## Aviation Incidents

### Bangladeshi Bombardier Dash 8 Q400 crashes in Nepal; 50+ dead

From Reuters (03.12.2018) Gopal Sharma

A Bangladeshi airliner crashed on Monday after making an unexpected turn in cloudy weather as it came in to land at the airport in Nepal's capital, killing at least 50 people, officials said. There were 71 people on board the US-Bangla Airlines plane arriving from Dhaka when it clipped the fence at Kathmandu and burst into flames, said Raj Kumar Chettri, the general manager of the hill-ringed airport. Those aboard included 33 Nepali passengers, with 32 from Bangladesh, one from China and one from the Maldives. The accident was the latest to hit mountainous Nepal, which has a poor record of air safety. "We have recovered 50 dead bodies so far," said army spokesman Gokul Bhandari. Although several people had been rescued from the burning wreckage of the Bombardier Q400 series aircraft, nine people were still unaccounted for, he added. Chettri said that moments after the plane received permission to land, the pilot said he wanted to go in a northern direction. Asked by the control tower if there was a problem, he replied in the negative. The plane was then seen making two rounds in a northeast direction, Chettri said. Traffic controllers again asked the pilot if things were OK, and he replied, "Yes". The tower then told the pilot his alignment was not correct, but there was no reply, Chettri added. The aircraft that went down on Monday was 17 years old, data from tracking website Flightradar24.com showed. It descended to an airport altitude of 4,400 feet (1,341 m) and then climbed to 6,600 feet (2,012 m) before crashing about two minutes later, the website said. [Link](#)

## Operational Outages

### Spirit Airlines brief computer outage affects 16 Detroit flights

From The Detroit News (03.09.2018) Sarah Rahal

Spirit Airlines is investigating the cause of a brief computer issue that affected 16 flights Friday, officials said. The Federal Aviation Administration tweeted at 5:20 p.m. that they received a request from Spirit Airlines to ground "all flights system-wide due to company computer issues." An hour later, the ground stop was canceled after the issue was resolved, according to Spirit and the FAA. Derek Dombrowski, manager of media relations for Spirit Airlines, said the outage directly affected 16 flights. They still are investigating the cause. "We experienced a brief system outage this evening, but the issue is now resolved," Dombrowski said. "We are investigating the cause, and we apologize for any inconvenience to our guests." [Link](#)

Cyber Security News

\*China-Linked APT15 Used New Malware against U.K. Company

From Security Week (03.12.2018) Eduard Kovacs

A known cyber espionage group believed to be operating out of China was last year spotted using new malware in an attack aimed at an organization that provides services to the U.K. government. Details about the attack were presented last week at Kaspersky's Security Analyst Summit (SAS) in Cancun by Ahmed Zaki, senior malware researcher at NCC Group. The attack has been attributed to a threat actor known as APT15, Ke3chang, Mirage, Vixen Panda and Playful Dragon. NCC Group started analyzing the group's recent activities after it targeted one of its customers, a global company that provides a wide range of services to the United Kingdom government. APT15 has been active since at least 2010 and it has targeted organizations all around the world using its own malware and Word, Adobe Reader and Java exploits. The group has improved its tools and techniques over the years, and NCC recently spotted two new backdoors it created. One of the backdoors has been dubbed RoyalCLI and is considered a successor of BS2005, a piece of malware that is often used by the group. RoyalCLI leverages similar encryption and encoding routines, and they both communicate with command and control (C&C) servers via Internet Explorer using the IWebBrowser2 interface. The second backdoor, named RoyalDNS, uses DNS, specifically TXT records, to communicate with the C&C server. This piece of malware receives commands, executes them, and returns output through DNS. Record surges in healthcare attacks, fileless malware, cryptocurrency mining

From Help Net Security (03.12.2018)

During Q4 2017, McAfee Labs saw on average eight new threat samples per second, and the increasing use of fileless malware attacks leveraging Microsoft PowerShell. The Q4 spike in Bitcoin value prompted cybercriminals to focus on cryptocurrency hijacking through a variety of methods, including malicious Android apps. The fourth quarter of 2017 saw the rise of newly diversified

cybercriminals, as a significant number of actors embraced novel criminal activities to capture new revenue streams. For instance, the spike in the value of Bitcoin prompted actors to branch out from moneymakers such as ransomware, to the practice of hijacking Bitcoin and Monero wallets. McAfee researchers discovered Android apps developed exclusively for the purpose of cryptocurrency mining and observed discussions in underground forums suggesting Litecoin as a safer model than Bitcoin, with less chance of exposure. Cybercriminals also continued to adopt fileless malware leveraging Microsoft PowerShell, which surged 432% over the course of 2017, as the threat category became a go-to toolbox. The scripting language was used within Microsoft Office files to execute the first stage of attacks. [Link](#)

