping to cool the climate, masking some of the global warming that's occurred so far.</p> <p>That means efforts worldwide to clean up the air may cause an increase in warming, as well as other climate effects, as this pollution disappears.</p> <p>New research is helping to quantify just how big that effect might be. A study published this month in the journal Geophysical Research Letters suggests that eliminating the human emission of aerosols—tiny, air-polluting particles often released by industrial activities—could result in additional global warming of anywhere from half a degree to 1 degree Celsius.</p> <p>This would virtually ensure that the planet will warm beyond the most stringent climate targets outlined in the Paris climate agreement. World leaders have set an ambitious goal of keeping global temperatures</p>

within 1.5 to 2 degrees Celsius of their preindustrial levels. But research suggests the world has already warmed by about 1 degree—meaning even another half a degree of warming could push the planet into dangerous territory.

"Since we're trying to keep to a 1.5- or 2-degree target, then this is something we still need to keep in mind," said Bjørn Samset, a climate scientist at Norway's CICERO Center for International Climate Research and the study's lead author.

The research also suggests that removing aerosols could have striking regional consequences by causing major changes in precipitation and other weather patterns in certain parts of the world. Aerosols don't linger in the atmosphere for very long, meaning they don't have time to spread around the world the way carbon dioxide and some other greenhouse gases do. Their effects tend to be strongest in the regions where they were emitted in the first place.

This means the places where air pollution is most severe are likely to experience some of the greatest effects if that pollution were to disappear. East Asia, where aerosol emissions are some of the highest in the world, would be likely to experience a strong increase in precipitation and extreme weather events. To a certain extent, these effects might carry over to other parts of the Northern Hemisphere, which are connected to Asia via major atmospheric currents.

"We also see that the impact that these aerosols have on temperature in Asia really transports northwards to the Arctic region, northern Europe, Norway, the northern U.S.," Samset noted. "That part of the world is also quite sensitive to the changes in aerosols in Asia."

Scientists have long known that some types of pollution can actually help cool the climate. Certain aerosols—sulfate, for instance—can reflect sunlight away from the Earth or enhance sun-reflecting cloud cover. As nations around the world have begun to crack down on air pollution, scientists have grown interested in figuring out how much extra warming might be expected as they disappear. This is critical information for strategizing ways to meet global climate goals, like the 2-degree target.

The new study relied on four global climate models, which the researchers used to simulate the effects of removing all human-caused emissions of the major aerosols, including sulfate and carbon-based particles like soot. The resulting global warming, they concluded, would be anywhere from 0.5 to 1.1 degrees Celsius.

These results are in line with other studies that have investigated the cooling "mask" of aerosols. A 2016 paper published in Nature Geoscience found that up to a half-degree Celsius of the warming that has been observed in the Arctic—the most rapidly warming region on the planet—since 1980 was caused by pollution reductions in Europe. Like the new study, those findings speak to both the considerable cooling effect aerosols have had on the climate and to the atmospheric linkages between different regions of the Northern Hemisphere.

Other research has also supported the idea that aerosols have influenced global temperatures as a whole. Another 2016 paper, also published in Nature Geoscience, suggested that about a third of all the warming that occurred over land areas over the past 50 years was masked—temporarily covered up, in other words—by aerosol pollution.

Collectively, the research indicates that greenhouse gas emissions have had an even greater effect on the climate so far than it appears—it's just that part of it has been obscured by the presence of air pollution. As the air gets cleaner, those masked effects will start to make themselves known.

**HEADLINE** 01/22 US 'concern' about Turkey offensive

**SOURCE** <https://www.cnn.com/2018/01/22/middleeast/tillerson-concern-at-turkeys-syria-offensive->

	<a href="#">intl/index.html</a>
GIST	<p>(CNN)US Secretary of State Rex Tillerson has expressed "concern" about Turkey's offensive against Kurdish militia in northern Syria, urging restraint but stopping short of demanding an end to the operation.</p> <p>On a visit to London, Tillerson said that Turkey had a right to protect its citizens but urged "restraint" on both sides.</p> <p>The offensive has strained relations between Washington and Ankara, two NATO allies. Turkey's President Recep Tayyip Erdogan again blasted the United States for supporting what he called a "terrorist organization" on Monday.</p> <p>Turkey has been battling Kurdish unrest in the southeast of the country for years, and views the Syrian Kurds as indistinguishable. But the US and other Western powers see the Kurds in Syria as crucial allies in the effort to defeat ISIS in the region.</p> <p>Pentagon spokesman Marine Maj. Adrian Rankine-Galloway told CNN on Monday that senior US defense officials are in Ankara to discuss security matters, including the situation in northern Syria. "I can confirm that senior leaders from the Department of Defense are fully engaged in working with their Turkish counterparts to de-escalate tensions along the Turkish-Syrian border and to ensure that operations to defeat ISIS continue without interruption," said Rankine-Galloway, further urging restraint on all sides.</p> <p>Gen. Joseph Votel, the commander of US Central Command, was in Syria on Monday, along with US Agency for International Development Administrator Mark Green, on a previously planned trip, according to defense and USAID spokespeople.</p> <p>The special presidential envoy to the anti-ISIS coalition, Ambassador Brett McGurk, was also in the region in recent days. His spokeswoman, Michelle Barton, told CNN that McGurk was there "as part of his regularly scheduled trips to the region to consult with senior leaders on the campaign to defeat ISIS," and stopped in Iraq and Syria.</p> <p>Turkey began airstrikes against the Kurdish YPG on Saturday, followed by a ground incursion into northern Syria involving Turkish special forces and factions of the rebel Free Syrian Army. The Turkish operation is targeting the Kurdish-held enclave of Afrin, to which tens of thousands of Syrians have fled from other parts of the country.</p> <p>The Turkish offensive appeared to have expanded Monday, with elements of the Free Syrian Army opening a second front from the north-east towards the city of Afrin. The FSA forces said they had captured ten Kurdish fighters. According to Turkey's official news agency Anadolu, Turkish troops have taken the strategic Barsaya mountain.</p> <p>Turkish officials say the YPG has fired rockets at several Turkish border towns, an accusation denied by Kurdish commander Sibam Hamo and other YPG officials.</p> <p>The YPG control a large part of northern Syria -- some 24% of all Syrian territory, including hundreds of kilometers along the Turkish border. Both the Obama and Trump administrations have provided the group with training and weapons as the chief US ally against ISIS in Syria. But Turkey regards the YPG as a terrorist organization closely allied to Kurdish separatists inside Turkey.</p>

## Cyber Awareness

[Top of page](#)

HEADLINE	01/22 FBI changes cybercrime data definitions
SOURCE	<a href="http://www.nextgov.com/cybersecurity/2018/01/massive-reduction-fbi-cyber-crime-takedowns-was-">http://www.nextgov.com/cybersecurity/2018/01/massive-reduction-fbi-cyber-crime-takedowns-was-</a>

	<a href="#">result-definition-change/145392/</a>
GIST	<p>An apparent steep decline in FBI takedowns of cybercrime rings was the result of a change in how the bureau collects cybercrime statistics, a spokeswoman told Nextgov.</p> <p>The official tally of FBI cybercrime takedowns dropped from nearly 2,500 in fiscal year 2014, the first year reliable records were kept, to just 262 in fiscal year 2017, according to annual audits.</p> <p>Agents disrupted or dismantled 510 cyber crime operations in fiscal year 2015 and 259 operations in fiscal year 2016, according to the audits.</p> <p>That sharp reduction “was the result of the FBI changing the definitions of what constituted a disruption or dismantlement,” Spokeswoman Jillian Stickels said.</p> <p>“The change was made to ensure that investigative activity was consistently measured across all field offices,” Stickels said.</p> <p>The change, according to a person familiar with the methodology, was that some FBI field offices previously tallied disruptions and dismantlements based on the number of victims rather than the number of perpetrators.</p> <p>So, depending on which office was doing the counting, a major botnet takedown could count as dozens or hundreds of dismantlements -- based on the number of victim computers – or just one – based on the single botnet operator.</p> <p>A botnet is basically a large mass of computing power that’s been stolen, byte by byte, from hundreds or thousands of infected computers and other internet-connected devices around the world. Botnet operators sell that computing juice to the highest bidder who can use it to force adversaries or political opponents offline.</p> <p>Beginning in 2015, the FBI clarified its methodology so all field offices counted takedowns consistently, the person familiar with the matter said.</p> <p>The FBI previously declined to comment on the reduction in an earlier Nextgov story.</p> <p>The perpetrator-based measurement allows for more consistency but might also be less reflective of FBI cyber activities.</p> <p>The Avalanche botnet takedown in December, 2016, for example, involved blocking more than 800,000 malicious internet domains, plus arrests in five countries and cooperating with law enforcement in 35 additional countries, according to Justice Department figures.</p> <p>The botnet targeted more than 40 financial institutions and cost victims hundreds of millions of dollars, the Homeland Security Department said, but the takedown would only count as a single operation.</p> <p>The FBI missed its own target of 500 disruptions or dismantlements in fiscal years 2016 and 2017, according to the audit reports.</p>

HEADLINE	<b>01/23 UK official: major cyberattack inevitable</b>
SOURCE	<a href="https://www.theguardian.com/world/2018/jan/23/tuesday-briefing-major-cyber-attack-is-inevitable-warns-security-chief">https://www.theguardian.com/world/2018/jan/23/tuesday-briefing-major-cyber-attack-is-inevitable-warns-security-chief</a>
GIST	A major cyber-attack targeting Britain’s electoral system or infrastructure is inevitable in the next two years, according to the man charged with trying to protect us from the threat. Speaking to the Guardian, Ciaran Martin, head of the UK National Cyber Security Centre, said the US, France and other parts of

	<p>Europe had suffered so-called “category one” attacks and it was a question of “when, not if” Britain became the target.</p> <p>“We will be fortunate to come to the end of the decade without having to trigger a category one attack,” he said, adding that total protection was impossible. The country’s worst attack was the WannaCry ransomware attack in May last year that disrupted hospitals. But it was only classed as a category two attack, of which there have been 34 since the NCSC was set up in October 2016, Martin said. There have been 762 category three incidents, he said.</p> <p>His comments come as the chief of the general staff, General Sir Nick Carter, prepares to issue his own warning about the cyber-attack threat, in particular from Russia. As the debate about defence spending intensifies, Sir Nick will say Moscow now has unconventional military capabilities that the UK will struggle to match.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>01/22 Evrial: info-stealing Trojan</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/evrial-info-stealing-trojan-steal-cryptocurrency/">https://www.hackread.com/evrial-info-stealing-trojan-steal-cryptocurrency/</a>
<b>GIST</b>	<p>It is just another with just another Cryptocurrency malware targeting unsuspecting users – This time, it modifies addresses to steal cryptocurrency payments.</p> <p>Evrial is the latest to join the bandwagon of information stealing Trojans that sprout every now and then and leave users grasping for enhanced privacy and security. This Trojan is now up for sale at criminal forums and is in high demand.</p> <p>Just like other information stealer Trojans, it also hijacks browser cookies and to extract stored credentials. But, what makes it more lethal is that Evrial is capable of monitoring the Windows clipboard and look for certain text. Once it detects that text, it modifies it into something else. It was identified that Evrial makes it possible to hijack cryptocurrency payments and track Steam trades by replacing authentic payment addresses and links with that of the attacker.</p> <p>Evrial has been discovered by MalwareHunterTeam and Guido Not CISSP security researchers. MalwareHunterTeam states that the Trojan is being sold on Russian criminal forums for 1,500 Rubles (\$27). To sell it, the seller advertised that when the product is purchased an attacker would gain access to a web panel to allow buyer build an executable while the web panel would track the clipboard modifications and let the attacker configure the most feasible replacement strings. Malware does this by connecting to a remote site to upload original string and downloading a string that is to be used as a replacement.</p> <p>According to Lawrence Abrams of Bleeping Computer, an intriguing feature of Evrial is that it only monitors clipboards for certain types of strings and changes them with the ones that the attacker sends, which lets the attacker reroute a cryptocurrency payment to another address owned and controlled by the attacker. To modify strings in such a way is a rare feat and hasn’t been noticed in other malware so far even in those that are capable of matching strings. What’s even more alarming is the fact that the Trojan is configured to detect strings corresponding to a variety of cryptocurrency including Bitcoin, Litecoin, Monero, WebMoney and Qiwi addresses.</p> <p>Moreover, Evrial also steals bitcoin wallets, stored passwords and all the files that are stored on the targeted desktop. It can also capture a screenshot of the active windows and then compiles all the information into a .zip file. The file is then uploaded to a web panel operated by the attacker. It identified the location of bitcoin’s wallet.dat through scanning for the registry key; if the key is found it can steal the wallet to access and steal bitcoins.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>01/23 Uber dismissive about security flaw</b>
-----------------	--

<b>SOURCE</b>	<a href="https://www.hackread.com/uber-dismissive-about-flaw-that-lets-attackers-bypass-its-2fa/">https://www.hackread.com/uber-dismissive-about-flaw-that-lets-attackers-bypass-its-2fa/</a>
<b>GIST</b>	<p>Uber has no plans to fix a critical security flaw in its two-factor authentication (2FA) protocol reported by an IT security researcher.</p> <p>An Indian IT security researcher Karan Saini has discovered a critical security flaw in the two-factor authentication protocol used by the ride-hailing giant Uber to protect user accounts from hijacking and prevent their data from hackers.</p> <p>The flaw, on the other hand, allows attackers to bypass 2FA that could apparently lead them to perform a number of malicious acts including hacking a targeted account, change its username and password and book expensive rides etc.</p> <p>Simply put, 2FA is an extra layer of security that is known as “multi-factor authentication” that requires not only a password and username but also something that only that user has on them, i.e. a piece of information only they should know or have immediately to hand – such as a physical token or a code.</p> <p>Uber not serious about fixing the bug</p> <p>In Uber’s case, Siani reported his findings to Uber’s bug bounty program on HackerOne, who acknowledged that there is indeed a bug in its two-factor authentication but at the same time the company downplayed the severity of it and stated that his findings were informative but “this report contained useful information but did not warrant an immediate action or a fix.”</p> <p>Uber uses two-factor authentication in case of suspicious login activity and sends the second code to the user’s device in order to verify their identity. Uber has been testing the 2FA feature since 2015 however, Siani’s findings highlighted how a hacker can bypass 2FA security without even entering the correct code.</p> <p>According to a statement to ZDNet, Uber spokesperson Melanie Ensign said that the bug was not a bypass but could be caused by ongoing security testing the company is conducting on the app.</p> <p>“We’ve been testing different solutions since we received a lot of user complaints about requiring 2FA on [an Uber web address which we are redacting per our decision to not reveal specifics of the bug] when people are trying to report a lost or stolen phone and can’t receive a code on that device, Ensign told ZDNet.</p> <p>“We believe those tests are causing both the existence and inconsistency of this issue.”</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>01/22 Fake cryptocurrency packs ransomware</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/fictional-spritecoin/">https://www.infosecurity-magazine.com/news/fictional-spritecoin/</a>
<b>GIST</b>	<p>A new ransomware that only accepts Monero for payment has emerged, attempting to trick victims by masquerading as a password-protected storage mechanism for SpriteCoin. SpriteCoin doesn’t exist, however – it’s a fictional cryptocurrency.</p> <p>According to Fortinet FortiGuard Labs, the malware claims to be a wallet and asks the user to create their desired password. It doesn’t actually download blockchain, however; rather, it secretly encrypts the victim’s data files and then demands a ransom in Monero cryptocurrency.</p> <p>Adding insult to injury, if the ransom is paid, during the decryption phase another piece of malware is deployed with capabilities including certificate harvesting, image parsing and web camera activation.</p> <p>Fortinet researchers said that the initial file is a packed executable for simple evasion. It displays the typical ransom note telling targets that “your files are encrypted” and asks for a sum of 0.3 Monero – which is equivalent to about \$105 at the time of writing.</p>

	<p>“During our analysis, we have seen indicators that the sample appears to have an embedded SQLite engine,” explained Fortinet researchers in an analysis. “This leads us to believe it is using SQLite to store harvested credentials. The ransomware first looks to harvest Chrome credentials, and if it finds nothing it then moves on and tries to access the Firefox credential store. It then looks for specific files to encrypt. These files are then encrypted with an encrypted file extension (e.g.: resume.doc.encrypted).”</p> <p>The use of Monero, an open source cryptocurrency created in 2014, signals a shift away from the widely used and accepted standard Bitcoin in the ransomware space, they added.</p> <p>“Ransomware authors are aware of current trends and events, and appear to be taking advantage of all the hype surrounding the cryptocurrency craze,” they said.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>01/22 Flaws in HASP system put ICS at risk</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/14-flaws-in-popular-software-ics/">https://www.infosecurity-magazine.com/news/14-flaws-in-popular-software-ics/</a>
<b>GIST</b>	<p>A variety of serious vulnerabilities have been identified in popular license management software used in corporate and industrial control system (ICS) environments to activate software on PCs and servers.</p> <p>According to Kaspersky Lab ICS CERT researchers, 14 vulnerabilities in the Hardware Against Software Piracy (HASP) license management system mean that license management USB tokens can be used to open a hidden remote-access channel for cyber-attackers.</p> <p>The flaws include multiple denial-of-service (DoS) vulnerabilities and several remote code execution issues. These are automatically exploited not with user rights but with the most privileged system rights, providing attackers with an opportunity to execute any arbitrary code they wish.</p> <p>“The USB-tokens in question are widely used in different organizations to serve the purpose of convenient software license activation,” researchers explained in their analysis. “In normal use case scenarios, a company’s system administrator would need to approach the computer with the software that needs to be activated and insert the token. It will then confirm that the software of interest is legitimate (not pirated) and would activate it.”</p> <p>The problem is, upon installation, the software adds port 1947 of the computer to the list of exclusions of the Windows Firewall with no proper user notification, which makes it vulnerable to a remote attack.</p> <p>“An attacker would only need to scan the targeted network for open port 1947 in order to identify any remotely available computers,” the researchers said. “More importantly, the port remains open after the token has been detached, which is why even in a patched and protected corporate environment, an attacker would only need to install software using the HASP solution or attach the token to a PC once (even a locked one) in order to make it available for remote attacks.”</p> <p>The number of systems affected by the vulnerability is uncertain, but given the popularity of the software, it could affect hundreds of thousands of users worldwide.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>01/22 Ransomware attacks hit healthcare firms</b>
<b>SOURCE</b>	<a href="http://www.securityweek.com/samsam-ransomware-attacks-hit-healthcare-firms">http://www.securityweek.com/samsam-ransomware-attacks-hit-healthcare-firms</a>
<b>GIST</b>	<p>Earlier this month, Hancock Health, headquartered in Greenfield, Indiana, was infected with the SamSam ransomware. This past weekend, Allscripts -- a major electronic health record (EHR) company headquartered in Chicago, IL -- confirmed that it had also been hit by Ransomware, which it described as a SamSam (also known as Samas) variant.</p>

The methodologies employed in each attack are different. SamSam is not usually delivered by email phishing. It is more usually introduced after the target has already been breached. This method was described in the Symantec Internet Security Threat Report V22 : "In the case of SamSam (Ransom.SamSam) the attackers' initial point of entry was a public-facing web server. They exploited an unpatched vulnerability to compromise the server and get a foothold on the victim's network."

This bears a strong similarity to what we know about the attack against Hancock Health, Greenfield, disclosed last week. The Greenfield Reporter wrote, "...the hacker gained access to the system by using the hospital's remote-access portal, logging in with an outside vendor's username and password. The attack was not the result of an employee opening a malware-infected email."

On Jan. 15, Hancock released a statement saying, "At approximately 9:30 PM on Thursday, January 11, 2018, an attack on the information systems of Hancock Health was initiated by an as-yet unidentified criminal group."

One day later it announced that it had decided to pay the ransom. CEO, Steve Long, said, "Restoring from backup was considered, though we made the deliberate decision to pay the ransom to expedite our return to full operations." Payment was made on Friday, January 12, and, "By Monday, January 15, 2018, critical systems were restored to normal production levels and the hospital was back online."

Last Friday (Jan. 19) Long posted a more detailed description of the events. He confirmed that the malware was SamSam, and that it had been a supply chain attack via a provider of ICS equipment to the hospital. The attackers targeted Hancock's remote emergency IT backup facility and used the connections from there to gain access to the primary facility -- targeting files associated with the most critical information systems in the hospital.

Long notes that when the hospital made the business decision to pay the ransom (set at 4 bitcoins, thought to be worth \$55,000 at the time), the hospital believed that it could recover its files from backup, but that the time and cost involved made it more efficient to pay the ransom. Now he added, "Several days later it was learned that, though the electronic medical record backup files had not been touched, the core components of the backup files from all other systems had been purposefully and permanently corrupted by the hackers."

Forensic firm Pondurance suggested that no patient data had been stolen, while the FBI confirmed that the SamSam group are more interested in receiving the ransom than in harvesting patient data.

The more recent attack against Allscripts occurred late last week. Allscripts emailed its clients on Jan. 18: "...early on the morning of January 18, we became aware of a ransomware incident that has impacted our hosted Professional EHR service and our Electronic Prescription of Controlled Substances ("EPCS") service, which are hosted in our Raleigh and Charlotte, NC data centers. According to industry reports, we are one of dozens of companies impacted by this attack, which is a variant of the SamSam ransomware."

Next day another email stated, "Material progress has been made to restore service as we now have access to data and services that were previously subject to the SamSam malware. We are in the process of cleaning impacted systems and services to ensure they will be operational once we are able to bring the services back online."

There has been no mention of any ransom payment, and no public discussion of the attack from Allscripts. The information above comes from copies of the emails posted to Reddit.

[Update] "On early Thursday morning, January 18, we discovered a ransomware attack had affected two of our data centers, which house a small subset of our products," an Allscripts spokesperson told SecurityWeek in an emailed statement. "The ransomware has since been identified as a new variant of the SamSam malware. Of the roughly 1,500 clients impacted, none were hospitals or large independent physician practices, and services to many already have been restored. In addition, we immediately notified

the FBI and have been providing information to assist with their investigation. Importantly, there is no evidence that any data was removed from our systems. We continue to work unceasingly to restore all services to our clients who are still experiencing outages."

If the malware really is a variant of the SamSam ransomware, then it marks a divergence from its usual use. CSO Online reported Saturday, "The variant of SamSam that infected Allscripts was a new variant unrelated to the version of SamSam that infected systems at Hancock Health Hospital in Greenfield, Indiana and Adams Memorial Hospital in Decatur, Indiana... Allscripts said that all appearance this was commodity malware and that the company wasn't directly targeted."

The implication from 'material progress' having been made so quickly without any ransom payment suggests that restitution is coming from Allscripts' backups rather than from decryption keys. This further supports the description of the attack being a commodity malware attack rather than a targeted attack as with Hancock Health. In the targeted attack, the attackers destroyed backups before infecting files; in the Allscripts attack, backup files were left intact.

<b>HEADLINE</b>	<b>01/22 Russia: arrest for gas stealing malware</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/russian-authorities-bust-up-gas-stealing-malware-scam/article/738609/">https://www.scmagazine.com/russian-authorities-bust-up-gas-stealing-malware-scam/article/738609/</a>
<b>GIST</b>	<p>Russian authorities Sunday arrested Denis Zayev in Stavropol, Russia, on charges stemming from a widespread scam that swindled gas station customers into paying for more gas than they actually pumped into their tank.</p> <p>Zayev allegedly designed malware used in a scam that netted hundreds of millions of rubles by skimming between 3-to-7 percent of every gallon sold into a separate tank as it was being pumped, according to Russian media outlet Rosbalt.</p> <p>The stolen gasoline was automatically sent to a separate onsite tank that had intentionally been left empty while the malware erased any information related to the rerouting of fuel. When the tank was full the employees would sell the gas off the books while the malware continued to erase any information pertaining to the boosted fuel.</p> <p>The scam was one of the largest of its kind and reportedly involved dozens of gas station employees who would split the spoils. Authorities said the malware was nearly impossible to detect by the companies that monitor the gasoline remotely and that the pumps displayed false data along with the cash registers and backend systems.</p>

<b>HEADLINE</b>	<b>01/22 Satori malware targets more IoT devices</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/vulnerabilities---threats/satori-botnet-malware-now-can-infect-even-more-iot-devices/d/d-id/1330875">http://www.darkreading.com/vulnerabilities---threats/satori-botnet-malware-now-can-infect-even-more-iot-devices/d/d-id/1330875</a>
<b>GIST</b>	<p>The authors of the Satori IoT malware family have dramatically increased their pool of bot recruits for attack botnets with a new version of the tool targeting systems running ARC processors.</p> <p>The latest Satori variant, the fourth since the malware first surfaced in Dec. 2017, appears to be the first aimed specifically at ARC chipsets, DDoS attack mitigation vendor Arbor Networks said in an advisory this week.</p> <p>ARC processors are 32-bit power-efficient CPUs that are used in a wide range of applications including automotive, industrial, and IoT. More than 1.5 billion embedded systems containing ARC cores ship every year, including electronic steering controls and infotainment systems in cars, as well as personal fitness bands and digital TV set tops, and smart thermostats.</p> <p>Like other Satori variants, the newest one also leverages the Mirai code base. Like Mirai, it is designed to propagate through credential scanning, meaning the malware can potentially infect any ARC device with</p>

	<p>default and easily guessable telnet usernames and passwords. The previous Satori variant specifically targeted Huawei routers.</p> <p>It's hard to say which specific ARC-based devices the Satori authors are hoping to target because of the huge installed base of systems, says Peter Arzamendi, security researcher at NETSCOUT, Arbor's Security Engineering &amp; Response Team.</p> <p>However, "botnets that target new and novel types of IoT devices is the new normal," he says. "With the proliferation of IoT and BYOD, enterprises will need to understand how to both defend these devices and be able to respond when they are compromised," Arzamendi says.</p> <p>Support for ARC processors allows Satori variants to target a wide range of systems including those based on Intel, ARM, MIPS, PPC, and SuperH processor architectures. All of the variants differ slightly in targeting and in capabilities.</p>

<b>HEADLINE</b>	<b>01/22 Phoenix man in terror case jailed 1yr</b>
<b>SOURCE</b>	<a href="https://www.azcentral.com/story/news/local/phoenix/2018/01/22/phoenix-man-terror-case-sentenced-1-year-prison-4-years-probation-derrick-thompson/1054083001/">https://www.azcentral.com/story/news/local/phoenix/2018/01/22/phoenix-man-terror-case-sentenced-1-year-prison-4-years-probation-derrick-thompson/1054083001/</a>
<b>GIST</b>	<p>A Phoenix man convicted of plotting a "lone wolf"-style terrorist attack was sentenced to one year in prison and four years' probation Monday in Maricopa County Superior Court.</p> <p>Derrick Thompson, 31, pleaded guilty this month to assisting a criminal syndicate and solicitation to commit misconduct involving weapons.</p> <p>Judge Pamela Gates gave Thompson 110 days of incarceration credit. As part of his probation terms, which will start once he is released from prison, he'll have to surrender his passport and won't be able to travel outside of Maricopa County without permission.</p> <p>Thompson also will be restricted from having contact with any affiliates of a known terror group or from</p>

visiting any terrorism-backed websites, and will also have his computer monitored.

His defense attorney Robert Ditsworth told Gates that Thompson had difficulty getting his life back together after he was released from prison in an unrelated case, and then he lost his father.

"I think he was playing around on the internet being an idiot," Ditsworth said.

Gates warned Thompson, who waived his right to make a statement prior to his sentencing, that he could be facing more than three years in prison if he didn't comply with his terms of probation.

Thompson was arrested in December 2016 after a two-year FBI investigation.

Prosecutors say in court records that Thompson was an "avowed jihadist" who voiced his support online for the Islamic State, more commonly known as ISIS, and the attacks that sympathizers have orchestrated in Western nations.

Also, Thompson had searched online for assault rifles, scopes, ammunition, suppressors, handguns and crossbows, court documents say.

A review of his Google account in October 2016 shows that he searched for the terms "istishad (martyrdom) vs. suicide" on the same day he searched for "Midnight Mass" — a Christian tradition of celebrating Christmas in a church in the late-night hours of Christmas Eve or midnight on Christmas Day, court records show.

The review, court documents say, also showed that there was an online search for "fatwa on killing civilians," as well as a post to his Google Plus account that stated, "Right, we need to get down with this ISIS s--t."

FBI agents also tracked an online seller of a handgun with whom Thompson had contacted in January 2016 through Backpage.com, court records say.

Thompson was already prohibited from possessing firearms because of previous convictions of aggravated assault and armed robbery.

While terrorism suspects are traditionally tried in federal courts, state prosecutors recently began taking some of the cases, based partly on Arizona statutes' lower burden of proof.

Federal prosecutors require an "overt act" to prove terrorism conspiracy, such as purchasing a weapon or explosive. Arizona law only requires evidence of intent, such as an agreement between one person and another person.

Thompson's case was one of the first amid an Arizona Attorney General's Office push to prosecute would-be terrorism suspects.

But unlike other previous cases brought by the state's Attorney General's Office, Thompson didn't explicitly face a terrorism charge under Arizona statutes.

HEADLINE	<b>01/22 Ohio man in terror plot sentenced 22yrs</b>
SOURCE	<a href="https://www.washingtonpost.com/world/national-security/ohio-man-who-trained-with-terrorists-overseas-and-plotted-to-kill-us-troops-sentenced-to-22-years/2018/01/22/2d18ff42-ff8f-11e7-9d31-d72cf78dbeee_story.html?utm_term=.b05f7d886fa1">https://www.washingtonpost.com/world/national-security/ohio-man-who-trained-with-terrorists-overseas-and-plotted-to-kill-us-troops-sentenced-to-22-years/2018/01/22/2d18ff42-ff8f-11e7-9d31-d72cf78dbeee_story.html?utm_term=.b05f7d886fa1</a>
GIST	A Columbus, Ohio, man who trained with terrorists overseas and plotted to kill American troops upon his return to the United States was sentenced Monday to 22 years in federal prison, a spokeswoman for the

U.S. attorney's office said.

Abdirahman Sheik Mohamud, 26, had pleaded guilty to providing material support to terrorists and giving a false statement involving international terrorism in August 2015. Court documents say Mohamud admitted traveling in early 2014 to Syria in an attempt to join his brother, a fighter with the al-Nusra Front terrorist group, and give him \$1,000 and a communication device.

Mohamud made it to the country with the funds, court records show, and while there, he was trained by al-Nusra in weapons and tactics, including how to enter a structure and kill people inside.

Mohamud's brother, Abdifatah Aden, was killed in June 2014, and there is no evidence he and Mohamud ever met face-to-face, court documents filed by prosecutors say. Mohamud returned to the United States that same month and began to recruit others for a terrorist plot — possibly involving killing military personnel in Texas, the documents say.

It is unclear how far along he got in his effort. In September, court documents filed by prosecutors say, Mohamud and three other men went to a central Ohio shooting range, where Mohamud taught two of them how to shoot a handgun. But Mohamud's defense attorney wrote in court papers that by the end of November 2014, Mohamud had "completely abandoned" any plans for terrorism.

The FBI arrested Mohamud in February 2015, and court documents say he lied to law enforcement about his time overseas.

Prosecutors had asked that Mohamud be sentenced to 23 years in federal prison. Defense attorneys had not requested a specific penalty but noted that Mohamud was remorseful for what he had done. In court filings, Mohamud's defense attorneys wrote that Mohamud was heavily influenced by his brother and fully radicalized when he traveled to Syria, though once home, he "realized the immoral and illegal nature of terrorist ideology."

"Mr. Mohamud already appreciates the seriousness of his conduct and feels nothing but remorse for his willingness to embrace a violent and dangerous ideology," Mohamud's defense attorneys wrote. "This self-awareness will ensure that Defendant never again poses a threat of danger to others, or to the United States."

Mohamud, who was born in Somalia and came to the United States just before his second birthday, is a naturalized citizen, though prosecutors wrote in court papers that obtaining that status was meant to further his and his brother's terrorist plan.

Prosecutors wrote that Mohamud, who had been a legal permanent resident since 1993, had begun the naturalization process only after communicating with at least one person linked to a terrorist organization, and he sent his brother a message pledging to join him as a fighter overseas in September 2013. That was months before he took his oath of allegiance to the United States at a naturalization ceremony in February 2014.

Prosecutors wrote that Mohamud had also posted a picture showing armed fighters of the Islamic State in March 2013. He wrote on his naturalization application that he had in no way been associated with a terrorist organization, nor had he advocated the overthrow of any government by force or violence.

HEADLINE	<b>01/23 ISIS steps up campaign to inspire attacks</b>
SOURCE	<a href="https://www.stripes.com/news/middle-east/we-are-in-your-home-after-losses-isis-steps-up-campaign-to-inspire-attacks-1.508003">https://www.stripes.com/news/middle-east/we-are-in-your-home-after-losses-isis-steps-up-campaign-to-inspire-attacks-1.508003</a>
GIST	The man with the Islamic State scarf appears to be playing a kind of jihadist peekaboo.

In the photo, he hides his features behind the terrorist group's infamous logo but shows just enough background scenery so viewers can recognize his location: New York's Central Park, in wintertime.

"We are in your home," reads the photo's simple caption, posted online a few days after Christmas and circulated widely on a prominent jihadist internet channel.

Precisely when the photo was taken is not known, but the message is chillingly clear. It has been repeated in similar posts in recent weeks, all purporting to show Islamic State operatives casing landmarks in Western cities and urging followers to carry out attacks wherever they are. "It is time to harvest the heads," the narrator in one such video states.

Such is the typical fare served up by the Islamic State's propaganda machine, which remains very much alive three months after the fall of the terrorist organization's capital in Raqqa, Syria. The self-proclaimed caliphate has been reduced to a handful of villages in the Syrian desert, but the "virtual caliphate" fights on, a diminished but still formidable presence focused on rallying the group's followers in the face of crushing military defeats, according to U.S. officials and independent analysts.

The content has changed significantly since the loss of Raqqa, formerly home to the group's official media division and production facilities. Gone are the glossy Islamic State magazines and slick videos extolling the virtues of life under militant Islamist rule. In their place is a steady stream of incitements, nearly all of them aimed at offering encouragement and detailed instructions for carrying out terrorist attacks.

Some are amateurish and appear to originate not from studios or official spokesmen, but from bloggers and other volunteers who often are only loosely affiliated with the Islamic State - the online equivalent of lone-wolf terrorists who act without official guidance or instruction. Terrorism analysts say the Islamic State is growing more dependent on such independent platforms, which are capable of distributing highly targeted appeals in scores of local languages and can't be easily silenced by military strikes.

At the same time, there are signs of new life from the group's official mouthpiece. Last week, the Islamic State's Amaq News Agency issued its first English-language communique since mid-September, just before the fall of Raqqa. The first weeks of 2018 have also seen a sharp rise in traffic on pro-Islamic State social media accounts compared with previous months, according to an analysis released Friday by the SITE Intelligence Group, a private firm that monitors jihadist content.

"The Islamic State is now showing the first signs of a regrouping media operation," said SITE Executive Director Rita Katz. "The group suffered major setbacks by coalition and regime attacks but is now clearly taking major steps to reassemble its propaganda operation, which is among its most dangerous weapons."

The newest propaganda campaign illustrates the difficulties faced by counterterrorism officials in seeking to stop militants from connecting with would-be terrorists in the United States and throughout the West. Even after destroying the Islamic State's sanctuary and successfully blocking - with help from private companies - hundreds of the group's social media accounts, the terrorists and their supporters continue to find ways to get their messages out, analysts say.

"The depletion of ISIS on the battlefield has not yet translated into the degradation of ISIS in the online space," said Tara Maller, a former CIA military analyst and senior policy adviser for the Counter Extremism Project, a nonpartisan group that promotes policies to block extremist content online. "What we see is a continuing effort to engage online and an increased effort to inspire people to carry out lone-wolf attacks."

U.S. officials and analysts have been watching closely to see how the collapse of the caliphate would affect the group's propaganda machine, the driving force behind the Islamic State's rise to global prominence. Beginning in Syria in 2013, the group's leaders spent millions of dollars creating a nimble, technically savvy media operation with a heavy social media presence.

Under Presidents Barack Obama and Trump, the Pentagon and CIA tried different measures to knock the

terrorists offline. U.S. fighter jets and drones bombed the Islamic State's production houses and stalked its spokesmen, while the State Department pressed YouTube and other social media companies to block the militants' Web channels and chat rooms. In response, the terrorists shifted tactics, migrating to different social media platforms and cultivating a global network of allies to amplify official messages and post their own pro-Islamic State content.

Still, the fall of Raqqa in October resulted in a steep decline in the Islamic State's official media output. Rumiya, the group's flagship online publication, appears to have ceased production entirely, while the number of routine posts and videos is down sharply. The analysis by SITE shows that Islamic State-affiliated websites put out a total of 907 communiqués, reports and videos between November and December of 2016. During the same period this past year, the group and its supporters managed only 211.

An analysis published Jan. 7 by the national security blog Lawfare cites an overall drop in content of about 90 percent from the Islamic State's high-water mark in 2015.

"This is not just a media decline - it is a full-fledged collapse," the report's authors, counterterrorism researchers Charlie Winter and Jade Parker, write in the blog.

But volunteers have stepped up to fill the gap, analysts say. The broader web of militant commentators and videographers - a network that was encouraged and facilitated by the Islamic State in its heyday - was designed to continue functioning even if the mother branch was completely shut down.

While many of the individual cyberwarriors have been around for years, the Islamic State has become more reliant on them in issuing appeals for what Winter and Parker call "retributive terrorism" - acts of violence intended to avenge the group's losses while convincing followers and foes that it remains relevant.

"Before its territorial decline, a successful terrorist operation was a tactical bonus. Now, it is a strategic necessity," the writers state. "The online sphere has been tailored to facilitate these attacks more efficiently than ever before.

The posting of the "peekaboo" jihadist's selfie in New York was part of a remarkable incitement campaign that began in the weeks before Christmas and continued through early January. Several videos and photographs that appeared online during the period sought to convey the impression that Islamic State warriors were lurking everywhere. The images depict well-known landmarks such as Paris's Eiffel Tower, the Sydney Harbor Bridge in Australia and the Los Angeles skyline.

The New York photo appears to have been taken outside New York's Metropolitan Museum of Art, on the edge of Central Park on the city's Upper East Side. It is unclear whether the photo is genuine or altered, but it depicts weather similar to that experienced by New Yorkers late last month, with pedestrians in heavy coats and hats trudging along sidewalks lightly covered with snow.

A commentary accompanying one of the videos warns of coming terrorist attacks while offering tips to supporters on how to unleash mayhem during the Christmas holiday season, when urban streets would be packed with shoppers and revelers.

"Make [explosive] devices and plant them in their celebrations," it says, "or set their homes and forests on fire, or run over the largest number of unbelievers with your vehicle, or stab them repeatedly with a knife."

Other postings in recent weeks offered detailed technical advice. On the messaging application Telegram, Islamic State supporters published a "Knights of the Lone Jihad" series with how-to manuals on everything from bombmaking to the poisoning of food supplies.

Experts who closely monitor jihadist channels say the overall impression is that of a vibrant propaganda machine that hasn't slowed appreciably or moderated its content. To ensure the broadest audience, the messages are typically translated into multiple languages, including English, Arabic, Russian, Urdu and

even Chinese.

"When you look at the unofficial ISIS material out there - the stuff posted by ISIS supporters - that has not diminished," said Steven Stalinsky, executive director of the Middle East Media Research Institute, a Washington nonprofit. "There is so much content - so many accounts, so many new chats - and more popping up every day."

For whatever reason, the holiday season appeals did not bear fruit, although there was at least one close call. In mid-December, federal officials arrested a 26-year-old California man for allegedly plotting a Christmas-week attack on San Francisco's famed Pier 39 commercial area. U.S. officials said the suspect, a former Marine, had expressed support for the Islamic State on social media.

Both suspects in the two attacks in New York last year - Sayfullo Saipov, the Uzbek immigrant who ran over pedestrians with a truck in Lower Manhattan on Oct. 31, and Akayed Ullah, a Bangladeshi immigrant who exploded a crude bomb in a Times Square subway tunnel on Dec. 11 - also told authorities they were inspired by Islamic State videos.

Each terrorism attempt - successful or not - serves as a reinforcer, generating waves of excitement among online jihadists while encouraging further use of the same tactics, said Stalinsky, who also is the author of "American Traitor," a biography of the al-Qaida propagandist Adam Gadahn.

"Even if it's a small attack, it pumps blood into the cyber-body of ISIS," he said. "All it takes is one attack to produce a lot of energy for the online movement."

<b>HEADLINE</b>	<b>01/22 ISIS looted gold, cash from Philippines</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-philippines-militants-islamicstate-ex/exclusive-looted-cash-gold-helps-islamic-state-recruit-in-philippines-idUSKBN1FC0E2">https://www.reuters.com/article/us-philippines-militants-islamicstate-ex/exclusive-looted-cash-gold-helps-islamic-state-recruit-in-philippines-idUSKBN1FC0E2</a>
<b>GIST</b>	<p>MARAWI CITY, Philippines (Reuters) - Islamist insurgents looted cash, gold and jewellery worth tens of millions of dollars when they occupied a southern Philippines town last year, treasure one of their leaders has used to recruit around 250 fighters for fresh attacks.</p> <p>The military said Humam Abdul Najib escaped from Marawi City, which the militants had hoped to establish as a stronghold for Islamic State in Southeast Asia, before it was recaptured by the military in October after five months of ferocious battles and aerial bombardment.</p> <p>Since then, Najib, also known as Abu Dar, has used the booty looted from bank vaults, shops and homes in Marawi to win over boys and young men in the impoverished southern province of Lanao del Sur, military officers in the area said. Hardened mercenaries are also joining, lured by the promise of money.</p> <p>As a result, Islamic State followers remain a potent threat in Southeast Asia even though hundreds of militants were killed in the battle for Marawi, the officers said.</p> <p>"Definitely they haven't abandoned their intent to create a caliphate in Southeast Asia," Colonel Romeo Brawner, the deputy commander of Joint Task Force Marawi, told Reuters.</p> <p>"That's the overall objective, but in the meantime while they are still trying to recover and build up again - fighters and weapons - our estimate is they are going to launch terrorist attacks."</p> <p>On Saturday, militants wounded eight soldiers in two attacks in Lanao del Sur, Brawner said, the first such violence since the recapture of Marawi.</p> <p>In the early days of the occupation of Marawi last May, as black-clad fighters burned churches, released prisoners and cut the power supply, other militants targeted banks and the homes of wealthy citizens,</p>

commandeering hostages to help with the plunder.

“It was in the first week. They divided us into three groups with seven people each,” said J.R. Montesa, a Christian construction worker who was captured by the militants.

Using explosives, the militants blew open the vaults of the city’s three main banks, Landbank, the Philippine National Bank and the Al Amanah Islamic Bank, Montesa told Reuters in a town near Marawi. They trucked away the booty, easily slipping out of Marawi because a security cordon was not fully in place.

They also raided jewellery stores, pawnshops and businesses.

Landbank and Al Amanah did not respond to requests for comment. Philippine National said recovering losses because of the Marawi fighting was a concern, but did not give details.

The Islamic celebration of Ramadan was looming at the time the militants struck and banks, businesses and homes had more money than usual, said Marawi City police chief Ebra Moxsir. The Maranaos, the ethnic group that dominates the area around Marawi, are mostly Muslims.

“There was a lot of money inside the battle area,” he told Reuters. “Maranaos keep millions of pesos in safety vaults in their homes. Gold, also. It is a tradition of the Maranao to give gifts of money (during Ramadan).”

Montesa said vans they loaded with the spoils of the raids were “overflowing”, with money, gold and other valuables stuffed into every crevice of the vehicles.

“They were saying it was a gift from Allah. They would say ‘Allahu Akbar’ (God is greatest) while we were stealing.”

<b>HEADLINE</b>	<b>01/22 Fighting rages Turkey push in Syria</b>
<b>SOURCE</b>	<a href="https://apnews.com/019bba5b3dc24881804d7cadd8984c34/Fighting-rages-amid-Turkish-push-in-Kurdish-enclave-in-Syria">https://apnews.com/019bba5b3dc24881804d7cadd8984c34/Fighting-rages-amid-Turkish-push-in-Kurdish-enclave-in-Syria</a>
<b>GIST</b>	<p>HASSA, Turkey (AP) — Intense fighting flared Monday as Turkish troops and their allies advanced on a Kurdish enclave in northwestern Syria, the third day of Ankara’s offensive to oust a U.S.-allied Kurdish militia from the area, according to the militia and a war monitoring group.</p> <p>Skirmishes between Turkish troops and Kurdish fighters also broke out farther east in Syria, threatening to widen the scope of the new front in the Syrian war that pits Turkey against Washington’s main ally in the region.</p> <p>The Turkish ground and air offensive on Afrin, codenamed “Operation Olive Branch,” began Saturday, raising tensions in the already-complicated Syrian conflict and threatening to further strain ties between Turkey and the U.S., both NATO allies. Turkey says it aims to create a 30-kilometer (20-mile) deep “secure zone” in Afrin, the Kurdish-controlled enclave on its border.</p> <p>The Turkish military announced late Monday its first fatality to the operation. It said a soldier was killed in cross-border raid.</p> <p>The U.N. Security Council was scheduled to convene later Monday to discuss the situation.</p> <p>A NATO statement said it has contacted Turkey over the offensive. NATO said Turkey has suffered from terrorism and has the right to self-defense but urged Ankara to do so in a “proportionate and measured way.”</p>

NATO also said it has no presence in Syria but that as members of the anti-Islamic State coalition, “our focus is on the defeat” of the extremists.

U.S. Defense Secretary Jim Mattis said Turkey has “legitimate security concerns” about Syria. Speaking to reporters traveling with him Sunday to Indonesia, he said diplomats are working on a solution to Turkey’s confrontation with the Syrian Kurdish fighters, known as the People’s Defense Units or YPG, who have been the key U.S. military ally in battling the Islamic State in Syria. Turkey considers the YPG a terrorist group because of its ties to its own Kurdish insurgency.

Mattis said Ankara gave the U.S. military advance notice of its Afrin offensive.

The U.S. has offered direct military and logistical support to a Kurdish-led group known as the Syrian Democratic Forces that spearheaded the fight against IS in Syria. With the near total defeat of IS in both Syria and Iraq, the U.S. said it would create a 30,000-strong border force of existing Kurdish and Arab SDF members to ensure there would be no IS comeback.

That announcement has outraged Turkey, and Secretary of State Rex Tillerson has tried to walk back the U.S. position, saying it was portrayed incorrectly. The U.S. focus in recent years has been on eastern Syria. The area west of the Euphrates River, including Afrin, has been more of a problem for the U.S. because Turkey had said it would not accept a Kurdish military presence there.

The U.S. is discussing with Turkey and others the possibility of setting up a security zone on the Syria border to address Turkey’s concerns about a Kurdish enclave there, Tillerson said while traveling in Europe on Monday. Such a zone could help stabilize the situation and meet Turkey’s legitimate concerns over security, he said.

The U.S. recognizes Turkey’s “legitimate right” to defend itself from terrorists, he said, but added that Washington wants Turkey to try to be precise in its Afrin operation and to limit it by showing restraint.

But Turkish President Recep Tayyip Erdogan has promised to expand the operation, threatening to push farther east to the town of Manbij to the east, which the Kurdish fighters had liberated of Islamic State militants in 2016 and currently administer.

<b>GIST</b>	<p>BUFFALO, N.Y. (AP) — A New York man who traveled to Turkey in an attempt to join the Islamic State group has pleaded guilty to attempting to provide material support to a terrorist organization.</p> <p>Arafat Nagi (NAH’-gee) entered the plea in federal court in Buffalo on Monday. The 47-year-old Lackawanna (lak-ah-WAH’-nah) man faces up to 15 years in prison when he’s sentenced in May.</p> <p>Prosecutors say Nagi traveled to Turkey in 2012 and 2014 with plans to meet members of the Islamic State group, first purchasing military combat items including body armor, a machete, night vision goggles and a black and white flag associated with the group.</p> <p>Authorities say he was planning his third trip to Turkey, with plans to continue to Syria to join the fighters, at the time of his arrest in 2015.</p>

HEADLINE	<b>01/22 Envoy: Pakistan won't be 'scapegoat'</b>
SOURCE	<a href="https://www.washingtontimes.com/news/2018/jan/22/aizaz-ahmad-chaudhry-pakistan-wont-be-scapegoat-fo/">https://www.washingtontimes.com/news/2018/jan/22/aizaz-ahmad-chaudhry-pakistan-wont-be-scapegoat-fo/</a>
GIST	<p>Pakistan's top diplomat lashed out at the Trump administration's decision to withhold millions in foreign aid and military assistance to Islamabad over its suspected support for extremist militants in the region, saying Pakistan refuses to be the White House's "scapegoat" for its failing Afghan war policy.</p> <p>In his first public statements since the White House decision to sharply curtail bilateral security aid to the South Asian nation, Pakistani Ambassador to the U.S. Aizaz Ahmad Chaudhry said Islamabad will not engage with Washington "in a transactional relationship" where diplomatic ties are defined by punitive actions driven by unsubstantiated rhetoric.</p> <p>"We will not wholeheartedly take the blame" for the worsening situation in Afghanistan, Mr. Chaudhry said during a speech at the Washington-based Center for Strategic and International Studies. Pakistan "is being scapegoated for the failures in Afghanistan," he added.</p> <p>His comments come weeks after U.S. U.N. Ambassador Nikki Haley announced plans to indefinitely suspend \$225 million in foreign aid, accusing Islamabad of playing "a double game for years" with its selective support of certain Pakistani-based terror groups.</p> <p>State Department officials followed up a week later, announcing their plans to block all bilateral security aid to the country.</p> <p>The U.S. has given more than \$30 billion in aid to Islamabad since 2001, much of it for military training and purchases of U.S.-made weaponry. The relationship has been tumultuous though, highlighted by the U.S. special forces mission in 2011 that killed al Qaeda leader Osama bin Laden at a hideout deep inside Pakistan.</p> <p>President Trump's new blueprint for the 17-year-old Afghan war, outlined last summer, had sharp words for Pakistan's role in the conflict, demanding Islamabad crack down on terror groups inside its territory who were helping the Taliban insurgency.</p> <p>State Department spokeswoman Heather Nauert told reporters that Pakistan's unwillingness to curb groups like Tehrik-i-Taliban, the Pakistani faction of the terror group, and the Haqqani Network forced the administration's hand.</p> <p>Pakistan has repeatedly denied claims of its support for terror groups, citing its own robust counterterrorism operations in the volatile federal tribal areas along the Afghan-Pakistan border and the casualties its army has taken in anti-terror operations.</p> <p>On Monday, Mr. Chaudhry took an even more direct shot at American-led security and stability efforts in Afghanistan, saying it was the lack of order and stable government there that was the root cause of the crisis.</p> <p>"The tide of terrorism has been reversed" inside Pakistan, he said, adding stability in Afghanistan is the only way Islamabad can continue to capitalize on that progress. "Our gains will continue to be at risk ... unless Afghanistan stabilizes."</p> <p>Pakistan's security forces "have been breathing down [the terror groups'] necks" and limiting territory for safe havens where extremist groups can operate inside the country. Meanwhile, the U.S.-backed central government in Kabul can only keep 60 percent of Afghanistan out of the Taliban's hands, the Pakistani diplomat noted.</p> <p>Despite the harsh rhetoric, there are signs neither side is ready for a permanent break, particularly when Pakistan provides a key logistical route for U.S. forces and materiel into Afghanistan.</p>

	<p>Central Command chief Gen. Joseph Votel and Gen. Qamar Javed Bajwa, head of Pakistan's army, have remained in "continuous communication" in the weeks following the U.S. aid cut-off announcement.</p> <p>"We value mutual understanding of interests and concerns that we need to consider and might lead to a positive path forward," command spokesman Col. John Thomas said earlier this month.</p>

<b>HEADLINE</b>	<b>01/22 Boy: lived w/US family under ISIS rule</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/ayham-elias-iraqi-boy-tells-cbs-news-isis-american-family-raqqa/">https://www.cbsnews.com/news/ayham-elias-iraqi-boy-tells-cbs-news-isis-american-family-raqqa/</a>
<b>GIST</b>	<p>NEAR DOHUK, Iraq -- Ayham Elias is an 8-year-old Iraqi boy who made it back from territory held by the Islamic State of Iraq and Syria (ISIS) in November, more than three years after he was kidnapped by the extremists. But when the little boy arrived in a muddy refugee village near Dohuk in northern Iraq, his family immediately noticed a change; Ayham had somehow learned to speak fluent English.</p> <p>He says he lived under ISIS rule with an American family. He only knew they were American because the woman told him she was from the U.S.</p> <p>Ayham tells CBS News correspondent Holly Williams that he spent two years living with the American woman and her four children in Raqqa, which was then the ISIS self-declared capital city in Syria.</p> <p>Asked what the woman's name was, Ayham said he called her Umm Yusuf, but that her real name was Sam.</p> <p>Amazingly, an ISIS propaganda video released in August seems to confirm much of his story. It shows Ayham with a boy he identifies as Yusuf -- whom he says was the American family's oldest child.</p> <p>He says the family treated him with kindness. They were forced to make the video by an ISIS gunman, he tells CBS News.</p> <p>Ayham is a member of the Yazidi religious minority, which was ruthlessly targeted by ISIS as the militants rampaged across Iraq in 2014. Yazidi men were killed and women and children were kidnapped - the women later sold as sex slaves.</p> <p>Ayham tells CBS News he was separated from his mother -- who is still missing -- and beaten before he was handed over to the American woman named Sam.</p> <p>Her husband, a North African man, was killed by an airstrike, Ayham says, as the U.S. coalition pummelled Raqqa to eventually help regional forces retake the sprawling city.</p> <p>"All the night they're bombing our house," the young boy recalls. "All the night."</p> <p>Ayham fled ISIS territory with the American family, he says, but they became separated, and now he misses them.</p> <p>"I want to go next to this woman," he tells Williams. "Next to this family. American. American family."</p> <p>It's an extraordinary story, but the woman he knew as Sam remains a mystery. CBS News has not been able to confirm her identity, or her U.S. citizenship. We don't know how she ended up living under ISIS, or where she and her children are now.</p>

HEADLINE	<b>01/22 TSA issues emergency order on cargo</b>
SOURCE	<a href="https://www.cbsnews.com/news/tsa-emergency-action-strictier-air-cargo-scrutiny-5-predominantly-muslim-countries/">https://www.cbsnews.com/news/tsa-emergency-action-strictier-air-cargo-scrutiny-5-predominantly-muslim-countries/</a>
GIST	<p>Growing concern about terrorists getting a bomb onto a plane headed for the United States prompted an emergency order requiring stricter scrutiny of air cargo by TSA Administrator David Pekoske. Effective Monday morning, all cargo being loaded onto flights at last point of departure airports in five predominately Muslim countries — Egypt, Jordan, Qatar, Saudi Arabia, and the United Arab Emirates — will be subject to the new requirements.</p> <p>"These countries were chosen because of a demonstrated intent by terrorist groups to attack aviation from them," said a TSA official familiar with the order. "This is all intel driven."</p> <p>Last year, these countries were among those subject to the so-called laptop ban that prohibited electronics larger than a cell phone to be carried on in the passenger cabin.</p> <p>"In close coordination with CBP, I directed specific carriers to implement strict security requirements based upon recent information that established a need to implement additional security measures for air cargo bound to the United States, on both passenger and cargo aircraft," Pekoske said in a statement to CBS News.</p> <p>Six airlines — EgyptAir, Royal Jordanian, Qatar, Saudi, Emirates and Etihad — serving the U.S. from seven airports are now required to comply with Air Cargo Advance Screening protocols. Known as ACAS, it is typically a voluntary program, that provides the TSA and Customs and Border Protection with advanced information about all cargo those carriers plan to bring to the United States.</p> <p>The airports subject to the order include Cairo International Airport in Egypt, Queen Alia International Airport in Jordan, King Abdul-Aziz International Airport and King Khalid International Airport in Saudi Arabia, Doha International Airport in Qatar, as well as Dubai International Airport and Abu Dhabi International Airport in the U.A.E.</p> <p>All cargo loaded on an airplane already undergoes security screening. The new measures will give TSA and CBP specific additional information in advance of cargo being loaded onto a U.S.-bound flight. The carriers will be required to provide details like where a parcel was sent from, who sent it, where it's been since it was mailed, how it was sent, where its going, and its contents. That is a similar level of "total asset visibility" that comes with a package sent through FedEx or UPS.</p> <p>"Anomaly detection is the bottom line here," said a TSA official. "This helps us track those anomalies."</p> <p>Turkey is the only other country required to participate in ACAS, an order that followed a failed terror plot to blow up an Australian airliner over the summer. High-grade military explosives were sent by air cargo from Turkey as part of that plot.</p> <p>The emergency order, referred to by TSA officials as an emergency amendment, builds on continuing concern about a bomb concealed in a large personal electronic device like a laptop that may not be easily detectable by some screening equipment. Intelligence that ISIS had constructed such a device prompted the short lived laptop ban and resulted in a two phased increase of security at foreign airports with direct flights to the U.S.</p> <p>"We haven't necessarily seen anything 'brand new' in terms of a new threat but we are seeing things and want to stay ahead of the threat that we've seen over the past nine months or so. There's enough out there, enough threat streams, that give us enough concern that we need to move forward with this as quickly as possible," said a TSA official familiar with the current threat intelligence.</p>

<b>HEADLINE</b>	<b>01/22 Turkey's 'Operation Olive Branch'</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/01/22/ap-explains-turkeys-operation-olive-branch-in-aftrin.html">http://www.foxnews.com/world/2018/01/22/ap-explains-turkeys-operation-olive-branch-in-aftrin.html</a>
<b>GIST</b>	<p>ISTANBUL – Turkey has launched an air and ground campaign into Afrin, a Kurdish-controlled enclave in northwestern Syria. Codenamed "Operation Olive Branch," it's the latest chapter in a decades-long conflict between Turkey and Kurdish militants. Here's a look at why this is happening now and what's at stake:</p> <p>—</p> <p>WHAT'S THE GOAL?</p>

Turkish Prime Minister Binali Yildirim has said Turkey wants to create a 30-kilometer (20-mile) deep "secure zone" in Afrin. President Recep Tayyip Erdogan has said the military operation is essential for Turkey's security and Syria's territorial integrity.

The Turkish operation aims to oust from Afrin a militia made up of an estimated 8,000 to 10,000 fighters affiliated with the People's Protection Units or YPG, a Syrian Kurdish group that has controlled territory in northern Syria and proven effective in fighting the Islamic State group.

Turkey considers the YPG to be a terrorist organization and an extension of the outlawed Kurdistan Workers' Party or PKK, which has fought for Kurdish autonomy in Turkey.

The PKK has waged an insurgency in Turkey since 1984 that has claimed some 40,000 lives. A peace process collapsed in 2015 and the conflict resumed, with devastating street battles and major bomb attacks in cities.

The YPG and its political counterpart, the Democratic Union Party, or PYD, say they want regional autonomy within a federalized Syria. They control nearly 25 percent of Syrian territory dubbed Rojava that includes the three "cantons" of Afrin, Kobani and Jazira.

The PKK, YPG and PYD consider as their guide the Kurdish Marxist-nationalist leader Abdullah Ocalan, who is imprisoned on a Turkish island for leading a separatist movement.

While Turkey's Western allies, including the U.S., consider the PKK a terrorist group, Washington has offered direct military and logistical support for Syrian Kurdish militants, known as the Syrian Democratic Forces, to fight IS in Syria. This has infuriated Ankara and strained its relations with Washington even though the two are NATO allies.

The YPG denies accusations of separatism and the YPG-dominated Syrian Democratic Forces said Monday the Turkish offensive "gives IS a space to breathe."

—

#### WHY IS THIS HAPPENING NOW?

Turkey has long warned it would not allow a "terror corridor" on its border with Syria and launched a cross-border operation with Syrian opposition forces into Jarablus in northern Syria in 2016.

That operation cleared the Turkish border and nearly 2,000 square kilometers of the extremist IS but also aimed to prevent the YPG from linking the Afrin and Kobani cantons.

Turkey is pushing to be a key player in the Syrian conflict on behalf of rebels in peace talks in Kazakhstan, where it has been negotiating with Russia and Iran, who represent the Syrian government.

The parties have agreed on "de-escalation zones," which has allowed Turkey to send troops to rebel-held Idlib province in October as a monitor. But once again, Turkey's other goal has been to check the YPG's westward expansion, and Turkey amassed troops and armored vehicles between Idlib and Afrin.

The latest development leading up to the Afrin operation was an announcement by the U.S. military earlier this month that it was going to create a 30,000-member border force with the Kurdish fighters to secure northern Syria.

This has incensed Turkish leaders who claim that U.S. arms provided to the Syrian Kurds are and will be used against Turkey.

Secretary of State Rex Tillerson has tried to walk back the U.S. position, saying it was misrepresented. The U.S. also is discussing with Turkey and others the possibility of setting up a security zone on the Syria

border to address Turkey's concerns about a Kurdish enclave there, Tillerson said Monday. The buffer zone Turkey has been pushing for since 2012 may be closer than ever, with one already established around Jarabulus.

—

#### WHAT'S AT STAKE?

The Afrin operation poses considerable military and political risks for Turkey. Erdogan has slammed critics who describe the operation as an "invasion" and said Turkish troops would leave after fulfilling their mission.

The Afrin district houses an estimated 800,000 civilians, including displaced people from earlier years of the Syrian war. Airstrikes could lead to another humanitarian crisis.

If Turkey's campaign proves successful, it could continue on to Manbij, where U.S.-backed Kurdish militants are in control since pushing IS out. Turkey has long accused the U.S. of going back on a promise that the militants would withdraw from the town.

The operation risks destabilizing a relatively peaceful area in Syria where civilians have found refuge and could further complicate the seven-year civil war.

The U.S. has urged Turkey to exercise restraint and said it would maintain a military presence with the Kurds for the foreseeable future. This continued support angers Turkish leaders, who expressed dismay that the U.S. chose to work with Syrian Kurds rather than Turkey in the fight against IS.

The European Union also warned Turkey that its offensive could undermine the Geneva peace talks.

Russia has pulled back troops from Afrin but has recently firmed up its ties with the YPG, while Turkey has struck defense and trade deals with Russia, raising questions about its NATO membership.

Syria's government in Damascus says it will shoot down any Turkish jets on raids in the country. The two governments have been at odds for years.

The operation could also spread along the Turkish-Syrian border. Skirmishes in the east already have been reported. It risks intensifying the conflict within Turkey, further polarizing a divided nation where pro-Kurdish lawmakers and many others have been arrested on alleged terror charges.

HEADLINE	01/22 Oregon seeks help w/stolen headstones
SOURCE	<a href="https://www.seattletimes.com/seattle-news/oregon-officials-ask-for-help-identifying-stolen-headstones/">https://www.seattletimes.com/seattle-news/oregon-officials-ask-for-help-identifying-stolen-headstones/</a>
GIST	<p>GRANTS PASS, Ore. — Got time on your hands? Want to help solve a local mystery?</p> <p>The public is being asked to help identify the few remaining grave markers that have yet to be identified from a criminal case this past year. Other memorials in the case have already been traced to local cemeteries.</p> <p>The markers were discovered in the house of Matthew Jason Millwood, 49, during an April 2017 Rogue Area Drug Enforcement Team search of his home on Southwest Isham Street in Grants Pass.</p> <p>In total, police seized 15 headstones or pieces of headstones, as well as drugs and guns. Millwood was</p>

	<p>sentenced in December to just under two years in prison for crimes that included the unusual charge of “abuse of a memorial to the dead.”</p> <p>“I’ve never seen in my career someone who goes and steals headstones,” said newly retired Grants Pass police Detective Pete Jenista, who recently handed off the case to the Josephine County Historical Society.</p> <p>Millwood claimed in court records that he was a caretaker, but Jenista said he wouldn’t give any more details to police as to why he had taken the markers or where they all came from.</p> <p>Police were able to trace most of the grave markers to nearby cemeteries, including Pleasant Valley Cemetery near Hugo, Sloan Pioneer Cemetery near Wilderville, Rock Point Pioneer Cemetery in Gold Hill and Granite Hill Cemetery just west of Grants Pass. The origins of some remain harder to track, however.</p> <p>That’s where officials hope the public can help.</p> <p>“Normally we would have these maintained as evidence, but the District Attorney said to take photos and return them to see if we can’t get them back where they belong,” Jenista said. “If they aren’t restored to their proper places, the Josephine County Historical Society will be the stewards of that property.”</p> <p>The remaining markers have been turned over to the Historical Society in Grants Pass, which, so far, has been able to trace two of the remaining markers: brass placards belonging the Cameron Family that were taken from the Independent Order of Odd Fellows Cemetery, off Foothill Boulevard.</p>

<b>HEADLINE</b>	<b>01/23 Oklahoma: 5 missing from rig explosion</b>
<b>SOURCE</b>	<a href="https://apnews.com/7c1f0b321eb145c788402d1eecda3d99/Officials:-5-missing,-fire-out-after-Oklahoma-rig-explosion">https://apnews.com/7c1f0b321eb145c788402d1eecda3d99/Officials:-5-missing,-fire-out-after-Oklahoma-rig-explosion</a>
<b>GIST</b>	<p>QUINTON, Okla. (AP) — Five people are missing after a fiery explosion ripped through an eastern Oklahoma drilling rig on Monday, sending plumes of black smoke into the air and leaving a derrick crumpled on the ground, emergency officials said.</p> <p>More than 20 employees were at the natural gas well site when the blast was reported around 8:45 a.m., Pittsburg County Sheriff Chris Morris said. Aerial footage showed several fires were still burning by midday on the rig and other equipment; the derrick, a towering metal structure above the well, collapsed onto the ground.</p> <p>Emergency crews were pulled away after other explosions at the site, where several tanks are also located, Pittsburg County Emergency Management Director Kevin Enloe said during an afternoon news conference.</p> <p>“Pretty much everything that is on location is on fire,” Enloe said.</p> <p>A statement Monday night from emergency management said the fire was out.</p> <p>The explosion occurred west of the town of Quinton, about 100 miles (161 kilometers) southeast of Tulsa. Enloe said firefighters were letting the blaze burn and weren’t putting water on it to keep from spreading possible hazardous materials at the site.</p>

<b>GIST</b>	AIRWAY HEIGHTS, Wash. (AP) — The U.S. Air Force is expanding the area they are testing for water

	<p>contamination in the Spokane suburb of Airway Heights.</p> <p>Last year, the city went without drinkable tap water for more than 20 days after officials said there were high levels of two different contaminants in the water and urged residents not to drink it.</p> <p>KREM-TV reports that the Air Force announced Friday it would expand the current sampling area to include more private well owners.</p> <p>Airway Heights is home to Fairchild Air Force Base.</p> <p>The water is contaminated with chemicals used by the Air Force in fire trucks from 1970-2016.</p>

<b>HEADLINE</b>	<b>01/22 Report: NKorea ships head to Russia</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/World-News/2018/01/22/Report-North-Korea-ships-blocked-in-China-head-to-Russia/5871516630425/?utm_source=fp&amp;utm_campaign=ts_tn_int&amp;utm_medium=4">https://www.upi.com/Top_News/World-News/2018/01/22/Report-North-Korea-ships-blocked-in-China-head-to-Russia/5871516630425/?utm_source=fp&amp;utm_campaign=ts_tn_int&amp;utm_medium=4</a>
<b>GIST</b>	<p>Jan. 22 (UPI) -- More North Korean ships are heading to Russia as sanctions take root and Chinese ports are under scrutiny for trade with Pyongyang.</p> <p>North Korea may be coping with the blacklisting of ships under international embargoes by sending more vessels to Russia than China in the second half of 2018, Voice of America reported Monday.</p> <p>According to data from the Port State Control Committee of the Asia Pacific, 55 ships of North Korean origin docked at Russian ports while 38 ships docked in China.</p> <p>The data set is from July to December 2017.</p> <p>In 2016, trends were moving in reverse, with 135 North Korean vessels receiving inspections in China between July and December 2016, while 55 vessels were registered as arrivals in Russia, according to the report.</p> <p>The number of North Korean vessels headed to China was already declining by March 2017, a possible sign China was implementing sanctions while North Koreans cut back on trade with its largest trading partner.</p> <p>China's commerce ministry has also stated it would not import North Korean coal, in compliance with United Nations Security Council sanctions Resolution 2321.</p>

<b>HEADLINE</b>	<b>01/22 Metal spikes on roads in Kitsap Co.</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/its-a-little-disturbing-homemade-metal-spikes-found-strewn-across-roads-in-kitsap-coun">http://komonews.com/news/local/its-a-little-disturbing-homemade-metal-spikes-found-strewn-across-roads-in-kitsap-coun</a>
<b>GIST</b>	<p>POULSBO, Wash. -- A Poulsbo Fire engine was damaged by a metal spike in the road while responding to a call, but firefighters don't think it was an accident after they found out that more spikes were found in North Kitsap County.</p> <p>Poulsbo firefighters were driving to a fire in Bainbridge Island last week when they heard a clunk. It happened along Highway 305, about a half mile from the Agate Pass Bridge.</p> <p>Shortly after hearing the loud noise, the firefighters were canceled on the call and returned to their station. Within minutes of arriving they discovered the front tire was flat.</p>

	<p>"Initially, when they came back they thought we had three large nails," said Poulsbo Fire Batt. Chief Chris Morrison. "Once a mechanic was able to remove the tire and get a closer look they found pieces of a spike and at least six holes in the tire.</p> <p>"It's a little disturbing to realize if somebody- we believe somebody maliciously did this because there were instances up in North Kitsap and Kingston where they found additional spikes," said Morrison.</p> <p>On Jan. 12, Kingston High School student Abby Rose posted on the North Kitsap Community Facebook page that she found spikes at the Kingston Cemetery. She says the metal pieces were buried in the gravel parking lot.</p> <p>"Some very rude person decided it would be a great idea to make homemade spikes to pop people's tires," Rose wrote in the message. "I picked up every one I could find buried in the gravel."</p> <p>Meanwhile, in Poulsbo, the engine was out of service for about an hour as the tire was replaced. The cost to make the repairs was \$1,300.</p> <p>Morrison said even more concerning is knowing what could happen if more spikes are out there.</p> <p>"Potentially, this could have caused damage to our crew and to the citizens if our engine would have went into oncoming traffic," said Morrison. "Could have been devastating."</p>

<b>HEADLINE</b>	<b>01/22 City pays homeless to pick up trash</b>
<b>SOURCE</b>	<a href="http://www.khq.com/story/37324754/this-texas-city-is-paying-homeless-people-to-pick-up-trash">http://www.khq.com/story/37324754/this-texas-city-is-paying-homeless-people-to-pick-up-trash</a>
<b>GIST</b>	<p>FORT WORTH, Texas - The city of Fort Worth is paying homeless people to pick up trash as part of a new program to clean up the city and turn lives around.</p> <p>One of the people who works in the program is 53-year-old Frank Crist. Crist makes \$10 an hour to pick up litter in an area frequented by the homeless population. Crist told KXAS that he's thankful for the opportunity.</p>

	<p>"It just makes you feel better keeping it cleaned up. It means a lot, with my record and stuff, I really had no other place that would hire me," Crist said.</p> <p>Crist served prison time for drugs and ended up on the street. He lives at the Presbyterian Night Shelter, which hired him as part of the Clean Slate program. The city pays for the program and the shelter runs it.</p> <p>"It is a win-win," said Presbyterian Night Shelter CEO Toby Owen. "We want a clean neighborhood that speaks hope, that speaks dignity to our homeless guests. And it also provides income for these individuals so they can move out and be successful without living in a homeless shelter."</p> <p>According to Owen, the Clean Slate program put 40 people to work last year and about 3,856 tons of trash was collected. Those working for Clean Slate work as janitors for businesses as well.</p> <p>KXAS reports that Crist is about to move into an apartment, after almost two years of living in the shelter. He says he'll continue to work at Clean Slate after he moves into his new place.</p> <p>The city spends about \$48,000 a year on the program and the shelter is working with the city to expand it next year.</p>

<b>HEADLINE</b>	<b>01/23 NKorea ex-spy casts doubt w/Olympics</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/north-korea/north-korean-ex-spy-kim-hyon-hui-casts-doubt-kim-n839746">https://www.nbcnews.com/news/north-korea/north-korean-ex-spy-kim-hyon-hui-casts-doubt-kim-n839746</a>
<b>GIST</b>	<p>DAEGU CITY, South Korea — She's a killer with a soft voice and a sharp blue suit. And not just any killer.</p> <p>Kim Hyon-hui is a mass murderer, a former spy for North Korea who blew up a passenger jet in 1987 on orders from Kim Jong Un's father.</p> <p>She says he wanted to sabotage the 1988 Seoul Summer Games.</p> <p>And with the Olympics returning to South Korea in just over two weeks in PyeongChang, she's warning the world not to trust Kim Jong Un. She sees dark motives behind his decision to send athletes to the Winter Olympics.</p> <p>According to Kim Hyun-hui, the regime hopes to try to separate South Korea from its ally, the United States, and eventually to reunify the Korean Peninsula under Communist rule.</p> <p>"North Korea is using the Olympics as a weapon," Kim Hyon-hui said. "It's trying to escape the sanctions by holding hands with South Korea, trying to break free from international isolation."</p> <p>She described the joint Korean Olympic team as "a publicity stunt for Kim Jong Un."</p> <p>"I was brainwashed that giving my life carrying out a mission ordered by the Kim family is an honor."</p> <p>The Korean War ended in an armistice rather than a peace treaty in 1953, meaning the neighbors officially remain at war. Friction has built over the past year, fueled by the North's nuclear and missile tests and apocalyptic rhetoric from Kim Jong Un and President Donald Trump. Kim has repeatedly threatened to destroy the South along with the U.S., while Trump has threatened Pyongyang with "fire and fury."</p> <p>Thousands of North Korean artillery pieces stand ready around 30 miles away from Seoul, a city of 10 million people.</p> <p>Since taking office in May, South Korean President Moon Jae-in has made it clear he plans to re-engage</p>

with North Korea — an approach at odds with the Trump administration’s hardline stance of sanctions and the threat of a pre-emptive strike.

Secretary of State Rex Tillerson and National Security Adviser H.R. McMaster have both warned that North Korea must not be allowed “to drive a wedge” between the allies.

'I was trained only to take orders like a robot'

Kim Hyun-hui was a 19-year-old university student in North Korea’s capital, Pyongyang, when she was handpicked to be a spy.

She trained for years before her first mission in 1987 — carry a bomb aboard a South Korean jet and blow it up. The aim was to persuade the world that South Korea was too dangerous to send Olympic athletes the following summer.

She was 25 on Nov. 29, 1987, when she boarded Korea Air Flight 858 in Baghdad and loaded her bomb into the overhead bin of the Boeing jet, and took her seat in row seven alongside her supposed father, an older North Korean agent.

They both got off at a stopover in Abu Dhabi before the plane continued to Seoul. It never made it, exploding over the Andaman Sea, killing all 115 on board, most of them South Koreans.

“When I was given the mission, my role was to disrupt the Seoul Olympics,” she told NBC News. “North Korea thought that hosting the Olympics would permanently divide the Koreas ... and make South Korea more economically powerful than the North. So I was ordered to harm the ‘South Korean puppets’ by hitting the flight.”

She has no doubt who was behind the mission: Kim Jong Un’s father, Kim Jong Il, who later became leader of the North.

“My mission was personally signed by Kim Jong Il,” she said. “At the time, he oversaw all matters relating to South Korea. Living in North Korea is like being in huge prison and being treated like slaves. You didn’t question an order.

“I was brainwashed that giving my life carrying out a mission ordered by the Kim family is an honor. So I took the mission thinking that the bombing will bring revolution in Korea and will contribute to the reunification of the Koreas.”

Kim Hyon-hui had no hesitation or doubts, but claims she experienced an unusual rush of feeling on the plane.

“The moment I boarded the flight I was thinking, ‘This is an enemy state,’” she recounted. “But then, placing the bomb, I was nervous, anxious, scared of being caught. I had a brief moment thinking that all the people in this plane will die, but I was frightened to even have such feelings. I wasn’t supposed to have such feelings. I was trained only to take orders like a robot. I tried to get rid of the feelings by thinking that for the sake of reunification these people had to be sacrificed. In North Korea, you can’t have these doubts, because if you do, it means your ideology has been corrupted and you’ll be executed or sent to a prison camp.”

And then came the only moment in a 70-minute interview in which she betrayed any hint of emotion.

Asked if she could still see the faces of the people she killed, Kim Hyon-hui replied, “Not really.”

But her eyes filled and she blinked repeatedly. “Every year I try to visit the memorial to the victims to make an apology,” she said, “and to pray for their souls.”

She succeeded in blowing up the plane, but failed to escape. Kim Hyon-hui was intercepted by police in Bahrain who pulled a cyanide capsule in a cigarette from her mouth before she could kill herself, as her fellow spy did.

After more than a week of interrogation she confessed and was sentenced to death in South Korea.

But its president pardoned her, on the grounds that she had been brainwashed by Pyongyang, freeing her into a lifetime of protection.

Even 30 years on, she is surrounded by a group of bodyguards and fears for her life.

"I think I am on a list to be assassinated," said Kim Hyon-hui, who is now aged 54 and married to a South Korean.

North Korea boycotted the 1988 Olympic Games, but it's taking part in the PyeongChang Games, sending 22 athletes and hundreds of supporters, officials, musicians and journalists.

However, Kim Hyon-hui believes the country's eventual goal is to get rid of American troops from the Korean Peninsula and predicted "North Korea will start its provocations again" in the months following the Olympics.

She added: "North Korea won't give up its nuclear weapons. They're its lifeline."

<b>HEADLINE</b>	<b>01/22 NJ town bans non-residents off roads</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/jersey-town-bans-nonresidents-roads-rush-hour/story?">http://abcnews.go.com/US/jersey-town-bans-nonresidents-roads-rush-hour/story?</a>
<b>GIST</b>	<p>Next time you're traveling northbound on I-95 and your navigation app tells you to exit in Leonia, New Jersey, to skip traffic on the George Washington Bridge, you may find yourself \$200 poorer. Effective Monday, the city of Leonia is shutting down local streets to nonresident drivers during rush hour.</p> <p>The influx of vehicles creates a major headache for residents, according to Leonia Mayor Judah Zeigler.</p> <p>"When there is a problem on the bridge or on one of the New York City highways, 12,000 vehicles utilize this same road during the same period," Zeigler told ABC News.</p> <p>Most of the main streets will stay open to drivers, according to the mayor. But the local streets are closed off to nonresidents during certain times.</p> <p>Leonia Police Chief Tom Rowe told ABC station WABC that Leonia had no choice.</p> <p>"Three years ago we had a pedestrian [who] was run over when there were 90-minute delays at the bridge," Rowe said. "On that day, there was wall-to-wall traffic. So, we must do this to keep our streets safe, pedestrians safe, keep our intersections open so that ambulances get to the hospital. It's unfortunate we have to do it, but we have to do it."</p> <p>As extreme as it may sound, the measure is legal, according to Zeigler.</p> <p>"There is a U.S. Supreme court decision from 1977 that gives municipalities the absolute right to legislate restrictions on roads that are under their control as long as those roads are open to all residents, and we, ours, are and as long as there is a public purpose," Zeigler said.</p> <p>The Leonia Police Department, with its 18-member team, will do their best to enforce the ordinance.</p> <p>"Residents and employees of businesses or public entities in the Borough of Leonia have been issued</p>

	yellow hang tags for each vehicle," Zeigler said. "The police department will only be stopping people who don't have these hang tags -- no other standard is being used."

<b>HEADLINE</b>	<b>01/22 Report: NKorea desperate to feed army</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/01/22/north-korean-officials-ransacking-farmers-homes-to-find-food-for-kims-hungry-army-report-says.html">http://www.foxnews.com/world/2018/01/22/north-korean-officials-ransacking-farmers-homes-to-find-food-for-kims-hungry-army-report-says.html</a>
<b>GIST</b>	<p>North Korean officials desperate to feed Kim Jong Un's hungry army are ransacking the homes of drought-stricken farmers to collect every last grain of food inside, according to a report that highlights rising tensions between the regime and the public.</p> <p>The raids come weeks after news surfaced that soldiers in Kim's army are being given months off at a time to scrounge around fields to find food.</p> <p>"Officials carried out home searches in Paekam County to determine how much food some families had," a North Korean source told Daily NK. "As an excuse to enter and demand bribes, they said to the residents, 'Are we just going to let our military starve while the Americans lick their lips and prepare to eat us alive?'"</p> <p>The Seoul-based website, which covers the Hermit Kingdom through a network of informants, published a photo last month purportedly showing North Korean soldiers rummaging through a corn field.</p> <p>Despite drought conditions and a poor harvest last year in parts of North Korea, government officials are still demanding farmers fulfill a mandatory quota for military provisions.</p> <p>"All individuals who weren't able to meet the demands have been receiving additional assignments since the very beginning of January," a source in South Hamgyong Province told Daily NK last week.</p> <p>Another source in a neighboring province also said "these demands are pushing people to their wits' end."</p> <p>Sources told the website residents are not surprised by the annual demands to offer food to the military, but the tactic of officials ransacking homes in some regions is a new development.</p>

<b>HEADLINE</b>	<b>01/22 Canada's addiction to road salt</b>
<b>SOURCE</b>	<a href="http://nationalpost.com/news/canada/how-canadas-addiction-to-road-salt-is-ruining-everything">http://nationalpost.com/news/canada/how-canadas-addiction-to-road-salt-is-ruining-everything</a>
<b>GIST</b>	<p>This winter, Calgary has expanded its use of beet juice as a de-icing alternative to road salt. While slightly more expensive than salt, the mixture is more efficient, less toxic and less corrosive.</p> <p>Nevertheless, despite a galaxy of relatively benign de-icing agents such as beet juice, this year cities across Canada will stubbornly continue to coat their roads with literal mountains of salt. Although salt remains the single cheapest way to keep snow and ice at bay, the economics make much less sense when considering the awesome scale of the damage wrought every year by the salt truck.</p> <p>Below is a repost of an article that first ran in January, 2017. Since it was originally published, road salt has dissolved hundreds of kilograms of automotive steel, chapped untold numbers of dog's paws and done at least \$5 billion damage to Canadian infrastructure.</p> <p>In 2015, the U.S. National Highway Traffic Safety Administration pegged salt corrosion as the culprit in thousands of vehicle brake failures. That same year, Transport Canada issued a recall of 3,000 BMWs and Minis that had been parked at the Port of Halifax during the 2015 ice storm. But it wasn't the ice that caused the recall; salt de-icing had damaged the vehicles so badly that they couldn't steer properly. Way</p>

back in 1975, Transport Canada estimated that de-icing salts were causing \$200 in damage per car, per year — the equivalent of \$854 in 2017. Corrosion-resistant coatings have improved in the interim, but even when one-quarter that amount is applied to the roughly 14 million registered vehicles in Ontario and Quebec, the result is an extra \$3 billion in vehicle depreciation each year.

Crews are already at work on a \$4.2-billion replacement for Montreal’s Champlain Bridge. The original, built in 1962, was brought to the edge of collapse in only 50 years because of salt corrosion. Salt brine seeping into concrete dramatically speeds up the corrosion of rebar within — and is heavily responsible for the poor state of bridges and highway overpasses across central Canada. Salt was a key contributor to the deadly 2006 collapse of the De La Concorde bridge in Laval, killing six people. The heavy salt diet on Toronto’s Gardiner Expressway is also one of the main reasons the elevated highway is often raining chunks of concrete; as rebar corrodes, the concrete around it crumbles. Tellingly, a series of 1930s-era stone carvings around Toronto’s Air Canada Centre have been permanently ruined by salty runoff from the nearby expressway.

After the Algo Centre Mall in Ontario’s Elliot Lake collapsed in 2012, killing two people, forensic analysts said the building’s steel supports looked like they had spent decades marinating in sea water. There were structural problems, to be sure, but the building was also hammered by 30 years of salty runoff from a rooftop parking garage. Road salt was also a contributing factor to lead contamination of drinking water in Flint, Mich. Water from the Flint River — made extra salty by road salt runoff — was eating into old pipes, dosing the population with lead. In 2011, well before the Flint disaster, Michigan’s Mackinac Center for Public Policy pegged the total damage done by road salt as high as \$687 CDN per tonne. In Minnesota, damage estimates ranged between \$1000 CDN and \$5000 CDN per tonne. Canada uses at least seven million tonnes of salt per year, according to 2009 estimates by Environment Canada. Using the Mackinac Center estimate, that’s \$4.8 billion in damage per year — \$1 billion more than the \$3.6 billion damage caused by the Fort McMurray wildfire.

Dalhousie University estimated that it costs it an extra \$15,000 in cleaning and maintenance each year just to repair all the damage salt does to floors and baseboards — with similar costs presumably accruing to most of Canada’s other universities, museums and public buildings. Salt severely corrodes leather, reducing the lifespan of Canadian shoes and requiring extra cleaning. And wading through salt is brutal on dogs’ paws: Every winter brings a new wave of chapped paw cases to Canadian vets.

Hit a moose lately? There’s a chance that they wandered onto the road in order to lick up some road salt. Sodium is quite rare in nature, which is why moose — like humans — have pretty strong salt cravings. Much of Canada’s road salts also end up on forest floors, farm fields or water systems. In 2010, a report found that Frenchman’s Bay outside Pickering, Ont., was so polluted with road salt that it had been effectively cleared of fish.

It’s generally too cold for road salt to be effective in the Prairies, so municipalities make do with sand, plowing and — in residential areas — simply having people drive on packed snow. But, the Prairies also regularly rack up Canada’s highest rates of highway deaths. Keeping roads ice-free is generally a good thing, but there are less-corrosive alternatives: calcium magnesium acetate, magnesium chloride and calcium chloride. But with salt costing only \$50 per tonne, alternatives can cost between six to 18 times. It’s a lot of money for the already overstretched de-icing budgets of Canadian cities — but potentially a bargain when the total societal costs of salt are factored in.

<b>HEADLINE</b>	<b>01/22 Pentagon: Russia ‘doomsday torpedo’</b>
<b>SOURCE</b>	<a href="http://chicago.cbslocal.com/2018/01/22/russia-doomsday-torpedo-pentagon/">http://chicago.cbslocal.com/2018/01/22/russia-doomsday-torpedo-pentagon/</a>
<b>GIST</b>	CBS Local — The Russian government is reportedly developing a city-killing torpedo, called Kanyon, that would allegedly leave a country’s coastline uninhabitable for decades. The terrifying news, which sounds more likely to come from a “James Bond” film, was actually leaked from the Pentagon’s report on nuclear weapons posturing.

	<p>The “doomsday torpedo” has been on the U.S. military’s radar for several years and was first revealed publicly by the Washington Free Beacon in 2015. Kanyon, an autonomous underwater vehicle carrying a lethal 100-megaton thermonuclear weapon, is reportedly being designed by the Russians to attack coastal areas, major cities, naval bases, and other sea ports.</p> <p>The massive nuclear payload of Kanyon would equal the explosion of 100 million tons of TNT and is twice as powerful as the most powerful thermonuclear weapon ever tested, according to Popular Mechanics.</p> <p>Perhaps even worse than the immediate devastation of a nuclear attack by this Russia robot sub, experts add that the radioactive fallout from such a powerful torpedo would leave the contaminated area off-limits to humans for the next 100 years. Russia’s alleged use of the radioactive isotope Cobalt-60 is to blame for the long recovery time.</p> <p>Jeffrey Lewis, an expert on nuclear policy, called Kanyon’s development “absurd.” In an interview with Business Insider, Lewis added that Russia’s willingness to create such a torpedo was “deeply, deeply, deeply immoral” and the U.S. has not even considered copying Kanyon’s design.</p>

## Crime, Criminals

[Top of page](#)

<b>HEADLINE</b>	<b>01/22 Seattle: hate crimes up 230% since 2012</b>
<b>SOURCE</b>	<a href="http://www.capitolhilltimes.com/Content/News/News/Article/Hate-crimes-bias-incidents-up-230-percent-in-Seattle-since-2012/26/337/5471">http://www.capitolhilltimes.com/Content/News/News/Article/Hate-crimes-bias-incidents-up-230-percent-in-Seattle-since-2012/26/337/5471</a>
<b>GIST</b>	<p>Reported hate crimes and incidents in Seattle have increased 230 percent since 2012, and the city is now focusing on a phased approach to improving accuracy in documenting and responding to future cases.</p> <p>The city auditor’s office has created a report that analyzes the past five years of data regarding hate crimes and incidents in Seattle at the request of City Councilmember Lisa Herbold, and a presentation will be provided to the Civil Rights, Utilities, Economic Development, and Arts Committee at 9:30 a.m. Tuesday, Jan. 23.</p> <p>There were 150 crimes with bias elements reported in 2017, and 107 cases of malicious harassment. Non-criminal bias incidents were at 116. This is a marked increase over the 2012 reports of 47 bias-related crimes, 31 cases of malicious harassment and 35 non-criminal bias incidents recorded in 2012. Bias-related crimes jumped from 89 in 2016 to 150 in 2017.</p> <p>Race was the biggest factor in the 1,126 incidents reported between January 2012 and November 2017, followed by 722 incidents involving LGBTQ community members. Religion came in third at 286, followed by ethnicity at 118 incidents.</p> <p>The auditor’s office published its Phase One report reviewing hate crime prevention, response and reporting back in September, and from that has come up with nine recommendations for consideration addressing reporting, training, using data and city and regional coordination.</p> <p>The Seattle Police Department is creating a training plan that includes an e-learning module on hate crimes, and is incorporating hate crime scenarios into its annual training. SPD is also increasing its data analysis capacity to include hot spots where hate crimes are reported, time of day, and victimization and socio-demographic trends, according to a presentation to be provided to the committee on Tuesday.</p> <p>SPD will also be working with the Office for Civil Rights to coordinate reporting, and with Seattle Public Utilities in terms of hate graffiti data.</p>

	<p>The U.S. Department of Justice Community Relations Service is expected to convene regional partners to discuss better ways to coordinate data collection and strategies.</p> <p>A Phase Two audit will include analysis of cases, a socio-demographic analysis by the University of Washington and a review of prevention efforts.</p>

<b>HEADLINE</b>	<b>01/22 RCMP: criminals getting more clever</b>
<b>SOURCE</b>	<a href="https://www.columbiavalleypioneer.com/news/police-fear-fewer-fentanyl-imports-dont-signal-the-end-of-the-overdose-crisis/">https://www.columbiavalleypioneer.com/news/police-fear-fewer-fentanyl-imports-dont-signal-the-end-of-the-overdose-crisis/</a>
<b>GIST</b>	<p>Despite fewer fentanyl seizures from shipments being flown and mailed to B.C. last year, police warn that the amount of the deadly opioid being smuggled in might not be decreasing.</p> <p>Insp. Rob Parker, who heads up RCMP E Division's federal serious and organized crime unit, said Thursday that although imports tracked by the Canada Border Security Agency have decreased by 20 per cent in 2017, that doesn't mean the opioid overdose is letting up</p> <p>According to figures obtained from the CBSA, 56 seizures resulted in 10,661 grams of fentanyl seized at by mail or at the airport in 2017.</p> <p>The previous year, 13,701 grams were seized over 55 seizures.</p> <p>Parker said that while the decreasing amounts look to be at odds with the opioid crisis that has gripped B.C. for close to two years, "obviously it would be counterintuitive to assume that they're getting everything."</p> <p>The CBSA statistics provided only measure what comes into the province at the Vancouver International Mail Centre and Vancouver International Airport cargo centre.</p> <p>Parker said drug dealers often bring in fentanyl via land and air borders. The fentanyl data provided by the CBSA only showed air and mail imports; however, seizures of general narcotics by land, sea, air and rail dropped by about half between 2016 and 2017.</p> <p>Parker told Black Press that from what he and his team have seen, it's too early to assume fentanyl imports are slowing down.</p> <p>"Sadly, I think it's still early days in the fentanyl opioid crisis," he said, noting that a fewer seizures are as likely to be proof of more clever drug dealers as they are to show a real decrease in drugs going in.</p> <p>The latest statistics available show that in B.C. 1,208 people have died from opioid overdose-related deaths in the first 10 months of 2017. Of those, 83 per cent are linked to fentanyl.</p> <p>Overdose-related deaths have nearly doubled since the previous year: from January to October 2016, 683 people died. In the first 10 months of 2015, 402 people died.</p> <p>The BC Coroners service has linked the increase in overdose deaths to the increase in fentanyl in B.C.'s communities, citing a 136 per cent increase in fentanyl-linked deaths in the first 10 months of 2017, compared to the first 10 months of 2016.</p> <p>Parker said fentanyl's potency – 100 times stronger than morphine – makes it so alluring to drug dealers. Drug dealers are now mixing pure fentanyl or fentanyl analogues with buffering agents that can stretch mere grams of the deadly opioid into much more profitable quantities.</p> <p>"We're seeing fentanyl purchased in a pure format being mixed with a buffering-type agent, extending the</p>

	<p>quantity,” said Parker. “They’re turning a small amount of fentanyl into what’s being held out as larger amount of cocaine or heroin.”</p> <p>Police worry that the profitability of fentanyl is contributing to the gang-style shootings seen across the region.</p> <p>Four people have died in reported gang-related violence in the first three weeks of 2018. Three were targeted; a fourth, 15-year-old Alfred Wong, was hit by a stray bullet while driving by a shootout in Vancouver.</p> <p>“There’s obviously a connection to organized crime, trafficking and narcotics that we need to be concerned about.”</p>

<b>HEADLINE</b>	<b>01/22 MS-13 ‘more violent’ enforcers to US</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/01/22/ms-13-wants-to-send-younger-more-violent-offenders-to-us-officials-say.html">http://www.foxnews.com/us/2018/01/22/ms-13-wants-to-send-younger-more-violent-offenders-to-us-officials-say.html</a>
<b>GIST</b>	<p>Frustrated MS-13 gang leaders feeling the pressure from the Trump administration’s crackdown are looking to send “younger, more violent offenders” to the United States to take over the role of being enforcers, officials say.</p> <p>The revelations were made Thursday during a House Committee on Homeland Security meeting on fighting international criminal organizations, where officials discussed the arrests and imprisonment of MS-13 members and leadership over the last year.</p> <p>"They're very much interested in sending younger, more violent offenders up through their channels into this country in order to be enforcers for the gang," said Stephen Richardson, assistant director of the FBI's criminal investigative division, according to VOA News.</p> <p>Peter King, R-N.Y., the committee’s chairman, said his staff recently visited El Salvador and was told by law enforcement there that the gang -- which mostly operates out of prisons in the Central American country -- is "frustrated that MS-13 members in [the U.S.] are not violent enough."</p> <p>"It's a horrifying thought," King was quoted as saying by VOA News.</p> <p>Justice Department figures say the gang has 40,000 members worldwide, with around 10,000 in the U.S. carrying out crimes ranging from extortion to gun trafficking.</p> <p>"We're looking at the information we're getting and doubling down our efforts against MS-13," Raymond Villaneuva, an assistant director for U.S. Immigration and Customs Enforcement, told lawmakers in response to King’s comments.</p> <p>The gang, also responsible for dozens of gruesome deaths throughout the U.S., was designated a “priority” last year by the Justice Department’s Organized Crime Drug Enforcement Task Force. Prosecutors are able to pursue any legal avenue to target MS-13, according to Attorney Gen. Jeff Sessions.</p> <p>U.S. officials and three Central American countries announced in September that more than 3,800 members of MS-13 and the 18th Street gangs have been charged since March.</p> <p>Sessions also said in December the Justice Department convicted more than 1,000 gang members in the U.S. in 2017, VOA News reported.</p> <p>MS-13 is believed to be behind 25 killings on New York’s Long Island alone in the past two years.</p>

Trump in July 2017 visited Brentwood, N.Y., a town that has experienced the gang's wrath, and pledged to push Congress for additional federal immigration agents to crack down on gang members who are in the country illegally. He also called MS-13 members "animals."

Many MS-13 recruits are middle- and high-school students, predominantly in immigrant communities, who are said to risk violent retribution if they leave.

<b>HEADLINE</b>	<b>01/22 Benton Co. charges 11 in fraud, theft</b>
<b>SOURCE</b>	<a href="http://www.tri-cityherald.com/news/local/crime/article196069069.html">http://www.tri-cityherald.com/news/local/crime/article196069069.html</a>
<b>GIST</b>	<p>A 20-year-old Kennewick man who never worked a day for one of Eastern Washington's largest apple and cherry producers admitted cashing in on nearly \$102,000 in paychecks.</p> <p>Mario David Prado's mother was friends with the ringleader, who created nine "phantom" employees to embezzle nearly \$1 million from Zirkle Fruit Company in a years-long scheme.</p> <p>Prado's name was put on the payroll list, along with his mother, father and sister.</p> <p>His mother, Esmeralda Prado, allegedly agreed to participate because she was having financial troubles in late 2013 and early 2014, according to court documents.</p> <p>The agreement with bookkeeper Norma Ruth Garza was that Esmeralda Prado and others had to give back half of the value of each paycheck, documents said.</p> <p>In all, 11 people have been charged with various crimes in Benton County Superior Court in connection with the scheme.</p> <p>Mario Prado is only the second to resolve his case. He recently pleaded guilty to first-degree theft and three counts of forgery.</p> <p>Sentencing is set for April 19. The standard range is four months to one year in county jail because of Prado's lack of criminal history.</p> <p>Deputy Prosecutor Terry Bloor said in the plea statement that he will recommend 10 months.</p> <p>Garza, 52, was sentenced in November to five years and eight months in prison for charges of leading an organized crime and four counts of forgery.</p> <p>The full restitution she was ordered to pay is \$864,647.</p> <p>The trials for six co-defendants — all family and friends — have been pushed into March and April.</p> <p>Meanwhile, Garza's fellow bookkeeper and the bookkeeper's husband and father all have yet to appear in court. Investigators say they can't be found.</p> <p>Garza and Maria Teresa Galarza worked for the Selah-based company out of the Paterson branch office.</p> <p>It was only when both women were off on a payday that the manager of a Finley ranch noticed he had extra checks for non-employees, court documents said.</p> <p>Both women tried to avoid any suspicion by calling in that day and claiming there had been a mistake, but their unusual behavior brought attention and sparked an audit of the company's payroll, documents said.</p> <p>The investigation dated back to April 2010 and reportedly totaled about \$956,000 in fraudulent paychecks.</p>

	<p>Records show that Prado had received 153 paychecks between May 2013 and November 2016.</p> <p>Galarza and her husband, Geronimo Marquez Galarza, both have no-bail warrants on charges of forgery and theft.</p> <p>Juan Antonio Ulloa, the father of Maria Galarza, is wanted on a \$5,000 warrant, also for theft and forgery.</p>

<b>HEADLINE</b>	<b>01/22 Unlikely slave masters in Britain</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-britain-crime-modern-slavery/middle-aged-couples-and-families-make-unlikely-slave-masters-in-britain-idUSKBN1FB2JE">https://www.reuters.com/article/us-britain-crime-modern-slavery/middle-aged-couples-and-families-make-unlikely-slave-masters-in-britain-idUSKBN1FB2JE</a>
<b>GIST</b>	<p>LONDON (Thomson Reuters Foundation) - Many modern slavery crimes in Britain are committed by families and middle-aged couples leading seemingly respectable lives, experts said on Monday, confounding the general belief that crime gangs control slavery operations.</p> <p>At least 13,000 people across Britain are estimated to be victims of modern slavery - trapped in forced labor, sexual exploitation and domestic servitude - but police say the true figure is likely to be in the tens of thousands.</p> <p>Offenders include large human trafficking networks but also ostensibly ordinary people that do not fit the stereotype of violent criminals, said Nadia Wager, a reader in Forensic Psychology at England's University of Huddersfield.</p> <p>A study she conducted in the Thames Valley in southeast England found most offenders in 2016 were aged 30 to 60 who exploited vulnerable family members or acquaintances in domestic work, sex work, forced labor and to commit drug related crimes.</p> <p>"The perception in the public mind is (of) big organized criminal gangs but that is not necessarily what we are finding," she told the Thomson Reuters Foundation by phone.</p> <p>The same is true nationwide, said Jakub Sobik of Anti-Slavery International, a London-based charity.</p> <p>"A large numbers of perpetrators are individuals or small groups of people, including families, who take the opportunity of exploiting people who are vulnerable," he said.</p> <p>Police in Britain are ramping up investigations into cases of slavery and trafficking, with more than 500 live policing operations into the crimes ongoing, according to the National Crime Agency - dubbed Britain's FBI.</p> <p>But investigations and media coverage have so far mainly focused on criminal networks, which risks skewing the general understanding of the crime, making it more difficult for members of the public to spot and report modern slavery, Sobik said.</p> <p>"There is definitely too much emphasis on organized criminal groups in comparison to individuals," he said in an email.</p> <p>Slavery predominantly affects immigrants and vulnerable people, often working at car washes, nail bars and farms, according to the Gangmasters and Labour Abuse Authority (GLAA), Britain's anti-slavery body.</p> <p>Potential signs include poor hygiene, injury and malnourishment, living in cramped or dirty accommodation, a suspicious manner and seeming under the influence or control of others, said the GLAA.</p>

HEADLINE	<b>01/23 Pakistan women speak out on abuse</b>
SOURCE	<a href="https://apnews.com/ee6e5fe6f40a4409a10dd9eaf6cc256d/After-girl's-killing,-Pakistani-women-speak-out-on-abuse">https://apnews.com/ee6e5fe6f40a4409a10dd9eaf6cc256d/After-girl's-killing,-Pakistani-women-speak-out-on-abuse</a>
GIST	<p>KASUR, Pakistan (AP) — The brutal rape and killing of Zainab Ansari, a 7-year-old girl whose body was left in a garbage dump, has unleashed a wave of revulsion around Pakistan, revealing a string of child abductions and killings by a suspected serial predator and generating outrage at a culture of silence surrounding sexual abuse.</p> <p>Zainab’s death has even given birth to a nascent Pakistani version of #MeToo movement.</p> <p>A number of prominent Pakistani women have come forward with their own stories of sexual assault, saying they want to change traditions that consider abuse as a mark of shame for the victim. Those traditions, they say, help predators get away with abuse and encourage an already corrupt police force to ignore such crimes.</p> <p>Maheen Khan, a legendary Pakistani fashion designer, tweeted that she had been sexually abused as a child by an Islamic cleric who taught her the Quran. “I froze in fear day after day,” she tweeted. At 73, Khan has spoken publicly only once before of the abuse.</p> <p>“We are now saying enough is enough. We should have woken up long ago,” she said in a telephone interview from her home in the southern city of Karachi. “I am ashamed to say it has taken this one little girl’s death.”</p> <p>“What disturbs me the most is the silence when a little girl gets raped,” she said. “It has to do with the honor of family. Parents tell their daughters: ‘Don’t talk about it. Don’t tell anyone.’ Our silence is saying it is all right to sexually molest a child.”</p> <p>The horror of Zainab’s killing was brought home for Pakistanis by a photo of her that went viral on social media, showing the smiling girl in her favorite bright pink coat, with a pink barrette holding back her hair. TV channels aired the photo alongside pictures of her lifeless body abandoned on a heap of garbage in her home city of Kasur.</p> <p>Across Pakistan, thousands protested, condemning police inaction and blaming the government for failing to protect children.</p> <p>“Whenever anybody saw her picture on social media or on electronic media everybody started weeping,” said Waqas Abid, a lawyer in Kasur who heads an activist group called the Good Thinkers Organization. “Everybody was self-motivated to come out from his or her house and ask for justice for Zainab.”</p> <p>The Senate’s Standing Committee on the Interior, which oversees policing, launched an inquiry this week into the sexual assaults in Kasur, as well as into another recent attack in another part of the country — the rape and killing of a 4-year-old named Asma, whose body was left in a field near her home in Kyhber Pukhtunkhwa, in northwestern Pakistan.</p> <p>Kasur is a congested district of around 2.5 million people in eastern Pakistan, near the border with India. The city of Kasur is surrounded by brick kilns and tanneries and has hundreds of small factories making shoes and embroideries, all of which employ children — making them vulnerable to abuse. In 2015, an extensive child pornography ring was uncovered in the city; it had been flourishing for nearly a decade and involved nearly 250 children, some of whom were forced at gunpoint to have sex.</p> <p>It was only after the shock over Zainab that news emerged of other children abducted and raped in Kasur. Amid the uproar, police did testing on the victims and found the same DNA on eight of the children, all</p>

but one of whom was killed. Police now say they are hunting for a serial rapist-killer.

Among the eight victims was 5-year-old Ayesha. Her father, Mohammed Asif, said he pleaded with the police to find her after her abduction last year.

“They had no interest. They were more interested in keeping it quiet,” he told The Associated Press. Her body, showing signs of rape and torture, was found two days after her disappearance.

The sole survivor among the eight was a 6-year-old girl found by a homeless man rummaging through a garbage bin outside a vegetable market. She had been kidnapped for 15 hours, during which she was tortured. Cigarettes were put out on her feet and legs, and she suffered a serious head injury. Now at a hospital in the nearby city of Lahore, she can’t sit, hold up her head or speak, and her father Mohammad Ahsan, says all she does is cry.

Ahsan said his daughter’s attack was ignored in the media until Zainab’s killing.

Abid, the lawyer, said there have been at least 20 cases of children abducted, raped and killed over the past year in Kasur district. At his office, he showed the AP the police reports he has collected on 15 of the cases.

There were 4,139 cases of child sexual abuse reported in Pakistan in 2016, according to Sahil, an organization documenting child abuse in the country. It collects its figures by tracking reports in Pakistani media. But most cases go unreported, said Sahil’s executive director, Munizae Bano.

Zainab’s case, however, sparked a moment of openness. A number of well-known women hope that telling about their own experiences will prompt others to speak out.

Actress and child activist Nadia Jamil said anger and frustration at the silence prompted her to tweet about sexual abuse she suffered as a child.

“I just lost it when I went personal on social media, openly on social media,” she said.

Frieha Altaf, an events manager, model and actress who tweeted about abuse she suffered as a 6-year-old, said Zainab’s death is a catalyst to challenge shame and fear that silence victims and their parents.

“There is no stopping now,” she said. “For me, there is no stopping now.”

But Abid cautioned that change isn’t necessarily unstoppable. Frank language about sexual assault will likely bring a backlash from religious conservatives and many parents who oppose discussing sexual issues and hold tight to traditions that ban mixing of the sexes, consider girls responsible for the family “honor” and even forgive killing a girl who marries for love.

<b>HEADLINE</b>	<b>01/23 Family man killed in ‘swatting’ sues</b>
<b>SOURCE</b>	<a href="https://apnews.com/9291fee62fd34c23a961dc534a2b1437/Family-of-man-killed-after-'swatting'-call-sues-Wichita">https://apnews.com/9291fee62fd34c23a961dc534a2b1437/Family-of-man-killed-after-'swatting'-call-sues-Wichita</a>
<b>GIST</b>	<p>WICHITA, Kan. (AP) — The family of a Kansas man fatally shot by police at the door of his home after a hoax emergency call has sued the city of Wichita and the unidentified officers involved.</p> <p>The federal lawsuit filed in U.S. District Court of Kansas seeks unspecified damages related to the Dec. 28 death of Andrew Finch in Wichita. The unarmed 28-year-old man was shot by police responding to a California man’s call with a fake story about a shooting and kidnapping at Finch’s Wichita home.</p> <p>The shooting drew national attention to a practice called “swatting,” in which a person makes up a false</p>

report to get emergency responders to descend on an address. The hoax call reportedly was made after a dispute over a small wager online in a “Call of Duty” online video game tournament, according to Dexerto, a news service focused on gaming.

“The family wants justice and reform — they want to make sure Andy’s legacy means something and maybe some other family won’t have to experience the tragedy they are experiencing because of a change in policy and procedures,” said civil rights attorney Andrew M. Stroth, who is representing the family. His Chicago law firm specializes in police shootings cases nationwide.

Wichita police officers have been involved in at least 29 shootings between 2010 and 2015, resulting in at least 15 deaths, according to the lawsuit. In most of these cases, the city has declined to release the names of the involved officers.

“Two children — a 7-year-old boy and an almost 2-year-old girl — lost their father because of the unjustified and unconstitutional acts of the Wichita Police Department as well as the policies, practices and custom of the WPD,” Stroth said.

Tyler Barriss, 25, of Los Angeles has been criminally charged with involuntary manslaughter, giving false alarm and interference with a law enforcement officer for allegedly placing the hoax call. Barriss is not named as a defendant in the Finch family’s civil lawsuit.

“Wichita leadership is trying to put all the blame on the young man in California who placed the swatting call,” Stroth said. “But let’s be clear: the swatter did not shoot the bullet that killed Andy Finch. That was an officer working under the direction of the Wichita Police Department.”

The lawsuit cites FBI crime statistics showing Wichita has a ratio of one shooting death for every 120 officers — a number that is 11 times greater than the national ratio and 12 times greater than the ratio in Chicago.

<b>HEADLINE</b>	<b>01/23 Arrest threatening ‘mass CNN shooting’</b>
<b>SOURCE</b>	<a href="http://time.com/5113871/cnn-death-threats-fake-news-shooting/?xid=homepage">http://time.com/5113871/cnn-death-threats-fake-news-shooting/?xid=homepage</a>
<b>GIST</b>	<p>A Michigan man has been arrested for allegedly threatening to carry out a mass shooting at CNN’s Atlanta headquarters in a series of hostile phone calls earlier this month.</p> <p>The man threatened CNN operators in 22 separate phone calls on Jan. 9 and 10, in which he allegedly called the network “Fake News” and threatened CNN employees with violence, Atlanta CBS affiliate WGCL-TV reported. “I’m coming to gun you all down,” he reportedly said.</p> <p>“I’m smarter than you. More powerful than you. I have more guns than you. More manpower. Your cast is about to get gunned down in a matter of hours,” the man allegedly told a CNN operator, according to WGCL-TV. “I am coming to Georgia right now to go to the CNN headquarters to f—ing gun every single last one of you.”</p> <p>The FBI launched an investigation into the caller, who was identified by released federal court documents as Brandon Griesemer of Novi, Michigan, a suburb of Detroit, according to ABC15 Arizona. Local police had previously looked into threatening calls made from the same phone number to the Islamic Center of Ann Arbor, Michigan in Sept, ABC15 reports, helping a CNN-employed investigator trace the calls to a number associated with Griesemer’s parents.</p>

<b>HEADLINE</b>	<b>01/22 Arrests for stealing \$400K from hospital</b>
-----------------	--

<b>SOURCE</b>	<a href="http://mynorthwest.com/876892/mother-daughter-accused-of-stealing-400k-from-hospital/">http://mynorthwest.com/876892/mother-daughter-accused-of-stealing-400k-from-hospital/</a>
<b>GIST</b>	<p>ABERDEEN, Wash. (AP) — A 64-year-old woman and her 45-year-old daughter have been arrested on suspicion of stealing nearly \$400,000 from a Washington state hospital.</p> <p>KOMO-TV reports that the arrests follow a nine-month investigation that began when administrators at Grays Harbor Community Hospital and Grays Harbor Physicians Services found a large amount of money missing from their accounts in April 2017.</p> <p>Police say they were able to identify the two suspects with help from a financial audit.</p> <p>Both the mother and daughter are former employees of the hospital. Police say the thefts started in September 2015 when the daughter started making direct deposits and depositing checks written to herself that she had access to through her payroll controller position.</p> <p>Aberdeen police detectives arrested the suspects on Friday. Both were released from jail pending charges.</p>

<b>HEADLINE</b>	<b>01/22 Airline workers stole 343 computers?</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/01/22/airline-workers-in-alaska-charged-with-swiping-343-computers.html">http://www.foxnews.com/us/2018/01/22/airline-workers-in-alaska-charged-with-swiping-343-computers.html</a>
<b>GIST</b>	<p>ANCHORAGE, Alaska – A federal grand jury has indicted six former employees of an Alaska commuter airline on charges of stealing mail over two years, including 343 computers headed to schools in rural villages.</p> <p>The six ramp agents were employed by Ravn Air. U.S. Attorney Bryan Schroder said the six were charged with stealing Apple computers and other mail, conspiracy and possession of stolen mail.</p> <p>The value of the items stolen from March 2015 to April 2017 was \$489,000. Besides computers, the men are suspected of stealing cellphones, cigarettes and chewing tobacco.</p> <p>The six include Congress Lepou, 29, Breadoflife "Presley" Faiupu, 36, Hubert Barte, 37, Paulo Maae, 24, Harold Velicaria, 35, and Rogelio "Roger" Daquis, 49.</p> <p>One suspect was arrested Friday and five others were arrested Monday. All but Maae were in custody Monday afternoon at the Anchorage jail, according to online corrections listings. The indictment did not list their attorneys.</p> <p>Ravn was authorized to pick up mail from the U.S. Postal Service Processing and Distribution Center in Anchorage and move it to Ravn facilities for placement on planes and delivery to villages, including the western Alaska communities of Saint Marys, Mountain Village, Stebbins, Unalakleet, Emmonak, Kotlik, Alakanuk, Aniak, Grayling, Kalskag and Koyuk.</p> <p>Lepou was a lead ramp agent and Faiupu was a ramp agent trainer.</p> <p>Prosecutors said Lepou and Faiupu used a Ravn truck to move items from the post office distribution center to the Ravn employee parking lot, where they were loaded into private vehicles.</p> <p>The four others paid for stolen items or found buyers for stolen items, prosecutors said. The computers included both desktop and laptop models.</p> <p>Some items were sold or given to family members or co-workers.</p> <p>Lepou in April was found with two stolen computers, 667 cartons of cigarettes stolen from the mail and 305 cans of stolen chewing tobacco. He also had eight stolen prepay cellular phones worth \$109,000,</p>

	prosecutors said.

<b>HEADLINE</b>	<b>01/22 Pipeline protestor pleads guilty shooting</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/01/22/dakota-access-protester-pleads-guilty-in-shooting-incident.html">http://www.foxnews.com/us/2018/01/22/dakota-access-protester-pleads-guilty-in-shooting-incident.html</a>
<b>GIST</b>	<p>BISMARCK, N.D. – A Denver woman accused of shooting at law officers while being arrested for protesting the Dakota Access oil pipeline in North Dakota pleaded guilty Monday to two federal charges in a deal with prosecutors.</p> <p>The agreement means Red Fawn Fallis won't stand trial, where she could have faced up to life in prison if convicted. Instead, prosecutors will recommend a sentence of no more than seven years in prison.</p>

Assistant U.S. Attorney Gary Delorme declined comment outside the courtroom on why the government chose not to take the case to trial.

Fallis, 38, was accused of firing a handgun three times during her October 2016 arrest. No one was hurt. She pleaded guilty Monday to civil disorder and gun possession by a convicted felon. She has a 2003 conviction in Colorado for being an accessory to a felony crime. Court records show she was accused of driving a car for a man who shot and wounded another man.

Fallis cried while she entered her pleas. She did not discuss the protest shooting incident, only answering basic questions from U.S. District Judge Daniel Hovland about her background and understanding of the proceedings.

Prosecutors at sentencing will drop a more serious count against Fallis — discharge of a firearm during a felony crime of violence. Sentencing wasn't immediately scheduled.

About two dozen supporters of Fallis packed the courtroom but didn't comment after the hearing. The courthouse was under heavy security. The number of federal law and security officers outside the courtroom was double the norm, and people had to obtain passes to enter the courtroom. The courthouse was the site of protests several times when the demonstrations against the pipeline were at their height between August 2016 and February 2017.

Fallis' arrest was among 761 that authorities made in southern North Dakota in that six-month span. At times thousands of pipeline opponents gathered in the region to protest the \$3.8 billion project to move North Dakota oil to a shipping point in Illinois. Fallis is the only protester accused of firing a gun.

<b>GIST</b>	<p>Greek riot police have fired tear gas and stun grenades during clashes with activists protesting an arson fire at a building used by anarchist squatters in the northern city of Thessaloniki.</p> <p>No injuries were reported from the confrontation late Monday. Police said five people were detained as suspected rioters.</p> <p>The clashes broke out during a march through the city to protest the fire that gutted the building, which anarchist groups say was being used to house refugees. Right-wing extremists are suspected in the arson.</p> <p>The fire occurred on the sidelines of a large demonstration opposing efforts to resolve a long-standing name dispute between Greece and neighboring Macedonia. Greece has a region named Macedonia, where Thessaloniki, Greece's second-largest city, is located.</p> <p>Police are investigating the arson.</p>

<b>HEADLINE</b>	<b>01/22 Texas high school shooting; 1 injured</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/injured-shooting-texas-school/story?id=52522539">http://abcnews.go.com/US/injured-shooting-texas-school/story?id=52522539</a>
<b>GIST</b>	<p>A 15-year-old girl was hospitalized after a shooting in a cafeteria at a Texas school this morning, local officials said.</p> <p>The suspect, a 16-year-old male student, fired several shots from a semi-automatic handgun shortly before</p>

8 a.m. local time at Italy High School in Italy, Texas, located about 45 miles south of Dallas, the Ellis County Sheriff's Office said.

The suspect was confronted by a staff member in the cafeteria, the sheriff's office said. He then fled and was apprehended by law enforcement.

The victim was transported by air ambulance, the sheriff's office said. Her condition is unknown.

No one else was injured, officials said, adding that all students have been accounted for.

The handgun was recovered at the scene, officials said.

The sheriff's office said students were moved to another campus and are in the process of being reunited with their families.

**HEADLINE** **01/22 FBI: flares, not IEDs, ignited at mall**

**SOURCE** <https://www.cnn.com/2018/01/22/us/eagle-ridge-mall-florida-mall-ied/index.html>

**GIST** (CNN)The items that ignited early Sunday evening at a Florida mall are believed to be marine flares -- not pipe bombs, the FBI said Monday.

Officers responded to a smoke alarm call at 5:22 p.m. at the Eagle Ridge Mall in Lake Wales, central Florida. They found smoke coming out of a service corridor next to the mall entrance of JCPenney and found what they initially said were two improvised explosive devices that detonated.

"There is no indication of any explosion at the mall and no pipe bombs were found," the FBI said Monday. "There is no current indication of any terrorist connection to this incident."

"It appears two items, believed to be marine flares, were ignited in a mall hallway, creating a large amount of smoke, and a backpack was located at the scene. Bomb technicians examined the contents of the backpack and determined it did not contain any incendiary or explosive devices," the FBI said.

The mall also said initial reports of pipe bombs, IEDs, explosions or detonations and reports of dangerous materials found during searches at the facility were incorrect.

"Yesterday afternoon around 5:30 p.m., two signal flares triggered a fire alarm in an unoccupied area of Eagle Ridge Mall. No one was injured," the mall said.

Lake Wales Police Deputy Chief Troy Schulze said the devices appeared to be a type of flare, placed inside a PVC pipe and then wrapped in electrical tape. Both devices were in the same hallway, about 10 yards from each other.

"There is nothing at this time to indicate this act was terrorism," he said. "At this time, we are checking video surveillance cameras."

Police were looking for a man they're describing as a person of interest. CNN reached out to Lake Wales police for comment on the FBI release.

The FBI said it will continue work with state and local law enforcement to identify the person or persons responsible.

HEADLINE	<b>01/08 Mayor searches for next Seattle PD chief</b>
SOURCE	<a href="https://www.seattletimes.com/seattle-news/politics/noting-law-enforcement-tragedies-mayor-jenny-durkan-kicks-off-seattle-police-chief-search/">https://www.seattletimes.com/seattle-news/politics/noting-law-enforcement-tragedies-mayor-jenny-durkan-kicks-off-seattle-police-chief-search/</a>
GIST	<p>Mayor Jenny Durkan cited local killings by police and of a law-enforcement officer as she opened the first meeting of a committee that will help her find Seattle's next police chief.</p> <p>The city's police department needs a leader "who can build trust externally and internally," with both community members and rank-and-file officers, Durkan said Monday.</p> <p>The search for a new chief comes after Kathleen O'Toole stepped down as police chief on Dec. 31. Carmen Best, a deputy chief under O'Toole who joined the Seattle Police Department in 1992, is serving as interim chief.</p> <p>"We have seen tragedies like Charleena Lyles and know very much the final thing that can happen when a police officer gets involved with citizens," Durkan told the 25-member search committee, referring to the fatal shooting by officers last year of a Seattle mother inside her Magnuson Park apartment.</p> <p>"But we also saw the tragedy last night, the danger that police officers face," the mayor added, referring to the fatal shooting late Sunday night of a Pierce County sheriff's deputy who was responding to a report of a home invasion near Frederickson.</p> <p>"I want to acknowledge the deputy, Daniel McCartney, who was killed in Pierce County," Durkan said. "He was a Navy veteran, a father of three and only 34 years old."</p> <p>Seattle must equip its officers to "avoid tragedies like Pierce County suffered yesterday" and also know that interactions between officers and community members are critical, the mayor said.</p> <p>Durkan said she's confident the committee will "come up with three names" of candidates for chief and believes Seattle is "a destination where people will want to be police chief," due to the city's relatively low crime rate, its booming economy and the department's progress on reforms.</p> <p>After taking charge in 2014, O'Toole helped guide Seattle toward compliance with a federal consent decree requiring it to remedy a history of excessive force and biased policing. The city is awaiting a ruling by U.S. District Judge James Robart on whether to grant its request to find it in full and effective compliance with the consent decree.</p>

HEADLINE	<b>01/09 US apologizes to Japan for accidents</b>
SOURCE	<a href="https://www.shephardmedia.com/news/defence-notes/us-apologises-japan-over-military-accidents/">https://www.shephardmedia.com/news/defence-notes/us-apologises-japan-over-military-accidents/</a>
GIST	The US has apologised to Japan following a recent series of accidents involving US military equipment,

the Japanese Ministry of Defence (MoD) said.

US Secretary of Defense, James Mattis, apologised to Japanese counterpart Itsunori Onodera after a series of accidents including the emergency landing of an American military helicopter in Okinawa on 8 January.

That came just two days after a similar incident on the southern Japanese island, where over half of the 47,000 American troops in Japan are stationed.

Itsunori Onodera, Japan's Minister of Defence, said: 'I told him about the issue, raising concrete examples of various accidents that happened in September, October, November, December last year and January this year in Okinawa.'

Onodera is expected to depart for Hawaii to meet the US commander in the Pacific, Harry Harris, to discuss the issue.

There were no immediate reports of injuries or damage after the helicopter landed near a hotel in the village of Yomitan on 8 January.

<b>HEADLINE</b>	<b>01/08 Landslide near Yakima weeks away?</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/northwest/landslide-near-yakima-might-be-a-few-more-weeks-away/">http://www.heraldnet.com/northwest/landslide-near-yakima-might-be-a-few-more-weeks-away/</a>
<b>GIST</b>	<p>YAKIMA — While authorities reiterated Sunday that no one can predict exactly when the Rattlesnake Ridge landslide will occur, they've pushed the estimated date to late January or early February.</p> <p>Meanwhile, Gov. Jay Inslee, who toured the site just south of here Sunday, said an independent geologist will join the team already monitoring the progress of the roughly 20-acre, 200-foot-deep mass of basalt that continues to slide down the south side of the ridge at about 1.5 feet a week, potentially threatening I-82 and the Yakima River.</p> <p>"This is a significant risk that we have significant concerns about," Inslee said. "We are continuing to determine whether there should be additional monitoring or additional analysis ... and in the next several days we will probably be engaging a third-party independent consultant that would work for the state of Washington for the multiple agencies involved."</p> <p>He hopes to fill that role within a week.</p> <p>"I don't sense a gap in our analytical ability. We have multiple geologists looking at this ... every day," he said. "But we want to give the public more confidence that there is someone who is outside state agencies who is also not hired by the quarry owner so that we know that they're totally independent."</p> <p>During his visit, Inslee joined about 40 officials with local and state agencies and the Yakama Nation who heard from Dave Norman, state geologist for the Department of Natural Resources, in a closed briefing held at the Yakima Air Terminal.</p> <p>Authorities, who had previously estimated a slide could potentially occur in mid-January, extended the estimate to later in the month or early February.</p> <p>The hillside has been sliding since at least October when authorities began monitoring cracks that had opened atop the western slope of Rattlesnake Ridge. At that time, the landslide was moving at less than an inch per day. As of Friday, that had increased to 2.5 inches.</p>

<b>HEADLINE</b>	<b>01/08 Report: fusion centers focus on 'left'</b>
-----------------	---

SOURCE	<a href="https://www.muckrock.com/news/archives/2018/jan/08/fusion-centers-antifa/">https://www.muckrock.com/news/archives/2018/jan/08/fusion-centers-antifa/</a>
GIST	<p>Homeland Security-run fusion centers are often criticized for keeping tabs on activist groups, particularly those that are demonstrably non-violent. That criticism is reinforced by a series of public records requests sent by the author to each of the 70 plus fusion centers in the country, asking for any reports regarding both Antifa and other leftist-aligned groups, as well as “alt-right” and outright white supremacist organizations.</p> <p>Only a handful of fusion centers have so far actually provided records to MuckRock, and of those, produced reports overwhelmingly focused on the left. Take this email from the Nevada Threat Analysis Center, for example.</p> <p>(Click on source link to view embedded email)</p> <p>This shows that agency keeping detailed tabs on the proposed National Strike in protest against President Donald Trump’s Muslim Ban last year. Note the analyst comment blaming Antifa for “recent violence,” and the attention given to Palestine Legal. Despite being as non-violent as protests get, it’s quite clear that the agency was monitoring the event closely.</p> <p>In the ensuing pages, there are several questions about Antifa, people protesting ICE vans, anarchist groups, and several requests to monitor May Day.</p> <p>Most alarming is this email concerning the National Alliance Reform and Restoration Group, an inconspicuously named white supremacist group headquartered in Carson City.</p> <p>(Click on source link to view embedded email)</p> <p>For starters, it is shocking that the NTAC had not been paying attention to a white supremacist group operating within their state - but what’s really incredible is the dig at the Southern Poverty Law Center’s credibility because of some of their donors, namely one George Soros.</p> <p>Kentucky Fusion Center, however, had no records regarding white supremacist groups, and instead released a single report on Antifa, which categorized the group’s activities as organized crime. This is despite the SPLC identifying 17 hate groups operating within the state.</p> <p>(Click on source link to view embedded email)</p> <p>This is despite the SPLC identifying 17 hate groups operating within the state.</p> <p>Are things better in Liberal bastion California? Not really. Continuing the trend, the Central California Intelligence Center was largely focused on the threat from “anarchist extremists” ...with one CCIC report calling Antifa “the greatest threat to public safety,” despite the presence of actual Neo-Nazis at these events.</p> <p>(Click on source link to view embedded email)</p> <p>While another 17 fusion centers just outright rejected our request, and many others still haven’t responded, just from these three examples we can clearly see a pattern forming. Despite this being an era of rising hate crime, fusion centers spend a lot of time tracking activist groups and protesters, while not seeming to spend much time monitoring white supremacist groups.</p> <p>And as last year’s events in Portland, Oregon, Charlottesville, Virginia, and the University of Maryland have shown, downplaying that threat can have deadly consequences.</p>

<b>HEADLINE</b>	<b>01/09 Suspect fatal shooting of deputy arrested</b>
<b>SOURCE</b>	<a href="https://apnews.com/5e962af09c44400cb4cb87f9ce7bfc66/Suspect-apprehended-in-killing-of-Washington-state-deputy">https://apnews.com/5e962af09c44400cb4cb87f9ce7bfc66/Suspect-apprehended-in-killing-of-Washington-state-deputy</a>
<b>GIST</b>	<p>FREDERICKSON, Wash. (AP) — Authorities in Washington state have arrested a man believed to have been involved in the fatal shooting of a sheriff’s deputy.</p> <p>Pierce County Deputy Daniel McCartney, a 34-year-old Navy veteran and married father to three young boys, was shot during a foot chase late Sunday as he responded to a home invasion near the small community of Frederickson, 15 miles (24 kilometers) southeast of Tacoma, said sheriff’s spokesman Ed Troyer.</p> <p>One suspect in his mid-30s was found dead at the scene, and another got away, authorities said. On Monday, Troyer said 32-year-old Frank William Pawul had been taken into custody in the Shelton area on unrelated felony warrants.</p> <p>A state trooper in the area spotted Pawul, who gave a false name when approached, Troyer said. Once authorities learned his real name, Troyer said he was taken to jail on the warrants and further investigation tied him to the shooting. Two weapons also were found at the scene, Troyer said.</p> <p>Police had closed off roads in the area and conducted a manhunt among industrial sites as well as wooded areas.</p> <p>The suspect was expected to appear in court Tuesday on a first-degree murder charge, Troyer said.</p> <p>Pierce County Jail officials said Monday night that Pawul did not yet have an attorney.</p> <p>The deceased suspect’s name hasn’t been released.</p> <p>“There’s a sadness that will be felt and should be felt in the community,” said Pierce County Sheriff Paul Pastor. “He is a young deputy who signed up to watch over other people. He had an ethic in his heart for doing something for other people.”</p> <p>McCartney was hired at the sheriff’s department in 2014 after stints with police departments in the small Washington state cities of Aberdeen and Hoquiam.</p> <p>After the shooting, McCartney was taken to a Tacoma hospital, where he was pronounced dead. His family members and dozens of law enforcement officers gathered at the hospital to say goodbye, The News Tribune newspaper reported .</p> <p>More than a dozen officers and deputies saluted as McCartney’s body was carried from the hospital in a flag-draped coffin and loaded into a van.</p> <p>A memorial fund was set up to benefit his wife and children.</p>

<b>HEADLINE</b>	<b>01/09 Salvadorans: El Salvador not ready</b>
<b>SOURCE</b>	<a href="http://time.com/5094653/el-salvador-donald-trump-return/?xid=homepage">http://time.com/5094653/el-salvador-donald-trump-return/?xid=homepage</a>
<b>GIST</b>	<p>(SANTA TECLA, El Salvador) — Being deported to an El Salvador he hadn’t seen in more than three decades was a trauma Hugo Castro recalls clearly.</p> <p>The 51-year-old said Monday that his country must begin preparing now to receive the nearly 200,000 Salvadorans who may have to return following the Trump administration’s decision to lift their temporary protected status next year.</p>

“The main problem for deportees is that they’re made invisible. They’re rejected, there’s no work. They don’t help us,” said Castro, who was deported from the U.S. in 2015.

The U.S. announcement brought fears that a major source of income for this poor Central American nation will be cut off and that families could be separated. But there was also a hint of optimism that Salvadorans with many years of experience in the U.S. could bring expertise and investment to spur the economy.

Homeland Security Secretary Kirstjen Nielsen said Salvadorans who have stayed in the U.S. with temporary protected status — only a fraction of the estimated 2 million Salvadorans living there — would have to leave by Sept. 9, 2019, unless Congress came up with a solution allowing them to stay.

The temporary protected status program has been offered to citizens from a number of countries fleeing natural disasters or other instability. The affected Salvadorans received the status after earthquakes in 2001 killed more than 1,000 people. Thousands more who arrived in the United States in recent years fleeing gang violence were not eligible.

Castro went to the United States as a teenager to study at a college in Atlanta. During his junior year his family back home lost nearly everything when the bank seized their coffee operation. Dropping out, he worked at a country club and a book store and became manager of a Mexican restaurant. Then a run-in with police led to more than two years in immigration detention as he unsuccessfully fought deportation after living in the U.S. for three decades.

His first three months back in El Salvador were the worst, he said. He suffered from depression and didn’t want to leave his mother’s home. People told him a 49-year-old man should not depend on his mother to support him, so he started looking for work.

“I went everywhere, to restaurants. I told them I had a lot of experience and that I spoke English, but they rejected me,” he said.

Eight months after arriving, Castro finally found work at the Salvadoran Immigrant Institute. The non-profit group recognized the value of Castro’s bilingualism and the experience he had gained through the deportation process and it put him to work helping other deportees reintegrate into society.

Castro said programs like his are very limited and more needs to be done for returnees.

“The government has to get ready, partner with businesses, with all of society, the nonprofits and create assistance programs,” he said.

As an example, he noted that in 2016, the country received 52,000 deportees from the United States and Mexico. Meanwhile, a government program to give small cash grants to allow deportees to open their own businesses has only graduated 140 people, he said.

The biggest worry among many Salvadorans is that their nation of 6.2 million people will see a big drop in the amount of cash sent home by countrymen working in the United States. Salvadorans transferred more than \$4.5 billion from the U.S. in 2016, accounting for 17 percent of El Salvador’s economy, according to government figures.

HEADLINE	<b>01/08 FEMA: Puerto Rico emergency mode</b>
SOURCE	<a href="https://www.washingtontimes.com/news/2018/jan/8/fema-head-puerto-rico-still-in-emergency-response/">https://www.washingtontimes.com/news/2018/jan/8/fema-head-puerto-rico-still-in-emergency-response/</a>
GIST	SAN JUAN, Puerto Rico   Nearly four months after two hurricanes hit this island, the chief of the Federal Emergency Management Agency’s operations in Puerto Rico says he has never before had to continue emergency relief efforts like delivering food, water and temporary roofing so long after a natural disaster.

“So this far into a disaster in my experience, at least in the last 20 years, we never do that, we’re never — the food and water would have stopped weeks ago. But we can’t, and one of the driving factors for that is power,” Michael Byrne, an acting regional administrator for FEMA, told The Washington Times.

Since Sept. 6, FEMA had been responding to a state of emergency on Puerto Rico in the aftermath of Hurricane Irma when Hurricane Maria made landfall on the U.S. territory on Sept. 20. About 1 million islanders had lost power during Irma, when Maria killed electricity for nearly the entire 3.5 million population.

FEMA tasked the U.S. Army Corps of Engineers with overseeing the reconstruction of the entire electric grid, not an unprecedented event but unheard of after a natural disaster, officials said.

Nearly 50,000 wooden, concrete or steel electrical poles need to be repaired or replaced, and about 65 percent of the substations and power plants were destroyed.

Officials hesitate to give a schedule for when they’ll finish the job but hope to achieve 95 percent connection levels by the end of February or the end of March.

Mr. Byrne, a veteran New York City firefighter who joined FEMA in 1999, has helped manage disasters throughout the Northeast, from 9/11 to Hurricane Sandy. Yet he says he can’t help but be humbled by the scope of the help Puerto Rico requires.

“Every time you think you’ve met the last challenge — I can’t have another curveball thrown at me, right, another curveball I hate talking like this because I hate making excuses,” he said. “We have to humble ourselves by the fact that the storm did so much damage that it requires these extraordinary levels of effort but I think we should be proud of some of the work that’s going on.”

In addition to Puerto Rico, the FEMA region Mr. Byrnes oversees consists of the states of New York and New Jersey, the U.S. Virgin Islands and the Native American tribes in the region. He was appointed to the post last January.

With regard to Puerto Rico, rebuilding its infrastructure to meet current U.S. standards and codes would be a major boon for the Caribbean island, whose roads, power system and other infrastructure elements had long been neglected before the storms.

Mr. Byrne said that Puerto Rican Gov. Ricardo Rossello has asked FEMA to invoke at least three sections of the federal Stafford Act to allow the agency to not only rebuild what was damaged but do so in a smarter way.

<b>HEADLINE</b>	<b>01/08 Navy seeks course correction from 2017</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jan/8/navys-deadly-accidents-result-budget-issues-cultur/">https://www.washingtontimes.com/news/2018/jan/8/navys-deadly-accidents-result-budget-issues-cultur/</a>
<b>GIST</b>	<p>The Navy’s disastrous and deadly 2017, punctuated by a slew of accidents and fatal at-sea collisions ending with the deaths of nearly 20 American sailors, was the culmination of deep-seated issues within the sea service’s budget, operations and culture stretching back decades, issues that Navy leaders are only now attempting to address.</p> <p>And, despite the determination of the Trump White House and defense hawks on Capitol Hill to boost the troubled service’s budget and mission support, the service faces a battleship full of problems coming out of 2017 that will take more than one year to turn around.</p> <p>Seven U.S. sailors aboard the USS Fitzgerald were killed when the warship collided with Philippine-</p>

flagged shipping vessel near the Japanese coast in June. Two months later, the Arleigh Burke-class destroyer USS McCain collided with an oil tanker off the coast of Singapore, resulting in 10 sailors killed.

Prior to the fatal collisions involving the McCain and Fitzgerald, the Ticonderoga-class guided-missile cruiser USS Lake Champlain collided with a South Korean fishing vessel off the country's eastern coast last May, a month before the incident involving the Fitzgerald.

As a result, Chief of Naval Operations Adm. John Richardson ordered a worldwide 48-hour stand down of all service operations. The order was issued to gain insight into the circumstances that led to three major, at-sea collisions in the Pacific within four months, and to see if systemic problems of command and operations left the Navy susceptible to similar catastrophes.

"The Navy has recognized that we are in a boatload of trouble here. We cannot paper this over," retired Navy Capt. Jerry Hendrix, now a senior fellow at the Washington-based Center for a New American Security. "Something had to give, and what you saw this past year is seeing it give."

Even the Naval Academy's football team, which saw a record 14-game winning streak over Army broken in 2015, lost a second straight heartbreaker to its hated rival last month.

Senate Armed Services Committee Chairman John McCain ripped into Navy leaders at a scathing Capitol Hill hearing in September, accusing the service of failing to heed critical reviews in 2010 and 2015 warning that dwindling training and maintenance for overseas ships could put sailors in harms way.

"Many of the issues we are discussing today have been known to Navy leaders for years. How do we explain that?" Mr. McCain, a onetime U.S. Navy pilot and Annapolis graduate, asked at one point.

But from the wardrooms and bridges aboard American warships deployed worldwide, all the way to Navy headquarters in Washington, the tragedies in the Pacific that defined the last year for the sea service were predictable and possibly preventable, current and former service members say.

Shortly after the stand-down order was issued last year, former head of capabilities for the Office of the Deputy Under Secretary of the Navy Thomas Callender reached out to former colleagues still in uniform in the Pacific and elsewhere across the Navy to get a read on the situation. The majority of the officers and sailors he spoke to said the deadly four months in the Pacific that prompted the order were no surprise, he told The Washington Times.

"There were warnings," Mr. Callender, now a senior defense fellow at the conservative think tank Heritage Foundation, said. But those warnings went unnoticed or unheeded by senior Navy brass. The decision makers at headquarters in Washington "were so far removed from the waterfront, that they were not as aware of what the problem really was," he said.

"It was just a matter of time before we would see this happen, and that is the part that kind of scares me," said Mr. Callender.

Part of those problems stretch back to the steady reduction of the Navy's fleet enacted by the Clinton White House in the 1990s, a result of the so-called "peace dividend we sort of conned ourselves into" during the Clinton era, Mr. Callender said.

Subsequent administration's continued to whittle down the Navy from its previous height of roughly 700 ships, ultimately resulting in the nearly 270-ship fleet the sea service fields today, he added.

During the post 9/11 era, Presidents George W. Bush and Barack Obama accelerated the Clinton-era cuts to U.S. sea power as budget focus inside the Pentagon shifted from maritime engagements to counterterrorism and asymmetric warfare. While the demands on the Navy did not diminish, the service's overall combat strength did, said Capt. Hendrix.

On average, roughly 100 U.S. warships out of the entire fleet are engaged in active combat operations, he said. With a 700-ship Navy, service leaders could sustain having 100 ships out on combat missions at any one time. But with a fleet of barely 300 ships, “suddenly having 100 ships forward deployed, now you are starting to break into unsustainable levels” of deployments, he said.

The Trump White House has indicated it is looking to remedy the Navy’s fleet shortfalls. Administration officials are expected to formalize the sea service’s 355-shipbuilding goal within the White House’s National Security Strategy. The highly anticipated strategy is on track for release later this month, Pentagon spokesman Col. Rob Manning told reporters Monday.

The Trump administration’s defense budget blueprint for fiscal year 2019 — the first full-fledged defense budget drafted by the administration — is expected to include the 355-ship goal in the Navy’s proposed bottom line. The shipbuilding goals was included in the defense spending package for fiscal year 2018, signed into law by Mr. Trump in December.

Shrinking ship numbers, in the face of increasing maritime threats to U.S. and allied navies across the globe, did spark the slow erosion of Navy capabilities resulting in last year’s calamities at sea. But an erosion of professionalism within the sea service, prodded by mounting operational demands on the fleet from senior commanders, also set the stage for 2017’s troubles.

A pair of wide-ranging Navy reviews initiated in the wake of the Fitzgerald and McCain incidents, one focusing explicitly on the Pacific’s Seventh Fleet and another conducted service-wide, found severe failings in Navy crew preparedness and ability to carry out the most basic seagoing activities during service operations.

Accidents involving American warships in the Pacific were the result in officers and crew members lacking basic seamanship skills, such as navigation and situational awareness, along with “failures to follow the international rules of the road” when traversing international waters, Adm. Richardson told reporters in November.

This lack of basic seamanship skills, a result of minimal or insufficient training, represented another trade-off Navy leaders were forced to make to field a smaller fleet against a growing threat scenario, Mr. Hendrix explained. Valuing efficiency over capabilities, Navy leaders attempted to “squeeze every dollar” into operations and growing the fleet, which left little time or funding for training, he said.

The lack of adequate training led to Navy crews being ill-prepared to handle the rigors of an unrelenting operational tempo of a region like the Pacific. In the end “it was just a breakdown in culture and practices” of a sea service being forced to do more with less, Mr. Hendrix said.

A Government Accountability Office independent review conducted after last year’s string of Navy disasters reported widespread readiness and safety problems with service ships deployed in the Pacific. For example, more than a third of training certifications for the Navy’s cruisers and destroyers based in Japan had expired in June.

More generally, the GAO report in September found Navy ships based overseas faces degraded readiness level; reduced crew sizes and longer working shifts that have contributed to safety problems, and the inability to meet maintenance schedules. Of the 11 prior recommendations the watchdog agency had given the Navy, the GAO said, the service had to date “implemented only one.”

The problems have been exacerbated by rising pressure to carry out the Navy’s missions in the Pacific, driven by recent threats from North Korea and Chinese aggression in the South China Sea, said Navy officials.

“The world is much more dangerous now than it was 18 years ago,” at the peak of the Navy’s fleet size and strength, Mr. Callender noted. “More moles are popping up that the Navy is being asked to whack,” he added.

HEADLINE	<b>01/08 Seattle interim police chief: Carmen Best</b>
SOURCE	<a href="http://crosscut.com/2018/01/meet-seattles-new-police-chief-carmen-best/">http://crosscut.com/2018/01/meet-seattles-new-police-chief-carmen-best/</a>
GIST	<p>Carmen Best is the first African-American woman to lead the Seattle Police Department, a job she took over as of Jan. 1 when Chief Kathleen O’Toole’s departure became official. Best is chief on an interim basis for now but she has applied for the permanent job.</p> <p>Although Mayor Jenny Durkan has promised a national search to replace O’Toole, it’s hard to not see Best as a favorite nominee: a Tacoma native who has risen through the ranks in her 26-year career with the SPD; an officer who has built relationships with both the rank-and-file and with the community-at-large; and, as second-in-command for the past 3.5 years, the heir apparent to continuing on O’Toole’s path for the department.</p> <p>The mayor hopes to choose the permanent chief by this spring. In the meantime, Best inherits a 1,400-officer department that remains under a shadow of a federal consent decree struck to reverse SPD’s pattern of excessive force.</p> <p>In her first week on the job, Best suggested the 40th floor Starbucks in the Columbia Center for an interview. But when she arrived, she looked around and suggested we “go upstairs” instead.</p> <p>Upstairs was the members-only (and pricey — \$287-per-month) Columbia Tower Club. Inside, the bar is cavernous, with a staircase and spectacular views of the ferris wheel and ferries below.</p> <p>O’Toole — Best’s predecessor and mentor — happened to be sitting at the bar with her daughter and the SPD’s Chief Legal Officer Rebecca Boatright and for a moment I wonder if this scheduled interview is some sort of ambush. Apparently, it’s just a coincidence. Best greets O’Toole. The bartender greets the chief as “Ms. Best.”</p> <p>We sit in one of the booths — inset into a nook as if meant for private conversations — drink water and talk police culture, race and her goals for leading the 24th largest department in the country.</p> <p>This interview has been edited for length and clarity.</p> <p><b>What will you do that’s different than what Chief O’Toole has done?</b> A lot of what I’m going to be doing is just carrying on what she came here in part to do, which is making sure we reform the organization in a way that’s real and meaningful. We want to stay on the trajectory, move forward and try to get there and have in place what we believe to be an iterative process so you’re not like, ‘Reform on Tuesday.’ That’s not how it works.</p> <p><b>When you talk about changing culture, one thing I’ve heard people talk about is this sort of insider/outsider dynamic. In the event you become the permanent chief, you’ve come up through the department. How do you change the culture of a place where you’ve sort of grown up in?</b> I think it comes with its challenges, but I think it’s probably easier in some ways because I do know the culture. I’m not learning how we operate. I was here in 2011 when [the consent decree reform process] started and I know how the feeling was within the organization. We’ve gone through a lot of changes and I know we’ve improved and I know it’s better. I know that for a fact. The data shows that, but I also know that intuitively.</p> <p>Certainly, we’re not done. But we’ve done some great improvement and I’ve seen that because I actually know where we started. I actually remember when we had to just do the rubber stamp on use-of-force statements.</p> <p><b>How do you balance keeping the rank-and-file satisfied while also keeping people like Rev. Harriett</b></p>

**Walden [founder of Mothers for Police Accountability] who have an interest in accountability and reform happy?**

My goal is to do the right thing. Doing the right thing doesn't always mean keeping everybody happy. I don't walk in and say, 'I hope everybody I talk to today is happy.' What I do hope is that we have a mission, we have a vision, we're trying to make sure that policies and procedures are followed, that training is appropriate, that officers recognize that behavior matters and that our interaction with the community matters. That the community knows that we're here.

We're here to serve the community. That's why we're here, that's why we exist. A lot of times you do the best you can and try to do the right thing and everybody's unhappy, to be honest with you! [laughs] But I'm just trying to keep that in mind. Being a really true and honest broker and really true about what your goal and mission.

And I actually find I'm in a good place to do that. I mean this sincerely. I'm at the end of my career. I've been in the department 26 years and I'm 52. So literally half of my life is in the SPD. You start reflecting on what happened here. *What did I do? From when I came in, How have I changed? How have I grown? How have I helped the agency? How have I helped the community that I love?*

**You're the first African American woman to lead the Seattle Police Department. There's a lot of discussion about law enforcement and race in this country. Have you talked about this with your two daughters?**

Of course. How can you live in the society we live in today and not have conversations about race?

**And specifically race in relation to law enforcement?**

Of course. People say we need more training on race when we're talking about this, but we are highly conscious about race in this profession. I specifically am, but I think we all are. We recognize that there are quarters of the community that have a real, in some cases, fear, but definitely concern about how they're being policed, what's happening with them, what they're seeing and it's difficult for me, in some ways, only because we're balancing what's happening locally against the national stories and some of them are pretty horrendous. I get out there and say, 'I'm as shocked and dismayed as you are.'

[My daughters] have grown up as two African-American women themselves, knowing a lot of officers and knowing that they're just people with families doing their jobs. They have that perspective. But they also see that stuff that happens and some of it's just wrong. We do have conversations about it. They know I'm not always going to defend something if I don't think it's right. And I'm not going to defend people who criticize if I don't think their criticisms aren't grounded in truth, either.

**What was your reaction when you heard about the Charleena Lyles shooting?**

Well, I was sad, because it was really tragic. I mean, I've been in this job a long time. There are really sad things that happen. I will tell you, I'm not blaming anybody. I think there was a whole set of really complex issues converged at a time and a moment that was very sad and very tragic. And I mean that sincerely. I don't know if people even know but we met with members of her family after, very quietly, no media or anything like that, and it was heartbreaking in many ways. We also talked to the officers who were at the scene and they were pretty shook up too. Nobody walks away from that feeling anything but sad. It's just a tragedy.

At the same time, we're also making sure the things that need to happen are happening internally, in terms of protocol and procedure. All those things need to occur, too. Making sure, *Where's the force investigation team? Are they here? Where are the officers? There. Where's the guild member? There. Who's talking to the family?* All those things need to occur but in the midst of a very sad and tragic time.

**When the Force Review Board came back and said they found the Lyles shooting to be within policy, the backlash was, *Well, if this is within policy, then there's something wrong with the policy.* How do you respond to that?**

I respond by saying we're always going to look at every incident and try to learn what we can from it. And some of those lessons will involve the police department, some will involve the community, some will

involve other organizations. You can't just nail this down to one little thing. There's a whole lot of complexity.

**As a chief, what's the relationship like with your police unions? The Seattle Police Officers Guild [the rank-and-file union], for example, filed an unfair labor practice complaint alleging the city acted improperly by passing police accountability legislation without first negotiating with the union. [The city and Seattle Police Officers Guild have been in contract negotiations for more than three years].**

I have a healthy respect for unions. I've been in a union. At the same time, we have an organization to run. We have to push our agenda forward with our own folks. We actually agree on a lot of things when it comes to a philosophical, high-level: I want officers to have a decent paycheck, to support their family and to be able to be productive members of the conversation and to have rules and regulations that keep them in alignment with what we need to see going forward. I don't think there's a lot of disagreement on that. When it comes down to policies and those things, they're going to have their perspective. I respect that. I don't always agree with it, but we're going to have to agree to disagree on some of those issues. But I don't ever want to go swinging at the unions and I don't want them swinging at us because, ultimately, I think, in a large way, we do want officers to serve the community. We do want them to have a good working environment. We do want people to feel comfortable talking to them. We just might be going about it differently. On certain things, it may be an outside party that helps us do that.

**Is there a tangible rift there between leadership and, say, rank-and-file, SPOG [Seattle Police Officers Guild]?**

I think rift is much too strong a word. There will be points where we won't agree. There's a lot of points where we do agree. That might sound like a very neutral answer, but that is the actual truth.

**What's your biggest priority for this year?**

When I came in, I set out the five priorities I saw for the organization. First: Crime and disorder. Our fundamental priority is to minimize crime and disorder in this city.

Then, excellence in service. In terms of public service, let's make sure we do it better than anyone else. Also, honor and professionalism. Every time you come in uniform, you should feel a sense of *I am doing something honorable*. And if you're a civilian employee, you should feel proud to associate with the police department.

Also, business efficiency. I stole that from Chief O'Toole. How are we going to make sure we're managing our overtime, our maintenance, our vehicles and our equipment and our training? This is taxpayer money so we have to really make sure we're doing things that make sense.

And the last was data-driven policies and practices. Just using technology the best way we can, to help us be more efficient, to do predictive policing, hot spots policing, to find out where repeat calls for service are. Why are we going to a certain place exorbitantly more than we are other places?

**What happens if you're not appointed as chief? Will you remain in the SPD?**

You know, that's hard to say. That's up to the new chief. Some of it's outside of my control. Somebody has to step up and take the lead and say, *I want to be the one to make this a better place*. And I think I'm well qualified to do it. I really do. I feel like I've worked really, really hard and I feel super connected to both officers and the community. I just wouldn't be able to feel good about myself if I didn't take this opportunity when it's here.

HEADLINE	01/08 PCSO detective: becoming too often
SOURCE	<a href="http://mynorthwest.com/862200/pierce-county-deputy-involved-shooting/">http://mynorthwest.com/862200/pierce-county-deputy-involved-shooting/</a>
GIST	Pierce County Detective Ed Troyer says the fatal shooting of Deputy Daniel McCartney is an example of a

	<p>tragedy that is becoming too common.</p> <p>“We, unfortunately, are pretty good at doing police funerals because we’ve done a lot of them,” he said.</p> <p>Just over a year ago, Tacoma officer Reginald “Jake” Gutierrez was killed while responding to a domestic-violence call that turned into an 11-hour standoff. Gutierrez, 45, was a father of three.</p> <p>According to the National Law Enforcement Officer Memorial Fund, 128 officers were killed in the line of duty in 2017. Forty-four of those were shot. That was a decrease from 2016, when 143 officers were killed, according to the Memorial Fund, a nonprofit that tracks officer deaths and researches trends in officer fatalities. Four law enforcement officers have been killed this year, according to the Memorial Fund.</p> <p>Deputy McCartney, 34, was with the Pierce County Sheriff’s Department for about three years. He worked for the Hoquiam Police Department for six years prior to that. He was a Navy veteran.</p> <p>Early Monday morning, law enforcement held a procession for McCartney.</p> <p>Law enforcement departments and individual officers from around the country sent their condolences in the hours following the fatal shooting of Deputy McCartney.</p>

<b>HEADLINE</b>	<b>01/08 Next three years Seattle construction</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/862375/seattle-construction-maximum-constraint/">http://mynorthwest.com/862375/seattle-construction-maximum-constraint/</a>
<b>GIST</b>	<p>If you think it’s tough getting around Seattle now, you better get ready for the next three years.</p> <p>The city will be undergoing a major transformation as new towers are built, and Seattle construction blocks traffic while also eliminating parking. It’s going to impact more than just solo drivers.</p> <p>The Convention Center expansion begins in 2019. The downtown bus tunnel will close, sending all the buses onto surface streets. And the Seattle tunnel will open in about a year, possibly pushing thousands of cars a day onto surface streets.</p> <p>That’s on top of the construction already underway, including along the city’s waterfront and Seattle First Hill Streetcar project, which will eliminate two lanes of traffic on First Avenue between Stewart and Jackson.</p> <p>Seattle construction: Period of maximum constraint</p> <p>A city advisory group has dubbed the time period starting later this year through 2021 the “period of maximum constraint” due to all the work scheduled to take place. It sounds like the title of a Michael Bay action film, but it’s actually the state of harsh traffic conditions Seattle will endure. Even Mayor Jenny Durkan has warned that traffic will get worse.</p> <p>Because of all this work, according to materials from the advisory group, people in Seattle can expect to spend additional time traveling throughout the city. The group reports that cyclists, bus riders, and even pedestrians could see a negative impact on getting around the city, especially in the downtown core. For example, bus riders will spend 2,500 hours of total travel time each day. The afternoon commute will take 3.5 minutes longer.</p>

<b>HEADLINE</b>	<b>01/08 Seattle drafts employee hours tax 2.0</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/860957/employee-hours-tax-task-force/">http://mynorthwest.com/860957/employee-hours-tax-task-force/</a>
<b>GIST</b>	<p>Seattle’s last attempt at a business tax may have failed in 2017, but its successor is already being drafted at city hall.</p> <p>A new task force is developing Seattle’s employee hours tax 2.0.</p> <p>“As it was written last year, it was somewhat of a knee-jerk legislation,” said Ian Eisenberg. “I’m glad the city decided to take a breath and study it a little bit more and draft it a bit better.”</p> <p>Eisenberg owns and operates Seattle’s most successful pot shop — Uncle Ike’s. He is on the new 16-member task force; one of three members with business ties. The group is expected to develop a report for the council by early March, identifying potential revenue sources — including an employee hours tax aka a head tax. The money will fund homelessness and housing programs. It has a goal of reaching between \$25 million and \$75 million in revenue.</p> <p>“The (previous) tax was sold to the public as a tax on the largest and most prosperous businesses in the city,” Eisenberg said. “I run a small business; a small, family business . . . and the idea that we are one of the largest businesses like Amazon or Microsoft was just ludicrous. I think it was a matter of it being put together so quickly; nobody at the city had time to really study who was being affected by the tax and what the ramifications were.”</p> <p>According to the task force’s documents, the city requests the executive office and council conduct a stakeholder engagement process:</p> <p><i>The outcome of the engagement process would be a broadly supported recommendation for an on-going revenue source that the City could collect beginning in 2019, with the understanding that such ongoing revenue would be used to address the affordability and homelessness crisis in Seattle and the displacement of low-income residents.</i></p> <p>Employee hours tax task force</p> <p>The previous tax attempt proposed a few ideas, such as charging employers 5 cents per hour, per employee, or as much \$125 per employee. It would have affected about 1,100 Seattle companies that earn more than \$10 million annually.</p> <p>After the first attempt at a head tax failed in 2017, the council passed a resolution promising to form the task force currently underway. Council chairs are Councilmembers Lorena Gonzalez and Lisa Herbold.</p>

Community co-chairs are Tony To and Kirsten Harris-Talley. Harris-Talley was a temporary council member sitting in for Tim Burgess during the last budget cycle when the first head tax was rejected.

“Mainly, it’s a lot of service organizations that would eventually get some of the money,” Eisenberg said of the task force. “There’s a construction company on it that builds a lot of affordable housing. They and myself are about the only business interests on the committee.”

Three members of the task force, including Eisenberg, are listed as members of the business community.

- Councilmember M. Lorena González, Co-Chair
- Councilmember Lisa A. Herbold, Co-Chair
- Jennifer Adams, Lived Experience of Homelessness
- Andrew Coak, Labor Representative
- Lisa Daugaard, Subject Matter Expert
- Ian Eisenberg, Business Representative
- Samantha Grad, Labor Representative
- Kirsten Harris-Talley, Community Co-Chair
- Katie B. Wilson, Subject Matter Expert
- Brianna Little, Service Provider
- Daniel K. Malone, Housing/Service Provider
- Tom Mathews, Business Representative
- Fernando Mejia-Ledesma, Business Representative
- Courtney O’Toole, Lived Experience of Homelessness
- Tony To, Community Co-Chair
- Maiko Winkler-Chin, Housing Provider

“I was a critic of the last administration, that they didn’t always have any small business input,” Eisenberg said. “The city asked who wanted to be on the committee and I applied. And I think I’m the only actual business person that would be affected by the tax, as opposed to recipients of the funds. It’s kind of hard to complain the city doesn’t want business input when no business persons apply to be on committees and panels, so I decided to step up and not just talk, but actually do something.”

The task force will meet twice a month on Thursdays through the beginning of March. The first meeting on Jan. 4 was largely a meet-and-greet for members to set objectives and a timeline.

“It was really just ground rules and schedules, so nothing really happened so far,” Eisenberg said.

A current timeline for the task force has the group slated to finalize a report for the city council by March 1. In the meantime, the group will discuss the potential employee hours tax; any burden created by new taxes and comparing them to businesses outside the city; alternative revenue sources; and spending priorities.

Other taxes

This is not the first time Seattle has considered or passed an employee hours tax. In 2007, a \$25 per full-time employee tax was passed to fund transportation projects. That tax produced: \$4.7 million in 2008; and \$5.6 million in 2009. The tax was repealed after 2.5 years.

<b>HEADLINE</b>	<b>01/08 King Co. halts police shooting inquests</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/862473/police-shooting-inquests-on-hold/">http://mynorthwest.com/862473/police-shooting-inquests-on-hold/</a>
<b>GIST</b>	All inquests into police shootings will be put on hold temporarily while the King County Inquest Review Committee finishes conducting its review of the inquest process, Executive Dow Constantine announced

	<p>on Monday.</p> <p>“In the interest of fairness to all those involved, we will pause all inquests as the Review Committee and community partners seek to better understand what works and what doesn’t, and recommend reforms,” Constantine said.</p> <p>Five inquests into deaths at the hands of police officers are currently pending in the following cases: Isaiah Obet, Damarius D. Butts, Eugene D. Nelson, Tommy Le, and Charleena Lyles. Those five inquests will be put on hold and no new requests will be accepted.</p> <p>Similarly, but in a separate decision, King County District Court Presiding Judge Donna Tucker stated that she will stop appointing District Court Judges to preside over inquests for the foreseeable future.</p> <p>“It is important and timely for the County to review this Executive process,” Judge Tucker said.</p> <p>An inquest is a process of investigating a police shooting to determine the facts of the incident. Inquests into King County law enforcement-related deaths have traditionally been conducted by District Court Judges and a six-member jury. The jurors are not tasked with determining liability on the part of any law enforcement personnel involved. Instead, they decide what factual issues exist in the case.</p> <p>The review committee, which was formed by Executive Constantine about a month ago, includes five members and will eventually appoint a sixth. One member of the committee is Rick Williams, whose brother John T. Williams was shot and killed by a Seattle Police officer in 2010. Other members include a King County Superior Court judge, a member of the state Supreme Court’s Minority &amp; Justice Commission, and the former Director of Seattle’s Office of Professional Accountability.</p> <p>The committee will likely make recommendations on topics such as attorney’s fees for the family of the deceased, the role of inquest jurors, and alternative processes that might better serve the county and its residents.</p> <p>The committee’s final recommendations are expected in March.</p>

<b>HEADLINE</b>	<b>01/08 Iran president pragmatic view on protests</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-iran-rallies-rouhani/in-jab-at-rivals-rouhani-says-iran-protests-about-more-than-economy-idUSKBN1EX0S9">https://www.reuters.com/article/us-iran-rallies-rouhani/in-jab-at-rivals-rouhani-says-iran-protests-about-more-than-economy-idUSKBN1EX0S9</a>
<b>GIST</b>	<p>LONDON (Reuters) - In a swipe at his hardline rivals, President Hassan Rouhani said on Monday young Iranian protesters were unhappy about far more than just the economy and they would no longer defer to the views and lifestyle of an aging revolutionary elite.</p> <p>The pragmatic cleric, who defeated anti-Western hardliners to win re-election last year, also called for the lifting of curbs on social media used by anti-government protesters in the most sustained challenge to conservative authorities since 2009.</p> <p>“It would be a misrepresentation (of events) and also an insult to Iranian people to say they only had economic demands,” Rouhani was quoted as saying by Tasnim news agency.</p> <p>“People had economic, political and social demands.”</p> <p>Rouhani, 69, suggested there was a generational element to the unrest, which appears to have been spearheaded by under-25s.</p> <p>“We cannot pick a lifestyle and tell two generations after us to live like that. It is impossible... The views of the young generation about life and the world is different than ours,” he said.</p>

The Revolutionary Guards, Iran's security backbone since the 1979 revolution that created the Islamic Republic, said on Sunday the security forces had put an end to a week of unrest fomented by what it called foreign enemies.

The protests, which began over economic hardships suffered by the young and working class, spread to more than 80 cities and towns and has resulted in 22 deaths and more than 1,000 arrests, according to Iranian officials.

Many of the protesters questioned Iran's foreign policy in the Middle East, where it has intervened in Syria and Iraq in a battle for influence with rival Saudi Arabia.

The country's financial support for Palestinians and the Lebanese Shi'ite group Hezbollah also angered Iranians, who want their government to focus on domestic economic problems instead.

Rouhani won re-election last year by promising more jobs for Iran's youth through more foreign investment, as well as more social justice, individual freedom and political tolerance - aims questioned by his main challenger in the contest.

Echoing some of his campaign rhetoric, Rouhani said on Monday people should be allowed to criticize all Iranian officials, with no exception.

Demonstrators initially vented their anger over high prices and alleged corruption, but the protests took on a rare political dimension, with a growing number of people calling on Supreme Leader Ayatollah Ali Khamenei, 78, to step down.

The Supreme Leader is commander-in-chief of the armed forces and appoints the heads of the judiciary. Key ministers are selected with his agreement and he has the ultimate say on Iran's foreign policy. By comparison, the president has little power.

"No one is innocent and people are allowed to criticize everyone," said Rouhani.

<b>HEADLINE</b>	<b>01/08 Pentagon, diplomats role in arms sales</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-usa-trump-weapons/exclusive-trump-to-call-on-pentagon-diplomats-to-play-bigger-role-on-arms-sales-idUSKBN1EX0WX">https://www.reuters.com/article/us-usa-trump-weapons/exclusive-trump-to-call-on-pentagon-diplomats-to-play-bigger-role-on-arms-sales-idUSKBN1EX0WX</a>
<b>GIST</b>	<p>WASHINGTON (Reuters) - The Trump administration is nearing completion of a new "Buy American" plan that calls for U.S. military attaches and diplomats to help drum up billions of dollars more in business overseas for the American weapons industry, going beyond the assistance they currently provide, U.S. officials said.</p> <p>President Donald Trump as early as February is expected to announce a "whole of government" effort to ease export rules on purchases by foreign countries of U.S.-made military equipment, from fighter jets and drones to warships and artillery, according to people familiar with the plan.</p> <p>Trump is seeking to fulfill a 2016 election campaign promise to create jobs in the United States by selling more goods and services abroad to bring down the U.S. trade deficit from a six-year high of \$50 billion.</p> <p>The administration is also under pressure from U.S. defense contractors facing growing competition from foreign rivals such as China and Russia. But any loosening of the restrictions on weapons sales would be in defiance of human rights and arms control advocates who said there was too great a risk of fueling violence in regions such as the Middle East and South Asia or arms being diverted to be used in terrorist attacks.</p>

	<p>Besides greater use of a network of military and commercial attaches already stationed at U.S. embassies in foreign capitals, senior officials who spoke on condition of anonymity said another thrust of the plan will be to set in motion a realignment of the International Trafficking in Arms Regulations (ITAR). It is a central policy governing arms exports since 1976 and has not been fully revamped in more than three decades.</p> <p>This expanded government effort on behalf of American arms makers, together with looser restrictions on weapons exports and more favorable treatment of sales to non-NATO allies and partners, could bring additional billions of dollars in deals and more jobs, a senior U.S. official said, without providing specifics.</p> <p>The strategy of having the Pentagon and the U.S. State Department take a more active role in securing foreign arms deals could especially benefit major defense contractors such as Lockheed Martin and Boeing Co.</p> <p>“We want to see those guys, the commercial and military attaches, unfettered to be salesmen for this stuff, to be promoters,” said the senior administration official, who is close to the internal deliberations and spoke on condition of anonymity.</p> <p>A State Department official, asked to confirm details of the coming new policy, said the revamped approach “gives our partners a greater capacity to help share the burden of international security, benefits the defense industrial base and will provide more good jobs for American workers.”</p>

<b>HEADLINE</b>	<b>01/08 World's punctual airlines, airports</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/airlines-airports-best-on-time-performance/">https://www.cbsnews.com/news/airlines-airports-best-on-time-performance/</a>
<b>GIST</b>	<p>Here's some essential reading material while you contend with long lines and drawn-out delays at the airport. A survey of the world's most punctual airlines and airports by the OAG Punctuality League, an air travel intelligence firm based in the U.K., listed the best ones in terms of on-time performance, which it defines as "flights that arrive or depart under 15 minutes of their scheduled times."</p> <p>The 2018 OAG Punctuality League survey is based on 57 million flight records compiled in 2017. The good news: Despite all the complaints, several U.S. carriers made these lists, but in most instances, they didn't come in first. The top-ranked airline was little-known airBaltic, a Latvian state carrier with a stellar 90 percent on-time record. U.S. carrier Hawaiian Airlines came in third at 87 percent.</p>

Among airports, those in the Japanese cities of Osaka and Tokyo had the shortest waiting times for flights.

OAG divided the data for both airports and airlines into five categories: mega (30 million-plus departing seats last year), major (20 million-30 million seats), large (10 million-20 million seats), medium (5 million-10 million seats) and small (2.5 million-5 million seats).

Within the mega airport category, the U.S. had four finishers: Atlanta's Hartsfield came in third, Denver took fourth, Dallas-Ft. Worth placed fifth and Chicago's O'Hare was seventh.

Often-snowbound Minneapolis-St. Paul International came in a surprising first worldwide in the "major" airport category, with an on-time performance of 86 percent. Detroit's Metropolitan was fourth, Phoenix International placed fifth, Houston's George Bush Intercontinental took sixth, Charlotte's Douglas International came in eighth and Seattle-Tacoma's International was 10th.

For "large" airports, Salt Lake City came in second.

The OAG specified mega airlines as those operating globally. Top performers were Japan Airlines and All Nippon Airways. Not far behind was U.S.-based Delta Air Lines (DAL), which came in third with an 83 percent performance. Alaska Airlines came in fifth, American Airlines (AAL) placed ninth and Southwest (LUV) tied for 10th place.

The survey shows very clearly that Americans aren't the world's biggest travelers. Tracking the world's "busiest routes," New York's La Guardia to Toronto, Canada was the only one to place in the top 10, coming in sixth. In contrast, the most heavily traveled route was from Hong Kong in mainland China to Taipei, the capital of Taiwan.

Although everyone complains about on-time performance, airlines have a very good track record for a more important aspect of flying: 2017 was the safest on record for commercial flights, with no reported fatalities.

<b>HEADLINE</b>	<b>01/08 Law agencies split selling seized guns</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/ap-law-agencies-split-over-selling-seized-guns/">https://www.cbsnews.com/news/ap-law-agencies-split-over-selling-seized-guns/</a>
<b>GIST</b>	<p>SEATTLE — Kyle Juhl made one last attempt to patch things up with his fiancée, then took back his ring, put a gun to his head and pulled the trigger as she and her mother ran from the apartment. The bullet went through a wall and narrowly missed a neighbor's head as she bent to pick up her little boy.</p> <p>The Smith &amp; Wesson 9 mm that Juhl used to kill himself in Yakima in 2014 was familiar to law enforcement: The Washington State Patrol had seized it years earlier while investigating a crime and then arranged its sale back to the public. It eventually fell into Juhl's hands, illegally.</p> <p>It's fears of tragedies like that, or worse, that have created a split among law enforcement officials over the reselling of confiscated guns by police departments, a longtime practice allowed in most states.</p> <p>Juhl's gun was among nearly 6,000 firearms that were used in crimes and then sold by Washington law enforcement agencies since 2010, an Associated Press review found. More than a dozen of those weapons later turned up in new crime investigations inside the state, according to a yearlong AP analysis that used hundreds of public records to match up serial numbers.</p> <p>The guns were used to threaten people, seized at gang hangouts, discovered in drug houses, possessed illegally by convicted felons, hidden in a stolen car, and taken from a man who was committed because of erratic behavior.</p>

While those dozen or so guns represent an extremely small percentage of the resold firearms, some police departments contend the law shouldn't be doing anything to put weapons back on the street. The AP did not look at how many of the resold guns figured in crimes committed out of state, so the actual number of misused weapons could be higher.

"We didn't want to be the agency that sold the gun to somebody who uses it in another crime," said Capt. Jeff Schneider of the Yakima Police Department, which sold guns until about a decade ago but now melts them down. He added: "While there is almost an unlimited supply of firearms out there, we don't need to make the problem worse."

Similarly, the International Association of Chiefs of Police says confiscated guns should be destroyed because putting them back in circulation "increases the availability of firearms which could be used again to kill or injure additional police officers and citizens." Also, federal agencies must destroy seized firearms unless they are needed as evidence or being used by the agency.

On the other side of the debate, some law enforcement officials say the selling of guns raises money to purchase crime-fighting equipment, and if the practice were abandoned, people would just buy weapons somewhere else. In fact, a growing number of states from Arizona to North Carolina are passing laws prohibiting agencies from destroying guns.

"These guns are going to be out there," said Sheriff Will Reichardt of Skagit County, Washington. "If I destroy them all, I'm just helping Remington or Winchester's bottom line."

Phyllis Holcomb, a manager with the Kentucky State Police, which oversees Kentucky's gun sale program, said such transactions have helped equip officers with body armor and other gear.

The debate is playing out in Washington state, where the State Patrol is pushing back against a state law that requires the agency to auction off or trade most guns.

The State Patrol hasn't sold any weapons since 2014 and at one point accumulated more than 400 in the hope the Legislature would change the law and let the agency destroy them. Democratic Rep. Tana Senn of Bellevue is sponsoring such a bill.

"I know many of the police chiefs in my district chose not to sell but rather to destroy, and in their own words, 'It's so we can sleep at night,'" Senn told a legislative committee.

The National Rifle Association opposes the plan.

"The police chiefs maybe could sleep better if they went out and apprehended the criminals behind the guns and didn't worry about destroying perfectly legal firearms that are no more easy to purchase than a brand-new firearm at a firearms dealer," NRA spokesman Tom Kwieciak said.

Tragedies involving police-sold guns have happened throughout the U.S.

In 2010, a mentally ill man ambushed and wounded two Pentagon police officers with a handgun sold by Memphis, Tennessee, police. Also that year, a Las Vegas court security officer was killed by a man with a shotgun sold by a Memphis-area sheriff's office. And in 2015, an unstable man walked into City Hall in New Hope, Minnesota, and wounded two officers with a shotgun sold by the Duluth Police Department. The department has since stopped selling guns and now destroys them.

The weapons sold back to the public in Washington include Colt, Glock and Ruger pistols, 12-gauge shotguns, .22-caliber rifles and assault weapons such as AR-15 and SKS rifles. All such sales are handled through federally licensed firearms dealers, including auction houses, pawnshops and sporting goods stores. Before buyers can take their guns home, they must pass an FBI background check.

On a recent Friday night, owner John West of Johnny's Auction House in Rochester, Washington, about 80

miles south of Seattle, launched into his rapid-fire bid-calling to a packed room, selling necklaces and coins. Before he offered up the first police-confiscated gun for sale, he had a warning.

"Straight up," he told the crowd, "if you cannot possess a firearm and you can't pass a background check, just don't even bother bidding."

There is no master list of guns sold by police, so compiling one for Washington state involved dozens of public-records requests to individual agencies. The federal Bureau of Alcohol, Tobacco, Firearms and Explosives keeps track of crime guns but refused to release information from its database, so the AP collected databases from individual agencies and compared them with the sold guns.

One of the guns that ended up in a new police report was a .22-caliber handgun sold by Longview police in 2016. In 2017, a drunken Jesse Brown and a friend armed themselves with the gun and two other weapons, went to a house and threatened two young men they believed were selling drugs, police said.

Longview Police Chief Jim Duscha said that while some resold guns may be used in new crimes, "if they're going to get a weapon, they're going to get a weapon." Selling guns generates money used for drug investigations, he said.

The Seattle Police Department and the sheriff's office in surrounding King County don't sell crime-scene weapons; they hand them over to a foundry to be melted down at no cost to themselves.

For years, the State Patrol traded confiscated firearms to dealers for other gear, and the dealers then would sell the guns to the public. In one exchange in 2013, the State Patrol traded in 159 weapons and got a credit of \$27,420, which it then used to buy handguns for the force.

The weapon Juhl used to kill himself was in a batch the State Patrol traded in 2012. It was purchased by a man in Yakima, who sold it to someone else, who then sold it on Craigslist. Juhl's girlfriend told police that's where he acquired it.

Juhl, 24, was not legally permitted to own or possess a gun. He received a bad-conduct discharge from the Army after serving time in prison for using the drug ecstasy and going AWOL for about two months. An Army spokesman said Juhl's criminal history was sent to the FBI's Criminal Justice Information System, but the police detective who handled Juhl's suicide said he checked the FBI's database but didn't find Juhl's convictions.

<b>HEADLINE</b>	<b>01/08 UN: 64 migrants drowned in sinking</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/raises-probable-death-toll-migrant-boat-sinking-64-52208482?">http://abcnews.go.com/International/wireStory/raises-probable-death-toll-migrant-boat-sinking-64-52208482?</a>
<b>GIST</b>	<p>As many as 64 migrants, including a mother whose 3-year-old child desperately clung to her, are feared dead after a traffickers' overcrowded rubber dinghy from Libya started sinking in the Mediterranean Sea, officials said Monday.</p> <p>The Italian coast guard rescued 86 people from the boat hours after it started sinking Saturday morning due to a puncture. Specially trained rescue divers leapt into the water to pull dozens to safety, including those who managed to stay aboard the half-submerged dinghy as well as others already flailing in the cool waters around it. The bodies of eight dead women were also recovered.</p> <p>Since trafficking dinghies are often crammed with far more than 100 migrants, fears quickly arose that dozens more could be missing in the sinking. U.N. officials said Monday that accounts from survivors bore out those fears.</p> <p>An Italian coast guard search that went through the night didn't find any more survivors or corpses.</p> <p>Flavio Di Giacomo of the International Organization for Migration (IOM) said in tweet Monday that survivors interviewed by the agency in Catania, Sicily, after they arrived on a rescue ship said 150 people had been aboard the dinghy when it set out from the coast of Libya.</p> <p>"Sixty-four migrants lost their life in the shipwreck (which) occurred last Saturday," Di Giacomo said, adding that "probably 56 missing migrants" were lost at sea.</p>

<b>HEADLINE</b>	<b>01/08 Snohomish Co. flu season: 8 dead</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/01/08/deadly-flu-season-kills-8-in-snohomish-county/">http://q13fox.com/2018/01/08/deadly-flu-season-kills-8-in-snohomish-county/</a>
<b>GIST</b>	<p>SEATTLE — Three more adults have died from the flu in Snohomish County, bringing the total to eight this flu season. At least 50 have been hospitalized.</p> <p>The winter season also means flu cases nationally and in Washington state surged between Thanksgiving and Christmas.</p> <p>Doctors say this year's flu strain tends to be hardest on the elderly, especially people over the age of 65 and those with weak immune systems, as well as children under the age of two.</p> <p>"You can go from having flu to pneumonia to being a very serious situation especially if you've had pneumonia before, so we certainly advise everyone to take the flu shot," said Claire Petersky, executive director of the Wallingford Community Senior Center.</p> <p>The effectiveness of the flu shot changes every year, and this year doctors say it's not quite as effective as in years past. However, the CDC is still urging anyone six months or older to get the flu shot. The CDC says when getting the flu shot, opt for the actual shot and not the nasal spray for the best benefits.</p> <p>"There is year to year added benefit of getting flu shot," said Dr. Ari Gilmore with Pacific Medical Centers.</p> <p>Gilmore says every year the vaccine is reformulated so getting each new flu shot builds immunity over time to various strains.</p> <p>The flu shot is not intended to keep people from getting the flu, but rather help make symptoms less severe if you do get the flu.</p>

<b>HEADLINE</b>	<b>01/08 Region shares memories, mourns loss</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/01/08/community-shares-memories-mourns-loss-of-pierce-county-deputy-daniel-mccargney-killed-in-action/">http://q13fox.com/2018/01/08/community-shares-memories-mourns-loss-of-pierce-county-deputy-daniel-mccargney-killed-in-action/</a>
<b>GIST</b>	<p>YELM-- Daniel McCartney believed deeply in service.</p> <p>Love of country moved him to enlist in the U.S. Navy, where he served a tour to Afghanistan.</p> <p>Love of community compelled him to enter local law enforcement.</p> <p>The 34-year-old husband, father and Pierce County sheriff's deputy was shot and killed late Sunday night in Pierce County. The Sheriff's Department says he was responding to a report of an intruder.</p> <p>He leaves behind a wife and three young sons, ages 4,6, and nine-years-old.</p> <p>According to police, McCartney graduated from Loyalton (Calif.) High School before joining the U.S. Navy in 2002. He served in the Navy as an Electronics Technician 2nd class and toward the end of his tour was deployed to Afghanistan with a security detail assigned to the US Army.</p> <p>McCartney started his career in law enforcement as a police officer with the Hoquiam Police Department on April 1, 2009.</p> <p>"Daniel started his career here and he will always be one of our family," Hoquiam Police Chief Jeff Myers said in a statement. "We sincerely mourn his loss and wish there was more we could do for his family and his fellow deputies who were out at the scene last night."</p> <p>McCartney and his family moved to Yelm, where he found a sense of community at the CrossFit gym owned by Annie Malone.</p> <p>"I don't know how to process this or how to deal with it," Malone said Monday, tearing up. "He was a great dad, great husband, loved his wife, and he loved his kids. It's hard to believe"</p> <p>Nick Jakovac coached at the gym with McCartney. The two found solace working out together.</p> <p>He said McCartney set the example of how to serve, every day.</p> <p>"He means so much to this community," Jakovac said, his voice quivering with emotion. "And to the police officers he works side by side with, you know we take that for granted, they go out there every day."</p> <p>In Yelm, many are taking time to recognize the sacrifice McCartney made to keep their community safe. That includes the New Christian Center, where McCartney attended church services with his family.</p> <p>"The one thing I think about him is his calm demeanor and kindhearted way and it showed in his kids," says Mical Gaynor, the Children's Pastor at New Life Christian Center. "He will be missed."</p> <p>Sheriff's spokesperson Det. Ed Troyer said anyone who would like to help McCartney's family can donate to the Deputy Daniel McCartney Legacy Fund at Tapco Credit Union, or by donating online through Crime Stoppers of Tacoma-Pierce County.</p>

<b>HEADLINE</b>	<b>01/08 Milestone: 1M senior drivers on roads</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/data/a-new-milestone-1-million-senior-drivers-on-washington-state-roads/">https://www.seattletimes.com/seattle-news/data/a-new-milestone-1-million-senior-drivers-on-washington-state-roads/</a>

## GIST

There's been such heavy focus on the wave of millennials flooding into our area, it's easy to forget that it's seniors who are the fastest-growing segment of Washington's — and even Seattle's — population.

In 2015, the state hit a demographic milestone: The number of folks age 65-plus hit 1 million.

And the number of them who drive? That just passed the same milestone, according to an analysis of records from the state Department of Licensing.

As of December, there were 1,037,969 Washingtonians age 65-plus with active driver's licenses. Their ranks increased by more than 46,000 over the course of last year, passing the 1 million mark in the process.

There's no mystery here. Aging baby boomers — that massive generation born between 1946 and 1964 — are swelling the ranks of our senior population. The oldest boomers are now in their early 70s. And, as with everyone else, nearly all of them get behind the wheel.

That's why, since the start of the decade, the number of senior drivers in Washington has surged by 41 percent, which is more than three times faster than the overall rate of increase.

Double-digit growth rates can be seen in every county in the state. In Clark, San Juan and Thurston counties, the number of senior drivers grew by more than 50 percent. Even in Columbia County — it's the only county in Washington where the total driving population is shrinking — seniors with licenses still increased by 18 percent.

Of the 5.8 million licensed drivers in Washington, nearly 1 in 5 now is age 65 or older. Jefferson County, where Port Townsend is located, tops the state for the share of drivers who are senior citizens, at 39 percent. King County, though, is one of the state's youngest counties. Drivers age 65-plus are just 14 percent of the total here.

Is the surge in older drivers a safety concern?

Traffic-safety experts predicted years ago that the aging boomers would spike the number of fatal road collisions, but those fears haven't materialized. That's due in part to the improved safety technology of cars, which has helped reduce the number of deadly crashes. And boomers, as it turns out, are in better physical shape than past generations of seniors, which helps their driving abilities.

Still, as fit as they are, they're not as young as they used to be. With aging comes slower reflexes, a more limited range of motion, and often an increased use of prescription medications — all things that can have an impact on driving ability.

Data show that once drivers are in their 70s, the rate of crashes per vehicle mile traveled starts to climb. And crashes are more often deadly for older drivers, simply because they are less likely to survive the impact than a younger person is.

Unlike some other states, Washington does not have any safety initiatives in relation to senior drivers. But in her role as program manager for the Washington Traffic Safety Commission, Angie Ward is tasked with keeping a pulse on senior-driver issues, and she says at this point, the increase in senior drivers hasn't been an issue.

“Older drivers are pretty good about taking themselves off the road and minimizing their driving — not driving at night, not going longer distances,” Ward said. And she points out that the youngest drivers — those 16 to 25 — are responsible for nearly three times the number of fatalities on Washington roads as drivers age 70 and older.

If boomers are like previous generations, their car travel will taper off as they enter their golden years. Then again, boomers are famous for defying expectations. They've already redefined middle age — “50 is

	<p>the new 40" — so it remains to be seen if they'll slow down in their new phase of life.</p> <p>Washington drivers have no restrictions based on age alone. When drivers renew their licenses in person, they have to take a vision test and are asked some questions about their health. The Department of Licensing can require an individual's driving skills to be re-evaluated based on certain factors, including physical or mental condition. In some circumstances, older drivers maybe have restrictions placed on their license, such as being permitted to drive only during daylight hours, or prohibited from freeway driving.</p>

<b>HEADLINE</b>	<b>01/09 MLK Jr birth site now national park</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/US/2018/01/09/Trump-signs-bill-to-make-MLKs-birth-site-a-national-park/2281515480399/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=4">https://www.upi.com/Top_News/US/2018/01/09/Trump-signs-bill-to-make-MLKs-birth-site-a-national-park/2281515480399/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=4</a>
<b>GIST</b>	<p>Jan. 9 (UPI) -- President Donald Trump signed a bill Monday that will make Dr. Martin Luther King Jr.'s birthplace a national park.</p> <p>Trump signed the Martin Luther King, Jr. National Historical Park Act of 2017 aboard Air Force One, shortly after landing in Marietta, Ga. Alveda King, the civil rights icon's niece, was in attendance for a bill-signing ceremony.</p> <p>"Through his life and work, Dr. Martin Luther King Jr. made America more just and free," White House deputy press secretary Hogan Gidley told reporters. "This important historical park tells his story, and this bill will help ensure that the park continues to tell Dr. King's story for generations to come."</p> <p>In addition to adding federal protections and increasing resources toward the site, the bill expands the area of the Martin Luther King Jr. National Historic Site in Atlanta to include the Prince Hall Masonic Temple, the former site of the Southern Christian Leadership Conference, which trained teams civil rights organizers in the 1960s.</p> <p>The bill was introduced by Rep. John Lewis, D-Ga., in January, 2017 and easily passed both houses of Congress later in the year.</p> <p>According to the Atlanta Journal-Constitution, Lewis pushed for years to upgrade the status of the site. But in December, he said he would not attend the signing ceremony because he didn't want to share a stage with Trump.</p>

<b>HEADLINE</b>	<b>01/9 Despite weather, gas prices stable</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Energy-News/2018/01/09/US-gas-prices-stable-even-with-winter-weather-strains/7261515496458/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=3">https://www.upi.com/Energy-News/2018/01/09/US-gas-prices-stable-even-with-winter-weather-strains/7261515496458/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=3</a>
<b>GIST</b>	<p>Jan. 9 (UPI) -- Severe winter weather put a strain on the U.S. energy grid, but low consumer demand for gasoline left the price at the pump stable, market reports found.</p> <p>More than a foot of snow fell on some major eastern U.S. metropolitan areas and temperatures dipped to sub-Arctic levels. Utility companies servicing states like New York and Massachusetts said they were braced for long-term outages, though much of the grid escaped with minor damage.</p> <p>For gasoline, Jeanette Casselano, a spokesperson for motor club AAA, said there wasn't much of a test for gasoline.</p> <p>"On the week, consumer demand for gasoline decreased," she said in a statement. "If this continues, gas prices will decrease in the weeks ahead."</p>

AAA reports an average retail price nation-wide of \$2.49 for a gallon of regular unleaded gasoline on Tuesday, an increase of less than a half percent from last week. Oil prices, meanwhile, are up almost 2 percent from the start of the year and showing up as a factor at the pump.

By region, the West Coast market is the most expensive in the country, with California taking top honors in the Lower 48 with \$3.16 per gallon, though that price is inflated by a new tax that went into effect last year. Washington state, however, is close behind at \$2.92 per gallon. Regional prices have been volatile, but more or less steady, with Tuesday's state average in California only less than 1 percent higher than a month ago.

AAA said the high level of gasoline supplies in the region was keeping a lid on prices, and the pace at which refineries were working was "healthy."

The same held for many eastern U.S. states despite the severe winter weather last week. By AAA's account, there were no major supply issues, though the regional market is running a 7 billion barrel deficit for gasoline supplies when compared with last year. The state average for Massachusetts of \$2.59 per gallon is unchanged from this time in December.

The Great Lakes market, however, is not so lucky. The price at the pump in Michigan dropped six cents last week, but at \$2.63 is just out of the Top 10 when it comes to the most expensive gas in the country. Illinois and Michigan led the nation when it came to volatility over last month.

Patrick DeHaan, a senior analyst at GasBuddy, said the Great Lakes states should see prices move even higher because of a retail practice dubbed price cycling. That's when gas stations drop prices to gain business, but as retail prices approach wholesale prices, stations need to push the price back up to make money.

"In the weeks ahead, the national average is likely to begin trending lower as winter gasoline inventories surge and as refiners will soon offer discounts to move these fuels out of their systems to make way for the eventual transition to summer blends of gasoline," he said in a statement.

<b>HEADLINE</b>	<b>01/08 Puerto Rico police stage sickout</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/puerto-rico-crisis/puerto-rico-s-police-stage-sickout-over-unpaid-overtime-n835111">https://www.nbcnews.com/storyline/puerto-rico-crisis/puerto-rico-s-police-stage-sickout-over-unpaid-overtime-n835111</a>
<b>GIST</b>	<p>SAN JUAN — Puerto Rico saw a spike in crime over the holidays, as thousands of police officers called out sick in protest of not being paid for countless hours of overtime worked in the aftermath of hurricanes Irma and Maria and in frustration over the island's lingering economic crisis.</p> <p>Police stations in over half of Puerto Rico's 78 municipalities were forced to close in recent days as the increase in absences reached alarming levels.</p> <p>The situation has grown so dire that Gustavo Gelpí Jr., the federal judge who oversees a reform agreement for the Puerto Rico Police Department, on Saturday ordered the department's high command and the island's Department of Public Security to meet with the U.S. Justice Department to come up with ways to end the "unprecedented massive absenteeism."</p> <p>He ordered them to submit possible solutions to the court by Friday, warning that because "public safety is a priority," there will be no extension of the deadline.</p> <p>Gelpí also urged all police officers to return to work.</p> <p>And on Monday, Puerto Rico's governor, Ricardo Rosselló, issued a statement that he had accepted the resignation of police commissioner Michelle Hernández de Fraley, the first woman to have held the job.</p> <p>While the governor named an interim commissioner, Lieut. Col. Henry Escalera, from within the department, he said that he would also be looking outside the island for a replacement — as they are doing with the candidate to head the island's beleaguered power authority.</p> <p>Related: Puerto Rico governor announces task force to examine hurricane-related deaths</p> <p>Though no reasons were given for the resignation, it comes amid the controversy over officer absenteeism and reports of clashes between Hernández de Fraley and the island's Public Safety Secretary Héctor Pesquera.</p> <p>The island has seen an increase in reports of murders, robbery and carjackings in the first week of 2018. Official statistics indicate that so far this year, there have been 25 murders, 15 more than reported in the same period of 2017, according to Puerto Rico's Police Department.</p> <p>Puerto Rico's police force is the second largest in the U.S., with about 13,600 officers. On average, about 550 to 600 officers call out sick each day across the island. But lately, the number has been in the thousands.</p> <p>On Jan. 1 alone, the department reported that 3,335 officers called in sick for the day's first shift. The number rose in the second shift to 3,501. It was unclear how many called out for the third and final shift.</p>

<b>HEADLINE</b>	<b>01/08 Cherokee Nation to recognize MLK Day</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/nbcblk/ Cherokee-nation-finally-recognize-martin-luther-king-jr-day-n835906">https://www.nbcnews.com/news/nbcblk/ Cherokee-nation-finally-recognize-martin-luther-king-jr-day-n835906</a>
<b>GIST</b>	TAHLEQUAH, Okla. — The Cherokee Nation next week will mark Martin Luther King Jr. Day as an official holiday for the first time, months after a federal court ruled that descendants of black slaves, known as freedmen who were owned by members of the nation, have a right to tribal citizenship.

	<p>On Monday, Principal Chief Bill John Baker announced he recently signed an executive order declaring next Monday as a Cherokee Nation national holiday. Baker said the declaration was both a tribute to King's contributions and a call to play a part in continuing his work.</p> <p>Cherokee Nation Principal Chief Bill John Baker, in 2011. Michael Wyke / Tulsa World Via AP File "He was a remarkable advocate for change for all people of color in America, including Indian Country," Baker said in a statement.</p> <p>In August, U.S. District Judge Thomas Hogan ruled on a long-standing dispute between Cherokee Freedmen and the second-largest tribe in the United States which claims more than 350,000 citizens.</p> <p>"The Cherokee Nation can continue to define itself as it sees fit," Hogan wrote, "but must do so equally and evenhandedly with respect to native Cherokees and the descendants of Cherokee Freedmen."</p> <p>Under the ruling that ended a dispute that began in 2003, Cherokee Freedmen would have all the rights that tribal citizens have, including the right to run for office, vote in elections and receive benefits, including access to tribal health care and housing.</p> <p>The principal chief noted in Monday's statement that King wrote about colonization and the injustices committed against indigenous peoples and asked Cherokee Nation citizens to dedicate a day of service to their communities.</p>

<b>HEADLINE</b>	<b>01/09 Take this job and shiver it: chilly offices</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Technology/wireStory/job-shiver-chilly-offices-plague-workers-52226737">http://abcnews.go.com/Technology/wireStory/job-shiver-chilly-offices-plague-workers-52226737</a>
<b>GIST</b>	<p>Two long-sleeved shirts, a sweater, a fleece jacket, two scarves and two pairs of socks.</p> <p>That has been Karen Ericson's go-to outfit in her office in Des Moines, Iowa, in recent weeks.</p> <p>"I am still shivering," the 39-year-old graphic designer said last week, estimating the temperature in the office was in the mid-60s while outside, the city hit 19 below zero at one point. "Living in the Midwest,</p>

I'm well-trained to dress warmly and in layers, but this deep freeze has been difficult to endure, especially when I expect to be comfortable — or at least not shivering — inside."

As much of the nation muddled through bitter weather in recent weeks, office dwellers found they still had to brave the cold even when indoors. Many relied on winter parkas, gloves, blankets and space heaters just to keep working.

"Today I've got two sweaters, a scarf, ear coverings, gloves and a blanket over my lap," Rebecca Miller, a 27-year-old academic adviser at Tennessee State University in Nashville, said last week as temperatures barely ticked above 50 degrees in her office while outside it was 20 degrees or lower in the daytime. "But I'm still having a hard time working. I'm shaking cold, and it's hard to focus. The gloves make it hard to type, and the bulky layers make it difficult to move around."

Like thousands of other chilly Americans, she snapped selfies of herself at her desk in attire usually reserved for the ski slopes and shared them on social media.

Office developments are built with centralized heating systems that make the buildings suitable for a range of uses over many years. The down side is that they provide little climate control to individual tenants — sometimes purposely, said Khee Poh Lam, architecture professor at Carnegie Mellon University in Pittsburgh.

Thermostats are often tucked into hard-to-reach spaces like false ceilings and air ducts so office tenants can't mess with them, Lam said. Other buildings have dummy units out in the open that don't actually do anything except give desperate workers the illusion of control.

Finding the right temperature to please everyone has been an elusive goal for office designers and builders, said Stefano Schiavon, architecture professor at the University of California, Berkeley, who co-wrote a 2012 study that found roughly 40 percent of U.S. workers were satisfied with their office's temperature. Design standards call for an acceptability rate closer to 80 percent, he said.

The challenge isn't just confined to the winter, of course. Chilly offices have long been the bane of women who complain air conditioning is cranked up in the summer to appease their male, suit-wearing counterparts. And there are certainly many offices with overzealous furnaces that prompt workers to crack open windows even on the coldest days.

Optimal temperature for office work is 72 to 79 degrees — or nearly 10 degrees more than what many buildings typically set their thermostats, said Alan Hedge, a design professor at Cornell University in New York who has researched how temperature affects productivity.

Schiavon suggested that companies, even those based in the draftiest old offices, can invest in safe, relatively inexpensive technology to keep workers warm and productive, like heated chairs, electric blankets and heated floor mats.

"The bottom line is that central heating won't work for everyone, even if designed right," he said. "We're very different people and need some sort of personalization of our environment."

Ericson, the Iowa resident, said the key to getting through the work day has been reminding herself the cold is only temporary.

"Every day that passes," she said, "is a day closer to spring."

**HEADLINE** 01/08 This year's flu season is bad

**SOURCE** <http://abcnews.go.com/Health/years-flu-season-bad-flu-shot-effective/story?id=52209578>

<b>GIST</b>	<p>The flu has ramped up early this year and is rapidly spreading across the country, with widespread flu activity in 46 states, according to the latest data from the U.S. Centers for Disease Control and Prevention.</p> <p>"This is a feature of this year's flu -- not only did it start early, but it seemed to occur all over the country more or less simultaneously," Dr. William Schaffner, infectious disease specialist at Vanderbilt University, told ABC News.</p> <p>The flu has not yet reached "epidemic" proportions, according to last week's CDC data, but it may happen soon. A flu epidemic occurs when the percentage of people who have died from the flu exceeds a threshold set by the CDC using data from prior years. Last week, the number of people who died from the flu this year was only 0.2 percent below that threshold.</p> <p>Doctor's visits for flu-like illness are rising. This year's numbers are almost identical to three years ago, in the 2014-2015 season -- both years surpassed what was seen last year, 2016-2017.</p> <p>Twenty-six states are reporting high flu activity, with some of the worst in Arkansas, where 14 percent of outpatient doctor visits were for influenza-like illness last week. Neighboring states of Mississippi and Texas also have high flu activity, with 12 percent of doctors' visits related to flu-like symptoms.</p> <p>But when patients must be admitted to the hospital, flu can turn deadly. The number of patients in the hospital for flu-like illness nationally has doubled in the past two weeks and is higher than in recent years - about 35 percent up from the same time last year. Most of the people who are hospitalized for the flu are over the age of 65.</p> <p>The predominant flu strain this year is H3N2, a form of influenza A. This strain is included in this year's flu vaccine, but information on how effective the vaccine has been is typically not available until the flu season is over.</p> <p>Vaccine effectiveness typically ranges from 40 to 60 percent in a good year. Preliminary estimates from last year show the vaccine was 40 percent effective in the U.S., similar to 2014-2015.</p> <p>Concerns have been raised about this year's vaccine after an editorial published in the New England Journal of Medicine last Thursday said it was only 10 percent effective against H3N2 in Australia.</p> <p>Schaffner cautions against using this statistic to predict how well the vaccine will work in the U.S., since this is not official CDC data, but warns it could be a bad sign.</p> <p>"We are being affected by the basically same virus and using basically the same vaccine," he said.</p> <p>Additionally, years in which H3N2 is the predominant influenza strain tend to have higher death rates, with approximately 20,000 deaths in the 2012-2013 and 2014-2015 seasons when H3N2 predominated.</p>

<b>HEADLINE</b>	<b>01/08 Puerto Rico police chief resigns</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/puerto-rico-police-chief-resigns-killings-absences-spike-52221820?">http://abcnews.go.com/International/wireStory/puerto-rico-police-chief-resigns-killings-absences-spike-52221820?</a>
<b>GIST</b>	<p>Puerto Rico's first female police chief resigned Monday amid a spike in killings while thousands of officers continue to call in sick to protest the lack of overtime pay.</p> <p>The island's governor said retired military officer Michelle Hernandez was stepping down after one year of overseeing one of the largest police departments under U.S. jurisdiction. Officials did not provide further details, and Hernandez did not immediately return a call for comment through her spokeswoman.</p> <p>Puerto Rico had recorded 23 killings as of Sunday, compared with nine in the same period last year, police</p>

spokesman Carlos Rivera told The Associated Press. This year's killings have occurred across the U.S. territory and include a triple homicide in recent days, he said. Two double homicides were reported later Monday, in the western coastal city of Mayaguez and the north coastal town of Rio Grande.

More than 2,700 officers have been absent daily on average in recent weeks, compared with the usual average of about 600 daily absences. It is unclear whether that number has changed in recent days and whether any action has been taken against officers who have called in sick. The island's police department referred all questions to Karixia Ortiz, spokeswoman for Puerto Rico's Department of Public Safety. She told AP that the agency is investigating the absences and declined further comment.

Carlos Morales, president of an association that represents the majority of the department's 13,000-plus officers, said that he and many others are not upset that Hernandez resigned.

"She has not proven nor shown interest in how to work with Puerto Rico's police officers," he told AP.

Morales said daily absences have dropped slightly to about 2,300. He said a judge overseeing a 10-year federally mandated reform of Puerto Rico's police department has requested information on the absences and why they are occurring. He said officers are pleased the judge has shown interest in the issue.

Officers have been demanding millions of dollars owed for working overtime after hurricanes Irma and Maria, with some working seven days a week, 12 to 15 hours a day.

A couple of weeks ago, Hernandez estimated the government owed officers an additional \$35 million in overtime pay, but said the department was still tallying attendance sheets to determine the exact amount. More than \$20 million has been paid so far as the island struggles to restructure a portion of its \$73 billion public debt amid an 11-year recession.

<b>HEADLINE</b>	<b>01/09 China: tanker still on fire; 31 missing</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/china-body-found-tanker-fire-sea-collision-52227022?">http://abcnews.go.com/International/wireStory/china-body-found-tanker-fire-sea-collision-52227022?</a>
<b>GIST</b>	<p>Rescuers have found a body believed to be of a sailor from the Iranian oil tanker set ablaze after a collision in the East China Sea, China's Ministry of Transportation said Tuesday, as the search continued for another 31 missing from the same ship.</p> <p>The ministry said the body recovered Monday had yet to be identified but was wearing a protective suit designed to withstand cold seawater. There was no further word about the others missing since the Panamanian-registered Sanchi collided with a freighter late Saturday.</p> <p>Chinese media said the tanker was still on fire Tuesday and at risk of exploding.</p> <p>The tanker was carrying 136,000 metric tons (nearly 1 million barrels) of condensate, a type of gassy, ultra-light oil, when it collided with the Hong Kong-registered freighter CF Crystal. All 21 crew members of the Crystal, which was carrying grain from the United States to China, were rescued, the Chinese ministry said. The Crystal's crew members were all Chinese nationals.</p> <p>It wasn't immediately clear what caused the collision, which happened in open seas rather than a narrow channel where such accidents are more common. Ships of such size generally come with sophisticated radar and other technologies aimed at preventing collisions.</p> <p>The Sanchi was sailing from Iran to South Korea when the collision occurred 257 kilometers (160 miles) off the coast of Shanghai, China's Ministry of Transport said.</p>

<b>HEADLINE</b>	<b>01/09 Syria: Israel missiles target Damascus</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/syria-israeli-missiles-target-damascus-military-outposts-52228348?">http://abcnews.go.com/International/wireStory/syria-israeli-missiles-target-damascus-military-outposts-52228348?</a>
<b>GIST</b>	<p>Syria's military on Tuesday accused Israel of launching several missiles targeting military outposts near the capital, Damascus, claiming that the Syrian air force shot down one of the Israeli projectiles.</p> <p>In a statement, the army said the Syrian air defense confronted the early morning missile attacks that were launched from Lebanese airspace on the outposts in the area of Qutayfeh in the Damascus countryside on Tuesday. It said several missiles were first launched at 2:40 a.m., followed by two more missiles at 3:04 a.m. and four at 4:14 a.m.</p> <p>The military said the Syrian air defense shot down one missile and the rest fell on one of the Syrian</p>

	<p>military sites, causing material damage.</p> <p>The Israeli military declined to comment on the matter.</p> <p>Israel has carried out dozens of airstrikes inside Syria in the course of Syria's civil war, against what it says are suspected arms shipments believed to be bound for Lebanon's Hezbollah militant group, which is fighting alongside Syrian government forces. Tuesday's strike was the first this year.</p>

<b>HEADLINE</b>	<b>01/09 NKorea to send Olympic team</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/south-korea-accepts-olympic-team-north-countries-hold/story?id=52223379&amp;cid=clicksource_76_2_hero_headlines_bsq_hed">http://abcnews.go.com/International/south-korea-accepts-olympic-team-north-countries-hold/story?id=52223379&amp;cid=clicksource_76_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>Officials from North Korea accepted South Korea's offer and will send athletes to next month's Winter Olympics as the two sides began long-anticipated talks on Tuesday. North Korea agreed to send athletes, officials and reporters to the games, as well as its cheerleading group and taekwondo demonstration athletes. South Korea proposed the two countries march together in the Opening Ceremonies, a point which will be further debated Tuesday afternoon.</p> <p>In their opening statement, South Korea mentioned further denuclearization talks between the two countries, but the point was not acknowledged by North Korean officials in early discussions.</p> <p>"In addition, we proposed resuming temporary reunions of families separated by war and holding inter-Korean Red Cross talks to discuss this," Chun Hae-sung, South Korean Vice Unification Minister, said after the morning talks. "Along with this, we also proposed holding inter-Korean military talks designed to reduce animosities in frontline areas."</p> <p>Negotiations were continuing on those proposals by the South.</p> <p>Five representatives from the highest levels of both governments -- including South Korean Unification Minister Cho Myoung-gyon and the North Korean chairman of the Committee for the Peaceful Reunification of the Country, Ri Son-gwon -- kicked off by meeting with a symbolic crossing by the northern delegation into the South-controlled building called House of Peace.</p>

<b>HEADLINE</b>	<b>01/08 Military women gather in #MeToo protest</b>
<b>SOURCE</b>	<a href="https://www.stripes.com/news/where-s-our-reckoning-military-women-gather-outside-pentagon-in-metoo-protest-1.505745">https://www.stripes.com/news/where-s-our-reckoning-military-women-gather-outside-pentagon-in-metoo-protest-1.505745</a>
<b>GIST</b>	<p>ARLINGTON, Va. — The moment was the most traumatic in her life. The last thing Nichole Bowen-Crawford wanted to do was fly across the country to stand in the bitter cold outside the nerve center of the nation's defense system and tell everyone who would listen about being assaulted by a fellow soldier and then silenced by her superiors.</p> <p>But she believed she had to speak up and encourage others like her to break their silence.</p> <p>On Monday — the morning after millions of viewers watched women in Hollywood declare at the Golden Globe awards that the time for sexual assault and harassment was up -- she summoned the courage to fight through post-traumatic stress and step back into the limelight. She joined a small cadre of military survivors who demanded accountability from Pentagon leadership that has failed to end sexual assault in the Armed Forces.</p> <p>Her hope, she said, is that the #MeToo movement that has penetrated Hollywood and the halls of Congress will take hold within the tight ranks of the male-dominated U.S. military, where a culture of sexual assault,</p>

harassment and retaliation for those who come forward remains pervasive.

"The truth is, I am really scared to be here, really scared to tell my story," she told a small crowd gathered at the Pentagon gates.

"But standing up for the men and women who serve our country, who can't report sexual assault in a safe way is more important than my feelings," she said. "It's time there is a safe way to report sexual assault in the military so that men and women have the freedom to say "Me Too" instead of (maintaining) silence."

Despite efforts to stem military sexual assault in recent years, the Pentagon estimates more than 6,100 sexual assaults took place in fiscal year 2016, a figure similar to the two previous years and based only on data from those who've come forward to report. It also assesses that two-thirds of victims don't report, which means there were more than 18,300 sexual assaults for each of those years.

The same report found that only about 4 percent of cases resulted in conviction.

In the meantime, six out of every 10 who reported sexual assault faced retaliation, often in the form of stigma, accusations of personality disorder and being discharged with bad paper that would end careers and strip them of their veterans benefits and job prospects in the civilian world, said Lydia Watts, the CEO at Service Women's Action Network, or SWAN, which organized Monday's protest.

"Where is the incentive to report?" Watts said to the several dozen people assembled. "Your career may be damaged, you are more likely than not to be retaliated against and then, even if a case is brought against your assailant, less than one in 20 cases will result in conviction and in the other 19 cases, the assailants will walk away unscathed.

"Military men and women are asking themselves, 'Where's our #MeToo reckoning? When do we see military perpetrators of sexual violence held to account?'"

Bearing signs like "Denial is not a policy" and "Veterans demand reform," Monday's protestors demanded that the Pentagon take increased action to stop sexual assault by changing what several called a misogynistic military culture and taking military sexual assault cases out of the hands of commanders — a proposal that military leadership has blocked saying it undermines command authority.

Inside the Pentagon, Army Col. Rob Manning said there was "zero tolerance" for sexual assault or harassment in the military.

"Events like this morning's underscore the importance of the department's continued efforts to eliminate sexual harassment and assault in the military," he said. "The message is that no one should have to tolerate harassment as part of their military service. The Department of Defense continuously works to eliminate sexual harassment and assault from the military, and we encourage servicemembers to report all instances of sexual assault so we can provide support services and hold offenders accountable."

Vocal advocates for victims say more needs to be done. Erin Kirk-Cuomo, a founder of the "Not In My Marine Corps" movement, said the only way to end the scourge is to change the culture and fully integrate men and women on equal footing in all of the services.

"A lot of times the military seems to be the one to push progressive change in our society but let's be honest," she said. "It's considered the biggest boys club in the world, especially the Marine Corps."

"Time's up, time's up!" said Monica Medina, an attorney and advisor to former Defense Secretary Leon Panetta, who helped draft protections for women in the military who were assaulted, including ensuring that victims have a lawyer and removing certain cases from the chain of command.

"Sexual assault is finally recognized as the morale-killing scourge that it is," she said. "This is the moment. #MeToo is the movement. And the military needs to use this movement and moment to encourage victims

	<p>of sexual harassment to come forward."</p> <p>Medina served in the Army straight out of law school, being posted to the Army general counsel's program at the Pentagon. There, she encountered a powerful senior officer and had to face career retaliation after rebuffing his advances.</p> <p>It was then that she joined what she called "the #MeToo club." It was not club she wanted, she said, or "even one I admitted to until a couple of months ago."</p> <p>On Monday, she told her story publicly for the first time, calling for change.</p> <p>"I don't think we can change it unless more women speak up," she said.</p> <p>"Eighty percent - 80 percent! - of women in the military report being sexually harassed during their career," Medina said. "Women in service to their nation deserve better."</p>

<b>HEADLINE</b>	<b>01/08 More equipment, crews to Puerto Rico</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/equipment-crews-head-puerto-rico-power-boost-52216505?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/equipment-crews-head-puerto-rico-power-boost-52216505?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Federal officials said Monday that efforts to fully restore power to Puerto Rico in the wake of Hurricane Maria should get a boost with more work crews and more supplies arriving in the coming weeks.</p> <p>The U.S. Army Corps of Engineers said that it is getting its own barge to ship items and that materials it requested several months ago have been manufactured and are finally on their way to the U.S. territory.</p> <p>"We're doing everything we can to increase the (power company's) ability to do this as fast as possible for the people of Puerto Rico," said Col. John Lloyd, who is helping oversee power restoration efforts for the Corps of Engineers.</p> <p>He told The Associated Press that officials over the weekend also discovered some needed materials in a previously overlooked warehouse owned by Puerto Rico's Electric Power Authority.</p> <p>The lack of some of those hard-to-find pieces had delayed energizing certain lines, according to the Corps of Engineers, which said the material included transformers, splices and hundreds of a key small piece no longer in stock elsewhere.</p> <p>Puerto Rico's energy infrastructure is about 44 years old, compared with an average 18 years on the U.S. mainland, so a lot of parts damaged or destroyed by the hurricane are no longer available and have to be manufactured, Lloyd said.</p> <p>It is unclear why power company officials had not provided the equipment previously. The Corps of Engineers said that the company's transmission division controls that warehouse and that it lacked transparency in inventory and accountability. Power company spokesman Carlos Monroig did not return a message asking for comment.</p> <p>More than 40 percent of Puerto Rico's power customers remain in the dark nearly four months after the Category 4 storm hit the island, causing an estimated \$95 billion in damage and killing dozens of people. Classes are resuming this week even though hundreds of public schools are still without power. Only 20 percent of intersections with stoplights have been powered.</p> <p>Lloyd said crews are still assessing damage and his agency is still waiting for the shipment of hundreds of thousands of poles, transformers, fuses, towers, insulators, bolts and other pieces.</p> <p>Of nearly 31,000 poles ordered, almost 12,000 have arrived. Of more than 6,000 transformers ordered, only 412 have arrived, but more than 630 were expected this week.</p> <p>Lloyd said most of the island should have power by the end of February or early March, but estimated a complete restoration would take until May.</p> <p>"Four months is a long time for people to be without power," he said. "We try to do this as fast as we possibly can."</p> <p>An upcoming shipment of 1,250 miles of conductor wire and 6,000 poles made of wood, concrete and galvanized steel will coincide with the arrival of nearly 2,500 new workers over the next two weeks, officials said.</p>

**HEADLINE** 01/08 Calif. evacuations mudslides threat

<b>SOURCE</b>	<a href="http://abcnews.go.com/US/record-breaking-cold-waning-midwest-east-bracing-snow/story?id=52206531&amp;cid=clicksource_81_2_hero_headlines_headlines_hed">http://abcnews.go.com/US/record-breaking-cold-waning-midwest-east-bracing-snow/story?id=52206531&amp;cid=clicksource_81_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>Officials have ordered thousands of people who were affected by recent wildfires in Southern California to evacuate as an upcoming winter storm poses a threat for mudslides and flash floods.</p> <p>Mandatory evacuations were issued for about 7,000 people in mountainous areas affected by the Thomas, Whitter, Sherpa and Rey fires, according to the Santa Barbara County Office of Emergency Management. Another 23,000 people were under evacuation warnings, officials said.</p> <p>The storm is the West Coast's first significant winter storm of the season, and heavy rain and strong winds are expected in the area through Tuesday, bringing "strong potential" for flash flooding and mud in areas where wildfires recently burned through, according to Santa Barbara County officials.</p> <p>Flash flood watches are in effect from Los Angeles to Santa Barbara County, and a wind advisory is in effect for the San Francisco area, according to the National Weather Service.</p>

<b>HEADLINE</b>	<b>01/08 Scam: 'blessing loom' on Facebook</b>
<b>SOURCE</b>	<a href="http://www.fox19.com/story/37213059/have-you-seen-the-blessing-loom-on-facebook-experts-say-its-a-scam">http://www.fox19.com/story/37213059/have-you-seen-the-blessing-loom-on-facebook-experts-say-its-a-scam</a>
<b>GIST</b>	<p>CHARLOTTE, NC (WBTV) - An internet scam making its way around Facebook is leaving some people with empty bank accounts.</p> <p>It's called "The Blessing Loom" and it's a new twist on an old scam, the pyramid scheme.</p> <p>The scheme requires participants to pay \$100 into an online payment system like PayPal, Venmo or Cash App. The person is promised an \$800 return on their \$100 investment.</p> <p>The problem is participants have to recruit others to invest in order to get the money. But there's another danger to this scheme other than losing the initial \$100 investment.</p> <p>When using an online payment system to invest, people are opening themselves up to the possibility of getting hacked.</p> <p>Mike Holland, who is the executive vice president of client relations for Fortalice - a cybersecurity company, said this is a classic cybercrime.</p> <p>"Cyber criminals use the internet to prey on unsuspecting people to try to convince them to give them their password or log in, their credentials and so under the guise of what is probably a Ponzi scheme or a quick cash scheme which is usually a farce, they're convincing people to give their login information which is never a good idea," Holland said.</p> <p>Holland said the best thing to do is avoid the "Blessing Loom" altogether.</p>

<b>HEADLINE</b>	<b>01/08 Ransomware on healthcare spiked 89%</b>
<b>SOURCE</b>	<a href="https://www.healthcare-informatics.com/news-item/cybersecurity/report-ransomware-attacks-against-healthcare-orgs-increased-89-percent-2017">https://www.healthcare-informatics.com/news-item/cybersecurity/report-ransomware-attacks-against-healthcare-orgs-increased-89-percent-2017</a>
<b>GIST</b>	The number of reported major IT/hacking events attributed to ransomware by health care institutions

increased by 89 percent from 2016 to 2017, according to cyber defense firm Cryptonite's 2017 Healthcare Cyber Research Report, which used data reported to the U.S. Department of Health and Human Services (HHS) Office for Civil Rights (OCR).

The research conducted by Rockville, Md.-based Cryptonite looks at healthcare cyber attack activity last year and finds that 2017 was a very challenging year for healthcare institutions as these organizations remain under sustained attack by cyber attackers that continue to target their networks through the use of well understood vulnerabilities. According to the report, there were a total of 140 data breach events characterized and reported to HHS OCR as IT/hacking in 2017, representing an almost 24 percent increase over the 113 IT/hacking events reported in 2016. For an historical view, there were 57 reports for IT/hacking in 2015 and 35 reports in 2014.

The number of reported major IT/hacking events attributed to ransomware by health care institutions increased by 89 percent from 2016 to 2017. This was an increase from 19 reported events in 2016 to a total of 36 events in 2017. In 2017 ransomware events represented a quarter of all events reported to HHS/OCR and attributed to IT/hacking.

All six of the six largest IT/hacking healthcare events reported in 2017 were attributed to ransomware, according to the report.

The research found that there were 3,442,748 records reported compromised in 2017, a substantial decrease from 13,425,263 reported compromised in 2016 as cyber attackers diversified their attacks against a broader mix of healthcare entities.

"In past years, cyber criminals invested considerable time and effort in targeting the largest healthcare institutions as evidenced by the 2015 events impacting Anthem (78.8 million records), Premera Blue Cross (11 million records) and by the 2016 events impacting Banner Health (3.6 million records) and Newkirk Products (3.4 million records)," the report authors wrote. "This low hanging fruit has to some extent, been harvested and attackers are now increasingly turning their attention to the broader mix of health care entities."

What's more, the report authors note that the emergence and refinement of advanced ransomware tools lowers both the cost and the time for cyber attackers to target smaller healthcare institutions – now they can cost effectively reach physician practices, surgical centers, diagnostic laboratories, MRI/CT scan centers and many other smaller yet critical healthcare institutions. And, the report authors predict that this is the beginning of a trend that will increase very substantially in 2018 and 2019.

<b>HEADLINE</b>	<b>01/09 ATM at gas station serves up bitcoin</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/life/atm-at-lynnwood-gas-station-dispenses-bitcoin-digital-currency/">http://www.heraldnet.com/life/atm-at-lynnwood-gas-station-dispenses-bitcoin-digital-currency/</a>
<b>GIST</b>	<p>The Lynnwood 76 service station has all the essentials. Gas. Food. Bitcoin.</p> <p>What's up with that?</p> <p>A Bitcoin ATM sits next to the lottery self-service kiosk in the convenience mart at the bustling 11-pump station at 19611 Alderwood Parkway.</p> <p>The ATM has been inside the 76 station for more than a year, but didn't get much attention until the recent hoopla that made Bitcoin the Kardashian of currency.</p> <p>At first glimpse, the boxy white machine owned by national company Coinme looks like one of those Coinstars you dump your stash of pennies and quarters in and, cha-ching!, turn it into paper money backed by the U.S. Treasury.</p> <p>Looks are deceiving. This ATM deals in digital money, also called cryptocurrency, that has no tangible form and is used worldwide with no central regulating body or bank. Investors from America and Africa to North Korea and New Zealand have pumped billions of dollars, euros, yen, rubles and other real money into it. It's not legal tender nor is it illegal.</p> <p>Bitcoin exists virtually, like a figment of your imagination. In reality, it is valueless bits of computer data. It's stored in a digital wallet. There's nothing to jingle in your pocket. Despite the name, it's not even a "coin" in the old-fashioned sense.</p> <p>This newfangled currency is created through a process called "mining" on computers around the globe to form blockchains. That's right, this currency worth billions is just a bunch of numbers generated by equations that only computers are smart enough to do.</p> <p>"It's code," said 76 gas station shopper Michael Gorta, visiting from California.</p> <p>Gorta had studied up on Bitcoin but not invested — yet. He noticed the Bitcoin ATM when he came in for scratch lottery tickets, which are funded by the state.</p> <p>"There is no physical backing," he said of Bitcoin. "It's only worth what someone will give you for it, at the moment."</p> <p>For him, that was a green bill with George Washington. He fed the \$1 bill in the ATM for Bitcoin, which was going for about \$16,600.</p> <p>"For one dollar I own 0.0000546 Bitcoins," Gorta said, laughing. That was really 90 cents worth: Coinme charges a 10 percent transaction fee.</p>

You can buy up to eight decimal points of Bitcoin. It's like buying pizza at Brooklyn Bros. It's sold by the whole or by the slice, though in this case, fractional pieces.

Most Bitcoin buyers go to the 76 gas station for petrol, not crypto. They use their phone or computer to wheel and deal in digital currencies. Unlike store hours or the stock market, trading is 24/7.

The main way to buy Bitcoin is to use an app, such as online trading broker Coinbase (no relation to Coinme), which allows people to carry around their big wad of blockchains on their phone.

Coinbase was the most downloaded app at Apple's Apps Store a month ago, when a single Bitcoin, which started 2017 at less than \$1,000, spiked to nearly \$20,000 in mid-December.

A Bitcoin has since hovered in the \$13,000 to \$16,000 range, which is still a good tease and a gamble. That's what this is: gambling. Think of it as putting money in a slot machine.

The Coinbase app also offers a few virtual cousins of Bitcoin, such as Ethereum and Litecoin, which cost less and also fluctuate wildly in price — a month ago, Ethereum was \$450 and at this writing is about \$1,100. There are many other virtual coins out there, gobbling up billions of dollars. The site CoinMarketCap.com lists 1,386 different coins.

It costs real money to buy. And when you sell it, you get real money. Or you can shop with it. Bitcoin is accepted as payment by Expedia and Overstock as well as some stores, coffee shops, bars, car dealers, hairdressers, dentists and, it turns out, kidnappers. Last week, a Kiev crypto company executive was kidnapped by an armed gang then freed after paying the ransom demand of more than \$1 million in Bitcoins.

<b>HEADLINE</b>	<b>01/09 Children's smartphone addiction</b>
<b>SOURCE</b>	<a href="https://www.thedailybeast.com/just-how-bad-is-kids-smartphone-addiction?ref=home">https://www.thedailybeast.com/just-how-bad-is-kids-smartphone-addiction?ref=home</a>
<b>GIST</b>	It's the easiest babysitting hack known to modern adults attempting to pacify a fussy baby: Take a smartphone, find a game or show, put it in the child's hands, and—lo and behold! The kid is quiet, eyes

wide, and still.

And that magic trick seems to extend to children who can crawl, tots who are just stringing together words, kids toddling into preschool, and—most obviously, at least when it comes to psychological research—tweens and teens hunched over their smartphones, oblivious to the world.

That worries a group of Apple investors, who are calling on the company to investigate what effects this screen time has on children’s brains and development. In a letter co-signed by New York investment firm JANA Partners and Anne Sheehan, the director of corporate governance at the California State Teachers’ Retirement System (the largest public teacher’s pension fund in the country), the investors implore the tech giant to fund research into what their ubiquitous products might do to a child’s brain:

*The average American teenager who uses a smart phone receives her first phone at age 10 and spends over 4.5 hours a day on it (excluding texting and talking). 78% of teens check their phones at least hourly and 50% report feeling ‘addicted’ to their phones. It would defy common sense to argue that this level of usage, by children whose brains are still developing, is not having at least some impact, or that the maker of such a powerful product has no role to play in helping parents to ensure it is being used optimally. It is also no secret that social media sites and applications for which the iPhone and iPad are a primary gateway are usually designed to be as addictive and time-consuming as possible, as many of their original creators have publicly acknowledged.*

The letter is signed on behalf of investors whose shares amount to nearly \$2 billion of Apple stock. Apple’s total valuation is about \$900 billion.

It’s a small proportion, but the letter is sparking conversation about what it means to be addicted to technology—particularly among the youngest users of smart technology. It cites research and science published within childhood psychology, including that of Jean Twenge, a professor of psychology at San Diego State University whose most recent book, *iGen: Why Today’s Superconnected Kids Are Growing Up Less Rebellious, More Tolerant, Less Happy—and Completely Unprepared for Adulthood*, tackles the effects of smartphones on teens.

Twenge said she first spotted some odd trends in teenage mental health in 2011 and 2012, when smartphones were becoming more common among teens. “There was a doubling in the suicide rate and tripling in emergency room admissions of self-harm among young girls,” Twenge said. “And there was a 20 percent increase in the clinical depression rate.”

To Twenge, the link between screen time and mental health seemed apparent. And while she said her research doesn’t touch on addiction so much as the mental health of teens based on smartphone use, she said there’s undeniable proof that screen time has a negative effect on developing minds, based on research that was published in November in the journal *Clinical Psychological Science*.

“I found that teens who spend five or more hours a day of screen time are 71 percent more likely to have risk factors” for mental health issues, such as depression, or thinking about suicide. That screen time is measured as that devoted to gaming, social media, or any other use of a device outside homework. And while Twenge’s research doesn’t indicate causation, it does show that screen time leads to unhappiness rather than the other way around.

That’s because there are some very significant neurological events happening when we interact with our screen. Anna Lembke is an assistant professor of psychiatry and behavioral sciences at the Stanford University Medical Center, and she’s studied addiction extensively, both substance abuse and technology. She said the way we absorb the cool blue glow of a screen is akin to the electricity a drug user may feel.

“Smartphone screens light up the same area of the brain as opioids and cannabis,” she told *The Daily Beast*. “The rewards pathways mediated by dopamine respond to screens in a very similar way to opioids.”

What makes adolescents especially vulnerable to the addictive nature of smartphones is that they are in a

crucially pliable point of their mental and physical growth. “They’re incredibly socially sensitive,” Lembke said of adolescents, classed as those first experiencing puberty through those at the end of the teenage years.

The need to fit in and the desire to be popular and gain social points mean that kids this age are especially vulnerable to falling for the “social media contagion effect,” the term Lembke uses to describe a child doing something just because a peer is doing it. And Lembke said that reasoning is simply logical in an adolescent’s brain.

“Adolescent brains are more vulnerable to risk taking, so the emotion centers of the brain drive behavior more than the future planning centers of the brain,” she said—which is why teens are impulsive enough to take risks without recognizing future consequences. Their brains are pliable because adolescence is a time when neurons undergo pruning, fundamentally altering the shape and structure of the brain from one of a child’s into that of an adult’s.

Online, that can be dangerous: It can lead to slut shaming when kids send and receive nude photos without thinking about ramifications, for example, or bullying on anonymous messaging apps like last summer’s sleeper hit Sarahah. Being turned on by peers can be devastating for a teen and in some extreme, tragic cases lead to suicide. Neuronal pruning can mean screens are used as a coping strategy, and tearing kids away from their screen can be difficult not only because it offers a sense of safety and information, but also because a kid may be addicted.

<b>HEADLINE</b>	<b>01/08 Android gaming apps tracking TV habits</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/android-gaming-apps-tracking-tv-viewing-habits/">https://www.hackread.com/android-gaming-apps-tracking-tv-viewing-habits/</a>
<b>GIST</b>	<p>There are more than 250 Android gaming apps on Google Play Store that are using your smartphone’s microphone to record what you watch on TV – This means instead of your conversation these apps are focused on listening what you are watching on TV.</p> <p>According to a report published by The New York Times, these gaming apps are using a software developed by a California based company called Alphonso that collects TV-viewing data including shows, ads, and movies for advertising firms.</p> <p>The software allows apps to use the microphone on a device to identify audio signals from TV advertisement, collect and share the data with companies for targeted advertising. However what may worry some is the fact that once the apps are running in the background the software could detect audio even when the phone is in a pocket.</p> <p>According to Alphonso’s CEO Ashish Chordia, the company also worked with Shazam (now owned by Apple) to collect music music-listening data as well as with movie studios to collect movie-viewing habits. At the same time, the company claims it does not record human speech and only gains access to devices’ microphones and locations if the user allows it.</p> <p>A look at Alphonso LinkedIn page the company claims that there are “hundreds of Fortune 500 brands and all major holding companies in the U.S. work with Alphonso to amplify their TV spend with digital and to reach targeted TV demographics across all screens.”</p> <p>“With automatic content recognition (ACR) technology embedded in tens of millions of smart TVs, TV chipsets, mobile apps, gaming consoles, streaming devices and OTT services, Alphonso understands what programming and advertising people are watching on TV,” explains Alphonso’s LinkedIn page.</p>

<b>HEADLINE</b>	<b>01/08 Lawsuits hit Intel over CPU vulnerabilities</b>
<b>SOURCE</b>	<a href="http://www.securityweek.com/lawsuits-filed-against-intel-over-cpu-vulnerabilities">http://www.securityweek.com/lawsuits-filed-against-intel-over-cpu-vulnerabilities</a>
<b>GIST</b>	<p>At least three class action lawsuits have been filed against Intel in the past days over the recently disclosed vulnerabilities that could allow malicious hackers to obtain potentially sensitive information from computers.</p> <p>The Meltdown and Spectre attack methods uncovered by several independent research teams work not only against Intel processors, but also against CPUs from AMD and ARM. Intel has been hit the hardest – even its stock went down after initial reports claimed only Intel processors were affected – but the company says media reports describing the design flaws are overblown.</p> <p>The lawsuits, all seeking class action status, have been filed in the Northern District of California, the Southern District of Indiana, and the District of Oregon, and they accuse Intel of violating state consumer protection laws. All complaints demand a jury trial.</p> <p>In California, Branstetter, Stranch &amp; Jennings of Nashville and Doyle APC of San Diego filed a consumer fraud case, accusing Intel of misleading consumers about the performance and reliability of its processors by selling a product with “fatal” security flaws.</p> <p>The complaint filed in Indiana alleges that “Intel committed unfair and deceptive acts by representing that the Intel CPUs had performance, characteristics, or benefits which Intel knew or should reasonably have known they did not have.”</p> <p>The chip giant has also been accused of breaching warranties by selling defective CPUs that it's not willing to repair or replace free of charge. The Indiana lawsuit also claims the company was negligent in the manufacture and design of its processors.</p>

In Oregon, plaintiffs say they are entitled to restitution based on Intel’s “intentional and knowing failures to disclose material defects.” The complaint claims plaintiffs would have acquired a CPU from an Intel competitor had they known about the flaws and the fact that they will end up with a slower product.

The Meltdown and Spectre attacks allow malicious applications to bypass memory isolation mechanisms and access potentially sensitive data, including passwords, photos, documents, emails, and data from instant messaging apps. The bugs that make these attacks possible are said to date back 20 years.

<b>HEADLINE</b>	<b>01/08 Western Digital storage devices backdoor</b>
<b>SOURCE</b>	<a href="http://www.securityweek.com/hardcoded-backdoor-found-western-digital-storage-devices">http://www.securityweek.com/hardcoded-backdoor-found-western-digital-storage-devices</a>
<b>GIST</b>	<p>Firmware updates released by Western Digital for its MyCloud family of devices address a series of security issues, including a hardcoded backdoor admin account.</p> <p>The vulnerabilities were found in WDMyCloud firmware prior to version 2.30.165 and are said to affect devices such as MyCloud, MyCloudMirror, My Cloud Gen 2, My Cloud PR2100, My Cloud PR4100, My Cloud EX2 Ultra, My Cloud EX2, My Cloud EX4, My Cloud EX2100, My Cloud EX4100, My Cloud DL2100, and My Cloud DL4100.</p> <p>Discovered by GulfTech security researcher James Bercegay, the security flaws could be exploited to achieve remote root code execution on the affected WD My Cloud personal cloud storage units (the device is currently the best-selling NAS (network attached storage) device on Amazon).</p> <p>One of the most important security issues the researcher found was an unrestricted file upload vulnerability created by the “misuse and misunderstanding of the PHP gethostbyaddr() function,” the researcher says.</p> <p>The vulnerable code in said file allows an attacker to define a remote auth server, which could be an attacker-controlled server. The result should fail if an invalid host is defined, but a series of bugs result in checks being skipped, eventually allowing an attacker to abuse the issue “to upload any file to the server that they want.”</p>

<b>HEADLINE</b>	<b>01/08 DHS report: botnets, automated threats</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/vulnerabilities---threats/us-gov-outlines-steps-to-fight-botnets-automated-threats/d/d-id/1330763">http://www.darkreading.com/vulnerabilities---threats/us-gov-outlines-steps-to-fight-botnets-automated-threats/d/d-id/1330763</a>
<b>GIST</b>	<p>The US Departments of Commerce and Homeland Security have published a report focused on the challenges and steps toward fighting botnets and other automated, distributed threats, the National Institute of Standards and Technology (NIST) announced last week.</p> <p>Their report is a response to Executive Order 13800, Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure. The EO directed the Secretaries of Commerce and Homeland Security to "lead an open and transparent process to identify and promote action by the appropriate stakeholders" in order to reduce automated and distributed cyberattacks.</p> <p>In a joint effort, the two departments drafted the opportunities and challenges in reducing the threat of automated attacks. Key themes of their report include acknowledging automated attacks are a global problem, effective tools exist but are not widely used, education and awareness is needed, and market incentives are misaligned.</p> <p>They also created a list of goals to reduce the threat. These include identifying a clear path toward a secure tech marketplace, promoting infrastructure innovation to adapt to evolving threats, and promoting network innovation to prevent and detect threats.</p>
<a href="#">Return to Top</a>	<a href="https://csrc.nist.gov/publications/detail/white-paper/2018/01/05/enhancing-resilience-against-botnets--report-to-the-president/draft">https://csrc.nist.gov/publications/detail/white-paper/2018/01/05/enhancing-resilience-against-botnets--report-to-the-president/draft</a>

<b>HEADLINE</b>	<b>01/08 Fileless malware campaign at Olympics</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/vulnerabilities---threats/emailed-cyberattack-targets-2018-pyeongchang-olympics/d/d-id/1330768">http://www.darkreading.com/vulnerabilities---threats/emailed-cyberattack-targets-2018-pyeongchang-olympics/d/d-id/1330768</a>
<b>GIST</b>	<p>A fileless malware campaign was discovered targeting organizations associated with the upcoming 2018 winter Olympics being held in Pyeongchang, South Korea, report analysts at McAfee Advanced Threat Research. An unknown nation-state attacker is likely responsible.</p> <p>The campaign's primary target was icehockey@pyeongchang2018.com with 337 South Korean organizations included on the BCC line. Most targets had some involvement in the Olympics, either in providing infrastructure or playing another supporting role.</p> <p>This attack arrived as a spearphishing email containing a malicious Word attachment with the original file name "Organized by Ministry of Agriculture and Forestry and Pyeongchang Winter Olympics" (translated from Korean). Emails began on Dec. 22, 2017 with the most recent activity appearing on Dec. 28, when messages were sent from an IP address in Singapore.</p> <p>Emails were disguised to appear to be from South Korea's National Counter-Terrorism Center (NCTC). At the time, the NCTC was conducting physical anti-terror drills to prep for the Olympics, which suggests the email is legitimate and increases the odds people will open it.</p>

<b>HEADLINE</b>	<b>01/08 Claim: NKorea crypto mining malware</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/new-cryptocurrency-mining-malware-has-links-to-north-korea/d/d-id/1330773">http://www.darkreading.com/attacks-breaches/new-cryptocurrency-mining-malware-has-links-to-north-korea/d/d-id/1330773</a>
<b>GIST</b>	A security vendor has found another clue that North Korea may be turning to illegal cryptocurrency mining as a way to bring cash into the nation's economy amid tightening international sanctions.

AlienVault on Monday said it had recently discovered malware that is designed to stealthily install a miner for Monero, a Bitcoin-like cryptocurrency, on end-user systems and to send any mined coins to the Kim Il Sung University (KSU) in Pyongyang.

The malicious installer appears to have been created just before Christmas 2017 and is designed to install xmrig, an open source miner for Monero.

The link to the university itself doesn't appear to be working, however, meaning the software cannot send any mined coins back to its authors. The malware itself appears pretty basic, and the inclusion of the KSU server in the code could simply be a false flag to trick security researchers. Even so, the malware is consistent with previous similar campaigns tied to North Korea, AlienVault said.

"Cryptocurrencies could provide a financial lifeline to a country hit hard by sanctions," the vendor said. "Therefore it's not surprising that universities in North Korea have shown a clear interest in cryptocurrencies."

Crypto mining is legitimate activity. Some, like Coinhive, even distribute miners to website operators so users can run it in their browsers in exchange for an ad-free experience. In recent years, though, cybercriminals have increasingly begun hijacking computers in order to mine cryptocurrency for illegal profit.

<b>HEADLINE</b>	<b>01/08 Meltdown, Spectre just the beginning</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/cloud/meltdown-spectre-likely-just-scratch-the-surface-of-microprocessor-vulnerabilities/d/d-id/1330774">http://www.darkreading.com/cloud/meltdown-spectre-likely-just-scratch-the-surface-of-microprocessor-vulnerabilities/d/d-id/1330774</a>
<b>GIST</b>	<p>The dust has yet to settle on the recent revelation of critical vulnerabilities in microprocessors that most modern computers worldwide, but it's already troublingly clear that fixing the problem isn't simply a matter of applying the latest vendor security updates.</p> <p>Last week's disclosure by researchers from Google's Project Zero team and research teams from academia of the vulnerabilities in most Intel processors and in some AMD and ARM processors have left organizations scrambling to gather and track security updates available for their firmware, operating systems, and browsers. Given that operating system patches can incur significant performance hits – some experts are estimating up to 30% degradation for Linux and Windows platforms – there's a lot at stake in fixing the flaws.</p> <p>The so-called Meltdown and Spectre hardware vulnerabilities allow for so-called side-channel attacks: in the case of Meltdown, that means sensitive information in the kernel memory is at risk of being accessed nefariously, and for Spectre, a user application could read the kernel memory as well as that of another application. So an attacker could read sensitive system memory, which could contain passwords, encryption keys, and emails – information that could be used to help craft a local attack.</p> <p>Meltdown and Spectre are especially vexing because the attacks take advantage of the design of the hardware itself, the so-called "out-of-order execution" performance feature in most modern processors that runs operations out of order to streamline and speed up processing. The timing differences of the operations, for example, can leak sensitive information from the kernel, and an attacker could use that information to then attack the system via another exploit.</p> <p>The irony is that a feature meant to boost processor performance for now can only be fixed with software updates that can in some cases deplete performance. And experts say this pervasive security weakness not only has a long tail but is likely only the tip of the iceberg for hardware vulnerabilities yet to be unearthed.</p> <p>"I would be surprised if these particular issues were the only ones of this class of problems. Just digging a little bit, there appears to be a lot of space for" other microprocessor issues like this, says Dino Dai Zovi, a</p>

veteran security researcher and co-founder and CTO at Capsule8.

Patching is the only option to mitigate risk of a Meltdown or Spectre attack, but it's still not a perfect solution. Given that the basic design flaw lies in the microprocessor hardware, the software updates merely provide software mitigations for the attack. So there's still the chance the updates ultimately can be bypassed by an attacker, for example.

The US-CERT reiterated those concerns late last week in its Vulnerability Guidance alert: "Due to the fact that the vulnerability exists in CPU architecture rather than in software, patching may not fully address these vulnerabilities in all cases," the US Department of Homeland Security post said of the flaws, CVE-2017-5753, CVE-2017-5715, and CVE-2017-5754.

The security updates and patches are mainly workarounds and mitigations: a real fix would require a hardware do-over in the microprocessors, experts say. "In general, we think you have to wait until the new generation of processors will be introduced," says Max Goryachy, security researcher at Positive Technologies, which late last year discovered a buffer overflow Intel's chip firmware can be abused to take control of a machine even when it's powered down.

While future-generation chips may address the flaws, for existing systems it's all about patching. Yet, not all systems will get patched.

"What worries me," says Chris Pierson, CEO of Binary Sun Cyber Risk Advisors, is that "the wholesale underlying infrastructure vulnerabilities are so deep-seeded that they will remain with us for years to come."

<b>HEADLINE</b>	<b>01/08 What happens bitcoin when you die?</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/what-happens-to-your-digital-bitcoins-if-you-die/">https://www.cbsnews.com/news/what-happens-to-your-digital-bitcoins-if-you-die/</a>
<b>GIST</b>	<p>What happens to your digital assets when you die? There's no single answer to that question. Digital assets cover a wide range of items, from Facebook and LinkedIn accounts to online bank accounts -- and cryptocurrencies like bitcoin.</p> <p>Bitcoin offers a unique challenge upon death. Since bitcoins only exist in virtual form and are encrypted by their very nature, they are extremely secure. Each bitcoin owner has a private password, or key, that allows secure access to the bitcoins stored in their digital wallet. Unfortunately, there is no method of retrieving this private key for a potential heir because there is no central authority that tracks the private keys.</p> <p>If you pass away without leaving anyone the private key, your bitcoins effectively become inaccessible to anyone. Similarly, if you leave your private key behind without a clear explanation of what it is and how to use it, your bitcoins are likely to stay lost. It's similar to a key to a safety deposit box without any indicator of where the box is located -- except that a bank will eventually clear out a safety deposit box to reclaim the space.</p> <p>Nobody would ever "clear out" old bitcoins to retain space if they could, because there's no incentive to do so. The genius of bitcoin is that the algorithm that creates them inherently limits the supply -- so when bitcoins are lost, the remaining supply in circulation become a bit more valuable through scarcity.</p>

<b>HEADLINE</b>	<b>01/08 AI in workplace sinking wages?</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/ai-in-workplace-sinking-wages/">https://www.cbsnews.com/news/ai-in-workplace-sinking-wages/</a>
<b>GIST</b>	Artificial intelligence can mean everything from personal digital assistants like Amazon's (AMZN) Echo

to the program that checks you into a doctor's office, or even a nail salon, before you speak to a human. These features are becoming increasingly ubiquitous in U.S. cities as offices automate many functions. A recent report from consultant McKinsey & Co. predicted about half of all current work activities can be adapted and automated, today.

Now, a new report of 10 major U.S. metropolitan areas from job search site Glassdoor showed the shift is underway as wages slip for jobs where "automation and AI are taking hold."

The survey, released monthly, found pay for loan officers fell 6.1 percent in December compared with a year earlier, while office manager pay sank 1.1 percent and machine operators lost 1.9 percent as automation takes root even more widely in manufacturing.

"In our pay data, when we look at jobs that are seeing weak pay growth, and sometimes the negative pay growth, it's clear that some of those professions have a weak labor market because some of those jobs are being done now by software," Glassdoor Chief Economist Andrew Chamberlain said in an interview.

It's not so much that all of one job is being replaced, it's that portions of some traditional jobs are being automated, Chamberlain said. Electronic tablet check-in at all kinds of offices, for example, is replacing one function of the administrative assistant. More people now can apply for loans online, going through the bulk of the process before ever actually speaking to a human.

"So far we really haven't seen large-scale displacement of people actually becoming fully unemployed because their job has been fully replaced by artificial intelligence," Chamberlain noted.

It's that the jobs themselves are changing: New supervisory skills are needed to oversee humans and the software-driven tasks that now do some portion of their work, and workers who have those skills are in demand. A recent Gartner report predicted AI will create more jobs than it eliminates by 2020 and generate 2 million new net jobs in 2025.

But for now, the transition may be cutting into wages as job descriptions and skills needed to do those jobs change.

As many as one-third of U.S. workers may need to learn new skills and find new occupations by 2030, the McKinsey report estimated. Transitional remedies will be needed, and the authors cite measures being explored globally, such as basic universal income and extensive job training.

**HEADLINE** 01/08 Crypto website changes data

**SOURCE** <https://www.wsj.com/articles/a-crypto-website-changes-its-data-and-100-billion-in-market-value-vanishes-1515443100>

<b>GIST</b>	<p>Prices for some of the most popular cryptocurrencies dropped sharply Monday. One apparent reason: an adjustment from a popular website on its digital-currency price quotes.</p> <p>A website called coinmarketcap.com on Monday removed data from some South Korean exchanges from its price quotes for a range of virtual currencies including bitcoin, Ethereum and Ripple’s XRP. The move followed a South Korean government crackdown on cryptocurrencies.</p> <p>The move by coinmarketcap caused some amount of chaos when prices across the board suddenly plunged. In mid-Monday trading, XRP had fallen 26% over the past 24 hours, Bitcoin Cash was down 18%, and litecoin was down 12%. Of the top 40 cryptocurrencies, 31 were down, including bitcoin and Ethereum.</p> <p>A representative of the website confirmed the moves in an email to The Wall Street Journal, citing “extreme price discrepancy” among South Korean exchanges. The company added in a tweet Monday afternoon that it “excluded some Korean exchanges in price calculations due to the extreme divergence in prices from the rest of the world and limited arbitrage opportunity.”</p> <p>Coinmarketcap has become one of the most popular destinations for price quotes as the sector surged last year. According to Amazon’s web-ranking service, coinmarketcap is currently the 154th most popular website in the world, in the same ballpark as Chinese retail giant Alibaba.com .</p> <p>The website’s rejiggered prices led to a flip in market-value rankings on the site. Ethereum, with a \$109 billion total market valuation, moved into second place, the spot previously occupied by XRP, which fell to third place with a \$97 billion market value. Bitcoin remained number one, with a \$255 billion market value.</p> <p>More than \$100 billion of the sector’s total market value was erased over the last 24 hours, according to the site. On Sunday, it stood at \$835 billion. On Monday, it fell to as low as \$683 billion, and lately was at \$722 billion.</p> <p>Before Monday, for example, prices for XRP on coinmarketcap were quoted as high as \$3.84 on Jan. 4. About 25% of XRP’s trading volume came from the Seoul-based online exchange Bithumb, according to coinmarketcap.</p> <p>On Monday, without the Korean-exchange data, the XRP price fell to about \$2.50, and at one point on coinmarketcap.com, fell below \$2.10. On Ripple’s website, the company quoted XRP at \$2.41, with its source being a weighted average of prices on the U.K. exchange Bitstamp.</p> <p>In 2017, South Korea and Japan became major markets for bitcoin and other cryptocurrencies, at the same time that China was clamping down on the sector. The flood of new money and enthusiasm in these countries led to price quotes that were higher, sometimes by hundreds of dollars, than on exchanges elsewhere. In Korea, this gap was nicknamed the “kimchi premium.”</p> <p>In Japan, authorities embraced the sector, implementing rules for proper trading of bitcoin and other cryptocurrencies. In South Korea, though, the government has been more concerned with the potential for criminal activity tied to cryptocurrencies, and even retail investor losses amid a global mania and what many fear is a bubble in the sector.</p>

<b>HEADLINE</b>	<b>01/09 Afghan heroin trade: US-UK failure</b>
<b>SOURCE</b>	<a href="https://www.theguardian.com/news/2018/jan/09/how-the-heroin-trade-explains-the-us-uk-failure-in-afghanistan">https://www.theguardian.com/news/2018/jan/09/how-the-heroin-trade-explains-the-us-uk-failure-in-afghanistan</a>
<b>GIST</b>	<p>After fighting the longest war in its history, the US stands at the brink of defeat in Afghanistan. How could this be possible? How could the world's sole superpower have battled continuously for more than 16 years – deploying more than 100,000 troops at the conflict's peak, sacrificing the lives of nearly 2,300 soldiers, spending more than \$1tn (£740bn) on its military operations, lavishing a record \$100bn more on “nation-building”, helping fund and train an army of 350,000 Afghan allies – and still not be able to pacify one of the world's most impoverished nations? So dismal is the prospect of stability in Afghanistan that, in 2016, the Obama White House cancelled a planned withdrawal of its forces, ordering more than 8,000 troops to remain in the country indefinitely.</p> <p>In the American failure lies a paradox: Washington's massive military juggernaut has been stopped in its steel tracks by a small pink flower – the opium poppy. Throughout its three decades in Afghanistan, Washington's military operations have succeeded only when they fit reasonably comfortably into central Asia's illicit traffic in opium – and suffered when they failed to complement it.</p> <p>It was during the cold war that the US first intervened in Afghanistan, backing Muslim militants who were fighting to expel the Soviet Red Army. In December 1979, the Soviets occupied Kabul in order to shore up their failing client regime; Washington, still wounded by the fall of Saigon four years earlier, decided to give Moscow its “own Vietnam” by backing the Islamic resistance. For the next 10 years, the CIA would provide the mujahideen guerrillas with an estimated \$3bn in arms. These funds, along with an expanding opium harvest, would sustain the Afghan resistance for the decade it would take to force a Soviet withdrawal. One reason the US strategy succeeded was that the surrogate war launched by the CIA did not disrupt the way its Afghan allies used the country's swelling drug traffic to sustain their decade-long struggle.</p> <p>Despite almost continuous combat since the invasion of October 2001, pacification efforts have failed to curtail the Taliban insurgency, largely because the US simply could not control the swelling surplus from the country's heroin trade. Its opium production surged from around 180 tonnes in 2001 to more than 3,000 tonnes a year after the invasion, and to more than 8,000 by 2007. Every spring, the opium harvest fills the Taliban's coffers once again, funding wages for a new crop of guerrilla fighters.</p> <p>At each stage in its tragic, tumultuous history over the past 40 years – the covert war of the 1980s, the civil war of the 90s and its post-2001 occupation – opium has played a central role in shaping the country's destiny. In one of history's bitter ironies, Afghanistan's unique ecology converged with American military technology to transform this remote, landlocked nation into the world's first true narco-state – a country where illicit drugs dominate the economy, define political choices and determine the fate of foreign interventions.</p>

During the 1980s, the CIA's secret war against the Soviet occupation of Afghanistan helped transform the Afghani-Pakistani borderlands into a launchpad for the global heroin trade. "In the tribal area," the US state department reported in 1986, "there is no police force. There are no courts. There is no taxation. No weapon is illegal ... Hashish and opium are often on display." By then, the process of guerrilla mobilisation to fight the Soviet occupation was long under way. Instead of forming its own coalition of resistance leaders, the CIA had relied on Pakistan's powerful Inter-Services Intelligence agency (ISI) and its Afghan clients, who soon became key players in the burgeoning cross-border opium traffic.

The CIA looked the other way while Afghanistan's opium production grew from about 100 tonnes annually in the 1970s to 2,000 tonnes by 1991. In 1979 and 1980, just as the CIA effort was beginning to ramp up, a network of heroin laboratories opened along the Afghan-Pakistan frontier. That region soon became the world's largest heroin producer. By 1984, it supplied a staggering 60% of the US market and 80% of the European. Inside Pakistan, the number of heroin addicts surged from near zero (yes, zero) in 1979 to 5,000 in 1980, and 1.3 million by 1985 – a rate of addiction so high the UN termed it "particularly shocking".

According to a 1986 state department report, opium "is an ideal crop in a war-torn country since it requires little capital investment, is fast growing and is easily transported and traded". Moreover, Afghanistan's climate was well suited to growing poppies. As relentless warfare between CIA and Soviet surrogates took its toll, Afghan farmers began to turn to opium "in desperation", since it produced "high profits" that could cover rising food prices. At the same time, the state department reported that resistance elements took up opium production and trafficking "to provide staples for [the] population under their control and to fund weapons purchases".

As the mujahideen guerrillas gained ground against the Soviet occupation and began to create liberated zones inside Afghanistan in the early 1980s, the resistance helped fund its operations by collecting taxes from peasants who grew the lucrative opium poppies, particularly in the fertile Helmand valley. Caravans carrying CIA arms into that region for the resistance often returned to Pakistan loaded down with opium – sometimes, reported the New York Times, "with the assent of Pakistani or American intelligence officers who supported the resistance".

Charles Cogan, a former director of the CIA's Afghan operation, later spoke frankly about the agency's choices. "Our main mission was to do as much damage as possible to the Soviets," he told an interviewer in 1995. "We didn't really have the resources or the time to devote to an investigation of the drug trade. I don't think that we need to apologise for this ... There was fallout in term of drugs, yes. But the main objective was accomplished. The Soviets left Afghanistan."

Over the longer term, the US intervention produced a black hole of geopolitical instability that would never again be sealed or healed. Afghanistan could not readily recover from the unprecedented devastation it suffered in the years of the first American intervention. As the Soviet-Afghan war wound down between 1989 and 1992, the Washington-led alliance essentially abandoned the country, failing either to sponsor a peace settlement or finance reconstruction.

While Washington turned away from Afghanistan to other foreign policy hotspots in Africa and the Persian Gulf, a vicious civil war broke out in a country that had already suffered, between 1979 and 1989, some 1.5 million dead, about 10% of the country's population. During the years of civil strife among the many well-armed warlords the CIA had left primed to fight for power, Afghan farmers raised the only crop that ensured instant profits: the opium poppy. Having multiplied twentyfold during the covert-war era of the 1980s, the opium harvest would more than double again during the civil war of the 1990s.

In this period of turmoil, opium's ascent is best understood as a response to severe damage from two decades of destructive warfare. With the return of some three million refugees to a war-ravaged land, the opium fields were an employment godsend, requiring nine times as many labourers to cultivate as wheat, the country's traditional staple. In addition, only opium merchants were capable of accumulating capital rapidly enough to be able to provide poor poppy farmers with much-needed cash advances, which often

provided more than half their annual income. That credit would prove critical to the survival of many impoverished villagers.

In the civil war's first phase, from 1992 to 1994, ruthless local warlords combined arms and opium in a countrywide struggle for power. Later, Pakistan threw its backing behind a newly arisen Pashtun force, the Taliban. After seizing Kabul in 1996 and taking control of much of the country, the Taliban regime encouraged local opium cultivation, offering government protection to the export trade and collecting much-needed taxes on both the opium harvested and the heroin manufactured. UN opium surveys showed that, during the Taliban's first three years in power, Afghanistan's opium crop accounted for 75% of world production.

In July 2000, however, as a devastating drought entered its second year and hunger spread across Afghanistan, the Taliban government suddenly ordered a ban on all opium cultivation, in an apparent appeal for international acceptance. A subsequent UN crop survey of 10,030 villages found that this prohibition had reduced the harvest by 94%.

Three months later, in September 2000, the Taliban sent a delegation to UN headquarters in New York to trade upon the country's continuing drug prohibition in a bid for diplomatic recognition. Instead, the UN imposed new sanctions on the regime for protecting Osama bin Laden. The US, on the other hand, actually rewarded the Taliban with \$43m in humanitarian aid, even as it seconded UN criticism over Bin Laden. Announcing this aid in May 2001, secretary of state Colin Powell praised "the ban on poppy cultivation, a decision by the Taliban that we welcome", but still urged the regime to end "their support for terrorism; their violation of internationally recognised human rights standards, especially their treatment of women and girls".

After largely ignoring Afghanistan for a decade, Washington "rediscovered" the country in the aftermath of the 9/11 terrorist attacks. In October 2001, the US began bombing the country, and then, with the support of British forces, launched an invasion spearheaded by local warlords. The Taliban regime collapsed with a speed that surprised many government officials. In retrospect, it seems likely that its opium prohibition was a crucial factor.

To an extent not generally appreciated, Afghanistan had, for two full decades, devoted a growing share of its resources – capital, land, water and labour – to the production of opium and heroin. By the time the Taliban banned cultivation, its agriculture had become little more than an opium monocrop. The drug trade accounted for most of its tax revenues, much of its export income, and a significant share of its employment.

The Taliban's sudden opium eradication proved to be an act of economic suicide that brought an already weakened society to the brink of collapse. A 2001 UN survey found that the ban had "resulted in a severe loss of income for an estimated 3.3 million people", about 15% of the population. In this context, it became, according to the UN, "easier for western military forces to persuade rural elites and the population to rebel against the regime".

In little more than a month, the lethal US bombing campaign, combined with ground attacks by its warlord allies, smashed the Taliban's weakened defenses. But the longer-term US strategy would plant the seeds, quite literally, for the Taliban's surprising revival just four years later.

While the American bombing campaign raged throughout October 2001, the CIA shipped \$70m in cash into the country to mobilise its old cold war coalition of tribal warlords for the fight against the Taliban, an expenditure President George W Bush would later hail as one of history's biggest "bargains". To capture Kabul and other key cities, the CIA put its money behind the leaders of the Northern Alliance, an ethnic Tajik force that had fought the Soviets in the 1980s and then resisted the Taliban government in the 1990s. They, in turn, had long dominated the drug traffic in the area of north-east Afghanistan that they controlled during the Taliban years. The CIA also turned to a group of rising Pashtun warlords along the Pakistan border who had been active as drug smugglers in the south-eastern part of the country. As a result, when the Taliban collapsed, the groundwork had already been laid for the resumption of opium cultivation and

the drug trade on a major scale.

Once Kabul and the provincial capitals were taken, the CIA quickly ceded operational control to allied military forces and civilian officials. In the years to come, those forces' inept drug-suppression programmes would cede the heroin traffic's growing profits first to the warlords and, in later years, largely to Taliban guerrillas. In a development without historical precedent, illicit drugs would be responsible for 62% of the country's 2003 gross domestic product (GDP).

But for the first few years of the occupation, according to a 2007 New York Times report, defense secretary Donald Rumsfeld reportedly "dismissed growing signs that drug money was being funnelled to the Taliban", while the CIA and the military "turned a blind eye to drug-related activities by prominent warlords".

In late 2004, after nearly two years of outsourcing opium control to its British allies and police training to the Germans, the White House was suddenly confronted with troubling CIA intelligence suggesting that the escalating drug trade was fuelling a revival of the Taliban. Backed by George W Bush, secretary of state Colin Powell then urged a forceful counter-narcotics strategy for parts of rural Afghanistan, including the same kind of aggressive aerial defoliation then being used against Colombia's illicit coca crop. But the US ambassador to Afghanistan, Zalmay Khalilzad, resisted this approach, seconded by his local ally Ashraf Ghani, then the country's finance minister (and, since 2014, its president), who warned that such an eradication program would mean "widespread impoverishment" in the country, without \$20bn in foreign aid to create a "genuine alternative livelihood". As a compromise, Washington came to rely on private contractors such as DynCorp to train Afghan teams to eradicate drugs. By 2005, however, that effort had, according to New York Times correspondent Carlotta Gall, already become "something of a joke".

By 2007, the UN's Afghanistan Opium Survey found that the country's then-record opium harvest of approximately 8,200 tonnes provided 93% of the world's illicit heroin supply. Significantly, the UN stated that Taliban guerrillas have "started to extract from the drug economy resources for arms, logistics, and militia pay". In 2008, the rebels reportedly collected \$425m in "taxes" levied on the opium traffic, and with every harvest they made enough funds to recruit a new crop of young fighters from the villages. Each of those prospective guerrillas could count on monthly payments of \$300 – far above the wages they would have made as agricultural laborers.

To contain the spreading insurgency, Washington decided to commit 40,000 more US combat troops to Afghanistan in mid-2008, raising allied forces to 70,000. Recognising the crucial role of opium revenues in Taliban recruitment, the allied command was also fielding specialist teams that used development aid to encourage drug-suppression efforts in poppy-rich provinces. It was a fortuitous moment. That record harvest in 2007 had created an opium surplus that depressed prices, while simultaneous food shortages made wheat a competitive crop. As farmers used foreign aid to plant food crops in key areas of Helmand and Nangarhar provinces, the country's poppy cultivation slipped from a record 200,000 hectares (494,000 acres) in 2007 to just 123,000 two years later – still sufficient, however, to sustain the Taliban. Meanwhile, inept and heavy-handed attempts to suppress the drug trade only ended up increasing opposition to the US and its allies.

By 2009, the guerrillas were expanding so rapidly that the new Obama administration opted for a "surge" of US troop strength to 102,000 in a bid to cripple the Taliban. After months of rising deployments, President Obama's big breakthrough strategy was officially launched in the darkness before dawn on 13 February 2010, at Marja, a remote market town in Helmand province. As waves of helicopters descended on its outskirts spitting up clouds of dust, hundreds of marines sprinted through fields of sprouting opium poppies toward the village's mud-walled compounds. Though their targets were the local Taliban guerrillas, the marines were in fact occupying one of the capitals of the global heroin trade.

A week later, Gen Stanley McChrystal choppered into town with Karim Khalili, Afghanistan's vice-president. They were there for the media rollout of new-look counter-insurgency tactics that were, the general told reporters, certain to pacify villages such as Marja. The local opium traders, however, had other ideas. "If they come with tractors," one Afghan widow announced to a chorus of supportive shouts

from her fellow farmers, “they will have to roll over me and kill me before they can kill my poppy”. Speaking by satellite telephone from the region’s opium fields, one US embassy official told me: “You can’t win this war without taking on drug production in Helmand province.”

By attacking the guerrillas but failing to eradicate the opium harvest that funded new insurgents every spring, Obama’s surge soon faltered. Amid the rapid drawdown of allied forces to meet Obama’s politically determined deadline of December 2014 for “ending” all combat operations, a marked reduction in air operations allowed the Taliban to launch mass-formation offensives, which killed record numbers of Afghan army troops and police.

At the time, John Sopko, the special inspector for Afghanistan, offered a telling explanation for the Taliban’s survival. Despite the expenditure of a staggering \$7.6bn on “drug eradication” programs during the previous decade, he concluded that, “by every conceivable metric, we’ve failed. Production and cultivation are up, interdiction and eradication are down, financial support to the insurgency is up, and addiction and abuse are at unprecedented levels in Afghanistan”.

As the 2014 opium crop was harvested, fresh UN figures suggested that production levels were approaching the country’s 2007 high. In May 2015, having watched this flood of drugs enter the global market as US counter-narcotics spending climbed to \$8.4bn, Sopko tried to translate these developments into a comprehensible all-American image. “Afghanistan,” he said, “has roughly 500,000 acres, or about 780 square miles, devoted to growing opium poppy. That’s equivalent to more than 400,000 US football fields – including the end zones”.

During Afghanistan’s 2015 fighting season, the Taliban decisively seized the combat initiative, and opium seemed ever more deeply embedded in its operations. In October 2015, the UN released a map showing that the Taliban had “high” or “extreme” control in more than half the country’s rural districts. Within a month, the Taliban unleashed offensives countrywide that were aimed at seizing and holding territory. Not surprisingly, the strongest attacks came in the poppy heartland of Helmand province, where half the country’s opium crop was then grown.

In 2016, 15 years after Afghanistan was “liberated”, and in a significant reversal of the Obama administration’s drawdown policies, Washington launched a mini-surge by “hundreds” of new US troops into Helmand province to deny insurgents the “economic prize” of the world’s most productive poppy fields. Despite support from US airpower and 700 special-operations troops, in February and March 2016 embattled Afghan government forces retreated from two more districts, leaving the Taliban largely in control of 10 of the province’s 14 districts.

With its forces demoralised and the Taliban fielding aggressive fighters equipped with night-vision and sophisticated weapons, US airstrikes became the Afghan government’s last, tenuous line of defence. And in a tacit admission of failure, the Obama administration ended its planned withdrawal in June 2016, allowing US forces to move beyond advising and rejoin actual combat, and announcing, a month later, that 8,400 troops would remain there for the foreseeable future.

In Helmand and other strategic provinces, the Afghan army seemed to be losing a war that was now driven – in ways that eluded most observers – by a battle for control of the country’s opium profits. In Helmand province, both Taliban rebels and provincial officials are locked in a struggle for control of the lucrative drug traffic. “Afghan government officials have become directly involved in the opium trade”, the New York Times reported in February 2016. In so doing, they expanded “their competition with the Taliban ... into a struggle for control of the drug traffic”, while imposing “a tax on farmers practically identical to the one the Taliban uses”. In a process that implicated virtually the entire government, provincial officials then passed a portion of their illicit profits “up the chain, all the way to officials in Kabul ... ensuring that the local authorities maintain support from higher-ups and keeping the opium growing”.

Simultaneously, a UN security council investigation found that the Taliban had systematically tapped “into the supply chain at each stage of the narcotics trade” – collecting a 10% tax on opium cultivation in Helmand, fighting for control of heroin laboratories and acting as “the major guarantors for the trafficking

of raw opium and heroin out of Afghanistan”. No longer simply taxing the traffic, the Taliban was so deeply and directly involved that, according to the New York Times, it “has become difficult to distinguish the group from a dedicated drug cartel”.

These dismal trends persisted throughout 2017, as the Afghan opium harvest nearly doubled to 9,000 tonnes, well above the previous peak of 8,200 tonnes in 2007. Inside wartorn Helmand province, the poppy area increased by 79% to 144,000 hectares, representing 44% of the country’s total crop. In November, convinced that opium is providing 60% of the Taliban’s funds for wages and weapons, the US command – emboldened and expanded by Donald Trump’s decision to “win” the Afghan war – dispatched, for the first time ever, F-22 fighters and B-52 bombers to destroy 10 of the Taliban’s heroin laboratories in Helmand, a small share of the country’s 500 drug refineries.

For the foreseeable future, opium will likely remain entangled in the rural economy, the Taliban insurgency, and government corruption whose sum is the Afghan conundrum.

The failure of America’s intervention in Afghanistan offers broader insight into the limits to its global power. The persistence of both opium cultivation and the Taliban insurgency suggest the degree to which the policies that Washington has imposed upon Afghanistan since 2001 have reached a dead end. For most people worldwide, economic activity, the production and exchange of goods, is the prime point of contact with their government. When, however, a country’s most significant commodity is illegal, then political loyalties naturally shift to the economic networks that move that product safely and secretly from fields to foreign markets, providing protection, finance and employment at every stage. “The narcotics trade poisons the Afghan financial sector and fuels a growing illicit economy,” John Sopko explained in 2014. “This, in turn, undermines the Afghan state’s legitimacy by stoking corruption, nourishing criminal networks and providing significant financial support to the Taliban and other insurgent groups.”

After 16 years of continuous warfare, Washington is faced with the same choice it had back in 2010, when Obama’s generals airlifted those marines into Marja. Just as it has been over the past decade and a half, the US can remain trapped in the same endless cycle. As snow melts from the mountain slopes and poppy plants rise from the soil every spring, there will be a new batch of teenage recruits from impoverished villages ready to fight for the rebel cause.

<b>GIST</b>	<p>COX’S BAZAR, Bangladesh — Mohammad Haroon, a community leader at the Balukhali Refugee Camp here, is a worried man. The 27-year-old has heard complaints of men visiting refugees’ tents in the dead of the night in search of young people. He is certain they are Rohingya insurgents on the lookout for recruits for their fight in neighboring Myanmar.</p> <p>The fierce clash between the government of overwhelmingly Buddhist Myanmar and the Muslim Rohingya minority has created the world’s most pressing humanitarian crisis, with hundreds of thousands forced to flee their homes. But the refugee camps here in Bangladesh also represent a fertile breeding ground and a new cause for Islamist militants looking to re-energize their struggle.</p> <p>“There are bad elements everywhere. Here, these bad elements are trying to take advantage of our current situation and exploit us into turning against each other,” said Mr. Haroon. “They want us to fight the military, the monks. What good can come out of more violence?”</p> <p>Mr. Haroon was referring to the Arakan Rohingya Salvation Army, or ARSA, an insurgency movement that has organized attacks against Myanmar security forces. Ultra-nationalist Buddhist monks are among the most vocal critics of the Rohingya minority in the Southeast Asian country.</p>

Since late August, an estimated 650,000 stateless Rohingyas have fled from Myanmar to neighboring Bangladesh to escape the military's campaign of torching villages, rape and murder. The Trump administration the United Nations are among a wide range of groups condemning what they see as ethnic cleansing.

Myanmar's military leaders claim their crackdown is in response to ARSA's deadly attacks. Earlier this month, for example, ARSA rebels attacked an army truck in Myanmar, wounding five troops, according to state-controlled media.

ARSA fighters, in turn, have said they are simply trying to protect the approximately 1 million Muslim Rohingyas who have long lived in largely Buddhist Myanmar from discrimination.

Descended from laborers imported from Bangladesh during British colonial rule in the 19th century, the Rohingyas are technically not Myanmar citizens. Most live in Rakhine, an impoverished province on Myanmar's west coast.

Across the sprawling, overcrowded refugee camps in southeastern Bangladesh's Cox's Bazar, the district bordering Myanmar, rumors swirl of more ARSA attacks in the offing.

Independent observers have warned of ARSA's efforts to target and recruit Rohingya youth, stoking fears of radicalization at the camps.

Angshuman Choudhury, a New Delhi-based researcher at the Institute of Peace and Conflict Studies, believes Rohingya refugees are extremely susceptible to exploitation.

"The Rohingyas are a marginalized community that has been persecuted for decades," Mr. Chaudhury said. "Their economically vulnerable state and their natural urge to vent out their anger to what happened makes them the perfect recruitment tool."

With Islamic State's territorial base in Syria and Iraq nearly eliminated, terrorism analysts fear Islamist militants fleeing the Middle East could fasten on crises such as those in Myanmar as their next base of operations. Foreign fighters were much in evidence in recent brutal fighting between the government of the Philippines and radical Islamic terror groups in the country's south.

"The conditions in Rakhine are ripe for the influence of extremist stimuli, including the infiltration of Islamic State ideology, which may worsen the situation in Myanmar," a study last fall by researchers at Singapore-based Nanyang Technological University concluded. It's an ideal situation for the Islamic State and affiliates to collaborate with regional groups, they added.

<b>GIST</b>	<p>A man and woman who met on a Muslim dating website were convicted Monday of plotting a bomb attack in Britain.</p> <p>Prosecutors say Munir Mohammed, an asylum-seeker from Sudan, and London pharmacist Rowaida El-Hassan met on SingleMuslim.com and bonded over their shared extremist views.</p> <p>Both defendants denied the charges, but jurors at London's Central Criminal Court found them guilty of preparing terrorist acts.</p> <p>Prosecutors said Mohammed volunteered to carry out an attack during Facebook exchanges with a man he believed to be an Islamic State group commander.</p>

	<p>Police said they found bomb-making instructions and two of the three components for the explosive TATP at Mohammed's home when he was arrested in December 2016.</p> <p>Prosecutors say Mohammed drew on El-Hassan's knowledge of chemicals during his preparations.</p> <p>She acknowledged an "emotional attachment" to Mohammed, but denied plotting an attack.</p> <p>Judge Michael Topolski said Mohammed, 36, had been "planning an explosion to kill and maim innocent people in the cause of Islamic State." The judge said El-Hassan, 33, was "ideologically motivated to provide him with support, motivation and assistance."</p> <p>They are set to be sentenced Feb. 22 and face a maximum sentence of life in prison.</p>

<b>HEADLINE</b>	<b>01/08 Syria captures 14 villages from rebels</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/syrias-death-toll-idlib-car-bomb-rises-25-52205911?cid=clicksource_76_2_hero_headlines_headlines_hed">http://abcnews.go.com/International/wireStory/syrias-death-toll-idlib-car-bomb-rises-25-52205911?cid=clicksource_76_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>Syrian government forces captured 14 villages on Monday as they advance on the largest rebel-held enclave in the country's north amid a wave of airstrikes.</p> <p>Syrian government forces and their allies have been on the offensive since late October in Hama and Idlib provinces, capturing nearly 100 villages from insurgent groups, including the al-Qaida-linked Levant Liberation Committee. The offensive intensified on Christmas Day after reinforcements were brought in from other parts of Syria.</p> <p>The main aim of the troops is to reach the rebel-held Abu Zuhour air base and secure the road linking the capital, Damascus, with the northern city of Aleppo, Syria's largest. Rebels captured Abu Zuhour in 2015 after a three-year siege.</p> <p>The government-controlled Syrian Central Military Media said the newly captured villages, include Freija, Jahman, Dawoudiyeh and Jub al-Qasab, bring the troops closer to the air base.</p> <p>The SCMM and the opposition's Britain-based Syrian Observatory for Human Rights confirmed that 14 villages have been captured over the past hours.</p> <p>The offensive in the southern parts of Idlib province comes amid intense airstrikes and shelling that have killed 21 people since Sunday, according to the Observatory.</p> <p>Clashes also erupted Monday near the Damascus suburb of Harasta, after government forces reached troops trapped for more than a week in a military base surrounded by insurgents.</p> <p>State media said the Syrian army broke through rebel lines Sunday to reach soldiers trapped at the Murakabat vehicle base near Harasta, in the eastern Ghouta suburbs.</p> <p>Rebels surrounded the base late last month, trapping an unknown number of soldiers inside. The rebels say they have taken numerous soldiers hostage. The Observatory says 159 rebels and government soldiers have been killed in fighting over the base since Dec. 29.</p>

<b>HEADLINE</b>	<b>01/08 Lawsuit: Ala. sheriffs profit off jail food</b>
<b>SOURCE</b>	<a href="https://apnews.com/84c22c4967c744ecbc6b39d37fe02d33/Groups-sue,-aim-to-learn-if-sheriffs-profit-from-jail-food">https://apnews.com/84c22c4967c744ecbc6b39d37fe02d33/Groups-sue,-aim-to-learn-if-sheriffs-profit-from-jail-food</a>
<b>GIST</b>	<p>MONTGOMERY, Ala. (AP) — Two advocacy groups say they have sued Alabama sheriffs seeking records about whether they have personally profited from jailhouse food programs.</p> <p>The Atlanta-based Southern Center for Human Rights and the Alabama Appleseed Center for Law and Justice announced the lawsuit Monday against 49 sheriffs they said did not comply with a public records request seeking information about the food programs.</p> <p>A state law says state sheriffs can “keep and retain” leftover food money and some sheriffs have kept the money as income. A federal judge in 2009 found that a sheriff — who got the nickname “Sheriff Corndog” for feeding corndogs two or more times a day— had inadequately fed inmates and ordered him jailed for a day in contempt of court.</p> <p>Aaron Littman, a staff attorney at the Southern Center for Human Rights, said the “archaic system is based on a dubious interpretation of state law.” The money is supposed to be used, he argued, for official purposes.</p> <p>“It also raises grave ethical concerns, invites public corruption, and creates a perverse incentive to spend as little as possible on feeding people who are in jail,” Littman said in a statement announcing the lawsuit.</p> <p>Bobby Timmons, the executive director of the Alabama Sheriffs’ Association, could not immediately be reached for comment.</p> <p>The groups said they asked sheriffs to provide information about the jail feeding program but received limited responses. The lawsuit, filed in Hale County Circuit Court, asks a judge to order the sheriffs to turn over the requested documents.</p> <p>Alabama Appleseed executive director Frank Knaack said the public has a right to know whether sheriffs “are meeting the basic human needs of incarcerated people in their care, or are instead filling their personal coffers.”</p>

<b>HEADLINE</b>	<b>01/08 Israel appoints first female sharia judge</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/best-countries/articles/2018-01-08/israels-first-female-sharia-judge-reflects-changes-for-israels-arab-community">https://www.usnews.com/news/best-countries/articles/2018-01-08/israels-first-female-sharia-judge-reflects-changes-for-israels-arab-community</a>
<b>GIST</b>	<p>JERUSALEM – After nearly a year on the job, Hana Mansour Khatib says she is already seeing the impact she can make as the first female judge in Israel's Islamic, or sharia court system. She says she has long witnessed many female plaintiffs remain quiet and instruct a lawyer or male relative to speak on their behalf in the Islamic courts, which handle marriage, divorce and other personal issues for Muslims here.</p> <p>"But now, I have noticed that when women see me as the judge, they have more confidence to talk and speak up," says Khatib, adding that she also asks the many relatives who often accompany a divorcing couple to court to leave the room "so the parties can talk honestly. I really encourage them to talk and I want to hear what they have to say, especially in these sensitive matters."</p> <p>In appointing Khatib, Israel joins a growing number of countries with Islamic courts with female judges. Her appointment also is significant here for the Jews and Christians, who, like Muslims, must marry and divorce through their respective religious authorities because civil marriage does not exist in Israel. Jewish and Christian legal authorities remain all male.</p>

"The appointment of Khatib is wonderful proof that what is perceived as entrenched and immutable can in fact be changed," says Ruth Halperin-Kaddari, a law professor at Bar-Ilan University and vice president of the U.N. Committee on Elimination of all forms of Discrimination against Women.

Khatib's judgeship comes at a time of rapid change for Israel's Arab minority, which makes up about 20 percent of the country's population. Recent years have seen an increase in the number of Arab women going to work and earning academic degrees and certifications. There has been significant government investment, including a five-year 15 billion shekel (\$4.3 million) plan, implemented in 2015, to improve education, employment opportunities and other infrastructure in Israel's Arab communities.

The appointment of a female "qadi" – a magistrate or judge on a sharia court – may be even more significant in the long run than those other social changes, says Israeli parliamentarian Esawi Frej, a Muslim and a member of the left-wing Meretz political party. That's because Arab society remains deeply traditional, and what religious leaders say carries a lot of weight, explains Frej, who sat on the parliamentary committee that nominated Khatib.

"There really is no such thing as a secular Muslim," he says. "So for real change in Muslim society, you need the religious establishment to support it. So it is significant that you have religious law saying it's OK for women to be a sharia court judge. That means that gender equality can improve in other parts of life, as well."

Although appointing a female judge is still seen by many as controversial, Islamic law does not ban it, Abd Al-Hakim Samara, Israel's Sharia Court of Appeals president, said at last spring's swearing-in ceremony for Khatib and three new male judges. Khatib was appointed "out of a right, not out of kindness," Samara said at the ceremony.

In recent years, female sharia judges have been appointed to other courts in the region, including in Morocco, Tunisia, Egypt and the Palestinian Authority. For centuries, judges have been only men due to cultural and social norms, experts say.

The appointment of female qadis in Israel and elsewhere shows how Muslim feminists are finding empowerment through religion, and changing the social and cultural norms that have long held them back, says Engy Abdelkader, a Rutgers University professor of human rights law who has researched the history of female Islamic judges.

<b>HEADLINE</b>	<b>01/08 Seattle school bus driver strike?</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/862491/seattle-school-bus-strike-january-2018/">http://mynorthwest.com/862491/seattle-school-bus-strike-january-2018/</a>
<b>GIST</b>	<p>Seattle education officials are warning families that school bus service may be disrupted as soon as Tuesday.</p> <p>First Student, the company that runs buses for Seattle Public Schools, made a contract offer to its drivers' union, but that offer was voted down on Saturday, Jan. 6. It has left the status of Seattle's yellow school bus services in limbo. Normal bus service was expected Monday but according to the union's website, a strike could be next. Now Seattle Public Schools is asking families to be prepared for a strike.</p> <p>The website for the Teamsters Union Local 174 states:</p> <p><i>At a meeting that filled nearly every seat in the Local 174 Union auditorium, First Student school bus drivers voted by a margin of 85 percent to reject the most recent offer made by their employer. Now that this offer has been rejected, a protracted strike by the group of over 400 drivers is all but imminent, barring a new, better offer from First Student.</i></p>

	<p>The same union went on strike in November 2017. It lasted one day and left 12,000 students without transportation to classes. For that strike, the drivers' union announced in advance that bus service would not be available to families. The strike was put on hold as contract negotiations continued. With the recent vote, the strike could be on once again.</p> <p>According to the Teamsters, drivers were unhappy with the proposal provided by First Student — it did not include a pension plan and it did not offer healthcare coverage to spouses and family members.</p> <p>Driver Alex Bengé, a shop steward at First Student's South Park location, is quoted on the union's website: "This company is the Wal-Mart of school transportation, and we need to say it loud and clear: we are not okay with that. We cannot wait – we need to do this now."</p>

<b>HEADLINE</b>	<b>01/08 Court: Miss. anti-LGBT law stands</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/feature/nbc-out/supreme-court-allows-mississippi-anti-lgbt-law-stand-n835721">https://www.nbcnews.com/feature/nbc-out/supreme-court-allows-mississippi-anti-lgbt-law-stand-n835721</a>
<b>GIST</b>	<p>WASHINGTON — The U.S. Supreme Court declined Monday to take up a legal battle over a Mississippi law that allows state employees and private businesses to deny services to LGBT people based on religious objections.</p> <p>Signed into law in 2016 in response to the Supreme Court's gay marriage ruling, it allows county clerks to avoid issuing marriage licenses to gay couples and protects businesses from lawsuits if they refuse to serve LGBT customers.</p> <p>The law was immediately challenged. But lower courts, without ruling on the merits of the law, said those suing could not show that they would be harmed by it.</p> <p>A new round of challenges is expected from residents who have been denied service, and the issue could come back to the Supreme Court's doorstep.</p> <p>Sponsors of the law said they wanted to protect those who believe that marriage can exist only between a man and a woman and that a person's gender is determined at birth.</p> <p>A conservative law firm that helped defend the law praised the Supreme Court for refusing to take up the challenge.</p> <p>"Good laws like Mississippi's protect freedom and harm no one," said Kevin Theriot of Alliance Defending Freedom.</p> <p>He said the law's only purpose was guaranteeing "that Mississippians don't live in fear of losing their careers or their businesses simply for affirming marriage as a husband-wife union."</p> <p>But gay rights groups promised to continue their efforts to get the law struck down.</p>

<b>HEADLINE</b>	<b>01/08 Costliest disasters record shattered</b>
<b>SOURCE</b>	<a href="http://www.cnn.com/2018/01/08/us/2017-costliest-disasters/index.html">http://www.cnn.com/2018/01/08/us/2017-costliest-disasters/index.html</a>
<b>GIST</b>	<p>(CNN)2017 was the costliest year ever for weather and climate disasters in the United States, the National Oceanographic and Atmospheric Administration announced Monday, totaling \$306 billion. The previous record year, 2005, saw \$215 billion in disasters.</p> <p>Highlighted by a string of hurricanes that pounded the southeastern US coast in August and September, as</p>

well as devastating wildfires that torched large swaths of Northern and Southern California, 2017 saw 16 weather events that each topped a billion dollars in damage.

This ties 2011 for the most billion-dollar weather events to occur in a single year, but their extreme nature and the breadth of disaster types really set last year apart.

"In 2017, we have seen the rare combination of high disaster frequency, disaster cost and diversity of weather and climate extreme events," said Adam Smith, lead researcher at NOAA's National Centers for Environmental Information.

"The U.S. has endured billion-dollar impacts from six of the seven disaster categories we track," he said: drought, flood, freeze, severe storm, tropical cyclone, wildfire and winter storm. There hasn't been a year when all seven disaster categories have seen a billion-dollar disaster.

2017 lacked only a billion-dollar winter storm -- though we almost certainly had one in the first week of 2018 with the major nor'easter termed a "bomb cyclone."

Hurricanes are the costliest weather events, responsible for about half of the total losses among all US billion-dollar disasters despite accounting for less than 20% of the total events since 1980.

This certainly proved true in 2017, when the US and the Caribbean islands endured back-to-back-to-back devastating hurricanes -- all of them now ranking among the top five costliest disasters -- which were the main drivers behind the year becoming the costliest on record.

But 2017 will also be remembered for the way years of drought combined with strong winds to create numerous historic firestorms in the Western states, namely California.

"In addition to these hurricanes, the US had a historically damaging wildfire seasons with over 9.1 million acres burned and damages up to \$18 billion," Smith said.

NOAA groups all the western wildfires from the year into one billion-dollar weather disaster, even though 2017 featured multiple massive fires that each would have caused at least \$1 billion in damages.

Six of the 20 most destructive fires in California history occurred this year.

During the month of October, "over 15,000 homes, businesses and other structures across California" were destroyed, according to NOAA.

"The combined destruction of the Tubbs, Atlas, Nuns and Redwood Valley wildfires represent the most costly wildfire event on record," NOAA said Monday, "also causing 44 deaths."

Santa Ana winds returned to California in December, bringing another round of disastrous fires.

The Thomas wildfire in Ventura and Santa Barbara counties grew uncontrolled for days, topping 280,000 acres and becoming the largest single fire in California history.

Disastrous wildfires burned over 9.8 million acres across multiple Western and Northwestern states during 2017, well more than the 10-year average of 6.5 million acres, according to NOAA.

Montana was also hit hard, with more than 1 million acres burned during the year.

NOAA has been tracking billion-dollar disasters since 1980, and it has seen a clear upward trend in their number and severity.

"US billion-dollar disasters are becoming more common," Smith said, but the reasons are numerous and complex.

<p><a href="#">Return to Top</a></p>	<p>The damage potential is much higher than in previous decades due to "increases in population and material wealth over the last several decades," he said.</p> <p>This is compounded by the fact that much of this population resides in densely populated cities in vulnerable areas like coasts and river floodplains and near large forests.</p> <p>But climate change is what concerns Smith the most.</p> <p>"Climate change is playing an increasing role, amplifying the frequency and intensity of certain types of extreme weather that lead to billion-dollar disasters," Smith said.</p> <p>2017 stands as a glaring example of this, with record inland floods and a wildfire season that dwarfs all others, two of the event types most affected by a warming climate.</p>

<b>HEADLINE</b>	<b>01/08 Toxic chemicals at Air Force bases</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/air-force-base-epa-toxic-chemicals-pfc-cancer-low-birth-weight/">https://www.cbsnews.com/news/air-force-base-epa-toxic-chemicals-pfc-cancer-low-birth-weight/</a>
<b>GIST</b>	<p>For 25 years, Dan Cruz delivered mail at the Peterson Air Force Base and drank the water. Then came cancer – thyroid, prostate, testicular – he said never before seen in his family.</p> <p>"I'm the only one that's been diagnosed with cancer not once, not twice, but three times. People on my route... cancer has come upon them and sometimes stage 4," Cruz told CBS News correspondent Barry Petersen.</p> <p>The cause could be firefighting foam used since the 1970s at Air Force bases and airports across the country, something meant to save lives that may have harmed them instead. The foam contains highly fluorinated chemicals, known as PFCs. It is suspected of causing some cancers and underweight births.</p> <p>Mica Ullum has lived near Peterson Air Force Base for a quarter century, in a town where the foam has contaminated the water. Sadie, one of three children born to Mica, was born premature, weighing a mere one pound six ounces. She spent 94 days in the neonatal intensive care unit. Mica's four other pregnancies ended in miscarriage or death.</p> <p>"With what you know now, do you think any of this has to do with the effects, potential effects, of what's in the water?" Petersen asked.</p> <p>"Possibly, yeah," Ullum responded.</p> <p>"Why?"</p> <p>"Because if you continue to pump poison into your body, something has to respond," Ullum said.</p> <p>Peterson is one of 190 Air Force bases where PFCs may have leached in the ground and surrounding areas. One study based on EPA's test results shows as many as six million people may be exposed nationwide to PFCs in their drinking water at higher levels than the EPA now deems safe.</p> <p>But the more than 60,000 people in the communities near Peterson Air Force Base may be America's hardest-hit. The EPA said anything over 70-parts per trillion could be dangerous. Some water they tested here had over 1,300 parts per trillion. Additionally, according to a proposed class action lawsuit filed against the foam manufacturers, it has caused serious medical conditions in hundreds of residents.</p> <p>One foam manufacturing company, 3M, said there is no merit in the health claims, adding they "sold these products with instructions regarding their safe use and disposal...acted responsibly at all times...and will vigorously defend this lawsuit."</p>

But the Air Force has responded, spending more than \$4 million to provide bottled water and filtration systems. Air Force firefighters now train with water, and for real fires it uses a different fluorinated foam, still containing another type of PFCs, but believed to be safer.

But some of those who have studied the new foam say the Air Force may have traded one evil for another.

"Our chemical regulation system makes us all guinea pigs... because chemicals are assumed safe until proven guilty and they go out into the world... and we are exposed to them with no health information," said Arlene Blum, researcher at the University of California Berkeley.

Mark Correll is deputy assistant secretary of the Air Force for environment safety and infrastructure.

"Is it possible that you've replaced this with something that could still have a long-term problem down the road?" Petersen asked him.

"I've got to rely on the Environmental Protection Agency and on the health agencies... to tell us whether or not that's going to be a problem in the future," Correll said.

But for now, "We're going to treat it as if it were any other hazardous material... so that we can prevent contamination in the ground water and in the soil by cleaning it up immediately," Correll said.

<b>HEADLINE</b>	<b>01/08 Study: courthouses security inadequate</b>
-----------------	---

SOURCE	<a href="http://komonews.com/news/local/new-study-shows-states-courthouses-dont-have-enough-security">http://komonews.com/news/local/new-study-shows-states-courthouses-dont-have-enough-security</a>
GIST	<p>SEATTLE - Metal detectors greet visitors at the three King County Courthouse entrances, but a study released Monday by the Washington State Superior Court Judge's Association says that's far from the norm.</p> <p>More than half of the state's 39 counties don't have security screening at their central courthouses. Courthouse personnel aren't being trained to handle active shooters and other security-type trainings, the study said.</p> <p>"You have high emotion running on the issues that are presented here in superior courts and providing that safe environment is really something we want to see happen," said King County Superior Court Judge Sean P. O'Donnell. "Other than adoptions and marriages usually the people are coming to court because they have a conflict."</p> <p>In March, the state Supreme Court made it clear that courthouse security is a priority. In General Rule 36, the court said a "safe courthouse environment is fundamental to the administration of justice," according to the judicial study.</p> <p>After that rule was adopted, O'Donnell began surveying colleagues statewide about their workplace security.</p> <p>Eric Johnson, Executive Director of the Washington State Association of Counties, said the people he works with at the county level across the state have long complained about the lack of security in courthouses.</p> <p>"We have so many counties that are struggling with their fiscal sustainability that they don't have the resources necessary to do all the things that's expected of them," Johnson said. "We'll be working with the state legislature to point out to them the necessity to make more investment into the trial court system."</p> <p>Lisa Ayers and Lisa Olsen, who are both commissioners in Pacific County, said they've researched beefing up security in the historic South Bend courthouse but say the county just can't afford it.</p> <p>"It always comes down to funding," Ayers said.</p> <p>The worry for O'Donnell is that the state, and counties, won't step up until too late.</p> <p>King County didn't install metal detectors until after the murder of Susana Blackwell in 1995. She and two friends were killed by her estranged husband at the courthouse.</p> <p>The same for Grays Harbor County – they installed weapon screeners after a judge and a deputy were attacked by a knife-wielding man in 2012.</p> <p>"People get mad at the county it doesn't matter what department you're in, so it's always on our minds," Olsen said.</p>

HEADLINE	<b>01/09 Shooting wounds Hamas official in Gaza</b>
SOURCE	<a href="http://www.foxnews.com/world/2018/01/09/top-hamas-official-in-gaza-wounded-in-mysterious-shooting.html">http://www.foxnews.com/world/2018/01/09/top-hamas-official-in-gaza-wounded-in-mysterious-shooting.html</a>
GIST	<p>GAZA CITY, Gaza Strip – The Hamas militant group says one of its senior officials is in critical condition after accidentally shooting himself while cleaning his weapon.</p> <p>Initial reports, some by Hamas' official media, said that Imad al-Alami had died of natural causes. But Hamas subsequently said he was badly wounded in a gun accident.</p>

	<p>The 62-year-old al-Alami is a former member of Hamas' policy-making politburo and remains a top official.</p> <p>Israel exiled al-Alami from Gaza in 1994. He spent most of his time in Syria before returning in 2012, after Hamas abandoned its longtime base in Damascus.</p> <p>After the 2014 war between Hamas and Israel, al-Alami traveled to Turkey for treatment for what Hamas said was an injury during the war. There were no details on how he was injured and lost a leg.</p>

<b>HEADLINE</b>	<b>01/08 World's busiest air routes</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-01-08/world-s-busiest-air-routes-tiny-island-beats-london-new-york">https://www.bloomberg.com/news/articles/2018-01-08/world-s-busiest-air-routes-tiny-island-beats-london-new-york</a>
<b>GIST</b>	<p>The world's busiest air route isn't London to Paris or New York to Los Angeles, but the trip between Seoul and a tiny island off the coast of South Korea.</p> <p>Planes made 65,000 trips between the Korean capital and Jeju island -- a journey of little more than an hour -- in 2017, equivalent to 178 flights a day, according to data from OAG Aviation Worldwide Ltd. That's almost double the 35,000 trips on the busiest North American route: Los Angeles to San Francisco.</p> <p>Asian cities dominated the list, cementing the region's status as the world's fastest-growing travel market. Among the 10 busiest routes in the world last year, Los Angeles-San Francisco was the only North American entry and there wasn't a single European destination. The top European route in OAG's rankings was Dublin-London Heathrow with about 14,500 flights.</p>

<b>HEADLINE</b>	<b>01/08 US govt. 'secret' airline is hiring</b>
<b>SOURCE</b>	<a href="https://www.aol.com/article/finance/2018/01/08/the-secret-airline-run-by-the-us-government-is-hiring-and-to-get-the-job-you-have-to-share-your-drinking-habits-sexual-behavior-and-mental-health/23328024/">https://www.aol.com/article/finance/2018/01/08/the-secret-airline-run-by-the-us-government-is-hiring-and-to-get-the-job-you-have-to-share-your-drinking-habits-sexual-behavior-and-mental-health/23328024/</a>
<b>GIST</b>	<p>Forget secret agent. If you want one of the most exclusive, top-secret jobs about there, consider becoming a flight attendant.</p> <p>JANET airlines, the secret airline run by the US government, is hiring flight attendants to shuttle employees and contractors out of a private terminal at McCarran National Airport in Las Vegas to their jobs in places like Area 51.</p> <p>As Business Insider previously reported, while some joke JANET stands for "Just Another Non-Existent-Terminal," it may actually mean "Joint Air Network for Employee Transportation."</p> <p>The JANET airlines hires will perform all the usual flight attendant tasks including providing food and drink service, giving pre-flight safety demonstrations and ensuring passenger safety throughout the flight, and providing assistance during emergencies.</p> <p>And like flight attendants working for other airlines, JANET flight attendants must have a high school degree or the equivalent diploma, pass flight attendant training, and comply with the airline's dress code and uniform guidelines, among other things.</p> <p>But JANET airline flight attendants bear the additional burden of qualifying for and maintaining a top secret government security clearance and associated work location access.</p>

	<p>According to the US State Department's website, "top secret" is the highest level of security clearance, and having this clearance gives you access to classified national security information.</p> <p>Every application for security clearance is evaluated on an individual basis, and considerations include a number of deeply personal details including:</p> <ul style="list-style-type: none"> <li>• The person's allegiance to the United States</li> <li>• Foreign influence</li> <li>• Foreign preference</li> <li>• Sexual behavior</li> <li>• Personal conduct</li> <li>• Financial considerations</li> <li>• Alcohol consumption</li> <li>• Drug involvement</li> <li>• Emotional, mental, and personality disorders</li> <li>• Criminal conduct</li> <li>• Security violations</li> <li>• Outside activities</li> <li>• Misuse of information technology systems</li> </ul>
<a href="#">Return to Top</a>	<p><i>If that sounds like the job for you, <a href="#">find the listing at AECOM.</a></i></p>

<b>HEADLINE</b>	<b>01/09 Iran lawmaker: 3,700 protest arrests</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/iran-lawmaker-3700-arrested-days-protest-unrest-52229059?">http://abcnews.go.com/International/wireStory/iran-lawmaker-3700-arrested-days-protest-unrest-52229059?</a>
<b>GIST</b>	<p>An Iranian reformist lawmaker says some 3,700 people were arrested in the days of protests and unrest that roiled Iran over the past two weeks.</p> <p>The official news website of the Iranian parliament, icana.ir, quoted Mahmoud Sadeghi on Tuesday as saying that different security and intelligence forces detained the protesters, making it difficult to know the exact number of detainees.</p> <p>The number is far higher than the one initially offered by authorities.</p> <p>Iranian authorities have said that the protests — which at first vented anger at Iran's economic woes but later saw demonstrators calling for the overthrow of the government — are waning.</p> <p>The United States and Israel have expressed support for the protesters, but deny Iranian allegations of fomenting them.</p>

<b>HEADLINE</b>	<b>01/08 Venezuela annual inflation: 2,616%</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-venezuela-economy-inflation/venezuela-2017-annual-inflation-at-2616-percent-opposition-lawmakers-idUSKBN1EX23B">https://www.reuters.com/article/us-venezuela-economy-inflation/venezuela-2017-annual-inflation-at-2616-percent-opposition-lawmakers-idUSKBN1EX23B</a>
<b>GIST</b>	<p>CARACAS (Reuters) - Prices in Venezuela, which is believed to have the world's highest inflation, jumped 2,616 percent last year, the country's opposition-led National Assembly said, as millions suffer from food and medicine shortages during a severe economic crisis.</p> <p>Opposition politicians, whose numbers are broadly in line with analysts' estimates, on Monday put December's inflation figure alone at 85 percent, well into hyperinflation territory for which the benchmark is usually 50 percent.</p>

	<p>“Inflation in December alone is greater than accumulated inflation (over the whole year) for all of Latin America,” said lawmaker José Guerra.</p> <p>Venezuelan authorities did not respond to a request for comment.</p> <p>The country’s minimum wage went up 40 percent in January but still is worth just over \$2 per month on the black market exchange, where the bolivar currency has weakened about 35 percent against the dollar in the last month alone. Hundreds of people mobbed some supermarkets on Saturday after authorities promised price cuts.</p> <p>The central bank has not published inflation or gross domestic product data for two years. However, the money supply expanded by more than 1,000 percent last year.</p> <p>President Nicolás Maduro says the problems stem from the “economic war” waged by Washington and the opposition against his government. Critics blame the government’s strict currency and price controls.</p>

<b>HEADLINE</b>	<b>01/08 San Francisco: car break-in every 17min.</b>
<b>SOURCE</b>	<a href="http://www.ktvu.com/news/san-francisco-averages-1-car-break-in-every-17-minutes">http://www.ktvu.com/news/san-francisco-averages-1-car-break-in-every-17-minutes</a>
<b>GIST</b>	<p>SAN FRANCISCO (Tara Moriarty/KTVU) - Every 17 minutes a car is being broken into in San Francisco. And in just the past year, the number of auto-break ins increased by nearly 25 percent.</p> <p>Today city supervisors are teaming up with SFPD Police Chief Bill Scott to roll out a new plan aimed at curbing property crime.</p> <p>"We are notoriously known as the City of Broken Glass," said Supervisor Norman Yee.</p> <p>It's a cringe worthy reputation for San Franciscans. There were about four car break-ins every hour in 2017.</p>

"It doesn't happen in other cities and it shouldn't be happening in San Francisco," said Supervisor Hillary Ronen. "Whatever we've been doing do far, is not working."

That's why today Ronen and Yee announced a board resolution to team up with Chief Scott to crack down on the property crime epidemic by assigning each district station a plainclothes team to conduct its own operations.

"We believe that this will compliment the foot patrols deployed in the citywide effort to arrest and prosecute organized crime rings," said Yee.

Crime statistics show that in 2017, about 30,000 people had their cars broken into. If you compare that number to 2012, it's more than double the amount in 2012, when there were only around 13,000 break-ins.

"In 70 percent of the cases, property was visible when cars were broken into," said Capt Robert Yick of Taraval Station.

SFPD has been ramping up its Park Smart campaign which reminds folks not to leave valuables in their cars.

Many in law enforcement have blamed the crime uptick on Proposition 47, which re-categorized some non-violent offenses as misdemeanors. They claim it made it easier for serial car burglars to re-offend with little or no penalty. That's why critics of Prop 47 say the courts, probation and the District Attorney's Office need to work more hand in hand with police."

"We can't control what happens in the courts we can't control what happens at the District Attorney level but we can give them the best case that we can give them," said Chief Scott.

<b>HEADLINE</b>	<b>01/08 Texas hotel shooting: family of 4 killed</b>
<b>SOURCE</b>	<a href="https://apnews.com/762018b075e6490cbfa6fadeaaf69905/The-Latest:-Police:-Family-of-4-died-in-Texas-hotel-shooting">https://apnews.com/762018b075e6490cbfa6fadeaaf69905/The-Latest:-Police:-Family-of-4-died-in-Texas-hotel-shooting</a>

<p>GIST</p>	<p>GALVESTON, Texas (AP) — The Latest on the shooting deaths of four family members at an upscale beachfront hotel in Galveston, Texas (all times local):</p> <p>5:15 p.m.</p> <p>Police say the four people who were shot to death in a Southeast Texas beachfront hotel were family members.</p> <p>Investigators are looking at the shootings early Monday at the San Luis Resort in Galveston as possibly being a triple killing followed by a suicide in which the mother was the shooter. Galveston police Capt. Josh Schirard says the victims were a 37-year-old woman, a 39-year-old man and two boys ages 10 and 5. They were from Baytown about 35 miles north of Galveston.</p> <p>Schirard says the family checked in Sunday evening at the upscale hotel.</p> <p>Police were summoned to the 250-room hotel on the Gulf of Mexico after a guest in a nearby room on the eighth floor called police about 4:30 a.m. Monday and reported popping sounds. Officers entered the locked room and found the man and two boys in bed with apparent gunshot wounds and the woman on the floor, also with a gunshot wound.</p>

<p>HEADLINE</p>	<p><b>01/09 Transit imposter takes deal in latest case</b></p>
<p>SOURCE</p>	<p><a href="https://apnews.com/f99e6447a443419b8257083cab0fb8c4/Transit-impostor-takes-deal-in-latest-bus-stealing-escapade">https://apnews.com/f99e6447a443419b8257083cab0fb8c4/Transit-impostor-takes-deal-in-latest-bus-stealing-escapade</a></p>
<p>GIST</p>	<p>NEW YORK (AP) — A man who has been arrested 30 times for impersonating a transit worker, stealing buses and trains and driving their routes has taken a plea deal that’s sending him to a mental health facility, not prison, for his latest escapade.</p> <p>Darius McCollum had been charged with criminal impersonation and grand larceny in his most recent arrest, a 2015 case in which he was caught behind the wheel of a Greyhound bus.</p> <p>On Monday, he said he was not criminally responsible by reason of mental disease or defect. He will be evaluated by psychiatrists, who will determine whether he is dangerously mentally ill, mentally ill or not mentally ill. If he is deemed dangerous, he will be confined in a secure facility for at least six months. If not, he could be sent to a clinic, where he would be able to see his mother.</p> <p>“I commandeered a bus,” McCollum said in court, admitting he posed as a U.S. Department of Homeland Security officer twice — both times the Greyhound workers believed him.</p> <p>McCollum, 52, has been diagnosed with an autism spectrum disorder, which often includes repetitive behaviors and a difficulty with impulse control. He is obsessed with buses and trains. He befriended engineers and pilots and first started hanging around the subway system as a child.</p> <p>He has memorized every subway line and every stop and can recite them on request. He knows mechanical details about how the subway trains and buses work, and he often knows how to fix problems.</p> <p>McCollum often would dress up as a transit worker just to be around trains. He wanted to work for the Metropolitan Transportation Authority, but transit officials have long said they would not hire someone who had stolen a train, as he did at age 15 from Penn Station to the World Trade Center.</p> <p>Doctors who evaluated McCollum in his most recent case found he lacked the ability to understand the problem with his behavior.</p> <p>“The plea is in the best interest of justice, your honor,” Assistant District Attorney Christopher Myco said.</p>

	Despite McCollum's many convictions over the years, he'd never been sent to a mental health facility for treatment. His lawyer Sally Butler said this will be his first opportunity to really get help.

<b>HEADLINE</b>	<b>01/09 Guns sold by police at crime scenes</b>
<b>SOURCE</b>	<a href="https://apnews.com/163c0a50c84347b69e9c71d4266b1d9e/A-look-at-guns-sold-by-police-that-ended-up-at-crime-scenes">https://apnews.com/163c0a50c84347b69e9c71d4266b1d9e/A-look-at-guns-sold-by-police-that-ended-up-at-crime-scenes</a>
<b>GIST</b>	<p>SEATTLE (AP) — A yearlong Associated Press analysis found more than a dozen firearms sold by law enforcement agencies in Washington state since 2010 later became evidence in new criminal investigations.</p> <p>Identifying guns sold by law enforcement and matching them to new crimes required extensive research and dozens of public records requests to individual agencies.</p> <p>Using those records, the AP created a database of almost 6,000 firearms sold by law enforcement since 2010. The Bureau of Alcohol, Tobacco, Firearms and Explosives declined to release tracking information on guns associated with crimes, so the AP collected that information from individual agencies and compared it with its own database to find firearms with matching make, model, caliber and serial numbers.</p> <p>Below are details about guns sold by law enforcement that were later picked up at crime scenes:</p> <p><b>BABY SHOT IN CAR SEAT</b></p> <p>The Washington State Patrol traded a batch of crime guns with a firearms dealer in June 2010. The batch included a Lorcin L380 semi-automatic pistol. In April 2015, a gang member shot at a car carrying a couple and their year-old daughter. One of the bullets hit the child in the head and killed her. While searching a home frequented by the suspected shooter and many other gang members, the Kent Police Department found a Lorcin L380 semi-automatic pistol — the gun sold by the State Patrol.</p> <p><b>TEXT THREATS</b></p> <p>The Pierce County Sheriff's Office in April 2014 sold a list of guns at auction that included a Mossberg 12-gauge shotgun. In October 2016, Jaylen Bolar sent text messages to his mother, threatening to kill her</p>

and others. Angela Almo contacted a behavioral health center instead of the police because she knew her son had firearms, including a Mossberg 12-gauge shotgun and she feared he'd be killed in a standoff with authorities.

When the Tacoma police became involved, he denied it, but his aunt confirmed that she, too, had received threats. Robin Olson showed an officer her phone, which contained a message from Bolar asking his uncle to kill him because he was tired of living.

Bolar also threatened to kill a woman who used to be his boss. He was taken into custody, and a search of his home found two firearms in his bedroom. One was the Mossberg shotgun sold by the sheriff's office.

#### JUVENILES IN STOLEN CAR

The Aberdeen Police Department sold a Lorcin Model L380 pistol in February 2011. In May 2016, the Kent Police Department located a stolen vehicle parked at the Benson Village Apartments and found a gun under the seat — the Lorcin Model L380 pistol sold by Aberdeen police. The three juveniles who stole the car were convicted felons.

#### DRUNKEN FELON

The Kitsap County Sheriff's Office sold a Hi Point 9mm pistol in March 2014. In October 2015, the Snohomish County Sheriff's Office responded to a 911 call from a woman who said she heard what she thought was a gunshot and went outside to find her daughter's intoxicated boyfriend passed out on the front porch. When deputies arrived, they found a handgun, the Hi Point 9 mm pistol, on the ground next to the man. It was the gun sold by the Kitsap sheriff's office. A search found that the man was a convicted felon who wasn't permitted to have a gun. The deputy put the man in handcuffs and called for medical help.

#### PROHIBITED FROM HAVING GUN

The Washington State Patrol traded a Lorcin L380 semi-automatic pistol with a firearms dealer in June 2010. In May 2015, the Kent Police Department was investigating a 911 call and encountered four people outside the house. One of the men was prohibited from having a gun, but they found he was carrying a handgun, the Lorcin L380 semi-automatic pistol sold by the State Patrol. The gun had been reported stolen, and he was arrested.

A sales clerk hands a pistol, being sold on behalf of the Aberdeen police, to a customer before an auction. (AP Photo/Elaine Thompson)

#### DRUG HOUSE ASSAULT

The Aberdeen Police Department traded a JC Higgins .22-caliber rifle with a firearms dealer in February 2011. In April 2015, the Yakima Police Department responded to a domestic violence assault involving a JC Higgins .22-caliber rifle with the same serial number. The dispute involved an elderly man who had handled his wife roughly and threatened her sister. The man was charged, and police took his firearm. In October 2015, Kent police searched a suspected drug house and arrested several people wanted on felony warrants. They found a .22 caliber rifle — the JC Higgins rifle sold by the Aberdeen police.

#### FACEBOOK POSTS ABOUT KILLING

The Thurston County Narcotics Task Force sold a Smith & Wesson pistol in August 2012. In October 2013, the Tacoma Police went to the University of Washington, Tacoma to investigate a report of a student who was posting photos of a gun on Facebook and said he had "vivid, colorful dreams of shooting and killing lots of people last night." Police found in his backpack a Smith and Wesson pistol, the one sold by the narcotics task force.

**COCAINE PARTY FAVORS**

The Bonney Lake Police Department in March 2011 traded a Davis Industries .380-caliber handgun with a firearms dealer who sold it to the public. In February 2012, Kent police stopped a man for an expired registration and discovered baggies of cocaine in his car. He said they were party favors. They also found his concealed handgun, the firearm sold by the police.

**THREATS TO KILL**

Longview Police Department sold a Davis Industries .22 caliber pistol in August 2016. The Thurston County Sheriff's Office responded to a 911 call in April 2017 from a man who said his father headed to a house with a gun and planned to threaten the occupants. Jesse Brown threatened to kill the men who lived there and was arrested. Officers confiscated his Davis Industries .22 caliber pistol — the one sold by Longview police — and 15 other firearms.

**DRUNKEN FATHER**

The Thurston County Sheriff's Office sold a Mossberg, Model 590, 12-gauge shotgun in December 2014. In March 2016, the Tacoma police responded to a call by a 12-year-old girl who said she and her sister fled their home because their father was drunk and was threatening to shoot his girlfriend and threatening to beat up one of the girls because he couldn't find his gun. The police later found a Mossberg, Model 590, 12-gauge shotgun — the gun sold by the Sheriff's Office — in the bathtub.

**MAN'S SUICIDE**

The Washington State Patrol traded a batch of guns to a firearms vendor in June 2010 that included a Smith and Wesson .9mm handgun. In September 2014, the Yakima Police Department responded to a report of a suicidal man with a gun. They arrived to find 24-year-old Kyle Juhl with a gunshot wound to the head. He used a Smith and Wesson .9mm handgun, the one sold by the State Patrol.

**MENTAL HEALTH EMERGENCY**

The Thurston County Narcotics Task Force sold a Springfield Armory .40-caliber pistol in December 2013. In February 2014, the Seattle Police Department helped take firearms from a man who was having a mental health emergency and was at the Involuntary Treatment Act court. One of the guns was the Springfield Armory .40-caliber pistol sold by the task force.

<b>SOURCE</b>	<a href="https://apnews.com/523de15e0a1c48098d2359210e20850b/4-ex-fraternity-members-get-jail-in-pledge's-hazing-death">https://apnews.com/523de15e0a1c48098d2359210e20850b/4-ex-fraternity-members-get-jail-in-pledge's-hazing-death</a>
<b>GIST</b>	<p>STROUDSBURG, Pa. (AP) — Four New York City men were given jail sentences Monday in the death of an 18-year-old fraternity pledge during a 2013 hazing ritual in Pennsylvania, with a judge saying she believes they succumbed to “brainwashing” and “indoctrination” that is rampant at fraternities around the nation.</p> <p>Baruch College freshman Chun “Michael” Deng was blindfolded, forced to wear a heavy backpack and then repeatedly tackled as part of the fraternity’s Crossing Over initiation ceremony. He was knocked unconscious and later died at a hospital.</p> <p>Police charged 37 people with crimes ranging from aggravated assault to hazing to third-degree murder.</p> <p>“Not one person out of 37 picked up a telephone and called an ambulance. I cannot wrap my head around it,” Monroe County President Judge Margherita Patti-Worthington said. “So there’s something greater</p>

going on here, and I think it's probably really prevalent. We see across the country these issues in fraternities."

The four defendants sentenced Monday, Kenny Kwan, Charles Lai, Raymond Lam and Sheldon Wong, pleaded guilty to voluntary manslaughter, hindering apprehension and other charges.

Kwan got 12 to 24 months in county jail. Lam and Wong were sentenced to 10 to 24 months each. Lai, who spent 342 days in jail after he was unable to make bail, was sentenced to time served.

All four defendants apologized, a few of them tearfully.

Earlier Monday, the Pi Delta Psi fraternity was banned from Pennsylvania for 10 years and was ordered to pay a fine of more than \$110,000 for its role in Deng's death.

The judge and a prosecutor slammed Pi Delta Psi for calling itself a victim of rogue fraternity members, saying the fraternity tolerated and even encouraged hazing for years.

<b>HEADLINE</b>	<b>01/08 Federal judge dismisses Bundy case</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/01/08/charges-against-rancher-cliven-bundy-three-others-are-dismissed.html">http://www.foxnews.com/us/2018/01/08/charges-against-rancher-cliven-bundy-three-others-are-dismissed.html</a>
<b>GIST</b>	<p>A federal judge dismissed all charges against rancher Cliven Bundy, his two sons and another man on Monday.</p> <p>U.S. District Judge Gloria Navarro cited "flagrant prosecutorial misconduct" in her decision to dismiss all charges against the Nevada rancher and three others.</p> <p>Navarro on Dec. 20 declared a mistrial in the high-profile Bundy case. It was only the latest, stunning development in the saga of the Nevada rancher, and served as a repudiation of the federal government. Navarro accused prosecutors of willfully withholding evidence from Bundy's lawyers, in violation of the federal Brady rule.</p> <p>The Brady rule, named after the landmark 1963 Supreme Court case known as Brady v. Maryland, holds that failure to disclose such evidence violates a defendant's right to due process.</p> <p>"In this case the failures to comply with Brady were exquisite, extraordinary," said Fox News legal analyst Judge Andrew Napolitano. "The judge exercised tremendous patience."</p> <p>The 71-year-old Bundy's battle with the federal government eventually led to what became known as the Bundy standoff of 2014. But it began long before that.</p> <p>In the early 1990s, the U.S. government limited grazing rights on federal lands in order to protect the desert tortoise habitat. In 1993, Bundy, in protest, refused to renew his permit for cattle grazing, and continued grazing his livestock on these public lands. He didn't recognize the authority of the Bureau of Land Management (BLM) over the sovereign state of Nevada.</p> <p>The federal courts sided with the BLM, and Bundy didn't seem to have a legal leg to stand on. Nevertheless, the rancher and the government continued this dispute for 20 years, and Bundy ended up owing over \$1 million in fees and fines.</p> <p>Things came to a head in 2014, when officials planned to capture and impound cattle trespassing on government land. Protesters, many armed, tried to block the authorities, which led to a standoff. For a time, they even shut down a portion of I-15, the main interstate highway running through Southern Nevada.</p>

Tensions escalated until officials, fearing for the general safety, announced they would return Bundy's cattle and suspend the roundup.

Afterward, Bundy continued to graze his cattle and not pay fees. He and his fellow protesters were heroes to some, but criminals to the federal government. Bundy, along with others seen as leaders of the standoff, including sons Ammon and Ryan, were charged with numerous felonies, including conspiracy, assault on a federal officer and using a firearm in a violent crime. They faced many years in prison.

The Bundy case finally began in late October, 2017. But just two months later, it ended with Navarro angry, the feds humiliated and Bundy – at least to his supporters – vindicated.

In fact, Navarro had suspended the trial earlier and warned of a mistrial when prosecutors released information after a discovery deadline. Overall, the government was late in handing over more than 3,300 pages of documents. Further, some defense requests for information that ultimately came to light had been ridiculed by prosecutors as “fantastical” and a “fishing expedition.”

<b>HEADLINE</b>	<b>01/08 Feds: \$22M cocaine hidden in furniture</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/philadelphia-22-million-in-cocaine-seized-hidden-in-furniture/">https://www.cbsnews.com/news/philadelphia-22-million-in-cocaine-seized-hidden-in-furniture/</a>
<b>GIST</b>	<p>PHILADELPHIA -- Federal customs officials in Philadelphia say they recently discovered more than 700 pounds of cocaine hidden inside bedroom furniture and kitchen cabinets that were shipped from Puerto Rico, making it the area's largest illicit drug bust in a decade.</p> <p>The drugs, which had a street value of about \$22 million, were seized in November by Customs and Border Protection (CBP) officers from the Area Port of Philadelphia.</p> <p>The drugs were found hidden inside false walls of the furniture. More than 250 bricks of a white powdery substance that field tested positive for cocaine were concealed in the compartments.</p> <p>"Customs and Border Protection knows that transnational drug trafficking organizations will take advantage of natural disasters, and in this case an island struggling to recovering from a crippling hurricane, to smuggle dangerous drugs to our nation's mainland," Joseph Martella of CBP said in a statement. "CBP officers remain ever vigilant to interdict narcotics loads, and we are pleased to have stopped this deadly poison shipment before it could hurt our communities."</p> <p>The furniture was searched after officers detected something unusual about one of the shipping containers. An investigation is ongoing.</p>

<b>HEADLINE</b>	<b>01/09 Singapore: 17 arrests in Shell oil heist</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/world/asia/as-singapore-oil-theft/2018/01/09/id/835921/">https://www.newsmax.com/world/asia/as-singapore-oil-theft/2018/01/09/id/835921/</a>
<b>GIST</b>	<p>SINGAPORE (AP) — Singapore police have arrested 17 men suspected of involvement in stealing oil from the largest Shell refinery in the world.</p> <p>Police said Tuesday that they also seized \$2.3 million and an oil tanker in connection with the theft, which was first reported in August.</p> <p>Singapore media reported that that nine of the men were charged with criminal breach of trust and could face up to 15 years in jail if convicted. Two Vietnamese were accused in court of receiving stolen goods and could face up to five years in jail, local media said.</p>

	<p>Shell has not said how much oil was taken. It said in a statement that those detained included "a limited number of Shell employees."</p> <p>A police statement said the 17 men, aged 30-63, were detained Sunday. It said police are seeking to freeze the suspects' bank accounts.</p> <p>The oil came from Shell's Bukom industrial site, located on an island southwest of Singapore. It is the company's largest petrochemical production and export center in the Asia-Pacific.</p> <p>Theft of oil and of oil tankers has been a chronic problem in piracy-prone Southeast Asia for years.</p>

<b>HEADLINE</b>	<b>01/08 Somaliland passes first law against rape</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/news/world-africa-42604496">http://www.bbc.com/news/world-africa-42604496</a>
<b>GIST</b>	<p>For the first time in its history, the self-declared republic of Somaliland has passed a law against rape.</p> <p>In the past, a victim's family could force them to marry their rapist to avoid being shamed.</p> <p>Rapists now stand to face at least 30 years in prison.</p> <p>Somaliland declared itself independent from Somalia in 1991 but is not internationally recognised as a country. There is still no law against rape in Somalia.</p> <p>Somaliland's speaker of parliament, Bashe Mohamed Farah, told the BBC that rape cases have risen and he hoped the new law would help stop that trend.</p> <p>"Nowadays we have seen even people carrying out gang rapes," he said.</p> <p>"The main emphasis of the new act is to completely stop rape."</p> <p>The new law has come in after years of lobbying by children and women's rights advocates.</p>

<b>HEADLINE</b>	<b>01/08 Man arrested for stabbing L.A. sheriff</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/01/08/man-accused-stabbing-los-angeles-sheriffs-detective.html">http://www.foxnews.com/us/2018/01/08/man-accused-stabbing-los-angeles-sheriffs-detective.html</a>
<b>GIST</b>	<p>SANTA CLARITA, Calif. – A man was arrested Monday after he walked up to a Los Angeles County sheriff's detective outside a fast food restaurant, asked him if he was a law enforcement officer and then stabbed him in the chest, investigators said.</p> <p>The detective was walking out of a Jack in the Box restaurant in the Canyon Country neighborhood of Santa Clarita around 10 a.m. when he was approached by a man who asked him if he was a sheriff's deputy, said Capt. Darren Harris, a sheriff's department spokesman. When the detective said yes, the man immediately stabbed him in the chest and then ran off, he said.</p> <p>The 26-year veteran detective, who investigates sex crimes, was able to make his way back to his car and called for help, Harris said.</p> <p>After a two-hour manhunt, deputies found Donald Chinchilla, 21, hiding in the backyard of a home a few blocks from the restaurant.</p> <p>He was arrested on suspicion of attempted murder, Harris said. A telephone number for Chinchilla could not immediately be located in public records.</p> <p>The detective, who was not identified, was taken to a hospital and is expected to survive, authorities said.</p>

HEADLINE	01/02 New King Co. Sheriff sworn in
SOURCE	<a href="http://komonews.com/news/local/new-sheriff-in-town-mitzi-johanknecht-sworn-in-as-king-county-sheriff">http://komonews.com/news/local/new-sheriff-in-town-mitzi-johanknecht-sworn-in-as-king-county-sheriff</a>
GIST	<p>SEATTLE - Looking out at a crowd of deputies dressed in their dress uniforms, Mitzi Johanknecht recited the deputies' oath.</p> <p>Tuesday was supposed to be Johanknecht's day – her swearing in as King County's newest sheriff, her day to move into her corner office and the day she wears her new uniform for the first time – instead, she said she wanted to share the limelight.</p> <p>“As a leader it takes a huge team and I think you saw a portion of the 1,100 employees present today stand up and recommit to you as the community, to the other elected in the room to work cooperatively,” Johanknecht said, standing at a podium in the the largest courtroom in the King County Courthouse.</p> <p>During the swearing in ceremony she asked deputies the rank of major and higher to join her in the front of the courtroom. She asked other deputies and employees to stand as well.</p> <p>“I want everyone to take this oath with us,” Johanknecht said.</p> <p>Presiding Superior Court Judge Laura Inveen swore Johanknecht in as Sheriff. Johanknecht's wife, Maureen Warren, pinned on her badge.</p> <p>“My wife is the kindest person I have ever met in my life. I mean really kind, really compassionate and she's a fabulous listener,” Warren said.</p> <p>Johanknecht, a more than 30-year veteran of the sheriff's office, won a bitterly contested election against incumbent John Urquhart. The campaigns made allegations against the other; Johanknecht said she never spoke to Urquhart after the election.</p> <p>Although Urquhart was not at Tuesday's swearing in ceremony, Johanknecht thanked him in her remarks to the crowd.</p> <p>“I want to take a moment to thank Sheriff Urquhart to his five years of service and his commitment to the Sheriff's Office,” Johanknecht said. “I didn't want the day to pass without acknowledging that.”</p> <p>Johanknecht said that among her first orders of business is to meet with community members to see how she and her deputies can serve. She said she also wants to get deputies trained in using less-lethal forms of force.</p> <p>“They have the pepper spray, they have the Taser, they have their firearm but what is in-between there, one of the tools, is what's called less-lethal shotgun and that fires a beanbag round, or sponge round,” Johanknecht said. “We can work toward avoiding lethal force and have those options.”</p> <p>While Johanknecht was sworn in Seattle police Deputy Chief Carmen Best was sworn in by Mayor Jenny Durkan as Seattle's interim chief of police just a few miles away.</p> <p>King County Executive Dow Constantine said he hopes Johanknecht will bring stability to the sheriff's office.</p>

<b>HEADLINE</b>	<b>01/02 SPOG files 2<sup>nd</sup> unfair labor complaint</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/crime/seattle-police-guild-files-2nd-unfair-labor-complaint-related-to-reforms/">https://www.seattletimes.com/seattle-news/crime/seattle-police-guild-files-2nd-unfair-labor-complaint-related-to-reforms/</a>
<b>GIST</b>	<p>The Seattle Police Officers' Guild (SPOG) has accused the city of "acting in bad faith" when the council passed sweeping accountability legislation this past spring that changes who and how the city investigates allegations of police misconduct — issues the union says should be negotiated.</p> <p>It is the second complaint filed by SPOG with the Public Employees Relations Commission (PERC) in Olympia involving officer accountability. Seattle is urging a federal judge to find it in compliance with court-ordered police reforms contained in a 2012 consent decree between the city and the Department of Justice stemming from allegations of excessive use of force and biased policing.</p> <p>SPOG's first complaint, filed last summer, challenged an executive order issued by former Mayor Ed Murray directing the police department to begin equipping patrol officers with body cameras. It remains pending before the three-member commission, an independent state agency charged with resolving disputes involving the state's approximately 350,000 public employees.</p> <p>The most recent complaint, filed this past week, focuses on changes made to the officer-disciplinary procedures at the core of groundbreaking accountability legislation passed by the Seattle City Council in May.</p> <p>Based on the complaint, the guild seems particularly chafed at the establishment of a powerful civilian inspector general who, beyond overseeing disciplinary matters, would also review internal workings throughout the department. In a six-page complaint, the guild outlines more than 40 changes to the current internal investigation and disciplinary mechanisms it believes should be the subject of collective bargaining.</p> <p>SPOG President Kevin Stuckey said that the guild is "on board" with most of the reforms, but that the city is trying to make an end-run around the collective-bargaining process. The department's rank-and-file officers have been working without a formal contract since 2014.</p> <p>"We've said all along, 'Let's sit down like grown-ups,'" Stuckey said Tuesday. "We don't want to be a stumbling block to reforms. But you have to play by the rules."</p> <p>Ian Warner, counsel for Mayor Jenny Durkan, said the office was reviewing the complaint and declined to comment further. A message seeking comment from Councilwoman M. Lorena González, who was a key sponsor of the accountability legislation, was not immediately returned Tuesday.</p> <p>Another area of concern for SPOG in the legislation outlined in the six-page PERC complaint is the use of civilian investigators replacing sworn officers in a newly formed Office of Police Accountability, which would be under civilian control.</p> <p>The city — and, in particular, the federal judge overseeing implementation of the consent decree — has said police reforms will not be "held hostage" by the guild as it tries to win wages and concessions for its officers in exchange for supporting the reforms.</p> <p>Stuckey said those concerns are ironic in light of the recent tentative contract with the Seattle Police Management Association (SPMA), which represents 74 SPD captains and lieutenants. They have agreed to support the accountability legislation in exchange for raises — retroactive to January 2014 — amounting to as much as \$17,000 a year and a new contract next year.</p> <p>In exchange, the SPMA agreed to drop its own unfair-labor practitioners complaint against the city.</p>

	<p>The city has maintained that some of the changes do not need SPOG's approval, and has said it would sit down to negotiate those areas covered by the contract.</p> <p>"Right now, we just disagree with what is mandatory for bargaining," Stuckey said.</p>

<b>HEADLINE</b>	<b>01/03 Disaster declared over Calif. wildfire</b>
<b>SOURCE</b>	<a href="https://apnews.com/ded4e6ec9c364c009b78c367abbf6495/President-declares-disaster-over-deadly-California-wildfire">https://apnews.com/ded4e6ec9c364c009b78c367abbf6495/President-declares-disaster-over-deadly-California-wildfire</a>
<b>GIST</b>	<p>VENTURA, Calif. (AP) — President Donald Trump on Tuesday declared a major disaster in California over a wildfire that destroyed more than 1,000 buildings as fierce winds whipped it through Ventura and Santa Barbara counties last month.</p> <p>The declaration makes federal funding available to state and local governments and some nonprofit organizations for emergency work in those counties and statewide for work to reduce hazards related to the fire, according to a White House statement.</p> <p>The Thomas fire that began on Dec. 4 is the largest recorded in the state. It was 92 percent contained on Tuesday. Firefighters were still putting out hot spots and smoldering areas.</p> <p>The fire covered more than 440 square miles (1,140 sq. kilometers), killed two people, destroyed entire neighborhoods, threatened coastal foothill communities, ravaged wilderness areas and cast a pall of smoke that shuttered businesses in downtown Santa Barbara.</p> <p>Firefighting costs alone have approached \$200 million.</p> <p>The disaster declaration means the federal government may cover 75 percent of those costs and the costs of recovering from the blaze, such as removing vast amounts of debris in fire-denuded areas that could be hit with flash floods and debris flows if winter rains arrive.</p> <p>After a flight over the devastated area on Tuesday, Department of Homeland Security Secretary Kirstjen M. Nielsen said the president's declaration will help with rebuilding from the fire, which burned more than 700 homes along with other buildings.</p>

<b>HEADLINE</b>	<b>01/02 Tsunami of store closures about to hit</b>
<b>SOURCE</b>	<a href="https://www.msn.com/en-us/money/companies/a-tsunami-of-store-closures-is-about-to-hit-the-us---and-its-expected-to-eclipse-the-retail-carnage-of-2017/ar-BBHJnok?li=BBnb7Kz&amp;ocid=HPCDHP">https://www.msn.com/en-us/money/companies/a-tsunami-of-store-closures-is-about-to-hit-the-us---and-its-expected-to-eclipse-the-retail-carnage-of-2017/ar-BBHJnok?li=BBnb7Kz&amp;ocid=HPCDHP</a>
<b>GIST</b>	<p>Retailers are bracing for a fresh wave of store closures in 2018 that's expected to eclipse the rash of closures that rocked the industry last year.</p> <p>"Landlords are panicking," said Larry Perkins, CEO and founder of the advisory firm SierraConstellation Partners. "The last year was pretty apocalyptic from a retail standpoint, and the macro issues haven't changed. There will continue to be a high degree of bankruptcies and store closures."</p> <p>2017 was a record year for both store closures and retail bankruptcies.</p> <p>Dozens of retailers including Macy's, Sears, and JCPenney shuttered an estimated total of 9,000 stores — far exceeding recessionary levels — and 50 chains filed for bankruptcy over the course of the year.</p> <p>But there's still a glut of retail space in the US, and the fallout is far from over.</p>

The number of store closures in the US is expected to jump at least 33% to more than 12,000 in 2018, and another 25 major retailers could file for bankruptcy next year, according to estimates by the commercial real estate firm Cushman & Wakefield.

Nearly two dozen major chains including Walgreens, Gap, and Gymboree have already announced plans to close more than 3,600 stores next year.

Many more announcements on closures and bankruptcies are expected in the coming months.

The start of the year is a popular time to announce store closures and bankruptcies because retailers are typically flush with cash after the busy holiday season — and closing stores and filing for bankruptcy are costly.

Among the companies most likely to file for bankruptcy within the next year are Sears, The Bon-Ton Stores, Bebe Stores, Destination Maternity Corp., and Stein Mart, according to S&P Global Market Intelligence.

Last year's record-high store closures, combined with an even higher rate of closures in 2018, will push hundreds of low-performing shopping malls to the brink of death.

The commercial real estate firm CoStar has estimated that nearly a quarter of malls in the US, or roughly 310 of the nation's 1,300 shopping malls, are at high risk of losing an anchor tenant.

Anchor tenants are retailers — like Macy's and JCPenney — that occupy the large, multistory buildings at mall entrances.

The loss of even one anchor tenant can trigger a decades-long downward spiral for mall owners.

That's because the malls don't only lose the income and shopper traffic from that store's business. The closure often triggers co-tenancy clauses that allow the remaining mall tenants to exercise their right to terminate their leases or renegotiate the terms, typically with a period of lower rents, until another retailer moves into the vacant anchor space.

That's good news for retailers looking to grow their physical assets — it means they are more likely to score low rent and favorable lease terms.

But it's terrible news for retail landlords, some of whom are now trying to stop the bleeding by suing the companies that are closing stores.

Simon Property Group, one of the biggest mall operators in the country, sued Starbucks this year after the coffee chain said it that it planned to close all 379 stores in its Teavana chain, 77 of which are located in Simon Property Group malls.

The mall owner demanded that Starbucks keep running the tea shops located in its malls, arguing in part that their closure would reduce traffic to surrounding stores.

A judge ruled in Simon Property Group's favor in December and ordered Starbucks to keep operating the Teavana stores in question.

<b>HEADLINE</b>	<b>01/02 DuPont curve long known as obstacle</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/news/local/article192557089.html">http://www.thenewstribune.com/news/local/article192557089.html</a>
<b>GIST</b>	The curve where Amtrak Cascades 501 derailed Dec. 18, killing three people, was identified years ago as an obstacle to Washington state's dream of creating high-speed rail.

The corridor between Lakewood and Nisqually “includes unsuitable sharp curvature,” said the state’s long-range plan, written in 2006. “A new connection, largely on structure because of differences in elevation, with a speed limit of one hundred mph will be required.”

Yet the curve remains, a symbol of unsteady political support in the United States for rapid-rail infrastructure.

Even with \$800 million in Obama administration stimulus money, Washington state didn’t rebuild it.

The state decided instead to spread that cash among 20 projects, mostly to make its 79-mph corridor through Western Washington more reliable. Those projects include landslide prevention in Mukilteo, new Port of Vancouver, Washington, freight tracks to clear shipments out of the way of Amtrak Cascades, and renovating historic King Street Station in Seattle.

To straighten the DuPont curve and adjoining trestle over Interstate 5 would have driven the total cost to at least \$412 million for the 14.5-mile passenger-rail corridor that opened this month from the Tacoma Dome to Lakewood and DuPont. That’s more than double the \$181 million actual cost to rebuild the century-old segment with the 30-mph curve left in place.

Amtrak Cascades 501 was going 78 mph in a 30-mph area when the lead locomotive jumped off the tracks to the right, where the rails curve toward an I-5 overcrossing. The engineer, who was accompanied by another crew member, didn’t slow the train, for reasons yet to be determined.

Washington’s incremental projects are a far cry from true high-speed rail, defined in the United States as reaching a 110- to 150-mph top speed in regional corridors — achieved only on two Amtrak lines in the Northeast, while construction is just beginning in California on a 200-mph system.

Worldwide there are more than 50 corridors 150 mph or quicker, including the famous TGV in France. Japanese Shinkansen trains cruise at 200 mph, and last month, China Railway opened a 155-mph line.

In the past decade, Congress named the Northwest one of five U.S. high-speed rail regions, and Washington state wrote its \$6.5 billion master plan. But even then, the DuPont curve appeared only in a technical appendix. And the straightening was proposed for performance, not to clear an urgent hazard.

Gov. Jay Inslee has discussed going beyond that plan, to consider a bullet train, averaging 220 to 250 mph, between Vancouver, B.C., Seattle and Portland. A state-funded \$300,000 study describes a \$24 billion to \$42 billion construction cost, but it says enough people would ride to break even on operations.

No promise made

A Wall Street Journal story Dec. 22 said the DuPont curve was to be removed “in the original plans.” It portrays the site as an example of neglected areas around the country, some designed around the Civil War era, that afflict rail service today.

The Washington State Department of Transportation (WSDOT), which owns and subsidizes Amtrak Cascades, replied on its blog that the 2006 document is merely intended to describe a series of building blocks, to be added gradually, on a limitless budget.

“It is common for railroads to have areas of reduced speeds due to curves or other factors, as found along the entire Cascades route,” according to the post.

WSDOT said in a statement to The Seattle Times on Thursday, Dec. 28, that the new route “is safe for passenger rail operation.”

“It received all necessary approvals for the design, construction and upgrades that were necessary to open

for operation. Multiple tests occurred over the last year to ensure tracks and signals functioned properly, equipment was certified to operate on the corridor, and train crews were familiar with the new route. All tests were completed successfully.”

Amtrak hasn't answered news-media questions about the quality of crew training, an issue the National Transportation Safety Board will examine.

The 2006 plan envisioned trains cruising up to 110 mph from Blaine to Marysville, slowing through the Puget Sound urban core, then again reaching 110 mph in most places from Lakewood to the Oregon border.

Some funds became available through the \$831-billion American Recovery and Reinvestment Act of 2009, known as “economic stimulus” money. Washington won \$800-million for rail, trailing only California and Illinois.

The state's stimulus contracts, released through a public-records request, show the state made no promises to change the curve, nor did it promise to create a 100-mph corridor.

Former WSDOT Secretary Paula Hammond said she doesn't recall anyone discussing the DuPont curve during her leadership, from 2007-13.

Bruce Agnew, director of the Cascadia Center think tank, recalls the state “talking about very tough negotiations in 2008 and 2009,” over where to spend stimulus funds, involving BNSF Railway and the Federal Railroad Administration.

Officials weren't going to spend money to straighten the curve if that drained money for the new Tacoma-Lakewood bypass.

“This is their centerpiece,” Agnew said.

WSDOT rail director Ron Pate has declined interview requests since the crash. Spokeswoman Barbara LaBoe says the state determined it could leave the slow curve while still meeting its contractual commitment to the federal government to provide six daily round trips for Cascades by 2017, and an 88 percent on-time performance, with available stimulus funds.

The state kept that commitment until Cascades 501 derailed. Trains have since reverted to the waterfront route out of “sensitivity” to crash victims, rail customers and the public, LaBoe said. Trains will enter the new route once an automatic braking system, called positive train control, is ready, sometime in 2018.

The new route through Lakewood is designed to save 10 minutes compared with the former alignment along the Tacoma Narrows. Passengers also would be delayed less often by freight trains.

\$230 million

If the 2006 estimates were right, straightening the curve would have required roughly \$230-million. That's comparable to Sound Transit's cost per mile of elevated light rail, or half the cost of WSDOT's two-lane I-5 widening plan at Joint Base Lewis-McChord.

But the trains still couldn't exceed 79 mph, when continuing north through communities such as Lakewood, without a host of additional improvements.

Lloyd Flem, executive director of the rail supporters group All Aboard Washington, lost two friends in the crash. But he said last week keeping the curve was the correct, fiscally conservative move. “I'll roll through a curve at 30 mph to save the taxpayers \$200-million,” he said.

WSDOT anticipates it will straighten the track in some big future phase, allowing an increase to eight

	<p>round-trip Cascades trains daily reaching 110 mph, LaBoe said.</p> <p>“I don’t think we have a year put on it. A lot of it depends on funding availability,” she said.</p> <p>President Donald Trump tweeted about the Cascades 501 crash as a reason to improve U.S. infrastructure, but his recent budget proposals reduce transit funds, calling those a strictly local concern. His administration Friday declared it won’t carry out an Obama-era agreement to fund half of a new Hudson River train tunnel. No subsidies are forthcoming for new high-speed rail.</p> <p>If Washington state ever aims for triple-digit speeds, said Agnew, of Cascadia Center, another tight crossing would need to be rebuilt, over I-5 between Marysville and the Tulalip Indian Reservation.</p>

<b>HEADLINE</b>	<b>01/02 Southern Calif. faces mudslide danger</b>
<b>SOURCE</b>	<a href="http://www.cnn.com/2018/01/02/us/california-thomas-fire-mudslide-threat/index.html">http://www.cnn.com/2018/01/02/us/california-thomas-fire-mudslide-threat/index.html</a>
<b>GIST</b>	<p>Ventura, California (CNN)The frightening hiss and crackle of the massive Thomas Fire in Southern California has been replaced by the loud droning of heavy equipment below the burn area.</p> <p>Public work crews in Ventura and Santa Barbara counties are frantically clearing out every debris basin and storm drain possible, because the fire has left behind another threat -- mudslides.</p> <p>"The Thomas Fire burned all of our front country range here," said Tom Fayram, Santa Barbara's deputy director of public works.</p> <p>"All these hills normally have a protective cover of chaparral. That's all gone. Almost 100% gone," he said.</p> <p>What's left is black-gray hillside that officials and residents alike fear will become ashy waves of floodwater with the first rain of a so far bone-dry season.</p> <p>Ventura County officials predict any rain will pour twice the usual amount of water into flood channels because of the burned hills.</p> <p>Work crews are cutting down dead or doomed trees and bulldozers are scooping up debris near a cement-ringed storm drain large enough for a human to walk through.</p>

	<p>They are taking no chances in flood channels, hauling away anything that could block the drain and cause pooling, then flooding all around.</p> <p>While such cleanup occurs before every rainy season, the scale of the Thomas Fire has cranked up the intensity.</p> <p>"Generally we are dealing with hundreds of acres (burned), not in the thousands or hundred thousands," said Jeff Pratt, director of public works in Ventura County.</p> <p>"This is an order of magnitude or two greater than anything we've ever dealt with."</p> <p>The Thomas Fire is the largest wildfire in state history, having burned around 282,000 acres since it began December 4. It was 92% contained Monday; officials don't expect full containment until later this month.</p> <p>Both Santa Barbara and Ventura counties have experienced fire and then flood after rains before.</p> <p>The National Weather Service office in Oxnard predicts lower than average rainfall for Santa Barbara and Ventura Counties for the next three months.</p> <p>But forecasters say it takes only one storm with a lot of rain in a short amount of time to mush up fire-stricken hillsides and start a slide.</p> <p>"A typical threshold would be about a half an inch of rain," Robbie Monroe of the National Weather Service Oxnard office told CNN.</p> <p>"About a half an inch per hour can start to produce issues, mudslides "</p>

<b>HEADLINE</b>	<b>01/02 Judge orders release Iraq immigrants</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-usa-immigration-ruling/u-s-judge-orders-government-to-release-iraqis-or-grant-bond-hearings-idUSKBN1ES01D">https://www.reuters.com/article/us-usa-immigration-ruling/u-s-judge-orders-government-to-release-iraqis-or-grant-bond-hearings-idUSKBN1ES01D</a>
<b>GIST</b>	<p>WASHINGTON (Reuters) - A U.S. judge ordered the government on Tuesday to either release Iraqi immigrants it arrested last year or grant them bond hearings, in the latest judicial curb on the Trump administration’s efforts to tighten U.S. immigration.</p> <p>Last year the federal government detained hundreds of Iraqi immigrants who had been ordered deported years ago due to criminal convictions. Iraq until recently had refused to take them back, but struck a deal with the United States in March to repatriate its citizens, sparking the immigration sweeps.</p> <p>The Iraqis and civil rights groups representing them sued the federal government. U.S. District Judge Mark Goldsmith, in Detroit, had previously halted the deportation of the Iraqis, many of whom are Christian, who argued they would face persecution if they were sent back to Iraq.</p>

	In his ruling on Tuesday, Goldsmith said that any of the Iraqis held for six months or longer must either be released or granted a bond hearing before an immigration judge within 30 days.

<b>HEADLINE</b>	<b>01/01 Commercial air travel 2017 safest ever</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/airplane-mode/commercial-air-travel-2017-was-safest-ever-travel-group-says-n833866">https://www.nbcnews.com/storyline/airplane-mode/commercial-air-travel-2017-was-safest-ever-travel-group-says-n833866</a>
<b>GIST</b>	WASHINGTON — Airlines recorded zero accident deaths in commercial passenger jets last year,

according to a Dutch consulting firm and an aviation safety group that tracks crashes, making 2017 the safest year on record for commercial air travel.

Dutch aviation consulting firm To70 and the Aviation Safety Network both reported Monday there were no commercial passenger jet fatalities in 2017. "2017 was the safest year for aviation ever," said Adrian Young of To70.

To70 estimated that the fatal accident rate for large commercial passenger flights is 0.06 per million flights, or one fatal accident for every 16 million flights.

The Aviation Safety Network also reported there were no commercial passenger jet deaths in 2017, but 10 fatal airliner accidents resulting in 44 fatalities onboard and 35 persons on the ground, including cargo planes and commercial passenger turbo prop aircraft.

That figure includes 12 people killed on Sunday when a Nature Air Cessna 208B Grand Caravan aircraft crashed minutes after takeoff into a mountainous area off the beach town of Punta Islita, Costa Rica.

In comparison, there were 16 accidents and 303 deaths in 2016 among airliners.

The Aviation Safety Network said 2017 was "the safest year ever, both by the number of fatal accidents as well as in terms of fatalities."

Over the last two decades aviation deaths around the world have been steadily falling. As recently as 2005, there were 1,015 deaths aboard commercial passenger flights worldwide, the Aviation Safety Network said.

The United States last recorded a fatal airline passenger jet crash in February 2009, when Colgan Air Flight 3407 crashed short of the runway in Clarence Center, New York, killing 49 onboard and one person on the ground.

In 2016, 412 people were killed in the United States in aviation accidents - nearly all in general aviation accidents and none on commercial passenger airlines.

The last fatal passenger jet airliner accident worldwide took place in November 2016 near Medellin, Colombia and the last commercial passenger aircraft crash to kill more than 100 people occurred in October 2015 in Egypt.

<b>HEADLINE</b>	<b>01/02 GAO: Feds overpaid unemployment \$1.6B</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/gao-labor-unemployment/2018/01/02/id/834715/">https://www.newsmax.com/newsfront/gao-labor-unemployment/2018/01/02/id/834715/</a>
<b>GIST</b>	<p>The federal government overpaid for unemployment insurance benefits by more than \$1.6 billion in 2016, according to a new report.</p> <p>The Washington Free Beacon cited a Government Accountability Office (GAO) audit that found there was a significant overpayment amount on the books during fiscal year 2016, which ended June 30, 2016.</p> <p>The audit discovered that the payments were sent to people who had been given formal warnings for not fulfilling the requirements to receive benefits, a list that includes looking for and applying for jobs and visiting job fairs.</p> <p>A Department of Labor "analysis further shows that if formal warning cases had been included in DOL's calculation of the overpayment rates for fiscal year 2016, the nationwide overpayment rate would have increased by about 5 percentage points, from an estimated 11.1 percent to an estimated 16.3 percent," the GAO report reads.</p>

	<p>A chart included in the report shows that several states' overpayment rates could be higher than 20 percent when factoring in cases in which a formal notice was issued.</p> <p>Topping the list is Nevada (54.22 percent), followed by Pennsylvania (50.88) and Colorado (46.8).</p> <p>As of November, the nationwide unemployment rate was 4.1 percent.</p>

<b>HEADLINE</b>	<b>01/03 Record dry fuels Calif. drought fears</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Technology/wireStory/record-dry-raises-fears-droughts-return-california-52110699?">http://abcnews.go.com/Technology/wireStory/record-dry-raises-fears-droughts-return-california-52110699?</a>
<b>GIST</b>	<p>It's been almost a year since Los Angeles residents felt any real rain, and precious little snow is in the Sierras, but water managers say it's too early for fears that California is sliding back into drought as abruptly as the state fell out of it.</p> <p>Water officials carry out the first of their regular ritual winter snow measurements before news cameras on Wednesday. Plunging rods into snowpacks to measure the snow depth, water managers use the event to acquaint Californians with the state of the water supply. It's a crucial question in a semi-arid state with the U.S.'s biggest state economy, agricultural industry and population. In a normal year, nearly two-thirds of Californians' water supply starts as snow in the Sierras.</p> <p>Southern California wildfires that grew to the biggest in state history in December — normally the rainy season in California — already have made clear the bottom line: The state is far drier than normal so far this winter.</p> <p>"We're back in the old waiting game," said Doug Carlson, a spokesman for the state Department of Water</p>

	<p>Resources.</p> <p>Near-record rainfall last year unleashed widespread flooding and snapped a historic five-year drought. The wet 2017 allowed Gov. Jerry Brown in April to lift a drought emergency declaration that had brought mandatory water conservation orders for cities and towns, and water cutbacks for many rural users.</p> <p>This year, meteorologists point to a strengthening La Nina weather pattern in the Pacific, which typically brings drier weather. A stubborn ridge of high pressure in the Pacific — the same bad guy during the state's drought — is blocking storms from reaching Southern California in particular.</p> <p>People in California's southwest last felt any significant rain in February, the National Weather Service noted this week. Los Angeles is marking a record dry spell, with rainfall just 9 percent of normal for the past 10 months, the weather service said.</p> <p>Snowpack in the Sierras, which supplies a steady flow of water in good years as the snow melts, stood Tuesday at one-fourth of normal for this point in the year.</p> <p>It's not time to despair, yet, Carlson said.</p> <p>Last year's copious rains have left reservoirs with plenty of water. And it's early in the winter rainy season yet — California normally receives half its rain between December and February.</p> <p>"Our message to the public as we begin to do our first snow survey...is it's still very early in the season," Carlson said. "Anything could happen."</p>

<b>HEADLINE</b>	<b>01/03 Pro-govt. rallies appear in Iran</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/pro-government-rallies-iran-days-protest-unrest-52109990?">http://abcnews.go.com/International/wireStory/pro-government-rallies-iran-days-protest-unrest-52109990?</a>
<b>GIST</b>	<p>Iranian state media on Wednesday aired pro-government demonstrations in cities across the country after a week of protests and unrest over the nation's poor economy — a move apparently seeking to calm nerves amid clashes that have killed 21 people.</p> <p>The protests, the largest seen in Iran since its disputed 2009 presidential election, began Dec. 28 in the city of Mashhad, Iran's second-largest, over the weak economy and a jump in food prices. They have since expanded to cities and towns in nearly every province. Hundreds have been arrested, and a prominent judge warned that some could face the death penalty.</p> <p>The English-language broadcaster Press TV broadcast Wednesday's pro-government rallies live, saying they were to "protest the violence that has taken place over the last few nights in cities."</p> <p>Demonstrators waved Iranians flags and signs supporting Iran's clerically overseen government.</p> <p>According to state TV, the demonstrations took place in at least 10 cities, including Ahvaz, the capital of the oil-rich province of Khuzestan, the Kurdish town of Kermanshah in the country's west and Qom, the religions capital of Shiite Islam in Iran.</p> <p>The rallies come after Iran's Supreme Leader Ayatollah Ali Khamenei on Tuesday blamed days of protests across the country on meddling by "enemies of Iran."</p>

<b>HEADLINE</b>	<b>01/02 Feds urge railroad anti-crash system</b>
-----------------	---

SOURCE	<a href="https://www.reuters.com/article/us-usa-railroads-safety/u-s-urges-railroads-to-quickly-install-anti-crash-safety-system-idUSKBN1ER1O7">https://www.reuters.com/article/us-usa-railroads-safety/u-s-urges-railroads-to-quickly-install-anti-crash-safety-system-idUSKBN1ER1O7</a>
GIST	<p>WASHINGTON (Reuters) - U.S. Transportation Secretary Elaine Chao urged the nation's railroads and transit agencies to take all possible measures to meet deadlines to install a safety system called positive train control (PTC) to prevent crashes.</p> <p>Letters dated Dec. 27, which were made public on Tuesday, said Chao wanted railroads to "greatly accelerate" efforts to meet congressional deadlines. A deadly Amtrak crash last month near Seattle that killed three occurred on a section of track that did not have the PTC system operating.</p> <p>The system is designed to prevent derailments caused by excessive speed. Investigators have said several deadly U.S. train crashes in recent years could have been prevented if the system was in place.</p> <p>In 2008, Congress mandated the implementation of PTC nationwide by the end of 2015, then extended that deadline until the end of 2018 when its installation became more complex than anticipated. The government can extend the deadline to 2020 to complete some aspects of the system.</p> <p>The National Transportation Safety Board said last month the Amtrak train that derailed onto a highway near Seattle was going 78 miles per hour (125.5 km per hour) in a 30-mph zone.</p> <p>The letters went to the chief executives of railroads, including Amtrak, BNSF Railway Co, Canadian National Railway (CNR.TO), CSX Corp (CSX.O), Norfolk Southern Corp (NSC.N), Union Pacific Corp (UNP.N) and transit systems in Chicago, Boston, New York, Boston, Newark, Seattle and Los Angeles.</p> <p>Amtrak said last month it was "imperative that the rail industry urgently work together to get PTC activated on the national network as soon as possible - and certainly by the December 2018 federal deadline, if not before."</p> <p>The Transportation Department said 12 of 41 railroads covered by the requirements report having installed less than 50 percent of the hardware required for their PTC systems as of Sept. 30. The government said the systems are in operation on 45 percent of route miles owned by freight railroads and just 24 percent of passenger railroads</p> <p>Chao's letter said the Federal Railroad Administration (FRA) leadership plans to work with railroads "to help create an increased level of urgency to underscore the imperative of meeting existing timeline expectations for rolling out this critical rail-safety technology."</p>

<b>HEADLINE</b>	<b>01/02 Wall St. starts year on strong note</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-usa-stocks/wall-street-starts-year-on-strong-note-nasdaq-ends-above-7000-idUSKBN1ER0Y9?il=0">https://www.reuters.com/article/us-usa-stocks/wall-street-starts-year-on-strong-note-nasdaq-ends-above-7000-idUSKBN1ER0Y9?il=0</a>
<b>GIST</b>	<p>NEW YORK (Reuters) - U.S. stocks rose on Tuesday in the first session of the new year, pushing the Nasdaq to close above 7,000 for the first time, as investors were optimistic that 2018 will bring more gains for the market.</p> <p>The S&amp;P 500 also ended at a record high. Technology drove the day's gains, but consumer discretionary, healthcare, energy and materials sectors were also up more than 1 percent each.</p> <p>Apple (AAPL.O), Facebook (FB.O), Alphabet (GOOGL.O) and Microsoft (MSFT.O) pulled the technology index .SPLRCT up 1.4 percent, following a 37-percent surge in 2017 that made it the best-performing S&amp;P sector.</p> <p>Major stock indexes had closed out 2017 with their best performances since 2013. Many investors say the rally could continue this year with help from the recently approved U.S. tax overhaul that is anticipated to boost profits as well as the economy.</p> <p>"We're off to the races once again," said Stephen Massocca, senior vice president at Wedbush Securities in San Francisco.</p> <p>"I don't expect the kind of moves we saw last year. But as long as monetary policy stays the way it is ... my view is stocks are going to have a decent year. And fiscal policy has become stimulative, as well, given the tax bill."</p> <p>The Dow Jones Industrial Average .DJI rose 104.79 points, or 0.42 percent, to 24,824.01, the S&amp;P 500 .SPX gained 22.18 points, or 0.83 percent, to 2,695.79 and the Nasdaq Composite .IXIC added 103.51 points, or 1.5 percent, to 7,006.90.</p>

<b>HEADLINE</b>	<b>01/02 US scorns Iran protest accusations</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/news/world-middle-east-42548108">http://www.bbc.com/news/world-middle-east-42548108</a>
<b>GIST</b>	<p>The US has branded as "complete nonsense" Iran's accusation that its enemies have been behind a wave of violent protests sweeping the country.</p> <p>Iran's supreme leader Ayatollah Ali Khamenei had made the accusation in his first comments on the protests.</p> <p>US envoy to the UN Nikki Haley said the protests were "spontaneous", adding that the US planned to call an emergency UN meeting on the situation.</p> <p>The unrest began last Thursday and has seen 22 people killed.</p> <p>The demonstrations, which started in the city of Mashhad, were initially against price rises and corruption, but then began to express wider anti-government sentiment.</p> <p>Meanwhile, Iranian President Hassan Rouhani spoke with French counterpart Emmanuel Macron on Tuesday. Mr Macron called for "restraint" and it was decided that a visit by France's foreign minister due this week should be postponed.</p> <p>In a post on his official website, Iran's supreme leader had said: "In recent days, enemies of Iran used different tools including cash, weapons, politics and intelligence services to create troubles for the Islamic Republic."</p> <p>Analysts say the ayatollah's reference to "enemies" is a swipe at Israel, the US and regional rival Saudi Arabia.</p> <p>Ms Haley said the accusation was "ridiculous".</p> <p>She added: "The people of Iran are crying out for freedom, All freedom-loving people must stand with their cause."</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>01/02 US strategy to support Iran protesters</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/politics/2018/01/02/state-department-to-launch-social-media-strategy-to-back-iranian-protesters.html">http://www.foxnews.com/politics/2018/01/02/state-department-to-launch-social-media-strategy-to-back-iranian-protesters.html</a>
<b>GIST</b>	<p>The Trump administration ramped up its support of Iranian regime change on Tuesday, announcing it will use Facebook and Twitter to communicate directly with the pro-democracy protesters who have taken to the streets to demand freedom from Tehran's hard-line rule.</p> <p>The move came after the Iranian government shut off access to Instagram as well as Telegram, a popular, encrypted messaging app used by activists to organize demonstrations. As it did in 2009, when Iran was rocked by protests after a disputed election, Tehran acted swiftly to crack down on protests and cut off their preferred means of communication – social media.</p> <p>Unlike the Obama administration, which stood largely silent amid those protests, the Trump administration is openly supporting pro-democracy demonstrations.</p> <p>"We must not be silent," U.S. Ambassador to the United Nations Nikki Haley said on Tuesday. "The</p>

people of Iran are crying out for freedom. All freedom-loving people must stand with their cause.”

The United States will post messages in Farsi on Facebook and Twitter, according to Under Secretary for Public Diplomacy and Public Affairs Steve Goldstein. While the effort may not facilitate communication among protesters – something Tehran is keen to stop – it will allow the U.S. to unilaterally show it backs the protests.

"We support a freedom of the press," the State Department said in a tweet. "When a nation clamps down on social media, we ask the question — what are you afraid of? We support the people of #Iran, and we support their voices being heard."