\*Qwerty Ransomware Utilizes GnuPG to Encrypt a Victims Files

From Bleeping Computer (03.09.2018) Lawrence Abrams

A new ransomware has been discovered that utilizes the legitimate GnuPG, or GPG, encryption program to encrypt a victim's files. Currently in the wild, this ransomware is called Qwerty Ransomware and will encrypt a victims files, overwrite the originals, and the append the .qwerty extension to an encrypted file's name. It goes without saying, that GnuPG is a legitimate program being illegally used by the Qwerty Ransomware developers. While a ransomware using GnuPG to encrypt files is not unique as it has been done in the past with VaultCrypt and KeyBTC, it is not something that is commonly seen. While it is not known for sure how this ransomware is being distributed, it appears likely that it is manually installed by the attacker when they hack into computer running Remote Desktop Services. The Qwerty Ransomware consists of a package of individual files that are run together to encrypt a computer. This package consists of the GnuPG gpg.exe executable, the gnuwin32 shred.exe file, a batch file that loads the keys and launches a JS file, and a JS file that is used to launch the find.exe program. The first file to be launched is the key.bat file. This file acts as the main launcher for the ransomware by executing various commands sequentially. [Link](#)

Australian criminals used half of the Phantom Secure modified BlackBerry handsets

From ZDNet (03.12.2018) Chris Duckett

A Canadian businessman has been arrested in the US for allegedly modifying and encrypting BlackBerry smartphones used by "upper echelon" Australian criminals, Mexican drug cartel members, and other members of the global underworld. Vincent Ramos, 41, the chief executive of Vancouver-based Phantom Secure, was taken into custody in California last week after a global investigation involving the Australian Federal Police and the seizure of shipments of cocaine from the US to Australia. Phantom Secure technicians gutted BlackBerry handsets of their original hardware and software and installed new encryption software and an email program, according to a criminal complaint filed in the US District Court. Of the 20,000 Phantom Secure devices in service around the world, 10,000 were allegedly in Australia, according to estimates touted by the FBI. Phantom Secure allegedly charged customers between \$2,000 and \$3,000 for six-month subscriptions and were "specifically designed to prevent law enforcement from intercepting and monitoring communication". The phones' emails were allegedly routed through encrypted servers in Panama and Hong Kong, nations Phantom Secure claimed in marketing materials were "uncooperative" with law enforcement. [Link](#)

Necurs and Gamut Botnets Account for 97% of the Internet's Spam Emails

From Bleeping Computer (03.12.2018) Catalin Cimpanu

Just two botnets accounted for 97% of all spam emails in the last three months of 2017, according to a McAfee report released earlier today. For most of these months, Necurs has spent its time churning out "lonely girl" spam lures for adult websites, pump-and-dump schemes, and delivering ransomware payloads. Overall, nearly two out of three spam emails sent in the last quarter of 2018 were sent from the infrastructure of this mammoth botnet. Second on the list was the Gamut botnet, also built on Windows machines infected with malware that hijacks systems to send out spam. Gamut —while smaller in size when compared to Necurs— had previously been more active in Q3, sending more spam than the aforementioned. In Q4, Gamut activity went down, but the botnet still accounted for 37% of all email spam, compared to Necurs' 60%. Most of Gamut's email subjects were related to job offer-themed phishing and money mule recruitment. On the desktop side, the security firm says that a big contributor to the growth of ransomware detections was the Ransom:Win32/Genasom family, a generic term that has been used for CryptoMix variants. GAO dings DHS for failing to share info on cybersecurity workforce efforts

From Cyberscoop (03.09.2018) Michelai Graham

Among the many things the Department of Homeland Security is required to report on from time to time is its cybersecurity workforce challenges. Yet, according to the Government Accountability Office, it has failed to do so in a timely manner. GAO says DHS did not complete efforts to identify and assign codes

to all its cybersecurity positions. In August 2017, DHS reported to Congress that it had coded 95 percent of the department's cybersecurity positions but in fact, it was discovered that the department only coded 79 percent of the cybersecurity positions, the report states. GAO is not denying that DHS has taken some steps to identify the gaps but in a new the report, the office is calling out DHS for falling short on reporting these cybersecurity efforts regularly. These specialized codes help define roles and tasks for specific cybersecurity areas. The codes have not been fully assigned since September 2015. The Homeland Security Cybersecurity Workforce Assessment Act of 2014 requires DHS to categorize and assign employment codes to its cybersecurity positions. June 2016 was the last time the department reported any cybersecurity critical needs. The department is also supposed to report these needs annually to OPM, but it hasn't done so since September 2016. [Link](#)