<b>HEADLINE</b>	<b>01/02 Calif. pot supporters: tax too high</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/california-pot-advocates-say-tax-rates-too-high-legal-recreational-marijuana/">https://www.cbsnews.com/news/california-pot-advocates-say-tax-rates-too-high-legal-recreational-marijuana/</a>
<b>GIST</b>	<p>OAKLAND -- Marijuana dispensaries across California experienced long lines on the first day of legal recreational pot sales. But advocates warned the legal industry won't survive without big changes, CBS SF Bay Area reports.</p> <p>"I'm very happy about – thrilled really – to see the legalization of cannabis in California," said Steve DeAngelo, co-founder and CEO of Harborside in Oakland. "At the same time, I'm terrified about what's going to happen with these taxes."</p> <p>Harborside has been a medical marijuana dispensary for more than a decade, and is now selling recreational marijuana at a much higher price.</p> <p>"In our shop here, the tax rate has gone from 15 percent all the way up to almost 35 percent for adult consumers," DeAngelo said.</p> <p>Here's how that math works for Harborside. There is the regular state sales tax of 6 percent, and the regular Alameda County sales tax of 3.25 percent. Then there is a 15 percent state tax on marijuana, and a 10 percent Oakland tax on recreational marijuana.</p> <p>Total taxes: 34.25 percent.</p> <p>"That is a huge hit. And it's going to mean that a significant number of people, less affluent consumers, are going to turn to the lower prices of the underground market," DeAngelo said.</p> <p>Some customers are willing to pay a premium for quality product, such as Geno Escalante, who was among those in line on Monday.</p> <p>DeAngelo said the black market may be lower cost, but Harborside offers hundreds of products not available on the black market and they also offer consumer protection.</p> <p>"All of our medicine is tested in a laboratory," DeAngelo said. "It's evaluated both for safety, for things like pesticides and pathogenic molds, and it's also evaluated for potency."</p> <p>Still, all this protection isn't cheap. In addition to taxes, marijuana regulations drive up the cost.</p> <p>"We have to pay rent, we have to have security systems, we have to pay licensing fees, we have to have insurance, we have to buy equipment," DeAngelo said.</p> <p>It adds up. And not everyone can pay the higher prices. People who are disabled or on fixed incomes may turn to the black market.</p>

	<p>"They can barely afford cannabis now, much less with a 35 or 40 percent tax increase," DeAngelo said.</p> <p>When people aren't buying from a regulated business, the state is getting zero taxes.</p> <p>Colorado, Washington state and Oregon each legalized marijuana at one tax rate and then had to lower the rate to keep people in the legitimate market. DeAngelo believes California will have to do the same.</p> <p>"I don't think that the current tax rate for cannabis in California is sustainable," he said.</p>

<b>HEADLINE</b>	<b>01/02 FEMA extends housing aid Puerto Rico</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/fema-extends-transitional-shelter-assistance-housing-program-for-puerto-rico-hurricane-maria/">https://www.cbsnews.com/news/fema-extends-transitional-shelter-assistance-housing-program-for-puerto-rico-hurricane-maria/</a>
<b>GIST</b>	<p>The Federal Emergency Management Agency (FEMA) is extending it's Transitional Shelter Assistance (TSA) program Puerto Ricans who are still unable to return to their homes three months after Hurricane Maria.</p> <p>The program provides short-term shelter for people displaced from declared disaster areas, and provides help to people unable to return to their homes after an evacuation. The 66-day extension means the program will continue to provide assistance to residents from Jan. 14 to March 20, according to a memo from FEMA dated Dec. 29. The Puerto Rican government requested the extension because many residents who are unable to return to damaged homes.</p> <p>More than 10,000 Puerto Ricans are receiving assistance under the program, CBS News correspondent David Begnaud reports.</p> <p>Meanwhile, Puerto Rico still struggles with basic needs. More than 30 percent of customers still lack electricity three months after the storm. The U.S. Army Corps of Engineers has said that power won't be restored for the entire island until May.</p>

<b>HEADLINE</b>	<b>01/02 NKorea resumes missile activity</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/north-korea-resumes-missile-activity-south-olympics-talks/">https://www.cbsnews.com/news/north-korea-resumes-missile-activity-south-olympics-talks/</a>
<b>GIST</b>	<p>SEOUL, South Korea -- North Korea appears to be in the early stages of a launch cycle for another intercontinental ballistic missile test, CBS News national security correspondent David Martin reports. Meanwhile, South Korea on Tuesday offered high-level talks with its rival to find ways to cooperate on next month's Winter Olympics in the South.</p> <p>The missile activity is at the same location just north of Pyongyang where an ICBM test occurred in November, Martin reports. If there is a test, it would likely take place later this week or next.</p> <p>Seoul's quick Olympics proposal follows a rare rapprochement overture from the North a day earlier. The North offered the possibility of better ties after a year that saw a nuclear standoff increase fear of war on the Korean Peninsula.</p> <p>In a closely watched New Year's address, North Korean leader Kim Jong Un said Monday that he was willing to send a delegation to the Olympics, though he also repeated fiery nuclear threats against the United States. Analysts say Kim may be trying to drive a wedge between Seoul and its ally Washington in a bid to reduce international isolation and sanctions against North Korea.</p>

<b>HEADLINE</b>	<b>01/02 Pakistan lambasts Trump tweet</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/donald-trump-pakistan-tweet-protests-karachi-us-ambassador-summoned-islamabad/">https://www.cbsnews.com/news/donald-trump-pakistan-tweet-protests-karachi-us-ambassador-summoned-islamabad/</a>
<b>GIST</b>	<p>President Trump's New Year's Day lambasting of Pakistan on Twitter has drawn an angry response on the streets and an official summoning of the U.S. ambassador in Islamabad to demand an explanation.</p> <p>The president began the second year of his presidency with confrontational tweets targeting Pakistan and Iran. He slammed Islamabad on Monday for "lies &amp; deceit," saying the country had played U.S. leaders for "fools," by not doing enough to control Islamic militants.</p> <p>"The United States has foolishly given Pakistan more than 33 billion dollars in aid over the last 15 years, and they have given us nothing but lies &amp; deceit, thinking of our leaders as fools. They give safe haven to the terrorists we hunt in Afghanistan, with little help. No more!"</p> <p>It was not immediately clear why the president decided to comment on Pakistan, or whether it could signal a shift in U.S. policy regarding the Asian nation. As recently as October, President Trump voiced optimism over relations with Pakistan, saying the U.S. was being "respected again" following Pakistan's compliance with a rescue operation that saw an American woman and her family released after years of captivity with a group linked to the Taliban.</p> <p>Later on Monday, U.S. Ambassador David Hale was summoned to the Pakistani Foreign Office to explain Mr. Trump's tweet, according to Pakistani media reports.</p> <p>A spokesperson for the embassy confirmed to the Reuters news agency that the meeting had taken place, but provided no details of the discussion.</p> <p>On the streets of Karachi, meanwhile, scores of protesters hit the streets to voice their anger at Mr. Trump's rhetoric. The demonstration, organized by an umbrella group of religious-political parties, saw angry protesters burn an image of the U.S. leader and U.S. flags, as they chanted anti-American slogans.</p>

<b>HEADLINE</b>	<b>01/02 Miami: 2017 hottest year on record</b>
<b>SOURCE</b>	<a href="http://www.miamiherald.com/news/local/environment/article192568899.html">http://www.miamiherald.com/news/local/environment/article192568899.html</a>
<b>GIST</b>	<p>Miami's yearlong sizzling temperatures were enough to beat a chilly end to 2017, tying the record for the hottest year on the books.</p> <p>The National Weather Service reported Tuesday that December officially ended with an average monthly temperature of 79.2 degrees in Miami. That's high enough to end the year in a tie with 2015, when an El Niño helped amplify the steamy tropics and produce a warm, soggy winter that felt more like spring.</p> <p>The announcement came after a brief mix-up in how records are calculated.</p> <p>On Monday, the Service's Miami office said temperatures had narrowly missed tying 2015. But that number was based on a daily average. Year-end records use monthly averages to avoid inconsistency created in leap years when the number of days are greater.</p> <p>"The confusion came if you do it daily," said Service meteorologist Larry Kelly. "But that's not the official record."</p> <p>The correction was made after University of Miami senior research scientist Brian McNoldy, who has been tracking the escalating temperatures, noted the error.</p> <p>"In most instances this isn't a big deal, but in this case it made the difference of 0.1 degrees, and more</p>

importantly the difference between being tied for first and being in second place,” Christopher Fisher, the Service’s Miami Observation Program Leader, said in an email.

Overall, 2017 will be remembered for its extremes, the agency said in its year-end wrap-up.

<b>HEADLINE</b>	<b>01/02 ‘Winter hurricane’ to hit East coast</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/capital-weather-gang/wp/2018/01/02/monster-storm-to-blast-east-coast-before-polar-vortex-uncorks-tremendous-cold-late-this-week/?utm_term=.4ec49db7ebf8">https://www.washingtonpost.com/news/capital-weather-gang/wp/2018/01/02/monster-storm-to-blast-east-coast-before-polar-vortex-uncorks-tremendous-cold-late-this-week/?utm_term=.4ec49db7ebf8</a>
<b>GIST</b>	<p>Unforgiving cold has punished the eastern third of the United States for the past 10 days. But the most severe winter weather will assault the area late this week.</p> <p>First, a very large and powerful storm will hammer coastal locations from Georgia to Maine with ice and snow. By Thursday, the exploding storm will, in many ways, resemble a winter hurricane, battering easternmost New England with potentially damaging winds in addition to blinding snow.</p> <p>Forecasters are expecting the storm to become a so-called “bomb cyclone” because its pressure is predicted to fall so fast, an indicator of explosive strengthening. The storm could rank as the most intense over the waters east of New England in decades at this time of year.</p> <p>In the storm’s wake, the mother lode of numbing cold will crash south — likely the last but most bitter in brutal blasts since Christmas Eve.</p> <p>The responsible storm is forecast to begin taking shape off the coast of Florida Wednesday, unloading hazardous snow and ice in highly unusual locations not accustomed to such weather. The National Weather Service has already posted winter storm watches from Lake City, Fla. to Norfolk</p> <p>It is then expected to explosively intensify, buffeting the Mid-Atlantic beaches and eastern New England, where winter storm watches have also been issued.</p> <p>The National Weather Service office serving northeast Florida and southeast Georgia cautions that a nasty mix of light freezing rain, light sleet and light snow is expected to develop Wednesday “with significant icing possible.”</p> <p>In Charleston, one to three inches of snow and sleet is forecast Wednesday, where the Weather Service warns to “plan on difficult travel conditions.”</p> <p>From Norfolk to the Maryland and Delaware beaches, including much of the southern half of the Delmarva Peninsula, 3 to 6 inches of heavy snow are predicted from Wednesday evening to Thursday afternoon.</p> <p>Farther inland in the Mid-Atlantic, near Interstate 95, the storm’s exact track will be highly consequential. Current computer models suggest most, if not at all, snowfall will occur east of Washington and Baltimore on Wednesday night into early Thursday. But small shifts to the west could bring some snow to these cities.</p> <p>To the north, Philadelphia and New York have a better chance for a coating of snow, but — unless the storm edges closer to the coast — the more significant snow should remain to their east from Atlantic City to eastern Long Island, where at least four to six inches could fall late Wednesday to late Thursday.</p> <p>By the time the storm reaches the ocean waters east of Long Island and eastern New England on Thursday, it will be explosively intensifying. The storm’s central pressure will have fallen 55 millibars in just 24 hours — an astonishing rate of intensification.</p>

“Some computer models are projecting a minimum central air pressure of below 950 millibars at its peak, which would be nearly unheard of for this part of the world outside of a hurricane,” wrote Mashable’s Andrew Freedman. “For comparison, Hurricane Sandy had a minimum central pressure of about 946 millibars when it made its left hook into New Jersey in 2012.”

Winds will crank in response to this pressure drop, howling to at least 30 to 50 mph along the coast. Winds will be considerably stronger over the ocean — exceeding hurricane force — where enormous waves will form.

In Boston, the Weather Service is predicting not only four to seven inches of snow but also winds strong enough to bring down branches. Throughout eastern Massachusetts and eastern Maine, the combination of wind and snow could create blizzard conditions, especially if the storm wobbles west.

“Our biggest concern is the potential for damaging wind gusts especially near the southeast New England coast,” the Weather Service tweeted. “Power outage risk followed by arctic air Fri/Sat a big concern!”

The storm’s enormous circulation will help draw several lobes of the polar vortex, the zone of frigid air encircling the North Pole, over the Mid-Atlantic and Northeast by Friday and Saturday. Wicked cold air sourced from Siberia, the North Pole and Greenland will all converge on the region.

Temperatures are forecast to be 20 to 40 degrees below normal, the coldest of the winter so far.

Most locations in the Mid-Atlantic and Northeast are predicted to set records for cold temperatures on Friday with highs in the single digits and teens.

On Saturday morning, subzero cold is forecast over almost all of New England, with single digits in the Mid-Atlantic.

Finally, after one of the most intense cold spells of such duration on record in parts of New England — including Boston, temperatures are forecast to gradually thaw by early next week.

<b>HEADLINE</b>	<b>01/02 DOE to close Hanford tank permanently</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/857889/energy-department-to-permanently-close-damaged-hanford-tank/">http://mynorthwest.com/857889/energy-department-to-permanently-close-damaged-hanford-tank/</a>
<b>GIST</b>	<p>RICHLAND, Wash. (AP) — The Energy Department says it will permanently close a damaged radioactive waste storage tank on the Hanford Nuclear Reservation.</p> <p>The department says that Tank AY-102 has widespread damage and should not be repaired.</p> <p>The Tri-City Herald reports that this is the oldest of the double-walled underground tanks at Hanford.</p> <p>The Energy Department in 2012 revealed that waste from the inner shell of the tank was slowly leaking into the space between its inner and outer shells. No waste is known to have breached the outer shell to reach the environment.</p> <p>The decision means that Hanford will have 27 newer double-walled tanks to hold waste emptied from 149 leak-prone single-walled tanks.</p> <p>The waste is left from World War II and Cold War production of plutonium for the nation’s nuclear weapons program.</p>

<b>HEADLINE</b>	<b>01/02 Canada: Native American hunting rights</b>
-----------------	---

<b>SOURCE</b>	<a href="http://mynorthwest.com/857925/court-recognizes-native-american-hunting-rights-in-canada/">http://mynorthwest.com/857925/court-recognizes-native-american-hunting-rights-in-canada/</a>
<b>GIST</b>	<p>COLVILLE, Wash. (AP) — The Supreme Court of British Columbia has upheld a Washington state man’s right to hunt in the province by recognizing the traditional hunting grounds of his ancestors.</p> <p>The Northwest News Network reports the court last week ruled in favor of Richard Desautel, a member of the Colville Confederated Tribes and a descendant of the Sinixt people.</p> <p>Desautel had crossed into Canada to shoot and kill an elk in 2010, and Canadian authorities had charged him with hunting without a license.</p> <p>Desautel claimed the hunt was legal because it was on the traditional hunting grounds.</p> <p>Authorities argued the hunting rights ended when the Sinixt were declared extinct in Canada.</p> <p>A lower court sided with Desautel in march 2017, acquitting him of the charges after a nearly yearlong trial.</p>

<b>HEADLINE</b>	<b>01/02 Olympia, SeaTac 9<sup>th</sup> wettest year</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/857864/olympia-sea-tac-had-9th-wettest-year-in-recorded-history/">http://mynorthwest.com/857864/olympia-sea-tac-had-9th-wettest-year-in-recorded-history/</a>
<b>GIST</b>	<p>Seattlites may have lived through four unusually wet years, but they were nothing when compared to what other areas of Western Washington went through this year.</p> <p>Olympia and Sea-Tac Airport both had their ninth wettest years in recorded history, according to the National Weather Service.</p> <p>A total of 47.87 inches of rain was recorded at Sea-Tac. The normal total is about 37.5 inches per year.</p> <p>In Olympia, a total of 61.44 inches of rain was recorded in 2017. The normal, according to the Weather Service, is 50 inches.</p> <p>Over in Forks, according to The Seattle Times, approximately 120 inches of rain fell.</p> <p>As for Seattle, the Weather Service says that for the first time in more than 120 years, Seattle had four years in a row with at least 44 inches of rain for a combined total of 186.38 inches.</p> <p>“It could be said that 2017 was wet for most places,” the Weather Service stated.</p>

<b>HEADLINE</b>	<b>01/02 Egypt top imam: Islam forbids bitcoin</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/bitcoin-top-imam-declares-cryptocurrency-forbidden-islam-and-calls-ban-768075">http://www.newsweek.com/bitcoin-top-imam-declares-cryptocurrency-forbidden-islam-and-calls-ban-768075</a>
<b>GIST</b>	<p>Egypt’s top imam has endorsed a ban on trading in bitcoin, declaring the cryptocurrency “forbidden” under Islam.</p> <p>Sheikh Shawki Allam, the Grand Mufti, issued a formal fatwa on Monday stating that trading in the digital currency is “forbidden in Sharia, as it causes harm to individuals, groups and institutions.”</p> <p>The imam argued that bitcoin carries risks of “fraudulence, lack of knowledge, and cheating,” Egyptian</p>

daily Ahram reported. Allam likened the trading of the cryptocurrency to gambling, which he said is also forbidden under Islam “due to its direct responsibility in financial ruin for individuals.”

The Grand Mufti said the cryptocurrency was risky as it is not regulated by any centralised authority. He also said that both the “currency’s risk as well as its high profit potential undermines Egypt’s ability to maintain and stabilize its own currency.”

The imam added that his fatwa was issued following consultations with a number of economic experts.

An adviser to the Grand Mufti, Magdy Ashour, told Egypt Today that the virtual currency is “used directly to fund terrorists.”

“It has no set rules, which is considered as a contract annulment in Islam, that is why it is forbidden,” he said.

Egypt’s Dar al-Ifta, an institute and government body founded to represent Islam, has repeatedly warned against the digital currency, arguing that its lack of regulation creates opportunities for extremists to receive funding.

<b>HEADLINE</b>	<b>01/02 Big hack attack financial firms</b>
<b>SOURCE</b>	<a href="https://www.fa-mag.com/news/the-big-hack-attack-36292.html">https://www.fa-mag.com/news/the-big-hack-attack-36292.html</a>
<b>GIST</b>	<p>Cyber criminals have become increasingly sophisticated, and all financial services firms are ripe targets for frauds. In 2016, the FBI’s Internet Crime Complaint Center received almost 300,000 complaints for almost \$1.3 billion in losses. According to the IBM X-Force Threat Intelligence Index, the financial services sector was attacked more than any other industry that year. The most pervasive scams involve phishing, ransomware, malware and denial-of-service attacks.</p> <p>Diane Pearson of Legend Financial Advisors in Pittsburgh, says her IT person once told her that someone was trying to break through the firm’s firewall every night. Pearson knows of somebody at another firm who lost her job after succumbing to a phishing e-mail, wiring \$50,000 from a client to a fraudster.</p> <p>The scams don’t have to be terribly sophisticated. The biggest vulnerabilities of financial companies, say security experts, are perhaps not surprisingly their employees. Naïve staffers are most at risk of opening phishing e-mails that allow fraudsters to download malicious software into their machines, taking over their computers and breaking into networks.</p> <p>The biggest risk is that a hacker will capture an employee’s credentials and then log in externally to third-party vendors, says Benjamin Gordon, the manager of advisory services at Rook Security in Carmel, Ind. “Employees just aren’t educated enough on security, to be perfectly blunt. It doesn’t matter what technology you have in place, what IT team you have in place. If somebody clicks on a malicious link, it’s a problem.”</p> <p>Rook performs such attacks, (known by their nickname as “pen tests”) for major corporations, including financial institutions, in a variety of packages that include basic vulnerability and software testing as well as more novel physical site breaches.</p> <p>Gordon and Nat Shere, Rook’s senior information security consultant, say that even before a pen test is done, they would recommend that smaller firms do vulnerability scanning with software that costs a couple of thousand dollars a year for a license. “Going further is the pen test itself,” says Shere. “We would perform reconnaissance over the environment and look for credentials that had already been compromised through other attacks.” The pen test is meant to prove that a suspected vulnerability could actually be exploited.</p>

After that, the fun cloak and dagger stuff begins in which the hackers (with permissions from business owners) don costumes and try to fool staff by slipping into the physical locations themselves. Says Shere, “We have posed as a maintenance crew, as fire extinguisher inspection agents, insurance agents, FedEx employees. And that gets somewhat involved . . . having costumes related to those personas. Creating e-mails, creating fake IDs.” The first thing they do during a physical attack is recon, some of which is fairly unsophisticated—walking around buildings inconspicuously to get a sense of what the entry points are, finding out whether there are badge readers or cameras. The Rook team might loiter around the back of a building to see if they can sneak in when somebody leaves a door open.

A lot of times the owners will set flags throughout the building, Gordon says, challenging Rook to break through different levels of security or into certain areas, like the server room.

Recently, says Shere, the firm was contracted to go into a client’s large data center in Texas. “We dressed up as though we were from the fire department. We had some clipboards; we had some very official looking outfits. And we came in and said we are here to inspect the fire extinguishers to make sure they are still up to code.” The person at the front desk called the manager. “We had a fake printed-out e-mail from a supervisor who was not there at the time saying it was OK.

“The manager ended up giving us a full access key to the entire building so that we could go floor to floor inspecting all the fire extinguishers. So we did that, wandering around on our own and basically taking pictures of all the various network and computer hardware.”

Other times, Rook finds out stuff about its clients on the internet. After finding out that an employee of one firm had just gotten a performance review, “we sent e-mails to around 50 to 75 of their employees with an attached document that said, ‘Here’s the results of your performance review.’ And we had nearly 60% to 70% of them download and try to execute this malicious file that gave us access to their computers.”

The firm also does phone attacks—posing as help desk or HR staffers—asking employees to reset their passwords. “It’s amazing what you can find on the internet,” Gordon says, “in terms of what a company is doing and who works there, and we can tailor our attack plans based off that information.” Hackers can find out who works in HR on LinkedIn, and send fake e-mails to staffers spoofing real human resource names.

Many hackers work by cross-checking all the stuff available on the internet, especially on the dark web. Greg Fulk, a COO at Valeo Financial Advisors in Indianapolis, asked Rook to test one of its custom applications.

“They will try to guess usernames and passwords,” Fulk says, “and anytime these great big public websites are hacked something like Yahoo, they are going to try to find somebody in the Yahoo hack of 2013 who has the same credentials as one of my employees.” That employee likely uses the same password at work that he or she uses to shop for Christmas presents at Home Depot or Amazon, he says. Rook was able to find those employee credentials on the dark web and try them on Valeo’s site.

<b>HEADLINE</b>	<b>01/02 Tech giants try to stop attacks</b>
<b>SOURCE</b>	<a href="http://host.madison.com/business/investment/markets-and-stocks/microsoft-and-facebook-join-forces-to-stop-cyberattack-on-the/article_cfb8d1c9-71ed-5258-81e1-8d739591b452.html">http://host.madison.com/business/investment/markets-and-stocks/microsoft-and-facebook-join-forces-to-stop-cyberattack-on-the/article_cfb8d1c9-71ed-5258-81e1-8d739591b452.html</a>
<b>GIST</b>	In May 2017, the computer virus known as WannaCry spread across the globe like wildfire, infecting hundreds of thousands of computers. Using a type of infection known as ransomware, the virus locked and encrypted files on the affected computers so they could not be accessed. Messages demanded that users pay \$300 in digital currency in order to have their computers unlocked. The unknown perpetrators stated that if the ransom wasn't paid within days, the required payment would double, and after a week, the files on the infected computer would be wiped clean.

Before the attack was stopped, more than 300,000 computers in 150 countries were affected. The attack caused disruptions in hospitals, public transportation, banks, and telecom providers.

In mid-December, the Trump administration blamed North Korea for the attack, and the U.S. Department of Homeland Security revealed that tech giants Facebook, Inc. (NASDAQ: FB) and Microsoft Corporation (NASDAQ: MSFT) had disabled a number of new cyberthreats in recent weeks.

These would-be competitors joined forces to shut down an ongoing cyber attack. Image source: Getty Images.

#### Strange bedfellows

The two companies that might normally be considered competitors in the tech arena collaborated with "others in the security community," though the other players weren't identified.

In a White House news conference, homeland security advisor Tom Bossert said that "Facebook took down accounts that stopped the operational execution of ongoing cyberattacks and Microsoft acted to patch existing attacks, not just the WannaCry attack initially." Bossert chose not to elaborate on the nature of the other attacks.

Both companies confirmed their role in the action. Facebook said that it deleted accounts linked with the hackers "to make it harder for them to conduct their activities." The hacking collective, known as the Lazarus Group, had a number of fake personal profiles that it used to target unsuspecting users. Facebook also notified individuals who had contact with the suspect accounts. In a statement, the company said:

*Facebook has a long-standing commitment to security, and we continue to invest in efforts to protect people from cyber threats and keep our platform safe. We will continue to work closely with companies to investigate and counteract these types of threats to our collective security.*

Microsoft president and chief legal officer Brad Smith issued a blog post saying that the company "among other steps, last week helped disrupt the malware this group relies on, cleaned customers' infected computers, disabled accounts being used to pursue cyberattacks and strengthened Windows defenses to prevent reinfection."

Smith also said that the company "welcomed the opportunity" to cooperate with Facebook and others on the threat.

The risk from cybercrime has risen to the level of a worldwide epidemic in recent years, with some saying that it represents the greatest single threat to every company worldwide. The cost of cyberattacks could rise to \$6 trillion annually by 2021, according to the Official 2017 Annual Cybercrime Report by Cybersecurity Ventures.

While the collaboration between Microsoft and Facebook was successful at disabling a number of recent security threats, investors should be aware that this will be an ongoing battle and one that will likely cut into future profitability for the tech giants.

<b>HEADLINE</b>	<b>01/02 Kidnapped exec released for \$1M bitcoin</b>
<b>SOURCE</b>	<a href="https://www.pymnts.com/blockchain/bitcoin/2018/crypto-exec-lerner-kidnapped-for-ransom-cyberattack/">https://www.pymnts.com/blockchain/bitcoin/2018/crypto-exec-lerner-kidnapped-for-ransom-cyberattack/</a>
<b>GIST</b>	A cryptocurrency executive who was kidnapped by an armed gang near his office in Kiev earlier this week was freed on Thursday after paying the ransom demand of more than \$1 million in bitcoins.  According to Financial Times, Pavel Lerner, who runs the U.K.-registered cryptocurrency exchange

	<p>EXMO, was kidnapped in a crime that an adviser to the Ukrainian interior minister described as “bitcoin kidnapping and extortion.”</p> <p>Witnesses reported seeing Lerner, a Russian citizen, being placed into a black Mercedes-Benz by people wearing dark clothes and balaclavas.</p> <p>“He was kidnapped by an armed gang for the purpose of extorting bitcoins,” said Anton Gerashchenko. “We have operative information that he paid more than \$1M worth of bitcoins.” Lerner was “then released in a state of shock ... He got very lucky that he remained alive,” added Gerashchenko.</p> <p>Ukraine’s national police force is now investigating the incident.</p> <p>EXMO, which is registered in the U.K. with Companies House but also has operations in Ukraine, also reported via Twitter that it had been a victim of a cyberattack, which resulted in its website being down temporarily.</p> <p>The company was quick to assure customers that their funds were safe, explaining that Lerner’s job didn’t “assume access either to storages or any personal data of users.” While Lerner’s LinkedIn profile says he is the CEO of EXMO, the company reportedly told the BBC he is its analytics manager.</p>

<b>HEADLINE</b>	<b>01/02 Not sci-fi but real wars in space</b>
<b>SOURCE</b>	<a href="http://spacenews.com/sorry-sci-fi-fans-real-wars-in-space-not-the-stuff-of-hollywood/">http://spacenews.com/sorry-sci-fi-fans-real-wars-in-space-not-the-stuff-of-hollywood/</a>
<b>GIST</b>	<p>WASHINGTON — The public’s idea of a war in space is almost entirely a product of Hollywood fantasy: Interstellar empires battling to conquer the cosmos, spaceships going head to head in pitched dogfights</p> <p>The reality of how nations will fight in space is much duller and blander. And some of the key players in these conflicts will be hackers and lawyers.</p> <p>Savvy space warriors like Russia’s military already are giving us a taste of the future. They are jamming GPS navigation signals, electronically disrupting satellite communications links and sensors in space. Not quite star wars.</p> <p>This form of electronic warfare in space is serious enough, however, that the U.S. military is now moving to defend its satellites and other space assets. There is in fact a real conversation under way about war in space, albeit one of cyber and electromagnetic attacks, not spaceships shooting at each other.</p> <p>“There are legal and practical limits on armed conflict in space,” said Brian Weeden, director of program planning at the Secure World Foundation in Washington, D.C.</p> <p>“Most people experience space through Hollywood movies, TV shows and science-fiction books,” he said during an online discussion last month hosted by the American Bar Association. In almost all cases the depictions of warfare and combat in space are fictional. “They take extreme liberties and show outright ignorance of the laws of physics, orbital mechanics, conservation of energy and other things in order to make stories more dramatic and exciting.”</p> <p>Weeden mentioned “The Expanse” as a rare case of a TV show that depicts space warfare pretty close to accurately, but he insisted that the gap between fiction and reality with regard to space war is stark.</p> <p>Space indeed has turned into an important battlefield, and for good reasons. It is critical to nearly all aspects of national security and military power, including intelligence, surveillance, reconnaissance, communications, precision timing and navigation, attack warning and targeting of potential threats. The issue for the United States is to figure out how to thwart attacks within the boundaries of current treaties and legal frameworks, Weeden said. “Counterspace is now part of conventional warfare because space</p>

itself is part of conventional warfare.”

Non-kinetic attacks like jamming and interference are occurring more often. They are cheaper and easier to pull off than full-on kinetic destruction of satellites that would require a high-power laser or a ballistic missile.

As the Pentagon maps out strategies and tactics to defend its satellites, military lawyers are actively investigating how international law applies to outer space.

“Any operation in outer space must comply with the same law that is applicable to other domains, like sea, air and ground warfare,” said Michael Hoversten, chief of space, cyber, international, and operations law at Air Force Space Command headquarters at Peterson Air Force Base, Colorado.

As with other uses of military force, actions in space are restricted by international rules. If U.S. satellites were attacked, there is no ambiguity, he said. “The right to use force in self defense applies.”

The preeminent statute of international space law is the 1967 Outer Space Treaty, but some of the language is becoming harder to interpret in today’s environment, Hoversten said. “The treaty states that the Moon and other celestial bodies must be used exclusively for peaceful purposes” but it does not specifically say that outer space is exclusively a haven for peaceful purposes. The phrase “peaceful purposes” has been interpreted as “no military use” and also as “nonaggressive military use consistent with international law and the UN charter.”

The reality is that many countries use space for military purposes, he said. And most are reluctant to sign on to new treaties that might restrict their ability to exploit space in national security or economic activities.

The majority view is that military use is permissible, provided that it’s nonaggressive and consistent with international law and UN charter, Hoversten said. There is no consensus, however, about the meaning of “militarization” and “weaponization” of space, and different states use these terms differently. Outer space has been militarized for decades, but that is not the same as weaponization. “There is a common misconception that weapons of all kinds are illegal in outer space. That is not the case.” The only specific prohibition is against so-called weapons of mass destruction — nuclear, biological, chemical and radiological.

Electronic arms like lasers or jammers, or even conventional kinetic weapons can lawfully be placed in orbit, he said. Some countries, notably China and Russia, for the past decade have championed efforts to prohibit all kinds of space weapons. The United States has opposed bans primarily because of difficulties in defining what a weapon is, Hoversten explained. Theoretically any satellite that is capable of maneuvering can be used as a weapon. U.S. officials also have argued that an arms control treaty for space weapons would be unverifiable.

Also a topic of debate is how the U.S. military would justify the use of countermeasures. So far it remains a fuzzy issue, said Maj. Ross Brown, chief of space, international and operations law at 14th Air Force headquarters at Vandenberg Air Force Base, California.

“Below an armed attack, the most applicable response is a countermeasure,” he said. But the devil is in the details. “Countermeasures must be proportional. Must not be forceful. They must be constrained. Must be reversible,” Brown said. “It’s a ‘mushy’ requirement.”

Another concern is that the response must be “proportionate to the injury being suffered,” he said. “That is difficult to measure.” Disruptions to satellite links can cause material damage but also “strategic harm” if the military is cut off from access to information.

As the Pentagon and others sound alarms about cyber threats to space, the reality is that very little is known about the frequency of attacks or even the scope of the danger.

	<p>“Public data on cyber attacks on any satellites, military or commercial, is extremely scarce,” said Weeden. “Militaries, governments, space agencies, companies are pretty reluctant to talk publicly about cyber attacks, whether successful or unsuccessful.”</p>

<b>HEADLINE</b>	<b>01/02 Teenage girl faces jail for nude selfie</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/teen-girl-facing-up-to-10-years-for-sending-selfie/">https://www.hackread.com/teen-girl-facing-up-to-10-years-for-sending-selfie/</a>
<b>GIST</b>	<p>As unnerving and concerning as it sounds, the fact is that teen sexting has become a grave issue not only for the parents but also for law enforcement authorities as they often find it difficult to deal with the situation in case something goes wrong.</p> <p>According to a recent survey from Cyberbullying Research Center around 12% of teens between 12 and 17 years age sent their sexually explicit photo to someone in their lifetime and 4% of them have done so in the past month. The latest incident involving a teenage girl being charged with the creation of child pornography is a clear proof that sexting is a dangerous act that can lend kids and teens into great trouble.</p> <p>Minnesota selfie case</p> <p>In Minnesota, a fourteen-year-old girl is being charged for sexting, which falls under the category of sexual crimes. Reportedly, the teenage girl sent an explicit selfie of hers to a boy at her school, which prosecutors claim is a violation of Minnesota’s child pornography statute. Sexting is a broad term that refers to various behaviors from exchanging/sending sexually explicit text messages to suggestive videos and pictures.</p> <p>It is worth noting that under the statute, distribution of sexually explicit photographs of underage subjects is banned. However, in this scenario, the girl, who is being referred to as Jane Doe, sent her own picture to a boy whom she knew very well, yet, the accused is facing charges in Minnesota juvenile courts.</p> <p>ACLU to the rescue</p> <p>This is simply ridiculous, claims a legal brief filed [PDF] by the ACLU of Minnesota; it is absurd that a teen is being charged for taking an explicit selfie because it is akin to the state charging a victim for nudity as it is exactly what the law says.</p> <p>According to the legal brief from ACLU, the accused sent an explicit selfie to a classmate via phone-based messaging application Snapchat and the recipient took a screenshot of the message and shared it with other schoolmates without the consent of the girl. Faribault, Minnesota police was alerted by a classmate and this is how the whole matter came to the limelight.</p> <p>The ACLU is worried because officials are charging the accused for “felony sex offense of knowingly disseminating pornographic work involving a minor to another person,” a crime for which an adult would get up to seven to ten years jail time if convicted. Though the circumstances are different since this particular case involves a teen girl, therefore the sentence might not be as harsh but it is concerning for the ACLU that the girl would be placed on a sex offender registry if found guilty. This would indeed be devastating for the accused of getting a job or a house will not be easy for her in the future.</p> <p>Jane Doe claims that she is being victimized by the state. “I’m not a criminal for taking a selfie. Sexting is common among teens at my school, and we shouldn’t face charges for doing it. I don’t want anyone else to go through what I’m going through,” the accused stated.</p> <p>As per the Minnesota statute 617,247, the purpose of child pornography law is to “protect minors from the physical and psychological damage caused by their being used in pornographic work depicting sexual conduct which involves minors.” But, in this case, whether the law is applicable or not that is the whole</p>

	<p>issue. Apparently, the state is applying the law in a wrong manner since the image in question was sent by the girl with consent to a boy she liked.</p> <p>The case currently is being heard in Rice County juvenile court. Since the case involves a teenager, therefore, critical details of the case haven't been made public such as the accused's name and whether the accused took a photo or a video and if the boy has also been charged or not. What we do know is that the girl went to a school in Southern Minnesota.</p> <p>First Amendment</p> <p>It is also claimed by the ACLU that sexting is protected by the First Amendment because virtual child pornography was allowed while exploitation of actual children was prohibited by law, which means charging a teen for explicit selfies is itself in violation of the First Amendment, noted ArsTechnica. Moreover, it was illogical to file a case and accuse a teenager on grounds that the girl coerced herself into the creation of pornographic content because it will create another issue of limiting the expressive rights of teens.</p> <p>The ACLU wrote in its legal brief: sending an explicit selfie to a peer "to indicate romantic or sexual interest, the same compelling risk of physical and psychological injury does not exist. Thus, the statute infringes upon constitutionally-protected speech." But going by the understanding of Minnesota officials, this is a case of child pornography and the teen girl could easily be classified as a child pornographer.</p>

<p><b>HEADLINE</b></p>	<p><b>01/02 DHS: DMARC adoption surges ahead</b></p>
<p><b>SOURCE</b></p>	<p><a href="https://www.infosecurity-magazine.com/news/dmarc-adoption-surges-ahead-mandate/">https://www.infosecurity-magazine.com/news/dmarc-adoption-surges-ahead-mandate/</a></p>
<p><b>GIST</b></p>	<p>Federal domain adoption of the DMARC email security scheme in the US increased 38% in 30 days, with 151 more domains now protected.</p> <p>According to an analysis on its adoption by Agari, adoption is up from 34% of domains implementing DMARC on November 18 to 47% on December 18. This shows rapid adoption of the critical email authentication standard ahead of a January 15 deadline for the Department of Homeland Security (DHS) directive to do so. DHS announced Binding Operating Directive (BOD) 18-01 in October, which mandates that all federal domains implement DMARC, TLS and HTTPS to prevent domain name spoofing and to secure email communication.</p> <p>"DMARC has proven to be an effective solution to secure our federal domains, but more work is needed to protect all federal domains. The time to act is now; deadlines to comply with [the operational directive] are imminent," said Jeanette Manfra, assistant secretary for the Office of Cybersecurity and Communications, DHS. "Cybersecurity is a critical component of our homeland security policy, but it is also a shared responsibility. It is crucial for US citizens to trust that an email from a government agency is legitimate."</p> <p>Agari research also shows the effectiveness of the DMARC security control across federal agencies. Of the billions of emails sent across the more than 400 federal government domains secured by Agari, 96% of the emails are protected by the strongest DMARC policy (p=reject), including those in the US Senate, Veterans Affairs, Health and Human Services and the US Post Office. All of these have seen attempted fraud send rates decrease to less than 2% in December, Agari said.</p> <p>Federal departments and agencies have 90 days to implement DMARC at its lowest setting (monitoring, P=none) and one year to implement DMARC at its highest setting (P=reject), which prevents unauthorized mail from being sent.</p> <p>About half (53%) still have not deployed DMARC, just ahead of the first DHS deadline.</p>

<b>HEADLINE</b>	<b>01/02 Necurs botnet fueled year-end attacks</b>
<b>SOURCE</b>	<a href="http://www.securityweek.com/necurs-botnet-fuels-massive-year-end-ransomware-attacks">http://www.securityweek.com/necurs-botnet-fuels-massive-year-end-ransomware-attacks</a>
<b>GIST</b>	<p>The Necurs botnet started 2017 with a four-month vacation, but ended the year sending tens of millions of spam emails daily as part of massive ransomware distribution campaigns.</p> <p>Considered the largest spam botnet at the moment, Necurs was the main driver behind the ascension of the Locky ransomware (which in turn is associated with the Dridex banking Trojan) in 2016. As Necurs took a long vacation in the beginning of 2017, Locky was silent as well, but both resumed activity in April.</p> <p>Over the course of 2017, however, the botnet was involved in the distribution of the Jaff, GlobeImposter, and Scarab ransomware families, as well as in 'pump-and-dump' schemes.</p> <p>Over a 10-day period between December 19 and December 29, 2017, Necurs was once again involved in the distribution of ransomware, in addition to sending typical holiday-themed scam emails, data collected by AppRiver reveals.</p> <p>The messages, AppRiver says, were distributing the Locky and GlobeImposter ransomware families and revealed the attackers' preference to use malicious .vbs (Visual Basic Script) or .js (JavaScript) files located inside a .7z archive.</p> <p>Consisting of between 5 and 6 million infected hosts and keeping around 1 or 2 million of them active at any given time, Necurs provides operators with remote access to the infected machines and can be used for various malicious activities, including malware downloads.</p> <p>Starting on Dec. 19, the botnet was observed sending tens of millions of spam emails daily to distribute ransomware. It started at nearly 46 million emails on the first day (peaking at over 4.6 million messages per hour) and continued with over 47 million messages on Dec. 20 (peaking at 5.7 million per hour).</p> <p>While the initial spam featured mainly .vbs files inside the .7z archive, .js files started appearing as well on the second day, and the traffic switched to .js files on Dec. 21-22, when it also started to taper off, at 36 million and 29 million messages per day, respectively. The botnet remained quiet from Dec. 23-25 and recommenced activity for only a couple of hours on Dec. 26.</p> <p>"Hard to say why, however, I would hypothesize the operators may have been testing or monitoring the rate of infections and realized many workers are on vacation," AppRiver's David Pickett notes.</p> <p>On Dec. 28-29, however, the botnet was highly active. It peaked at 6.5 million messages early morning on Dec. 28, but wasn't active for long. On the next day, Necurs was observed sending nearly 59 million ransomware messages.</p>

<b>HEADLINE</b>	<b>01/02 Trackmageddon: GPS tracking service flaws</b>
<b>SOURCE</b>	<a href="http://www.securityweek.com/many-gps-tracking-services-expose-user-location-other-data">http://www.securityweek.com/many-gps-tracking-services-expose-user-location-other-data</a>
<b>GIST</b>	<p>Researchers discovered that many online services designed for managing location tracking devices are affected by vulnerabilities that expose potentially sensitive information.</p> <p>Fitness, child, pet and vehicle trackers, and other devices that include GPS and GSM tracking capabilities are typically managed via specialized online services.</p> <p>Security experts Vangelis Stykas and Michael Gruhn found that over 100 such services have flaws that can be exploited by malicious actors to gain access to device and personal data. The security holes, dubbed Trackmageddon, can expose information such as current location, location history, device model and type, serial number, and phone number.</p>

Some services used by devices that have photo and audio recording capabilities also expose images and audio files. In some cases, it's also possible to send commands to devices in order to activate or deactivate certain features, such as geofence alerts.

Attackers can gain access to information by exploiting default credentials (e.g. 123456), and insecure direct object reference (IDOR) flaws, which allow an authenticated user to access other users' accounts simply by changing the value of a parameter in the URL. The services also expose information through directory listings, log files, source code, WSDL files, and publicly exposed API endpoints that allow unauthenticated access.

Stykas and Gruhn have notified a vast majority of the affected vendors in November and December. Nine services have confirmed patching the flaws or promised to implement fixes soon, and over a dozen websites appear to have addressed the vulnerabilities without informing the researchers. However, the rest of the tracking services remain vulnerable.

There are roughly 100 impacted domains, but some of them appear to be operated by the same company. Researchers have identified 36 unique IPs hosting these domains and 41 databases that they share. They estimate that these services expose data associated with over 6.3 million devices and more than 360 device models.

The vulnerable software appears to come from China-based ThinkRace, but in many cases the company does not have control over the servers hosting the tracking services.

Gruhn and Stykas pointed out that vulnerabilities in ThinkRace products – possibly including some of the issues disclosed now – were first discovered in 2015 by a New Zealand-based expert while analyzing car tracking and immobilisation devices that relied on ThinkRace software.

<b>HEADLINE</b>	<b>01/02 Ukraine ‘training ground’ Russia hackers</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/ukraine-a-training-ground-for-russian-hacking-attacks-on-west/article/734267/">https://www.scmagazine.com/ukraine-a-training-ground-for-russian-hacking-attacks-on-west/article/734267/</a>
<b>GIST</b>	<p>Ukraine has become a “training ground” for Russian hackers wishing to perpetrate cyber-attacks on the west, a Kyiv security expert has claimed.</p> <p>Oleksii Yasinsky, forensic analyst at Kyiv cyber security firm ISSP, claimed that Russian hackers are using Ukraine to "hone technologies, mastery and attack techniques" for bigger targets – such as Europe</p>

and the US.

According to Yasinsky: "It will be a quiet attack." He added: "Whoever controls cyber-space will control the world."

It comes after National Cyber Security Centre chief, Ciaran Martin confirmed in November that the Kremlin had ordered a cyber-assault on the UK's major power companies in a bid to disrupt international order.

In June last year, more than 300 Ukrainian companies were victims of the global cyber-attack dubbed NotPetya, thought to be state sponsored. The country also suffered power cuts in December 2015 and 2016, attributed to a hacker group called 'Sandworm', which is thought by some to have meddled in the US elections.

Russia denies any wrongdoing, but last month during a visit to Moscow, International Secretary Boris Johnson warned the country not to target the UK.

"We know Russia are up to no good in terms of their cyber-capability and I'm afraid it will only get worse," Jamal Elmellas, CTO at Auriga Consulting told SC UK. "It's now part of a conventional war tool chest where they will soften targets in preparation for a physical attack."

Elmellas said Russia is carrying out covert attacks on foreign nations to spread fake news and steal state secrets. However, he added that an attack on UK critical infrastructure in the near future is unlikely because "they don't have the capability to hide their footprints".

"They can be identified by the tools they utilise: there are signatures which give them away."

<b>HEADLINE</b>	<b>01/02 Non-malware attacks favored in 2017</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/cybercriminals-favored-non-malware-attacks-in-2017-report/article/734266/">https://www.scmagazine.com/cybercriminals-favored-non-malware-attacks-in-2017-report/article/734266/</a>
<b>GIST</b>	<p>Non-malware-based cyberattacks were behind the majority of cyber incidents reported in 2017, despite proliferation of malware available to both the professional and amateur hacker.</p> <p>However, non-malware attacks were only part of the story in 2017 as Carbon Black also reported that ransomware attack are inflicting significantly higher costs and the number of attacks skyrocketed during the course of the year.</p> <p>Non-malware, or file-less, attacks using PowerShell and Windows Management Instrumentation tools, normally utilized by IT staffers along with exploiting exploit in-memory access and running applications, like web browsers and Office applications, were used in 52 percent of all attacks, according to a Carbon Black report. The number of non-malware based attacks increased, on average, of 6.8 percent per month during 2017 with 64 percent of security researchers surveyed by Carbon Black noting an uptick in this style of attack.</p> <p>Carbon Black also found that many security workers were not confident in the legacy tools they had on hand to defeat non-malware attacks with two-thirds indicating they had no confidence that traditional anti-virus software would protect their firm.</p> <p>Despite all the problems non-malware attacks caused, malware was able to inflict a tremendous amount of damage and cost on businesses and individuals during 2017.</p> <p>The company said ransomware alone cost business about \$5 billion in paid ransoms in 2017, up from \$850 million in 2016 and just \$24 million in 2015. Tech companies, governments and those in the legal</p>

profession were the biggest losers and Carbon Black noted that Spora was used in about 20 percent of all attacks followed by CryptXXX/Exxroute, Locky, Cerber, and Genasom.

In addition to the financial cost of malware increasing, attacks also came at a fast and furious rate last year. Carbon Black reported that the number of attacks hitting individual computers protected by its software went from 0.7 per month earlier in the year to more than three times per month as the year closed out.

<b>HEADLINE</b>	<b>01/01 Claim: security flaw in major browsers</b>
<b>SOURCE</b>	<a href="https://thehackernews.com/2018/01/browser-password-managers.html">https://thehackernews.com/2018/01/browser-password-managers.html</a>
<b>GIST</b>	<p>Security researchers have uncovered how marketing companies have started exploiting an 11-year-old bug in browsers' built-in password managers, which allow them to secretly steal your email address for targeted advertising across different browsers and devices.</p> <p>The major concern is that the same loophole could allow malicious actors to steal your saved usernames and passwords from browsers without requiring your interaction.</p> <p>Every modern browser—Google Chrome, Mozilla Firefox, Opera or Microsoft Edge—today comes with a built-in easy-to-use password manager tool that allows you to save your login information for automatic form-filling.</p> <p>These browser-based password managers are designed for convenience, as they automatically detect login form on a webpage and fill-in the saved credentials accordingly.</p> <p>However, a team of researchers from Princeton's Center for Information Technology Policy has discovered that at least two marketing companies, AdThink and OnAudience, are actively exploiting such built-in password managers to track visitors of around 1,110 of the Alexa top 1 million sites across the Internet.</p> <p>Third-party tracking scripts found by researchers on these websites inject invisible login forms in the background of the webpage, tricking browser-based password managers into auto-filling the form using the saved user's information.</p> <p>"Login form auto filling in general doesn't require user interaction; all of the major browsers will autofill the username (often an email address) immediately, regardless of the visibility of the form," the researchers say.</p> <p>"Chrome doesn't autofill the password field until the user clicks or touches anywhere on the page. Other browsers we tested don't require user interaction to autofill password fields."</p> <p>Since these scripts are primarily designed for user-tracking, they detect the username and send it to third-party servers after hashing with MD5, SHA1 and SHA256 algorithms, which could then be used as a persistent ID for a specific user to track him/her from page to page.</p> <p>"Email addresses are unique and persistent, and thus the hash of an email address is an excellent tracking identifier," the researchers said. "A user's email address will almost never change—clearing cookies, using private browsing mode, or switching devices won't prevent tracking."</p>

<b>HEADLINE</b>	<b>01/02 Researcher: critical flaw in phpMyAdmin</b>
<b>SOURCE</b>	<a href="https://thehackernews.com/2018/01/phpmyadmin-hack.html">https://thehackernews.com/2018/01/phpmyadmin-hack.html</a>
<b>GIST</b>	A critical security vulnerability has been reported in phpMyAdmin—one of the most popular applications

for managing the MySQL database—which could allow remote attackers to perform dangerous database operations just by tricking administrators into clicking a link.

Discovered by an Indian security researcher, Ashutosh Barot, the vulnerability is a cross-site request forgery (CSRF) attack and affects phpMyAdmin versions 4.7.x (prior to 4.7.7).

Cross-site request forgery vulnerability, also known as XSRF, is an attack wherein an attacker tricks an authenticated user into executing an unwanted action.

According to an advisory released by phpMyAdmin, "by deceiving a user to click on a crafted URL, it is possible to perform harmful database operations such as deleting records, dropping/truncating tables, etc."

phpMyAdmin is a free and open source administration tool for MySQL and MariaDB and is widely used to manage the database for websites created with WordPress, Joomla, and many other content management platforms.

Moreover, a lot of hosting providers use phpMyAdmin to offer their customers a convenient way to organize their databases.

Barot reported the vulnerability to phpMyAdmin developers, who confirmed his finding and released phpMyAdmin 4.7.7 to address this issue. So administrators are highly recommended to update their installations as soon as possible.

<b>HEADLINE</b>	<b>01/02 Trail of clues to DC camera hackers</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/hackers-who-disabled-police-cameras-prior-to-trump-inauguration-left-trail-of-clues/d/d-id/1330735">http://www.darkreading.com/attacks-breaches/hackers-who-disabled-police-cameras-prior-to-trump-inauguration-left-trail-of-clues/d/d-id/1330735</a>
<b>GIST</b>	<p>Two Romanian nationals who were arrested recently for allegedly breaking into computers controlling police surveillance cameras in Washington, DC just ahead of President Trump's inauguration last year appear to have left a trail of evidence that led authorities directly to them.</p> <p>Romanian police last month arrested Mihai Isvanca, 25 and Eveline Cismaru, 28 at Bucharest's Otopeni airport apparently as the pair was about to leave the country. They are currently waiting to be extradited to the US on wire fraud and other computer crime-related charges. Isvanca and Cismaru face up to 20 years in federal prison if convicted on all counts.</p> <p>Documents related to their arrest released last week describe the pair as breaking into 123 computers associated with surveillance cameras used by DC's Metropolitan Police Department (MPD) and using the compromised systems to distribute ransomware.</p> <p>The intrusions occurred sometime between January 9 and January 12, 2017. It resulted in several critical police surveillance cameras becoming disabled just prior to Trump's inauguration. The incident triggered the highest priority response by US law enforcement because of its potential impact on security plans for the event.</p> <p>An affidavit in support of the criminal complaint against Isvanca and Cismaru shows that the MPD called in the US Secret Service to investigate the break-in on January 12, 2017. Secret Service agents from the Washington Field Office discovered that 123 of the MPD's 187 outdoor surveillance cameras had been illegally accessed and were being used to distribute spam emails containing the Cerber and Dharma ransomware samples. One of the infected systems contained a text file with over 179,600 email addresses belonging to targets of the ransomware scheme.</p> <p>Somewhat curiously considering their choice of target, Isvanca and Cismaru did not appear to have been particularly careful about concealing their tracks. A forensic analysis of three of the MPD's infected</p>

computers yielded a lot of information on the identity of the alleged perpetrators and their direct involvement in the malicious activity.

One of the infected devices showed that the attackers had accessed multiple fraudulently established email accounts while the computer was under their control. The email accounts were used to share IP addresses, usernames, passwords, and other details on the compromised surveillance camera computers. They were also used to download ransomware samples on the compromised MPD systems and to send and receive thousands of stolen credit card numbers.

Investigators were able to link at least two of the email addresses directly to Isvanca and Cismaru. Google records, for instance, showed that both Isvanca and Cismaru had used their actual Gmail address as recovery email addresses for some of the accounts associated with the malicious activity. Investigators also discovered that the IP addresses from which the malicious email accounts were established belonged separately to Isvanca and Cismaru.

Other evidence showed that the file containing the over 179,600, target email addresses for the ransomware campaign had been downloaded to the MPD computer directly from Cismaru's system. Numerous, barely concealed email exchanges also showed the two had collaborated on the plot.

The arrests of Cismaru and Isvanca follow the detainment of two other individuals—a British man and Swedish woman—in London last year for the attacks on the MPD computers. However, the affidavit released last week shows that the two individuals were not connected to the attack. They were detained based on information pertaining to a tracking number for Hermes, a European packing shipping company that was found on one of the hacked computers.

Investigation of the tracking number showed it to be associated with a delivery address in London belonging to the two individuals who were detained. But a forensic analysis of computers seized from their residence showed them to have no link to the MPD attack. Instead, the tracking number was associated with a purchase the two individuals had made through Amazon from a company that was registered in Cismaru's name.

<b>HEADLINE</b>	<b>01/02 Colorado gunman alarming online trail</b>
<b>SOURCE</b>	<a href="http://www.cnn.com/2018/01/01/us/colorado-shooting-suspect-military-record/index.html">http://www.cnn.com/2018/01/01/us/colorado-shooting-suspect-military-record/index.html</a>
<b>GIST</b>	<p>(CNN)Just weeks before a barricaded man shot and killed a sheriff's deputy in a Colorado apartment, he apparently was writing alarming messages in email and on social media that included threats to police officers, officials have said.</p> <p>Matthew Riehl, a 37-year-old former Army reservist, shot four sheriff's deputies who responded to a complaint at his apartment in the Denver suburb of Highlands Ranch on Sunday morning, killing one, police say. Riehl was killed during a subsequent shootout with a police tactical team -- a clash that also left a SWAT officer injured, authorities say.</p> <p>The slain deputy was Zackari Parrish, a 29-year-old father of two. Two civilians outside the apartment also were shot and injured during the incidents, police say.</p> <p>Police haven't revealed suspected motives for Sunday's shootings, but several law enforcement agencies had been aware weeks beforehand that Riehl was accused of writing harassing or suspicious messages online, officials said this week.</p> <p>That includes "harassing posts" that Riehl put on his social media sites in November about a traffic stop in the Denver suburb of Lone Tree, just a few miles east of his apartment in Highlands Ranch, said Lone Tree spokeswoman Denisse Coffman.</p>

Shortly after those posts, Riehl allegedly sent harassing emails to Lone Tree police officers, Coffman said. "At that point, the Lone Tree Police Department immediately contacted the Douglas County Sheriff's Office to investigate, given that a Lone Tree police officer was being targeted by the suspect's harassing communication," Coffman said.

Coffman said she couldn't reveal any other information about the case because the investigation wasn't finished. But these apparently weren't the only messages that recently were brought to the attention of authorities.

In late 2017, the University of Wyoming -- where Riehl was a 2010 law school graduate -- alerted students and faculty to what it called his suspicious behavior.

According to a letter sent to faculty and staff in November, Riehl posted "rambling, nonsensical messages on his Facebook page" that mentioned the school. Campus police and the Laramie Police Department were both alerted to the posts. The faculty was asked to alert authorities if Riehl was spotted on campus.

Chad Baldwin, associate vice president for communications and marketing at the university, told CNN the posts were "outrageous, vulgar and alarming." Baldwin said the university heightened security on campus, but there were no reported sightings of Riehl in the area.

Douglas County Sheriff Tony Spurlock told reporters Sunday that Riehl had previous contacts with law enforcement "throughout the metro area," but had no criminal history.

<b>HEADLINE</b>	<b>01/02 Experts describe: planet of the apps</b>
<b>SOURCE</b>	<a href="https://www.sundaypost.com/fp/planet-of-the-apps-experts-warn-of-a-tech-take-over-as-robots-with-artificial-intelligence-seize-control/">https://www.sundaypost.com/fp/planet-of-the-apps-experts-warn-of-a-tech-take-over-as-robots-with-artificial-intelligence-seize-control/</a>
<b>GIST</b>	<p>Thousands of us unwrapped voice-activated electronic devices on Christmas Day.</p> <p>Amazon's Alexa service, Apple's Home Pod and Google's Home speakers were among the best-sellers.</p> <p>Recognising the human voice, the gadgets can play music, search the web, shop online, check the weather and even switch on the lights or control the central heating.</p> <p>But while we are getting to grips with our new interactive electronics, a report last week sounded alarm bells over the implications of rapidly improving artificial intelligence.</p> <p>The study, from the Institute for Public Policy Research (IPPR) warns of thousands of jobs being lost to robots – with those on lowest wages likely to be hardest hit.</p> <p>Around 44% of jobs accounting for about £290 million in wages risk being automated in the coming decades – mostly in low-paid sectors such as call centres, offices and factories.</p> <p>Mathew Lawrence, a senior researcher at the IPPR, said: "Managed badly, the benefits of automation could be narrowly concentrated, benefiting those who own capital. Inequality would spiral."</p> <p>Now the think tank is calling on governments to examine ways of spreading the benefits of automation throughout society.</p> <p>IPPR research fellow Carys Roberts said: "To avoid inequality rising, the Government should look at ways to spread capital ownership and make sure everyone benefits from increased automation."</p> <p>Unite, Britain's biggest union, said coping with advances in technology was nothing new for workers in the manufacturing sector in particular – but stressed the Government needs to invest in retraining people as</p>

automation increases.

They said: “We have seen in previous industrial revolutions, in the likes of the steel and other heavy industries, that whole communities can be left behind by new technology and this cannot happen again.”

Scottish Engineering chief executive Bryan Buchan has a much more positive view of what robots will bring to the workplace.

He said: “The evidence is that automation doesn’t cost jobs but it changes jobs. These things are quite advanced in terms of robotics and they don’t need guards around them so humans can work alongside them.

“They are using ‘cobots’ on the Mini assembly lines now at Oxford. Fundamentally the ‘cobot’ does the horrible, repetitive jobs that humans don’t like doing.”

The UK is one of the best prepared countries in the world to benefit from artificial intelligence, rather than lose out.

This month, the AI Readiness Index – by the Oxford Insights Team – put the UK in top place out of the world’s 35 most advanced countries – beating the US into second spot. But not all human jobs are under immediate threat from robots. Plumbers, electricians and nurses will stay in employment the longest, according to artificial intelligence expert and author Martin Ford.

“One area that is safe for people is the kind of job that requires a lot of dexterity, hand-eye coordination and flexibility,” he said. But will the robots we are creating one day enslave us?

It is a question that increasingly troubles many scientists and tech entrepreneurs.

Oxford professor Michael Woolridge has warned MPs artificial intelligence could go ‘rogue’.

He said the machines might become so complex that the engineers who create them will no longer understand them or be able to predict how they function.

If that sounds far-fetched, consider this: A few weeks ago a robot called AlphaZero taught itself how to play chess in four hours – then it beat a grandmaster with moves never seen in the game’s history.

The robot was given the rules and instructed to learn how to win by playing against itself. In doing so it amassed centuries of chess knowledge and tactics then went on to surpass all previous human ingenuity in the game.

Back in our homes, the computers have already begun their quiet revolution.

Videos have appeared on the internet showing voice activated devices from different manufacturers starting to talk to each other.

Amazon’s Alexa – the voice of its Echo system – asks Apple’s Siri a question. Siri answers and then asks Google’s Home, which answers before addressing Alexa.

And so it goes on in a continuous babbling loop, with little or no human input required.

It’s all a bit of fun... isn’t it?

### **How rise of the machines has changed our working lives forever**

Just as horses were gradually made obsolete by the car, humans’ jobs have also been affected by changing technology throughout modern history.

	<p>The Industrial Revolution of the 1700s saw hand production methods replaced by machines and heralded the rise of the factory system.</p> <p>In recent times, it is the internet which has had the biggest impact on jobs – leading to a sharp decline in retail positions as increasing numbers of people shopped online.</p> <p>Self-service tills at supermarkets and department stores have also led to a rapid decline in the numbers of shop workers.</p> <p>Another job we have seen begin to disappear is the bank teller. The arrival of ATM machines in the 1970s signalled the start of the decline. Banks in Scotland have closed more than 140 branches this year at the cost of hundreds of jobs as more people head online to bank.</p> <p>Other jobs that have largely fallen by the wayside in recent times due to automation and artificial intelligence include petrol pump operators, car park attendants and telephone switchboard operators, plus postal service mail sorters and sewing machine operators. Scientists, including Stephen Hawking, have argued that it may only be a matter of time before artificial intelligence turns on mankind.</p> <p>Hawking has said he believes development of full artificial intelligence could “spell the end of the human race”.</p>

<b>HEADLINE</b>	<b>01/02 Germany new online hate speech rules</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/germany-begins-enforcing-new-online-hate-speech-rules/">https://www.cbsnews.com/news/germany-begins-enforcing-new-online-hate-speech-rules/</a>
<b>GIST</b>	<p>Social media companies may have been dreading the fireworks marking the start of the new year. On Jan. 1, Germany began enforcing strict rules that could fine companies such as Facebook, Twitter and YouTube up to 50 million euros (\$60 million) if they don't remove posts containing hate speech within 24 hours of receiving a complaint.</p> <p>The new hate speech rules, passed last June, require companies to maintain an "effective and transparent procedure for dealing with complaints" that users can access readily at anytime. Upon receiving a complaint, social media companies have to remove or block "obviously illegal content" within 24 hours, although they have up to a week when dealing with "complex cases."</p> <p>Social media companies haven't been viewed too favorably in many countries due to the massive volume of hate content on their platforms. To fight that, Facebook in June said it removes 66,000 posts every week, saying it wants to do better but admitting the task is not easy. Last month, Twitter escalated its fight against hate, enforcing an updated policy that bans users from promoting violence and hate in their usernames and bios, and threatening to remove accounts if users tweeted hate speech, symbols and images.</p> <p>German isn't the only country that wants social media companies to do more about hate speech. While the European Union acknowledged Facebook, Twitter, YouTube and Microsoft for being better at the job, it said it managed to block twice the volume of hate content at a faster rate than those companies did in the beginning of the year.</p>

<b>HEADLINE</b>	<b>01/02 US blogger sorry for suicide forest video</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/american-blogger-logan-paul-apologizes-youtube-video-52092786">http://abcnews.go.com/International/wireStory/american-blogger-logan-paul-apologizes-youtube-video-52092786</a>
<b>GIST</b>	American blogger Logan Paul apologized Tuesday after getting slammed for a video he shared on YouTube that appeared to show a body hanging in a Japanese forest known as a suicide spot.

Paul, who has millions of Twitter followers and YouTube subscribers, posted an apology on his Twitter site , saying, "Where do I begin. Let's start with this. I'm sorry."

Although the video has been taken down, segments were still online. Critics, who have also gone online, say what was offensive was Paul's giggling and joking about the body.

The video, posted Sunday, shows Paul going on a trek with friends in the Aokigahara forest, near Mount Fuji. He seems aware that the site is sometimes chosen for suicides, but is surprised to come across what appears to be a body hanging from a tree.

He said he had wanted to raise awareness about suicide and possibly save lives, and denied his goal was to drive clicks.

"I thought I could make a positive ripple on the internet, not cause a monsoon of negativity," he said in his Twitter post.

Paul posted a more sanguine video on YouTube on Monday, showing him romping through a Tokyo park, talking about his apparel brand, visiting gadget stores and running around city streets wearing a Pokemon outfit.

He briefly mentioned the encounter with a body at the start of the video, saying, "That was weird."

Japan has a relatively high rate of suicides, with more than 21,000 a year, according to government data. Its per capita suicide rate is among the highest in the world.

Many blame the high suicide rate on the value placed on conformity, excelling and hard work in the country.

Suicide also does not suffer the religious stigma here it does in other cultures. Ritual suicide, known as seppuku or hara-kiri, has long been portrayed in movies and theater as an honorable way to take responsibility.

The Mount Fuji forest has been known for suicides for decades because people can easily get lost there, and know they won't be found for a long time.

Although Japan has many suicide-prevention groups, the culture of shame has family members of convicted criminals, people who have racked up massive debt and youngsters bullied at school often turning to suicide.

<b>HEADLINE</b>	<b>01/03 Drug addict, criminal to ISIS member</b>
<b>SOURCE</b>	<a href="http://www.malaysiandigest.com/frontpage/29-4-tile/715903-drug-addict-criminal-and-now-is-member-singaporean-man-videotapes-himself-killing-3-men.html">http://www.malaysiandigest.com/frontpage/29-4-tile/715903-drug-addict-criminal-and-now-is-member-singaporean-man-videotapes-himself-killing-3-men.html</a>
<b>GIST</b>	<p>Back in September 2017, Megat Shahdan Abdul Samad first came under media frenzy when the 39-year-old challenged Britain's Prince Harry to fight jihadists.</p> <p>However, the Singaporean member of the Islamic State (IS), who is based in Syria, is now back in the spotlight after appearing in another propaganda video, that is believed to have been distributed by the militant group on December 29 (Friday).</p> <p>As reported by the Straits Times, the eight-minute long video depicted Megat Shahdan, or notoriously known by his moniker 'Abu Uqayl,' executing three men via firearm at point blank – towards the end of</p>

the harrowing video, with Abu Uqayl commanding IS followers to “slay the enemies of Allah wherever you can find them.”

Since the video garnered massive attention on social media, the Islamic Religious Council of Singapore (MUIS) has condemned the propaganda video, and deemed it as a “desperate attack” by IS fighters to drive a wedge between Muslims and non-Muslims.

“The IS' message blatantly disregards the sanctity of human life that Islam strives to preserve and protect”, said MUIS on Monday(January 1), as quoted by Channel News Asia, and urged Muslims to not share the sensitive material.

“Such videos prey on the minds of the weak, or those who do not have proper religious guidance. We must continue to stand together and stop the spread of ISIS’ dangerous propaganda,” and advised individuals who are swayed by such videos to seek counsel from a credible religious preacher.

The Straits Times reported that this is the first incident whereby a Singaporean citizen participated in an execution for the IS, as senior analyst from the S. Rajaratnam School of International Studies (RSIS) shared his view that Abu Uqayl may be a man in a leadership position.

While the Singaporean Home Affairs stated that they are “no following updates,” since the video’s release, Dr Kumar Ramakrishna of RSIS opined that the video is at risk of spreading extreme ideology in Singapore.

“Singaporeans may think we are educated, but even people in our particular day and age, given exposure to extremist ideology, can be influenced to such an extent... where they can so dehumanise other people not seen to be part of their circle that they can just murder them in cold blood,” he said.

“It shows why extremist ideology is so dangerous and has to continue to be countered,” he added.

According to reports, Shahdan left Singapore for the Middle East in 2014, which some have believed to be the starting point as to when he was radicalised – prompting the Ministry of Home Affairs to keep a close tab on his activities.

Prior his radicalisation, Shahdan had been a member of a secret society with a history of drug and criminal convictions.

<b>HEADLINE</b>	<b>01/01 From ‘normal teen’ to ISIS sympathizer</b>
<b>SOURCE</b>	<a href="https://www.stripes.com/news/us/clues-to-how-a-young-man-went-from-classic-teenage-boy-to-accused-isis-sympathizer-1.504895">https://www.stripes.com/news/us/clues-to-how-a-young-man-went-from-classic-teenage-boy-to-accused-isis-sympathizer-1.504895</a>
<b>GIST</b>	<p>A skeletal portrait of the Sterling, Va., man federal authorities have accused of obstructing a terrorism investigation began to come into focus on Monday — that of a directionless youth who converted to Islam at the end of high school, married a significantly older Muslim woman, had a child who died as an infant, and became increasingly religious until an arrest Friday that allegedly included him destroying a computer thumb drive that authorities suspect may have contained evidence of terrorism-related activity.</p> <p>In the months before that arrest, court filings allege Sean Andrew Duncan, 21, who will appear in federal court on Tuesday, acted in a manner that was "indicative of an individual planning and researching how to conduct an attack," including research into materials relating to the Islamic State, terrorist attacks, weapons, surveillance tactics and body armor.</p> <p>Now, family members are struggling to reconcile the man they had believed Duncan to be with the one federal agents say he had become.</p>

"Sean is a very good kid. And that's all I can really say at this point. I'm floored," said his mother, Laurie Duncan, a real estate agent in Ocean City, Md. "Sean is a very honest and sincere child, and that's all I can say, is that he's a child. He's 21."

Sean Duncan, who could not be reached for comment, grew up in eastern Baltimore County and, at first, was a "classic teenage boy," recalled Zach, who is engaged to Duncan's sister and requested that The Washington Post withhold his last name for fear of career repercussions.

As a boy, Duncan liked video games more than sports, didn't seem to have much ambition, and had trouble in school, Zach said. So much so that Duncan transferred from Patapsco High School to Patterson High School, where Zach said he befriended a few Muslim students and became interested in Islam.

"I accepted Islam during my last year of high school by the grace of Allah," as Duncan later described his "journey to Islam" in an online post he published to raise money for studying Koranic Arabic at Fawakih, an Islamic educational institute in Herndon, Va.

"It was the summer before my 12th grade that I began looking into Islam, specifically how to pray the salah." He said he was struck by the "beauty" and "cleanliness" of the daily prayer and started listening to the Arabic recitation of the Koran, which, although he didn't understand Arabic, "penetrated my heart," causing him to fall "in love with the words of Allah."

He called the next chapter "Trouble on the Homefront."

"It was very hard for me to practice my Islam for at least the first 6-12 months," he wrote. "There is still some friction even until this day."

Some of the friction, Zach said, involved his relationship with a woman he met in his new social network, Zakiya Sadeq, now 36, who would become his wife. "She was in her 30s, and we were trying to figure out why this woman who is also studying medicine, how did she find this 18-year-old boy who doesn't have a job or money, and why is she interested in him?"

Duncan told the family he was going to marry Sadeq, who, according to her LinkedIn profile, obtained a medical degree at the International Islamic University Malaysia in Kuala Lumpur. "We were all like, 'What the hell are you doing?'" Zach said.

Through her attorney, Sadeq declined to comment.

The couple married, but in January 2016, according to court records, Duncan was also allegedly communicating with another woman whom the filing called an "unnamed co-conspirator." Duncan asked the woman to go to Syria with him and become his second wife, the filing said she told investigators. She "asked Duncan if his current wife would be OK with [her] coming with them to Syria," it said. "Duncan stated that his wife would have to be OK with it. [She] did not agree to go."

The next month, the FBI received a tip from one of Duncan's relatives saying he "may have been radicalized, and voiced his approval of Westerners being beheaded in the Middle East," according to court documents.

That year, Duncan, who had taken to wearing a religious robe and cap, and Sadeq moved to Pittsburgh, where Sadeq's LinkedIn profile says she worked as a doctor with the University of Pittsburgh Medical Center. They moved into a small apartment complex, as Duncan continued what was described in a Facebook post in September 2016 as his "journey to understand the Koran: the reason I became curious about Islam." He said he had just completed a Koranic Arabic course and planned to "teach this amazing language."

By the time of that posting, Sadeq was already pregnant with their child.

	<p>"They brought the baby down here," said the daughter of a neighbor who declined to give her name, calling Sadeq "very nice."</p> <p>"They weren't trouble or had any problems, but the baby died, and the next thing you know, they were gone."</p> <p>On June 6 last year, 4-month-old Muhammad Duncan died of sudden unexplained infant death, according to the Allegheny County Medical Examiner's Office.</p> <p>Soon after, they returned to the Washington region, where some family members on both sides are having difficulty comprehending the allegations against Duncan. "He seemed normal," said Sadeq's cousin, Roxana Muzzammel. "He seemed fine. They're both very simple people."</p>

<b>HEADLINE</b>	<b>01/02 Report: domestic terrorism policy gaps</b>
<b>SOURCE</b>	<a href="https://www.splcenter.org/hatewatch/2018/01/02/congressional-report-highlights-gaps-us-domestic-terrorism-policy">https://www.splcenter.org/hatewatch/2018/01/02/congressional-report-highlights-gaps-us-domestic-terrorism-policy</a>
<b>GIST</b>	<p>Since the 9/11 terrorist attacks against the World Trade Center, Shanksville, and the Pentagon in 2001, U.S. counterterrorism policies have overwhelmingly focused on international terrorist threats emanating from jihadist terrorists, such as al-Qaeda, the Islamic State (IS) and their affiliates.</p> <p>While this national security strategy was justified in the years immediately following such a horrific, mass-casualty producing attack against America, it now appears narrow-minded and limited given the</p>

resurgence of other violent forms of domestic terrorism perpetrated by violent antigovernment and hate-oriented extremists.

A new Congressional report distributed in August highlights the growing threat from domestic terrorists, described as “people who commit crimes within the homeland and draw inspiration from U.S.-based extremist ideologies and movements.” The report, published by the Congressional Research Service (CRS), highlights several gaps in U.S. policy related to identifying, analyzing and assessing domestic terrorist threats. It notes that domestic terrorists “have not received as much attention from federal law enforcement as their violent jihadist counterparts,” which has not always been the case. For example, in 1999, the Federal Bureau of Investigation (FBI), the lead federal agency responsible for investigating acts of domestic terrorism, stated that “during the past 30 years, the vast majority — but not all — of the deadly terrorist attacks occurring in the United States have been perpetrated by domestic extremists.”

According to the CRS report, it’s clear that domestic terrorism is not a top federal counterterrorism priority. Nevertheless, domestic terrorist threats feature prominently among state and local law enforcement concerns. Furthermore, several recent studies have shown that domestic terrorism is often overlooked and rivals that of jihadist terrorism.

According to studies from New American Foundation, Combatting Terrorism Center at West Point, the SPLC and others, domestic terrorists have been responsible for orchestrating many deadly terrorist incidents in the U.S. since 9/11. Some have concluded that domestic non-Islamic terrorism poses a greater threat in the U.S. than jihadist terrorism based on the number of attacks since 9/11.

A 2016 Center for Investigative Reporting study concluded there were nearly twice as many domestic terrorist attacks and plots as jihadist-inspired incidents between 2008 and 2016. According to CIR investigative reporters, nearly half (48 percent) of the jihadist incidents were FBI sting operations (which inflated the number of incidents). This was more than four times the rate for domestic non-Islamic extremists. This disparity, according to counterterror experts, is indicative of the lopsided nature of U.S. government counterterrorism and investigative resources. Statistics provided in the CIR study indicates that far fewer resources (e.g. analysts, agents, informants, operatives, etc.) are allocated to analyze, assess, investigate, and prosecute domestic non-Islamic terrorists. A similar allegation was also made during a Congressional hearing on hate crimes held in the immediate aftermath of the Sikh Temple shooting in August 2012.

Likewise, a 2014 University of Maryland national survey of state and local law enforcement officers found that sovereign citizens was the “top concern” for terrorist threats in the homeland. Jihadist-inspired terrorism ranked second, but was also closely followed by militia/antigovernment and white supremacist threats. A second survey conducted by Duke University’s Triangle Center on Terrorism and Homeland Security in 2015 produced similar results with antigovernment extremism being the top law enforcement concern.

The CRS report raises several key issues related to improving U.S. domestic terrorism policy. They include: (1) federal agencies employ varying terminology and definitions to describe domestic terrorist threats; (2) the Department of Justice (DOJ) and the FBI do not officially designate domestic terrorist organizations; (3) few, if any, domestic terrorists are charged or prosecuted under federal or state terrorism statutes; (4) domestic terrorists, for the most part, do not use traditional terrorist tactics such as bombings, large-scale attacks, airplane hijackings, or political assassinations; (5) foreign-inspired homegrown violent jihadists get more media attention than acts of domestic terrorism; and, (6) domestic extremist ideology often uses the cover of constitutionally protected activity. These constitutional rights pose unique challenges to law enforcement when monitoring extremist groups and individuals, assessing potential threats and interdicting violent acts.

Existing official definitions of “domestic terrorism” (e.g. those used by federal agencies or codified into law) are too broad and confusing. These definitions need to be consolidated, more clearly worded, and narrowly focused on what constitutes domestic terrorism. Ambiguity in the investigative process regarding when criminal activity becomes domestic terrorism may also need clarification. Furthermore, federal

agencies appear to use the terms “terrorist” and “extremist” interchangeably when referring to domestic terrorism. This practice confuses the issue and blurs the line between peaceful, law-abiding activity and illegal acts and violence.

The report raises the lack of an official domestic terrorist group list as another problem. U.S. counterterrorism policy abroad is driven by such a list — the U.S. Department of State’s list of foreign designated terrorist organizations. The State Department list gives lawmakers a clear, succinct, and vetted catalog of terrorist groups. The lack of a similar domestic terrorist group list confuses policy makers and complicates their understanding of domestic terrorism. In turn, this negatively impacts their ability to develop domestic counterterrorism policies.

The group list issue is further problematic due to the fact that domestic terrorists don’t operate like foreign terrorist groups. In contrast, domestic terrorists have adopted the tactics of leadless resistance, lone wolves and small cells. For this reason, domestic terrorists may be better categorized according to the extremist ideological concepts that underpin their threats, inspire radicalization, and mobilize individuals toward violence or criminal activity. For example, the DOJ, the FBI, and the Department of Homeland Security (DHS) have already identified domestic terrorist threats in their public statements, Congressional testimony and official reports. According to these statements, domestic terrorist threats have included animal rights extremists, eco-terrorists, anarchists, anti-government extremists (such as ‘sovereign citizens’ and unauthorized militias), black nationalists, white supremacists and violent anti-abortion extremists.

The DOJ, FBI, and DHS, however, must balance their respective authorities while safeguarding extremists’ rights to freedom of expression, freedom of assembly, and other constitutionally protected activity. Unfortunately, domestic extremists are well aware of their civil and privacy rights and often exploit these rights to provide cover for illegal activity, further radicalization, and mobilization towards violence. The CRS report draws attention to this dilemma stating, “domestic terrorists operate in a decentralized fashion, terrorist lone actors (lone wolves) or isolated small groups (cells) generally operate autonomously and in secret, all the while drawing ideological sustenance — not direction — from propagandists operating in the free market of ideas.”

Another persistent issue relates to the disparity in federal and state prosecution and sentencing of jihadist terrorists in the U.S. versus domestic terrorists. Outside of eco-terrorist cases, there have been virtually no violent domestic extremists charged or prosecuted under federal or state terrorism statutes which offer penalty enhancements for suspects engaging in domestic terrorist plotting or terrorist-related activity. Most domestic terrorists are charged under existing firearms, arson, and explosives laws, rather than a terrorism statute.

A 2016 Reuters analysis of more than 100 federal cases since 2014 further illustrated that domestic terrorist suspects collectively face less severe charges than those affiliated with the Islamic State who were arrested in the U.S. Between 2014 and 2016, 27 defendants were charged in the U.S. for plotting or inciting terrorist attacks. They carried a median prison sentence of 53 years. Over the same time period, 27 U.S.-based antigovernment or hate-motivated extremists were charged with similar activity. They carried a medium prison sentence of 20 years.

The Reuters study indicates that federal agents and U.S. Attorney’s Offices are encouraged to “open investigations into Americans who support groups on the State Department’s list of foreign designated terrorist organizations.” Reuters further reported that, “the maximum penalty for supporting a foreign terrorist organization has been raised from 10 years to 20 years in prison since 2001.”

Although most judges sentenced jihadist terrorists below the maximum, domestic terrorists enjoy greater constitutional protections and have rarely been charged or prosecuted with terrorism statutes. Embracing domestic extremism, no matter how radical the rhetoric becomes, is not a crime. According to current and former federal prosecutors, it is also very difficult “to convince a jury that someone who is not affiliated with a foreign group can be guilty of terrorism.”

<b>HEADLINE</b>	<b>01/02 Military aggressive Afghanistan strategy</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jan/2/top-commander-us-forces-go-offensive-afghanistan/">https://www.washingtontimes.com/news/2018/jan/2/top-commander-us-forces-go-offensive-afghanistan/</a>
<b>GIST</b>	<p>American forces in Afghanistan will pursue a more aggressive battle plan for the 16-year conflict in the coming year, with U.S. troops more engaged in the fight against the Taliban and other extremist groups for the first time since President Obama officially ended combat operations four years ago.</p> <p>U.S. Central Command chief Gen. Joseph Votel outlined details of the American battle plan in Afghanistan on Tuesday, a battle plan which will depend heavily on the new influx of U.S. troops into the country approved by President Trump late last year. The near-term goal for the roughly 3,900 U.S. servicemembers heading into Afghanistan will be to give Afghan security forces a significant advantage in this year’s upcoming fighting season, Gen. Votel said.</p> <p>American and NATO commanders intend to “focus on offensive operations and ... look for a major effort to gain the initiative very quickly as we enter into the fighting season,” the general said in an interview with The Associated Press.</p> <p>Afghan security forces, with ramped-up assistance from the U.S. and NATO-led coalition, must “keep the pressure on all the time and work to gain the upper hand as quickly as we can. So that as we get into this next fighting season we can build on the initiative,” Gen. Votel said.</p> <p>Past U.S.-Afghan military offensives have failed to end the long conflict with the Taliban and other Islamist groups, and Mr. Trump’s new approach risks a new spike in U.S. casualties in what is already the longest conflict in U.S. history.</p> <p>Officials at coalition headquarters in Kabul on Tuesday confirmed an American soldier was killed and four were wounded in eastern Afghanistan’s violent Nangarhar province on New Year’s Day. The U.S. casualty is the first official American death in Afghanistan of 2018.</p> <p>Gen. Votel’s more aggressive posture echoes comments from Gen. John Nicholson, the top American commander in the country, who predicted Afghan and allied forces would be able to reclaim 80 percent of the country from Taliban control over the next two years.</p> <p>“Currently, [Kabul] controls about two-thirds of the population ... so we would like to see that increase to at least 80 percent,” he told reporters at the Pentagon in November.</p>

	The two-year goal coincides with a slew of nationwide parliamentary and district-level elections, culminating in Afghanistan's 2019 presidential elections.

<b>HEADLINE</b>	<b>01/03 NYPD investigates 'ISIS selfies' in NYC</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/01/03/nypd-investigating-isis-selfies-outside-nyc-museum-report.html">http://www.foxnews.com/us/2018/01/03/nypd-investigating-isis-selfies-outside-nyc-museum-report.html</a>
<b>GIST</b>	<p>Authorities in New York are reportedly investigating photographs of a possible ISIS supporter taking selfies outside the Metropolitan Museum of Art and in view of One World Trade Center.</p> <p>The chilling images, that began circulating on social media over the weekend, shows an individual posing while wearing an ISIS-branded scarf over his face.</p> <p>The picture was captioned with “We are in your own Backyard,” according to The New York Daily News.</p> <p>“The NYPD is aware of the photograph. As with all terror related threats, the NYPD is looking into the incident. At this time there are no credible threats related to New York City,” an NYPD spokesman told the newspaper on Tuesday.</p> <p>Another photograph subject to the investigation is a snap of a person holding a phone with an ISIS flag in the shadows of the One World Trade Center building. The image was reportedly taken in a similar spot where, weeks later, the Manhattan truck attacker killed eight people.</p> <p>Eric Feinberg, the co-founder of GIPEC, a cyber-intelligence company that tracks terrorism-related hashtags, told the Daily News that imagery like that are aimed at spreading fear and possibly inspiring so-called lone wolf attacks.</p> <p>But he warned that it remains unclear whether the pictures are authentic, adding that they may have been doctored. “Maybe it’s Photoshopped, maybe it’s not. It should be taken seriously,” he said.</p> <p>The attempts to induce fear and inspire lone jihadists have increased since ISIS’ retreat in Iraq and Syria, where the group lost most of its territory and fighters to the U.S.-led military campaign. Increasingly, the group tends to focus on inciting terror attacks in Europe and the U.S. rather than recruiting militants to the “Caliphate.”</p> <p>Last month, a Bangladeshi man, Akayed Ullah, reportedly inspired by the terror group attempted to commit a bomb attack inside New York’s Port Authority bus terminal during rush hour.</p>

<b>HEADLINE</b>	<b>01/02 NYC to install 1,500 protective barriers</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/new-york-city-install-hundreds-barriers-protect-pedestrians-vehicle-attacks/">https://www.cbsnews.com/news/new-york-city-install-hundreds-barriers-protect-pedestrians-vehicle-attacks/</a>
<b>GIST</b>	<p>NEW YORK -- Hundreds of new protective barriers will be permanently installed in Times Square and other locations around New York in an effort to block vehicles from hitting pedestrians after deadly attacks last year on crowds. The city is spending \$50 million on protective measures including the installation of 1,500 metal barriers, or bollards, in key locations around the city, Mayor Bill de Blasio said Tuesday.</p> <p>Known around the world for the New Year's Eve ball drop, Times Square is crowded most days with tourists, costumed characters, sightseeing bus hawkers and office workers.</p> <p>In May, a man said by police to be high on drugs drove through crowds for more than three blocks, killing</p>

an 18-year-old tourist from Michigan. The vehicle was eventually stopped by one of the squat metal barriers. Temporary concrete blocks were put up along the Seventh Avenue sidewalk while city officials weighed a long-term solution and considered banning vehicle traffic from the area all together.

Then, on Halloween, a man who claimed to be inspired by ISIS drove down a busy bicycle path near the World Trade Center, authorities said. He killed eight people before he wrecked his rented truck and was shot and wounded by police. Barriers have also been placed there to keep cars out of the bike path.

"In 2017, New Yorkers witnessed the horrible capacity of people willing to do us harm, whether it was in our subways, on our bike paths or in Times Square," de Blasio, a Democrat, said. "We know we have to do even more to keep people safe and that's why we conducted a review on how best to secure our streets and public spaces, and we formulated a plan of action."

The rollout will begin in March. Meanwhile, the temporary blocks already set up will remain in place. "People have to be able to get around but they have to be safe at the same time," de Blasio said.

City officials didn't specify what other locations will be fortified, beyond the bike path and Times Square, but said there would be barriers set up in all five boroughs.

<b>HEADLINE</b>	<b>01/02 'Bomb cyclone' forming off East coast</b>
<b>SOURCE</b>	<a href="http://time.com/5085306/bomb-cyclone-east-coast-weather-cold-winter/?xid=homepage">http://time.com/5085306/bomb-cyclone-east-coast-weather-cold-winter/?xid=homepage</a>
<b>GIST</b>	<p>As record cold temperatures paralyze much of the country, a "bomb cyclone" forming off the East Coast is threatening to douse the area from Northern Florida to New England in ice and snow. The weather event has the potential to make 2018 one of the worst winters in the U.S. yet, and it's only the first week of January.</p> <p>A bomb cyclone, scientifically known as an explosive cyclogenesis, typically brews over the water where drops in barometric pressure can make it an extra forceful weather event. Making matters worse, forecasters say the storm could trap the bone-chilling cold currently putting the middle of the U.S. in a deep freeze over the Atlantic coastline later this week. The extreme cold has already been blamed for nine deaths across the U.S.</p> <p>Meteorologists are calling the event Winter Storm Grayson, and they say it could bring snow to the Southeast on Wednesday, as well as possible blizzard conditions to the Northeast Wednesday night and Thursday. After the wet winter weather passes, the cold air would make the east coast even more miserable. Boston, for instance, could see its coldest week in 100 years.</p> <p>But if the snow and the cold don't get you, the wind will, says the National Weather Service. Windchill advisories are currently in effect across the mid-Atlantic, with warnings in place for Ohio, Kentucky, Tennessee, and Pennsylvania. Pittsburgh and State College, Penn. may even experience -20 degree weather Tuesday evening — and that's before the big storm hits.</p>

<b>HEADLINE</b>	<b>01/02 Washington, Idaho top relocating states</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/news/business/article192627979.html">http://www.thenewstribune.com/news/business/article192627979.html</a>
<b>GIST</b>	<p>Washington is a move-to destination, and Atlas Van Lines offers its 2017 migration data as proof.</p> <p>The mover's latest migration study shows the state was one of the top destinations for people relocating last year, second only to Idaho.</p>

	<p>Atlas said more people came here than moved away, with 63 percent of its Washington moves coming into the state. Oregon was eighth in inbound moves.</p> <p>Washington was eighth in top destinations for international household moves in 2017, according Atlas moving data. (Texas was No. 1, followed by California).</p> <p>As for the larger Western region, the moving company said in a new release that for the second consecutive year, “Western states boasted the state with the highest percentage of inbound moves across the United States.”</p> <p>“This region housed the three inbound leaders for 2017: Idaho, Washington and Nevada. In addition, Nevada moved from balanced to inbound and Hawaii from balanced to outbound.”</p>

<b>HEADLINE</b>	<b>01/02 Claim: strong quakes to ravage Earth</b>
<b>SOURCE</b>	<a href="http://www.mirror.co.uk/science/powerful-earthquakes-ravage-earth-2018-11785189">http://www.mirror.co.uk/science/powerful-earthquakes-ravage-earth-2018-11785189</a>
<b>GIST</b>	<p>The world is entering a period of higher seismic activity this year that will bring more earthquakes with it, scientists have predicted.</p> <p>While that's undoubtedly bad news for those living within affected areas, the ability to accurately predict when and where earthquakes will occur is growing all the time.</p> <p>This prediction comes from the fact that the Earth is currently experiencing a periodic slowdown of its rotation.</p> <p>Historically, these slowdowns have coincided with peak times for earthquakes and seismic activity.</p> <p>"So far we have only had about six severe earthquakes [in 2017]. We could easily have 20-a-year starting in 2018," said Dr Roger Bilham from the University of Colorado.</p> <p>Bilham, together with Rebecca Bendick from the University of Montana studied earthquakes occurring since 1900 that measured over 7 on the Richter Scale. They found periods of five years where the Earth's rotation slowed and these were followed by periods when seismic activity was heavier than usual.</p> <p>"It is straightforward," said Bilham. "The Earth is offering us a five-year heads-up on future earthquakes."</p> <p>These fluctuations are usually very small, sometimes slowing a day by no more than a millisecond. But according to their research it has an effect. How and why is not yet known but it's supposed that it could have something to do with behavioural changes in the the Earth's core.</p> <p>Although it's impossible to predict where the earthquakes will happen, the pair's research showed that historically they occur around the equator in the Earth's tropical regions.</p> <p>Some geologists have disagreed with the findings.</p> <p>"It appears to be a conference presentation and very preliminary rather than peer reviewed research, so there is no detail for us to examine," said GNS Science communications manager John Callan.</p> <p>"It is true there have been periods of elevated rates of large earthquakes in the past 100 years. However, if you go looking for correlations with other natural phenomenon, you will almost certainly find some interesting matches."</p>

<b>HEADLINE</b>	<b>01/02 Major crack in ridge near Yakima</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/drone-video-shows-crack-in-ridge-near-yakima/281-504348953">http://www.king5.com/article/news/local/drone-video-shows-crack-in-ridge-near-yakima/281-504348953</a>
<b>GIST</b>	<p>Dramatic drone video of Rattlesnake Ridge shows a deep crack in the southside of the slope. DNR, WSDOT and Emergency Management are monitoring the hillside as it continues to move south.</p> <p>Rattlesnake Ridge sits in Yakima County, next to Interstate 82.</p> <p>The Yakima County Office of Emergency Management says there is "no definitive answer as to if or when significant movement of the slide will occur or how far the slide will travel."</p> <p>A Level 3 evacuation notice was placed on homes along Thorp Road south of the Quarry.</p> <p>Emergency Management has closed a section of Thorp Road due to potential rock slides. The road is closed between Birchfield Road and Gangl Road.</p> <p>The crack was discovered back in October. Since then, the crack has continued to grow in size.</p> <p>Two separate earthquakes were recorded in the area Friday evening by USGS. But these events do not appear to have impacted the ridge, according to KNDU-TV.</p> <p>Interstate 82 remains open, for now. WSDOT is continuing to monitor the roadway and will close it if conditions become unsafe.</p>

<b>HEADLINE</b>	<b>01/03 Ethiopia to release all political prisoners</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/01/03/ethiopia-to-release-all-political-prisoners-close-camp.html">http://www.foxnews.com/world/2018/01/03/ethiopia-to-release-all-political-prisoners-close-camp.html</a>
<b>GIST</b>	<p>ADDIS ABABA, Ethiopia – In a surprise move, Ethiopia's leader on Wednesday announced plans to drop charges against political prisoners and close a notorious prison camp in what he called an effort to "widen the democratic space for all."</p> <p>Prime Minister Hailemariam Desalegn's comments came after anti-government protests engulfed much of the restive Oromia and Amhara regions in recent months, bringing many businesses, universities and transport networks to a standstill. The protests spread into other parts of the East African country, leading to a months-long state of emergency that has since been lifted.</p> <p>"Political prisoners that are facing prosecutions and are already under arrest will be released," Hailemariam said. "And the notorious prison cell that was traditionally called Maekelawi will be closed down and turned into a museum."</p> <p>It was not immediately clear how many political prisoners were being held across the country, a close U.S. security ally.</p> <p>Rights groups and opposition groups in Ethiopia had been calling for the release of political prisoners, saying they were arrested on trumped-up charges and were being punished for their points of view. Ethiopia's government has long been accused of arresting critical journalists and opposition leaders.</p> <p>Some of the prominent politicians currently in custody include opposition leaders Bekele Gerba and Merara Gudina. A number of journalists also remain in detention.</p>

	The months of protests demanding wider freedoms led to hundreds of reported deaths and tens of thousands of arrests while disrupting one of Africa's fastest growing economies.

<b>HEADLINE</b>	<b>01/03 Koreas reopen key communication channel</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/seoul-nkorea-reopen-cross-border-communications-52108459">http://abcnews.go.com/International/wireStory/seoul-nkorea-reopen-cross-border-communications-52108459</a>
<b>GIST</b>	<p>North Korean leader Kim Jong Un reopened a key cross-border communication channel with South Korea for the first time in nearly two years Wednesday as the rivals explored the possibility of sitting down and talking after months of acrimony and fears of war.</p> <p>The sudden signs of easing animosity, however, came as President Donald Trump threatened Kim with nuclear war in response to his threat earlier this week.</p> <p>In his New Year's address Monday, Kim said he was willing to send a delegation to next month's Winter Olympics in South Korea. But he also said he has a "nuclear button" on his desk and that all U.S. territory is within striking distance of his nuclear weapons, comments Trump latched onto Tuesday when he boasted of a bigger and more powerful "nuclear button" than Kim's.</p> <p>The two leaders exchanged crude insults last year, as the North received new U.N. sanctions over its sixth and most powerful nuclear test explosion and a series of intercontinental ballistic missile launches.</p> <p>The recent softening of contact between the rival Koreas may show a shared interest in improved ties, but there's no guarantee tensions will ease. There have been repeated attempts in recent years by the rivals to talk, but even when they do meet, the efforts often end in recriminations and stalemate.</p> <p>Kim's latest announcement, which was read by a senior Pyongyang official on state TV, followed a South Korean offer on Tuesday of high-level talks with North Korea to find ways to cooperate on next month's Winter Olympics in the South and discuss other inter-Korean issues.</p> <p>Ri Son Gwon, chairman of the state-run Committee for the Peaceful Reunification, cited Kim as welcoming South Korea's overture and ordering officials to reopen a communication channel at the border village of Panmunjom. Ri also quoted Kim as ordering officials to promptly take substantial measures with South Korea out of a "sincere stand and honest attitude," according to the North's state TV and news agency.</p> <p>South Korea quickly welcomed Kim's decision and later confirmed that the two Koreas began preliminary contacts on the channel. During their 20-minute communication, liaison officials of the two Koreas exchanged their names and examined their communication lines to make sure they were working, according to Seoul's Unification Ministry.</p>

<b>HEADLINE</b>	<b>01/02 Baked Alaska: unusually warm</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/weather/2018/01/02/baked-alaska-usas-northernmost-state-has-been-unusually-warm/996303001/">https://www.usatoday.com/story/weather/2018/01/02/baked-alaska-usas-northernmost-state-has-been-unusually-warm/996303001/</a>
<b>GIST</b>	<p>If you want to escape the cold, should you head to ... Alaska?</p> <p>While most of the lower 48 states continue to endure a hideous deep freeze, Alaska has had an unusually warm start to winter.</p> <p>In fact, several locations in northern and central Alaska — such as Utqiagvik (Barrow), Bettles, Kotzebue and McGrath — all had their warmest December on record, according to climatologist Brian</p>

Brettschneider. Fairbanks had its 2nd-warmest December. Over the first three weeks of the month, the city was a whopping 20 degrees above average.

And midday Tuesday, at 48 degrees, Anchorage's Merrill Field Airport was warmer than almost the entire Lower 48 states, including cities such as Jacksonville, Houston, Atlanta and New Orleans.

Anchorage had its fifth-warmest December: an average temperature more than 7 degrees above average.

It's cold outside, but that doesn't mean climate change isn't real

The exceedingly warm weather in Alaska was related to a large area of high pressure in upper levels of the atmosphere, which dominated much of western North America for most of December, according to weather.com.

"When the jet stream bows to the north and high pressure builds underneath in the upper atmosphere, warmer-than-average temperatures typically occur under it or near the periphery," weather.com meteorologist Chris Dolce said.

Alaska wasn't just warm in December: Utqiagvik (Barrow) had its second-warmest year on record. In fact, the tiny city on the state's north coast warmed so fast in 2017, the weather data from the city were automatically flagged as unreal and removed from the climate database, the Capital Weather Gang said.

Is the warmth related to climate change?

"The state has seen a growing trend of milder temperatures overall through the last few decades," Dolce said, noting that the last three years rank among the top four warmest years on record in the state.

Specifically, Utqiagvik, as one of a precious few long-term observing sites in the American Arctic, is often referenced as an embodiment of rapid Arctic changes, said Deke Arndt, the head of NOAA's Climate Monitoring Branch.

"In the context of a changing climate, the Arctic is changing more rapidly than the rest of the planet," he said.

<b>HEADLINE</b>	<b>01/02 New research global warming, drought</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Science_News/2018/01/02/Global-warming-could-leave-25-percent-of-the-planet-in-permanent-drought/4681514907695/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=5">https://www.upi.com/Science_News/2018/01/02/Global-warming-could-leave-25-percent-of-the-planet-in-permanent-drought/4681514907695/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=5</a>
<b>GIST</b>	<p>Jan. 2 (UPI) -- New research suggests roughly a quarter of the globe could be left in permanent drought if efforts to curb global warming fail to meet the targets set by the Paris agreement.</p> <p>Scientists compiled the predictions of 27 global climate models to determine which regions of planet Earth are most likely to experience significant aridification by the end of the century.</p> <p>Their analysis -- published this week in the journal Nature -- showed between 20 and 30 percent of the globe will be significantly drier than the aridity ranges established by historical year-to-year variations in precipitation.</p> <p>"Aridification is a serious threat because it can critically impact areas such as agriculture, water quality, and biodiversity," study author Chang-Eui Park, a researcher at the the Southern University of Science and Technology in Shenzhen, China, said in a news release. "It can also lead to more droughts and wildfires -- similar to those seen raging across California."</p> <p>Researchers looked at likely rates of aridification for different levels of global warming, including a 1.5</p>

and 2 degrees Celsius rise in the average global temperature. The goal of the Paris agreement is to limit global warming to a 2 degree Celsius increase above Earth's pre-industrial average.

"Another way of thinking of the emergence of aridification is a shift to continuous moderate drought conditions, on top of which future year-to-year variability can cause more severe drought," said Park, who also works at the University of East Anglia in Norwich, England. "For instance, in such a scenario 15 percent of semi-arid regions would actually experience conditions similar to 'arid' climates today."

The latest research shows limiting global warming to a 1.5 degrees rise would prevent much of the predictive aridification. Drought rates are already increasing across much of the globe, as Earth has already experienced a 1 degree Celsius rise in global average temperature.

"The areas of the world which would most benefit from keeping warming below 1.5 degree Celsius are parts of Southeast Asia, Southern Europe, Southern Africa, Central America and Southern Australia -- where more than 20 percent of the world's population live today," said Tim Osborn, a professor at UEA.

<b>HEADLINE</b>	<b>01/03 VA: Co. gunman escaped mental ward</b>
<b>SOURCE</b>	<a href="https://apnews.com/3817f4a79e1c4b99877384428618962f/VA-document:-Gunman-who-killed-deputy-had-fled-mental-ward">https://apnews.com/3817f4a79e1c4b99877384428618962f/VA-document:-Gunman-who-killed-deputy-had-fled-mental-ward</a>
<b>GIST</b>	<p>DENVER (AP) — The gunman who killed a Colorado sheriff’s deputy escaped from the mental health ward of a VA hospital in Wyoming in 2014 but was located and returned, according to a Veterans Affairs document obtained by The Associated Press Tuesday.</p> <p>The document was provided to the AP by a congressional aide on condition of anonymity because the aide was not authorized to release it. The document was first reported by The Denver Post.</p> <p>The gunman, Matthew Riehl, fatally shot Douglas County Deputy Zackari Parrish and wounded four other officers on Sunday, Colorado authorities said. Riehl was killed by a SWAT team.</p> <p>The VA document said Riehl was hospitalized at the veterans medical center in Sheridan, Wyoming, in April 2014 after a psychotic episode. The document said he escaped but was found and brought back.</p> <p>The VA issued a statement saying it “cannot ordinarily discuss the specific care of any veteran without a privacy release.” A spokeswoman for the Sheridan VA hospital did not respond to an after-hours phone message and email.</p> <p>In addition to Riehl’s hospitalization in Sheridan, the VA document said he had an “urgent contact for mental health” with another VA facility in July 2015. It did not describe the nature of the contact or say where that facility was, but it was in the department’s Eastern Colorado Health Care System, which includes a hospital in Denver and nine clinics in other cities.</p> <p>The document said Riehl was on multiple medications in 2015 stemming from an earlier hospitalization, but it did not say what those medications were or why they had been prescribed.</p> <p>The document identified Riehl as an Army veteran who was honorably discharged. It said his records did not list any military service-related psychiatric disorders.</p> <p>Colorado authorities said Riehl served in Iraq.</p>

<b>HEADLINE</b>	<b>01/02 DOJ: crackdown on citizenship fraud</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jan/2/us-naturalized-citizen-fraud-target-justice-depart/">https://www.washingtontimes.com/news/2018/jan/2/us-naturalized-citizen-fraud-target-justice-depart/</a>
<b>GIST</b>	<p>Iyman Faris is set to be released from prison in 2020 after serving 17 years behind bars for terrorism-related charges stemming from a plot to destroy the Brooklyn Bridge. By the time he gets out, American authorities hope, he will no longer be able to call the U.S. his home.</p> <p>The Justice Department has filed a lawsuit to try to strip the Pakistan-born Faris of his citizenship, which he obtained in 1999, saying it’s an affront to allow him to continue to be an American citizen.</p> <p>It’s just the type of case authorities say they expect to pursue more frequently under President Trump and Attorney General Jeff Sessions.</p>

“The attorney general and the administration are focused on enforcing all immigration laws, especially when it comes to this pinnacle level of citizenship,” said one Justice Department official, who spoke on the condition of anonymity.

Native-born citizens cannot have their citizenship revoked, but those who became naturalized can lose citizenship, and all the rights that come with it, if they are found to have unlawfully or fraudulently obtained naturalization.

The Justice Department can seek to strip a person of citizenship either through a criminal case, by obtaining a conviction of naturalization fraud, or by filing a civil suit claiming the person procured naturalization illegally or procured it by through willful misrepresentation during the naturalization process.

Faris pleaded guilty to providing material support and resources to al Qaeda in 2003. He admitted he researched methods to sever cables on the Brooklyn Bridge and had met with Osama bin Laden at an al Qaeda training camp in Afghanistan.

Authorities sought to revoke his citizenship on grounds that he entered the U.S. using another person’s passport, willfully misrepresented the circumstances under which he came to the United States, and cited his support for al Qaeda as evidence he was engaged in terrorist activities that would have made him ineligible for admission to the U.S. had those facts been known at the time.

“We are doing our best to hold these people accountable,” the department official said. “When these people get through, it weakens the integrity of citizenship.”

The Justice Department stepped up the number of criminal charges brought in an effort to revoke citizenship in fiscal 2017, with 57 cases filed compared with 46 cases in fiscal 2016 and 44 cases in 2015.

At least another 25 civil denaturalization cases were also filed by the Civil Division’s Office of Immigration Litigation in 2017, according to an estimate provided by another Justice Department official.

Among those who had their citizenship stripped last year was Araceli Martinez, who was convicted of impersonating a U.S. immigration officer. She lied about the crime when she applied for citizenship. In November, the Justice Department filed denaturalization cases against five people who lied about a history of sexual abuse of minors during the citizenship process.

<b>HEADLINE</b>	<b>01/02 Border Patrol can’t stop drug drones</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/jan/2/drones-fly-drugs-us-no-border-patrol-detection-tec/">https://www.washingtontimes.com/news/2018/jan/2/drones-fly-drugs-us-no-border-patrol-detection-tec/</a>
<b>GIST</b>	<p>Border Patrol agents are increasingly worried about the threat from drug-cartel-flown drones, after agents spotted 13 drones suspected of carrying drugs across one section of the U.S.-Mexico border in just one four-day period in November.</p> <p>Cartels are aware that the U.S. lacks the ability to detect the drones, much less to interdict them, making them a choice method for smuggling high-dollar hard drugs into the country, agents said.</p> <p>They said the fact that they even spotted the 13 drones was serendipitous and only hints at the scope of the real problem.</p> <p>“We’re seeing an uptick. We flat-out just don’t have the technology to detect these,” said Brandon Judd, an agent and president of the National Border Patrol Council. “The number is just astronomical.”</p>

Security analysts say the problems from drones are tough to oversell. The Islamic State has harnessed drones as delivery vehicles for improvised explosive devices, and top U.S. officials fear those same tactics could be used in the U.S.

Last year, one security blog reported that an intercepted Mexican cartel truck had both a drone and potato bombs, which are crude explosives packed with shrapnel.

Other uses could include tracking the Border Patrol to direct drug loads around them, or even using the drones as defensive shields to make it too dangerous for air support to assist on Border Patrol operations.

U.S. Customs and Border Protection, the agency that oversees the Border Patrol, was unable to point to a policy for handling the dangers posed by unmanned aerial vehicles.

“While I can’t provide specifics, I can tell you that U.S. Customs and Border Protection is charged with protecting our nation and will mitigate threats from any direction or any mode they may come,” said Dan Hetlage, a spokesperson for the agency.

Agents said there isn’t any policy and they are left to deal with the problem as best they can.

Agents say cartels all along the border are using drones, though the San Diego sector has been among the most active in detailing the traffic it is seeing.

In August, an agent managed to spot a drone flying across the border and tracked it to its landing. They arrested a 25-year-old American citizen who admitted he was the pickup person.

Police seized 13 pounds of methamphetamine, worth an estimated \$46,000, and also seized the drone, a Matrice 600 Pro, which sells for about \$5,000, can take off with a 13-pound load and can fly at 40 mph.

The man arrested with the drone and drugs said he was paid \$1,000 per pickup and had made a series of deliveries before he was caught.

Some local law enforcement officials have questioned why agents aren’t permitted to shoot down drones they see crossing the border. They call it the equivalent of an attack.

Agents say the logistics of firing on a drone would be complicated, particularly in more populated areas.

<b>HEADLINE</b>	<b>01/02 Seattle unsolved civil rights assassination</b>
<b>SOURCE</b>	<a href="http://crosscut.com/2018/01/seattles-own-civil-rights-assassination-still-a-cold-case/">http://crosscut.com/2018/01/seattles-own-civil-rights-assassination-still-a-cold-case/</a>
<b>GIST</b>	<p>Young Jean Soliz didn’t notice the dead man crumpled in the doorway of his Richmond Highlands home that snowy night in 1969. She and her mother were hurriedly responding to a call they’d just received from the man’s frantic wife.</p> <p>“Ed’s been shot!” neighbor Bettye Pratt said in the call, which she made after phoning the sheriff for help. When they arrived, a deputy was already standing guard under the carport of the modest Shoreline neighborhood home. He told them to go around to another door, where a distraught Bettye gave them the bad news.</p> <p>Her 38-year-old husband, Edwin Pratt, a black-community leader and director of the Urban League of Metropolitan Seattle, was dead, ambushed in his driveway by two assassins who disappeared into the darkness.</p> <p>“I didn’t see his body out there so we were shocked,” Soliz recalled recently between sips of coffee at a Tacoma Starbucks. Once the Pratts’ neighbor, babysitter and a member of a group that helped the Pratts</p>

start an interracial church in north Seattle, Soliz, who is white, is finishing up a book on the murder — the Northwest’s major unsolved civil rights assassination.

Officially unsolved, that is. The murder case is almost a half-century old — the 49th anniversary is approaching this month — and investigators have determined who did it and why. As I learned while reporting on the case for a 2011 Seattle Weekly article, three white men carried out a racially motivated hit on a black civic leader. (Some of the details in this story came from records and other sources I interviewed then and appeared in the Weekly story.)

Pratt urged Seattle’s people of color to rail against inequities in hiring, education and housing, including redlining, a banking practice that constricted approval of new home mortgages in ethnic neighborhoods.

To some, the civil rights leader was a troublemaker. But who wanted him dead, and was willing to pay for the favor? All these years and thousands of hours of investigations later, cold-case probers are still seeking the final puzzle piece.

Soliz, however, thinks she’s close to an answer. If she’d known then at age 22 what she knows now as a 70-year-old Olympia writer, researcher and former state official — once heading up the huge state Department of Social and Health Services — Soliz says, “I probably wouldn’t have been so stunned” that deadly night.

Pratt’s murder came at the end of a decade of deadly violence against community and national leaders — most notably, the 1963 assassination of John F. Kennedy and the 1968 shootings of presidential candidate Bobby Kennedy and Nobel Peace Prize winner Martin Luther King Jr. Like them, but on a regional stage, Pratt became a marked man for challenging racial and political norms.

Recalling another assassination, the 1963 shooting of Mississippi civil rights leader Medgar Evers by a member of the Klu Klux Klan, Bettye would later tell investigators that an anonymous caller warned her in 1964, “If Ed doesn’t shut up, he’ll end up like Medgar.” He did. Both black leaders were murdered by white racists armed with rifles, waiting for them in their driveways — in Seattle and Jackson, Miss., 2,500 miles and six years apart.

Like Evers’ death — which President Trump recently brought up during an awkward speech at the new Civil Rights Museum in Jackson, calling the work by Evers and other rights crusaders “big stuff... very big stuff” — Pratt’s murder reverberated across the U.S., and drew a crowd to his funeral at St. Mark’s Cathedral on Capitol Hill. Whitney Young, national Urban League director, told attendees, “I sense some shame that this could happen here,” a racial murder in a mostly white but reputedly tolerant northern city.

An arts center and a park in Seattle were named for Pratt. Shoreline, which did not incorporate until 1995, moved on. But, through an online petition drive started by a Shoreline third grader, about 1,900 signatories are today urging the school district to name one of its buildings after Pratt. The student, who gives her name as just Sarah, said she only recently heard about Pratt and hopes to honor him because “he was an important person and he had a huge impact on others.”

Pratt was aware that his trailblazing agenda — including a hard push for integrating neighborhoods and an end to police harassment — was creating enemies. Mustachioed, well-built, with a friendly demeanor, he attracted wide, biracial support among moderates. But his rhetoric also united others, black and white, in opposition.

Pratt’s white secretary told police many of his detractors were African-Americans and the more militant ones vowed to “eliminate” him. “Uncle Tom” was one of the milder phrases Pratt was accustomed to hearing.

He refused to react to the danger, and investigators had to ask whether he had added to it: Pratt was having a secret affair with the secretary, investigators learned, and had recently asked Bettye, his wife of 13 years, for a divorce. Her response? She threatened to kill Ed if he left her.

“I was babysitting for Bettye the night she found them together,” says Soliz, who is devoting most her time now to probing the murder. “Bettye went looking for Ed and found him with his girlfriend at the movies. She came home in tears, and was a wreck.”

Ed Pratt persisted nonetheless, and planned to meet the secretary for dinner at her apartment on the night of Jan. 26, 1969. But due to an unusual heavy Seattle snowfall that Sunday, he canceled.

Pratt relaxed in his living room chair at their home in the 17900 block of First Avenue NE. He watched TV while Bettye put their 5-year-old daughter Miriam to bed. They were Southerners who’d grown up poor in the 1930s and met in the 1950s while attending Atlanta University, where he received a masters degree. They moved to Seattle after their marriage when he became the Seattle Urban League’s community-relations director, moving up to executive director in 1961. He liked the work, disturbing the dust of racial contentment.

Startled by the sound of snowballs suddenly hitting the side wall of their rambler, Ed Pratt went to the door, opened it warily and asked, “Who’s there?”

A shotgun blast ignited the scene and sent a slug tearing into Pratt’s mouth, glancing off bone and severing his spine before lodging in his neck. He collapsed in the doorway as Bettye, who’d been watching from a bedroom window, saw the muzzle flash and shouted, “They’ve got a rifle!” Most likely, an autopsy later indicated, her husband was already dead.

Neighbors told police they spotted two young men hop into what some guessed was a 1968 Buick Skylark, driven by a third man. “They looked like kids,” said a witness. “It was the way they ran — their gait.” And their race? Some insisted they were white, others though they were black.

Seattle, which considered itself a melting pot of progress and civility, was witnessing what it might be like to deal with a Southern-style racial assassination. National leaders sent condolences. President Richard Nixon dubbed Pratt the Martin Luther King Jr. of the North.

Investigators had little to go on, however. The scant evidence included a 12-gauge slug taken from Pratt’s body, tire tracks and footprints in the snow. “The snow was frozen but scuffed up and broken” from all the foot traffic, Jean Soliz remembers. She can’t imagine how investigators obtained any usable or untainted evidence from the trampled crime scene.

Despite Nixon’s comment comparing Pratt to King, my research for the Weekly showed that his administration may have preferred not to have the killing blamed on whites. U.S. Attorney General John Mitchell said in a teletype message to FBI Director J. Edgar Hoover: “It has come to my attention that certain black groups are circulating a story to the effect that the death of Pratt was caused by White racists. Does your bureau have any information to the contrary, and, if so, is there any way it might be publicized through local police or otherwise?”

Despite a \$10,000 reward (about \$70,000 in today’s dollars), no one was ever arrested or charged with the crime. But after the case went cold for 25 years, it warmed up in 1995 when the Seattle Post-Intelligencer broke new ground, citing witnesses who said two white men had committed the crime and had been overheard bragging about it.

The two were Tommy Kirk, 21, a violent street thug, and his accomplice, Texas Barton Gray, 49, an armed drug dealer. A third person, unidentified, drove the getaway car, the P-I reported.

Investigators told me they believed the information to be accurate. But Kirk and Gray were the messengers. Who, detectives still wondered, ordered the delivery, and how much did it cost? In 2011, after obtaining the Mitchell-Hoover papers and then plowing through stacks of the county’s cold case files, I came up with some additional answers.

Based on documents and interviews with detectives and two witnesses who were with the three-man hit team after the murder, I was able to confirm that Kirk, described as a psychopathic, trigger-happy drug dealer, fired the shot that killed Pratt, while Gray, a longtime drug dealer and gun peddler, was his lookout.

Detectives and the witnesses had now identified the third man as Michael Lee Jordan, then 22, a small-time criminal who drove the getaway car. As I wrote then, all were white, all were dead, and all may have shared as much as \$25,000 to kill Pratt, investigators indicated.

Cold-case detectives suspected a black contractor named Henry Roney was most likely the man who paid for the shooting. Known for his dislike of Pratt and their ongoing spat over how to reform construction hiring practices, Roney was questioned only days after Pratt's death. He was considered a leading suspect because "No one had a greater motive," a detective told me. "When you look at the evidence, it's very compelling."

But Roney, who died two decades back, had denied any role in the shooting, and his ex-attorney told me Roney was wrongly accused. Author Soliz says she doesn't believe Roney was the money man either.

Her research points to a "group" of sponsors willing to pay for the hit. "I can't tell you yet all I've learned," she said, "but it will be in the book."

There's also the possibility Pratt was killed by someone who was simply a racist and would gladly do it for free — someone like Kirk. Danella Jordan, the widow of getaway driver Michael Jordan, told me she was with her husband, Kirk, and Gray just hours after the Pratt shooting, and there had been no talk of a behind-the-scenes sponsor.

Jordan instead fingered Kirk as the idea man. He was a loose cannon and racist, she said, and the shooting was a "monumental hate crime" committed essentially by one man. Kirk never mentioned the name Roney, she recalls, but he did mention Ed Pratt.

"Tommy had heard about Pratt," said Jordan, who now lives in another state. Pratt "was all over the news, and [Tommy] stated he was going to shoot 'that rich n—,' or words to that effect. I honestly don't recall money being the motivation."

Her husband apparently bought that theory too, based on a statement he gave the FBI in 1995, when the agency briefly reopened its probe following the P-I story. Interviewed in his Walla Walla prison cell where he was doing time for robbery, Jordan said Kirk killed Pratt for "being a black dude in a white neighborhood."

Jordan never flashed any extra cash during that period, said his widow — they lived off drug sales money at the time. But then, he "was wildly in love with a Texas whore, running from the Texas Rangers," the widow said. "If he had big bucks, perhaps it was her he spent it on."

A witness at the Jordan home following that night's shooting recalled seeing the three suspects enter carrying a shotgun. "Tommy Kirk kind of ah, scared my ass, you know," the witness told a detective in an interview. "I had enough sense to know that if you screwed with Kirk, he was a psychopath, man." He proved it that night, the witness said. "God, I have never seen anybody do this in my life, but Tommy Kirk started shooting dope, and it was like, it was, believe me, it was, I, I have never got this, 'cause he had, he had like a jug of this [drug], and...he'd just 'Bam!' till it was gone. I mean, he did enough dope that would of killed like all three of us, you know?"

Four months later, Kirk was murdered on Capitol Hill by co-conspirator Gray, sometimes his rival in drug dealing, over money and a woman. Gray died in 1991 of a heart attack following his conviction for manslaughter. Mike Jordan died in 2006 at age 58.

<b>HEADLINE</b>	<b>01/01 Baltimore: new year, 2 new murders</b>
<b>SOURCE</b>	<a href="http://baltimore.cbslocal.com/2018/01/01/nyd-shooting/">http://baltimore.cbslocal.com/2018/01/01/nyd-shooting/</a>
<b>GIST</b>	<p>BALTIMORE (WJZ) — Baltimore just recorded its first two murders of the year after struggling with a per capita record number of killings last year.</p> <p>Baltimore Police say the first shooting happened in the 2000 block of Eagle St. on New Year's Day at 3:40 p.m. — not even 16 hours into the new year.</p> <p>Officers found a man who had been shot in the neck. The victim was taken to a local hospital, where he was initially in critical condition, but later died.</p> <p>The second shooting occurred just hours later, around 5:45 p.m., in a parking lot in the 5100 block of Goodnow Rd.</p> <p>Officers found two men sitting in a white Infiniti suffering from gunshot wounds. Police say a 30-year-old was in the driver seat suffering from wounds to the head and torso. He was pronounced dead a short time later at an area hospital, authorities say.</p> <p>The passenger, a 36-year-old was found suffering from a gunshot wound to the hip. That victim was taken to an area hospital with a non-life threatening injury.</p>

<b>HEADLINE</b>	<b>01/02 Arrest in fatal Lynnwood shooting</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/crime/man-arrested-in-fatal-lynnwood-shooting/">https://www.seattletimes.com/seattle-news/crime/man-arrested-in-fatal-lynnwood-shooting/</a>
<b>GIST</b>	<p>A 19-year-old Everett man has been arrested on investigation of second-degree murder in connection with the fatal shooting of a 22-year-old Lynnwood man over the weekend, according to the Snohomish County Sheriff's Office.</p> <p>The Saturday night shooting — which is believed to have been sparked by a disagreement over a borrowed 2006 Honda Pilot that had not been returned on time — took place at an apartment complex in the 16100 block of Ash Way in Lynnwood, according to the sheriff's office.</p> <p>Police detectives initially believed that there were three suspects in the shooting, but witness interviews and other leads established that there were only two occupants in the car — the suspect and a female driver — when the shooting occurred, police said.</p> <p>Authorities now believe the suspect was in the passenger seat when he fired a single shot through the closed window, striking and killing the victim.</p> <p>The driver and suspect fled the scene and abandoned the vehicle at a gas station at the corner of Rucker and 41st Avenue in Everett, a location where the suspect admitted to being, police said.</p> <p>The victim, who has not been officially identified by the Snohomish Medical Examiner's Office, was part of a group of people who had arrived at the apartment complex in Lynnwood about 9 p.m. Saturday looking for the borrowed car. At some point, the car arrived, and there was some sort of altercation when the suspect fired the shot, police said. The suspect fired one shot, striking the victim, who was standing nearby, police said.</p>

<b>HEADLINE</b>	<b>01/03 Calif. deputy dies after brutal attack</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/01/03/california-sheriffs-deputy-dies-after-brutal-attack-following-traffic-collision-police-say.html">http://www.foxnews.com/us/2018/01/03/california-sheriffs-deputy-dies-after-brutal-attack-following-traffic-collision-police-say.html</a>

<b>GIST</b>	<p>A California sheriff's deputy died Tuesday after succumbing to injuries from an off-duty traffic collision and a violent beating, authorities said.</p> <p>Lawrence Falce, 70, a deputy in San Bernardino County, was off-duty Sunday when he was involved in a minor crash on a highway in the city, the Sheriff's Employees' Benefits Association said in a statement. Falce contacted the other driver in the car, but was brutally attacked and was left severely injured, the statement said.</p> <p>Authorities said Falce never regained consciousness after the attack, according to KTLA.</p> <p>San Bernardino police said a suspect was in custody in Falce's death, but they were not going to identify the person due to the ongoing criminal investigation.</p> <p>Falce, a 36-year veteran of the force and an Army veteran, began his career with the San Bernardino County Sheriff's Department in 1981 as a deputy sheriff. He worked patrol at Central Station for 32 years.</p>

<b>HEADLINE</b>	<b>01/03 'Swatting' suspect false bomb reports 2016</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/suspect-kansas-swatting-death-served-time-false-bomb-reports-n834201">https://www.nbcnews.com/news/us-news/suspect-kansas-swatting-death-served-time-false-bomb-reports-n834201</a>
<b>GIST</b>	<p>LOS ANGELES — The man accused of making a hoax 911 call that led to a fatal police shooting in Kansas last week previously made as many as 20 similar calls and was sentenced in 2016 for making false bomb reports involving two Los Angeles-area schools and a television station, authorities said Tuesday.</p> <p>Tyler Raj Barriss, 25, was scheduled to appear in a Los Angeles courtroom Wednesday on a request to extradite him to Kansas, where police in Wichita shot and killed Andrew Finch, 28, on Thursday as they responded to the hoax call. He was being held without bail on an arrest warrant from Sedgwick County, Kansas.</p> <p>Police said Finch was an innocent victim of a harassment tactic called "swatting," in which someone deceives authorities into sending SWAT officers or other emergency services rushing to another person's address.</p> <p>Multiple law enforcement sources told NBC News that Barriss made the false report after he got into a dispute in connection with online gaming. He gave authorities the address where he believed that person lived, but it was an address for Finch, who wasn't involved in the dispute, the sources said.</p> <p>As long ago as 2015, California authorities pursued Barriss for similar activities. The Los Angeles County District Attorney's Office handled two previous cases that year of bomb threats involving Barriss, a spokesman for the agency told NBC News on Tuesday.</p> <p>The cases involved four separate threats — two against KABC-TV and one each against an elementary school in Los Angeles and a middle school in Granada Hills, near Los Angeles, the spokesman said.</p> <p>The cases were consolidated, and Barriss pleaded no contest in May 2016 to felony counts of making a false report of a bomb to an agency or business and maliciously reporting a false bombing. He was sentenced to 32 months in the Los Angeles County Jail, the district attorney's office said; under California law, non-violent offenders customarily are released after serving half of their sentences.</p> <p>No information was immediately available on whether he was on probation or whether he was being monitored.</p> <p>The FBI's Los Angeles field office separately confirmed Tuesday night that it worked with Los Angeles-area police on a series of threats Barriss allegedly made in or around 2015. It said it deferred to California</p>

	<p>authorities to pursue prosecution.</p> <p>A spokesman for police in Glendale, north of Los Angeles, told NBC News that Barriss is believed to have made about 20 threat-related calls around the country during the time of that investigation. Some of the calls went to universities and news organizations, Sgt. Dan Suttles said.</p>

<b>HEADLINE</b>	<b>01/02 Canada: ex-Taliban hostage jailed</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/taliban-hostage-joshua-boyle-jailed-arrest-assault-charges/story?id=52103756">http://abcnews.go.com/International/taliban-hostage-joshua-boyle-jailed-arrest-assault-charges/story?id=52103756</a>
<b>GIST</b>	<p>Former Taliban hostage Joshua Boyle was charged Monday in Canada with 15 criminal offenses including multiple allegations of assault since he arrived home with his American wife and three children in October following five years of captivity in Pakistan.</p> <p>Boyle, 34, appeared in a hearing in Ottawa's criminal court on New Year's Day, court records show. He was denied immediate release and his next hearing will be Wednesday, according to a family member.</p> <p>Boyle's American wife, Caitlan Coleman Boyle, said in a statement, "I can't speak about the specific charges, but I can say that ultimately it is the strain and trauma he was forced to endure for so many years and the effects that that had on his mental state that is most culpable for this.</p> <p>"Obviously, he is responsible for his own actions," she wrote in the statement, "but it is with compassion and forgiveness that I say I hope help and healing can be found for him. As to the rest of us, myself and the children, we are healthy and holding up as well as we can."</p> <p>The 15 charges filed Monday by the Ottawa Police Service include multiple allegations of assault, including physical and sexual assault of a woman, physical assault of a child and unlawful confinement, between October and December and misleading police over the weekend "to divert suspicion from himself."</p> <p>The Canadian court issued an order prohibiting the publication of information that identifies the alleged victims in Canada. As a general policy, ABC News does not name victims in cases of alleged sexual assault.</p> <p>Joshua Boyle's defense lawyer, Eric Granger, in a statement to ABC News said his client "is presumed innocent."</p> <p>Joshua Boyle was known in Canada for his activism even before becoming a hostage of the Haqqani Network. He was previously married to one of Canada's most outspoken pro-jihadi women, Zaynab Khadr, whose two brothers were imprisoned at the Guantanamo Bay detention camp, but were later released.</p> <p>U.S. intelligence officials long expressed doubts to ABC News about Joshua Boyle's motives in traveling to Afghanistan in 2012. Joshua Boyle told ABC News last month that those doubts were unfounded and referred to his Haqqani captors as "criminal miscreants."</p> <p>American officials put aside their skepticism of Joshua Boyle in offering the family assistance in leaving Pakistan and since they settled in Ottawa, including offers of psychological counseling to adjust from captivity, they have told ABC News.</p>

<b>HEADLINE</b>	<b>01/02 Chicago: Shotspotters tech effective</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/01/02/violence-scarred-chicago-saw-crime-drop-as-high-tech">http://www.foxnews.com/us/2018/01/02/violence-scarred-chicago-saw-crime-drop-as-high-tech</a>

	<a href="#">program-rolled-out.html</a>
GIST	<p>Asiaha Butler, 42, remembers when her Chicago neighborhood of Englewood was plagued by almost non-stop gun violence.</p> <p>“In a two- to three-week span, there was shootings over and over again,” Butler said. “Someone lost their life just a block away, actually down the street, and I was actually sitting on my porch and witnessed it.”</p> <p>But now the neighborhood, which historically has been one of Chicago’s most violent, is experiencing something that had eluded police and activists for years: Crime is dropping – and sharply.</p> <p>Englewood is one of a handful of neighborhoods taking part in a new program that uses cameras and detection radars on utility poles to cut crime. The Shotspotters technology instantly alerts police to the sound of gunshots and pinpoints its location, rapidly reducing response times and potentially catching suspects on video.</p> <p>Chicago police say the technology is effective – and it wants to expand the program to other parts of the city. The system is also used in several major cities, including New York.</p> <p>The technology comes as the violence-scarred city is experiencing a drop in major crime. Chicago had 650 murders in 2017, a noteworthy drop from 2016 when 771 people were killed — an average of two per day— according to police data. Shootings also dropped, from 3,550 incidents in 2016 to 2,785 incidents last year, police said.</p> <p>In Englewood, the neighborhood has seen the greatest reduction in shootings, with a 43 percent decline in 2017, according to police.</p> <p>“I am proud of the progress our officers made in reducing gun violence all across the city in 2017, but none of us are satisfied,” said Chicago Police Superintendent Eddie Johnson. “In 2018, we are going to work to build on the progress we made last year – to reduce gun violence, to save lives and to find justice for victims.”</p> <p>In addition to the new technology, in 2017 Mayor Rahm Emanuel and Superintendent Johnson added 1,100 new officers to the police force and successfully lobbied to pass the Neighborhoods Reform Act— a new state law that aims to crack down on repeat gun offenders by providing guidelines for judges to sentence those offenders at the higher end of the existing sentencing range, while expanding diversion programs for first-time nonviolent offenders.</p> <p>“As this new law goes into effect, the police department is fully committed to partnering with prosecutors to make sure that repeat gun offenders are held fully accountable for the crimes they commit on our streets,” Johnson said in a press release.</p> <p>But ShotSpotter has also proven effective, police officials say, and officials plan to expand the technology to six more districts in 2018.</p> <p>“I have seen and just witnessed shots fired and immediately cops are right there,” said Butler, a community activist, “so definitely that technology has been helpful.”</p>

HEADLINE	01/02 Co. gunman livestreamed ‘ambush’
SOURCE	<a href="http://www.foxnews.com/us/2018/01/02/colorado-gunman-livestreamed-ambush-style-shooting-that-killed-deputy-report-says.html">http://www.foxnews.com/us/2018/01/02/colorado-gunman-livestreamed-ambush-style-shooting-that-killed-deputy-report-says.html</a>
GIST	A Colorado man who gunned down a deputy and wounded six other people in an “ambush-style” attack on New Year’s Eve livestreamed the shootout on Periscope, where he was heard yelling, “I warned you,” before firing more than 100 rounds at them, a report said.

Matthew Riehl, 37, an Army veteran who briefly served in Iraq, recorded a 911 call and posted a live video on the streaming service Periscope at his apartment in Highlands Ranch as he shot and killed Douglas County Sheriff's Deputy Zackari Parrish during the attack, FOX31 Denver reported. Three other deputies, a police officer and two civilians were wounded in the shooting.

"Go away. Don't come in. I've warned you," Riehl is heard saying in the audio-only recording.

Riehl then ordered the deputies to identify themselves before several shots were fired.

"Get the [expletive] out of here. Get out, leave me alone," he was heard saying as a smoke alarm blared in the background. "Why are you here without a warrant?"

The gunman then shouted: "Go away, go. Leave me alone. Go, get out," before gunfire resumed.

"They broke my door, they broke my door, they broke my door," he yelled, according to FOX31.

"Why? Why? Leave me alone," he repeatedly said until the audio ended with the sound of the smoke alarm.

Riehl was found dead in his bedroom.

Earlier, authorities had responded to a complaint of a verbal disturbance involving two men at an apartment building in Highlands Ranch, 16 miles south of Denver. A caller said Riehl was acting bizarre and might have been having a mental breakdown, but responding deputies found no evidence of a crime and left.

When deputies were called back to the scene, Riehl's roommate, who had left, gave them a key and granted them permission to enter the apartment, according to FOX31.

Colorado authorities had been warned about Riehl's volatile mental state before the shooting, but never held him for a mental health evaluation. His anger against law enforcement officials apparently stemmed from a traffic infraction that happened in November, which followed with a Dec. 13 YouTube video where he calls Douglas County Sheriff Tony Spurlock a "clown" and a deputy a pimp.

"You know who's going flub big time next election? Spurlock," Riehl said in the video called "Fire Sheriff Spurlock."

HEADLINE	<b>12/29 Calif. law enforcement readies for pot</b>
SOURCE	<a href="https://apnews.com/8be50fb920124e73be4284037bbf6a11/California-law-enforcement-readies-for-new-marijuana-laws">https://apnews.com/8be50fb920124e73be4284037bbf6a11/California-law-enforcement-readies-for-new-marijuana-laws</a>
GIST	<p>SAN FRANCISCO (AP) — Licensed businesses around California can begin legally growing and selling marijuana for recreational use Monday, and a hodgepodge of enforcement agencies will be trying to make sure they adhere to a slew of new pot laws.</p> <p>Since no single agency has overarching responsibility, supporters and opponents of legalization worry how well the laws will be followed.</p> <p>Three state agencies will issue a combined 19 types of permits to growers, retailers, manufacturers and distributors. Each agency has enforcement officers tasked with cracking down on unlicensed operators.</p> <p>In addition, other state agencies such as Fish and Wildlife and the Narcotic Enforcement Bureau said they will rely on marijuana task forces already in place to continue eradicating illegal growers and sellers.</p> <p>The newly created state Bureau of Cannabis Control, which licenses retail outlets, said it has hired several officers to help crack down on unlicensed shops and plans to hire more in the coming months. But much of the work of arresting illegal operators will still rely on sheriffs and police departments.</p> <p>“We are a pretty small operation,” bureau spokesman Alex Traverso said.</p> <p>He said about eight enforcement officers will be in place Jan. 1, though bureau chief Lori Ajax said enforcement won’t be a priority in the first months of the new year as the agency focuses on getting retailers licensed.</p> <p>The bureau has issued fewer than 200 temporary business licenses so far. That’s a fraction of what ultimately will be distributed once Los Angeles, San Francisco and other major local governments start issuing their own licenses, which are required to get a state permit.</p> <p>A small number of retail shops from Berkeley to San Diego say they will open New Year’s Day.</p> <p>While an increasing number of states have legalized marijuana in one form or another, all uses of the drug remain illegal under federal law. U.S. Attorney General Jeff Sessions has said federal authorities still are contemplating how they will enforce pot laws in California.</p> <p>State laws include that consumers be at least 21, that businesses not be within 600 feet (183 meters) of schools and must close by 10 p.m. They’re also required to have 24-hour video surveillance.</p> <p>Counties and cities have similar requirements with a few twists. Oakland city officials, citing disparate marijuana arrest records, have given applicants convicted of pot-related felonies preference in obtaining permits in certain neighborhoods.</p> <p>Several counties and cities used existing medical marijuana laws to adopt recreational use rules by striking the word “medical” from the ordinances, keeping in place existing local tax rates.</p> <p>Marijuana businesses also will be required to pay state taxes. Some of the tax revenue is earmarked for enforcement, but sheriffs in several counties say they’re already pouring resources into marijuana enforcement.</p> <p>Siskiyou County leaders recently declared a state of emergency and called on the governor to assist the</p>

sheriff with eradicating an influx of illegal farms. The county banned commercial cultivation, but that hasn't stopped a migration of marijuana farmers snapping up cheap land in remote Northern California.

"We are overwhelmed," Sheriff Jon Lopey said.

Mendocino County Sheriff Tom Allman has similar concerns in a county that has legalized marijuana in the heart of the fabled pot growing region called the Emerald Triangle.

"Please do not continue to say that marijuana is a totally harmless herb that God put on this Earth, and we don't know why we're fighting over it," he told county supervisors, who he said were overlooking the criminal aspects of growing marijuana.

In Los Angeles County, sheriff's officials are preparing to see a possible increase in marijuana dispensary robberies and drivers who are high behind the wheel.

Sheriff Jim McDonnell said he believes legalization will be "eye-opening for a lot of people."

"The public's perception is that weed is innocuous, that this is something they did 40 years ago and it is no big deal," he said. "Well, today's marijuana is not yesterday's marijuana. The active ingredient, THC, is so much higher today than back 40 years ago."

In some cases, the farmers are planting on government lands hidden deep in forests patrolled by state wildlife wardens. So-called guerrilla farms illegally set up on public property or remote private property without the owners' knowledge have troubled rural law enforcement officials and federal authorities for years.

California's Fish and Wildlife Department created a marijuana enforcement team three years ago to stem illegal gardens in the state's forests. The agency also created Watershed Enforcement Teams to crack down on marijuana farmers who illegally divert streams, used banned pesticides or otherwise harm the environment.

Fish and Game Capt. Paul Foy said the department has no plans to change its enforcement strategy after Jan. 1 and will continue to concentrate on environmental crimes and illegal farms on public lands.

An estimated 1,000 illegal farms controlled by organized crime operate on public property in California, he said.

"We're going to keep on keeping on with enforcement," Foy said. "We stay busy."

<b>HEADLINE</b>	<b>12/28 Van crashes into Seattle pedestrians</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/855579/vehicle-drives-into-building-in-near-westlake-center/">http://mynorthwest.com/855579/vehicle-drives-into-building-in-near-westlake-center/</a>
<b>GIST</b>	<p>A van crashed into a building near Westlake Center just before noon on Thursday, according to police.</p> <p>The Seattle Police Department reports the crash occurred at Fifth Avenue and Pine Street around noon. The van drove onto the sidewalk where it crashed into the front of a Gap store. Five people were taken to local hospitals, including the driver.</p> <p>"What we've determined so far ... is that the Shuttle Express driver experienced some type of medical condition, then lost consciousness, the van then drove over to the sidewalk where it struck four pedestrians," said Marc Garth Green with the Seattle Police Department.</p> <p>"(Video of the crash) shows the van did not accelerate; there is nothing obvious to make this an intentional or deliberate act," he said. "It just idles and then rolls through and strikes pedestrians."</p>

	<p>Harborview Medical Center reports receiving five patients; one is in critical condition. One person was taken to the hospital after being struck by falling glass.</p> <p>“Initial indications,” according to police, show that the driver of the van suffered from a medical condition prior to the crash and lost control of the vehicle. One other person was in the van at the time.</p>

<b>HEADLINE</b>	<b>12/28 Wash. REAL ID grace period Oct 2018</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/855660/washington-real-id-deadline-october-2018/">http://mynorthwest.com/855660/washington-real-id-deadline-october-2018/</a>
<b>GIST</b>	<p>Washington state travelers are getting another grace period to use their IDs at airports despite being out of compliance with federal regulations.</p> <p>Washington residents can use their state-issued IDs to travel through airports until October 2018, Business Insider reports. The previous deadline set by the Transportation Security Administration was Jan. 22, 2018.</p> <p>“Washington state residents who are trying to do a domestic flight using their Washington state driver’s license have just gotten a reprieve,” said travel expert Steve Danishek. “Washington state was out of compliance with the federal REAL ID law. They were given until January 22, 2018 to get either an enhanced driver’s license or a passport to board domestic flights.”</p> <p>But that deadline has been pushed back. It’s not the first time TSA has delayed the deadline for states to come into compliance with the REAL ID Act. It was initially passed in 2005, but the deadline for states to come into compliance has been adjusted ever since. While Washington’s driver licenses meet state standards, they fail to meet the federal requirements. That means, eventually, travelers will not be able to use a Washington ID to travel through airports. They will have to use a passport.</p> <p>Most recently, states were given until October 2017 to come into compliance with the REAL ID law, but that was delayed until the Jan. 22, 2018 due date — which has now, in turn, also been pushed back to October 2018.</p> <p>“This is a surprise because Washington state had been out of compliance for years along with several other states ... so we anticipated that the deadline would apply,” Danishek said. “This was a little bit unexpected. It’s going to apply to all 50 states, not just the ones out of compliance.”</p> <p>Washington is among nine states that are not in compliance with the REAL ID Act, including: Kentucky, Maine, Minnesota, Missouri, Montana, Oklahoma, Pennsylvania, and South Carolina.</p>

<b>HEADLINE</b>	<b>12/28 More women sought for wildfire fighters</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/more-women-called-upon-to-join-dedicated-washingtons-wildfire-fighters/670421863">http://www.kiro7.com/news/local/more-women-called-upon-to-join-dedicated-washingtons-wildfire-fighters/670421863</a>
<b>GIST</b>	<p>Washington Department of Natural Resources Public Lands commissioner wants more women to join the frontlines of wildfire fights.</p> <p>Commissioner Hilary Franz, who was elected into office last year, turned to Facebook to say that women are under-represented on the state’s fireline and in wildfire leadership. Women make up only 14.5 percent of the state's wildfire fighting force, according to DNR.</p> <p>“I want every woman out there who wants to keep their state safe to sign up for these great wildfire fighting opportunities,” she wrote on her page.</p>

	<p>In a video attached with a message, she thanks the thousands of firefighters who have strenuously and bravely worked protected Washington's landscapes.</p> <p>The DNR responded to over 600 wildfires this year amid dry weather and wind over the summer and fall – keeping 96 percent of fires under 10 acres.</p> <p>““What we don't see is enough woman to join this powerful [job of] firefighting ,” Franz said. “There's no reason we can't make this number higher. I am encouraging all women interested in protecting our communities and keeping our landscapes green to join ... We are not only fighting fire but we are fighting the glass ceiling.”</p>

<b>HEADLINE</b>	<b>12/29 Flood watch in effect for western Wash.</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/flood-watch-in-effect-for-western-wa-winter-storm-warning-in-cascades/281-503104417">http://www.king5.com/article/news/local/flood-watch-in-effect-for-western-wa-winter-storm-warning-in-cascades/281-503104417</a>
<b>GIST</b>	<p>As a big chill ends in the North Sound, Western Washington is transitioning to warmer and wetter weather.</p> <p>We got a break from heavy rain overnight Thursday, but it crept back in on Friday. Things begin to get interesting Friday as warmer air mixes into the region, and snow that fell in parts of Western Washington is melting fast.</p> <p>Snow levels drastically jump up to 5,000 feet with highs in Puget Sound climbing to 50 degrees or warmer. This will cause problems with rapid runoff in our streams, rivers, and tributaries. A Flood Watch has been issued from Friday afternoon to Saturday afternoon for the entire Western Washington region because of this.</p>

<b>HEADLINE</b>	<b>12/28 Oregon raises tobacco age to 21</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2017/12/28/oregon-raises-tobacco-age-to-21-on-new-years-day/">http://q13fox.com/2017/12/28/oregon-raises-tobacco-age-to-21-on-new-years-day/</a>
<b>GIST</b>	<p>Soon you'll need to be 21 years old in order to buy tobacco products in Oregon. The age increase will take effect Jan 1.</p> <p>The law will require anyone buying tobacco or vape products to be 21 years old or older. It also creates stiff penalties for vendors who sell to minors.</p> <p>Fines for store clerks and managers start at \$50 and \$250, but can reach \$500 and \$1,000 after multiple offenses.</p> <p>The move is thought to be a major victory for health advocates and a big blow to Big Tobacco.</p> <p>According to the Oregon Health Authority, tobacco-related diseases are the number one cause of preventable death in Oregon. Saying tobacco causes more than 7,000 deaths a year in the state.</p> <p>In the New Year, Oregon is joining a handful of other states (California, Hawaii, Maine and New Jersey) that have increased the tobacco age limit.</p>

HEADLINE	<b>12/28 First responders mental health struggles</b>
SOURCE	<a href="http://q13fox.com/2017/12/28/first-responders-face-mental-health-struggles-after-responding-to-traumatic-events/">http://q13fox.com/2017/12/28/first-responders-face-mental-health-struggles-after-responding-to-traumatic-events/</a>
GIST	<p>First Responders, like those who came to the rescue following the deadly train accident in DuPont, often times face mental health challenges.</p> <p>The University of Phoenix surveyed 2,000 firefighters, police officers, paramedics and nurses about their mental health. They found that the majority — 85 percent — of these first responders have experienced symptoms.</p> <p>“There are real consequences that could cause-effect what happened because of your job and reaching out for help,” said Samantha Dutton, Ph.D., Social Sciences Program Director at the University of Phoenix.</p> <p>Given what they do on a daily basis, it’s not surprising that 84 percent of these first responders say they’ve experienced traumatic events while on the job.</p> <p>“Shock and fear and adrenaline rushing, those are all pretty normal,” said Dutton. “It’s when you have abnormal things that show up later such as not sleeping, not eating, not hanging out with friend, if you’re drinking too much.”</p> <p>Seeking help</p> <p>Only 34 percent have had a formal diagnosis of a mental health disorder, like depression or post-traumatic stress disorder. Researchers say it shows that mental health services offered by organizations are not being fully utilized by these workers.</p> <p>“If you had a broken leg, would you not go to the hospital?” asked Dutton. “If there’s no conversation about what it’s like to have an issue or have symptoms of PTSD or depression or if there’s not an open conversation about that, you don’t know the difference between a broken leg and a paper cut because they both hurt.”</p> <p>The survey found that 75 percent of the people who received a formal diagnosis of PTSD have received treatment.</p> <p>Twenty-seven percent of people were diagnosed with depression and of those, 47 percent say their depression was caused by incidents they dealt with at work.</p> <p>According to Dutton, these issues are treatable. “PTSD is treatable. Depression is treatable. It’s getting over the stigma of asking for the treatment, getting better, and then getting back in the game.”</p> <p>And while a majority have access to help, many aren’t taking advantage of it.</p> <p>Sixty-nine percent of those asked say mental health services are seldom or never used.</p> <p>Why is that?</p> <p>First responders say there remains a stigma to people who admit to having mental health problems.</p> <p>They say supervisors have treated them differently when they bring up mental health conditions. Almost one-in-four say there are negative repercussions for people looking to get help at work.</p> <p>Starting the conversation</p> <p>Dutton believes there needs to be more of a national conversation about mental health, not just for first responders. She says there’s not a person in the United States who isn’t touched in some way by mental health issues, whether it’s their own or a family member.</p>

	<p>For first responders, she suggests that superiors discuss mental health with those who serve under them by telling their own stories. Dutton says showing that it's ok to talk about it, more people will feel comfortable about opening up.</p> <p>While she served in the military, Dutton says one leader opened up, and it helped.</p> <p>"I wouldn't keep people out of my door. There were people in my office lined up. Once they realize their leader did this, it was all great. They wanted to get the help too," said Dutton.</p> <p>If you or a loved one is dealing with depression or other mental health issues, reach out to your insurance company to find out what kind of services are available to you.</p> <p>Dutton says often times, simply being aware of the problem is the first step in the recovery process.</p>
<a href="#">Return to</a> <a href="#">Top</a>	

<b>HEADLINE</b>	<b>12/28 Census: 1 person every 18sec. in 2018</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/US/2017/12/28/US-population-to-add-one-person-every-18-seconds-in-2018/3771514499378/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=3">https://www.upi.com/Top_News/US/2017/12/28/US-population-to-add-one-person-every-18-seconds-in-2018/3771514499378/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=3</a>
<b>GIST</b>	<p>Dec. 28 (UPI) -- The U.S. Census Bureau predicts the U.S. population will grow by one person every 18 seconds as of the start of next year.</p> <p>The Census Bureau found the United States is expected to experience one birth every 8 seconds, a death every 10 seconds and add one person through net international migration every 29 seconds in 2018.</p> <p>It also predicted the U.S. population will reach 326,971,407 -- about 4.4 percent of the global total -- on Jan. 1, 2018, an increase of 2,314,238 from the first day of 2017.</p> <p>The bureau predicted the global population will reach 7,444,443,881 on Jan. 1, an increase of 78,521,283 from New Year's Day 2017.</p> <p>About 4.3 births and 1.8 deaths are expected every second worldwide during January of next year.</p>

<b>HEADLINE</b>	<b>12/29 Israel: Gaza militants fire rockets</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2017/12/29/military-says-gaza-gunmen-fire-rockets-at-israel.html">http://www.foxnews.com/world/2017/12/29/military-says-gaza-gunmen-fire-rockets-at-israel.html</a>
<b>GIST</b>	<p>JERUSALEM – Israel says militants in the Gaza Strip have fired several rockets at the Jewish state with two intercepted by its air defense system and another damaging a building.</p> <p>The military said its Iron Dome missile defense system downed two rockets Friday. Police said another exploded near a building causing damage but no injuries.</p> <p>Israel holds Hamas, the Islamic militant group that rules Gaza, responsible for all attacks emanating from the territory regardless of who fires the rockets. Israel typically responds to each attack.</p> <p>There has been an increase in Gaza rocket fire since President Donald Trump's announcement Dec. 6 recognizing Jerusalem as Israel's capital.</p> <p>Palestinians have been clashing with Israeli forces in the West Bank and along the Gaza border in weekly protests over the decision.</p>

<b>HEADLINE</b>	<b>12/29 Taiwan president seeks stronger defense</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2017/12/29/taiwan-president-pledges-stronger-defense-to-china-pressure.html">http://www.foxnews.com/world/2017/12/29/taiwan-president-pledges-stronger-defense-to-china-pressure.html</a>
<b>GIST</b>	<p>TAOYUAN CITY, Taiwan – Taiwanese President Tsai Ing-wen has pledged to step up defense spending to defend the self-ruled island's sovereignty in the face of China's growing military assertiveness in the region.</p> <p>Speaking at a military research center, Tsai said Friday that Beijing's "attempt to expand militarily in the region is more and more obvious" and Taiwan "needs to stand up for its sovereignty."</p> <p>China and Taiwan split in 1949 after Chiang Kai-shek's Nationalists fled the mainland following a civil war. The communist Beijing government insists the two sides must unite, but surveys show most Taiwanese oppose that.</p> <p>Beijing has rattled neighboring governments including Taiwan, Japan and South Korea by sending military aircraft close to their airspace.</p>
	<p><a href="#">Return to Top</a></p>

<b>HEADLINE</b>	<b>12/28 Universities face #MeToo movement</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2017/12/28/academia-faces-metoo-movement-over-sexual-harrassment.html">http://www.foxnews.com/us/2017/12/28/academia-faces-metoo-movement-over-sexual-harrassment.html</a>
<b>GIST</b>	<p>WASHINGTON – When Celeste Kidd was a graduate student of neuroscience at the University of Rochester she says a professor supervising her made her life unbearable by stalking her, making demeaning comments about her weight and talking about sex.</p> <p>Ten years on and now a professor of neuroscience at the university, Kidd is taking legal action. She has filed a federal lawsuit against the school alleging that it mishandled its sexual harassment investigation into the professor's actions and then retaliated against her and her colleagues for reporting the misconduct.</p> <p>"We are trying to bring transparency to a system that is corrupt," Kidd told The Associated Press.</p> <p>Academia — like Hollywood, the media and Congress — is facing its own #MeToo movement over allegations of sexual misconduct. Brett Sokolow, who heads an association of sexual harassment investigators on campuses, estimates that the number of reported complaints has risen by about 10 percent since the accusations against Hollywood mogul Harvey Weinstein surfaced in early October, spurring more women to speak out against harassment in various fields. The increase is mostly from women complaining of harassment by faculty members who are their superiors.</p> <p>But the Trump administration has viewed the issue of sexual harassment on campus in a different light. Education Secretary Betsy DeVos has scrapped Obama-era regulations on investigating sexual assault, arguing that they were skewed in favor of the accuser. New instructions allow universities to require higher standards of evidence when handling such complaints.</p> <p>A forthcoming study of nearly 300 such cases in the Utah Law Review found that one in 10 female graduate students at major research universities reports being sexually harassed by a faculty member. And in more than half of those cases, the alleged perpetrator is a repeat offender, according to the study.</p> <p>"Often schools might turn a blind eye toward sexual harassment that they know about or have heard about because a professor is bringing in a big grant or is adding to the stature of the university," said Neena Chaudhry, senior counsel at the National Women's Law Center.</p> <p>The Education Department did not respond to a request for comment.</p>

Activists say young women pursuing graduate studies are especially vulnerable to sexual misconduct because they depend heavily on their academic adviser to complete their degrees, pursue research in their field of study and get recommendations for future jobs. Reporting misconduct could endanger an academic career. And besides damaging the women's mental health and well-being, sexual harassment can chase some of them out of academia altogether.

"Often professors who are advising graduate students are the students' gateway to their degree attainment and their career prospects," said Anne Hedgepeth with the American Association of University Women. "That's an immense amount of power that professors hold. It's also an immense amount of risk that students take when coming forward when future prospects are on the line."

That sums up what happened to Kidd, according to the lawsuit.

Kidd says Florian Jaeger, a distinguished linguistics professor at the New York university's cognitive sciences department who was one of her academic advisers in 2007, pressured her to rent a room in his apartment for a year. She says he then constantly intruded in her private life, demoralized her and talked to her about oral sex and other sexually explicit topics.

"I begged him to stop and to just advise me professionally and he said that was impossible, that wasn't his mentorship style," Kidd said in a phone interview. "There were many moments where I went to sleep in the lab and I wondered what I had done to deserve the hell I was living in every day."

When Kidd protested, Jaeger made it understood that he could derail her career.

"He had a lot of control over my work life, he had the ears of everybody in the field," she recalled. "He reminded me constantly that they know him, that he was a big shot and that I was no one."

In the end, Kidd moved out of Jaeger's apartment and abandoned language research so that she wouldn't have to be supervised by Jaeger. She now studies attention and general learning.

Last year, two professors at the department, in whom Kidd eventually confided, filed a sexual harassment complaint. The university investigated but found the allegations unsubstantiated. The professors say the university then began a retaliation campaign against them. In August, Kidd together with group of faculty members filed a complaint with the Equal Employment Opportunity Commission, a federal agency in charge of workplace discrimination issues. In December, Kidd and her colleagues filed a federal lawsuit.

The university responded by placing Jaeger, now a tenured professor, on administrative leave and commissioning an independent investigation. Results are expected in early January.

University President Joel Seligman said in a statement that the school is committed to creating a safe and respectful environment, but vowed to "vigorously defend" himself and the university provost against some personal claims made against them in the suit.

Jaeger did not respond to an email seeking comment. But shortly after the case was made public this fall, he emailed his students to say that while some of the online comments about him were painful to read, "I am glad that there is now generally so much support for people who speak up against discrimination." Jaeger added that he has always tried to make his lab "an exciting, sa(f)e and supportive place to pursue science" and that he has received letters of support from former students.

As universities face pressure to rethink their sexual misconduct policies, activists suggest various possible remedies: spelling out what interaction is appropriate between faculty and students; more transparency in reporting and investigating complaints; more women in senior leadership positions in academia; and making a student's career less dependent on just one professor.

"There is really no excuse for not addressing this," Chaudhry at the National Women's Law Center said.

HEADLINE	<b>12/29 China seizes opportunity in Iran</b>
SOURCE	<a href="https://www.usatoday.com/story/news/world/2017/12/29/u-s-sanction-iran-china-seizes-opportunity/989571001/">https://www.usatoday.com/story/news/world/2017/12/29/u-s-sanction-iran-china-seizes-opportunity/989571001/</a>
GIST	<p>Mostafa Kishavarzi looks over the 10,000 watches crammed into his tiny store wedged between dozens of similar retailers in the jewelry section of the Tehran Bazaar.</p> <p>Every watch in his store — and most of those sold by his competitors — come from one place, and it's not Iran. It's China.</p> <p>Kishavarzi sells everything from knock-off Rolexes to nothing-fancy, off-brand watches. He flies to Shenzhen, China, several times a year to buy the timepieces and makes a tidy profit selling them back in Tehran.</p> <p>“My watches are perfect for middle- and low-income people,” he said proudly. “Even the batteries are guaranteed for a year.”</p> <p>Watches are just a tiny part of an explosion in trade between the two countries: China has become Iran's largest trading partner.</p> <p>The Chinese government has also extended huge loans to Iran, most recently a \$10 billion line of credit for Chinese companies to build infrastructure projects such as dams, power generation facilities and transportation projects. Meanwhile, the Trump administration continues to block U.S. investment and most trade with Iran. Analysts in Iran say the U.S. pressures European businesses to do the same.</p> <p>“The more the U.S. puts pressure on Iran, the closer Iran will get to China,” said Foad Izadi, an assistant professor in the Department of North American Studies at the University of Tehran.</p> <p>Izadi said China remained a reliable trading partner even during the height of U.S. sanctions earlier this decade. After implementing the nuclear accord in 2015, Iran signed numerous memoranda of understandings with companies in Italy, Germany and France. But facing the possibility of new U.S. sanctions, few of them followed through with sales or investments.</p> <p>The European plane manufacturer Airbus, for example, agreed to sell 100 planes to Iran but has delivered only three so far.</p> <p>China, on the other hand, has accelerated its investments, with infrastructure projects and sales of moderately priced cars, cell phones and clothing.</p> <p>The Chinese “are interested in buying and selling stuff,” said Izadi. “They are not interested in regime change. They are not interested in putting political pressure on governments that have an independent foreign policy.”</p> <p>In 2016 Chinese President Xi Jinping and Iranian President Hassan Rouhani announced plans to increase bilateral trade to \$600 billion over the next decade. That's an ambitious goal, to say the least.</p> <p>China exported \$7.95 billion worth of goods to Iran over the last eight months, a 22% increase over the same period last year, according to Iranian customs statistics provided by the Tehran Chamber of Commerce. Iran's exports to China, excluding oil, were valued at \$5.7 billion, a 13.5% increase during the same period.</p> <p>China sees Iran as an important component of its "One Belt, One Road" program, connecting China to Europe via Asia. The project costs an estimated \$1.7 trillion per year to build ports, highways, rail lines</p>

and other infrastructure in the region. China is also constructing a 2,000-mile long railroad to connect the western Chinese city of Urumqi with the northern Iranian city of Mashhad, cutting through four former Soviet republics.

Politically, China seeks allies against what it perceives as U.S. hegemony in the Middle East. Izadi said China doesn't want to depend on oil produced in Saudi Arabia, the Gulf States and other U.S. allies.

"As long as there is a defiant Iran in the Middle East, the United States cannot fully concentrate on East Asia where China's core interests are located," Izadi and Esfandiar Khodaei wrote in a scholarly journal.

But those common interests go only so far.

While China continued to buy Iranian oil during the sanctions era, it kept the money from those sales in special accounts in China as prescribed by U.N. sanctions. After sanctions were lifted, however, China didn't release the \$22 billion it accumulated. It only allows the funds to be used to finance Chinese infrastructure projects in Iran.

"They were ruthless," political analyst Saeed Laylaz said. "They tried to cheat us. But at least they sold things to us."

China faces another problem with Iran. Many ordinary people complain about the shoddy quality of Chinese goods such as the watches in the Bazaar jewelry stores.

"We know there are different quality goods in China," said Bazaar shopper Fereshteh, who declined to give her last name. "But the poor quality ones end up coming to Iran. They don't last for long and break down quickly compared to products from other places."

Izadi notes that the shoddy quality of some imports are as much the fault of Iranian traders as Chinese manufacturers. The traders buy cheap goods to make a bigger profit.

Even those consumers who want to "buy Iranian" face difficult choices.

Nasibeh Tavakoli, another Bazaar shopper, said she supports buying her own country's products rather than Chinese goods. But like consumers the world over, that's not so easy anymore. Asked if she actually buys Iranian, she replied sheepishly, "Sometimes I don't know if it's Iranian or Chinese. I end up buying very few Iranian goods."

<b>HEADLINE</b>	<b>12/28 Arctic freeze hits Midwest, Northeast</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-usa-weather/land-of-the-freeze-arctic-wave-hits-u-s-midwest-northeast-idUSKBN1EM1PV">https://www.reuters.com/article/us-usa-weather/land-of-the-freeze-arctic-wave-hits-u-s-midwest-northeast-idUSKBN1EM1PV</a>
<b>GIST</b>	<p>NEW YORK (Reuters) - Most of the U.S. Northeast and Midwest grappled with a post-Christmas deep freeze on Thursday, with temperatures expected to plunge as low as minus 20 degrees F (minus 29 C) in North Dakota as forecasters warned that the harsh winter weather could usher in the New Year.</p> <p>Tioga, about 200 miles (322 km) north of Bismarck, took honors as the coldest spot in the continental United States, according to National Weather Service (NWS) spokesman Bob Oravec. The mercury dived to minus 15 F early on Thursday afternoon.</p> <p>"By tomorrow morning, low temperatures will probably be 15 to 20 degrees below zero in the northern and northwestern areas of North Dakota, maybe even in north Minnesota," Oravec said.</p> <p>On Wednesday, International Falls, Minnesota, about 300 miles north of Minneapolis, lived up to its reputation as the "Icebox of the Nation." The low temperature there dropped to 37 degrees F below zero, breaking the old record for the day of 32 degrees below, set in 1924. Temperatures moderated to minus 2 F on Thursday.</p> <p>Mayor Bob Anderson told Reuters that a local paper mill had to reduce operations because of the cold. But he said mail was still being delivered, and the town's roughly 6,000 weather-hardened residents were taking the cold in stride.</p> <p>For most of the region encompassing New England, northern Pennsylvania and New York, the NWS issued wind chill advisories or warnings. Temperatures in the region ranged from highs in the teens and 20s F to lows in the single digits or below zero.</p> <p>For upstate New York, east of Lake Ontario, the NWS warned of "dangerously" cold wind chills of minus 5 F to minus 30 F through Friday. In northern Vermont, conditions are even more brutal, with wind chills threatening to bottom out at minus 40 F.</p> <p>On Twitter, the hashtag #ItsSoCold was the No. 1 trending topic in the United States on Thursday as social media users expressed their frustration with Old Man Winter.</p>

<b>HEADLINE</b>	<b>12/28 Impact of southern Calif. wildfires</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2017/12/28/southern-california-wildfires-trigger-mass-destruction-hurting-families-economy.html">http://www.foxnews.com/us/2017/12/28/southern-california-wildfires-trigger-mass-destruction-hurting-families-economy.html</a>
<b>GIST</b>	<p>After nearly a month of battling the so-called "Thomas Fire," fire personnel have nearly reached full containment.</p> <p>As of Thursday morning, the wind-whipped fire, which is the biggest blaze in California's history since detailed record-keeping began in 1932, was 89 percent contained.</p> <p>The massive blaze started on Dec. 4 about 60 miles northwest of downtown Los Angeles and caused at least 50,000 people to evacuate, destroyed 1,063 structures and scorched roughly 281,620 acres.</p> <p>The Thomas Fire has very little active heat at this time and no forward progress of the fire is expected, the Los Padres National Forest, which is now tracking the fire, said in a statement.</p>

Visitors are now welcome back to Santa Barbara, Ventura and surrounding areas -- just days after authorities lifted all evacuation orders in Santa Barbara County and portions of Ventura County on Dec. 21.

The cause of the fire is currently unknown.

One firefighter died while trying to combat the fire in Southern California, authorities said on Dec. 14. Cory Iverson, 32, was an engineer based in San Diego. He left behind a pregnant wife and a 2-year-old daughter.

Iverson, who died of burns and smoke inhalation, had been with the California Department of Forestry and Fire Protection since 2009.

Iverson's wildfire-related death was not the first.

Authorities confirmed the death of a 70-year-old woman on Dec. 8. Virginia Pesola was reportedly killed in a car crash along an evacuation route on Dec. 6. Her death was the first connected to the six wildfires that were in the region.

In addition, one unnamed firefighter has reportedly been injured and three other people were burned, the Los Angeles Times reported.

In light of the Thomas Fire and others, here's what you need to know about California wildfires.

### **How do the fires start?**

While wildfires in Northern California are often caused by lightning storms, about 99 percent of wildfires in Southern California are caused by humans, David Peterson, a senior research biologist with the U.S. Forest Service, Pacific Northwest Research Station, told Fox News.

While throwing a cigarette butt out of a window is usually not enough to spark a fire, Peterson said, other simple tasks -- like mowing the lawn or parking a car on dry grass -- can.

For instance, if a rock hits a lawn mower's metal blades, that's usually enough friction to create a spark that can ultimately start a fire, Scott McLean, an information officer at the California Department of Forestry and Fire Protection, or Cal Fire, told Fox News. And the heat from a car's catalytic converter, a device that's located underneath that controls its exhaust emissions, can reach up to 1,200 degrees Fahrenheit -- enough heat to create a fire if the car is parked over dry, flammable grass.

"It only takes one spark to start a fire," McLean said.

Another common source of wildfires are utility wires, Peterson said. On a windy day, these wires can be knocked over, land on dry vegetation and ultimately ignite a fire.

Wildfires are a "perfectly natural, normal phenomenon," Peterson said. But as urban areas continue to expand into wildland areas, the risk of wildfires will also continue to grow.

"We cannot stop them. We can maybe do things to reduce their severity, like removing as much dead vegetation that we can, but they will continue to occur," he added.

### **How are wildfires stopped?**

All wildfires can bring mass destruction. But the way each fire is stopped varies, McLean said.

In other words, "the different vegetation and different scenarios up and down the state" impact how each fire is handled.

"You don't just throw resources at a wildfire," he said. "It's like a battle -- you have to think what will be the most effective."

Cal Fire usually depends on a mix of bulldozers, fire engines, inmate crews, and helicopters or airplanes, which disperse things like fire retardant, to stop wildfires.

Using containment lines, or large areas where a bulldozer cuts away vegetation to the point where only dirt remains, is very common, he said. But this isn't always an accessible option.

"What would increase the fire's speed, what would slow it down?" he asked. "Helicopter and airplanes are ineffective with winds over 30 miles an hour, and bulldozers can't always get in there."

Strong wind gusts also cause problems when putting out or controlling wildfires, he said. Regional atmospheric patterns that develop in the fall create dry, hot wind gusts that can sometimes reach 80 miles per hour. These winds can create so-called "spot fires" -- which is when an ember from the main wildfire gets blown into a nearby bush or field, ultimately creating a second fire.

"It's like a blowtorch," he said.

Indeed, "the thing that's really challenging here is the embers, which can float one or two miles and jump across fire breaks," Peterson said. "That's why residential areas are so vulnerable."

"There is so much energy and so much intensity that we cannot stop them with conventional means," Peterson said. "In these fires, we have to allow them to burn until there's a period of high humidity and rain that helps reduce the temperature of fire enough to control it."

But rain can also create muddy conditions for bulldozers and fire crews which impacts how they can combat the blaze.

Peterson said that firefighters work to "steer" the fire, pushing it toward the ocean, highway or a steep, rocky area where there is less vegetation. This usually helps to stop or slow down the wildfire. They also use aerial and satellite photos to "work with the landscape" and keep an eye on which direction the wind is coming from, he said.

As for the Thomas Fire, however, McLean said resident safety comes first -- hence the evacuation that first took place last week. He said Cal Fire is expecting more resources to come to the Ventura County area, adding that "several strategies and tactics are in place" to stop or control it.

"It's a case by case basis, and it's extremely fluid," he said.

### **Why have California's wildfires been so destructive recently?**

McLean explained that California has faced a significant drought over the past five years, which created a lot of dead vegetation across the state. Like other mediterranean climates, wintertime brings rain, which fills up water reserves and helps new vegetation grow. California also had a record amount of rainfall in the spring of 2017. But the summer's heat dried out that new growth, and, combined with the autumn winds, means "a lot of fuel was created for wildfires," he said.

"These wildfires in Southern California are unlike anywhere else in the West," Peterson said. And this year in particular, that's primarily because of the Santa Ana winds.

Indeed, "the fires that occur in Southern California in the fall and winter are unique," Peterson said.

While most of the wind cycles across the U.S. blow off of the Pacific Ocean and move east, the Santa Ana winds blow off the desert in Arizona and move west toward California. These hot, dry winds, which can

reach 50 miles per hour or more, along with warm weather and dead vegetation, is the perfect concoction for severe wildfires.

“This [the Santa Ana winds] usually happens to some extent every year, but, like all natural phenomena, happens more severely some years than others,” he said. One of the more severe years has been 2017.

Between the winds and the lightning storms, close to 10 million acres in the West have burned in 2017 alone, Peterson said.

McLean said there are millions of dead trees in California -- but those primarily serve as potential fuel for wildfires to blaze across the northern part of the state. In Southern California, on the other hand, smaller fuels -- like chaparral, which is a shrub-like plant with fine stems and leaves -- propel the wildfires.

“We’re not dealing much with forest in Southern California, we’re dealing more with chaparral -- and that gets even hotter than a forest fire,” Peterson said.

“There’s a long road ahead of us. The fires we’ve dealt with recently -- like the Thomas Fire -- are all indicators of what we’re having to deal with in California for the next few years,” McLean added.

“Rains are not a cure all with one winter -- it will take several years of winters to get moisture back into plants and reservoirs.”

### **What is the impact on wine, entertainment and wildlife?**

Wildfires could also impact the state’s wine industry from an economic standpoint, wine experts previously told Fox News. The California wine industry generates \$57.6 billion in annual economic activity in the state and \$114 billion in the country, according to statistics from the Wine Institute, a California-based public policy organization.

About 325,000 Californians are employed by the wine industry in California. The industry also contributes \$17.2 billion in wages annually in the state.

Additionally, it generates \$7.2 billion in tourism expenditures in California.

One of the biggest revenue generators in the West are “recreational activities on public lands,” Peterson said -- such as hiking, skiing or sightseeing.

“Businesses shut down, and smaller communities who depend on tourism are greatly impacted,” Peterson said.

As for wildlife, most animals can either fly or run away from the wildfires, while others can burrow underground. Peterson said that wildfires are actually a good thing for deer, elk, Bark Beetles and some types of vegetation. But for other animals -- like the Spotted Owl and the Lynx, for example -- wildfires are harmful, often destroying their habitats.

“There’s always going to be winners and losers in wildfires,” Peterson said.

Additionally, the smoke from wildfires is hard on people who have respiratory problems. Elderly people and children are typically impacted by the smoke.

Peterson recalled a time that there was so much smoke in the air from a wildfire it was difficult to talk.

As for the entertainment industry, the Hollywood Reporter reported that HBO suspended its second season of “Westworld” due to a 200-acre brush fire that broke out near where the show was filming.

<b>HEADLINE</b>	<b>12/28 Expert: U-turn in flights not uncommon</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/airplane-mode/chrissy-teigen-s-tokyo-bound-flight-turning-back-more-common-n833226">https://www.nbcnews.com/storyline/airplane-mode/chrissy-teigen-s-tokyo-bound-flight-turning-back-more-common-n833226</a>
<b>GIST</b>	<p>Supermodel Chrissy Teigen captivated her Twitter followers when she live-tweeted about her "flight to nowhere" — caused when a rogue passenger was discovered on board her Tokyo-bound airplane Tuesday morning. The incident led the All Nippon Airways crew to turn the jetliner back to Los Angeles four hours into the flight.</p> <p>While airline officials apologized for the turnaround and said it was investigating how the "unauthorized" passenger was even permitted aboard, aviation experts say it's actually not uncommon for an aircraft to turn around mid-flight.</p> <p>In fact, it happens everyday, multiple times a day, said Ian Petchenik, a spokesman for Flightradar24, a real-time flight-tracking service.</p> <p>"This time of year we track about 150,000 flights a day. In any 24-hour period, about two dozen will not arrive for a number a reasons," Petchenik said.</p> <p>The most common reason for a diverted or returned flight, Petchenik said, is weather — especially in winter. But other reasons can range from medical to mechanical, and yes, even a stray passenger.</p> <p>Petchenik said in the hours after All Nippon Airways Flight NH175 went viral on social media, he was repeatedly asked why the plane didn't just land at a closer airport, such as in Anchorage, Alaska, instead of returning to Los Angeles.</p> <p>"If it's practical, airlines prefer to land where they have ground staff and can accommodate the passenger," he said, adding that other airports "might not have proper staff to receive the plane, to refuel the plane, things like that."</p> <p>He said an airline would rather know the airport can "re-accommodate the passenger and the aircraft" before making the unscheduled landing.</p> <p>Although it is still not known how the stray passenger ended up on the flight, Henry Willis, a senior policy researcher at RAND Corporation with a knowledge of aviation security, said keeping airports secure is a team effort.</p> <p>"Security isn't just the TSA. It's all parties," Willis said, adding that everyone from airlines to passengers play a role in keeping airports safe.</p> <p>He said it is likely a review will be done so the airline can assess how it can prevent future mix-ups. As to what led to this one, Willis said it's hard to tell.</p>

<b>HEADLINE</b>	<b>12/28 More cities light up Chinese lanterns</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/asian-america/chinese-lantern-light-festivals-catching-across-country-n832266">https://www.nbcnews.com/news/asian-america/chinese-lantern-light-festivals-catching-across-country-n832266</a>
<b>GIST</b>	<p>TULSA, Okla. — Medium-sized cities across the U.S. have begun hosting lantern light festivals in recent years in an effort to boost tourism and share a bit of Chinese culture.</p> <p>While similar festivals have taken place in large U.S. cities like San Francisco and New York for decades, events are currently underway in a variety of smaller municipalities, including Tulsa, Oklahoma; Cary, North Carolina; and Columbus, Ohio.</p>

“It’s very colorful. It’s something you don’t see at other places,” Lyman Collins, cultural arts manager for the Town of Cary in North Carolina, said. “Maybe you do in far away other places, but not around here. There’s nothing like it.”

The city of Cary has hosted a lantern festival for the past three years and has signed an agreement with the China-based Tianyu Arts & Culture company, to host it for the next four years, Collins said.

Last year, the city of 162,000 saw 90,000 people attend the event, a 75 percent increase over the previous year, he said.

“It’s been successful,” Collins said. “It’s a program that people seem to want to attend. They enjoy it. And it allows us to use the amphitheater at a time we would otherwise not be using it.”

The festival has also been credited with creating the first budget surplus for the local Koka Booth Amphitheater.

Huiyuan Liu, event manager for Tianyu Arts & Culture, said the company focuses on selling a cultural experience to visitors of the festivals. In addition to the Cary festival, the company has organized events in Milwaukee, Wisconsin; Spokane, Washington; and Columbus, Ohio; among other cities.

She said that venues often want to host the lantern festivals to help bring in additional visitors. For example, Tianyu Arts & Culture partnered with the botanical gardens in Milwaukee in an effort to increase attendance to the gardens and bring extra revenue to the park.

“They did a really good job in advertising and the lanterns looked beautiful,” she said. “So, eventually, lots of people showed up, and I think 80 to 90 percent of them had never been to the botanical gardens before.”

Traditionally, the lantern light festival marks the end of the Lunar New Year period and the return of spring, and is seen by many as an important celebration.

In Tulsa, more than 5,000 people have visited the city’s inaugural Lantern Light Festival, put on by the Pinnacle Production Group, said Ryan Howell, events coordinator at the River Parks Authority, which is hosting the event.

“The festival producer... has been touring the nation in several other locations and we thought it would be something unique for Tulsa to enjoy,” Howell said. “The way they construct these lanterns and the sheer size of them is quite a spectacle, so we thought it might be something that the citizens of Tulsa would enjoy.”

Advertising for the show has stretched into Kansas and Missouri, drawing visitors across state lines, Howell noted.

Local food concessions and local acrobats are also used during the performances, which run through Jan. 14.

“It’s a really fun show,” he said. “It’s a touring show, and I think a lot of people don’t realize that these are custom works of art so they’re not like mass produced inflatable bubbles. These are individually crafted works of art.”

In fact, each lantern is designed by hand, said Sanjay Syal, president of Pinnacle Production Group.

Though the company hosts such festivals all year, they tend to be most popular around Christmas time, he said.

Hosting such an enormous event isn’t cheap. It costs about \$1.5 million to \$2 million to put a festival on,

	<p>Syal said. Many communities look at it as a tourism draw.</p> <p>“It’s a once in a life-time opportunity. It’s like Disney coming to you,” he said. “The photos and videos look impressive, but when you’re standing next to a 400-foot dragon, it looks even more impressive.”</p>

<b>HEADLINE</b>	<b>12/28 US, Turkey announce end visa crisis</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/us-embassy-announces-end-visa-crisis-turkey-52025923?cid=clicksource_76_2_hero_headlines_headlines_hed">http://abcnews.go.com/International/wireStory/us-embassy-announces-end-visa-crisis-turkey-52025923?cid=clicksource_76_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>The U.S. Embassy in Turkey announced Thursday that it is resuming normal visa services for Turkish citizens, saying Turkish authorities fulfilled assurances that no local staff would be detained or arrested for performing their duties. Turkey reciprocated by restoring full visa services to Americans.</p> <p>The United States had halted most visa services for Turkish citizens following the October arrest of a Turkish citizen employed at the U.S. Consulate in Istanbul. Turkey had retaliated by halting visa services in the U.S. for Americans traveling to Turkey.</p> <p>The diplomatic conflict aggravated tensions between the United States and Turkey, NATO allies that have seen their ties deteriorate since a coup attempt last year that the Turkish government blames on a Muslim cleric who lives in the U.S.</p> <p>After receiving assurances its locally employed staff members would not be arrested for performing duties such as communicating with Turkish officials, U.S. diplomatic missions in Turkey began processing visas on a "limited" basis in November.</p> <p>The embassy said Thursday it was satisfied enough that Turkish authorities had kept their promise to restore the full range of visa services. It added that Turkey also followed through on assurances that Washington would be informed in advance if authorities intended to detain other staff members in the future.</p> <p>"The Department of State is confident that the security posture has improved sufficiently to allow the full resumption of visa services in Turkey," the U.S. Embassy said in a statement.</p> <p>Turkey welcomed the U.S. announcement, but denied giving the U.S. any reassurances about any ongoing legal case.</p>

<b>HEADLINE</b>	<b>12/28 Report: more credit cards, more debt</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/business/consumer/americans-have-more-credit-cards-more-debt-says-cfpb-n833086">https://www.nbcnews.com/business/consumer/americans-have-more-credit-cards-more-debt-says-cfpb-n833086</a>
<b>GIST</b>	<p>The credit card market is alive and well – and growing, according to a new report from the Consumer Financial Protection Bureau released on Wednesday. The biennial report to Congress found that the total number of credit card accounts, the total credit available to cardholders, and the average amount of card debt have all increased over the past two years.</p> <p>During that same period, the delinquency rate (paying late or not at all) – which had fallen to historic lows following the financial crisis of 2007-2009 – has “modestly increased,” the CFPB analysis showed.</p> <p>“Even though the increase in delinquencies is slight, it is a troubling sign,” Bruce McClary, vice president of communications at the National Foundation for Credit Counseling, told NBC News. “There’s nothing wrong with using a credit card, which can be a useful financial tool, as long as you make payments on time and avoid going deep into debt.”</p>

The credit card industry spends billions of dollars each year to attract new customers and that investment is paying off.

“The market has grown in size, in the number of its offerings and participants, and in the scope and features of its products,” the CFPB report noted. Some of the major findings:

- Credit card companies extended more than \$4 trillion in credit lines – used or unused – as of mid-2017. That’s up from the end of the great recession, but below the high of \$4.4 trillion in mid-2008.
- Consumers opened about 110 million new credit card accounts in 2016. That’s roughly 50 percent higher than 2010 and higher than any single year since 2007. New account volume has not yet return to the pre-recession level.
- Although the number of cards in people’s wallets has increased in recent years, the average cardholder has fewer credit cards than before the recession. About 169 million Americans had at least one card as of mid-2017. Cardholders with prime credit scores now have, on average, more than four cards. Prior to the recession, they had more than five.

"Card issuers have loosened up on approvals and credit lines as the economy has recovered, but things still remain below the Wild Wild West, pre-recession levels," said Greg McBride, chief financial analyst at Bankrate.com.

Average credit card debt increased 9 percent since 2015. The average balance for cardholders with low credit scores rose at a faster rate, the CFPB reported. Those with deep subprime scores – indicating a really bad credit history – saw a 26 percent increase in their average credit card debt these past two years.

The average American household that’s carrying credit card debt has a balance of \$15,654, according to a recent report from the financial website NerdWallet. That unpaid debt becomes increasingly costly as interest rates rise.

The national average APR hit 16.21 percent last week, according to the latest report from creditcards.com. That’s the highest average APR the website has recorded since it began tracking rates in mid-2007. Credit card interest rates are expected to go even higher in 2018, as the Federal Reserve continues to boost interest rates.