Amazon, Boeing, GE and Google to develop private Unmanned Traffic Management (UTM) system

From Drone DJ (03.12.2018) Haye Kesteloo

During last week's FAA Symposium in Baltimore, Amazon, Boeing, GE, and Google announced that they are ready to start working on the development of a private Unmanned Traffic Management (UTM) system for drones. Testing in conjunction with NASA is supposed to start in the next three months. The system will enable swarms of drones to fly a couple of hundred feet above the ground using cellular and web applications to avoid collisions and allow for remote tracking. Amazon, Boeing, and Google have already expressed their visions of deliveries made by drones in the future. The companies have also started testing these new technologies on small scale. The new drone UTM is to be developed separately from the FAA's existing ground-based radars and human air traffic controllers but would need to be able to interact with it. Furthermore, the system would provide information to law enforcement agencies on the ground to help them identify and track drones from clueless, careless or criminal drone pilots. The drone UTM will be completely funded by the companies to help speed up the development time. Currently, the FAA is not able to respond fast enough to requests from commercial drone pilots for waivers and permits. Many applications get denied and the FAA admitted that the approval process takes too long. The introduction of Low Altitude Authorization and Notification Capability (LAANC) aims to speed up the approval process to near real-time but that system is not designed as an air traffic management system required to enable large-scale usage of drones in heavily populated, areas such as cities. To keep the costs down and to simplify the UTM, the system will have a narrow geographical focus and only provide air traffic information on drones in your vicinity. [Link](#)

## Legislation & Regulation News

Saudi Arabia ends 70-year Ban, Allows Flights to Israel Over Its Airspace

From Haaretz (03.08.2018)

Air India has been allowed to operate flights between New Delhi and Tel Aviv over Saudi Arabian airspace, the national airline's spokesman told Reuters on Wednesday, ending a 70-year ban and marking a dramatic diplomatic shift. Saudi Arabia does not recognize Israel and lifting the airspace ban would reflect what appears to be thawing ties between Israel and the kingdom, both U.S. allies with a shared concern over Iranian influence in the region. Prime Minister Benjamin Netanyahu said on Monday that Saudi Arabia had granted Air India permission to fly over its territory on its new routes to and from Tel Aviv, but there was no confirmation from either Saudi Arabia or Air India. Air India plans to operate flights three days a week, and the flight would save two hours of travel time as a result of flying over the Saudi airspace, an Air India spokesman said. [Link](#)

Senator Schumer wants FTC to investigate airlines that set ticket prices based on personal info of customers

From New York Daily News (03.11.2018) Erin Durkin

Sen. Chuck Schumer is calling for a federal investigation into airlines mining personal data in order to charge higher fares to certain customers. Schumer (D-N.Y.), the Senate minority leader, warned of “dynamic pricing” software airlines are developing — which could track the websites a potential flier has visited and figure out details like their income or other purchases they’ve made in order to decide how much to charge them for a flight. Schumer wrote to the chair of the Federal Trade Commission asking for an investigation into how airlines are implementing dynamic pricing and whether it violates privacy rules. Airlines already charge widely different fares for seats on the same flights depending on factors like when the ticket is purchased and demand. It’s unclear how far along they are with implementing dynamic pricing based on more personal characteristics. The new technology attempts to predict how much a customer is willing to pay for a flight based on their personal data. For instance, someone whose search history suggests they’re traveling for business might get a higher fare, whereas a tourist browsing for vacation spots might get a lower offer. [Link](#)

Pro-Kurdish and Turkish protesters clash at German airport

From Deutsche Welle (03.11.2018)

Pro-Kurdish protesters demonstrating against Turkey's military offensive in the Kurdish-led Afrin region in northern Syria scuffled with Turks and German police at the airport of the western city of Düsseldorf on Sunday, authorities said. It remains unclear whether people were injured in the clashes, which

involved some 200 protesters from two different groups, police said. One protest was called to oppose Turkey's ongoing assault on Afrin, while supporters of the Turkish action staged a counterdemonstration. The protests were both unregistered. The airport said travelers were not disrupted by the scuffles, with only a small section of the departures terminal affected. Pro-Kurdish demonstrations have also taken place elsewhere in Germany this weekend. [Link](#)

Man charged with making false bomb threat as plane left O'Hare

From The Chicago Tribune (03.11.2018) Nereida Moreno

A Chicago man now charged with making a false bomb threat told a fellow passenger that the plane they were on was going to explode as it departed from O'Hare International Airport on Friday, prosecutors said Sunday. Michael Bielinski, 28, was seated aboard American Airlines Flight 1316 and made statements that could "endanger the aircraft and its passengers," according to court documents. He told a woman seated next to him that "we are all going to die" and "the plane is going to explode," according to an arrest report. The witness told police that Bielinski smelled of gasoline, prosecutors said. Bielinski retrieved an electronic vaping cigarette from his pocket to put batteries in it, prosecutors said. He grabbed the witness' carry-on bag, held it up and said, "maybe it's a good time to cut out the bomb material," prosecutors said. The pilot returned the plane to an O'Hare gate and Bielinski was removed from the flight. He was later charged with felony disorderly conduct in connection with making a false bomb threat. [Link](#)

Miscellaneous News

Driverless vehicles prepare for introduction at Tokyo airport

From Nikkei Asian Review (03.10.2018) Minoru Satake

On a recent February day, a mini bus made by Hino Motors cautiously made its way along a public road near Tokyo's Haneda Airport at a speed of about 10kph. There were no passengers, and more surprisingly, no driver either. The exercise was a trial run of a self-driving bus being carried out by the Japanese tech giant SoftBank Group and All Nippon Airways, with the eventual aim of commercializing driverless transport at airports from around 2020. Japan's high-tech industry sees airports as having great potential for improvement using the latest robotics and artificial intelligence technologies. Some of the functions ripe for automation include cleaning and delivery services, which could be handled by robots, and information desk services, which could be done with AI. The idea behind the recent driverless bus test was that self-driving transport will eventually replace cargo vehicles and shuttle buses now operated by human drivers carrying passengers and crews between terminals and airplanes. The lanes for airport ground traffic do not have as many signals or pedestrians as public

roads, lowering the challenges of introducing driverless vehicles. The recent test successfully achieved Level 4 self-driving autonomy, meaning the vehicle was fully capable of autonomous driving under certain conditions in restricted areas. Japan's government has defined five levels of autonomous driving for ground vehicles. ANA hopes to take testing further by operating a driverless bus carrying real passengers by March 2019. ## Radiation Risk Rises with Polar Air Routes and Ultra Long-Hauls

From Bloomberg (03.12.2018) Justin Bachman

Ionizing radiation is a permanent feature of the upper atmosphere, where the protection we take for granted on the surface is significantly thinner. At airlines' cruising altitude, particles periodically ejected by the sun and cosmic radiation coursing through the universe are 100 times more potent than down below. Still, the exposure for every extra-long trip across the globe is roughly equivalent to one X-ray. That is, except for two regions: The poles. Airline employees are already the most vulnerable to workplace radiation, but the growing number of polar and long-haul routes may make the hazard worse. A flight from Germany to Southeast Asia can be just as long as one to the western U.S., but the risks can be very different given the latter goes "over the top" of the world. "If I go to Los Angeles or San Francisco, it's going to be the highest dosage in our network, whereas when I go to New Delhi or Singapore, it's about a third of those doses," said Eberbach, an Airbus A380 first officer for Deutsche Lufthansa AG who also serves as chairman of a radiation protection working group for Vereinigung Cockpit, or VC, the German pilots' union. Airline employees face more radiation exposure than radiology workers or nuclear power plant engineers, according to the National Council on Radiation Protection and Measurements. Beyond the popularity of polar routes, airlines are also connecting more far-flung cities, with 16-18-hour hauls becoming routine thanks to modern aircraft technology. Singapore Airlines intends to resume its 19-hour nonstop service to New York this year, while Qantas Airways Ltd. has launched what it calls "Project Sunrise" to connect Sydney with London and New York nonstop by 2022. [Link](#)

## U.S. Department of Transportation Crisis Management Center Daily Report

### Commercial In-Flight Incidents

\*Southwest 3562, B738

o March 11, 2018 at 10:27 PM EDT

o Enroute from Phoenix, AZ (Phoenix Sky Harbor International Airport) to Dallas, TX (Dallas/Fort Worth International Airport)

o Electrical problem

- o Diverted to Albuquerque, NM (Albuquerque International Sunport); landed without incident
- o Passengers evacuated on taxiway via slides
- o 0 fatalities; 5 injuries

\*American 752, A321

- o March 11, 2018 at 9:21 PM EDT
- o Enroute from Philadelphia, PA (Philadelphia International Airport) to San Francisco, CA (San Francisco International Airport)
- o Hydraulic problem
- o Diverted to Denver, CO (Denver International Airport); landed without incident at 9:50 PM EDT