<b>HEADLINE</b>	<b>12/28 Criminal charges in flight U-turn?</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/ana-flights-mid-air-turn-result-criminal-charges/story?id=52024185">http://abcnews.go.com/International/ana-flights-mid-air-turn-result-criminal-charges/story?id=52024185</a>
<b>GIST</b>	<p>The FBI is weighing criminal charges against two brothers who got on a Tokyo-bound flight together in Los Angeles allegedly using a single boarding pass, forcing the plane to turn around mid-flight.</p> <p>Law enforcement sources with knowledge of the situation told ABC News that two brothers went through security at Los Angeles International Airport on Tuesday with legitimate tickets, but were booked on separate flights to Tokyo. One had a ticket on an All Nippon Airways flight and the other was booked on a United Airlines plane.</p> <p>The brothers, who have nearly identical names, were able to board the ANA flight together by apparently using a duplicate boarding pass, the sources said. It's unclear how the brother with a United Airlines ticket found a seat on the plane. Their identities have not been revealed.</p> <p>The flight crew didn't become aware of the situation until roughly four hours into the flight. The airline then decided to turn around mid-air and head back to Los Angeles.</p>

	<p>When the flight landed, the brothers were interviewed by authorities and released. There is no indication anyone was in danger.</p> <p>"During the flight, the cabin crew became aware that one of the passengers boarded the incorrect flight and notified the pilot," ANA said in a statement. "As part of the airline's security procedure, the pilot in command decided to return to the originating airport, where the passenger was disembarked."</p> <p>"ANA is researching the situation currently to determine how the passenger boarded the flight," the airline added.</p> <p>FBI agents told ABC News on Wednesday night that they aren't in a position to arrest anyone or press charges yet, but the investigation is ongoing. If investigators determine there was intent to board the incorrect flight, one of the brothers could be accused of being a stowaway, which is a federal crime and punishable up to five years in prison.</p> <p>Meanwhile, the airline could face hefty fines from the U.S. Customs and Border Protection for allowing the passenger on board and failing to make an accurate headcount.</p>

<b>HEADLINE</b>	<b>12/28 Question arises on flight's U-turn LAX</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/ana-flight-175-u-turn-lax-former-airline-captain-questions-safety/">https://www.cbsnews.com/news/ana-flight-175-u-turn-lax-former-airline-captain-questions-safety/</a>
<b>GIST</b>	<p>The FBI is investigating how a passenger with the wrong ticket boarded a flight from Los Angeles to Tokyo. All Nippon Airways (ANA) Flight 175 returned to LAX about four hours after takeoff Tuesday after the crew discovered an unauthorized passenger in what was supposed to be a vacant seat, reports CBS News correspondent Don Dahler.</p> <p>ANA says there is no mandatory regulation that forced its plane to turn around, and the airline defended the decision. But one aviation expert we spoke to said the U-turn was not necessary – and may have put the people on board at even greater risk.</p> <p>Denny Kelly, a former airline captain, said the plane should have landed at the nearest airport and solved the issue as soon as possible.</p> <p>"To spend four hours flying back to Los Angeles with the guy on the airplane you don't really know what's going on, that's not the safest way to go," Kelly said. "It messed a bunch of things up and didn't hurt anybody. But it could've."</p> <p>The airline says the unauthorized passenger was an American in his 20s. According to the Transportation Security Administration, the passenger was ticketed for a different flight, on United Airlines. He was traveling with his brother, who was ticketed for the ANA flight. Both flights were scheduled to depart around the same time.</p> <p>The decision to bring Flight 175 back cost fliers an entire day of travel.</p> <p>ANA told CBS News the decision was made "in consideration of safety." ANA also tweeted an apology, saying, "We failed to deliver the customer service we strive for. ... We welcome ongoing feedback to understand how we can work to make this right."</p> <p>The FBI said it has not filed charges against the unauthorized passenger.</p>

<b>HEADLINE</b>	<b>12/28 Russia slams US Aegis system sale</b>
-----------------	--

SOURCE	<a href="http://www.cnn.com/2017/12/28/asia/russia-us-japan-anti-missile-defense-intl/index.html">http://www.cnn.com/2017/12/28/asia/russia-us-japan-anti-missile-defense-intl/index.html</a>
GIST	<p>(CNN)Russia has accused the United States of violating an arms control treaty by agreeing to supply anti-missile systems to Japan.</p> <p>Russian Foreign Ministry spokeswoman Maria Zakharova said the deal with Japan was part of a bigger plan by the US for a "global anti-missile system."</p> <p>Japan's cabinet approved a plan last week to buy two US-built Aegis Ashore missile defense systems, state broadcaster NHK reported, as the country faces increasing hostility from neighboring North Korea.</p> <p>Russia has raised concerns over several US-built defense systems, claiming they also have the ability to launch missiles.</p> <p>Zakharova claimed they were in breach of the Intermediate-Range Nuclear Forces (INF) Treaty, an arms control agreement between Moscow and Washington that has been in force for 30 years.</p> <p>"We need to bear in mind that all these systems have universal missile launchers that can use all types of missiles. It means another violation of the INF treaty and we see that Japan is an accomplice in this matter," she said.</p> <p>The US rejected the accusation. "The United States is in full compliance with the INF Treaty. Russian claims to the contrary are false and meant to deflect attention from Russia's own very clear violations," a spokesman for the US State Department told CNN.</p> <p>"Third parties will not deter us from taking appropriate defensive measures in the face of growing security challenges," the spokesman added.</p>

HEADLINE	<b>12/28 DHS: First Responder apps w/flaws</b>
SOURCE	<a href="https://www.bleepingcomputer.com/news/security/dhs-18-of-33-first-responder-apps-affected-by-security-flaws/">https://www.bleepingcomputer.com/news/security/dhs-18-of-33-first-responder-apps-affected-by-security-flaws/</a>
GIST	<p>A Department of Homeland Security (DHS) pilot program uncovered several privacy and security-related issues in Android and iOS applications used by first responders on the scene of natural disasters and other emergency situations.</p> <p>The pilot program consisted of carrying out security audits for 33 first responder apps developed by 20 app developers.</p> <p>Three US government agencies worked together with experts from Kryptowire to review the apps. Auditors say they identified both privacy and security issues in the apps they tested.</p> <p><b>32 of 33 apps affected by privacy issues</b></p> <p>For example, 32 of the 33 apps featured various privacy issues, such as the app gaining access to permissions it did not need or used, such as the ability to send SMS messages, access the phone camera, and the device's contacts list.</p> <p>Experts also found critical security issues in 18 apps, which they say were vulnerable to MitM (Man-in-the-Middle) attacks, mishandled SSL certificates, or used hardcoded credentials.</p> <p>The audit took three months, and investigators said they notified all app developers. At the time of a DHS</p>

	<p>press release, published last week, 14 apps developed by ten developers received fixes for the reported issues.</p> <p><b>Fixes took approximately one hour per app</b></p> <p>"Most developers who fixed their app's vulnerability(ies) reported investing approximately one hour on remediation," said the DHS in a statement. "Remediation steps included removing old or unused code, enabling built-in security provided by the operating system, and ensuring the functionality requested is necessary for operations."</p> <p>According to the DHS, the pilot program was important because even if very few people use these apps, they are critical and need to function as designed at a time of crisis.</p>
<p><a href="#">Return to Top</a></p>	<p><i>More information is available on the program's homepage. The test pilot was named "<a href="#">Securing Mobile Applications for First Responders</a>." A 22-page PDF with the security audit's results is available <a href="#">here</a>.</i></p>

<p><b>HEADLINE</b></p>	<p><b>12/28 New cybersecurity threats unwrapped</b></p>
<p><b>SOURCE</b></p>	<p><a href="http://www.healthcareitnews.com/news/new-cybersecurity-threats-unwrapped-hidden-cobra-public-safety-apps-western-digital-my-cloud">http://www.healthcareitnews.com/news/new-cybersecurity-threats-unwrapped-hidden-cobra-public-safety-apps-western-digital-my-cloud</a></p>
<p><b>GIST</b></p>	<p>December saw another round of cyber threats emerge that highlight healthcare's need to better communicate. That means hospitals sharing threat information with each other, researchers alerting tech vendors when they uncover vulnerabilities, and getting the word out to consumers.</p> <p>"We still take a lot of things for granted," said Lee Kim, Director of Privacy and Security at HIMSS. "We still need to bridge the vendor-consumer divide."</p> <p>That's Kim's takeaway after compiling this month's HIMSS Healthcare and Cross-Sector Cybersecurity Report.</p> <p>Western Digital My Cloud is one example. Mitre's Common Vulnerability and Exposures pointed to a hole through which hackers can get root-level privileges in the personal storage device — and do so without authenticating.</p> <p>On the international scene, meanwhile, the U.S. Computer Emergency Readiness Team, working in conjunction with the FBI and the Department of Homeland Security, pinpointed seven malicious executable variants that North Korea's government uses. CERT explained that Hidden Cobra is the name it and other U.S. agencies use for North Korea's malicious cyber activity, while Bankshot refers to the Trojan malware North Korea deploys.</p> <p>"FBI has high confidence that Hidden Cobra actors are using malware variants in conjunction with proxy servers to maintain a presence on victim networks and to further network exploitation," U.S. CERT said.</p> <p>To that end, CERT recommends that hospitals and other enterprises employ some of the basic infosec blocking and tackling to safeguard against North Korean threats, including keeping operating systems and antivirus software current, restricting users from downloading unwanted apps, enforcing password policies, being careful about opening and scanning attachments, installing personal firewalls and keeping pace with the latest threats.</p> <p>Another federal agency, the Centers for Disease Control and Prevention, posted its Supply Chain Disaster Preparedness Manual recently, aimed specifically at healthcare supply chain and emergency managers.</p> <p>And then there's the Securing Mobile Applications for First Responders report from Homeland Security, which revealed that 32 of 33 tested public safety applications have security holes that could let nefarious actors slip in to access a smartphone's camera, contacts, audio recording, SMS message and hard-coded credentials – the most personal stuff, in other words.</p>

“I just don’t think many people understand what it means for an attacker to be able to eavesdrop on a connection or get control over a device or gain root or administrator privileges on a machine,” Kim said. “If I am a researcher and I discover a vulnerability, is it fair to disclose it if the vendor fails to act on it? How many ordinary users are aware of the exploitable dangers and how their systems may be affected?”

<b>HEADLINE</b>	<b>12/28 Hacks increasingly target student data</b>
<b>SOURCE</b>	<a href="http://www.govtech.com/security/Cyberattacks-Increasingly-Target-Student-Data.html">http://www.govtech.com/security/Cyberattacks-Increasingly-Target-Student-Data.html</a>
<b>GIST</b>	<p>(TNS) — Three sets of eyes are trained on a bank of glowing screens that wraps around the room.</p> <p>Data flashes. Charts fill a large panel.</p> <p>The systems engineers sit in front of smaller, desktop computer monitors. They scan information as it pours in and check for problems.</p> <p>The network operations center, which opened a couple of years ago in a former school turned technology hub, is the front line of the DeKalb County school district’s defense against hackers, cyberthreats, and data theft.</p> <p>“We get close to about 3,000 attacks a day, and so we are able to see it and constantly make adjustments,” said chief information officer Gary Brantley, who likened the onslaught to a barrage of missiles. “The biggest focus is, we are trying to protect kids. We are trying to protect student information.”</p> <p>As school districts ditch chalkboards and paper files for computers and data systems with valuable details about employees and students — from personal identification to grades, attendance records, parents’ names, and contacts — cyber criminals have targeted them.</p> <p>Online scammers steal paychecks, swipe data, and even have demanded ransom after taking over district’s networks.</p> <p>In recent months, three metro Atlanta school districts reported email phishing attacks. Thieves nabbed nearly \$130,000 from Atlanta Public Schools and Fulton County Schools by fooling dozens of employees with fake emails that allowed hackers to gain access to their online information and reroute direct deposits.</p> <p>A third district, Clayton County Public Schools, said attackers tried unsuccessfully to reroute paychecks from 28 unsuspecting workers.</p> <p>In October, the U.S. Department of Education warned schools of extortion attempts in at least three states. Cyberattackers threatened to release student information and, in some cases, threatened violence unless the district paid up. Some schools have.</p> <p>There have been at least 283 cybersecurity incidents at K-12 public schools since 2016, according to a tally by education technology consultant Doug Levin. He thinks his count underreports the scope of the security troubles.</p> <p>“These are new threats facing schools. They are harming individuals. They are disrupting school schedules and class time and they are costing schools and taxpayers a lot of money, and we are going to need an effective and sort of comprehensive response to it,” said Levin, president of Virginia-based EdTech Strategies.</p> <p>Data breaches are so expected that a policy guide the National School Boards Association released this year called them “inevitable.”</p>

In the days after the Atlanta attack, the district warned that confidential data for all its roughly 6,000 employees may have been exposed. Bill Caritj, chief accountability and information officer, now says further forensic analysis found no evidence of a widespread problem.

Fulton and APS both repaid employees after their paychecks were stolen. Fulton officials plan to ask the school board for about \$250,000 to beef up protections, while APS spent \$150,000 on a forensic investigation and will pay a company \$32,653 a year for three years to educate and train staff and students.

Both districts also called in law enforcement.

Districts throughout the metro area said they routinely review and update security systems to try to thwart cybercrime. They pay millions of dollars to secure networks, upgrade firewalls and purchase anti-virus protections.

For example: Gwinnett County Public Schools will spend nearly \$1 million over a three-year contract for software to prevent attacks that aim to disrupt legitimate access to the system. The state's largest district also spent roughly \$2.8 million this year on other security measures, including encryption tools, as it implemented a data policy plan over the past 18 months.

After the phishing attacks, both Fulton and Atlanta schools limited access to payroll systems. They also are adding authentication steps needed to log in — such as requiring users to retrieve codes sent to their cellphones.

Gwinnett also plans to add that feature, superintendent J. Alvin Wilbanks said. And instead of allowing schools to manage their own websites, the district is centralizing that work.

A big part of the security effort is focused on education. Wilbanks said he's training himself to look closely before opening emails.

"I don't know that I did that six months ago. I didn't have to worry about it too much six months ago," he said. "One person being derelict can cause some real issues."

Local districts are laying traps for employees by sending out managed phishing emails to see if they click on a link or provide sensitive information.

In Fulton schools, the emails are made to look as real as possible by including school images and official-looking salutations. Employees who fall for the ruse are enrolled in a training session, said Derrick Johnson, director of information technology and security.

DeKalb's watchful computer experts will shut down access to its network, including email, in a particular region if there's a high volume of suspicious traffic coming from a certain country.

Privacy and security advocates are pushing for stricter reporting requirements for school districts and vendors.

The federal education department encourages but does not require school districts to report data breaches. States take a patchwork approach to notification mandates, though more attention has been paid to the topic recently.

In Georgia, school districts are to notify residents whose unencrypted personal information was acquired without authorization, but districts don't have to report incidents to the state education department.

A privacy act that became law in 2016 requires notification by the Georgia Department of Education if student data that it collects is breached. The department informs specific members of its administration as well as the superintendent of the affected school district and the attorney general.

This month, the Missouri state auditor backed a bill to require schools to alert parents of data breaches. The announcement highlighted the market for stolen children’s identities, thefts that might go undetected for years because few people monitor kids’ credit reports.

“The way the laws are written, the ways that they are actually working on the ground, it’s not consistent. It’s very muddy. We really need federal guidance on this so everyone is playing by the same rules,” said Rachael Stickland, a Colorado mother and co-chairman of the Parent Coalition for Student Privacy.

FBI investigators said there’s nothing particularly unique about school districts as a target for cybercriminals. Hackers look for vulnerabilities, said Michael F.D. Anaya, a supervisory special agent on a cyber squad in the Atlanta field office.

Some in the education field fear school systems are susceptible to online threats because many don’t have the money or dedicated security experts to fight back.

In extreme cases, hackers have terrorized communities, leading to temporary school closures.

<b>HEADLINE</b>	<b>12/28 Elections remain unprotected?</b>
<b>SOURCE</b>	<a href="https://www.theatlantic.com/international/archive/2017/12/russia-disinformation-election-trump-putin-hack-cyber-europe/549260/">https://www.theatlantic.com/international/archive/2017/12/russia-disinformation-election-trump-putin-hack-cyber-europe/549260/</a>
<b>GIST</b>	<p>Two weeks before the inauguration of President Donald Trump, the U.S. intelligence community released a declassified version of its report on Russia’s interference in the 2016 election. It detailed the activities of a network of hackers who infiltrated voting systems and stole documents from the Democratic National Committee and Hillary Clinton’s presidential campaign. It also issued a stark warning: “Moscow will apply lessons learned from its Putin-ordered campaign aimed at the U.S. presidential election to future influence efforts worldwide, including against U.S. allies and their election processes.” Since then, current and former officials, including former Pentagon official Michael Vickers and former CIA deputy director Michael Morell have said that the Russians will interfere in U.S. elections again, in potentially new and sophisticated ways.</p> <p>How disinformation will be deployed in 2018 and beyond is unclear. What is clear, however, is that the Kremlin believes its efforts to sow chaos in the American political process, which it has continued to hone in Europe, have worked and are poised for a return.</p> <p>So far, Washington’s response to all this has been muted. Facing a criminal probe into possible ties between his campaign and the Kremlin, Trump has tried to discredit the case that Russian election interference poses an ongoing national-security risk. Earlier this month, The Washington Post reported that the president has held no cabinet-level meetings on Russian interference. And while other parts of the U.S. government have taken a strong line against Moscow, continuing to support Kiev and codifying sanctions against Moscow for its intervention in Ukraine, the White House has explored ways to undo those sanctions. There is little to deter the Kremlin from deploying its arsenal of cyber and psychological warfare to wage another campaign in the United States, setting the stage for a protracted, ever-evolving conflict just as another election approaches.</p> <p>Russian and American officials have discussed how to stabilize the situation. According to BuzzFeed News, Moscow has floated proposals to normalize relations and impose a mutual ban on foreign political interference. But the deals were shot down by U.S. officials, reportedly over Washington’s long-growing mistrust of Moscow. Following decades of failed rapprochement between the United States and Russia, relations between them hit a new low after Russia’s annexation of Crimea and outbreak of war in Ukraine in 2014. Things deteriorated further with Russia’s intervention in Syria and 2016 election meddling. “It’s highly unlikely that you’ll get a breakthrough in relations and even if you did, I wouldn’t assume that interference would stop,” Angela Stent, a former U.S. national intelligence officer on Russia and a professor at Georgetown University, told me. “Right now, the only real answer is better defenses.”</p>

## What Putin Really Wants

Devising those defenses is no simple task. Fact-checking measures adopted by major tech and social-media companies are unlikely to stop Russia from seeking out new vulnerabilities in Western democracies. Despite the fact that the United States possesses what experts call the most advanced cyber capabilities in the world, former senior officials have said that the country was ill-prepared for Russia's election meddling. Political hesitancy from the White House, they say, will prevent the implementation of necessary measures. Michael Hayden, the former director of the CIA and the NSA, said in December that preparation for another attack would be impossible without "a coordinated response" across all levels of government, especially the White House.

Michael Sulmeyer, a former senior cyber policy official in the U.S. Defense Department, told me that the 2018 midterm election will present the Kremlin with an opportunity to assess how or whether the United States has stiffened its defenses. Russia "may not need to become more sophisticated" in order to intervene again, given the relatively simple techniques (like a phishing email) it has already used. Aggressive ad hoc attacks, from targeted hacks to diverse disinformation campaigns, formed the core of Russian intervention efforts. "They were able to push on so many different unlocked doors at the same time in order to achieve their goal," Sulmeyer said.

Andrei Soldatov, a Russian journalist and expert on the Kremlin's cybertools, told me that Russia's emboldened leaders could expand their ambitions. "My biggest concern is that in the near future we're going to get a combination of attacks," Soldatov said, "say, an attack on critical infrastructure combined with a massive disinformation campaign, aimed to define the public's perception of the attack."

While such an attack would mark a major escalation for Russia, it would not be unprecedented. Attacks on at least a dozen electric facilities in America—including one nuclear plant—have been traced back to a Russian-linked group. Russia is also thought to be behind an increasing number of cyberattacks against private corporations and government agencies in Ukraine. Similarly, Moscow waged a massive disinformation and propaganda campaign alongside its annexation of Crimea in 2014.

None of these attacks, however, constitute a definitive Russian disinformation playbook. Instead, they suggest an opportunist, ever-changing array of weapons. "This is a new generation of warfare that is continuous and ongoing," Elina Lange-Ionatamishvili, a senior expert at the NATO Strategic Communications Centre of Excellence in Riga, told me. "The goal is to confuse, distract, and blur the lines between war and peace."

In recent years, Kremlin-linked cyber and disinformation campaigns of varying ambition have hit several European countries. In Germany, Russian state news spread a fake story about the rape of an underage girl by migrants during the height of Europe's refugee crisis in 2016 that led to dozens of protests across the country. Similarly, Russian-backed broadcasters targeted Germany's Russian emigrant community allegedly to bolster support for the country's right-wing Alternative for Germany party in its bid to enter parliament for the first time. In France, Russian-linked hackers were believed to have stolen and leaked emails from French President Emmanuel Macron's campaign. Moscow also recently launched a French version of RT, the public broadcaster formerly known as Russia Today. Spanish investigators found that both private and state-led Russian-based groups disseminated information on social media to try to sway public opinion ahead of Catalonia's independence referendum in October.

Many experts said that such campaigns are attempts to discern what sort of tactics can work in different countries. But they also said that none of the attacks have had the same impact as interference around the U.S. election. "Disinformation only really works if you have other problems," Harvard's Jed Willard, who has consulted the Finnish and Swedish governments on how to counter disinformation, told me. Through their Facebook groups, ads, and other targeted social-media posts centered around race relations, immigration, and income equality, the Russian campaigns reflected an uncanny understanding of America's deepest political and social fault lines, in an effort to feed the public's already declining trust in government institutions and the media. Surveys have also shown that false election stories from hyper-

partisan blogs and news sites outperformed real stories, and that most Americans tended to believe them. “The battlefield that we’re playing on here is the human mind,” Willard said, “and the human mind is not built to have an instinctive appreciation for truth.”

The Baltic countries were an early frontline in Russia’s new information war against the West. In 2007, Estonia suffered a series of debilitating cyberattacks that took down critical pieces of the government, banking, and media infrastructure in what is regarded as the Kremlin’s first major use of its 21st-century war capabilities. Similarly, neighboring Finland and Sweden have been hit with fake stories about the war in Ukraine, the abuse of ethnic Russians, and threats from the Kremlin over pursuing NATO membership. “We always need to be learning from each other,” Linas Linkevicius, Lithuania’s foreign minister, told me. “The shift comes from experience.”

In response, regional governments are developing defensive countermeasures. That includes temporary solutions like exposing propaganda and disinformation and raising awareness among the public and policymakers about their origins, along with longer-term initiatives, like investing in media-literacy education to help people distinguish fake stories from real ones. In October, Germany passed a law to combat the spread of hate speech and fake news on the internet. The following month, the European Union allocated one million euros toward its special anti-disinformation unit. “It seems that the Kremlin feeds on being demonized,” Maria Belovas, the director of communications for the Estonian foreign ministry, told me. That’s why, she said, investing in “a population that can recognize what a fake story is and [is able] to understand the wider context of why it is taking place” is a smart step.

But such countermeasures are unlikely to change the core geopolitical dynamics shaping the Kremlin’s behavior. “The problem is that in Europe we don’t have enough political will to respond effectively,” Jakub Janda, deputy director of the Prague-based think tank European Values. Janda, who has advised the Czech government on dealing with Russia, argued that without tougher and more targeted sanctions against Russian leadership, the Kremlin has “no reason to stop” interfering in Europe or elsewhere.

Looking ahead to America’s 2018 midterm elections, state and federal lawmakers face a rapidly closing window to better secure their voting systems. U.S. intelligence officials found that Russian hackers targeted 21 states during the 2016 election, although they did not interfere with the voting machinery itself. While there is no central U.S. electronic database to hack and election systems vary from state to state, the vulnerabilities still exist: At a cybersecurity conference this summer, 30 voting machines of various types were hacked by attendees; those types of machines are in use across the United States.

Still, some progress has been made. Virginia phased out the more vulnerable paperless touchscreen voting machines prior to its gubernatorial race in November. Lawmakers are also scrambling to push a bipartisan bill through Congress that would improve and modernize the nation’s voting machines. But with polls set to open in Texas and Illinois in nearly three months for the country’s first 2018 primaries, time is running out.

“On the security side, there are some improvements that can happen without the [Trump] administration,” Sulmeyer, the former cyber official, said. “But without a greater counterweight or cost for Russia, none of this is going to stop.”

<b>HEADLINE</b>	<b>12/28 Attacks hit Colorado medical group</b>
<b>SOURCE</b>	<a href="http://www.healthcareitnews.com/news/colorado-medical-group-hit-two-cyberattacks-single-week">http://www.healthcareitnews.com/news/colorado-medical-group-hit-two-cyberattacks-single-week</a>
<b>GIST</b>	<p>Hackers hit Colorado-based Longs Peak Family Practice with ransomware on Nov. 5 and once again with a second cyberattack on Nov. 10.</p> <p>The <u>Longmont provider discovered</u> the first “suspicious activity” on its network and determined a hacker was in the system. After launching an investigation, its team was unable to secure the network before the hacker executed malicious ransomware code onto the system.</p>

Officials said certain files were encrypted by the virus, but they were able to rebuild and restore system files from a separate, secure backup.

Then the investigation found a second hack into the network within a week -- separate from the ransomware incident. Investigators promptly hired a forensic computer firm to help with the investigation and restoration, which concluded on Dec. 5.

Investigators found unauthorized access into its system on three separate occasions.

“We didn’t find evidence of any patient files being opened on the computers,” officials said in a statement. “Because some of the software installed by the hackers could have been used to download computer files and some files were encrypted, we can’t be sure health information wasn’t compromised.”

The potentially compromised files contained patient identification numbers, Social Security numbers, dates of birth, addresses, phone numbers, email addresses, insurance information, driver’s licenses, dates of services, clinical data and copies of provider notes. No financial data was contained in the files.

<b>HEADLINE</b>	<b>12/28 Laws on data hacks, companies murky</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2017/dec/28/laws-regarding-data-hacks-companies-remain-murky/">https://www.washingtontimes.com/news/2017/dec/28/laws-regarding-data-hacks-companies-remain-murky/</a>
<b>GIST</b>	<p>Data hacks are happening at an alarming rate to some of the world’s largest companies, but consumers whose personal information is being stolen are struggling to hold those companies accountable.</p> <p>The problem, legal analysts say, is victims have a rough time connecting any one hack to a problem with their own credit or finances — without that direct link, judges have been tossing efforts to get companies to do more than provide credit monitoring.</p> <p>“The ordinary consumer really has very little recourse,” said Paul Rosenzweig, a law professor at George Washington University. “I would advise the ordinary consumer to seek changes in the law.”</p> <p>With hacks expected to grow in number and severity, it’s an issue voters, lawmakers and businesses are likely to confront. Among the questions legal analysts are debating is what constitutes negligence on a company’s part, how far liability extends and what sorts of incentives can be put in place to make sure companies are willing to report hacks.</p> <p>After Equifax suffered its breach earlier this year affecting more than 143 million people, it waited more than 40 days to notify customers.</p> <p>Uber, meanwhile, waited more than a year after its hack of information on roughly 57 million customers before it alerted them to the theft.</p> <p>The company also paid its hackers \$100,000 to destroy the data, which has sparked several investigations into the transportation platform.</p> <p>Those breaches set off a round of bills introduced in Congress trying to get at the problem.</p> <p>Mr. Rosenzweig said laws could require companies pay liquidated damages, so instead of customers proving exact cause and effect of suffering economic loss after a hack, they could collect a set amount of money from the company breached such as \$1,000.</p> <p>“Until companies are required to be liable for the harms they cause directly and indirectly from their lack of cyber security of their systems, we are going to continue to systematically underinvest in cyber security</p>

as a country — that’s true of Uber,” he said.

One bill offered by Sen. Bill Nelson, Florida Democrat, would require companies to notify customers of an attack within 30 days, and if anyone concealed the hack, he or she would face up to five years in prison.

Sen. Patrick Leahy, Vermont Democrat, also introduced a bill requiring notification standards and safeguard practices, mandating companies take preventative steps to avoid cyber breaches.

Hacks go beyond the private sector.

The IRS in 2015 saw hackers access financial transcripts of tens of thousands of taxpayers. The federal Office of Personnel Management also revealed in 2015 that it had suffered a devastating breach with the most sensitive information from 22 million personnel files stolen.

Labor unions for federal employees sued the OPM, arguing the agency had ignored repeated warnings to update its systems. A federal judge earlier this year ruled that while the OPM behavior was “troubling,” the federal employees weren’t able to show they’d actually faced a financial loss due to the government’s actions.

Peter Swire, a law professor at Georgia Institute of Technology, said banks have been more successful than individuals in collecting damages after cyber breaches. Banks are able to show how much they’ve had to pay out to cover fraudulent purchases.

After Target’s 2013 data breach, the retailer struck a deal with banks and credit unions, paying them \$40 million to settle fraud claims from 40 million credit card numbers that were hacked.

“The banks have actually done the best,” said Mr. Swire.

<b>HEADLINE</b>	<b>12/28 Cyberattack disrupts NY state hospital</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/cyberattack-forces-new-york-state-hospital-to-run-on-downtime-procedures/article/733482/">https://www.scmagazine.com/cyberattack-forces-new-york-state-hospital-to-run-on-downtime-procedures/article/733482/</a>
<b>GIST</b>	A cyberattack disrupted computer systems at Jones Memorial Hospital (JMH) in Wellsville, N.Y. on Thursday, the Buffalo-area health care facility has announced on its website.

	<p>While the hospital did not state the nature of the incident, the circumstances sound similar to previous ransomware attacks against health care providers. According to the hospital, patient financial or medical information did not appear to be compromised, but a “limited number of our information services” were rendered inoperable.</p> <p>In response, the hospital enacted computer downtime procedures, including manually entering patients' information into their medical charts. “We are asking patients using JMH services or clinics to bring their complete medications list and any available medical history with them to any visits,” the hospital noted.</p> <p>JMH said its IT staffer was working with the University of Rochester, Noyes Health and St. James Mercy Hospital to restore its systems.</p>

<b>HEADLINE</b>	<b>12/28 NJ State Police paid \$850K on stingrays</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/850000-spent-on-harris-corp-stingrays-by-new-jersey-state-police/article/733485/">https://www.scmagazine.com/850000-spent-on-harris-corp-stingrays-by-new-jersey-state-police/article/733485/</a>
<b>GIST</b>	<p>Information obtained via right-to-know request revealed The New Jersey State Police spent at least \$850,000 on stingray devices from Harris Corp.</p> <p>Authorities didn't respond to NBC10's request to discuss the use of the technology described in more than 100 pages of invoices and other heavily redacted documents detailing the devices purchased. Jeanne LoCicero, deputy legal director ACLU of New Jersey, asked for the same documents that NBC10 sought and received the same response from the department upon further inquiry.</p> <p>"The response to our OPRA request is really disappointing because it shed virtually no information on how Stingray technology is being used and New Jerseyans deserve to know," LoCicero said. "This is really invasive and sweeping search tools that were developed for the military and now they're being used in New Jersey and public needs to know more."</p> <p>New Jersey State Police department's lack of transparency on the device is not uncommon from what has been seen with other law enforcement agencies at both the local and federal level when similar requests have been made.</p>

<b>HEADLINE</b>	<b>12/28 Botnet launches massive holiday campaign</b>
-----------------	---

<b>SOURCE</b>	<a href="https://www.scmagazine.com/necurs-botnet-launched-massive-holiday-campaign/article/733650/">https://www.scmagazine.com/necurs-botnet-launched-massive-holiday-campaign/article/733650/</a>
<b>GIST</b>	<p>The Necurs botnet continued to launch massive global ransomware attacks through the Holiday Season with researchers stopping as many as 47 million emails per day.</p> <p>Threat actors behind the attacks continue to distribute Lock and GlobeImposter ransomware preferring to use either a malicious .vbs (visual basic script) or .js (javascript) file located inside a .7z (seven-zip archive) to pull down the ransomware payload, according to a Dec. 26 blog post.</p> <p>The seven-zip archive keeps file sizes small to evade detection from basic email filters that don't scan inside archives. Between Dec. 19 and Dec. 22 AppRiver researchers spotted a large influx in attacks that at its peak, blocked a maximum sustained traffic of 5,704,052 malicious emails sent by the for-rent botnet.</p> <p>On Dec. 19, all of the 45,976,814 malicious emails stopped were .7z archives that contained malicious .vbs and on the next day, of the 47,309,380 messages stopped, 32,730,828 were the .vbs file, and the remaining 14,578,552 were javascript files.</p> <p>“On Dec. 21 and 22, the traffic switched back over to the .js files and began to taper off,” researchers said. “We saw 36,290,981 and 29,602,971 messages blocked respectively, for those two days, before the botnet went quiet from Dec. 23-25. Today (Dec. 26), Necurs re-awoke from its slumber for a couple hours then went quiet again.”</p> <p>AppRiver researcher David Pickett hypothesizes the threat actors may have been testing or monitoring the rate of infections before realizing many of their potential targets were on vacation.</p> <p>Last month, Necurs pushed out a total of 12 million malicious emails in one morning helping move it from tenth to eight place for the month's Most Wanted Malware list.</p>

<b>HEADLINE</b>	<b>12/27 CEO cryptocurrency exchange kidnapped</b>
<b>SOURCE</b>	<a href="https://thehackernews.com/2017/12/crypto-exchange-kidnap.html">https://thehackernews.com/2017/12/crypto-exchange-kidnap.html</a>
<b>GIST</b>	Pavel Lerner, a prominent Russian blockchain expert and known managing director of one of the major

crypto-exchanges EXMO, has allegedly been kidnapped by "unknown" criminals in the Ukrainian capital of Kiev.

According to Ukraine-based web publication Strana, Lerner, 40-year-old citizen of Russia, was kidnapped on December 26 when he was leaving his office in the center of town (located on the Stepan Bandera Avenue).

Unknown kidnapers in dark clothes and balaclavas dragged Lerner in their black Mercedes-Benz Vito brand (state number AA 2063 MT) car and drove away in an unknown direction.

The information comes from an anonymous source in Ukrainian law enforcement agencies, though multiple investigations are currently underway to find out why and by whom Lerner was kidnapped.

Lerner is a recognized IT specialist in Ukraine who led a number of startups related to blockchain technology development and mining operations.

Lerner is also the managing director of EXMO, a major UK-based cryptocurrency exchange founded in 2013 and well-known with Russians for accepting ruble payments.

Law enforcers in Kiev have begun an investigation and are currently conducting search operation, working out all possible leads in the case which is described as the kidnapping.

<b>HEADLINE</b>	<b>12/28 Apple apologizes slowing older iPhones</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Technology/wireStory/apple-slowing-iphones-cuts-battery-price-50-52034050?">http://abcnews.go.com/Technology/wireStory/apple-slowing-iphones-cuts-battery-price-50-52034050?</a>
<b>GIST</b>	<p>Apple apologized for secretly slowing down older iPhones, a move it said was necessary to avoid unexpected shutdowns related to battery fatigue.</p> <p>Many customers had interpreted the move as a way to for Apple to juice demand for newer iPhone models, their suspicions fueled by the fact that the company didn't initially disclose the slowdowns or its reasons for them.</p> <p>Apple also said it will cut the price of a battery replacement by \$50 to \$29 through next year. New batteries had previously cost \$79 for those who didn't purchase the Apple Care maintenance plan.</p> <p>"We apologize," the company said on its website . "We have never — and would never — do anything to intentionally shorten the life of any Apple product, or degrade the user experience to drive customer upgrades."</p> <p>The replacement plan begins in late January for anyone with an iPhone 6 or later that requires a new battery.</p> <p>Apple said it will also issue an update to its operating system early next year to give users a better</p>

	<p>understanding of the health of their battery, so they can see if its condition is affecting performance.</p> <p>Hostile customer reaction was swift after a report this month uncovered the intentional slowdown in speed tests. Only then did Apple acknowledge that the slowdown was due to a fix it rolled out last year. Shares dropped 2.5 percent Tuesday — also dinged by analysts predicting lower-than-expected demand for the iPhone X — and only partially recovered by Thursday.</p> <p>At least five groups seeking class action status, involving consumers in Texas, Illinois, California and New York, have also sued the company in the wake of the slowdown revelation.</p>

## Terror Conditions

[Top of page](#)

<b>HEADLINE</b>	<b>12/28 Experts: terror attacks likely to rise</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2017/12/28/terror-isis-and-al-qaeda-likely-to-carry-out-more-attacks-in-2018.html">https://www.cnn.com/2017/12/28/terror-isis-and-al-qaeda-likely-to-carry-out-more-attacks-in-2018.html</a>
<b>GIST</b>	<p>The "caliphate" may be in ruins, but that doesn't mean ISIS is gone forever.</p> <p>Terror attacks are likely to increase in 2018, as the destruction of the Islamic State's physical stronghold in Iraq and Syria will strengthen its will to strike out abroad, experts say.</p> <p>"ISIS will want to show that they are still in the fight, and their followers remain as fanatical as ever," said Lewis-Sage Passant, a former British Army intelligence officer and founder of travel security company HowSafeIsMyTrip. "The number of attacks globally will likely increase as the group switches focus from the war in the Middle East to international terrorism."</p> <p>Adam Deen, executive director of counter-extremism think tank Quilliam, makes a similar argument.</p> <p>"We're going to see without a doubt more attacks in the West," he told UK newspaper the Independent in October. Deen said ISIS is now more focused on revenge, and warned against the false sense of victory that many expressed after the death of Osama Bin Laden.</p> <p>Propaganda will continue online and elsewhere, despite the destruction of its main source in the former ISIS "capital" of Raqqa, Syria.</p> <p>"Threats in the West will persist in the form of people who are still inspired by the propaganda that has been disseminated by ISIS," Anthony Richards, an assistant professor in Terrorism Studies at the University of East London, told CNBC.</p> <p>"I think in the longer term, the defeat of ISIS and the propaganda defeat that goes with that will actually reduce the threat in the UK and Europe, but ... In the shorter term, we'll still see more terrorist attacks."</p> <p>Some foresee more frequent attacks, accompanied by a decrease in lethality, including a rising number of knife and vehicle attacks.</p> <p>"The loss of ISIS' central coordination and revenue-generating capabilities means that they will be less able to mount well-funded operations such as the Paris attacks," Sage-Passant said, "But they want to show that they are still in the fight."</p> <p>An estimated 25,000 foreign fighters from more than 100 countries left their homes to fight in Syria. A report by the Soufan Center in October put the current figure for returned fighters at 5,600 from 33 countries, and revealed that on average 20 to 30 percent of those from Europe are already back. In the U.K., Sweden and Denmark, a whopping 50 percent have returned. Almost 20,000 names have been shared with Interpol.</p>

For the U.S., the figure is far smaller: The Soufan Center reported 129 Americans made it to the battlefields of Syria or Iraq, and only seven of them have returned as of October. Seventy-seven out of 135 people charged with ISIS-linked terrorism offenses have been convicted as of August.

That presents a tremendous challenge for domestic authorities. However, many warn that blanket bans on movement or entry, such as U.S. President Donald Trump's travel ban on six majority-Muslim countries, aren't likely to effectively stem the threat.

"The underlying ideology that drives the violence of groups like ISIS is not a physical entity that can be stopped by territorial borders," Mubarak Ahmed, analyst at the Tony Blair Institute for Global Change, told CNBC.

Domestic networks and individuals are what matters, he argued — after all, ISIS attacks in Europe have been carried out almost exclusively by citizens or residents of those countries.

Even if the ISIS threat ultimately recedes, al-Qaeda is very capable of filling that void in terms of a major terrorist threat, warned Richards at the University of East London. "We shouldn't just be looking at ISIS. al-Qaeda, for example, is still very much in existence and could change its focus back to attacks on the West."

In recent months, Osama bin Laden's son Hamza has released a series of messages upping his calls for attacks on Westerners and Western interests, particularly following Trump's naming of Jerusalem as Israel's capital. The organization is likely to use the younger Bin Laden to spearhead a comeback as it sees opportunity in ISIS's military defeats.

"There can be no misunderstanding or complacency," Ahmed urged. "Al-Qaeda remains active and ideologically engaged in activities against the West. An over-concentration on ISIS, rather than jihadi terrorism as a whole, risks creating blind spots for the group to exploit."

MI5, the U.K.'s domestic counterintelligence agency, revealed in October that it was overseeing 500 live operations and had 20,000 people on its counterterrorism radar. Between January and October 2017, seven terror plots in the U.K. had been foiled.

The numbers paint a sobering picture for the year ahead, despite military victories in the Middle East, as governments grapple with how to tackle the evolving terror threat.

<b>HEADLINE</b>	<b>12/28 UK charges 2 in Christmas terror plot</b>
<b>SOURCE</b>	<a href="http://www.independent.co.uk/news/uk/crime/terrorist-attack-uk-christmas-men-charged-plot-a8132471.html">http://www.independent.co.uk/news/uk/crime/terrorist-attack-uk-christmas-men-charged-plot-a8132471.html</a>
<b>GIST</b>	<p>Two men have been charged with terrorism offences by police who had been investigating a suspected Christmas terror plot.</p> <p>Farhad Salah, 22, from Sheffield, and Andi Sami Star, 31, from Chesterfield, were among four men arrested in Derbyshire and South Yorkshire on 19 December.</p> <p>They have been charged with engaging in the preparation of an act of terrorism, West Yorkshire Police said.</p> <p>The pair are to appear by video-link before London's Westminster Magistrates' Court on Friday.</p> <p>West Yorkshire Police said a 36-year-old man from Burngreave in Sheffield remains in custody, while a 41-year-old from Meersbrook in Sheffield was released on Saturday.</p>

	<p>The police were originally given until Christmas Day to decide whether to charge the four men, but a court approved an extension of that deadline until 1 January.</p> <p>The arrests followed an investigation led by Counter Terrorism Policing North East, which was backed by Derbyshire Constabulary and South Yorkshire Police.</p> <p>During the arrests, an army bomb disposal unit carried out a controlled explosion to "safely dispose of material" found at one of the properties.</p>

<b>HEADLINE</b>	<b>12/28 Iraq quickly sends ISIS to the gallows</b>
<b>SOURCE</b>	<a href="https://www.stripes.com/news/middle-east/iraq-s-rapid-fire-trials-send-alleged-isis-members-to-the-gallows-1.504465">https://www.stripes.com/news/middle-east/iraq-s-rapid-fire-trials-send-alleged-isis-members-to-the-gallows-1.504465</a>
<b>GIST</b>	<p>BAGHDAD — The two Turkish men shuffled into the courtroom, their closely cropped hair, clean shaven faces and chubby waistlines hardly the look of fearsome fighters of the Islamic State.</p> <p>Appearing in court for the first time since being arrested in August on charges of belonging to that group, they professed their innocence, telling the judge they were simply plumbers who migrated to Iraq from Turkey looking for work.</p> <p>After an 18-minute trial, they were sentenced to death by hanging.</p> <p>The men are among hundreds of foreigners detained in Iraq on terrorism charges after the toppling of the Islamic State's self-declared caliphate. The defendants - men, women and children hailing from Asia, Europe and Africa - are coursing their way through Iraq's criminal justice system, receiving harsh sentences in rapid-fire trials.</p> <p>The trials and capital sentences are presenting foreign governments with a moral and political dilemma. Do they object to the Iraqi trials and claim their citizens, who could threaten their home countries and radicalize others if repatriated? Or should Iraqi courts be allowed to determine the defendants' fate in trials that human rights groups and the United Nations say are deeply flawed?</p> <p>The issue has taken on a new urgency as major combat against the Islamic State ended this month. Iraq has fast-tracked executions under the year-old orders of Prime Minister Haider al-Abadi, aiming to "give comfort to the families" of Islamic State's victims.</p> <p>Iraq's justice ministry has disclosed 194 terrorism-related executions since 2016, including at least 27 foreigners from other Arab countries, according to a review of ministry news releases.</p> <p>Last week, the ministry said it had executed another 38 prisoners on terrorism-related charges, but it did not specify their nationalities, prompting a rebuke by the United Nations human rights office. At least one of those executed had Swedish citizenship, researchers into human rights and terrorism said.</p> <p>Up to 6,000 more are on death row and their nationalities have not been disclosed, according to the United Nations. Many more suspected militants are in custody, including at least four Europeans.</p> <p>European countries have given little indication that they want to claim their citizens.</p> <p>In a statement, Turkey's foreign ministry said it is aware of their citizens being detained in Iraq for allegedly joining the Islamic State. "We are in touch with the Iraqi authorities in terms of finding out their whereabouts and ensuring their repatriation," the statement said.</p> <p>The United Nations said last month that Iraq does not have jurisdiction to try Islamic State atrocities and</p>

that Iraqi investigators, prosecutors and judges do not have the capability to ensure due process. It urged Iraq to turn to the International Criminal Court for such cases, especially ones dealing with the attempted genocide of minority groups like the Yazidis whose reintegration into Iraqi society largely depends on the accurate prosecution of crimes committed against them.

Iraq's massive dragnet is ensnaring scores of innocent people, while rushed investigations and trials are failing to distinguish between Iraqis who embraced the Islamic State and others who cooperated with the group out of fear or coercion, human rights groups and the United Nations said.

The lack of due process could imperil national reconciliation by enshrining a cycle of revenge in Iraq's courts, these groups said. This dynamic raises the possibility of continued sectarian conflict between Shiites that dominate the government and legal system and Sunnis who account for nearly all those accused of terrorism.

But Abdulsattar Bayraqdar, a senior Iraqi federal judge, bristled at the criticism, saying his country's judges and lawyers have sacrificed their lives to guarantee fair trials and hold terrorists accountable. He said since 2003, at least 60 judges and more than 160 investigators and court employees have been killed in terrorist attacks stemming from their work.

As for foreigners affiliated with the Islamic State, Bayraqdar said crimes committed by extremists on Iraq's soil must be prosecuted in Iraq, and it is under no legal obligation to hand over suspects or convicts to other countries.

Iraq's anti-terrorism law gives judges wide berth in deciding cases. Prosecutors must show that a defendant joined or supported a terrorist group but are not required to prove a specific charge of murder.

In a report released earlier this month, Human Rights Watch said prosecutors and judges were doing little to distinguish between fighters and others who did menial jobs for the Islamic State, like cooks.

But Bayraqdar, the senior judge, defended the legal process, saying every member of the militant group contributed to a cohesive unit that terrorized Iraqi citizens. He added that a terrorism trial is not a simple formality. In November, he said, trials resulted in 449 convictions and 1,490 acquittals.

<b>HEADLINE</b>	<b>12/29 Pakistan warns US on 'unilateral' moves</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/pakistan-warns-trump-against-unilateral-moves-defeat-taliban-al-qaeda-country-763685">http://www.newsweek.com/pakistan-warns-trump-against-unilateral-moves-defeat-taliban-al-qaeda-country-763685</a>
<b>GIST</b>	<p>Pakistan has warned the United States and President Donald Trump against taking unilateral military action in the country against extremist groups, after warnings from top officials in the president's administration and the American leader himself.</p> <p>Vice President Mike Pence said in a speech during a trip to Afghanistan earlier this month that Trump had issued a warning to Pakistan and cautioned that there was much for the country to lose if it aided extremist groups in any way.</p> <p>"As the president said, so I say now: Pakistan has much to gain from partnering with the US, and Pakistan has much to lose by continuing to harbor criminals and terrorists," Pence said.</p> <p>The U.S.-Pakistan has been fraught since it came to light that former Al-Qaeda leader and mastermind of the 9/11 attacks Osama bin Laden was in hiding at a safe house in the Pakistani city of Abbottabad before the infamous U.S. special forces operation to kill him in 2011. But Islamabad rejected the accusation that it could have been aiding extremist groups and was not doing enough to help Washington.</p> <p>"We have sacrificed a lot. We have paid a huge price both in blood and treasure. We have done enough</p>

and we cannot do any more for anyone," Pakistani military spokesman Major-General Asif Ghafoor said Friday, according to Al-Jazeera.

"Had we not supported [the U.S.], Al-Qaeda would not have been defeated," he continued.

The country is battling an insurgency by the Pakistani Taliban, Al-Qaeda and a growing ISIS presence in the border regions with Afghanistan. The military has launched several major operations against these militant groups for several years.

ISIS has continued to gain ground in Afghanistan and Pakistan has made efforts to halt the militant group's spread to its territory. The jihadi group has created an affiliate for the Afghanistan-Pakistan border region known as Khorasan Province, a historical name for the region.

ISIS has conducted several attacks inside Pakistani territory, including suicide bombings against religious minorities the group considers to be heretical. The deadliest was the August 2016 suicide bombing that killed at least 70 people in the southwestern city of Quetta.

While it has been conducting operations against militant groups, the Trump administration has been eager to press Pakistan to do more. U.S. Secretary of State Rex Tillerson warned Islamabad in an opinion piece in the New York Times published on Wednesday.

"We are prepared to partner with Pakistan to defeat terrorist organizations seeking safe havens, but Pakistan must demonstrate its desire to partner with us," he wrote.

Despite the warnings, Trump praised Pakistan in October for working closely with U.S. authorities. "Starting to develop a much better relationship with Pakistan and its leaders. I want to thank them for their cooperation on many fronts," he wrote in a tweet.

<b>HEADLINE</b>	<b>12/28 'American' ISIS: carry out mass shootings</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/american-isis-fighter-tells-jihadis-use-us-gun-laws-carry-out-mass-shootings-761115">http://www.newsweek.com/american-isis-fighter-tells-jihadis-use-us-gun-laws-carry-out-mass-shootings-761115</a>
<b>GIST</b>	<p>The Islamic State militant group (ISIS) on Wednesday published a propaganda video that showed a one-legged fighter, purportedly American, ordering Muslims living in the United States to use the country's flexible gun laws to carry out mass-casualty attacks.</p> <p>In the release "A Message to the Crusading Trump," the bearded jihadi, identified as "Abu Salih al-Amriki," is shown in military khaki fatigues and with a prosthetic leg.</p> <p>"Take advantage of the fact that you can easily obtain a rifle or a pistol in America," the fighter says. "Spray the kuffar [infidels] with bullets so that their fear of the Muslims rises, and they continue to reveal their hatred towards Islam."</p> <p>He also called upon fellow disabled fighters to take up arms against the U.S. "Brothers with limbs or no limbs, I challenge you to a race toward gates of Jannah [paradise]," he says.</p> <p>Amriki then turns to President Donald Trump, calling him a "dog of Rome" and accusing him of entering "into the White House on the back of your crusader rhetoric, which the fake media has pressured you to tone down."</p> <p>"Your war against Islam has only made your homeland more vulnerable," the fighter continued in his message to Trump.</p> <p>Images of the video were published and shared by cyber-monitoring company Jihadoscope on Twitter.</p>

	<p>The Department of Homeland Security said it was “aware” of the online threats to American nationals.</p> <p>Individuals inspired by ISIS and its radical ideology have committed several attacks on U.S. soil in recent years, including a mass stabbing at a Minnesota mall that injured more than half a dozen people, a deadly shooting at an LGBT nightclub in Orlando, Florida, that killed at least 49 people and an attack by two gun-toting attackers in San Bernardino, California, that killed 14 people.</p> <p>Last week, the outgoing director of the National Counterterrorism Center warned that the U.S. remains “dangerously” vulnerable to mass-casualty attacks by extremists because of the easy access to weapons in the country.</p> <p>“We find ourselves in a more dangerous situation because our population of violent extremists has no difficulty gaining access to weapons that are quite lethal,” Nicholas Rasmussen said, according to The Washington Post. “I wish that weren’t so.”</p> <p>He appeared to criticize the policies of the Trump administration in creating a “mutual suspicion” with Muslims in the U.S. that had made counterterrorism efforts “more difficult” to be effective.</p> <p>“If you’re increasing the amount of suspicion and distress on these communities, it places more challenges in our way,” he told CNN.</p>

<b>HEADLINE</b>	<b>12/27 ISIS by the numbers in 2017</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/world/articles/2017-12-27/isis-by-the-numbers-in-2017">https://www.usnews.com/news/world/articles/2017-12-27/isis-by-the-numbers-in-2017</a>
<b>GIST</b>	<p>President Donald Trump and his top advisers have said in recent weeks that the Islamic State group in Iraq and Syria has been all but defeated, following through on a campaign promise that he would significantly escalate the U.S.-led war against the extremist group.</p> <p>"Thanks to the leadership of this commander in chief and the courage of our armed forces, ISIS is on the run, their capital has fallen, and their so-called caliphate has crumbled across Syria and Iraq," Vice President Mike Pence said Dec. 20 during a ceremony marking the passage of a tax reform bill through Congress, using an alternative name for the extremist group.</p> <p>The war against the terror network, however, is far from over, even in Iraq and Syria, where it first declared its so-called caliphate and from where its fighters and leaders are now spreading to other faraway regions of the globe, from Southeast Asia to Africa to not far from U.S. shores.</p> <p>Brett McGurk, the special envoy to the coalition fighting the Islamic State group in Iraq and Syria, told reporters at the State Department just before Christmas that the U.S. had made significant progress against the extremist network in 2017, but there is still work to do.</p> <p>"Nobody who works on these problems would tell you we're popping champagne corks or anything," said McGurk, who began his position during the Obama administration and has continued under Trump. "This is not over, there is a long way to go."</p> <p>Defeating the Islamic State group in Syria will require months more of fighting, McGurk says.</p> <p>As defense and intelligence officials continue to find and kill members of the extremist network and combat its success in remotely attracting followers worldwide, here are some numbers on where the Islamic State group still operates and maintains power.</p> <p><b>Iraq and Syria</b></p>

For the campaign to defeat the Islamic State group Trump inherited a U.S.-led coalition that had already begun clearing out Mosul in Iraq and was beginning to surround Raqqa in Syria – both key cities in the extremist group's messaging.

In January, about 35,000 Islamic State group fighters were in Iraq and Syria controlling more than 17,000 square miles – an area roughly the size of Pennsylvania. Now, between 1,000 and 3,000 extremists are occupying less than 2,000 square miles, according to officials at the U.S. military headquarters in Baghdad overseeing the war.

Most of the remaining fighters are in the rural desert areas around Dayr Az Zawr in Syria to the southeast of Raqqa, and Iraq's Anbar province, officials say.

Almost 8 million people lived under Islamic State group rule during its height. Five million have been liberated in the past year with 2.7 million Iraqis returning to their homes, McGurk said Thursday.

The air coalition, comprised largely of U.S. bombers, fighter jets, helicopters and drones and supported by artillery on the ground, conducted 11,400 airstrikes since Jan. 1.

That conflict has not been without its costs. The Associated Press reported this week that as many as 11,000 civilians died in the campaign to retake Mosul, roughly 10 times higher than previous assessments.

## **Yemen**

The Islamic State group presence in the war-torn Arabian Peninsula nation, while small, has doubled in size this year, part of a larger trend of fighters and leaders fleeing the onslaught in Iraq and Syria.

"As ISIS is getting handed a defeat in other areas, they tend to try to push into areas of ungoverned spaces," says Army Lt. Col. Earl Brown, a spokesman for U.S. Central Command. "Those areas in the Arabian Peninsula, most notably in Yemen, have been some of those spots."

There are between 300 and 500 Islamic State group fighters in the area, mostly in Yemen but not limited to there. They're exploiting areas that are traditionally ungoverned or where governance has collapsed as a result of the ongoing war between Houthi rebels backed by Iran and forces loyal to the government currently in exile in Saudi Arabia.

The Islamic State group has also successfully recruited fighters formally loyal to al-Qaida in the Arabian Peninsula who have grown disaffected with a group that, while still among the most dangerous in the world, has suffered intense losses in leadership amid an ongoing U.S.-led commando and air campaign. Three AQAP leaders were killed in airstrikes on Nov. 2 and Nov. 20, according to Central Command, which oversees operations in the region.

Defense officials say the quiet U.S. mission to root out Islamic State group and al-Qaida fighters in Yemen exists in coordination with the exiled government.

## **Africa**

The death of four American soldiers on a special operations patrol in Niger in October drew widespread attention to the intensifying covert war against extremists throughout the African continent, almost four times larger than the continental U.S.

The Islamic State group first expand its presence into Africa in Somalia in 2015 and conducted its first suicide attack in Bosasso in May. U.S. Africa Command estimates there are fewer than 250 fighters there, though they are able to conduct small-scale operations in the northern reaches of the country. A shadowy American targeting cell exists in Somalia to help coordinate counterterrorism operations outside of the capital, Mogadishu.

Islamic State group operatives entered the continent en masse in 2016 in Libya, where as many as 8,000 fought to establish a foothold in the coastal city of Sirte to serve as a lifeboat amid steady losses in Iraq and Syria. A U.S.-led mission of airstrikes and special operations forces helped win back the city earlier this year, but not without scattering some of those fighters to other corners of the fractionated and war-torn country.

Now roughly 500 Islamic State group fighters are in Libya, though that assessment fluctuates, officials with Africa Command say. The group's presence there continues to be a focus of U.S. attention as it still poses a threat in planning attacks against Europe and Western interests in North Africa, officials say.

In 2015, the Islamic State group scored a propaganda win when Boko Haram, the Nigerian hard-line extremist group, declared itself an affiliate branch. The group fractured in 2016 when some fighters split to join the Islamic State group instead of remaining loyal to their own leaders.

This new branch, dubbed ISIS-West Africa, poses a more significant threat than Boko Haram, Africa Command officials say, due to its increased capability to plan and launch attacks. It was responsible for the attack on the convoy in Niger in July that killed at least 70 people.

The Islamic State group continues to operate in the Greater Sahara region, largely at the border of Niger and Mali, though that comprises a relatively smaller number of troops.

### **The Pacific Rim**

Navy Adm. Harry Harris, chief of U.S. Pacific Command, said in October that it has witnessed terrorism and attacks inspired by the Islamic State group in Malaysia, Bangladesh and the Philippines.

"As we succeed in degrading ISIS in Iraq, Syria and Libya, radicalized, weaponized and displaced terrorists will seek new footholds in the Indo-Asia-Pacific," Harris said in a speech in Singapore at the time.

In 2016, the commander of the Islamic extremist group Abu Sayyaf based in the southern Philippine region of Mindanao, Isnilon Hapilon, was named the Islamic State group emir for Southeast Asia. Philippine forces, currently leading operations against the extremist network there, killed him in October during a campaign to retake the city of Marawi, though Harris said the leader's following represented an ongoing threat to the region.

"It's important to understand Hapilon's rise in 2016, when in just a matter of months he started uniting elements of several violent extremist organizations – building a coalition under the ISIS black flag," Harris said. "Today, Marawi is a wake-up call and a rallying cry for every nation in the Indo-Asia-Pacific. Foreign fighters are passing their ideology, resources and methods to local, home-grown, next-generation radicals. So we must stop ISIS at the front end and not at the back end when the threat can become even more dangerous."

When asked for specific numbers of ISIS fighters or operatives in the region, U.S. Pacific Command declined to comment.

"We do not comment on intelligence matters for security reasons," says Navy Cmdr. Dave Benham, a spokesman for the command.

### **The Caribbean**

Then-Marine Gen. John Kelly, when he was still commander of U.S. Southern Command, first observed in March 2015 that people from Caribbean countries like Suriname, Venezuela, Jamaica, and Trinidad and Tobago had traveled to Syria or Iraq to join the Islamic State group, where "they get good at killing and pick up some job skills," like working with explosives. As many as 100 had returned to their homelands, which were largely devoid of intelligence or law enforcement infrastructure to hunt them down on their

	<p>own.</p> <p>In January 2016, Kelly, now White House chief of staff, observed that the Islamic State group's presence in the region was on the rise at a time when the Islamic State group was encouraging its followers to stay away from Iraq and Syria and plot attacks at home instead.</p> <p>"It seems like the Islamic extremists and terrorists have shifted a lot of their message," Kelly told reporters at the time. "Why don't you just stay at home and do a San Bernardino or do Boston or do Fort Hood?"</p> <p>Southern Command did not immediately respond to requests for comment on the current status of the Islamic State group in the Caribbean. Reports persist, however, that local Muslims find inspiration in the Islamic State group and that it continues to target tourists in the region, prompting warnings from those governments.</p>

HEADLINE	<b>12/29 Turkey nabs ISIS suspects ahead NYE</b>
SOURCE	<a href="http://abcnews.go.com/International/wireStory/turkey-detains-29-suspected-militants-ahead-years-52039286?">http://abcnews.go.com/International/wireStory/turkey-detains-29-suspected-militants-ahead-years-52039286?</a>
GIST	<p>Turkish police detained 29 suspected Islamic State group militants in the capital, Ankara, on Friday, some of whom allegedly were preparing to carry out attacks during New Year's celebrations, the state-run news agency reported.</p> <p>Some 500 police officers took part in simultaneous raids to detain the suspects, many of them foreign nationals, Anadolu Agency reported. Police had warrants to detain 17 other suspects.</p> <p>Materials seized by police during the raids indicated that some of the suspects had staked out locations and made preparations for possible attacks on New Year's Eve, the report said.</p> <p>There was no immediate information on the foreigners' nationalities.</p> <p>Turkey has suffered a series of deadly attacks blamed on IS militants, including a New Year's attack at an Istanbul nightclub by a gunman that killed 39 people.</p> <p>The country is stepping up security measures ahead of this weekend's celebrations, including canceling</p>

	several large-scale New Year's Eve street parties in Istanbul. Turkey's police chief said 275,000 police officers would be on duty.
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>12/29 China Uighurs grapple w/extremism</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/ap-exclusive-chinas-uighurs-grapple-pull-extremism-52038551?">http://abcnews.go.com/International/wireStory/ap-exclusive-chinas-uighurs-grapple-pull-extremism-52038551?</a>
<b>GIST</b>	<p>As Uighurs flee a stifling Chinese security crackdown in droves, they often end up caught in a tug-of-war between militant Uighur members of Syria-based Islamic groups and moderate leaders of the Uighur diaspora who plead with them to reject calls of jihad.</p> <p>Extensive Associated Press interviews detail the daily battle some Uighur activists are fighting against the radicalization of their people, members of a Muslim ethnic minority who live in western China under heavy surveillance and the constant fear of arrest.</p> <p>The war in Syria has thrust this ethnic minority from China into the center of the global jihadi movement. Several thousand Uighur men, women and children are estimated to have crossed the border from Turkey to join the Turkistan Islamic Party (TIP), an ethnic Uighur militia allied with al-Qaida on the front lines of the fighting.</p> <p>"We are losing the deradicalization battle," said Seyit Tumturk, a moderate Uighur activist, said in a recent interview in Kayseri. "Why? Because we cannot convince our people that hope and human rights exists in the world."</p> <p>The spread of extremism has alarmed many exiled Uighur leaders, who condemn violence and say it will lead their people's ruin. But they face a young generation who see no future under one of the world's most powerful authoritarian governments and feel ignored by the rest of the world.</p> <p>The Uighurs are wrestling over age-old questions: Do we seek freedom with peace or violence? Is our path forward secular or Islamist? Who will help us face the might of the People's Republic of China?</p> <p>Even in the relative sanctuary of Turkey, Uighurs say they are isolated economically and engulfed by murky political currents.</p> <p>While Turkey has welcomed Uighur refugees, the bureaucracy churns against them after they arrive. Uighurs are considered stateless under Turkish law, unlike refugees from Syria or Iraq, and often unable to receive work permits, health insurance, or schooling for their children.</p> <p>Men work — if they're lucky — in local furniture factories and restaurants for about 1000 to 1,500 Turkish lira a month (roughly \$300 to \$440), far less than what a Turk would legally make and barely enough to survive.</p>

<b>HEADLINE</b>	<b>12/28 UN decries Saudi-led strikes in Yemen</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/saudi-led-airstrikes-yemen-kill-109-people-10-52026696?">http://abcnews.go.com/International/wireStory/saudi-led-airstrikes-yemen-kill-109-people-10-52026696?</a>
<b>GIST</b>	<p>The U.N. humanitarian coordinator for Yemen says Saudi-led airstrikes have killed 109 civilians over the past 10 days.</p> <p>Jamie McGoldrick said Thursday that those killed include at least 54 in airstrikes on a market in the western province of Taiz, and 14 people from the same family in an airstrike on a farm in the coastal Hodeida province.</p> <p>He says such incidents "prove complete disregard for human life that all parties, including the Saudi-led coalition, continue to show in this absurd war."</p> <p>The coalition, backing an internationally recognized government, has been at war with Iran-allied Shiite rebels, known as Houthis, since March 2015. The stalemated war has killed more than 10,000 people, displaced 3 million, damaged critical infrastructure and pushed the country to the brink of famine.</p>

<b>SOURCE</b>	<a href="https://www.msn.com/en-us/news/world/defected-north-korean-nuclear-scientist-commits-suicide-">https://www.msn.com/en-us/news/world/defected-north-korean-nuclear-scientist-commits-suicide-</a>

	<a href="#">after-being-forced-to-return/ar-BBHsowz?li=BBnb7Kz&amp;ocid=HPCDHP</a>
GIST	<p>A North Korean nuclear scientist who defected to China committed suicide after being forced to return back, Radio Free Asia reported Thursday. The defector was a researcher at the physics center in the State Academy of Sciences in Pyongyang, the report said.</p> <p>The scientist was identified as Hyun Cheoi Huh, though RFA clarified it was unclear whether that was his real name. The man reportedly took a leave of absence from his job at the academy before defecting.</p> <p>He was sent back to North Korea Nov. 17, RFA reported.</p> <p>“He killed himself only a few hours after he was placed in solitary confinement at the State Security Department in Sinuiju city,” a source told RFA, speaking on the condition of anonymity. “He died before he could be questioned about the reasons for his escape, and what his route had been.”</p> <p>The man took poison inside the security cell where he was set to be questioned. It remained unclear how he smuggled the poison inside.</p>

HEADLINE	<b>12/28 Showdown in Moscow looms</b>
SOURCE	<a href="https://www.washingtontimes.com/news/2017/dec/28/showdown-between-alexei-navalny-vladimir-putin-in-/">https://www.washingtontimes.com/news/2017/dec/28/showdown-between-alexei-navalny-vladimir-putin-in-/</a>
GIST	<p>The Kremlin has done everything in its power to control Russia’s upcoming presidential election in 2018.</p> <p>The main opposition candidate, anti-corruption crusader Alexei Navalny, has been recently banned by the election commission due to an embezzlement conviction that his supporters say was politically motivated. They argue that the charges were felony in nature precisely to prevent Mr. Navalny from running, per Russian election law.</p> <p>His offices have also been raided and he’s been detained multiple times for holding “illegal” rallies across Russia in different cities.</p> <p>Add to that a recent attack by sausage-throwing bandits in the airport upon returning to Moscow — in addition to having a green chemical liquid thrown in his face, which caused him to travel abroad to Spain for surgery on his left eye.</p> <p>And yet, Mr. Navalny keeps pushing.</p> <p>In his most recent affront to Moscow, upon being denied permission to compete against Russian President Vladimir Putin in March’s polls, Mr. Navalny has called for an election boycott.</p> <p>“I assure you, a huge amount of people will not go to this election, would actively boycott this election,” he said. “Going to the polls right now is to vote for lies and corruption ... We refuse to call the reappointment of Putin an election.”</p> <p>This did not sit well with the Kremlin. Now there are reports that a criminal investigation has been opened against Mr. Navalny for his boycott comments.</p> <p>To take things up another notch, the 41-year-old Moscow native also called for nationwide rallies in over 85 cities across the Russian Federation to protest what he calls an illegal election contest. This infuriated those in power in Russia.</p> <p>If there is one thing the Russian leadership despises, and fears, it is civil unrest. The “color revolutions” of recent decades in Ukraine and elsewhere, along with the “Arab Spring,” have shown Moscow in real time what can happen when a political movement spirals beyond control.</p>

Most likely, the theatrics coming out of the Russian side of the Syrian theater, the declarations that the Islamic State is defeated, and Russia is removing troops (although they also just announced a permanent presence in the Mediterranean and the air base at Khmeimim), are meant for the domestic population to hear just before the election.

The Russian people have seen their standards of living decline, and social services cut in favor of military spending over the last several years.

In short, the trappings exist right now for a good old-fashioned spate of civil disobedience.

The Kremlin knows this. They thought they had all the T's crossed and the I's dotted. Then along comes Mr. Navalny calling for massive demonstrations across Russia a mere few weeks before the nation goes to vote.

If Mr. Putin pushes back too hard against Mr. Navalny, he could be outed as too authoritarian and his carefully crafted PR campaign and image could be tarnished. If he goes to soft, and let's Mr. Navalny keep going, Russia could be in for some serious political unrest.

We have a showdown at the Moscow corral.

My bet is on Mr. Putin. I think he will shut Mr. Navalny down by any means necessary. There is simply too much on the line for the government he has built over the last few decades.

Mr. Putin is also counting on the Russian people, who are in no mood for a revolution, as they have seen how that can work out. The Bolsheviks destroyed Russia for a hundred years, with no idea what to put in its place.

<b>HEADLINE</b>	<b>12/28 Claim: sea level rise not climate change</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/855616/cliff-mass-sea-level-rise-climate-change/">http://mynorthwest.com/855616/cliff-mass-sea-level-rise-climate-change/</a>

<p><b>GIST</b></p>	<p>University of Washington Meteorologist Cliff Mass has run up against others warning about the effects of climate change. His most recent blog post will only continue that contention.</p> <p>To be clear, Mass firmly promotes that the climate is changing and that human influence is a primary cause. He doesn't agree on many points that others argue, however. For example, when many in Seattle said that climate change killed a tree, Mass was quick to point out that science doesn't back that assertion. When some people pinned summer weather on climate change, Mass said otherwise.</p> <p>In a recent blog post, Mass addresses sea level rise – another concern posed by climate change. He writes that the sea level rise measured in Seattle (with records going back to 1900) has been steady for more than 100 years – about 2.03 mm each year. But he points out:</p> <p>“The interesting thing is that the upward trend has been going on for a long time, well before the impacts of human emissions of greenhouse gases were significant. (The radiative impacts of increasingly CO2 became large in the 1970s and later). And rate of rise has been quite steady, with no hint of a recent acceleration. In fact, there has been minimal rise during the past 20 years.”</p> <p>Other communities, such as San Diego or Key West, have seen similar rises in sea level, but at different rates. This is because the water level is not the only factor at play. Mass points out that the land is not remaining at the same elevation. The ground is sinking in many regions. In the Olympic Mountains, Mass writes, the land is being pushed up. Measurements around the Olympics shows the sea level decreasing.</p> <p>Mass concludes that the sea level rise over the past 100 years is primarily due to the end of a small ice age (between 1500 and the 1800s). The meteorologist, however, is not doubting that the sea level will be impacted by human-influenced climate change in the years to come.</p> <p>“On the other hand, our climate models suggest an accelerated rise of sea level rise due to greenhouse gas warming during this century ... Extrapolating the current, steady upward trend implies about a .6 ft rise. If we include the impacts of greenhouse gas warming, there would be more. A National Academy of Sciences report did such an analysis suggesting a 4-56 inch increase by 2100, with a mean change of 30 inches (2.5 ft). But whether such model-driven estimates are reliable is uncertain: I suspect it will be on the high side considering the slow rise of the past few decades.”</p>

<p><b>SOURCE</b></p>	<p><a href="https://www.upi.com/Odd_News/2017/12/28/Taiwan-recalls-passports-featuring-image-of-US-airport/6371514495305/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=6">https://www.upi.com/Odd_News/2017/12/28/Taiwan-recalls-passports-featuring-image-of-US-airport/6371514495305/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=6</a></p>
<p><b>GIST</b></p>	<p>Dec. 28 (UPI) -- Taiwan's foreign ministry is recalling hundreds of passports mistakenly printed with an image of Washington, D.C.,'s Dulles International Airport.</p> <p>Internet users spotted the misprint featuring an image of the Dulles airport instead of Taipei's Taoyuan International Airport, prompting the Ministry of Foreign Affairs on Wednesday to announce plans to recall 285 passports that have already been issued.</p> <p>More than 200,000 of the misprinted passports have been printed and will be returned to the printing company.</p> <p>Central Engraving and Printing Plant, the contract printer responsible for producing the passports said it will bear the cost of reprinting the passports. The first print cost about \$2.67 million.</p> <p>Those who received the misprinted passports will be issued first-generation e-passports from the country's remaining stock.</p> <p>The Ministry of Foreign Affairs initially denied the error stating the passports featured "100 percent</p>

	Taiwanese scenery."  The ministry later admitted the mistake, and Agnes Chen, Taiwan's head of the Bureau of Consular Affairs, stepped down and took responsibility for the error.

<b>HEADLINE</b>	<b>12/28 Iran: thousands protest high prices</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/World-News/2017/12/28/Thousands-protest-high-prices-in-Irans-Mashhad/2761514490243/?utm_source=fp&amp;utm_campaign=ts tn int&amp;utm_medium=5">https://www.upi.com/Top_News/World-News/2017/12/28/Thousands-protest-high-prices-in-Irans-Mashhad/2761514490243/?utm_source=fp&amp;utm_campaign=ts tn int&amp;utm_medium=5</a>
<b>GIST</b>	<p>Dec. 28 (UPI) -- Several thousand residents protested high prices and denounced President Hassan Rouhani across Iran, including the nation's second-largest city, Mashhad, on Thursday.</p> <p>In the northern Iranian city, protesters shouted "Death to Rouhani" and "Death to the dictator" and "If you stop one case of embezzlement, our problem will be solved."</p> <p>They also held banners opposing Iran's interference in the Arab region, including troops and funds sent to assist Syria's government. They chanted, "Forget about Syria, think about us."</p> <p>Besides protests in city of about 3 million, demonstrations took place in cities that included Neyshabur, Kashmar, Birjand, Shahrood and Noshahr. And last week demonstrations took place in Isfahan against high unemployment.</p> <p>The National Council of Resistance of Iran said forces were stationed in Mashhad but protesters pushed them away. The security forces then opened fire and launched tear gas at demonstrators. The protesters resisted, returning tear gas to the forces.</p> <p>Mashhad Gov. Mohammad Norouzian said it was an "illegal" protest but security forces handled the situation "with great tolerance," according to Iran's state-run IRNA news agency.</p> <p>Norouzian said a number of people who intended to destroy public property were arrested.</p>

<b>HEADLINE</b>	<b>12/28 Teen jailed 4yrs without a trial</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/tyler-haire-mental-health-issues-jail-bbc-propublica/">https://www.cbsnews.com/news/tyler-haire-mental-health-issues-jail-bbc-propublica/</a>
<b>GIST</b>	<p>Tyler Haire was a 16-year-old with a history of mental health issues when he was arrested in 2012 for allegedly stabbing his father's girlfriend with a 10-inch butcher knife. According to a joint investigation by BBC News and ProPublica, Haire remained in a Mississippi jail for nearly four years without getting a mental health evaluation or going to trial, and he has yet to receive treatment for his well-documented mental illness behind bars.</p> <p>Following the attack, the report says Tyler Haire called 911 and waited for responders to arrive. Paramedics transported the injured woman to a hospital where she underwent surgery for a knife wound that cut her colon in half. Haire claims he doesn't remember most of what happened on the morning he was taken into custody.</p> <p>"I remember calling the cops and standing outside, so I didn't have to look at what I did. The only part I remember is me going to get water after looking for some Kool-Aid that I was left by my mother," he told the BBC and ProPublica. "After that, it's blurry."</p> <p>Haire was subsequently booked into Calhoun County Jail, where he was charged with aggravated assault as an adult. The sheriff said he put the teen in a solitary confinement cell for his own protection.</p>

According to District Attorney Ben Creekmore, Haire was ordered to have a mental evaluation in Mississippi State Hospital's forensic unit at the beginning of his case. But the BBC and ProPublica report the evaluation never happened.

His mother, Bridgett, says her son had at least 10 mental health diagnoses during his childhood — including generalized anxiety disorder, impulse control disorder, major depression with homicidal ideations, major depressive disorder with psychotic tendencies, and bipolar disorder.

But during his time behind bars, he never received mental health treatment, despite hearing voices in his head that made him "miserable to the brink of suicide," Haire said.

Nearly four years after his arrest, Haire was finally evaluated by a psychologist in August 2016 and was found to be legally competent. However, the psychologist noted, "At the time of the alleged crime, consistent with his history, he probably had a diminished capacity to conform his conduct to the requirements of the law just as he has never had the skills to live adaptively without support."

He was then taken to the state psychiatric hospital in Whitfield, and after 32 days he was returned to the sheriff's custody.

Haire took a plea bargain and was sentenced to seven years in jail, with credit for time served. He's expected to be released in 2018. A state corrections official told the BBC and ProPublica that county facilities like the one Haire is in do not provide substantial mental health care.

Haire told the reporters he still hears voices in his head but has gotten better at ignoring them.

According to the investigation, the state of Mississippi is being sued by the Department of Justice for inmates' lack of access to mental health care. Currently, more than 100 "legally innocent inmates" are awaiting pretrial mental health evaluations; three of them have been waiting more than 1,000 days.

<b>HEADLINE</b>	<b>12/28 Claim: Calif. port truckers 'impaired'</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/pages/interactives/news/rigged-asleep-at-the-wheel/">https://www.usatoday.com/pages/interactives/news/rigged-asleep-at-the-wheel/</a>
<b>GIST</b>	<p>Every day, port trucking companies around Los Angeles put hundreds of impaired drivers on the road, pushing them to work with little or no sleep in violation of federal safety regulations, a USA TODAY Network investigation found.</p> <p>They dispatch truckers for shifts that last up to 20 hours a day, six days a week, sometimes with tragic results.</p> <p>In August 2013, a Container Intermodal Transport trucker, who said in depositions that he often broke fatigue laws, barreled into stopped traffic at 55 mph, killing a teenager and injuring seven others.</p> <p>Seven months later, a Pacific 9 Transportation driver had just finished his 45th hour on the clock in three days when he ran over and killed a woman crossing the street.</p> <p>A Gold Point Transportation truck was moving containers for 15 hours one day in May 2013 when it crashed in Long Beach, injuring four people.</p> <p>The trucking industry has always had drivers who work reckless amounts of overtime.</p> <p>But the USA TODAY Network investigation shows for the first time that fatigued truckers are a near-constant threat on the roads around America's busiest ports.</p> <p>To identify port trucking companies that put their drivers and the public at risk, reporters retraced the</p>

movement of thousands of Los Angeles-area trucks over four years using time stamps generated each time a driver passes through a port gate.

Reporters then calculated how long each truck had operated and compared the results to federal crash data from 2013 to 2016.

The analysis found that, on average, trucks serving the ports of Los Angeles and Long Beach operated without the required break 470 times a day.

Those trucks were involved in at least 189 crashes within a day of an extended period on the clock. Federal records do not indicate who was at fault.

With some exceptions, federal rules say commercial truckers must take a 10-hour break every 14 hours.

The data alone don't prove that a trucker was driving impaired. But regulators and experts said the analysis provides strong evidence of a problem they know to be pervasive but difficult to quantify.

"There's enough there to warrant further investigation," said Collin Mooney, executive director of the Commercial Vehicle Safety Alliance, an association of industry regulators dedicated to improving safety.

As the USA TODAY Network first reported in June, California port truckers have been forced to work long days against their will.

Over the past decade, many companies pushed drivers into debt by requiring them to buy trucks through company-sponsored lease-to-own programs.

Drivers found themselves trapped in jobs that paid them pennies per hour after expenses. If they complained or refused to work past the legal limit, they could be fired and lose their truck along with thousands they paid toward its purchase.

Trucking company executives contacted by USA TODAY Network denied allowing their drivers to violate fatigue rules. Some noted that two drivers sometimes share one truck, a practice that could account for long stints of activity.

"We believe your analysis of driver gate data is perhaps a bit misplaced," said Kevin Dukesherer, president of Progressive Transportation Services.

Dukesherer did not say how many of his trucks were driven by multiple drivers or address specific instances of overtime driving revealed in the data.

Drivers say sharing a truck is rare because many companies prohibit it. Far more common, they say, are truckers who feel compelled to work long hours.

Jose Juan Rodriguez, who drove for Morgan Southern for five years, said he sometimes worked 16-hour shifts for days at a time, a claim the company denied. He kept a bucket of ice water by his seat to splash on his face when he felt himself nodding off.

More than once, he said, he found himself hallucinating, a side effect of extreme sleep deprivation.

"There are some days when you can't think right anymore," he said. "You can't tell if you're driving or not. You just have to continue working."

**HEADLINE** 12/28 Climate change push immigration?

SOURCE	<a href="https://www.usatoday.com/story/weather/2017/12/28/how-climate-change-could-drive-immigration-united-states-mexico/948358001/">https://www.usatoday.com/story/weather/2017/12/28/how-climate-change-could-drive-immigration-united-states-mexico/948358001/</a>
GIST	<p>The number of people moving from Mexico to the United States has dropped sharply over the past decade. But researchers say a new force could drive more people across the U.S.-Mexico border in the coming decades: climate change.</p> <p>As global temperatures continue to climb, dry regions across the world have become more susceptible to drought. That includes northern Mexico, where increasingly intense dry spells are expected to reduce crop yields in rural, agriculture-dependent areas, potentially giving people more reason to seek better opportunities in the United States.</p> <p>Researchers who study the link between global warming and migration say many factors contribute to a person or family's decision to move to another country, with climate change often playing a supporting role. But several studies have singled out climate change as a potentially significant driver of future U.S.-Mexico migration.</p> <p>"It's never any one thing that causes people to move," said Michael Oppenheimer, a Princeton University climate scientist who's researched climate-driven migration. "But we have a lot of evidence from many different countries that relatively modest variations in the climate, that could be short-term or long-term, do cause people to move."</p> <p>It's hard to say how many people could be pushed across the U.S.-Mexico border by climate change, in part because there's been relatively little research on the subject so far.</p> <p>A 2010 study co-authored by Oppenheimer found that up to 6.7 million people could come to the United States from Mexico as a result of global warming by 2080. A study last year from researchers at the University of California Davis projected just 41,000 additional immigrants over the next 50 years as a result of climate change.</p> <p>What those studies and others have in common is a finding that high temperatures and reduced rainfall — conditions that are becoming more common with climate change — have contributed to past waves of migration from Mexico to the United States.</p> <p>"More hot days in rural Mexico, predicted by the major climate models, will increase migration out of rural Mexico, including to the U.S.," Ed Taylor, a development economist at UC Davis and co-author of the 2016 migration study, said.</p> <p>Susan Martin, an emeritus professor at Georgetown University and expert in international migration, also believes any climate-driven migration from Mexico to the United States will be relatively small. She said the Mexican government has improved its social safety net significantly over the past decade, giving agricultural areas greater insurance against the risk of climate-fueled crop losses. She said the United States may be more likely to see a big increase in climate-driven migration from Central America, where more extreme weather is adding to the instability created by violence and poverty.</p> <p>"It's not that climate change won't create problems for people in Mexico, particularly in those semi-arid zones which will become more arid," Martin said. "It's just that they have more options, and moving to the U.S. is a less attractive one, given all of those changes in Mexico."</p>

HEADLINE	<b>12/29 SKorea holds ship w/NKorea oil</b>
SOURCE	<a href="http://abcnews.go.com/International/wireStory/korea-inspects-hong-kong-ship-korean-oil-52039710?">http://abcnews.go.com/International/wireStory/korea-inspects-hong-kong-ship-korean-oil-52039710?</a>
GIST	South Korea said Friday that it was holding a Hong Kong-flagged ship and its crew members for allegedly violating U.N. sanctions by transferring oil to a North Korean vessel in October.

	<p>The Lighthouse Winmore is believed to have transferred about 600 tons of refined petroleum products to the North Korean ship, the Sam Jong 2, in international waters on Oct. 19, after leaving the South Korean port of Yeosu, a South Korean Foreign Ministry official said.</p> <p>South Korean customs authorities boarded the ship and interviewed crew members after they returned to Yeosu on Nov. 24. South Korea formally seized the ship after the U.N. Security Council on Dec. 22 imposed new sanctions on North Korea that allow member states to seize, inspect and freeze vessels that are suspected of transferring banned goods to or from North Korea, the official said. He spoke on condition of anonymity, citing office rules.</p> <p>The ship's 25 crew members — 23 of them Chinese nationals and two from Myanmar — are being held at Yeosu but will be allowed to leave South Korea after authorities are finished investigating them, the official said. South Korea plans to report the results of its inspection to the U.N. Security Council's sanctions committee.</p> <p>The ship, which also transferred oil to three other non-North Korean ships, was chartered by Taiwan's Billions Bunker Group and stopped at South Korea to load up about 14,000 tons of Japanese oil products. It claimed its destination as Taiwan when leaving Yeosu on Oct. 11, the official said.</p>

<b>HEADLINE</b>	<b>12/28 Turkey: blast targeted police station</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/reports-explosion-hits-police-station-southern-turkey-52028582?">http://abcnews.go.com/International/wireStory/reports-explosion-hits-police-station-southern-turkey-52028582?</a>
<b>GIST</b>	<p>An explosion apparently targeted a police station Thursday in the southern Turkish city of Adana but no one was hurt, Turkey's state-run news agency reported.</p> <p>The blast occurred at 7:10 p.m. on a street close to the police station in the city's Seyhan district. It shattered nearby windows and was heard in other parts of the city, the private Dogan news agency reported.</p> <p>Police believe the blast was caused by a "sound bomb" designed to make a loud noise but not cause any casualties, the state-run Anadolu Agency reported. Police teams were investigating the site and a search was launched for a suspect.</p> <p>"We believe it was a home-made bomb, like a sound bomb," Anadolu quoted Adana Police Chief Selami Yildiz as saying. "We are continuing our inspections."</p> <p>The Dogan news agency said the bomb was placed beneath an electrical pole by a person wearing a mask.</p> <p>Turkey has suffered a wave of deadly attacks carried out by Kurdish rebels or Islamic State militants in recent years that have killed hundreds of people.</p>

<b>HEADLINE</b>	<b>12/28 Brazil arrests Mexico drug kingpin</b>
<b>SOURCE</b>	<a href="https://sofrep.com/96967/brazil-arrests-mexican-drug-kingpin-beach-resort/">https://sofrep.com/96967/brazil-arrests-mexican-drug-kingpin-beach-resort/</a>
<b>GIST</b>	<p>The police in Brazil have arrested the head of a Mexican drug cartel, which is a serious blow to one of the more powerful drug gangs challenging the Sinaloa Cartel for control of the Mexican drug trade. Brazilian federal prosecutors announced the arrest on Wednesday.</p>

	<p>According to the arrest warrant, police detained Jose Gonzalez Valencia, 42, a leader of the Jalisco New Generation Cartel (CJNG), with the intention of fulfilling a U.S. extradition request.</p> <p>Once a little-known gang, the CJNG has grown in recent years to challenge the Sinaloa Cartel of captured kingpin Joaquin “El Chapo” Guzman for primacy of the drug trade in Mexico.</p> <p>Gonzalez Valencia was arrested at a beach resort near the coastal city of Fortaleza and brought to the headquarters of the federal police for the state of Ceará, Brazilian prosecutors said in a statement.</p> <p>Gonzalez Valencia had been living in neighboring Bolivia for two years after fleeing Mexico and he had entered Brazil as a tourist using a Bolivian passport, the statement added.</p> <p>Valencia will be immediately extradited to the United States that had a warrant out for him. Valencia is the brother of Abigael Gonzalez Valencia, a CJNG leader captured in February 2015.</p>

<b>HEADLINE</b>	<b>12/28 Yakima: police shot 3 suspects in 24hrs</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/855688/yakima-police-officers-shoot-3-men-in-24-hours/">http://mynorthwest.com/855688/yakima-police-officers-shoot-3-men-in-24-hours/</a>
<b>GIST</b>	<p>YAKIMA, Wash. (AP) — Authorities say Yakima police officers shot three suspects in a 24-hour period.</p> <p>The Yakima Herald-Republic reports Yakima police Capt. Jeff Schneider at a Wednesday news conference called the shooting statistic unprecedented in the department.</p> <p>On Wednesday police shot and wounded Gabriel Anthony Zavala who had allegedly fired at officers and rammed a pickup into a police vehicle. Police say Zavala was shot at least twice and flown to a Seattle hospital.</p> <p>Police say Yakima officers shot and killed two men on Tuesday in separate standoff situations.</p> <p>Police say Officer Booker Ward shot Adrian Escobar during a standoff at a home after he allegedly fired shots at officers.</p> <p>Officers Shane Stevie and Patrick Shad fatally shot Juan Miguel Garcia following a five-hour standoff at an apartment complex. Police haven’t said exactly what led to that shooting.</p> <p>The shootings are under investigation.</p>

<b>HEADLINE</b>	<b>12/28 Thieves hit Habitat for Humanity home</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/news/local/crime/article192052824.html">http://www.thenewstribune.com/news/local/crime/article192052824.html</a>
<b>GIST</b>	<p>Just weeks before move-in day, a worker made a gut-punching discovery at a Habitat for Humanity home in Pacific.</p> <p>Someone ripped off the window screen, broke into the home and made off with a brand-new washer and dryer unit.</p> <p>It happened the day after Christmas.</p> <p>“That was discouraging someone would do that around the holidays and impact our veteran family so that saddened us all,” said Gail Luxenberg, the CEO of Habitat Seattle King County.</p> <p>The nonprofit housing group helps families in need help attain the American dream, and these homes in</p>

	<p>Pacific are part of their veterans' build.</p> <p>"This is a very special community for us," Luxenberg added. "We build all over King County, and this community is dedicated to veterans."</p> <p>The family that is slated to move in is a single mother and her two children. News of this crime is a little more personal because, like other habitat homes, this family has put in 250 hours of sweat equity, building this home from the ground up.</p> <p>"It hurts when you hear the news," Luxenberg explained. "Our family puts in their sweat equity. They worked long and hard to get into home. They hold a mortgage. They have a lot invested in this."</p> <p>Unfortunately, the camera at the window doesn't work.</p> <p>And it clearly didn't deter the thieves.</p> <p>While police do their job trying to catch the criminals, Luxenberg says she is as determined as ever.</p>

<b>HEADLINE</b>	<b>12/28 London: woman injured in acid attack</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2017/12/28/woman-suffers-life-changing-injuries-after-acid-attack-in-london-police-say.html">http://www.foxnews.com/world/2017/12/28/woman-suffers-life-changing-injuries-after-acid-attack-in-london-police-say.html</a>
<b>GIST</b>	<p>A British woman suffered life-changing burns to her leg and face Wednesday when she was sprayed with acid while walking in east London, police said.</p> <p>The 26-year-old woman was walking on Marsh Wall near South Quay DLR station around 7 p.m. when an unidentified attacker threw a noxious substance on her. She ran to nearby Westferry Road where police were alerted.</p> <p>The woman was taken to a local hospital. She did not see the attacker, police said.</p> <p>No arrests have been made and law enforcement is reviewing CCTV images.</p> <p>The noxious substance that was sprayed at the woman was confirmed to be a strong acid solution.</p> <p>Acid attacks have been on the rise in London in recent months.</p> <p>The number of reported attacks using corrosive liquids rose from 261 in 2015 to 454 in 2016, London police said. Some appeared to be related to gang activity or the theft of cars and motorbikes.</p> <p>In September, six people were injured when a group of men sprayed acid at shoppers at the Westfield Stratford Shopping Centre in east London. A 15-year-old boy was arrested in the incident.</p> <p>The spike in attacks has prompted some lawmakers to call for restrictions on the sale and carrying of corrosive liquids such as sulfuric acid.</p>

<b>HEADLINE</b>	<b>12/28 Pa. official: no terror link in shooting</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/prosecutor-terror-links-found-immigrant-shooting-52029208">http://abcnews.go.com/International/wireStory/prosecutor-terror-links-found-immigrant-shooting-52029208</a>
<b>GIST</b>	A prosecutor says investigators haven't connected an Egyptian immigrant who shot a Pennsylvania state trooper and fired at other police with any organized terror group or terrorist activity.

	<p>Dauphin County District Attorney Ed Marsico said Thursday friends and relatives of Ahmed Aminamin El-Mofty describe him as depressed, and he's believed to have acted alone during the Friday shooting.</p> <p>Police shot and killed the 51-year-old naturalized U.S. citizen about a mile from where the shooting began near Pennsylvania's State Capitol building.</p> <p>Marsico says the divorced El-Mofty was said to be depressed over lack of contact with his family and had money problems. He's unsure what motivated El-Mofty.</p> <p>The trooper was treated for what Marsico called a slight wound.</p> <p>The prosecutor's preliminary finding suggests police were justified in shooting El-Mofty.</p>

<b>HEADLINE</b>	<b>12/28 Poachers target endangered fish meat</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/mexican-traffickers-now-shipping-endangered-fish-meat-52029441?">http://abcnews.go.com/International/wireStory/mexican-traffickers-now-shipping-endangered-fish-meat-52029441?</a>
<b>GIST</b>	<p>Poachers in Mexico have long smuggled the swim bladders of the totoaba, an endangered fish prized in China.</p> <p>But federal police said Thursday they've now found a shipment of 104 frozen totoaba fish fillets at the Tijuana airport. That suggests smugglers are seeking to take advantage of the whole fish.</p> <p>Fishing for totoaba is prohibited in Mexico's Gulf of California, but the high prices paid for dried swim bladders have made that hard to enforce. Poachers in the past simply discarded the fish carcasses after extracting the bladders.</p> <p>Nets set for totoaba frequently catch the highly endangered vaquita marina, the world's smallest porpoise. Fewer than 30 vaquitas are thought to remain.</p>

<b>HEADLINE</b>	<b>12/28 Sex assaults on commercial flights</b>
<b>SOURCE</b>	<a href="http://www.cnn.com/2017/12/27/politics/women-sexual-assaults-harassment-commercial-flights/index.html">http://www.cnn.com/2017/12/27/politics/women-sexual-assaults-harassment-commercial-flights/index.html</a>
<b>GIST</b>	<p>Washington (CNN)Katie Campos settled into her seat for a short flight from Newark to Buffalo last week. Within minutes, she said, an intoxicated male passenger sitting next to her began groping and harassing both Campos and a second female passenger seated in the same row, grabbing Campos repeatedly despite her demands for him to stop it.</p> <p>"He grabbed my upper thigh, like in the crotch area, and he grabbed it pretty forcefully," Campos told CNN, adding that the man only stopped touching her after she got out of her seat and ran to the back of the plane, where she told a flight attendant what was happening.</p> <p>Campos is one of four women CNN interviewed who said they've been sexually assaulted or harassed during a commercial flight. These women are a small fraction of a typically overlooked group enduring inappropriate behavior during an American reckoning with harassment and misconduct that spans across many industries like entertainment, sports, news media and politics.</p> <p>A police report filed said that the male passenger told the other female passenger seated in Campos' row that he would like to kiss her. When the woman declined, he began stroking her leg. The passenger reported the man's behavior to a flight attendant.</p>

When Campos reported what the man had done to members of the United Airlines crew, she said she didn't feel like she was taken seriously until she said she refused to retake her seat next to him.

"I felt like no one, no one that was supposed to be in charge could handle the situation," she told CNN. "I kept on feeling, and I continue now as I'm like filing these reports, to feel like I'm the one who is doing something wrong, and I'm not being protected."

Ultimately, Campos was reseated -- but directly behind the man who was harassing her. United Airlines told CNN that's because there were few empty seats on the plane. The man, Campos said, didn't stop touching her even after she moved.

"This man continued," she said. "This man should have been restrained so he couldn't continue to do this. And just continuing to touch and stare just made me feel completely helpless and horrible. It was terrifying."

A United Airlines spokesperson told CNN that the airline has "zero tolerance for this type of behavior." "Our pilot requested that local law enforcement meet the aircraft on arrival," the spokesperson said.

Members of the Niagara Frontier Transportation Authority Police Department met the plane at the gate and escorted the man off the plane, according to the police report. Cell phone video obtained by CNN shows police boarding the flight and removing the man. He has been charged with disorderly conduct.

Campos said the flight crew didn't appear prepared to handle the situation and wondered what could have happened if the relatively short flight had gone on for longer.

"At the end of the day, they didn't protect my safety or those around me," Campos said.

It's difficult to determine just how frequently assaults happen on commercial flights because no federal regulatory agency tracks that data nationwide. But FBI investigations into midair sexual assaults have increased by 66% from fiscal year 2014 to 2017. The bureau said it opened 63 investigations into sexual assault on aircraft during the current fiscal year, compared with 57 in 2016, 40 in 2015 and 38 in 2014.

The FBI said it isn't clear what is behind the increase.

Even so, those are just the cases that the FBI investigates, and those figures don't account for incidents reported that the FBI never hears about, or those that are never reported at all like so many cases of sexual harassment overall.

The Association of Flight Attendants-CWA, one of the world's largest flight attendant unions, last year surveyed nearly 2,000 flight attendants about their experiences with midair sexual assaults. Among those who responded, one out of five said they received a report of passenger on passenger sexual assault while working a flight. But, according to the survey, law enforcement was contacted or met the plane less than half of the time. Three of the four women interviewed by CNN about their assault or harassment said there were no apparent attempts to contact law enforcement.

Typically, the AFA said, intervention comes from flight attendants, but many say their employers haven't told them what to do if someone says they've been harassed or assaulted in flight.

Sara Nelson, a United Airlines flight attendant who is president of the union, told CNN, "In my 22 years as a flight attendant, I have never taken part in a conversation -- in training or otherwise -- about how to handle sexual harassment or sexual assault."

While policies exist, Nelson says that if they're not elevated in airlines' training, flight attendants are at a loss of what to do when confronting inappropriate -- and sometimes criminal -- behavior.

"They don't necessarily know exactly what to do and how to respond when they discover it," she said.

Allison Dvaladze said she didn't believe the Delta Air Lines crew knew how to best help her when a man allegedly groped her during a flight. Dvaladze said that as she was dozing off during an April 2016 flight from Seattle to Amsterdam, she felt a hand grabbing her."

I felt a hand in my crotch, and realized that the man next to me was holding, was grabbing my crotch," Dvaladze told CNN. "I slapped his hand right away, yelled 'no,' without even thinking."

The man reached for her again, Dvaladze said, and she again hit him away. After the man reached toward her again, despite her attempts to stop him, she said she unbuckled her seat belt, and ran to the back of the plane where she asked to speak with members of the flight crew.

"I believe they were doing everything they could, in their mind, to comfort me, but it was clear there was not a clear procedure for what they should do," she said. "They asked me what I wanted them to do, and at that moment I really just couldn't think about anything except for wanting to get off the plane."

That wasn't an option in midair. Ultimately, Dvaladze was given a new seat away from the male passenger who had groped her. Dvaladze said she assumed that the crew would file a report based on her experience and she followed up with the airline's customer service department herself about a week after her flight, according to emails reviewed by CNN.

The airline's customer service department responded to her email about a month later, emails show. A representative apologized for her flight experience, saying "I know it's not fair when one person's behavior affects another person."

As a "goodwill gesture," the airline also offered Dvaladze 10,000 frequent flyer miles.

"If somebody reports a crime to an airline, it should be flagged. It should not be treated as if it's lost luggage," Dvaladze told CNN.

A spokesperson for Delta Air Lines told CNN that the airline continues to be "disheartened by the events Ms. Dvaladze described."

The spokesperson said that Delta crew members are "trained to have situational awareness in the cabin at all times and are prepared to handle a range of situations and always prioritize customer safety."

CNN reached out to each of the major US airlines, as well as Airlines for America, the industry trade group that represents them. Each responded with a statement with a similar theme: The safety and security of passengers is the priority. Each airline also said that flight attendants are trained to handle incidents like these, but none of the airlines detailed their policies or guidelines.

Alison McAfee, a spokesperson for Airlines for America, said that member airlines "take these matters seriously and do not tolerate harassment in any form."

"Employees receive extensive customer service training to ensure the safety and wellbeing of all our passengers and crew," McAfee said in a statement. "Airlines strive to make sure every passenger has a safe and pleasant travel experience and that disruptive or inappropriate behavior is dealt with as promptly as possible."

McAfee also said that carriers have "well-defined processes and procedures in place" for reporting criminal activity to the Federal Aviation Administration and the appropriate law enforcement authorities.

Each of the women CNN spoke to who said they were sexually harassed or assaulted during a commercial flight said the flight crews did little or nothing to help. Ayanna Hart was a passenger on a Delta Air Lines flight. She said an intoxicated man repeatedly grabbed her during a flight earlier this year and said a flight

crew member was dismissive of her concerns.

The last time the male passenger grabbed her, Hart said the flight attendant told the man, "oh, no touching." When another passenger called the flight attendant over to express concerns about the man, the flight attendant was of little help.

"The flight attendant said, 'Oh, don't worry about him. He flies with us all the time. He's Delta Platinum,'" Hart said, a reference to the top tier of Delta's frequent flyer program.

Now, Hart is suing Delta for failing to intervene and continuing to serve the man alcohol.

The airline wouldn't comment on the case, citing pending litigation, but said it takes these incidents "seriously" and "with law enforcement, investigates them."

The Association of Flight Attendants-CWA has called on airlines to do more not just to train crew members on how to handle sexual assault and harassment that has happened to passengers in the air, but also to do more to protect the crew members themselves.

"Not only are we not equipped with good, clear policies about how to do that and training about how to do that, you're asking people who are experiencing sexual harassment every single day to now be the enforcers and it just doesn't make a lot of sense," said Nelson, the head of the AFA.

The situation is equally senseless for passengers who have experienced harassment and who say they are left with little comfort.

Campos, the United Airlines passenger who said she endured repeated groping and unwanted touching at the hands of a man seated next to her, said she felt that even the people who were supposed to ensure her safety on board the late-night flight were unable to do so.

"It felt very much like the only reason this came to an end at all is that the flight landed. And we were at a gate, and the lights came on," she told CNN.

InFOCUS

Thursday

28 December 2017

Editor's Note: InFOCUS will not be published Monday, 1 Jan 2018; will return on Tuesday, 2 January 2018—Happy New Year!

Welcome to InFOCUS!

What is InFOCUS? It is the Washington State Fusion Center's daily "Information From Online Communities and Unclassified Sources" publication outlining open-source headlines and stories.

We aren't attempting to replace online news reporting services. Rather, we understand that all of you have busy work schedules, so, InFOCUS is our situational awareness service that we provide to you on a daily basis exposing you to headlines that spark our interest or have an impact within our community, our region and our state. We highlight the headline and we 'gist' the stories for you. Should you desire to read the entire story, you are just a click away from the reporting source. Typically what took a dedicated open-source reader on average of 2-4 hours a day, InFOCUS can deliver to you situational awareness of major headlines requiring no more than 15 minutes total reading time—15 minutes to maintain daily situational awareness of events that are happening across the world, our nation and within our region.

InFOCUS consists of a headline matrix focused on five topical areas: events/opportunities, cyber awareness, terror conditions, suspicious activities and criminal extremism against an international, national and regional/local backdrop. Our intent is to provide an easy-to-read, easy-to-select (hypertext link) stories that may contribute to your situational awareness of our topical areas without requiring you

to conduct an exhaustive search or needing a library of links. We daily screen terabytes of major data-streams to filter headlines and open-source stories that enable all of us, as a community, to have a common basis of situational awareness for community interaction.

While the Fusion Center initiated InFOCUS from a law enforcement perspective, we are open to the community for suggestions in improving our service. Our goal is to ensure the immediacy of awareness for all public safety organizations (whether law enforcement, emergency management, fire, health/medical or other first responders, public/private security, utilities, critical infrastructure resources and services) on open-source headlines that may influence our day-to-day interaction. We firmly believe if we as a community are aware then our ability to respond is enhanced.

InFOCUS strives to serve as an important tool to enhance communication, collaboration and cooperation through your email inbox on a daily basis!

HEADLINE	<b>12/27 FEMA sells disaster trailers despite need</b>
SOURCE	<a href="http://www.spokesman.com/stories/2017/dec/27/fema-sells-disaster-trailers-cheaply-despite-victi/">http://www.spokesman.com/stories/2017/dec/27/fema-sells-disaster-trailers-cheaply-despite-victi/</a>
GIST	<p>FORT WORTH, Texas – The federal government typically spends up to \$150,000 apiece – not counting utilities, maintenance or labor – on the trailers it leases to disaster victims, then auctions them at cut-rate prices after 18 months of use or the first sign of minor damage, the Associated Press has learned.</p> <p>Officials have continued the practice even amid a temporary housing shortage in Texas, where almost 8,000 applicants are still awaiting federal support nearly four months after Hurricane Harvey landed in the Gulf Coast.</p> <p>The Federal Emergency Management Agency briefly halted trailer sales following Harvey but resumed them in November, online records show. Since then, at least 115 units manufactured this year have been sold for pennies on the dollar, and many of the online auctions have listed such things as dirty mattresses, missing furniture, pet odors or loose trim as the lone damage.</p> <p>“I don’t care what shape it’s in, it beats sleeping on a dirt floor,” said Christy Combs, who moved with her husband, four children and five dogs into a tent after their rented apartment in Aransas Pass, Texas, was left uninhabitable by floodwater.</p> <p>FEMA has no written policy or regulation requiring disposal of used trailers, but an official confirmed to AP that it’s a longstanding internal policy and that seldom are the housing units given to another family in need after the initial 18-month stint.</p> <p>“Because of the challenges associated with damaged units, and the costs of life-cycle maintenance, and because we are required to maintain a ready reserve for disasters, FEMA, by practice, doesn’t return used units to our reserve inventory,” said Jenny Burke, a spokeswoman for the U.S. Department of Homeland Security, which oversees FEMA.</p> <p>Burke was unable to explain why FEMA leases new units for only 18 months before consigning them to the General Services Administration’s online auction.</p> <p>The agency’s experience after Hurricane Katrina in 2005 could provide one explanation for a strict policy governing what kind of housing can go to storm victims. Some 144,000 FEMA trailers became symbols of the troubled federal response after some victims who lived in them for years won millions of dollars from lawsuits claiming the units leached high levels of cancer-causing formaldehyde.</p> <p>FEMA spokesman Bob Howard stressed the units being used now are much higher quality than those and don’t have formaldehyde problems, meeting U.S. Housing and Urban Development standards for mobile homes.</p> <p>Harvey survivors in Texas have received 859 trailers so far, but another some 7,900 applicants are in need of some type of temporary housing assistance, whether rent, home repairs or trailers, Howard said.</p> <p>FEMA’s policy of selling off its used trailers left the agency with a standing inventory of only 1,700 units as an unusually-active hurricane season battered southeast Texas, Florida, Puerto Rico and the U.S. Virgin Islands this year.</p> <p>Federal records show that FEMA has awarded about \$278 million in competitive-bid contracts to trailer</p>

	manufacturers even as it has continued to sell off used units. One record showed an expected delivery date of February 2018.

<b>HEADLINE</b>	<b>12/28 China: US should cut opioid demand</b>
<b>SOURCE</b>	<a href="https://apnews.com/bd16cfe466ea4e77855dfd24ce69d11d/China:-US-should-curb-demand-for-opioids,-not-blame-China">https://apnews.com/bd16cfe466ea4e77855dfd24ce69d11d/China:-US-should-curb-demand-for-opioids,-not-blame-China</a>
<b>GIST</b>	<p>BEIJING (AP) — The United States should look within to cut down demand for opioids which are fueling its deadly drug crisis rather than stressing unsubstantiated claims that China is the major source of these chemicals, a top Chinese drug enforcement official said Thursday.</p> <p>China and the U.S. have worked to build a close working relationship to fight global flows of illicit synthetic drugs, but their collaboration remains fraught.</p> <p>Yu Haibin of the China National Narcotics Control Commission told reporters there was little evidence showing China was the source of much of the chemicals used in the production of the powerful opioid fentanyl. President Donald Trump in November blamed a “flood of cheap and deadly” fentanyl made in China for the deadliest drug epidemic in U.S. history.</p> <p>“China doesn’t deny that shipments to the U.S. happen, but there isn’t the proof to show how much — whether it’s 20 percent or 80 percent,” said Yu, adding that U.S. authorities have only sent him information about six shipments from China in the past year.</p> <p>He urged the U.S. to share more data and police intelligence with Chinese authorities and said rampant over-prescription of pain medication and lax cultural attitudes toward drugs had fueled massive demand for opioids in the U.S.</p> <p>Insufficient drug education and the trend in some states of legalizing marijuana have hurt drug enforcement efforts, he said.</p> <p>“As many states decriminalize marijuana, the public’s attitudes and trends of thinking toward drugs will also have a bad effect” on the fight against hard drugs, Yu said.</p> <p>Chinese officials have been eager to tout their collaboration with American counterparts on drug enforcement as a bright spot in the occasionally rocky relationship.</p>

<b>HEADLINE</b>	<b>12/27 Thousands Puerto Rico cops call in sick</b>
<b>SOURCE</b>	<a href="https://apnews.com/361de7ce896c4da6a4f3c8c76d023c78/Thousands-of-Puerto-Rico-police-owed-overtime-call-in-sick">https://apnews.com/361de7ce896c4da6a4f3c8c76d023c78/Thousands-of-Puerto-Rico-police-owed-overtime-call-in-sick</a>
<b>GIST</b>	<p>SAN JUAN, Puerto Rico (AP) — Thousands of police officers are calling in sick every day in Puerto Rico, partly to press demands for unpaid overtime pay for hurricane recovery efforts as concerns grow over people’s safety in a U.S. territory struggling to restore power.</p> <p>The increase in absences recently prompted Puerto Rico Police Chief Michelle Hernandez to recommend that U.S. National Guard soldiers help fill the temporary vacancies.</p> <p>“We have had an inordinate amount of absences that we haven’t seen in years prior,” she told The Associated Press, adding that while there has been a drop in major crimes this year, she is concerned that trend could reverse.</p> <p>However, the administration of Gov. Ricardo Rossello on Wednesday rejected the idea of using the</p>

	<p>National Guard.</p> <p>Normally, an average of 550 police officers are absent every day across Puerto Rico, which has one of the largest police departments under U.S. jurisdiction with more than 13,000 officers overall. But recently, more than 2,700 officers on average have been absent daily.</p> <p>Public Affairs Secretary Ramon Rosario said the government has already made nearly \$15 million in overtime payments since Hurricane Maria hit more than three months ago and \$6.4 million more will be distributed Saturday.</p> <p>“There are a lot of police officers who are not showing up,” he said. “We are trying to address all demands to encourage these police officers to return to their jobs.”</p> <p>Hernandez estimated the government owes officers an additional \$35 million in overtime pay, but said the department is still tallying attendance sheets to determine the exact amount.</p> <p>Authorities said part of the problem is that Puerto Rico’s government has to wait for the U.S. Federal Emergency Management Agency to reimburse it for overtime police pay and that it is a slow process.</p> <p>The police chief said officers also are upset about other changes amid Puerto Rico’s economic crisis, including smaller pensions and an end of payments for unused sick days. “They feel in a way cheated in the past 15 years in terms of benefits,” Hernandez said.</p> <p>The island is struggling to recover from the Category 4 storm that hit amid an 11-year-old recession, killing dozens of people and causing up to an estimated \$95 billion in damage.</p> <p>Police officers worked seven days a week for 12 to 15 hours a day in September and October, said lobbying groups for the island’s police officers, who are not allowed to unionize.</p>

<b>HEADLINE</b>	<b>12/27 Chaos: 911 calls on derailment released</b>
<b>SOURCE</b>	<a href="https://apnews.com/8605b06a848b41d389b6e6709f77c766/911-calls-show-chaos-of-Washington-state-train-derailment">https://apnews.com/8605b06a848b41d389b6e6709f77c766/911-calls-show-chaos-of-Washington-state-train-derailment</a>
<b>GIST</b>	<p>SEATTLE (AP) — Whimpering in pain, bleeding from head injuries and dazed by the enormity of the crash, victims in the Amtrak train derailment south of Seattle begged 911 dispatchers for help and said “tons of people” had been hurt.</p> <p>Dozens of emergency recordings released Wednesday by South Sound 911 Dispatch provided a vivid account of what happened during the deadly Dec. 18 crash.</p> <p>“My abdomen hurts really bad. I don’t feel good,” said a crying woman identified as Angela who was bleeding from her head and wailed in panic each time she couldn’t find an answer to a dispatcher’s questions. “I don’t know how old I am off the top of my head. I’m sorry!”</p> <p>Angela was in Car 5 with her 14-year-old son as the passenger train barreled through a curve at 78 mph (126 kph) in a 30 mph zone, derailing along both sides of the tracks and toppling some cars onto Interstate 5 below.</p> <p>Angela begged for help and ordered her bleeding son to lie still because he had neck and back pain. He took a hit to his face. They got slammed into a table. She couldn’t find her shoes.</p> <p>“Everybody’s getting off but I’m afraid to move my son,” Angela said, adding that “tons of people are hurt!”</p>

Authorities say it could take more than a year to understand how the inaugural run of the train carrying 85 passengers and crew members ended in disaster along a new 15-mile (24-kilometer) bypass route.

Friends Jim Hamre, 61, and Zack Willhoite, 35, died of brain and skull injuries. Benjamin Gran, 40, died of multiple traumatic injuries.

Another 911 caller said there were bodies everywhere. A dispatcher said there were at least 12 bodies on the tracks.

One man called seeking information about his wife after learning she hit her head while on the train. He said he was driving to the scene, but the dispatcher urged him to avoid the area so he didn't get stuck on the road.

The man replied: "I'm not going to be able to not (go). He added: "I apologize for being a bit of a mess and in a panic."

On the ground, a woman identified as Aura MacArthur said she was driving south on Interstate 5 and thought her car had been hit by a mudslide.

"A huge cloud of mud and dirt came and hit my car and spun me around," she said, cold and crying in her glass-strewn SUV.

"I am the only car besides a semi that made it through the train derailment. I was right at the front when it came," she said, at times gasping for air and weeping.

"My chest is sore but my airbag's deployed ... I can't go anywhere," she said.

She said it was dark and no cars could pass because the road was blocked by the wreckage.

"I hope everybody's OK," she said.

<b>HEADLINE</b>	<b>12/28 Bitter cold takes hold northern states</b>
<b>SOURCE</b>	<a href="https://apnews.com/8b7a28cb545e40a6b1ff993d8cb462f3/Bundle-up:-Bitter-cold-weather-takes-hold-of-northern-US">https://apnews.com/8b7a28cb545e40a6b1ff993d8cb462f3/Bundle-up:-Bitter-cold-weather-takes-hold-of-northern-US</a>
<b>GIST</b>	<p>ERIE, Pa. (AP) — Bitter cold weather has taken hold of much of the northern United States and is expected to stay put for days to come as two Minnesota cities already have set record low temperatures and a city in Pennsylvania continues to dig out from a record snowfall.</p> <p>Forecasters warned of hypothermia and frostbite from arctic air settling in over the central U.S. and spreading east.</p> <p>The National Weather Service reported International Falls, Minnesota, the self-proclaimed Icebox of the Nation, plunged to 37 degrees below zero, breaking the old record of 32 below set in 1924. Hibbing, Minnesota, bottomed out at 28 below, breaking the old record of 27 below set in 1964.</p> <p>Wind chill advisories or warnings were in effect for much of New England, northern Pennsylvania and New York. Those places and states in the northern Plains and Great Lakes were projected to see highs in the teens or single digits and lows below zero for the rest of the week and into the new year.</p> <p>The National Weather Service said wind chills in many areas Thursday could make temperatures feel below zero.</p> <p>People in Erie, Pennsylvania, continued to dig out from a storm that brought 34 inches of snow on</p>

	<p>Christmas Day, smashing the daily snowfall record for the Great Lakes city of 8 inches, and 26.5 more inches on Tuesday. More than 65 inches total fell on the city in just a few days.</p> <p>Strong westerly winds over Lake Erie picked up moisture, developed into snow and converged with opposing winds, dumping snow in a band along the shore from Ohio to New York, said Zach Sefcovic, a National Weather Service meteorologist in Cleveland.</p> <p>In New York, communities near Lake Ontario's eastern end, including Redfield and Boylston, also saw around 5 feet of snow this week.</p>

<b>HEADLINE</b>	<b>12/28 Does the help help the homeless?</b>
<b>SOURCE</b>	<a href="https://apnews.com/fe7fd4aab59640aa86011043f7ff6703/Food,-showers,-tents:-Does-the-help-help-the-homeless?">https://apnews.com/fe7fd4aab59640aa86011043f7ff6703/Food,-showers,-tents:-Does-the-help-help-the-homeless?</a>
<b>GIST</b>	<p>ANAHEIM, Calif. (AP) — Mohammed Aly does not see any reason why he shouldn't try to ease the lives of Orange County's homeless. But the authorities — and many of his neighbors — disagree.</p> <p>Aly, a 28-year-old lawyer and activist, has been arrested three times as he campaigned on behalf of street people. Recently, he was denied permission to install portable toilets on a dried-up riverbed, site of an encampment of roughly 400 homeless.</p> <p>“Put yourself in their position: Would you want a toilet, or would you not want a toilet?” he asked. “It is a question of basic empathy.”</p> <p>But his detractors — engaged in a dispute that rages up and down America's West Coast, as the region struggles to cope with a rising tide of homelessness — say Aly and other do-gooders are doing more harm than good. However well-meaning, critics say, those who provide the homeless with tents and tarps, showers and toilets, hot meals and pet food, are enabling them to remain unsheltered.</p> <p>And not coincidentally, they note, nuisances of homelessness like trash and unsanitary conditions fester and aberrant behavior continues.</p> <p>In California, the San Diego County community of El Cajon passed a measure that curtails feeding the homeless, citing health concerns. In Los Angeles, city officials have closed and re-opened restrooms for those on Skid Row amid similar controversies.</p> <p>The issue is hotly debated across Orange County, a cluster of suburbs and small cities known more for surf culture and Disneyland than its legions of poor.</p> <p>In the tony seaside enclave of Dana Point, neighbors fear a nightly meal is drawing homeless to a popular state beach where teens play beach volleyball and families picnic and surf.</p> <p>On the dusty riverbed 30 miles (48 kilometers) north, a van furnished with shower stalls parks alongside the homeless encampment; those living in the string of tattered tents add their names to a list of dozens waiting to bathe. While the mobile unit aims to help those living on the trash-strewn strip, neighbors worry the 2-mile-long (3-kilometer-long) encampment is becoming more entrenched in an area where they once jogged and biked.</p> <p>“If the ultimate goal is to get them under a roof, why on Earth are you giving all the advantages you would have under a roof on the riverbed?” asked Shaun Dove, a 46-year-old soon-to-be retired policeman from Anaheim, who lives less than a mile from the riverbed in a palm-tree lined neighborhood of three-bedroom homes.</p> <p>“There's no doubt that giving them stuff there prevents them from a desire to move.”</p>

—

The number of homeless living in Orange County has climbed 8 percent over the last two years. In the United States, homelessness rose slightly in the last year to nearly 554,000, pushed up largely by increases on the West Coast, federal data shows. The increase is driven by soaring housing costs, though a drug addiction crisis and need for mental health services are also factors.

Advocates say the homeless population has become more visible as police have cracked down on rules barring camping, driving people from parks and bus benches to a few centralized locations, such as the flood control channel along the Santa Ana River in Anaheim.

Everybody knows that the only solution is more housing; there aren't enough beds available in a county where the median home price hovers near \$700,000. Until there are, many well-meaning residents want to try to alleviate what they feel is a humanitarian crisis by bringing food and other assistance to the homeless.

In a small community like Dana Point, there is no shelter. The nightly meals began more than two decades ago at local churches but were moved to Doheny State Beach after a late night stabbing between two homeless residents.

The picturesque city on bluffs overlooking the Pacific Ocean is known for its million dollar homes and scenic harbor. But homeless have long been drawn to Dana Point and other beach communities which offer public access and wide open spaces — and the beauty and sunshine that lure so many people to California's shores.

In the late afternoon, volunteers arrive at the beach parking lot with folding tables and trays of chicken or beef or fish and fruit. They often also hand out a sack lunch for the next day to several dozen homeless, day laborers and poor who line up to eat after bowing their heads in a brief prayer.

The homeless say as much as they appreciate it, the food isn't keeping them on the streets.

Gholamreza Haghghi, 59, said he has been sleeping in the nearby brush for more than two decades — well before meals were served there — and has nowhere else to go. Jose Luis Gonzalez, 60, said he has been living in his motor home since splitting with his wife and sometimes stops by the suppers to see friends and have a meal. Another homeless man who refused to give his name said he heads there simply to eat.

"I come here because it's a Band-Aid," the 55-year-old said. "It doesn't help me tomorrow. It doesn't. But it helps me today."

Volunteers say the homeless are drawn to the beaches because of the open space and access to water and restrooms — not the meals. They feel that feeding people can build trust and lead the homeless to additional services, including housing.

"We understand that some residents and business owners in Dana Point are experiencing problems with the homeless. We are adamant, though, and disagree with the fact that we are contributing to the problem," said Chris Phillips, who helps lead the volunteer network known as Welcome INN.

Tell that to Brian Brandt, a 55-year-old lawyer. He jogs at the state beach and takes his six children there to surf but these days he doesn't let them go on their own. He said he's seen volatile outbursts among the homeless and frequent police calls and wishes volunteers would stop offering meals at a place meant for community recreation.

"I don't want to be seen as a bad guy — 'OK, look at this heartless dude,'" he said. "I don't feel safe. I don't feel like my kids are safe."

Robert Marbut, a consultant to communities on homelessness, believes it's misguided to provide housing or other services without heavy incentives for recipients to be in treatment programs for mental health problems, addiction or other issues.

"Anytime you give out services without treatment," Marbut said, "that's enabling, period. ... You've got to serve the food in a place where mental health is being provided."

But Marbut insists that camping bans or crackdowns don't work. And in fact, the encampment at the riverbed began when police in a host of cities refused to let the homeless sleep in parks or on bus benches. They headed to the trail along the flood channel, which is county property and cuts through several cities.

In recent years, the number of tents on the trail along the dried out riverbed has soared. Tents and tarps are surrounded by cardboard boxes and litter. Some of the people who live there travel up and down the trail on bikes, toting blankets or cans for recycling.

People say they ended up there for different reasons. For some, it was drug addiction. Others lost their jobs and couldn't make rent.

Aly, the homeless advocate, said for those living there basic sanitation is key. His latest plan is to station a trailer he fitted with portable toilets and shower stalls on a street near the encampment but Anaheim city officials have raised health and safety concerns.

Many neighbors want help moved off the trail entirely. They said nearby neighborhoods have suffered as the encampment has grown. Hypodermic needles have been found among pine needles in a park next to an elementary school. Shopping carts rattle as they're pushed down otherwise quiet streets.

Some homeowners said their neighbors' mail has gone missing, and potted plants from outside their homes. Some moved to Anaheim years ago when the city was smaller and more suburban to escape the bustle and traffic of Los Angeles. Now, they find themselves grappling with some of the same big city problems.

City officials said they want to move people off the riverbed and that any aid should be part of a broader effort to help people find a way out: "The goal shouldn't be to make it slightly more comfortable there to live that way but rather, how can we get those folks to a better place?" said city spokesman Mike Lyster.

Unfortunately, those better places are limited. Orange County has shelter beds but they largely fill up. And many homeless said they don't like the shelter's curfew or rules barring pets and prefer their privacy, even outdoors. From 2015 to earlier this year, the number of people staying in Orange County shelters went down slightly, but the number living on the streets jumped by 17 percent, federal data shows.

County authorities say they want to clear the riverbed and are trying to connect the men and women living there with the assistance they need to get back on their feet. Last summer, the county started providing showers along with case management services, hoping they can help those who want to find a way out.

Larry Ford, a 53-year-old U.S. army veteran, said he is grateful for any help. But like those at the beach in Dana Point, he insists food and showers don't tether him to the tents surrounded by plastic bottles and toppled furniture.

"Look at this," he said, pointing to heaps of garbage by his feet. "What is this enabling here?"

"This is devastation."

HEADLINE	<b>12/28 China tests hypersonic ballistic missile</b>
SOURCE	<a href="https://thediplomat.com/2017/12/introducing-the-df-17-chinas-newly-tested-ballistic-missile-armed-with-a-hypersonic-glide-vehicle/">https://thediplomat.com/2017/12/introducing-the-df-17-chinas-newly-tested-ballistic-missile-armed-with-a-hypersonic-glide-vehicle/</a>
GIST	<p>China carried out the first flight-tests of a new kind of ballistic missile with a hypersonic glide vehicle (HGV) in November, The Diplomat has learned.</p> <p>According to a U.S. government source who described recent intelligence assessments on the People’s Liberation Army Rocket Force (PLARF) on the condition of anonymity, China recently conducted two tests of a new missile known as the DF-17.</p> <p>The first test took place on November 1 and the second test took place on November 15. The November 1 test was the first Chinese ballistic missile test to take place after the conclusion of the first plenum of the Communist Party of China’s 19th Party Congress in October.</p> <p>During the November 1 test flight, which took place from the Jiuquan Space Launcher Center in Inner Mongolia, the missile’s payload flew to a range of approximately 1,400 kilometers with the HGV flying at a depressed altitude of around 60 kilometers following the completion of the DF-17’s ballistic and reentry phases.</p> <p>HGVs begin powered flight after separating from their ballistic missile boosters, which follow a standard ballistic trajectory to give the payload vehicle sufficient altitude.</p> <p>Parts of the U.S. intelligence community assess that the DF-17 is a medium-range system, with a range capability between 1,800 and 2,500 kilometers. The missile is expected to be capable of delivering both nuclear and conventional payloads and may be capable of being configured to deliver a maneuverable reentry vehicle instead of an HGV.</p> <p>Most of the missile’s flight time during the November 1 flight test was powered by the HGV during the glide phase, the source said. The missile successfully made impact at a site in Xinjiang Province, outside Qiemo, “within meters” of the intended target, the source added. The duration of the HGV’s powered flight was nearly 11 minutes during that test.</p> <p>The HGV payload that China tested in November was specifically designed for the DF-17, the source told The Diplomat, while noting that parts of the U.S. intelligence community assess that the DF-17 is heavily based on the PLARF’s DF-16B short-range ballistic missile, which is already deployed.</p> <p>“The missile is explicitly designed for operational HGV implementation and not as a test bed,” the source said, describing U.S. intelligence assessments of the DF-17. This was “the first HGV test in the world using a system intended to be fielded operationally,” the source added.</p> <p>The DF-17, per current U.S. intelligence assessments, is expected to reach initial operating capability around 2020.</p> <p>“Although hypersonic glide vehicles and missiles flying non-ballistic trajectories were first proposed as far back as World War II, technological advances are only now making these systems practicable,” Vice Admiral James Syring, director of the U.S. Missile Defense Agency, remarked in June, during a testimony before the U.S. House Armed Services Committee.</p> <p>Outside these missiles, China has conducted seven known tests of experimental hypersonic glide vehicles. These tests took place between 2014 and 2016.</p>

HEADLINE	<b>12/27 UN: children faced shocking violence</b>
----------	---

SOURCE	<a href="http://time.com/5080963/unicef-children-conflict-violence/?xid=homepage">http://time.com/5080963/unicef-children-conflict-violence/?xid=homepage</a>
GIST	<p>Children have been subject to a widespread and “shocking” scale of violence this year, the U.N.’s children fund said, as conflicts around the world have increasingly targeted and victimized the most vulnerable.</p> <p>As violence spread across the Middle East, Africa, Myanmar, and eastern Ukraine, children have found themselves on the front lines, used as human shields or recruited as fighters by armed or extremist groups. They have been subject to sexual violence, forced marriage, abduction, and enslavement, UNICEF said in a press release. Even after fighting has stopped, UNICEF said, children often continue to suffer from malnutrition and trauma, and lack access to adequate medical facilities, which are often destroyed in war.</p> <p>“Children are being targeted and exposed to attacks and brutal violence in their homes, schools and playgrounds,” said Manuel Fontaine, UNICEF Director of Emergency Programmes. “As these attacks continue year after year, we cannot become numb. Such brutality cannot be the new normal.”</p> <p>The report singled out several conflict hotspots in 2017, including western Africa, where Boko Haram forced 135 children into suicide bombings, a fivefold increase over last year. In Iraq and Syria, children have reportedly been used as human shields, maimed and killed, or trapped in besieged areas under intense bombardment as fighting between Syrian rebel forces and forces loyal to to President Bashar al-Assad entered its sixth year.</p> <p>In civil-war wracked Yemen, fighting and a Saudi Arabia-imposed blockade has created a humanitarian catastrophe, with 5,000 children confirmed dead or injured and 1.8 million children suffering from malnutrition. A cholera epidemic is believed to have surpassed one million cases, with the outbreak killing more than 2,000 people.</p> <p>Children account for more than half of the 655,000 Rohingya refugees who have fled violence in western Myanmar since August 2017. In sprawling refugee camps in Bangladesh, they are particularly vulnerable to malnutrition and disease, including a diphtheria outbreak that has already claimed 22 lives, according to the U.K.’s Department for International Development.</p> <p>The report also highlighted concerns about child recruitment and abduction in Somalia and Central African Republic, while in the Democratic Republic of the Congo, 850,000 children have been displaced by fighting. In eastern Ukraine, 220,000 children are endangered by landmines and other unexploded ordinances along a 310 mile de facto border that is “becoming one of the most mine-contaminated places on earth.”</p> <p>UNICEF called on all parties involved in conflict to “abide by their obligations under international law” and “immediately end violations against children and the targeting of civilian infrastructure, including schools and hospitals.”</p>

HEADLINE	<b>12/27 Russia: US meddling in election</b>
SOURCE	<a href="https://www.washingtontimes.com/news/2017/dec/27/russia-accuses-us-election-interference-condemning/">https://www.washingtontimes.com/news/2017/dec/27/russia-accuses-us-election-interference-condemning/</a>
GIST	<p>Russia’s Foreign Ministry has accused the United States of meddling in next year’s Kremlin race after the State Department condemned election officials for disqualifying Alexei Navalny, a prominent opposition politician who planned to challenge incumbent President Vladimir Putin in 2018.</p> <p>The Russian Central Election Commission barred Mr. Navalny from running for president this week, prompting the U.S. State Department to issue a statement Tuesday evening expressing concerns with Moscow’s “ongoing crackdown against independent voices, from journalists to civil society activists and opposition politicians.”</p> <p>“These actions indicate the Russian government has failed to protect space in Russia for the exercise of</p>

human rights and fundamental freedoms,” the State Department said in the statement, Business Insider first reported. “More broadly, we urge the government of Russia to hold genuine elections that are transparent, fair and free and that guarantee the free expression of the will of the people, consistent with its international human rights obligations.”

The spokeswoman for Russia’s Foreign Ministry cited the State Department’s statement in a Facebook post Tuesday evening accusing the U.S. of meddling in next March’s election.

“This State Department statement, which I’m sure will be repeated, is a direct interference in our electoral process and internal affairs,” wrote spokeswoman Maria Zakharova, as translated by The Moscow Times.

Ms. Zakharova also mentioned recent measures requiring certain Russian media outlets to register in the U.S. as foreign agents, accusing the U.S. of harassing foreign reporters and “investing huge amounts of money into ‘countering Russian propaganda,’ which is how they label anyone who they disagree with,” The Times translated.

<b>HEADLINE</b>	<b>12/27 WSDOT explains train speed limits</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/855029/wsdot-train-derailment-speed-limits/">http://mynorthwest.com/855029/wsdot-train-derailment-speed-limits/</a>
<b>GIST</b>	<p>The Washington State Department of Transportation is responding to questions left in the wake of a fatal train derailment near DuPont earlier this month, stating that speed limit signs are posted before the site of the incident.</p> <p>“With the recent derailment of an Amtrak Cascades train, we wanted to talk a bit about the Point Defiance Bypass and our agency’s work to develop it for Amtrak Cascades passenger train service .... we want to answer questions that have arisen about the tracks where the train derailed.” WSDOT states in a recent blog post.</p> <p>The official cause of the train derailment has not been announced. The National Transportation Safety Board is conducting an investigation into the incident and is not expected to come to a conclusion for up to a year. But WSDOT’s post makes a point of addressing the speed limits leading up to the site where a sharp curve in the tracks is located south of DuPont.</p> <p>The train that derailed was reportedly traveling in excess of 80 mph; the speed limit for the curve is 30 mph.</p> <p>“The bypass tracks have a reduced speed limit before the curve where the derailment took place to inform engineers to decrease their speed to negotiate the curve. The maximum speed limit decreases from 79 mph to 30, with signs posted two miles before the speed zone and just before the speed zone approaching the curve. Amtrak is responsible for ensuring all engineers on this specific set of tracks are qualified. It is common for railroads to have areas of reduced speeds due to curves or other factors, as found along the entire Cascades route.</p> <p>Trains successfully ran the bypass track numerous times in the past few months during track testing, locomotive testing and engineer qualification on the tracks, and the ceremonial train ride with passengers on Dec. 15 during the new station dedication.”</p> <p>The Point Defiance Bypass is a new railroad route along I-5 around DuPont. The train derailment happened during the inaugural run of the new service between Seattle and Portland on Dec. 18. The tracks are meant to take passenger service off of the previous route that runs along the shore of Puget Sound south of Tacoma. Sound Transit owns the stretch of tracks and recently completed upgrades and other work on the route.</p> <p>WSDOT’s post also explains that planning for the bypass began more than 10 years ago. It also states that</p>

	the bypass meets all Federal Railroad Administration requirements

<b>HEADLINE</b>	<b>12/27 New Year's at the Needle</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/ring-in-2018-with-new-years-at-the-needle/281-502828048">http://www.king5.com/article/news/local/ring-in-2018-with-new-years-at-the-needle/281-502828048</a>
<b>GIST</b>	<p>Celebrate the arrival of 2018 with a dazzling fireworks show in downtown Seattle. The iconic Space Needle transforms into a 650-foot launch pad for a stunning display set to a unique soundtrack curated by KEXP.</p> <p><b>HOW TO WATCH</b> The team at KING 5 Evening hosts the pre-party from the shadow of the Space Needle, starting at 11:35 p.m. Watch live on KING 5, stream on king5.com or the <a href="#">KING 5 app</a>, or watch on the <a href="#">KING 5 Facebook page</a>. Fireworks start at the stroke of midnight and dance for 10 minutes to <a href="#">music hand-picked by the talented DJs at KEXP</a>. Stay tuned after the fireworks as KING 5 Evening celebrates with the crowd and shares photos from around the Northwest.</p> <p><b>SHARE YOUR VIEW</b> Be part of the show by sharing your photos with KING 5. Use the hashtag <a href="#">#NYESeattle</a> on <a href="#">Instagram</a> and <a href="#">Twitter</a>, or post your photos to the <a href="#">KING 5 Facebook page</a>. Join the Facebook event and be sure to invite your friends!</p> <p><b>FORECAST</b> After a snowy Christmas, we're looking DRY for New Year's Eve! But bundle up - it will be a chilly night in downtown Seattle with temperatures dipping to 38 degrees. Check the latest <a href="#">KING 5 Weather forecast</a> as we get closer to the countdown.</p> <p><b>WATCHING IN PERSON</b> The Seattle Center is free to visit, although private celebrations will be held nearby. Visit <a href="#">here for details</a> about watching the fireworks in person.</p> <p><b>WHAT ABOUT THE SPACE NEEDLE CONSTRUCTION?</b> The Space Needle is sporting a new look these days as <a href="#">construction continues on a new restaurant</a>. But don't worry, the annual fireworks are a GO and seem to get more and <a href="#">more impressive each year</a>. The fireworks are sponsored by T-Mobile and you'll see the Space Needle illuminated in T-Mobile's distinctive magenta brand color for the 33rd annual celebration.</p>

<b>HEADLINE</b>	<b>12/27 New year: new wage, sick leave rules</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/business/2018-brings-changes-in-washingtons-minimum-wage-sick-leave-rules/">https://www.seattletimes.com/business/2018-brings-changes-in-washingtons-minimum-wage-sick-leave-rules/</a>
<b>GIST</b>	<p>Another year is on its way in, and that means another minimum-wage increase for workers across Washington state. This time, Jan. 1 also brings paid sick leave to nearly all employed Washingtonians.</p> <p>The changes to workplace wages in 2018 will be mostly incremental. Washington state's minimum-wage increases from \$11 to \$11.50 per hour. Young workers — 14 or 15 years old — can be paid at a lower rate, \$9.78 per hour. (Those younger teens are restricted in how many hours they can work, which is generally 16 hours per week during the school year and 40 hours a week when school is out.)</p> <p>Across the state, just 1.4 percent of full-time-equivalent jobs earned Washington's minimum wage of \$9.47 in 2016, a drop from 2.1 percent in 2015, according to the state Employment Security Department. The decrease is largely due to Seattle's rising minimum wage, which lifted many people to higher earnings.</p>

	<p>Implementing paid sick leave will be the bigger challenge to employers, after an initiative approved by voters in 2016 takes effect on the first of the year. It calls for most full-time, part-time and temporary employees to accrue paid sick leave.</p> <p>The state paid sick-leave law ensures that employees earn at least an hour of paid time off for every 40 hours worked. That time can be used when the worker or a family member is ill, when an office or school has been closed for any health-related reason or as provided under the domestic-violence leave law.</p> <p>For some employers, especially small businesses, offering paid sick leave is a whole new world, said Tim Church, public-affairs manager for the state Department of Labor and Industries.</p> <p>The department has been holding training sessions and offering templates to get businesses on the right track. It also spent about \$250,000 on a media campaign to make businesses aware of the law.</p> <p>The state will start enforcing the new law next year, but Church said its primary goal is to make sure employers know what to do. The state first will work with companies to get them in compliance. Only if businesses don't get in line will it impose financial penalties.</p> <p>A few Washington cities already have a paid sick-leave law, among them Seattle and Tacoma. Both cities' laws are similar to the new state act, and Seattle changed its law slightly this year to match the state's law, which was more generous.</p>

<b>HEADLINE</b>	<b>12/27 Study: rising humidity endangers lives</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/global-warming-climate-change-humidity-danger/">https://www.cbsnews.com/news/global-warming-climate-change-humidity-danger/</a>
<b>GIST</b>	<p>You may have heard the expression: It's not the heat, it's the humidity. Researchers seem to agree, and are now warning that humidity is likely to increase the threat to human health from climate change-related temperature hikes in certain parts of the world.</p> <p>Those areas include the southeastern United States, the Amazon, western and central Africa, southern areas of the Mideast and Arabian peninsula, northern India and eastern China, the study authors said.</p> <p>At times, the combination of heat and high humidity in these regions could make it impossible for people to work or, in some cases, even survive, the researchers suggested. Along with harming health, these conditions could cause economic damage.</p> <p>"The conditions we're talking about basically never occur now -- people in most places have never experienced them," lead author Ethan Coffel, a graduate student at Columbia University's Earth Observatory, said in a university news release.</p> <p>"But they're projected to occur close to the end of the century," Coffel added.</p> <p>Using global climate models, the researchers mapped current and projected future "wet bulb" temperatures, which reflect the combined effects of heat and humidity.</p> <p>Lab experiments have shown a wet-bulb reading of 89.6 degrees Fahrenheit is the threshold beyond which many people would have trouble carrying out normal activities outside. This level is rarely reached anywhere today, the study authors said. But the investigators project that by the 2070s or 2080s, the mark could be reached one or two days a year in the U.S. southeast, and three to five days in parts of South America, Africa, India and China.</p> <p>According to background information in the report: "Human health impacts depend on both temperature and humidity. The human body is efficient at shedding heat through evaporative cooling [sweating], even</p>

	<p>in high air temperatures, if moisture levels are low.</p> <p>"However, in hot and humid conditions, the efficiency of evaporative cooling slows and the body may become unable to maintain a stable core temperature," the study authors wrote. This can cause heat stress, which can lead to heat stroke, heat exhaustion, heat cramps or heat rashes.</p> <p>Study co-author Alex deSherbinin, of Columbia's Center for International Earth Science Information Network, added that "it's not just about the heat, or the number of people. It's about how many people are poor, how many are old, who has to go outside to work, who has air conditioning."</p> <p>The study was published Dec. 22 in the journal Environmental Research Letters.</p>

<b>HEADLINE</b>	<b>12/28 Getting harder to fund for infrastructure</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/gop-tax-overhaul-makes-it-harder-to-pay-for-infrastructure-in-u-s/">https://www.cbsnews.com/news/gop-tax-overhaul-makes-it-harder-to-pay-for-infrastructure-in-u-s/</a>
<b>GIST</b>	<p>President Donald Trump promised during the presidential campaign and after his election to lead an upgrade in our nation's infrastructure, announcing in February 2017, for instance, that he would ask Congress to approve programs designed to stimulate \$1 trillion in infrastructure investment across the country.</p> <p>At least up to this point, <a href="#">the President's promises with respect to infrastructure remain unfulfilled</a>. Furthermore, the recently passed tax bill that he signed last week may create some challenges for the municipal bond market and the infrastructure sector.</p> <p><i>The facts</i></p> <p><b>Bridges, schools, police stations, sewer systems, levees and airports, as well as other forms of infrastructure, are essential for economic activity in America and elsewhere.</b> But public investment in the United States has fallen sharply since the 1980s, and with this declining investment our infrastructure has aged and deteriorated in important ways (see <a href="#">here</a>). The American Society of Civil Engineers recently gave U.S. infrastructure a <a href="#">grade of D+</a>, and estimated that it would take \$3.6 trillion in spending to bring our infrastructure to a state of "good repair."</p> <p><b>The municipal bond market has been an important source of financing for infrastructure investment</b> (see <a href="#">this Econofact memo</a>). Proceeds from bond issuance paid for about <a href="#">32 percent</a> of infrastructure investment in 2015, with the rest of the funding for infrastructure coming directly from a mix of sources that includes the federal government, state and local governments, and dedicated fees. The recently passed tax bill will pose some immediate challenges for the municipal bond market and for issuers of municipal bonds, and also raises the potential for longer-term challenges. In general, the demand for municipal bonds is partly driven by the tax-exemption of their interest, which means that issuers of municipal bonds can pay lower yields than can issuers of otherwise equivalent taxable bonds. The tax-exempt status of municipal bonds has been preserved in the new tax legislation. But the fact that marginal tax rates have fallen both for individuals and especially for corporations will mean that the relative yield on municipal bonds will have to rise in order for the bonds to remain competitive as an investment choice, making financing more expensive for infrastructure projects.</p> <p><b>One direct effect of the tax legislation on the municipal market is the elimination of the tax deduction for "advance refunding" municipal bonds.</b></p> <p>Many municipal bonds are "callable" – a "call" provision means that the issuer of a bond can purchase the bond back from investors before the bond's maturity at a pre-specified price. For example, a bond may have a 30-year maturity but be callable after 10 years, meaning that the issuer would have the right to buy the bond back and retire it after 10 years. This provision allows issuers to take advantage of falling interest rate levels. Current tax rules allow a municipal issuer to "advance refund" (one time) an issue that is not yet callable. The loss of the advance refunding provision raises the potential cost of issuing municipal bonds by limiting the ability to refinance debt in response to decreasing interest rates. Veteran municipal</p>

analyst George Friedlander of the Court Street Group has recently suggested that with the new limits on advance refunding, issuers and underwriters will have an incentive to develop more costly, exotic and opaque structures involving derivatives that accomplish the same objective while complying with the new law (see [this article](#) in *The Bond Buyer*). But even with these potential responses to the new tax legislation, the new limitations on advance refunding will, on net, raise the cost of tax-exempt financing for infrastructure projects.

**The deliberations regarding the tax bill raised uncertainty regarding the tax-exempt status of [Private Activity Bonds \(PABs\)](#) going into the future.** PABs are tax-exempt bonds issued to finance the construction of private-sector facilities that have a significant public purpose. The PAB market is a particularly important tool for financing low-income housing. The House version of the tax bill proposed total elimination of PABs, and even though PABs have survived in the new tax law signed by President Trump, there have already been signals from Congressional Republicans that the question of tax exemption for PABs may be revisited very soon. The total Private Activity Bond issuance volume was over \$35 billion in 2016, a bit less than 10 percent of the total municipal market, so the loss of this financing channel would be an important change in the overall market and a particular shock to important subsectors of the market such as housing.

**The impact of the tax law on state and local finances could also affect infrastructure spending.** State and local expenditures account for roughly [three quarters](#) of total spending on infrastructure. But state and local governments will likely face an important new headwind in raising revenues under the new law: The new tax law will cap federal tax deductions for state and local taxes (the SALT deduction) at \$10,000. The curtailment of this tax deduction will make it more expensive for individuals who itemize their deductions for their state and local taxes and will thus hurt the taxing capacity of cities and states. This development will reduce somewhat the resources that are available for cities and states to fund new infrastructure investments. The impact of this change in the SALT deduction will be particularly important in higher-tax areas such as New York and California.

**A medium-to-longer term impact of the new tax law will come through its impact on our federal fiscal position.** The overwhelming balance of opinion among economists outside the administration is that the new tax bill will significantly increase the federal debt. If one begins with the presumption that this debt must be repaid, then the resources will eventually have to come from somewhere. The need to raise additional funds means that the tax exemption for important municipal bond market sectors remains very credibly threatened in the future. This drain in resources to repay the federal debt does not augur well for future investment in infrastructure and for our ability to close our existing infrastructure gap.

#### What this means

Infrastructure is essential for economic activity and growth, but our nation has accumulated an infrastructure "debt." President Trump's campaign promises to stimulate investment in infrastructure remain unrealized, and the new tax law will create some challenges for that market. And the move away from federal fiscal balance means that the municipal tax exemption may come under threat in later rounds of budget balancing.

HEADLINE	<b>12/28 Real estate 'climate gentrification'</b>
SOURCE	<a href="https://www.cbsnews.com/news/climate-gentrification-home-values-rising-sea-level/">https://www.cbsnews.com/news/climate-gentrification-home-values-rising-sea-level/</a>
GIST	<p>Homes at higher elevations in Miami are gaining value at a faster clip than those closer to sea level. It's an accelerating trend, and it has residents and real estate agents -- in Miami and other coastal communities -- asking whether "climate gentrification" has arrived.</p> <p>The term, which only recently entered the lexicon, describes the role of climate change in recalibrating land values, a phenomenon that ultimately could displace low-income and minority residents in a similar fashion as urban gentrification. As sea levels rise and flooding persists, the thinking goes in the case of Miami, waterfront property will lose some of its luster and higher-situated neighborhoods like Little Haiti</p>

	<p>and Little Havana will become more attractive.</p> <p>The professor who was first to publish research using the phrase "climate gentrification" isn't convinced that's the main culprit in Miami. At least not yet. Jesse M. Keenan, a researcher on urban development and climate adaptation at Harvard's Graduate School of Design, tracked the rate of price appreciation since 1971 for more than 250,000 residential properties in Miami-Dade County, and compared those figures to elevation. Keenan found that properties at high elevations have long appreciated faster in Miami, mostly because of nonclimate factors.</p> <p>However, since 2000, the correlation between elevation and price appreciation has grown stronger, which Keenan, in an interview with CBS MoneyWatch, suggested may be "early signaling" of preference for properties at higher elevations and a reaction to persistent nuisance flooding in lower areas.</p> <p>His prediction: Over the next 10 years, climate change will become a more significant factor in the real estate market for many cities. He expects a "slow burn" toward a tipping point -- similar to the foreclosure crisis -- when all of a sudden values drop precipitously for high-risk properties.</p> <p>"This is real," Keenan said. "There are actual people spending lots of money thinking about how to make money from climate change. We have to come to terms with this sooner than later."</p>

<b>HEADLINE</b>	<b>12/28 Deported Ethiopians claim Saudi abuses</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/ethiopians-deported-en-masse-saudi-arabia-allege-abuses-52022409?">http://abcnews.go.com/International/wireStory/ethiopians-deported-en-masse-saudi-arabia-allege-abuses-52022409?</a>
<b>GIST</b>	<p>Undocumented Ethiopian migrants who are being forcibly deported from Saudi Arabia by the thousands in a new crackdown say they were mistreated by authorities while detained.</p> <p>In interviews with The Associated Press upon their arrival home, the returnees described beatings, theft and stays in dirty prison camps. Their accounts brought to light one of the world's busiest and most dangerous migrant routes but one that remains overlooked amid the larger rush toward Europe.</p> <p>Saudi Arabia, like other rich Gulf nations, is a magnet for hundreds of thousands of people from impoverished East African nations like Ethiopia and Somalia. They pay traffickers for rides in boats across</p>

the narrow waters to Yemen, where they make their way by land through a war zone.

In August, traffickers heaved scores of migrants into the sea off Yemen, leaving more than 50 to drown. In March, more than 30 Somali migrants, including children, were killed — apparently in a helicopter gunship attack by a Saudi-led coalition at war in Yemen.

More than 111,500 migrants landed on Yemen's shores last year, up from around 100,000 the year before, according to the Regional Mixed Migration Secretariat. Those who make it to Saudi Arabia often find employment as domestic workers and farm workers, sending money to support families back home.

Saudi Arabia's latest wave of deportations began Nov. 11 after several months of warnings by the government. Saudi authorities say the kingdom has detained around 250,000 people violating its residency laws in the crackdown, with approximately 50,000 already forcibly flown out of the country.

Of those who entered the country illegally, 72 percent were from Yemen and 26 percent were Ethiopians.

Those arriving home in Ethiopia described the process as jarring and unfair. The six who spoke to the AP at the airport in the capital, Addis Ababa, said they were robbed of their possessions by "Saudi police officers" who shared their money between them. Some of the returnees said they saw compatriots being shot and wounded when they tried to escape police roundups.

"The prison cell I was put into was so dirty that some of us were severely sick. It was like a toilet," said Sadiq Ahmed, a former teacher who went to Saudi Arabia five years ago and was detained for 11 days before his deportation. "As if this was not enough, we were robbed of our belongings. I came here with nothing. I know lots of people who went insane because of this torment."

Human Rights Watch researcher Adam Coogle said that in interviews with dozens of Yemeni migrants in a previous Saudi crackdown in 2014, many "described serious abuses during the process of detention and deportation, including attacks by security forces." The rights group has not documented the current campaign, he said.

Saudi authorities did not respond to requests for comment.

Ethiopia's government says more than 14,000 of its citizens have been deported since mid-November and 70,000 have returned voluntarily, but the International Organization Migration says the number that has left forcibly or voluntarily since the amnesty period ended in June has reached 96,000.

<b>HEADLINE</b>	<b>12/27 Seattle crises part of national problem</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/seattles-crises-are-part-of-a-national-problem/669640269">http://www.kiro7.com/news/local/seattles-crises-are-part-of-a-national-problem/669640269</a>
<b>GIST</b>	<p>Seattle's homelessness and housing crises are part of a much larger and concerning problem of American poverty, according to a United Nations expert's recent report.</p> <p>"I think the United States has an incomparable record," Philip Alston told KIRO Radio's Dave Ross. "It's one of the world's richest countries, by far, but it's also a country with very high poverty rates — 40 million — and half of those people are living in extreme poverty and therefore dire circumstances. We have the highest child poverty rates in the United States. It has the lowest levels of social well-being across a range of indicators."</p> <p>"The big difference with the United States is that when I go to other countries, they say, 'We just don't have the money. We can't afford to provide basic services to the poorest in our community,'" he said. "The United States, on the other hand, clearly does have the money. It just mobilized one-and-a-half trillion dollars in the tax reform to assist the super-rich. It could have diverted a small amount of those resources to helping the super-poor."</p>

Alston is the United Nation's special rapporteur on extreme poverty. He recently toured the country, documenting the current state of American poverty. What he found: unsanitary conditions; that poverty disproportionately affects people of color and women; that it affects large numbers of white people; and that America's trumpet call for human rights is often not heard within its own borders.

"It is pretty shocking to see, in the midst of a very rich developed country, pockets that remind one very much of living in a third world country," he said.

It didn't matter if he was on Skid Row in Los Angeles or a poor community in Alabama, America's inequality problem spared no region. It's something that Western Washington is quite familiar with — tents lining sidewalks and underneath roadways; an opioid crisis leaving used syringes scattered on the ground; people unable to afford or obtain affordable housing; and a homeless service system that is unable to keep up with demand.

<b>HEADLINE</b>	<b>12/27 IG: DOJ mishandled sex harassment</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/sexual-misconduct/justice-department-mishandled-sex-harassment-cases-says-report-n832811">https://www.nbcnews.com/storyline/sexual-misconduct/justice-department-mishandled-sex-harassment-cases-says-report-n832811</a>
<b>GIST</b>	<p>WASHINGTON — The Justice Department is readying its response to a May Inspector General report that found "potential systemic" issues in the way the agency deals with sexual harassment complaints, including 19 "substantiated" allegations made between fiscal years 2012 and 2016, a spokesman told NBC</p>

News on Wednesday.

The department's response follows a Washington Post report that highlighted the Inspector General's findings and highlighted several additional examples of misconduct that came to light after a Freedom of Information Act (FOIA) request, including a finding that a chief deputy in the U.S. Marshals Service had sex with nine women in his office.

Justice Department spokesman Ian Prior said Deputy Attorney General Rod Rosenstein convened a working group to look at the issues outlined in the report and the group would soon be issuing "recommendations for action."

Prior pointed out that the examples highlighted by the Inspector General occurred during the Obama administration, and not under current Attorney General Jeff Sessions' leadership.

"The Department was very disappointed with the issues that occurred in the Obama administration and strives for a workplace free of harassment and other misconduct for all of its 115,000 employees," Prior said.

The report covers the fiscal years 2012 through 2016.

The majority of Justice Department employees are non-political and remain in place even as administrations change. The report detailed abuse by attorneys in the Civil Division, and employees in the offices of U.S. Attorneys, the Federal Bureau of Investigation, the U.S. Marshals Service and the Bureau of Alcohol, Tobacco, Firearms and Explosives.

Inspector General Michael Horowitz wrote in a June 1 memorandum to Rosenstein that an FBI supervisory management and program analyst subjected subordinates to approximately three years of sexual harassment, despite the analyst undergoing four counselling sessions and signing a pledge to refrain from such conduct.

According to the full Inspector General report, an employee of the Civil Division was accused of inappropriate comments and touching. The allegations were substantiated and the employee was reprimanded, but only transferred within the Civil Division.

Horowitz notes that Civil Division employees said it was difficult to remove an employee, even after cases of serious sexual harassment.

Transfers can be used to "avoid imposing a more severe disciplinary action and may create a risk that the same type of misconduct will occur in the new environment, placing other Department employees at risk unnecessarily," the memorandum from Horowitz said.

In some cases, employees with pending investigations into alleged sexual harassment were given performance bonuses, according to the memorandum.

<b>HEADLINE</b>	<b>12/27 Russia: market bombing injures 10</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/russia-explosion-injures-st-petersburg-supermarket-52011847?">http://abcnews.go.com/International/wireStory/russia-explosion-injures-st-petersburg-supermarket-52011847?</a>
<b>GIST</b>	<p>At least 10 people were injured Wednesday by an explosion at a supermarket in St. Petersburg, Russia's second-largest city and the site of a deadly subway bombing this year.</p> <p>The Investigative Committee, the nation's top investigative agency, said a device containing 200 grams (7 ounces) of explosives went off at a storage area for customers' bags. It said the device was rigged with shrapnel to cause more damage.</p>

	<p>No one has claimed responsibility for the explosion at a branch of the Perekrestok supermarket chain in the city's northwest Kalininsky district.</p> <p>Alexander Klaus, the chief of the local branch of the Investigative Committee, said 10 people were hospitalized with injuries.</p> <p>A criminal investigation has been launched.</p> <p>Russian President Vladimir Putin telephoned U.S. President Donald Trump earlier this month to thank him for a CIA tip that helped thwart a series of bombings in St. Petersburg, Putin's home town.</p> <p>The Federal Security Service, or FSB, said seven suspects linked to the Islamic State group were arrested in connection to the alleged plot. The Kremlin said the arrested suspects had planned to bomb St. Petersburg's Kazan Cathedral and other crowded sites.</p> <p>In April, a suicide bombing in the St. Petersburg's subway left 16 people dead and wounded more than 50. Russian authorities identified the bomber who blew himself up on a subway line as Akbardzhon Dzhaliyov, a 22-year old Kyrgyz-born Russian national.</p>

<b>HEADLINE</b>	<b>12/27 America's little regulated body trade</b>
<b>SOURCE</b>	<a href="https://ca.news.yahoo.com/special-report-business-where-human-bodies-were-butchered-131025725.html">https://ca.news.yahoo.com/special-report-business-where-human-bodies-were-butchered-131025725.html</a>
<b>GIST</b>	<p>PHOENIX (Reuters) - Sam Kazemi stood over the old man's corpse. Nearby lay pliers, a scalpel and a motorized saw designed to cut drywall and pipe.</p> <p>On a busy day, Kazemi might harvest body parts from five or six people who had donated their bodies to science. On this day in November 2013, the corpse before Kazemi typified the donors who gave their remains to his employer, Biological Resource Center.</p> <p>The man was a retired factory worker with a ninth-grade education. He had lived with his wife in a mobile home in Mohave Valley, Arizona, and had died six days earlier, aged 75. His name was Conrad Patrick.</p> <p>But after he died and his body was donated, Patrick became a commodity, known by the company's initials and a number: BRC13112103.</p> <p>Reuters reviewed thousands of internal BRC records and confidential law enforcement documents containing profiles of Patrick and 2,280 other donors. The documents include invoices and inventories for thousands of body parts harvested from those people. They show how their bodies were dissected, which body parts were sent where, and why buyers obtained them.</p> <p>Kazemi helped cut up and package Patrick into seven pieces. BRC shipped Patrick's left foot to a Chicago-area orthopedic lab. His left shoulder was sent to a Las Vegas company that holds surgical seminars. His head and his spine went to a project run by the U.S. Army. And Patrick's "external reproductive organs" were sent to a local university. His right foot and left knee were placed in the company's freezers, where they became part of BRC's million-dollar inventory of flesh and bone.</p> <p>For more than a year, Reuters has examined America's body trade, a little-known and virtually unregulated industry. These businesses, which call themselves non-transplant tissue banks, are also known as body brokers.</p> <p>The operations can resemble meat-packing plants. At BRC, body parts from heads to fingernails were harvested and sold. On Saturday mornings, Kazemi taught college students how to dismember cadavers in the company lab. He also starred in a grisly training video, demonstrating how to carve out a man's spine using a motorized saw.</p> <p>The documents obtained by Reuters – along with dozens of interviews with investigators, former BRC workers and families of donors – offer an unparalleled look at how one of America's major body brokers operated.</p>

The records, never before made public, also reveal how little the government or the donors themselves understood what was happening at the company, and show in graphic detail how a cadaver becomes a commodity.

Sales invoices detail many of those transactions.

For \$607, BRC sold the liver of a public school janitor to a medical-device company. The torso of a retired bank manager, bought by a Swiss research institute, fetched \$3,191. A large Midwestern healthcare system paid \$65 for two femoral arteries, one from a church minister. And the lower legs of a union activist were purchased by a Minnesota product-development company for \$350 each.

For raw material, the industry relies in large part on people too poor to afford a funeral, offering to cremate a portion of each donated body for free.

A Reuters analysis of BRC donor files from May 3, 2011 through January 20, 2014 confirmed how important the disadvantaged were to business. The vast majority of BRC donors came from neighborhoods where the median household income fell below the state average. Four out of five donors didn't graduate from college, about twice the ratio of the country as a whole.

Before brokers accept a body, they typically present the donor or next of kin with a consent form. These agreements are often written in technical language that many donors and relatives say they find hard to understand. The documents give brokers the right to dismember the dead, then sell or rent body parts to medical researchers and educators, often for hundreds or thousands of dollars. At BRC, a whole body sold for \$5,893, records show.

Since 2004, when a federal health panel unsuccessfully called on the U.S. government to regulate the industry, Reuters found that more than 2,357 body parts obtained by brokers from at least 1,638 people have ended up misused, abused or desecrated.

Documents reviewed for this article indicate that those figures are vastly understated. The extent of BRC's operation surprised even investigators who raided the Phoenix-based company in 2014.

There, agents discovered 10 tons of frozen human remains – 1,755 total body parts that included 281 heads, 241 shoulders, 337 legs and 97 spines.

Applying a state forfeiture law, authorities hauled away the contents of BRC's freezers, filling 142 body bags. One bag held parts from at least 36 different people.

The seizure was so large that officials struggled to properly handle the body parts. When plans to cremate the remains stalled, officials brought three walk-in freezers to a military base and stacked the body bags inside, one atop another. Parts from 851 different people remained in those freezers for almost three years before they were cremated.

The raid on BRC was part of a broader federal probe into the suspected practices of one of its clients, Arthur Rathburn. A Detroit body broker, Rathburn has pleaded not guilty to charges of defrauding customers. During a 2013 search of Rathburn's warehouse, federal agents found rotting body parts along with four preserved fetuses, confidential photographs reviewed by Reuters show. It is not clear how Rathburn acquired the fetuses or what he planned to do with them. He was indicted for allegedly selling diseased body parts without warning buyers. His trial is set for January.

After the BRC raid, the company went out of business. Its founder and former owner, Stephen Gore, later pleaded guilty to fraud – not for selling body parts but for misleading customers by shipping them contaminated specimens. His punishment: probation. He is expected to testify at the Rathburn trial.

As Reuters reported last year, BRC also sold body parts to U.S. Army contractors for military

experiments. A Pentagon spokeswoman said BRC provided the body parts “under false pretenses,” misleading the Army that consent had been secured for donors to be used in destructive tests.

Among the parts BRC sold for the Army experiments were the heads and spines of Conrad Patrick and Leon Small, a 71-year-old retiree who had once managed a furniture factory.

On the consent forms Patrick and Small signed, each man checked a box stating that he did not wish to be used in military or destructive tests, records show.

But just days after Patrick and Small died, a BRC employee called their widows and persuaded them to amend the forms so their husbands could be used by the military, according to recordings of the calls reviewed by Reuters. The widows said the calls came during a traumatic time.

“I didn’t understand what they were talking about,” Dona Patrick said. “But I said ‘OK.’”

Bodies or parts from at least 20 BRC donors were used without their consent in Army experiments, Reuters found. Parts from Small and Patrick, however, were not. The military halted testing when it learned of the raid at BRC.

The shoulders of both men were sent to a for-profit surgical training company in Nevada.

The widows, Karen Small and Dona Patrick, are among two dozen next of kin who said they were surprised to learn that BRC profited from a relative’s donated body.

“They prey on people that have no money, that are poor, that have no insurance – like us,” Patrick said.

Family members of some donors said BRC employees led them to believe body donation was regulated by federal and state authorities, and that selling body parts is illegal. Based on those pitches, the relatives said they believed the remains wouldn’t be sold. In truth, there are virtually no regulations on the body trade.

“It’s a horrible thing,” Small said. “Sick.”

<b>HEADLINE</b>	<b>12/27 Social Security beneficiaries hit record</b>
<b>SOURCE</b>	<a href="https://www.cnsnews.com/commentary/terence-p-jeffrey/social-security-beneficiaries-hit-record-61859250">https://www.cnsnews.com/commentary/terence-p-jeffrey/social-security-beneficiaries-hit-record-61859250</a>
<b>GIST</b>	<p>The number of Social Security beneficiaries hit a record 61,859,250 in November, according to data released by the Social Security Administration.</p> <p>At the same time, according to the Bureau of Labor Statistics, with unemployment at the lowest rate since 2000 (4.1 percent), there were 126,827,000 full-time workers in the United States (including government workers). Yet that equaled only 2.05 full-time workers for each person receiving Social Security benefits.</p> <p>Even when all 153,918,000 people who had jobs in November are considered (counting both full- and part-time workers), the ratio of workers to Social Security beneficiaries was about 2.49 to 1.</p> <p>The record 61,859,250 Social Security beneficiaries in November, included 45,439,781 retired workers and their dependents; 5,992,862 survivors of deceased workers; and 10,426,607 disabled workers and their dependents.</p> <p>The Social Security program has two primary elements: Old Age and Survivors Insurance and Disability Insurance. Each of these are supposed to be supported by a "payroll tax" imposed on a worker's earnings.</p> <p>The payroll tax for the OASI is 10.03 percent and is split so that one half is deducted from a worker's</p>

paycheck and the other half is paid to the government by the employer. The payroll tax for DI is 2.37 percent and, like the OASI tax, is split between a deduction from a worker's paycheck and a payment made directly by the employer.

In total, the worker and employer must pay the government 12.4 percent in taxes (on the first \$127,200 a worker makes) for the combined OASDI tax. Self-employed Americans pay the entire 12.4 percent directly.

But this is no longer enough, says the Social Security board of trustees, which includes the commissioner of Social Security and the secretaries of the Treasury, Labor and Health and Human Services.

In the past, when Social Security ran surpluses, the federal government loaned the surplus to itself so it could spend it immediately on other government programs.

In their 2017 report, the Social Security board of trustees puts it this way: "The Department of the Treasury invests trust fund reserves in interest-bearing securities issued by the U.S. Government."

Without the "interest" the government pays itself back on the money it has already spent from previous Social Security surpluses, the Social Security program would not have enough money now to pay all the current benefits it owes.

"The 2016 excess of total income over cost for the year was \$35 billion," said the trustees' report. But "total income" — as the report calls it — includes the interest the government pays itself.

"However, when interest income is excluded," the report admitted, "Social Security's cost is projected to exceed its non-interest income throughout the projection period, as it has since 2010. For 2016, cost for the year exceeded non-interest income by \$53 billion. For 2017, total income for the program is projected to exceed cost for the year by \$59 billion, and non-interest income is projected to be \$27 billion less than program cost for the year."

The trustees' report estimated that the Social Security program faces a \$12.5 trillion shortfall over 75 years.

"Through the end of 2091, the combined funds have a present-value unfunded obligation of \$12.5 trillion," said the report.

"If actions are deferred for several years, the changes necessary to maintain Social Security solvency become concentrated on fewer years and fewer generations," it said.

The report politely recommended that Congress raise taxes, cut benefits, take money from elsewhere, or use a combination of these means, to pay for Social Security.

Going into the Christmas weekend, the federal debt was \$20,492,874,492,282.58.

That equaled approximately \$133,142 in debt for each of 153,918,000 people who had a full- or part-time job in the United States in November.

<b>HEADLINE</b>	<b>12/27 Shocking scale homelessness in L.A.</b>
<b>SOURCE</b>	<a href="http://www.dailymail.co.uk/news/article-5214593/Christmas-Day-2017-Downtown-Los-Angeles.html">http://www.dailymail.co.uk/news/article-5214593/Christmas-Day-2017-Downtown-Los-Angeles.html</a>
<b>GIST</b>	Rubbish bags piled up by the pavements and littered across streets. Tents erected in clusters where people have camped down for the night.  Dozens of directionless residents congregating by the roadside and wandering into the road.

This is what Christmas Day looked like for thousands of homeless people in the dark and dingy underbelly of Downtown Los Angeles this year.

The shocking footage - captured using a car dash camera - shows the brutal reality of life on the street for some 20,000 people in the notorious Skid Row district.

Shot on 5th Street, 6th Street and San Pedro Street, it is a stark glimpse into the day-to-day existence of some of the country's poorest citizens - including women and children.

This area of LA's central business zone is considered to be one of the most dangerous places to live in the city.

In Skid Row - one of the notorious homeless hotspots in the area - nine toilets are shared by some 2,000 people, according to a June report titled 'No Place to Go'.

A lucky few will find food and somewhere warm to sleep at shelters and rescue missions. But many are left to navigate the industrial sprawl and smoke alone.

The three-minute clip was originally published on Instagram by LA street artist Plastic Jesus then on LiveLeak by Nick Stern in the 'Citizen Journalism' video category.

It had only been live for 10 hours when it was viewed nearly 40,000 times.

In one frame of the viral footage, a man can be seen pushing a wheelchair in the middle of the road. Another wheelchair-bound man reclines listlessly on a street corner while women file their thin-looking children through the crowds.

Makeshift canopies - often simply sheets erected on poles - are packed in tightly beside one another in endless rows.

The rising cost of rent and housing in California is also forcing middle class residents into alternative accommodation.

Workers end up living in their cars by the roadside and hundreds of people - including nurses and chefs - sleep in parking lots in affluent areas like Santa Barbara.

For example, nursing assistant Marva Ericson has been sleeping in her Kia for the past three months. She showers at her local YMCA then gets dressed in her hospital scrubs for work.

The problem is so widespread that a Safe Parking Program was introduced in the area 12 years ago. It allows clients to stay overnight in the parking lots of churches, not-for-profits and government offices. In Santa Barbara alone, there are 23 parking lots currently used for the program.

Though ranked as one of the wealthiest nations, the US is home to some of the poorest communities in the world.

<b>HEADLINE</b>	<b>12/27 San Diego border crossings backlog</b>
<b>SOURCE</b>	<a href="http://www.latimes.com/local/lanow/la-me-border-crossing-20171227-story.html">http://www.latimes.com/local/lanow/la-me-border-crossing-20171227-story.html</a>
<b>GIST</b>	So many people fleeing persecution in their home countries have asked for help in San Ysidro in recent weeks that federal officials have not been able to process all of them, leaving some stranded and running out of money while they wait in Tijuana.

U.S. border officials are trying to work through the backlog, but they can go only as fast as migrants can be processed and moved from temporary holding cells to immigration detention.

An official with U.S. Customs and Border Protection said the agency remains committed to meeting the care and safety needs of people in custody, and is working actively with partners, including Immigration and Customs Enforcement, to resolve the backup.

“There are potentially a number of reasons causing the San Diego area ports of entry to reach capacity; we do not have a definitive reason to offer at this time,” the official added.

Because of the backlog, close to 100 migrants lined up last week in the plaza outside the walkway that leads to PedWest, the pedestrian border crossing that opened earlier this year, Tijuana media outlets reported. Migrants slept in line, afraid of losing their places and having to wait longer for CBP to process them.

Then, Mexican officials told them they couldn’t stay in the plaza.

On Monday of last week, about 25 migrants were jailed overnight for waiting in the plaza outside the port, according to several Eritrean migrants.

When someone arrives at a port without documents for entry, CBP officials interview that person, take photographs and fingerprints and check law enforcement databases for records. If the person reports being afraid to go back to his or her home country, CBP is required by law to transfer that migrant to other federal agencies for a potential asylum case.

Most of the asylum process happens once the person has been transferred to Immigration and Customs Enforcement custody, and back-ups in that transfer system can leave CBP with limited space in its temporary holding cells at the border. Large groups of migrants arriving at once can also clog the system.

In the fall of 2016, San Diego’s ports were overwhelmed by thousands of Haitian migrants. In partnership with Mexican officials, CBP established a ticketing system that scheduled appointments for migrants to be processed. As of November, the most recent data available from CBP, arrivals hadn’t reached the levels of the wave of arriving Haitians.

In October 2016, more than 6,000 people came to San Diego’s ports of entry asking to come in despite not having documents permitting entry to the U.S. That number included asylum seekers — CBP does not distinguish between those seeking asylum and other “inadmissibles” in its data collection. (In addition to asylum seekers, inadmissibles are those looking for better economic opportunities or anyone else who has asked to enter the U.S. at a port without the proper documents.)

In November 2017, the number of people deemed inadmissible was 2,824, more than double the low of 1,313 reached in March of this year.

Under current policy, asylum seekers are detained by ICE until they get results from credible fear interviews, which determine the likelihood that they will win their cases in immigration court.

If asylum seekers don’t pass the interviews, they are sent back to their home countries. If they do pass, many stay in detention for the remainder of their cases, which can take a year or more to finish. Some are released from detention on parole or by paying bond while they wait to tell their stories to immigration judges.

Asylum seekers, like refugees, must prove that they’ve been persecuted or fear persecution because of their race, religion, nationality, political opinion or membership in a particular social group.

Some of the migrants from African countries expressed frustration that they were the ones left outside after Mexican officials intervened.

	<p>“We are human beings,” said another man from Eritrea. “They don’t respect. I’m feeling racism here, a big discrimination here. We don’t want to be here in Mexico. Our target, our way is U.S.A.”</p> <p>When Tijuana media first reported the line of migrants, many of those interviewed were Mexican asylum seekers fleeing gang violence in other parts of the country. By Friday, most of them did not appear outside the port.</p> <p>An official from Mexico’s immigration agency told a Mexican media outlet that his agency had asked CBP to find a way to take in more people because of concerns about how migrant children waiting in line could be affected when temperatures drop overnight.</p> <p>The group of Eritreans and Cameroonians outside El Chaparral on Friday said many of those who didn’t make it into the U.S. had traveled on to Mexicali or even Texas to try at other ports.</p>

<b>HEADLINE</b>	<b>12/26 Disney resorts add new security policy</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/travel/2017/12/26/disney-resorts-add-new-security-policy-removes-do-not-disturb-signs-from-rooms.html">http://www.foxnews.com/travel/2017/12/26/disney-resorts-add-new-security-policy-removes-do-not-disturb-signs-from-rooms.html</a>
<b>GIST</b>	<p>Disney has started updating the security policies at several of its resorts in Walt Disney World.</p> <p>Guests staying at one of the three monorail hotels – the Grand Floridian, Polynesian and Contemporary resorts – near the Magic Kingdom have already experienced the tighter security policies, which include the removal of the “Do Not Disturb” door sign. The markers have been swapped out for “Room Occupied” signs that will alert maintenance and staff that guests are currently in their rooms, but will not stop Disney staff from coming in.</p> <p>The sign accompanies another new policy that requires Disney employees to enter each hotel room at least once a day to ensure “the safety and security of guests and property,” Walt Disney World News Today reports.</p> <p>Under the old rules, employees would pass by rooms marked with the “Do Not Disturb” sign. However, now Disney says “the hotel and its staff reserve the right to enter your room for any purpose including, but not limited to, performing maintenance and repairs or checking on the safety and security of guests and property.”</p> <p>Though guests will no longer have the option to keep staff out, the company assures that its guests will be given notice prior to entering the room by knocking and announcing that they are coming in, WDWNT reports.</p> <p>Some have reportedly hypothesized that the tightened security measures are a response to the Las Vegas shooting at Mandalay Bay that claimed the lives of 58 people earlier this year. According to WDWNT, the monorail resorts have similar vantage points into crowded areas. However, Disney officials have not made any statement as to why they are introducing the new policies.</p> <p>The changes are expected to roll out to other Walt Disney World Resort Hotels in the coming weeks, but some Disney guests are already balking at them</p>

<b>HEADLINE</b>	<b>12/28 Fear: bitcoin use in terror financing</b>
-----------------	--

SOURCE	<a href="https://business.inquirer.net/243182/fears-bitcoin-use-terror-financing">https://business.inquirer.net/243182/fears-bitcoin-use-terror-financing</a>
GIST	<p>The global bitcoin craze has attracted almost everyone, from mom-and-pop traders to giant investment banks.</p> <p>Promoters of bitcoin and other cryptocurrencies tout them as being safe and secure, and without oversight from financial regulators. But there is some concern that these very advantages could be exploited by terrorists to transfer funds from one place to another.</p> <p>Financial intelligence experts from the region say this is already happening, with several suspicious financial transactions detected recently.</p> <p>Some of these experts gathered in Malaysia last month for the Third Counter-Terrorism Financing Summit. The security experts from 35 countries unanimously agreed that the first step to disrupting militant operations is by cutting off their funds.</p> <p>A new alliance between Australia and South-east Asia has also been formed to directly target and disrupt the funding lifeline of terrorist groups by denying them access to the international financial system and other sources of funds. Sources told The Straits Times that the high degree of anonymity offered by digital currencies makes them a possible preferred avenue for militants in South-east Asia.</p> <p>“The number might not be big but we know it’s picking up. Their ultimate goal is to make sure that these funds get where they’re supposed to be,” said one source.</p> <p>“Small or big, it can help move any terrorism planning to the next level – launching attacks.”</p> <p>While the surge in the value of bitcoins and similar cryptocurrencies has garnered widespread media attention, security experts say the terrorists use digital currency not to make money, but for ease of moving funds between borders without the regular banking scrutiny.</p> <p>For operational reasons, officials declined to reveal the locations and frequency of such transactions. But the identity of some of these financial movements on the Web has been determined, said a second source.</p> <p>“Special equipment and database are already in place to help analyse these patterns. Identity is key to uncovering terrorism activities. We can monitor and trace the origin of the fund but to know who’s behind it is very tricky,” he said.</p> <p>“We have all these equipment in place, but it’s still very hard to ‘crawl’ in the dark Web market,” the source added.</p> <p>Malaysian criminologist P. Sundramoorthy said the consequences of militants or sympathisers switching to the use of cryptocurrency would be devastating as terror groups could be expected to execute attacks after receiving the funds.</p> <p>“Given that cryptocurrency offers a high degree of anonymity and is popular and user-friendly, measures to control it must be put in place as soon as possible. They will always find a way to exploit such channels. We can’t eliminate the use but we need to limit it.”</p> <p>Still, some experts say the issue might have been played up.</p> <p>In a recent study by the Royal United Services Institute (Rusi), the British intelligence think-tank suggested that there is little link between cryptocurrency and terrorism. It said the claims that bitcoin is funding terrorism are greatly exaggerated.</p> <p>Mr David Carlisle, an independent consultant with Rusi, said in a March 2 commentary: “Treating cryptocurrencies as an exceptional threat creates the misleading impression that more conventional financial products are not already equally, or more, vulnerable to terrorist exploitation.”</p>

A regional security source acknowledged that most militants are indeed still channelling funds via conventional banking and money remittance services.

Still, it has been noticed that digital currency has also been used as a means of transfer.

“We still see most of them funding their operations by taking personal loans, selling their belongings and so on. But to say the possibility of these militants turning to the dark Web is little or unlikely, that’s dangerous as we’re already seeing suspicious movements which we believe are terrorism fundings,” he said. “They will always try to find new ways to exploit technology to materialise their sick agenda.”

The danger of terrorist financing can be gleaned by the capture of Marawi in the southern Philippines by militants that ended in October after a five-month siege.

The Associated Press reported last month that Philippine military chief Eduardo Ano said at least US\$1.5 million (S\$2 million) was sent by terrorist group Islamic State in Iraq and Syria to finance militants planning the Marawi attack.

As Malaysia begins to impose controls over the growing use of digital currencies, Bank Negara Malaysia (BNM), its central bank, has required that conversions of cryptocurrencies into cash must be reported under the strict transactions under anti-money laundering laws.

Deputy Home Minister Nur Jazlan Mohamed said: “BNM has announced measures that would regulate the use of cryptocurrencies in Malaysia, especially the conversion of cryptocurrencies into cash and other equivalents. This measure will help the police and other enforcement agencies to manage terrorism financing.”

<b>HEADLINE</b>	<b>12/27 Bizarre treason cases Russia hacking</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/bizarre-treason-cases-tied-russian-election-hacking-759011">http://www.newsweek.com/bizarre-treason-cases-tied-russian-election-hacking-759011</a>
<b>GIST</b>	<p>Four Russian hackers have been rotting away in a notorious prison for more than a year—and they are either traitors to their country for telling U.S. intelligence agencies about Russian meddling in last year's U.S. election or just pawns in a bizarre power game by President Vladimir Putin.</p> <p>Almost nothing about the cases against Sergei Mikhailov, Dmitry Dokuchaev, Ruslan Stoyanov and Georgy Fomchenkov is known, except that all four are being held on charges of treason. Their lawyers won't talk about details of the cases, and even the legal papers haven't been made public. Newsweek spoke to one of the men's lawyers, and he wouldn't even confirm the name of his client, let alone whether he pleaded guilty or not guilty.</p> <p>The trials are at the core of the Russian election-hacking scandal, which has roiled American politics since even before Election Day last year. But the cases also may reveal Putin's darkest political instincts. The Russian media, which are largely controlled by the Kremlin, say the men are spies. Others say they are pawns.</p> <p>Then again, in Putin's Russia, they may be both at the same time.</p> <p>This much is known: Mikhailov and Dokuchaev were officers in Russia's Federal Security Service, the notorious FSB. Fomchenkov is a cyberexpert who also worked for the security agency. And Stoyanov is a cyberexpert at Kaspersky Lab, a software company that the U.S. government believes allows Russian intelligence access to customers' computers and, according to Bloomberg, has been working closely with Russian agents.</p> <p>Such pedigree puts the four men at the heart of Russia's meddling in the 2016 presidential election, which</p>

the U.S. intelligence community believes was orchestrated at the highest levels.

So why are they in prison?