\*Delta 2042, MD90

- o March 11, 2018 at 8:50 PM EDT
- o Enroute from Atlanta, GA (Hartsfield–Jackson Atlanta International Airport) to Philadelphia, PA (Philadelphia International Airport)
- o Bird struck left engine
- o Returned to Atlanta, GA; landed without incident at 8:55 PM EDT

\*Allegiant 1858, A319

- o March 11, 2018 at 6:45 PM EDT
- o Enroute from Indianapolis, IN (Indianapolis International Airport) to Orlando, FL (Orlando Sanford International Airport)
- o Crew members medical incident due to turbulence
- o Continued to Orlando, FL; landed without incident
- o 0 fatalities; 2 injuries

\*FedEx 594, A306

- o March 11, 2018 at 6:30 PM EDT
- o Enroute from Memphis, TN (Memphis International Airport) to Richmond, VA (Richmond International Airport)
- o Hydraulic problem
- o Diverted to Knoxville, TN (McGhee Tyson Airport); landed without incident

\*American 738, A320

- o March 10, 2018 at 6:29 AM EST

- o Enroute from Boston, MA (Boston Logan International Airport) to Philadelphia, PA (Philadelphia International Airport)
- o Level 2 disturbance
- o Diverted to Indianapolis, IN (Indianapolis International Airport); landed without incident
- o Passenger transported to medical facility for evaluation at 7:26 AM EST

#### Ground Incidents

\*Tucson, AZ, Tucson International Airport

- o March 11, 2018 at 10:17 PM EDT
- o SkyWest 3556, CRJ7, scheduled to Los Angeles, CA (Los Angeles International Airport)
- o Level 1 disturbance
- o Aircraft returned to gate; law enforcement responded
- o Passenger arrested

<b>SOURCE</b>	<a href="http://www.heraldnet.com/news/stunning-olympia-news-compromise-over-police-use-of-force/">http://www.heraldnet.com/news/stunning-olympia-news-compromise-over-police-use-of-force/</a>
<b>GIST</b>	<p>OLYMPIA — To fully appreciate a peace accord reached this week on rewriting state law on the use of deadly force by police, consider the intensity of the conflict between the parties 15 months ago.</p> <p>Two dozen people tasked by the Legislature to provide guidance gathered for a final time in November to settle on recommendations.</p> <p>They represented those who write state laws, those who enforce them and those upon whom they are enforced. And they had spent months in search of a narrow peninsula of common ground where Washington residents could rest assured of a fair and just review process each time a cop took a life.</p> <p>On that decisive day, task force members engaged in a raw and unfettered public demonstration of democracy, sometimes impolite and other times emotional. There were insinuations of racism and cop-blaming. Most of the day they spent talking at each other rather than to each other.</p> <p>What resulted was a split decision in the panel’s final report, no revisions in law during the 2017 legislative session and then Initiative 940, which, if it gets on the ballot this fall and is passed, will make it easier to prosecute an officer with a crime after an incident in which they wrongfully kill someone.</p> <p>Then came Tuesday’s moment of Zen at a meeting of the House Public Safety Committee.</p> <p>Representatives from law enforcement and from De-Escalate Washington, the force behind the initiative, announced the discovery of common ground. They now agree on how to rewrite existing state law in ways that will open the door a little wider for prosecuting officers without pushing every one of them through should they injure or kill someone in the line of duty.</p> <p>It required lawmakers to perform an unprecedented — and some think unconstitutional — procedural two-</p>

	<p>step, in which they adopt the initiative in its entirety then immediately pass a second bill amending it with verbiage of the compromise.</p> <p>What finally brought the parties together?</p> <p>First, the initiative. Its architects hauled in \$1.4 million and gathered 355,000 signatures to get it on the ballot. Raising another couple of million dollars for a campaign would be no problem, and the ballot measure looked pretty unbeatable.</p> <p>Most of those in law enforcement realized if they didn't want to live under the language of the initiative, they needed to negotiate terms under which they could. So most — though not all — got on board.</p> <p>Second, the brokers of peace, Rep. Roger Goodman, D-Kirkland, and Rep. Dave Hayes, R-Camano Island.</p> <p>They both served on the task force and never stopped looking for a beachhead of compromise. On Tuesday, Goodman declared that the wording everyone signed onto makes the initiative “more workable, more understandable.”</p> <p>The once-feuding forces agreed.</p> <p>It “truly strengthens and clarifies” the initiative in ways that will build bridges and trust in communities, said Heather Villanueva, a member of the leadership team for I-940, during the committee hearing.</p> <p>“This bill brings us together,” said Steve Strachan, executive director of the Washington Association of Sheriffs and Police. “This is the best outcome for our state.”</p> <p>It was unclear Wednesday morning if the two-step will be completed before legislators adjourn Thursday. If not, voters should get their say on I-940 in November. Presuming it passes, lawmakers could do their thing next session.</p> <p>That path is messier and rife with risks. But given how far the parties have traveled, they don't seem likely to turn back anytime soon.</p>