The arrests came around the same time that the U.S. intelligence community reported on Russian meddling, specifically on how Democratic National Committee emails were stolen by hackers and published by WikiLeaks during the presidential campaign. No individual hackers were ever identified.

Then, in January, the arrests of the four men were made public in Russia, prompting rumors that they were connected to the hacking. But if Putin was behind the hacking, why would he imprison the hackers?

A possible answer came this month, when a Russian media outlet, The Bell, reported that the four men may have confirmed Russia's role in the hacking to U.S. intelligence.

Citing two sources, the website reported that "the men passed the information about last year's Russian attacks on the Democratic National Committee." But that Bell report doesn't necessarily ring true.

Experts familiar with Russian intelligence practices are skeptical of the claims that the men had worked with U.S. intelligence, given Russia's past history of privately handling potential spies and not using the courts, even ones veiled in secrecy.

"In my experience, over years and years they rarely catch spies and deal with them in that sort of open legal way," said John Sipher, a former CIA operative who ran the agency's Russia program for several years.

And, worse for Putin, putting spies on trial and leaking details to the press makes it more difficult to recruit future hackers, which the Russian government reportedly does through handlers.

But then again, putting spies on trial and leaking details to the press allows Putin to flaunt his power.

"He definitely wants his population to realize that he's important on the world stage, that he's powerful, and that he can control what happens in the United States," Sipher said. "They could be trying to deflect from something that obviously is more covert and more real, whereas this stuff is already out there."

Russia has never directly confirmed its role in the hacking campaign, but at times it has sought to subtly take credit. Putin told reporters in June that maybe "patriotically minded" private Russians hacked the U.S. political system, a seemingly tongue-in-cheek denial.

So which is it: Putin cracking down on treason or pretending to be disciplining rogue hackers? Another clue came from a different case this month when an accused hacker, Konstantin Kozlovsky, said that Dokuchaev had expressly ordered him to steal emails from the Democratic National Committee for the Kremlin.

But even that claim may be part of a larger game being played by Putin. The allegation by Kozlovsky came from an apparent audio recording and handwritten note that popped up on his Facebook page nine months after Dokuchaev was arrested—a posting that suggests tampering because Kozlovsky is being held in a high-security prison, where detainees typically don't have access to the internet.

Some believe the Facebook posts are actually misinformation from the Kremlin. But then again, they may just be information: The U.S. intelligence community has never said how it was so certain about Russian hacking, but most experts assume that federal agencies had sources inside Russian intelligence who confirmed key details of the hacking campaign.

All four of the men have ties to Russia's hacking underworld, a hybrid community of government employees and contractors viewed by cyberexperts as one of the best in the world.

Mikhailov was a key figure running the FSB's cyberoperations through its Center for Information Security. The FSB has been tied to Russian hacking group Cozy Bear, one of the attackers behind the political hacking that yielded the Hillary Clinton campaign's emails released by WikiLeaks.

Dokuchaev is on the FBI's most wanted list, accused of having been involved in a hack of Yahoo's systems that compromised the accounts of millions of users.

Russian hackers are generally recruited by government handlers after they are caught engaging in financial crime, according to cybersecurity experts. The handlers can then use the hackers, without directly employing them, while maintaining some plausible deniability for Russia's government.

"It really makes it challenging for the U.S. intelligence community to understand the scope and size of their cyberforce," said Jeff Moulton who runs Louisiana State University's Transformational Technology and Cyber Research Center. "It gives them expertise that they probably don't have. The criminal element is always more sophisticated."

All four of the men and their lawyers were required to sign special security agreements preventing them from discussing the cases, including the specific nature of the charges that keep them at Lefortovo Prison, which was infamous as a torture facility for FSB's predecessor, the KGB.

Ivan Pavlov, a lawyer for one of the four men, told Newsweek that he could not even reveal his client's identity, adding that the "strict conditions" of the court bar him from talking about the case at all. But he did tell Newsweek that his client "has a hope that everything will be resolved without any public noise."

That resolution, and the amount of noise it makes, will likely be decided by one man, Vladimir Putin.

<b>HEADLINE</b>	<b>12/27 Healthcare cybersecurity action plan</b>
<b>SOURCE</b>	<a href="https://healthitsecurity.com/news/crafting-a-strong-healthcare-cybersecurity-action-plan">https://healthitsecurity.com/news/crafting-a-strong-healthcare-cybersecurity-action-plan</a>
<b>GIST</b>	<p>December 27, 2017 - Following recent research showing that 83 percent of physicians report they have experienced a cybersecurity attack, AHIMA released a healthcare cybersecurity action plan to assist entities in preparing for potential threats.</p> <p>Implementing an information governance program will be critical, AHIMA stressed. A holistic approach to data security can greatly assist organizations of all sizes work toward keeping sensitive information secure.</p> <p>Smaller healthcare organizations, such as rural hospitals or single-physician practices can find it much more difficult to maintain HIPAA compliance, said AHIMA IG Advisors Senior Director Kathy Downing, MA, RHIA.</p> <p>"Often times, those smaller organizations can't necessarily hire full-time staff to manage privacy and security," Downing told HealthITSecurity.com.</p> <p>Those smaller entities are also working to transfer over to electronic health records and are likely finding it challenging to implement the necessary cybersecurity tools. Larger organizations cannot always prevent hacks either, which shows how much more difficult it could be for the small facilities, she said.</p> <p>AHIMA was pleased though when the HHS Cybersecurity Task Force report released earlier in 2017 noted the need for information governance programs within the industry.</p> <p>"Attackers coming in aren't necessarily coming straight to an attack on the electronic health record," Downing explained. "They're often getting in through other systems. The Banner Health hack, for example, came in through the credit card machines in the cafeteria."</p>

“There’s just a lot more that needs to be done,” she continued. “It’s not just an IT issue. It’s very much a people, process, and technology issue; all three.”

Information governance is a broader view of information, Downing pointed out. Contrarily, HIPAA regulation is focused on PHI, clinical information, or electronic health information. Information governance requires an entity to look at all of the organization’s information assets. This includes where all information is stored and even employee information.

“Information governance for healthcare includes all of our information users,” she stated. “A physician practice may be using a business associate to do billing or collections. Information governance is going to say that those vendors in the healthcare space need to also have a robust information governance solution program. It’s bigger than just the physician practice. It’s all of us and we’re all interoperable. We’re all sending information from here to there.”

“That is the ultimate goal related to patient engagement and reducing costs in healthcare,” Downing added. “But with that, we need a more broad information governance view.”

## RISK ASSESSMENTS AND INFORMATION GOVERNANCE

A proper risk assessment is an essential step for creating a robust approach to cybersecurity, Downing said. Having the right information inventory and knowing where that information flows is the first part of performing a risk assessment, she added.

“The risk assessment piece under HIPAA doesn’t mean just your HER,” Downing explained. “You’ve got other systems that are interconnected where that information is and unless you really understand where it is and where it’s flowing, you can’t do an accurate risk assessment.”

“Information governance would go even further to say, it’s not just about electronic health information,” she continued. “It’s about the paper and where the paper’s stored.”

Healthcare data breaches can happen because a physician stores medical records in a shed with just a simple lock on the door, Downing pointed out. Other times a data breach occurs because patient records are improperly disposed of in a dumpster.

Paper records are an important part of an organization’s overall information governance program, she stressed. Record retention on the whole – including paper and electronic – needs to be a key focus area.

“We cannot keep everything forever in the big data world that we’re in now with the electronic health records,” Downing said. “It’s not like it was before, where you take your records from 1930 and you store them offsite with a vendor and you just set them there and forget about them.”

“Now, you’ve got these electronic records,” she continued. “You have to back them up. You have to have a disaster recovery plan. You have to have a business continuity plan. You have to decide who has access. It’s a much bigger issue.”

Legacy systems can also create data security concerns with regard to record retention, Downing added.

“Systems that are outdated, out of their support framework, or the vendor is out of business or no longer supports it, organizations still have patient information in it. They need to maintain that.”

Cyber criminals will find outdated systems or unpatched software. Smaller practices in particular need to start understanding potential dangers with record retention and start destroying. This includes emails and even employee records not just – clinical records. All of those pieces could put an entity at risk, Downing warned.

## ENSURING PROPER USER ACCESS MEASURES

Insider threats are also potential cybersecurity threats of which healthcare organizations must be mindful.

“The threats are real and they’re coming constantly,” Downing said. “The hackers may send out one million emails just to have one innocent person think they’re resetting their password. That employee goes in and puts their user ID and password in. Then, the bells and whistles go off on the hacker end because the hackers are in once they have that.”

Staff members who have administrative privileges must be especially careful, she added. Employees who are able to access sensitive data, log in to more systems, and even set up log in privileges for other employees could inadvertently give hackers access to more information.

Covered entities must also ensure that employees only have access to information that they need for their specific job function. When staff members leave their position or leave the organization entirely, their credentials will also need to be updated.

“Access creep,” is a challenge for healthcare organizations, Downing explained. This is when users may have changed jobs and they kept their old access. Then the users got their new access. All this access keeps increasing, she said.

“The other kind of access creep is where you bring in a new system and you set everybody up with all this access,” she continued. “The organization may not really know how its work flow is going to be. Then, it goes live and two years later, people have access to things they don’t need access to. It could be setting up master code tables or even user access modifications.”

Privacy officers, security officers, compliance officers, and leaders across all of healthcare need to ensure that each individual only has access to information that is absolutely necessary. With the exception of one-off situations, such as when one staff member is on vacation and someone needs to cover certain tasks, organizations must remain vigilant.

<b>HEADLINE</b>	<b>12/27 Artificial Intelligence fueling cyber race</b>
<b>SOURCE</b>	<a href="https://www.thestar.com/business/2017/12/27/artificial-intelligence-is-fuelling-new-cybersecurity-race-say-experts.html">https://www.thestar.com/business/2017/12/27/artificial-intelligence-is-fuelling-new-cybersecurity-race-say-experts.html</a>
<b>GIST</b>	<p>MONTREAL—Technological advances in artificial intelligence are fuelling a new race between hackers and those toiling to protect cybersecurity networks.</p> <p>Cybersecurity is always a race between offence and defence but new tools are giving companies that employ them a leg up on those trying to steal their data.</p> <p>Whereas past responses to cybercrimes often looked for known hacking methods long after they occurred, AI techniques using machine learning scan huge volumes of data to detect patterns of abnormal behaviour that are imperceptible to humans.</p> <p>Experts expect machines will become so sophisticated that they’ll develop answers to questions that humans won’t clearly understand.</p> <p>David Decary-Hetu, assistant professor of criminology at the University of Montreal, says defenders have an edge right now in using artificial intelligence.</p> <p>“But who knows what’s going to happen in a few years from now,” he said in an interview.</p> <p>“The main issue is that if you’re defending a system you have to be good 100 per cent of the time, but</p>

when you're attacking the system you only have to be successful once to get in."

Decary-Hetu said a growing list of corporate and government officials who say infiltrations are their top worry, including Bank of Canada governor Stephen Poloz, have a very good reason to fear.

The Bank of Canada warned in its semi-annual review released this month that the high degree of interconnectedness among Canadian financial institutions means any successful cyberattack could spread widely throughout the financial system.

Reports suggest cybercrime costs the Canadian economy between \$3 billion and \$5 billion a year, including ransom paid to foreign criminals.

Hacks of Sony Pictures, Uber, Ashley Madison, Yahoo and multinational retailers have sparked unsettling headlines about security of personal information.

One of the latest to face scrutiny is global credit-reporting firm Equifax. Hackers accessed the personal information, including names, social insurance and credit card numbers, as well as usernames, passwords and secret question/secret answer data of 19,000 Canadians and 145.5 million Americans.

Current detection systems tend to only recognize improper activity based on past events, often long after the damage is done.

An example of this is Equifax, which discovered the breach in July, months after hackers first infiltrated the system. It only notified the public in early September.

Niranjan Mayya, founder and CEO of Toronto-based Rank Software, said it takes on average 143 days for a breach to be detected.

The challenge is growing as the number of connected devices in the world continues to soar.

"Clearly the old style techniques of looking at cybersecurity threats and having people go through each threat aren't working anymore, so automated means of detecting threats has become more and more important," he said.

David Masson, Canadian manager for U.K.-based Darktrace, said artificial intelligence will help to keep up with threats by quickly identifying and stopping attacks by picking up on subtle markers that identify bad behaviour.

He said his company's systems map a customer's entire network, including every user and device, to discern even the slightest deviations as they emerge.

Masson said AI is needed to keep up with threats by automating defence responses to growing machine-on-machine attacks launched by sophisticated hackers.

"You're kind of looking at a cyber arms race," he said in an interview.

"If you want to keep up with this threat and put the advantage back in the hands of the defenders you're gonna have to use AI."

Ontario-based utilities company Energy+ Inc. said installed Darktrace technology alerted it to a user going to a malware site in Russia and uploading undisclosed sensitive data to a third-party cloud provider that its existing security was unable to catch.

Some observers temper the current exuberance about AI, saying it's not a silver bullet and these are nascent days for the technology.

	<p>Receptiviti CEO Jonathan Kreindler says the hype around artificial intelligence has accelerated and has almost become a branding exercise for some companies that aren't even offering truly leading edge technology.</p> <p>"The term AI is now being applied to any sort of algorithmic reasoning unfortunately," said Kreindler.</p> <p>His firm uses AI to scour writings for unconscious use of language to understand the psychological state of company insiders who are responsible for 80 per cent of cybersecurity issues.</p> <p>Canada's largest IT company, CGI Group, said artificial intelligence is a growing field of interest for customers, although the average client is in the fairly early stages of considering AI adoption in cybersecurity.</p> <p>CGI cybersecurity expert Andrew Rogoyski said that still puts them one step ahead of most hackers, who are typically interested in stealing data using the cheapest tools possible.</p> <p>Rogoyski added that he expects a strengthening of defensive mechanisms might force hackers to also adopt innovative techniques such as AI.</p> <p>"There's a race, it's been going on for 20 years plus and the race just keeps evolving. We keep leapfrogging each other," he said.</p>

<b>HEADLINE</b>	<b>12/28 Healthcare cybersecurity spending rising</b>
<b>SOURCE</b>	<a href="https://www.govinfosecurity.com/interviews/healthcare-cybersecurity-spending-rising-i-3818">https://www.govinfosecurity.com/interviews/healthcare-cybersecurity-spending-rising-i-3818</a>
<b>GIST</b>	<p>A new research report shows a majority of large healthcare provider organizations plan to boost 2018 spending for cybersecurity resources, including technology and staff, in an effort to keep up with the evolving threat landscape, says Ira "Gus" Hunt of Accenture Federal Services.</p> <p>The new report analyzing the plans of major U.S. healthcare systems was prepared by Pittsburgh-based Center for Connected Medicine in partnership with the Health Management Academy, to which Hunt provides support.</p> <p>Investments in cybersecurity talent and technology are "critically important," says Hunt, the former chief technology officer at the Central Intelligence Agency.</p> <p>"You've got to invest in technology on a continuum in order to keep pace with the cyber threats ... which are probably the fastest moving technology space out there," he says in an interview with Information Security Media Group. "Without some form of continuous investment to ensure that the technologies we bring to bear to protect ourselves are commensurate with the threats ... we're going to keep falling more and more behind."</p> <p>Investing in security staffing is vital as well, he notes. "With the right staff, right skills, and right knowledge, you can deal with almost any problem that happens - even the unexpected big surprises ... that come at you out of the blue," he notes.</p> <p>An ongoing hurdle, however, is the ongoing shortage of cybersecurity skills in the U.S. and elsewhere, Hunt says.</p> <p>With those challenges in mind, "it's imperative [that organizations] invest in automation and orchestration to ease the burden of day-to-day security work and allow healthcare organizations to focus their people on higher-level work ... to get ahead of the threats."</p>

<b>HEADLINE</b>	<b>12/27 Alaska key position in kingpin takedown</b>
<b>SOURCE</b>	<a href="https://kaplanherald.com/2017/12/27/alaska-brokers-play-key-position-in-taking-down-a-russian-cybercrime-kingpin/">https://kaplanherald.com/2017/12/27/alaska-brokers-play-key-position-in-taking-down-a-russian-cybercrime-kingpin/</a>
<b>GIST</b>	<p>Alaska federal law enforcement agents and prosecutors played a central role in a newly announced U.S. Justice Department effort to take down the Kelihos botnet, a global network of infected computers under the control of a Russian cybercriminal.</p> <p>The Kelihos botnet has been a source of criminal activity targeting computer users worldwide since at least 2010, according to the U.S. Justice Department. At times, 100,000 simultaneously infected devices were used to carry out spam attacks, including password thefts and installing ransomware on target devices, the department said.</p> <p>The man suspected of running the criminal enterprise, a Russian national named Peter Yuryvich Levashov, was arrested in Spain over the weekend.</p> <p>A criminal case against Levashov by DOJ remains under seal, but on Monday the department announced a civil complaint intended to block spam from the botnet.</p> <p>The U.S. Attorney's office in Alaska filed the civil complaint, which was the result of investigative work by Anchorage FBI cybercrime agents.</p> <p>A civil court order signed by an Alaska judge allowed the FBI to neutralize the botnet by cutting off communication between the infected computers and the operator. The FBI's New Haven, Connecticut office was also involved in the effort to dismantle the botnet.</p> <p>Why the FBI's Anchorage office?</p> <p>The office had the staff available and the technical expertise to do it, said Bill Walton, a supervisory special agent with the agency.</p> <p>Federal prosecutors also had jurisdiction in Alaska because the Kelihos malware infected the computers of hundreds of thousands of people around the globe, including some in Alaska.</p> <p>"If you've ever opened your email and received 7 million spam emails, you've gotten Kelihos spam," Walton said.</p>

<b>HEADLINE</b>	<b>12/28 Biggest DDoS attack in history?</b>
<b>SOURCE</b>	<a href="http://en.brinkwire.com/51258/biggest-ddos-attack-in-history-hammers-spamhaus/">http://en.brinkwire.com/51258/biggest-ddos-attack-in-history-hammers-spamhaus/</a>
<b>GIST</b>	<p>Anti-spam organisation Spamhaus has recovered from possibly the largest DDoS attack in history.</p> <p>A massive 300Gbps was thrown against Spamhaus' website but the anti-spam organisation was able to recover from the attack and get its core services back up and running. CloudFlare, the content delivery firm hired by Spamhaus last week to guard against an earlier run of DDoS attacks, was also hit, forcing it into taking the highly unusual step of dropping London as a hub in its network – as a Twitter update by CloudFlare on Monday explained.</p> <p>Spamhaus supplies lists of IP addresses for servers and computers on the net linked to the distribution of spam. The blacklists supplied by the not-for-profit organisation are used by ISPs, large corporations and spam filtering vendors to block the worst sources of junk mail before other spam filtering measures are brought into play.</p> <p>Spammers, of course, hate this practice so it's no big surprise that Spamhaus gets threatened, sued, and</p>

DDoS regularly. Those affected by what they regard as incorrect listings also object about Spamhaus' alleged vigilante tactics.

The latest run of attacks began on 18 March with a 10Gbps packet flood that saturated Spamhaus' connection to the rest of the Internet and knocked its site offline. Spamhaus's blocklists are distributed via DNS and widely mirrored in order to ensure that it is resilient to attacks. The website, however, was unreachable and the blacklists weren't getting updated.

The largest source of attack traffic against Spamhaus came from DNS reflection, launched through Open DNS resolvers rather than directly via compromised networks. Spamhaus turned to CloudFlare for help and the content delivery firm was able to mitigate attacks that reached a peak of 75Gbps, as explained in a blog post here.

Things remained calm for a few days before kicking off again with even greater intensity – prompting claims that collateral damage was being sustained by other services, sources including the New York Times claimed.

Spamhaus' site remains available at the time of writing on Wednesday. Steve Linford, chief executive for Spamhaus, told the BBC that the scale of the attack was unprecedented.

“We've been under this cyber-attack for well over a week. But we're up – they haven't been able to knock us down. Our engineers are doing an immense job in keeping it up – this sort of attack would take down pretty much anything else,” he said.

<b>HEADLINE</b>	<b>12/27 SKorea school for hackers hitting back</b>
<b>SOURCE</b>	<a href="https://www.theguardian.com/technology/2017/dec/28/best-of-the-best-the-south-korean-school-for-hackers-hitting-back-against-the-north">https://www.theguardian.com/technology/2017/dec/28/best-of-the-best-the-south-korean-school-for-hackers-hitting-back-against-the-north</a>
<b>GIST</b>	<p>At the fortified border between South and North Korea, students on a computer hacking course are instructed to peer northwards across a strip of empty land toward the enemy state.</p> <p>“Our country is divided and we are at war, but you can't see that division in cyberspace,” said Kim Jin-seok. “So we take them to see it in person.”</p> <p>Kim manages a program called Best of the Best, the goal of which is to train the next generation of so-called white-hat hackers, netizens with elite cybersecurity skills who are able and willing to defend South Korea against malicious hacking attacks, many of which are believed to come from North Korea.</p> <p>Such skills are in high demand in South Korea. The country is officially at war with the North and while the two sides only rarely exchange bombs or bullets, they are locked in a round-the-clock battle in cyberspace. As North Korea builds its nuclear and missile strength, it is also advancing its ability to launch disruptive attacks online.</p> <p>With the North's economy increasingly strangled by international sanctions, the country has almost no tax base and an expensive nuclear weapons program, meaning it has to seek alternative, often illegal, ways of generating income. North Korean hackers were linked to the theft of \$81m from Bangladesh's central bank in March 2016, and in December the US Trump administration identified North Korea as the culprit behind the WannaCry cyber-attack, which in May caused millions in losses. North Korea has denied involvement.</p> <p>North Korean hackers have been linked to leaks of credit card information and illegal ATM withdrawals in South Korea. “There are thousands of cyber-attacks in South Korea every day and most of them never get reported on the news,” Kim said. “Information security is the basis of economic development.”</p>

The government-funded counter-hacker training program was conceived in 2010 when North Korean hackers were switching gears from only targeting South Korean government entities to attacking private sector bodies. Of late, researchers have linked North Korean hackers to attacks on cryptocurrency exchanges.

South Koreans live each day amid the threat of North Korean attack, cyber or otherwise and in a country with among the highest internet and smartphone penetration in the world, they have no choice but to take the threat of hacking increasingly seriously.

A turning point in the cyberwar was an incident in 2013 when three television networks and two banks had their networks frozen while some ATMs and online banking portals went out of order.

“That was when we all realized how vulnerable we are,” said Lee Dong-geun, of the Korean internet and security agency, which an organization that works with the South Korean government to help private sector entities deal with cyber-attacks.

Graduates of the Best of the Best scheme are competing against hackers from a well-established North Korean training program. Martyn Williams, editor of North Korea Tech, compares the North’s scheme to the ways some countries train athletes for the Olympics. “The lack of computers and widespread internet access means hackers in North Korea do not organically learn their skills in their spare time at home. Instead, hackers rise to prominence through a series of government-led initiatives that begin at junior school and progress to university and beyond,” said Williams.

Best of the Best’s space in Seoul’s Gangnam district is a place where war training, competitive spirit and youthful exuberance come together. Covering the walls of the hallways are plaques from hacker competition victories around the world and photos of graduating classes. A large common area looks like a tech startup space, with leather couches and a ping pong table. Behind a nearby door is the cyberwarfare room, which is filled with clusters of tables covered in computer monitors; on the walls are lurid, blinking screens that relay real time data of online activity and any signs of threats.

Participants range in age from high school to their mid-twenties, an age when most South Koreans are preparing to do battle in the country’s fiercely competitive job market. But the program is a chance to learn from industry experts and build elite IT skills, and a graduation certificate from the program is well-regarded by employers.

But at the Gangnam centre, North Korea is the elephant in the room: a topic on everyone’s mind but almost never spoken of. Kim says it is difficult to establish conclusively that North Korean hackers are behind the attacks on the South, so there is no public blaming. Most attacks are carried out by computers with servers located in China, Kim said.

Analysts say North Korean cyber-attacks are a modern manifestation of the regime’s traditional tactics. “Asymmetric warfare goes back to the early days of North Korea, coming from the leaders’ history as guerrilla fighters,” said Andrew Salmon, a Seoul-based military historian and author of *To the Last Round*, a book on Britain’s role in the Korean war.

“For a weak country fighting a strong country, cyber-attacks are cost-effective, largely deniable and carry a low risk of retaliation,” Salmon said.

HEADLINE	<b>12/27 Jailed hacker: proof Russia hacked DNC</b>
SOURCE	<a href="http://amp.mcclatchydc.com/news/nation-world/national/article191857354.html?_twitter_impression=true">http://amp.mcclatchydc.com/news/nation-world/national/article191857354.html?_twitter_impression=true</a>
GIST	WASHINGTON - A jailed Russian who says he hacked into the Democratic National Committee computers on the Kremlin’s orders to steal emails released during the 2016 U.S. presidential election

campaign now claims he left behind a data signature to prove his assertion.

In an interview with Russia's RAIN television channel made public Wednesday, Konstantin Kozlovsky provided further details about what he said was a hacking operation led by the Russian intelligence agency known by its initials FSB. Among them, Kozlovsky said he worked with the FSB to develop computer viruses that were first tested on large, unsuspecting Russian companies, such as the oil giant Rosneft, later turning them loose on multinational corporations.

Kozlovsky first came to public attention in early December when word spread about his confession last Aug. 15 in a Russian courtroom that he was the person who hacked into DNC computers on behalf of Russian intelligence. The Russian was jailed earlier this year, alleged to have been part of a hacking group there that stole more than \$50 million from Russian bank accounts through what's called the Lurk computer virus.

The alleged hacker posted to his Facebook page in December a transcript and an audio recording of his confession during a pre-trial court hearing. He also confessed online to having hacked investigators looking into the crash of Malaysia Airlines Flight 17, brought down in July 2014 by a missile near the disputed Ukrainian border with Russia.

In written answers from jail made public Wednesday by RAIN TV, a Moscow-based independent TV station that has repeatedly run afoul of the Kremlin, Kozlovsky said he feared his minders might turn on him and planted a "poison pill" during the DNC hack. He placed a string of numbers that are his Russian passport number and the number of his visa to visit the Caribbean island of St. Martin in a hidden .dat file, which is a generic data file.

That allegation is difficult to prove, partly because of the limited universe of people who have seen the details of the hack. The DNC initially did not share information with the FBI, instead hiring a tech firm called CrowdStrike, run by a former FBI cyber leader. That company has said it discovered the Russian hand in the hacking, but had no immediate comment on the claim by Kozlovsky that he planted an identifier.

The newest allegations are potentially significant. If the FSB did in fact direct Kozlovsky, then it debunks Russian President Vladimir Putin's assertion that his government had nothing to do with hacking that all major U.S. intelligence agencies put at his feet. It also calls into question the view of a hack that was conducted as a closely held, organized FSB campaign directed from central offices. Kozlovsky says he worked largely from home, with limited knowledge of others and that the political hack was just part of larger relationship with the FSB's top cyber officials on viruses directed at other countries and the private sector.

"Based on my experience and understanding of professional intelligence operations, the blending of criminal activity with sanctioned intelligence operations is an old page out of the Russian intelligence-services playbook," said Leo Taddeo, chief information security officer for Cyxtera Technologies and a former head of cyber operations in the FBI's New York office. "What the defendant (in Russia) is describing would not be inconsistent with past Russian intelligence operations."

Kozlovsky's claims include an assertion that for the past seven years he was under the control of Major Gen. Dmitry Dokuchayev, who he said gave him orders to breach the DNC servers to interfere in the U.S. election process. A federal court in San Francisco in February issued an arrest warrant for Dokuchayev for his alleged role in a hack of Yahoo accounts. A month later the FBI put the former hacker-turned-spy on a Wanted poster for his alleged role in directing hackers. He was arrested in Russia in late 2016 on treason charges in a high-profile incident that included the arrest of another FSB cyber leader.

The jailed Kozlovsky told RAIN TV that he had a relationship with Dokuchayev that preceeded the latter's rise to a prominent post in the FSB.

<b>HEADLINE</b>	<b>12/27 Library Congress reins in Twitter archive</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2017/dec/27/library-congress-reins-twitter-archives-project/">https://www.washingtontimes.com/news/2017/dec/27/library-congress-reins-twitter-archives-project/</a>
<b>GIST</b>	<p>The Library of Congress is ending its practice of archiving every single public Twitter post after accumulating billions of tweets covering the platform's first dozen years of existence.</p> <p>“As the twelfth year of Twitter draws to a close, the Library has decided to change its collection strategy for receipt of tweets on December 31, 2017,” the institution announced Tuesday. “After this time, the Library will continue to acquire tweets but will do so on a very selective basis.”</p> <p>Twitter gave the Library of Congress an archive in 2010 containing every public tweet since its launch four years earlier, as well as access to subsequent tweets posted publicly by the platform's millions of monthly users.</p> <p>Twitter has changed substantially since it first partnered with the country's oldest cultural institution, however, and the Library of Congress said it no longer sees a need for archiving each and every one of the throngs of public tweets posted daily.</p> <p>“The Library continuously reviews its ongoing acquisitions, whether subscriptions to newspapers or the receipt of tweets via a gift. As a result of the review, the Library has determined that its initial Twitter collection will consist of a twelve-year snapshot of the beginning of one of social media's most important and transformative communication tools,” it said in a white paper explaining the decision.</p> <p>The Library of Congress will continue to archive certain tweets after Jan. 1, but will focus on posts that are “thematic and event-based,” including tweets concerning political elections, public policy matters or other issues of nation interest, it said in a statement.</p> <p>Twitter has gone from processing about 5,000 tweets a day in 2007, to more than 50 million tweets daily when it partnered with the Library of Congress in 2010. The platform hosted about 500 million daily tweets in 2013, at which point the Library of Congress had already amassed an archive of roughly 170 billion tweets and counting.</p>

<b>HEADLINE</b>	<b>12/27 Xero invoice as bait in email scam</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/email-scam-using-xero-invoice-as-bait-detected/article/733183/">https://www.scmagazine.com/email-scam-using-xero-invoice-as-bait-detected/article/733183/</a>
<b>GIST</b>	<p>A large email scam centered on a fake Xero invoice was detected by the firm Mailguard, the second such campaign using the popular cloud-based accounting software this month.</p> <p>The target receives an email with a Word document attached that is labeled as an invoice that contains malicious macros. The fake invoice is well crafted and contains the target's name along with an email address that appears to be from Xero, but is actually domain recently registered in China.</p> <p>Once opened the document does not try to illicit any type of payment from the victim, but contains a note informing the person that money will be deducted from their account in accordance with their supposed contract with Xero. Xero is a commonly used software platform so the cybercriminals social engineering plan is banking on either the target having used the software at some point, or is at least familiar enough with it to become curious enough to open the attachment.</p> <p>Mailguard did not say what type of malware is being dropped by the macro, but did say that a macro can be used to install anything from a trojan to ransomware.</p>

<b>HEADLINE</b>	<b>12/27 Irish zoo scammed; \$600,000 stolen</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/irish-zoo-scammed-nearly-600000-stolen/article/733191/">https://www.scmagazine.com/irish-zoo-scammed-nearly-600000-stolen/article/733191/</a>
<b>GIST</b>	<p>Most humans have a soft spot for animals. Cybercriminals are another breed obviously, as evidenced by the Dublin Zoo's computer system getting breached so that payments due it were electronically redirected to a criminal's account.</p> <p>Ireland's Economic Crime Bureau of its national police force, known as Gardaí, is investigating who intercepted various invoices totaling the Euro equivalent of approximately \$600,000 due to the zoo, which told the Irish Examiner last week none of its consumer records were compromised in the breach.</p> <p>The zoo alerted the authorities as soon as the discrepancies were discovered, and financial institutions helped recover a portion of the funds.</p> <p>The national police used the unfortunate incident as a wakeup call for all businesses.</p> <p>"Gardaí would like to advise all businesses, both large and small, that under no circumstance should you agree to change a bank account number for a supplier based on a phone call, email or other means without verifying such change with someone that is known to you in the supplier's company," the Gardaí added.</p> <p>The Dublin Zoo was founded in 1831 and today its 400-plus animals, many endangered species from all over the world, attracts more than 1 million visitors a year.</p>

<b>HEADLINE</b>	<b>12/27 Bad passwords déjà vu all over again</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/bad-passwords-still-common-at-the-close-of-2017/article/733387/">https://www.scmagazine.com/bad-passwords-still-common-at-the-close-of-2017/article/733387/</a>
<b>GIST</b>	<p>The worst password of 2016 remains the number one worst password of 2017 as "123456" tops the list of the most commonly chosen passwords spotted in data leaks.</p> <p>SplashData researchers found several version of the "1234" sequence passwords were among the top 30 most used passwords from an examination of more than five million passwords leaked by hackers in 2017, according to a recent report.</p> <p>Other bad passwords that haven't gone out of mass use included "qwerty," "letmein," "admin," "welcome," and "login."</p> <p>"Attackers will use the leaked terms, but they'll also create common variations on these words using simple algorithms." KnowBe4 CEO Stu Sjouwerman said in a Dec. 26 blog post. "This means that by adding "1" or any other character combinations at the start or end of basic terms, users aren't improving the security of their password."</p> <p>Researchers said that while more than five million passwords were leaked, the findings still give good insight into the poor decisions users are making when securing their online accounts.</p> <p>To help combat poor password use, website admins should ensure they offer two-factor authentications to prevent account compromise in the event that their credentials fall into the wrong hands and users should opt into using the option whenever available. In addition researchers called for more sites to block the use of simple and easy to use passwords or at least warn users they may be using potentially weak passwords.</p> <p>"Passwords like these are not only easily guessable, they're already in the password-cracking databases of any hacker worth his or her salt, alongside millions of other popular choices and dictionary words," independent researcher Graham Cluley said in an ESET blog post. "If you, or someone you know, is using any of the passwords above online then you need to take a long hard look at yourself in the mirror."</p> <p>Other passwords found among the top 100 worst passwords were an extensive collection of sports terms</p>

	such as football, baseball, soccer, hockey, Lakers, jordan23, golfer, Rangers, Yankees, car brands including Mercedes, Corvette, Ferrari, Harley, and various expressions such as iloveyou, letmein, whatever, and blahblah.

<b>HEADLINE</b>	<b>12/27 Trio net neutrality challenges from Wash.</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/855007/neutrality-challenges-coming/">http://mynorthwest.com/855007/neutrality-challenges-coming/</a>
<b>GIST</b>	<p>Two weeks after the FCC voted to repeal regulations on net neutrality, a trio of challenges are coming from Washington state.</p> <p>First, Senator Maria Cantwell plans to introduce a congressional resolution to undo the new rules. She already has 15 co-signers in the Senate.</p> <p>Second, the State of Washington is working to regulate internet providers under the state utilities commission to ensure they don't throttle or block any content.</p> <p>Finally, Representative Drew Hansen is putting the final touches on a bill that would make it illegal for internet providers to block or prioritize content.</p> <p>Even if the measures move ahead there could be pushback from the FCC and possibly a court challenge. When they repealed net neutrality, FCC Commissioner Michael O'Rielly stated he wouldn't stand for a "hodgepodge of state rules" on the issue.</p> <p>Net Neutrality regulations are designed to prevent service providers from showing favor to websites and apps. It is the principle that providers treat all web traffic equal.</p> <p>In 2015, the FCC approved rules that ensured service providers wouldn't manipulate web traffic and gave the commission the power to go after companies for questionable business practices that weren't explicitly banned, The Associated Press reports.</p>

<b>HEADLINE</b>	<b>12/28 Bitcoin takes a tumble</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2017-12-28/bitcoin-drops-as-south-korea-says-exchange-closures-are-possible">https://www.bloomberg.com/news/articles/2017-12-28/bitcoin-drops-as-south-korea-says-exchange-closures-are-possible</a>
<b>GIST</b>	<p>Bitcoin resumed its tumble on Thursday after South Korea said it was eyeing options including a potential shutdown of at least some cryptocurrency exchanges to stamp out a frenzy of speculation.</p> <p>South Korea has been ground zero for a global surge in interest in bitcoin and other digital currencies as prices surged this year, prompting the nation's prime minister to worry over the impact on Korean youth. While there's no immediate indication Asia's No. 4 economy will shutter exchanges that have accounted by some measures for more than a fifth of global trading, the news is a warning as regulators the world over express concerns about private digital currencies.</p> <p>Bitcoin fell as much as 9 percent to as low as \$13,828 in Asia trading, erasing modest gains after the South Korean release, composite Bloomberg pricing shows. The cryptocurrency had retraced some of its losses by 10:13 a.m. in London, trading down 4.5 percent to \$14,505. That puts the drop from a record high reached last week at about 26 percent.</p>

<b>HEADLINE</b>	<b>12/27 Forbes' 'richest terror groups'</b>
<b>SOURCE</b>	<a href="https://worldisraelnews.com/hezbollah-amas-rank-top-forbes-richest-terror-groups-list/">https://worldisraelnews.com/hezbollah-amas-rank-top-forbes-richest-terror-groups-list/</a>
<b>GIST</b>	<p>One of the more far-reaching consequences of former President Barack Obama's nuclear deal with Iran is on display in Forbes Israel's latest ranking of the richest terrorist groups in the world, as in 2017 Iran-backed Hezbollah leaped to the top of list with a whopping \$1.1 billion in revenue.</p> <p>That is not to say that all their income stems from Iran. Terrorist organizations in general also fund their purchase of arms, training and salary payments to their members from such criminal activities as drug smuggling, money laundering, kickbacks, kidnappings, 'protection', etc., just as organized crime does.</p> <p>But the nuclear deal, it should be recalled, allowed for the release of billions of dollars into Iran's state coffers from the lifting of internationally imposed sanctions, and the unfreezing of its assets abroad.</p> <p>This, in turn, allowed the world's largest sponsor of terrorism to open the spigots to its proxies, and the results can clearly be seen by comparing this year's "Top Ten" list with the previous one, made in 2014.</p> <p>Lebanese group Hezbollah, which has been fighting in Syria for years for Iranian ally Bashar al-Assad, was then ranked fourth, with \$500 million – only half of what it has today.</p> <p> Hamas has \$700 million</p> <p>The Gaza Strip's Hamas, meanwhile, is now in third place, having actually dropped a rung from 2014. (The Taliban now occupy second place, with a revenue of \$800 million). Forbes lists them as currently receiving about \$700 million a year, vs. a billion dollars three years ago. They have two well-known state sponsors, Qatar and, again, Iran. But in the decade since it took over Gaza, Hamas also became expert in extracting money from its own citizens.</p> <p>According to Forbes' 2014 report, Hamas makes most of its money from a sophisticated tax system aimed at, among other things, pocketing large portions of the international aid that flows into Gaza. It also runs hundreds of businesses, controls several banks, and has levies on all consumer goods entering the Gaza Strip. All in all, the report says, about 15% of Gaza's economy ends up in this organization's pocket.</p> <p>ISIS drops to 5th place</p> <p>There is a steep drop-off from the top three richest terror organizations to the bottom seven. Al-Qaeda and its affiliates are listed next with only \$300 million. The Islamic State used to be the richest terror organization the world has ever known, with an annual turnover of around \$2 billion in 2014, but its defeat in Iraq and subsequent relinquishment of territory have dropped it to fifth place with a drastic reduction to \$200 million.</p> <p>It should be noted that since this Radical Islamist group is Sunni, they are the enemies of Shiite Iran, so their funding had to come from independent sources – a major part of which came from black-market sales from the oil and gas fields they had taken over and have since lost. Now, says the report, their main sources of cash are donations and ransom money from kidnappings.</p> <p>The two non-Muslim organizations that made this year's list are the PKK (#6), which mainly fights in Turkey for Kurdish independence, and the REAL IRA (#10), which still aims to bring about a united Ireland by force, with a mere \$50 million in income.</p>

<b>HEADLINE</b>	<b>12/28 More nimble, more dangerous 'ISIS 3.0'</b>
<b>SOURCE</b>	<a href="https://www.vanityfair.com/news/2017/12/the-next-generation-of-terror">https://www.vanityfair.com/news/2017/12/the-next-generation-of-terror</a>
<b>GIST</b>	In a video that has now been deleted from YouTube, a camera pans across a desert skyline before alighting

upon a young man in the familiar regalia of the modern jihadist: fatigue pants and army boots, an ammo belt across his chest and an AK-47 at his side. “March forth with your weapons and defend the fronts in Syria and Iraq,” he says, his timbre and disposition suggesting some amount of media training. “With only a few of our soldiers in we are having an outsized impact,” he adds, looking directly into the camera. His extremist group’s logo flashes across the screen: “What Are You Waiting For?”

It’s a call that many angry young men have answered in recent years by making the journey to Syria to take up arms against all sorts of enemies: Bashar al-Assad, the United States, the Russians. It is also one that has become more technologically sophisticated. The clip of the young mujahideen, which was uploaded in early November, wasn’t a traditional recruitment video, but an extremist version of a Kickstarter campaign, with the goal of signing up new fighters over the anonymous Telegram app. The group behind it wasn’t al-Qaeda or ISIS, but an umbrella group called the Levant Liberation Committee, known in Arabic as Tahrir Al-Sham, that was created as the result of a merger between the Qaeda-affiliated al-Nusra Front and other militant groups in Syria. The group’s fighters are younger and less religious; not tied to a geographic caliphate, like ISIS; and less interested in governance. They are, in other words, more nimble—and more dangerous. Call them ISIS 3.0.

As a diplomat and scholar who has studied violent extremism, I’ve seen firsthand how the spread of Tahrir Al-Sham’s message has alarmed Western intelligence agencies, how critical Internet technology has become to terrorist groups, and how vulnerable our infrastructure is to cyber attacks. With a limited number of dedicated actors, Tahrir could take down local, regional, or even national power grids. They could disrupt cellphone, GPS, and satellite communications. In a worst case scenario, they could hack into government computers and publish all types of classified military and intelligence information, endangering Western agents and assets. Our postal and package delivery systems depend on SatLocators that, if compromised, could bring America’s sprawling logistics network to a standstill. On their hidden Telegram channel, Tahrir militants have bragged about adapting drones to deliver explosives or biological agents, and once posted an encrypted video of their efforts.

Whether or not the group has staying power, they already know how to shape and deploy information to their advantage. Recently, after an initial crowdsourcing campaign had run for only six hours, Tahrir claimed to have recruited over a dozen young followers, including five from Germany. These were played up in subsequent postings directed at potential new recruits. This crowdsourcing approach, via Telegram’s end-to-end encryption channels, is difficult to detect, let alone censor. Their Dark Web social networks, unlike ISIS’s territorial holdings, cannot be seen by satellites or destroyed with bombs. Tahrir leaders operate on the principle, “The narrower the audience, the bigger the impact.”

This still-emerging digital battlefield is the least understood component of our ever-changing, 16-year war on terror. Like any start-up, Tahrir militants have learned from ISIS’s successes and failures on the battlefield, using multiple platforms to amplify their impact. While ISIS sent messages using a broadcast model, Tahrir has experimented with platforms like Sarahah (“Honesty” in Arabic), which allows users to send messages anonymously to one person. The app provides a honeypot approach for Tahrir, in which they can A/B test different messages to see what sticks. While governments are still trying to censor ISIS on Twitter, Tahrir is experimenting with an app that reaches more than sixteen million young people and is the top download in over twenty-five countries, including Egypt, Jordan and Lebanon. Tahrir can fail, quickly measure what resonates, and retool their pitch before the activity is detected by officials. Again, speed gives them the advantage.

The group has also learned from Moscow’s 2016 campaign to meddle in the U.S. presidential election, by making tactics like disinformation and high-traffic bots an integral part of their marketing strategy. Research suggests that Tahrir surrogates have configured AI bots which can be run on thousands or even millions of user accounts at very low cost. They operate 24/7 and respond to events almost immediately, allowing Tahrir to consistently punch far above their weight. Social media giants like YouTube and Facebook can’t keep up: By the time they take down pro-Tahrir accounts, the content has already been linked or distributed through encrypted platforms like Telegram or Riot. These bots are programmed to react to certain events and create content at machine speed, shaping the narrative almost immediately. This is critical in an information environment where the first story to circulate may be the only one that people

	<p>see or recall.</p> <p>ISIS broke the mold with its social media savvy. But they also fell prey to old-line, establishment thinking by emphasizing land assets that could easily be targeted and destroyed. Establishing a caliphate was their measure of success, but ironically it set them up for failure. Subsequent groups, like Tahrir, are beginning to realize that winning the physical war is much less important than winning online.</p> <p>Just as Tahrir has wielded outsized power by leveraging social media, so too does the U.S. need to think smaller and faster, and to be more disruptive. We need to ditch our unwieldy bureaucracy and use the very same tools the terrorists are using: social media, slick advertising campaigns, and colorful narratives. If one percent of social media users are content creators, nine percent are content curators, and 90 percent are consumers, we need to find ways to get the consumer off the sidelines. Using the best digital tools, we can ensure that the right stories reach the right audiences.</p> <p>We, too, can learn from Silicon Valley in adopting faster learning cycles. There is an evolving understanding among diplomats and policy engineers of how radicalism spreads and gains traction within different communities. By identifying how ideas go viral, and how they can be countered, we can disrupt the feedback loops that Tahrir enjoys. For example, a defector's tale of disillusionment can shatter the image of unity and sacrifice for an alleged noble cause.</p>

<b>HEADLINE</b>	<b>12/28 AQ seeks attacks for 'victory in Kashmir'</b>
<b>SOURCE</b>	<a href="http://www.greaterkashmir.com/news/india/al-qaeda-threatens-attacks-in-delhi-mumbai-for-victory-in-kashmir/270363.html">http://www.greaterkashmir.com/news/india/al-qaeda-threatens-attacks-in-delhi-mumbai-for-victory-in-kashmir/270363.html</a>
<b>GIST</b>	<p>Global militant network Al Qaeda has said that targeting Indian cities and sidelining Pakistan and its army were key to jihadi success in Jammu and Kashmir.</p> <p>In a video interview with Al Qaeda's mouthpiece, released on jihadi online networks, Usama Mehmood, spokesman Al Qaeda in Indian Sub-continent, said there could be no easy solution to the Kashmir issue which needs "blood and sweat" of Muslims.</p> <p>Mehmood, in the 42-minute video recorded in Urdu, said it was necessary for "the jihadi movement to strengthen and expand its activities in the region and target Indian interests.</p> <p>"India has protected itself by deploying 600,000 troops in a small place like Kashmir. We will target it and its interests in Kolkata, Bangalore and New Delhi, it will come to its senses, its atrocities will be controlled and its grip on Kashmir will weaken by the will of Allah," said the group's second-in-command in the sub-continent.</p> <p>This is the first detailed Al Qaeda talk on its activities in Kashmir since July 27 this year when the group announced it was establishing an affiliate in Jammu and Kashmir called Ansar Ghazwat-ul-Hind, headed by the 23-year-old former Kashmir commander of the pro-Pakistan Hizbul Mujahideen, Zakir Musa.</p> <p>The Al Qaeda announcement was promptly rejected by militant groups like Lashkar-e-Taiba, Jaish-e-Mohammad and Hizbul Mujahideen. Even the Hurriyat Conference dismissed it, saying the Kashmir issue was political and had nothing to do with global Islamist jihad even as the longstanding militant outfits also espouse an Islamist outlook for Kashmir.</p> <p>Mehmood called on all Muslims in the sub-continental region, including from India, to "stand behind the Kashmiri people and perform their duties for jihad in Kashmir".</p> <p>"It is imperative to wage jihad against India. It can only happen when jihadi activities are strengthened in the entire region.</p>

	<p>"We should help our Kashmiri brothers first, defend our jihad from apostatic forces like Pakistan Army and its policies and then expand the jihadi activities," he said, terming the Pakistan Army "an obstacle in the path of victory, an enemy of the sharia and a slave of global infidels".</p> <p>"It fights only for its salary, personal aggrandisement and plots of land. It is the same army that spills the blood of the mujahideen for American dollars."</p>

<b>HEADLINE</b>	<b>12/28 Vietnam jails 15 in foiled airport plot</b>
<b>SOURCE</b>	<a href="http://sea-globe.com/vietnam-bomb-airport/">http://sea-globe.com/vietnam-bomb-airport/</a>
<b>GIST</b>	<p>Fifteen people were handed jail terms ranging from five to 16 years over their role in a failed attempt to detonate a bomb at Vietnam’s busiest airport in the southern city of Ho Chi Minh City, local media reported on Wednesday.</p> <p>The defendants were charged with “terrorism opposing the people’s administration,” reported Vietnamese newspaper Phap Luat.</p> <p>Dang Hoang Thien, accused of making petrol bombs, was jailed for 16 years. Other defendants were given jail terms from five to 14 years, reported Reuters.</p> <p>According to Phap Luat, the group’s plan to detonate bombs at the Tan Son Nhat airport was initially thwarted after passengers on a nearby plane saw suspicious boxes that police later confirmed contained petrol explosives.</p>

	<p>There has been no motive provided for the group’s attempted attack, but in a verdict read after the two-day trial, the state-controlled newspaper, Thanh Nien, reported that the court had found the accused to have links to foreign networks that had funded another failed terrorist attack within the country earlier in the year.</p> <p>“Via social networks, the defendants cooperated with an overseas reactionary organisation...which financed the purchase of weapons and petrol bombs for terrorism,” the newspaper reported, citing the verdict.</p> <p>People convicted of terrorism in Vietnam can face the death penalty and independent media in the one-party state is banned while freedom of expression is tightly controlled by the government.</p>

<b>HEADLINE</b>	<b>12/28 After ISIS defeat, massive bill to rebuild</b>
<b>SOURCE</b>	<a href="https://apnews.com/daf97af61a044ecb9c5f2a7b283ed00/After-Islamic-State's-defeat,-a-massive-bill-to-rebuild-Iraq">https://apnews.com/daf97af61a044ecb9c5f2a7b283ed00/After-Islamic-State's-defeat,-a-massive-bill-to-rebuild-Iraq</a>
<b>GIST</b>	<p>MOSUL, Iraq (AP) — For nearly 2½ miles along the western bank of the Tigris River, hardly a single building is intact. The warren of narrow streets of Mosul’s Old City is a crumpled landscape of broken concrete and metal. Every acre is weighed down by more than 3,000 tons of rubble, much of it laced with explosives and unexploded ordnance.</p> <p>It will take years to haul away the wreckage, and this is just one corner of the destruction. The Iraqi military and U.S.-led coalition succeeded in uprooting the Islamic State group across the country, but the destruction is nearly incalculable.</p> <p>Three years of war devastated much of northern and western Iraq. Baghdad estimates \$100 billion is needed nationwide to rebuild. Local leaders in Mosul, the biggest city held by IS, say that amount is needed to rehabilitate their city alone.</p> <p>So far no one is offering to foot the bill. The Trump administration has told the Iraqis it won’t pay for a massive reconstruction drive. Iraq hopes Saudi Arabia and other Gulf countries will step up, and Iran may also take a role. The U.N. is repairing some infrastructure in nearly two dozen towns and cities around Iraq, but funding for it is a fraction of what will be needed. As a result, much of the rebuilding that has happened has come from individuals using personal savings to salvage homes and shops as best they can.</p> <p>Nearly every city or town in former IS territory needs repair to one degree or another. The longer it takes, the longer many of those who fled IS or the fighting remain uprooted. While 2.7 million Iraqis have returned to lands seized back from the militants, more than 3 million others cannot and they languish in camps. Worst hit is Mosul; the U.N. estimates 40,000 homes there need to be rebuilt or restored, and some 600,000 residents have been unable to return to the city, once home to around 2 million people.</p> <p>Corruption and bitter sectarian divisions make things even harder. The areas with the worst destruction are largely Sunni, while the Baghdad government is Shiite-dominated. The fear is that if Sunni populations feel they’ve been abandoned and left to fend for themselves in shattered cities, the resentment will feed the next generation of militants.</p> <p>“The responsibility to pay for reconstruction falls with the international community,” said Abdulsattar al-Habu, the director of Mosul municipality and reconstruction adviser to Nineveh province, where the city is located.</p> <p>If Mosul is not rebuilt, he said, “it will result in the rebirth of terrorism.”</p> <p>Mosul’s Old City paid the price for the Islamic State group’s last stand.</p>

Streets are now knee-deep in rubble from destroyed homes. The few high buildings of six or seven stories have been blasted hollow, reduced to concrete frames. Shopping centers and office buildings are pancaked slabs. Almost all that is left of the 850-year-old al-Nuri mosque, blown up by IS fighters as they fled, is the stump of its famed minaret.

At the southern end of the district, the arcades of stone-arched storefronts in the historic bazaars that once sold spices, cloth and household goods are charred and gutted. Eaves that once shaded shoppers look like they were hurled into the air to land as mangled metal scattered across the cityscape. At the northern end just outside the Old City, some buildings have been blown to splinters and piles of dirt in a large medical compound that housed the College of Medicine and the Jomhuriya Hospital.

All five bridges crossing the Tigris have been disabled by airstrikes, forcing all traffic onto a single-lane temporary span linking east and west.

Mosul the same size in New York City would run from the 9/11 Memorial nearly to 18th Street and cover nearly a quarter of Manhattan south of Central Park.

There were effectively two battles for Mosul. The first, from October to February, freed the city's east, which survived largely intact. The second pulverized the west side. There, IS dug in and the Iraqis and U.S.-led coalition upped their firepower, culminating in house-to-house fighting in the Old City. The city, which IS overran in the summer of 2014, was declared liberated in July found at least 9,000 civilians died in the assault to retake Mosul, most in the west.

The Old City shows the densest destruction, but nearly every neighborhood of western Mosul has blocks of blasted houses, industrial areas, government buildings and infrastructure.

It's been more than a generation since the last comparable fight to seize a city. Military experts compare the assaults on Mosul and IS-held Raqqa in Syria to the devastating 1968 battle for the Vietnamese city of Hue.

Some look even further back. "All I can think of is Dresden, or pictures I've seen of World War II," said Stephen Wood, a senior analyst at the satellite imagery firm DigitalGlobe.

Along the Old City's gutted roads, a handful of people are beginning to rebuild. Amar Ismail Brahim sold his wife's gold to repaint his cafe. He didn't bother asking for government aid.

Brahim ultimately blames the Islamic State group for the destruction, but he believes the obligation of reconstruction lies with the United States and other Western countries.

"We fought Daesh on behalf of the whole world," he said, using the Arabic acronym for the group. "Now is the time for them to stand with Mosul."

The main engine for rebuilding has been the known as UNDP, which focuses on rehabilitating infrastructure, including roads, water and electricity systems and schools, as well as some homes.

Its daily project notices are ambitious. To clear debris from Mosul's riverbank neighborhood of al-Madain, a single contractor must have three heavy-duty shovels, six mini dump trucks, six tractor-trailers, two excavators and 2 tons of black trash bags. The timeframe: 45 days. Workers must be locals and must earn no less than \$20 a day.

But funding is far lower than what Iraq says it needs. So far, stabilization has received some \$392 million in contributions. The United States has given the lion's share, some \$115 million. Germany is the second biggest donor at \$64 million. The United Arab Emirates and Kuwait are also contributing, but no other Gulf nations are among the list of donors.

Overall, Washington has contributed \$265 million to reconstruction since 2014, on top of \$1.7 billion in humanitarian assistance in Iraq. That is a fraction of the \$14.3 billion that the U.S. spent in fighting the Islamic State group in Iraq and Syria.

And it's far less than what Iraqis hoped. Baghdad at first expected American money would flow in after the defeat of IS, said a senior U.S. official in Washington who regularly meets with Iraqi leadership. But Secretary of State Rex Tillerson has said the United States is no longer in the business of "nation-building."

"We just tell them, no, it's not going to happen," the U.S. official said. "We have to be up front with them."

The official said many in Washington believe past efforts in Iraq didn't yield adequate returns and there is little appetite for large international reconstruction projects. After the 2003 toppling of Saddam Hussein, the U.S. pumped \$60 billion over nine years into Iraqi reconstruction. Critics say the money did little to prevent political disarray and the rise of militants in Iraq. About \$8 billion dollars of it was wasted through corruption and mismanagement, according to the U.S. special inspector general for Iraq reconstruction.

Douglas Silliman, the U.S. ambassador to Iraq, blamed the destruction of Iraqi cities squarely on IS fighters.

"Had they not been here, had they not conducted a completely brutal and inhumane campaign against the Iraqi people, this destruction would not have happened," he said.

<b>HEADLINE</b>	<b>12/28 Putin: market bombing terrorist attack</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/world/articles/2017-12-28/putin-calls-st-petersburg-explosion-terrorist-attack">https://www.usnews.com/news/world/articles/2017-12-28/putin-calls-st-petersburg-explosion-terrorist-attack</a>
<b>GIST</b>	<p>MOSCOW (AP) — The explosion at a supermarket in Russia's second-largest city was a terrorist attack, President Vladimir Putin said Thursday, adding that another attack had been thwarted.</p> <p>At least 13 people were injured Wednesday evening when an improvised explosive device went off at a storage area for customers' bags at the supermarket in St. Petersburg. Investigators said the device contained 200 grams (7 ounces) of explosives and was rigged with shrapnel to cause more damage.</p> <p>No one has claimed responsibility for the attack.</p> <p>Putin made his comment Thursday at an awards ceremony at the Kremlin for troops who took part in Russia's Syria campaign but did not offer any details. He also said another terrorist attack had been thwarted in St. Petersburg but did not elaborate.</p> <p>Putin has portrayed Russia's operation in Syria as a pre-emptive strike against terrorism at home. He said the threat of attacks at home would have been much worse if Russia had not intervened in Syria.</p>

<b>HEADLINE</b>	<b>12/27 Libya: Sirte begins to rebuild</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2017/dec/27/sirte-libya-starts-rebuilding-from-war-isis/">https://www.washingtontimes.com/news/2017/dec/27/sirte-libya-starts-rebuilding-from-war-isis/</a>
<b>GIST</b>	<p>SIRTE, Libya — Mahmoud Emsameen eases off the gas as he rolls toward the rubble and wrecked vehicles that sit near what had been a checkpoint on the road into this war-ravaged city’s downtown manned by Islamic State militants.</p> <p>A year has gone by since the six-month-long, American-led air campaign pounded the jihadis out of Sirte, a city nestled on the Mediterranean that was once known as a favorite hideaway of Libyan dictator Moammar Gadhafi.</p> <p>While the violence has subsided, Sirte’s broad avenues and narrow alleyways lay in ruins. Posters hanging almost everywhere warn about the danger of unexploded ordnance beneath the rubble.</p> <p>But there are flashes of hope. Children dart in and out of gutted buildings, and Mr. Emsameen, a native of the city who has worked with those displaced by years of conflict, said residents are coming back and looking toward the future.</p> <p>“It shows that people want to revive Sirte, even if it means that families have to live in half-destroyed buildings,” said Mr. Emsameen, who fled the city when Islamic State took over in early 2015. He estimated that 70 percent of those who fled have returned to pick up the pieces and rebuild.</p> <p>Sirte is famous in Libya as the birthplace and hometown of Gadhafi and was the backdrop of several dramatic battles of the Libyan revolution.</p> <p>Gadhafi, who ruled Libya for 42 years, was killed in 2011 in the city that reared him.</p> <p>Sirte was battered badly by those battles, and reconstruction was slow going during the years that immediately followed. Without a unified government to provide assistance, residents took to the task themselves, clearing away rubble and using their fingers to fill bullet holes with cement.</p> <p>Amid the chaos from 2011 to 2014, prolonged sparring among militias in Tripoli and an elected parliament in Tobruk left Sirte, which is situated along a vast stretch of coastline between those cities, vulnerable to attacks by jihadis.</p> <p>In May 2015, the city fell to the Islamic State, whose operatives quickly set about imposing their extreme interpretation of Islam on residents. The severity of what Islamic State did to the city is underscored by what the terrorist group left behind when its fighters fled a year ago.</p> <p>Walking through Sirte’s streets, many shops remain tagged with the black logo of Islamic State — proof that the shops’ owners had paid their Islamic taxes. But where fear once reigned supreme, many say they are embracing their regained freedom.</p>

Ahmed Akhdhar, a businessman, relishes in the fact that he can now sell articles of clothing other than the black robes once mandated by Islamic State. “Look how colorful the showcase is,” he said with pride, pointing at ornately decorated dresses in the shop’s window display.

Such clothes were forbidden under the jihadis. Nevertheless, customers were scarce on a recent day because residents are strapped for cash in Sirte, as is the case across Libya.

While the reopening of a few oil fields has put the nation’s gross domestic product back into the black for the first time in four years, inflation stands at about 30 percent, severely diminishing Libyans’ purchasing power, according to the World Bank.

Abdallah Bouiazia, 21, is one retailer who has benefited from the nominal uptick in prosperity. His fish market along Sirte’s coastal road is one of the few city buildings not in ruins. Mr. Bouiazia said he once took up arms against Islamic State when they ruled the city, and he still keeps a Kalashnikov in his shop just in case the violence returns.

Battles against Islamic State followers continue to rage just 150 miles south of Sirte, and authorities say the terrorist group still has cells nearby.

In Tripoli, about 280 miles west of Sirte, Libya’s U.N.-backed Government of National Accord is also remains fragile. Its authority has been challenged by a rival administration in the east run by military strongman Khalifa Haftar.

With that as a backdrop, various militias are still battling in parts of the country. On Dec. 17, the mayor of Misrata — a city between Sirte and Tripoli — was abducted and killed by unknown assailants, according to reports.

But such developments haven’t stopped merchants in Sirte from seeing a silver lining. “My brothers and I are the only fishmongers in Sirte,” said Mr. Bouiazia. “Clients come all the way from Misrata to buy our sea bream.”

Students in Sirte are also beginning to see futures for themselves. During Islamic State’s rule, most of the city’s 12,000 students and professors fled to universities elsewhere in Libya.

But feelings of pride for the city run deep. Many who managed to graduate from other institutions during the occupation had their diplomas stamped with Sirte’s local seal.

<b>HEADLINE</b>	<b>12/28 Coalition: ISIS flees toward Damascus</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/isis-fighters-flee-west-damascus-us-led-coalition/story?id=52014579&amp;cid=clicksource_76_2_hero_headlines_headlines_hed">http://abcnews.go.com/International/isis-fighters-flee-west-damascus-us-led-coalition/story?id=52014579&amp;cid=clicksource_76_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>With the collapse of the ISIS caliphate in 2017, what's left of the terrorist group in Iraq and Syria is on the run, with some fighters moving west toward Damascus into Syrian regime-controlled territory and away from where the U.S.-led coalition will work to defeat them.</p> <p>A two-star British general in the coalition's war against ISIS confirmed the "movement of limited numbers of ISIS militants westwards," but said the U.S.-led coalition won't pursue them because the area is operated by the regime.</p> <p>"The coalition will remain committed to the mission in Syria until ISIS no longer poses a threat and a [United Nations]-backed peace process is implemented to ensure lasting stability in the country," British Army Major Gen. Felix Gedney, deputy commander of strategy and support for the coalition, told reporters during a Pentagon briefing on Wednesday.</p> <p>But he later clarified the coalition would only defeat ISIS "in areas controlled by partner forces," leaving the Syrian regime and their Russian backers to oust the ISIS fighters that have moved west.</p> <p>Gedney, as well as U.S. military leadership, have long expressed doubt in the regime's desire and ability to fight ISIS.</p> <p>"They seem to be moving with impunity through regime-held territory, showing that the regime is clearly either unwilling or unable to defeat [ISIS] within their borders," Gedney said Wednesday.</p> <p>The coalition dealt a significant blow to ISIS in 2017, liberating 60,000 square kilometers of land once claimed by the terrorist group, which ruled large swaths of Iraq and Syria since 2014. The coalition estimates only about 1,000 ISIS fighters remain in that area.</p>

<b>HEADLINE</b>	<b>12/27 Unprecedented NYE security Times Sq.</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/unprecedented-security-precautions-expected-times-square-years-eve/story?id=52010389">http://abcnews.go.com/US/unprecedented-security-precautions-expected-times-square-years-eve/story?id=52010389</a>
<b>GIST</b>	More than a million people are expected to ring in the new year in New York City’s Times Square, making the crowded tourist site an inherent target, experts say.

The security precautions that will be taken by the New York Police Department to protect the revelers are expected to be unprecedented. Typical security measures, like using sand trucks and blocker vehicles on nearby cross streets and a mix of plainclothes and uniformed officers, will be deployed as always, but other steps, such as increasing security at nearby parking garages and closer surveillance of large rental trucks, are also being put in place, city officials said, according to local ABC station WABC.

Police officials are expected to make more detailed disclosures about their plans on Thursday.

John Cohen, a former counterterrorism coordinator for the Department of Homeland Security and current ABC News contributor, said that it is "not surprising at all" that security is being increased this year "based on how the threat facing the country has evolved."

"It's very possible that our traditional intelligence techniques for detecting threats are not well suited to uncover potential attacks," Cohen said, adding that it means that more precautions are necessary.

"In the current threat environment, the public plays a major role in both helping to detect potential attacks and being prepared in the event they find themselves at a location where an attack is unfolding," Cohen said.

Matt Olsen, a former director at the National Counterterrorism Center and current ABC News contributor, told "Good Morning America" that increased security is a must.

"People should expect to see an increase in security this New Year's because of an ongoing threat we've seen from ISIS. Really over the past few years, they've sought to encourage their followers to carry out low-level attacks wherever they can, particularly targeting people where they gather in crowds," Olsen said.

A joint assessment report for New York's New Year's celebration was released on Dec. 21 culling the findings from multiple agencies, and it concluded that there was "no information to indicate a specific, credible threat" toward the Times Square celebration, but officials and the public should be cautious nonetheless.

The report stated that the FBI, DHS, NYSP, PAPD, NYPD and FDNY "remain concerned about international terrorists and domestic extremists potentially targeting the event."

New York is not the only city that has law enforcement officials concerned about keeping celebrants safe. A similar threat assessment report was released by the Southern Nevada Counterterrorism Center and the Office of Intelligence and Analysis evaluating the potential threats facing partygoers in Las Vegas on New Year's.

The report states that since many of the festive events in Sin City "are being held on congested sidewalks and in high-rise buildings, presenting logistical challenges that make it difficult to secure the event from overhead threats." In October, 58 people were killed in Vegas when a man opened fire on a crowd of concertgoers from the 32nd floor of a hotel.

The report specifically cited that shooting, adding that "the risk of copycat attacks by terrorists and unaffiliated lone offenders is of particular concern to the SNCTC, as it highlighted a vulnerability associated with large crowds in open spaces."

HEADLINE	12/27 Sheriff: deputies gunfire killed 6yr-old
SOURCE	<a href="https://apnews.com/02efcaad12a74ba4a0326de9728c8ba6/Sheriff:-Deputies-threatened-before-">https://apnews.com/02efcaad12a74ba4a0326de9728c8ba6/Sheriff:-Deputies-threatened-before-</a>

	<a href="#"><u>gunfire-that-killed-boy</u></a>
GIST	<p>SCHERTZ, Texas (AP) — A Texas sheriff says a wanted felon told deputies that she was armed and would shoot them before they killed her in a spray of gunfire that also left a 6-year-old boy dead.</p> <p>Bexar County Sheriff Javier Salazar told the San Antonio Express-News that Amanda Jones, 30, forced her way into a mobile home where the boy, Kameron Prescott, lived on Dec. 21 and then was confronted outside by four deputies.</p> <p>A person inside the home in Schertz, northeast of San Antonio, also reported hearing Jones say she would shoot the deputies, Salazar said.</p> <p>“Someone from inside the trailer that (Jones) forced her way into ... said that she had an object in her hand. They believed it could have been a weapon,” the sheriff said Tuesday. “And when she exited the house, the witness heard the suspect proclaim to whoever was outside — we now know that was the deputies — ‘I have a gun, I’m going to shoot you.’”</p> <p>Jones was found with a dark, metal tube after she was shot, but no gun. However, Salazar said deputies had seen Jones with a gun earlier as they chased her.</p> <p>All four deputies have been placed on administrative leave. The sheriff’s office is investigating. Bexar County District Attorney Nico LaHood’s office said it will “analyze the initial work” of the investigation and “evaluate all additional evidence as it is gathered.”</p> <p>The probe is in its early stages, Salazar said.</p> <p>LaHood’s office said in a statement that it is “important to carefully review all of the facts and circumstances surrounding the officers’ use of force and not form any premature conclusions before the investigation is finalized.” It said if the deputies’ actions “rise to the level” of a criminal offense, the office will take the appropriate steps.</p> <p>Kameron was inside the mobile home when he was struck by a bullet as deputies fired on Jones. The boy died at a hospital.</p>

GIST	<p>A few months after the collapse of the Soviet Union, a group of American investors and Russian scientists struck a deal to begin marketing one of the crown jewels of Moscow's strategic arsenal: an entire family of missiles designed for launch from submarines.</p> <p>Up for sale were powerful missiles called "Calm" and "Ripple," built to lob heavy warheads into space from a barge or a submarine tube, and a new model called "Surf" that could be rolled off the side of a ship and fired straight out of the water. The idea of the joint venture, as one of its U.S. partners wrote in early 1993, was to link American satellite companies to a top Russian weapons laboratory to "convert potentially threatening submarine missiles into peaceful space boosters."</p> <p>The Americans quickly ran aground on a series of legal and bureaucratic barriers, but the Russians forged ahead with a new partner willing to pay cash for Soviet military technology: North Korea. More than two decades later, some of the Soviet designs are reappearing, one after another, in surprisingly sophisticated missiles that have turned up on North Korean launchpads over the past two years. Now, newly uncovered documents offer fresh clues about the possible origins of those technical advances, some of which seemed to outside observers to have come from nowhere.</p>

"The question that has long been raised is: Did North Korea get this technology from a [Russian] fire sale?" said David Wright, a missiles expert at the Union of Concerned Scientists. "Did they get plans years ago and are just now at the point where they can build these things?"

North Korea is known to have relied on Russian parts and designs for its older missiles, including the Scud derivatives that had dominated its stockpile since the 1980s. The newly uncovered documents include technical drawings for much more advanced missiles — designs that include features seen in some of the newest missiles in North Korea's expanding arsenal.

The documents from the Makeyev Rocket Design Bureau include marketing brochures for an array of top-of-the-line Soviet missiles that were able to deliver nuclear warheads to U.S. cities. Initially designed for the Soviet navy's nuclear submarines, some of the models offered for sale could be launched from a large boat, a submerged barge, or a capsule dropped into the ocean, negating the need for a modern submarine fleet.

"The missile could be floated and ignited without any need for a launch platform," recalled Kyle Gillman, the former executive vice president of the U.S.-Russian joint venture known as Sea Launch Investors. Gillman, who negotiated the business agreement with Russia's Makeyev scientists, reviewed and authenticated the documents obtained by The Washington Post.

The evidence that the designs eventually ended up in North Korea is partly circumstantial. In summer 1993, with the U.S.-Russian project flagging, more than 60 Russian missile scientists and family members from the Makeyev facility were arrested at Moscow's Sheremetyevo International Airport as they prepared to travel to Pyongyang to work as consultants. U.S., Russian and South Korean intelligence officials later concluded that some of the scientists eventually succeeded in traveling to North Korea to offer blueprints and technical advice for the country's missiles program.

But U.S. analysts see more persuasive evidence in the actual missiles that North Korea has put on display over the past two years. In the most striking case, the Hwasong-10, or Musudan, a single-stage missile successfully tested by North Korea in June 2016, appears to use the same engine and many design features as the Soviet Union's R-27 Zyb, a submarine-launched ballistic missile designed by Makeyev scientists and advertised in one of the brochures obtained by The Post.

The fact that it has taken Pyongyang so long to exploit the Russian designs is perplexing, but North Korea had long lacked the sophisticated materials, engineering expertise and computer-driven machine tools for the kinds of advanced missiles it has recently tested, weapons experts say. With an industrial base enhanced by years of slow, patient acquisition efforts, North Korea is only now in a position to capitalize on technology it had been sitting on for years or even decades, analysts say.

"North Korea was just recently able to acquire machine tools that were state-of-the-art in the 1990s, meaning they are still damn good machine tools," Wright said. "Once you have the plans, and are able to get your hands on the materials and the right kinds of tools, you have a real leg up."

<b>HEADLINE</b>	<b>12/27 SKorea: Japan sex slavery deal 'flawed'</b>
<b>SOURCE</b>	<a href="http://time.com/5080894/south-korea-japan-sex-slaves/?xid=homepage">http://time.com/5080894/south-korea-japan-sex-slaves/?xid=homepage</a>
<b>GIST</b>	(SEOUL, South Korea) — South Korean President Moon Jae-in said Thursday the country's 2015 agreement with Japan to settle a decades-long impasse over Korean women forced into wartime sexual slavery was seriously flawed.  Moon's statement in which he vows unspecified follow-up measures to meet the victims' demands potentially throws the future of the deal in doubt, two years after both countries declared it as "final and

	<p>irreversible.”</p> <p>The statement came a day after a state-appointed panel concluded that Seoul’s previous conservative government failed to properly communicate with the victims before reaching the deal.</p> <p>The panel also said parts of the deal were not made public, including Japanese demands that the South Korean government avoid using the term “sexual slavery” and provide a specific plan to remove a bronze statue representing sex slaves in front of its Seoul embassy. South Korea in response said it would formerly refer to the victims as “victims of Japanese military comfort stations” but didn’t make a clear promise to remove the statue, according to the panel.</p> <p>“It has been confirmed that the 2015 comfort women negotiation between South Korea had serious flaws, both in process and content,” Moon said in a statement read out by his spokesman.</p> <p>“Despite the burden of the past agreement being a formal promise between governments that was ratified by the leaders of both countries, I, as president and with the Korean people, once again firmly state that this agreement does not resolve the issue over comfort women.”</p> <p>Under the deal, Japan agreed to provide cash payment for the dwindling number of surviving victims, while South Korea said it will try to resolve Japanese grievance over the statue in front of the embassy.</p> <p>The deal came under heavy criticism in South Korea where many thought the government settled for far too less. Japan has been angry that South Korea hasn’t taken specific steps to remove the statue and similar monuments in other places in the country, insisting there has been a clear understanding to do so.</p> <p>The Foreign Ministry said government officials will hold extensive discussions with victims and experts before deciding whether to pursue changes to the deal. Japanese officials have said a renegotiation is unacceptable.</p>

<b>HEADLINE</b>	<b>12/27 Seattle streetcar tracks deadly to cyclists</b>
<b>SOURCE</b>	<a href="http://www.seattlepi.com/local/transportation/article/Lawsuit-Seattle-streetcar-tracks-deadly-to-12457978.php">http://www.seattlepi.com/local/transportation/article/Lawsuit-Seattle-streetcar-tracks-deadly-to-12457978.php</a>
<b>GIST</b>	<p>Desiree McCloud was cycling from Capitol Hill to Alki Beach on May 13, 2016 on streets with designated bike lanes when her front wheel plunged into a First Hill Streetcar track on Yesler Way, catapulting her forward and inflicting critical head injuries.</p> <p>The 27-year-old behavioral neuroscientist died 11 days later.</p> <p>On the one-year anniversary of her death, her younger brother, Cody McCloud, filed a claim against Sound Transit and the city of Seattle alleging both failed to protect cyclists from the deadly obstacle.</p> <p>That day, Suzanne Greenberg was headed to her next gig as a freelance sign language interpreter when she became caught in the streetcar track on the same block. Her bike tilted to the left, throwing her onto the street. She suffered a torn rotator cuff, torn bicep and other injuries to her forearm.</p> <p>Greenberg and Cody McCloud joined in a lawsuit against the city last week, claiming Seattle has installed a "death trap" for cyclists in its streets and doesn't adequately ensure bicycle safety on the same roads it encourages cyclists to ride.</p> <p>The stretch of Yesler Way near 13th and 14th Avenues South where Desiree McCloud and Greenberg were injured contains a bicycle lane designated by painted white lines. No physical barrier exists between the lane and parked cars, moving traffic or the streetcar track, which shares the road with motorists.</p> <p>The existence of that lane did not protect Desiree McCloud and Greenberg from other hazards, they argue.</p> <p>In Desiree McCloud's case, she was traveling with a group of friends who intentionally set their route along areas that were designated for bike travel, her brother contends. She reportedly entered a traffic lane to pass around another cyclist in the bike lane when her 1-inch-wide wheel wedged in the slightly wider streetcar track.</p> <p>Greenberg was also using the bike lane, but a Metro bus stopped in front of her, taking up both the shoulder and bike lane. As Greenberg applied her brakes, she faced three options: smash into the back of the bus, veer onto the sidewalk and risk hurting pedestrians or pass on the left, as allowed by law.</p> <p>She decided to pass, but at that intersection, the First Hill Streetcar tracks curve from 14th Avenue to East Yesler Way -- something she hadn't seen while she pedaled behind the bus. That's how her wheel dipped into the track.</p> <p>The First Hill Streetcar line, paid for in part by Sound Transit with \$132.8 million in voter-approved money, as well as federal dollars, opened to public use in January 2016. The city designed and built the line, with several delays along the way. Both Seattle and Sound Transit approved the design of the transit line, streetcar track, pavement markings and both protected and unprotected bike paths, according to the lawsuit.</p> <p>Seattle and Sound Transit considered a plan in June 2010 to continue the Broadway cycle track on Yesler, the lawsuit alleges, but that never happened. They even installed a removable rubber insert in the tracks at Eighth Avenue South and South Dearborn Street to prevent incidents such as McCloud's.</p> <p>That rubber insert was the least the city could have done to offset the danger the streetcar tracks pose on Yesler, attorney Phil Arnold contends.</p>

Greenberg filed her initial claim against the city in June, about a month after Cody McCloud's May claim.

Neither had heard back from the city about their concerns.

A few months after Desiree McCloud's death, Cody McCloud said he met with Seattle Department of Transportation officials who promised to address the streetcar safety hazards, but didn't specify what they would do.

Spokespeople for SDOT declined to comment Wednesday on that claim.

Therefore, the city's subsequent silence on the matter was "not at all surprising," Cody McCloud said Wednesday.

And this wasn't the only time Greenberg had fallen victim to the dangers of surface street train tracks. Four years earlier, she was trying to cross the South Lake Union Trolley tracks, but failed to cross them at a 90 degree angle and fell there, too.

In the wake of her more recent crash, Greenberg, a Vashon Island resident who commutes to Seattle, missed some work and was forced to sign with one hand while her other arm rested in a sling.

She's back at work now and intends to return to bicycle commuting in the spring. Her commute hasn't been as convenient in recent months, relying on public transportation, she says.

<b>HEADLINE</b>	<b>12/27 Study: retiring early could kill you</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/finance/personal-finance/retiring-early-kill-you/2017/12/27/id/833881/">https://www.newsmax.com/finance/personal-finance/retiring-early-kill-you/2017/12/27/id/833881/</a>
<b>GIST</b>	<p>We already know you're better off financially the later you begin claiming Social Security.</p> <p>Now it seems there's another reason to hold off on collecting those checks: If you retire early you're more likely to die early as well.</p> <p>A new study from Maria Fitzpatrick at Cornell University and Timothy Moore at the University of Melbourne shows a striking correlation between Social Security claims for early takers and a jump in mortality.</p> <p>About a third of all Americans retire and start claiming Social Security benefits in their first month of eligibility when they turn 62. Fitzpatrick and Moore find this "may have an immediate, negative impact" on health.</p> <p>The effect is biggest on men in this scenario, who see an increase in mortality risk of about 20 percent.</p> <p>The authors found no rise in mortality among those for whom 62 was not the eligibility threshold for collecting Social Security.</p> <p>Moreover, demographic groups with the highest rate of retirement at 62 had the highest mortality rate increases at that age.</p> <p>The paper notes that the phenomenon may be linked partly to existing health problems that force some to stop working early.</p> <p>Mortality rates for Americans as a whole, and especially for children, were down in 2013-2015 from 15 years prior. But death rates went in the opposite direction for rural, working-age people after more than a century of decline, according to a report from the U.S. Department of Agriculture.</p>

	Abuse of prescription medications, especially opioids, and related heroine-overdose deaths played a large role in the increase.

<b>HEADLINE</b>	<b>12/27 Active-shooter training simulation</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2017/12/27/army-and-homeland-security-prepping-teachers-for-gunman-at-door.html">http://www.foxnews.com/us/2017/12/27/army-and-homeland-security-prepping-teachers-for-gunman-at-door.html</a>
<b>GIST</b>	<p>The U.S. Army and the Department of Homeland Security have created a computer-based simulator that trains teachers on how best to react in an active-shooter situation.</p> <p>The \$5.6 million program – it's called the Enhanced Dynamic Geo-Social Environment, or EDGE – is similar to those used by the Army, in which a virtual environment helps train soldiers in combat tactics and scenarios.</p> <p>The program is expanding to schools to allow teachers and other school personnel to train for active shooters alongside first responders. Homeland Security officials said the school version should be ready for launch by spring.</p> <p>"With teachers, they did not self-select into a role where they expect to have bullets flying near them," said Tamara Griffith, a chief engineer for the project. "Unfortunately, it's becoming a reality. We want to teach teachers how to respond as first responders."</p> <p>Bob Walker, the project manager, said the program was designed to put a teacher in a situation similar to an active-shooter scenario.</p> <p>Each teacher will get seven options on how to keep students safe, and some in the program might not</p>

respond or be too afraid to react. That, in itself, becomes another problem to be solved.

"Once you hear the children, the screaming, it makes it very, very real," Walker said.

The program can have the shooter be either an adult or a child.

"We have to worry about both children and adults being suspects," he said.

The designers of the program listened to real dispatch tapes from school shootings and talked to a mother of a child killed in the 2012 mass shooting at Sandy Hook Elementary School in Newtown, Connecticut. That shooting left 20 children and six educators dead after gunman Adam Lanza opened fire in the school

"It gives you chills when you think about what's happening on those tapes," Griffith said. "It tore us apart to listen to her and what she went through."

The goal of EDGE was to serve one purpose: to train educators to save lives when an armed attacker busts through a school door, weapons at the ready.

School safety advocates say safety training gets pushed to the back burner until a tragedy happens. Amanda Klinger, director of operations for the nonprofit Educator's School Safety Network, said this new program could help change that.

"I hope that people will sort of see this simulation as a really cool and engaging way," she said, "to think about school safety."

John Verrico, a spokesman for the Department of Homeland Security told Fox News the program was free for administrators and teachers to download and the program was implemented partly due to concerns of active shooter situations at schools.

"These active shooting scenarios are what we wanted to focus on first," Verrico told Fox News.

Verrico could not elaborate if the program would be mandatory for educators but said it was a good way for teachers to train with police if these situations were to occur.

Everytown reported there have been 271 school shootings in the U.S. since 2013.

<b>HEADLINE</b>	<b>12/27 NKorea defectors w/radiation exposure?</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/north-korean-defectors-show-signs-of-radiation-exposure/">https://www.cbsnews.com/news/north-korean-defectors-show-signs-of-radiation-exposure/</a>
<b>GIST</b>	<p>Four North Korean defectors have shown symptoms linked to radiation exposure, according to the Yonhap News Agency, citing the South Korean government. However, scientists were unable to determine whether the defectors' symptoms were the direct cause of nuclear tests.</p> <p>The defectors are among 30 former residents of from Kilju county in North Korea, the location of a known nuclear test site. South Korean officials began testing defectors from that area for signs of radiation exposure in October, one month after North Korea claimed to detonate a hydrogen bomb.</p> <p>U.S. officials said that explosion was almost 10 times larger than the blast from the bomb dropped over Hiroshima during World War II. The October blast registered as a magnitude 6.3 earthquake, and satellite images showed several landslides around the test area, prompting fears of radiation exposure.</p> <p>However, the four individuals who exhibited symptoms of exposure defected before the most recent test. A researcher at the Korea Atomic Energy Research Institute, which conducted the exams, told reporters that the defectors were exposed to radiation between 2009 and 2013, Reuters reported.</p>

	<p>North Korea has conducted six nuclear tests at the Punggye-ri test site in Kilju county since 2006.</p> <p>While the South Korean researchers noted changes to chromosomes in four of the defectors, they say that could have been caused by other factors aside from nuclear tests, including smoking.</p> <p>More data is needed to determine the cause of the symptoms, including information about the defectors' lifestyles prior to leaving North Korea.</p> <p>The South Korean government plans to conduct future radiation testing and is advising North Korean defectors to get regular check-ups.</p>

<b>HEADLINE</b>	<b>12/27 Excessive video gaming disorder</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/excessive-video-gaming-to-be-recognized-as-mental-health-disorder/">https://www.cbsnews.com/news/excessive-video-gaming-to-be-recognized-as-mental-health-disorder/</a>
<b>GIST</b>	<p>The World Health Organization is poised to classify "gaming disorder" as a mental health problem in its 2018 update of the International Classification of Diseases (ICD).</p> <p>"How serious is the problem? It's an epidemic," licensed marriage and family therapist Paula-Jo Husack told CBS San Francisco.</p> <p>She says the designation is long overdue and that addiction to video games is a hidden but widespread problem.</p> <p>Gaming disorder could be diagnosed if a person's video game habit "is of sufficient severity to result in significant impairment in personal, family, social, educational, occupational or other important areas of functioning," according a tentative draft of WHO's 11th update to the ICD.</p> <p>Husack said common symptoms for children and adults include social isolation, trouble transitioning from one thought to another, reduction in empathy, loss of appetite and loss of sensory perception.</p> <p>The WHO said those symptoms generally need to persist for at least a year before doctors diagnose a case of gaming disorder, but added that a diagnosis could be made sooner if symptoms are severe.</p> <p>Gamer Joshua Parrish told the station that taking anything to an extreme can create problems.</p> <p>"Alcohol could be consumed that way, casinos, gambling," he said. "Anything could be taken to that extreme."</p> <p>Robert Figone plays in video game tournaments. He says video gaming can be a healthy form of entertainment.</p> <p>"I join tournaments for competitive video games," he said. "It's mentally stimulating, but doesn't hold me back from my workout everyday."</p> <p>WHO officials have not made a final decision on whether gaming disorder will indeed be included as part of the 2018 ICD.</p> <p>The latest update of the Diagnostic and Statistical Manual of Mental Disorders (DSM-5), which guides psychiatric diagnoses in the U.S., does not go so far. Its latest update, published in 2013, lists Internet Gaming Disorder as a condition warranting more clinical research and experience before it might be considered for inclusion as a formal disorder.</p>

<b>HEADLINE</b>	<b>12/26 Mystery illness linked to heavy pot use</b>
<b>SOURCE</b>	<a href="http://www.kunc.org/post/rare-and-mysterious-vomiting-illness-linked-heavy-marijuana-use">http://www.kunc.org/post/rare-and-mysterious-vomiting-illness-linked-heavy-marijuana-use</a>
<b>GIST</b>	<p>For 17 years, Chalfonte LeNee Queen suffered periodic episodes of violent retching and abdominal pain that would knock her off her feet for days, sometimes leaving her writhing on the floor in pain.</p> <p>"I've screamed out for death," says Queen, 48, who lives in San Diego. "I've cried out for my mom, who's been dead for 20 years, mentally not realizing she can't come to me."</p> <p>Queen lost a modeling job after being mistaken for an alcoholic. She racked up tens of thousands of dollars in medical bills, and her nausea interrupted her sex life. Toward the end of her illness, the 5-foot-9-inch woman weighed just 109 pounds.</p> <p>Throughout the nearly two decades of pain, vomiting and mental fog, Queen visited the hospital about three times a year, but doctors never got to the bottom of what was ailing her. By 2016, she thought she was dying, that she "must have some sort of cancer or something they can't detect," Queen recalls.</p> <p>But she didn't have cancer. She had an obscure syndrome called cannabinoid hyperemesis syndrome, a condition only recently acknowledged by the medical community. It affects a small population — namely, a subset of marijuana users who smoke multiple times a day for months, years or even decades.</p> <p>There's no hard data on the prevalence of the illness. But in California and Colorado, which have loosened marijuana laws in recent years, some emergency physicians say they're seeing it more often. One study in Colorado suggests there may be a link.</p> <p>Dr. Aimee Moulin, an emergency room physician at UC-Davis Medical Center in Sacramento, says she has seen a rise in the number of cases since California voters legalized recreational marijuana last November. She expects to see another increase after commercial sales are permitted starting in January.</p> <p>Doctors say it's difficult to treat the condition. There is no cure other than to quit using marijuana, and many patients are skeptical that cannabis is making them sick, so they keep using it and their vomiting episodes continue.</p> <p>Doctors can do little to relieve the symptoms, since traditional anti-nausea medications often don't work and there are no pills to prevent the onset of an episode. Patients may need intravenous hydration and hospital stays until the symptoms subside.</p> <p>"That's really frustrating as an emergency physician," says Moulin. "I really like to make people feel better."</p> <p>Diagnosing the syndrome can also be frustrating and expensive. There is no blood test to link the stomach ailment with marijuana use, so physicians often order pricey CT scans and lab tests to rule out other medical problems.</p> <p>Cannabinoid hyperemesis syndrome was first documented in Australia in 2004. Physicians have historically misdiagnosed it as the more generic cyclic vomiting syndrome, which has no identifiable cause or, as in Queen's case, acute intermittent porphyria (AIP).</p> <p>"Five years ago, this wasn't something that [doctors] had on their radar," says Dr. Kennon Heard, an emergency physician at the University of Colorado in Aurora who co-authored the Colorado study showing a possible tie between the liberalization of marijuana and a surge of the vomiting illness. "We're at least making the diagnosis more now."</p>

<b>HEADLINE</b>	<b>12/27 Montreal: more dying in blazes</b>
<b>SOURCE</b>	<a href="https://www.mtlblog.com/news/more-montrealers-are-dying-in-blazing-fires-than-ever-before">https://www.mtlblog.com/news/more-montrealers-are-dying-in-blazing-fires-than-ever-before</a>
<b>GIST</b>	<p>As of December 25th, 14 Montrealers have been killed by a fire-related incident in 2017, with the total number of deaths steadily increasing over the last several years.</p> <p>According to information provided by the SPVM to La Presse, 11 fire-related deaths were accidental in nature, two were attributed to suicide, and another was a homicide, for a total of 14 deaths in 2017.</p> <p>Four of these incidents can be linked back to smoke detecting devices, said an SPVM officer. Two cases involved smoke detectors that did not have working batteries.</p>

	<p>Fire-relate deaths in Montreal have actually been increasing in the last three years. In 2016, 11 fire-related deaths were reported. 2015 and 2014 saw 9 deaths.</p> <p>In total, 820 cases were opened by fire investigators in 2017, a major uptick since 2016, when 572 were reported. Around 500 of the 2017 fire investigations are said to be criminal or suspicious in nature.</p> <p>More individuals are being arrested in connection to fires, with 108 arrested since November 30 2017. 99 were apprehended in the same span in 2016, but the SPVM says the increase is probably because people with mental health issues are now being counted among those arrested.</p> <p>Molotov cocktails were a cause of major fires in Montreal this year, with a total of 27 hurled at buildings in the city. 12 of these incidents are said to be in connection to organized crime.</p> <p>The most common motives for arson in Montreal 2017, according to police, are vandalism, getting rid of a marijuana grow-op, disputes between two individuals, and homeless people starting fires in order to warm themselves.</p>

<b>HEADLINE</b>	<b>12/27 NYC murder rate on pace 1950s level</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/new-york-city-murder-rate-on-pace-to-drop-to-1950s-levels-1514420267">https://www.wsj.com/articles/new-york-city-murder-rate-on-pace-to-drop-to-1950s-levels-1514420267</a>
<b>GIST</b>	<p>New York City is on track to close the year with the fewest murders since Elvis Presley appeared on “The Ed Sullivan Show.”</p> <p>The New York Police Department has recorded 286 murders as of Wednesday, putting the city on pace to finish the year with fewer than 300 murders for the first time since the 1950s. Murders in 2017 are down from 329 at the same point last year and 2,262 in 1990—the highest recorded amount of murders by the NYPD.</p> <p>Officials have credited the decline to the department’s data-driven approach of targeting the worst offenders in the city, centered on the crime-tracking system known as CompStat, as well as improved community relations and better utilization of technology. The NYPD also has the most officers of any department in the U.S., with 36,000 members.</p> <p>“I’ve been going to CompStat since 1996 and to have a year like we had last year in 2016 was pretty amazing,” NYPD Commissioner James O’Neill said at a crime-statistics briefing earlier this month. “What we’re doing this year—continuing that trend and making those decreases go even deeper—is really nothing short of amazing.”</p> <p>Overall major crime, which includes murders, rape, robbery, felony assaults, burglary, grand larceny and grand larceny of vehicles, so far this year is on pace to finish under 100,000—also the lowest since the 1950s, according to crime data updated on Sunday. Police have recorded 94,806 major felonies so far this year—a little more than half of the roughly 184,000 in 2000.</p> <p>While rape is down 1% for the year, misdemeanor sex crimes are up by 9.3% to 3,585 compared with last year.</p> <p>The drop in crime coincides with dips in arrests and the number of people incarcerated in the city jails. The city on Wednesday announced that it is on track for a monthly jail population below 9,000 for the first time in three decades. There were 73,855 adult arrests in Manhattan in 2016, the fewest since 2007.</p>

<b>HEADLINE</b>	<b>12/27 Chicago murder rate declines; still high</b>
<b>SOURCE</b>	<a href="https://www.yahoo.com/news/chicago-murder-rate-declines-still-alarmingly-high-011829733.html">https://www.yahoo.com/news/chicago-murder-rate-declines-still-alarmingly-high-011829733.html</a>
<b>GIST</b>	<p>Chicago experienced a near 20-year record number of murders last year, prompting President Donald Trump to regularly single out the city for criticism.</p> <p>"What the hell is going on in Chicago?" Trump asked during a speech this month. "For the second year in a row, a person was shot in Chicago every three hours."</p> <p>The good news is that violence actually declined in Chicago in 2017.</p> <p>The bad news is that it remains alarmingly high.</p> <p>As of mid-December, there had been 635 murders in Chicago -- a 15 percent drop from the previous year, according to the Chicago Police Department.</p>

	<p>The total number of shootings incidents was down 21 percent to 2,719.</p> <p>Still, murders remain at levels unseen since the 1990s, when the crack cocaine epidemic ravaged communities across the United States and fueled a spike in crime.</p> <p>As the city's gun violence spiraled seemingly out of control last year, it raised alarms among officials and residents alike, and brought about a number of initiatives to help stem the tide.</p> <p>City officials have credited the reduction in murders and shootings this year to a push to hire 1,100 additional police officers and a focus on new crime-fighting technologies.</p> <p>"Communities that were once under a cloud of gun violence are beginning to see signs of optimism and hope," police chief Eddie Johnson said this month.</p> <p>The city has relied on more data crunching to help predict violence and deployed more high-tech devices that help detect gunshots and alert police even before residents can make an emergency call.</p> <p>Still, in pure numbers, Chicago remains the source of the most shootings and murders in the nation.</p> <p>As the third most populous US city, its crime numbers would naturally be higher. In fact, cities such as St Louis, Baltimore and Detroit have a higher murder rate (the number of people killed per 100,000 residents).</p> <p>But Chicago's problems cannot be explained away by its size alone.</p> <p>If you were to add up the murders in both of America's largest cities -- Los Angeles and New York -- the total still would be about half the number in Chicago.</p> <p>Officials and academics say they cannot point to any one factor as a definitive cause of the rise in murders.</p>

<b>HEADLINE</b>	<b>12/28 Officers killed hits near 50yr-low</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/2017/12/28/number-officers-killed-2017-hits-nearly-50-year-low/984477001/">https://www.usatoday.com/story/news/2017/12/28/number-officers-killed-2017-hits-nearly-50-year-low/984477001/</a>
<b>GIST</b>	<p>The night five Dallas officers were gunned down marked one of the deadliest days for law enforcement. As a whole, 2016 saw more deaths than in the five previous years, but something changed this year: Killings dropped.</p>

As of today, 128 officers have died in the line of duty, 44 of them shot and killed. That's down from 2016, when 135 officers died, 64 of them gunned down, according to data released by the National Law Enforcement Officers Memorial Fund.

Deaths in 2017 have hit a nearly 58-year low. The only other year with fewer deaths since 1959 was in 2013, when 116 officers were killed.

"I think this is one of those good-news, bad-news situations," said Craig Floyd, president and chief executive of the fund. "On one hand, you had 128 officers who made the ultimate sacrifice, showing the cost of public safety, but for the first time since 2013, the number of deaths has actually declined."

Reasons for the drop could range from advanced safety gear such as bulletproof vests, better training, better relationships and reduced violence in communities — or just 2017 being an outlier.

"It's definitely a good sign but if it's a trend, we'll have to see," said Geoffrey P. Alpert, a professor at the University of South Carolina and a researcher on high-risk police activities. "I think we're starting to see the impact of all this new training and equipment, and a shift because of the overall concern for officer safety."

While shootings played a big role, the largest number of deaths were the result of traffic crashes. Forty-seven officers were killed in crashes this year, down 15% from 2016. A number of factors — including the "move-over law" and enhanced policies that limit vehicle pursuits and speeding — could be behind the drop.

Texas, as it has in other years, had the highest number of law enforcement officers killed on the job, followed by Florida and New York, both with nine deaths.

Fourteen Texas officers have died in 2017, including earlier this month with the death of San Marcos Police Officer Kenneth Copeland, who was fatally shot while serving an arrest warrant.

San Marcos Police Chief Chase Stapp said the killing was similar to an ambush, which in 2016 was behind a jarring 21 deaths. Eight deaths in 2017 were the result of ambushes. This year, the largest number of fatal shootings happened when officers were responding to domestic disturbances.

Randy Sutton, a spokesman for the Blue Lives Matter group, said there are likely multiple reasons behind the drop in killings, including a change in how officers approach arrests because of the controversial high-profile shootings over the years. He said officers don't put themselves in dangerous situations as often.

"There's a saying in law enforcement: You can't get in trouble for the car stop you don't make," he said. "They don't want to be the next Ferguson, the next officer burned on the stake."

The numbers of people killed by officers actually jumped from 963 in 2016 to 971 this year, according to data compiled by The Washington Post. But the number of high-profile shootings that led to protests and riots was far lower than previous years, Floyd said.

"I'm hoping this is a sign that officers have restored some of that trust, especially in communities where that relationship has been torn," he said, adding that body-worn cameras have helped departments become more transparent and stop violence before it begins after controversial incidents.

Floyd said there have also been significant improvements over the years with de-escalation training and improved safety equipment provided to officers.

But some of those advancements could show why this year's data could be an outlier, according to Justin Nix, a criminal justice professor at the University of South Carolina.

There's no way of knowing the number of times officers nearly died or were shot at but survived because

	<p>they a bullet hit their tactical vest instead of them, he said. "Random chance" sometimes plays a role in these incidents, he said.</p> <p>"Every year, 100 to 150 officers die in the line of duty. It's a relatively small number when you consider the half a million officers nationwide, so it's going to bounce around," Nix said. "This decrease is definitely a good thing, but there's no way of knowing whether it might go up again next year."</p>

<b>HEADLINE</b>	<b>12/27 FBI declines to head murdered cop probe</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/fbi-declines-lead-investigation-unsolved-murder-veteran-baltimore/story?">http://abcnews.go.com/US/fbi-declines-lead-investigation-unsolved-murder-veteran-baltimore/story?</a>
<b>GIST</b>	<p>The FBI has declined to lead an investigation into the murder of a veteran Baltimore detective who was killed one day before he was due to testify in a federal police corruption trial, Baltimore Police Commissioner Kevin Davis said in a press conference Wednesday afternoon.</p> <p>On Nov. 15, homicide Det. Sean Suiter, an 18-year veteran of the Baltimore Police Department, was killed last month while conducting a follow-up to a homicide investigation, police said. While on the scene, Suiter approached a man who he saw was engaging in suspicious activity, and the man shot Suiter in the head shortly after with Suiter's own gun, police said.</p> <p>Suiter was scheduled to testify the next day in federal court regarding an ongoing corruption investigation of eight police officers being led by the FBI, which is what led Davis to request that the FBI assume a lead in the murder investigation into Suiter's death, he said.</p> <p>Yesterday, Davis received a letter from FBI Assistant Director Stephen Richardson, explaining that since "no information has been developed to indicate Det. Suiter's death was directly connected to an FBI investigation," the investigation into his murder should remain with the Baltimore Police Department.</p> <p>The FBI emphasized its "current commitment" to assist the police department, which will include providing FBI analytical, forensic and investigative support as well as \$25,000 toward a reward "for information leading to the arrest of anyone who may have been involved in this matter," the letter states, according to Davis, who added that the total reward stands at \$215,000.</p> <p>The case will remain with the Baltimore Police Department, Davis said. He described his decision to ask the FBI to take the lead in the investigation as a "unusual step" taken out of an abundance of caution, given that Suiter was due to testify in the federal corruption trial the next day.</p> <p>The FBI's decision to not lead the murder investigation reiterates in "black and white" that Suiter's death had nothing to do with the pending corruption investigation into the department, Davis said. In addition, there is "zero evidence" to suggest that Suiter committed suicide, Davis said.</p>

<b>HEADLINE</b>	<b>12/27 NY police: 'act of savagery' in killings</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/young-boy-girl-killed-act-savagery-upstate-york/story?id=52012275">http://abcnews.go.com/US/young-boy-girl-killed-act-savagery-upstate-york/story?id=52012275</a>
<b>GIST</b>	<p>A 5-year-old girl and an 11-year-old boy were among four people found dead in upstate New York in what police are treating as a quadruple homicide, described by the police chief as "savagery."</p> <p>The two children and two adult female victims, ages 22 and 36, were found early Tuesday afternoon in a basement apartment in Troy, New York, about 8 miles outside of Albany, Troy Police Chief John Tedesco said at a news conference today.</p> <p>The victims all appeared to have lived in the apartment, police said. The women were in a relationship,</p>

	<p>and the girl and the boy were the children of one of the women, police said.</p> <p>Tedesco said the killings aren't believed to be a random act, adding police do not believe there is any imminent danger to the public.</p> <p>Tedesco is urging anyone with information to contact the police.</p> <p>Tedesco did not release the causes of death. The autopsies are being performed today, he said.</p> <p>"The emotions of a police officer are something you repress because there is a job to be done," Tedesco said, adding that no one involved in this case will ever forget it.</p>

<b>HEADLINE</b>	<b>12/27 Calif. border checkpoints pot crackdown</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/legal-pot/pot-becomes-legal-california-2018-border-checkpoints-will-still-crackdown-n832876">https://www.nbcnews.com/storyline/legal-pot/pot-becomes-legal-california-2018-border-checkpoints-will-still-crackdown-n832876</a>
<b>GIST</b>	<p>PINE VALLEY, Calif. — California legalizes marijuana for recreational use Monday, but that won't stop federal agents from seizing the drug — even in tiny amounts — on busy freeways and backcountry highways.</p> <p>Marijuana possession still will be prohibited at eight Border Patrol checkpoints in California, a reminder that state and federal laws collide when it comes to pot. The U.S. government classifies marijuana as a controlled substance, like heroin and LSD.</p> <p>"Prior to Jan. 1, it's going to be the same after Jan. 1, because nothing changed on our end," said Ryan Yamasaki, an assistant chief of the Border Patrol's San Diego sector. "If you're a federal law enforcement agency, you uphold federal laws."</p>

	<p>The checkpoints, located up to 100 miles from Mexico, are considered a final line of defense against immigrants who elude agents at the border. They also have been a trap for U.S. citizens carrying drugs, even tiny bags of marijuana.</p> <p>About 40 percent of pot seizures at Border Patrol checkpoints from fiscal years 2013 to 2016 were an ounce (28 grams) or less from U.S. citizens, according to a Government Accountability Office report last month. California's new law allows anyone 21 and over to carry up to an ounce.</p> <p>The Border Patrol operates 34 permanent checkpoints along the Mexican border and an additional 103 "tactical" stops, typically cones and signs that appear for brief periods.</p> <p>Ronald Vitiello, acting deputy commissioner of parent agency Customs and Border Protection, called drug seizures an "ancillary effect" of enforcing immigration laws. Motorists typically are released after being photographed and fingerprinted. They generally aren't charged with a crime because prosecutors consider them low priority.</p> <p>The clash between state and federal marijuana laws played out on a smaller scale near the Canadian border in Washington after that state legalized marijuana in 2014. California is a far busier route for illegal crossings with many more agents.</p>

<b>HEADLINE</b>	<b>12/27 Overpass deaths: danger from above</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/overpass-death-highlights-dangers-motorists-pedestrians/story?id=52009795">http://abcnews.go.com/US/overpass-death-highlights-dangers-motorists-pedestrians/story?id=52009795</a>
<b>GIST</b>	<p>Four teenagers appeared in court this morning on murder charges for allegedly hurling a sandbag over an overpass, killing a 22-year-old man in a car below.</p> <p>This isn't the first incidence of a thrown item killing or injuring innocent people.</p> <p>Here's a look at some other occurrences that involved items ranging from a sandbag, a rock, a shopping cart and even a frozen turkey:</p> <p><b>December 2017</b></p>

Four teenagers are in custody after Toledo, Ohio, police say they threw a construction sandbag from an overpass on Dec. 19, hitting a passenger in a car on the interstate below.

The victim, 22-year-old Marquise Byrd, of Warren, Michigan, died three days later.

Three teenagers are 14 years old, police said. The other teen is 13.

They were charged with murder and vehicular vandalism, the Lucas County Prosecutor's Office said. The teens appeared in court this morning, where they denied the murder charge, the prosecutor's office said.

### **October 2017**

Five teenage boys in Michigan are facing charges including second-degree murder for allegedly throwing a rock at a van that went through the windshield and killed a passenger in October.

On Oct. 18, the victim, Kenneth White, and his friend were driving on the interstate when the driver said a large rock came through their van. The rock, according to the driver, struck White, 32, in the face and then ricocheted from his face to his chest, officials said.

The teens -- who were charged as adults with second-degree murder -- were also charged with conspiracy to commit murder and malicious destruction of property. They all pleaded not guilty, ABC affiliate WJRT in Flint reported in October.

They could face life in prison if convicted, officials said.

WJRT reported in October that White's fiance, Amiee Cagle, said she hoped the teen who allegedly threw the rock is sentenced to life in prison.

Cagle added that she will try to forgive the teens, WJRT reported.

"I know that's what Kenneth would have wanted," she said. "It's going to take time, a lot of time."

### **October 2011**

On Oct. 30, 2011, a New York City woman was seriously injured when a shopping cart fell four stories onto her at an East Harlem shopping center, according to The Associated Press.

The victim, Marion Hedges, was at the mall at the time buying Halloween candy for underprivileged children. She suffered a serious brain injury.

Two teenagers pleaded guilty in the assault.

One teen was sentenced to six to 18 months at a center for at-risk students, while the other teen was ordered to spend six months in a therapeutic group home, The New York Post reported.

In 2012, Hedges said she forgave the teens.

As of 2015, Hedges was still suffering from memory loss, double vision and impaired motor skills, the Post reported.

Her husband, Michael Hedges, told the Post, "This has destroyed our lives in every possible way."

### **November 2004**

On Nov. 13, 2004, a 44-year-old woman was in her car on Long Island when she was struck in the head by a 20-pound frozen turkey, the New York Post reported.

Victoria Ruvolo spent two weeks in an induced coma. Her esophagus was caved in, both cheeks and her jaw were shattered, the socket of one eye was fractured and she suffered brain damage.

	<p>Then-18-year-old Ryan Cushing pleaded guilty and was sent to jail for six months. He could have faced up to 25 years in prison if convicted, but Ruvolo asked the judge to show mercy, ABC News reported in 2005.</p> <p>Ruvolo said at the time of a lengthy prison sentence, "I don't think that would have done him, myself or society any good."</p> <p>Ruvolo said when Cushing pleaded guilty, "He came over to me and his eyes started swelling up and he was starting to apologize. ... And then he took me in his arms and the only thing I could do was comfort him. I needed that hug from him as much as he needed it from me."</p>

Top Gov't Contracts Policy Developments Of 2017

2017 introduced several major policy changes that will affect federal contractors' operations for years to come, from the implementation of a stringent defense cybersecurity rule and the repeal of a deeply unpopular rule on labor violations to provisions of the sprawling Pentagon budget bill. Here, Law360 runs down some of the year's most consequential moves for government contractors. [Read more »](#)

Lockheed, Northrop Shed F-35 FCA Case At 5th Circ.

The Fifth Circuit refused in a published opinion Tuesday to revive a False Claims Act suit alleging Lockheed Martin Corp. and Northrop Grumman Systems Corp. concealed the F-35 fighter aircraft's true cost, finding the whistleblower lacked direct knowledge of the alleged, and publicly disclosed, scheme. [Read more »](#)

Deutsche Bahn, German Army Sue Truck Makers Over Cartel

Rail giant Deutsche Bahn AG on Wednesday sued Volvo, Daimler and several other manufacturers accused of operating a long-running truck cartel, lodging a complaint on behalf of more than three dozen truck buyers and the German army, and seeking damages over vehicle sales worth more than

€2 billion. [Read more »](#)

### Commerce Dept. Finalizes 300% Tariffs On Bombardier Jets

When Bombardier Inc. starts exporting its C-Series commercial jets to the United States, they'll face tariffs totaling nearly 300 percent after the U.S. Department of Commerce announced final determinations Wednesday concluding the company is underpricing its aircraft and is illegally subsidized by the Canadian government. ### A Review Of US Economic Sanctions In 2017

The past 12 months have been an extraordinarily active period and, given recent international developments, the pace of change for U.S. sanctions policy is unlikely to slow in the foreseeable future, say Ama Adams, Brendan Hanifin and Emerson Siegle of Ropes & Gray LLP. [Read more »](#)

### Hearing The Need For More Women's Voices In The Courtroom

For many female attorneys, the results revealed in the New York State Bar Association's recently adopted report on female litigators in the courtroom were not encouraging but not terribly surprising. Each stakeholder in the litigation process — judges, law firms and corporate clients — should contribute toward increasing female voices in the courtroom, says Carrie Cohen of Morrison & Foerster LLP. ### Analysis

#### Trump's First Year Saw Slew Of Judicial Confirmations

With 12 appellate judges and a U.S. Supreme Court justice, President Donald Trump has already made an impact on the federal courts in his first year, even as allies push for more judges to be confirmed more quickly and Trump's detractors cry foul. [Read more »](#)

#### Trump Taps 10 For Bench In Latest Round Of Nominations

President Donald Trump announced a wave of federal judicial nominations on Wednesday, tapping a New Mexico energy law partner for the Tenth Circuit, a Morgan Lewis & Bockius LLP intellectual property partner for the District of Delaware, and eight more attorneys for federal district judgeships in Pennsylvania, Florida and other states. [Read more »](#)

#### IP Firm Hits LegalZoom, State Bars With \$60M Antitrust Suit

A law firm specializing in trademark registration filed a \$60 million antitrust lawsuit in California federal

court Tuesday, accusing federal and state regulators of complicity in allowing LegalZoom.com and its founders to use false advertising and offer customers unauthorized legal services. [Read more »](#)

Womble Bond Taking On 24 Attys From Calif. IP Boutique

Womble Bond Dickinson (US) LLP is picking up 24 members of an intellectual property boutique in California, adding another notch to its belt in a series of combinations following the November merger of North Carolina-based Womble Carlyle Sandridge & Rice LLP and British firm Bond Dickinson LLP. [Read more »](#)

Law360's Weekly Verdict: Legal Lions & Lambs

The year's final legal lions list has been compiled, and sole practitioner John R. Sommer ended up on top of it for his work taking down the Lanham Act's ban on "scandalous and immoral" trademarks, while 2017's final legal lambs list is headed up by Kane Russell Coleman & Logan PC, which was on the losing end of a \$98 million fraud verdict in Texas this week. [Read more »](#)

Legal Tech Download: Dentons' Leadership Change-Up

The world of legal technology is quickly evolving, with new products coming to market in rapid succession. Here, Law360 takes a look at seven major recent developments. [Read more »](#)

Top Gov't Contracts Policy Developments Of 2017

2017 introduced several major policy changes that will affect federal contractors' operations for years to come, from the implementation of a stringent defense cybersecurity rule and the repeal of a deeply unpopular rule on labor violations to provisions of the sprawling Pentagon budget bill. Here, Law360 runs down some of the year's most consequential moves for government contractors. [Read more »](#)

Lockheed, Northrop Shed F-35 FCA Case At 5th Circ.

The Fifth Circuit refused in a published opinion Tuesday to revive a False Claims Act suit alleging Lockheed Martin Corp. and Northrop Grumman Systems Corp. concealed the F-35 fighter aircraft's true cost, finding the whistleblower lacked direct knowledge of the alleged, and publicly disclosed, scheme. Deutsche Bahn, German Army Sue Truck Makers Over Cartel

Rail giant Deutsche Bahn AG on Wednesday sued Volvo, Daimler and several other manufacturers accused of operating a long-running truck cartel, lodging a complaint on behalf of more than three dozen truck buyers and the German army, and seeking damages over vehicle sales worth more than

€2 billion. [Read more »](#)

### Commerce Dept. Finalizes 300% Tariffs On Bombardier Jets

When Bombardier Inc. starts exporting its C-Series commercial jets to the United States, they'll face tariffs totaling nearly 300 percent after the U.S. Department of Commerce announced final determinations Wednesday concluding the company is underpricing its aircraft and is illegally subsidized by the Canadian government. \*Remote LD\_PRELOAD Exploitation against GoAhead servers

From Elttam (12.18.2017)

A blog post by Elttam researchers details CVE-2017-17562, a vulnerability which can be exploited to gain reliable remote code execution in all versions of the GoAhead web server < 3.6.5. The vulnerability is a result of Initializing the environment of forked CGI scripts using untrusted HTTP request parameters, and will affect all users who have CGI support enabled with dynamically linked

executables. This behavior, when combined with the glibc dynamic linker, can be abused for remote code execution using special variables such as LD\_PRELOAD (commonly used to perform function hooking). GoAhead's marketing page says that it's "the world's most popular, tiny embedded web server" and is used by such companies as IBM, HP, Oracle, Boeing, D-link, and Motorola. Elttam did a search on shodan, and found over 735,000 devices using it on the internet today. The exploitation of this issue serves as an interesting case study, and could be applied to other types of software with the same insecure construct. Link

### \*"Zealot" Campaign Uses NSA Exploits to Mine Monero on Windows and Linux Servers

From Bleeping Computer (12.16.2017) Catalin Cimpanu

An aggressive and sophisticated malware campaign is currently underway, targeting Linux and Windows servers with an assortment of exploits with the goal of installing malware that mines the Monero cryptocurrency. The campaign was detected by security researchers from F5 Networks, who named it Zealot, after zealot.zip, one of the files dropped on targeted servers. According to security researchers for F5 Networks, the attackers are scanning the Internet for particular servers and using two exploits, one for Apache Struts (CVE-2017-5638) and one for the DotNetNuke ASP.NET CMS (CVE-2017-9822), to get a foothold on unpatched machines. For this campaign, the Struts flaw included payloads for targeting both Linux and Windows machines at the same time. In the case attackers infected a Windows machine, attackers also deployed EternalBlue and EternalSynergy, two NSA exploits leaked by the Shadow Brokers earlier this year, which attackers use to move laterally in the victim's local network and infect even more systems. At a later point, they would use PowerShell to download and install the final-stage malware, which, for this campaign, was a Monero miner. On Linux, attackers would use Python scripts that appear to be taken from the EmpireProject post-exploitation framework, and would also install the same Monero miner. Link

### \*New GnatSpy Mobile Malware Family Discovered

From Trend Micro (12.18.2017) Ecular Xu

Earlier this year researchers first disclosed a targeted attack campaign targeting various sectors in the Middle East. This threat actor was called Two-tailed Scorpion/APT-C-23. Later on, a mobile component called VAMP was found, with a new variant (dubbed FrozenCell) discovered in October. VAMP targeted various types of data from the phones of victims: images, text messages, contacts, and call history, among others. Dozens of command-and-control (C&C) domains and samples were found, which were soon disabled or detected. Recently, Trend Micro researchers came across a new mobile malware family which they called GnatSpy. We believe that this is a new variant of VAMP, indicating that the threat actors behind APT-C-23 are still active and continuously improving their product. Some C&C

domains from VAMP were reused in newer GnatSpy variants, indicating that these attacks are connected. Researchers do not know for sure how these files were distributed to users. It is possible that threat actors sent them directly for users to download and install on their devices. They had names like "Android Setting" or "Facebook Update" to make users believe they were legitimate. Nor have significant numbers of these apps been detected in the wild, indicating their use is probably limited to specific targeted groups or individuals. The capabilities of GnatSpy are similar to early versions of VAMP. However, there have been some changes in its behavior that highlight the increasing sophistication of this particular threat actor. The structure of the new GnatSpy variants is very different from previous variants. More receivers and services have been added, making this malware more capable and modular. [Link](#)

[Blog\[.\]trendmicro.com/trendlabs-security-intelligence/new-gnatspy-mobile-malware-family-discovered/](http://blog.trendmicro.com/trendlabs-security-intelligence/new-gnatspy-mobile-malware-family-discovered/)

\*Google Researcher Finds Critical Flaw in Keeper Password Manager

From Security Week (12.18.2017) Eduard Kovacs

Google Project Zero researcher Tavis Ormandy recently discovered that the Keeper password manager had been affected by a critical flaw similar to one he identified just over one year ago in the same application. Ormandy found the security hole after noticing that Keeper is now installed by default in Windows 10. He remembered a vulnerability he reported last year and managed to reproduce the same attack with only a few minor modifications. The vulnerability affects the Keeper browser extensions, which, unless users opt out, are installed alongside the Keeper desktop application. The security hole allows attackers to steal passwords stored by the app if they can convince an authenticated user to access a specially crafted website. Keeper released a patch within 24 hours of being notified by Ormandy. The fix has been rolled out with version 11.4.4 and it has already been delivered to Edge, Chrome and Firefox users via the browsers' automatic extension update process. [Link](#)

[Securityweek\[.\]com/google-researcher-finds-critical-flaw-keeper-password-manager](http://Securityweek[.]com/google-researcher-finds-critical-flaw-keeper-password-manager)

\*Loapi Android Malware Can Cause Cell Phones to Overheat

From Bleeping Computer (12.16.2017)

A malware strain known as Loapi will damage phones if users don't remove it from their devices. Left to its own means, this modular threat will download a Monero cryptocurrency miner that will overheat and overwork the phone's components, which will make the battery bulge, deform the phone's cover, or even worse. Discovered by Kaspersky Labs, researchers say Loapi appears to have evolved from

Podec, a malware strain spotted in 2015. Back then, crooks were using Podec to bypass Advice of Charge (AoC) and CAPTCHAs to subscribe victims to premium-rate SMS services. The new Loapi malware is much more advanced compared to the simplistic Podec strain. Kaspersky experts call it a "jack of all trades," as Loapi has a highly advanced modular structure and components for all sorts of nasty operations. Loapi is currently advertised on third-party app stores, masquerading as a mobile antivirus. The malware uses the classic trick of pestering users with an endless stream of popups until the user does what the malware wants. This is how Loapi obtains device administrator rights and how Loapi forces users to uninstall real antivirus apps from their phones. Loapi-infected apps will also close the Settings window whenever it detects that a user is trying to deactivate its administrator account. Users will have to boot their device in Safe Mode in order to remove Loapi. [Link](#)

[Bleepingcomputer\[.\]com/news/security/android-malware-will-destroy-your-phone-no-ifs-and-buts-about-it/](http://bleepingcomputer.com/news/security/android-malware-will-destroy-your-phone-no-ifs-and-buts-about-it/)

\*Two Critical 0-Day Remote Exploits for vBulletin Forum Disclosed Publicly

From The Hacker News (12.17.2017) Swati Khandelwal

Security researchers have discovered and disclosed details of two unpatched critical vulnerabilities in a popular internet forum software—vBulletin—one of which could allow a remote attacker to execute malicious code on the latest version of vBulletin application server. vBulletin is a widely used proprietary Internet forum software package based on PHP and MySQL database server. It powers more than 100,000 websites on the Internet, including Fortune 500 and Alexa Top 1 million companies websites and forums. The vulnerabilities were discovered by a security researcher from Italy-based security firm TRUDEL IT and an unknown independent security researcher, who disclosed the details of the vulnerabilities by Beyond Security's SecuriTeam Secure Disclosure program. The vulnerabilities affect version 5 of the vBulletin forum software and are currently unpatched. Beyond Security claims, it tried to contact vBulletin since November 21, 2017, but received no response from the company. The first vulnerability discovered in vBulletin is a file inclusion issue that leads to remote code execution, allowing a remote attacker to include any file from the vBulletin server and execute arbitrary PHP code. An unauthenticated attacker can trigger the file inclusion vulnerability by sending a GET request to index.php with the routestring= parameter in the request, eventually allowing the attacker to "create a crafted request to Vbulletin server installed on Windows OS and include any file on the web server." The second vulnerability discovered in the vBulletin forum software version 5 has been assigned CVE-2017-17672 and described as a deserialization issue that an unauthenticated attacker can exploit to delete arbitrary files and even execute malicious code "under certain circumstances." Automated Hunting of Software Update Supply Chain Attacks

From Digital Forensics SANS (12.16.2017) Adam Kramer

Software that automatically updates itself presents an attack surface, which can be leveraged en masse

through the compromise of the vendor's infrastructure. This has been seen multiple times during 2017, with high profile examples including NotPetya and CCleaner. Most large organizations have built robust perimeter defenses for incoming and outgoing traffic, but this threat vector is slightly different and far more difficult to detect. Update packages are often deployed in compressed, encrypted or proprietary formats and would not easily be subject to an antivirus scan or sandbox analysis during transit. This leaves us with a large number of trusted processes within our infrastructure that could turn on us at any time and download something evil, which could potentially be undetectable by endpoint antivirus software. It would be almost impossible to detect all potential malicious code changes, as they could be as simple as changing a single assembly instruction from JNZ to JZ to allow for unauthorized access or privilege escalation to occur. However, this doesn't prevent some additional proportionate due diligence on the update package being pulled down and installed. In a large network there is going to be a lot of noise and you may want to select the top 50 auto updating processes that are most widely utilised across the estate and focus on them. [Link](#)

### Barclays Bank Insider Sentenced for Role in Dridex Plot

From Info Security (12.15.2017) Phil Muncaster

A former Barclays Bank employee has been sentenced to six years and four months behind bars for helping cyber-criminals launder millions of pounds of stolen funds. Jinal Pethad, 29, from London, set up 105 fake bank accounts using false identity documents in a bid to trick the bank's security processes, the National Crime Agency claimed. He pleaded guilty this week to conspiring to launder money between 2014 and 2016 on behalf of Pavel Gincota and Ion Turcan. The two, who were jailed in October, wanted to get rid of £2.5m stolen in scams using the infamous Dridex banking trojan. Pethad was soon tracked down during the investigation into their activities and after officers raided his Edgware home they apparently recovered over £4000 in cash, seven luxury watches and three mobile phones which had been used to communicate with Gincota. "Jinal Pethad abused his position of trust at the bank to knowingly set up sham accounts for Gincota and Turcan, providing a vital service which enabled them to launder millions," said Mark Cains of the NCA's National Cybercrime Unit. #### NASA X-Plane Battery Passes Tests

From AV Web (12.14.2017) May Grady

NASA says its engineers reached a major milestone this week, successfully testing the battery system that will power the all-electric X-plane expected to take flight next year. "This was an extremely critical milestone for the overall project," said Tom Rigney, project manager for the X-57 Maxwell. "Without a

safe battery system, we wouldn't be able to execute our objectives. This test truly ensures a safe environment for the pilot and the test program." The testing validated that the battery system can safely power the X-57 for an entire flight profile. The team is working toward a flight duration of at least 45 minutes to an hour. "We exposed the battery to the conditions of an X-57 flight, based on current expected flight profiles, to make sure the capacity and thermal conditions stayed within safe limits," said NASA Glenn's Dionne Hernandez-Lugo, battery development lead for the project. "We were able to see how the battery behaves throughout the flight, as well as the overall capacity. The battery passed." The test also confirmed the battery design's ability to isolate potential overheating issues to single battery cells, preventing unsafe conditions from spreading to the rest of the battery system. The X-57 project aims to demonstrate a significant increase in efficiency at high-speed cruise compared to aircraft propelled by traditional systems, NASA says. The technology would result in lower operating costs, as well as lower carbon emissions. [Link](#)

## Legislation & Regulation News

President Trump may stop Boeing and Airbus jetliner sales to Iran

From The Hill (12.15.2017) Max Greenwood

The Trump administration is weighing a strategy that could stop Boeing and Airbus from selling hundreds of passenger planes to Iranian airlines. The Wall Street Journal reported Friday that while options have not yet been presented to President Trump, they are expected to include prohibiting the sales, imposing restrictions that could stop any aircraft deliveries or slowing down the approval process. Boeing and Airbus have agreed to sell nearly 300 planes to Iranian airlines. Those sales were allowed under the 2015 Iran nuclear deal, pending approval from the Treasury Department's Office of Foreign Assets Control. The nuclear deal bars Iran from developing nuclear weapons in exchange for sanctions relief. Trump disavowed the nuclear deal in October, though he did not withdraw from the agreement. He must decide by mid-January whether to extend sanctions relief for Iran. He is expected to once again say that Tehran is not complying with the deal. Boeing and General Electric are two major U.S. companies to pursue business opportunities with Iran. The administration is concerned that the airplanes could be used by Iran to send weapons and military personnel to Syria, according to the Journal. In a statement to the newspaper, a White House spokesman said that the administration would not grant licenses for the sales unless Iran can offer assurances that the aircraft would be used only for commercial aviation. Top U.S. official calls for clarity on post-Brexit aviation safety

From Reuters (12.13.2017) Julia Fioretti

The United States is urgently calling for clarity on which aviation safety regime the British aerospace industry will operate under after the country leaves the European Union, to avoid increased certification costs for airlines and manufacturers.

The head of the U.S. Federal Aviation Administration (FAA) is in London and Brussels for talks with both sides on whether Britain can retain a role in the European Aviation Safety Agency (EASA) and said the FAA needed clarity on that by early next year. "The UK's status (within EASA) does evaporate upon exit from the EU so the question becomes 'what is going to replace it?'" Michael Huerta told reporters before meeting with the EU executive, the European Commission. If Britain quits EASA its own aviation regulator, the Civil Aviation Authority (CAA), will need to assume EASA's role in supervising manufacturers, raising questions about whether it has the capacity to do that. "If there is now no EASA regulatory oversight over the United Kingdom's manufacturers we have no way of relying on EASA's oversight and certification so therefore we would need to make our own findings, manufacturer by manufacturer. And that is highly disruptive, highly costly for manufacturers to ensure that they can comply with FAA standards for manufacturing," Huerta said. The United Kingdom has said it expects to remain part of EASA, although that raises thorny questions about the jurisdiction of the EU's top court, which London does not want to submit to. An official from the UK's CAA said on Monday that the agency was not planning for a new independent aviation safety system in the UK. [Link](#)

Nigerian Airport Security Team Investigates How Bandits Attacked And Burgled Taxiing Jet At Lagos Airport

From Sahara Reporters (12.17.2017)

Less than 24 hours after SaharaReporters broke the news of how airport bandits of attacked and burgled Vistajet aircraft that was taxiing to apron after landing, the management of the Federal Airports Authority of Nigeria (FAAN) has set up an investigation team to unravel the cause of the incident. FAAN said that it has set up a combined team of Aviation Security (AVSEC) Department, Airport Police Command and other relevant security agencies to immediately get to the root cause of the incident. A

statement by Henrietta Yakubu, the spokesman of the agency said that the investigative team would immediately commence an investigation into the incident, which took place while the aircraft, a Vistajet with the registration number 9H-VFA was taxiing to the hangar of Evergreen Apple Nigeria (EAN) Ltd. SaharaReporters can confirm that the incident actually occurred on the night of Tuesday, December 12, 2017, when the jet with the registration number 9H-VFA operated by EAN was taxiing to the apron from the runway. Information gathered by SaharaReporters had revealed that the jet was taxiing on the 18Right of the runway before the incident. A source close to EAN had confided in our correspondent that one of a crewmember of the jet discovered that the rear door of the aircraft was opened while taxiing to the hangar of EAN. [Link](#)

More New Orleans airport travelers bringing guns in their carry-on

From NOLA (12.15.2017) Jennifer Larino

This year could be another record-breaking year for firearms found in carry-on bags of passengers trying to board flights in Louisiana, led by guns seized at New Orleans' Louis Armstrong International Airport. So far this year, the Transportation Security Administration has intercepted 83 guns at airport security lines across Louisiana, including 56 in New Orleans. "We are pretty certain we're going to unfortunately set a record," said Sari Koshetz, spokeswoman for the Transportation Security Administration. "It's not the kind of record we want to set." Koshetz and Billy Booth, a TSA expert on improvised explosive devices, stood inside a small room at the airport Friday morning in front of a table with a sampling of the roughly two-tons of illegal items intercepted at New Orleans airport security lines this year. There were dozens of knives, ranging from pocket-size to long hunting knives, as well as bats, self-defense keychains, bullet casings, batons, flares, two bottles of lighter fluid, two replica handguns and, the highlight of the display, two replica hand grenades. Koshetz urged people ahead of the holiday travel season to know what is in their bag and to closely review TSA guidelines before, during and after packing. She noted many of the guns intercepted in New Orleans security lines are loaded, a "disturbing and dangerous" reality for fellow travelers. [Link](#)

Miscellaneous News

French Aerospace Firm Thales Acquires SIM Maker Gemalto

From Tech Crunch (12.17.2017) Natasha Lomas

Digital security solutions provider Gemalto has agreed to a €51 per share acquisition offer from French aerospace and defense group Thales — in a deal worth around \$5.43BN. Gemalto is a major producer of SIM cards and NFC for mobile phones but also provides secure transaction solutions to banks, including EMV chip cards, payment terminals and user authentication systems for online banking, such as one-time token generating hardware devices for 2FA. It also sells identity and access control solutions to the public sector, including biometric authentication technologies for government-issued ID documents such as passports. Another branch of its business is in enterprise security, including encryption and cloud security services. It also plays in the Internet of Things space — offering connectivity, security and monetization services. The Thales Group, which focuses on aerospace, defense, space and transportation, also operates a security division offering solutions in areas such as critical information system operations, airport security systems and cryptology and security architectures for big data. This is where it's intending Gemalto to slot in. [Link](#)

Timeline: How the Atlanta airport outage unfolded

From USA Today (12.18.2017) Tim Darnell

Monday, Dec. 18

6:30 a.m. -- Although a dense fog advisory is in effect, an airport spokesperson said it has not hindered departures.

1:10 a.m. -- 11Alive's Bill Liss reports that lines are now moving through security and Delta is checking folks in.

12:56 am -- First flight takes off from Atlanta airport after blackout.

Sunday, Dec. 17

11:56 p.m. -- Mayor Kasim Reed says all power has been restored to the airport.

11:19 p.m. -- Power has been restored in the atrium and Concourses T, A and B.

9:37 p.m. -- Delta has canceled 300 flights on Monday as a result of Sunday's airport blackout.

8:59 p.m. -- During a live press conference, Atlanta Mayor Kasim Reed says there is no evidence to suggest the fire that caused the airport blackout was the result of criminal activity.

8:30 p.m. -- Delta says it has canceled 900 flights as a result of the airport blackout. It is continuing to deplane passengers.

7:42 p.m. -- Delta has canceled all flights into and out of Atlanta.

7:34 p.m. -- City officials say power at Concourse F is back on.

7:33 -- Atlanta fire rescue says all flights at the airport have been cancelled.

6:50 p.m. -- Gov. Nathan Deal is sending two teams comprised of 24 Georgia state troopers to assist at the airport.

6:47 p.m. -- Terminal A has emergency lights and someone just said Terminal B emergency lights just came on."

6:35 p.m. -- Georgia Power expects power to be restored to Atlanta airport by midnight.

6:29 p.m. -- A Delta executive has told 11Alive that the airport is being evacuated.

5:12 p.m. - -Delta says it is deplaning aircraft that have not been able to depart due to the power outage.

4 p.m. -- Airport officials say they are still working to restore power at the airport. The ground stop continues, and there is no timetable for when flights will be allowed to resume. The exact cause of the power outage is still under investigation. Many inbound flights to Atlanta are being diverted.

3:53 p.m. -- Southwest Airline has canceled all flights into and out of Atlanta for the rest of the day.

3:37 p.m. -- According to the U.S. Customs and Border southeastern division, all international flights heading into Atlanta are being diverted to other airports.

3:22 p.m. -- The FAA has extended the ground stop to at least 4 p.m., and says between 80 to 100 jets are parked on the taxiways, waiting for gates.

3:15 p.m. -- Major airlines are canceling flights at Atlanta's Hartsfield-Jackson International Airport in the aftermath of a major power outage Sunday afternoon.

12:55p.m. – Outage begins at Atlanta's Hartsfield-Jackson International Airport.

U.S. Department of Transportation Crisis Management Center Daily Report

Commercial In-Flight Incidents

\*American 1359, A319

o December 17, 2017 at 10:58 PM EST

- o Enroute from Miami, FL (Miami International Airport) to Toronto, Canada (Toronto Pearson International Airport)

- o Level 1 disturbance

- o Returned to Miami, FL; landed without incident at 11:12 PM EST

- o Passenger interviewed and detained on December 18, 2017 at 12:27 AM EST

- o Flight rescheduled to depart on December 18, 2017 at 9:15 AM EST

\*American 439, A321

- o December 17, 2017 at 4:15 PM EST

- o Enroute from Los Angeles, CA (Los Angeles International Airport) to Philadelphia, PA (Philadelphia International Airport)

- o Intake valve problem

- o Returned to Los Angeles, CA; landed without incident at 4:35 PM EST

\*Republic 4595, E75S

- o December 17, 2017 at 7:37 AM EST

- o Enroute from Miami, FL (Miami International Airport) to Austin, TX (Austin-Bergstrom International Airport)

- o Pressurization problem; overweight landing

- o Returned to Miami, FL; landed without incident

\*Delta 1440, B712

- o December 16, 2017 at 7:33 PM EST

- o Enroute from Kansas City, MO (Kansas City International Airport) to Detroit, MI (Detroit Metropolitan Wayne County Airport)

- o Passenger disturbance

- o Continued to Detroit, MI; landed without incident

- o Passenger escorted off aircraft; no longer allowed to fly on Delta Airlines at 9:52 PM EST

#### Ground Incidents

\*Atlanta, GA, Hartsfield-Jackson Atlanta International Airport

- o December 17, 2017 at 1:26 PM EST

- o Power outage affecting all terminals; passenger screening suspended

- o First tier ground stop implemented; Cargo, General Aviation and Air Traffic Control Tower not impacted
- o All passengers deplaned from aircraft that were waiting for available gates; all terminals evacuated
- o Power outage was due to a fire in a power vault between concourses E and F
- o 711 arrivals, 579 departures flights were cancelled
- o Power restored to all terminals at 11:49 PM EST; ground stop cancelled on December 18, 2017 at 12:35 AM EST
- o TSA screening resumed on December 18, 2017 at 3:00 AM EST; flights resumed at 6:00 AM EST

The al Qaeda-linked Ansar al-Islam has claimed responsibility for the Oct. 20 ambush in Western Egypt that killed at least 55 Egyptian security force members. The attack showed a level of sophistication beyond that shown by the Hasam Movement and the Islamic State-affiliated Wilayat Sinai, the other major militant groups active in the area. The level of sophistication is not surprising, however, for Ansar al-Islam, which has ties to former Egyptian Special Forces officer Hisham Ashmawy. Ansar al-Islam is a relatively new group, but the re-emergence of al Qaeda, which has kept a low profile in the country lately is concerning. How will the re-emergence of al Qaeda in Egypt change the complex militant landscape there? What does it mean for Egyptian stability?

- \*Chinese Malware Resurfaces After a Decade's Absence to Target Aerospace Sector

From Bleeping Computer (10.18.2017) Catalin Cimpanu

A remote access trojan (RAT) known as Hacker's Door has resurfaced in active infections after being

seen the last time in 2004-2005. According to experts at Cylance, who spotted the recent Hacker's Door infections, the malware "was signed with a stolen certificate, known to be used by the Winnti APT group," meaning the new version is used in nation-state cyber-espionage or economic espionage campaigns. Furthermore, this is not the old Hacker's Door RAT. Researchers say the malware has been updated to work on 64-bit architectures and can run on newer Windows versions such as Windows 7 and Windows 8.1. Researchers tracked down the new Hacker's Door malware to a Chinese blog where its author had been offering this new version for download since at least June 2015. It is not uncommon for APT groups to use your run-of-the-mill malware, this being a good technique to hide APT operations among the large number of mundane malware detections. Recent Winnti attacks with Hacker's Door malware have targeted aerospace entities. Winnti is also famous for developing/deploying several other malware families, such as PlugX, HDRoot, Tengo, the eponymous Winnti malware, and Skeleton Key, just to name a few. Other security firms also track the Winnti group under the name of Blackfly or G0044. [Link](#)

\*New Malicious Macro Evasion Tactics Exposed in URSNIF Spam Mail

From Trend Micro (10.18.2017)

Malicious macros are commonly used to deliver malware payloads to victims, usually by coercing victims into enabling the macro sent via spam email. The macro then executes a PowerShell script to download ransomware or some other malware. Just this September EMOTET, an older banking malware, leveraged this method in a campaign that saw it spreading to new industries and regions. Because of the effectiveness of this method, attackers continue to use it and improve it. Threats leveraging malicious macros are constantly changing to evade security measures that detect and block them. Recently, in spam email distributing URSNIF, a malware famous for adopting new tools, we saw simple checks that the malware uses to evade sandbox detections. Macros that use AutoClose can run malicious PowerShell script after closing the document, evading sandbox detections that analyze the macro itself. This method is becoming a common feature in many malicious macros because it is easy to implement. After coercing the victim to enable macros, the macro waits for the would-be victim to close the document and only then will PowerShell execute. Sandbox detections might miss the malicious behavior since the malicious routines will only run after the document is closed. Most of the samples analyzed have one thing in common—they run PowerShell script that downloads and executes another malware. For the samples we analyzed, the malware downloaded is a variant of the URSNIF malware. However, these are not unique to one malware; it is possible that others may be downloaded. As malware and their delivery methods continue to evolve, security must be updated as well. [Link](#)

\*Necurs Downloader Updated with New Capabilities

From Bleeping Computer (10.18.2017) Catalin Cimpanu

Malware families evolve on a daily basis, but some updates catch your eye more than others. Necurs has just gone through one of these "interesting" updates, according to US security firm Symantec. In the world of security research, the Necurs malware strain is a "downloader" or "loader," and just like similar downloaders, it only has three major functions: (1) gain boot persistence on an infected PC, (2) collect telemetry on infected hosts, and (3) download and install a second-stage payload. The Necurs malware is distributed via spam sent by Necurs bots or hacked web servers. Recently, researchers from Symantec observed two major additions to the Necurs downloader. The first is the addition of a Powershell script that takes a screenshot of the infected user's screen, and after waiting a few seconds, it uploads the image to a remote server. The second function is a built-in error reporting function that watches the Necurs downloader for errors, records problems, and sends the info back to Necurs operators. Other malware families also come with these types of features, but they have never been seen in downloaders. According to Symantec, the reasons for the screenshot behavior may be that Necurs operators are looking for more clues about the computers they infect, besides the telemetry data they collect shortly after infection. This info could allow them to detect when they infect more valuable environments, like the ones running professional office-related software, which usually mean computers on corporate networks. [Link](#)

Ransomware Attack Locks Down a U.S. city for four days

From The Hacker News (10.16.2017)

Unitrends—an American company specialized in backup and business continuity solutions—recently disclosed a real cyber-attack incident with one of their customers and described the required steps they took to recover functionality following a CryptoLocker attack against a US city. Issaquah is a small city of 30,434 people in Washington state. The city's networks were protected by a five-person team and their back-up system had not been upgraded in a decade. Unitrends analysts said that, "we believe the ransomware attack originated from a "drive-by" where a single city employee visited and opened a .pdf file that had been compromised on a grant coordination site run by a non-profit. This ransomware appeared to disable our anti-virus systems, and is known to remove all traces once finished. This virus ran only in PC memory and did not turn up on any other devices in our system. It only attacked Microsoft Office, image, .pdf, and text files in folders on the user's PC and file shares to which the user had to write access. It stopped encrypting files once the PC was restarted in safe mode. The lack of propagation could have been a result of either the virus being designed to reside solely in memory to prevent triggering alarms or because our anti-virus software intercepted it at other devices as it attempted to propagate.

The physical server that hosted the file also hosted five critical virtual application servers. After careful analysis, it was determined these were not compromised. We immediately moved these virtual machines onto a different host. This was done prior to kicking off the server restore to reduce processor and NIC load on the file server host. When we began the file server restore process it quickly became apparent it would take a long time... four days as it turned out. A quick analysis revealed we had no other options to restore the file server. The backup.exe device did work and never failed or stopped during the restore process. It seems the scale of the restore was too big for the device capacity and it had to chunk the workout, making the process very long." [Link](#)

Google Chrome can now spot even brand new phishing pages

From ZD Net (10.18.2017) Liam Tung

Google is stepping up defenses against phishing through a new predictive feature coming to Chrome and its Advanced Protection Program for high-risk Gmail users. Google has updated its Safe Browsing technology to warn users when they visit a new phishing page that hasn't existed long enough to be detected by Safe Browsing as a known phishing site. The new predictive phishing protection for Chrome is designed to prevent users from typing their credentials in a phishing site that was "created and used for attacks moments later". According to Google, Safe Browsing's historical data allow it to make predictions about risks in real-time. Predictive phishing protection will initially only protect the Google account password, however it will eventually be used to protect all passwords saved in Chrome's password manager. It will also be available to other apps and browsers that use Safe Browsing, including Safari, Firefox and Snapchat. Google has also rolled out the Advanced Protection Program, which is available to any Gmail users who face a high risk of being targeted online. Once a Gmail account is enrolled in the program, signing in requires using a physical Security Key which means the user needs to first buy a USB Secure Key for access on a PC and a Bluetooth-enabled Security Key for accessing Gmail on a mobile device. The keys cost around \$20 each. [Link](#)

88% of Java Apps Vulnerable to Attacks from Known Security Defects

From Info Security (10.18.2017) Michael Hill

A new report from CA Veracode has exposed the pervasive risks companies face from vulnerable open source components. In its 2017 State of Software Security Report the firm reviewed application security testing data from scans of its base of 1400 customers, discovering that 88% of Java applications contain at least one vulnerable component, making them susceptible to widespread attacks. A cause of the problem, in part, is that fewer than 28% of companies carry out regular analysis to see which components are built into their applications, Veracode claimed. There have been plenty of examples of high-profile Java app breaches caused by vulnerabilities in open source or commercial components in the last year, one such being the 'Struts-Shock' flaw affecting the Apache Struts 2 web application framework. As evidenced in the report, the most severe flaws require significant time to fix (only 22% of very high severity flaws were patched in 30 days or less), with most attackers leveraging vulnerabilities within days of discovery. "Veracode researchers said that they've seen quite a few breaches as a result of vulnerable components and unless companies start taking this threat more seriously, and using tools to monitor component usage, the problem will intensify. ## RSA Unveils New GDPR Compliance Offerings

From Security Week (10.17.2017) Kevin Townsend

Europe's General Data Protection Regulation (GDPR) is just another information security compliance regulation requiring that organizations protect personal data from being stolen by hackers. The emphasis on data protection has changed: it is traditionally designed to protect data from criminals; but this regulation is designed to protect data for the user. It is against the background of GDPR being as much about data governance as it is about information security that RSA has today beefed up its Archer governance suite specifically to aid compliance with the governance side of GDPR. Archer, combined with RSA NetWitness and the RSA Data Risk and Security Practice can aid GDPR compliance. On risk assessment, RSA suggests that Archer's components will help accelerate the identification of the linkage between risks and internal controls, potentially reduce the GDPR compliance gaps and improve risk mitigation strategies. On breach response, GDPR requires that regulators are notified of a breach generally within 72 hours of the company becoming aware of the breach. Here, RSA says its NetWitness product will scan the entire network infrastructure looking for indications of a compromise. RSA offers its SecurID suite and Data Risk and Security Practice service to cover the mainstream governance side of GDPR. Compliance is no longer a destination, but a continuing state, it suggests. While under earlier European laws, companies needed only worry about compliance if they were breached, with GDPR they can be found non-compliant in data governance areas at any time. [Link](#)

## Microsoft denies that BoundHook vulnerability is actually a vulnerability

From Beta News (10.18.2017) Mark Wycislik-Wilson

Security researchers at CyberArk are reporting about a new technique that could be used to take control of Windows 10 devices. Known as BoundHook, the technique takes advantage of the BOUND hooking technique in Intel MPX (Memory Protection Extensions). But while CyberArk says that it will "bring new capabilities to both software security vendors and malware writers," Microsoft is downplaying the issue, suggesting there is nothing to worry about. CyberArk acknowledges that the "technique can be used in a post-exploitation scenario in which the attacker has control over the asset." That said, it's not something that should necessarily be ignored. "Since malicious kernel code (rootkits) often seeks to establish persistence in unfriendly territory, stealth technology plays a fundamental role." Over on the CyberArk website, there is some detail about how the technique works. The concern is that the method may well not be detected by antivirus and anti-malware software. Microsoft has previously dismissed a similar vulnerability (GhostHook) that was also reported by CyberArk, saying: Microsoft replied: "The technique described in this marketing report does not represent a security vulnerability and requires a machine to already be compromised to potentially work. We encourage customers to always keep their systems updated for the best protection." [Link](#)

### XTI Aircraft Company Accepts More Orders for TriFan 600 Vertical Takeoff Airplane

From Aviation Pros (10.18.2017)

Colorado-based XTI Aircraft Company (XTI) announced today it received several additional orders for its TriFan 600 vertical takeoff aircraft. XTI officially launched its prototype program at this year's NBAA trade show in Las Vegas. The TriFan 600 is a major breakthrough in aviation and air travel. The six-seat TriFan 600 will have the speed, range and comfort of a luxury business aircraft and the ability to take off and land vertically, like a helicopter. It will travel at 345 miles an hour, with a range of up to 1,200 miles. Using three ducted fans, the TriFan lifts off vertically. Its two wing fans then rotate forward for a seamless transition to cruise speed and its initial climb. It will reach 30,000 feet in just ten minutes and cruise to the destination as a highly efficient business aircraft. On June 19, at this year's Paris Air Show, XTI announced its first orders for the TriFan 600 under the company's pre-sales program. "Vertical takeoff combined with long-range, the speed and comfort of a business aircraft, and our quieter and cleaner state-of-the-art hybrid-electric propulsion system." [Link](#)

## Legislation & Regulation News

### EASA advises against using Kobe Steel products

From Reuters (10.18.2017) Ritsuko Shimizu

Europe's aviation regulator has advised aircraft manufacturers to stop using parts supplied by Kobe Steel until their safety can be verified, following product data manipulation by the Japanese company. The move by the European Aviation Safety Agency (EASA) is another headache for Kobe Steel, which has shocked aircraft, auto, train and other industries with its revelations that it has been shipping some products to customers with falsified data on strength and durability. The U.S. Justice Department is also see eking information from Kobe Steel and has requested documentation on products the company has sold to U.S. buyers, Kobe Steel said earlier. The Japan Civil Aviation Bureau is investigating the issue and gathering information from Japanese manufacturers and Kobe Steel, a spokesman told Reuters on Wednesday. "Where alternative suppliers are available, it is recommended to suspend use of Kobe Steel products until the legitimacy of the affected parts can be determined," EASA said in a Safety Information Bulletin (SIB) dated Oct. 17. The admissions that Kobe Steel's supply chains have been tainted, affecting about 500 companies across the world, has sent its shares into freefall. The tampering went back more than 10 years, a source told Reuters earlier this week. The world's two largest planemakers, Airbus and Boeing, have already said they are conducting a review. [Link](#)

## FAA Awards First Waiver Allowing Drone Flights Over Crowds

From Bloomberg (10.18.2017) Allan Levin

CNN received a waiver allowing routine drone flights above crowds, a milestone for the industry seeking greater use of the remote-controlled devices for everything from insurance inspections to covering news. The approval is the first time the U.S. Federal Aviation Administration has granted a waiver for unlimited flights over people, the news network said in an emailed statement. The standards used in the application can be applied to other applicants, potentially opening vast new uses by the media and other industries for so-called unmanned aerial systems, or UAS. The FAA currently prohibits drone flights overhead, although its regulations allow for waivers if applicants can show there's no risk of injury. Limited waivers have been issued to filmmakers and others for flights over contained areas after those on the ground consented. The small device that was approved, a Snap drone, has internal rotors and is designed to break apart in the event of a crash to prevent injuries. Time Warner Inc.'s CNN and Vantage Robotics, the company that built it, say they spent two years designing and testing the drone. The Snap drone weighs 1.37 pounds (0.62 kilograms), and its four rotors are encased to reduce the chances of injury. It's designed to break into harmless smaller pieces if it crashes, according to the company's website. It can be snapped back together and reused after a crash, according to the company. [Link](#)

## Physical Security News

### TSA chief promises new vision for airport security checkpoints

From The Hill (10.17.2017) Melanie Zanona

The new head of the Transportation Security Administration (TSA) has promised to unveil a new vision for airport security checkpoints in the coming months, with the goal of improving safety at the public spaces outside of screening areas. Speaking at a Washington conference on Tuesday, TSA Administrator David Pekoske said incidents like the deadly bombing outside the Brussels airport, the fatal mass shooting at an outdoor concert in Las Vegas and a lone shooter at the Fort Lauderdale airport are all a "stark reminder" of the need for extra vigilance and tighter security in public spaces. Since stepping into the role this August, Pekoske has asked the agency to work with the airline and airport industry, technology partners and academia to start coming up with innovative ideas for the "airport security area of the future." That could include rebuilding airports or changing screening processes, Pekoske said. "If we get some infrastructure investment dollars to be able to change the layout at some airports or even build new terminals, can we get an airport security system that's not a checkpoint, per say, but has security in a continuum?" Pekoske said. "The need to refresh the technology at the checkpoints is critical. I will use whatever influence I have as administrator to push that." Pekoske also said that the TSA is continuing efforts started by former Homeland Security

Secretary John Kelly to raise the global baseline for aviation security. The new standards are being required in stages, with the first round nearly complete and the agency now focused on the next stage.

Trump administration working with Chad to lift travel restrictions

From The Hill (10.17.2017) Melanie Zanona

The Trump administration is working with Chad to lift the travel restrictions that the U.S. recently placed on the African country — a new policy that was supposed to take effect Wednesday but has been put on hold by a federal judge. The State Department said in a statement Tuesday afternoon that it plans to help Chad improve its vetting capabilities so that it can be removed from President Trump's list of travel-ban nations. The agency also said that Chad, a key counterterrorism ally, has “shown a clear willingness to work closely with us on these issues.”“National Security Advisor Lieutenant General H. R. McMaster spoke to Chad President Idriss Deby Itno to underscore the importance of the bilateral relationship and Chad’s effort as a key partner in countering terrorism,” the State Department said. The statement came not long after a federal district court in Hawaii temporarily blocked the majority of Trump’s latest travel ban from taking effect. Trump’s order, which was set to take effect on Wednesday at 12:01 a.m., indefinitely banned entry into the U.S. by nationals of Iran, Libya, Syria, Yemen, Somalia, Chad and North Korea, as well as certain government officials from Venezuela. Senior administration officials have emphasized that the travel restrictions are supposed to be conditional. If countries improve their information-sharing practices, the restrictions can be lifted, while new nations could also be added to the ban in the future. Link

#### Miscellaneous News

Air Berlin pilots suspended after fly-by stunt at Dusseldorf Airport

From Reuters (10.18.2017)

The pilots of an Air Berlin flight that performed a fly-past during the insolvent carrier’s last long-haul flight to its hub in Dusseldorf have been suspended, the airline said on Wednesday. When coming into land from Miami on Monday morning, the A330 jet flew low across the runway, then pulled up and banked sharply to the left before landing on its second approach. Pilots are trained in such “go-around” procedures for aborted landings, but the maneuver was unusual and the German aviation authorities are investigating. “In aviation, safety always comes first. We are taking the incident very seriously,” an Air Berlin spokesman said. The Air Berlin pilot had requested permission from the tower to make a left turn should a go-around be necessary. “We wanted to make a mark, a dignified and emotional

goodbye,” the Air Berlin pilot was quoted as saying by German broadcaster ZDF. His identity was not given. Another pilot for a different carrier told Reuters that a go-around should be performed only for operational or safety reasons. “Electing to do one if it is known not to be required adds an unnecessary risk,” he said. Several videos of the incident can be viewed online. In one, control tower staff can be heard exclaiming as the plane flies past, with one person saying: “We are all in awe.” The Air Berlin spokesman said the videos raised questions that had to be answered as part of the investigation. [Link](#)

Delta determined to proceed with the C Series order and refuse to pay 300% tariff

From News in Flight (10.18.2017)

Delta says that the act of Airbus taking over major stake in Canadian plane-maker Bombardier, will not prevent it from purchasing C series jets from Bombardier, and it will neither pay the 300% tax levied by US on the product. There was an allegation forwarded by Boeing, sometime back, against Bombardier that it was selling its planes below the cost quoting that is against the international Trade Regulations. Since Bombardier ignored the issue, US levied 300% tax on the Bombardier product. This has pushed Bombardier to join with the maker of world’s largest planes, Airbus, which happened last week. Delta Airlines which also is a major customer of Boeing expressed that they are going in for Bombardier not for the price but for the product of C series jet for which Boeing doesn’t have a match. Delta Air Lines has already ordered 75 CS100 aircraft for a value of \$5.6 billion with options for an additional 50. [Link](#)

ANTHRAX - NAMIBIA (06): (BWABWATA NATIONAL PARK) ANTHRAX CONFIRMED

\*\*\*\*\*

A ProMED-mail post  
<<http://www.promedmail.org>>  
ProMED-mail is a program of the  
International Society for Infectious Diseases  
<<http://www.isid.org>>

[1]  
Date: Thu 12 Oct 2017  
Source: The Namibian [edited]  
<<https://www.namibian.com.na/60321/read/Anthrax-confirmed-as-cause-of-hippo-deaths>>

The ministry of environment yesterday [Wed 11 Oct 2017] confirmed that anthrax was the cause of the recent deaths of 110 hippos and 20 buffalos at Kavango West's Bwabwata National Park. The ministry's spokesperson, Romeo Muyunda, yesterday said in a statement that the ministry and the veterinary services department of the ministry of agriculture were working together for solutions to contain the outbreak. Senior officials from the directorate of veterinary services as well as from the directorate of parks and wildlife in the ministry of environment are expected to visit the area to familiarise themselves with the situation on the ground.

Muyunda also told The Namibian that he was not sure whether the Botswana government was working with its Namibian counterparts to contain the situation after a few hippos were also found dead in that country. Some international media, including New China, yesterday [Wed 11 Oct 2017] reported that senior officials from the ministry of environment, wildlife and tourism in Botswana have joined hands with their Namibian counterparts to investigate the matter. Muyunda said the ministry has already started burning the carcasses and burying the ashes.

In the meantime, the ministry is likewise cautioning the public against touching the carcasses or consuming the meat as this might be catastrophic.

"The ministry is also aware of concerns regarding the safety of tourists intending to visit the park. In this regard, we would like to assure our visitors that there is no health hazard to people as a result of the situation," he noted. He added that the areas in which these mortalities are taking place is not open to tourists, but an exclusive area for management only, warning tourists from coming close to the affected area. The ministry thus does not foresee the situation threatening the existence of other wildlife species. Anthrax is a fatal bacterial disease known to kill game, cattle as well as humans.

Date: Wed 11 Oct 2017

Source: Reuters [edited]

<<http://ewn.co.za/2017/10/12/botswana-finds-anthrax-outbreak-after-spate-of-hippo-deaths>>

Anthrax has been detected in dead hippos floating in the Okavango River, officials in Botswana said on [Wed 10 Oct 2017], after more than 100 of the animals were suspected to have been killed by the disease in neighboring Namibia.

Botswana's Ministry of Environment, Natural Resources Conservation and Tourism advised people not to touch the dead hippos and to report any sightings of hippo carcasses.

The Okavango Delta is a major tourist attraction in southern Africa, supporting a diverse range of wildlife.

Namibian media reported on [Mon 9 Oct 2017] that more than 100 hippos had died in the remote Bwabwata National Park, in the northeastern part of the country, with anthrax the suspected cause.

The Okavango River flows through Namibia before entering Botswana. Tourism is important for the economies of both countries.

<promed@promedmail.org>

[I must apologize. The Namibian Ministry of Environment has shown more initiative than I had expected and had burnt those initial test carcasses. Burning hippo carcasses is no mean feat, especially when in a national park one has minimal facilities. I am truly impressed. It is hard work. And they have a further 125 carcasses to dispose of. Shoot!

Poliovirus Weekly Update 11-Oct-2017, World Health Organization

-----

New wild poliovirus cases reported this week: 0  
Total number of wild poliovirus cases in 2017: 11  
Total number of wild poliovirus cases in 2016: 37

New cVDPV cases reported this week: 1  
Total number of cVDPV cases in 2017: 57  
Total number of cVDPV cases in 2016: 5

## Headlines

- New on <[www.polioeradication.org](http://www.polioeradication.org)> : Next Steps in Poliovirus Containment: National authorities for containment encouraged to initiate 1st steps in containment certification process (<<http://polioeradication.org/news-post/next-steps-in-poliovirus-containment-october-2017/>>), and, 10 Interventions Bringing Afghanistan Closer to Ending Polio (<<http://polioeradication.org/news-post/10-interventions-bringing-afghanistan-closer-to-ending-polio/>>).
- Summary of newly-reported viruses this week [week of Sun 8 Oct 2017]: Syria: one new circulating vaccine derived poliovirus 2 (cVDPV2) case reported, from Mayadeen district, Deir Ez-Zor governorate. Two new cVDPV2 positives from healthy children, both from Mayadeen district. Afghanistan: 2 new wild poliovirus one (WPV1) positive environmental samples reported in Nangarhar province. Pakistan: 3 new wild poliovirus one (WPV1) positive environmental samples reported in Sindh province.

## Afghanistan

- Up to 2 new wild poliovirus one (WPV1) positive environmental samples were reported in the past week [week of Sun 1 Oct 2017]. One sample was collected on [Sat 23 Sep 2017] from Jalalabad district, Nangarhar province, and the other on [Sun 24 Sep 2017] from Behsud district, also located in Nangarhar province.
- The total number of WPV1 cases for 2017 is currently 6. The most recent case in the country had onset of paralysis on [Mon 10 Jul 2017], from Zabul province, neighbouring Kandahar province and Pakistan.
- An advance notification of a WPV1 case, received from Batkot district in Nangarhar Province (paralysis onset on 15-Sep-2017), is likely to raise the case count to 7 in the coming days.

## Pakistan

- Up to 3 new wild poliovirus type one (WPV1) positive environmental samples were reported in the last week [week of Sun 1 Oct 2017]. The samples are from Sindh province, 2 from Sukkur district, and one from Karachi district.
- No new wild poliovirus type one (WPV1) cases were reported in the past week [week of Sun 1 Oct 2017]. The total number of WPV1 cases for 2017 remains 5.
- A vaccination campaign is underway, targeting more than 3.5 million children aged less than 5 years in 29 selected districts of 4 provinces and Federally Administered Tribal Areas, in response to the most recent polio case (Lakki Marwat, KP) and positive environmental samples.
- A bOPV-IPV Campaign is being implemented in selected areas of Rawalpindi and Islamabad targeting about 0.2 million children, to boost the immunity among high risk populations.

## Nigeria

- No new cases of wild poliovirus type one (WPV1) were reported in the past week [week of Sun 1 Oct 2017]. The total number of WPV1 cases for 2016 remains 4 and no cases have been reported in 2017. The most recent case had onset of paralysis on [21 Aug 2016] in Monguno Local Government Area, Borno.
- Nigeria continues to implement an emergency response to the detected WPV1 strain and circulating vaccine-derived poliovirus type 2 (cVDPV2) strains affecting the country (last detected in 2016).

- Detection of polio cases in Nigeria underscores the risk posed by low-level undetected transmission and the urgent need to strengthen subnational surveillance.

- Subnational immunisation days took place last week [week of Sun 1 Oct 2017], providing protection to over 50 percent of children under the age of 5 nationwide.

#### Lake Chad Basin

- The detection of wild poliovirus type one (WPV1) (Borno state, Nigeria in 2016) and circulating vaccine-derived poliovirus type 2 (cVDPV2) (Borno and Sokoto states in 2016) continue to pose a risk to the neighbouring countries of the Lake Chad basin.

- Emergency outbreak response efforts continue across the Lake Chad basin, together with activities to fill subnational surveillance gaps across the region.

- These activities include efforts to vaccinate children at markets, in internally displaced persons camps, and at international borders.

- Synchronised immunisation activities took place last week [week of Sun 1 Oct 2017], using bOPV to vaccinate children aged 0 to 5 years in all countries in the Lake Chad Basin.

- A large livestock vaccination campaign targeting international nomads is planned for the end of November [2017].

- The 2nd Outbreak Response Assessment (OBRA) in CAR and Nigeria is scheduled for [29 Oct 2017 - 10 Nov 2017].

#### Central Africa

- No new cases of type 2 circulating vaccine-derived poliovirus (cVDPV2) were reported this week [week of Sun 8 Oct 2017] in the Democratic Republic of the Congo (DR Congo).

- The total number of cVDPV2 cases this year is 9, in 2 separate outbreaks: in Haut Lomami province (7 cases, with onset of paralysis of the most recent case on [27 Jul 2017]); and in Maniema province (2 cases with onset of paralysis on [26 Mar 2017 and 18 Apr 2017], with an additional isolate detected in a healthy individual with sample collection on 2 May [2017]).

- Outbreak response continues to take place, including use of monovalent oral polio vaccine type 2 (mOPV2) in line with internationally-agreed outbreak response protocols.

- The next immunisation activities are scheduled for the end of October [2017], using bOPV vaccine to immunise over 10 million children.

- Surveillance and immunization activities are being strengthened in neighbouring countries.

#### Middle East

- In Syria, one new type 2 circulating vaccine-derived polio (cVDPV2) case has been reported this week [week of Sun 8 Oct 2017]. The case was reported in Mayadeen district, Deir Ez-Zor governorate, and had onset on [Sat 19 Aug 2017]. At the time of infection, the child was 19-months-old, and no history of polio vaccination.

- The bulk of all cases continue to be from Mayadeen, the epicentre of this outbreak.

- This increases the current number of cases in this outbreak to 48. Onset of paralysis of these cases is between [3 Mar 2017 and 19 Aug 2017].

- A total of 2 new cVDPV2 positives from healthy children have also

been recorded, both from Mayadeen district, Deir Ez-Zor governorate.

- The 2nd immunization round for Raqqa commenced [Sat 7 Oct 2017]. mOPV2 is being administered to children 0-59 months of age, and IPV to children aged between 2-23 months. Aqua tabs are being provided to families together with vaccination. Initial reports indicate that vaccination has started in all 3 districts of Raqqa (Tell Abyad, Raqqa and Thawra).

- A total of 36 000 caregivers and influencers were reached via face-to-face communication activities in the lead-up to the round. Up to 40 000 campaign date announcements were disseminated, with megaphones used in camps and remote locations. A local radio station has regularly aired campaign announcements.

Officially reported wild poliovirus cases as of 10 Oct 2017

Total global cases in 2017: 11 (compared with 27 for the same period in 2016)

- Total in endemic countries in 2017: 11 (compared with 27 for the same period in 2016)

- Total in non-endemic countries in 2017: 0 (compared with 0 for the same period in 2016)

- Afghanistan: 6 cases in 2017 (compared with 8 for the same period in 2016), onset of paralysis of most recent case: 10-Jul-17

- Pakistan: 5 cases in 2017 (compared with 15 for the same period in 2016), onset of paralysis of most recent case: 21-Aug-17

- Nigeria: 0 case in 2017 (compared with 4 for the same period in 2016), onset of paralysis of most recent case: 21-Aug-16

Total global cases in 2016: 37

- Total in endemic countries: 37

- Total in non-endemic countries: 0

Officially reported cVDPV cases as of 10 Oct 2017

Total global cases in 2017: 57 (compared with 3 for the same period in 2016)

- Syrian Arab Republic: 48 cases in 2017 (compared with 0 for the same period in 2016), onset of paralysis of most recent case: 19-Aug-17

- Democratic Republic of the Congo: 9 cases in 2017 (compared with 0 for the same period in 2016), onset of paralysis of most recent case: 27-Jul-17

- Pakistan: 0 case in 2017 (compared with 0 for the same period in 2016), onset of paralysis of most recent case: 17-Dec-16

- Nigeria: 0 case in 2017 (compared with 0 for the same period in 2016), onset of paralysis of most recent case: 28-Oct-16

- Lao People's Democratic Republic: 0 case in 2017 (compared with 3 for the same period in 2016), onset of paralysis of most recent case: 11-Jan-16

Total global cases in 2016: 5

- Total in endemic countries: 2

- Total in non-endemic countries: 3

ProMED-mail

<promed@promedmail.org>

[Take away messages from the above report(s):

- WPV1 is still circulating in Afghanistan and Pakistan. The isolation of the WPV1 in environmental samples confirms this. In the most recent isolations in Afghanistan, there is also an early report of a new WPV1 associated case in Nangarhar province, but from a different district (Batikot) than the where the environmental isolates were from (Jalalabad and Besud). Of note is that the 3 districts (Batikot, Jalalabad and Besud) are contiguous with one another. Nangarhar province borders with Pakistan ([https://en.wikipedia.org/wiki/Nangarhar\\_Province#/media/File:Map\\_Nangarhar\\_Province.svg](https://en.wikipedia.org/wiki/Nangarhar_Province#/media/File:Map_Nangarhar_Province.svg)).

In contrast, the positive environmental samples in Pakistan are coming from Sindh province (Sukkur and Karachi districts). (<http://www.mappk.com/wp-content/uploads/2015/09/Sindh-Province-Complete-Map-District-Wise.jpg>).

The most recent case of WPV1 paralytic disease in Sindh had onset of paralysis on [Fri 11 Aug 2017] and was in Karachi. Of note is that in recent updates, there have been other positive environmental samples for WPV1 in Sindh province, involving multiple different districts. (see Poliomyelitis update (26): global (Syria, DR Congo) <http://promedmail.org/post/20170922.5334914>, Poliomyelitis update (27): global (Pakistan, Afghanistan), Syria <http://promedmail.org/post/20170928.5347795>).

- The cVDPV2 is still circulating in Syria, predominantly in Mayadeen, Deir Ez-Zor governorate where one new case was confirmed, and 2 asymptomatic children also had cVDPV infections.

A map showing the global distribution of all WPV1 associated cases and cVDPV associated cases can be found at <http://polioeradication.org/polio-today/polio-now/>.

<<http://www.reuters.com/article/us-birdflu-italy/italy-culls-birds-after-five-h5n8-avian-flu-outbreaks-in-october-idUSKBN1CG1QU>>

Italy has had 5 outbreaks of highly pathogenic H5N8 avian flu in farms in the central and northern parts of the country since the start of the month [October 2017] . About 880 000 chickens, ducks and turkeys will be culled, officials said on [Wed[11 Oct 2017].  
The biggest outbreak of the H5N8 virus, which led to the death or killing of millions of birds in an outbreak in western Europe last winter, was at a large egg producing farm in the province of Ferrara.

The latest outbreak was confirmed on [Fri 6 Oct 2017] and about 853 000 hens are due to be culled by [Tue 17 Oct 2017], the IZSV zoological institute said.

Another outbreak involved 14 000 turkeys in the province of Brescia, which are due to be culled by [Fri 13 Oct 2017].

A 3rd outbreak involved 12 400 broiler chickens at a smaller farm in

the province of Vicenza and 2 others were among a small number of hens, ducks, broilers and turkeys on family farms.

In those 3 cases, all the birds have been culled.

[Byline: Philip Pullella]

--

Communicated by:  
ProMED-mail Rapporteur Mary Marshall

[The current H5N8 event in Northern Italy started, according to OIE's data, in wild birds on 3 Jan 2017 and in commercial poultry on 20 Jan 2017.

The cases in the 2 realms have been reported in 2 separate threads.

1. Outbreak summary - wild birds (as of 2 Oct 2017; affected provinces - Lombardia, Friuli-Venezia Giulia, Piemonte):

Total outbreaks = 8 (Submitted)

Species/ Susceptible/ Cases/ Deaths/ Killed and disposed of/  
Slaughtered

Common Shelduck/-/ 1/ 1/ 0/ 0

Eurasian Wigeon/-/ 1/ 1/ 0/ 0

Whooper Swan/-/ 2/ 2/ 0/ 0

Grey Heron/-/ 1/ 1/ 0/ 0

Mallard/-/ 10/ 10/ 0/ 0

Mute Swan/-/2/ 2/ 0/ 0

(Detailed report and map at

<[http://www.oie.int/wahis\\_2/temp/reports/en\\_fup\\_0000024952\\_20171004\\_185147.pdf](http://www.oie.int/wahis_2/temp/reports/en_fup_0000024952_20171004_185147.pdf)>.

2. Outbreak summary - commercial poultry (as of 2 Oct 2017; affected provinces - Veneto, Emilia-Romagna, Lombardia, Piemonte, Friuli-Venezia Giulia).

Total outbreaks = 41 (Submitted in 27 reports)

Species/ Susceptible/ Cases/ Deaths/ Killed and disposed of/  
Slaughtered

Birds/ 1 295 846/ 887 439/ 34 908/ 684 028/ 0

(Detailed report and map at

[http://www.oie.int/wahis\\_2/temp/reports/en\\_fup\\_0000024919\\_20171002\\_182225.pdf](http://www.oie.int/wahis_2/temp/reports/en_fup_0000024919_20171002_182225.pdf))/

H5 clade 2.3.4.4 of the H5N8 subtype was 1st detected in domestic poultry in China in 2010; by 2014, this virus had caused multiple outbreaks among domestic ducks, chickens, geese, and wild birds in South Korea and subsequent outbreaks in Japan, China, Europe (including Italy), and North America. During these outbreaks, 2 distinct clusters of HPAI A(H5N8) viruses were identified: group A viruses were detected in China in early 2014 and later in South Korea, Japan, Taiwan, Canada, the United States, and Europe; group B viruses were detected only in China in 2013 and South Korea in 2014.

Co-circulation of group A viruses with low pathogenicity avian influenza (LPAI) viruses led to new reassortants, including H5N1, H5N2, and H5N8.

In late May 2016, a novel reassortant group B HPAI A(H5N8) clade

2.3.4.4 virus was detected in a wild bird in UVs-Nuur Lake in the Republic of Tyva, Siberia. As of March 2017, the virus had spread across most European countries (Italy included) , the Middle East, and Africa. (Further details in ref 1).