<b>HEADLINE</b>	<b>03/08 France vows to fight anti-Semitism</b>
<b>SOURCE</b>	<a href="https://apnews.com/a65521b85f934be18d3ed8f03dcc3222/France's-Macron-vows-to-fight-anti-Semitism-online-and-off">https://apnews.com/a65521b85f934be18d3ed8f03dcc3222/France's-Macron-vows-to-fight-anti-Semitism-online-and-off</a>
<b>GIST</b>	<p>PARIS (AP) — French President Emmanuel Macron pledged Wednesday to fight firmly against anti-Semitism wherever it surfaces, whether in the street or online, and to protect the nation's Jews amid growing concerns about intolerance.</p> <p>In a speech to France's leading Jewish group, he insisted there is no reason for Jews to flee the country, which is home to the world's largest Jewish population outside Israel and the United States.</p> <p>“There are hatreds that are rising again, there are the worse kinds of crimes,” Macron said at the annual dinner of the CRIF umbrella organization.</p> <p>“We have understood, with horror, that anti-Semitism is still alive. And on this issue our response must be unforgiving. France would not be itself if Jewish citizens had to leave because they were afraid,” he said.</p> <p>He pledged continued protection for Jewish schools and synagogues and other sites as well as a new government plan to fight racism and anti-Semitism online, which is notably spreading among young people.</p>

	<p>Macron also called for a Europe-wide effort to force internet platforms to remove content that feeds extremism.</p> <p>The latest official figures show that anti-Semitic violence increased 26 percent last year in France and that criminal damage to Jewish places of worship and burials increased 22 percent.</p>

<b>HEADLINE</b>	<b>03/08 China: greater global leadership role</b>
<b>SOURCE</b>	<a href="https://apnews.com/1458f3d281114c2284c732ff8e6739ce/China-eyes-greater-global-leadership-role,-downplays-fears">https://apnews.com/1458f3d281114c2284c732ff8e6739ce/China-eyes-greater-global-leadership-role,-downplays-fears</a>
<b>GIST</b>	<p>BEIJING (AP) — The world can only benefit as China marches toward “irresistible” national rejuvenation and assumes greater global leadership under President Xi Jinping, China’s top diplomat said Thursday as he sought to dismiss concerns about China’s rise while also underscoring its inevitability.</p> <p>From providing the most peacekeepers of any U.N. Security Council member to facilitating talks in world conflicts, “the China of today should play a more active role in resolving hot issues in the region and the world,” Chinese Foreign Minister Wang Yi said. “This is not only something we should do, but what is widely expected of us.”</p> <p>Wang spoke on the fringes of China’s annual, largely ceremonial legislative session at a news conference, where he was asked whether China’s recent efforts to push for peace talks in Myanmar and between Israeli and Palestinian delegations, for instance, represented a shift in its longstanding non-interference foreign policy.</p> <p>China remains committed to non-interference, Wang said, arguing that those in the West who are alarmed by China’s growing clout and overseas activity are affected by bias.</p> <p>“The development and rejuvenation of China is irresistible,” Wang said. “Some people in the United States believe that China therefore wants to replace the role of the U.S. in the international arena. This is a fundamental, strategic misjudgment.”</p> <p>“China and the United States can compete without necessarily being opponents, they should more be partners,” he added, while warning that a possible trade war mulled by President Donald Trump would hurt the U.S.</p> <p>“Especially in today’s globalized world, a trade war is the wrong prescription,” he said.</p> <p>Wang emphasized what he called the key role played in China’s more pro-active foreign policy by President Xi Jinping, who is likely to remain leader indefinitely after the legislature lifts presidential term limits.</p> <p>“Since 2012, President Xi Jinping has been the chief architect of China’s major-country diplomacy. He was personally involved in the planning and conduct of head of state diplomacy, which by world acclaim has been brilliant,” Wang said.</p> <p>Xi has visited 57 countries and received more than 110 foreign heads of state, Wang said, citing Xi’s “leadership and charisma.”</p> <p>Wang called on the Shanghai Cooperation Organization, an eight-nation group dominated by China and Russia, to play a greater role in international diplomacy, saying it has a “bounden duty to maintain peace and stability in our region and beyond.”</p> <p>China will host the SCO summit in the port of Qingdao in June.</p>