##### Cyber Security News

Munich Airport will open new cyber center in January 2018

From Travel Daily News (09.25.2017) Angelos Restanis

The number of attacks on the IT systems of companies and public-sector organizations in Germany has rapidly increased in recent years, parallel to the rise of digitization. Munich Airport also faces all kinds of cyber attacks on a daily basis. Now a new center of competence is being set up at the Bavarian hub. It will bring together IT experts from the airport operating company (FMG) and specialists from high-profile tech companies to test defensive strategies and look for new solutions in the fight against cyber-criminals. To set up and operate the "Information Security Hub", FMG secured the support of three renowned IT security companies. ERNW Insight, HvS-Consulting and IT-CUBE Systems have been successfully developing solutions and advising clients on improved IT security for many years. The new competence center at Munich Airport will provide a platform for cross-company cooperation. It will offer business, public-sector organizations and other institutions opportunities for training and continuing education while working together to put next-generation IT security technologies and processes through their paces. A professional testing and training environment is essential for success. It also offers security solution manufacturers the opportunity to try out new products and services under realistic conditions and jointly develop efficient and pragmatic approaches to fighting cyber-crime and promoting current trends. The primary target group for the services of the Information Security Hub are airports, airlines and other partners from the aviation industry, which, as critical infrastructure, must meet the new standards for the transport and traffic sector. The center is also open to other companies and organizations from all kinds of areas, however. That includes companies from the mobility and industrial sectors, for example, as well as any companies and institutions that manage complex infrastructures and facilities. The "Information Security Hub" will open on January 31, 2018 on the occasion of a two-day Aviation Information Security Congress. [Link](#)

Retefe malware enhanced by addition of EternalBlue exploit

From ZDNet (09.25.2017) Danny Palmer

A trojan banking malware campaign has returned and now it's leveraging EternalBlue -- the leaked NSA surveillance exploit -- to target Swiss financial institutions. Allegedly developed by the NSA but revealed to the world by a hacking group, the EternalBlue Windows security flaw exploits a version of Windows' Server Message Block (SMB) networking protocol to spread itself across an infected network using worm-like capabilities. It was by using the EternalBlue exploit that May's WannaCry ransomware attack was able to spread so quickly. The tool was soon adopted by cybercriminal groups looking to make their malware more powerful -- and now it's being used to steal credentials and cash from Swiss banks by the group behind the Retefe malware. Retefe is typically delivered via phishing emails containing malicious Microsoft Office documents containing embedded Package Shell Objects -- although some contain malicious macros instead. If the user runs the file, a PowerShell command will run the malicious payload and install the code. Now researchers at Proofpoint have discovered that the payload contains the configuration for EternalBlue, with code taken from a publicly available proof-of-concept for the exploit posted in a dump on GitHub. The tool is now used to download the PowerShell script which installs Retefe. While the addition of EternalBlue, malware can spread across networks. This particular installation of the exploit lacks the module responsible for infinitely spreading the malware as WannaCry did. However, researchers note that the attackers behind Retefe could be merely experimenting with EternalBlue for now -- and that they could roll out the leaked exploit in full force in future. [Link](#)

### First Android Malware Discovered Using Dirty COW Exploit

From Bleeping Computer (09.26.2017) Catalin Cimpanu

ZNIU is the name of the first in-the-wild Android malware that uses the Dirty COW vulnerability to infect users. Dirty COW is a privilege escalation vulnerability in the Linux kernel that came to light last year, in October 2016. The vulnerability allows an attacker to elevate the privilege of attack code to "root" level and carry out malicious operations. The Dirty COW bug existed in the Linux kernel code for nine years, since 2007. At the time of its discovery, Dirty COW was a zero-day and researchers said attackers used it against Linux servers. A patch was released immediately. Yesterday, security researchers from Trend Micro published a report detailing a new malware family named ZNIU that uses Dirty COW to root devices and plant a backdoor. Researchers say attackers use this backdoor to collect information on infected devices. The second stage of the attack happens only if the user is located in China. Attackers use the full control the backdoor grants them over the device to subscribe the user to premium SMS numbers that benefit a local company. Trend Micro says it discovered more than 1,200 malicious apps that carry ZNIU available via various online websites. ZNIU made victims across 40 countries, but most were located in China and India. ### Three out of four DDoS attacks target multiple vectors

From Help Net Security (09.26.2017)

Three out of every four DDoS attacks employed blended, multi-vector approaches in the second quarter of 2017, according to Nexusguard. The quarterly report, which measured more than 8,300 attacks, demonstrated that hackers continued to rely on volumetric attacks to overwhelm system resources. For example, UDP-based attacks increased by 15 percent this quarter, targeting hijacked devices connected to the IoT, and overtaking SYN, HTTP Flood and other popular volumetric attacks in popularity. With the average attack rating 4.63 Gbps in size, enterprises that do not yet have access to high-capacity DDoS mitigation were most likely to suffer interruption from attacks. IoT networks continued to be targeted by DDoS attacks during Q2, including a new botnet, Persirai, which attacked more than 1,000 different models of IP cameras. Nexusguard gathers the DDoS attack data through botnet scanning, honeypots, ISPs and traffic moving between attackers and their targets that is unbiased by any single set of customers or industries. With UDP attacks growing in favor, the company recommends enterprises protect their DNS servers and employ Anycast routing technology to distribute the footprint of these DDoS attacks. As DDoS extortionist gangs became increasingly active in several European countries, Switzerland made its first-ever appearance in the top three DDoS attacker countries. [Link](#)

## Oracle Releases Patches for Exploited Apache Struts Flaw

From Security Week (09.25.2017) Eduard Kovacs

Oracle has released patches for many of its products to address several vulnerabilities in the Apache Struts 2 framework, including one that has been exploited in the wild for the past few weeks. The actively exploited flaw is CVE-2017-9805, for which proof-of-concept (PoC) code was published within hours after a patch was released by Apache Struts developers on September 5. Several security firms reported seeing attacks shortly after. The vulnerability, caused due to the way Struts deserializes untrusted data, allows remote code execution and it affects applications that use the REST plugin with the XStream handler for XML payloads. There is a long list of Oracle products that use Apache Struts and which are exposed to attacks due to flaws in the open-source development framework. The list includes Oracle's MySQL Enterprise Monitor, Communications Policy Management, FLEXCUBE Private Banking, Retail XBRI, Siebel, WebLogic Server, and various Financial Services and Insurance products. [Link](#)

[Securityweek\[.\]com/oracle-releases-patches-exploited-apache-struts-flaw](http://Securityweek[.]com/oracle-releases-patches-exploited-apache-struts-flaw)

## Splunk brings machine learning updates to flagship suites

From ZDNet (09.26.2017) Natalie Gagliardi

Splunk on Tuesday outlined the latest versions of its flagship analytic suites with a focus on machine learning advances. The company updated Splunk Enterprise, Splunk IT Service Intelligence (ITSI), Splunk Enterprise Security (ES) and Splunk User Behavior Analytics (UBA) for both cloud and on-premises deployments. Splunk's algorithms are focused on investigations for security incidents, alerting, predictive tools for operations and maintenance and business optimization for demand, inventory and analysis of historical data. Splunk says the machine learning advancements rely on these algorithms to help customers better monitor, investigate and build intelligence with their data. Key updates include Splunk Enterprise cloud 7.0, which aims to boost performance and scale with faster metrics to speed up monitoring and alerting as well as optimizations to core search technology. The latest version of Splunk ITSI builds in more machine learning for advanced anomaly detection, adaptive thresholds and event correlation. The new version of Splunk UBA integrates with custom machine learning models and also includes greater privacy controls with identity masking for PII information. [Link](#)

## New dime-sized YubiKey adds more mobility to authentication keys

From Cyberscoop (09.25.2017) Patrick Howell O'Neill

YubiKeys are getting smaller as they grow more and more popular. The cybersecurity hardware that acts as a secure key to machines and accounts now comes in a dime-sized package. The YubiKey 4C Nano launched Monday for \$60. The 4C Nano is meant for mobility. It's tiny, measuring in at 12mm x 10.1mm x 7mm, meant to meet demand for an even smaller tool than the keychain-sized keys Yubico has offered for a decade. It's designed for use in USB-C ports on computers like the HP Spectre, Dell XPS 15, Apple Macbook Pro and newer Chromebooks. Experts praise tools like the YubiKey because they are the most secure form of multifactor authentication. In order to prevent unauthorized access to computers and accounts, best practices often tout that people need multiple factors of authentication to prove their identity. But while text messages or even apps can be phished, a hardware key is the most effective defense against hacker's biggest attack vector. They're easy to use with most major commercial offerings. Everything from your Google account to Windows computer can be protected. [Link](#)

Cloudflare Announces Unmetered DDoS Mitigation, Geo Key Manager

From Security Week (09.26.2017) Eduard Kovacs

Web performance and security solutions provider Cloudflare announced this week that all customers will benefit from unmetered mitigation against distributed denial-of-service (DDoS) attacks, and they will be able to choose where they want their private SSL keys stored. DDoS protection providers typically ask their customers to pay more and even terminate them if they are hit by a massive attack that may cause disruptions to other customers' services. Cloudflare, which claims to have the ability to handle more than 15 terabits per second of DDoS traffic, believes it can now protect a website against attacks of any size while ensuring that other customers are not impacted in any way. That is why the company has decided that it will not terminate customers or jack up their bill regardless of the size of the attack or the plan they use. Customers that use a paid plan will, of course, have more benefits, but when it comes to volumetric DDoS mitigation, even users of the Free plan will benefit from unlimited and unmetered protection. Cloudflare also announced that customers will be able to specify where to store their private SSL keys via a new service called Geo Key Manager. The company has data centers in more than 55 countries and some of its customers might not be comfortable knowing that the keys to their kingdom are stored on servers physically located in a certain country. ## Aviation Tech

Bio-inspired retina allows drones to almost see in the dark with no motion blur

From ZDNet (09.26.2017) Greg Nichols

A group of researchers from the University of Zurich and NCCR Robotics is giving drones a new way to see. Their innovation is an eye-inspired camera that can easily cope with high-speed motion and even see in near-dark conditions--crucial functionality as drones become more autonomous and applications for drones more widespread. Autonomous and semi-autonomous drones need to know their precise position and orientation in space at all times to fly safely. Commercial drones use GPS, but that can be unreliable in cities. Autonomous drones that rely on computer vision are restricted to flying below speeds that cause motion blur, which renders vision algorithms useless. To solve these problems, the Swiss team invented a so-called event-based camera. Event cameras are bio-inspired vision sensors that output pixel-level brightness changes instead of standard intensity frames. Crucially, the camera's retina doesn't require full light capture to generate a clear image. The UZH researchers designed software to efficiently process the output from these cameras. So far they've successfully used the software to enable autonomous flight at higher speeds and in lower light than currently possible with commercial drones--at least in limited tests. A spokesman from NCCR said that drones equipped with such a system could assist search and rescue teams in scenarios where conventional drones would be of no use--for example on missions at dusk or dawn or when there is too little light for normal cameras to work. Because they don't require laser sensors, drones using these cameras could soon be relatively cheap, opening up new possibilities for commercial and professional drone use. [Link](#)

## Legislation & Regulation News

New U.S. travel restrictions for 6 countries announced

From Reuters (09.25.2017) Andrew Chung

The Supreme Court signaled on Monday it may dismiss a challenge to President Donald Trump's controversial travel ban after the White House announced tailored restrictions on eight countries that legal experts said stand a better chance at holding up in court. That ban expired on Sunday. The president replaced it with a proclamation that indefinitely restricts travel from Iran, Libya, Syria, Yemen, Somalia, Chad and North Korea. Certain government officials from Venezuela will also be barred. The new ban, Trump's third, could affect tens of thousands of potential immigrants and visitors. The Sunday

proclamation, which he said is needed to screen out terrorist or public safety threats, could be less vulnerable to legal attack, scholars and other experts said, because it is the result of a months-long analysis of foreign vetting procedures by U.S. officials. The new ban is set to go into effect on Oct. 18, but it already applies to five of the six countries covered by the March 6 ban, according to a U.S. State Department cable issued on Sunday and obtained by Reuters. Sudan was dropped from the list of banned countries after the Sudanese government provided information required under the new criteria set out by the Trump administration earlier this year, a White House official said on Monday. [Link](#)

House Democrats sink bill with FAA extension, five days before deadline

From The Hill (09.25.2017) Christina Marcos

Legislation to reauthorize Federal Aviation Administration programs and provide tax relief for victims of recent hurricanes failed on the House floor Monday after Democrats rejected it. The package was considered under a fast-track process requiring a two-thirds majority for passage, known as suspension of the rules. House GOP leaders will likely return it to the floor later this week under a procedure that needs only a simple majority. A total of 26 Democrats, mostly centrists or members from hurricane-affected states, refrained from endorsing their leaders' strategy and joined all but eight Republicans in supporting the bill. Democratic leaders urged their rank-and-file to oppose the package because they thought the tax provisions didn't go far enough and wanted to offer the DREAM Act to let young undocumented immigrants stay in the U.S. as an amendment. The package includes a six-month extension of aviation programs, which are set to expire if Congress doesn't act by Sept. 30. [Link](#)

Physical Security News

FAA-Issued Pilot Licenses still vulnerable to identity theft

From Boston Globe (09.25.2017) Kelly Carr

The FAA was warned in 2009 that people with terrorist ties were licensed to fly and repair aircraft. Eight years later, it is, incredibly, still the case. Nader Ali Sabouri Haghghi's own pilot certificate, it turned out, had been revoked years earlier for providing false information, but the Federal Aviation Administration conveniently mailed him a new one. Haghghi had called the FAA hot line claiming to be a professional pilot named Daniel George who had lost his license. He then recited George's license number and other personal details that he'd obtained from their business dealings. Without asking further questions, the FAA agent sent Haghghi a license with George's name on it. Almost a decade after Haghghi's brazen identify theft, the FAA still does not include pilot photos on its licenses, and the agency does not fully vet pilot information before issuing them credentials. Last year, a leading congressional overseer of the FAA, then-Representative John Mica, called US pilot licenses "a joke" and said that a day pass to Disney World in his native Florida contains more sophisticated security measures. FAA officials defend their licensing practices, noting that pilots are also required to carry a government-issued ID such as a driver's license to prove their identity. The pilot certificate, they say, is more an indicator of the pilot's level of training than a security tool, and commercial airports and airlines generally issue their own IDs for access to tarmacs, planes, and other secure areas. But the flawed airman licenses are part of a troubling pattern of lax oversight of more than 1 million FAA-approved airmen — including pilots, mechanics, flight attendants, and other aviation personnel — that has made the agency vulnerable to fraud, and the public vulnerable to those who mean to do harm, a Spotlight Team review has found. Honeywell Digital Video Manager Connects Organizations to Smarter Security and Surveillance

From Aviation Pros (09.25.2017)

Honeywell announced an enhanced version of Honeywell Digital Video Manager (DVM) that offers smarter security and surveillance capabilities for today's increasingly complex building environments. The new release, DVM R620, enables organizations to more easily secure large-scale security operations with features that improve operator efficiency and situational awareness for faster incident identification and resolution, and power more accurate and reliable security operations. DVM R620 is well suited for a range of facilities, including complex security installations with stringent requirements—such as airports, correctional facilities, hospitals, higher education campuses and smart cities. It features an enhanced user interface and includes major updates to how operators can capture, access and manage live and recorded video, reliably and efficiently. Based on a highly available distributed architecture, the system features edge recording playback and backfill capabilities, capturing video footage on camera memory cards, and then backfilling the footage to the system's main server. These features make the system more resilient in response to interruptions ranging from routine system maintenance, to network or server failures and cybersecurity issues, and ensure cameras more consistently and reliably capture video footage, wherever they are located. ## Miscellaneous News

### United Airlines B737 Narrowly Avoids Collision with Glider

From The Points Guy (09.25.2017) Alberto Riva

A United Airlines Boeing 737 on approach to Chicago O'Hare on Monday afternoon narrowly avoided a midair collision with what its crew said was a small aircraft, according to a The Points Guy reader who was on the flight. While about to complete flight UA246 from Vancouver (YVR) to Chicago O'Hare (ORD), the plane made a sudden evasive turn that had passengers "shrieking." After safely landing at O'Hare, one of the pilots on UA246 came on the intercom to say it was a "split second decision" to save the plane. According to flight tracking site Flightradar24, UA246 landed at 3:02pm, ahead of its scheduled time of 3:14. A United Airlines spokesperson emailed a statement confirming the near-collision, and saying that everybody was indeed OK: United flight 246 from Vancouver to O'Hare landed safely and all passengers deplaned normally after the pilots deviated from the aircraft's flight path because they spotted a glider. [Link](#)

### Gogo Vision Touch IFE to launch on Delta's CSeries in 2018

From The Boarding Area (09.25.2017) Seth Miller

In-seat entertainment screens are not dead; they just need a bit of disruption. That's the message Gogo, Delta and Bombardier are sending with the launch of Gogo Vision Touch, the new wireless IFE solution that will fly on Delta's CSeries aircraft beginning with deliveries in 2018. The service combines Gogo's wireless network infrastructure and content serving with commercial-grade tablets installed in the seat-back to deliver a solution the companies believe is lighter, cheaper, easier to upgrade and easier to support. Gogo Vision Touch uses existing server infrastructure technology on board while adding additional components to maintain an isolated network. The dedicated Wi-Fi infrastructure improves the reliability, redundancy and security of the system while also avoiding interference with the regular connectivity and streaming media solution. Streaming content means spending more in bandwidth, but the idea is to offset that increased cost by reducing the airline-paid content licensing fees paid to studios. The content costs shift to Netflix or Amazon Prime – and really to the passenger and their subscriptions – from the airline. And rather than delivering the content the airline simply

delivers the pipe. One technical challenge that remains for the new Gogo Vision Touch solution is regulatory certification for the use of commercial tablets in the seats rather than traditional IFE screens that are designed to withstand various safety certifications, including the 16G HIC test. Details are limited right now but that burden is being shouldered by Bombardier and its suppliers, not by Gogo. [Link](#)

## U.S. Department of Transportation Crisis Management Center Daily Report

### Commercial In-Flight Incidents

#### \*Mesa 5743, CRJ9

- o September 25, 2017 at 9:17 PM EDT
- o Enroute from Dayton, OH (Dayton International Airport) to Dallas, TX (Dallas/Fort Worth International Airport)
- o Pressurization problem
- o Diverted to Little Rock, AR (Clinton National Airport); landed without incident at 9:29 PM EDT

#### \*Southwest 601, B737

- o September 25, 2017 at 9:06 PM EDT
- o Enroute from Denver, CO (Denver International Airport) to Boston, MA (Logan International Airport)
- o Blown tire
- o Returned to Denver, CO; landed without incident at 11:20 PM EDT
- o Aircraft towed to gate with passengers on board

#### \*United 246, B739

- o September 25, 2017 at 6:48 PM EDT
- o Enroute from Vancouver, Canada (Vancouver International Airport) to Chicago, IL (Chicago O'Hare International Airport)
- o Near mid-air collision; observed a glider at 7,000 feet in vicinity of Beloit, WI (Beloit Airport)
- o Aircraft climbed to avoid glider; 400 feet deviation made; no contact or damages reported
- o Continued to Chicago, IL
- o 0 fatalities; 0 injuries

\*Jetstream 5174, CRJ2

- o September 25, 2017 at 3:54 PM EDT
- o Enroute from Nashville, TN (Nashville International Airport) to Louisville, KY (Louisville International Airport)
- o Engine problem
- o Diverted to Covington, KY (Cincinnati/Northern Kentucky International Airport); landed without incident

#### Ground Incidents

\*Fresno, CA, Fresno Yosemite International Airport

- o September 25, 2017 at 3:42 PM EDT
- o Allegiant 514, MD83, scheduled from Las Vegas, NV (McCarran International Airport)
- o Hydraulic failure and smoke in cockpit after exiting runway
- o Passengers deplaned aircraft on taxiway
- o 0 fatalities; 0 injuries

infection>

Following the recent death of an Iowa infant who suffered complications after becoming infected with the herpes simplex virus type 1 (HSV-1) likely due to a kiss, health experts are reminding the public that the virus can spread easily to babies.

Oral herpes is a highly contagious virus that is spread via oral-to-oral contact, such as kissing. The WHO estimates that 3.7 billion individuals around the world have an HSV-1 infection, with the Americas having the lowest prevalence of the virus. HSV-1 is typically acquired during childhood and never goes away, though the infection is typically asymptomatic with most individuals unaware that they even have it. Visible symptoms of oral herpes appear as open sores or ulcers in and around the mouth, or sores on the lips known as cold sores. Less common is herpes simplex virus type 2 (HSV-2), a sexually transmitted infection affecting an estimated 417 million individuals worldwide. In rare cases, a woman infected with genital HSV-1 can pass the virus on to her baby during vaginal delivery, and less commonly, a baby can contract the virus through other forms of contact.

In recent news, a baby girl born in Iowa on 1 Jul 2017, died less than 3 weeks later of viral meningitis, an infection of the fluid surrounding the brain and spinal cord; the infection was caused by HSV-1. The baby's parents and doctors say she became infected with the virus when she was less than a week old after being kissed by someone with HSV-1 who had a cold sore. The baby soon stopped eating and was unresponsive when her parents tried to wake her up. The parents took the infant to Blank Children's Hospital in Des Moines, where doctors diagnosed the baby with meningitis from an HSV-1 infection, and the baby was transferred to University of Iowa Children's Hospital. Neither of the parents tested positive for the virus, and said the infant likely picked up the infection from a visitor. The baby's mother announced the infant's death in a Facebook post on 18 Jul 2017.

"The majority of neonatal HSV occurs as a result of perinatal transmission, where an infant acquires HSV via the maternal genital tract," says pediatric infectious disease specialist and Contagion? editorial advisory board member Kengo Inagaki, MD, of the University of Mississippi. Perinatal transmission accounts for about 85 percent of infant HSV cases, he notes. "It is believed that about 10 percent of neonatal HSV is acquired postnatally, from someone shedding HSV from the mouth who then kisses the baby, from exposure to HSV from a breast lesion, et cetera."

Dr Inagaki explains that the symptoms of HSV infection in neonates and young infants can vary. Herpes can result in skin, eye, or mouth (SEM) infections in some babies, and in more serious cases, it leads to central nervous system (CNS) disease, such as meningitis and disseminated disease.

"SEM disease is the most common, and can progress to CNS or disseminated disease, and needs to be treated," says Dr Inagaki, noting that eye infections can lead to vision loss. "CNS disease can

present with seizures, poor feeding, lethargy, and fever. It can result in permanent neurodevelopmental complications, although not all patients have sequelae. Disseminated disease can involve multiple organs, including CNS, liver, and lungs." If left untreated, mortality due to CNS infection or disseminated disease can be high.

While doctors can take certain steps to prevent HSV transmission from mother to infant during birth, the American Academy of Pediatrics notes that parents, family members, or friends with cold sores must take extra precautions and avoid kissing infants, particularly with babies under 6 months of age who have weak immune systems. Dr Inagaki notes that if there are HSV lesions on the breast, a mother should avoid breastfeeding from that breast. An infant who has been infected with HSV may have a low grade fever and one or more small skin blisters, and symptoms can appear within 2 to 12 days of exposure to the virus. Parents are urged to call their pediatrician if such symptoms occur.

[Byline: Einav Keet]

--  
Communicated by:  
ProMED-mail from HealthMap Alerts  
<promed@promedmail.org>

[This case underscores the importance of minimizing the exposure of neonates to herpes simplex virus by not allowing close contact with individuals who have overt perioral lesions from HSV, that is, cold sores or fever blisters. Although HSV-1 can be present in oral secretions without overt lesions, the amount of virus is less so the risk of transmission is smaller. - Mod.LL

HEPATITIS A - USA (21): (MICHIGAN) REQUEST FOR INFORMATION  
\*\*\*\*\*

A ProMED-mail post  
<<http://www.promedmail.org>>  
ProMED-mail is a program of the  
International Society for Infectious Diseases  
<<http://www.isid.org>>

Date: Wed 16 Aug 2017 4:01 EDT  
Source: Oakland Press [edited]  
<<http://www.theoaklandpress.com/health/20170816/oakland-county-health-division-reports-hepatitis-a-outbreak-63-cases-over-past-year>>

The Oakland County Health Division says 63 cases of hepatitis A have been confirmed over the past year, that's 58 more than the previous year [2016]. This includes 8 more cases of hepatitis A that have been confirmed in the Farmington Hills area over the past week.

The health division has not identified a source but are urging residents to get vaccinated to reduce the risk of contracting the disease.

"We contribute this increase in confirmed cases to illicit drug use in the community," said Pamela Hackert, medical director for the county's health division. "When 8 cases are in more of a localized community that is a high number."

Although a source has not been found, the health division is investigating potential common factors such as contaminated food, sick individuals, travel, and healthcare exposure.

Since [26 Jun 2017], there have been 13 confirmed cases in the county. >>From [1 Aug 2015 through 31 Jul 2016] there were only 5 confirmed cases in the county.

There have been 247 confirmed cases statewide in 2017 compared to 132 in 2016.

Leigh-Anne Stafford, health officer for the county's health division, said it's important to practice proper hygiene to reduce the risk.

"The health division urges all residents, food handlers, and

healthcare providers to get the Hepatitis A vaccine and to wash hands thoroughly," said Leigh-Anne Stafford, health officer for the county's health division. "Food workers and health care workers are encouraged to stay home from work, seek medical attention, and report their illness to their employer."

Hepatitis A is an infection of the liver caused by a virus and is vaccine-preventable.

Dr Pamela Hackert, medical director for county's health division, said the virus is shed in feces and is most commonly spread from person to person by contaminated hands.

Symptoms may appear from 2 to 6 weeks after exposure, with the average time being about one month.

ProMED-mail  
<promed@promedmail.org>

[Previous postings reported an increased number of cases of hepatitis A from the eastern side of Michigan's lower peninsula in Macomb, Oakland, and Wayne counties, and the city of Detroit. The outbreak appears to have been going on for some time and ProMED would appreciate additional information regarding risk factors of the cohort including MSM, travel, homelessness and illicit drug use.

One previous post (Hepatitis A - USA (12): (MI) fatal, RFI archive no. <http://promedmail.org/post/20170707.5158430>) from 7 Jul 2017 reported a case fatality rate of 4.5 percent, higher than the parallel larger outbreak in San Diego, California which does not appear based on genetic studies to be related to the Michigan cluster. Whether there have been additional fatalities is not clearly reported. - Mod.LL

The state of Michigan can be located on the HealthMap/ProMED-mail interactive map at <<http://healthmap.org/promed/p/1933>>. A county map can be seen at <<http://geology.com/county-map/michigan-county-map.gif>>. - Sr.Tech.Ed.MJ]

[ref: Wang W, Lin XD, Liao Y, et al. Discovery of a highly divergent coronavirus in the Asian house shrew from China illuminates the origin of the alphacoronaviruses. J Virol. 2017. pii: JVI.00764-17. abstract available at <<http://jvi.asm.org/content/91/17/e00764-17.abstract>>]

-----  
Abstract

Although shrews are one of the largest groups of mammals, little is known about their role in the evolution and transmission of viral pathogens, including coronaviruses (CoVs). We captured 266 Asian house shrews (*Suncus murinus*) in Jiangxi and Zhejiang Provinces, China, during 2013 to 2015. CoV RNA was detected in 24 Asian house shrews, with an overall prevalence of 9.02 percent. Complete viral genome sequences were successfully recovered from the RNA-positive samples. The newly discovered shrew CoV fell into 4 lineages reflecting their geographic origins, indicative of largely allopatric evolution. Notably, these viruses were most closely related to alphacoronaviruses

but sufficiently divergent that they should be considered a novel member of the genus *Alphacoronavirus*, which we denote WESV (WESV shrew virus). Phylogenetic analysis revealed that WESV was a highly divergent member of the alphacoronaviruses and, more dramatically, that the S gene of WESV fell in a cluster that was genetically distinct from that of known coronaviruses. The divergent position of WESV suggests that coronaviruses have a long association with Asian house shrews. In addition, the genome of WESV contains a distinct NS7 gene that exhibits no sequence similarity to genes of any known viruses. Together, these data suggest that shrews are natural reservoirs for coronaviruses and may have played an important and long-term role in CoV evolution.

ProMED-mail from HealthMap Alerts  
<promed@promedmail.org>

[Coronavirus (subfamily Coronavirinae) are of importance because they comprise several human and animal pathogens. The origin of alphacoronaviruses had been linked to bats. These data suggest that shrews might have played a role, too. - Mod.PM

BRUCELLOSIS - ALGERIA: (EL-OUED)

\*\*\*\*\*

A ProMED-mail post  
<<http://www.promedmail.org>>  
ProMED-mail is a program of the  
International Society for Infectious Diseases  
<<http://www.isid.org>>

Date: Mon 14 Aug 2017 15:53  
Source: APS [machine transl., edited]  
<<http://www.aps.dz/sante-science-technologie/61720-el-oued-70-cas-de-brucellose-enregistres-durant-le-1er-semester-2017>>

No less than 70 cases of human brucellosis have been recorded during the 1st half of 2017 in the province of El-Oued. Of the total number of cases recorded, 60 percent were diagnosed in 4 communes (El-M'ghair, Reguiba, Oum-Toyour and Still) considered as foci of this disease, due to high amount of livestock, goats and cattle in particular, said the APS doctor at the prevention department Kamel Dif.

The highest number of cases of brucellosis is generally recorded during the spring period (March, April and May), characterized by high consumption of raw milk, especially in pastoral areas . An extensive awareness program on the fight against this disease was launched in 2017 by the health sector targeting breeders, as well as producers and consumers of raw milk, according to this official. The aim of this awareness-raising action is to anchor the culture of prevention among consumers of raw milk, he said.

Brucellosis vaccination partners are also being led by the Agricultural Services Directorate (DSA) to protect livestock against this zoonosis.

--  
Communicated by:  
ProMED-mail  
<[promed@promedmail.org](mailto:promed@promedmail.org)>

[This infection, a bacterial zoonosis, is classified among the

category B biowarfare agents. Natural transmission to humans occurs after occupational exposure or through ingestion of contaminated food products. Although brucellosis has become a rare entity in the United States and many industrialized nations because of animal vaccination programs, this condition remains a significant health problem in many developing countries.

Each species of *Brucella* has a specific animal reservoir in which chronic disease is present. The bacilli tend to localize in the reproductive organs of the animals, causing sterility and abortions, and are shed in large numbers in the animal's urine, milk, and placental fluid. This localization allows for efficient spread to farmers, veterinarians, slaughterhouse workers, and consumers.

Among the 4 species known to cause disease in humans, *Brucella melitensis* (from goats, sheep, or camels) may be the most virulent, producing the most severe and acute cases of brucellosis with disabling complications. A prolonged course of illness, which may be associated with suppurative destructive lesions, is associated with *B. suis* (from feral or commercially raised pigs) infection. *B. abortus* (from cattle, buffalo, and camels) is associated with mild-to-moderate sporadic disease that is rarely associated with complications.

In the Maghreb and the Middle East, human brucellosis is usually contracted through consumption of raw goat / ewe's milk or local artisanal cheese made from the raw milk and *Brucella melitensis* is responsible for the great majority of the reported cases, with a marked predominance of its biovar 3, as in other Mediterranean countries.

El Oued Province lies in the Sahara desert in northeast Algeria. The mostly uninhabited southern half of the province is covered by the Grand Erg Oriental, a vast region of uninterrupted sand dunes. - Mod.LL

A Message from Northrop Grumman:

Northrop Grumman has been the industry leader on the U.S. Air Force's Intercontinental Ballistic Missile system since its inception. As a trusted partner/technical integrator, we've mastered the complexities of its flight, launch, and command & control systems. Our capabilities and engineering expertise make us a clear choice to deliver the next generation ICBM system. That's why we're a leader in strategic deterrence. We know the nation's most critical systems—inside and out. [Learn more.](#)

---

**MATTIS' WAR ON WASTE:** Defense Secretary Jim Mattis is making the war on waste his own. Faced with a report last month from one of the Pentagon's watchdogs that the U.S. may have wasted upwards of \$28 million by supplying the Afghan army with custom woodland camouflage uniforms in a country where forests cover only 2.1 percent of the total land area, Mattis issued a blunt call to action to some of his deputies. The report, from the Special Inspector General For Afghanistan Reconstruction, said former Afghan Defense Minister Abdul Rahim Wardak "ran across" the proprietary pattern on a website in 2007 and "liked what he saw." Mattis reviewed the report and decidedly did not like what he saw, calling it "an example of a complacent mode of thinking."

"The report is an indication of a frame of mind — an attitude that can affect any of us at the Pentagon or across the Department of Defense — showing how those of us entrusted with supporting and equipping troops on the battlefield, if we let down our guard, can lose focus on ensuring their safety and lethality against the enemy," Mattis wrote in a July 21 memo. "Cavalier or casually acquiescent decisions to spend taxpayer dollars in an ineffective and wasteful manner are not to recur," Mattis said, and he made clear he didn't want anyone making excuses or defending the wasteful spending. "Rather than minimize this report or excuse wasteful decisions, I expect all DoD organizations to use this error as a catalyst to bring to light wasteful practices — and take aggressive steps to end waste in our Department."

The House Armed Services Subcommittee on Oversight and Investigations hears testimony at 2 p.m. from both the Special Inspector General for Afghanistan Reconstruction John Sopko and Michael Roark, assistant inspector general, Office of the DOD Inspector General.

**McCAIN'S BACK:** Also on Capitol Hill today, John McCain, the influential chairman of the Senate Armed Services Committee, is back at his desk, despite his disheartening diagnosis of an aggressive form of brain cancer. McCain's office made the announcement yesterday and the senator himself tweeted, "Look forward to returning to Senate tomorrow to continue work on health care reform, defense bill & #RussiaSanctions..."

McCain is expected to provide a critical vote on a "motion to proceed" to allow the debate on health care to move forward today, but his office said the widely respected senator is also anxious to weigh in on the National Defense Authorization Act, and new sanctions on Russia, Iran and North Korea.

**WAVERING ON SANCTIONS:** President Trump's team won't say yet if he will sign or veto legislation imposing new sanctions on Russia, which is poised for congressional passage after a weekend breakthrough in negotiations, Joel Gehrke writes. "He's going to study that legislation and see what the final product looks like," White House press secretary Sarah Huckabee Sanders told reporters on Air Force One. That's a change from what Sanders said Sunday on ABC's "This Week." Sanders told host George Stephanopoulos the administration is happy with changes made to the bill, and said, "We support where the legislation is now." Stay tuned.

**RUSSIA ARMING THE TALIBAN:** As the Trump administration weighs cooperating more closely with Moscow to bring peace to Syria, there is fresh evidence that Russia is arming America's enemies in Afghanistan. CNN says it has obtained two videos that to back up vague allegations made by senior Pentagon officials in the spring suggesting Russia was supplying small arms to the Taliban. CNN says the two videos show sniper rifles, Kalashnikov variants and heavy machine guns that weapons experts say are stripped of any means of identifying their origin.

Good Tuesday morning and welcome to Jamie McIntyre's Daily on Defense, compiled by Washington Examiner National Security Senior Writer Jamie McIntyre (@jamiejmcintyre), National Security Writer Travis J. Tritten (@travis\_tritten) and Senior Editor David Brown (@dave\_brown24). Email us here for tips, suggestions, calendar items and anything else. If a friend sent this to you and you'd like to sign up, click here. If signing up doesn't work, shoot us an email and we'll add you to our list. And be sure to follow us on Twitter @dailyondefense.

**HAPPENING TODAY:** Trump is scheduled to have a joint news conference at the White House at 3 p. m. after his meeting with Lebanese Prime Minister Saad Hariri. The two leaders are expected to discuss issues ranging from "the fight against terrorism, the economy, and refugees," according to a White House statement.

**EARNINGS NEWS THIS WEEK:** Last week Lockheed Martin was the first major defense contractor to report its second quarter earnings. This week everyone else reports in. United Technologies releases its Q2 earnings this morning. Tomorrow we'll hear from Boeing, Northrop Grumman and General Dynamics. Raytheon wraps up the week with its report on Thursday.

**DEFENSE FIRMS AT THE TOP:** Defense News is out with its annual Top 100 list of worldwide defense companies for the year. For stateside firms, Lockheed, Boeing and Raytheon maintained their spots high on the list. Northrop Grumman and General Dynamics switched places this year, with Northrop now in the upper spot. You can see the list here.

ADVERTISEMENT

**AUMF HEARINGS:** The House Foreign Affairs Committee will hear testimony from former attorney general Michael Mukasey and others on the U.S. authorizations for the use of military force. The so-called AUMFs provide the legal framework that has allowed the Trump administration and two preceding administrations to strike terrorists around the world. The Senate Foreign Relations Committee will hold a top secret hearing with Mattis and Secretary of State Rex Tillerson to discuss war authorizations next week.

Debate over the authorizations, passed by Congress in the aftermath of 9/11 and during the runup of the Iraq invasion of 2003, have been heating up on the Hill. Anti-war progressive Rep. Barbara Lee scored a surprising victory last month when a House committee, including some Republicans, voted to add her repeal of the 2001 AUMF into an appropriations bill, which would have required the first vote on war authorizations in 15 years. But the measure was later quietly stripped from the bill by the House Rules Committee.

**RYAN ASKED ME TO DO IT:** Democrats who were angered by the removal of Lee's amendment in the annual defense appropriations bill asked for an explanation and got one Monday night. Rep. Tom Cole, a senior Republican on the Rules Committee, said House Speaker Paul Ryan personally asked him to remove the AUMF repeal-and-replace language and he consented. "He said, look, jurisdictionally this can't happen and he made another point which I agree with, which is the administration ought to participate in this exercise," Cole said during a hearing on sending the appropriations bill to the House floor.

**WRONG BUTTON:** Human error led to a failed Navy ballistic missile intercept test, Defense News reported Monday. A U.S. Missile Defense Agency investigation found a sailor on the destroyer John Paul Jones, the Navy's ballistic missile defense test ship, pressed the wrong button into the combat system, causing the missile to self-destruct before reaching its target.

The sailor, a tactical datalink controller, accidentally identified the incoming ballistic missile target as a "friendly in the system," causing the missile to combust. The test, which occurred on June 22, was the fourth test of the missile defense system, which is known as SM-3 Block IIA.

**RETURN OF MALIKI:** Russia and Iraq will "build up [their] cooperation and partnership" on military and economic issues in an effort to expand Soviet-era partnerships between the two countries, Foreign Minister Sergey Lavrov declared Monday, Joel Gehrke writes.

"We will continue to develop and build up this cooperation and partnership, the foundations of which we laid during the second half of the 20th century," Lavrov said Monday during a meeting with Iraqi Vice President Nouri al-Maliki.

Lavrov identified counterterrorism efforts as the top priority for the relationship, but the statement was laden with clues that the Russians hope to supplant the United States as a top power broker in the country.

**TRUMP TROLLS SESSIONS:** Trump called out Attorney General Jeff Sessions for the second day in a row on Tuesday, questioning why he hasn't investigated "crimes" by Hillary Clinton. Trump also accused the acting head of the FBI of not probing Clinton because she donated money to McCabe's wife's campaign.

"Ukrainian efforts to sabotage Trump campaign - 'quietly working to boost Clinton.' So where is the investigation A.G. @seanhannity," the president tweeted Tuesday morning.

Less than 10 minutes later, Trump added: "Attorney General Jeff Sessions has taken a VERY weak position on Hillary Clinton crimes (where are E-mails & DNC server) & Intel leakers!"

**WHAT, ME COLLUDE?** Senior White House adviser Jared Kushner is back behind closed doors before a House committee today, where he will again deny any improper contacts with Russians during the

2016 campaign. Yesterday, the president's son-in-law and senior adviser spent more than two hours briefing Senate investigators on four meetings with Russian officials during and after the campaign.

"Let me be very clear: I did not collude with Russia, nor do I know of anyone else in the campaign who did so. I had no improper contacts. I have not relied on Russian funds for my businesses, and I have been fully transparent in providing all requested information," Kushner said in brief remarks delivered at the White House after the closed-door questioning. In an 11-page statement released before his unsworn testimony, Kushner detailed the four meetings in question, but said he was never close to the Russians, and insisted he had done nothing illegal or improper.

Kushner has been criticized for failing to disclose his meetings with Russian officials on his initial disclosure form. But Kushner said that information was left off unintentionally due to a "miscommunication" that prevented information on any of his foreign meetings from being listed, not just those meetings with Russia.

TRUMP JOKES THIS MORNING: "Jared Kushner did very well yesterday in proving he did not collude with the Russians. Witch Hunt. Next up, 11 year old Barron Trump!" Hey, aren't we supposed to leave the younger kids out of this?

"EXCEPTION, NOT THE NORM" The Pentagon says Sunday's incident in which a hot-dogging Chinese pilot forced a U.S. EP-3 surveillance plane to take evasive action was "the exception, not the norm." The U.S. spy plane was flying in international airspace over the East China Sea, when a Chinese J-10 fighter jet flew under it, and then abruptly pulled up in front of the American plane, triggering its automatic collision avoidance system. "There are intercepts that occur in international airspace regularly, and the vast majority of them are conducted in a safe manner," said Navy Capt. Jeff Davis, a Pentagon spokesman.

HEY, A NEW NICKNAME: Trump criticized the top Democrat on the House Intelligence Committee, calling him "sleazy" for discussing the investigation into Russian meddling on television. "Sleazy Adam Schiff, the totally biased Congressman looking into 'Russia,' spends all of his time on television pushing the Dem loss excuse!" Trump tweeted.

Schiff responded: "With respect Mr. President, the problem is how often you watch TV, and that your comments and actions are beneath the dignity of the office."

Congress is poised this week to force President Trump's hand, as well as handcuff him in the future, by passing a sweeping Russian sanctions bill that would not only punish Moscow for meddling in the U.S. elections, but would sharply limit the president's ability to grant sanctions relief down the road. The bill passed the Senate by a near unanimous 98-2 vote, and is expected to pass easily in the House tomorrow. That will puts Trump in a tight spot. If he vetoes the bill, he risks feeding the perception that's he too eager to please Russian President Vladimir Putin. If he signs it, he'll be allowing Congress to limit his flexibility in dealing with Russia as he tries to forge a new relationship with Putin. A Message from Northrop Grumman:

Northrop Grumman has been the industry leader on the U.S. Air Force's Intercontinental Ballistic Missile system since its inception. As a trusted partner/technical integrator, we've mastered the complexities of its flight, launch, and command & control systems. Our capabilities and engineering expertise make us a clear choice to deliver the next generation ICBM system. That's why we're a leader in strategic deterrence. We know the nation's most critical systems—inside and out. Learn more.

---

**RUSSIA SANCTIONS:** Congress is poised this week to force President Trump's hand, as well as handcuff him in the future, by passing a sweeping Russian sanctions bill that would not only punish Moscow for meddling in the U.S. elections, but would sharply limit the president's ability to grant sanctions relief down the road. The bill passed the Senate by a near unanimous 98-2 vote, and is expected to pass easily in the House tomorrow. That will puts Trump in a tight spot. If he vetoes the bill, he risks feeding the perception that's he too eager to please Russian President Vladimir Putin. If he signs it, he'll be allowing Congress to limit his flexibility in dealing with Russia as he tries to forge a new relationship with Putin.

**MIXED MESSAGE:** While White House press secretary Sarah Huckabee Sanders signaled Trump will sign the sanctions bill in her appearance on ABC yesterday, her boss White House communications director Anthony Scaramucci said on CNN that the president hasn't yet decided. "He hasn't made the

decision yet to sign that bill one way or the other,” Scaramucci said. But he also said Trump remains unconvinced Russia interfered in the election, despite the consensus of the U.S. intelligence community. “If, in fact, he makes a decision that it’s 100 percent true, he is going to be super tough on Russia. But let him — let him — let him do it at his own time and pace.”

Sanders was on a different page entirely, telling ABC that now that the bill focused on Russia’s annexation of Crimea, Trump was ready to sign the sanctions into law. “The original piece of legislation was poorly written but we were able to work with the House and Senate. And the administration is happy with the ability to do that and make those changes that were necessary,” Sanders said. “We support where the legislation is now, and will continue to work with the House and Senate to put those tough sanctions in place on Russia until the situation in Ukraine is fully resolved.”

**NOT JUST RUSSIA:** The House votes tomorrow on the sanctions, which now includes Iran and North Korea as well as Russia. “North Korea, Iran and Russia have in different ways all threatened their neighbors and actively sought to undermine American interests,” said House Majority Leader Kevin McCarthy and House Foreign Affairs Chairman Ed Royce said in a statement. “The bill the House will vote on next week will now exclusively focus on these nations and hold them accountable for their dangerous actions.”

**IRAN DEFIANT ON SANCTIONS:** Iran says it will launch a new missile production line despite new U.S. -imposed sanctions over its ballistic missile program. Iranian Defense Minister Hossein Dehghan told people attending a ceremony Saturday that the Sayyad 3 missile will be able to travel up to 74 miles at an altitude of 16 miles, according to Iranian state media. The missile could be used to target fighter planes, helicopters, and cruise missiles, according to a Reuters report of the remarks. Dehghan cited a \$110 billion weapons deal between the U.S. and Saudi Arabia as Iran’s reason for developing new missile technologies.

**‘STAR WARS’ REDUX:** North Korean leader Kim Jong Un’s successful test of an intercontinental ballistic missile, theoretically capable of hitting Alaska, has Congress again looking to space for the high ground in defending the U.S. Both the House and Senate want the Pentagon to pursue what Sen. Dan Sullivan calls the “unblinking eye,” an array of orbiting satellite sensors that could collect high-quality launch data on future ballistic missiles from North Korea. But the House is poised to go further, resurrecting a vision of space defenses first envisioned by former President Ronald Reagan.

Rep. Trent Franks sponsored the legislation in the House version of the National Defense Authorization Act calling for research and prototyping of the controversial space-based missile interceptors. Franks called it a “true paradigm shift” and the “biggest step since Reagan” in preventing a nuclear strike. The bill puts \$30 million into creating a “test bed” to try out hardware in space that could shoot down incoming North Korean ballistic missiles, similar to the United State’s existing ground-based interceptors at Fort Greely in Alaska, and Vandenberg Air Force Base in California.

**KABUL ATTACK:** The Taliban claimed responsibility for a suicide car bombing in the Afghan capital of Kabul. The bomber drove a car packed with explosives into a bus carrying government employees in an upscale neighborhood during morning rush hour. Afghan officials said 24 people were killed and 42 wounded.

Good Monday morning and welcome to Jamie McIntyre’s Daily on Defense, compiled by Washington Examiner National Security Senior Writer Jamie McIntyre (@jamiejmcintyre), National Security Writer Travis J. Tritten (@travis\_tritten) and Senior Editor David Brown (@dave\_brown24). Email us here for tips, suggestions, calendar items and anything else. **HAPPENING TODAY:** President Trump’s son-in-law Jared Kushner is scheduled to meet with Senate Intelligence Committee staff behind closed doors today to answer questions about contact between the Trump campaign and Russian officials. In December, Kushner met with a leading Russian diplomat,

and also attended a June 2016 meeting with Trump's son, Donald Trump Jr., and his former campaign manager, Paul Manafort, and a Russian lawyer who Trump Jr. believed had damaging information on Hillary Clinton. Kushner's attorney said his client's appearance before Congress is voluntary and he is cooperating fully.

The Washington Post said it has obtained an 11-page prepared statement Kushner will submit for the record, which he details four meetings with Russian officials, but denies any improper contacts or collusion.

Tomorrow Kushner will talk privately to members of the House Intelligence Committee, and on CBS yesterday Rep. Adam Schiff, the top Democrat on the panel, said they have a lot of unanswered questions. "We want to know whether those meetings took place, whether other meetings took place. We have a lot of ground to cover. His counsel has said they will only make him available for two hours," Schiff said. "So, we expect this is just going to be the first interview."

## ADVERTISEMENT

**POLITICIZING THE MILITARY?** At Saturday's commissioning of the USS Gerald R. Ford, the president ad libbed into his remarks a call for political action. After promising the crowd in Norfolk, Virginia, that the military would get the additional funding he has promised, he asked predominantly military audience to "call that congressman and call that senator and make sure you get it." After a burst of applause he added, "And by the way, you can also call those senators to make sure you get healthcare."

Setting aside that members of the military already have healthcare, that rubbed some people, particularly Democrats, the wrong way, accusing Trump of urging members of the military to take sides on a highly partisan political issue.

"I condemn President Trump's remarks. We need to be one-hundred percent clear that it is utterly beyond the pale for the commander in chief to publicly tell members of the armed services that they should lobby Congress on his behalf," said Rep. Adam Smith, ranking member on House Armed Services Committee. "Doing so puts them in an untenable position and disrespects their longstanding professional practices as well as their duty to remain apolitical. President Trump has done this before, and he cannot be allowed to keep doing it."

**DON'T BLAME US:** The New York Times is crying foul after a Trump tweet blaming the newspaper for compromising a mission to capture or kill Islamic State leader Abu Bakr al-Baghdadi. Early Saturday morning Trump tweeted, "The Failing New York Times foiled U.S. attempt to kill the single most wanted terrorist, Al-Baghdadi. Their sick agenda over National Security." The tweet followed a report on one of the president's favorite shows "Fox and Friends," which was headlined: "NYT Foils U.S. Attempt To Take Out Al-Baghdadi."

That in turn was based on an interview Fox News' Catherine Herridge conducted with U.S. Special Operations Commander Gen. Raymond Thomas at Aspen Security Forum in Colorado. Asked if the U. S. was ever close to getting Baghdadi, Thomas said. "There were points in time when we were particularly close to him. Unfortunately, there were some — some leaks about what we were up to at that — at that time, you know, when — when we went out after Abu Sayyaf, the oil minister, who was very close to him, one of his personal confidants. He didn't live, but his wife did, and she gave us a treasure trove of information about where she had just been with Baghdadi in Raqqa, you know, days, if not, you know — within days prior, and so that was a very good lead. Unfortunately, it was leaked in a prominent national newspaper about a week later, and that — that lead went dead.'

The Times is pushing back on the account, and asking for an apology from Fox News. "A review of the record shows that information made public in a Pentagon news release more than three weeks before

the Times article, and extensively covered at the time by numerous news media outlets," the Times reported.

On Friday Defense Secretary Jim Mattis said so far as he knows Baghdadi is still alive, despite numerous reports recently saying he died. Mattis said he has seen no evidence that Baghdadi is dead, although Russia claimed in June it killed him during an airstrike in Syria a month earlier. The Pentagon has said the group's "caliph," who last appeared publicly in 2014 in Mosul, does not appear to be involved in command-and-control operations over Islamic State forces fighting in Iraq and Syria. "I think Baghdadi's alive," Mattis said. "I think that he is alive, and I'll believe otherwise when we know we've killed him."

**MATTIS ON THAT PUTIN DINNER MEETING:** In speaking with reporters, Mattis scoffed at all the fuss over Trump's dinner meeting with Putin at the G-20 summit in Hamburg, Germany. I've been to hundreds of these dinners, ladies and gentlemen, and you just walk around talking because you don't want to be bored sitting there just eating your pâté de foie gras," Mattis said in another semi-regular Friday session with the Pentagon press corps. "People do get up and go see their wife at dinner, and if they're sitting next to the other country that just had a two-hour talk or whatever it was, of course they are going to talk," Mattis said. "If you watched me at dinner, you'd find me talking to some ne'er-do-wells, just the way I do business," Mattis said. "You talk to people who agree, but mostly you try to talk to people who disagree with you when you're in a social setting because that's when you can probably get into more than superficial things."

"I'm not trying to make fun of you guys in the press." Mattis said. "My God, he talked to Putin. Give me a break."

**NOT THE BEST TIME:** At the Aspen forum Saturday National Security Agency Director Mike Rogers expressed minimum high enthusiasm for the idea of a joint U.S.-Russia cybersecurity unit. It seemed like the idea was dead when Trump tweeted after his Putin meeting, "The fact that President Putin and I discussed a Cyber Security unit doesn't mean I think it can happen. It can't." But a Russian presidential envoy said this week that Moscow and Washington were still talking about creating a joint cybersecurity working group. "I'm not a policy guy here," Rogers said, according to Reuters. "I would argue now is probably not the best time to be doing this."

**NICE TRY:** It turns out that an intrepid student journalist in Washington State is not the only one who gave Secretary Mattis' private number a shot. You may recall Mattis' cellphone number was scrawled on a sticky note that showed in photograph published in the Washington Post. High School student Teddy Fischer used the number to score an exclusive interview with Mattis, and Friday Mattis revealed that Michael Gordon of the New York Times has also texted his private phone. Mattis said he saw the message but didn't read it, and seemed to indicate his old phone had been "impounded."

"I just noticed you sent me a text message like a week ago," Mattis said. "Oh, wow. OK. You can still answer it," Gordon replied. "I don't even know what it is about." To which Mattis said, "I don't either."

Hey. It was worth a shot.

#### QUOTE OF THE DAY

"We love reading the news. We love reading those kinds of stories. I'm amazed sometimes when I'm having a fight with somebody I haven't talked to in two weeks. I'm having a fight with them. It's good. You know, it keeps us smiling."

- Defense Secretary Jim Mattis on how he gets a chuckle out of inaccurate media reports.

A Message from Northrop Grumman:

Northrop Grumman has been the industry leader on the U.S. Air Force's Intercontinental Ballistic Missile system since its inception. As a trusted partner/technical integrator, we've mastered the complexities of its flight, launch, and command & control systems. Our capabilities and engineering expertise make us a clear choice to deliver the next generation ICBM system. That's why we're a leader in strategic deterrence. We know the nation's most critical systems—inside and out. [Learn more.](#)

---

**THE PRESIDENT'S 'TANK' SESSION:** No decisions were made at the Pentagon yesterday, as President Trump brought his national security team to sit down with his top civilian and military leaders in the joint chiefs' secure briefing room known as "the Tank." The two-hour session was "a walk around the world to talk about where we have challenges and where we have opportunities," said Dana White, chief Pentagon spokesperson. "What are our levers of influence, economically, politically, militarily and diplomatically."

White said the meeting was scheduled a while back and was never intended to be a decision meeting, and while all the world hot spots were touched on, this was also not a briefing on the new Afghanistan strategy, which is still a work in progress. "It's still being worked on," White said. "The Afghan strategy is part of a broader strategy," she said and Defense Secretary Jim Mattis only has one piece of it. "There no decision. It's still a point of discussion," White said.

Trump made no formal public remarks during his Pentagon visit, but he did answer a shouted question

on his arrival. Asked if the U.S. would be sending more troops to Afghanistan, Trump said, "We'll see," adding, "and we're doing very well against ISIS. ISIS is falling fast, very fast," according to a pool report.

**MATTIS UPBEAT AFTER HILL BRIEFS:** Mattis, Secretary of State Rex Tillerson and Joint Chiefs Chairman Gen. Joseph Dunford, who were all in the Pentagon meeting with Trump in the morning, were up on Capitol Hill in the afternoon, where they spent over an hour updating House members behind closed doors on the campaign to defeat the Islamic State. It was the second meeting with lawmakers after their briefing to the Senate the day before. "I have no doubt we have the support of Congress and that was loud and clear," Mattis said when leaving the meeting on Capitol Hill.

Afterward Republican Rep. Trent Franks told reporters, "We've had more progress in the battle to defeat ISIS in the last eight months than we've had in the last eight years." He attributed the shift to Trump's leadership. It should be noted the U.S. war against ISIS began in August of 2014, three years and President Trump has been in office six months, as of yesterday.

House Democrats, on the other hand were less effusive. Rep. Adam Schiff, the top Democrat on the House Intelligence Committee, said the administration has yet to fill in the missing pieces of its strategy for political peace in Iraq and Syria. "What I was struck by more than anything else was how very similar much of the strategy is to the prior administration," said Schiff who argued that much of what Mattis, Tillerson and Dunford presented, beyond president's delegation of more military authority, was a continuation of President Obama's strategy.

**BRING IN THE EXPERTS:** Welcome the newly minted Commission on National Defense Strategy. Leaders on the House and Senate armed services committees, including Sen. John McCain and Rep. Mac Thornberry, have announced a panel of Washington experts to review the U.S. national defense policy and come back with some recommendations for President Trump, Defense Secretary Jim Mattis and Congress. The commission was authorized by lawmakers last year and among its charges will be to look at U.S. enemies abroad, the size and composition of the military, and how defense money is spent. Here's each lawmaker's panel picks:

McCain:

Jon Kyl, former Republican senator from Arizona.

Retired Gen. Jack Keane, chairman of the board at the Institute for the Study of War and former vice chief of staff for the Army.

Thomas Mahnken, CEO of the Center for Strategic and Budgetary Assessments.

Sen. Jack Reed, ranking Democrat on Senate Armed Services:

Christine Fox, a senior adviser at Johns Hopkins University's applied physics laboratory and previous acting deputy secretary of defense.

Michael Morell, former deputy director of the CIA.

Ambassador Anne Patterson, former assistant secretary for Near Eastern Affairs at the State Department.

Thornberry:

Ambassador Eric Edelman, a diplomat to Turkey and former undersecretary of defense for policy at the Pentagon.

Andrew Krepinevich, Jr., president emeritus of the Center for Strategic and Budgetary Assessments.

Roger Zakheim, former general counsel of the House Armed Services Committee.

Rep. Adam Smith, ranking Democrat on House Armed Services:

Retired Adm. Gary Roughead, former chief of naval operations.

Kathleen Hicks, senior vice president of the Center for Strategic and International Studies.

Mike McCord, former Pentagon comptroller.

Good Friday morning and welcome to Jamie McIntyre's Daily on Defense, compiled by Washington Examiner National Security Senior Writer Jamie McIntyre (@jamiejmcintyre), National Security Writer Travis J. Tritten (@travis\_tritten) and Senior Editor David Brown (@dave\_brown24). Email us here for tips, suggestions, calendar items and anything else. **HAPPENING TODAY:** The Naval Future Force Science and Technology Expo kicks off this morning with a keynote address by Chief of Naval Operations Adm. John Richardson at 7.30 a.m the Walter Washington Convention Center. Other speakers include Walter Jones, executive director, Office of Naval Research at 8 a.m.; Marine Lt. Gen. Robert Walsh, commanding general, Marine Corps Combat Development Command, at 8:15 a.m.; and Joint Chiefs Vice Chairman Gen. Paul Selva at 10:30 a.m.

**FORD CHRISTENING:** After years of delay and cost overruns, the U.S. Navy is adding a powerful new warship to its fleet, the USS Gerald R. Ford, a first-of-class ship, and first new U.S. aircraft carrier design in 40 years. President Trump will be the guest of honor tomorrow at the official christening of the USS Ford, the Navy's newest nuclear-powered aircraft carrier named in honor of the nation's 38th president. The price tag for the next-generation ship is \$13 billion, including cost overruns of \$2.3 billion, but its all electric high-tech catapult allows it to launch a wider array of planes. The Navy admits the ship is costly, but when you consider it will be in service for 50 years, it's worth it. "That's not to say we are not cognizant of the cost, not aware of the cost, we are always trying to drive down the cost, trying to increase the learning curve so that subsequent ships costs less," said Rear Adm. DeWolfe Miller. "Ford, being a new design with a lot of new technology, is an expensive ship, but that return on investment is well worth that price," Miller said in a Navy podcast.

**STILL FEISTY FROM HIS BED REST:** Sen. John McCain may be on bedrest following his diagnosis of an aggressive form of brain cancer, but that doesn't mean he's taking Trump's latest olive branch to Moscow lying down. Yesterday, McCain fired off a press release from his home in Arizona accusing Trump of "playing right into the hands" of Russian President Vladimir Putin, after reading reports that the president ended a covert CIA program aiding Syrian rebel groups. "Making any concessions to Russia, absent a broader strategy for Syria, is irresponsible and short-sighted," McCain said in his statement issued just hours after news broke that the 80-year-old senator has a type of brain tumor known as a glioblastoma.

**MCCAIN AND THE NDAA:** McCain's medical challenge prompted an outpouring of concern and well-wishes in Washington but it also raised questions about how his absence and health might affect the National Defense Authorization Act. As Armed Services chairman, McCain is the leader on the must-pass annual policy bill, which means overseeing the amendment process, defending it on the Senate floor and negotiating a final NDAA deal with the House. McCain was considering chemotherapy or radiation treatment but tweeted Thursday, "I'll be back soon, so stand-by!" So, we asked two experts what might lie ahead for the NDAA.

Mackenzie Eaglen, a resident fellow at the American Enterprise Institute, said time is dwindling for the Senate to bring the NDAA bill to a floor vote and McCain's absence and health are likely to push consideration into September or later. In the meantime, the Senate Armed Services staff has the bulk of the legislation completed in the committee-passed version and can continue working toward negotiations for a final bill with the House. Still, McCain is likely to remain involved as well. "My indications from staff is that Sen. McCain will work through treatment," she said. "He can absolutely still lead the committee."

Andrew Hunter, a senior fellow at the Center for Strategic and International Studies, said the Senate will need to decide whether McCain or another senator will shepherd the policy bill to a vote. "The Senate floor passage of the NDAA that is an incredibly intense and grueling exercise," Hunter said. Much of the work on amendments can be done by staff but McCain or another lawmaker will be needed to make hard calls, such as telling other senators 'no.' "The question then is, how much is he present and able to kind of steer that process," Hunter said.

**MORE NOMINEES MOVING:** The Senate Armed Services Committee has approved the nomination of Charles "Cully" Stimson to be general counsel of the Department of the Navy, the Navy's top lawyer. While serving at the Pentagon in a position that placed him in charge of military detainees in 2007, Stimson made controversial remarks expressing his dismay about U.S. law firms representing detainees in Guantanamo Bay, which led to Stimson's resignation. The committee also approved 3,879 military nominations in the Army, Air Force, Navy and Marine Corps, including Air Force Gen. Paul Selva to be re-appointed as vice chairman of the Joint Chiefs of Staff. Other nominees approved by the committee included David Trachtenberg to be principal deputy undersecretary of Defense for Policy, Owen West to be assistant secretary of Defense for Special Operations and Low-Intensity Conflict and Ryan McCarthy to be undersecretary of the Army.

**MORE PENTAGON PICKS:** Trump has made two more key Pentagon nominations, picking a member of his presidential transition team Robert Wilkie, along with Anthony Kurta, to oversee military personnel and readiness. If confirmed by the Senate, Wilkie would serve as undersecretary and Kurta would be his deputy overseeing and advising Mattis on training, personnel policy and the military's readiness to fight wars. They have extensive Washington national security experience both in the Defense Department and on Capitol Hill. Wilkie, a senior adviser to Sen. Thom Tillis, worked on defense issues during Trump's transition, was assistant secretary of defense for legislative affairs, and a national security adviser to President George W. Bush. Kurta, who served 32 years in the Navy, had previously filled in as personnel and readiness undersecretary and was a deputy assistant secretary.

**TRUMP'S MAN IN KABUL:** President Trump has nominated John Bass to be U.S. ambassador to Afghanistan. Bass is currently the U.S. ambassador to Turkey and is a former ambassador to Georgia. Former President Barack Obama nominated Bass to both positions. If confirmed by the Senate, Bass will be transferred to his new job in Afghanistan during a critical time. The Trump administration is currently weighing whether to increase American troop levels to bolster an existing U.S. force of 8,400 in Afghanistan to help Afghan forces battle the Taliban.

**PARDON ME, MR PRESIDENT:** Amid reports that Trump is asking lawyers about his pardon powers, such as this one in the Washington Post, Sen. Mark Warner, top Democrat on the intelligence committee is crying fowl. "Russia's interference in the 2016 elections was an attack on our democracy. Both the Senate Intelligence Committee and Special Counsel Mueller are currently investigating whether any coordination occurred between Russia and individuals associated with the Trump campaign," Warner said in a statement. "The possibility that the President is considering pardons at this early stage in these ongoing investigations is extremely disturbing. Pardoning any individuals who may have been involved would be crossing a fundamental line."

Quoting "people familiar with the effort," the Post reports "Trump has asked his advisers about his power to pardon aides, family members and even himself in connection with the probe," and said "a second person" said Trump's lawyers "have been discussing the president's pardoning powers among

themselves.”

Eric Holder, who was Obama’s attorney general, charged in a tweet that Trump may be trying to hinder special prosecutor Robert Mueller’s probe into Russian meddling in the 2016 election, and warned the president against trying to “constrain” the investigation. “If he tries to do so this creates issues of constitutional and criminal dimension,” Holder tweeted.

## U.S. ends controversial laptop ban on Middle East carriers

[Reuters, 20 Jul 2017](#): The United States has ended a four month ban on passengers carrying laptops onboard U.S. bound flights from certain airports in the Middle East and North Africa, bringing to an end one of the controversial travel restrictions imposed by President Donald Trump's administration. Riyadh's King Khalid International Airport was the last of 10 airports to be exempted from the ban, the U.S. Department of Homeland Security (DHS) confirmed in a tweet late on Wednesday local time. Middle East carriers have blamed Trump's travel restrictions, which include banning citizens of some Muslim majority countries from visiting the United States, for a downturn in demand on U.S routes. In March, the United States banned large electronics in cabins on flights from 10 airports in the Middle East and North Africa over concerns that explosives could be concealed in the devices taken onboard aircraft. The ban has been lifted on the nine airlines affected -- Emirates [EMIRA.UL], Etihad Airways, Qatar Airways, Turkish Airlines, Saudi Arabian Airlines, Royal Jordanian, Kuwait Airways [KA.UL], EgyptAir [EGY.UL] and Royal Air Maroc [RAM.UL] -- which are the only carriers to fly direct to the United States from the region. A ban on citizens of six Muslim-majority countries -- Iran, Libya, Somalia, Sudan, Syria, and Yemen, -- remains in place though has been limited after several U.S. court hearings challenged the restrictions. "The aviation industry has been trying to come together with a united message to governments and stakeholders about regulation and supporting the industry," said Will Horton, senior analyst at Australian aviation consultancy CAPA. Leading industry group the International Air Transport Association (IATA) criticized the laptop ban as ineffective, as security experts argued that militants could travel to the United States via Europe or elsewhere where the restrictions didn't apply. The restrictions were imposed as major U.S. carriers American Airlines Group, Delta Air Lines and United Airlines resumed their campaign against the Gulf carriers Emirates, Etihad and Qatar Airways by pressuring the new U.S. administration to renegotiate its open skies agreements with the United Arab Emirates and Qatar. However, U.S. and Middle

**NMCIWG CYBER SHIELD**

East officials said the campaign and the travel restrictions were not related. U.S. officials lifted the ban after visiting the 10 airports in Egypt, Morocco, Jordan, the United Arab Emirates, Saudi Arabia, Kuwait, Qatar and Turkey over the past three weeks to confirm new security measures announced last month were being implemented. On Thursday, the U.S. issued a revised directive to airlines around the world in response to requests that it clarify aviation security measures scheduled to start taking effect this week. The new requirements include enhanced passenger screening at foreign airports, increased security protocols around aircraft and in passenger areas and expanded canine screening. They affect 325,000 airline passengers on about 2,000 commercial flights arriving daily in the United States, on 180 airlines from 280 airports in 105 countries. Airlines that fail to meet the new security requirements could face in-cabin electronics restrictions. The United Kingdom continues to enforce a similar in-cabin ban on electronics ban on flights from some Middle Eastern airports. Those restrictions apply to flights from Turkey, Lebanon, Jordan, Egypt, Tunisia and Saudi Arabia.

**Security and education in the wake of WannaCry, Petya**

[CSO Online, 19 Jul 2017](#): Attacks occur for a variety of reasons, and in the wake of the most widespread ransomware attacks, WannaCry and Petya, many organizations are re-evaluating their security practices to figure out what went wrong. While those who were hit are still trying to understand where their security gaps are, others enterprises that rely on legacy systems and can't be patched are looking for ways to prevent being the next victim. No, the vulnerabilities attackers leverage are not new. They prey on systems that have not been updated, said Carson Sweet, CTO of CloudPassage. There is no one-fits-all fix, but Sweet offered some sound advice on a variety of both long- and short-term solutions. What might have helped protect companies from these worm-like ransomware attacks? The important thing to remember is that WannaCry and Petya were, in actuality, easily preventable. Victims of these attacks were only victims because they failed to conduct basic software patching. Enterprises searching for a way to protect themselves should know there are several tools on the market that use automation to patch software vulnerabilities in real time. Automation is one way to close the gap, but we also need to train developers, at the very earliest stage of their education, to bake security into all new code. It's no longer enough to tack cybersecurity onto projects as an afterthought anymore. Having readily available data backups is the best way to maintain business continuity in the face of an attack. Keeping good, fresh data backups allows enterprises to rebuild systems quickly and inexpensively. In the face of a ransomware attack, there's no longer a need to pay the ransom because the enterprise already has a recent backup of all the data it needs. When we look at the bigger picture and the future of cybersecurity, the issue of education is critical. A recent Cisco report estimates there are 1 million unfilled cybersecurity positions globally. Here in the U.S., that number is about 100,000. It's a crisis that directly hurts the ability of companies and governments to curb hacking because there simply isn't enough available talent to fill those jobs. Cybersecurity training has not been a priority for the American education system. Universities are inadvertently contributing to the lack of cybersecurity readiness in the U.S. by failing to teach students how to implement security thinking and awareness into all new code design, development and testing. As recently as 2016, only one of the top 121 computer and science information science schools in the country required at least three cybersecurity classes before graduation. At a minimum, cybersecurity training must be a graduation requirement for all computer science programs. To keep up with the ever-increasing challenges of hackers, though, there is no choice for but to prioritize cybersecurity education for our future.

### **iOS 10.3.3 now available to download on iPhone and iPad**

[BGR News, 19 Jul 2017](#): With just a couple of months remaining before the inevitable release of the iPhone 8, Apple rolled out iOS 10.3.3 for the iPhone, iPad and iPod touch on Wednesday. While the update itself is little more than a collection of bug fixes and security improvements, there's a chance that this could be the last major iOS 10 update with iOS 11 deep in development and set to release to the public in September. On the whole, iOS 10.3 wasn't a major upgrade for the mobile operating system. In fact, the most substantial upgrade was invisible, as Apple replaced the HFS+ file system with the new Apple File System (APFS). Other additions include the Find My AirPods feature, a new Podcasts widget and updated app transition animations that you may or may not have even noticed. Lately, Apple fans have been far more interested in the latest iOS 11 beta releases than they have in any potential updates for iOS 10.3. Now that the public beta is available, anyone with a compatible iOS device can download and test the next version of Apple's mobile OS before it rolls out this fall.

### **New malware takes over your smartphone camera by posing as a popular app**

[The Sun, 19 Jul 2017](#): A terrifying new virus that can stealthily film and record smartphone owners is spreading across the world – and you might already be infected. The malware is called GhostCtrl and often disguises itself as popular apps like WhatsApp and Pokemon Go. Victims who download the fake apps — which look exactly like the real deal — inadvertently install a backdoor to their phone. This grants hackers access to their camera, web browser history and searches and lets them intercept text messages. They can also surreptitiously record voice or audio and upload it to their computer servers. “The data GhostCtrl steals is extensive, compared to other Android info-stealers,” cyber security researchers Trend Micro explained in a blogpost. A version of GhostCtrl was used in a large-scale attack which recently targeted Israeli hospitals. The digital assault used a “worm” called RETADUP to steal information from desktop PCs, but it appears that hackers have used similar code to create an Android bug that could spread worldwide. “We can only expect it to further evolve,” Trend Micro warned. More than 200,000 victims in 150 countries were recently infected by malware known as WannaCry in May. If an app on the Google Play store doesn't have a star rating or several reviews, be very wary of it.

### **Windows 10 no longer supported? How to tell if your PC is eligible for latest version**

[ZD Net, 19 Jul 2017](#): If you own a PC or tablet that's powered by an Intel Clover Trail processor, you're part of an exclusive and unlucky fraternity. For now, at least, Microsoft has cut off Windows 10 support early for your device. If Microsoft doesn't deliver a patch within the next six to nine months, those PCs could be cut off from security fixes. Any Clover Trail-based device currently running the Windows 10 Anniversary Update, version 1607, will be blocked from upgrading to the latest version: Creators Update, version 1703. And under Microsoft's new support calendar, that means you'll stop getting security and reliability updates for version 1607 sometime in the first quarter of 2018. I've asked Microsoft for more details on why this problem is occurring and whether owners of affected devices can expect a software patch to resolve the incompatibility. Earlier today a spokesperson declined to provide any details, saying only, “We are aware of this and investigating the matter.” Ben Bajarin of Creative Strategies, who tracks PC and tablet sales closely, estimates that the number of affected devices is probably more than 10 million. So how can you tell whether your PC is one of them? Start by looking in Settings > System > About. If the processor is identified as an Intel Atom Z2520, Z2560, Z2580, or Z2760, your device is blocked from the Windows 10 Creators Update. If you see a different processor, including later Atom variants such as the Z3700 or x5-Z8500, you should be in the clear. But even on a PC running a fully supported processor, you are potentially at risk of being blocked for other issues, including serious incompatibilities associated with specific devices or installed programs. To check for

## NMCIWG CYBER SHIELD

potential problems before you spend hours attempting to update to the latest Windows 10 release, there's a simple option: Run the Setup program with a pair of switches that instruct it to perform a compatibility check and return the results. For this compatibility test, you need installation media for the Windows 10 version you want to test. If you've already downloaded the Creators Update, you can use that media; just make sure it matches the architecture - 32-bit or 64-bit - of the system you plan to test. If you don't have the latest Windows 10 installer files, use the Media Creation Tool to download a fresh copy, as I describe in my FAQ: [How to install, reinstall, upgrade and activate Windows 10](#). Double-click the ISO file to mount it as a virtual drive with its own drive letter, or insert a USB flash drive containing the installation files. Make a note of the drive letter. Next, open a command prompt window (the easiest way is to type cmd.exe in the Run box and then press Ctrl+Shift+Enter to run it as an administrator. At the command prompt, type the following command, substituting the drive letter where your installer files are located in place of d:. [d:\Setup /Compat ScanOnly]. Press Enter and follow the setup screens just as if you were performing an upgrade. When you get to the final screen, click Install. The program should end at that point rather than beginning the upgrade. When it does, it writes some information to a file called BlueBox.log, which you'll find in the C:\Windows\Logs\MoSetup folder. Double-click that file to open it in Notepad and then scroll to the bottom and look for the final error code. If you see 0xC1900210, you're good to go. That means there are no blocking compatibility issues. If you see another error code, you'll need to find out what it means. Here are four common errors, decoded: (a) Compatibility issues found (hard block): 0xC1900208; (b) Migration choice (auto upgrade) not available (probably the wrong SKU or architecture) 0xC1900204; (c) Does not meet system requirements for Windows 10: 0xC1900200; (d) Insufficient free disk space: 0xC190020E.

### China clamping down on use of VPNs to evade Great Firewall

[The Associated Press, 19 Jul 2017](#): China is tightening control over foreign companies' internet use in a move some worry might disrupt their operations or jeopardize trade secrets as part of a crackdown on technology that allows web surfers to evade Beijing's online censorship. In a letter to corporate customers seen by The Associated Press, the biggest Chinese internet service provider says virtual private networks, which create encrypted links between computers and can be used to see sites blocked by Beijing's web filters, will be permitted only to connect to a company's headquarters abroad. The letter from state-owned China Telecom Ltd. says VPN users are barred from linking to other sites outside China, a change that might block access to news, social media or business services that are obscured by its "Great Firewall." The letter repeats an announcement from January that only VPNs approved by Chinese authorities are allowed. That has prompted fears of possible loss of trade secrets or information about customers or employees among companies that question the reliability of Chinese encryption services and whether authorities might read messages. Regulators announced a crackdown in January to stamp out use of VPNs to circumvent web censorship. Authorities have tried to reassure companies they won't be affected, but if the rules in the China Telecom letter are enforced, they could hamper activity ranging from gathering information for business deals to employees working on business trips. The crackdown reflects President Xi Jinping's vision of "internet sovereignty," or Beijing's absolute right to control what people can do and see online. Control over information is especially sensitive ahead of a party congress late this year at which Xi is due to be appointed to a second five-year term as leader. The ruling Communist Party controls internet traffic across China's borders and tries to keep its public from seeing thousands of websites abroad including Google and social media such as Facebook, Twitter and YouTube, as well as news outlets and human rights groups. This week, the Beijing municipal internet regulator announced it ordered website operators including Baidu Inc. and Tencent Holdings Ltd. to remove material that was "distorting the history of China and the Party" and "promoting abnormal values" or had other problems. Also this week, a letter issued by the Waldorf Astoria Hotel in Beijing

## NMCIWG CYBER SHIELD

to guests that circulated on social media says the hotel can no longer provide VPN service “due to legal issues” as of last Friday. In June, the Hong Kong-based operator of a popular service, Green VPN, announced Chinese regulators had ordered it to close. Beijing has repeatedly pressured foreign companies to hand over technology, encryption know-how and other trade secrets in exchange for access to its huge and growing market. Companies cite internet controls as among the biggest obstacles to doing business in China. In a survey by the American Chamber of Commerce in China last year, 79 percent of companies that responded said web filters hurt them by blocking access to information and business tools. The China Telecom’s letter, which bears no date, says VPNs are for “internal office use only” and only can connect to a company’s headquarters abroad, not to any other websites. That would block users from seeing business news or other information sources that are shielded by the filters. Companies are required to provide the identities of every employee who uses a VPN, according to the letter. Lester Ross, a lawyer in Beijing for the firm WilmerHale, said he had not heard of the China Telecom letter. But he said the conditions in it described to him by a reporter would be disruptive if enforced. Without VPNs to bypass web filters, “then it is just impossible to do business under the constraints that apply officially,” said Ross. “You’re either making it unenforceable or they are damaging business to an extraordinary extent.” A Western diplomat who asked not to be identified further due to the sensitivity of the issue said companies have told his government they worry the controls might lead to weaker data security and trade secrets being leaked to Chinese competitors. The diplomat said some are hesitant to invest more in China due to that. China Telecom and the Ministry of Industry and Information Technology, which announced the January crackdown, did not respond to requests for information about the letter. Authorities have never disclosed whether they read communications sent over Chinese VPN providers. “Despite the fact that people get used to the system, protection of confidentiality is always a concern,” said Ross. “They’ve never guaranteed privacy of communications.” Beijing has announced restrictions on VPN use over the past decade but did little to enforce them, possibly to avoid disrupting business or access to information for scientists and academics. The VPN crackdown coincides with a Cybersecurity Law that took effect on June 1 and tightens control over data. It limits use of foreign security technology and requires companies to store information about Chinese citizens within this country. On Tuesday, users of Facebook’s WhatsApp messaging service, which normally operates freely in China, were no longer able to send images without using a VPN. That coincided with official efforts to suppress mention of Liu Xiaobo, the imprisoned Nobel Peace laureate who died last week and whom social media users have commemorated by exchanging images of him. Already, companies increasingly limit VPN access to employees such as media managers “with a critical business need” to see a banned website, according to Jake Parker, vice president of China operations for the U.S.-China Business Council. Companies can avoid the need for a VPN by leasing a circuit from China Telecom or other state-owned providers that connects directly to their headquarters abroad. Prices start at more than \$1,000 per month. The information ministry tried to reassure commercial users in a statement reported last week in a Shanghai newspaper, *The Paper*. “Foreign trade enterprises and multinational companies that need a cross-border line for their own office use can lease one from an authorized telecoms enterprise,” said the statement. It said the January notice “will not affect normal operations.”

## U.S. ends controversial laptop ban on Middle East carriers

[Reuters, 20 Jul 2017](#): The United States has ended a four month ban on passengers carrying laptops onboard U.S. bound flights from certain airports in the Middle East and North Africa, bringing to an end one of the controversial travel restrictions imposed by President Donald Trump's administration. Riyadh's King Khalid International Airport was the last of 10 airports to be exempted from the ban, the U.S. Department of Homeland Security (DHS) confirmed in a tweet late on Wednesday local time. Middle East carriers have blamed Trump's travel restrictions, which include banning citizens of some Muslim majority countries from visiting the United States, for a downturn in demand on U.S routes. In March, the United States banned large electronics in cabins on flights from 10 airports in the Middle East and North Africa over concerns that explosives could be concealed in the devices taken onboard aircraft. The ban has been lifted on the nine airlines affected -- Emirates [EMIRA.UL], Etihad Airways, Qatar Airways, Turkish Airlines, Saudi Arabian Airlines, Royal Jordanian, Kuwait Airways [KA.UL], EgyptAir [EGY.UL] and Royal Air Maroc [RAM.UL] -- which are the only carriers to fly direct to the United States from the region. A ban on citizens of six Muslim-majority countries -- Iran, Libya, Somalia, Sudan, Syria, and Yemen, -- remains in place though has been limited after several U.S. court hearings challenged the restrictions. "The aviation industry has been trying to come together with a united message to governments and stakeholders about regulation and supporting the industry," said Will Horton, senior analyst at Australian aviation consultancy CAPA. Leading industry group the International Air Transport Association (IATA) criticized the laptop ban as ineffective, as security experts argued that militants could travel to the United States via Europe or elsewhere where the restrictions didn't apply. The restrictions were imposed as major U.S. carriers American Airlines Group, Delta Air Lines and United Airlines resumed their campaign against the Gulf carriers Emirates, Etihad and Qatar Airways by pressuring the new U.S. administration to renegotiate its open skies agreements with the United Arab Emirates and Qatar. However, U.S. and Middle

East officials said the campaign and the travel restrictions were not related. U.S. officials lifted the ban after visiting the 10 airports in Egypt, Morocco, Jordan, the United Arab Emirates, Saudi Arabia, Kuwait, Qatar and Turkey over the past three weeks to confirm new security measures announced last month were being implemented. On Thursday, the U.S. issued a revised directive to airlines around the world in response to requests that it clarify aviation security measures scheduled to start taking effect this week. The new requirements include enhanced passenger screening at foreign airports, increased security protocols around aircraft and in passenger areas and expanded canine screening. They affect 325,000 airline passengers on about 2,000 commercial flights arriving daily in the United States, on 180 airlines from 280 airports in 105 countries. Airlines that fail to meet the new security requirements could face in-cabin electronics restrictions. The United Kingdom continues to enforce a similar in-cabin ban on electronics ban on flights from some Middle Eastern airports. Those restrictions apply to flights from Turkey, Lebanon, Jordan, Egypt, Tunisia and Saudi Arabia.

**Security and education in the wake of WannaCry, Petya**

[CSO Online, 19 Jul 2017](#): Attacks occur for a variety of reasons, and in the wake of the most widespread ransomware attacks, WannaCry and Petya, many organizations are re-evaluating their security practices to figure out what went wrong. While those who were hit are still trying to understand where their security gaps are, others enterprises that rely on legacy systems and can't be patched are looking for ways to prevent being the next victim. No, the vulnerabilities attackers leverage are not new. They prey on systems that have not been updated, said Carson Sweet, CTO of CloudPassage. There is no one-fits-all fix, but Sweet offered some sound advice on a variety of both long- and short-term solutions. What might have helped protect companies from these worm-like ransomware attacks? The important thing to remember is that WannaCry and Petya were, in actuality, easily preventable. Victims of these attacks were only victims because they failed to conduct basic software patching. Enterprises searching for a way to protect themselves should know there are several tools on the market that use automation to patch software vulnerabilities in real time. Automation is one way to close the gap, but we also need to train developers, at the very earliest stage of their education, to bake security into all new code. It's no longer enough to tack cybersecurity onto projects as an afterthought anymore. Having readily available data backups is the best way to maintain business continuity in the face of an attack. Double-click that file to open it in Notepad and then scroll to the bottom and look for the final error code. If you see 0xC1900210, you're good to go. That means there are no blocking compatibility issues. If you see another error code, you'll need to find out what it means. Here are four common errors, decoded: (a) Compatibility issues found (hard block): 0xC1900208; (b) Migration choice (auto upgrade) not available (probably the wrong SKU or architecture) 0xC1900204; (c) Does not meet system requirements for Windows 10: 0xC1900200; (d) Insufficient free disk space: 0xC190020E.

### China clamping down on use of VPNs to evade Great Firewall

[The Associated Press, 19 Jul 2017](#): China is tightening control over foreign companies' internet use in a move some worry might disrupt their operations or jeopardize trade secrets as part of a crackdown on technology that allows web surfers to evade Beijing's online censorship. In a letter to corporate customers seen by The Associated Press, the biggest Chinese internet service provider says virtual private networks, which create encrypted links between computers and can be used to see sites blocked by Beijing's web filters, will be permitted only to connect to a company's headquarters abroad. The letter from state-owned China Telecom Ltd. says VPN users are barred from linking to other sites outside China, a change that might block access to news, social media or business services that are obscured by its "Great Firewall." The letter repeats an announcement from January that only VPNs approved by Chinese authorities are allowed. That has prompted fears of possible loss of trade secrets or information about customers or employees among companies that question the reliability of Chinese encryption services and whether authorities might read messages. Regulators announced a crackdown in January to stamp out use of VPNs to circumvent web censorship. Authorities have tried to reassure companies they won't be affected, but if the rules in the China Telecom letter are enforced, they could hamper activity ranging from gathering information for business deals to employees working on business trips. The crackdown reflects President Xi Jinping's vision of "internet sovereignty," or Beijing's absolute right to control what people can do and see online. Control over information is especially sensitive ahead of a party congress late this year at which Xi is due to be appointed to a second five-year term as leader. The ruling Communist Party controls internet traffic across China's borders and tries to keep its public from seeing thousands of websites abroad including Google and social media such as Facebook, Twitter and YouTube, as well as news outlets and human rights groups. This week, the Beijing municipal internet regulator announced it ordered website operators including Baidu Inc. and Tencent Holdings Ltd. to remove material that was "distorting the history of China and the Party" and "promoting abnormal values" or had other problems. Also this week, a letter issued by the Waldorf Astoria Hotel in Beijing

## NMCIWG CYBER SHIELD

to guests that circulated on social media says the hotel can no longer provide VPN service “due to legal issues” as of last Friday. In June, the Hong Kong-based operator of a popular service, Green VPN, announced Chinese regulators had ordered it to close. Beijing has repeatedly pressured foreign companies to hand over technology, encryption know-how and other trade secrets in exchange for access to its huge and growing market. Companies cite internet controls as among the biggest obstacles to doing business in China. In a survey by the American Chamber of Commerce in China last year, 79 percent of companies that responded said web filters hurt them by blocking access to information and business tools. The China Telecom’s letter, which bears no date, says VPNs are for “internal office use only” and only can connect to a company’s headquarters abroad, not to any other websites. That would block users from seeing business news or other information sources that are shielded by the filters. Companies are required to provide the identities of every employee who uses a VPN, according to the letter. Lester Ross, a lawyer in Beijing for the firm WilmerHale, said he had not heard of the China Telecom letter. But he said the conditions in it described to him by a reporter would be disruptive if enforced. Without VPNs to bypass web filters, “then it is just impossible to do business under the constraints that apply officially,” said Ross. “You’re either making it unenforceable or they are damaging business to an extraordinary extent.” A Western diplomat who asked not to be identified further due to the sensitivity of the issue said companies have told his government they worry the controls might lead to weaker data security and trade secrets being leaked to Chinese competitors. The diplomat said some are hesitant to invest more in China due to that. China Telecom and the Ministry of Industry and Information Technology, which announced the January crackdown, did not respond to requests for information about the letter. Authorities have never disclosed whether they read communications sent over Chinese VPN providers. “Despite the fact that people get used to the system, protection of confidentiality is always a concern,” said Ross. “They’ve never guaranteed privacy of communications.” Beijing has announced restrictions on VPN use over the past decade but did little to enforce them, possibly to avoid disrupting business or access to information for scientists and academics. The VPN crackdown coincides with a Cybersecurity Law that took effect on June 1 and tightens control over data. It limits use of foreign security technology and requires companies to store information about Chinese citizens within this country. On Tuesday, users of Facebook’s WhatsApp messaging service, which normally operates freely in China, were no longer able to send images without using a VPN. That coincided with official efforts to suppress mention of Liu Xiaobo, the imprisoned Nobel Peace laureate who died last week and whom social media users have commemorated by exchanging images of him. Already, companies increasingly limit VPN access to employees such as media managers “with a critical business need” to see a banned website, according to Jake Parker, vice president of China operations for the U.S.-China Business Council. Companies can avoid the need for a VPN by leasing a circuit from China Telecom or other state-owned providers that connects directly to their headquarters abroad. Prices start at more than \$1,000 per month. The information ministry tried to reassure commercial users in a statement reported last week in a Shanghai newspaper, *The Paper*. “Foreign trade enterprises and multinational companies that need a cross-border line for their own office use can lease one from an authorized telecoms enterprise,” said the statement. It said the January notice “will not affect normal operations.”

## U.S. ends controversial laptop ban on Middle East carriers

[Reuters, 20 Jul 2017](#): The United States has ended a four month ban on passengers carrying laptops onboard U.S. bound flights from certain airports in the Middle East and North Africa, bringing to an end one of the controversial travel restrictions imposed by President Donald Trump's administration. Riyadh's King Khalid International Airport was the last of 10 airports to be exempted from the ban, the U.S. Department of Homeland Security (DHS) confirmed in a tweet late on Wednesday local time. Middle East carriers have blamed Trump's travel restrictions, which include banning citizens of some Muslim majority countries from visiting the United States, for a downturn in demand on U.S routes. In March, the United States banned large electronics in cabins on flights from 10 airports in the Middle East and North Africa over concerns that explosives could be concealed in the devices taken onboard aircraft. The ban has been lifted on the nine airlines affected -- Emirates [EMIRA.UL], Etihad Airways, Qatar Airways, Turkish Airlines, Saudi Arabian Airlines, Royal Jordanian, Kuwait Airways [KA.UL], EgyptAir [EGY.UL] and Royal Air Maroc [RAM.UL] -- which are the only carriers to fly direct to the United States from the region. A ban on citizens of six Muslim-majority countries -- Iran, Libya, Somalia, Sudan, Syria, and Yemen, -- remains in place though has been limited after several U.S. court hearings challenged the restrictions. "The aviation industry has been trying to come together with a united message to governments and stakeholders about regulation and supporting the industry," said Will Horton, senior analyst at Australian aviation consultancy CAPA. Leading industry group the International Air Transport Association (IATA) criticized the laptop ban as ineffective, as security experts argued that militants could travel to the United States via Europe or elsewhere where the restrictions didn't apply. The restrictions were imposed as major U.S. carriers American Airlines Group, Delta Air Lines and United Airlines resumed their campaign against the Gulf carriers Emirates, Etihad and Qatar Airways by pressuring the new U.S. administration to renegotiate its open skies agreements with the United Arab Emirates and Qatar. However, U.S. and Middle

## NMCIWG CYBER SHIELD

East officials said the campaign and the travel restrictions were not related. U.S. officials lifted the ban after visiting the 10 airports in Egypt, Morocco, Jordan, the United Arab Emirates, Saudi Arabia, Kuwait, Qatar and Turkey over the past three weeks to confirm new security measures announced last month were being implemented. On Thursday, the U.S. issued a revised directive to airlines around the world in response to requests that it clarify aviation security measures scheduled to start taking effect this week. The new requirements include enhanced passenger screening at foreign airports, increased security protocols around aircraft and in passenger areas and expanded canine screening. They affect 325,000 airline passengers on about 2,000 commercial flights arriving daily in the United States, on 180 airlines from 280 airports in 105 countries. Airlines that fail to meet the new security requirements could face in-cabin electronics restrictions. The United Kingdom continues to enforce a similar in-cabin ban on electronics ban on flights from some Middle Eastern airports. Those restrictions apply to flights from Turkey, Lebanon, Jordan, Egypt, Tunisia and Saudi Arabia.

**Security and education in the wake of WannaCry, Petya**

[CSO Online, 19 Jul 2017](#): Attacks occur for a variety of reasons, and in the wake of the most widespread ransomware attacks, WannaCry and Petya, many organizations are re-evaluating their security practices to figure out what went wrong. While those who were hit are still trying to understand where their security gaps are, others enterprises that rely on legacy systems and can't be patched are looking for ways to prevent being the next victim. No, the vulnerabilities attackers leverage are not new. They prey on systems that have not been updated, said Carson Sweet, CTO of CloudPassage. There is no one-fits-all fix, but Sweet offered some sound advice on a variety of both long- and short-term solutions. What might have helped protect companies from these worm-like ransomware attacks? The important thing to remember is that WannaCry and Petya were, in actuality, easily preventable. Victims of these attacks were only victims because they failed to conduct basic software patching. Enterprises searching for a way to protect themselves should know there are several tools on the market that use automation to patch software vulnerabilities in real time. Automation is one way to close the gap, but we also need to train developers, at the very earliest stage of their education, to bake security into all new code. It's no longer enough to tack cybersecurity onto projects as an afterthought anymore. Having readily available data backups is the best way to maintain business continuity in the face of an attack. Keeping good, fresh data backups allows enterprises to rebuild systems quickly and inexpensively. In the face of a ransomware attack, there's no longer a need to pay the ransom because the enterprise already has a recent backup of all the data it needs. When we look at the bigger picture and the future of cybersecurity, the issue of education is critical. A recent Cisco report estimates there are 1 million unfilled cybersecurity positions globally. Here in the U.S., that number is about 100,000. It's a crisis that directly hurts the ability of companies and governments to curb hacking because there simply isn't enough available talent to fill those jobs. Cybersecurity training has not been a priority for the American education system. Universities are inadvertently contributing to the lack of cybersecurity readiness in the U.S. by failing to teach students how to implement security thinking and awareness into all new code design, development and testing. As recently as 2016, only one of the top 121 computer and science information science schools in the country required at least three cybersecurity classes before graduation. At a minimum, cybersecurity training must be a graduation requirement for all computer science programs. To keep up with the ever-increasing challenges of hackers, though, there is no choice for but to prioritize cybersecurity education for our future.

### **iOS 10.3.3 now available to download on iPhone and iPad**

[BGR News, 19 Jul 2017](#): With just a couple of months remaining before the inevitable release of the iPhone 8, Apple rolled out iOS 10.3.3 for the iPhone, iPad and iPod touch on Wednesday. While the update itself is little more than a collection of bug fixes and security improvements, there's a chance that this could be the last major iOS 10 update with iOS 11 deep in development and set to release to the public in September. On the whole, iOS 10.3 wasn't a major upgrade for the mobile operating system. In fact, the most substantial upgrade was invisible, as Apple replaced the HFS+ file system with the new Apple File System (APFS). Other additions include the Find My AirPods feature, a new Podcasts widget and updated app transition animations that you may or may not have even noticed. Lately, Apple fans have been far more interested in the latest iOS 11 beta releases than they have in any potential updates for iOS 10.3. Now that the public beta is available, anyone with a compatible iOS device can download and test the next version of Apple's mobile OS before it rolls out this fall.

### **New malware takes over your smartphone camera by posing as a popular app**

[The Sun, 19 Jul 2017](#): A terrifying new virus that can stealthily film and record smartphone owners is spreading across the world – and you might already be infected. The malware is called GhostCtrl and often disguises itself as popular apps like WhatsApp and Pokemon Go. Victims who download the fake apps — which look exactly like the real deal — inadvertently install a backdoor to their phone. This grants hackers access to their camera, web browser history and searches and lets them intercept text messages. They can also surreptitiously record voice or audio and upload it to their computer servers. “The data GhostCtrl steals is extensive, compared to other Android info-stealers,” cyber security researchers Trend Micro explained in a blogpost. A version of GhostCtrl was used in a large-scale attack which recently targeted Israeli hospitals. The digital assault used a “worm” called RETADUP to steal information from desktop PCs, but it appears that hackers have used similar code to create an Android bug that could spread worldwide. “We can only expect it to further evolve,” Trend Micro warned. More than 200,000 victims in 150 countries were recently infected by malware known as WannaCry in May. If an app on the Google Play store doesn't have a star rating or several reviews, be very wary of it.

### **Windows 10 no longer supported? How to tell if your PC is eligible for latest version**

[ZD Net, 19 Jul 2017](#): If you own a PC or tablet that's powered by an Intel Clover Trail processor, you're part of an exclusive and unlucky fraternity. For now, at least, Microsoft has cut off Windows 10 support early for your device. If Microsoft doesn't deliver a patch within the next six to nine months, those PCs could be cut off from security fixes. Any Clover Trail-based device currently running the Windows 10 Anniversary Update, version 1607, will be blocked from upgrading to the latest version: Creators Update, version 1703. And under Microsoft's new support calendar, that means you'll stop getting security and reliability updates for version 1607 sometime in the first quarter of 2018. I've asked Microsoft for more details on why this problem is occurring and whether owners of affected devices can expect a software patch to resolve the incompatibility. Earlier today a spokesperson declined to provide any details, saying only, “We are aware of this and investigating the matter.” Ben Bajarin of Creative Strategies, who tracks PC and tablet sales closely, estimates that the number of affected devices is probably more than 10 million. So how can you tell whether your PC is one of them? Start by looking in Settings > System > About. If the processor is identified as an Intel Atom Z2520, Z2560, Z2580, or Z2760, your device is blocked from the Windows 10 Creators Update. If you see a different processor, including later Atom variants such as the Z3700 or x5-Z8500, you should be in the clear. But even on a PC running a fully supported processor, you are potentially at risk of being blocked for other issues, including serious incompatibilities associated with specific devices or installed programs. To check for

## NMCIWG CYBER SHIELD

potential problems before you spend hours attempting to update to the latest Windows 10 release, there's a simple option: Run the Setup program with a pair of switches that instruct it to perform a compatibility check and return the results. For this compatibility test, you need installation media for the Windows 10 version you want to test. If you've already downloaded the Creators Update, you can use that media; just make sure it matches the architecture - 32-bit or 64-bit - of the system you plan to test. If you don't have the latest Windows 10 installer files, use the Media Creation Tool to download a fresh copy, as I describe in my FAQ: [How to install, reinstall, upgrade and activate Windows 10](#). Double-click the ISO file to mount it as a virtual drive with its own drive letter, or insert a USB flash drive containing the installation files. Make a note of the drive letter. Next, open a command prompt window (the easiest way is to type cmd.exe in the Run box and then press Ctrl+Shift+Enter to run it as an administrator. At the command prompt, type the following command, substituting the drive letter where your installer files are located in place of d:. [d:\Setup /Compat ScanOnly]. Press Enter and follow the setup screens just as if you were performing an upgrade. When you get to the final screen, click Install. The program should end at that point rather than beginning the upgrade. When it does, it writes some information to a file called BlueBox.log, which you'll find in the C:\Windows\Logs\MoSetup folder. Double-click that file to open it in Notepad and then scroll to the bottom and look for the final error code. If you see 0xC1900210, you're good to go. That means there are no blocking compatibility issues. If you see another error code, you'll need to find out what it means. Here are four common errors, decoded: (a) Compatibility issues found (hard block): 0xC1900208; (b) Migration choice (auto upgrade) not available (probably the wrong SKU or architecture) 0xC1900204; (c) Does not meet system requirements for Windows 10: 0xC1900200; (d) Insufficient free disk space: 0xC190020E.

### China clamping down on use of VPNs to evade Great Firewall

[The Associated Press, 19 Jul 2017](#): China is tightening control over foreign companies' internet use in a move some worry might disrupt their operations or jeopardize trade secrets as part of a crackdown on technology that allows web surfers to evade Beijing's online censorship. In a letter to corporate customers seen by The Associated Press, the biggest Chinese internet service provider says virtual private networks, which create encrypted links between computers and can be used to see sites blocked by Beijing's web filters, will be permitted only to connect to a company's headquarters abroad. The letter from state-owned China Telecom Ltd. says VPN users are barred from linking to other sites outside China, a change that might block access to news, social media or business services that are obscured by its "Great Firewall." The letter repeats an announcement from January that only VPNs approved by Chinese authorities are allowed. That has prompted fears of possible loss of trade secrets or information about customers or employees among companies that question the reliability of Chinese encryption services and whether authorities might read messages. Regulators announced a crackdown in January to stamp out use of VPNs to circumvent web censorship. Authorities have tried to reassure companies they won't be affected, but if the rules in the China Telecom letter are enforced, they could hamper activity ranging from gathering information for business deals to employees working on business trips. The crackdown reflects President Xi Jinping's vision of "internet sovereignty," or Beijing's absolute right to control what people can do and see online. Control over information is especially sensitive ahead of a party congress late this year at which Xi is due to be appointed to a second five-year term as leader. The ruling Communist Party controls internet traffic across China's borders and tries to keep its public from seeing thousands of websites abroad including Google and social media such as Facebook, Twitter and YouTube, as well as news outlets and human rights groups. This week, the Beijing municipal internet regulator announced it ordered website operators including Baidu Inc. and Tencent Holdings Ltd. to remove material that was "distorting the history of China and the Party" and "promoting abnormal values" or had other problems. Also this week, a letter issued by the Waldorf Astoria Hotel in Beijing

## NMCIWG CYBER SHIELD

to guests that circulated on social media says the hotel can no longer provide VPN service “due to legal issues” as of last Friday. In June, the Hong Kong-based operator of a popular service, Green VPN, announced Chinese regulators had ordered it to close. Beijing has repeatedly pressured foreign companies to hand over technology, encryption know-how and other trade secrets in exchange for access to its huge and growing market. Companies cite internet controls as among the biggest obstacles to doing business in China. In a survey by the American Chamber of Commerce in China last year, 79 percent of companies that responded said web filters hurt them by blocking access to information and business tools. The China Telecom’s letter, which bears no date, says VPNs are for “internal office use only” and only can connect to a company’s headquarters abroad, not to any other websites. That would block users from seeing business news or other information sources that are shielded by the filters. Companies are required to provide the identities of every employee who uses a VPN, according to the letter. Lester Ross, a lawyer in Beijing for the firm WilmerHale, said he had not heard of the China Telecom letter. But he said the conditions in it described to him by a reporter would be disruptive if enforced. Without VPNs to bypass web filters, “then it is just impossible to do business under the constraints that apply officially,” said Ross. “You’re either making it unenforceable or they are damaging business to an extraordinary extent.” A Western diplomat who asked not to be identified further due to the sensitivity of the issue said companies have told his government they worry the controls might lead to weaker data security and trade secrets being leaked to Chinese competitors. The diplomat said some are hesitant to invest more in China due to that. China Telecom and the Ministry of Industry and Information Technology, which announced the January crackdown, did not respond to requests for information about the letter. Authorities have never disclosed whether they read communications sent over Chinese VPN providers. “Despite the fact that people get used to the system, protection of confidentiality is always a concern,” said Ross. “They’ve never guaranteed privacy of communications.” Beijing has announced restrictions on VPN use over the past decade but did little to enforce them, possibly to avoid disrupting business or access to information for scientists and academics. The VPN crackdown coincides with a Cybersecurity Law that took effect on June 1 and tightens control over data. It limits use of foreign security technology and requires companies to store information about Chinese citizens within this country. On Tuesday, users of Facebook’s WhatsApp messaging service, which normally operates freely in China, were no longer able to send images without using a VPN. That coincided with official efforts to suppress mention of Liu Xiaobo, the imprisoned Nobel Peace laureate who died last week and whom social media users have commemorated by exchanging images of him. Already, companies increasingly limit VPN access to employees such as media managers “with a critical business need” to see a banned website, according to Jake Parker, vice president of China operations for the U.S.-China Business Council. Companies can avoid the need for a VPN by leasing a circuit from China Telecom or other state-owned providers that connects directly to their headquarters abroad. Prices start at more than \$1,000 per month. The information ministry tried to reassure commercial users in a statement reported last week in a Shanghai newspaper, *The Paper*. “Foreign trade enterprises and multinational companies that need a cross-border line for their own office use can lease one from an authorized telecoms enterprise,” said the statement. It said the January notice “will not affect normal operations.”

## U.S. ends controversial laptop ban on Middle East carriers

[Reuters, 20 Jul 2017](#): The United States has ended a four month ban on passengers carrying laptops onboard U.S. bound flights from certain airports in the Middle East and North Africa, bringing to an end one of the controversial travel restrictions imposed by President Donald Trump's administration. Riyadh's King Khalid International Airport was the last of 10 airports to be exempted from the ban, the U.S. Department of Homeland Security (DHS) confirmed in a tweet late on Wednesday local time. Middle East carriers have blamed Trump's travel restrictions, which include banning citizens of some Muslim majority countries from visiting the United States, for a downturn in demand on U.S routes. In March, the United States banned large electronics in cabins on flights from 10 airports in the Middle East and North Africa over concerns that explosives could be concealed in the devices taken onboard aircraft. The ban has been lifted on the nine airlines affected -- Emirates [EMIRA.UL], Etihad Airways, Qatar Airways, Turkish Airlines, Saudi Arabian Airlines, Royal Jordanian, Kuwait Airways [KA.UL], EgyptAir [EGY.UL] and Royal Air Maroc [RAM.UL] -- which are the only carriers to fly direct to the United States from the region. A ban on citizens of six Muslim-majority countries -- Iran, Libya, Somalia, Sudan, Syria, and Yemen, -- remains in place though has been limited after several U.S. court hearings challenged the restrictions. "The aviation industry has been trying to come together with a united message to governments and stakeholders about regulation and supporting the industry," said Will Horton, senior analyst at Australian aviation consultancy CAPA. Leading industry group the International Air Transport Association (IATA) criticized the laptop ban as ineffective, as security experts argued that militants could travel to the United States via Europe or elsewhere where the restrictions didn't apply. The restrictions were imposed as major U.S. carriers American Airlines Group, Delta Air Lines and United Airlines resumed their campaign against the Gulf carriers Emirates, Etihad and Qatar Airways by pressuring the new U.S. administration to renegotiate its open skies agreements with the United Arab Emirates and Qatar. However, U.S. and Middle

**NMCIWG CYBER SHIELD**

East officials said the campaign and the travel restrictions were not related. U.S. officials lifted the ban after visiting the 10 airports in Egypt, Morocco, Jordan, the United Arab Emirates, Saudi Arabia, Kuwait, Qatar and Turkey over the past three weeks to confirm new security measures announced last month were being implemented. On Thursday, the U.S. issued a revised directive to airlines around the world in response to requests that it clarify aviation security measures scheduled to start taking effect this week. The new requirements include enhanced passenger screening at foreign airports, increased security protocols around aircraft and in passenger areas and expanded canine screening. They affect 325,000 airline passengers on about 2,000 commercial flights arriving daily in the United States, on 180 airlines from 280 airports in 105 countries. Airlines that fail to meet the new security requirements could face in-cabin electronics restrictions. The United Kingdom continues to enforce a similar in-cabin ban on electronics ban on flights from some Middle Eastern airports. Those restrictions apply to flights from Turkey, Lebanon, Jordan, Egypt, Tunisia and Saudi Arabia.

**Security and education in the wake of WannaCry, Petya**

[CSO Online, 19 Jul 2017](#): Attacks occur for a variety of reasons, and in the wake of the most widespread ransomware attacks, WannaCry and Petya, many organizations are re-evaluating their security practices to figure out what went wrong. While those who were hit are still trying to understand where their security gaps are, others enterprises that rely on legacy systems and can't be patched are looking for ways to prevent being the next victim. No, the vulnerabilities attackers leverage are not new. They prey on systems that have not been updated, said Carson Sweet, CTO of CloudPassage. There is no one-fits-all fix, but Sweet offered some sound advice on a variety of both long- and short-term solutions. What might have helped protect companies from these worm-like ransomware attacks? The important thing to remember is that WannaCry and Petya were, in actuality, easily preventable. Victims of these attacks were only victims because they failed to conduct basic software patching. Enterprises searching for a way to protect themselves should know there are several tools on the market that use automation to patch software vulnerabilities in real time. Automation is one way to close the gap, but we also need to train developers, at the very earliest stage of their education, to bake security into all new code. It's no longer enough to tack cybersecurity onto projects as an afterthought anymore. Having readily available data backups is the best way to maintain business continuity in the face of an attack. Keeping good, fresh data backups allows enterprises to rebuild systems quickly and inexpensively. In the face of a ransomware attack, there's no longer a need to pay the ransom because the enterprise already has a recent backup of all the data it needs. When we look at the bigger picture and the future of cybersecurity, the issue of education is critical. A recent Cisco report estimates there are 1 million unfilled cybersecurity positions globally. Here in the U.S., that number is about 100,000. It's a crisis that directly hurts the ability of companies and governments to curb hacking because there simply isn't enough available talent to fill those jobs. Cybersecurity training has not been a priority for the American education system. Universities are inadvertently contributing to the lack of cybersecurity readiness in the U.S. by failing to teach students how to implement security thinking and awareness into all new code design, development and testing. As recently as 2016, only one of the top 121 computer and science information science schools in the country required at least three cybersecurity classes before graduation. At a minimum, cybersecurity training must be a graduation requirement for all computer science programs. To keep up with the ever-increasing challenges of hackers, though, there is no choice for but to prioritize cybersecurity education for our future.

### **iOS 10.3.3 now available to download on iPhone and iPad**

[BGR News, 19 Jul 2017](#): With just a couple of months remaining before the inevitable release of the iPhone 8, Apple rolled out iOS 10.3.3 for the iPhone, iPad and iPod touch on Wednesday. While the update itself is little more than a collection of bug fixes and security improvements, there's a chance that this could be the last major iOS 10 update with iOS 11 deep in development and set to release to the public in September. On the whole, iOS 10.3 wasn't a major upgrade for the mobile operating system. In fact, the most substantial upgrade was invisible, as Apple replaced the HFS+ file system with the new Apple File System (APFS). Other additions include the Find My AirPods feature, a new Podcasts widget and updated app transition animations that you may or may not have even noticed. Lately, Apple fans have been far more interested in the latest iOS 11 beta releases than they have in any potential updates for iOS 10.3. Now that the public beta is available, anyone with a compatible iOS device can download and test the next version of Apple's mobile OS before it rolls out this fall.

### **New malware takes over your smartphone camera by posing as a popular app**

[The Sun, 19 Jul 2017](#): A terrifying new virus that can stealthily film and record smartphone owners is spreading across the world – and you might already be infected. The malware is called GhostCtrl and often disguises itself as popular apps like WhatsApp and Pokemon Go. Victims who download the fake apps — which look exactly like the real deal — inadvertently install a backdoor to their phone. This grants hackers access to their camera, web browser history and searches and lets them intercept text messages. They can also surreptitiously record voice or audio and upload it to their computer servers. “The data GhostCtrl steals is extensive, compared to other Android info-stealers,” cyber security researchers Trend Micro explained in a blogpost. A version of GhostCtrl was used in a large-scale attack which recently targeted Israeli hospitals. The digital assault used a “worm” called RETADUP to steal information from desktop PCs, but it appears that hackers have used similar code to create an Android bug that could spread worldwide. “We can only expect it to further evolve,” Trend Micro warned. More than 200,000 victims in 150 countries were recently infected by malware known as WannaCry in May. If an app on the Google Play store doesn't have a star rating or several reviews, be very wary of it.

### **Windows 10 no longer supported? How to tell if your PC is eligible for latest version**

[ZD Net, 19 Jul 2017](#): If you own a PC or tablet that's powered by an Intel Clover Trail processor, you're part of an exclusive and unlucky fraternity. For now, at least, Microsoft has cut off Windows 10 support early for your device. If Microsoft doesn't deliver a patch within the next six to nine months, those PCs could be cut off from security fixes. Any Clover Trail-based device currently running the Windows 10 Anniversary Update, version 1607, will be blocked from upgrading to the latest version: Creators Update, version 1703. And under Microsoft's new support calendar, that means you'll stop getting security and reliability updates for version 1607 sometime in the first quarter of 2018. I've asked Microsoft for more details on why this problem is occurring and whether owners of affected devices can expect a software patch to resolve the incompatibility. Earlier today a spokesperson declined to provide any details, saying only, “We are aware of this and investigating the matter.” Ben Bajarin of Creative Strategies, who tracks PC and tablet sales closely, estimates that the number of affected devices is probably more than 10 million. So how can you tell whether your PC is one of them? Start by looking in Settings > System > About. If the processor is identified as an Intel Atom Z2520, Z2560, Z2580, or Z2760, your device is blocked from the Windows 10 Creators Update. If you see a different processor, including later Atom variants such as the Z3700 or x5-Z8500, you should be in the clear. But even on a PC running a fully supported processor, you are potentially at risk of being blocked for other issues, including serious incompatibilities associated with specific devices or installed programs. To check for

potential problems before you spend hours attempting to update to the latest Windows 10 release, there's a simple option: Run the Setup program with a pair of switches that instruct it to perform a compatibility check and return the results. For this compatibility test, you need installation media for the Windows 10 version you want to test. If you've already downloaded the Creators Update, you can use that media; just make sure it matches the architecture - 32-bit or 64-bit - of the system you plan to test. If you don't have the latest Windows 10 installer files, use the Media Creation Tool to download a fresh copy, as I describe in my FAQ: [How to install, reinstall, upgrade and activate Windows 10](#). Double-click the ISO file to mount it as a virtual drive with its own drive letter, or insert a USB flash drive containing the installation files. Make a note of the drive letter. Next, open a command prompt window (the easiest way is to type cmd.exe in the Run box and then press Ctrl+Shift+Enter to run it as an administrator. At the command prompt, type the following command, substituting the drive letter where your installer files are located in place of d:. [d:\Setup /Compat ScanOnly]. Press Enter and follow the setup screens just as if you were performing an upgrade. When you get to the final screen, click Install. The program should end at that point rather than beginning the upgrade. When it does, it writes some information to a file called BlueBox.log, which you'll find in the C:\Windows\Logs\MoSetup folder. Double-click that file to open it in Notepad and then scroll to the bottom and look for the final error code. If you see 0xC1900210, you're good to go. That means there are no blocking compatibility issues. If you see another error code, you'll need to find out what it means. Here are four common errors, decoded: (a) Compatibility issues found (hard block): 0xC1900208; (b) Migration choice (auto upgrade) not available (probably the wrong SKU or architecture) 0xC1900204; (c) Does not meet system requirements for Windows 10: 0xC1900200; (d) Insufficient free disk space: 0xC190020E.

### **China clamping down on use of VPNs to evade Great Firewall**

[The Associated Press, 19 Jul 2017](#): China is tightening control over foreign companies' internet use in a move some worry might disrupt their operations or jeopardize trade secrets as part of a crackdown on technology that allows web surfers to evade Beijing's online censorship. In a letter to corporate customers seen by The Associated Press, the biggest Chinese internet service provider says virtual private networks, which create encrypted links between computers and can be used to see sites blocked by Beijing's web filters, will be permitted only to connect to a company's headquarters abroad. The letter from state-owned China Telecom Ltd. says VPN users are barred from linking to other sites outside China, a change that might block access to news, social media or business services that are obscured by its "Great Firewall." The letter repeats an announcement from January that only VPNs approved by Chinese authorities are allowed. That has prompted fears of possible loss of trade secrets or information about customers or employees among companies that question the reliability of Chinese encryption services and whether authorities might read messages. Regulators announced a crackdown in January to stamp out use of VPNs to circumvent web censorship. Authorities have tried to reassure companies they won't be affected, but if the rules in the China Telecom letter are enforced, they could hamper activity ranging from gathering information for business deals to employees working on business trips. The crackdown reflects President Xi Jinping's vision of "internet sovereignty," or Beijing's absolute right to control what people can do and see online. Control over information is especially sensitive ahead of a party congress late this year at which Xi is due to be appointed to a second five-year term as leader. The ruling Communist Party controls internet traffic across China's borders and tries to keep its public from seeing thousands of websites abroad including Google and social media such as Facebook, Twitter and YouTube, as well as news outlets and human rights groups. This week, the Beijing municipal internet regulator announced it ordered website operators including Baidu Inc. and Tencent Holdings Ltd. to remove material that was "distorting the history of China and the Party" and "promoting abnormal values" or had other problems. Also this week, a letter issued by the Waldorf Astoria Hotel in Beijing

## NMCIWG CYBER SHIELD

to guests that circulated on social media says the hotel can no longer provide VPN service “due to legal issues” as of last Friday. In June, the Hong Kong-based operator of a popular service, Green VPN, announced Chinese regulators had ordered it to close. Beijing has repeatedly pressured foreign companies to hand over technology, encryption know-how and other trade secrets in exchange for access to its huge and growing market. Companies cite internet controls as among the biggest obstacles to doing business in China. In a survey by the American Chamber of Commerce in China last year, 79 percent of companies that responded said web filters hurt them by blocking access to information and business tools. The China Telecom’s letter, which bears no date, says VPNs are for “internal office use only” and only can connect to a company’s headquarters abroad, not to any other websites. That would block users from seeing business news or other information sources that are shielded by the filters. Companies are required to provide the identities of every employee who uses a VPN, according to the letter. Lester Ross, a lawyer in Beijing for the firm WilmerHale, said he had not heard of the China Telecom letter. But he said the conditions in it described to him by a reporter would be disruptive if enforced. Without VPNs to bypass web filters, “then it is just impossible to do business under the constraints that apply officially,” said Ross. “You’re either making it unenforceable or they are damaging business to an extraordinary extent.” A Western diplomat who asked not to be identified further due to the sensitivity of the issue said companies have told his government they worry the controls might lead to weaker data security and trade secrets being leaked to Chinese competitors. The diplomat said some are hesitant to invest more in China due to that. China Telecom and the Ministry of Industry and Information Technology, which announced the January crackdown, did not respond to requests for information about the letter. Authorities have never disclosed whether they read communications sent over Chinese VPN providers. “Despite the fact that people get used to the system, protection of confidentiality is always a concern,” said Ross. “They’ve never guaranteed privacy of communications.” Beijing has announced restrictions on VPN use over the past decade but did little to enforce them, possibly to avoid disrupting business or access to information for scientists and academics. The VPN crackdown coincides with a Cybersecurity Law that took effect on June 1 and tightens control over data. It limits use of foreign security technology and requires companies to store information about Chinese citizens within this country. On Tuesday, users of Facebook’s WhatsApp messaging service, which normally operates freely in China, were no longer able to send images without using a VPN. That coincided with official efforts to suppress mention of Liu Xiaobo, the imprisoned Nobel Peace laureate who died last week and whom social media users have commemorated by exchanging images of him. Already, companies increasingly limit VPN access to employees such as media managers “with a critical business need” to see a banned website, according to Jake Parker, vice president of China operations for the U.S.-China Business Council. Companies can avoid the need for a VPN by leasing a circuit from China Telecom or other state-owned providers that connects directly to their headquarters abroad. Prices start at more than \$1,000 per month. The information ministry tried to reassure commercial users in a statement reported last week in a Shanghai newspaper, *The Paper*. “Foreign trade enterprises and multinational companies that need a cross-border line for their own office use can lease one from an authorized telecoms enterprise,” said the statement. It said the January notice “will not affect normal operations.”

A Message from Northrop Grumman:

Northrop Grumman has been the industry leader on the U.S. Air Force's Intercontinental Ballistic Missile system since its inception. As a trusted partner/technical integrator, we've mastered the complexities of its flight, launch, and command & control systems. Our capabilities and engineering expertise make us a clear choice to deliver the next generation ICBM system. That's why we're a leader in strategic deterrence. We know the nation's most critical systems—inside and out. [Learn more.](#)

**MCCAIN'S DIAGNOSIS:** There is no more influential member of the Senate when it comes to national security policy than Senate Armed Services Committee Chairman John McCain, whose office confirmed last night that the 80-year-old senator has brain cancer. Examination of tissue removed last week during a procedure to remove a blood clot over his left eye revealed a type of brain tumor known as a glioblastoma. McCain, who is said to be in "good spirits" is reviewing treatment options with his medical team from the Mayo Clinic in Arizona, which could include a combination of chemotherapy and radiation. "The Senator's doctors say he is recovering from his surgery 'amazingly well' and his underlying health is excellent," said a statement released last night. "Further consultations with Senator McCain's Mayo Clinic care team will indicate when he will return to the United States Senate."

The news shocked McCain's colleagues on both sides of the aisle in Congress and prompted an outpouring of well-wishes, none more poignant than from his best friend Sen. Lindsey Graham, who talked to McCain by phone last night. "Pray," said Graham. "I don't know, God knows how this ends, not me. But I do know this: this disease has never had a more worthy opponent."

**WHAT IT MEANS:** While he continues his recovery at his home in Arizona, McCain's absence will be

felt in ways large and small. Aside from the obvious, the loss of a Republican vote in a chamber that has little margin for error in any partisan vote, McCain also is a fierce advocate for congressional oversight. Last week, frustrated over the delay in receiving a new Afghanistan strategy from the Trump administration, he threatened to insert his own into the National Defense Authorization Act. The House passed the NDAA last week, which means McCain is being sidelined just as the upper chamber prepares to debate and vote on its version of the bill. McCain is also a key player in the confirmation process for Pentagon nominees, and has warned the White House about filling so many top DoD spots with executives from the top five defense contractors.

**INDUSTRY EXECES PILE UP:** Meanwhile President Trump's Army secretary nominee is the latest in a growing list of defense industry executives nominated or confirmed for top Pentagon positions, exactly what McCain was warning against. The White House plans to nominate Mark Esper, vice president of government relations at Raytheon, as the top civilian overseeing the Army. The administration is banking on Esper's experience as an active-duty Army officer, and key legislative aide on Capitol Hill to offset his potential conflicts of interest stemming from his current job as a top lobbyist for Raytheon. A source close to the White House noted Esper's nomination could create a "very interesting" situation given that his position would require him to sit on the Defense Acquisition Board, an advisory panel within the Pentagon that collectively decides what systems to purchase. Esper would be forced to recuse himself from any contracts with Raytheon.

**TRUMP'S TANK SESSION:** Trump, who gave a wide-ranging interview to the New York Times yesterday, does not plan to make any public statements when his visits the Pentagon this morning, according to Pentagon officials. The plan is for Trump to be greeted at the River entrance this morning, be escorted up the steps, take a left and walk about 25 paces to the secure briefing room used by the Joint Chiefs of Staff known as "the Tank." The meeting is scheduled to run for an hour and a half, and we are told the topic is a general update on progress in the fight against the Islamic State. This is not planned as a briefing on the new Afghanistan strategy that Defense Secretary Jim Mattis promised to deliver to the White House and Congress by "mid-July," according to a Pentagon official, who noted that the president can bring up any subject he wants.

**THE ANNIHILATION OF ISIS:** The Senate got its own classified briefing yesterday afternoon on ISIS from Mattis, Secretary of State Rex Tillerson and Joint Chiefs Chairman Gen. Joseph Dunford. Most senators were tight-lipped about what happened in the secure briefing area in the Senate basement, which coincidentally is also dubbed "the Tank," but they said the officials delivered an update on current operations and not the long-awaited overarching Trump strategy to defeat the terror group.

Sen. Bob Corker, chairman of the Foreign Relations Committee, was among the few who stepped in front of the cameras and recorders of staked-out reporters to talk up the ISIS update. "There is just a lot more clarity, a lot more focus on annihilation," he said. "Anybody that listened to that hearing understands they're all about killing every ISIS member they can get ahold of." Corker batted away a question about what exactly has changed from the Obama administration strategy. "Comparisons are odious," he said. Much of the previous administration's strategy remains firmly in place, though as ISIS has lost ground, Mattis has employed a tactic of surrounding concentrations of ISIS forces, blocking escape routes and eliminating every fighter who doesn't surrender.

**DON'T TAKE THAT MEETING MR. PRESIDENT:** National security adviser Lt. Gen H.R. McMaster reportedly advised Trump against sitting down with Russian President Vladimir Putin at the G-20 Summit in Hamburg, Germany, this month, according to The Associated Press. The AP says McMaster expressed his disapproval of the meeting to foreign officials during the lead-up to the summit, and also

told the officials that he disagreed as well with Trump's decision to host Russian diplomats in an Oval Office meeting in May. McMaster is said to be worried Trump is not speaking out forcefully enough about Russian aggression in Europe, especially in light of Moscow's meddling in the U.S. election.

"PLEASANTRIES" WITH PUTIN: In that interview with the New York Times, Trump again pushed back against the idea there was anything nefarious about his after-dinner chat with Putin at the spouses dinner in Hamburg. "The meal was going, and toward dessert I went down just to say hello to Melania, (who was seated next to Putin) and while I was there I said hello to Putin," Trump explained. "Really, pleasantries more than anything else. It was not a long conversation, but it was, you know, could be 15 minutes. Just talked about — things. Actually, it was very interesting, we talked about adoption."

The Kremlin's top spokesman called the whole fuss "absurd," according to Reuters. "The use of a term like 'undercover' or 'secret meeting' raises eyebrows," Dmitry Peskov told state TV. "They had a bilateral meeting that had been officially agreed through diplomatic canals, then they repeatedly exchanged views and remarks on the sidelines. There were no undercover or secret meetings and to assert that there were is absolutely absurd," Peskov was quoted as saying by Russian news agencies.

OBAMA'S WEAKNESS: In that Times interview, Trump went on at length blaming the big foreign policy challenges he faces on what he sees as the failure of President Obama to act decisively. "Crimea was gone during the Obama administration, and he gave, he allowed it to get away," Trump said. "You know, he can talk tough all he wants, in the meantime he talked tough to North Korea. And he didn't actually. He didn't talk tough to North Korea. You know, we have a big problem with North Korea. Big. Big, big," Trump told the Times. "You look at all of the things, you look at the line in the sand. The red line in the sand in Syria. He didn't do the shot. I did the shot."

## ADVERTISEMENT

THE INFAMOUS DOSSIER: "Totally made-up stuff," is how Trump described to so-called dossier of Russian kompromat that FBI Director James Comey showed Trump shortly after his election. "This is really made-up junk," Trump said. "I didn't think about anything. I just thought about, man, this is such a phony deal." The dossier contained unconfirmed and unverifiable "compromising material" supposedly gathered during Trump's time in Moscow. "I went there for one day for the Miss Universe contest, I turned around, I went back," Trump said. "It was so disgraceful. It was so disgraceful." Under questioning, Trump said he thought in hindsight that Comey showed him the report to hold it over his head as a form of leverage. "In my opinion, he shared it so that I would think he had it out there." "As leverage?" the Times asked. "Yeah, I think so. In retrospect. In retrospect," Trump replied.

"NOT A SMART GUY" The other big headline out the interview was Trump's trashing of his own attorney general, who he called "not a smart guy" for being "tricked" during his confirmation hearing into answering a question he was not asked about meeting with Russians. That led to Jeff Sessions having to correct the record, and then recusing himself from the Russia investigation. Trump, who felt blindsided, was furious. "Sessions should have never recused himself," Trump said, "and if he was going to recuse himself, he should have told me before he took the job, and I would have picked somebody else." Trump said Sessions gave him no inkling of what he was going to do. "Zero. So Jeff Sessions takes the job, gets into the job, recuses himself," Trump said, "which, frankly, I think is very unfair to the president."

REBEL PROGRAM SHUT DOWN: In a nod toward Moscow, Trump is ending a CIA program to covertly arm rebels in Syria, according to a new report. U.S. support for rebels fighting against Syrian President Bashar Assad was a bipartisan, if controversial, plank of American policy in the country as recently as last fall. Obama began the shipments in 2013 and a GOP-led Congress eased restrictions on the program in 2016. But Russia and Turkey, a NATO ally, have accused the United States of backing terrorist groups.

"Officials said the phasing out of the secret program reflects Trump's interest in finding ways to work with Russia, which saw the anti-Assad program as an assault on its interests," according to the Washington Post, which first reported the move. "The shuttering of the program is also an acknowledgment of Washington's limited leverage and desire to remove Assad from power."

HOUSE GETS SPACE BRIEF: Just as Chairman Mac Thornberry said last week, the House Armed Services Committee has continued to push forward with its effort to reorganize the military's space operations and create a new Space Corps. Thornberry held a classified hearing Tuesday and all members were invited to a closed briefing Wednesday by the Government Accountability Office on current problems with space operations. "The GAO report cited numerous failed or failing acquisition programs, with billions of dollars of cost overruns because the current acquisition system is so complicated that no one is in charge," Rep. Mike Rogers and Rep. Jim Cooper said in a release.

The two lawmakers, who are spearheading space reforms, said "the time for study is over: We must now act." They also panned the Air Force for the claim by Secretary Heather Wilson and others that the Space Corps ordered in the House's National Defense Authorization Act would create unneeded bureaucracy. Sixty Pentagon offices now deal with space operations, and it would become 61 if the Air Force goes ahead with plans to create a new deputy chief of staff position, which Rogers and Cooper claim is a "proposal designed to stop the Space Corps."

AUMF LANGUAGE STRIPPED: House leadership has removed language from a defense spending bill that would have repealed the authorization to use military force against terrorists that Congress passed after the 9/11 attacks, drawing anger from the Democratic lawmaker who was able to include that repeal language in the bill in late June.

"This is underhanded & undemocratic," Rep. Barbara Lee tweeted late Tuesday evening. "The people deserve a debate!" Lee authored an amendment to the spending bill that would repeal the authorization of military force that passed in 2001 and give Congress eight months to debate and pass a successor bill. With the support of a group of Republicans who broke with party leaders, her amendment was included in the bill, which seemed to set the stage for a debate about how much authority Trump ought to have to make war.

But the provision was jettisoned by the time it got to the Rules Committee, which is the last stop for legislation before it reaches the House floor. "[House Speaker Paul] Ryan should be ashamed of himself for forcing Republicans to strip out my bipartisan AUMF [amendment] in the dead of night," Lee tweeted. "What is he afraid of?"

WITH ALLIES LIKE THESE: Turkish state-run media, Anadolu, published an article highlighting 10 U.S. military points in northern Syria. According to the Daily Beast, the maps include specific locations of eight military posts and two air bases near the Turkish border as well as troop counts for both U.S. and French forces.

The article lists three points in Haseke, two points in Münbic and three spots north of Raqqa. The U.S. first established air bases in the region during October 2015, but added supplemental sites in both March and April of 2016. The article suggested this was a retaliatory action by Turkey for weapons ending up in the hands of the Syrian Worker's People's Protection Units (YPG), which is assisting the U.S.-led coalition in the fight against ISIS.

A Message from Northrop Grumman:

Northrop Grumman has been the industry leader on the U.S. Air Force's Intercontinental Ballistic Missile system since its inception. As a trusted partner/technical integrator, we've mastered the complexities of its flight, launch, and command & control systems. Our capabilities and engineering expertise make us a clear choice to deliver the next generation ICBM system. That's why we're a leader in strategic deterrence. We know the nation's most critical systems—inside and out. [Learn more.](#)

**SHANAHAN CONFIRMATION VOTE:** President Trump's pick to be deputy defense secretary, Boeing vice president Pat Shanahan, is set for a final confirmation vote in the Senate today. The chamber voted to end debate and move forward Monday evening after a partisan scuffle over the slow pace of approving nominees. After a rocky trip through the Senate, Shanahan, who was passed to the floor by the Senate Armed Services Committee on June 28, could soon be the Defense Department's No. 2 under Defense Secretary Jim Mattis as the department attempts to shore up depleted forces and prepare for a buildup next year. During Shanahan's Armed Services hearing, Sen. John McCain berated him for vague answers on arming the Ukrainians and threatened to hold up the nomination, relenting after Shanahan filed amended answers to his written committee testimony.

**MORE NOMINEES IN SENATE:** Despite McCain's medical absence due to a blood clot, his Armed Services Committee is pushing ahead today on five Trump administration defense nominees with senior Republican member Sen. James Inhofe holding the gavel. First up this morning, Gen. Paul Selva will face the committee for his re-appointment to vice chairman of the Joint Chiefs of Staff. McCain has made filling Pentagon positions a top priority this month and Armed Services is slated for a rare afternoon hearing on four nominees:

\*Matthew Donovan to be Air Force undersecretary.

\*Lucian Niemeyer to be assistant secretary of defense for energy, installations and environment.

\*Ellen Lord to be defense undersecretary for acquisition, technology and logistics.

\*John H. Gibson II to be deputy chief management officer of the Defense Department.

**FROM HERE TO 355 SHIPS:** Senate Armed Services will also hold the first of two hearings this afternoon aimed at charting a course for the Navy to reach its goal of a 355-ship fleet. Trump's election and promises of an historic military buildup have sparked a lot of talk about President Ronald Reagan's buildup in the 1980s. The committee will follow that theme with testimony from former Reagan administration officials, including former Navy Secretary John Lehman, who advocated for a 600-ship fleet. Next week's hearings will include naval analysts.

Good Tuesday morning and welcome to Jamie McIntyre's Daily on Defense, compiled by Washington Examiner National Security Senior Writer Jamie McIntyre (@jamiejmcintyre), National Security Writer Travis J. Tritten (@travis\_tritten) and Senior Editor David Brown (@dave\_brown24). Email us here for tips, suggestions, calendar items and anything else. If a friend sent this to you and you'd like to sign up, click here. If signing up doesn't work, shoot us an email and we'll add you to our list. And be sure to follow us on Twitter @dailyondefense.

**LOCKHEED EARNINGS TODAY:** Lockheed Martin will announce its second quarter results today at 11. Lockheed is the prime contractor for the F-35 and the Freedom-class littoral combat ship program, and is also in the running for the Ground-Based Strategic Deterrent, the Long-Range Standoff missile and the T-X aircraft trainer replacement program. The rest of the big five (General Dynamics, Boeing, Raytheon and Northrop Grumman) are releasing second quarter results next week.

**IRAN DEAL UPHELD, FOR NOW:** The Trump Administration is holding its nose and grudgingly certifying that Iran is in compliance with the international nuclear agreement that Trump pledged to dismantle just last year when he was running for office, Joel Gehrke and Sarah Westwood write. The certification by Secretary of State Rex Tillerson comes despite the finding that Iran "is unquestionably in default of the spirit" of the 2016 Joint Comprehensive Plan of Action, or JCPOA, and goes against the advice of many Republican senators who cited Iran's recent violations and broader aggression in the region. A declaration of non-compliance would set the stage for expedited Iran sanctions and a likely fatal disruption of the agreement.

But the White House also took a major step away from the past administration by promising to impose new sanctions against Iran for other questionable activities, such as its ongoing ballistic missile testing. "We [will be] putting on new sanctions to hold Iran accountable for its misbehavior in the region on a bunch of fronts, related to ... things like missiles, and fast boat provocations and that sort of thing; illicit procurement networks and that sort of thing," a senior administration official told reporters.

**TWO MORE NOMINEES NAMED:** The White House announced yesterday that it plans to nominate two more people for Pentagon posts. Retired Vice Adm. Joseph Kernan, a Navy SEAL who is now senior vice president for SAP National Security Services, would be undersecretary of defense for intelligence. Retired Marine Col. Guy Roberts, president of GBR Consulting, would be assistant defense secretary for nuclear, chemical and biological defense programs.

**DEFEATING ISIS WITHOUT PUTIN:** Wisconsin Republican Rep. Mike Gallagher argues in an opinion piece this morning in the Washington Examiner that the U.S. should resist the temptation of trying to defeat the Islamic State "on the cheap" by partnering with Russia in Syria. Gallagher argues Russia remains an adversary that works against U.S. interests in the Middle East, and around the world. "This is why it was a surprise when Secretary of State Rex Tillerson said the other week that American and

Russian objectives in Syria were 'exactly the same,' " Gallagher writes. "Why haven't we learned from the mistakes of the last administration?" Read more here.

**IT WAS RUSSIA'S FAULT:** Tillerson's team issued a pointed reminder on Monday that Russia bears responsibility for the deaths of 298 civilians killed when an airliner was downed over Ukraine in 2014, Joel Gehrke writes.

Malaysia Airlines Flight MH17 was shot down on July 17, 2014, as Ukrainian forces clashed with a separatist movement supported by Russian special forces in the eastern part of the country. Putin has denied responsibility for the incident, but Dutch investigators concluded that the plane was downed by a surface-to-air missile launched from "Russian-led forces in eastern Ukraine [who] fired the surface-to-air BUK missile — brought into sovereign Ukrainian territory from Russia — that took down flight MH17," State Department spokeswoman Heather Nauert said Monday.

**BAGHDADI DEAD OR ALIVE, DOES IT MATTER?** Amid the latest conflicting reports that Islamic State leader Abu Bakr al-Baghdadi is not dead, but alive and in hiding near Raqqa, the Pentagon says it doesn't make much difference. "We don't know one way or another if he's alive or dead," said Navy Capt. Jeff Davis, a Pentagon spokesman. "Militarily speaking he's already largely irrelevant because he's not involved in any day-to-day decision making, or command and control that we can see." The Syrian Observatory for Human Rights claimed last week it had "confirmed information" that Baghdadi had been killed, but this week Syrian Kurds fighting near Raqqa said they think he's still alive. "We certainly agree he's better off dead than alive," Davis said.

**THE FIGHT FOR RAQQA:** While the U.S.-backed Syrian Democratic Forces are making steady progress against the ISIS fighters in Raqqa, the attackers are taking heavy casualties as they advance into the old city section of the Islamic State's self-declared capital. "We knew going in that Raqqa was going to be very hard," Davis said, noting that ISIS has had more than two years to prepare for the assault. And he denied that the offensive had stalled in the face of fierce resistance from ISIS. "There is not a consistent degree of progress in any military campaign, it's a stop and go effort by its very nature," Davis said.

**CIVCAS PUSHBACK:** The Pentagon continues to push back on the long-running dispute with outside advocacy groups who allege the U.S. military's system for tracking civilian casualties vastly undercounts the number of innocents who have died as a result of coalition airstrikes in Iraq and Syria. The latest claim comes from Airwars, an independent transparency group, which says by collating both government and open source reporting it believes the number deaths has jumped dramatically since Trump took office, and now has reached the point at which a dozen or more civilians die each day. At the Pentagon, Davis disputed that, insisting the U.S. military carefully reviews every claim, and holds itself to a very high standard.

"I would encourage all to take with a grain of salt when they see these reports, that profess to have a knowledge of civilian casualties," Davis said. "I think there are well-meaning people and organizations and reporters who will look at reports that they see on social media, and ascribe truth to them, without taking the time to cross reference where we have struck."

**VISAS FOR GRANDMA AND GRANDPA:** The Trump administration reportedly will allow grandparents of U.S. citizens from the six Muslim-majority countries named in Trump's travel ban to obtain visas and enter the United States. The State Department has issued new guidance after a federal judge in Hawaii ruled against the Trump administration late last week. The Justice Department is appealing the ruling, but in the meantime the definition of "close family" allowed to enter the U.S. under the temporary travel ban will include not just grandparents, but also grandchildren, brothers-in-law, sisters-in-law, aunts and uncles, nephews and nieces, and first cousins.

**MATTIS' PENTAGON PEREGRINATIONS:** Mattis has both delighted and confounded Pentagon reporters lately by just showing up at random times in the press area and conducting short impromptu on-the-record interactions with whatever reporters happen to be around. Asked for an explanation of

why Mattis seemingly eschews the traditional briefing room news conference, where journalists know to show up and the secretary's pronouncements are on camera, the Pentagon said essentially that Mattis is a low profile kinda guy.

"The secretary is someone who likes to communicate in small groups and not have a large public posture," Davis said. "He often finds himself wandering around the building, as we've seen, twice on Friday as a matter of fact, and he's always ready to come in here and say, 'Hi.'" Asked if we might see Mattis behind the lectern in the briefing room any time soon, Davis said "I have nothing to announce right at the moment."

Future of Media: By 2025, more than 20% of new cars will be fully or semi-autonomous, according to a new Business Insider Intelligence report. That means that in stop-and-go traffic, drivers will be able to "turn away from the road and make use of a car's built-in infotainment system to look at news, select music, or even watch streaming video."

"As drivers slowly transform into passengers," BI says, "the car will continue to emerge as a new platform for media consumption and engagement."

And on that note, welcome to Reliable Sources, this is Dylan Byers in for Brian Stelter...

The talk of Sun Valley

So NBC's Tom Brokaw moderated a panel at the Allen & Co. conference on Thursday morning called "America Divided" -- about, ya know, our polarized politics -- and guess who was sitting near the front, per an attendee?

Jared Kushner and Ivanka Trump.

Kushner and Trump's presence at the annual big-wig retreat is still the talk of Sun Valley: "Every year has its own 'new' celebs," one regular attendee tells me -- Travis Kalanick when Uber was having its breakout moment, Brian Chesky when Airbnb was having its breakout moment, etc. "It feels the same around Jared and Ivanka."

As we noted in yesterday's newsletter, much of the Sun Valley crowd is pretty anti-Trump. But the couple is hardly lacking for friends. The New York Post reports that they were spotted walking into today's session with billionaire GOP backer Ken Langone and his wife Elaine.

Meanwhile, sources at the White House remain annoyed by the absence... and the general sense that Jared & Ivanka aren't pulling their weight.

Consolidation, consolidation, consolidation

CNBC: CEOs in Sun Valley "expect a new wave of media consolidation, with AT&T's acquisition of Time Warner shedding a spotlight on distribution companies' need for content to differentiate their services.... Plus there's pressure from streaming companies and cord cutting on traditional business

models..."

But: No deals yet.

However: CBS chief Les Moonves once again expressed interest in buying CNN, if it were ever for sale: "CNN is a very worthy news organization," he told CNBC. "It's something that could enhance CBS. But I don't think that's on the table right now. If it came up later on, it would be something we would look at."

Strange timing on that, given this....

CBS News, BBC join forces

CBS News and BBC News have announced a new editorial and newsgathering partnership.

The deal will bolster both organizations' coverage, CBS News president David Rhodes told me. CBS gets access to BBC's global footprint. BBC gets a new inroad into America and the biggest story on earth: the Trump presidency.

"We couldn't pass up an opportunity like this," Rhodes told me. "When you think about the BBC's size and how comprehensive their news report is, that's why it's great for us, that's why this one is so exciting."

"It's hard to cover the world in a comprehensive way," he said. "You take a big story like Syria, sometimes they're in a better place, sometimes we're in a better place. This makes everybody stronger."

The BBC deal replaces CBS's previous partnership with Sky, which is likely to be acquired by 21st Century Fox pending regulatory approval in the UK. The two organizations will begin sharing content immediately, and -- good news -- the companies say there will be no layoffs at either company as a result of the deal.

Bad news for ABC?

An emailer calls it "a massive blow" to ABC's foreign newsgathering because "ABC is so incredibly reliant on the BBC overseas for video, editorial and logistical. ABC (and CBS) has such a tiny footprint overseas that so often the first call on a big story is to the BBC to figure out what they're doing."

An ABC source takes issue with that: "It's very disappointing after a long and productive partnership... [But] there are plenty of opportunities for new and innovative cooperative global newsgathering arrangements." One of those opportunities is, of course, Sky...

Trump still antagonizing media

As if anti-media rhetoric and off-camera briefings weren't enough, the Trump White House found new ways to antagonize journalists on Thursday, straining a relationship that already feels like it's at breaking point:

1. Cherry-picked quotes: On Trump's request, the White House released excerpts from an off-the-record conversation he had with journalists on his plane trip to Paris. But they didn't release all of it. And when reporters asked that two other excerpts from the conversation be included, the White House did not do so.

"If the president speaks to reporters off the record, and then puts parts of it on the record, we're essentially giving him quote approval," USA Today's Gregory Korte tweeted. "Even if 99% is on-the-

record, I'd want to hear a pretty good argument about why the 1% can't also be on the record."

Tom Kludt wrote about the off/on-the-record issue here...

2. Denying reporters a chance to ask questions: In a break with protocol, Trump called on a non-American journalist during his press conference with the French President. This meant only one American journalist got to ask Trump a question.

These joint press conferences traditionally include two questions from journalists of the host nation (in this case, France) and two questions from journalists of the visiting nation (in this case, the United States). Jonathan Lemire, a White House reporter for the Associated Press, said it seemed like "a clear violation of protocol for this question not to go to an American journalist." Here's my full story...

Four months without a press conference

WashPost's Erik Wemple: "Trump has gone four months without a formal solo news conference, while dispersing thoughts about the 'fake news' media being the 'enemy' of the people; his aides have crippled the White House press briefing by banning cameras and prohibiting real-time audio; he and his people continue attempting to discredit the news media, yet love to cite it when the news is good..."

The Big Picture:

The Trump White House probably isn't going to wake up one day and decide it's time to be nicer to the media, or give it more access. Perhaps the more important question is: How will this White House's behavior affect future administrations?

Barring some surprise, the next president won't be in office til 2021 or 2025. After four/eight years of off-camera briefings and months-long stretches without a solo press conference, is the next president really going to feel the need to do anything differently? "Treatment of the media" is hardly at the top of voters' list of concerns.

Alternatively, you can see a scenario in which a candidate runs in part on the promise of greater transparency -- "Make America Accountable Again" -- or, simply, restoring an air of civility to our politics and our media...

Maddow viewer emailed Trump's lawyer, and the lawyer responded with "threats and profanity"

Brian Stelter emails from vacation: This ProPublica story is jaw-dropping. The headline: "Trump Lawyer Marc Kasowitz Threatens Stranger in Emails: 'Watch Your Back, Bitch.'"

What happened? Someone watching cable news emailed Kasowitz. Justin Elliott explains: "After hearing Rachel Maddow discuss our recent story about Kasowitz, a man emailed the attorney urging him to resign. Kasowitz responded with threats and profanity." Read all about it here...

-- Fun/weird fact: Kasowitz is also representing AMC in the "massive lawsuit" filed by fired "Walking Dead" creator Frank Darabont... THR has a brand-new, remarkable piece about the suit here...

Trump's new lineman

The White House's Sebastian Gorka "has emerged as one of President Trump's favorite cable news defenders," Axios' Jonathan Swan reports:

"In the more establishment-aligned parts of the White House, Sebastian Gorka is a figure of ridicule, with some staff believing he's an embarrassment when he represents the administration on TV... But to Trump's nationalist base, and the one person who matters inside the White House, he's become a rock star in recent days. Gorka's stock has soared as President Trump has watched him on various cable

channels fighting with the hosts and accusing them of being part of the 'fake news industrial complex.'"

For the record, part one

-- HuffPost says it's going in search of Middle America... via a 7-week, 23-city bus tour... (Politico)

-- CNN's mobile app is under siege from Trump supporters... (Digiday)

-- No, Billy Bush is not hosting a new show for Fox TV stations... (GossipCop)

This week's Reliable Sources podcast

Do Trump's tweets bring out the worst in him AND the news media?

FiveThirtyEight EIC Nate Silver talked with Brian about whether the president's media bashing gives him "the appearance of doing something" as he faces "uphill" battles over health care and Russian meddling. Silver and Stelter also discussed how Americans are in a "permanent campaign mode." Listen via iTunes or other podcasting services... and subscribe via iTunes here...

Are the Mercers funding Milo?

New evidence obtained by BuzzFeed suggests the Mercers, the billionaire right-wing donor family, may have funded Milo Yiannopoulos after he resigned from Breitbart News in the wake of a controversial video.

"Leaked documents, including a promissory note and emails, as well as conversations with several people familiar with the matter, strongly imply that the Mercers funded Yiannopoulos following his resignation," BuzzFeed's Joseph Bernstein reports. "Together, they suggest that the financiers of the new conservative politics aren't simply interested in protecting their money, but in winning a brutal new culture war waged largely online." The Mercers are also big backers of Breitbart News...

New Time cover: "Red Handed"

"This is one Time magazine cover President Trump might not want to frame," CNNMoney's Jill Disis writes. "The cover story, written by Time editor-at-large David Von Drehle, explores what kind of damage the email story might cause for Trump Jr. and his father's presidency."

>> Von Drehle on "CNN Tonight:" "We know that President Trump, in particular, has a thing about Time covers." But "I don't think this one" is going to end up on the walls of his golf clubs...  
...and from The Washington Post: a collection of "every Russia story Trump said was fake news or a 'witch hunt.'"

"Over the past year -- regardless of intelligence reports that found Russians attempting to influence the U.S. election — Donald Trump's rhetoric has remained consistent. He dismisses any allegation of Russian interference in the election as a 'hoax' or 'fake news' -- often blaming the Democrats for making it all up.... This video... explores the consistency of Trump's rhetoric, despite the evolution of the charges about the Kremlin's role in the 2016 election."

"Very angry -- at the media"

Brian Stelter emails: Robert Leonard, the Iowa radio news director who appeared on last Sunday's "Reliable Sources," sent along this message (reality check?) about solid Trump support:

"I just thought you might want to know conservative friends here in Iowa are very angry -- at the media. They think the Trump/Russia deal is a coup attempt by the media, and don't think there is anything to the Russia/ Trump, Jr. emails. They don't understand why the media is trying to oust our duly elected president. They think there is a double standard -- why isn't anyone investigating the Clinton campaign/Russia connections? They are standing firm behind Trump..."

For the record, part two

-- Local news staff in Denver are worried about the Sinclair/Tribune deal... (The Denver Post)

-- Reporters need better tools for communicating with sources... (Slate)

-- Several prominent NPR journos tweeted this on Thursday: "NPR management is in the midst of contract negotiations with NPR journalists and morale is in the dumps." They promoted this web site about the contract talks... ("We Make NPR")

Historic Pulitzer appointment

Via NYT "Dana Canedy, a former senior editor at The New York Times, will be the next administrator of journalism's most prestigious award... Ms. Canedy — who was part of a Times team that won the 2001 Pulitzer for national reporting for a series about race in America — will help steer the awards process, working with the Pulitzer board on matters like jury selection. She is the first woman and the first African-American to hold the position."

The entertainment desk

Here are this year's Emmy nominations

HBO dominates with 111 nominations, Netflix gets 91.... 'Saturday Night Live' and 'Westworld' net 22 nominations each.... New shows top drama  
When: Sept. 17; Where: Los Angeles. On: CBS. Host: Stephen Colbert.

Here are the top takeaways from CNN Entertainment and around the web... and see the full list of nominees here.

Brian Lowry: The Big Picture

"There was practically something for everyone: HBO maintained its perennial lead as the most-nominated network (despite new players like Hulu yapping at its heels), Netflix crept up on its shoulder and NBC proved broadcasters can still play in this game, thanks largely to 'This is Us' -- the first best drama candidate on a major network since 2011 -- and 'Saturday Night Live,' which rode Donald Trump's coattails into the cultural zeitgeist. ...

"That said, the nominations produced some noteworthy oversights, and perhaps inevitable sins of omission. And while Emmy voters... impressively embraced the new, in places they exhibited a continued habit of voting in part based on reputation."

Lisa Respers France: Freshman blitz

"It was all about the freshman class in the drama category: Five newbies, including 'This Is Us,' 'Westworld,' 'The Handmaid's Tale,' 'The Crown' and 'Stranger Things' will compete with 'Better Call Saul' and 'House of Cards.'"

Where's "Game of Thrones," you ask? Not eligible due to the later start date. Season 7 premieres Sunday -- as if you didn't already know. ... Bonus: Brian Lowry calls 'Thrones' the perfect pay-TV warrior.

Frank Pallotta: The anti-Trump bump

"President Trump's biggest critics in late night received television's biggest acclaim... CBS' 'The Late Show with Stephen Colbert,' HBO's 'Last Week Tonight with John Oliver,' and TBS' 'Full Frontal with Samantha Bee' all received nominations for Outstanding Variety Talk Series.

"'Saturday Night Live,' arguably President Trump's biggest critic in late night, earned 22 Emmy nominations."

Bill Carter tells Frank: "It's seems pretty clear that to impress with comedy this season you had to have a point of view about what we used to call 'current affairs' and we now call the Trump Administration."

Sandra Gonzalez: Hidden gems

"The 65-page list of nominations is a lot to digest, so I did some of the leg work. From a nomination for Barb (Shannon Purser) from 'Stranger Things' to Snoop Dogg and Martha Stewart's big moment, here are the hidden gems of Emmy nominations."

Bonus: Sandra talked to "Handmaid's Tale" executive producer Bruce Miller, who said he thinks the show, which received an impressive 13 nominations, is just the start of what will be more great television about women.

NYT's John Koblin: "Year of the actress"

Koblin writes: "This may be the year of the actress at the Emmys... Last month, when the Television Critics Association announced the nominees for its acting categories — one for drama, one for comedy, neither separated by gender — 11 of the 14 nominees were women...."

"The limited series and TV movie best-actress category will be a showdown between four Oscar winners from two shows: HBO's 'Big Little Lies' (Nicole Kidman, Reese Witherspoon) and FX's 'Feud: Bette and Joan' (Susan Sarandon, Jessica Lange). The other nominees were Carrie Coon for FX's ' Fargo,' her first Emmy nomination, and Felicity Huffman for 'American Crime.'"

THR's Scott Feinberg: What got snubbed

Feinberg writes: "In this era of Peak TV, when nobody can possibly see everything (or even come close to doing so), Thursday's noms make it crystal-clear that the roughly 20,000 members of the TV Academy are far more susceptible to buzz from PR efforts than raves from critics.

"How else can one explain the egregious snubs of FX's 'The Americans' and Amazon's 'Transparent' in favor of two tired shows, the aforementioned 'House of Cards' and ABC's 'Modern Family,' in the drama and comedy series categories, respectively, as well as almost across-the-board neglect of the acclaimed final season of HBO's 'The Leftovers' and 'Insecure', FX's 'Legion' and Starz's 'American Gods?'"

CNN nominations

More from Lisa Respers France: "We will shamelessly self-promote that CNN earned four nominations including for W. Kamau Bell as host of "United Shades Of America" and CNN's travel series "Anthony Bourdain Parts Unknown."

Yes, yes, we will.

Europe trip shows how the Trump Doctrine is situational and always in flux

Donald Trump clenches his fist yesterday in front of the Warsaw Uprising Monument on Krasinski Square. (Saul Loeb/AFP/Getty Images)

BY JAMES HOHMANN  
with Breanne Deppisch and Joanie Greve

THE BIG IDEA: Just seven weeks ago, in Saudi Arabia, President Trump assiduously avoided using the term “radical Islamic terrorism.” Not long ago, he vociferously attacked Barack Obama for not uttering those very words. But pragmatists in the administration, such as National Security Adviser H.R. McMaster, warned the commander-in-chief that this rhetoric is counterproductive.

The term made a comeback in Poland on Thursday. “We are fighting hard against radical Islamic terrorism, and we will prevail,” Trump said in Warsaw.

Comparing the president’s two major foreign policy speeches reveals the extent to which the Trump Doctrine is forever in flux and offers a window into the internal maneuvering to define it.

“This is not a battle between different faiths, different sects, or different civilizations,” Trump told Arab leaders in Riyadh. “This is a battle between barbaric criminals who seek to obliterate human life and decent people.”

In Warsaw, though, Trump referred 10 separate times to a clash of civilizations. “The fundamental question of our time is whether the West has the will to survive,” he told a crowd that included people who had been bused in by the ruling party to cheer for him. “Do we have the confidence in our values to defend them at any cost? Do we have enough respect for our citizens to protect our borders? Do we have the desire and the courage to preserve our civilization in the face of those who would subvert and destroy it?” The president concluded by confidently declaring that “the West will never, ever be broken”: “Our values will prevail, our people will thrive and our civilization will triumph.”

Compare that to his message in Riyadh: “America will not seek to impose our way of life on others, but to outstretch our hands in the spirit of cooperation and trust. ... We are not here to lecture. We are not here to tell other people how to live, what to do, who to be, or how to worship.”

Trump has often used the phrase ‘radical Islamic terrorism.’ But not in Saudi Arabia.

-- Trump has also changed his tune on NATO since the last trip. In May, he caught McMaster and Defense Secretary Jim Mattis off guard by nixing language from a carefully prepared speech that reaffirmed the United States commitment to mutual defense obligations under Article 5 of the NATO charter. Ahead of the speech at the alliance’s headquarters in Brussels, senior administration officials told reporters that Trump would deliver the lines. His decision to cut them was seen as a win for White House Chief Strategist Stephen Bannon and senior adviser Stephen Miller.

Yesterday, the president delivered the line that these aides had wanted him to say in May: “The United States has demonstrated not merely with words but with its actions that we stand firmly behind Article 5.”

-- Boiling it down, McMaster got what he wanted from Trump on NATO this time but not on “radical Islamic terrorism.” And vice versa for Bannon and Miller.

This reflects the messiness of the ongoing war for the soul of Trumpism that rages on inside the administration, pitting the nationalists against the globalists. Neither faction is likely to ever decisively win out over the other. Trump, who puts a premium on keeping his options open, seems determined to never let himself get defined as one or the other for very long. Just as we saw throughout his campaign, he enjoys not just being unpredictable and improvisational but having competing power centers underneath him. Because he lacks many core convictions, he’s ideologically flexible.

That means that proximity to power matters far more in this White House than normal ones. Fairly or not, Trump has earned a reputation for doing whatever the last person he talks with suggests when trying to make up his mind. That makes facetime especially valuable.

H.R. McMaster arrives in the Rose Garden last Friday to watch a joint statement by Donald Trump and Moon Jae-in, South Korea’s president. (Andrew Harrer/Bloomberg)

-- Trump’s top aides are divided on a host of big questions, including whether to consider scaling back sanctions on Russia. Mattis and McMaster have hawkish views while Secretary of State Rex Tillerson has seemed more open to it. Two fresh news stories reflect other battle lines:

The military’s ability to determine troop levels in Afghanistan has secretly been curtailed. The Wall Street Journal’s Dion Nissenbaum reports: “A few days after (Trump) gave his Pentagon chief the unilateral authority last month to send thousands of American troops to Afghanistan at his own discretion, the White House sent classified guidance that effectively limits the number of forces. The memo, sent by (McMaster) to a small group of administration officials, said that the president would let (Mattis) send no more than 3,900 troops to Afghanistan without coming back to confer with the White House. ... The conflicting messages reflect divisions that have surfaced in the Trump administration as it tries to develop a comprehensive new strategy for Afghanistan.”

Tera Dahl, deputy chief of staff at the National Security Council and a former columnist for Breitbart, is leaving the White House. BuzzFeed’s John Hudson reports: “Dahl entered the White House with strong ties to members of the nationalist wing ... including Bannon, whose website she wrote for, and NSC aide Sebastian Gorka, whose wife worked with Dahl at the Council on Global Security, a now-defunct counterterrorism think tank that warned about the dangers of Islam. During her time at the White House, Dahl became a key ally of Keith Kellogg, the NSC’s chief of staff who maintains a strong

personal relationship with the president. White House aides said tensions between Kellogg and McMaster have created an uncomfortable working environment at the NSC ... One source said (Dahl) is likely to be nominated to a position at the US Agency for International Development.”

Trump chats with French President Emmanuel Macron before a family photo at the G-20 summit this morning. (Carlos Barria/Reuters)

-- All of this contributes to the mixed messages that Trump sometimes sends. Consider his posture on Russia:

In his scripted speech, which went through the traditional vetting process of the national security apparatus, Trump was firm: “We urge Russia to cease its destabilizing activities in the Ukraine and elsewhere and its support for hostile regimes, including Syria and Iran, and instead join the community of responsible nations in our fight against common enemies and defense of civilization itself.”

In his unscripted press conference, however, Trump refused to endorse the assessment of the U.S. intelligence community that Russia interfered in last year’s election. “Nobody really knows for sure,” he insisted, noting that the same agencies also thought Iraq had weapons of mass destruction. “They were wrong and it led to a mess,” he said.

-- When presidential pronouncements appear to be all over the place, they pack less of a punch. That’s why everyone pays so much attention to Trump’s Twitter feed. It is the clearest window into what he truly thinks. Ahead of his meeting with Vladimir Putin on the sidelines of the G-20 meeting in Hamburg, the president posted a stream of tweets this morning that were clearly not written by staff:

Trump asks ‘whether the West has the will to survive’

#### TWELVE TAKES ON TRUMP’S WARSAW SPEECH:

\*Post columnist Eugene Robinson: “Viewing the fight against terrorism as some kind of civilizational Armageddon is wrong. Trump seems to view himself as the West’s defender against 1.6 billion Muslims, almost all of whom want only to live in peace. We need a capable president, not a crusader in chief.”

\*The Post’s Editorial Board: “Trump wants us to defend ‘our values.’ Which ones?”

\*Walter Shapiro for The Guardian: “Trump’s warning about ‘western civilisation’ evokes holy war. About all that was missing from Trump’s Warsaw war cry was a rousing chorus of ‘Onward Christian Soldiers.’”

\*Bloomberg’s Marc Champion: “Trump Just Redefined Western Values Around Faith, Not Democracy.”

\*The Atlantic’s Peter Beinart: “When the president says being Western is the essence of America’s identity, he’s in part defining America in opposition to some of its own people.”

\*WorldViews’s Ishaan Tharoor: “Trump appealed to the blood-and-soil nationalism and Christian triumphalism that has defined his political brand and that of the far right in Europe. ... The most glaring omission in Trump’s speech — though no longer surprising — was of any discussion of democracy or human rights.”

\*The Wall Street Journal Editorial Board calls it “Trump’s defining speech”: “Six months into his first term of office, Mr. Trump finally offered the core of what could become a governing philosophy. It is a determined and affirmative defense of the Western tradition.”

\*Politico’s Annie Karni: “Trump hands a victory to Polish nationalists. Historians and observers say the president’s decision to break with tradition by skipping a trip to Warsaw’s Holocaust memorial plays into the ruling party’s message.”

\*The Associated Press's Ken Thomas: "Trump's Poland visit a study in breaking norms."

\*The libertarian Reason Magazine's Matt Welch: "The president's Warsaw speech takes a paranoid view of internal threats while downplaying the central role that international exchange has played in the rise of the West."

\*Breitbart's story about the speech, meanwhile, compares Trump to "another Western leader of indomitable resolve: Winston Churchill."

\*Conservative columnist Charles Krauthammer said it was Trump's best speech and called it Reaganesque on Fox News.

#### WHILE YOU WERE SLEEPING:

Russian President Vladimir Putin arrives for the opening day of the G-20 summit in Hamburg. (Lukas Barth/European Pressphoto Agency)

-- Russia has ramped up its intelligence-gathering efforts inside the United States, according to current and former U.S. intelligence officials, who believe Moscow feels "emboldened" by the lack of retaliation for interfering in last year's election. CNN's Pamela Brown, Shimon Prokupecz and Evan Perez report: "Since the November election, US intelligence and law enforcement agencies have detected an increase in suspected Russian intelligence officers entering the US under the guise of other business ... Russia is believed to now have nearly 150 suspected intelligence operatives in the US, these sources said. [Officials] say the Russians are replenishing their ranks after the US in December expelled 35 Russian diplomats suspected of spying ... Fueling law enforcement officials' concern is that the Russians are targeting people in the US who can provide access to classified information ... In some cases, Russian spies have tried to gain employment at places with sensitive information as part of their intelligence-gathering efforts, the sources say. But that hasn't stopped the State Department from issuing the temporary duty visas — also known as TDY — to the suspected Russian intelligence officers."

-- Hackers are targeting the computer networks of companies operating nuclear facilities in the United States and other countries, according to a new joint report from the DHS and the FBI, which was given an urgent "amber alert" classification. The New York Times' Nicole Perlroth reports: "Among the companies targeted was the Wolf Creek Nuclear Operating Corporation, which operates a nuclear power plant near Burlington, Kan. ... The report did not indicate whether the cyberattacks were an attempt at espionage — such as stealing industrial secrets — or part of a plan to cause destruction. There is no indication that hackers had been able to jump from their victims' computers into the control systems of the facilities, nor is it clear how many facilities had been successfully targeted. ... The hackers appeared determined to map out computers networks for future attacks ... But investigators have not been able to analyze the malicious 'payload' of the hackers' code, which would offer more detail into what they were after. In most cases, the attacks targeted people — industrial control engineers who have direct access to systems that, if damaged, could lead to an explosion, fire or a spill of dangerous material."

-- A federal judge ruled that grandparents are not exempt from the Trump administration's amended travel ban following the Supreme Court's decision on the order. Matt Zapotosky reports: "U.S. District Judge Derrick K. Watson wrote that he would not 'usurp the prerogative of the Supreme Court,' and if those suing over the ban wanted relief, they should take their claims there. ... Neal Katyal, a lawyer for those challenging the ban, noted on Twitter the ruling offered no decision on the 'merits of dispute,' but simply said it was the Supreme Court's place to decide. ... The matter is likely bound for higher courts."

Scalise readmitted to intensive care

-- House Majority Whip Steve Scalise underwent another surgery to manage an infection in his wounds, his medical team said last night. The Louisiana Republican "remains in serious condition" one day after being readmitted to the ICU. His doctors declined to give additional details but said Scalise "tolerated the procedure well." (Clarence Williams)

\*A man was arrested for threatening a staffer at Sen. Jeff Flake's office in Tucson. Referencing last month's shooting at the Republican congressional baseball practice where Scalise was wounded, the suspect reportedly said: "You know how liberals are going to solve the Republican problem? They are going to get better aim. That last guy tried, but he needed better aim." (Tucson News Now)

\*A federal judge ordered a Pennsylvania man accused of bringing a military-style rifle to the Trump International Hotel in May to undergo a psychiatric examination. (Spencer S. Hsu)

\*A Connecticut man admitted to spray-painting an elementary school with anti-Trump graffiti in an attempt to frame Democrats. Steven Marks told police that he wrote the at-times profane messages out of "anger towards liberals and they are breaking major laws everyday and being disrespectful towards our government." (Hartford Courant)

Protesters gather for the Women's March on Washington on Jan. 21. (Amanda Voisard For The Washington Post)

#### GET SMART FAST:

1.A Post poll found that around one in three Washingtonians has marched in protest against Trump at least once since January, including more than half of white residents. High-income residents are among the most likely Trump protesters this year. (Paul Schwartzman and Emily Guskin)

2.Trump is slated to appoint Georgia Public Health Commissioner Brenda Fitzgerald as CDC director. Fitzgerald, 70, an obstetrician-gynecologist who has led that state's public health department since 2011, will succeed Tom Frieden. "Within CDC, Fitzgerald's actions will be watched closely to discern whether she will allow politics to overrule science," Lena H. Sun reports. "She condemned graphic antiabortion ads aired by her GOP opponent in her first bid for elected office, saying the government had no business dictating abortion policy."

3.A new CDC report found the number of opioid prescriptions written by health-care providers has dropped for the very first time since the start of the modern drug crisis, falling more than 13 percent between 2012 and 2015. Still, researchers are expressing tempered optimism about the results, noting that prescription rates still triple levels from the late '90s and quadruple the numbers of some European countries. (Lenny Bernstein)

4.Hobby Lobby's \$3 million fine for smuggling Iraqi artifacts is casting a shadow over the Museum of the Bible. Hobby Lobby President Steve Green chairs the board of the museum, which is set to open near the Mall in November. (Julie Zauzmer and Sarah Pulliam Bailey)

5.Research by Scottish scientists indicates that Mars's surface is covered with a "toxic cocktail" of chemicals capable of destroying living organisms. In related news, Mike Pence pledged yesterday that the United States would send astronauts to Mars. (The Guardian/CNN)

6.Overriding the Republican governor's veto, Illinois lawmakers passed their first budget in two years. The state had fallen \$15 billion behind on bills and its credit rating teetered on the brink of junk status. (Chicago Tribune)

7.Prosecutors and defense attorneys delivered closing arguments yesterday in Joe Arpaio's trial for contempt. The former Phoenix-area sheriff is accused of purposely flouting a court injunction on conducting immigration-enforcement operations. A judge will now decide. (The Arizona Republic)

8.Fox Business Network host Charles Payne has been suspended due to sexual harassment allegations. A political analyst for the network claims that she was coerced into a sexual relationship with him. Corporate is investigating. (LA Times)

9.A New York hospital offered to admit Charlie Gard. New York Presbyterian Hospital and Columbia University Irving Medical Center said that they could accommodate the terminally ill child if safe

transportation methods from Britain could be secured. (Lindsey Bever and Alex Horton)

10. The Paris prosecutor's office has opened an investigation into a Vegas trip that French President Emmanuel Macron took as economy minister last year. The prosecutor is investigating possible "favoritism" for the trip that Macron used to boost French tech startups. (AP)

11. A Delta Airlines flight from Seattle to Beijing was forced to turn back after a passenger attacked a flight attendant. The passenger was subdued, and a Delta spokesperson said that there was no indication the incident represented a national security threat. (Travis M. Andrews)

12. The family of a former NFL player accused of killing his mother blames football for making him violent. De'von Hall's uncle said of his increasingly erratic behavior over the years, "He turned into something that became vicious, and that was the sport he was in. The more vicious, the more accolades you get." (Des Bieler)

13. Microsoft began its latest round of layoffs. The company said that thousands of jobs will be cut, mostly in the sales department, but it declined to confirm reports that put the exact figure around 3,000 jobs. (Hayley Tsukayama)

14. QVC and Home Shopping Network have agreed to a merger. The parent firm of QVC will buy the remaining 62 percent of HSN that it does not already own. (Sintia Radu)

Senate Majority Leader Mitch McConnell laughs during a ribbon-cutting ceremony yesterday for Exit 30 on Interstate 65 in Bowling Green, Ky. (Austin Anthony/Daily News via AP)

#### HEALTH-CARE LATEST:

-- Mitch McConnell suggested that he would work with Senate Democrats to shore up ACA insurance markets if a repeal bill does not pass. Juliet Eilperin and Amy Goldstein report: "The remarks, made at a Rotary Club lunch in Glasgow, Ky., represent a significant shift for the veteran legislator. While he had raised the idea last week that Republicans may have to turn to Democrats if they cannot pass their own bill, his words mark the first time he has explicitly raised the prospect of shoring up the ACA. ... McConnell on Thursday acknowledged how difficult it is proving to craft an alternative that can satisfy the GOP's conservative and centrist camps ... His suggestion that he and his colleagues might instead try to bolster the insurance exchanges created under the ACA is at odds with Republican talking points that they are beyond repair."

-- The timetable for a possible vote on a new Senate health-care bill is getting pushed back again: McConnell now hopes for a vote in two weeks. Politico's Burgess Everett and Josh Dawsey report: "There is unlikely to be a consensus new draft of the bill next week until there's tentative buy-in from the vast majority of the 52-member caucus."

-- The same day that McConnell opened the door to bipartisan collaboration, Ted Cruz expressed support for "repeal, then replace." (Everyone, including the Texas senator, knows there are not the votes to do this.) Sean Sullivan reports: "[Cruz] said Thursday that he agrees with President Trump: If Republican senators are unable to pass a bill to repeal and replace key parts of the Affordable Care Act, the Senate should vote on a narrower bill to simply repeal the law and work on a replacement later ... Cruz said such a repeal should be delayed 'either a year or two years' to give lawmakers time to work on a replacement ... Cruz, who has advocated for a 'clean repeal' in the past, said he still believes the Senate can pass some version of the sweeping bill to repeal and replace the ACA ... 'I believe we can get to yes,' said Cruz. 'I don't know if we will.'"

-- In his first town hall since coming out against McConnell's original health-care bill, Sen. Jerry Moran (R-Kan.) clarified that he would "not necessarily" vote against the final proposal. David Weigel reports: "Moran, the only Republican senator holding unscreened town halls on health care this week, revealed just how much his party is struggling to pass a bill — and even how to talk about it ... Moran announced the Palco event with a full week's notice, and Kansas's pro-ACA groups mobilized to fill it ... The result was a polite but heated round of questions that Moran occasionally chose not to answer ... He did not describe the task facing Republicans as repeal; it was 'repair, replace, whatever language people are

using.’ Pressed by activists and voters, Moran said that he did not want to cut back Medicaid.”

-- Sen. Mike Lee (R-Utah) has become more adamant about the inclusion of an amendment, crafted by Cruz, that would expand insurance options by allowing plans to skirt certain ACA requirements. Lee’s spokesperson said: “The entire bill is unacceptable without the Consumer Freedom Option.” (Axios’ Caitlin Owens)

-- Amid the squabbling, Sen. Patrick Toomey offered a simple reason for why Republicans have struggled so significantly to reach a consensus on health care: no one thought Trump would win. Paul Kane has a really smart column: “‘Look, I didn’t expect Donald Trump to win. I think most of my colleagues didn’t, so we didn’t expect to be in this situation,’ the Pennsylvania Republican said ... Every important Republican leader expected Democrat Hillary Clinton to win, and that left Republicans confused and paralyzed about how to proceed when she didn’t. That in turn led to a rushed initial decision, made in consultation with House Speaker Paul D. Ryan (R-Wis.) and ... McConnell during the presidential transition, to push for a full repeal of the 2010 health law and then set up a two- to three-year window in which Republicans would pass bills to replace it. We all know how that has gone so far.”

-- The Ohio House decided not to override Gov. John Kasich’s veto of a bill that would have frozen expanded Medicaid enrollment. The bill, if enacted, would have paused the state’s expanded enrollment beginning in July 2018, which Kasich estimated would cost 500,000 low-income residents their insurance within 18 months. (The Columbus Dispatch)

-- As the GOP legislation remains in limbo, Democrats are wrestling with a more radical idea: universal coverage. Weigel reports: “Democrats, who are largely using the week-long recess to rally opposition to the Republicans’ deeply unpopular attempt to repeal parts of the Affordable Care Act, are now facing a political challenge of their own: increasing pressure from their liberal base to embrace universal, government-funded health-care coverage ... Republicans have noticed — and have begun to attack. Facing a widespread voter backlash over the House and Senate repeal bills, they’re trying to make universal coverage a political anchor for Democrats by asking whether they can seriously defend trillions of dollars in new taxes and spending.”

A souvenir kiosk in Moscow depicts Putin holding a baby-faced Trump. (Mladen Antonov/Getty Images)

#### MORE ON THE BEAR IN THE WOODS:

-- There might not be an American note-taker when Trump and Putin hold their first bilateral meeting today on the sidelines of the G-20 summit. Axios’ Jonathan Swan says there will likely only be six people in the room: the two leaders, Rex Tillerson, Russian foreign minister Sergey Lavrov, and translators.

-- This means Fiona Hill, a strong Putin critic and senior National Security Council official for Russia, would not be in the meeting. “It would be very unusual for someone in Hill’s position not to participate in such a meeting,” Elizabeth Saunders and Joshua Tucker write on Monkey Cage. (They outline several key items that could — or should — be touched upon during the session.)

-- Congressional Democrats demanded Trump confront Putin on the subject of Russian meddling in U. S. elections, saying in a letter yesterday that failure to do so would be a “severe dereliction” of the duties of the presidency. Lawmakers stressed that it is “critical that you set the agenda from the start and make absolutely clear that Russian interference in our democracy will in no way be tolerated.

President Putin must understand this can never happen again.” (Karoun Demirjian)

-- “Whatever the outcome of the encounter on Friday ... the Kremlin is betting that Mr. Putin can stage-manage the event so that he comes out looking like the stronger party,” the New York Times’ Neil MacFarquhar reports. “If nothing much emerges from the meeting, analysts said, the Kremlin can repeat the standard Russian line that Mr. Trump is weak, hamstrung by domestic politics. But if Mr. Trump agrees to work with Mr. Putin ... he will also look weak while Mr. Putin can claim that he reconstructed the relationship. ‘It is a win-win situation for Putin,’ said [political analyst] Andrei V. Kolesnikov.”

-- Fred Kaplan warns on Slate that the risk in today’s meeting is that Putin has a goal and a policy, while Trump doesn’t but seems eager to come home with something: “That’s when diplomacy can be most risky. Risk sometimes pays off, but only if the leader taking the risk knows the dimension of the risk—the range of possible costs and benefits—and even more, knows where he’d like the conversation and the subsequent actions to go. Trump hasn’t thought this through.”

-- “You can regard the relationship of Putin and [Trump] as purely odd and possibly corrupt, or you can see in it and in them a classic tale of affections strangled and at times set free,” writes Times columnist Frank Bruni. “It’s irrepressible, international — part ‘Clueless,’ part ‘Casablanca.’ They have gone through all the usual phases of courtship. They have plumbed all the customary emotions. At least Trump has. To be brutally honest and risk bruising his quivering heart, this has been a lopsided affair, unless you count Putin’s meddling in the 2016 election as the purest possible expression of ardor and fidelity, which I suppose you can. ... Now, at long last, they come face to face, and while it’s uncertain what Trump will say, it’s clear what Trump has done: fashioned himself in the swaggering, blustering image of his beloved. It’s ‘Grease.’ And it’s gross.”

-- The meeting will be a “testosterone-fueled face-off” between two leaders who have staked their appeal on projecting masculinity, the Times’ Susan Chira explains. Putin — much like Trump — tapped into a long-held Russian preoccupation with being perceived as strong, said Soviet history expert William Taubman. “When they get drunk, Russians will often say, ‘You respect me, don’t you?’” he added.

“Meetings between world leaders have often been seen through the lens of masculinity, [and] that holds particularly true for encounters between Russian and American leaders,” Susan explains. Before John F. Kennedy’s first meeting with [Nikita] Khrushchev, [he was warned]: ‘Your job, Mr. President, is to make sure Khrushchev believes you are a man who will fight’ ... But Kennedy was rattled by their encounter; Khrushchev dismissed him as such a weakling that he went on to miscalculate Kennedy’s resolve in the Cuban missile crisis ... Even with the long history of swagger, this Russian-American meeting stands out. ‘It’s as old as American politics and yet it feels new in this iteration,’ said [professor Michael Kimmel]. ‘To me, that’s the metaphor, the WWE. It’s two hyper-idealized versions of masculinity getting into the ring.’”

Police, protesters clash at site of G-20 summit

**MASKED PROTESTERS, RIOT POLICE CLASH IN HAMBURG:**

-- German police in riot gear clashed Thursday with thousands of anti-capitalist protesters in Hamburg, using water cannons and pepper spray to drive away activists who massed near the site of the G-20 summit – some of whom wore face masks and chanted “Welcome to hell.” Isaac Stanley-Becker reports: “The skirmish followed an hour-long standoff adjacent to Hamburg’s harbor, where protesters were attempting to move from a public square toward the downtown conference center ... When police attempted to separate a group of ‘black bloc’ activists from the roughly 12,000 people who had assembled to protest inequality and economic greed, authorities met a hail of rocks and bottles. As police rushed the group, some of the protesters fled. But a phalanx of [activists] held their ground. Armored vehicles spewing powerful volleys of water rolled toward the protesters. Smoke bombs

detonated in the crowd.” Authorities said they made some arrests — though they did not have a final tally — and said 15 officers were injured in the skirmish. They expect an estimated 100,000 protesters to converge in the city — and have deployed 20,000 officers in the largest police operation in Hamburg’s history. In some parts of the city, a no-fly zone is in effect.

-- White House officials reportedly waited too long to book Trump’s accommodations for the summit, which was scheduled in early 2016. BuzzFeed reports that by the time his aides began calling for reservations, every luxury hotel in the surrounding area was booked — forcing Hamburg to open its Senate guesthouse to the U.S. president. (If you think this story sounds familiar, you’re not wrong — in February, Tillerson suffered a similar housing hiccup before a G-20 session with foreign ministers, and was forced to stay in a sanitarium.)

One of Trump’s most persistent ethics critics just resigned

#### CONFLICTS OF INTEREST WATCH:

-- Federal ethics chief Walter Shaub Jr., an outspoken Trump critic who has frequently sparred with the new administration, announced Thursday that he is resigning from his position as the director of the Office of Government Ethics. Rosalind S. Helderman and Matea Gold report: “[Shaub] made no reference to those clashes in a resignation letter ... Instead, he praised the work of federal ethics officials, pointedly noting their commitment to ‘protecting the principle that public service is a public trust, requiring employees to place loyalty to the Constitution, the laws, and ethical principles above private gain.’ In an interview, Shaub said he was not leaving under pressure, adding that no one in the White House or the administration pushed him to leave. But the ethics chief said he felt that he had reached the limit of what he could achieve in this administration, within the current ethics framework. ‘It’s clear that there isn’t more I could accomplish,’ he said.” Shaub’s term was scheduled to end in six months. He is slated to take a new job as senior director of ethics at the Campaign Legal Center, where he said he hopes to find bipartisan solutions to strengthening government ethics programs at both federal and state levels.

Education Secretary Betsy DeVos tours an elementary school in Prince William County. (Sarah L. Voisin/The Washington Post)

#### TRUMP’S AGENDA:

-- Attorneys general for 19 states are filing a lawsuit against Education Secretary Betsy DeVos for delaying an overhaul of rules to erase the debt of student borrowers who have been defrauded by colleges. Danielle Douglas-Gabriel reports: “The complaint, filed in U.S. District Court on Thursday, accuses the Education Department ... of violating federal law by halting updates to a regulation known as the borrower defense to repayment. The rule, which dates to the 1990s, wipes away federal loans for students whose colleges used illegal or deceptive tactics to get them to borrow money to attend. The Obama administration revised it last year to simplify the claims process and shift more of the cost of discharging loans onto schools. Before the changes could take effect July 1, DeVos suspended them last month and said she would convene a new rulemaking committee to rewrite the borrower defense regulation ... Proponents of the revised rule were livid that DeVos made a unilateral decision without soliciting or receiving input from stakeholders or the public.”

-- “The Interior Department, intent on boosting oil and gas production on federal lands, issued an order on Thursday designed to speed up the permitting process for drilling,” Dino Gradoni and Juliet Eilperin report. “Zinke said the aim of his order is to untangle the bureaucratic knot so the [Bureau of Land Management] can review permit applications within 30 days, as mandated by statute. He also ordered oil and gas lease sales be held in each state every quarter ... Still, Zinke cautioned Thursday that working out the kinks of such a speedy approval system would take time. ‘This is not going to be done

overnight,' he told reporters on a call. Environmental groups criticized the move as yet another unnecessary handout to oil and gas companies, which already have considerable access to federal lands."

-- "The United States and other major economies are nearing a compromise on climate change, one of the thorniest issues facing world leaders at the G-20 summit in Germany," Politico's Andrew Restuccia reports. "After days of preliminary talks, G-20 negotiators are increasingly hopeful they can settle on a joint communique in which the United States underscores its intent to withdraw from the Paris climate agreement while the other nations emphasize their support for the pact, according to a senior diplomat involved in the discussions."

-- Some sanctuary cities have "boldly asserted" that they will not comply with the DOJ's request that local authorities provide federal agents with information on residents' immigration status. Maria Sacchetti reports: "Attorney General Jeff Sessions had given 10 state and local governments until June 30 to prove that they share information with federal immigration officials — or risk losing some Department of Justice grant money this year. Federal law bars localities from creating policies that restrict the sharing of immigration-related information. But some local officials say the law does not require them to collect details such as a person's immigration status ... Sessions said the department is reviewing the jurisdictions' letters. 'It is not enough to assert compliance, the jurisdictions must actually be in compliance,' he said in the statement."

-- The Trump administration told a federal judge that it plans to store information collected by the voter fraud panel on White House computers monitored by one of the vice president's staffers. Spencer S. Hsu reports: "The executive order in May creating the Presidential Advisory Commission on Election Integrity stated that the panel would be funded and staffed through the General Services Administration — a federal agency subject to privacy requirements. But that arrangement has shifted, according to [Kansas Secretary of State Kris] Kobach's [court] filing. 'At this time, there are no plans for the General Services Administration to collect or store any voter registration or other elections-related data for the Commission,' Kobach said in response to questions from the court."

-- ProPublica, "Election Experts See Flaws in Trump Voter Commission's Plan to Smoke Out Fraud," by Jessica Huseman: "[Vice President's Pence's] office has confirmed the White House commission on voter fraud intends to run the state voter rolls it has requested against federal databases to check for potential fraudulent registration. Experts say the plan is certain to produce thousands of false positives that could distort the understanding of the potential for fraud ... 'This just demonstrates remarkable naivety on how this voter data can be used,' said David Becker, [of the] Center for Election Innovation & Research. 'There's absolutely no way that incomplete data from some states ... can be used to determine anything.' While [a Pence spokesman] would not say specifically which databases the rolls would be run against, [a recent report said] the commission may seek to check the names against the federal government's database of non-citizens. A 2012 attempt by Florida to do that resulted in many legitimate voters being falsely flagged because they had the same names as people in the federal database. Gov. Rick Scott scrapped the effort and eventually apologized. Comparing names nationwide could result in far more false positives."

-- Politico, "CNN parent's \$85B deal at little risk from Trump," by Steven Overly and Margaret Harding McGill: "Trump has only limited tools for venting his often-expressed fury at CNN, even as his administration weighs whether to approve AT&T's bid to purchase the network's parent company, Time Warner. ... Bannon has pushed the idea of blocking the merger ... But ... many industry observers say Trump's Justice Department has no obvious antitrust arguments for blocking AT&T's \$85 billion deal."

-- National security officials fear that the Trump administration is placing new restrictions on who can access sensitive information to smoke out leakers. Politico's Ali Watkins and Josh Dawsey report: "Officials at various national security agencies also say they are becoming more concerned that the administration is carefully tracking what they're doing and who they're talking to — then plotting to use them as a scapegoat or accuse them of leaks. One U.S. official voiced concern over even talking to their superiors about a benign call from a reporter. The agency this official works for had started limiting

staff's access to information, they said, and it would make it far easier to figure out who was talking to people in the media. There was suspicion, the official said, that the agency was even tracking what they printed, to keep tabs on what information they were accessing."

-- A left-leaning nonprofit in Indiana is suing to learn details of then-President-elect Trump's deal with furnace and air-conditioning manufacturer Carrier. Danielle Paquette reports: "[Kerwin] Olson, director of the Citizens Action Coalition, ... filed a public records request in December for communications between President Trump's team and former Indiana governor Mike Pence's office regarding Carrier ... But six months have passed, and state officials still haven't given the group any emails, letters or minutes of their meetings. So now, Olson said, CAC is suing Pence's successor, Indiana Gov. Eric Holcomb (R), for what he described as an effort to keep residents in the dark."

Sen. Claire McCaskill (D-Mo.) speaks at a recent hearing. (Alex Brandon/AP)

#### MIDTERM WATCH:

-- The Atlantic, "Will the 'Trump 10' Pay a Price in 2018?" by Ronald Brownstein: "Apparently, no one has informed Bob Casey and Claire McCaskill that they should be running scared. Casey and McCaskill are among the 10 Democratic senators facing reelection next year in states that [Trump] carried in 2016, often by commanding margins. After that performance, many in both parties assumed they would be the Senate Democrats most vulnerable to White House pressure. [But] instead of being tugged toward Trump, both Casey and McCaskill have been propelled toward resolute resistance of his agenda. In that, they are the rule, not the exception, for the Trump 10. It's also framing what could be the pivotal question in next year's Senate midterm elections: Will these Democrats pay a price for consistently opposing Trump in states that voted for him only last year?"

-- Republicans are struggling to recruit good candidates. Politico's Kevin Robillard and Burgess Everett report: "Rep. Ann Wagner's decision not to challenge (McCaskill) ... is the latest in a string of thanks-but-no-thanks moves from candidates Washington Republicans thought were locks to run for Senate next year. [The] red-tinged Senate map means there are few races where Republicans believe they need a single exceptional, heaven-and-earth-moving recruit to win in 2018 ... Yet top Republican strategists privately admit they are intensely focused on two people: Missouri Attorney General Josh Hawley, as an alternative challenger to McCaskill whom many Republicans now insist they prefer, and Florida Gov. Rick Scott ... If those two men pass, Republicans concede their 2018 recruiting class could quickly go from solid to disappointing."