	<p>The group also includes Kazakhstan, Kyrgyzstan, Tajikistan, Uzbekistan, India and Pakistan, and China has sought to use it to ensure security along its Central Asian border, for example, by holding joint anti-terrorism exercises.</p> <p>In international affairs, however, it has been a relative lightweight, and the new emphasis announced by Wang is in keeping with a Chinese push to broaden its global footprint with mega projects such as the trillion-dollar Belt and Road infrastructure initiative.</p>

<b>HEADLINE</b>	<b>03/08 UN Women: sex abuse cases 'tip iceberg'</b>
<b>SOURCE</b>	<a href="https://apnews.com/ba34af27bfea4f659a40c905009ebc6b/AP-Interview:-UN-Women-chief:-Sex-abuse-cases-tip-of-iceberg">https://apnews.com/ba34af27bfea4f659a40c905009ebc6b/AP-Interview:-UN-Women-chief:-Sex-abuse-cases-tip-of-iceberg</a>
<b>GIST</b>	<p>UNITED NATIONS (AP) — The head of the U.N. agency promoting equality for women says the global spotlight on sexual harassment and abuse and the punishment of some powerful men who had been “untouchable” is an important moment — but it’s just “a tip of an iceberg.”</p> <p>Phumzile Mlambo-Ngcuka said Wednesday that is because the number of women who have “come out” is small and the number of perpetrators who have been “brought to book” is limited compared to the number who haven’t been exposed.</p> <p>But in an interview with The Associated Press on the eve of International Women’s Day, she said that in the immediate future at the very least there is a possibility of reducing and halting the continuation of abuse because perpetrators now know “there is actually a possibility that your victim might tell.”</p> <p>“This is a tipping point and a critical time for everyone,” said Mlambo-Ngcuka, the executive director of UN Women. “And what we need to be guarding is that the pendulum must not swing backwards.”</p> <p>She said the follow-up that is needed is for all institutions to communicate with their employees what their rights are, so they know how to report any violations and can be assured “that they will be believed and that they will not end up being on trial themselves.”</p> <p>Mlambo-Ngcuka stressed that while the spotlight has been on powerful male offenders in Hollywood, business and the high echelons of society, sexual harassment and abuse is prevalent around the world from factories and farms to buses, trains and homes.</p> <p>And not a single country has achieved gender equality, she said.</p> <p>Even in Iceland, which comes closest and has the “highest levels of consciousness about gender equality, violence against women is a problem, and unequal pay is a fact, and underrepresentation of women in decision-making is a fact,” Mlambo-Ngcuka said.</p> <p>“This is the same thing we are fighting in India, in South Africa, in the U.S.,” she said. “So all of these countries do not value women the way they value men.”</p> <p>And 150 countries have at least one law that discriminates against women, she added.</p> <p>The theme of International Women’s Day is “Time is Now: Rural and urban activists transforming women’s lives.” To keep the global spotlight on the #MeToo movement, Mlambo-Ngcuka said #MeToo activists have been invited to participate in Thursday’s events at U.N. headquarters.</p> <p>“It’s about talking about the globalization of sisterhood,” she said, “and ensuring that when you are saying MeToo, MeToo have been harassed in Hollywood and MeToo have been harassed in a train in Bombay. And we both felt the pain.”</p>

The aim of bringing the #MeToo participants is for them “to get the feel of the woman who is not from Hollywood, who, however, is just as concerned about the issues,” Mlambo-Ngcuka said.

“When a perpetrator stands in front of you and attacks you, whether you are a celebrity or an ordinary woman in a village, the violation and the humiliation that you feel is the same,” she said. “The one thing we have in common, when a perpetrator attacks me, or attacks someone who is a queen, or a woman who is sitting in a shantytown, in front of the perpetrators we are all equal.”

“And what we need to be fighting for is a society and a generation of men, of all sorts, of all classes, of all countries, not to be violators,” Mlambo-Ngcuka said.

She expressed hope that “the millennials who are rising up in the companies and are destined for the corner office, they will know that the corner office doesn’t come with a girl — that you will get it trouble ... that the boards of organizations cannot afford these cases and the stigma, and the public will punish you.”

Mlambo-Ngcuka, who is from South Africa, said addressing sexual harassment and abuse and achieving equality for women will take years, and there is a lot of work to do in all countries.

Some women have been encouraged by sexual abusers and harassers losing jobs and facing criminal proceedings, she said, but it takes a long time “for women to actually master the courage to speak for themselves.”

Mlambo-Ngcuka said UN Women is also working with men and boys who are key to changing norms, attitudes and cultural practices — from engaging in child marriage and beating wives to accepting that they can be a partner to a woman.

UN Women also is working with the European Union on changing discriminatory laws, increasing the number of women decision-makers, and getting police to prosecute crimes against women.

Next week, the Commission on the Status of Women will be meeting at U.N. headquarters with the theme: “Challenges and opportunities in achieving gender equality and the empowerment of rural women and girls.”

Mlambo-Ngcuka said she expects sexual harassment and abuse to be a hot topic at side events.

“It is the beginning of a conversation that maybe is going to take us five years or so before maybe we see a critical mass of countries that are actually getting it the right way,” she said, “but we cannot afford to waste this moment, which we’ve all created.”

<b>HEADLINE</b>	<b>03/08 Philippine protest, SKorea’s #MeToo</b>
<b>SOURCE</b>	<a href="https://apnews.com/eff2b237ad0e41f5bf492cbdeda3ce32/Philippine-protest,-South-Korea's-MeToo-mark-Women's-Day">https://apnews.com/eff2b237ad0e41f5bf492cbdeda3ce32/Philippine-protest,-South-Korea's-MeToo-mark-Women's-Day</a>
<b>GIST</b>	<p>MANILA, Philippines (AP) — In Manila, they decried the president as a violator of women’s rights. In Seoul, the surging #MeToo movement took to the streets. In India, where endemic violence against women has only recently become part of the public conversation, they marched toward Parliament loudly demanding their rights.</p> <p>It was International Women’s Day on Thursday, and as the day began in Asia tens of thousands of women ensured it could not go unnoticed.</p> <p>Hundreds of activists in pink and purple shirts protested in downtown Manila against Philippine President Rodrigo Duterte, calling him among the worst violators of women’s rights in Asia. Protest leaders sang</p>

and danced in a boisterous rally in Plaza Miranda, handing red and white roses to mothers, sisters and widows of drug suspects slain under Duterte's crackdown on illegal drugs.

In Myanmar, embattled leader Aung San Suu Kyi urged women to build peaceful democracies using their strength in politics, economics and social issues. In Europe, protesters in Spain got an early start, launching a 24-hour strike and calling on women to stop working, whether at offices or at home.

And in China, students at Tsinghua University used the occasion to make light of a proposed constitutional amendment to scrap term limits for the country's president.

One banner joked that a boyfriend's term should also have no limits, while another said, "A country cannot exist without a constitution, as we cannot exist without you!"

China's ceremonial legislature is poised to pass a constitutional amendment to allow President Xi Jinping to rule indefinitely. Photos of the students' banners, like other content about the proposed amendment, were quickly censored on social media.

Hundreds of South Koreans, many wearing black and holding black #MeToo signs, rallied in central Seoul. They called for sex offenders to be brought to justice, and for action on issues including the gender pay gap.

South Korea's #MeToo movement has gained significant traction since January, when a female prosecutor began speaking openly about workplace mistreatment and sexual misconduct. The list of women who speak out is growing day by day.

Several high-profile men have resigned from positions of power, including a governor who was a leading presidential contender before he was accused of repeatedly raping his female secretary.

Suu Kyi's speech marked the third International Women's Day celebrated in Myanmar under a civilian government. She led her party to a landslide victory in 2015 elections and leads the government, even though the country's constitution bars her from the presidency.

"A country's human rights values will be enhanced when women are granted their rights," she said.

Philippine protesters condemned the thousands of people they say died in extrajudicial killings — accusations the police deny.

Protest leader Jean Enriquez also railed against Duterte's anti-women remarks, saying: "We're so alarmed. We have seen his direct attacks on women under his iron-hand rule and it's now time to heighten our resistance."

Human rights groups have condemned Duterte's sexist remarks, including one in which he asked troops to shoot female communist rebels in the genitals.

In India, hundreds of women, including students, teachers and sex workers, marched through the capital to bring attention to domestic violence, sexual attacks and discrimination in jobs and wages.

"Unite against violence against women," one placard urged. "Man enough to say no to domestic abuse," said another. "My body, My choice."

India had its first female leader in 1966 when Indira Gandhi became prime minister, but Indian women are still often relegated to second-class citizenship.

Prime Minister Narendra Modi, though, insisted in a tweet that things are changing. "Several women have left an indelible mark in the history of humankind," he said.

HEADLINE	<b>03/08 March 8 is International Women's Day</b>
SOURCE	<a href="http://time.com/5187268/international-womens-day-history/?xid=homepage">http://time.com/5187268/international-womens-day-