-- "Democratic Rep. Jacky Rosen announced today she is officially running for U.S. Senate, culminating weeks of deliberations that — once again — began with a phone call from Nevada's political godfather Harry Reid." The Nevada Independent's Megan Messerly reports: "[Rosen] will not seek re-election to her seat in Nevada's 3rd Congressional District but will instead pursue a bid against Republican Sen. Dean Heller, considered the most vulnerable Republican in the Senate ... Rosen, 59, said that Reid reached out to her at the end of May and asked her to consider running for Senate ... Rosen said that Heller was the reason she decided to run for Senate instead of seeking a second term, criticizing his votes to repeal the Affordable Care Act, allow states to cut off funding to Planned Parenthood and confirm Betsy DeVos as Education Secretary."

Sen. Kamala Harris (D-Calif.) heads from her Capitol office to a lunch with other senators. (Chip Somodevilla/Getty Images)

#### THE FUTURE OF THE DEMOCRATIC PARTY:

-- The New York Times, "Senator Kamala Harris's Voice Is Amplified by Interruptions," by Matt

Flegenheimer: “The casting call came early — the first of many unwelcome interruptions for Kamala Harris since November — consuming the Los Angeles nightclub where she was supposed to be celebrating an uncomplicated Senate victory. With the polls closed in nearly every other corner of the country, the giant TV above the dance floor left little doubt: [Trump] was almost certainly going to be president. A vacancy — standard-bearer of the Democratic Party, or at least one of them — had come open four to eight years ahead of schedule. And people had questions. ‘Literally everyone was essentially turning to her and asking ... ‘What does this mean? What do we do?’ [recalled her campaign manager, Juan Rodriguez]. The sensation has perhaps grown familiar for Ms. Harris. Less than eight months later, California’s very junior senator has emerged as the latest iteration of a bipartisan archetype: the Great Freshman Hope, a telegenic object of daydreaming projection — justified or not — for a party adrift and removed from executive power.”

-- Sen. Elizabeth Warren (Mass.), fresh off a trip to Afghanistan, questioned the Pentagon’s broader strategy in the region, saying that she is “not there on a troop increase.” Ed’O’Keefe reports: Warren “warned that the Trump administration is creating a “diplomatic vacuum” in Afghanistan by leaving key State Department posts unfilled at a time when a ‘whole-of-government strategy’ is needed to end the 16-year-old conflict. ... ‘No one on the ground believes there is a military-only solution in Afghanistan. No one,’ she said ... ‘The Trump administration needs to define what winning in Afghanistan is and how we get to that,’ the senator added.”

-- Politico Magazine, “Andrew Cuomo Could Beat Trump ... If He Can Win Over the Left First,” by David Freedlander: “Cuomo is a big-name politician who has long seemed an extremely unlikely national candidate — until now, when suddenly he’s seeming like a very likely one ... Suddenly it seems that Americans are willing to pull the lever for a muscular, messy, rough-edged leader shouting for the common man, and suddenly the governor of New York is starting to show up on a lot of people’s lists ... But if he runs, he’s got one big roadblock in his way first: The energy in the Democratic Party right now comes from a newly energized left. And the energized left, not to put too fine a point on it, hates Andrew Cuomo.”

-- Mark Penn, who managed Hillary Clinton’s failed campaign for the 2008 Democratic nomination, wrote a buzzy New York Times op-ed with Andrew Stein yesterday calling on Democrats to go “Back to the Center”: “The path back to power for the Democratic Party today, as it was in the 1990s, is unquestionably to move to the center and reject the siren calls of the left, whose policies and ideas have weakened the party ... The last few years of the Obama administration and the 2016 primary season once again created a rush to the left. Identity politics, class warfare and big government all made comebacks. Candidates inspired by Senator Bernie Sanders, Senator Elizabeth Warren and a host of well-funded groups have embraced sharply leftist ideas. But the results at the voting booth have been anything but positive.”

-- The piece inspired furious pushback from the left:

\*For HuffPost, Daniel Marans wrote a piece entitled “It’s 2017. Democrats Should Really Just Stop Taking Mark Penn’s Advice”: “Taking advice from Penn about how to win elections is a little like turning to Phil Jackson for wisdom on how to win an NBA title. It was a decent idea in 1996, now, not so much.”

\*Former Bernie Sanders campaign operative Symone Sanders said on Twitter: “There are so many things wrong with this op-ed. First of all, the party never really left the center. That is part of the problem.”

\*Sen. Brian Schatz (D-Hawaii) quipped in a tweet: “Hey, what does Mark Penn think the Democrats should do? Just kidding that guy is always wrong.”

-- The Fix’s Philip Bump notes that the Democratic Party looks quite different now than it did in 1995, when Bill Clinton’s embrace of the center proved successful: “The Democratic Party that nominated Hillary Clinton is not the Democratic Party that nominated John Kerry in 2004. At that time, former Vermont governor Howard Dean’s embrace of single-payer health care was unusual and only 40 percent of Democrats supported same-sex marriage. Those things changed.”

A TV screen displays pictures of Kim Jong Un and Kim Jong Nam. (Ahn Young-joon/AP)

#### WAPO HIGHLIGHTS:

-- "The message behind the murder: North Korea's assassination sheds light on chemical weapons arsenal," by Joby Warrick: "In a case with a thousand plot twists, there has been but one constant in the murder investigation of [Kim Jong Un's half brother], Kim Jong Nam: Nothing is ever what it seems. The victim himself ... was traveling under false papers when he died and had to be identified using DNA. The two women accused of killing him turned out to be hired dupes, paid a few dollars to perform what they thought was a reality-TV stunt. Stranger still was the murder weapon, liquid VX, a toxin so powerful that a few drops rubbed onto the skin killed the victim in minutes, yet it failed to harm the two women who applied the poison with their bare hands. [For prosecutors], some of the mysteries behind [Nam's death] will likely never be resolved. [But] in carrying out history's first state-sponsored VX assassination in a country 3,000 miles from its borders, North Korea has demonstrated a new willingness to use its formidable arsenal of deadly toxins and poisons to kill or intimidate enemies on foreign soil."

-- "North Korea: The Rubicon is crossed," column by Charles Krauthammer: "Across 25 years and five administrations, we have kicked the North Korean can down the road. We are now out of road ... How many times must we be taught that Beijing does not share our view of denuclearizing North Korea? It prefers a divided peninsula, i.e., sustaining its client state as a guarantee against a unified Korea (possibly nuclear) allied with the West and sitting on its border. Nukes assure regime survival. That's why the Kims have so single-mindedly pursued them ... What are our choices? Trump has threatened that if China doesn't help we'll have to go it alone. If so, the choice is binary: acquiescence or war."

Airmen working in the Joint Space Operations Center at Vandenberg Air Force Base in California.

-- "The watchers: Airmen who surveil the Islamic State never get to look away," by Greg Jaffe: "While her partner stares at the video feed from an armed Air Force drone [in western Iraq], Courtney, [29], is sitting in a chilly cubicle, where purplish-pink overhead lights, designed to make the video stand out, give the room a feeling of perpetual dusk. It's the start of another shift at this base outside Hampton, Va. ... For more than three years, this has been Courtney's war — 10 hours a day, four days a week, thousands upon thousands of hours of live video footage from Iraq and Syria. It is an existence characterized by long stretches of boredom and grim flashes of action as she helps guide pilots' decisions on when to shoot and watches the last seconds of another person's life. In some instances, the demands of urban combat ... have meant taking shots even when analysts determine civilians are present. 'Our suicide and suicidal ideation rates were way higher than the Air Force average; they were even higher than for those people who had deployed,' said [one commander]. Air Force officials are just beginning to grapple with the long-term effects of this life. [But] for now, they mostly have questions ..."

#### SOCIAL MEDIA SPEED READ:

After Trump attacked the press during his news conference with the Polish president:

Sen. Marco Rubio stated his disapproval of single-payer health care:

Wisconsin Gov. Scott Walker responded to a Wired story mocking his Instagram account:

From a New York Times reporter:

George W. Bush celebrated his 71st birthday:

#### GOOD READS FROM ELSEWHERE:

-- The New Yorker, "The U.S. Media's Murky Coverage of Putin and Trump," by Joshua Yaffa: "The Russian media is under nearly omnipresent pressure from numerous entities: political operatives in the Kremlin ... media owners [who neuter coverage], and financial constraints ... The result is that the

space for independent, muckraking journalism has shrunk further. Yet, even given these many constraints, Russia is nevertheless home to a coterie of talented and self-motivated journalists, who produce work that is courageous and illuminating. I spoke to more than a half-dozen of them, all of whom found themselves in some way bemused, frustrated, or disappointed in the way that the U.S. press has covered Putin and Russia ... On the whole, said [journalist] Mikhail Zygar[:] ... 'Putin seem to look much smarter than he is, as if he operates from some master plan.' The truth, Zygar told me, 'is that there is no plan—it's chaos.'"

#### HOT ON THE LEFT:

"Maine's governor suggests he lies to journalists 'so they'll write these stupid stories,'" from Amber Phillips: "It looks like Maine's governor just admitted to doing something that the Russians are being investigated for: making up news to confuse reporters. And then he took it a step further by wishing news never existed. 'I just love to sit in my office and make up ways so they'll write these stupid stories because they are just so stupid, it's awful,' Gov. Paul LePage (R) told local radio WGAN-AM on Thursday ... If that wasn't shocking enough, he also said this: 'The sooner the print press goes away, the better society will be.'"

#### HOT ON THE RIGHT:

"Muslim activist Linda Sarsour's reference to 'jihad' draws conservative wrath," from Samantha Schmidt: "A lead organizer of the Woman's March on Washington and one of the most high-profile Muslim activists in the country gave an impassioned speech last weekend that at first gained little attention ... In her speech, Sarsour told a story from Islamic scripture about a man who once asked Muhammad, the founder of Islam, 'What is the best form of jihad, or struggle? And our beloved prophet ... said to him, 'A word of truth in front of a tyrant ruler or leader, that is the best form of jihad.'" ... Sarsour [later] said she was advocating solely for peaceful, nonviolent dissent. But conservative media outlets accused the activist of urging Muslims to wage a holy war against the Trump administration."

#### DAYBOOK:

Trump's marquee event in Germany today, his meeting with Vladimir Putin, will take place at 3:45 p.m. local time. The rest of his day is filled with G-20 summit events, including a meeting with the Mexican president and a concert at Elbphilharmonie hall.

#### QUOTE OF THE DAY:

Visiting a coal plant yesterday in West Virginia, Energy Secretary Rick Perry offered an "alternative" interpretation of the most basic law of economics. "Here's a little economics lesson: supply and demand," he said. "You put the supply out there and the demand will follow."

#### NEWS YOU CAN USE IF YOU LIVE IN D.C.:

-- Showers are possible in D.C. today, but they shouldn't stick around too long. The Capital Weather Gang forecasts: "Clouds are on the decrease, and we could see decent amounts of sun during the afternoon as high temperatures top out in the upper 80s to lower 90s. It's perhaps the muggiest day of this forecast. We profusely sweat one last day (for now)."

-- After a three-hour rain delay that did not include much actual rain, the Nationals lost to the Braves 5-2. Chelsea Janes reports: "[The Washington Nationals, Atlanta Braves, fans and assorted media] waited through what was officially called a rain delay, a misnomer of biblical proportions for what could best be described as an antediluvian rain delay — one endured long before any signs of flooding, or even heavy rain. It did drizzle for a few minutes, though."

-- William C. Morva was executed by the state of Virginia last night, after Gov. Terry McAuliffe denied last-minute requests for clemency. Ann E. Marimow reports: "McAuliffe, who is personally opposed to the death penalty, said he would not stop the execution because he is convinced Morva received a fair trial. The governor also dismissed claims Morva was experiencing delusions at the time of the [2006 murders of a sheriff's deputy and an unarmed hospital security guard]."

-- Peter Hermann writes on the tragic story Malachi Yisrael, who became a construction engineer after years of convictions. Yisrael was shot and killed this week at the age of 43.

-- Maryland Gov. Larry Hogan appointed 10 new members to the state's medical marijuana regulating agency. Ovetta Wiggins reports: "The commission has been criticized by state lawmakers, businesses and medical marijuana advocates for struggling to get the medical marijuana program off the ground and for potential missteps in awarding licenses to grow the drug."

-- "A generic-drug trade group is suing Maryland over a price-gouging law that is set to go into effect in October," Ovetta Wiggins reports. "Maryland is the first state to give its attorney general the power to take legal action against drug companies that dramatically increase the price of off-patent or generic drugs."

-- "Two Democrats vying for their party's nomination to challenge Rep. Barbara Comstock (R-Va.) in 2018 have raised a combined \$700,000 this quarter, their campaigns said, an early indication that the race could be among the nation's most expensive," Jenna Portnoy reports.

#### VIDEOS OF THE DAY:

Jennifer Sclafani, a linguist at Georgetown University, has studied Trump for two years and says he's a "unique" politician because he doesn't speak like one:

This linguist studied the way Trump speaks for two years. Here's what she found.

Ahead of the president's meeting with Putin, MSNBC reviewed Trump's contradictory statements about his relationship with the Russian leader:

Even during his press conference with the Polish president yesterday, Trump still took time to beat up on the "fake news" media:

Trump rails on CNN, MSNBC and 'fake news' in Poland

He also thanked Polish Americans for their support in last year's election:

Trump boasts support from Polish Americans

And he described the Nazi occupation as "tough":

Trump on Nazi occupation in Poland: 'That was tough'

Introducing her husband in Poland, the first lady said, "People should be able to live their lives without fear":

Melania Trump: 'People should be able to live their lives without fear'

Awkward: the Polish first lady (briefly) passed over a handshake with Trump:

### Essential Reading

2017 Summer Reading List — Stratfor employees recommend books to keep you engrossed and informed during the extra daylight hours.

North Korea Successfully Tests Its First ICBM — Flight data indicates that Pyongyang test-fired an Intercontinental Ballistic Missile, a milestone for the country in its attempt to secure a long-range delivery system capable of carrying a heavy payload, such as a miniaturized nuclear device.

Iran: Cashing In on Energy — Iran just signed a deal worth \$4.9 billion that it hopes will be the first of many.

Japan: An Emerging Threat to the Ruling Party — Recent local assembly elections foretell future challenges for the ruling Liberal Democratic Party.

### Global Perspectives

Niger Delta Amnesty Programme as a Slippery Slope — Stratfor partner Cheta Nwanze for Financial Nigeria discusses how the approach of Nigerian President Muhammmadu Buhari's administration — paying off militants to ensure Nigeria reaches its oil production output target — does not provide a long-term solution to the deeper problems plaguing the region.

### Stratfor Graphic

### News You May Have Missed

---

\*North Korea carried out yet another ballistic missile test July 3 (mid-morning July 4, local time) the South Korean defense ministry said, Reuters reported.

\*The interior ministers of Germany, France and Italy met in Paris on July 2 to discuss the influx of migrants arriving by boat from Africa, Reuters reported July 3.

\*The Kurdistan Regional Government said Iran will restore the flow of water into the Little Zab river in Kurdistan, Kurdistan24 reported July 3.

\*French President Emmanuel Macron has pledged to lift a state of emergency later this year that has been in place since the 2015 Paris terrorist attacks, The Washington Post reported July 3.

\*Israeli Defense Minister Avigdor Lieberman warned Hezbollah against manufacturing rockets for Iran at installations inside Lebanon, Naharnet reported July 3.

\*Turkish President Recep Tayyip Erdogan hosted talks with Russian Defense Minister Sergei Shoigu in Istanbul on July 2, amid simmering hostilities along the Syrian border between Turkish troops and Kurdish militias, Naharnet reported July 3.

\*China criticized the United States for sailing close to a disputed island in the South China Sea, BBC reported July 3.

\*The Syrian military temporarily suspended combat operations in southern Syria ahead of peace talks with rebels, AP reported June 3.

[1] News

21 Jun 2017 Democratic Republic of Congo: Tombura reopens border with Congo as Ebola rates decrease

<<https://radiotamazuj.org/en/news/article/tombura-reopens-border-with-congo-as-ebola-rates-decrease>>

[Tombura State has officially reopened its border with neighboring Democratic Republic of Congo [DRC] after several weeks of closure due to reports of [Ebola virus disease (EVD)] infections in DRC, a local official said.]

Speaking to Radio Tamazuj on [Tue 20 Jun 2017], Deputy Governor of Tombura State, Lino Utu said the border is now open to allow free movement of people and goods.

Utu explained that the state government decided to reopen the common border after the situation had returned to normal in Congo. However, he said precautionary measures, which include surveillance and screening of people crossing into South Sudan, are still in place.]

22 Jun 2017 DR Congo: WHO confirms death of 4th patient in DR Congo

<<http://www.pulse.com.gh/health/ebola-who-confirms-death-of-4th-patient-in-dr-congo-id6720175.html>>

[A 4th person has died in an [Ebola virus disease (EVD)] outbreak in the Democratic Republic of Congo, a spokesman from the World Health Organization (WHO) said on Mon 22 May. Since the WHO declared the outbreak on 12 May in north-eastern Bas-Uele province, 37 suspected cases are being monitored, WHO's Eugene Kabambi said.]

Of these suspected cases, 2 were confirmed in the laboratory and 3 were regarded as probable [EVD] cases, Kabambi said. Community health agents are monitoring 400 people who may have come into contact with those killed by the [viral disease]. "People who were in contact with the 1st case reported on [22 April 2017] came out unscathed after the 21 days of observation," Kabambi said.]

The Democratic Republic of the Congo has suffered 7 previous outbreaks of [EVD] since the [viral disease] was discovered in the country in 1976. The last outbreak, in 2014, left 49 people dead.

West Africa was worst affected during 2014 [outbreak], with the hemorrhagic fever claiming more than 11 000 lives, most of those in Guinea, Liberia and Sierra Leone.]

[This case does not appear to represent further spread of the virus, but rather one of the cases being monitored. - Mod.LK]

25 Jun 2017 Liberia: MOH issues alert as strange disease emerges in Liberia

<<http://www.graphic.com.gh/news/general-news/moh-issues-alert-as-strange-disease-emerges-in>>

liberia.html>

[The Ministry of Health (MOH) has directed all agencies under its jurisdiction to increase surveillance at all health facilities following an emergence of what it described as a "strange" disease in Liberia.

A memo issued to all concerned agencies of the ministry said the Ministry of the Interior had advised the MOH to increase disease surveillance at all levels of the national health system to prevent the spread of the strange disease.

The Interior Ministry has underscored the need to promote infection prevention and control mechanism at health facilities as part of preparations to prevent the spread of the unknown disease to Ghana through the borders and the airport.

The disease, yet to be identified, according to the Ghana Immigration Service, has claimed 11 lives in Liberia while at least 9 more people have been infected by the disease.

"The symptoms reported by the victims mainly are headache, weakness, diarrhea, vomiting, mental confusion, abdominal pain and fever," the Ministry of the Interior has said. ...more]

[Such non-specific symptoms could be caused by many etiologic agents. Any further information a ProMED reader may have is welcome. - Mod.LK]

[2] Research

21 Jun 2017: Scientists locate where the most deadly 'missing viruses' are hiding

<<http://www.ibtimes.co.uk/scientists-locate-where-most-deadly-missing-viruses-are-hiding-1627284#>>

[Citation. Olival K.J., Hosseini C.Z-T, et al. (21 Jun 2017). Host and viral traits predict zoonotic spillover from mammals. Nature 2017. doi:10.1038/nature22975

Abstract. The majority of human emerging infectious diseases are zoonotic, with viruses that originate in wild mammals of particular concern (for example, HIV, Ebola and SARS). Understanding patterns of viral diversity in wildlife and determinants of successful cross-species transmission, or spillover, are therefore key goals for pandemic surveillance programs. However, few analytical tools exist to identify which host species are likely to harbour the next human virus, or which viruses can cross species boundaries. Here we conduct a comprehensive analysis of mammalian host-virus relationships and show that both the total number of viruses that infect a given species and the proportion likely to be zoonotic are predictable. After controlling for research effort, the proportion of zoonotic viruses per species is predicted by phylogenetic relatedness to humans, host taxonomy and human population within a species range--which may reflect human-wildlife contact. We demonstrate that bats harbour a significantly higher proportion of zoonotic viruses than all other mammalian orders. We also identify the taxa and geographic regions with the largest estimated number of 'missing viruses' and 'missing zoonoses' and therefore of highest value for future surveillance. We

then show that phylogenetic host breadth and other viral traits are significant predictors of zoonotic potential, providing a novel framework to assess if a newly discovered mammalian virus could infect people.]

July 2017. Clinical Laboratory Values as Early Indicators of Ebola Virus Infection in Nonhuman Primates

<[https://wwwnc.cdc.gov/eid/article/23/8/17-0029\\_article](https://wwwnc.cdc.gov/eid/article/23/8/17-0029_article)>

[Citation. Reisler R.B., Donofrio M.J., Warren T.K., et al. Clinical Laboratory Values as Early Indicators of Ebola Virus Infection in Nonhuman Primates. Emerg Inf Dis. 23(8)--August 2017

<<https://doi.org/10.3201/eid2308.170029>>

Abstract. The Ebola virus (EBOV) outbreak in West Africa during 2013-2016 demonstrated the need to improve Ebola virus disease (EVD) diagnostics and standards of care. This retrospective study compared laboratory values and clinical features of 3 nonhuman primate models of lethal EVD to assess associations with improved survival time. In addition, the study identified laboratory values useful as predictors of survival, surrogates for EBOV viral loads, and triggers for initiation of therapeutic interventions in these nonhuman primate models. Furthermore, the data support that, in nonhuman primates, the Makona strain of EBOV may be less virulent than the Kikwit strain of EBOV. The applicability of these findings as potential diagnostic and management tools for EVD in humans warrants further investigation.]

[3] Non-governmental organization

17 Jun 2017. Non-government organizations and the fight Against Ebola: Identifying the types of aid most provided by non-Government organizations during the 2013-2015 Ebola crisis

<<https://dspace.allegheeny.edu/handle/10456/42901>>

[Citation. Cook B. (17 Jun 2017). Non-government organizations and the fight against Ebola: Identifying the types of aid most provided by non-government organizations during the 2013-2015 Ebola crisis.

Allegheny College. <<https://dspace.allegheeny.edu/handle/10456/42901>>

Abstract. The purpose of this project is to identify what was the most given type of aid by non-government organizations (NGOs) was in response to the 2013-2015 [Ebola virus disease (EVD)] outbreak in the countries of Sierra Leone, Liberia and Guinea. The types of aid were split into 20 separate categories. Data was collected on 67 NGOs who were listed on The Center for International Disaster Information's website. The actual data was retrieved from the websites and affiliate sites of the NGOs being examined. The format of the data was usually self-reported, and was in other varying formats depending on the organizations. The data was then put into a spreadsheet on Microsoft Excel for analysis. It was determined at the end of the study that providing community education to communities who were at risk of coming into contact with the virus, or who already had been affected by the virus, was the most frequently given type of aid by NGOs. Several other areas of aid that had large contributions of aid were training healthcare workers and providing personal protective equipment. Several patterns were also found within the community

education data regarding how the community education was provided or supplemented. It was found that many NGOs also made use of pamphlets and radio messages to educate populations about the virus. ]

#### [4] Vaccines

19 Jun 2017: Ebola vaccine developed in Canada shows promising results

<[https://www.eurekalert.org/pub\\_releases/2017-06/cmaj-evd061317.php](https://www.eurekalert.org/pub_releases/2017-06/cmaj-evd061317.php)>

[A phase 1 randomized controlled trial has found an Ebola virus disease (EVD) vaccine, developed in Canada, was well-tolerated with no safety concerns, and high antibodies were present in participants 6 months after immunization. The study, led by Canadian researchers, is published in CMAJ (Canadian Medical Association Journal):

Citation. ElSherif M.S., Brown C., MacKinnon-Cameron M., et al. (19 Jun 2017) Assessing the safety and immunogenicity of recombinant vesicular stomatitis virus Ebola vaccine in healthy adults: a randomized clinical trial. CMAJ June 19, 2017. 189(24) doi: 10.1503/cmaj.170074

#### Abstract.

--Background. The 2013-2016 Ebola virus [disease] outbreak in West Africa was the most widespread in history. In response, a live attenuated recombinant vesicular stomatitis virus (rVSV) vaccine expressing Zaire Ebolavirus glycoprotein (rVSV?"G-ZEBOV-GP) was evaluated in humans.

--Methods. In a phase 1, randomized, dose-ranging, observer-blind, placebo-controlled trial, healthy adults aged 18-65 years were randomized into 4 groups of 10 to receive one of 3 vaccine doses or placebo. Follow-up visits spanned 180 days post-vaccination for safety monitoring, immunogenicity testing and any rVSV virus shedding.

--Results. Forty participants were injected with rVSV-deltaG-ZEBOV-GP vaccine (n = 30) or saline placebo (n = 10). No serious adverse events related to the vaccine or participant withdrawals were reported. Solicited adverse events during the 14-day follow-up period were mild to moderate and self-limited, with the exception of injection-site pain and headache. Viremia following vaccination was transient and no longer detectable after study day 3, with no virus shedding in saliva or urine. All vaccinated participants developed serum immunoglobulin G (IgG), as measured by Ebola virus envelope glycoprotein-based enzyme-linked immunosorbent assay (ELISA). Immunogenicity was comparable across all dose groups, and sustained IgG titers were detectable through to the last visit, at study day 180.

--Interpretation. In this phase 1 study, there were no safety concerns after a single dose of rVSV-deltaG-ZEBOV-GP vaccine. IgG ELISA showed persistent high titers at 180 days postimmunization. There was a period of reactogenicity, but in general, the vaccine was well tolerated. This study provides evidence of the safety and immunogenicity of rVSV-deltaG-ZEBOV-GP vaccine and importance of its further investigation.]

14 Mar 2017 Ebola vaccine has been shown to induce a durable immune response 1 year after vaccination

<[http://cordis.europa.eu/news/rcn/128465\\_en.html?WT.mc\\_id=RSS-Feed?WT.rss\\_f=news&WT](http://cordis.europa.eu/news/rcn/128465_en.html?WT.mc_id=RSS-Feed?WT.rss_f=news&WT).

rss\_a=128465&WT.rss\_ev=a>

[A prime-boost Ebola vaccine regime has induced a persistent antibody response of at least one year in 100 percent of the healthy volunteers. Partners behind the development of the vaccine include the EU's Innovative Medicines Initiative.

Citation. Winslow R.L., Milligan I.D., Voysey M., et al. (14 Mar 2017) Immune Responses to Novel Adenovirus Type 26 and Modified Vaccinia Virus Ankara-Vectored Ebola Vaccines at 1 Year. JAMA. 2017;317(10):1075-1077. doi:10.1001/jama.2016.20644

Abstract. The Ebola virus vaccine strategies evaluated by the World Health Organization in response to the 2014-2016 outbreak in West Africa included a heterologous primary and booster vaccination schedule of the adenovirus type 26 vector vaccine encoding Ebola virus glycoprotein (Ad26.ZEBOV) and the modified vaccinia virus Ankara vector vaccine, encoding glycoproteins from Ebola, Sudan, Marburg, and Tai Forest viruses nucleoprotein (MVA-BN-Filo). This schedule has been shown to induce immune responses that persist for 8 months after primary immunization, with 100 percent of vaccine recipients retaining Ebola virus glycoprotein-specific antibodies.]

<<http://polioeradication.org/polio-today/polio-now/this-week/>>

### Poliovirus Weekly Update 28-Jun-2017

New wild poliovirus cases reported this week: 0  
Total number of wild poliovirus cases in 2017: 6  
Total number of wild poliovirus cases in 2016: 37

New cVDPV cases reported this week: 5  
Total number of cVDPV cases in 2017: 26  
Total number of cVDPV cases in 2016: 5

### Headlines

- WHO Director-General Dr Margaret Chan retirement : GPEI offers sincere thanks for her ten-year leadership, which brought the world to the threshold of being polio-free.
- Containment update: progress towards containment of poliovirus type 2 published .
- "Coffee with Polio Experts": a short video-chat with Dr Ousmane Diop, Coordinator of the Global Polio Laboratory Network, on the increasingly important role of environmental surveillance to help track down every last poliovirus strain.
- Summary of newly-reported viruses this week: Syria - 5 new circulating vaccine-derived poliovirus type 2 (cVDPV2) isolated from acute flaccid paralysis (AFP) cases. Pakistan - 1 new wild poliovirus type 1 (WPV1) positive environmental sample.

### Afghanistan

- No new wild poliovirus type 1 (WPV1) cases were reported in the past week. The total number of WPV1 cases for 2017 remains four. The most recent WPV1 case had onset of paralysis on [16 Apr 2017] from Nawzad district, Hilmand province.
- With most of Afghanistan polio-free, efforts are focused on continuing to strengthen operations, in close coordination with Pakistan, to address remaining low-level transmission in the common reservoir area of the Quetta-Kandahar corridor.
- Afghanistan is carrying out a programme review focusing on the implementation of the National Emergency Action Plan and making necessary adjustments for the second half of 2017.

- Polio eradication teams from East and South East Afghanistan and neighbouring FATA and Khyber Pakhtunkhwa in Pakistan met in Kabul on 24-25 May [2017] to review the current coordination mechanisms and agree on additional measures to further improve implementation in the WPV common reservoirs. Core teams from the National Emergency Operation Centres Afghanistan and Pakistan also met to discuss next steps on further improving the vaccination strategies for high risk mobile populations.

#### Pakistan

- No new wild poliovirus type 1 (WPV1) cases were reported in the past week. The total number of WPV1 cases for 2017 remains two. The most recent case had onset of paralysis on [13 Feb 2017], from Diamir district, Gilgit Baltistan.
- One new WPV1 positive environmental sample was reported in the past week, from Karachi Gadap, Sindh, collected on [5 Jun 2017].
- The year 2016 saw the lowest ever annual number of polio cases in the country but poliovirus continues to be isolated through environmental surveillance over a significant geographical range. Efforts are ongoing through implementation of the national emergency action plan to address remaining gaps in coverage and surveillance, in close coordination with neighbouring Afghanistan.
- The National Polio Management Team met on [8-9 Jun 2017] to review implementation of the National Emergency Action Plan during the low transmission season, and to agree on essential adjustments to the plan for the second half of 2017.

#### Nigeria

- No new cases of wild poliovirus type 1 (WPV1) were reported in the past week. The total number of WPV1 cases for 2016 remains 4 and no cases have been reported in 2017. The most recent case had onset of paralysis on [21 Aug 2016] in Monguno Local Government Area (LGA), Borno.
- Nigeria continues to implement emergency response to the detected WPV1 strain and circulating vaccine-derived poliovirus type 2 (cVDPV2) strains affecting the country.
- The response is part of a broader regional outbreak response, coordinated with neighbouring countries, in particular the Lake Chad sub-region, including northern Cameroon, parts of Central African Republic, Chad and southern Niger.
- Detection of the polio cases in Nigeria underscores the risk posed by low-level undetected transmission and the urgent need to strengthen subnational surveillance.

#### Lake Chad Basin

- The detection of wild poliovirus type 1 (WPV1) and circulating vaccine-derived poliovirus type 2 (cVDPV2) in Nigeria poses a risk to the neighbouring countries of the Lake Chad basin and hence an outbreak response plan is being implemented as part of the response to the Nigeria outbreak.
- Emergency outbreak response efforts continue across the Lake Chad basin, together with activities to fill subnational surveillance gaps across the region.

#### Central Africa

- No new cases were reported in the past week. The Democratic

Republic of the Congo (DR Congo) is affected by 2 separate outbreaks of circulating vaccine derived poliovirus type 2 (cVDPV2), in Haut Lomami province (2 cases, with onset of paralysis on [8 Mar 2017 and 20 Feb 2017]); and in Maniema province (2 cases with onset of paralysis on [26 Mar 2017 and 18 Apr 2017], with an additional isolate detected in a healthy individual with sample collection on 2 May [2017]).

- Outbreak response plans are currently being finalised, with supplementary immunization activities using monovalent oral polio vaccine type 2 (mOPV2) in line with internationally-agreed outbreak response protocols.
- The 1st mOPV2 campaign is being implemented this week ([27-29 Jun 2017]) targeting more than 750 000 children under the age of 5 years in the 2 affected provinces.
- Surveillance and immunization activities are being strengthened in neighbouring countries.
- DR Congo is also affected by an Ebola outbreak, in Bas Uele province in the north of the country. Coordination among both outbreak response teams will be necessary and teams are already working on this.

#### Syrian Arab Republic

- In Syria, 5 new cases of circulating vaccine-derived poliovirus type 2 (cVDPV2) were reported in the past week, bringing the total of cVDPV2 cases to 22. All cases had onset of paralysis between [3 Mar 2017 and 25 May 2017]. 21 of the cases are from Mayadeen district, Deir-Al-Zour governorate, and 1 case is from Raqua district, Raqua governorate.
- Confirmation of these latest cases is not unexpected at this time and does not change the operational situation, as outbreak response plans are being finalized, in line with internationally-agreed outbreak response protocols. Although access to Deir-Al-Zour is compromised due to insecurity, the Governorate has been partially reached by several vaccination campaigns against polio and other vaccine-preventable diseases since the beginning of 2016. Most recently, 2 campaigns have been conducted in March and April 2017 using the bivalent oral polio vaccine ([bOPV]). However, only limited coverage was possible through these campaigns.

Officially reported wild poliovirus cases as of 20 Jun 2017

Total global cases in 2017: 6 (compared with 18 for the same period in 2016)

Total in endemic countries in 2017: 6 (compared with 18 for the same period in 2016)

Total in non-endemic countries in 2017: 0 (compared with 0 for the same period in 2016)

- Afghanistan: 4 cases in 2017 (compared with 6 for the same period in 2016), onset of paralysis of most recent case: 16-Apr-17
- Pakistan: 2 cases in 2017 (compared with 12 for the same period in 2016), onset of paralysis of most recent case: 13-Feb-17
- Nigeria: 0 case in 2017 (compared with 0 for the same period in 2016), onset of paralysis of most recent case: 21-Aug-16
- Total global cases in 2016: 37
- ? Total in endemic countries: 37
- ? Total in non-endemic countries: 0

Officially reported cVDPV cases as of 20 Jun 2017

Total global cases in 2017: 26 (compared with 3 for the same period in 2016)

- Syrian Arab Republic: 22 cases in 2017 (compared with 0 for the same period in 2016), onset of paralysis of most recent case:

25-May-17

- Democratic Republic of the Congo: 4 cases in 2017 (compared with 0 for the same period in 2016), onset of paralysis of most recent case: 18-Apr-17

- Pakistan: 0 case in 2017 (compared with 0 for the same period in 2016), onset of paralysis of most recent case: 17-Dec-16

- Nigeria: 0 case in 2017 (compared with 0 for the same period in 2016), onset of paralysis of most recent case: 28-Oct-16

- Lao People's Democratic Republic: 0 case in 2017 (compared with 3 for the same period in 2016), onset of paralysis of most recent case: 11-Jan-16

- Total global cases in 2016: 5

- Total in endemic countries: 2

- Total in non-endemic countries: 3

ProMED-mail

<promed@promedmail.org>

[With the addition of these 5 newly confirmed cases of cVDPV associated polio in Syria, the tally is now up to 26 total cVDPV cases during 2017 -- 22 in Syria and 4 in the Democratic Republic of the Congo. All 5 of the newly confirmed cases were from Deir Al Zour suggesting transmission is still somewhat localized in the province. As a reminder, in the previous update (see Poliomyelitis update (13): Syria (DY, RA), global <http://promedmail.org/post/20170622.5124548>) there was mention of a total of 65 acute flaccid paralysis (SFP) cases that had been detected in Deir al Zour since the beginning of 2017. Of those 65, 22 had tested negative, 5 were pending final laboratory results (?the 5 newly confirmed cases), 22 were en route to a laboratory for analysis. Presumably those latter 22 are still undergoing testing, and we should expect additional cases to be confirmed in the coming period. Unfortunately, the affected area in Syria is an area with civil unrest, with difficult access to provide both outbreak focused as well as routine focused immunization activities.

The identification of WPV1 in an environmental sample in Karachi (Sindh province) Pakistan is also cause for concern. Of note is that this sample was taken from the same location as the previous week's environmental sample that was also positive for WPV1, suggesting there is ongoing circulation of the WPV1 in the country, and in Sindh province specifically.

A map showing the locations of both WPV1 and cVDPV2 cases worldwide can be found at: <<http://polioeradication.org/polio-today/polio-now/>>.

For a map of Syria showing provinces, see

<<http://www.emapsworld.com/images/syria-provinces-map.gif>>. Deir Al Zour is referred to as Dayr az Zawr in this map.

The HealthMap/ProMED map of Syria can be found at <<http://healthmap.org/promed/p/86>>. - Mod.MPP]

[2] VDPV impact - media report

Date: Wed 28 Jun 2017

Source: NPR [National Public Radio]

<<http://www.npr.org/sections/goatsandsoda/2017/06/28/534403083/mutant-strains-of-polio-vaccine-now-cause-more-paralysis-than-wild-polio>>

## Mutant Strains Of Polio Vaccine Now Cause More Paralysis Than Wild Polio

-----  
For the 1st time, the number of children paralyzed by mutant strains of the polio vaccine are greater than the number of children paralyzed by polio itself.

So far in 2017, there have been only 6 cases of "wild" polio reported anywhere in the world. By "wild," public health officials mean the disease caused by polio virus found naturally in the environment.

By contrast, there have been 21 cases of vaccine-derived polio this year [note in the above GPEI update, the tally is now up to 26 with the addition of the 5 newly confirmed cases in Syria. - Mod.MPP]. These cases look remarkably similar to regular polio. But laboratory tests show they're caused by remnants of the oral polio vaccine that have gotten loose in the environment, mutated and regained their ability to paralyze unvaccinated children

"It's actually an interesting conundrum. The very tool you are using for [polio] eradication is causing the problem," says Raul Andino, a professor of microbiology at the University of California at San Francisco.

The oral polio vaccine used throughout most of the developing world contains a form of the virus that has been weakened in the laboratory. But it's still a live virus. (This is a different vaccine than the injectable one used in the U.S. and most developed countries. The injectable vaccine is far more expensive and does not contain live forms of the virus.)

Andino studies how viruses mutate. In a study published in March [2017], he and his colleagues found that the laboratory-weakened virus used in the oral polio vaccine can very rapidly regain its strength if it starts spreading on its own. After a child is vaccinated with live polio virus, the virus replicates inside the child's intestine and eventually is excreted. In places with poor sanitation, fecal matter can enter the drinking water supply and the virus is able to start spreading from person to person.

"We discovered there's only a few [mutations] that have to happen and they happen rather quickly in the 1st month or 2 post-vaccination,"

Andino says. "As the virus starts circulating in the community, it acquires further mutations that make it basically indistinguishable from the wild-type virus. It's polio in terms of virulence and in terms of how the virus spreads."

In June [2017], the World Health Organization reported 15 cases of children paralyzed in Syria by vaccine-derived forms of polio. These cases come on top of 2 other vaccine-derived polio cases earlier this year in Syria and 4 in the Democratic Republic of the Congo.

"In Syria, there may be more cases coming up," says Michel Zaffran, the director of polio eradication at the World Health Organization. He says lab work is still being done on about a dozen more cases of paralysis to confirm whether they're polio or something else.

The cases in Syria are all in the east of the country near the border with Iraq.

It has become fairly common each year for there to be 1 or 2 small outbreaks of vaccine-derived polio. These outbreaks tend to happen in conflict zones where health care systems have collapsed.

"These outbreaks are occurring only in very rare cases and only in places where children are not immunized," says Zaffran. The regular polio vaccine protects children from vaccine-derived strains of the virus just as it protects them from regular polio. Vaccine-derived outbreaks, he says, "occur where there are large pockets of unimmunized children, pockets sufficiently large to allow for the circulation of the virus."

WHO is staging a massive response to the Syrian outbreak. WHO plans to work with local health officials and aid groups to vaccinate a quarter of a million children in early July [2017]. The goal is to reach every child younger than 5 in the area with 2 doses of 2 different types of polio vaccine, spaced 1 to 2 weeks apart. This would be a logistical challenge in most parts of the world, never mind in war-torn Syria.

"The access in these areas is a bit limited because of the presence of ISIS," Zaffran says in what seems like an understatement. Eastern Syria is home right now to Syrians who've fled from Raqqa (the ISIS capital in Syria), other parts of the country and even Iraq. "Also there's a risk that the fighting might actually move to this area."

Zaffran is confident that the rogue vaccine-derived virus circulating in eastern Syria right now can be wiped out with a massive blast of more vaccine.

"We knew that we were going to have such outbreaks. We've had them in the past. We continue to have them now. We know how to find them, and we know how to interrupt them. We have the tools to do that," Zaffran says. "So it's hiccup ... a very regrettable hiccup for the poor children that have been paralyzed, of course. But with regards to the whole initiative, you know it's not something that is unexpected."

WHO is attempting to phase out the use of live oral polio vaccine to eliminate the risk that the active virus in the vaccine could mutate

into a form that can harm unvaccinated children.

But for now, the live vaccine continues to be the workhorse of the global polio eradication campaign for a couple of reasons. 1st it's cheap, costing only about 10 cents a dose versus USD \$3 a dose for the injectable, killed vaccine. 2nd, it can be given as drops into a child's mouth, which makes it far easier to administer than the inactivated or "killed" vaccine, which has to be injected. 3rd, there simply isn't enough killed vaccine on the market to vaccinate every child on the planet, and vaccine manufacturers don't have the capacity to produce the quantities that would be needed if such a switch happened immediately.

And finally, the live vaccine stops transmission of the polio virus entirely in a community if sufficient numbers of people are vaccinated. The killed vaccine doesn't fully block the virus from spreading because a person who is immunized can still carry and spread the polio virus. And this is an important difference between these 2 types of vaccines when the goal is to exterminate the polio virus.

"The fact is this [the live oral polio vaccine] is the only tool that we have that can eradicate the disease," says Zaffran.

That eradication effort has been incredibly successful. In 1988, when the campaign began, there were 350 000 cases of polio around the world each year compared with the 6 so far this year [2017].

Zaffran credits the oral polio vaccine with getting the world incredibly close to wiping out a terrible disease.

"Four regions of the world have totally eradicated the disease with the use of the oral polio vaccine," he notes. "Of course we need to recognize that there have been a few cases of children paralyzed because of the vaccine virus, which is regrettable. But, you know, from a public health perspective, the benefits far outweigh the risk."

<promed@promedmail.org>

[In formulating vaccination policies, a risk benefit analysis is a key process. In the case of polio vaccination, a critical question a country faces is "what is the risk of disease from the wild poliovirus" vs "what is the risk of disease from the vaccine virus". In the case of the WPV, the risk of paralysis among unvaccinated individuals averages 1 case per every 200 infected individuals. In the case of the vaccine virus, the risk of paralysis among those receiving the vaccine is approximately 1 case per every 2.7 million doses of vaccine administered. In the case of cVDPV there have been a total of 865 cases reported to WHO since 2000 with more than 10 billion doses administered during the period 2005 to 2015 - hence a very very low risk. Wherever there is persistent circulation of the

WPV (wild poliovirus), the risk of infection with the WPV is high, especially if there are pockets of susceptibles for the virus to circulate through. In contrast, in countries where there has not been circulation of the WPV in years, when there is the appearance of vaccine associated disease as the only form of polio identified in the country, that balance of risk and benefit has shifted. That being said, with the 2016 identification of WPV associated disease in Nigeria, in an area that had suboptimal vaccination coverages due to civil unrest, served as a reminder that the WPV could be circulating "under the radarscope" of the public health infrastructure, only to surface when there is access to the area or population at risk. Hence, the risk benefit analysis doesn't necessarily have a clearly definable risk identification.

In response to the observation above that "It's actually an interesting conundrum. The very tool you are using for [polio] eradication is causing the problem," countries that have been polio-free were migrating to the use of the inactivated poliovirus vaccine (IPV) through the years, and the end game strategy for polio eradication includes the complete shift to IPV worldwide. As type 2 VDPV is the most labile virus, with 723 out of 865 (83.6 percent) cVDPV polio cases associated with type 2 cVDPV, as of April 2016, the trivalent oral poliovirus vaccine was replaced with a bivalent poliovirus vaccine, omitting the type 2 vaccine virus, with the intent being to eliminate OPV2 virus from the environment. Unfortunately the virus was already circulating in Syria pre-dating this vaccine switch. (see

<http://polioeradication.org/polio-today/polio-now/this-week/circulating-vaccine-derived-poliovirus/> for tables showing the cVDPV isolates since 2000 and [http://www.who.int/immunization/diseases/poliomyelitis/endgame\\_objective2/en/](http://www.who.int/immunization/diseases/poliomyelitis/endgame_objective2/en/) for a description of the endgame strategy.

The advantages of the OPV include the ease in administration (drops are administered into the mouth), thereby permitting less technical training than needed to administer an injection, the observation that a recently vaccinated individual excretes the vaccine virus into the environment and thereby "vaccinates" others in the process (the conundrum), and produces local immunity in the intestines blocking continuation of circulation of WPV if the individual is exposed to it.

This latter advantage was seen in Israel in 2013. Israel had been using exclusively IPV since 2005. In 2013, there were multiple isolates of WPV1 from environmental samples tested moving chronologically from the south of the country to the north. While the WPV was identified from weekly samples, during a 5-6 month period in 2013, there were no cases of paralytic poliomyelitis identified in the country in general and in the geographic areas surrounding where the positive environmental samples were taken from. Hence, while the vaccine protected the vaccinated individuals (Israel had reported a 94 percent vaccination coverage at that time), it did not completely interrupt transmission of the WPV. (see prior ProMED-mail posts listed below).

We are not far away from the switch in use of the trivalent OPV (containing vaccine viruses type 1, 2 and 3), to the elimination of the type 2 vaccine virus from the vaccine administered in the majority of countries around the world... the switchover date was in April

2016, a bit more than a year ago. As there are other geographic areas with suboptimal vaccination coverages, it would not be too much of a surprise to identify other (hopefully small) foci with cVDPV associated polio cases in the coming period. - Mod.MPP]

[3] AFP private sector reporting challenges - Kuwait

Date: Wed 28 Jun 2017

Source: Arab Times - Kuwait

<<http://www.arabtimesonline.com/news/ministry-blames-private-health-sector-failure-report-detection-cases-acute-flaccid-paralysis/>>

Ministry blames private health sector of failure to report detection of cases - 'Acute flaccid paralysis'

-----  
Ministry of Health has blamed private health sector for failure to report detection of cases of acute flaccid paralysis to the Department of Public Health on time, reports Al-Jarida daily quoting a health source.

According to the report released by the Department of Public Health at the Ministry of Health, the situation coincides with a warning from the World Health Organization against resurface of polio in Syria and newly detected cases of polio in Der Al-Zour, Syria through the same stock of oral vaccine. It blames private health sector for defying the ministerial decision that ordered prompt report of acute flaccid paralysis detected. It indicated failure to report the cases has negative implication on integrity and position of Kuwait by continuing to declare to the World Health Organization that the country is free from polio.

It recommended the ministry should contact the private health sector to urge them give precise information about cases detected to enable the ministry record it appropriately. This is one of the standard conditions and procedures required to declare the country polio free, it stated.

Thwarted in Washington, the Koch network racks up conservative victories in the states

Charles Koch speaks during an interview on the sidelines of the 2015 Koch network seminar. (Patrick T. Fallon For The Washington Post)

BY JAMES HOHMANN  
with Breanne Deppisch and Joanie Greve

THE BIG IDEA:

COLORADO SPRINGS—The wealthy donors who finance the Koch network are frustrated that national Republicans are not doing more to capitalize on having unified control of the federal government. But at their summer seminar here in the Rocky Mountains, which wrapped up last night, many were ecstatic—even giddy—about significant conservative gains that have been made this year in state capitals across the country.

Republicans now control the governorship and legislature in 25 states, compared to only six states for Democrats. Last November, the GOP seized all the levers of lawmaking in four new states – Iowa, Kentucky, Missouri and New Hampshire – making it much easier to pass far-reaching legislation.

The network, led by the billionaire brothers Charles and David Koch, has spent hundreds of millions of dollars on low-profile races and building out grassroots operations in 36 states over the past decade.

In 2017 alone, several of these states have reduced union power, scaled back regulations, cut taxes, blocked Medicaid expansion, promoted alternatives to public education, loosened criminal sentencing laws and eased requirements to get occupational licenses.

Because President Trump is such an all-consuming story, most of these moves received scant national attention. But the 400 donors who descended on the Broadmoor resort over the past few days have been paying close attention and are keenly interested in the outcome of these state-level fights.

“Even in the past six months we’ve seen a lot of success: We have two new right-to-work states, school choice wins in five states, and a dozen states have reduced spending or taxes,” Roger Pattison, director of member relations for the Koch network, said at a dinner on Saturday night. “I could go on and on.”

“We’re coming off the most successful legislative session that this network has ever had, and it’s a result of your investments,” added Luke Hilgemann, chief executive of Americans for Prosperity, which is part of the constellation of Koch-funded groups.

Gov. Matt Bevin (R-Ky.) signs Senate Bill 11, also known as the Leeper Act, at the Paducah Area Chamber of Commerce earlier this month. The legislation lifts the state's 33-year-old moratorium on nuclear power plant construction. (Ryan Hermens/The Paducah Sun via AP)

The two introduced a panel with three Republican governors: Eric Greitens of Missouri, Matt Bevin of Kentucky and Greg Abbott of Texas. Each outlined sweeping changes that have been possible in their states because of unified GOP control and urged donors to keep the spigots open.

“You have to invest in governors because we’re getting things done,” said Greitens, who took office in January after eight years of a Democratic governor.

Bevin pointed out that Sen. Cory Gardner (R-Colo.), the chairman of the National Republican Senatorial Committee, was sitting in the audience. “It’s probably frustrating to him to bang his head against the wall, as it is for others, but the inability to get certain things done ... at the national level ultimately requires that we have things happening from the bottom up,” the governor told the crowd. “Your investment at this level ... can make a powerful, powerful difference. ... This network’s ability to put boots on the ground is transformative for states like Kentucky.”

Making the case that recent GOP gains are fragile, Abbott noted that Texas is one of just four states in which Hillary Clinton in 2016 outperformed Barack Obama in 2012. He expressed concern that Clinton carried Harris County, which includes Houston and some of its surrounding suburbs, even though he had won it in 2014. If Democrats win the Lone Star State, he said, they will have a long-term lock on the White House. “A lot of people really take Texas for granted,” said Abbott, who is up for reelection next year.

Koch network officials reiterated plans to spend between \$300 million to \$400 million on policy and politics in the 2018 cycle and said it will probably be in the higher end of that range. A lot of that will go toward state efforts.

Since most state legislatures are part-time and have now adjourned for the year, the network is already sketching out ambitious plans to hit the ground running in early 2018.

Tim Phillips, the president of AFP, noted that more progress has been made to limit the power of organized labor, which he describes as “worker freedom,” “in the last five years than in the previous five decades.” Bevin and Greitens have both signed right-to-work laws this year, which ban labor unions from collecting mandatory dues from employees they represent in collective bargaining. Six states have now enacted such legislation since 2012, including longtime union strongholds like Wisconsin and Michigan. “Did you think that would have been possible five years ago?” Phillips said.

Phillips revealed at a strategy session that the network’s next targets include Ohio, Minnesota and New Hampshire. “I know Washington tends to suck most of the oxygen out of the room ... but the untold story is the dramatic policy advancements ... at the state level,” he said. “At the state level, we’re seeing a once-in-a-generation renaissance.”

Gov. Doug Ducey (R-Ariz.) addresses the crowd after being inaugurated in Phoenix in 2015. (Ross D. Franklin/AP)

Doug Ducey, the former chief executive of Cold Stone Creamery, was a member of the Koch network before he got elected governor of Arizona in 2014. He still attends the seminars. Yesterday he said that a panel during the January conclave in California helped inspire his education agenda for the most recent session. He brought one of the speakers he had heard to Phoenix to meet with state legislators and business leaders. He just signed a bill that makes every school-aged child in his state eligible for an Educational Savings Account, which gives parents flexibility to spend public money on expenses like private school tuition or tutors. Ducey said “healthy competition” from charter schools and other alternatives is making public education better. “I needed the power of the network,” he told donors.

Stacy Hock, a philanthropist in Austin and a major donor to the Koch network, helped launch a group last year called Texans for Education Opportunity that is pursuing similar objectives. Abbott, the Texas governor, has called a special session to focus on education, and her group is gearing up. Hock urged other Koch donors to reach out to her if they want to create similar advocacy operations in their home states.

“The value of this network cannot be overstated,” she said during a panel on Monday. “Individuals trying to affect policy change at the state level is daunting, but the ability to stand on the shoulders of the giant that is this network to make yourself more impactful and strategic changes the game. It might have taken decades to build such a sophisticated operation, but we had a tremendous impact in just our first session of operation. ... Education policy is a dogfight. The entrenched interests are deeply embedded and very protective of their castle.”

Mark Holden, general counsel of Koch Industries, works in his office in Wichita, Kansas, in 2015. He is the point man for criminal justice reform efforts by the Koch network. (Nikki Kahn/The Washington Post)

Finally, the network is pressing states to overhaul their criminal justice systems. Koch groups worked with the Obama administration and a broad coalition last year on a major federal bill to reduce mandatory minimum sentences, among other changes. Jeff Sessions, as a senator from Alabama, was one of the strongest opponents of that effort. Now the attorney general, he recently issued strict new charging guidelines, including for drug crimes. With the pathway to change blocked off for now in Washington, the network is redoubling its efforts in state capitols.

During this legislative session, Koch World was closely involved with law-and-order discussions in Louisiana, Michigan, Kentucky, Arizona, Iowa, Illinois, Pennsylvania and Ohio. Next year officials hope to work in several other states, including Missouri and Florida.

“The states are leading the way ... That’s where 90 percent of the action is,” said Mark Holden, the general counsel of Koch Industries and chairman of Freedom Partners, a funding arm of the network, in an interview. “Whether the states know it or not, whether the federal government knows it or not, we’re going back to what federalism is all about. The best way to solve an issue is to be proximate to it.”

WHILE YOU WERE SLEEPING:

What’s in the CBO report on the Senate health-care plan

-- The Congressional Budget Office score of the Senate health-care bill that was published last night

and estimated the legislation would leave an additional 22 million Americans without insurance by the end of the coming decade, has threatened the bill's likelihood of passage. Amy Goldstein and Kelsey Snell report: "By late Monday, several senators and aides appeared nervous and unsure about the path forward. They hedged on the timing of that procedural vote and suggested the workweek could stretch beyond Friday. ... Sens. Susan Collins (Maine), Rand Paul (Ky.) and Ron Johnson (Wis.) signaled that they would vote against starting debate Tuesday on the bill in its current form. A fourth senator, Dean Heller (R-Nev.), had expressed his opposition last week."

Senate Majority Leader Mitch McConnell (R-Ky.) arrives at the Capitol. (Andrew Harnik/AP)

-- Mitch McConnell continues to offer amendments to the bill in an attempt to appease reluctant Republicans and get the legislation over the finish line. Juliet Eilperin and Sean Sullivan report on the horse-trading: "Senate leaders worked Monday to modify their plan to overhaul the Affordable Care Act, adding a provision that would penalize consumers for not keeping their plans, by imposing a six-month waiting provision before they could re-enroll. The change, intended to satisfy insurers and minimize the number of Americans who may drop their plans if the bill becomes law, received measured praise from some industry officials but sharp criticism from patient advocates..."

"Other measures, which were part of the original bill but are now facing intense scrutiny, have also raised questions ... One provision that spells out how the Medicaid program could be converted to a block grant, for example, would allow states to spend any leftover money on an item 'that is not related to health care,' as long as they meet 'quality standards' set by the Department of Health and Human Services. ... Separately, the leaders included language that aims to mollify Sen. Lisa Murkowski (R-Alaska), who has questioned the bill's impact on people in her state who gained insurance under the ACA's expansion of Medicaid. ... The bill calls for a transfer of Medicaid funds from states that provide more-generous benefits, such as New York and California, to those that do not. But it says the requirement to transfer funds 'shall not apply to any state that has a population density of less than 15 individuals per square mile.' That would affect just five states: Alaska, Montana, North Dakota, South Dakota and Wyoming." (To track the bill's prospects, The Fix has an up-to-date whip count of Republicans who have stated opposition or hesitation.)

Syrian President Bashar al-Assad attends a meeting in Damascus. (EPA)

-- The White House said it has found potential evidence that Syria's government is preparing for another chemical attack, publicly warning Bashar al-Assad that his regime will pay a "heavy" price if it employs such methods against its citizens again. Abby Phillip and Dan Lamothe report: In a statement last night, Sean Spicer said the United States has identified potential preparations for another attack that would result in the "murder of civilians, including innocent children." Spicer said the regime's activities are "similar" to preparations made before chemical attack in April, which prompted the United States to launch airstrikes against Syrian forces.

"The U.S. military maintains a variety of weapons in the region that could be used in the event of another strike, including manned and unmanned aircraft in several Middle Eastern countries," our colleagues write. "But the most likely scenario is probably a strike using naval assets, which can be launched with fewer diplomatic issues than using bases in allied countries such as Turkey or the [UAE]."

U.S. Ambassador to the United Nations Nikki Haley said the Assad regime and its allies will be "squarely blamed" if such an attack occurred: "Any further attacks done to the people of Syria will be blamed on Assad, but also on Russia & Iran who support him killing his own people," she wrote in a tweet.

Was the Pentagon out of the loop? Five U.S. defense officials reached by BuzzFeed News last night said they were unaware the White House was planning to release its statement: “Usually such statements are coordinated across the national security agencies and departments before they are released. [James Mattis] departed earlier Monday evening for a three-day trip to Germany and Belgium, and Joint Chiefs of Staff chairman Joseph Dunford was in Afghanistan.”

U.S. soldiers train with Polish troops. (Kacper Pempel/Reuters)

-- A Defense Department memo shows that the Pentagon is considering a plan to cancel enlistment contracts for 1,000 foreign-born recruits without legal immigration status, knowingly exposing them to deportation. Alex Horton reports: “The undated action memo, prepared for [Mattis] describes potential security threats of immigrants recruited in a program designed to award fast-tracked citizenship in exchange for urgently needed medical and language skills. Officials have assigned threat level tiers to the nearly 10,000 Military Accessions Vital to National Interest program recruits, [which was launched by the Defense Department] in 2009. Since the program’s start, more than 10,400 troops, most of them with service in the Army, have filled medical billets and language specialties ... [identified] by the Pentagon as vital to the success of military operations, but in short supply among U.S.-born troops. Last year, officials heightened security screenings specifically for MAVNI recruits ... [but] the overtaken vetting process and heightened security risk led officials to recommend canceling enlistment contracts for all 1,800 awaiting orders for basic training, and halting the program altogether.”

-- The E.U. announced a record \$2.7 billion fine against Google for its search result practices. Michael Birnbaum reports: “The European Union’s antitrust chief ... [said] that the powerful company illegally steered users toward its comparison shopping website ... The fine is the largest the European Union has ever levied against a company for abusing its dominant position, and marked the latest confrontation over business practices between E.U. regulators and American tech giants ... And as President Trump advocates a fierce America-first policy of trade protectionism, the ruling also raised questions of how his administration would respond to the broadside hit against one of the richest companies in the United States.”

-- Separately, Google announced that it will stop reading your emails. The company’s practice of scanning Gmail messages for better targeted advertisements has caused controversy for years. (Brian Fung)

#### GET SMART FAST:

1.The House Ethics Committee announced that it is reviewing charges against two Democratic lawmakers and one senior aide, agreeing to hear allegations against Rep. John Conyers Jr., the ranking Democrat on the Judiciary Committee, Rep. Ben Ray Luján, chairman of the DCCC, and Michael Collins, who serves as chief of staff to Rep. John Lewis. The allegations were forwarded by the independent Office of Congressional Ethics based on a “substantial reason to believe” a breach had occurred. The Ethics Committee did not detail the allegations, but a report on each case will be made public in August. (Mike DeBonis)

2.The opioid epidemic could kill as many as 650,000 Americans over the next decade, according to a panel of public health experts. If that worst-case scenario occurred, the epidemic would have killed more Americans in ten years than HIV/AIDS has since that epidemic began. (STAT)

3.The family of Philando Castile reached a nearly \$3 million settlement with the Minnesota city where he was fatally shot during a routine traffic stop last year. The officer who shot Castile was acquitted two weeks ago. (Mark Berman)

4.A Mississippi historical marker for Emmett Till was vandalized. It marks the second time in less than a

year that the sign has been defaced. (Peter Holley)

5. Brazil's attorney general formally accused President Michel Temer of corruption, making him the country's first sitting president to ever face criminal charges, and delivering a potential blow to political stability in Latin America's largest country. (AP)

6. Russia's Federal Security Service said terrorists used the encrypted messenger app Telegram to plan a deadly attack at a St. Petersburg train station earlier this year. The government is targeting anonymity on the Russian segment of the Internet and lawmakers are advancing a ban on the use of virtual private networks that mask IP addresses. (Andrew Roth)

7. Britain said it will begin testing the safety of exterior cladding on hundreds of schools, hospitals, and other buildings across the country, widening an existing fire-safety effort after tests on more than 70 public housing towers produced a 100 percent failure rate. The results point to a vast fire-safety problem after London's 24-story Grenfell Tower was destroyed in a catastrophic blaze. (Griff Witte and Karla Adam)

8. The Turkish bodyguards who were served with criminal charges for allegedly attacking protesters outside the ambassador's residence in D.C. "won't set foot on German soil in the foreseeable future," a spokesman for the German Foreign Ministry announced. The move bars the offenders from attending an upcoming G-20 summit in Hamburg. Germany, home to the second-largest Turkish population in the world, is preparing to accommodate a big wave of protesters outside the summit. (Isaac Stanley-Becker)

9. Dozens of activists formally filed a petition to try recalling the California judge who handed down the lenient prison sentence of former Stanford swimmer Brock Turner for sexual assault. (Nicole Lewis)

10. Amtrak named a former Delta executive, Richard Anderson, as its new president and chief executive. The current chief executive took over the railroad just last September. (Lori Aratani)

11. A Spanish judge has ordered the body of Salvador Dalí exhumed for DNA extraction, siding with a fortune-telling mother of four who believes she could be the daughter of the eccentric artist and, thus, entitled to a share of his massive wealth. (Max Bearak)

12. The Obama family took a river rafting trip while vacationing in Indonesia. (NBC News)

13. Alec Baldwin will reprise his Trump impersonation for the next season of "SNL." The president must be thrilled. (CNN)

#### THE SUPREME COURT PREPARES FOR A CONTENTIOUS FALL TERM:

-- The Supreme Court agreed to review a series of lower-court rulings blocking Trump's contentious travel ban — allowing a scaled-back version of his executive order to move forward until justices can review merits of the case in the fall. Robert Barnes and Matt Zapotosky report: "The court's unsigned order delivered a compromise neither side had asked for: It said the ban may not be enforced against those with a 'bona fide' connection to this country, such as family members here or an awaiting job or place in an American university. But the justices indicated that lower courts had gone too far in completely freezing Trump's order[:] 'The government's interest in enforcing (the executive order) and the executive's authority to do so, are undoubtedly at their peak when there is no tie between the foreign national and the United States,' the court wrote..."

"In the opinion, the court said it will consider the merits of the case [when] it reconvenes in October. In the meantime, the court nudged the Trump administration to get on with what it said would be a temporary pause to review vetting procedures. 'We fully expect that the relief we grant today will permit the executive to conclude its internal work and provide adequate notice to foreign governments' within 90 days, the court said. That means by the time the court takes the case up in the fall, circumstances could be quite different. Depending on the results of the review, Trump could push to extend the measure, or even make it permanent. And the court told lawyers to address whether the court's consideration of the case might be moot by fall."

Trump called the court's decision a "clear victory for our national security." "As President, I cannot allow

people into our country who want to do us harm. I want people who can love the United States and all of its citizens, and who will be hardworking and productive,” he said. He added that he was “particularly gratified that the Supreme Court’s decision was 9-0.”

Supreme Court allows limited travel ban to move forward

#### OTHER IMPORTANT SCOTUS NEWS:

-- Justice Anthony Kennedy did NOT announce his retirement.

-- The high court ended its term with a major First Amendment decision, ruling that efforts at separating church and state go too far when they deny religious institutions access to government grants meant for a secular purpose. Barnes reports: “In siding with a Missouri church that had been denied money to resurface its playground, the court ruled 7-2 that excluding churches from state programs for which other charitable groups are eligible is a violation of the Constitution’s protection of the free exercise of religion. ‘The consequence is, in all likelihood, a few extra scraped knees,’ wrote Chief Justice John G. Roberts Jr. ‘But the exclusion of Trinity Lutheran from a public benefit for which it is otherwise qualified, solely because it is a church, is odious to our Constitution all the same.’ Trinity Lutheran Church in Columbia, Mo., brought the case because it was excluded from a state program that reimburses the cost of rubberizing the surface of playgrounds. The court’s ruling in Trinity Lutheran v. Comer was a narrow one, but experts said it is sure to bring more challenges from religious groups in other areas.”

-- The Supreme Court agreed to consider whether a Denver baker unlawfully discriminated against a gay couple by refusing to sell them a wedding cake. Barnes reports: “Lower courts had ruled that [store owner Jack Phillips] had violated Colorado’s public accommodations law, which prohibits refusing service to customers based on factors such as race, sex, marital status or sexual orientation. The court granted the case after weeks of considering it. In 2014, the justices declined to revisit a New Mexico Supreme Court decision that found that a photographer violated a state civil rights law when she declined to photograph a lesbian couple’s commitment ceremony. Since then, the high court has found that marriage is a fundamental right that states may not prohibit to gay couples. The justices also reversed the Arkansas Supreme Court and said the state must list same-sex parents on birth certificates in the state. To refuse, the court said, is to deny married same-sex couples the full ‘constellation of benefits’ that government has linked to marriage. Justices Clarence Thomas and [Samuel Alito] joined [Neil Gorsuch’s] dissent, which said the law regarding such issues is not yet settled and stable.”

The court will decide this case as support for same-sex marriage has reached an all-time high in the U. S. The Pew Research Center reports: “By a margin of nearly two-to-one (62% to 32%), more Americans now say they favor allowing gays and lesbians to marry than say they are opposed ... The latest national survey by Pew Research Center ... finds striking increases in support for same-sex marriage among some demographic and partisan groups that, until recently, had broadly opposed it, including ... Republicans. For the first time, a majority of Republicans and Republican-leaning independents do not oppose allowing gays and lesbians to marry legally.”

-- The court declined to hear a cross-border shooting case involving the death of an unarmed Mexican teenager who was fatally shot by a U.S. Border Patrol agent, vacating and remanding the case back to a federal appeals court for reconsideration. Ann E. Marimow and Barnes report: “The narrow ruling came in an unsigned order, accompanied by dissents from three justices, suggesting a conflicted court when it comes to questions of how the country polices the daily churn along the border. In putting off a decision, the high court acknowledged a ‘disturbing incident resulting in a heartbreaking loss of life’ but said it would be ‘imprudent’ to decide whether the 15-year-old’s family has a right to sue in the United States before a federal appeals court reviews a separate Supreme Court opinion issued last week.”

-- The court also announced that it would schedule two immigration-related cases for re-argument, signaling that the justices were deadlocked. Both cases were argued before Gorsuch was confirmed in

April.

-- Bigger picture: The flurry of activity showcased just how conservative Gorsuch will be on the court. Reuters' Lawrence Hurley and Andrew Chung report: "Gorsuch showed his inclination to rule from a spot occupied by fellow conservative Clarence Thomas. At a minimum, he is so far living up to Trump's claim that he would be a conservative in the mold of the man he replaced, Justice Antonin Scalia. ... Liberal groups and Democratic senators had vociferously opposed Gorsuch's appointment, with the evidence so far suggesting their depiction of him as a dogged conservative was largely correct. 'Justice Gorsuch has shown himself to be the conservative ideologue many predicted he would be and not the moderating check on the executive branch as others suggested he would be,' said Michele Jawando, a lawyer with the liberal Center for American Progress. ... Conservatives are delighted. Their hope that Gorsuch, 49, would be a solid vote on the right, would appear to be well founded."

Former Trump campaign adviser Carter Page speaks at a news agency in Moscow. (Pavel Golovkin/AP)

THERE'S A BEAR IN THE WOODS:

-- The FBI has questioned former Trump campaign adviser Carter Page "at length" about his contacts with Russia and interactions with Trump's presidential campaign. Devlin Barrett reports: "Over a series of five meetings in March, totaling about 10 hours of questioning, Page repeatedly denied wrongdoing when asked about allegations that he may have acted as a kind of go-between for Russia and the Trump campaign ... The interviews with the FBI are the most extensive known questioning of a potential suspect in the probe of possible Russian connections to associates of President Trump."

Page confirmed the interviews Monday, calling them "extensive discussions," but declined to say if he has spoken to investigators since then. He said the FBI agents "acknowledged that I'm a loyal American veteran but indicated that their management was concerned that I did not believe the conclusions" of a U.S. intelligence report describing Moscow's interference in the U.S. election. As he has for months, Page maintained the accusations against him are "lies" spread by Clinton and Obama supporters and aimed at weakening Trump.

-- Jared Kushner has retained the services of defense attorney Abbe Lowell, bringing onboard the storied white-collar defense lawyer to advise him in the ongoing Russia investigation, which includes scrutiny of his business dealings. Abby Phillip and Philip Rucker report: "Lowell, a lawyer at Chadbourne & Parke, has defended a number of high-profile clients and was chief counsel to House Democrats during impeachment proceedings against [Bill Clinton]. He has also represented Sen. Robert Menendez against corruption charges. 'When Bob Mueller left WilmerHale to become special counsel and three of our colleagues joined him, we asked Mr. Kushner to get independent legal advice on whether to continue with us as his counsel,' said Kushner's attorney Jamie Gorelick. 'He engaged Abbe Lowell to advise him and then decided to add Mr. Lowell to the team representing him.' [On Sunday, The Post reported] that one of the deals that might be scrutinized ... is a \$285 million loan Kushner's real estate company finalized one month before Election Day."

-- Officials at the Office of the Director of National Intelligence are blocking a Freedom of Information request for a redacted version of a critical report that former President Obama received in January on Russian election interference. Politico's Josh Gerstein reports: "Then-Director of National Intelligence James Clapper made public an unclassified version of that report, but the Electronic Privacy Information Center brought a Freedom of Information Act lawsuit demanding a copy of the classified report given to Obama at the same time. EPIC said the unclassified version omitted 'critical technical evidence' that could help the public assess U.S. intelligence agencies' claims that Russia did make efforts to affect the outcome of the 2016 race. However, a top official in the Office of the Director of National Intelligence, Daniel Coats, said in a court declaration filed Monday that releasing the original report with classified information blacked out would be a field day for foreign intelligence operatives, including the very

Russians the report accuses of undertaking the interference.”

-- One of Michael Flynn’s consulting clients, Ekim Alptekin, has come under scrutiny for his ties to the embattled former national security adviser, but Alptekin’s business partner has gone largely unnoticed. Politico’s Isaac Arnsdorf reports: “The man, Dmitri “David” Zaikin, is not registered as a foreign lobbyist and has no apparent connection to Turkey. What he does have ... is a long track record of partnering with powerful Russian businesspeople and government officials, mostly involving energy and mining deals. More recently, Zaikin has done political work in Eastern Europe, advising parties in Albania and Macedonia that have drifted toward the Kremlin. Zaikin also has business connections to Trump. Working at a real estate agency in Toronto in the 2000s, Zaikin brokered sales in one of the city’s new high-rises: the Trump International Hotel and Tower ... Zaikin has not been accused of any wrongdoing. Alptekin and Zaikin have denied knowing each other, and say Zaikin had nothing to do with Flynn’s lobbying deal.”

-- One of Trump’s lawyers, Jay Sekulow, has been accused of steering millions of dollars away from his Christian non-profit and towards his family, The Guardian’s Jon Swaine reports: “Documents obtained by the Guardian show Sekulow [in June 2009] approved plans to push poor and jobless people to donate money to his Christian nonprofit, which since 2000 has steered more than \$60m to Sekulow, his family and their businesses. Telemarketers for the nonprofit, Christian Advocates Serving Evangelism (Case), were instructed in contracts signed by Sekulow to urge people who pleaded poverty or said they were out of work to dig deep for a ‘sacrificial gift’. ‘I can certainly understand how that would make it difficult for you to share a gift like that right now,’ they told retirees who said they were on fixed incomes and had ‘no extra money’ – before asking if they could spare ‘even \$20 within the next three weeks’.”

#### MORE ON HEALTH CARE:

-- Key takeaways from the CBO report:

\*“Two-thirds of the drop in health coverage a decade from now would fall on low-income people who rely on Medicaid.” Philip Bump writes that, contrary to statements from the bill’s defenders over the weekend, the CBO report definitively confirms that the Senate bill would constitute major Medicaid cuts.

\*“The sharpest spike in insurance premiums would fall on middle-aged and somewhat older Americans.”

\*“Its analysis of the Senate measure’s impact on federal spending — \$321 billion saved over a decade — compared with \$119 billion for the House’s version.”

\*“The Senate bill would mean that an estimated 15 million fewer Americans would have coverage next year ... At the end of the decade, the 22 million increase in the ranks of the uninsured would include 15 million low-income Americans who would otherwise be on Medicaid and 7 million with private insurance.”

-- If the CBO’s estimates prove accurate and the legislation passes, what would it mean for the average American?

\*For elderly, low-income Americans, insurance premiums would rise by 280 percent over the next decade. Amber Phillips reports: “In a report filled with brutal numbers for Republicans, this may be the most brutal.”

\*“A 21-year-old making \$56,800 would pay 1.8 percent more of his income under Obamacare than under the Senate bill, but someone who was 64 would pay 24.1 percent more of her income.” Philip

Bump reports: "As an American ages, their health care would cost them more and more money."

\*For low-income Americans, "it would be so financially burdensome with high deductibles that many people would choose not to sign up." Carolyn Y. Johnson reports: "Here's how CBO described the conundrum for someone who makes \$11,400 a year in 2026: they'd benefit from tax credits and pay only \$300 a year in premiums for their insurance. But their deductible would be more than half their annual income. Buying a more generous plan -- with a deductible that is a third of that person's income -- would cost \$1,700 a year."

\*For wealthy Americans, "the two main areas in which they'd see reduced taxes are on the Additional Medicare Tax (which applies to individuals who make \$200,000 or more in income) and a tax on investment income," Philip Bump reports.

\*"For those who could afford to get covered, their insurance would be less comprehensive." Kim Soffen reports: "The CBO expects the federal government will cover 70 percent of someone's health-care costs, on average, compared with 87 percent under Obamacare and 65 percent under an early version of House Republicans' health-care bill." Combining all of the above factors, the bill becomes quite "difficult for [Senate Republicans] to sell ... back home."

## Senate Democrats blast GOP health-care bill following CBO forecast

-- After the CBO released its estimates, Senate Democrats came out in force to denounce the bill, even taking their fight to the Capitol steps. David Weigel reports: "Sen. Cory Booker (D-N.J.) gathered colleagues on the steps outside the Senate, where they talked for hours into a Facebook feed as activists filed in and out to watch the debate. The tone alternated between grim stories of people who would lose access to Medicaid, and in-jokes between the senators."

-- Sen. Bernie Sanders has recently taken his argument against a health-care overhaul on the road, packing an Ohio concert hall with over 2,000 people on Sunday. Weigel was there: "The Columbus rally, the largest of three that Sanders staged over the weekend in Rust Belt states that Trump won in 2016, was part of an aggressive, last-ditch push to stop the Senate bill ... Teeing up the week's votes this way makes a point — they are unlikely to be able to tack their rhetoric into the legislation itself. But it also reveals the limitations of what Democrats, who have taken to Twitter to oppose the bill and plan to offer amendments to alter it, can do to stop a bill in the Republican-controlled chamber."

## HOW IT'S PLAYING:

-- The Post's Editorial Board calls the CBO's conclusion "damning": "The current system is not perfect, but it is also not collapsing," the board writes. "Though the CBO acknowledged that 'premiums have been rising under current law,' it projected 'sufficient demand for insurance by enough people, including people with low health care expenditures, for the market to be stable in most areas.' The Senate bill's system, meanwhile, would struggle to serve people in sparsely populated and other difficult-to-cover areas, just as the Affordable Care Act has. Obamacare requires fixes, not a destabilizing 'rescue.' The Senate bill contains provisions to shore up the existing system before transitioning to the shoddier one. It should just pass the fixes and move on."

-- Liberal columnist Eugene Robinson writes that Republicans could pay a high political price for advancing the bill: "The fact is that the party that tries to make substantial changes in health-care policy owns the issue and gets blamed for everything that goes wrong ... Republicans worry about having spent seven years promising to 'repeal and replace' the ACA and then failing to follow through. But if they do take the leap, Democrats competing in the 2018 midterms will be able to turn that slogan around with a clarion call to 'repeal and replace' the American Health Care Act."

-- Post columnist Catherine Rampell writes that the bill defies Republicans' bedrock principles on fixing the system: "Republicans have long bellyached that rising insured rates are misleading. Their argument: Having insurance coverage is meaningless if your deductible is so enormous that you can't afford to see the doctor! It's a fair point. But the Senate bill does nothing to improve access to care. In fact, it places care further out of reach. It does this not only by causing people to lose insurance

coverage and raising after-tax premium prices, but also by making 'insurance coverage' an even less useful gauge of whether a person can afford to see a doctor ... When all's said and done, there's just one major Republican health-care principle this bill remains loyal to: tax cuts for the rich."

-- Jennifer Rubin writes on the conservative Right Turn blog: "This is not a bill about providing cheaper, better health care to the masses. It's not about helping older or rural Americans. It's about taking hundreds of billions of dollars out of Medicaid and giving the money to rich people in the form of tax cuts. The CBO report makes clear what a total disgrace the bill really is."

-- Partisan attacks on the CBO have been largely overblown, Max Ehrenfreund argues on Wonkblog: "Republicans are correct that the CBO's forecasts for Obamacare did prove inaccurate in some important respects, as well as that, on several occasions, the agency revised its initial projections. But outside the spin room, health-care experts on both sides of the aisle say that the CBO is reliably nonpartisan ... The CBO's [Obamacare] forecasts overstated both the costs and the benefits of the Democratic changes, as the measure appears likely to have a lower price tag than CBO anticipated but has also insured fewer people than proponents hoped."

Jon Ossoff: A Rubber Stamp

#### OFF TO THE RACES:

-- The top GOP House super PAC intends to double-down on its "tried-and-true tactics" for the 2018 midterms — namely tying all Democratic candidates to Nancy Pelosi. Mike DeBonis reports: "The Congressional Leadership Fund, which has ties to House Speaker Paul D. Ryan (R-Wis.), plans to spend \$100 million before next year's midterm elections, and Executive Director Corry Bliss said in a memo released Tuesday that he sees no reason to abandon a strategy that has paid dividends for six years — most recently in Georgia's 6th congressional district, where CLF advertising featuring Pelosi (D-Calif.) and her San Francisco district helped define and defeat Democratic candidate Jon Ossoff in this month's special election there ... In 11 districts Democrats have identified as 2018 targets, Pelosi's favorability is at least 10 points underwater ... It is not unusual for a congressional leader to be widely unpopular. What is unusual is the relentlessness and effectiveness of the GOP's targeting of Pelosi."

-- In an op-ed for The Washington Post, Ossoff offers lessons for fellow Democrats heading into 2018. He writes: "Grass-roots politics, linking small-dollar fundraising to massive local volunteer organization, showed that it can rival the power of a right-wing machine comprising super PACs backed by entrenched interests and mega-donors. These outside groups were forced to spend nearly \$20 million defending a seat gerrymandered never to be competitive ... We ran an economy-first campaign centered on local prosperity and opportunity ... We paired this economic platform with an unwavering support for a woman's right to choose, Americans with preexisting conditions, criminal-justice reform, Medicare and Medicaid, voting rights, immigration reform, lesbian, gay, bisexual and transgender rights, anti-corruption efforts and U.S. leadership to fight climate change ... I remained committed to civility and optimism throughout the campaign, and I remain committed to civility and optimism now."

-- Virginia Rep. Barbara Comstock, included on the DCCC's list of vulnerable Republicans, received two more Democratic challengers. Jenna Portnoy reports: "Democrats think they have a chance to flip the Northern Virginia seat, which has been in Republican hands since 1980, after the area backed Democrat Hillary Clinton in the 2016 presidential election. Comstock supporters say the congresswoman's ability to outperform GOP presidential candidate Donald Trump by 16 points to win a second term cemented her dominance in the district."

-- An early 2018 indicator? When asked about the Senate health-care bill, Virginia gubernatorial candidate Ed Gillespie, the Republican running in the most closely watched race of 2017, dodges the question. Inside NoVa's Alex Koma reports: "[Gillespie] repeatedly stressed that he's waiting to form an opinion on the bill until his policy team can examine it, and he remains adamant that Barack Obama's signature healthcare law was a 'disaster for Virginia' and needs to be repealed. Gillespie also argued

that he's more focused on 'enacting policies in Richmond' than he is on the goings-on of Congress, which he believes provides a stark contrast with his Democratic opponent, Lt. Gov. Ralph Northam ... Yet, should Republicans succeed in passing some repeal of the ACA, the state's next governor will need to consider the impact of the law's coverage cuts and premium hikes on both older and poorer Virginians."

Trump greets Modi at White House

THE NEW WORLD ORDER:

-- While meeting with Indian Prime Minister Narendra Modi, Trump declared them to both be "believers" in public accountability — then refused to take reporters' questions. David Nakamura reports: "The White House declined to offer details about whose decision it was — the Americans' or the Indians' — to bar questions ... There was no mention of fault lines between the White House and New Delhi on the Paris climate accord, which Trump announced this month the United States would withdraw from but which India and China have supported. Nor did Modi mention immigration issues amid speculation that the Trump administration could cut H-1B visas for high-tech workers, visas that have benefited India ... Critics [of Trump and Modi], including civil liberties groups, have highlighted other similarities among two leaders who have sought, at times, to restrict media coverage and the flow of information."

-- Senate Foreign Relations Committee Chairman Bob Corker threatened yesterday to withhold consent from a U.S. arms sale to Persian Gulf countries until they resolve their dispute with Qatar. Karen DeYoung reports: "While congratulating President Trump on signing a joint statement of unity last month with the Gulf Cooperation Council, [Corker] said in a letter to Secretary of State Rex Tillerson that recent conflicts among GCC members 'only serve to hurt efforts to fight ISIS and counter Iran' ... 'For these reasons, before we provide any further clearances ... on sales of lethal military equipment ... we need a better understanding of the path to resolve the current dispute and reunify the GCC.' It was unclear what power Corker has to stop what the administration has said were \$110 billion worth of arms deals signed with the Saudis during President Trump's trip there last month. Laws governing such sales require congressional notification but not formal consent."

-- The embargo on Qatar is also disrupting a usually little-noticed market: helium. Ana Swanson reports: "The ultralight gas is widely used in medical imaging, technology manufacturing and nuclear reactors. And the blockade of Qatar, the source of nearly one-third of the world's helium supply, could soon cause destabilizing shortages and skyrocketing prices in this essential global market. In 2015, Qatar supplied 27.2 percent of the global supply."

-- The fight against ISIS will likely get only more complicated once it moves beyond Raqqa, Defense Secretary Jim Mattis said yesterday. Thomas Gibbons-Neff reports: "Speaking to reporters on his way to Germany Monday to meet with European allies, Secretary of Defense Jim Mattis spoke broadly about the U.S. military's future operations against the Islamic State in the Euphrates River Valley, adding that it will take "more precision" to stave off any incidents between the disparate forces operating there. 'You have to play this thing very carefully,' Mattis said. 'The closer we get, the more complex it gets.' Mattis also acknowledged that the U.S. would continue to supply Kurdish forces in the north with weapons despite objections by U.S. ally Turkey. 'When they don't need them anymore we'll replace them with what they do need,' he said."

-- The U.S. intends to add China to its list of the worst offenders in human trafficking and forced labor. Reuters' Matt Spetalnick reports: "The reprimand of China, Washington's main rival in the Asia-Pacific region, would come despite Trump's budding relationship with Chinese counterpart Xi Jinping and the U.S. president's efforts to coax Beijing into helping to rein in North Korea's nuclear and missile programs. Secretary of State Rex Tillerson has decided to drop China to 'Tier 3,' the lowest grade, putting it alongside Iran, North Korea and Syria among others."

-- A new poll suggests that the Trump presidency is already damaging America's reputation abroad. Isaac Stanley-Becker and Scott Clement report: "The international survey by the Pew Research Center found that favorable ratings of the United States have decreased from 64 percent of people across all countries surveyed at the end of Barack Obama's presidency to 49 percent this spring. The new figures are similar to those toward the end of the George W. Bush administration ... It is perhaps unsurprising that a man who campaigned on a pledge to put American interests first would generate backlash in other parts of the world ... What is surprising, said Frank G. Wisner, a former diplomat who served under Democrats and Republicans, is the degree to which Trump has scorned principles the United States has not only long espoused but also helped to define in the previous century."

One notable exception: "Russia is a bright spot for Trump. As beleaguered as the president is at home, a majority of Russians say they have confidence in him."

Security guards walk past the entrance to CNN headquarters in Atlanta. (David Goldman/AP)

#### THE FOURTH ESTATE:

-- Three CNN journalists resigned after the retraction of a story that connected former Trump transition official Anthony Scaramucci with a Russian investment fund, following an internal investigation that found some "standard editorial processes" weren't properly followed before the story's publication. The story in question cited just one anonymous source — departing from typical editorial procedure for such material, which CNN's Brian Stelter says often includes multiple levels of review from fact checkers and lawyers, among others. "We pulled it down not because we disproved it," a CNN source told The Post's Erik Wemple, adding that there was "enough concern" on some factual points that "given the breach in process, we decided to pull it down."

-- Donald Trump Jr. accelerated the controversy by demanding in a statement that CNN chief executive Jeff Zucker hold "an on-camera press briefing about CNN's fake news scandal before the White House does any more of them."

-- "The event is a cataclysm accentuated by the peculiar bind in which the 24-7 network has found itself," Wemple writes. "CNN tops [Trump's] list of objectionable news outlets, one that he famously claimed in a January transition press conference was 'fake news,' even though the reporting he was referring to — about high-level intelligence briefings — was 100 percent correct. Trump fans everywhere have taken up the fight, hammering the network every time it equivocates or otherwise over-reports the Russia-Trump line of inquiry. That context explains the speed and severity of CNN's personnel moves ... An organization of nearly 4,000 news professionals; an organization that has spent huge sums recruiting ever-greater reportorial muscle; an organization that promises both sides a fair shake ... it just cannot abide getting shamed by Sputnik and Breitbart."

-- The president himself weighed in on the CNN retraction early this morning:

-- Sean Spicer again received harsh criticism from journalists for refusing to allow TV cameras into yesterday's briefing. Reuters' Roberta Rampton and Steve Holland report: "'Why are the cameras off, Sean? Why did you turn them off?' shouted CNN correspondent Jim Acosta. Other reporters chimed in. 'You are a taxpayer-funded spokesman for the United States government - can you at least give us an explanation for why the cameras are off?' Acosta asked. Spicer answered questions for audio only about President Donald Trump's healthcare overhaul bill, a Supreme Court ruling on Trump's travel ban, and Trump's tweets about investigations into Russian meddling in the 2016 presidential election."

-- Despite the substantial rollback of press access, members of the media haven't staged much of a

protest yet. Paul Farhi writes: “Despite the administration’s unusual and increasing opacity, the reaction from reporters has been relatively muted. A few have noted it on Twitter, but none has taken up two suggestions offered by President Trump’s critics: Defy the camera ban and broadcast the briefings anyway, or boycott them. There are signs, however, that reporters may be gradually finding their backbones.”

American University student government president Taylor Dumpson speaks during a news conference on Capitol Hill in May. (Susan Walsh/AP)

#### WAPO HIGHLIGHTS:

-- “After bananas and nooses on campus, here’s how a student body president copes,” by Sarah Larimer: “[Taylor] Dumpson is the student government president at American University, which was jolted by a racial incident on May 1 when bananas were found hanging from strings fashioned in the shape of nooses on three locations on the Northwest Washington campus. The university termed the incident a hate crime. In the aftermath, Dumpson was thrust into a very public spotlight, dealing with news conferences, town halls and meetings. She became the latest student leader to confront tensions over racially charged incidents on campuses across the country ... For the 21-year-old Dumpson, from Salisbury, Md., the entire matter has been deeply personal. The bananas were marked with the letters of a sorority with predominantly African American membership. Dumpson is a member of that sorority, Alpha Kappa Alpha (AKA). What’s more, the fruit was found on her first full day in office.”

-- “A ‘very credible’ new study on Seattle’s \$15 minimum wage has bad news for liberals,” by Max Ehrenfreund: “When Seattle officials voted three years ago to incrementally boost the city’s minimum wage up to \$15 an hour, they’d hoped to improve the lives of low-income workers. Yet according to a major new study that could force economists to reassess past research on the issue, the hike has had the opposite effect. The city is gradually increasing the hourly minimum to \$15 over several years. Already, though, some employers have not been able to afford the increased minimums. They’ve cut their payrolls, putting off new hiring, reducing hours or letting their workers go, the study found. The costs to low-wage workers in Seattle outweighed the benefits by a ratio of three to one ... [and] on the whole, the study estimates, the average low-wage worker in the city lost \$125 a month because of the hike in the minimum. The paper’s conclusions contradict years of research ... [which in contrast] have found that the benefits of increases for low-wage workers exceed the costs ... often by a factor of four or five to one.”

#### SOCIAL MEDIA SPEED READ:

Liberal Plum Line blogger Greg Sargent argues that the two tweets above about Russian hacking leave Trump badly exposed. He writes: “In a few tweets last week, Trump blasted the Obama administration for failing to act on what it had learned about Russia’s meddling efforts. But now Trump is explicitly offering a rationale for this, i.e., that Obama didn’t think Trump was going to win, and so didn’t bother doing anything about it, because it might have ‘rocked the boat,’ whatever that is supposed to mean. This line of argument leaves Trump deeply exposed, however. It represents an acknowledgment that the intelligence community had, in fact, concluded that Russia interfered with the purpose of helping Trump win. And it also exposes Trump to questions about what his administration (and Republicans) are prepared to do about expected Russian efforts to meddle in the next election.”

Trump weighed in on McConnell’s fight for 50 votes on health care:

He also tweeted out a story from Fox News:

But the timing of the Fox News tweets was odd:

Democratic senators continued to slam the Senate health-care bill after the CBO released its score, as Republican senators stayed mostly quiet:

From Hillary Clinton's former spokesperson:

From the president of the AFL-CIO:

The former governor of Maryland responded to Kellyanne Conway's suggestion that those who lose their Medicaid coverage could find jobs:

A pro-Trump super PAC began going after wavering senators' staffers. From a Republican strategist:

One Republican senator struggled to explain the bill his caucus was proposing:

Trump kept the media at arm's length during his Modi meeting:

A top Democratic election lawyer commented on Kushner hiring Abbe Lowell:

A pro-Trump group launched an offensive against the special counsel's Russia investigation:

The editor of Commentary magazine responded to the outrage over CNN's retracted Russia story:

Sen. Jeff Flake lost his father yesterday:

Rep. Steve Scalise congratulated the newest Republican members of Congress:

West Virginia experienced some aerial confusion over health-care ads:

Joe Biden took on an honorary summer job:

And the Harry Potter series celebrated its 20th birthday:

Lynne Patton at the Republican National Convention in Cleveland. (J. Scott Applewhite/AP)

#### GOOD READS FROM ELSEWHERE:

-- The New York Times, "'Give Me a Chance,' Trump Associate-Turned-Housing-Official Says," by Yamiche Alcindor: "After The Daily News reported two weeks ago that [Lynne] Patton, a longtime Trump family associate who worked on the president's campaign and helped plan his son Eric's wedding, would be [appointed for a federal housing role], housing advocates and elected officials criticized the appointment. Most said Ms. Patton was not qualified for the job ... [and] Representative Grace Meng, Democrat of New York even wrote a letter to the president demanding Ms. Patton's immediate removal. But on Monday, Ms. Patton will begin her job in her new office in Manhattan. 'The misdirected discontent with my boss has prevented people from seeing the obvious fact that I am, more than anyone, best suited to serve as this liaison because, after all, I have a direct line to both the secretary and the president of the United States,' she said. 'I'm not going to hesitate to use them, either ...'

"While some see her appointment as a symbol of nepotism, Ms. Patton sees it as giving residents of New York and New Jersey an advocate with unprecedented access to those in charge. While critics see her background as lacking, she sees herself as a representation of the president's promise to shake things up ... And while many have cast her as an unqualified wedding planner, she sees the label as a result of a rumor ..."

-- The New Yorker, "The National Enquirer's Fervor for Trump," by Jeffrey Toobin: "[David Pecker] thought Donald walked on water,' [one former] employee said. 'Donald treated David like a little puppy. Donald liked being flattered, and David thought Donald was the king. One employee said that Trump was also a frequent source for Enquirer stories. '[If] Donald didn't want a story to run, it wouldn't run, [that employee said]. 'You can put that in stone.' Indeed, early in the 2016 campaign Pecker simply turned over the pages of the Enquirer to Trump, allowing the candidate to write columns under his own byline ... Pecker is now considering expanding his business: he may bid to take over the financially strapped magazines of Time, Inc., [and] based on his stewardship of his own publications, Pecker would almost certainly direct those magazines, and the journalists who work for them, to advance the interests of the President and to damage those of his opponents—which makes the story of the Enquirer and its chief executive a little more important and a little less funny ..."

-- Wall Street Journal, "China's All-Seeing Surveillance State Is Reading Its Citizens' Faces," by Josh Chin and Liza Lin: "Facial-recognition technology, once a specter of dystopian science fiction, is becoming a feature of daily life in China, where authorities are using it on streets, in subway stations, at airports and at border crossings in a vast experiment in social engineering. Their goal: to influence behavior and identify lawbreakers. [Gan Liping], 31 years old, had been caught on camera crossing illegally here once before, allowing the system to match her two images. Text displayed on the crosswalk screens identified her as a repeat offender ... 'I won't ever run a red light again,' she said."

-- New York Magazine, "Just Wait: Watergate didn't become Watergate overnight, either," by Frank Rich: "Unlike Nixon, who had to contend with Democratic majorities in the House and Senate, Trump has the shield of a Republican Congress ... [a distinction that is] alone is enough to make anti-Trumpers abandon all hope. I'm here to say don't do so just yet. There's a handy antidote to despair: a thorough wallow in Watergate, the actual story as it unfolded, not the expedited highlight reel that most Americans know from a textbook précis or cultural artifacts like the film version of All the President's Men. If you look through a sharp Nixonian lens at Trump's trajectory in office to date, short as it has been, you will discover more of an overlap than you might expect ..."

-- Politico Magazine, "It's the End of Small Talk in Washington," by Daniel Lipman and John F. Harris: "Team Trump is showing few signs so far of hungering for the sort of social intercourse with permanent Washington that usually accompanies a new administration. And many longtime capital denizens in interviews describe themselves as put off by what they see as Trump's personal vulgarity, and disturbed on some more fundamental level by the tornado of ethical controversies swirling around him. 'I think you are going to need a very strong blender to mix the Washington community with the Trump crowd, and I don't think it's going to end up being a smoothie,' says Sally Quinn, widow of the legendary Washington Post editor Ben Bradlee. 'A friend of mine said, 'It's the end of small talk in Washington.'"

#### HOT ON THE LEFT

"E.P.A. Official Pressured Scientist on Congressional Testimony, Emails Show," from The New York Times: "Deborah Swackhamer, an environmental chemist who leads the E.P.A.'s Board of Scientific Counselors, was to testify on May 23 before the House Science Committee on the role of states in environmental policy when Ryan Jackson, the E.P.A.'s chief of staff, asked her to stick to the agency's 'talking points' on the dismissals of several members of the scientific board. 'I was stunned that he was pushing me to 'correct' something in my testimony,' said Dr. Swackhamer, a retired University of Minnesota professor. 'I was factual, and he was not. I felt bullied.' "

#### HOT ON THE RIGHT

"Professor who said 'clueless white male' Otto Warmbier got 'what he deserved' won't be rehired," from Derek Hawkins: "Katherine Dettwyler, who taught in the anthropology department as recently as spring semester, 'will not be rehired to teach at the University [of Delaware] in the future,' the university said ... Warmbier died of unknown causes on June 19 ... Days later, in a now-deleted post from her Facebook account, Dettwyler wrote that Warmbier was 'typical of the mindset of a lot of the young, white, rich, clueless males who come into my classes' ... 'Is it wrong of me to think that Otto Warmbier got exactly what he deserved?' she wrote."

#### DAYBOOK:

President Trump will have two calls today with international leaders: French President Emmanuel Macron and Irish Prime Minister Leo Varadkar. He will also meet with his national security adviser in the morning.

Vice President Pence is giving the keynote speech at U.S.-India Business Council's leadership summit before heading over to Capitol Hill to meet with Republican senators.

## QUOTE OF THE DAY:

“Modi and I are world leaders in social media.” -- Trump during his photo opp with Indian Prime Minister Narendra Modi. While the president has 32.9 million followers on his personal account, Modi has 31 million.

## NEWS YOU CAN USE IF YOU LIVE IN D.C.:

-- D.C. residents will enjoy a fairly mild day given that it's the start of summer in the District. The Capital Weather Gang forecasts: “Temperatures are fantastic for late June as afternoon levels peak in the upper 70s to low 80s. Very low humidity and light breezes blow from the west at 5 to 10 mph. A slight chance of a brief afternoon shower or even thundershower exists, but most areas should stay dry today.”

-- The Nationals lost to the Cubs 5-4. (Steve Hendrix has a nice feature on those lucky few local singers who get to perform the national anthem at Nats Park.)

-- “The number of homicides, robberies and assaults have dropped significantly in the District over the past six months,” Peter Hermann reports: “Violent crime is down 26 percent from the same period in 2016, led by a 33 percent decline in robberies. Homicides are down 15 percent, from 61 at this time in 2016 to 52 so far this year. Violent crime went down 10 percent in 2016 compared with 2015.”

-- A federal judge declined to lift a hold on construction of Maryland's Purple Line amid ongoing litigation, Katherine Shaver reports.

-- Democratic state Sen. C. Anthony Muse announced that he would run to succeed outgoing Prince George's County Executive Rushern L. Baker. Arelis R. Hernández reports: “‘I want our students to do well, but I want to know our students are actually doing well,’ Muse, 59, said outside Crossland High School, a reference to recent allegations that county school officials tampered with student grades to artificially boost graduation rates.”

-- A pet Russian tortoise that was lost near the Japanese ambassador's property has been safely found. Dana Hedgpeth reports that Maui the tortoise is now resting comfortably with his family.

## VIDEOS OF THE DAY:

Stephen Colbert returned from a trip to Russia, where his “hard-core fans” (intelligence officers) followed him everywhere:

Stephen Returns From Russia With An Apology For Trump

Seth Meyers went over highlights from Steve Mnuchin's wedding:

VP Pence Officiates Wedding, World's Ugliest Dog - Monologue

Sen. Mazie Hirono (D-Hawaii) discussed her recent diagnosis of kidney cancer, as well as her gratefulness for health insurance, on the Senate floor:

Hirono says she has kidney cancer, adds health care is ‘a right’

Cory Booker staged a sit-in over health-care on the Capitol steps:

Cory Booker stages sit-in over health-care bill

Glenn Kessler fact-checks some Republicans' claims about increases in premiums under Obamacare:

Fact Check: The GOP's spin on Obamacare premiums

The Post dissects the history of Trump's travel ban tweets:

The many trials and tweets of Trump's travel ban

More global leaders criticized Trump's decision to withdraw from the Paris climate deal:

World leaders criticize Trump's choice to exit Paris climate deal

Finally, a humpback whale got a little too close to a boat off the coast of New Jersey last week:

Giant whale gets very close to a New Jersey boat

Subject: ASTI Upcoming Educational Training in Israel  
Date: Wed Jun 14 2017 11:11:20 CDT  
Attachments: ASTI CT Course May 2017 Notes.docx  
CTPDR Agenda Oct 2017.docx  
Letter of Support (1).doc

---

Steve,

I hope this email finds you well. Attached you will find several attachments related to Advanced Security Training Institute's (ASTI) Counter-Terrorism: Detection, Prevention, and Response (CTDPR) training course. These attachments may help to answer questions you may have about the upcoming October 2017 trip or others scheduled for the future.

The first attachment is a summary of the lessons, site visits, and activities completed during the May 2017 CTDPR course. While not every iteration of the course is the same, this document will provide you with an understanding of the material that is covered during the session. The second attachment is a draft agenda for the October 2017 CTDPR course. The final attachment is a YouTube video created by one of the participants from the May course with image and video highlights from the course.

The dates for the next CTDPR course are 13-21 October. Participants will stay in Tel Aviv and Jerusalem, Israel. The rate is \$9,450 per person and includes airfare, lodging, most meals and expenses, and the training curriculum. Please note that funds from the State Homeland Security Program, Urban Area Security Initiative, and Emergency Management Performance Grant can all be used to fund training through ASTI. ASTI courses also correlate closely with the FEMA Core Capabilities that serve as the basis for many of the DHS grant programs.

Please do not hesitate to contact me with any questions that you might have about course curriculum, funding or approval mechanisms, or travel/logistics. Also, please feel free to forward this information to other responders that may be interested in immersive counter-terrorism training.

I am available to travel to IA to meet with response agencies interested in the ASTI training courses. Chairman of House Homeland Security is hoping to attend the October course with members of the emergency response community.

Regards,

Yisroel Stefansky

## Counter-Terrorism Detection, Prevention, and Response and Recovery Immersion Course

May 2017

This document contains an overview of and detailed notes from the lectures, immersive site visits, and activities experienced by participants in the May 2017 *Counter-Terrorism Detection, Prevention, and Response* course. The intent of the course was to convey the tactics and strategies developed and used in Israel to address terror incidents, allowing participants to adapt their new skills for use in their home jurisdictions.

### Day 1:

#### Lecture: The History of Israel

##### Avi

This session provided information on key points in the history of that land and region that exists as the state of Israel. This information provided context for participants to understand historic conflicts, rulers, and battles that shaped the political and security situation as it exists today. The lecturer paid specific attention to the 1947 United Nations (UN) Partition Plan, declaration of Israeli independence, 1948 Arab-Israeli War, 1967 Six-Day War, and current day contested territories. Notes:

King David – first to occupy Jerusalem. Made peace with enemies by marrying their wives (including the Queen of Sheba). King Solomon was the son of David.

Israel has developed desalination technology that it is sharing with Arab countries, providing peace through water.

32 latitude – below is desert, above is green

Ottomans controlled land until the first World War

1947 UN Partition Plan gave Arabs land in the mountains, Jewish communities in the valleys, and Jerusalem as an internationally-protected area

- o Jews agreed to this plan, Arabs said no

May 14, 1948 – Israel declared independence; 5 Arab armies attacked

July 1948 – Israeli army counterattacked

Israel smaller than New Jersey

Ben Gurion – first Prime Minister of Israel

- Dream to make the desert green
- Special irrigation systems

1967 – 6 Days War fought against Syria, Egypt, and Jordan from 6/5/67-6/11/67

Jordan River is part of Africa Rift (tectonic plates)

Provide aid to neighbors during disasters

Contested territories: Gaza, West Bank, Golan Heights

Ben Gurion Airport – 8km from West Bank

“Land of Milk & Honey” – the only things that you can get from an animal without killing it

Israel as “the start-up nation”

## **Lecture: Terrorist Explosive Devices & Tactics**

### **Chief Superintendent Michael Cardash**

This session provided information on terroristic and criminal use of improvised explosive devices (IED) in Israel. The lecturer described the components of an IED and types of explosive material commonly used in IEDs. A segment of this lecture focused on person-borne improvised explosive device (PBIED). These suicide bombers use bags, vests, belts, pants or other innocent looking objects to transport explosive devices for detonation. The lecturer also discussed the importance of public awareness and intelligence/information sharing. Notes:

Last 4-5 years – few explosive attacks in Israel

Iron Dome System – built with the US to intercept rockets

Terroristic and criminal use of Improvised Explosive Devices (IEDs); criminal use means that it is specifically directed at a person

Components of IEDs

- Explosive material (XMAT)
- Detonator (initiator)
- Firing system (trigger)
- Optional additions

Camouflage

Fragmentation

Types of XMAT commonly use in IEDs

- TATP – with or without plasticizers
- Urea nitrate (with plasticizers)
- TNT – mostly from old ammunition
- Nitroglycerine-based
- Ammonium nitrate based (fertilizers)
- Nitro glycol (EGDN)

Times Square VBIED used 220lbs of urea, not urea nitrate

Ball bearings – best type of fragmentation

- Used to enhance the distance

Cell phone – most common radio detonator

DTMF – dual tone multi functional

- Added onto phone to set off tone
- Don't need to wait for call to go through

Public awareness is key

- Israel teaches awareness from kindergarten: “what is a suspicious object?”, “what is a suspicious person?”
- 10<sup>th</sup> graders get presentation from bomb tech
- training in military

Suicide bomber = person-based IED = PBIED

Response - first consideration – look for secondary device

Considerations for PBIED

- Overcome security measures
- Control the explosion and ensure success of the incident
- Portability of the explosive device
- Substitute for firing system
- Packaging – use bags, vests, belts, pants, and innocent looking objects

\*\* Importance of intelligence and information sharing

- Sources: Israeli Defense Forces (IDF), Mossad, Israeli Security Agency (ISA), police

Public resilience – get back to normal ASAP

## **Lecture: Cyber, Terror, & the Social Networks: The Dark Side of Technology**

### **Dr. Harel Menashri**

This session addressed the main trends in terrorist online activity, including the use of social media networks and hidden or dark networks. Terrorist organizations use file distribution applications, visible and hidden websites (e.g., blogs, forums), social networks, and communication applications (e.g. WhatsApp) for the purposes of propaganda, training, recruiting, funding, executing cyber attacks, intelligence gathering, etc. The lecturer also discussed ISIS trends and activities on the web. Notes:

Two main trends in terrorist online activity: grasping of popular social media networks and the dark web

Unparalleled tools for reaching out to as wide an audience as possible (e.g., mainstream social media networks)

ISIS has developed a multi-divisional media empire – target specific groups in local languages

Internet (only part of cyberspace) composed of: public networks, hidden networks, deep web

Terrorist activity on the internet: propaganda, training, recruiting, funding, cyber attacks, intelligence gathering, and more

Laws don't allow you to break into the network of someone who breaks into yours

Network discussion centers used for distributing files, websites (e.g., blogs, forums), social networks, communications applications

Cachedview.com shows deleted and removed

Terrorist organizations use encryption software, multiple accounts, social networks (including visible and hidden networks); Tor

ISIS trends:

- Propaganda focused on “distant enemy” encouraging lone wolves and cyber attacks
- Call to arms in social media
- Encouraging activities of terrorist organizations against critical infrastructure
- Use Android more than IOS
- Opera browser and Tor
- Use hushmail software to encrypt email
- Cyberghost VPN allows IP address switching
- Locker app deletes files after several incorrect password attempts
- Fake GPS apps hide location
- Fake social media accounts

Lessons:

- Do not take phone into the field or into meetings (change the culture)
- Everything is a computer and can be hacked
- Concerns about hacking of pacemakers, hearing aids, security cameras, automobiles, toys, appliances -> internet of things

## **Lecture: Crisis Media Management: Counter Terror Approach**

**Gil Kleiman**

This session focused on the ability to use the media as a multiplier as part of response operations. The lecturer stressed the importance of understanding the sensitive issues in your community to gather intelligence, as well as the need to feed the media with information during a response.

Terror is not new, but tactics of terror change

Object of terror is to turn you into a drowning man

Media as a multiplier

“The Kardashian Syndrome” – know which topics are sensitive to your community, what will turn heads

What you don’t put out there, someone else will

Never lie – say what you have to say

1 spokesman – unity of message

Book by Author: Terrorist Suicide Bombings: Attack Interdiction, Mitigation, and Response. The link to electronically review the book is:

**Day 2:**

## **In-Transit Lectures on Security Topics**

### **Rami Savir and Rami Shemesh**

While in transit to various site visits, two veteran Israeli Security Agency members provided a series of lectures throughout the day on numerous topics related to Israel, the security situation, and terrorist incidents. Notes:

#### Demographics

- 8 million Israeli citizens: 75% Jewish; 21% Israeli Arabs; 4% Other (e.g., Christians, Arabs, Druze)
- 4.2 million Palestinians: 1.9M in West Bank; 1.7M in Gaza, E. Jerusalem Arabs (Israeli residents)

Until 1948, 1.2M Arabs/600K Jews; after 1948, 300K Arabs/600K Jews

- 500K Arabs went to refugee camps -> now 5 million in refugee camps

UN Decision 181 (November 29, 1947)

- David Ben Gurion accepted division of Israel into Jewish State and Arab State with Jerusalem as international territory
- Jewish State 68% desert
- Arabs would not accept any independent Israeli state

6 Day War – 1967

- New reality – Jewish state controlled Gaza, West Bank, Sinai Peninsula

New forms of terrorist organizations emerged

Oslo Agreement

- West Bank divided into 3 parts
  - A – exclusively administered by Palestinian Authority
  - B – administered by both Palestinian Authority and Israel
  - C – security and public affairs administered by Israel
- 1993 Agreement – Hamas said no
  - 10 years – birth of suicide bombers – change in paradigm
  - Israeli citizens afraid of buses, restaurants
  - Israeli develops expertise in dealing with terrorist cells

Islamic Fanatical Radical Movement Point of View:

- Jerusalem belongs to Allah
- Allah chose Islam to rule the world
- Chosen people: Jews, Christians, Muslims, but Jews and Christians fell
- Jews can live here, but not be independent rulers
- Muslim Brotherhood says that Muslims must be the leaders in the Holy Land
- Mohammed – last prophet

Gaza Strip – 2 governments: 1 Hamas and 1 PLO; over 1.7M people

- 2006 decision to remove 16 Jewish settlements from Gaza (8K people)
- Hamas started shooting rockets all over Israel

Obstacles to peace: 1) Jerusalem, 2) refugees, 3) Israeli settlements in West Bank

After 1967 (6 Day War), green light given to settle into the West Bank (500K people)

Hamas is a political movement, Islamic jihad is a military movement

Border countries: Lebanon, Syria, Jordan, Egypt – no current problems except for Hezbollah

- Syria: ceasefire since 1967, few problems remaining regarding the Golan Heights
- Jordan: ceasefire since 1967, peace agreement 1994
- Egypt: ceasefire since 1973, peace agreement 1979

Ashdod – Philistine city; 3000 years old

- Largest port city in Israel
- High population of Russian Jews

First Intifada – began December 1987 - violent uprising against Israeli “occupation”; many riots and shootings

Second Intifada – began October 2000 – more violent

War with Gaza every 2-3 years, last was August 2014

Kibbutz – communal living generally according to Communist principles

More than 12 empires have conquered the Holy Land – all empire expansion has to go through Israel

50% unemployment rate in Gaza

Egypt has mostly closed their gate with Gaza

- Was open until 3 years ago
- Previous leader of Egypt was Muslim Brotherhood – kept the gate open

Desert defined as less than 200mm of rain/year

Rocket attacks from Gaza

- If in vehicle, stop car, get behind anything, cover head
- Every bus top has bomb shelter

Many tunnels from Gaza – get into Israel and behind military

Jerusalem

- King Solomon built first temple: “Gods house among people”
- Most important Holy City for Jews
- David Ben Gurion: “no state of Israel without Jerusalem, but there is Jerusalem without Israel”
- East Jerusalem belonged to Jordan until 1967  
1/3 of population of Jerusalem

## **Site Visit: Magen David Adom (MDA) in Israel – Tactics and Procedures**

### **Director of International Relations**

MDA is the Israeli emergency medical services (EMS) agency. Participants traveled to Ashdod to visit an MDA dispatch center. The lecturer provides information on operations and logistics required to coordinate the activities of the more than 15,000 volunteers and 2000 paid staff across the country. MDA is also the only supplier of blood services in Israel. Participants were able to view dispatch technology and operations as they occurred. Notes:

MDA: Red Shield of David -> National EMS organization and national blood services organization

British mandate over Middle East after WW2

Established according to Red Cross guidelines

National, public, statutory, volunteer organization

More than 15K volunteers, less than 2K employees

- Volunteers are trained the same as employees

Active every hour, every day, all over the country

Train all IDF paramedics

Not funded by government, but supervised by Ministries of Health and Finance

Charge for services provided

- Those treated can claim back costs from health organizations
- Costs covered if person is hospitalized or suffers from known medical problems
- 72% of budget comes from billed costs

Government provides funds for preparedness from multiple hazards (e.g., earthquakes, rockets)

- No major earthquakes since 1927
- Israel sits on 2 fault lines

Volunteers are crucial in every community -> active, involved, well-trained

Call volume: 2500 calls per day (emergency and non-emergency)

- 2 ALS helicopters
- Vehicles: 1000+ ambulances plus minibikes
- Tel Aviv region: 300-400 calls/day for 1.5 million people
- Not a lot of misuse of the system
- Provide backup to the national school system for non-emergency calls

There are private ambulance companies; a few provide ALS

9 regional dispatching centers

- Dispatchers are all EMTs or paramedics
- Can provide medical guidance over the phone
- National dispatch system – call will go to first available dispatcher  
Trying to keep time to answer call to less than 4 seconds

No central 911 system in Israel

- Dial 100 for police services
- Dial 101 for MDA
- Dial 102 for fire services

Created an understanding that all disciplines need to work together

- Direct communication from one dispatching center to another
- In areas of potential violence, MDA may request backup from law enforcement
- Some awareness training of fire department operations
- A lot of training with fire department
- GPS navigational system shows unit numbers of units from other departments

Law enforcement is in command of every incident

Law enforcement can shut down all communications amplifying sites near an incident

Responders have primary access to cellular bandwidth

Smart phone app (My MDA) – geolocates caller

- Personal information
- Known allergies

- Recent medical history
- Family info (calling in for self or other family member?)
- Can activate phone camera to provide video from scene
- Can communicate via text
- Shows “uber” view of vehicles arriving
- 60K users

Volunteers – group of highly trained EMTs and paramedics that keep supplies with them or bring them home

- MDA team app – shows location of all team members
- If first ambulance will arrive in more than 5 minutes, system will also scan volunteer first responders in the area
  - Provided with same call information
  - Can respond and click “navigate” -> uses Waze to guide to call
- Can fill out medical form – becomes part of the medical record

Only supplier of blood services in Israel

- Collect at least 1000 units every day
- Need to have enough inventory
- High holidays means lower supply
- Targeted communications with donors

Hospitals notify dispatchers when at capacity; close communication

- Ministry of Health monitors hospital capacity closely

Site tour: Ashdod dispatch center

- In bomb shelter
- Air filtering system to protect against chem/bio
- Automatic dispatch of mutual aid
- Average response time 7-8 minutes
- 8-hour shifts

### **Site Visit: Port of Ashdod – Protection of Transportation Assets**

Participants traveled to the Port of Ashdod for a discussion of terror threats to transportation assets. Participants viewed multiple security components including biometric and automated gate systems, a smart fence, camera surveillance systems, the use of defender-class boats for patrol of the port from the water, biometric screening of crew members, and the use of drones.

Notes:

Operations always connected to preventing terror

Need for separation of operations – like a military base

Profile employees for different categories of clearance

Video summarizing security measures

- Advanced gate system using biometrics for access
- Smart fence
- Camera surveillance system and included analytics
- Defender-class boats patrol
- Biometric screening of crew members

Database contains information on 70% of seamen in the world

- Drones

Example of terror threat: “trojan horse” shipping container with false wall -> killed 10

Guiding authorities:

- Interior Emergency Authority
- ISA Information Security
- ISA
- Israeli Police
- Israeli Navy

Site tour: Port security operations

### **Site Visit: Rutenberg Power Station – Protection of Critical Infrastructure**

The Rutenberg Power Station is located in Ashkelon, less than 5 km from Gaza. The power station is the target of repeated rocket and terror attacks. Numerous tunnels from Gaza have also been found in the vicinity of Rutenberg. Participants learned about the security components being used to prevent and mitigate attacks on the power station. Notes:

5 power stations located in Israel – Rutenberg is the largest

Located 5km from Gaza

Israel cannot get electricity from anywhere else in the world

Have to depend on themselves

Issues:

- Rockets
  - Concrete wall protects major systems
  - Iron Dome
  - Reliance on coal (LNG expensive)
  - Poles hardened
- Tunnels
  - Found in vicinity – one 3km long
- Terrorists
  - Combat trained security guards
  - Patrol vehicles
  - Guard towers
  - Surveillance – cameras, radar
  - Patrol boats (2)
  - Navy patrol of pier

Collaboration between fire, police, IDF, Red Cross

Site tour: power station

### **Site Visit: City of Sderot**

Sderot is the city located closest to Gaza and is targeted in many rocket attacks. Participants viewed stockpiles of exploded rockets launched from Gaza into Sderot, as well as shelters available throughout the city to protect civilians. These shelters include playground equipment that serve as bomb shelters in schools and parks.

## **Lecture: The State of Relations between Israel and its Neighbors**

### **Rami Savir**

This session provided information on the relationships with Lebanon, Syria, Jordan, and Egypt, nomadic Bedouin tribes within Israel, Gaza, the West Bank area of Judea and Sumeria, and the division within Jerusalem. Notes:

Understanding the mindset of Israel is key

Israel formed as a state for Jewish people

Mixed population: Jews, Israeli Arabs, Palestinians, E. Jerusalem

1.7 billion Muslims in the world

Most Muslims not terrorists, but most/many terrorists are Muslim

#### **Lebanon**

- Not a real country - clans of Christians, Muslims
- Hezbollah runs the state
- Theoretically should have no problems with Lebanon

#### **Syria**

- Sunni Muslims
- Govt holding power thanks to support of Lebanon and Russia

#### **Jordan**

- Left over from British Mandate
- 70-80% Palestinians
- Minority Bedouins are ruling
- Peace treaty with Israel but don't know if it will hold

#### **Egypt**

- Peace treaty since 1977
- Good relations with regime, but not with people
- Bedouins living in Sinai Desert

#### **Gaza**

- Trying to find ways to defeat/pass the fence (e.g., rockets, tunnels)
- For a while, didn't see foreigners as a significant threat
  - Requires profiling of behavior
  - You can't check everyone
  - Pure random checks are a waste of time

#### **Judea/Sumeria**

- Judea is south of Jerusalem in West Bank
- Sumeria is north of Jerusalem in West Bank

Use of walls to separate territory used/controlled by Palestinians when people are so close they can shoot each other with rifles

- Suicide attacks went down more than 90% after wall built
- Wood and concrete fence

#### **Tunnels**

- Tunnels into Israel are attack tunnels

- Tunnels into Egypt are smuggling tunnels
- Jerusalem – Old City (less than 1 mile x 1 mile)
- Jewish Quarter
  - Muslim Quarter
  - Armenian Quarter
  - Christian Quarter

## **Lecture: The Muslim Mindset**

### **Rami Savir**

This session provided an assessment of behaviors and motivations of Muslim Arabs in the Middle East from the prospective of former Israeli Security Agency members. Notes:

A man is always preferable to a woman

- The man decides
- A woman as a source is less beneficial
- Women do not participate in discussions

A mother is always preferable to a wife

- The function of a wife is to have kids

Marriage for practical reasons is always preferable to marriage for love

- Marriage to first cousins is ideal
- Woman moves to home/family of husband
- Woman takes husbands name
- Dynasty of family is very important

A cousin is always preferable to a stranger

- Importance of families and clans

Family obligation supersedes loyalty to a country

The Army is preferable to civilian institutions

- Force is important
- Perception of strength is important

Ethnic and religious affiliations are more important than a national identity

Rulers are more important than the law

- Leadership is to benefit your family

Luck is more important than discipline and planning

Affinity and charisma are more important than the sense of obligation

- People will follow someone to the worst decision they every made

Poetry is more important than prose

An embrace precedes acquaintance

Embarrassment precedes guilt

- Do not want to be embarrassed

Suspicion precedes trust

Shouting precedes dialogue

Past and future are more important than the present

Manipulation precedes listening

- Control and power are more important than the solution
- Negotiation occurs prior to, during, and following an agreement
- Honor above all
  - Most important issue in the mindset of Arabs

### **Day 3:**

#### **In-Transit Lectures on Security Topics**

##### **Rami Savir and Rami Shemesh**

While in transit to various site visits, two veteran Israeli Security Agency members provided a series of lectures throughout the day on numerous topics related to Israel, the security situation, and terrorist incidents. Notes:

##### Old Jerusalem

- 37K population inside walls
  - 65% Muslim
- 4 Quarters: Christian, Armenian, Jewish, Muslim
- Walls built in 1536 by the Ottomans to protect Jerusalem from Christian Crusaders
- 7 gates built originally

View of note: pillars built around light train station to prevent terror incidents caused by crashing vehicles into stations

View of note: Ammunition Hill from 1967 battle with Jordan

View of note: Mount of Olives, Mount of Scopus, Mount Zion

View of note: Bedouins villages - 280K population total

West Bank divided by Oslo Agreement:

- A: Exclusive responsibility of Palestinians
- B: Security responsibility of Israel, public services responsibility of Palestinians
- C: Exclusive responsibility of Israel

12 tribes of Israel – descendants from Jacob

- Exiled into and enslaved in Egypt for 400 years
- Moses led them through the desert for 40 years
- Came through Jericho (Jordan Valley)
- Moses died on the east side of the Jordan River; did not enter into Holy Land

Israel will not give up Jordan Valley as any part of a peace agreement – Jordan Valley is a buffer

June 16, 1946 – 11 bridges connecting Israel blown up to protest limits on amount of Holocaust Jews allowed into Israel

7 fruits that represent the “land of milk and honey”: date, olive, fig, grape, pomegranate, wheat, barley

Muslim calendar goes by the moon – 354 days

Jewish calendar – dates for holidays based on what is in the Bible

Ramadan – holiest Muslim holiday

- Fast for 30 days
- Greater chance of terror attacks because people feel more devout

Muslims pray 5 times per day – intelligence effort to see who goes to the mosque for the early prayers – most devout

Muslim Brotherhood – Dawah – call to build schools and mosques

Sea of Galilee – was main source of water for Israel

Dam at south end of the Sea / Jordan River

First desalination plant opened last year to provide water from the Mediterranean Sea

Syrians tried to stop water from flowing into Israel – 1964

First suicide bomber attack in 1991 after 400 Hamas leaders exported to Lebanon; came back with lots of knowledge about suicide bombing

Life of Jesus:

- Raised in Nazareth for 30 years
- Lived at Sea of Galilee for 3 years
  - Recruited disciples
  - Performed miracles
- Traveled along Jordan River
- In Jerusalem only one week before being crucified

Rule over land that is now Israel:

- For 300 years after Jesus died, there was harassment of Christians – Romans did not allow Christianity
- 325 AD, Constantine the Great (Roman Emperor) – allowed Christianity
- 638 AD Empire of Islam
- Defeated 1099 by Crusaders
- Defeated in 1187 by Muslims
- Defeated 1516 by Ottomans
- Ottomans ruled til the end of WW1

View of note: Bet She-An. In 1997, a Jordanian soldier killed 7 girls in Bet She-An; King Hussein of Jordan went to Bet She-An to give his condolences to the families

History of Islam:

- 7<sup>th</sup> Century AD – Islam became the 3<sup>rd</sup> monotheistic religion
- Established by Muhammad (name means “Praise God”)
  - 570 AD – born in Mecca
  - 610 AD – entered a cave in Mecca and had a vision from the Angel Gabriel
    - Wrote first verses of Koran in cave
  - Started to preach 610-622 AD
  - 622 AD chased from Mecca to Medina
  - 622 AD – died and buried in Medina
  - No successor – 2 competing camps
    - Al Sahaba (sp?) – friends of Muhammad
    - Fatimah – daughter of Muhammad, married to 4<sup>th</sup> caliph
      - Fought to continue Islam

- Mother of Al-Hasan and Al-Husayn

680 AD – battle for the future of Islam between Fatimah and sons vs. friends of Muhammad – Battle of Karbala

Al Husayn killed in battle – followers became Shia

Day of Ashura (Shia holiday) marks the death of Al Husayn at Battle of Karbala

ISIS – Sunni, Al Qaeda – Sunni

ISIS established after 9/11 and US involvement in Iraq

65% of Iraq controlled by ISIS

Syria – Bashar al-Assad not Sunni or Shia

ISIS, other Sunni groups, free rebels all fighting al-Assad

2014 – Jabhat al-Nusra kidnapped 45 United Nations peacekeepers in Golan Heights; Israeli forces opened the gate and allowed UN personnel into Israel

Druze

- Fatimid Caliphate (Shia) – 11<sup>th</sup> century
  - Ruled in Egypt and Israel
  - King kidnapped, ad Dazari thought king was 1<sup>st</sup> imam
  - Ad Dazari ran away and established new religion (Druze)
- Druze not Arab, not Muslim
- 1.5 million
- Don't need nation or government, only want territory
- Very little known about Druze religion
- Being killed in Syria
- Druze in Israel demanding that Israeli government intervene in Syrian conflict to help Druze in Syria
- Stopped ambulance and stoned wounded Syrian soldier to death

### **Site Visit: Jordan River Baptism Site**

Participants traveled to the Jorder River Baptism Site. This historic religious site is located on the border with Jordan, sharing baptism facilities. The span of the Jordan River at this site is less than 20 feet, posing unique security challenges. Notes:

One of 2 baptism sites – the other is at the Sea of Galilee

White dove symbolizes the baptism of Jesus

- Jesus baptized by John the Baptist in Jordan River
- Voice of God: “This is the son of God that I was talking about”
- Christians view baptism as a cleaning of the soul and the body

Currently good relationship with Jordan

Peutingner Map

- Discovered in the 4<sup>th</sup> century AD
- Shows network of roads from Roman Empire
- Indicates that site of baptism of Jesus close to Jordan River baptism site

No control of borders all the way to Turkey

Until 2007, 250km border with Egypt was completely open

- Fence built in 2007, significantly reducing smuggling problems
- Current war between ISIS and Tarabin (Bedouin tribe)
- Trying to keep Bedouins from smuggling

### **Site Visit: Triangle Border**

This border is the boundary between Israel, Syria, & Jordan. Lecturers provided information on the impact of the war in Syria on Israel, the expansion of ISIS into Syria and Jordan. Lecturers provided information on the security situation in the Golan Heights, and implications for Jewish settlements in the area. Notes:

Golan Heights: 950m above sea level

Sykes-Picot Agreement – 1916 – division of area

- Golan Heights, Lebanon, Syria to be French territory
- Israel, part of Jordan, part of Iraq, Egypt to be English territory

1945-46 – Syria became independent

ISIS concentrating opposite Golan Heights, but focusing on battles to the east and north right now

Jordan Valley = 65 miles

- Border between 2 tectonic plates
- Major earthquakes every 100-110 years

### **Site Visit: French Hospital/Syrian Officer Academy**

Participants toured the site of a former French hospital used as a Syrian Officer Academy before the Six Day War. The building ruins look down into the Syrian countryside. Notes:

Eli Cohen – Israeli intelligence agent

- Established cover identity 1960-61 in Argentina
- Settled in Syria 1961-65, transmitted information on Syrian military and fortifications
- Caught January 1965, tried, and executed

### **Site Visit: Valley of Tears**

The Valley of Tears is battle site from Yom Kippur War where significantly outnumbered Israeli forces held off attackers until reinforcements could arrive after 4 days. Participants were able to explore a maintained Israeli Defense Force (IDF) bunker. The visit highlighted the difficulties in defending territory given the proximity of countries that have been actively hostile to Israel. Lecturers also provided a review of international/UN participation in the security situation.

Notes:

Until 1967, Syria controlled Golan Heights and bombed the kibbutz

Yom Kippur War – surprise attack from Syrian in Golan Heights; 3-point attack

History:

- 1947 Independence
- 1956 Sinai War
- 1967 Six Day War

10/6/73 – Attack on Yom Kippur – holiest day for Jewish religion

- Israeli army kept minimal forces in Golan Heights
- Ignored intelligence about possible war
- No recruitment of reserves until 10/5/73

#### Valley of Tears – one of three attack columns

- 1 battalion in Valley
- 600 Syrian tanks vs. 35-40 Israeli tanks
- For 4 days, Israeli tank battalion held off Syrians
- Bitter battle – officers motivated soldiers to stay
- Reserves arrived after 4 days and turned battle
- Israeli forces pushed into Syria
  - Pushed to within 40km from Damascus
  - Pushed to within 101km from Cairo

1974 – ceasefire between Israel and Syria

### **Site Visit: The Dead Sea**

Participants were able to visit and swim in the Dead Sea, learning about the security challenges of protecting this site visited by travelers from within Israel and throughout the world. Notes:

- Every year 1m lost from the Dead Sea
- Dead Sea 34% salt in water (ocean .4% salt)

### **Day 4:**

#### **Site Visit: Knesset**

The Knesset is the legislature of Israel. A guided tour provided information on the structure and composition of the Knesset. Participants subsequently attended private meetings with 3 members of Israeli parliament (Yehuda Glick, Amir Ohana, and Tzipi Hotovely. The Knesset members provided their unique perspectives on the security situation in Israel and answered questions from ASTI participants. Notes:

“to come together/to congregate”

120 members

- 17 not Jewish
- 33 women (25%)

Parliamentary Democracy

- Vote for 1 party, not individual members
- Each party posts list of 120 potential
- Seated by percentage of vote
- Minimum of 3.25% to get representation in Knesset

President gives political power to Knesset

- Knesset has to form government
- At least 61 members must support government

Declaration of independence

- 14 May 1948 at 4:00pm (Friday)

- 5/15 – end of British Mandate, Shabbat (Saturday)
- Concerns about civil war if there was a leadership void
- Document
  - “Rock of Israel” = God
  - No other reference to God
  - Signed while blank
  - Bold paragraph in middle contains 3 justifications for independent Jewish state:
    - Historical connection with land
    - 1917 Balfour Declaration / 1947 UN Partition Plan
    - Holocaust
  - Describes type of government
  - 3 addresses to UN, to Jewish people, to Arabs
  - Call to peace

- No constitution

Plenary Hall used for voting

- Lively debates, most recognizable room
- Many other discussion rooms

Bills – 2 types

- Government-originated: written by minister or vice-minister, requires 3 votes
- Private: written by any member of Knesset; requires 4 votes

Official symbol – candelabrum

Separation of powers: legislative, government, judicial

PM is also a member of parliament

Speaker is member of parliament, but runs/manages the debate

10 seconds to vote; board shows voting results

Disciplinary action – can force members of party to vote in a specific way

Judicial oversees legislative oversees government oversees judicial

“ascend the podium” = give testimony

Viewing space for press, honored guests, public

Chegal Hall – 3 tapestries, 12 floor mosaics, 1 wall mosaic

- Tapestries: present (colorful – different waves of immigration), past (exodus from Egypt, Moses, King David), future (Isaiah)

### **Knesset Member Meeting: Yehuda Glick**

#### **Jerusalemofpeace.com**

Likud party – 30 seats in this Knesset

Formerly served in Ministry of Absorption

Six Day war – greatest victory of Jewish people

- 2 million Jews surrounded by 200 million Arab Muslims (supported by USSR)

Yom Kippur War – lesson in humility

- Lesson: if we put down our arms, we won't exist

Greatest danger – those who think God is exclusive and want to convert others

- 12 million Muslims killed by radical Muslims

Settlements not an obstacle to peace, but are bringing peace by living together peacefully

Importance of not being afraid of terrorism

Demand from ourselves the highest standards

Jerusalem mentioned more than 600 times in the Bible

Nations that want to remain relevant will recognize Jerusalem as capitol

Israel offers highest level of human rights for all citizens

Temple Mount as world center for human rights

Promote Jerusalem Covenant

### **Knesset Member Meeting: Amir Ohana**

12 years in IDF and ISA

Member of 5 committees

21 Arab states combined are 1000 times larger than Israel

1.4 billion Muslims in the world - yet still the minority that needs to be protected

It is the existence of the state of Israel and of the Jewish people in their homeland that Muslims find objectionable

100 years of terror

PLO founded in 1964 – before settlers

- What is Palestine? “From the river to the sea, Palestine will be free”
- Continue to support terror in many ways

Influential Muslim leadership sees Jews as occupiers like British and Ottomans before them

This is the birthplace of Jewish religion

2000 years of exile – “tomorrow in Jerusalem”

Israeli/Arab conflict will not be solved in DC – must be solved by Israelis and Arabs

Cannot overstate friendship/brotherhood with U.S.

- Share enemies, enemies of the free world

### **Knesset Member Meeting: Tzipi Hotovely**

Deputy Foreign Minister

Time for us to rethink

Issues with Iran and Syria

Challenges of Jerusalem

Children’s intifada

- 12-15 year old took kitchen knives to streets
  - Means it is part of education system and social media

Schools named after mass murderers

Great future for you and your families as terrorists

Congress sponsoring and funding families of terrorists

Winning of 6 Day War gave all religions freedom to practice their religion in Jerusalem

Israelis expecting movement of US embassy to Jerusalem

Clear that YouTube, Facebook have the ability to remove content related to terrorism, recruitment

- Arguments of free speech

- Already some restrictions on pornography, etc.
- Request to remove content combining certain words
- Still disappointed with accessibility of this information

## **Site Visit: Israeli National Security Council**

### **Eitan Ben-David**

Participants visited the office of the Prime Minister and attended a private meeting with Israel's National Security Director, Eitan Ben David (sp?). Mr. David provided information on the challenges of terrorism in Israel, Hezbollah and Hamas, counter-tunnel challenges, and the importance of learning from terror attacks in other countries. Participants were able to ask questions of Mr. David related to counter-terrorism policies. Notes:

We are trying to do our best in this region

- Trying to improve ourselves every day
- Our agenda is to alert and ready

Most of surrounding countries are enemy

- Countries by law, no diplomatic relations
- Peace treaties with Jordan and Egypt, but good relationships primarily with government
- People of Egypt and Jordan not happy with presence of Israel

Borders: Gaza (59km); Egypt (208km); Lebanon (79km); Syria (92km); Jordan (309km); Saudi Arabia (X); Mediterranean Sea (196km)

Asleep with 1 eye open; need to be strong in the neighborhood

A lot of budget dedicated to security issues

When it comes to security, people of Israel are very united

Last conventional war: 1982 with Lebanon

In last 2 decades, most operations are against terror organizations

Hezbollah in Lebanon, Hamas in Gaza

- Hiding with civilians inside villages and cities
- President of Lebanon said: "Hezbollah is Lebanon and Lebanon is Hezbollah"

Israelis want to live peacefully in region

Sharon gave back Gaza

- After less than one year, Palestinian Authority lost to Hamas and were kicked out
- Now terrorist organization controls land on Israeli border

They will always find a way to attack you with innovative methods

Iron Dome – most rockets not allowed to hit

Gaza using 35-40% of aid for military purposes

Building tunnels

- Karem Shalom crossing border: 1000 trucks per day into Gaza with supplies and humanitarian goods
- No good technology to detect every tunnel
- Israel investing a lot of money into technology placed deep into border to detect tunneling activity

Gas reserves in Mediterranean Sea

You have to send a message that you are not going to put up with terror incidents  
More than 100K come into Israel to work every morning (60% legally, 40% illegally)  
Rely on security clearances, fence, punitive measures against terrorist families, powerful intelligence assets, training, security awareness, community engagement  
Learn from the attacks of others – Israel studies what is going on in other places in the world including details, modus operandi

- Israel is a lab for terror attacks
- Need to understand the organization, mindset
  - Who they are, what is their cause?
  - What kind of measures will hurt them?
  - What will contain them?

### **Lecture/Site Visit: Military Court of Judea and Sumeria Lt Colonel Menachem Lieberman**

Participants received a presentation on the military court and the prosecution of suspects of those accused of security or criminal offenses in the West Bank. The site visit included in-court viewing of proceedings against a man charged with using social media as part of a terrorist organization. Notes:

West Bank under military sovereignty

Questions on whether Geneva Convention applies

Judiciary

- Local Palestinian courts
- Military courts
- Juvenile military courts
- Military court of appeals
- High Court of Justice: “Bagatz” (In Israel)

Those accused of criminal or security offenses in West Bank get real trial, rights of any defended

- Acquittal rate as high as Israeli courts
- Same evidentiary laws as in Israel

No jury system in Israel

Cases: terror, criminal, disturbance of public order, traffic, border offenses, and review of administrative decisions

24.5% of defendants have membership in a terrorist organization

Terror organizations find it easy to influence minors

Encourage and pay minors to perform terrorist acts

- Redeem “immoral behavior”
- “Hate indoctrination”

Administrative detention

- Preventative, not punitive
- Usually 6 months

Constant presence of human rights NGOs, visits of diplomats and foreign delegations

All defendants have lawyers; public defenders from Palestinian Authority available

Site tour: in-session court proceedings

## Lecture: IED Trends

### Chief Superintendent Michael Cardash

This lecture focused on ISIS and AQ IED trends exclusive of PBIEDs (addressed previously). The presenter discussed sources for explosive material, including unexploded ordnance (UXO) and the process necessary to create a homemade explosive materials as detailed in widely-distributed publications and internet-based videos. Participants also learned about camouflaging IEDs and anticipated upcoming threats and trends (including vehicle borne IEDs (VBIED), drones as a delivery mechanism. Notes:

#### Sources for explosives

- Unexploded ordnance (UXO)
  - PTAB 2.5 bomblets
  - Converted to an IED: remove fuse, remove tail assembly, add XMAT, insert det cord, close
  - Since Russian intervention in Syria, more modern munitions
  - UXO AO 2.5RT sub-munition
- Homemade explosives
  - Ammonium nitrate fertilizer
  - Ammonium nitrate + aluminum powder
  - TATP, nitrocellulose, EGDN, other
  - Christmas Eve 2014 AQAP magazine published article on how to make XMAT
    - Potassium chlorate (?) with booster
    - Plastic bottle casing
    - Nigella sativa (black cumin)
      - More energetic than carbon
      - Increased detonation energy by 30%
- TATP – classic 2-stage detonation

#### International Terror

- Richard Reid – shoe bomber
- UK 21.7 attempt (2005) London
- Delta Airlines attempt – Christmas Day
- Paris attacks: 13 November 2015
  - 1.2kg wet TATP and 700-1000 nuts
- Germany Ansbach: 24 July 2016
  - Suicide bomber outside wine bar
  - 2kg urea + AN and 200g TATP
- Brussels, Belgium: 22 March 2016
  - 3<sup>rd</sup> device 25kg TATP
  - Produced 100-125 kg of TATP
- Upcoming threat: TATP VBIED

### Turkish airport bombing

#### Camouflaged IEDs

- Building blocks (ISIS)
- Rock camouflage (Houthis)
- Sandals (ISIS)
- Laptop IEDs (Al Shabaab)
  - Flight restrictions
  - AQAP raid – tech to build device
  - Inside laptop battery; still functions

#### ISIS use of vehicle-borne IED (VBIED) – New trend

- Large armored VBIED driven by suicide bomber
- Now in Iraq and Syria on a defensive position
  - 4 x 4 or SUVs (prefer Kia)
  - Light armored SUVs
    - Route to Karbala – 8 VBIEDs
    - Month of Ramadan
    - Electronic detonators with electronic plugs
    - Plastic bags and containers packed with explosives

#### ISIS use of UAVs – New trend

- Commercial-off-the-shelf (COTS) multirotor drone/quadcopter
- Used for surveillance to date
- Quadcopter payloads – future threat?
- Hezbollah – Aug 2016 – weaponized quadcopter with AT/AP MZD2 bomblets
- ISIS fixed wing bomber – Jan 2017 - PR film
- ISIS quadcopter bombings – Jan 2017
  - 3D printed components
  - Tail hook on bomblets
  - 40mm warhead – M430 or M383
- Iraqi forces weaponized UAVs with shuttlecock bomblets
- Chemical – new trend
  - Fixed wing UAV with chlorine canister
  - Mosul April 2017
- French and Dutch using eagles to counter UAVs

## Review

### Rami Savir and Rami Shemesh

Cannot copy our methods in your communities – better to see why we do it and adapt our methods

Always expect a 2<sup>nd</sup> attack; things may happen in stages

Sunday - lectures

- Dangers of cyber and IOT; consider your cyber protection
- Consider communication
  - Used best by ISIS

Significant recruitment tool

Pay attention – see what the intentions are

Can use media to show your own message

Incitement on social media

Monday – MDA, Ashdod, Ashkelon, Gaza

- US may not have those kind of threats
- All of this can be applied to police work
- Community relations is also a part of response

Tuesday – West Bank, Golan Heights, Syria, Jordan

- Message that if you are strong enough and crazy enough, it helps to deter

Wednesday – Parliament, PM Office, Courts

- Right wing side of perspective
- Solution is a matter of perspective
- Demonstration of incitement via social networks

## **Lecture: Social Networks as a Source of Inspiration**

### **Rami Savir**

This session focused on the importance of monitoring content of social media networks to identify sites/videos/forums, etc. being used to inspire hatred against the Jewish population and potential suicide bombers. Participants watched 2 videos made for children that encourage violence against Jewish persons. The lecturer also provided Facebook posts showing the progression of radical ideology by a young man that killed a 13 year-old Jewish girl. Notes:

Video: PAL network

Video: Hamas children's network

Case of Muhammad Tarayrah

- Killed 13-year old girl
- Review of social media posts
  - “Death is a right and I demand my right”
  - Desire to become a Shaheed

Social media – riots and disorder predictable via SM

No such thing as a lone wolf – need inspiration – often found in social media

## **Day 5:**

### **Site Visit: Hadassah Hospital**

#### **Julie Bebinsky**

Participants visited Hadassah Hospital to review the readiness and capabilities for mass casualty readiness, including trauma-specific emergency room spaces and intensive care units, plans for surge of facilities and staff, preparedness drills, and the need for trans-cultural nursing. The visit included a presentation by Dr. Asaf Kedar Terrorism Related to Mass Casualty Events in Israel.

Dr. Kedar discussed the increase in vehicle assaults and knife attacks in recent year. Notes:

Everything in ER can be quarantined

Capacity for 110 beds

MDA notifies ER with patient details

Trauma ER – rooms strictly for trauma

- X-ray booms
- Lights also cameras – everything filmed
  - Not accessible to lawyers
- Each room has capacity for 2 patients
- Ultrasound machines in room
- Call volume / day – approx. 10

Rambam Hospital – only Level 1 hospital in north part of country

- Anticipate military wounds
- Complete hospital underneath the ground – used if necessary in time of war

Hadassah Hospital – geared towards terror victims

Conduct drills for hospital evacuation onto grounds

During mass casualty, patients leave for CT and don't return to ER, move to other care

No diverts, always accept trauma patients

Burn care – big issue – resources lacking

Big bottleneck – imagery, CT scans

ATLS – Advanced Trauma Life Support

No problems with drop times from ambulances

Another bottleneck in ICU, but all nurses ICU trained

Nursing school in hospital

Different ICUs distributed throughout hospital: trauma, peds, cario, etc.

Effort to keep families together during mass casualty incidents

Visiting dignitary room – bulletproof, self-contained

Simulation/training room can be converted for more beds

System for surge capacity

- Drill 3x per year for all former ER nurses in hospital
- Focus on new threats
- 2017 – pediatric drill

No translation problems

Workers reflect population of the city

No follow-up care available in Palestinian Authority (PA)

PA has Ministry of Health and own medical system

Air transports 1x per month

- Short distances in Israel
- Air pad fits criteria for military hospitals

Mass decon area with Geiger counter outside in ambulance bay

Mother and child pavilion

- Obstetrics, labor and delivery, pediatric ICU, oncology, surgery
- Cultural competence: trans-cultural nursing, ethnomed
- Can be used for surge in a mass casualty
- Access to utilities in ceiling

Family areas have kitchens and showers  
Pediatric ICU has parent sleeping rooms  
Hospitals in East Jerusalem run by Palestinian Authority Ministry of Health

### **Dr, Yorum Weiss**

Former Director of surgical ICU

A lot of experience here with trauma

Seeing a decline of trauma patients

- Used to have many multi-casualty events
- Importance of drills to maintain skills

MCE factors:

- Volume of patients
- Medical characteristics of event (e.g., injury types – crush)
- Prehospital scene
- Hospital-related variables

### **Terrorism Related to MCE in Israel**

#### **Dr. Kedar Assaf**

West Bank divided into Sumaria (North) and Judea (South)

1/10/15 Drive-by shooting

2392 attacks in 10 weeks (2015)

- Increase in vehicular assaults
- Most attacks in West Bank (74%)

Terrorists today

- Age of terrorists: 16-20: 37%, 21-25: 34%; minors 10%
- Gender of terrorists: 89% male
  - Some females – suicide by cop
- Lone terrorist is characterized by radicals who embark on individual terrorist missions without any logistical support or conventional means of attack
  - Example: tractor into crowded street

Patients spread out so hospitals not overwhelmed

Significant increase in vehicular assault

Continuous dialogue with dispatch centers

- Can connect to CCTV cameras to see what is happening in the field
- EMTs sending photos from smart phones
- Israel uses WhatsApp to send data

Knife attacks – Intifada of the Knife

- More force in those hit intentionally
- Attackers being taught efficient stab sites and how to avoid police/military protective vests -> “Intelligent stabbing”
- Use of foley catheter into path of knife track
- Whatever you can do to apply direct pressure
- Goal of MDA is to get to the closest, proper medical facility

### **Site Visit: Check Point between Israel and West Bank**

Participants visited a check point in Jerusalem where inhabitants from the West Bank cross into Jerusalem. Part of the visit included a tour of a main control center where Israeli border forces review an extensive surveillance camera outputs at all times. During the tour, participants saw an incident where two youths touched the fence and caused a sensor hit. The border forces maintained surveillance on the two. Notes:

North part of Jerusalem: PA and Israel come together

Behind wall is refugee camp – Kalandia

- ½ Israelis who choose to live behind the wall, ½ Palestinians

Hard to tell the intentions of people going through the check point

Next month is Ramadan - .5 million people going through the check point during holiday

Site tour: Control Center

- Incident ongoing – 2 boys/young men touched fence causing sensor hit
- Concerns about people infiltrating into Jewish communities and murdering people
- 5 platoons of 70 people each
- Want to allow people freedom to come into work and to pray
- Don't know the intentions of people coming over
- Concerns about attacks on border forces
- Border guards work together well with police, IDF -> importance of sharing information and intelligence
- Incident description: small village Sho-afat – rocks thrown at police and MDA – attacks on the people there to help others
- A lot of cooperation that people don't know about
- Incidents of bombs in ambulances – fake sick
- All facets of Israeli population in Border Guard
- Command board – shows location of all vehicles
- Software reads license plate of every car coming into Israel  
Information immediately provided to Border Guard

Site tour: Surveillance Center

- 24/7 camera surveillance
  - Women better than men at surveillance
  - 4 hour shifts
  - Looking for abnormalities, behavior, proximity to fence
  - Become very familiar with specific area
  - Land/terrain divided in a very specific way
  - Contact directly with units in field
- Similar units/centers all over the country

### **Site Visit/Lecture: Special Patrol Unit/Yasam Jerusalem**

The tactics and procedures of the Special Patrol Unit are similar to SWAT teams in the United States. The Special Patrol Unit is divided into motorcycle units and team-based squadrons. Unit

members demonstrated non-lethal and lethal weapons and capabilities. A unit member also provided a briefing on motives of a terrorist, operational parameters, suspicious signs and behaviors. Notes:

Deal with extraordinary incidents – anything with violence

2 types of units:

- Motorcycle units

- Anywhere in the city in 3-7 minutes

- Driver + rider; rider has M-4

- Elite of unit

- Helmet has Bluetooth for comms transmission

- 7 bikes every shift spread throughout city

- 2 shifts plus missions

- At night use 4-wheeled vehicles because of reduction in traffic

- Team-based squadrons

- Use Chevy Savana – holds 9 officers (but can hold up to 15-16)

- Modular vests

- Riot suit is fireproof

- Cannot use baton unless at highest threat level, and then only to outer thigh

- Non-lethal: rubber rounds

- Not allowed to fire center mass

- Can only aim below knee or below waist

- Water cannon

- Used for 3<sup>rd</sup> highest level of riots

- Has self-defense system – tear gas deployed from sides

- Disperses water, water with blue paint, water with stink, and water with tear gas

- Police can come in later to arrest people painted in blue

- Nozzle on front for trash fires

- Working time of 4 min at full blast

- Can refill from any fire hydrant

- Arsenal

- Importance of surgical means vs. mass means

- Non-lethal:

- Sponge rounds

- OC

- Paintball gun with paint, salt, OC

- Night-vision, night-sight for M4 and M22

M4 – fires .556

.22 Ruger (between lethal and non-lethal)

- For those that present danger, but not “clear and present” danger

Unit formed in the 90’s – needed to form professionally-trained operational units

- Most professional in police force

4 squadrons: 2 team-based, motorcycle, mounted

- Teams of 5 officers or pairs of riders

Focus on:

- Terror – arrests, identifying suspects, response to extreme events
- Crime – specific events, proactive actions
- Public order – demonstrations and protests
- Sensitive missions (Temple Mount, VIP protection, public security patrols)

Threats: suicide attacks, kidnapping, knife attacks, cars as weapons, shootings

- Concerns about combined attack and multiple attacks (e.g., secondary attacks on responders)
- Profile: all ages, family status, gender, education level, and economic status
- Locations: friction points where Arab population comes into contact with Jewish population
- Any time of day
- Motives:

Revenge

Environmental causes

Incitement

Desire to be famous

Copycat

Religious reasons

Personal

Suicidal

Clear name

Operational parameters

- Position personnel/units in sensitive places (e.g., crowds, commercial areas, schools, central areas, hot spots)
- Roadblocks to check suspicious persons
- Learn and train

Suspicious signs and behavior

- Presence in area not supposed to be
- Purse or backpack
- Nervous behavior
- Mumbling/praying
- Try to get close to security personnel

Operational behavior:

- Keep a safe distance

- Other officers looking for suspects
- Keep guard up at all time

Video: shooter in parking lot (2016)

Video: incident at Temple Mount – shooting from fortified door 7; no firearms allowed on Temple Mount

## **Lecture: Islam in the United States**

### **Mordechai Kedar**

This session focused on known radical Islamic groups in the United States. The lecturer discussed challenges for law enforcement, including the need to listen to people in their own language, in order to assess the level of support for radical Islamic organization. Notes:

Lecturer: 50 years experience in Arab culture (25 in IDF, 25 in academia)

“Alive and Killing: Tribalism in the Arab World”

Tribalism – most important element in the Arabic societies

Islam – extends to other countries

Suggested article: “Sharia and Violence in American Mosques”

<http://www.meforum.org/2931/american-mosques>

Found documents:

- “40 Hadith on Jihad” against infidels (Americans)
- “Racist, Fascist, Criminal Police: Manual for How to Resist Police Investigations”

Video: lying in Islam – prevention, protection of religion

- “The Life of Muhammad” page 367

Until they prove that this is wrong, they should be held to this – plan for North America

Images of billboards – [www.whyislam.com](http://www.whyislam.com)

Biggest challenge for law enforcement is how to find out what is true and what is not

- Listen to what people are saying in their own language
- Big difference between Arabic dialects

Pyramid for of degree of support by Muslims for terrorist activity:

- Tip is terrorists
- Below – those that supply weapons
- Below that – those that donate money
- Below that – sympathizers
- Below that – “understanders”

“War is deception”

Different definition of the word “jihad”

- Fight against sin – internal or external?

Wording of the Qu’ran vs. the Holy Qu’ran

## **Site Visit: Jerusalem Fire Department**

Participants visited a fire station in Jerusalem. Firefighters discussed the need for different cultures to work together to identify and mitigate threats within the city. Participants were able to explore ladder trucks and a CBRNE apparatus. Notes:

- 4 stations – one in Old City (Arab)
- 225 firefighters in whole city
- 3 shifts, 24 hours per day; career staff; 24 hours on/ 48 hours off
- Mutual aid from all over Israel
- Big problems because of many religions – need to treat everyone the same
- Call 102 to get fire response
- Site tour of multiple apparatus

## **Lecture: Israeli Security Agencies**

### **Rami Savir**

This session provided a description of the agencies that work together for intelligence collection activities within Israel, focusing on the Israel Security Agency. Participants learned about the separate expertise required for field officers and interrogators. The presentation included discussion of identifying, developing, and running sources. Notes:

Video clips:

- Boy caught smuggling XMAT
- Multiple operations
- Hospital fugitive extraction

Suggested documentary: The Green Prince:

<https://www.youtube.com/watch?v=5z8z4Fi7oz4&t=50s>

Shinbet/Israeli Security Agency

- Responsible for internal security: terrorism, subversion, espionage, diplomatic protection, international protection, cyber
- Field officers – 3 years training
  - 1 year language training
- Case officers in charge of geographic area; alone/independent
- Purpose is to thwart attacks, not collectors of intelligence
- Interrogators
  - Separate from case handlers
  - Operate as a team
  - Rely heavily on confessions
  - Mock prisons
  - Cannot use source information during interrogation
- Recruiting and handling difficult tasks
  - Need to be proactive
  - Walk-ins rarely valuable
  - Start by deciding who you want to be your source
  - Motives: money, ideology, personal issues, extortion, reduction of charges
  - Collect information and try to use it later

If the case officers doesn't find the hidden motive, then the recruitment will not succeed

If he doesn't have a motive, he will never be a source

The betrayal process starts when he says yes

Once he betrays his culture/brothers, he will one day betray the case officer

- Running a source – most difficult task

Information is immediately critical

Continuing threat to source

Always about checking the reliability of the source

What info did he give you?

What did he not give you?

Flow of meeting:

Importance of small talk at beginning and end

Headlines first – you have your priorities and he has his

- Get most important stuff at the beginning

You are in charge – you dictate the pace

- Don't want to stop the flow of information for technical info/details

You ask questions based on info needs

Small talk

Payment of money

- Same amount every time, not based on value of information
- The moment he understands the value of certain information, he will begin to lie or color his remarks
- Imagination becomes fact
- Source opinions, estimates are important, but are not facts

Reports – facts and case officer analysis/remarks

Sometimes you need to task a source with a specific mission

Validate mission outcomes

Identify gaps in outcome – what he reported versus what actually happened

Activity check – every couple of months

Sit down and review activity of source

Done by another case officer

Check for conflicts between what source told you and what actually happened

Reliability a key issue

Difference between source covering a target from the outside (example: barber) and a source covering a target from the inside

If you cannot recruit someone inside the target, you may be able to recruit from outside and get them inside

Try not to recruit the head of a cell  
 Want sources that can come to you, but that can't always happen  
 Need to know language and culture – culture adds context  
 Need to be proactive  
     Be ready to supply the things that they need as part of illegal activities (e.g., source, storage guy, smuggler)  
     Proactive prevention of terrorist organizations  
     Do not rely on luck or chance – make it!  
 Lessons learned and experience

## Day 6:

### In-Transit Lectures on Security Topics

#### Rami Savir and Rami Shemesh

While in transit to various site visits, two veteran Israeli Security Agency members provided a series of lectures throughout the day on numerous topics related to Israel, the security situation, and terrorist incidents. Notes:

#### Hebron

- 1929 – all Jews killed or expelled by Muslims
- Important city for many religions
  - Tombs of the Patriarchs (Abraham, Isaac, Jacob)
  - Massacre before peace agreements
  - Jewish settlements

#### Jewish settlements

- Anything that came under control of Jews after 1967
- Settlers feel safe inside of their community but not outside
- Suggested reading: “The Israeli Solution: A One-State Plan for Peace in the Middle East” <https://www.amazon.com/Israeli-Solution-One-State-Peace-Middle/dp/0385348061>
- View of interest: Kiryat Arba

### Activity: Caliber 3

Participants visited Caliber 3, a special academy for counterterrorism and security training. Participants viewed an active shooter response demonstration and joined in analysis of security operations during the demonstration and viewed active shooter response demonstration. Following the demonstration, completed the Basic Combat Shooting course and learned procedures for response operations. As part of the course, participants worked individually and in teams to neutralize threats in a training setting. Notes:

Founded 12 years ago

Sharon Gat – colonel in Israeli special forces

Special academy for counter-terrorism and security training

IDF, Israeli police, ISA, law enforcement from all over the world, civilians, government departments -> all train here

Instructors served at least 15 years with IDF, ISA, and/or Israeli police

“Brave heart and brave Jewish soul”

### **Site Visit: City of Hebron**

Hebron is located in an Arab-controlled area of the West Bank. There are protected Jewish settlements in the city that is 97% Arab and 3% Jewish, creating significant security issues. Hebron contains archeological sites that are important to the Jewish faith, as well as the Tomb of the Fathers which has significance for Christians, Jews, and Muslims. Notes:

Population: 220K

Biggest city in Judea

Heart of radical Islam

800 Jews

4 neighborhoods

1917 Mandate for Palestine

TIPH – Temporary International Presence in Hebron

A lot of rock throwing, attempted stabbings

Site tour: Tel Rumeida

- 4500 year old ruins: stairs/wall
- 4 room house
- Land purchased in 1807

Site tour: Tomb of the Fathers/Patriarchs

- Built during reign of King Herod
- 1267 – declared to be a mosque
  - Anyone not Muslim could not go in
  - Jews in Hebron in order to maintain access to the Tomb of the Fathers
- 1 million people per year visit Tomb of the Fathers
- Abraham paid 400 silver shekels for a cave and a field in Hebron
  - Discovered to be cave of Adam and Eve
  - Purchased after Sarah died
- Holy Arc – Torah Scrolls – contract for Hebron
- Site called “entrance to the garden of Eden”
- Rooms with memorials – actual tombs in caves underneath building
- Today building is split in 2 parts: one part for Muslim use, one part for everyone else

### **Site Visit: Old City of Jerusalem and Western Wall**

Participants visited religious sites in the Old City of Jerusalem to understand security issues related to Dome of the Rock and terrorist incidents in Old City of Jerusalem. These sites have been frequent targets of terrorist attacks. Notes:

Dome of the Rock / Temple Mount

- First Holy Temple of the Jews destroyed in the 5<sup>th</sup> century
- After 50 years of diaspora, Jews returned and built second Holy Temple in same place

Destroyed by Romans in 70AD

- Qu'ran Chapter 17 – journey of Muhammad
  - “exited mosque” and brought back prayers
  - Became 3<sup>rd</sup> holiest monument for Islam
- Jesus only in Jerusalem for last week of life
  - Palm Sunday – first day he entered Jerusalem from Mt of Olives
  - Thursday afternoon – arrested, interrogated
  - Friday – delivered to Romans, died, buried
  - Sunday – Mary sees empty tomb
- 40 days after resurrection, Jesus went to heaven from Mt Olive

Church of the Holy Sepulchre

- Via della Rosa
- Gethsemane Church
  - where Peter denied Jesus three times
  - where Judas gave up Jesus
  - where Jesus was arrested
- Crusader style
- Built in 11<sup>th</sup> century AD on the remains of the Byzantine church

Mercy Gate / Golden Gate

- Persians sacked Church of the Holy Sepulchre
- Golden cross returned with cross and entered through this gate
- Jews believe that the Messiah will return through this gate
- Muslims built cemetery in front of gate

Room of the Last Supper

- 14<sup>th</sup> century dispute between Franciscans and Jews regarding the room
- Grave of King David right below room
- Became a mosque in 14<sup>th</sup> century AD
- Messiah will come from the family of King David

Western Wall

- 2 tablets in Arc of the Covenant
  - Put in holiest room in the temple
  - Temple destroyed in 70AD
  - 132-135 AD – Jews rebelled against Romans
    - Roman emperor killed more than 650K Jews
    - Law restricted Jews from Jerusalem
    - Changed name from Judea to Palestine
      - All others expelled
    - 2000 year diaspora
    - 1700 (approx.) rabbi and students built synagogue – then destroyed
    - 1800s – built synagogue on same place, destroyed 1948
    - 1980s – rebuilt synagogue third time
- Western Wall is all that is left from the 2<sup>nd</sup> temple
- 10 gates to the Temple Mount only open to Muslims

- Jews, Christians, others must use small gate
- 10K people at the Western Wall every Friday evening

## Counter-Terrorism: Prevention, Detection, and Response and Recovery Course Draft Agenda October 2017

This agenda details the schedule for each day of the October 2017 Counter-Terrorism: Prevention Detection, and Response Course. Please note that this agenda represents the likely curriculum schedule, but may continue to be refined until the course begins.

<b>12 October 2017 (Thurs)</b>		<b>Depart local airports for TLV</b>
<b>13 October 2017 (Fri)</b>		<b>Arrival in Tel Aviv</b>
17:50	Arrive at Ben Gurion Airport, Tel Aviv, Israel	
18:30	Transport to hotel	
19:00	Check In	
19:30	Dinner at hotel	
<b>14 October 2017 (Sat)</b>		<b>Cultural Day</b>
Saturday is Shabbat in Israel – a day of rest. Participants are to use this day to acclimatize to the time change. The course curriculum starts early on Sunday morning and participants need to be alert. Breakfast and dinner buffets are included in the lodging rate. Participants are on their own for lunch. There are many restaurants within walking distance of the hotel.		
<b>15 October 2017 (Sun)</b>		
07:30	Breakfast at hotel	
08:00 – 09:30	<b>Lecture:</b> Israel History , Geography, & Security Environment	
09:45 – 12:30	<b>Lecture:</b> Terrorist Explosive Devices and Tactics	
12:30 – 13:30	Lunch provided in meeting room	
13:30 – 14:30	<b>Lecture:</b> Intelligence Orientation	
14:30 – 15:30	<b>Lecture:</b> Cyber, Terror, and Social Networks	
15:45 – 16:30	<b>Lecture:</b> Crisis Media Management: Counter-Terror Approach	
19:30	Dinner at hotel	
The series of lectures presented on Sunday provide background and contextual information critical to understanding the threat environment in Israel.		

<b>16 October 2017 (Mon)</b>	
07:00	Breakfast at hotel and check out
07:45	Bus Departs
07:45 – 09:00	<b>En-route lectures on security topics</b>
09:00 – 10:30	<b>Site Visit:</b> Magen David Adom (MDA) Tactics and Procedures Topic: Pre-hospital emergency medical services
10:30 – 12:00	<b>Site Visit:</b> Port of Ashdod Topic: Protection of transportation assets
12:00 – 13:30	<b>Site Visit:</b> Rutenberg Power Station Topic: Protection of critical infrastructure
13:30 – 14:00	Lunch provided
13:30 – 15:30	<b>Site Visit:</b> Gaza Border/City of Sderot Topic: Protection of communities/civilians
15:45 – 16:30	Travel to Jerusalem; hotel check in
19:30	Dinner at hotel
<p>The curriculum for Monday focuses primarily on protection of communities and critical infrastructure from terrorist threats. Many of the site visits for the day center on assets located in near proximity to Gaza, an origin point for military and terrorist attacks.</p>	

<b>17 October 2017 (Tues)</b>	
06:30	Breakfast at hotel
07:00	Bus Departs
07:00 – 10:00	<b>En-route lectures on security topics</b>
10:00 – 12:00	<b>Site Visit:</b> West Bank / Golan Heights Participants will visit a number of sites related to the security situation in Israel and proximity to Syria and Jordan
12:00 – 12:30	Lunch provided
12:30 – 16:30	<b>Site Visit:</b> Golan Heights (continued) Topic: Protection of critical infrastructure
16:30 – 17:30	<b>Site Visit:</b> Dead Sea Topic: Security of tourist areas
17:30 – 19:00	<b>En-route lectures on security topics</b>
19:30	Dinner at hotel
<p>The curriculum on Tuesday focuses primarily on the security situation in Israel, including shared borders with states that have previously attacked Israel. The security situation is complicated by Israeli settlements located in the West Bank. Participants will view sites from terrorist and military attacks to better understand concepts and techniques for combatting these incidents.</p>	

<b>18 October 2017 (Wed)</b>	
07:30	Breakfast at hotel
08:00	Bus Departs
08:00 – 08:30	<b>En-route lectures on security topics</b>
08:30 – 11:00	<b>Site Visit:</b> Knesset Topic: Discussions with members of Israeli Parliament on the security situation in Israel and terrorist threats
11:00 – 12:30	<b>Site Visit:</b> Israeli National Security Council Topic: Discussions with members of Israeli Security Council on the security situation in Israel and terrorist threats
12:30 – 13:00	Lunch provided
13:00 – 15:00	<b>Site Visit:</b> Military Court Topic: Prosecution of terrorist suspects
15:00 – 18:00	<b>Site Visit:</b> Old City of Jerusalem and Western Wall Topic: Security of religious and cultural sites
19:30	Dinner at hotel
The curriculum on Wednesday focuses on governmental attempts to address Israel's terrorist threat by examining efforts by the legislative, governmental, and judicial branches.	

<b>19 October 2017 (Thurs)</b>	
08:00	Breakfast at hotel
08:30	Bus Departs
08:30 – 09:00	<b>En-route lectures on security topics</b>
09:00 – 11:00	<b>Site Visit:</b> Hadassah Hospital Topic: Mass casualty readiness and response
11:00 – 12:00	<b>Site Visit:</b> West Bank Border Checkpoint Topic: Surveillance tactics and techniques
12:00 – 13:00	Lunch provided
13:00 – 14:30	<b>Site Visit:</b> Special Patrol Unit Topic: Specialized law enforcement tactics and techniques
14:30 – 15:30	<b>Site Visit:</b> Jerusalem Fire Department Topic: Specialized response assets
15:30 – 16:30	<b>Lecture: Extremist Islam in the United States</b>
16:30 – 17:30	<b>Lecture: Social Networks as a Source of Terrorist Inspiration</b>
19:30	Dinner at hotel
The curriculum on Thursday focuses on Israeli emergency response tactics and procedures for terrorist and mass casualty incidents.	

<b>20 October 2017 (Fri)</b>	
08:00	Breakfast at hotel
08:30	Bus Departs
08:30 – 09:30	<b>En-route lectures on security topics</b>
09:30 – 12:30	<b>Activity:</b> Active Shooter Drill and Training
12:30 – 13:00	Lunch provided
13:00 – 15:00	<b>Site Visit:</b> Hebron Topic: Security in high tension areas
16:00 – 18:00	<b>Site Visit:</b> Jerusalem Market Participants will tour the historic Jerusalem Market, site of numerous past terrorist incidents
19:30	Shabbat Dinner
20:30	Depart hotel for TLV
23:30	Depart TLV
The curriculum on Friday focuses on application of knowledge and skills learned during the week.	

<b>21 October 2017 (Sat)</b>	<b>Return to home jurisdictions</b>

## Letter of Support

In May of 2017, the Austin Regional Intelligence Center (ARIC) sent six students to Israel to take part in the Advanced Security Training Institute's Counter-Terrorism Immersion Training. Our delegation consisted of representatives from various disciplines and assignments from within our Police and Fire Departments.

We received training directly from security and intelligence experts on the topics of:

- Proactive Intelligence Gathering
- Critical Infrastructure Protection
- Active Shooter Response
- Target Hardening
- Bomb Prevention and Response
- Community Engagement for Preventing and Responding to Terrorism Events
- Case Studies and Lessons Learned from Terrorism Events

After months of research, we chose Advanced Security Training Institute (ASTI) to facilitate this training because they are the leader in this field. The training program developed for this purpose, the "*Counter-Terrorism Detection, Prevention, and Response Immersion Course*," is a six day program encompassing historical perspective, policy development, tactical and strategic preparations, and critical infrastructure protection strategies.

From the moment when we stepped off the plane until we departed Israel, we were greeted and escorted by professional representatives of ASTI. Our safety and comfort was a priority for their team. ASTI had representatives on hand to answer every question we had along the way. Security and intelligence specialists accompanied us on our travels and were able to provide historical, geographic, and ideological context throughout the trip. They acted as a liaison between us and the local community as we travelled throughout the country. Although the trip was not a personal or religious vacation, the ASTI staff still took time when they could to explain the religious and historical background of each site we visited and travelled through.

Israel's long history of dealing with threats, conflict, trauma, and casualties over the course of their history has resulted in the development and implementation of several of procedures and entities;

A National heightened sense of awareness that occurs at all levels within their society beginning with education in their schools

An Intelligence Process that affords them the ability to quickly address potential threats or issues on multiple levels

Extensive Security Protocols at key Critical Infrastructures

An established integrated response by the Military and Emergency Services Responders

Hospitals staffed and equipped around the clock to deal with mass casualties

Regional EMS Technicians deployed with “Take-Home” emergency vehicles to respond in the event of Mass Casualties

The implementation of a country wide phone app which allows for video exchange and quicker uploading of patient information for people needing an EMS response

Military Courts to preside over cases involving subjects suspected of Terrorist Activity

Over the last ten years, numerous U.S. Homeland Security Officials have travelled to Israel for this training. Among those who have participated in this training are First Responders (Police, Fire and EMS), Bomb Squad Technicians and Managers, Strategic Homeland Security Management Personnel, Incident Commanders, Policy Makers etc. In order to bring back valuable feedback about the program for other agencies considering whether or not to participate, many of these prior participants have documented their experience. ARIC utilized those reviews and testimonials to justify and support our decision to participate. Now, after having participated in the training ourselves, we are happy to add our name to the list of agencies supporting this training.

Due to our overwhelmingly positive experience and valuable lessons learned throughout this training, we remain available to discuss our experience with anyone who is considering participating. We may be contacted at the information below.

Joyce,

I hope this email finds you well. Attached you will find several attachments related to Advanced Security Training Institute's (ASTI) Counter-Terrorism: Detection, Prevention, and Response (CTDPR) training course. These attachments may help to answer questions you may have about the upcoming October 2017 trip or others scheduled for the future.

The first attachment is a summary of the lessons, site visits, and activities completed during the May 2017 CTDPR course. While not every iteration of the course is the same, this document will provide you with an understanding of the material that is covered during the session. The second attachment is a draft agenda for the October 2017 CTDPR course. The final attachment is a YouTube video created by one of the participants from the May course with image and video highlights from the course.

The dates for the next CTDPR course are 13-21 October. Participants will stay in Tel Aviv and Jerusalem, Israel. The rate is \$9,450 per person and includes airfare, lodging, most meals and expenses, and the training curriculum. Please note that funds from the State Homeland Security Program, Urban Area Security Initiative, and Emergency Management Performance Grant can all be used to fund training through ASTI. ASTI courses also correlate closely with the FEMA Core Capabilities that serve as the basis for many of the DHS grant programs.

Please do not hesitate to contact me with any questions that you might have about course curriculum, funding or approval mechanisms, or travel/logistics. Also, please feel free to forward this information to other responders that may be interested in immersive counter-terrorism training.

I am available to travel to IA to meet with response agencies interested in the ASTI training courses. Chairman of House Homeland Security is hoping to attend the October course with members of the

emergency response community.

Regards,

Yisroel Stefansky

Advanced Security Training Institute

## Counter-Terrorism Detection, Prevention, and Response and Recovery Immersion Course

May 2017

This document contains an overview of and detailed notes from the lectures, immersive site visits, and activities experienced by participants in the May 2017 *Counter-Terrorism Detection, Prevention, and Response* course. The intent of the course was to convey the tactics and strategies developed and used in Israel to address terror incidents, allowing participants to adapt their new skills for use in their home jurisdictions.

### Day 1:

#### Lecture: The History of Israel

##### Avi

This session provided information on key points in the history of that land and region that exists as the state of Israel. This information provided context for participants to understand historic conflicts, rulers, and battles that shaped the political and security situation as it exists today. The lecturer paid specific attention to the 1947 United Nations (UN) Partition Plan, declaration of Israeli independence, 1948 Arab-Israeli War, 1967 Six-Day War, and current day contested territories. Notes:

King David – first to occupy Jerusalem. Made peace with enemies by marrying their wives (including the Queen of Sheba). King Solomon was the son of David.

Israel has developed desalination technology that it is sharing with Arab countries, providing peace through water.

32 latitude – below is desert, above is green

Ottomans controlled land until the first World War

1947 UN Partition Plan gave Arabs land in the mountains, Jewish communities in the valleys, and Jerusalem as an internationally-protected area

- o Jews agreed to this plan, Arabs said no

May 14, 1948 – Israel declared independence; 5 Arab armies attacked

July 1948 – Israeli army counterattacked

Israel smaller than New Jersey

Ben Gurion – first Prime Minister of Israel

- Dream to make the desert green
- Special irrigation systems

1967 – 6 Days War fought against Syria, Egypt, and Jordan from 6/5/67-6/11/67

Jordan River is part of Africa Rift (tectonic plates)

Provide aid to neighbors during disasters

Contested territories: Gaza, West Bank, Golan Heights

Ben Gurion Airport – 8km from West Bank

“Land of Milk & Honey” – the only things that you can get from an animal without killing it

Israel as “the start-up nation”

## **Lecture: Terrorist Explosive Devices & Tactics**

### **Chief Superintendent Michael Cardash**

This session provided information on terroristic and criminal use of improvised explosive devices (IED) in Israel. The lecturer described the components of an IED and types of explosive material commonly used in IEDs. A segment of this lecture focused on person-borne improvised explosive device (PBIED). These suicide bombers use bags, vests, belts, pants or other innocent looking objects to transport explosive devices for detonation. The lecturer also discussed the importance of public awareness and intelligence/information sharing. Notes:

Last 4-5 years – few explosive attacks in Israel

Iron Dome System – built with the US to intercept rockets

Terroristic and criminal use of Improvised Explosive Devices (IEDs); criminal use means that it is specifically directed at a person

Components of IEDs

- Explosive material (XMAT)
- Detonator (initiator)
- Firing system (trigger)
- Optional additions

Camouflage

Fragmentation

Types of XMAT commonly use in IEDs

- TATP – with or without plasticizers
- Urea nitrate (with plasticizers)
- TNT – mostly from old ammunition
- Nitroglycerine-based
- Ammonium nitrate based (fertilizers)
- Nitro glycol (EGDN)

Times Square VBIED used 220lbs of urea, not urea nitrate

Ball bearings – best type of fragmentation

- Used to enhance the distance

Cell phone – most common radio detonator

DTMF – dual tone multi functional

- Added onto phone to set off tone
- Don't need to wait for call to go through

Public awareness is key

- Israel teaches awareness from kindergarten: “what is a suspicious object?”, “what is a suspicious person?”
- 10<sup>th</sup> graders get presentation from bomb tech
- training in military

Suicide bomber = person-based IED = PBIED

Response - first consideration – look for secondary device

Considerations for PBIED

- Overcome security measures
- Control the explosion and ensure success of the incident
- Portability of the explosive device
- Substitute for firing system
- Packaging – use bags, vests, belts, pants, and innocent looking objects

\*\* Importance of intelligence and information sharing

- Sources: Israeli Defense Forces (IDF), Mossad, Israeli Security Agency (ISA), police

Public resilience – get back to normal ASAP

## **Lecture: Cyber, Terror, & the Social Networks: The Dark Side of Technology**

### **Dr. Harel Menashri**

This session addressed the main trends in terrorist online activity, including the use of social media networks and hidden or dark networks. Terrorist organizations use file distribution applications, visible and hidden websites (e.g., blogs, forums), social networks, and communication applications (e.g. WhatsApp) for the purposes of propaganda, training, recruiting, funding, executing cyber attacks, intelligence gathering, etc. The lecturer also discussed ISIS trends and activities on the web. Notes:

Two main trends in terrorist online activity: grasping of popular social media networks and the dark web

Unparalleled tools for reaching out to as wide an audience as possible (e.g., mainstream social media networks)

ISIS has developed a multi-divisional media empire – target specific groups in local languages

Internet (only part of cyberspace) composed of: public networks, hidden networks, deep web

Terrorist activity on the internet: propaganda, training, recruiting, funding, cyber attacks, intelligence gathering, and more

Laws don't allow you to break into the network of someone who breaks into yours

Network discussion centers used for distributing files, websites (e.g., blogs, forums), social networks, communications applications

Cachedview.com shows deleted and removed

Terrorist organizations use encryption software, multiple accounts, social networks (including visible and hidden networks); Tor

ISIS trends:

- Propaganda focused on “distant enemy” encouraging lone wolves and cyber attacks
- Call to arms in social media
- Encouraging activities of terrorist organizations against critical infrastructure
- Use Android more than IOS
- Opera browser and Tor
- Use hushmail software to encrypt email
- Cyberghost VPN allows IP address switching
- Locker app deletes files after several incorrect password attempts
- Fake GPS apps hide location
- Fake social media accounts

Lessons:

- Do not take phone into the field or into meetings (change the culture)
- Everything is a computer and can be hacked
- Concerns about hacking of pacemakers, hearing aids, security cameras, automobiles, toys, appliances -> internet of things

## **Lecture: Crisis Media Management: Counter Terror Approach**

**Gil Kleiman**

This session focused on the ability to use the media as a multiplier as part of response operations. The lecturer stressed the importance of understanding the sensitive issues in your community to gather intelligence, as well as the need to feed the media with information during a response.

Terror is not new, but tactics of terror change

Object of terror is to turn you into a drowning man

Media as a multiplier

“The Kardashian Syndrome” – know which topics are sensitive to your community, what will turn heads

What you don’t put out there, someone else will

Never lie – say what you have to say

1 spokesman – unity of message

Book by Author: Terrorist Suicide Bombings: Attack Interdiction, Mitigation, and Response. The link to electronically review the book is:

<https://books.google.com/books?id=4a3MBQAAQBAJ&pg=PA266&lpg=PA266&dq=Terrorist+suicide+bombers+Kleiman&source=bl&ots=eI8nOL1kUY&sig=6txgZc59Nu1ssKaUIPdrR8evxJF8&hl=en&sa=X&ved=0ahUKEwjP7YSSkvvTAhUls1QKHXYDfMQ6AEINTAD#v=onepage&q=Terrorist%20suicide%20bombers%20Kleiman&f=false>

**Day 2:**

## **In-Transit Lectures on Security Topics**

### **Rami Savir and Rami Shemesh**

While in transit to various site visits, two veteran Israeli Security Agency members provided a series of lectures throughout the day on numerous topics related to Israel, the security situation, and terrorist incidents. Notes:

#### **Demographics**

- 8 million Israeli citizens: 75% Jewish; 21% Israeli Arabs; 4% Other (e.g., Christians, Arabs, Druze)
- 4.2 million Palestinians: 1.9M in West Bank; 1.7M in Gaza, E. Jerusalem Arabs (Israeli residents)

Until 1948, 1.2M Arabs/600K Jews; after 1948, 300K Arabs/600K Jews

- 500K Arabs went to refugee camps -> now 5 million in refugee camps

UN Decision 181 (November 29, 1947)

- David Ben Gurion accepted division of Israel into Jewish State and Arab State with Jerusalem as international territory
- Jewish State 68% desert
- Arabs would not accept any independent Israeli state

6 Day War – 1967

- New reality – Jewish state controlled Gaza, West Bank, Sinai Peninsula

New forms of terrorist organizations emerged

Oslo Agreement

- West Bank divided into 3 parts
  - A – exclusively administered by Palestinian Authority
  - B – administered by both Palestinian Authority and Israel
  - C – security and public affairs administered by Israel
- 1993 Agreement – Hamas said no
  - 10 years – birth of suicide bombers – change in paradigm
  - Israeli citizens afraid of buses, restaurants
  - Israeli develops expertise in dealing with terrorist cells

Islamic Fanatical Radical Movement Point of View:

- Jerusalem belongs to Allah
- Allah chose Islam to rule the world
- Chosen people: Jews, Christians, Muslims, but Jews and Christians fell
- Jews can live here, but not be independent rulers
- Muslim Brotherhood says that Muslims must be the leaders in the Holy Land
- Mohammed – last prophet

Gaza Strip – 2 governments: 1 Hamas and 1 PLO; over 1.7M people

- 2006 decision to remove 16 Jewish settlements from Gaza (8K people)
- Hamas started shooting rockets all over Israel

Obstacles to peace: 1) Jerusalem, 2) refugees, 3) Israeli settlements in West Bank

After 1967 (6 Day War), green light given to settle into the West Bank (500K people)

Hamas is a political movement, Islamic jihad is a military movement

Border countries: Lebanon, Syria, Jordan, Egypt – no current problems except for Hezbollah

- Syria: ceasefire since 1967, few problems remaining regarding the Golan Heights
- Jordan: ceasefire since 1967, peace agreement 1994
- Egypt: ceasefire since 1973, peace agreement 1979

Ashdod – Philistine city; 3000 years old

- Largest port city in Israel
- High population of Russian Jews

First Intifada – began December 1987 - violent uprising against Israeli “occupation”; many riots and shootings

Second Intifada – began October 2000 – more violent

War with Gaza every 2-3 years, last was August 2014

Kibbutz – communal living generally according to Communist principles

More than 12 empires have conquered the Holy Land – all empire expansion has to go through Israel

50% unemployment rate in Gaza

Egypt has mostly closed their gate with Gaza

- Was open until 3 years ago
- Previous leader of Egypt was Muslim Brotherhood – kept the gate open

Desert defined as less than 200mm of rain/year

Rocket attacks from Gaza

- If in vehicle, stop car, get behind anything, cover head
- Every bus top has bomb shelter

Many tunnels from Gaza – get into Israel and behind military

Jerusalem

- King Solomon built first temple: “Gods house among people”
- Most important Holy City for Jews
- David Ben Gurion: “no state of Israel without Jerusalem, but there is Jerusalem without Israel”
- East Jerusalem belonged to Jordan until 1967  
1/3 of population of Jerusalem

## **Site Visit: Magen David Adom (MDA) in Israel – Tactics and Procedures**

### **Director of International Relations**

MDA is the Israeli emergency medical services (EMS) agency. Participants traveled to Ashdod to visit an MDA dispatch center. The lecturer provides information on operations and logistics required to coordinate the activities of the more than 15,000 volunteers and 2000 paid staff across the country. MDA is also the only supplier of blood services in Israel. Participants were able to view dispatch technology and operations as they occurred. Notes:

MDA: Red Shield of David -> National EMS organization and national blood services organization

British mandate over Middle East after WW2

Established according to Red Cross guidelines

National, public, statutory, volunteer organization

More than 15K volunteers, less than 2K employees

- Volunteers are trained the same as employees

Active every hour, every day, all over the country

Train all IDF paramedics

Not funded by government, but supervised by Ministries of Health and Finance

Charge for services provided

- Those treated can claim back costs from health organizations
- Costs covered if person is hospitalized or suffers from known medical problems
- 72% of budget comes from billed costs

Government provides funds for preparedness from multiple hazards (e.g., earthquakes, rockets)

- No major earthquakes since 1927
- Israel sits on 2 fault lines

Volunteers are crucial in every community -> active, involved, well-trained

Call volume: 2500 calls per day (emergency and non-emergency)

- 2 ALS helicopters
- Vehicles: 1000+ ambulances plus minibikes
- Tel Aviv region: 300-400 calls/day for 1.5 million people
- Not a lot of misuse of the system
- Provide backup to the national school system for non-emergency calls

There are private ambulance companies; a few provide ALS

9 regional dispatching centers

- Dispatchers are all EMTs or paramedics
- Can provide medical guidance over the phone
- National dispatch system – call will go to first available dispatcher  
Trying to keep time to answer call to less than 4 seconds

No central 911 system in Israel

- Dial 100 for police services
- Dial 101 for MDA
- Dial 102 for fire services

Created an understanding that all disciplines need to work together

- Direct communication from one dispatching center to another
- In areas of potential violence, MDA may request backup from law enforcement
- Some awareness training of fire department operations
- A lot of training with fire department
- GPS navigational system shows unit numbers of units from other departments

Law enforcement is in command of every incident

Law enforcement can shut down all communications amplifying sites near an incident

Responders have primary access to cellular bandwidth

Smart phone app (My MDA) – geolocates caller

- Personal information
- Known allergies

- Recent medical history
- Family info (calling in for self or other family member?)
- Can activate phone camera to provide video from scene
- Can communicate via text
- Shows “uber” view of vehicles arriving
- 60K users

Volunteers – group of highly trained EMTs and paramedics that keep supplies with them or bring them home

- MDA team app – shows location of all team members
- If first ambulance will arrive in more than 5 minutes, system will also scan volunteer first responders in the area
  - Provided with same call information
  - Can respond and click “navigate” -> uses Waze to guide to call
- Can fill out medical form – becomes part of the medical record

Only supplier of blood services in Israel

- Collect at least 1000 units every day
- Need to have enough inventory
- High holidays means lower supply
- Targeted communications with donors

Hospitals notify dispatchers when at capacity; close communication

- Ministry of Health monitors hospital capacity closely

Site tour: Ashdod dispatch center

- In bomb shelter
- Air filtering system to protect against chem/bio
- Automatic dispatch of mutual aid
- Average response time 7-8 minutes
- 8-hour shifts

### **Site Visit: Port of Ashdod – Protection of Transportation Assets**

Participants traveled to the Port of Ashdod for a discussion of terror threats to transportation assets. Participants viewed multiple security components including biometric and automated gate systems, a smart fence, camera surveillance systems, the use of defender-class boats for patrol of the port from the water, biometric screening of crew members, and the use of drones.

Notes:

Operations always connected to preventing terror

Need for separation of operations – like a military base

Profile employees for different categories of clearance

Video summarizing security measures

- Advanced gate system using biometrics for access
- Smart fence
- Camera surveillance system and included analytics
- Defender-class boats patrol
- Biometric screening of crew members

Database contains information on 70% of seamen in the world

- Drones

Example of terror threat: “trojan horse” shipping container with false wall -> killed 10

Guiding authorities:

- Interior Emergency Authority
- ISA Information Security
- ISA
- Israeli Police
- Israeli Navy

Site tour: Port security operations

### **Site Visit: Rutenberg Power Station – Protection of Critical Infrastructure**

The Rutenberg Power Station is located in Ashkelon, less than 5 km from Gaza. The power station is the target of repeated rocket and terror attacks. Numerous tunnels from Gaza have also been found in the vicinity of Rutenberg. Participants learned about the security components being used to prevent and mitigate attacks on the power station. Notes:

5 power stations located in Israel – Rutenberg is the largest

Located 5km from Gaza

Israel cannot get electricity from anywhere else in the world

Have to depend on themselves

Issues:

- Rockets
  - Concrete wall protects major systems
  - Iron Dome
  - Reliance on coal (LNG expensive)
  - Poles hardened
- Tunnels
  - Found in vicinity – one 3km long
- Terrorists
  - Combat trained security guards
  - Patrol vehicles
  - Guard towers
  - Surveillance – cameras, radar
  - Patrol boats (2)
  - Navy patrol of pier

Collaboration between fire, police, IDF, Red Cross

Site tour: power station

### **Site Visit: City of Sderot**

Sderot is the city located closest to Gaza and is targeted in many rocket attacks. Participants viewed stockpiles of exploded rockets launched from Gaza into Sderot, as well as shelters available throughout the city to protect civilians. These shelters include playground equipment that serve as bomb shelters in schools and parks.

## **Lecture: The State of Relations between Israel and its Neighbors**

### **Rami Savir**

This session provided information on the relationships with Lebanon, Syria, Jordan, and Egypt, nomadic Bedouin tribes within Israel, Gaza, the West Bank area of Judea and Sumeria, and the division within Jerusalem. Notes:

Understanding the mindset of Israel is key

Israel formed as a state for Jewish people

Mixed population: Jews, Israeli Arabs, Palestinians, E. Jerusalem

1.7 billion Muslims in the world

Most Muslims not terrorists, but most/many terrorists are Muslim

#### **Lebanon**

- Not a real country - clans of Christians, Muslims
- Hezbollah runs the state
- Theoretically should have no problems with Lebanon

#### **Syria**

- Sunni Muslims
- Govt holding power thanks to support of Lebanon and Russia

#### **Jordan**

- Left over from British Mandate
- 70-80% Palestinians
- Minority Bedouins are ruling
- Peace treaty with Israel but don't know if it will hold

#### **Egypt**

- Peace treaty since 1977
- Good relations with regime, but not with people
- Bedouins living in Sinai Desert

#### **Gaza**

- Trying to find ways to defeat/pass the fence (e.g., rockets, tunnels)
- For a while, didn't see foreigners as a significant threat
  - Requires profiling of behavior
  - You can't check everyone
  - Pure random checks are a waste of time

#### **Judea/Sumeria**

- Judea is south of Jerusalem in West Bank
- Sumeria is north of Jerusalem in West Bank

Use of walls to separate territory used/controlled by Palestinians when people are so close they can shoot each other with rifles

- Suicide attacks went down more than 90% after wall built
- Wood and concrete fence

#### **Tunnels**

- Tunnels into Israel are attack tunnels

- Tunnels into Egypt are smuggling tunnels
- Jerusalem – Old City (less than 1 mile x 1 mile)
- Jewish Quarter
  - Muslim Quarter
  - Armenian Quarter
  - Christian Quarter

## **Lecture: The Muslim Mindset**

### **Rami Savir**

This session provided an assessment of behaviors and motivations of Muslim Arabs in the Middle East from the prospective of former Israeli Security Agency members. Notes:

A man is always preferable to a woman

- The man decides
- A woman as a source is less beneficial
- Women do not participate in discussions

A mother is always preferable to a wife

- The function of a wife is to have kids

Marriage for practical reasons is always preferable to marriage for love

- Marriage to first cousins is ideal
- Woman moves to home/family of husband
- Woman takes husbands name
- Dynasty of family is very important

A cousin is always preferable to a stranger

- Importance of families and clans

Family obligation supersedes loyalty to a country

The Army is preferable to civilian institutions

- Force is important
- Perception of strength is important

Ethnic and religious affiliations are more important than a national identity

Rulers are more important than the law

- Leadership is to benefit your family

Luck is more important than discipline and planning

Affinity and charisma are more important than the sense of obligation

- People will follow someone to the worst decision they every made

Poetry is more important than prose

An embrace precedes acquaintance

Embarrassment precedes guilt

- Do not want to be embarrassed

Suspicion precedes trust

Shouting precedes dialogue

Past and future are more important than the present

Manipulation precedes listening

- Control and power are more important than the solution
- Negotiation occurs prior to, during, and following an agreement
- Honor above all
  - Most important issue in the mindset of Arabs

### **Day 3:**

#### **In-Transit Lectures on Security Topics**

##### **Rami Savir and Rami Shemesh**

While in transit to various site visits, two veteran Israeli Security Agency members provided a series of lectures throughout the day on numerous topics related to Israel, the security situation, and terrorist incidents. Notes:

##### Old Jerusalem

- 37K population inside walls
  - 65% Muslim
- 4 Quarters: Christian, Armenian, Jewish, Muslim
- Walls built in 1536 by the Ottomans to protect Jerusalem from Christian Crusaders
- 7 gates built originally

View of note: pillars built around light train station to prevent terror incidents caused by crashing vehicles into stations

View of note: Ammunition Hill from 1967 battle with Jordan

View of note: Mount of Olives, Mount of Scopus, Mount Zion

View of note: Bedouins villages - 280K population total

West Bank divided by Oslo Agreement:

- A: Exclusive responsibility of Palestinians
- B: Security responsibility of Israel, public services responsibility of Palestinians
- C: Exclusive responsibility of Israel

12 tribes of Israel – descendants from Jacob

- Exiled into and enslaved in Egypt for 400 years
- Moses led them through the desert for 40 years
- Came through Jericho (Jordan Valley)
- Moses died on the east side of the Jordan River; did not enter into Holy Land

Israel will not give up Jordan Valley as any part of a peace agreement – Jordan Valley is a buffer

June 16, 1946 – 11 bridges connecting Israel blown up to protest limits on amount of Holocaust Jews allowed into Israel

7 fruits that represent the “land of milk and honey”: date, olive, fig, grape, pomegranate, wheat, barley

Muslim calendar goes by the moon – 354 days

Jewish calendar – dates for holidays based on what is in the Bible

Ramadan – holiest Muslim holiday

- Fast for 30 days
- Greater chance of terror attacks because people feel more devout

Muslims pray 5 times per day – intelligence effort to see who goes to the mosque for the early prayers – most devout

Muslim Brotherhood – Dawah – call to build schools and mosques

Sea of Galilee – was main source of water for Israel

Dam at south end of the Sea / Jordan River

First desalination plant opened last year to provide water from the Mediterranean Sea

Syrians tried to stop water from flowing into Israel – 1964

First suicide bomber attack in 1991 after 400 Hamas leaders exported to Lebanon; came back with lots of knowledge about suicide bombing

Life of Jesus:

- Raised in Nazareth for 30 years
- Lived at Sea of Galilee for 3 years
  - Recruited disciples
  - Performed miracles
- Traveled along Jordan River
- In Jerusalem only one week before being crucified

Rule over land that is now Israel:

- For 300 years after Jesus died, there was harassment of Christians – Romans did not allow Christianity
- 325 AD, Constantine the Great (Roman Emperor) – allowed Christianity
- 638 AD Empire of Islam
- Defeated 1099 by Crusaders
- Defeated in 1187 by Muslims
- Defeated 1516 by Ottomans
- Ottomans ruled til the end of WW1

View of note: Bet She-An. In 1997, a Jordanian soldier killed 7 girls in Bet She-An; King Hussein of Jordan went to Bet She-An to give his condolences to the families

History of Islam:

- 7<sup>th</sup> Century AD – Islam became the 3<sup>rd</sup> monotheistic religion
- Established by Muhammad (name means “Praise God”)
  - 570 AD – born in Mecca
  - 610 AD – entered a cave in Mecca and had a vision from the Angel Gabriel
    - Wrote first verses of Koran in cave
  - Started to preach 610-622 AD
  - 622 AD chased from Mecca to Medina
  - 622 AD – died and buried in Medina
  - No successor – 2 competing camps
    - Al Sahaba (sp?) – friends of Muhammad
    - Fatimah – daughter of Muhammad, married to 4<sup>th</sup> caliph
      - Fought to continue Islam

- Mother of Al-Hasan and Al-Husayn

680 AD – battle for the future of Islam between Fatimah and sons vs. friends of Muhammad – Battle of Karbala

Al Husayn killed in battle – followers became Shia

Day of Ashura (Shia holiday) marks the death of Al Husayn at Battle of Karbala

ISIS – Sunni, Al Qaeda – Sunni

ISIS established after 9/11 and US involvement in Iraq

65% of Iraq controlled by ISIS

Syria – Bashar al-Assad not Sunni or Shia

ISIS, other Sunni groups, free rebels all fighting al-Assad

2014 – Jabhat al-Nusra kidnapped 45 United Nations peacekeepers in Golan Heights; Israeli forces opened the gate and allowed UN personnel into Israel

Druze

- Fatimid Caliphate (Shia) – 11<sup>th</sup> century
  - Ruled in Egypt and Israel
  - King kidnapped, ad Dazari thought king was 1<sup>st</sup> imam
  - Ad Dazari ran away and established new religion (Druze)
- Druze not Arab, not Muslim
- 1.5 million
- Don't need nation or government, only want territory
- Very little known about Druze religion
- Being killed in Syria
- Druze in Israel demanding that Israeli government intervene in Syrian conflict to help Druze in Syria
- Stopped ambulance and stoned wounded Syrian soldier to death

### **Site Visit: Jordan River Baptism Site**

Participants traveled to the Jorder River Baptism Site. This historic religious site is located on the border with Jordan, sharing baptism facilities. The span of the Jordan River at this site is less than 20 feet, posing unique security challenges. Notes:

One of 2 baptism sites – the other is at the Sea of Galilee

White dove symbolizes the baptism of Jesus

- Jesus baptized by John the Baptist in Jordan River
- Voice of God: “This is the son of God that I was talking about”
- Christians view baptism as a cleaning of the soul and the body

Currently good relationship with Jordan

Peutingner Map

- Discovered in the 4<sup>th</sup> century AD
- Shows network of roads from Roman Empire
- Indicates that site of baptism of Jesus close to Jordan River baptism site

No control of borders all the way to Turkey

Until 2007, 250km border with Egypt was completely open

- Fence built in 2007, significantly reducing smuggling problems
- Current war between ISIS and Tarabin (Bedouin tribe)
- Trying to keep Bedouins from smuggling

### **Site Visit: Triangle Border**

This border is the boundary between Israel, Syria, & Jordan. Lecturers provided information on the impact of the war in Syria on Israel, the expansion of ISIS into Syria and Jordan. Lecturers provided information on the security situation in the Golan Heights, and implications for Jewish settlements in the area. Notes:

Golan Heights: 950m above sea level

Sykes-Picot Agreement – 1916 – division of area

- Golan Heights, Lebanon, Syria to be French territory
- Israel, part of Jordan, part of Iraq, Egypt to be English territory

1945-46 – Syria became independent

ISIS concentrating opposite Golan Heights, but focusing on battles to the east and north right now

Jordan Valley = 65 miles

- Border between 2 tectonic plates
- Major earthquakes every 100-110 years

### **Site Visit: French Hospital/Syrian Officer Academy**

Participants toured the site of a former French hospital used as a Syrian Officer Academy before the Six Day War. The building ruins look down into the Syrian countryside. Notes:

Eli Cohen – Israeli intelligence agent

- Established cover identity 1960-61 in Argentina
- Settled in Syria 1961-65, transmitted information on Syrian military and fortifications
- Caught January 1965, tried, and executed

### **Site Visit: Valley of Tears**

The Valley of Tears is battle site from Yom Kippur War where significantly outnumbered Israeli forces held off attackers until reinforcements could arrive after 4 days. Participants were able to explore a maintained Israeli Defense Force (IDF) bunker. The visit highlighted the difficulties in defending territory given the proximity of countries that have been actively hostile to Israel. Lecturers also provided a review of international/UN participation in the security situation.

Notes:

Until 1967, Syria controlled Golan Heights and bombed the kibbutz

Yom Kippur War – surprise attack from Syrian in Golan Heights; 3-point attack

History:

- 1947 Independence
- 1956 Sinai War
- 1967 Six Day War

10/6/73 – Attack on Yom Kippur – holiest day for Jewish religion

- Israeli army kept minimal forces in Golan Heights
- Ignored intelligence about possible war
- No recruitment of reserves until 10/5/73

#### Valley of Tears – one of three attack columns

- 1 battalion in Valley
- 600 Syrian tanks vs. 35-40 Israeli tanks
- For 4 days, Israeli tank battalion held off Syrians
- Bitter battle – officers motivated soldiers to stay
- Reserves arrived after 4 days and turned battle
- Israeli forces pushed into Syria
  - Pushed to within 40km from Damascus
  - Pushed to within 101km from Cairo

1974 – ceasefire between Israel and Syria

### **Site Visit: The Dead Sea**

Participants were able to visit and swim in the Dead Sea, learning about the security challenges of protecting this site visited by travelers from within Israel and throughout the world. Notes:

Every year 1m lost from the Dead Sea

Dead Sea 34% salt in water (ocean .4% salt)

### **Day 4:**

#### **Site Visit: Knesset**

The Knesset is the legislature of Israel. A guided tour provided information on the structure and composition of the Knesset. Participants subsequently attended private meetings with 3 members of Israeli parliament (Yehuda Glick, Amir Ohana, and Tzipi Hotovely. The Knesset members provided their unique perspectives on the security situation in Israel and answered questions from ASTI participants. Notes:

“to come together/to congregate”

120 members

- 17 not Jewish
- 33 women (25%)

Parliamentary Democracy

- Vote for 1 party, not individual members
- Each party posts list of 120 potential
- Seated by percentage of vote
- Minimum of 3.25% to get representation in Knesset

President gives political power to Knesset

- Knesset has to form government
- At least 61 members must support government

Declaration of independence

- 14 May 1948 at 4:00pm (Friday)

- 5/15 – end of British Mandate, Shabbat (Saturday)
- Concerns about civil war if there was a leadership void
- Document
  - “Rock of Israel” = God
  - No other reference to God
  - Signed while blank
  - Bold paragraph in middle contains 3 justifications for independent Jewish state:
    - Historical connection with land
    - 1917 Balfour Declaration / 1947 UN Partition Plan
    - Holocaust
  - Describes type of government
  - 3 addresses to UN, to Jewish people, to Arabs
  - Call to peace

- No constitution

Plenary Hall used for voting

- Lively debates, most recognizable room
- Many other discussion rooms

Bills – 2 types

- Government-originated: written by minister or vice-minister, requires 3 votes
- Private: written by any member of Knesset; requires 4 votes

Official symbol – candelabrum

Separation of powers: legislative, government, judicial

PM is also a member of parliament

Speaker is member of parliament, but runs/manages the debate

10 seconds to vote; board shows voting results

Disciplinary action – can force members of party to vote in a specific way

Judicial oversees legislative oversees government oversees judicial

“ascend the podium” = give testimony

Viewing space for press, honored guests, public

Chegal Hall – 3 tapestries, 12 floor mosaics, 1 wall mosaic

- Tapestries: present (colorful – different waves of immigration), past (exodus from Egypt, Moses, King David), future (Isaiah)

### **Knesset Member Meeting: Yehuda Glick**

#### **Jerusalemofpeace.com**

Likud party – 30 seats in this Knesset

Formerly served in Ministry of Absorption

Six Day war – greatest victory of Jewish people

- 2 million Jews surrounded by 200 million Arab Muslims (supported by USSR)

Yom Kippur War – lesson in humility

- Lesson: if we put down our arms, we won't exist

Greatest danger – those who think God is exclusive and want to convert others

- 12 million Muslims killed by radical Muslims

Settlements not an obstacle to peace, but are bringing peace by living together peacefully

Importance of not being afraid of terrorism

Demand from ourselves the highest standards

Jerusalem mentioned more than 600 times in the Bible

Nations that want to remain relevant will recognize Jerusalem as capitol

Israel offers highest level of human rights for all citizens

Temple Mount as world center for human rights

Promote Jerusalem Covenant

### **Knesset Member Meeting: Amir Ohana**

12 years in IDF and ISA

Member of 5 committees

21 Arab states combined are 1000 times larger than Israel

1.4 billion Muslims in the world - yet still the minority that needs to be protected

It is the existence of the state of Israel and of the Jewish people in their homeland that Muslims find objectionable

100 years of terror

PLO founded in 1964 – before settlers

- What is Palestine? “From the river to the sea, Palestine will be free”
- Continue to support terror in many ways

Influential Muslim leadership sees Jews as occupiers like British and Ottomans before them

This is the birthplace of Jewish religion

2000 years of exile – “tomorrow in Jerusalem”

Israeli/Arab conflict will not be solved in DC – must be solved by Israelis and Arabs

Cannot overstate friendship/brotherhood with U.S.

- Share enemies, enemies of the free world

### **Knesset Member Meeting: Tzipi Hotovely**

Deputy Foreign Minister

Time for us to rethink

Issues with Iran and Syria

Challenges of Jerusalem

Children’s intifada

- 12-15 year old took kitchen knives to streets
  - Means it is part of education system and social media

Schools named after mass murderers

Great future for you and your families as terrorists

Congress sponsoring and funding families of terrorists

Winning of 6 Day War gave all religions freedom to practice their religion in Jerusalem

Israelis expecting movement of US embassy to Jerusalem

Clear that YouTube, Facebook have the ability to remove content related to terrorism, recruitment

- Arguments of free speech

- Already some restrictions on pornography, etc.
- Request to remove content combining certain words
- Still disappointed with accessibility of this information

## **Site Visit: Israeli National Security Council**

### **Eitan Ben-David**

Participants visited the office of the Prime Minister and attended a private meeting with Israel's National Security Director, Eitan Ben David (sp?). Mr. David provided information on the challenges of terrorism in Israel, Hezbollah and Hamas, counter-tunnel challenges, and the importance of learning from terror attacks in other countries. Participants were able to ask questions of Mr. David related to counter-terrorism policies. Notes:

We are trying to do our best in this region

- Trying to improve ourselves every day
- Our agenda is to alert and ready

Most of surrounding countries are enemy

- Countries by law, no diplomatic relations
- Peace treaties with Jordan and Egypt, but good relationships primarily with government
- People of Egypt and Jordan not happy with presence of Israel

Borders: Gaza (59km); Egypt (208km); Lebanon (79km); Syria (92km); Jordan (309km); Saudi Arabia (X); Mediterranean Sea (196km)

Asleep with 1 eye open; need to be strong in the neighborhood

A lot of budget dedicated to security issues

When it comes to security, people of Israel are very united

Last conventional war: 1982 with Lebanon

In last 2 decades, most operations are against terror organizations

Hezbollah in Lebanon, Hamas in Gaza

- Hiding with civilians inside villages and cities
- President of Lebanon said: "Hezbollah is Lebanon and Lebanon is Hezbollah"

Israelis want to live peacefully in region

Sharon gave back Gaza

- After less than one year, Palestinian Authority lost to Hamas and were kicked out
- Now terrorist organization controls land on Israeli border

They will always find a way to attack you with innovative methods

Iron Dome – most rockets not allowed to hit

Gaza using 35-40% of aid for military purposes

Building tunnels

- Karem Shalom crossing border: 1000 trucks per day into Gaza with supplies and humanitarian goods
- No good technology to detect every tunnel
- Israel investing a lot of money into technology placed deep into border to detect tunneling activity

Gas reserves in Mediterranean Sea

You have to send a message that you are not going to put up with terror incidents  
More than 100K come into Israel to work every morning (60% legally, 40% illegally)  
Rely on security clearances, fence, punitive measures against terrorist families, powerful intelligence assets, training, security awareness, community engagement  
Learn from the attacks of others – Israel studies what is going on in other places in the world including details, modus operandi

- Israel is a lab for terror attacks
- Need to understand the organization, mindset
  - Who they are, what is their cause?
  - What kind of measures will hurt them?
  - What will contain them?

### **Lecture/Site Visit: Military Court of Judea and Sumeria Lt Colonel Menachem Lieberman**

Participants received a presentation on the military court and the prosecution of suspects of those accused of security or criminal offenses in the West Bank. The site visit included in-court viewing of proceedings against a man charged with using social media as part of a terrorist organization. Notes:

West Bank under military sovereignty

Questions on whether Geneva Convention applies

Judiciary

- Local Palestinian courts
- Military courts
- Juvenile military courts
- Military court of appeals
- High Court of Justice: “Bagatz” (In Israel)

Those accused of criminal or security offenses in West Bank get real trial, rights of any defended

- Acquittal rate as high as Israeli courts
- Same evidentiary laws as in Israel

No jury system in Israel

Cases: terror, criminal, disturbance of public order, traffic, border offenses, and review of administrative decisions

24.5% of defendants have membership in a terrorist organization

Terror organizations find it easy to influence minors

Encourage and pay minors to perform terrorist acts

- Redeem “immoral behavior”
- “Hate indoctrination”

Administrative detention

- Preventative, not punitive
- Usually 6 months

Constant presence of human rights NGOs, visits of diplomats and foreign delegations

All defendants have lawyers; public defenders from Palestinian Authority available

Site tour: in-session court proceedings

## Lecture: IED Trends

### Chief Superintendent Michael Cardash

This lecture focused on ISIS and AQ IED trends exclusive of PBIEDs (addressed previously). The presenter discussed sources for explosive material, including unexploded ordnance (UXO) and the process necessary to create a homemade explosive materials as detailed in widely-distributed publications and internet-based videos. Participants also learned about camouflaging IEDs and anticipated upcoming threats and trends (including vehicle borne IEDs (VBIED), drones as a delivery mechanism. Notes:

#### Sources for explosives

- Unexploded ordnance (UXO)
  - PTAB 2.5 bomblets
  - Converted to an IED: remove fuse, remove tail assembly, add XMAT, insert det cord, close
  - Since Russian intervention in Syria, more modern munitions
  - UXO AO 2.5RT sub-munition
- Homemade explosives
  - Ammonium nitrate fertilizer
  - Ammonium nitrate + aluminum powder
  - TATP, nitrocellulose, EGDN, other
  - Christmas Eve 2014 AQAP magazine published article on how to make XMAT
    - Potassium chlorate (?) with booster
    - Plastic bottle casing
    - Nigella sativa (black cumin)
      - More energetic than carbon
      - Increased detonation energy by 30%
- TATP – classic 2-stage detonation

#### International Terror

- Richard Reid – shoe bomber
- UK 21.7 attempt (2005) London
- Delta Airlines attempt – Christmas Day
- Paris attacks: 13 November 2015
  - 1.2kg wet TATP and 700-1000 nuts
- Germany Ansbach: 24 July 2016
  - Suicide bomber outside wine bar
  - 2kg urea + AN and 200g TATP
- Brussels, Belgium: 22 March 2016
  - 3<sup>rd</sup> device 25kg TATP
  - Produced 100-125 kg of TATP
- Upcoming threat: TATP VBIED

### Turkish airport bombing

#### Camouflaged IEDs

- Building blocks (ISIS)
- Rock camouflage (Houthis)
- Sandals (ISIS)
- Laptop IEDs (Al Shabaab)
  - Flight restrictions
  - AQAP raid – tech to build device
  - Inside laptop battery; still functions

#### ISIS use of vehicle-borne IED (VBIED) – New trend

- Large armored VBIED driven by suicide bomber
- Now in Iraq and Syria on a defensive position
  - 4 x 4 or SUVs (prefer Kia)
  - Light armored SUVs
    - Route to Karbala – 8 VBIEDs
    - Month of Ramadan
    - Electronic detonators with electronic plugs
    - Plastic bags and containers packed with explosives

#### ISIS use of UAVs – New trend

- Commercial-off-the-shelf (COTS) multirotor drone/quadcopter
- Used for surveillance to date
- Quadcopter payloads – future threat?
- Hezbollah – Aug 2016 – weaponized quadcopter with AT/AP MZD2 bomblets
- ISIS fixed wing bomber – Jan 2017 - PR film
- ISIS quadcopter bombings – Jan 2017
  - 3D printed components
  - Tail hook on bomblets
  - 40mm warhead – M430 or M383
- Iraqi forces weaponized UAVs with shuttlecock bomblets
- Chemical – new trend
  - Fixed wing UAV with chlorine canister
  - Mosul April 2017
- French and Dutch using eagles to counter UAVs

## Review

### Rami Savir and Rami Shemesh

Cannot copy our methods in your communities – better to see why we do it and adapt our methods

Always expect a 2<sup>nd</sup> attack; things may happen in stages

Sunday - lectures

- Dangers of cyber and IOT; consider your cyber protection
- Consider communication
  - Used best by ISIS

Significant recruitment tool

Pay attention – see what the intentions are

Can use media to show your own message

Incitement on social media

Monday – MDA, Ashdod, Ashkelon, Gaza

- US may not have those kind of threats
- All of this can be applied to police work
- Community relations is also a part of response

Tuesday – West Bank, Golan Heights, Syria, Jordan

- Message that if you are strong enough and crazy enough, it helps to deter

Wednesday – Parliament, PM Office, Courts

- Right wing side of perspective
- Solution is a matter of perspective
- Demonstration of incitement via social networks

## **Lecture: Social Networks as a Source of Inspiration**

### **Rami Savir**

This session focused on the importance of monitoring content of social media networks to identify sites/videos/forums, etc. being used to inspire hatred against the Jewish population and potential suicide bombers. Participants watched 2 videos made for children that encourage violence against Jewish persons. The lecturer also provided Facebook posts showing the progression of radical ideology by a young man that killed a 13 year-old Jewish girl. Notes:

Video: PAL network

Video: Hamas children's network

Case of Muhammad Tarayrah

- Killed 13-year old girl
- Review of social media posts
  - “Death is a right and I demand my right”
  - Desire to become a Shaheed

Social media – riots and disorder predictable via SM

No such thing as a lone wolf – need inspiration – often found in social media

## **Day 5:**

### **Site Visit: Hadassah Hospital**

#### **Julie Bebinsky**

Participants visited Hadassah Hospital to review the readiness and capabilities for mass casualty readiness, including trauma-specific emergency room spaces and intensive care units, plans for surge of facilities and staff, preparedness drills, and the need for trans-cultural nursing. The visit included a presentation by Dr. Asaf Kedar Terrorism Related to Mass Casualty Events in Israel.

Dr. Kedar discussed the increase in vehicle assaults and knife attacks in recent year. Notes:

Everything in ER can be quarantined

Capacity for 110 beds

MDA notifies ER with patient details

Trauma ER – rooms strictly for trauma

- X-ray booms
- Lights also cameras – everything filmed
  - Not accessible to lawyers
- Each room has capacity for 2 patients
- Ultrasound machines in room
- Call volume / day – approx. 10

Rambam Hospital – only Level 1 hospital in north part of country

- Anticipate military wounds
- Complete hospital underneath the ground – used if necessary in time of war

Hadassah Hospital – geared towards terror victims

Conduct drills for hospital evacuation onto grounds

During mass casualty, patients leave for CT and don't return to ER, move to other care

No diverts, always accept trauma patients

Burn care – big issue – resources lacking

Big bottleneck – imagery, CT scans

ATLS – Advanced Trauma Life Support

No problems with drop times from ambulances

Another bottleneck in ICU, but all nurses ICU trained

Nursing school in hospital

Different ICUs distributed throughout hospital: trauma, peds, cario, etc.

Effort to keep families together during mass casualty incidents

Visiting dignitary room – bulletproof, self-contained

Simulation/training room can be converted for more beds

System for surge capacity

- Drill 3x per year for all former ER nurses in hospital
- Focus on new threats
- 2017 – pediatric drill

No translation problems

Workers reflect population of the city

No follow-up care available in Palestinian Authority (PA)

PA has Ministry of Health and own medical system

Air transports 1x per month

- Short distances in Israel
- Air pad fits criteria for military hospitals

Mass decon area with Geiger counter outside in ambulance bay

Mother and child pavilion

- Obstetrics, labor and delivery, pediatric ICU, oncology, surgery
- Cultural competence: trans-cultural nursing, ethnomed
- Can be used for surge in a mass casualty
- Access to utilities in ceiling

Family areas have kitchens and showers  
Pediatric ICU has parent sleeping rooms  
Hospitals in East Jerusalem run by Palestinian Authority Ministry of Health

### **Dr, Yorum Weiss**

Former Director of surgical ICU

A lot of experience here with trauma

Seeing a decline of trauma patients

- Used to have many multi-casualty events
- Importance of drills to maintain skills

MCE factors:

- Volume of patients
- Medical characteristics of event (e.g., injury types – crush)
- Prehospital scene
- Hospital-related variables

### **Terrorism Related to MCE in Israel**

#### **Dr. Kedar Assaf**

West Bank divided into Sumaria (North) and Judea (South)

1/10/15 Drive-by shooting

2392 attacks in 10 weeks (2015)

- Increase in vehicular assaults
- Most attacks in West Bank (74%)

Terrorists today

- Age of terrorists: 16-20: 37%, 21-25: 34%; minors 10%
- Gender of terrorists: 89% male
  - Some females – suicide by cop
- Lone terrorist is characterized by radicals who embark on individual terrorist missions without any logistical support or conventional means of attack
  - Example: tractor into crowded street

Patients spread out so hospitals not overwhelmed

Significant increase in vehicular assault

Continuous dialogue with dispatch centers

- Can connect to CCTV cameras to see what is happening in the field
- EMTs sending photos from smart phones
- Israel uses WhatsApp to send data

Knife attacks – Intifada of the Knife

- More force in those hit intentionally
- Attackers being taught efficient stab sites and how to avoid police/military protective vests -> “Intelligent stabbing”
- Use of foley catheter into path of knife track
- Whatever you can do to apply direct pressure
- Goal of MDA is to get to the closest, proper medical facility

### **Site Visit: Check Point between Israel and West Bank**

Participants visited a check point in Jerusalem where inhabitants from the West Bank cross into Jerusalem. Part of the visit included a tour of a main control center where Israeli border forces review an extensive surveillance camera outputs at all times. During the tour, participants saw an incident where two youths touched the fence and caused a sensor hit. The border forces maintained surveillance on the two. Notes:

North part of Jerusalem: PA and Israel come together

Behind wall is refugee camp – Kalandia

- ½ Israelis who choose to live behind the wall, ½ Palestinians

Hard to tell the intentions of people going through the check point

Next month is Ramadan - .5 million people going through the check point during holiday

Site tour: Control Center

- Incident ongoing – 2 boys/young men touched fence causing sensor hit
- Concerns about people infiltrating into Jewish communities and murdering people
- 5 platoons of 70 people each
- Want to allow people freedom to come into work and to pray
- Don't know the intentions of people coming over
- Concerns about attacks on border forces
- Border guards work together well with police, IDF -> importance of sharing information and intelligence
- Incident description: small village Sho-afat – rocks thrown at police and MDA – attacks on the people there to help others
- A lot of cooperation that people don't know about
- Incidents of bombs in ambulances – fake sick
- All facets of Israeli population in Border Guard
- Command board – shows location of all vehicles
- Software reads license plate of every car coming into Israel  
Information immediately provided to Border Guard

Site tour: Surveillance Center

- 24/7 camera surveillance
  - Women better than men at surveillance
  - 4 hour shifts
  - Looking for abnormalities, behavior, proximity to fence
  - Become very familiar with specific area
  - Land/terrain divided in a very specific way
  - Contact directly with units in field
- Similar units/centers all over the country

### **Site Visit/Lecture: Special Patrol Unit/Yasam Jerusalem**

The tactics and procedures of the Special Patrol Unit are similar to SWAT teams in the United States. The Special Patrol Unit is divided into motorcycle units and team-based squadrons. Unit

members demonstrated non-lethal and lethal weapons and capabilities. A unit member also provided a briefing on motives of a terrorist, operational parameters, suspicious signs and behaviors. Notes:

Deal with extraordinary incidents – anything with violence

2 types of units:

- Motorcycle units

- Anywhere in the city in 3-7 minutes

- Driver + rider; rider has M-4

- Elite of unit

- Helmet has Bluetooth for comms transmission

- 7 bikes every shift spread throughout city

- 2 shifts plus missions

- At night use 4-wheeled vehicles because of reduction in traffic

- Team-based squadrons

- Use Chevy Savana – holds 9 officers (but can hold up to 15-16)

- Modular vests

- Riot suit is fireproof

- Cannot use baton unless at highest threat level, and then only to outer thigh

- Non-lethal: rubber rounds

- Not allowed to fire center mass

- Can only aim below knee or below waist

- Water cannon

- Used for 3<sup>rd</sup> highest level of riots

- Has self-defense system – tear gas deployed from sides

- Disperses water, water with blue paint, water with stink, and water with tear gas

- Police can come in later to arrest people painted in blue

- Nozzle on front for trash fires

- Working time of 4 min at full blast

- Can refill from any fire hydrant

- Arsenal

- Importance of surgical means vs. mass means

- Non-lethal:

- Sponge rounds

- OC

- Paintball gun with paint, salt, OC

- Night-vision, night-sight for M4 and M22

M4 – fires .556

.22 Ruger (between lethal and non-lethal)

- For those that present danger, but not “clear and present” danger

Unit formed in the 90’s – needed to form professionally-trained operational units

- Most professional in police force

4 squadrons: 2 team-based, motorcycle, mounted

- Teams of 5 officers or pairs of riders

Focus on:

- Terror – arrests, identifying suspects, response to extreme events
- Crime – specific events, proactive actions
- Public order – demonstrations and protests
- Sensitive missions (Temple Mount, VIP protection, public security patrols)

Threats: suicide attacks, kidnapping, knife attacks, cars as weapons, shootings

- Concerns about combined attack and multiple attacks (e.g., secondary attacks on responders)
- Profile: all ages, family status, gender, education level, and economic status
- Locations: friction points where Arab population comes into contact with Jewish population
- Any time of day
- Motives:

Revenge

Environmental causes

Incitement

Desire to be famous

Copycat

Religious reasons

Personal

Suicidal

Clear name

Operational parameters

- Position personnel/units in sensitive places (e.g., crowds, commercial areas, schools, central areas, hot spots)
- Roadblocks to check suspicious persons
- Learn and train

Suspicious signs and behavior

- Presence in area not supposed to be
- Purse or backpack
- Nervous behavior
- Mumbling/praying
- Try to get close to security personnel

Operational behavior:

- Keep a safe distance

- Other officers looking for suspects
- Keep guard up at all time

Video: shooter in parking lot (2016)

Video: incident at Temple Mount – shooting from fortified door 7; no firearms allowed on Temple Mount

## **Lecture: Islam in the United States**

### **Mordechai Kedar**

This session focused on known radical Islamic groups in the United States. The lecturer discussed challenges for law enforcement, including the need to listen to people in their own language, in order to assess the level of support for radical Islamic organization. Notes:

Lecturer: 50 years experience in Arab culture (25 in IDF, 25 in academia)

“Alive and Killing: Tribalism in the Arab World”

Tribalism – most important element in the Arabic societies

Islam – extends to other countries

Suggested article: “Sharia and Violence in American Mosques”

<http://www.meforum.org/2931/american-mosques>

Found documents:

- “40 Hadith on Jihad” against infidels (Americans)
- “Racist, Fascist, Criminal Police: Manual for How to Resist Police Investigations”

Video: lying in Islam – prevention, protection of religion

- “The Life of Muhammad” page 367

Until they prove that this is wrong, they should be held to this – plan for North America

Images of billboards – [www.whyislam.com](http://www.whyislam.com)

Biggest challenge for law enforcement is how to find out what is true and what is not

- Listen to what people are saying in their own language
- Big difference between Arabic dialects

Pyramid for of degree of support by Muslims for terrorist activity:

- Tip is terrorists
- Below – those that supply weapons
- Below that – those that donate money
- Below that – sympathizers
- Below that – “understanders”

“War is deception”

Different definition of the word “jihad”

- Fight against sin – internal or external?

Wording of the Qu’ran vs. the Holy Qu’ran

## **Site Visit: Jerusalem Fire Department**

Participants visited a fire station in Jerusalem. Firefighters discussed the need for different cultures to work together to identify and mitigate threats within the city. Participants were able to explore ladder trucks and a CBRNE apparatus. Notes:

- 4 stations – one in Old City (Arab)
- 225 firefighters in whole city
- 3 shifts, 24 hours per day; career staff; 24 hours on/ 48 hours off
- Mutual aid from all over Israel
- Big problems because of many religions – need to treat everyone the same
- Call 102 to get fire response
- Site tour of multiple apparatus

## **Lecture: Israeli Security Agencies**

### **Rami Savir**

This session provided a description of the agencies that work together for intelligence collection activities within Israel, focusing on the Israel Security Agency. Participants learned about the separate expertise required for field officers and interrogators. The presentation included discussion of identifying, developing, and running sources. Notes:

Video clips:

- Boy caught smuggling XMAT
- Multiple operations
- Hospital fugitive extraction

Suggested documentary: The Green Prince:

<https://www.youtube.com/watch?v=5z8z4Fi7oz4&t=50s>

Shinbet/Israeli Security Agency

- Responsible for internal security: terrorism, subversion, espionage, diplomatic protection, international protection, cyber
- Field officers – 3 years training
  - 1 year language training
- Case officers in charge of geographic area; alone/independent
- Purpose is to thwart attacks, not collectors of intelligence
- Interrogators
  - Separate from case handlers
  - Operate as a team
  - Rely heavily on confessions
  - Mock prisons
  - Cannot use source information during interrogation
- Recruiting and handling difficult tasks
  - Need to be proactive
  - Walk-ins rarely valuable
  - Start by deciding who you want to be your source
  - Motives: money, ideology, personal issues, extortion, reduction of charges
  - Collect information and try to use it later

If the case officers doesn't find the hidden motive, then the recruitment will not succeed

If he doesn't have a motive, he will never be a source

The betrayal process starts when he says yes

Once he betrays his culture/brothers, he will one day betray the case officer

- Running a source – most difficult task

Information is immediately critical

Continuing threat to source

Always about checking the reliability of the source

What info did he give you?

What did he not give you?

Flow of meeting:

Importance of small talk at beginning and end

Headlines first – you have your priorities and he has his

- Get most important stuff at the beginning

You are in charge – you dictate the pace

- Don't want to stop the flow of information for technical info/details

You ask questions based on info needs

Small talk

Payment of money

- Same amount every time, not based on value of information
- The moment he understands the value of certain information, he will begin to lie or color his remarks
- Imagination becomes fact
- Source opinions, estimates are important, but are not facts

Reports – facts and case officer analysis/remarks

Sometimes you need to task a source with a specific mission

Validate mission outcomes

Identify gaps in outcome – what he reported versus what actually happened

Activity check – every couple of months

Sit down and review activity of source

Done by another case officer

Check for conflicts between what source told you and what actually happened

Reliability a key issue

Difference between source covering a target from the outside (example: barber) and a source covering a target from the inside

If you cannot recruit someone inside the target, you may be able to recruit from outside and get them inside

Try not to recruit the head of a cell  
 Want sources that can come to you, but that can't always happen  
 Need to know language and culture – culture adds context  
 Need to be proactive  
     Be ready to supply the things that they need as part of illegal activities (e.g., source, storage guy, smuggler)  
     Proactive prevention of terrorist organizations  
     Do not rely on luck or chance – make it!  
 Lessons learned and experience

## Day 6:

### In-Transit Lectures on Security Topics

#### Rami Savir and Rami Shemesh

While in transit to various site visits, two veteran Israeli Security Agency members provided a series of lectures throughout the day on numerous topics related to Israel, the security situation, and terrorist incidents. Notes:

#### Hebron

- 1929 – all Jews killed or expelled by Muslims
- Important city for many religions
  - Tombs of the Patriarchs (Abraham, Isaac, Jacob)
  - Massacre before peace agreements
  - Jewish settlements

#### Jewish settlements

- Anything that came under control of Jews after 1967
- Settlers feel safe inside of their community but not outside
- Suggested reading: “The Israeli Solution: A One-State Plan for Peace in the Middle East” <https://www.amazon.com/Israeli-Solution-One-State-Peace-Middle/dp/0385348061>
- View of interest: Kiryat Arba

### Activity: Caliber 3

Participants visited Caliber 3, a special academy for counterterrorism and security training. Participants viewed an active shooter response demonstration and joined in analysis of security operations during the demonstration and viewed active shooter response demonstration. Following the demonstration, completed the Basic Combat Shooting course and learned procedures for response operations. As part of the course, participants worked individually and in teams to neutralize threats in a training setting. Notes:

Founded 12 years ago

Sharon Gat – colonel in Israeli special forces

Special academy for counter-terrorism and security training

IDF, Israeli police, ISA, law enforcement from all over the world, civilians, government departments -> all train here

Instructors served at least 15 years with IDF, ISA, and/or Israeli police

“Brave heart and brave Jewish soul”

### **Site Visit: City of Hebron**

Hebron is located in an Arab-controlled area of the West Bank. There are protected Jewish settlements in the city that is 97% Arab and 3% Jewish, creating significant security issues. Hebron contains archeological sites that are important to the Jewish faith, as well as the Tomb of the Fathers which has significance for Christians, Jews, and Muslims. Notes:

Population: 220K

Biggest city in Judea

Heart of radical Islam

800 Jews

4 neighborhoods

1917 Mandate for Palestine

TIPH – Temporary International Presence in Hebron

A lot of rock throwing, attempted stabbings

Site tour: Tel Rumeida

- 4500 year old ruins: stairs/wall
- 4 room house
- Land purchased in 1807

Site tour: Tomb of the Fathers/Patriarchs

- Built during reign of King Herod
- 1267 – declared to be a mosque
  - Anyone not Muslim could not go in
  - Jews in Hebron in order to maintain access to the Tomb of the Fathers
- 1 million people per year visit Tomb of the Fathers
- Abraham paid 400 silver shekels for a cave and a field in Hebron
  - Discovered to be cave of Adam and Eve
  - Purchased after Sarah died
- Holy Arc – Torah Scrolls – contract for Hebron
- Site called “entrance to the garden of Eden”
- Rooms with memorials – actual tombs in caves underneath building
- Today building is split in 2 parts: one part for Muslim use, one part for everyone else

### **Site Visit: Old City of Jerusalem and Western Wall**

Participants visited religious sites in the Old City of Jerusalem to understand security issues related to Dome of the Rock and terrorist incidents in Old City of Jerusalem. These sites have been frequent targets of terrorist attacks. Notes:

Dome of the Rock / Temple Mount

- First Holy Temple of the Jews destroyed in the 5<sup>th</sup> century
- After 50 years of diaspora, Jews returned and built second Holy Temple in same place

Destroyed by Romans in 70AD

- Qu'ran Chapter 17 – journey of Muhammad
  - “exited mosque” and brought back prayers
  - Became 3<sup>rd</sup> holiest monument for Islam
- Jesus only in Jerusalem for last week of life
  - Palm Sunday – first day he entered Jerusalem from Mt of Olives
  - Thursday afternoon – arrested, interrogated
  - Friday – delivered to Romans, died, buried
  - Sunday – Mary sees empty tomb
- 40 days after resurrection, Jesus went to heaven from Mt Olive

Church of the Holy Sepulchre

- Via della Rosa
- Gethsemane Church
  - where Peter denied Jesus three times
  - where Judas gave up Jesus
  - where Jesus was arrested
- Crusader style
- Built in 11<sup>th</sup> century AD on the remains of the Byzantine church

Mercy Gate / Golden Gate

- Persians sacked Church of the Holy Sepulchre
- Golden cross returned with cross and entered through this gate
- Jews believe that the Messiah will return through this gate
- Muslims built cemetery in front of gate

Room of the Last Supper

- 14<sup>th</sup> century dispute between Franciscans and Jews regarding the room
- Grave of King David right below room
- Became a mosque in 14<sup>th</sup> century AD
- Messiah will come from the family of King David

Western Wall

- 2 tablets in Arc of the Covenant
  - Put in holiest room in the temple
  - Temple destroyed in 70AD
  - 132-135 AD – Jews rebelled against Romans
    - Roman emperor killed more than 650K Jews
    - Law restricted Jews from Jerusalem
    - Changed name from Judea to Palestine
      - All others expelled
    - 2000 year diaspora
    - 1700 (approx.) rabbi and students built synagogue – then destroyed
    - 1800s – built synagogue on same place, destroyed 1948
    - 1980s – rebuilt synagogue third time
- Western Wall is all that is left from the 2<sup>nd</sup> temple
- 10 gates to the Temple Mount only open to Muslims

- Jews, Christians, others must use small gate
- 10K people at the Western Wall every Friday evening

Document ID: 0.7.1175.5265-000002

## Counter-Terrorism: Prevention, Detection, and Response and Recovery Course Draft Agenda October 2017

This agenda details the schedule for each day of the October 2017 Counter-Terrorism: Prevention Detection, and Response Course. Please note that this agenda represents the likely curriculum schedule, but may continue to be refined until the course begins.

<b>12 October 2017 (Thurs)</b>		<b>Depart local airports for TLV</b>
<b>13 October 2017 (Fri)</b>		<b>Arrival in Tel Aviv</b>
17:50	Arrive at Ben Gurion Airport, Tel Aviv, Israel	
18:30	Transport to hotel	
19:00	Check In	
19:30	Dinner at hotel	
<b>14 October 2017 (Sat)</b>		<b>Cultural Day</b>
Saturday is Shabbat in Israel – a day of rest. Participants are to use this day to acclimatize to the time change. The course curriculum starts early on Sunday morning and participants need to be alert. Breakfast and dinner buffets are included in the lodging rate. Participants are on their own for lunch. There are many restaurants within walking distance of the hotel.		
<b>15 October 2017 (Sun)</b>		
07:30	Breakfast at hotel	
08:00 – 09:30	<b>Lecture:</b> Israel History , Geography, & Security Environment	
09:45 – 12:30	<b>Lecture:</b> Terrorist Explosive Devices and Tactics	
12:30 – 13:30	Lunch provided in meeting room	
13:30 – 14:30	<b>Lecture:</b> Intelligence Orientation	
14:30 – 15:30	<b>Lecture:</b> Cyber, Terror, and Social Networks	
15:45 – 16:30	<b>Lecture:</b> Crisis Media Management: Counter-Terror Approach	
19:30	Dinner at hotel	
The series of lectures presented on Sunday provide background and contextual information critical to understanding the threat environment in Israel.		

<b>16 October 2017 (Mon)</b>	
07:00	Breakfast at hotel and check out
07:45	Bus Departs
07:45 – 09:00	<b>En-route lectures on security topics</b>
09:00 – 10:30	<b>Site Visit:</b> Magen David Adom (MDA) Tactics and Procedures Topic: Pre-hospital emergency medical services
10:30 – 12:00	<b>Site Visit:</b> Port of Ashdod Topic: Protection of transportation assets
12:00 – 13:30	<b>Site Visit:</b> Rutenberg Power Station Topic: Protection of critical infrastructure
13:30 – 14:00	Lunch provided
13:30 – 15:30	<b>Site Visit:</b> Gaza Border/City of Sderot Topic: Protection of communities/civilians
15:45 – 16:30	Travel to Jerusalem; hotel check in
19:30	Dinner at hotel
The curriculum for Monday focuses primarily on protection of communities and critical infrastructure from terrorist threats. Many of the site visits for the day center on assets located in near proximity to Gaza, an origin point for military and terrorist attacks.	

<b>17 October 2017 (Tues)</b>	
06:30	Breakfast at hotel
07:00	Bus Departs
07:00 – 10:00	<b>En-route lectures on security topics</b>
10:00 – 12:00	<b>Site Visit:</b> West Bank / Golan Heights Participants will visit a number of sites related to the security situation in Israel and proximity to Syria and Jordan
12:00 – 12:30	Lunch provided
12:30 – 16:30	<b>Site Visit:</b> Golan Heights (continued) Topic: Protection of critical infrastructure
16:30 – 17:30	<b>Site Visit:</b> Dead Sea Topic: Security of tourist areas
17:30 – 19:00	<b>En-route lectures on security topics</b>
19:30	Dinner at hotel
The curriculum on Tuesday focuses primarily on the security situation in Israel, including shared borders with states that have previously attacked Israel. The security situation is complicated by Israeli settlements located in the West Bank. Participants will view sites from terrorist and military attacks to better understand concepts and techniques for combatting these incidents.	

<b>18 October 2017 (Wed)</b>	
07:30	Breakfast at hotel
08:00	Bus Departs
08:00 – 08:30	<b>En-route lectures on security topics</b>
08:30 – 11:00	<b>Site Visit:</b> Knesset Topic: Discussions with members of Israeli Parliament on the security situation in Israel and terrorist threats
11:00 – 12:30	<b>Site Visit:</b> Israeli National Security Council Topic: Discussions with members of Israeli Security Council on the security situation in Israel and terrorist threats
12:30 – 13:00	Lunch provided
13:00 – 15:00	<b>Site Visit:</b> Military Court Topic: Prosecution of terrorist suspects
15:00 – 18:00	<b>Site Visit:</b> Old City of Jerusalem and Western Wall Topic: Security of religious and cultural sites
19:30	Dinner at hotel
The curriculum on Wednesday focuses on governmental attempts to address Israel's terrorist threat by examining efforts by the legislative, governmental, and judicial branches.	

<b>19 October 2017 (Thurs)</b>	
08:00	Breakfast at hotel
08:30	Bus Departs
08:30 – 09:00	<b>En-route lectures on security topics</b>
09:00 – 11:00	<b>Site Visit:</b> Hadassah Hospital Topic: Mass casualty readiness and response
11:00 – 12:00	<b>Site Visit:</b> West Bank Border Checkpoint Topic: Surveillance tactics and techniques
12:00 – 13:00	Lunch provided
13:00 – 14:30	<b>Site Visit:</b> Special Patrol Unit Topic: Specialized law enforcement tactics and techniques
14:30 – 15:30	<b>Site Visit:</b> Jerusalem Fire Department Topic: Specialized response assets
15:30 – 16:30	<b>Lecture: Extremist Islam in the United States</b>
16:30 – 17:30	<b>Lecture: Social Networks as a Source of Terrorist Inspiration</b>
19:30	Dinner at hotel
The curriculum on Thursday focuses on Israeli emergency response tactics and procedures for terrorist and mass casualty incidents.	

<b>20 October 2017 (Fri)</b>	
08:00	Breakfast at hotel
08:30	Bus Departs
08:30 – 09:30	<b>En-route lectures on security topics</b>
09:30 – 12:30	<b>Activity:</b> Active Shooter Drill and Training
12:30 – 13:00	Lunch provided
13:00 – 15:00	<b>Site Visit:</b> Hebron Topic: Security in high tension areas
16:00 – 18:00	<b>Site Visit:</b> Jerusalem Market Participants will tour the historic Jerusalem Market, site of numerous past terrorist incidents
19:30	Shabbat Dinner
20:30	Depart hotel for TLV
23:30	Depart TLV
The curriculum on Friday focuses on application of knowledge and skills learned during the week.	

<b>21 October 2017 (Sat)</b>	<b>Return to home jurisdictions</b>
------------------------------	-------------------------------------

### **Letter of Support**

In May of 2017, the Austin Regional Intelligence Center (ARIC) sent six students to Israel to take part in the Advanced Security Training Institute's Counter-Terrorism Immersion Training. Our delegation consisted of representatives from various disciplines and assignments from within our Police and Fire Departments.

We received training directly from security and intelligence experts on the topics of:

- Proactive Intelligence Gathering
- Critical Infrastructure Protection
- Active Shooter Response
- Target Hardening
- Bomb Prevention and Response
- Community Engagement for Preventing and Responding to Terrorism Events
- Case Studies and Lessons Learned from Terrorism Events

After months of research, we chose Advanced Security Training Institute (ASTI) to facilitate this training because they are the leader in this field. The training program developed for this purpose, the "*Counter-Terrorism Detection, Prevention, and Response Immersion Course*," is a six day program encompassing historical perspective, policy development, tactical and strategic preparations, and critical infrastructure protection strategies.

From the moment when we stepped off the plane until we departed Israel, we were greeted and escorted by professional representatives of ASTI. Our safety and comfort was a priority for their team. ASTI had representatives on hand to answer every question we had along the way. Security and intelligence specialists accompanied us on our travels and were able to provide historical, geographic, and ideological context throughout the trip. They acted as a liaison between us and the local community as we travelled throughout the country. Although the trip was not a personal or religious vacation, the ASTI staff still took time when they could to explain the religious and historical background of each site we visited and travelled through.

Israel's long history of dealing with threats, conflict, trauma, and casualties over the course of their history has resulted in the development and implementation of several of procedures and entities;

A National heightened sense of awareness that occurs at all levels within their society beginning with education in their schools

An Intelligence Process that affords them the ability to quickly address potential threats or issues on multiple levels

Extensive Security Protocols at key Critical Infrastructures

An established integrated response by the Military and Emergency Services Responders

Hospitals staffed and equipped around the clock to deal with mass casualties

Regional EMS Technicians deployed with “Take-Home” emergency vehicles to respond in the event of Mass Casualties

The implementation of a country wide phone app which allows for video exchange and quicker uploading of patient information for people needing an EMS response

Military Courts to preside over cases involving subjects suspected of Terrorist Activity

Over the last ten years, numerous U.S. Homeland Security Officials have travelled to Israel for this training. Among those who have participated in this training are First Responders (Police, Fire and EMS), Bomb Squad Technicians and Managers, Strategic Homeland Security Management Personnel, Incident Commanders, Policy Makers etc. In order to bring back valuable feedback about the program for other agencies considering whether or not to participate, many of these prior participants have documented their experience. ARIC utilized those reviews and testimonials to justify and support our decision to participate. Now, after having participated in the training ourselves, we are happy to add our name to the list of agencies supporting this training.

Due to our overwhelmingly positive experience and valuable lessons learned throughout this training, we remain available to discuss our experience with anyone who is considering participating. We may be contacted at the information below.

Mark,

I hope this email finds you well. Attached you will find several attachments related to Advanced Security Training Institute's (ASTI) Counter-Terrorism: Detection, Prevention, and Response (CTDPR) training course. These attachments may help to answer questions you may have about the upcoming October 2017 trip or others scheduled for the future.

The first attachment is a summary of the lessons, site visits, and activities completed during the May 2017 CTDPR course. While not every iteration of the course is the same, this document will provide you with an understanding of the material that is covered during the session. The second attachment is a draft agenda for the October 2017 CTDPR course. The final attachment is a YouTube video created by one of the participants from the May course with image and video highlights from the course.

The dates for the next CTDPR course are 13-21 October. Participants will stay in Tel Aviv and Jerusalem, Israel. The rate is \$9,450 per person and includes airfare, lodging, most meals and expenses, and the training curriculum. Please note that funds from the State Homeland Security Program, Urban Area Security Initiative, and Emergency Management Performance Grant can all be used to fund training through ASTI. ASTI courses also correlate closely with the FEMA Core Capabilities that serve as the basis for many of the DHS grant programs.

Please do not hesitate to contact me with any questions that you might have about course curriculum, funding or approval mechanisms, or travel/logistics. Also, please feel free to forward this information to other responders that may be interested in immersive counter-terrorism training.

I am available to travel to IA to meet with response agencies interested in the ASTI training courses. Chairman of House Homeland Security is hoping to attend the October course with members of the

emergency response community.

Regards,

Yisroel Stefansky

## Counter-Terrorism Detection, Prevention, and Response and Recovery Immersion Course

May 2017

This document contains an overview of and detailed notes from the lectures, immersive site visits, and activities experienced by participants in the May 2017 *Counter-Terrorism Detection, Prevention, and Response* course. The intent of the course was to convey the tactics and strategies developed and used in Israel to address terror incidents, allowing participants to adapt their new skills for use in their home jurisdictions.

### Day 1:

#### Lecture: The History of Israel

##### Avi

This session provided information on key points in the history of that land and region that exists as the state of Israel. This information provided context for participants to understand historic conflicts, rulers, and battles that shaped the political and security situation as it exists today. The lecturer paid specific attention to the 1947 United Nations (UN) Partition Plan, declaration of Israeli independence, 1948 Arab-Israeli War, 1967 Six-Day War, and current day contested territories. Notes:

King David – first to occupy Jerusalem. Made peace with enemies by marrying their wives (including the Queen of Sheba). King Solomon was the son of David.

Israel has developed desalination technology that it is sharing with Arab countries, providing peace through water.

32 latitude – below is desert, above is green

Ottomans controlled land until the first World War

1947 UN Partition Plan gave Arabs land in the mountains, Jewish communities in the valleys, and Jerusalem as an internationally-protected area

- Jews agreed to this plan, Arabs said no

May 14, 1948 – Israel declared independence; 5 Arab armies attacked

July 1948 – Israeli army counterattacked

Israel smaller than New Jersey

Ben Gurion – first Prime Minister of Israel

- Dream to make the desert green
- Special irrigation systems

1967 – 6 Days War fought against Syria, Egypt, and Jordan from 6/5/67-6/11/67

Jordan River is part of Africa Rift (tectonic plates)

Provide aid to neighbors during disasters

Contested territories: Gaza, West Bank, Golan Heights

Ben Gurion Airport – 8km from West Bank

“Land of Milk & Honey” – the only things that you can get from an animal without killing it

Israel as “the start-up nation”

## **Lecture: Terrorist Explosive Devices & Tactics**

### **Chief Superintendent Michael Cardash**

This session provided information on terroristic and criminal use of improvised explosive devices (IED) in Israel. The lecturer described the components of an IED and types of explosive material commonly used in IEDs. A segment of this lecture focused on person-borne improvised explosive device (PBIED). These suicide bombers use bags, vests, belts, pants or other innocent looking objects to transport explosive devices for detonation. The lecturer also discussed the importance of public awareness and intelligence/information sharing. Notes:

Last 4-5 years – few explosive attacks in Israel

Iron Dome System – built with the US to intercept rockets

Terroristic and criminal use of Improvised Explosive Devices (IEDs); criminal use means that it is specifically directed at a person

Components of IEDs

- Explosive material (XMAT)
- Detonator (initiator)
- Firing system (trigger)
- Optional additions

Camouflage

Fragmentation

Types of XMAT commonly use in IEDs

- TATP – with or without plasticizers
- Urea nitrate (with plasticizers)
- TNT – mostly from old ammunition
- Nitroglycerine-based
- Ammonium nitrate based (fertilizers)
- Nitro glycol (EGDN)

Times Square VBIED used 220lbs of urea, not urea nitrate

Ball bearings – best type of fragmentation

- Used to enhance the distance

Cell phone – most common radio detonator

DTMF – dual tone multi functional

- Added onto phone to set off tone
- Don't need to wait for call to go through

Public awareness is key

- Israel teaches awareness from kindergarten: “what is a suspicious object?”, “what is a suspicious person?”
- 10<sup>th</sup> graders get presentation from bomb tech
- training in military

Suicide bomber = person-based IED = PBIED

Response - first consideration – look for secondary device

Considerations for PBIED

- Overcome security measures
- Control the explosion and ensure success of the incident
- Portability of the explosive device
- Substitute for firing system
- Packaging – use bags, vests, belts, pants, and innocent looking objects

\*\* Importance of intelligence and information sharing

- Sources: Israeli Defense Forces (IDF), Mossad, Israeli Security Agency (ISA), police

Public resilience – get back to normal ASAP

## **Lecture: Cyber, Terror, & the Social Networks: The Dark Side of Technology**

### **Dr. Harel Menashri**

This session addressed the main trends in terrorist online activity, including the use of social media networks and hidden or dark networks. Terrorist organizations use file distribution applications, visible and hidden websites (e.g., blogs, forums), social networks, and communication applications (e.g. WhatsApp) for the purposes of propaganda, training, recruiting, funding, executing cyber attacks, intelligence gathering, etc. The lecturer also discussed ISIS trends and activities on the web. Notes:

Two main trends in terrorist online activity: grasping of popular social media networks and the dark web

Unparalleled tools for reaching out to as wide an audience as possible (e.g., mainstream social media networks)

ISIS has developed a multi-divisional media empire – target specific groups in local languages

Internet (only part of cyberspace) composed of: public networks, hidden networks, deep web

Terrorist activity on the internet: propaganda, training, recruiting, funding, cyber attacks, intelligence gathering, and more

Laws don't allow you to break into the network of someone who breaks into yours

Network discussion centers used for distributing files, websites (e.g., blogs, forums), social networks, communications applications

Cachedview.com shows deleted and removed

Terrorist organizations use encryption software, multiple accounts, social networks (including visible and hidden networks); Tor

ISIS trends:

- Propaganda focused on “distant enemy” encouraging lone wolves and cyber attacks
- Call to arms in social media
- Encouraging activities of terrorist organizations against critical infrastructure
- Use Android more than IOS
- Opera browser and Tor
- Use hushmail software to encrypt email
- Cyberghost VPN allows IP address switching
- Locker app deletes files after several incorrect password attempts
- Fake GPS apps hide location
- Fake social media accounts

Lessons:

- Do not take phone into the field or into meetings (change the culture)
- Everything is a computer and can be hacked
- Concerns about hacking of pacemakers, hearing aids, security cameras, automobiles, toys, appliances -> internet of things

## **Lecture: Crisis Media Management: Counter Terror Approach**

**Gil Kleiman**

This session focused on the ability to use the media as a multiplier as part of response operations. The lecturer stressed the importance of understanding the sensitive issues in your community to gather intelligence, as well as the need to feed the media with information during a response.

Terror is not new, but tactics of terror change

Object of terror is to turn you into a drowning man

Media as a multiplier

“The Kardashian Syndrome” – know which topics are sensitive to your community, what will turn heads

What you don’t put out there, someone else will

Never lie – say what you have to say

1 spokesman – unity of message

Book by Author: Terrorist Suicide Bombings: Attack Interdiction, Mitigation, and Response. The link to electronically review the book is:

<https://books.google.com/books?id=4a3MBQAAQBAJ&pg=PA266&lpg=PA266&dq=Terrorist+suicide+bombers+Kleiman&source=bl&ots=eI8nOL1kUY&sig=6txgZc59Nu1ssKaUIPdrR8evxJF8&hl=en&sa=X&ved=0ahUKEwjP7YSSkvvTAhUls1QKHXYDfMQ6AEINTAD#v=onepage&q=Terrorist%20suicide%20bombers%20Kleiman&f=false>

**Day 2:**

## **In-Transit Lectures on Security Topics**

### **Rami Savir and Rami Shemesh**

While in transit to various site visits, two veteran Israeli Security Agency members provided a series of lectures throughout the day on numerous topics related to Israel, the security situation, and terrorist incidents. Notes:

#### Demographics

- 8 million Israeli citizens: 75% Jewish; 21% Israeli Arabs; 4% Other (e.g., Christians, Arabs, Druze)
- 4.2 million Palestinians: 1.9M in West Bank; 1.7M in Gaza, E. Jerusalem Arabs (Israeli residents)

Until 1948, 1.2M Arabs/600K Jews; after 1948, 300K Arabs/600K Jews

- 500K Arabs went to refugee camps -> now 5 million in refugee camps

UN Decision 181 (November 29, 1947)

- David Ben Gurion accepted division of Israel into Jewish State and Arab State with Jerusalem as international territory
- Jewish State 68% desert
- Arabs would not accept any independent Israeli state

6 Day War – 1967

- New reality – Jewish state controlled Gaza, West Bank, Sinai Peninsula

New forms of terrorist organizations emerged

Oslo Agreement

- West Bank divided into 3 parts
  - A – exclusively administered by Palestinian Authority
  - B – administered by both Palestinian Authority and Israel
  - C – security and public affairs administered by Israel
- 1993 Agreement – Hamas said no
  - 10 years – birth of suicide bombers – change in paradigm
  - Israeli citizens afraid of buses, restaurants
  - Israeli develops expertise in dealing with terrorist cells

Islamic Fanatical Radical Movement Point of View:

- Jerusalem belongs to Allah
- Allah chose Islam to rule the world
- Chosen people: Jews, Christians, Muslims, but Jews and Christians fell
- Jews can live here, but not be independent rulers
- Muslim Brotherhood says that Muslims must be the leaders in the Holy Land
- Mohammed – last prophet

Gaza Strip – 2 governments: 1 Hamas and 1 PLO; over 1.7M people

- 2006 decision to remove 16 Jewish settlements from Gaza (8K people)
- Hamas started shooting rockets all over Israel

Obstacles to peace: 1) Jerusalem, 2) refugees, 3) Israeli settlements in West Bank

After 1967 (6 Day War), green light given to settle into the West Bank (500K people)

Hamas is a political movement, Islamic jihad is a military movement

Border countries: Lebanon, Syria, Jordan, Egypt – no current problems except for Hezbollah

- Syria: ceasefire since 1967, few problems remaining regarding the Golan Heights
- Jordan: ceasefire since 1967, peace agreement 1994
- Egypt: ceasefire since 1973, peace agreement 1979

Ashdod – Philistine city; 3000 years old

- Largest port city in Israel
- High population of Russian Jews

First Intifada – began December 1987 - violent uprising against Israeli “occupation”; many riots and shootings

Second Intifada – began October 2000 – more violent

War with Gaza every 2-3 years, last was August 2014

Kibbutz – communal living generally according to Communist principles

More than 12 empires have conquered the Holy Land – all empire expansion has to go through Israel

50% unemployment rate in Gaza

Egypt has mostly closed their gate with Gaza

- Was open until 3 years ago
- Previous leader of Egypt was Muslim Brotherhood – kept the gate open

Desert defined as less than 200mm of rain/year

Rocket attacks from Gaza

- If in vehicle, stop car, get behind anything, cover head
- Every bus top has bomb shelter

Many tunnels from Gaza – get into Israel and behind military

Jerusalem

- King Solomon built first temple: “Gods house among people”
- Most important Holy City for Jews
- David Ben Gurion: “no state of Israel without Jerusalem, but there is Jerusalem without Israel”
- East Jerusalem belonged to Jordan until 1967  
1/3 of population of Jerusalem

## **Site Visit: Magen David Adom (MDA) in Israel – Tactics and Procedures**

### **Director of International Relations**

MDA is the Israeli emergency medical services (EMS) agency. Participants traveled to Ashdod to visit an MDA dispatch center. The lecturer provides information on operations and logistics required to coordinate the activities of the more than 15,000 volunteers and 2000 paid staff across the country. MDA is also the only supplier of blood services in Israel. Participants were able to view dispatch technology and operations as they occurred. Notes:

MDA: Red Shield of David -> National EMS organization and national blood services organization

British mandate over Middle East after WW2

Established according to Red Cross guidelines

National, public, statutory, volunteer organization

More than 15K volunteers, less than 2K employees

- Volunteers are trained the same as employees

Active every hour, every day, all over the country

Train all IDF paramedics

Not funded by government, but supervised by Ministries of Health and Finance

Charge for services provided

- Those treated can claim back costs from health organizations
- Costs covered if person is hospitalized or suffers from known medical problems
- 72% of budget comes from billed costs

Government provides funds for preparedness from multiple hazards (e.g., earthquakes, rockets)

- No major earthquakes since 1927
- Israel sits on 2 fault lines

Volunteers are crucial in every community -> active, involved, well-trained

Call volume: 2500 calls per day (emergency and non-emergency)

- 2 ALS helicopters
- Vehicles: 1000+ ambulances plus minibikes
- Tel Aviv region: 300-400 calls/day for 1.5 million people
- Not a lot of misuse of the system
- Provide backup to the national school system for non-emergency calls

There are private ambulance companies; a few provide ALS

9 regional dispatching centers

- Dispatchers are all EMTs or paramedics
- Can provide medical guidance over the phone
- National dispatch system – call will go to first available dispatcher  
Trying to keep time to answer call to less than 4 seconds

No central 911 system in Israel

- Dial 100 for police services
- Dial 101 for MDA
- Dial 102 for fire services

Created an understanding that all disciplines need to work together

- Direct communication from one dispatching center to another
- In areas of potential violence, MDA may request backup from law enforcement
- Some awareness training of fire department operations
- A lot of training with fire department
- GPS navigational system shows unit numbers of units from other departments

Law enforcement is in command of every incident

Law enforcement can shut down all communications amplifying sites near an incident

Responders have primary access to cellular bandwidth

Smart phone app (My MDA) – geolocates caller

- Personal information
- Known allergies

- Recent medical history
- Family info (calling in for self or other family member?)
- Can activate phone camera to provide video from scene
- Can communicate via text
- Shows “uber” view of vehicles arriving
- 60K users

Volunteers – group of highly trained EMTs and paramedics that keep supplies with them or bring them home

- MDA team app – shows location of all team members
- If first ambulance will arrive in more than 5 minutes, system will also scan volunteer first responders in the area
  - Provided with same call information
  - Can respond and click “navigate” -> uses Waze to guide to call
- Can fill out medical form – becomes part of the medical record

Only supplier of blood services in Israel

- Collect at least 1000 units every day
- Need to have enough inventory
- High holidays means lower supply
- Targeted communications with donors

Hospitals notify dispatchers when at capacity; close communication

- Ministry of Health monitors hospital capacity closely

Site tour: Ashdod dispatch center

- In bomb shelter
- Air filtering system to protect against chem/bio
- Automatic dispatch of mutual aid
- Average response time 7-8 minutes
- 8-hour shifts

### **Site Visit: Port of Ashdod – Protection of Transportation Assets**

Participants traveled to the Port of Ashdod for a discussion of terror threats to transportation assets. Participants viewed multiple security components including biometric and automated gate systems, a smart fence, camera surveillance systems, the use of defender-class boats for patrol of the port from the water, biometric screening of crew members, and the use of drones.

Notes:

Operations always connected to preventing terror

Need for separation of operations – like a military base

Profile employees for different categories of clearance

Video summarizing security measures

- Advanced gate system using biometrics for access
- Smart fence
- Camera surveillance system and included analytics
- Defender-class boats patrol
- Biometric screening of crew members

Database contains information on 70% of seamen in the world

- Drones

Example of terror threat: “trojan horse” shipping container with false wall -> killed 10

Guiding authorities:

- Interior Emergency Authority
- ISA Information Security
- ISA
- Israeli Police
- Israeli Navy

Site tour: Port security operations

### **Site Visit: Rutenberg Power Station – Protection of Critical Infrastructure**

The Rutenberg Power Station is located in Ashkelon, less than 5 km from Gaza. The power station is the target of repeated rocket and terror attacks. Numerous tunnels from Gaza have also been found in the vicinity of Rutenberg. Participants learned about the security components being used to prevent and mitigate attacks on the power station. Notes:

5 power stations located in Israel – Rutenberg is the largest

Located 5km from Gaza

Israel cannot get electricity from anywhere else in the world

Have to depend on themselves

Issues:

- Rockets
  - Concrete wall protects major systems
  - Iron Dome
  - Reliance on coal (LNG expensive)
  - Poles hardened
- Tunnels
  - Found in vicinity – one 3km long
- Terrorists
  - Combat trained security guards
  - Patrol vehicles
  - Guard towers
  - Surveillance – cameras, radar
  - Patrol boats (2)
  - Navy patrol of pier

Collaboration between fire, police, IDF, Red Cross

Site tour: power station

### **Site Visit: City of Sderot**

Sderot is the city located closest to Gaza and is targeted in many rocket attacks. Participants viewed stockpiles of exploded rockets launched from Gaza into Sderot, as well as shelters available throughout the city to protect civilians. These shelters include playground equipment that serve as bomb shelters in schools and parks.

## **Lecture: The State of Relations between Israel and its Neighbors**

### **Rami Savir**

This session provided information on the relationships with Lebanon, Syria, Jordan, and Egypt, nomadic Bedouin tribes within Israel, Gaza, the West Bank area of Judea and Sumeria, and the division within Jerusalem. Notes:

Understanding the mindset of Israel is key

Israel formed as a state for Jewish people

Mixed population: Jews, Israeli Arabs, Palestinians, E. Jerusalem

1.7 billion Muslims in the world

Most Muslims not terrorists, but most/many terrorists are Muslim

#### **Lebanon**

- Not a real country - clans of Christians, Muslims
- Hezbollah runs the state
- Theoretically should have no problems with Lebanon

#### **Syria**

- Sunni Muslims
- Govt holding power thanks to support of Lebanon and Russia

#### **Jordan**

- Left over from British Mandate
- 70-80% Palestinians
- Minority Bedouins are ruling
- Peace treaty with Israel but don't know if it will hold

#### **Egypt**

- Peace treaty since 1977
- Good relations with regime, but not with people
- Bedouins living in Sinai Desert

#### **Gaza**

- Trying to find ways to defeat/pass the fence (e.g., rockets, tunnels)
- For a while, didn't see foreigners as a significant threat
  - Requires profiling of behavior
  - You can't check everyone
  - Pure random checks are a waste of time

#### **Judea/Sumeria**

- Judea is south of Jerusalem in West Bank
- Sumeria is north of Jerusalem in West Bank

Use of walls to separate territory used/controlled by Palestinians when people are so close they can shoot each other with rifles

- Suicide attacks went down more than 90% after wall built
- Wood and concrete fence

#### **Tunnels**

- Tunnels into Israel are attack tunnels

- Tunnels into Egypt are smuggling tunnels
- Jerusalem – Old City (less than 1 mile x 1 mile)
- Jewish Quarter
  - Muslim Quarter
  - Armenian Quarter
  - Christian Quarter

## **Lecture: The Muslim Mindset**

### **Rami Savir**

This session provided an assessment of behaviors and motivations of Muslim Arabs in the Middle East from the prospective of former Israeli Security Agency members. Notes:

A man is always preferable to a woman

- The man decides
- A woman as a source is less beneficial
- Women do not participate in discussions

A mother is always preferable to a wife

- The function of a wife is to have kids

Marriage for practical reasons is always preferable to marriage for love

- Marriage to first cousins is ideal
- Woman moves to home/family of husband
- Woman takes husbands name
- Dynasty of family is very important

A cousin is always preferable to a stranger

- Importance of families and clans

Family obligation supersedes loyalty to a country

The Army is preferable to civilian institutions

- Force is important
- Perception of strength is important

Ethnic and religious affiliations are more important than a national identity

Rulers are more important than the law

- Leadership is to benefit your family

Luck is more important than discipline and planning

Affinity and charisma are more important than the sense of obligation

- People will follow someone to the worst decision they every made

Poetry is more important than prose

An embrace precedes acquaintance

Embarrassment precedes guilt

- Do not want to be embarrassed

Suspicion precedes trust

Shouting precedes dialogue

Past and future are more important than the present

Manipulation precedes listening

- Control and power are more important than the solution
- Negotiation occurs prior to, during, and following an agreement
- Honor above all
  - Most important issue in the mindset of Arabs

### **Day 3:**

#### **In-Transit Lectures on Security Topics**

##### **Rami Savir and Rami Shemesh**

While in transit to various site visits, two veteran Israeli Security Agency members provided a series of lectures throughout the day on numerous topics related to Israel, the security situation, and terrorist incidents. Notes:

##### Old Jerusalem

- 37K population inside walls
  - 65% Muslim
- 4 Quarters: Christian, Armenian, Jewish, Muslim
- Walls built in 1536 by the Ottomans to protect Jerusalem from Christian Crusaders
- 7 gates built originally

View of note: pillars built around light train station to prevent terror incidents caused by crashing vehicles into stations

View of note: Ammunition Hill from 1967 battle with Jordan

View of note: Mount of Olives, Mount of Scopus, Mount Zion

View of note: Bedouins villages - 280K population total

West Bank divided by Oslo Agreement:

- A: Exclusive responsibility of Palestinians
- B: Security responsibility of Israel, public services responsibility of Palestinians
- C: Exclusive responsibility of Israel

12 tribes of Israel – descendants from Jacob

- Exiled into and enslaved in Egypt for 400 years
- Moses led them through the desert for 40 years
- Came through Jericho (Jordan Valley)
- Moses died on the east side of the Jordan River; did not enter into Holy Land

Israel will not give up Jordan Valley as any part of a peace agreement – Jordan Valley is a buffer

June 16, 1946 – 11 bridges connecting Israel blown up to protest limits on amount of Holocaust Jews allowed into Israel

7 fruits that represent the “land of milk and honey”: date, olive, fig, grape, pomegranate, wheat, barley

Muslim calendar goes by the moon – 354 days

Jewish calendar – dates for holidays based on what is in the Bible

Ramadan – holiest Muslim holiday

- Fast for 30 days
- Greater chance of terror attacks because people feel more devout

Muslims pray 5 times per day – intelligence effort to see who goes to the mosque for the early prayers – most devout

Muslim Brotherhood – Dawah – call to build schools and mosques

Sea of Galilee – was main source of water for Israel

Dam at south end of the Sea / Jordan River

First desalination plant opened last year to provide water from the Mediterranean Sea

Syrians tried to stop water from flowing into Israel – 1964

First suicide bomber attack in 1991 after 400 Hamas leaders exported to Lebanon; came back with lots of knowledge about suicide bombing

Life of Jesus:

- Raised in Nazareth for 30 years
- Lived at Sea of Galilee for 3 years
  - Recruited disciples
  - Performed miracles
- Traveled along Jordan River
- In Jerusalem only one week before being crucified

Rule over land that is now Israel:

- For 300 years after Jesus died, there was harassment of Christians – Romans did not allow Christianity
- 325 AD, Constantine the Great (Roman Emperor) – allowed Christianity
- 638 AD Empire of Islam
- Defeated 1099 by Crusaders
- Defeated in 1187 by Muslims
- Defeated 1516 by Ottomans
- Ottomans ruled til the end of WW1

View of note: Bet She-An. In 1997, a Jordanian soldier killed 7 girls in Bet She-An; King Hussein of Jordan went to Bet She-An to give his condolences to the families

History of Islam:

- 7<sup>th</sup> Century AD – Islam became the 3<sup>rd</sup> monotheistic religion
- Established by Muhammad (name means “Praise God”)
  - 570 AD – born in Mecca
  - 610 AD – entered a cave in Mecca and had a vision from the Angel Gabriel
    - Wrote first verses of Koran in cave
  - Started to preach 610-622 AD
  - 622 AD chased from Mecca to Medina
  - 622 AD – died and buried in Medina
  - No successor – 2 competing camps
    - Al Sahaba (sp?) – friends of Muhammad
    - Fatimah – daughter of Muhammad, married to 4<sup>th</sup> caliph
      - Fought to continue Islam

- Mother of Al-Hasan and Al-Husayn

680 AD – battle for the future of Islam between Fatimah and sons vs. friends of Muhammad – Battle of Karbala

Al Husayn killed in battle – followers became Shia

Day of Ashura (Shia holiday) marks the death of Al Husayn at Battle of Karbala

ISIS – Sunni, Al Qaeda – Sunni

ISIS established after 9/11 and US involvement in Iraq

65% of Iraq controlled by ISIS

Syria – Bashar al-Assad not Sunni or Shia

ISIS, other Sunni groups, free rebels all fighting al-Assad

2014 – Jabhat al-Nusra kidnapped 45 United Nations peacekeepers in Golan Heights; Israeli forces opened the gate and allowed UN personnel into Israel

Druze

- Fatimid Caliphate (Shia) – 11<sup>th</sup> century
  - Ruled in Egypt and Israel
  - King kidnapped, ad Dazari thought king was 1<sup>st</sup> imam
  - Ad Dazari ran away and established new religion (Druze)
- Druze not Arab, not Muslim
- 1.5 million
- Don't need nation or government, only want territory
- Very little known about Druze religion
- Being killed in Syria
- Druze in Israel demanding that Israeli government intervene in Syrian conflict to help Druze in Syria
- Stopped ambulance and stoned wounded Syrian soldier to death

### **Site Visit: Jordan River Baptism Site**

Participants traveled to the Jorder River Baptism Site. This historic religious site is located on the border with Jordan, sharing baptism facilities. The span of the Jordan River at this site is less than 20 feet, posing unique security challenges. Notes:

One of 2 baptism sites – the other is at the Sea of Galilee

White dove symbolizes the baptism of Jesus

- Jesus baptized by John the Baptist in Jordan River
- Voice of God: “This is the son of God that I was talking about”
- Christians view baptism as a cleaning of the soul and the body

Currently good relationship with Jordan

Peutingner Map

- Discovered in the 4<sup>th</sup> century AD
- Shows network of roads from Roman Empire
- Indicates that site of baptism of Jesus close to Jordan River baptism site

No control of borders all the way to Turkey

Until 2007, 250km border with Egypt was completely open

- Fence built in 2007, significantly reducing smuggling problems
- Current war between ISIS and Tarabin (Bedouin tribe)
- Trying to keep Bedouins from smuggling

### **Site Visit: Triangle Border**

This border is the boundary between Israel, Syria, & Jordan. Lecturers provided information on the impact of the war in Syria on Israel, the expansion of ISIS into Syria and Jordan. Lecturers provided information on the security situation in the Golan Heights, and implications for Jewish settlements in the area. Notes:

Golan Heights: 950m above sea level

Sykes-Picot Agreement – 1916 – division of area

- Golan Heights, Lebanon, Syria to be French territory
- Israel, part of Jordan, part of Iraq, Egypt to be English territory

1945-46 – Syria became independent

ISIS concentrating opposite Golan Heights, but focusing on battles to the east and north right now

Jordan Valley = 65 miles

- Border between 2 tectonic plates
- Major earthquakes every 100-110 years

### **Site Visit: French Hospital/Syrian Officer Academy**

Participants toured the site of a former French hospital used as a Syrian Officer Academy before the Six Day War. The building ruins look down into the Syrian countryside. Notes:

Eli Cohen – Israeli intelligence agent

- Established cover identity 1960-61 in Argentina
- Settled in Syria 1961-65, transmitted information on Syrian military and fortifications
- Caught January 1965, tried, and executed

### **Site Visit: Valley of Tears**

The Valley of Tears is battle site from Yom Kippur War where significantly outnumbered Israeli forces held off attackers until reinforcements could arrive after 4 days. Participants were able to explore a maintained Israeli Defense Force (IDF) bunker. The visit highlighted the difficulties in defending territory given the proximity of countries that have been actively hostile to Israel. Lecturers also provided a review of international/UN participation in the security situation.

Notes:

Until 1967, Syria controlled Golan Heights and bombed the kibbutz

Yom Kippur War – surprise attack from Syrian in Golan Heights; 3-point attack

History:

- 1947 Independence
- 1956 Sinai War
- 1967 Six Day War

10/6/73 – Attack on Yom Kippur – holiest day for Jewish religion

- Israeli army kept minimal forces in Golan Heights
- Ignored intelligence about possible war
- No recruitment of reserves until 10/5/73

#### Valley of Tears – one of three attack columns

- 1 battalion in Valley
- 600 Syrian tanks vs. 35-40 Israeli tanks
- For 4 days, Israeli tank battalion held off Syrians
- Bitter battle – officers motivated soldiers to stay
- Reserves arrived after 4 days and turned battle
- Israeli forces pushed into Syria
  - Pushed to within 40km from Damascus
  - Pushed to within 101km from Cairo

1974 – ceasefire between Israel and Syria

### **Site Visit: The Dead Sea**

Participants were able to visit and swim in the Dead Sea, learning about the security challenges of protecting this site visited by travelers from within Israel and throughout the world. Notes:

- Every year 1m lost from the Dead Sea
- Dead Sea 34% salt in water (ocean .4% salt)

### **Day 4:**

#### **Site Visit: Knesset**

The Knesset is the legislature of Israel. A guided tour provided information on the structure and composition of the Knesset. Participants subsequently attended private meetings with 3 members of Israeli parliament (Yehuda Glick, Amir Ohana, and Tzipi Hotovely. The Knesset members provided their unique perspectives on the security situation in Israel and answered questions from ASTI participants. Notes:

“to come together/to congregate”

120 members

- 17 not Jewish
- 33 women (25%)

Parliamentary Democracy

- Vote for 1 party, not individual members
- Each party posts list of 120 potential
- Seated by percentage of vote
- Minimum of 3.25% to get representation in Knesset

President gives political power to Knesset

- Knesset has to form government
- At least 61 members must support government

Declaration of independence

- 14 May 1948 at 4:00pm (Friday)

- 5/15 – end of British Mandate, Shabbat (Saturday)
- Concerns about civil war if there was a leadership void
- Document
  - “Rock of Israel” = God
  - No other reference to God
  - Signed while blank
  - Bold paragraph in middle contains 3 justifications for independent Jewish state:
    - Historical connection with land
    - 1917 Balfour Declaration / 1947 UN Partition Plan
    - Holocaust
  - Describes type of government
  - 3 addresses to UN, to Jewish people, to Arabs
  - Call to peace

- No constitution

Plenary Hall used for voting

- Lively debates, most recognizable room
- Many other discussion rooms

Bills – 2 types

- Government-originated: written by minister or vice-minister, requires 3 votes
- Private: written by any member of Knesset; requires 4 votes

Official symbol – candelabrum

Separation of powers: legislative, government, judicial

PM is also a member of parliament

Speaker is member of parliament, but runs/manages the debate

10 seconds to vote; board shows voting results

Disciplinary action – can force members of party to vote in a specific way

Judicial oversees legislative oversees government oversees judicial

“ascend the podium” = give testimony

Viewing space for press, honored guests, public

Chegal Hall – 3 tapestries, 12 floor mosaics, 1 wall mosaic

- Tapestries: present (colorful – different waves of immigration), past (exodus from Egypt, Moses, King David), future (Isaiah)

### **Knesset Member Meeting: Yehuda Glick**

#### **Jerusalemofpeace.com**

Likud party – 30 seats in this Knesset

Formerly served in Ministry of Absorption

Six Day war – greatest victory of Jewish people

- 2 million Jews surrounded by 200 million Arab Muslims (supported by USSR)

Yom Kippur War – lesson in humility

- Lesson: if we put down our arms, we won't exist

Greatest danger – those who think God is exclusive and want to convert others

- 12 million Muslims killed by radical Muslims

Settlements not an obstacle to peace, but are bringing peace by living together peacefully

Importance of not being afraid of terrorism

Demand from ourselves the highest standards

Jerusalem mentioned more than 600 times in the Bible

Nations that want to remain relevant will recognize Jerusalem as capitol

Israel offers highest level of human rights for all citizens

Temple Mount as world center for human rights

Promote Jerusalem Covenant

### **Knesset Member Meeting: Amir Ohana**

12 years in IDF and ISA

Member of 5 committees

21 Arab states combined are 1000 times larger than Israel

1.4 billion Muslims in the world - yet still the minority that needs to be protected

It is the existence of the state of Israel and of the Jewish people in their homeland that Muslims find objectionable

100 years of terror

PLO founded in 1964 – before settlers

- What is Palestine? “From the river to the sea, Palestine will be free”
- Continue to support terror in many ways

Influential Muslim leadership sees Jews as occupiers like British and Ottomans before them

This is the birthplace of Jewish religion

2000 years of exile – “tomorrow in Jerusalem”

Israeli/Arab conflict will not be solved in DC – must be solved by Israelis and Arabs

Cannot overstate friendship/brotherhood with U.S.

- Share enemies, enemies of the free world

### **Knesset Member Meeting: Tzipi Hotovely**

Deputy Foreign Minister

Time for us to rethink

Issues with Iran and Syria

Challenges of Jerusalem

Children’s intifada

- 12-15 year old took kitchen knives to streets
  - Means it is part of education system and social media

Schools named after mass murderers

Great future for you and your families as terrorists

Congress sponsoring and funding families of terrorists

Winning of 6 Day War gave all religions freedom to practice their religion in Jerusalem

Israelis expecting movement of US embassy to Jerusalem

Clear that YouTube, Facebook have the ability to remove content related to terrorism, recruitment

- Arguments of free speech

- Already some restrictions on pornography, etc.
- Request to remove content combining certain words
- Still disappointed with accessibility of this information

## **Site Visit: Israeli National Security Council**

### **Eitan Ben-David**

Participants visited the office of the Prime Minister and attended a private meeting with Israel's National Security Director, Eitan Ben David (sp?). Mr. David provided information on the challenges of terrorism in Israel, Hezbollah and Hamas, counter-tunnel challenges, and the importance of learning from terror attacks in other countries. Participants were able to ask questions of Mr. David related to counter-terrorism policies. Notes:

We are trying to do our best in this region

- Trying to improve ourselves every day
- Our agenda is to alert and ready

Most of surrounding countries are enemy

- Countries by law, no diplomatic relations
- Peace treaties with Jordan and Egypt, but good relationships primarily with government
- People of Egypt and Jordan not happy with presence of Israel

Borders: Gaza (59km); Egypt (208km); Lebanon (79km); Syria (92km); Jordan (309km); Saudi Arabia (X); Mediterranean Sea (196km)

Asleep with 1 eye open; need to be strong in the neighborhood

A lot of budget dedicated to security issues

When it comes to security, people of Israel are very united

Last conventional war: 1982 with Lebanon

In last 2 decades, most operations are against terror organizations

Hezbollah in Lebanon, Hamas in Gaza

- Hiding with civilians inside villages and cities
- President of Lebanon said: "Hezbollah is Lebanon and Lebanon is Hezbollah"

Israelis want to live peacefully in region

Sharon gave back Gaza

- After less than one year, Palestinian Authority lost to Hamas and were kicked out
- Now terrorist organization controls land on Israeli border

They will always find a way to attack you with innovative methods

Iron Dome – most rockets not allowed to hit

Gaza using 35-40% of aid for military purposes

Building tunnels

- Karem Shalom crossing border: 1000 trucks per day into Gaza with supplies and humanitarian goods
- No good technology to detect every tunnel
- Israel investing a lot of money into technology placed deep into border to detect tunneling activity

Gas reserves in Mediterranean Sea

You have to send a message that you are not going to put up with terror incidents  
More than 100K come into Israel to work every morning (60% legally, 40% illegally)  
Rely on security clearances, fence, punitive measures against terrorist families, powerful intelligence assets, training, security awareness, community engagement  
Learn from the attacks of others – Israel studies what is going on in other places in the world including details, modus operandi

- Israel is a lab for terror attacks
- Need to understand the organization, mindset
  - Who they are, what is their cause?
  - What kind of measures will hurt them?
  - What will contain them?

### **Lecture/Site Visit: Military Court of Judea and Sumeria Lt Colonel Menachem Lieberman**

Participants received a presentation on the military court and the prosecution of suspects of those accused of security or criminal offenses in the West Bank. The site visit included in-court viewing of proceedings against a man charged with using social media as part of a terrorist organization. Notes:

West Bank under military sovereignty

Questions on whether Geneva Convention applies

Judiciary

- Local Palestinian courts
- Military courts
- Juvenile military courts
- Military court of appeals
- High Court of Justice: “Bagatz” (In Israel)

Those accused of criminal or security offenses in West Bank get real trial, rights of any defended

- Acquittal rate as high as Israeli courts
- Same evidentiary laws as in Israel

No jury system in Israel

Cases: terror, criminal, disturbance of public order, traffic, border offenses, and review of administrative decisions

24.5% of defendants have membership in a terrorist organization

Terror organizations find it easy to influence minors

Encourage and pay minors to perform terrorist acts

- Redeem “immoral behavior”
- “Hate indoctrination”

Administrative detention

- Preventative, not punitive
- Usually 6 months

Constant presence of human rights NGOs, visits of diplomats and foreign delegations

All defendants have lawyers; public defenders from Palestinian Authority available

Site tour: in-session court proceedings

## Lecture: IED Trends

### Chief Superintendent Michael Cardash

This lecture focused on ISIS and AQ IED trends exclusive of PBIEDs (addressed previously). The presenter discussed sources for explosive material, including unexploded ordnance (UXO) and the process necessary to create a homemade explosive materials as detailed in widely-distributed publications and internet-based videos. Participants also learned about camouflaging IEDs and anticipated upcoming threats and trends (including vehicle borne IEDs (VBIED), drones as a delivery mechanism. Notes:

#### Sources for explosives

- Unexploded ordnance (UXO)
  - PTAB 2.5 bomblets
  - Converted to an IED: remove fuse, remove tail assembly, add XMAT, insert det cord, close
  - Since Russian intervention in Syria, more modern munitions
  - UXO AO 2.5RT sub-munition
- Homemade explosives
  - Ammonium nitrate fertilizer
  - Ammonium nitrate + aluminum powder
  - TATP, nitrocellulose, EGDN, other
  - Christmas Eve 2014 AQAP magazine published article on how to make XMAT
    - Potassium chlorate (?) with booster
    - Plastic bottle casing
    - Nigella sativa (black cumin)
      - More energetic than carbon
      - Increased detonation energy by 30%
- TATP – classic 2-stage detonation

#### International Terror

- Richard Reid – shoe bomber
- UK 21.7 attempt (2005) London
- Delta Airlines attempt – Christmas Day
- Paris attacks: 13 November 2015
  - 1.2kg wet TATP and 700-1000 nuts
- Germany Ansbach: 24 July 2016
  - Suicide bomber outside wine bar
  - 2kg urea + AN and 200g TATP
- Brussels, Belgium: 22 March 2016
  - 3<sup>rd</sup> device 25kg TATP
  - Produced 100-125 kg of TATP
- Upcoming threat: TATP VBIED

## Turkish airport bombing

### Camouflaged IEDs

- Building blocks (ISIS)
- Rock camouflage (Houthis)
- Sandals (ISIS)
- Laptop IEDs (Al Shabaab)
  - Flight restrictions
  - AQAP raid – tech to build device
  - Inside laptop battery; still functions

### ISIS use of vehicle-borne IED (VBIED) – New trend

- Large armored VBIED driven by suicide bomber
- Now in Iraq and Syria on a defensive position
  - 4 x 4 or SUVs (prefer Kia)
  - Light armored SUVs
    - Route to Karbala – 8 VBIEDs
    - Month of Ramadan
    - Electronic detonators with electronic plugs
    - Plastic bags and containers packed with explosives

### ISIS use of UAVs – New trend

- Commercial-off-the-shelf (COTS) multirotor drone/quadcopter
- Used for surveillance to date
- Quadcopter payloads – future threat?
- Hezbollah – Aug 2016 – weaponized quadcopter with AT/AP MZD2 bomblets
- ISIS fixed wing bomber – Jan 2017 - PR film
- ISIS quadcopter bombings – Jan 2017
  - 3D printed components
  - Tail hook on bomblets
  - 40mm warhead – M430 or M383
- Iraqi forces weaponized UAVs with shuttlecock bomblets
- Chemical – new trend
  - Fixed wing UAV with chlorine canister
  - Mosul April 2017
- French and Dutch using eagles to counter UAVs

## Review

### Rami Savir and Rami Shemesh

Cannot copy our methods in your communities – better to see why we do it and adapt our methods

Always expect a 2<sup>nd</sup> attack; things may happen in stages

Sunday - lectures

- Dangers of cyber and IOT; consider your cyber protection
- Consider communication
  - Used best by ISIS

Significant recruitment tool

Pay attention – see what the intentions are

Can use media to show your own message

Incitement on social media

Monday – MDA, Ashdod, Ashkelon, Gaza

- US may not have those kind of threats
- All of this can be applied to police work
- Community relations is also a part of response

Tuesday – West Bank, Golan Heights, Syria, Jordan

- Message that if you are strong enough and crazy enough, it helps to deter

Wednesday – Parliament, PM Office, Courts

- Right wing side of perspective
- Solution is a matter of perspective
- Demonstration of incitement via social networks

## **Lecture: Social Networks as a Source of Inspiration**

### **Rami Savir**

This session focused on the importance of monitoring content of social media networks to identify sites/videos/forums, etc. being used to inspire hatred against the Jewish population and potential suicide bombers. Participants watched 2 videos made for children that encourage violence against Jewish persons. The lecturer also provided Facebook posts showing the progression of radical ideology by a young man that killed a 13 year-old Jewish girl. Notes:

Video: PAL network

Video: Hamas children's network

Case of Muhammad Tarayrah

- Killed 13-year old girl
- Review of social media posts
  - “Death is a right and I demand my right”
  - Desire to become a Shaheed

Social media – riots and disorder predictable via SM

No such thing as a lone wolf – need inspiration – often found in social media

## **Day 5:**

### **Site Visit: Hadassah Hospital**

#### **Julie Bebinsky**

Participants visited Hadassah Hospital to review the readiness and capabilities for mass casualty readiness, including trauma-specific emergency room spaces and intensive care units, plans for surge of facilities and staff, preparedness drills, and the need for trans-cultural nursing. The visit included a presentation by Dr. Asaf Kedar Terrorism Related to Mass Casualty Events in Israel.

Dr. Kedar discussed the increase in vehicle assaults and knife attacks in recent year. Notes:

Everything in ER can be quarantined

Capacity for 110 beds

MDA notifies ER with patient details

Trauma ER – rooms strictly for trauma

- X-ray booms
- Lights also cameras – everything filmed
  - Not accessible to lawyers
- Each room has capacity for 2 patients
- Ultrasound machines in room
- Call volume / day – approx. 10

Rambam Hospital – only Level 1 hospital in north part of country

- Anticipate military wounds
- Complete hospital underneath the ground – used if necessary in time of war

Hadassah Hospital – geared towards terror victims

Conduct drills for hospital evacuation onto grounds

During mass casualty, patients leave for CT and don't return to ER, move to other care

No diverts, always accept trauma patients

Burn care – big issue – resources lacking

Big bottleneck – imagery, CT scans

ATLS – Advanced Trauma Life Support

No problems with drop times from ambulances

Another bottleneck in ICU, but all nurses ICU trained

Nursing school in hospital

Different ICUs distributed throughout hospital: trauma, peds, cario, etc.

Effort to keep families together during mass casualty incidents

Visiting dignitary room – bulletproof, self-contained

Simulation/training room can be converted for more beds

System for surge capacity

- Drill 3x per year for all former ER nurses in hospital
- Focus on new threats
- 2017 – pediatric drill

No translation problems

Workers reflect population of the city

No follow-up care available in Palestinian Authority (PA)

PA has Ministry of Health and own medical system

Air transports 1x per month

- Short distances in Israel
- Air pad fits criteria for military hospitals

Mass decon area with Geiger counter outside in ambulance bay

Mother and child pavilion

- Obstetrics, labor and delivery, pediatric ICU, oncology, surgery
- Cultural competence: trans-cultural nursing, ethnomed
- Can be used for surge in a mass casualty
- Access to utilities in ceiling

Family areas have kitchens and showers  
Pediatric ICU has parent sleeping rooms  
Hospitals in East Jerusalem run by Palestinian Authority Ministry of Health

### **Dr, Yorum Weiss**

Former Director of surgical ICU

A lot of experience here with trauma

Seeing a decline of trauma patients

- Used to have many multi-casualty events
- Importance of drills to maintain skills

MCE factors:

- Volume of patients
- Medical characteristics of event (e.g., injury types – crush)
- Prehospital scene
- Hospital-related variables

### **Terrorism Related to MCE in Israel**

#### **Dr. Kedar Assaf**

West Bank divided into Sumaria (North) and Judea (South)

1/10/15 Drive-by shooting

2392 attacks in 10 weeks (2015)

- Increase in vehicular assaults
- Most attacks in West Bank (74%)

Terrorists today

- Age of terrorists: 16-20: 37%, 21-25: 34%; minors 10%
- Gender of terrorists: 89% male
  - Some females – suicide by cop
- Lone terrorist is characterized by radicals who embark on individual terrorist missions without any logistical support or conventional means of attack
  - Example: tractor into crowded street

Patients spread out so hospitals not overwhelmed

Significant increase in vehicular assault

Continuous dialogue with dispatch centers

- Can connect to CCTV cameras to see what is happening in the field
- EMTs sending photos from smart phones
- Israel uses WhatsApp to send data

Knife attacks – Intifada of the Knife

- More force in those hit intentionally
- Attackers being taught efficient stab sites and how to avoid police/military protective vests -> “Intelligent stabbing”
- Use of foley catheter into path of knife track
- Whatever you can do to apply direct pressure
- Goal of MDA is to get to the closest, proper medical facility

### **Site Visit: Check Point between Israel and West Bank**

Participants visited a check point in Jerusalem where inhabitants from the West Bank cross into Jerusalem. Part of the visit included a tour of a main control center where Israeli border forces review an extensive surveillance camera outputs at all times. During the tour, participants saw an incident where two youths touched the fence and caused a sensor hit. The border forces maintained surveillance on the two. Notes:

North part of Jerusalem: PA and Israel come together

Behind wall is refugee camp – Kalandia

- ½ Israelis who choose to live behind the wall, ½ Palestinians

Hard to tell the intentions of people going through the check point

Next month is Ramadan - .5 million people going through the check point during holiday

Site tour: Control Center

- Incident ongoing – 2 boys/young men touched fence causing sensor hit
- Concerns about people infiltrating into Jewish communities and murdering people
- 5 platoons of 70 people each
- Want to allow people freedom to come into work and to pray
- Don't know the intentions of people coming over
- Concerns about attacks on border forces
- Border guards work together well with police, IDF -> importance of sharing information and intelligence
- Incident description: small village Sho-afat – rocks thrown at police and MDA – attacks on the people there to help others
- A lot of cooperation that people don't know about
- Incidents of bombs in ambulances – fake sick
- All facets of Israeli population in Border Guard
- Command board – shows location of all vehicles
- Software reads license plate of every car coming into Israel  
Information immediately provided to Border Guard

Site tour: Surveillance Center

- 24/7 camera surveillance
  - Women better than men at surveillance
  - 4 hour shifts
  - Looking for abnormalities, behavior, proximity to fence
  - Become very familiar with specific area
  - Land/terrain divided in a very specific way
  - Contact directly with units in field
- Similar units/centers all over the country

### **Site Visit/Lecture: Special Patrol Unit/Yasam Jerusalem**

The tactics and procedures of the Special Patrol Unit are similar to SWAT teams in the United States. The Special Patrol Unit is divided into motorcycle units and team-based squadrons. Unit

members demonstrated non-lethal and lethal weapons and capabilities. A unit member also provided a briefing on motives of a terrorist, operational parameters, suspicious signs and behaviors. Notes:

Deal with extraordinary incidents – anything with violence

2 types of units:

- Motorcycle units

  - Anywhere in the city in 3-7 minutes

  - Driver + rider; rider has M-4

  - Elite of unit

  - Helmet has Bluetooth for comms transmission

  - 7 bikes every shift spread throughout city

  - 2 shifts plus missions

  - At night use 4-wheeled vehicles because of reduction in traffic

- Team-based squadrons

  - Use Chevy Savana – holds 9 officers (but can hold up to 15-16)

  - Modular vests

  - Riot suit is fireproof

  - Cannot use baton unless at highest threat level, and then only to outer thigh

  - Non-lethal: rubber rounds

    - Not allowed to fire center mass

    - Can only aim below knee or below waist

  - Water cannon

    - Used for 3<sup>rd</sup> highest level of riots

    - Has self-defense system – tear gas deployed from sides

    - Disperses water, water with blue paint, water with stink, and water with tear gas

      - Police can come in later to arrest people painted in blue

    - Nozzle on front for trash fires

    - Working time of 4 min at full blast

    - Can refill from any fire hydrant

  - Arsenal

    - Importance of surgical means vs. mass means

    - Non-lethal:

      - Sponge rounds

      - OC

      - Paintball gun with paint, salt, OC

    - Night-vision, night-sight for M4 and M22

M4 – fires .556

.22 Ruger (between lethal and non-lethal)

- For those that present danger, but not “clear and present” danger

Unit formed in the 90’s – needed to form professionally-trained operational units

- Most professional in police force

4 squadrons: 2 team-based, motorcycle, mounted

- Teams of 5 officers or pairs of riders

Focus on:

- Terror – arrests, identifying suspects, response to extreme events
- Crime – specific events, proactive actions
- Public order – demonstrations and protests
- Sensitive missions (Temple Mount, VIP protection, public security patrols)

Threats: suicide attacks, kidnapping, knife attacks, cars as weapons, shootings

- Concerns about combined attack and multiple attacks (e.g., secondary attacks on responders)
- Profile: all ages, family status, gender, education level, and economic status
- Locations: friction points where Arab population comes into contact with Jewish population
- Any time of day
- Motives:

Revenge

Environmental causes

Incitement

Desire to be famous

Copycat

Religious reasons

Personal

Suicidal

Clear name

Operational parameters

- Position personnel/units in sensitive places (e.g., crowds, commercial areas, schools, central areas, hot spots)
- Roadblocks to check suspicious persons
- Learn and train

Suspicious signs and behavior

- Presence in area not supposed to be
- Purse or backpack
- Nervous behavior
- Mumbling/praying
- Try to get close to security personnel

Operational behavior:

- Keep a safe distance

- Other officers looking for suspects
- Keep guard up at all time

Video: shooter in parking lot (2016)

Video: incident at Temple Mount – shooting from fortified door 7; no firearms allowed on Temple Mount

## **Lecture: Islam in the United States**

### **Mordechai Kedar**

This session focused on known radical Islamic groups in the United States. The lecturer discussed challenges for law enforcement, including the need to listen to people in their own language, in order to assess the level of support for radical Islamic organization. Notes:

Lecturer: 50 years experience in Arab culture (25 in IDF, 25 in academia)

“Alive and Killing: Tribalism in the Arab World”

Tribalism – most important element in the Arabic societies

Islam – extends to other countries

Suggested article: “Sharia and Violence in American Mosques”

<http://www.meforum.org/2931/american-mosques>

Found documents:

- “40 Hadith on Jihad” against infidels (Americans)
- “Racist, Fascist, Criminal Police: Manual for How to Resist Police Investigations”

Video: lying in Islam – prevention, protection of religion

- “The Life of Muhammad” page 367

Until they prove that this is wrong, they should be held to this – plan for North America

Images of billboards – [www.whyislam.com](http://www.whyislam.com)

Biggest challenge for law enforcement is how to find out what is true and what is not

- Listen to what people are saying in their own language
- Big difference between Arabic dialects

Pyramid for of degree of support by Muslims for terrorist activity:

- Tip is terrorists
- Below – those that supply weapons
- Below that – those that donate money
- Below that – sympathizers
- Below that – “understanders”

“War is deception”

Different definition of the word “jihad”

- Fight against sin – internal or external?

Wording of the Qu’ran vs. the Holy Qu’ran

## **Site Visit: Jerusalem Fire Department**

Participants visited a fire station in Jerusalem. Firefighters discussed the need for different cultures to work together to identify and mitigate threats within the city. Participants were able to explore ladder trucks and a CBRNE apparatus. Notes:

- 4 stations – one in Old City (Arab)
- 225 firefighters in whole city
- 3 shifts, 24 hours per day; career staff; 24 hours on/ 48 hours off
- Mutual aid from all over Israel
- Big problems because of many religions – need to treat everyone the same
- Call 102 to get fire response
- Site tour of multiple apparatus

## **Lecture: Israeli Security Agencies**

### **Rami Savir**

This session provided a description of the agencies that work together for intelligence collection activities within Israel, focusing on the Israel Security Agency. Participants learned about the separate expertise required for field officers and interrogators. The presentation included discussion of identifying, developing, and running sources. Notes:

Video clips:

- Boy caught smuggling XMAT
- Multiple operations
- Hospital fugitive extraction

Suggested documentary: The Green Prince:

<https://www.youtube.com/watch?v=5z8z4Fi7oz4&t=50s>

Shinbet/Israeli Security Agency

- Responsible for internal security: terrorism, subversion, espionage, diplomatic protection, international protection, cyber
- Field officers – 3 years training
  - 1 year language training
- Case officers in charge of geographic area; alone/independent
- Purpose is to thwart attacks, not collectors of intelligence
- Interrogators
  - Separate from case handlers
  - Operate as a team
  - Rely heavily on confessions
  - Mock prisons
  - Cannot use source information during interrogation
- Recruiting and handling difficult tasks
  - Need to be proactive
  - Walk-ins rarely valuable
  - Start by deciding who you want to be your source
  - Motives: money, ideology, personal issues, extortion, reduction of charges
  - Collect information and try to use it later

If the case officers doesn't find the hidden motive, then the recruitment will not succeed

If he doesn't have a motive, he will never be a source

The betrayal process starts when he says yes

Once he betrays his culture/brothers, he will one day betray the case officer

- Running a source – most difficult task

Information is immediately critical

Continuing threat to source

Always about checking the reliability of the source

What info did he give you?

What did he not give you?

Flow of meeting:

Importance of small talk at beginning and end

Headlines first – you have your priorities and he has his

- Get most important stuff at the beginning

You are in charge – you dictate the pace

- Don't want to stop the flow of information for technical info/details

You ask questions based on info needs

Small talk

Payment of money

- Same amount every time, not based on value of information
- The moment he understands the value of certain information, he will begin to lie or color his remarks
- Imagination becomes fact
- Source opinions, estimates are important, but are not facts

Reports – facts and case officer analysis/remarks

Sometimes you need to task a source with a specific mission

Validate mission outcomes

Identify gaps in outcome – what he reported versus what actually happened

Activity check – every couple of months

Sit down and review activity of source

Done by another case officer

Check for conflicts between what source told you and what actually happened

Reliability a key issue

Difference between source covering a target from the outside (example: barber) and a source covering a target from the inside

If you cannot recruit someone inside the target, you may be able to recruit from outside and get them inside

Try not to recruit the head of a cell  
 Want sources that can come to you, but that can't always happen  
 Need to know language and culture – culture adds context  
 Need to be proactive  
     Be ready to supply the things that they need as part of illegal activities (e.g., source, storage guy, smuggler)  
     Proactive prevention of terrorist organizations  
     Do not rely on luck or chance – make it!  
 Lessons learned and experience

## Day 6:

### In-Transit Lectures on Security Topics

#### Rami Savir and Rami Shemesh

While in transit to various site visits, two veteran Israeli Security Agency members provided a series of lectures throughout the day on numerous topics related to Israel, the security situation, and terrorist incidents. Notes:

#### Hebron

- 1929 – all Jews killed or expelled by Muslims
- Important city for many religions
  - Tombs of the Patriarchs (Abraham, Isaac, Jacob)
  - Massacre before peace agreements
  - Jewish settlements

#### Jewish settlements

- Anything that came under control of Jews after 1967
- Settlers feel safe inside of their community but not outside
- Suggested reading: “The Israeli Solution: A One-State Plan for Peace in the Middle East” <https://www.amazon.com/Israeli-Solution-One-State-Peace-Middle/dp/0385348061>
- View of interest: Kiryat Arba

### Activity: Caliber 3

Participants visited Caliber 3, a special academy for counterterrorism and security training. Participants viewed an active shooter response demonstration and joined in analysis of security operations during the demonstration and viewed active shooter response demonstration. Following the demonstration, completed the Basic Combat Shooting course and learned procedures for response operations. As part of the course, participants worked individually and in teams to neutralize threats in a training setting. Notes:

Founded 12 years ago

Sharon Gat – colonel in Israeli special forces

Special academy for counter-terrorism and security training

IDF, Israeli police, ISA, law enforcement from all over the world, civilians, government departments -> all train here

Instructors served at least 15 years with IDF, ISA, and/or Israeli police

“Brave heart and brave Jewish soul”

### **Site Visit: City of Hebron**

Hebron is located in an Arab-controlled area of the West Bank. There are protected Jewish settlements in the city that is 97% Arab and 3% Jewish, creating significant security issues. Hebron contains archeological sites that are important to the Jewish faith, as well as the Tomb of the Fathers which has significance for Christians, Jews, and Muslims. Notes:

Population: 220K

Biggest city in Judea

Heart of radical Islam

800 Jews

4 neighborhoods

1917 Mandate for Palestine

TIPH – Temporary International Presence in Hebron

A lot of rock throwing, attempted stabbings

Site tour: Tel Rumeida

- 4500 year old ruins: stairs/wall
- 4 room house
- Land purchased in 1807

Site tour: Tomb of the Fathers/Patriarchs

- Built during reign of King Herod
- 1267 – declared to be a mosque
  - Anyone not Muslim could not go in
  - Jews in Hebron in order to maintain access to the Tomb of the Fathers
- 1 million people per year visit Tomb of the Fathers
- Abraham paid 400 silver shekels for a cave and a field in Hebron
  - Discovered to be cave of Adam and Eve
  - Purchased after Sarah died
- Holy Arc – Torah Scrolls – contract for Hebron
- Site called “entrance to the garden of Eden”
- Rooms with memorials – actual tombs in caves underneath building
- Today building is split in 2 parts: one part for Muslim use, one part for everyone else

### **Site Visit: Old City of Jerusalem and Western Wall**

Participants visited religious sites in the Old City of Jerusalem to understand security issues related to Dome of the Rock and terrorist incidents in Old City of Jerusalem. These sites have been frequent targets of terrorist attacks. Notes:

Dome of the Rock / Temple Mount

- First Holy Temple of the Jews destroyed in the 5<sup>th</sup> century
- After 50 years of diaspora, Jews returned and built second Holy Temple in same place

Destroyed by Romans in 70AD

- Qu'ran Chapter 17 – journey of Muhammad
  - “exited mosque” and brought back prayers
  - Became 3<sup>rd</sup> holiest monument for Islam
- Jesus only in Jerusalem for last week of life
  - Palm Sunday – first day he entered Jerusalem from Mt of Olives
  - Thursday afternoon – arrested, interrogated
  - Friday – delivered to Romans, died, buried
  - Sunday – Mary sees empty tomb
- 40 days after resurrection, Jesus went to heaven from Mt Olive

Church of the Holy Sepulchre

- Via della Rosa
- Gethsemane Church
  - where Peter denied Jesus three times
  - where Judas gave up Jesus
  - where Jesus was arrested
- Crusader style
- Built in 11<sup>th</sup> century AD on the remains of the Byzantine church

Mercy Gate / Golden Gate

- Persians sacked Church of the Holy Sepulchre
- Golden cross returned with cross and entered through this gate
- Jews believe that the Messiah will return through this gate
- Muslims built cemetery in front of gate

Room of the Last Supper

- 14<sup>th</sup> century dispute between Franciscans and Jews regarding the room
- Grave of King David right below room
- Became a mosque in 14<sup>th</sup> century AD
- Messiah will come from the family of King David

Western Wall

- 2 tablets in Arc of the Covenant
  - Put in holiest room in the temple
  - Temple destroyed in 70AD
  - 132-135 AD – Jews rebelled against Romans
    - Roman emperor killed more than 650K Jews
    - Law restricted Jews from Jerusalem
    - Changed name from Judea to Palestine
      - All others expelled
    - 2000 year diaspora
    - 1700 (approx.) rabbi and students built synagogue – then destroyed
    - 1800s – built synagogue on same place, destroyed 1948
    - 1980s – rebuilt synagogue third time
- Western Wall is all that is left from the 2<sup>nd</sup> temple
- 10 gates to the Temple Mount only open to Muslims

- Jews, Christians, others must use small gate
- 10K people at the Western Wall every Friday evening

Document ID: 0.7.1175.5059-000002

## Counter-Terrorism: Prevention, Detection, and Response and Recovery Course Draft Agenda October 2017

This agenda details the schedule for each day of the October 2017 Counter-Terrorism: Prevention Detection, and Response Course. Please note that this agenda represents the likely curriculum schedule, but may continue to be refined until the course begins.

<b>12 October 2017 (Thurs)</b>		<b>Depart local airports for TLV</b>
<b>13 October 2017 (Fri)</b>		<b>Arrival in Tel Aviv</b>
17:50	Arrive at Ben Gurion Airport, Tel Aviv, Israel	
18:30	Transport to hotel	
19:00	Check In	
19:30	Dinner at hotel	
<b>14 October 2017 (Sat)</b>		<b>Cultural Day</b>
Saturday is Shabbat in Israel – a day of rest. Participants are to use this day to acclimatize to the time change. The course curriculum starts early on Sunday morning and participants need to be alert. Breakfast and dinner buffets are included in the lodging rate. Participants are on their own for lunch. There are many restaurants within walking distance of the hotel.		
<b>15 October 2017 (Sun)</b>		
07:30	Breakfast at hotel	
08:00 – 09:30	<b>Lecture:</b> Israel History , Geography, & Security Environment	
09:45 – 12:30	<b>Lecture:</b> Terrorist Explosive Devices and Tactics	
12:30 – 13:30	Lunch provided in meeting room	
13:30 – 14:30	<b>Lecture:</b> Intelligence Orientation	
14:30 – 15:30	<b>Lecture:</b> Cyber, Terror, and Social Networks	
15:45 – 16:30	<b>Lecture:</b> Crisis Media Management: Counter-Terror Approach	
19:30	Dinner at hotel	
The series of lectures presented on Sunday provide background and contextual information critical to understanding the threat environment in Israel.		

<b>16 October 2017 (Mon)</b>	
07:00	Breakfast at hotel and check out
07:45	Bus Departs
07:45 – 09:00	<b>En-route lectures on security topics</b>
09:00 – 10:30	<b>Site Visit:</b> Magen David Adom (MDA) Tactics and Procedures Topic: Pre-hospital emergency medical services
10:30 – 12:00	<b>Site Visit:</b> Port of Ashdod Topic: Protection of transportation assets
12:00 – 13:30	<b>Site Visit:</b> Rutenberg Power Station Topic: Protection of critical infrastructure
13:30 – 14:00	Lunch provided
13:30 – 15:30	<b>Site Visit:</b> Gaza Border/City of Sderot Topic: Protection of communities/civilians
15:45 – 16:30	Travel to Jerusalem; hotel check in
19:30	Dinner at hotel
<p>The curriculum for Monday focuses primarily on protection of communities and critical infrastructure from terrorist threats. Many of the site visits for the day center on assets located in near proximity to Gaza, an origin point for military and terrorist attacks.</p>	

<b>17 October 2017 (Tues)</b>	
06:30	Breakfast at hotel
07:00	Bus Departs
07:00 – 10:00	<b>En-route lectures on security topics</b>
10:00 – 12:00	<b>Site Visit:</b> West Bank / Golan Heights Participants will visit a number of sites related to the security situation in Israel and proximity to Syria and Jordan
12:00 – 12:30	Lunch provided
12:30 – 16:30	<b>Site Visit:</b> Golan Heights (continued) Topic: Protection of critical infrastructure
16:30 – 17:30	<b>Site Visit:</b> Dead Sea Topic: Security of tourist areas
17:30 – 19:00	<b>En-route lectures on security topics</b>
19:30	Dinner at hotel
<p>The curriculum on Tuesday focuses primarily on the security situation in Israel, including shared borders with states that have previously attacked Israel. The security situation is complicated by Israeli settlements located in the West Bank. Participants will view sites from terrorist and military attacks to better understand concepts and techniques for combatting these incidents.</p>	

<b>18 October 2017 (Wed)</b>	
07:30	Breakfast at hotel
08:00	Bus Departs
08:00 – 08:30	<b>En-route lectures on security topics</b>
08:30 – 11:00	<b>Site Visit: Knesset</b> Topic: Discussions with members of Israeli Parliament on the security situation in Israel and terrorist threats
11:00 – 12:30	<b>Site Visit: Israeli National Security Council</b> Topic: Discussions with members of Israeli Security Council on the security situation in Israel and terrorist threats
12:30 – 13:00	Lunch provided
13:00 – 15:00	<b>Site Visit: Military Court</b> Topic: Prosecution of terrorist suspects
15:00 – 18:00	<b>Site Visit: Old City of Jerusalem and Western Wall</b> Topic: Security of religious and cultural sites
19:30	Dinner at hotel
The curriculum on Wednesday focuses on governmental attempts to address Israel's terrorist threat by examining efforts by the legislative, governmental, and judicial branches.	

<b>19 October 2017 (Thurs)</b>	
08:00	Breakfast at hotel
08:30	Bus Departs
08:30 – 09:00	<b>En-route lectures on security topics</b>
09:00 – 11:00	<b>Site Visit: Hadassah Hospital</b> Topic: Mass casualty readiness and response
11:00 – 12:00	<b>Site Visit: West Bank Border Checkpoint</b> Topic: Surveillance tactics and techniques
12:00 – 13:00	Lunch provided
13:00 – 14:30	<b>Site Visit: Special Patrol Unit</b> Topic: Specialized law enforcement tactics and techniques
14:30 – 15:30	<b>Site Visit: Jerusalem Fire Department</b> Topic: Specialized response assets
15:30 – 16:30	<b>Lecture: Extremist Islam in the United States</b>
16:30 – 17:30	<b>Lecture: Social Networks as a Source of Terrorist Inspiration</b>
19:30	Dinner at hotel
The curriculum on Thursday focuses on Israeli emergency response tactics and procedures for terrorist and mass casualty incidents.	

<b>20 October 2017 (Fri)</b>	
08:00	Breakfast at hotel
08:30	Bus Departs
08:30 – 09:30	<b>En-route lectures on security topics</b>
09:30 – 12:30	<b>Activity:</b> Active Shooter Drill and Training
12:30 – 13:00	Lunch provided
13:00 – 15:00	<b>Site Visit:</b> Hebron Topic: Security in high tension areas
16:00 – 18:00	<b>Site Visit:</b> Jerusalem Market Participants will tour the historic Jerusalem Market, site of numerous past terrorist incidents
19:30	Shabbat Dinner
20:30	Depart hotel for TLV
23:30	Depart TLV
The curriculum on Friday focuses on application of knowledge and skills learned during the week.	

<b>21 October 2017 (Sat)</b>	<b>Return to home jurisdictions</b>

## Letter of Support

In May of 2017, the Austin Regional Intelligence Center (ARIC) sent six students to Israel to take part in the Advanced Security Training Institute's Counter-Terrorism Immersion Training. Our delegation consisted of representatives from various disciplines and assignments from within our Police and Fire Departments.

We received training directly from security and intelligence experts on the topics of:

- Proactive Intelligence Gathering
- Critical Infrastructure Protection
- Active Shooter Response
- Target Hardening
- Bomb Prevention and Response
- Community Engagement for Preventing and Responding to Terrorism Events
- Case Studies and Lessons Learned from Terrorism Events

After months of research, we chose Advanced Security Training Institute (ASTI) to facilitate this training because they are the leader in this field. The training program developed for this purpose, the "*Counter-Terrorism Detection, Prevention, and Response Immersion Course*," is a six day program encompassing historical perspective, policy development, tactical and strategic preparations, and critical infrastructure protection strategies.

From the moment when we stepped off the plane until we departed Israel, we were greeted and escorted by professional representatives of ASTI. Our safety and comfort was a priority for their team. ASTI had representatives on hand to answer every question we had along the way. Security and intelligence specialists accompanied us on our travels and were able to provide historical, geographic, and ideological context throughout the trip. They acted as a liaison between us and the local community as we travelled throughout the country. Although the trip was not a personal or religious vacation, the ASTI staff still took time when they could to explain the religious and historical background of each site we visited and travelled through.

Israel's long history of dealing with threats, conflict, trauma, and casualties over the course of their history has resulted in the development and implementation of several of procedures and entities;

A National heightened sense of awareness that occurs at all levels within their society beginning with education in their schools  
An Intelligence Process that affords them the ability to quickly address potential threats or issues on multiple levels  
Extensive Security Protocols at key Critical Infrastructures  
An established integrated response by the Military and Emergency Services Responders  
Hospitals staffed and equipped around the clock to deal with mass casualties  
Regional EMS Technicians deployed with “Take-Home” emergency vehicles to respond in the event of Mass Casualties  
The implementation of a country wide phone app which allows for video exchange and quicker uploading of patient information for people needing an EMS response  
Military Courts to preside over cases involving subjects suspected of Terrorist Activity

Over the last ten years, numerous U.S. Homeland Security Officials have travelled to Israel for this training. Among those who have participated in this training are First Responders (Police, Fire and EMS), Bomb Squad Technicians and Managers, Strategic Homeland Security Management Personnel, Incident Commanders, Policy Makers etc. In order to bring back valuable feedback about the program for other agencies considering whether or not to participate, many of these prior participants have documented their experience. ARIC utilized those reviews and testimonials to justify and support our decision to participate. Now, after having participated in the training ourselves, we are happy to add our name to the list of agencies supporting this training.

Due to our overwhelmingly positive experience and valuable lessons learned throughout this training, we remain available to discuss our experience with anyone who is considering participating. We may be contacted at the information below.

The 10-Point.  
Gerard Baker  
Editor in Chief  
The Wall Street Journal

Good morning,

It's a big day for news and we have it all covered live, from James Comey's testimony to the U.K. general election. Follow our reports and analysis all day on WSJ.com.

#### All Eyes on Comey

Former FBI Director James Comey is set to testify in front of the Senate Intelligence Committee today at 10 a.m. ET. Our live analysis can be found [here](#). In prepared testimony recounting his conversations with President Trump before his abrupt firing last month, Mr. Comey describes a president determined to clear his own name as several investigations looked into whether Trump associates had colluded with Russia. And indeed Mr. Comey confirmed that he had told the president on three occasions that he was not being investigated—as Mr. Trump had claimed when he fired Mr. Comey. Mr. Trump asked him to “lift the cloud” cast over the administration by the investigation of possible Russian interference in last year's U.S. election, according to the testimony, and Mr. Comey felt the president was seeking to establish “a patronage relationship.” In Mr. Comey's narrative—rebutted by the White House—a vexed FBI director pushes back against a president seeking to exert control over him and his agency. We offer a viewer's guide to one of the most-anticipated congressional hearings in years.

### Foreign Targets

Suspected Islamic State gunmen struck Iran on Wednesday, killing 13 people and targeting two symbolic pillars of the regime: the parliament complex and the shrine of the Iranian revolution's founding father, Ayatollah Ruhollah Khomeini. The attacks are the first that Islamic State, a Sunni extremist group, has claimed in predominantly Shiite Iran; the two main branches of Islam have battled in other Middle Eastern countries for decades. If confirmed as the work of Islamic State, the attacks would serve as the latest evidence of the group's ability to direct operations away from its home bases in Syria and Iraq, where it is under mounting military pressure.

### How Siri Lost Her Mojo

Apple is playing catch-up in a product category it invented. Siri gained popularity for its ability to follow voice commands to handle simple tasks such as calendar appointments and text messaging, and had no real competitors for years. But nimble challengers developed more-sophisticated voice-powered products for the digital home, while Siri remained largely an iPhone feature, its capabilities advancing incrementally. On Monday, Apple announced HomePod, a Siri-powered home speaker—a market it will enter as a distant third, at best. Some former executives, close observers and even devoted customers say Apple's innovative power appears to be waning. But Apple's supporters say it often has followed rivals into categories—and still managed to assume a commanding position.

### May's June Gamble

Voters in Britain go to the polls today to choose a new Parliament. Prime Minister Theresa May is hoping her roll of the dice on an early election in pursuit of a big mandate for her Brexit negotiations will pay off. We will have live coverage of the results beginning Thursday evening U.K. time.

### Small Rewards

The decline in airline amenities that has vexed consumers in the back of the plane is now hitting elite frequent fliers, too. Some of the big carriers' best customers complain that perks have been whittled away. Delta used to give top-tier frequent fliers free club membership, but now offers that as a choice in a bundle of options. United once paid Global Entry fees for top customers, but stopped in 2015. And the most important benefit—an upgrade—has grown much rarer as airlines sell more first- and business-class seats. Frequent fliers say they understand airlines' desire to sell premium seats rather than give them away, but upgrades used to be considered a necessary investment in loyalty.

## READER RESPONSE

Responding to yesterday's question on Anthem's decision to pull out of the health-insurance exchange in Ohio next year, Kristy McCray of Ohio wrote: "Anthem's choice to leave the Affordable Care Act exchange reifies that insurance companies are profit-driven businesses whose only concern is the bottom dollar, not patient health. Access to health insurance does not equate to receiving medical care, yet another reason to use direct primary care and pay cash for medical needs." Tom Manning of New York said: "The insurance business requires stability and predictability. Providing insurance to lower-income households requires subsidy. With the Trump administration and the Republican Congress doing everything possible to undermine all of these factors, it is no wonder that insurers are pulling out." And Harry Fisher of Connecticut weighed in: "Corporate America works full time and makes decisions on behalf of shareholders within the framework of the law. By dithering and working part time, Congress proves again that it is not qualified to manage the economy or any industry. It should repeal Obamacare

in its entirety and leave the rest up to the states.”

This daily briefing is named “The 10-Point” after the nickname conferred by the editors of The Wall Street Journal on the lead column of the legendary “What’s News” digest of top stories. Technically, “10-point” referred to the size of the typeface. The type is smaller now but the name lives on.

Hope your coffee is extra strong, because there is a LOT to get through this morning. Here are the 5 things you need to know to Get Up to Speed and Out the Door.

By AJ Willingham.

### 1. White House

President Donald Trump shared highly classified information last week with the Russian foreign minister and Russian ambassador to the US in a White House meeting, The Washington Post first reported Monday. Two former officials knowledgeable of the situation confirmed to CNN that the main points of the Post story are accurate: The President shared classified information with the Russian foreign minister.

Trump administration reps have denounced the story. Dina Powell, the White House deputy national security adviser for strategy who was at the meeting, called it "false."

By the way, the President is legally allowed to declassify information by sharing it, if that's what he thinks is best. The big concern here is that, by knowing bits and pieces of classified intelligence, the Russians could put together the bigger picture, namely who the US worked with to get the info and how they got it. Political concerns also are bouncing around inside the Beltway, with Republicans in Congress worried this latest crisis will sideline their agenda.

### 2. Syria

The Syrian government has built a large crematorium near a notorious military prison in an effort to hide mass atrocities carried out there, the State Department said. Newly declassified photos and information show the regime may be killing as many as 50 detainees a day, then getting rid of the bodies. The claim represents yet another horrifying facet of the Syrian civil war, and the State Department is calling upon Russia to help end the devastation.

### 3. Cyberattack

Businesses around the world are recovering from a massive cyberattack that crippled computer

networks over the weekend and on Monday, but there are still more questions than answers, namely: Who was responsible for the attack? Was it North Korea?

Yes, it apparently could be North Korea. Security researchers found similarities between the malware code used in this attack and malware used by a notorious hacking group with ties to North Korea. Meanwhile, police are saying you should NOT pay the ransom the hackers demand if your computer is infected. That just proves to the hackers their plan is working, and you may not get all of your information back anyway.

#### 4. Mexico

He reported extensively on drug trafficking and how it destroys communities. Now he's dead. Mexican journalist Javier Valdez Cárdenas was shot in Sinaloa, the home base of the savage cartel run by kingpin Joaquín "El Chapo" Guzman. He is the fifth journalist to be killed in Mexico this year. Valdez never let up on telling the stories of what drugs were doing to his country. Despite the risk, his paper was one of the only ones that kept covering El Chapo, even when the world thought he was dead. Valdez once told CNN his staff lived in fear -- but would never back down from its coverage.

#### 5. al Qaeda

What do you do when your terrorist organization starts losing its global appeal? You try to refresh your image. That's what it looks like al Qaeda is doing with a new propaganda video featuring Osama bin Laden's son, Hamza bin Laden. The younger bin Laden is thought to be in his 20s, and in the video he calls for attacks on several groups including Jews, Westerners and Russians. Experts say Hamza bin Laden's profile is rising within the organization, and he is probably trying to emulate his dad with his messages and way of speaking.

French presidential election becomes Trump vs. Obama proxy war

Obama endorses Macron  
BY JAMES HOHMANN  
with Breanne Deppisch

THE BIG IDEA: Barack Obama's decision to record a commercial for French presidential frontrunner Emmanuel Macron reflects the global significance of Sunday's election. It also puts him, very publicly, on the opposite side of Donald Trump.

Just as the former president spoke out against Brexit before last year's referendum in the U.K., he sees this closing ad as a necessary defense of globalization and the international order that he believes would be further in jeopardy if Marine Le Pen wins. The populist leader of the far-right National Front party wants to pull out of the euro currency and majorly restrict immigration.

"The French election is very important to the future of France and the values that we care so much about," Obama says to camera. "Because the success of France matters to the entire world. ... (Macron) has stood up for liberal values. He put forward a vision for the important role that France plays in Europe and around the world, and he is committed to a better future for the French people. He appeals to people's hopes and not their fears. ... Because of how important this election is, I also want you to know that I am supporting Emmanuel Macron to lead you forward. En Marche! Vive la France!"

En Marche, which translates to "Onward," is the name of the new party founded by Macron last year, an independent coalition that blends fiscal conservatism and social liberalism.

Graffiti in Paris depicts Marine Le Pen and Donald Trump. Those words translate to "Pride and Prejudice." (Joel Saget/AFP)

-- President Trump, meanwhile, has repeatedly signaled his support for Le Pen. "She's the strongest on borders, and she's the strongest on what's been going on in France," the president told the Associated Press recently. "Whoever is the toughest on radical Islamic terrorism, and whoever is the toughest at

the borders, will do well in the election."

Days before the first round of the election, a small-time criminal apparently inspired by the Islamic State shot police officers on Paris's renowned Champs-Élysées boulevard. Le Pen responded with a speech calling on the French government to immediately reinstate border checks and expel foreigners being monitored by the intelligence services. That same day, Trump weighed in on Twitter:

White House chief of staff Reince Priebus denied that these comments constituted an endorsement. "I think he may have some opinions, as far as who he thinks might win," Reince said on Meet the Press. "But he certainly doesn't have a preference, other than a right-of-center person who believes in the free market."

But soon after Reince said that, Donald Trump Jr. retweeted a message of support for Le Pen from Nigel Farage, a British political who led the charge for Brexit and campaigned for his dad.

White House chief strategist Stephen K. Bannon, when he ran Breitbart, also praised Le Pen. In November, he reportedly reached out to the Le Pen family in hopes of "working together." Marion Maréchal-Le Pen, the niece of the candidate, replied on Twitter that she was enthusiastic about it:

Marine Le Pen herself visited Trump Tower shortly before the inauguration in January, though she did not meet with the president-elect or his staff.

There is obvious ideological kinship between the two, even if they have never met. (Just as there is between Obama and Macron.) Trump, who has described himself as "Mr. Brexit," has agreed with Le Pen that Europe would be better off without the European Union. She's also is very positive toward Russia, even traveling to the Kremlin last month to meet with Vladimir Putin.

Le Pen said last year she'd vote for Trump if she could. She was the first foreign politician to congratulate him after his upset victory. "The French referendum in 2005, the Greek one in 2015, the recent electoral successes of patriots in different European countries, the massive vote by the British in favor of Brexit and now Donald Trump — all are democratic choices that bury the old order and steppingstones to building tomorrow's world," Le Pen said at a rally immediately after our election.

Petitions calling on Obama to run for French president in the streets of Paris. (Elly Park)

-- Obama's direct intervention is highly unusual. Historically, it would have been unthinkable for a current or former American president to weigh in so directly. It also probably would have been unwelcome inside France.

-- The president's intervention into the French election is even more remarkable because of how reticent he has been to speak out forcefully against Trump back home, even as his successor accuses him of wiretapping and works to eviscerate his legacy, from health care to the environment, trade and Wall Street reform.

Many progressives pine for Obama to record video messages like the one he made for Macron to register his objections to Trump's agenda, whether against the travel ban or for the Affordable Care Act.

People close to Obama, who this week unveiled plans for his presidential library in the South Side of Chicago, explain that he's not doing so for several reasons:

- 1.He's trying to extend Trump the same courtesy George W. Bush showed him after leaving office.
- 2.Bracketing Trump too aggressively would make it easier for the president to use him as a foil. The Republican grassroots continues to despise Obama, so he plays into Trump's hands by helping him coalesce conservative support if he swings too hard.
- 3.A former president's stature tends to grow with the passage of time. Speaking up too often in an explicitly partisan manner may dilute the potency of his words down the road. Why not save his powder for closer to 2018 and 2020?
- 4.Obama wants a new generation of Democratic leaders to emerge, which is harder if he stays in the spotlight.

## Macron and Le Pen faceoff for French presidency

-- Macron has a nearly 20-point lead over LePen in the final polls, but he's struggling to consolidate support from his left in the runoff. Many who supported more progressive candidates aren't enthusiastic about voting for a longtime investment banker who calls himself a "radical centrist" (the same phrase Mark Warner used to get elected in Virginia!) and spends his time talking up the transnational institutions they view skeptically. Parisian elites are fearful that a lot of these people will just stay home.

There were 11 candidates on the ballot in the election's first round two weeks ago. Macron got 24 percent and Le Pen pulled 21 percent. A far-left, Bernie Sanders-like candidate who won almost 20 percent, Jean-Luc Mélenchon, has refused to endorse Macron. Two-thirds of Mélenchon's supporters said in one poll this week that they won't vote for Macron.

This is a jarring contrast to 2002: Fifteen years ago, Le Pen's father, Jean-Marie, shocked the political world by making it into the runoff. All the mainstream political figures rallied together behind Jacques Chirac in a very effective Stop Le Pen movement that called itself a "Republican Front." Literally, millions protested in the streets.

That sense of urgency is totally lacking in the streets right now. "For years, the right and left just divided the Republic with their disputes, and now there is little left," Hamid Djodi, 57, told a Post reporter during a May Day protest in Paris earlier this week. "In 2002, we believed it, this idea of a 'Republican Front.' But now we don't believe it anymore — all you have is a capitalist running against a fascist."

You'd think that the fascist vs. capitalist frame might motivate someone to vote. Especially someone whose parents came of age during World War II. Alas, the lesser of two evils argument doesn't work for everyone...

-- One of the reasons that there is not a "Republican Front" this time, a la 2002, is that Le Pen has worked very hard to sandpaper the rough edges of her father's image. (He once dismissed the Holocaust as a mere "detail of history.") She has successfully made inroads with millennials (desperate for jobs) and women (eager to shatter a glass ceiling). The party has fared better in several elections now under her watch, and the National Front's base is larger than it ever was under her dad:

-- That's where Obama comes in. "He enjoys a striking popularity in America's 'sister republic,'" reports James McAuley, our man in Paris. "Earlier this year, a group of voters dissatisfied with the names on the French ballot — mostly with Le Pen — began posting campaign posters with Obama's face and the slogan 'Oui on peut!' ('Yes we can!') throughout Paris. Although their 'campaign' began as a joke, it ultimately morphed into an online petition to persuade Obama to run for the French presidency. In the end, the petition received nearly 50,000 signatures." (Trump is not particularly popular in France. Even Le Pen distanced herself from him after his missile strikes on Syria, accusing him of acting like "the world's policeman.")

While Obama didn't formally endorse until yesterday, he telephoned Macron three days before the first

round to offer advice, wishing him “good luck” and urging him not to take anything for granted. “Because you never know, it might be that last day of campaigning that makes all the difference,” he said. Macron’s campaign posted a one-minute video of the men talking over speaker phone:

-- Macron’s appeal has been compared to Obama’s in 2008. He’s tried to run as a sort of post-partisan candidate. He’s benefited from angry voters rejecting both of France’s major political parties: the Republicans and the Socialists (even though he was a cabinet minister to the current Socialist president until they had a falling out). “Since the current voting system was introduced in 1965, at least one of these two wings of mainstream French politics has been in the runoff; usually both were,” Adam Taylor explains in a good primer on the race. “This is partly because of some unique circumstances in 2017. Republican (Francois) Fillon was seriously tarnished by corruption allegations, while the record unpopularity of outgoing Socialist President François Hollande was a big factor in (Benoit) Hamon's slim odds.”

-- The geographic divide is another important storyline to watch: Macron excels in the big urban cores (Paris, Bordeaux, Lyon). Le Pen, like Trump, is working to run up the score in rural areas (including the south and northeast), where deindustrialization has allowed her National Front to pour gasoline on the fire of xenophobia and nativism. Check out this map of first-round results. Places Macron won are purple. Places Le Pen won are dark blue:

-- While Macron embraces Obama, Le Pen is relentlessly trying to link her opponent with Angela Merkel in the closing days before Sunday. During their final debate Wednesday night, Le Pen said that a woman is going to run France no matter who wins on Sunday. It will either be her – or the German chancellor. “We do not want the migrants of Madame Merkel,” she said at a rally, accenting the foreignness of the chancellor’s name to loud applause. “Don’t you think Madame Merkel is toxic for Europe?” she added in a radio interview. “She let 1.5 million migrants in. Isn’t that toxic? She imposes austerity on all the nations of Europe. Isn’t that toxic?”

“In France, Le Pen’s attacks have lent an anti-German bent to her National Front’s Euroskepticism, exposing the historical rifts that have led some in France to chafe against the rise of German influence under Merkel,” Anthony Faiola and James McAuley report in a new piece this morning. “At the same time, Le Pen supporters increasingly see Merkel as the essence of the globalized, multicultural society that they are seeking to reject. ‘We cannot accept the threat of Madame Merkel to our country, to our national identity,’ said Davy Rodriguez, 23, a deputy of a National Front youth organization in Paris and a student at Sciences Po in the capital, one of France’s elite universities. ‘They’re putting migrants all over the countryside. We have to take back our sovereignty.’”

Trump, Merkel meet in Oval Office

-- Germany could be the next proxy war: While Trump has been highly critical of Merkel and awkwardly declined to shake her hand when she visited the White House in March, Obama has suggested that he plans to endorse her as she seeks a fourth term this summer. “If I were here, if I were German, and I had a vote, I’d support her,” Obama said during his November visit to Berlin. “I don’t know if that helps or hurts!”

WHILE YOU WERE SLEEPING:

---

-- The Justice Department has launched a criminal investigation into Uber's use of a secret software, "Greyball," to evade authorities in areas where its app was banned or restricted. The investigation comes as the latest blow to the embattled company, which has faced a slew of recent high-level departures, as well as a trade-secrets lawsuit taking aim at its development of self-driving cars. (Elizabeth Dwoskin and Craig Timberg)

Referee Monty McCutchen holds back Washington Wizards forward Kelly Oubre Jr. as he goes after Boston Celtics center Kelly Olynyk. Oubre was ejected. (Jonathan Newton/The Washington Post)

-- The Wizards won a particularly mean-spirited playoff game in Washington last night. "Washington spent the first two games of these Eastern Conference semifinals building leads and losing them, coming home in a 2-0 hole to the top-seeded Celtics. In Thursday's Game 3, they set a physical tone early, built another big lead and maintained the edge en route to a 116-89 win," Candace Bucker reports. "After Washington opened a 39-17 lead, tempers stopped the free-flowing action. Early in the second quarter, reserve forward Kelly Oubre Jr. was ejected for steamrolling Celtics 7-foot center Kelly Olynyk. By the fourth quarter, with Washington ahead by 26 points, the game descended into a hail of technical fouls. In the aftermath, both benches were standing, coaches were barking at officials, and the backup point guards, Brandon Jennings and Boston's Terry Rozier, were sent to the locker rooms. In all, eight technical fouls dotted a game with no shortage of shoving and smack-talking."

See the Oubre moment:

#### GET SMART FAST:

- 1.The Senate voted 79-18 to approve the \$1.1 trillion spending bill that funds the government through September. So there won't be a shutdown tonight. (Kelsey Snell)
- 2.Former New England Patriots star Aaron Hernandez cited Bible passage John 3:16 in ink on his forehead and in blood on the wall of his prison cell before he hanged himself. (AP)
- 3.Pittsburgh police are investigating a woman's report that she was raped at PPG Paints Arena during Wednesday's Penguins-Capitals playoff game. She said that the incident happened in a women's restroom between periods of the game. The woman said she screamed for a half-hour but no one came to her assistance. (Des Bieler)
- 4.Curt Schilling accused Orioles outfielder Adam Jones of lying after he said he was called the "n-word" by a Red Sox fan at Fenway Park, pointing to what he claimed was a "lack of evidence" from others in the stands. (Des Bieler)
- 5.Russia, Iran and Turkey have agreed to create "de-escalation zones" in Syria – renewing diplomatic efforts to bring warring parties to heel in the country's six-year conflict. It is unclear how the deal differs from previous failed cease-fires, in which Assad's regime has continued to strike rebel-held areas. The State Department expressed concern about the effort, including the involvement of Iran as a so-called "guarantor." (Louisa Loveluck and Karen DeYoung)
- 6.Texas Gov. Greg Abbott (R) is poised to sign a sweeping bill that would outlaw so-called "sanctuary cities" and other localities in the state – imposing costly fines, and even jail time, on officials who refuse to cooperate with ICE agents. If passed, the legislation would be the country's most significant crackdown so far on sanctuary cities. (Maria Sacchetti)
- 7.A new lawsuit accuses Wells Fargo employees of "targeting" undocumented immigrants on the street and persuading them to open bank accounts at their local branches – scouring locations such as construction sites and factories for potential recruits, and even offering them money to open an account. It's the latest in a string of alarming allegations that have engulfed the San Francisco-based banking giant, whose employees say they were forced to resort to questionable tactics to meet the company's unrealistic sales quotas. (Kristine Phillips)
- 8.The head of U.S. Special Operations, testifying before the Senate Armed Services Committee, said

sending additional U.S. troops to Afghanistan would be a “welcome boost” for his men and could lessen the need for them to conduct dangerous missions alongside local forces. Deploying additional troops is a possibility being considered by the Trump administration. (Missy Ryan)

9. Afghan warlord Gulbuddin Hekmatyar returned to Kabul after spending two decades in exile, pleading for peace and unity in a town where his ruthless fighting once earned him the nickname “Butcher of Kabul.” Hekmatyar’s return comes just eight months after he signed a controversial peace deal with the government, which allows him immunity for past crimes and the chance to lead his party, the Hizb-e-Islami, back into Afghan politics. (Pamela Constable)

10. A California father says he and his family were booted from a Delta flight after they declined to give up a seat they had purchased for their son. In video footage, officials can be heard requesting they fly with the two-year-old on their laps – against FAA recommendations – and threatening the parents with jail time when they refuse to comply. (Lindsey Bever)

11. A new study from George Mason University found that black applicants for Fairfax County teaching positions were far less likely than white candidates to get job offers in a recent year – even though they had, on average, more advanced degrees and classroom experience. The study asserts that racial bias in hiring may be contributing to a persistent lack of black teachers in public education – a problem long pinned on a lack of qualified applicants and interest. (T. Rees Shapiro and Moriah Balingit)

12. Three students who were reportedly threatened and beaten at a Pittsburgh high school have filed a lawsuit against the school district and local police department, saying surveillance footage documents an atmosphere where both administrators and cops are “assaulting children.” In one video, the school’s principal can be seen holding a student’s head to the ground while he is shocked with a stun gun. (Lindsey Bever)

13. A longtime Brooklyn principal is suing the Department of Education after she was accused of Communist organizing – saying the allegation, which “hearkens back to another era” – was made in retaliation for her outspokenness about race and segregation in New York City schools. (New York Times)

14. Owners of a Colorado wildlife sanctuary said a series of recent floods placed their beloved wild animals in danger. But after being denied a permit request to relocate their facility, owners took drastic action – deciding, inexplicably, to kill each one. Their abrupt decision has horrified local officials and wildlife experts, who had offered to help relocate the animals. (Peter Holley)

15. Hillary Clinton is preparing to launch her own political group as soon as next week. It will fund organizations working on the resistance to Trump’s agenda. She’s spent recent weeks in Washington, New York City, and Chappaqua, N.Y., meeting with donors and potential groups to invest in, and recruiting individuals for the group’s board of directors. It will be called Onward Together. (Politico)

Trump locks eyes with Paul Ryan in the Rose Garden after the House pushed through the health care bill. (Jabin Botsford/The Washington Post)

#### GOP HEALTH BILL ADVANCES:

-- The House voted 217-213 to pass its latest health-care bill, delivering a significant, if incomplete, political victory for Trump, even as it failed to meet his promise of “insurance for everybody.” Ed O’Keefe, Paige Winfield Cunningham and Amy Goldstein report: In the end, the bill slid by with just four votes to spare. All 193 Democrats voted in opposition, as did 20 Republicans -- primarily moderates who thought the legislation rolls back health-care benefits too much. “The latest bill’s changes allow states to opt out of many of the ACA’s key provisions, such as its protection of people with preexisting conditions,” our colleagues write. “And to regain moderates’ support it lost with that change, an additional \$8 billion was allocated to helping sick people afford their premiums — a figure even the conservative American Enterprise Institute says is not nearly enough.” (Check out a full list of how each lawmaker voted.)

-- THE TICK TOCK: "The rescue effort that pulled the Republicans back from the brink of failure on health care began quietly, with two House members who are not exactly household names trying to find common ground on a little-noticed issue," Karen Tumulty and Robert Costa report. "[They were Reps. Tom MacArthur and Mark Meadows, and] the question at hand was giving states more flexibility by allowing them to come up with their own ways of achieving cost savings and providing coverage. MacArthur — a goateed former insurance executive who once worked on claims with [Trump's] late father — decided to take a stab at it. While staying at the beach with his family over the House's two-week Easter recess last month, 'I took pen to paper,' MacArthur recalled. 'I presented it to the speaker and talked about it with Mark Meadows, and it got life. It moved.' That amendment allowing states to opt out of some central provisions of the Affordable Care Act was the first breakthrough in the resurrection of the GOP health-care bill — a far different process from the top-down one that led to the failure of the Republicans' first attempt to bring a bill to the floor in mid-March...

"The first and second incarnations of the health legislation represent a steep, six-week learning curve on the part of the Republicans who now control Washington. [Trump, for his part], had assumed that the force of his personality was his best asset in pushing the bill through. He summoned House members to the White House for negotiating sessions that were more theatrical than substantive; threatened Meadows that if he didn't support it, 'I'm coming after you'; and laid down an empty ultimatum that he would walk away. ... If his first big legislative victory has taught Trump anything, it may be that the art of the deal in Washington requires subtlety, patience and — most uncharacteristic for him — a willingness to step back and play a supporting role."

Rep. Tom MacArthur (R-NJ) speaks outside the House chamber. (Eric Thayer/Getty)

-- BUT, BUT BUT: Few Republican lawmakers truly like this bill – viewing it instead as a necessary step to demonstrate some sort of momentum and ability to govern with a new GOP majority. "Rather than embrace policy cobbled together to replace the 2010 Affordable Care Act, many Republicans simply decided the best move was to approve a flawed bill — and ram it through a flawed process — so that the Senate would get a chance to fix the House's mistakes, setting up a major negotiation later," Paul Kane writes in his column. "House Republicans did so knowing that their votes will be portrayed by their Democratic opponents as ruthlessly denying millions of people health insurance ... Inside the leadership team of [Ryan], there was a gripping fear of what failure would mean for its future overseeing a chamber seemingly incapable of moving important legislation. Ryan had already pulled his American Health Care Act from the floor once ... [and] the initial game plan was to simply give up on repealing Obamacare and move on to a broad rewriting of the tax code. But inside the White House, [Trump's] advisers became increasingly concerned about how little they had to show in terms of early victories. They helped nudge the hard-line House Freedom Caucus and some members of the moderate Tuesday Group back to the bargaining table. The consequence of failure — for a second time in six weeks, after the humiliating first retreat — became a compelling reason to vote 'yes.' The question is whether this short-term victory was worth the long-term squeeze."

"This bill is highly imperfect, imperfect, okay? There's no doubt about that," said Rep. Mario Diaz-Balart, who came onboard in the final 24 hours. "Is this bill good? No, I don't like it. So my decision was, how do I stay involved?"

-- Now, the measure will head to the Senate to face a whole new set of obstacles. On Thursday, Republican leaders there sent an unmistakable message: When it comes to health care, we're going to do our own thing. "I think there will be essentially a Senate bill," Sen. Roy Blunt (R-Mo.), the fourth-ranking Senate Republican, told our colleagues. HuffPost's Michael McAuliff reports that at least a half-dozen GOP senators have already expressed opposition to the tack the House was taking. It remains unclear how closely the Senate measure will resemble the one narrowly passed in the House, or whether Republican senators will resolve their own stark differences.

-- Trump expressed confidence that it will pass the Senate – calling Obamacare “essentially dead.” “This is a great plan. I actually think it will get even better. This is a repeal and replace of Obamacare. Make no mistake about it,” Trump told reporters.

-- Despite the new set of obstacles ahead, Trump and the House GOP had reason to celebrate. Ashley Parker reports on the scene at the White House: “They gathered on a chilly, overcast afternoon in the Rose Garden, busing over House members from the Capitol so everyone could preen and crow. And crow they did. A Marine quartet sat playing on the lawn — the same tableau as the day last month when Neil M. Gorsuch became a Supreme Court justice. Lawmakers snapped photos and clapped each other on the shoulder. [Sean Spicer] even raced back from his Navy Reserve duty at the Pentagon to savor the moment. And Trump — who earlier in the process expressed surprise at just how complicated health-care could be — also seemed momentarily in awe of the day. ‘How am I doing?’ he asked, before answering his own question and posing another. ‘I’m president! Hey, I’m president! Do you believe it, right?’”

'You have better health care than we do', Trump to Australia's Turnbull

-- Trump met with Australian Prime Minister Malcolm Turnbull in New York last night, arriving late for a truncated meeting with the foreign leader after he extended his stay in Washington to celebrate the passage of the health bill. It was the first time the two leaders were slated to meet in person after an infamous and frosty phone call that threw a curveball into their relationship earlier this year. Abby Phillip reports:

Appearing alongside the prime minister for the first time, Trump made a series of conflicting statements about their earlier call – jovially dismissing reports of the tense exchange as “fake news” in one moment, before acknowledging later that the exchange was indeed “testy.” “We get along great. We have a fantastic relationship, I love Australia, I always have,” Trump, seated next to Turnbull, told reporters after their one-on-one meeting. “We had a great telephone call. You guys exaggerated that call. That was a big exaggeration. We’re not babies.” Hours later, after Trump took to the stage to deliver remarks at the gala, he opened with a little confession. “Now that the record is straight ... We had a very nice phone call. A little testy. It got a little bit testy, but that’s okay.”

-- Hours after his party advanced a health-care bill that some estimate would leave millions uninsured, Trump lavished praise on Australia’s government-funded universal health-care system: “We have a failing health care — I shouldn’t say this to our great gentleman and my friend from Australia, because you have better health care than we do,” Trump said.

-- The left jumped all over this:

House Democrats sing 'goodbye' to Republicans as health-care bill passes

Three smart takes:

-- The eleven states with the highest percentages of people with preexisting conditions all voted for Trump in 2016, CNN’s Chris Cillizza notes. “What those numbers mean is that many of the people most in favor of repealing and replacing Obamacare are also the people most likely to be directly affected -- and not in a good way -- if the new GOP bill becomes law. It’s not immediately clear what the political ramifications of that reality would be. On one hand, Republicans have a cushion in most of these states, politically speaking, and so may be able to withstand some degree of fallout even if the GOP plan doesn’t work out as planned. On the other, people tend to pay more attention -- and be more unhappy -- when a change made by Congress directly impacts something they have relied on. And, if the House GOP’s change on pre-existing conditions means that people in the 11 states above can’t get any sort of coverage, there could be a political price to pay.”

-- Fourteen of the 23 Republicans representing districts that voted for Clinton last November ended up supporting the legislation. The Atlantic's Ronald Brownstein and Leah Askarinam say "that decision will elevate almost all of them on the target list for Democrats aching to recapture the House majority next year": "All seven of the California Republicans in districts Clinton carried voted for the bill; elsewhere, the Clinton-district Republicans split more closely, with nine opposing the legislation and seven supporting it. Looking at a broader list of legislators in competitive seats, the highly controversial plan drew support from fully 46 of the 61 House Republicans in districts that voted either for Clinton in 2016 or for Obama in his 2012 or 2008 elections. ... Only 15 of the Republicans from those districts voted 'no.'"

-- "The Republican health care overhaul might never become law, but it has already changed the life of one American: Reince Priebus, who knew it was his best and perhaps last hope of becoming an empowered White House chief of staff," the New York Times' Glenn Thrush and Maggie Haberman report: "It is unlikely that Mr. Priebus — roundly regarded as a steady party leader but one of the least powerful White House chiefs of staff ever — would have been fired had the second repeal-and-replace plan not passed the House on Thursday. But he viewed it as a personal make-or-break moment ... [and] responded by texting, calling and buttonholing Republicans, especially Mr. Ryan — badgering him for weeks to bring some version of the bill to the floor ..."

"Mr. Priebus's push for a quick vote chafed some members of the White House staff. Several people on Mr. Trump's team who were trying to lower expectations were annoyed to find out that Mr. Priebus was openly talking about forcing a vote this week. At times, Mr. Trump himself seemed a little puzzled by his aide's vehemence, telling legislators, including Mr. Ryan, that while he wanted a win, he did not necessarily need a vote immediately. "Even with a win, Mr. Priebus remains, at best, the third most powerful player in a top-heavy White House dominated by bigger personalities, a would-be gatekeeper desperately in search of a gate. In recent days, Mr. Priebus cut back on his stalking-butler tendency to hover over the president, realizing his antsy boss had grown resentful of his constant companionship. 'What are you doing in here? Don't you have health care to take care of?' Mr. Trump asked Mr. Priebus at one recent meeting around his desk."

Protesters hold signs as they rally on Capitol Hill to oppose the health-care bill. (Oliver Contreras/For The Washington Post)

-- Other consequences of the House bill:

\*Planned Parenthood will be defunded for one year: "The women's health provider stands to lose about 30 percent of its funding under a provision [in the bill] to block it from getting Medicaid reimbursements for one year, unless its hundreds of clinics stop offering abortions." (Paige Winfield Cunningham)

\*Those who obtain health insurance through their employers — about half the country — could be at risk of losing protections that limit out-of-pocket costs for catastrophic illnesses: "The provision ... lets states obtain waivers from certain [ACA] insurance regulations. Insurers in states that obtain the waivers could be freed from a regulation mandating that they cover 10 particular types of health services, among them maternity care, prescription drugs, mental health treatment and hospitalization. ... Under the House bill, large employers could choose the benefit requirements from any state—

including those that are allowed to lower their benchmarks under a waiver, health analysts said. By choosing a waiver state, employers looking to lower their costs could impose lifetime limits and eliminate the out-of-pocket cost cap from their plans under the GOP legislation." (Wall Street Journal)

\*Democrats warn that the bill could increase costs for up to seven million veterans who are eligible to receive health care from the VA system: "An estimated 7 million veterans who qualify for such care do not receive it for a range of reasons: They may live too far away from a VA center, their incomes may be too high for them to be placed in a high-priority group for VA access, or they may have health issues unrelated to their service ... By taking away the credits that Obamacare offered for those seeking insurance on their own, the GOP proposal effectively means a tax hike." (HuffPost)

-- This is far from the health-care bill that Trump promised. For perspective, Philip Bump compared how it stacks up to promises made by Trump during an interview in January:

\*Trump promised insurance for everybody: "The AHCA would probably result in 24 million more uninsured people by 2026."

\*Trump promised "lower numbers" and lower deductibles: "The AHCA would probably have higher deductibles. The CBO anticipates that they will be higher under the AHCA than they would have been if the ACA were kept."

\*Trump promised that insurance plans would be "much better": "The AHCA would probably reduce the quality of insurance plans, thanks to late amendments that would allow states to get waivers so that insurers could separate coverage items out of the default package."

\*Trump promised that the plan would take "care of preexisting conditions." "The AHCA would probably increase costs for a substantial number of people who have preexisting conditions."

-- Meanwhile, the largest insurer in the Mid-Atlantic region, CareFirst Blue Cross Blue Shield, warned Thursday that Affordable Care Act marketplaces were in the "early stages of a death spiral," and requested a rate hike of more than 50 percent in Maryland next year, a 35 percent increase in northern Virginia and a 29 percent increase in D.C. (Carolyn Y. Johnson)

#### TRUMP'S AGENDA:

-- The president will make his first foreign trip later this month, he announced, traveling to Saudi Arabia, Israel and the Vatican as part of an effort to unite Islam, Judaism and Christianity in the cause of fighting "intolerance and radical extremism." Karen DeYoung reports: "The nine-day trip, during which officials said Trump will meet with Pope Francis, will end with previously announced meetings with NATO leaders in Brussels and the Group of Seven world economic powers in Sicily. His trip, he said, 'will begin with a truly historic gathering in Saudi Arabia with leaders from all across the Muslim world,' where 'we will begin to construct a new foundation of cooperation and support with our Muslim allies to combat extremism, terrorism and violence.' In an apparent reference to his willingness to deal with authoritarian governments without pressuring them on human rights, Trump said, 'Our task is not to dictate to others how to live but to build a coalition of friends and partners who share the goal of fighting terrorism and bringing safety, opportunity and stability to the Middle East.'"

-- The Trump administration is moving to further toughen the vetting of foreigners, proposing new authority to allow State Department screeners to ask visa applicants more intrusive questions. The Wall Street Journal's Laura Meckler reports: "Under the proposed rule ... [visa applicants flagged] for additional screening would be asked for significantly more personal information. Specifically, applicants could be asked for 15 years of addresses, employment history and travel history, including sources of funding for their travel; names and birth dates for all siblings, children and current and former spouses or domestic partners; social media handles used during the past five years and phone numbers and email addresses used over the past five years. The State Department estimated these requests would go to about 65,000 people a year. ... The proposed rule, which is now open for public comment, asks for the [OMB] to approve the proposal on an emergency basis by May 18."

-- Trump signed an executive order aimed at making it easier for churches to participate in politics – an order that was cheered by some conservative Christians, but lamented by others as falling short of their original expectations. John Wagner and Sarah Pulliam Bailey report: "The order ... removes the financial threat faced by tax-exempt churches from the IRS when pastors speak out on behalf of political candidates. But some experts said it amounts to a mostly symbolic gesture with little likelihood of changing how the agency polices the issue. Trump's order ... also directs his administration to

consider developing regulations related to religious objectors to an Obama administration mandate, scaled back by the courts, that required contraception services as part of health plans. ... The sweep was considerably narrower than a leaked February draft, however, which included a provision that could have allowed federal contractors to discriminate against LGBT employees or single mothers on the basis of faith.”

-- Cindy McCain, the wife of John McCain, is being eyed by the Trump administration to fill a “prominent role” at the State Department. The AP’s Josh Lederman reports: “Although it wasn’t clear what position she would fill, one possibility under discussion is McCain serving as an ambassador-at-large in Washington, focusing on a specific issue such as human trafficking ... McCain, a philanthropist and global humanitarian activist, has been a vocal advocate for victims of human trafficking for several years.”

Michael Flynn at the White House in February. (Jabin Botsford/The Washington Post)

-- “The mystery behind a Flynn associate’s quiet work for the Trump campaign,” by Matea Gold: “Jon Iadonisi, a friend and business associate of [Michael Flynn], had two under-the-radar projects underway in the fall of 2016. One of his companies was helping Flynn with an investigative effort for an ally of the Turkish government — details of which Flynn revealed only after he was forced to step down from his White House post. At the same time, Iadonisi was also doing work for the Trump campaign ... The project Iadonisi was engaged in for Trump’s campaign focused on social media, [a source said]. What that work consisted of — and why his company was not disclosed as a vendor in campaign finance reports — remains a mystery. However, [FEC] reports show that the Trump campaign paid \$200,000 on Dec. 5 for ‘data management services’ to Colt Ventures, a Dallas-based venture-capital firm that is an investor in VizSense, a social-media company co-founded by Iadonisi. “It is common for political vendors to hire subcontractors whose work is not publicly reported. However, campaign committees cannot seek to avoid disclosure by paying an entity that does not have a legitimate relationship with the ultimate recipient, said [campaign-finance lawyer] Daniel Petalas ... ‘A venture-capital company is certainly a strange entity for a campaign to be making an expenditure to, and I would want to look further to assess whether it was it an appropriate recipient,’ he said.”

Corey Lewandowski arrives at Trump Tower. (Drew Angerer/Getty)

#### CONFLICTS OF INTEREST WATCH:

-- Former Trump campaign manager Corey Lewandowski is leaving the lobbying and consulting firm he co-founded in January amid a spate of negative publicity, saying he’s concerned he “lost control” over the firm. Bloomberg’s Jennifer Jacobs and Ben Brody report: “Lewandowski said Thursday that his partner, Barry Bennett, and others ... have used his name without his authorization and sought business with foreign clients that he doesn’t want. ‘The most important thing is my reputation, and I’ve worked really hard in the face of adversity to try to be successful,’ Lewandowski said. ... His remarks came after a liberal ethics group alleged that he might have engaged in unregistered lobbying and selling access to the Oval Office -- allegations he denies. Politico reported on April 28 that an affiliate of Avenue Strategies called Washington East West Political Strategies had been soliciting business in Eastern Europe and elsewhere by offering access to Trump, [Mike Pence] and other top administration officials. Lewandowski said Thursday that he hadn’t authorized the creation of Washington East West, nor been informed about it. He said he’s willing to dissolve the partnership to distance himself from negative publicity and what he called conjecture that he’s not following the rules. ‘I know I have a giant target on my back. People want to see me fail,’ he said.”

How Trump talks about history

-- "Trump says he's a big fan of history. But he doesn't seem to trust historians," by Amy B Wang: "One telling example of Trump's cavalier botching of history came when the History Channel invited him to appear — as an expert — in a 2012 episode of 'The Men Who Built America,' a series on the Industrial Revolution. Though he was on the screen only briefly, Trump delivered his contribution to the segment with confidence. 'Andrew Carnegie was somebody that I think in terms of because I do buildings,' Trump said on the show. 'And he really came up with the mass production of steel. He was the first and the biggest by far, by a factor of 30 times. And what he built was unbelievable and just got bigger and bigger and bigger.' Even in those few lines, there were factual issues. It was Sir Henry Bessemer who invented the first process to mass-produced steel — known as the 'Bessemer process' — in England in the 1800s. Carnegie adapted the process for his business needs and, in the process, became the richest man in America."

-- The American Association for Public Opinion Research convened a 13-member committee to study, in detail, what pollsters missed during the 2016 election. Dan Balz outlines their findings: "The report's two main findings about polling underscore that it was a treacherous year for pollsters, and therefore predictions. The AAPOR committee concludes that the national polls 'were generally correct and accurate by historical standards,' and that they were more accurate than in 2012. The polls, on average, pointed to a Clinton victory in the popular vote by about three percentage points. Her eventual advantage was well within the margin of error of the national polls. But where elections are decided, in state-by-state contests, things were not so rosy for pollsters. State polls were historically bad — the report calls it the largest error in state polling of elections starting in 2000 — and the key failure was the underestimation of Trump's support. This was particularly true in the Upper Midwest, where the election was decided. The AAPOR team also found flaws among those organizations that produce poll aggregates and projections of results and pointed to these predictions as one reason so many people were surprised by the outcome of the election."

#### SOCIAL MEDIA SPEED READ:

Online, the rhetoric got very, very, very heated after the health-care bill's passage. Here's a taste:

Before the vote:

Ouch:

Yikes:

The Democrats trolled Republicans in their own delegations:

A keeper:

And the reverse:

This is something people care about:

Time for the Senate:

Melania does something FLOTUS-y:

And at the White House:

#### GOOD READS FROM ELSEWHERE:

-- "After seven days of testimony from dozens of witnesses, and forensic accounting of years of bank records and financial statements, former U.S. Rep. Corrine Brown is gambling that she can beat 22 federal fraud and tax charges through sheer force of personality alone." The Florida Times-Union's Nate Monroe Christopher Hong and Steve Patterson report: "Brown's decision to take the stand in her own defense — which is the core of her strategy to beat the charges — offered some characteristically surreal moments from the pugnacious and often theatrical former lawmaker. She opined on which clothing stores offer the best deals (Neiman Marcus is 'Needless 'Markup') [and] the advantage of shopping at Dollar Tree ... [Her testimony] also included new explanations about why it appears she was wrapped up in the fraudulent activity surrounding One Door for Education, where the government says hundreds of thousands of dollars raised under the guise of charity was spent instead on luxurious parties ... or simply [deposited directly into her personal] account. Brown testified, for example, that a former aide made regular deposits into her bank account because the aide owed her money — not because Brown had conspired to find a secret source of cash."

#### HOT ON THE LEFT:

"Alaska Dispatch News reporter slapped by Wasilla lawmaker," from Alaska Dispatch News: "An Alaska Dispatch News reporter told Juneau police he was slapped Tuesday inside the Alaska Capitol by a state senator during an encounter regarding a recent story. ADN political reporter Nathaniel Herz said

the exchange between him and freshman Sen. David Wilson, R-Wasilla, occurred Tuesday afternoon in the main stairwell of the Capitol ... [after] the ADN published a story by Herz Sunday regarding Wilson's Senate Bill 90, which would end a state program that distributes grants to Mat-Su social-service groups. The story mentioned Wilson's employer prior to his election, Palmer-based nonprofit Alaska Family Services, wouldn't be among those potentially hurt by the cuts. ... [After the encounter], Herz filed a report with the Juneau Police Department. 'I was not enthusiastic about taking this to the police,' Herz said. 'But I also felt like I couldn't accept this kind of behavior from a public official.' Asked Wednesday about the incident, Herz said he was not injured by the slap, but 'it was not a love tap.'"

#### HOT ON THE RIGHT:

"Hero' stopped mass murder by crazed bar patron who was armed to the teeth, police say," from the Dallas Morning News: "A concealed carry holder is being heralded as a hero by Arlington police for preventing mass murder by killing an 'incoherent' gunman at a sports bar [after he killed the manager] ... Police later identified the gunman as 48-year-old James Jones ... [and later found him carrying two loaded guns and two knives]. 'We do believe he had the capacity to do much greater harm,' Cook said. When Jones entered the business, some witnesses told police, he started yelling incoherently [before fatally shooting the manager] ... That's when a customer fired his gun at Jones. 'After he was struck once, the suspect started shooting at the front door,' Cook [said] ... More than a dozen customers and a handful of employees were in the sports bar at the time of the shooting. Cook said the customer, who was dining with his wife, 'prevented further loss of life.' 'We're treating the good guy as sort of a hero,' he said."

#### DAYBOOK:

Trump and Pence have no public events scheduled. The president will spend this weekend at his golf club in New Jersey.

Congress is going back on recess.

#### QUOTE OF THE DAY:

Rep. Chris Collins (R-N.Y.) admitted on CNN that he didn't read the health care bill before voting for it: "I will fully admit, Wolf, I did not. ... I have to rely on my staff. And I can probably tell you that I read every word, and I wouldn't be telling you the truth, nor would any other member. We rely on our staff and we rely on our committees. I'm comfortable that I understand this bill in its entirety, Wolf, without poring through every word. I'm being quite honest. That's the way it is."

#### NEWS YOU CAN USE IF YOU LIVE IN D.C.:

-- Rainy, humid, and the possibility of some powerful storms this afternoon. The Capital Weather Gang forecasts: "Rain, showers, thunderstorms may dominate our weather through early afternoon. Rain that fell most of last night should taper this morning. We may even see some sunnier times in the midday. Muggy high temperatures should still get into the mid-to-upper 70s. Any storms later in the day may tend to be isolated, but they could be powerful with large hail, damaging wind, and a tornado all possible."

-- Sidwell Friends School has dismissed a veteran music teacher after learning of an allegation of inappropriate contact with student in previous job. The teacher will not be returning. (Valerie Strauss and Michael Alison Chandler)

-- The Nationals beat the Diamondbacks 4-2 yesterday, but Bryce Harper came out of the game in the

seventh inning because of groin pain that resulted from a diving catch. "We took him out for precautionary reasons and we just have to see," said Dusty Baker. "He's day-to-day." After the game, Harper said he "felt good." He explained he initially felt discomfort when he made a diving catch in the third inning, a few minutes before he walked and scored in the bottom of the frame. "I've got to stop diving, trying to catch fly balls too much," Harper joked. (Jorge Castillo)

-- Speaking of Bryce, he recently filmed a "promposal" for the son of former MLB star Steve Garvey:

#### VIDEOS OF THE DAY:

Seth Meyers took "a closer look" at the health care vote last night:

House Republicans Pass Trumpcare: A Closer Look

(Emily Yahr has a good write-up of all the Trumpcare jokes on the comedy shows last night.)

Tom Perriello, a Democratic candidate for Virginia governor, cuts a health-care focused ad that depicts an ambulance being crushed:

Ambulance

Pundits react:
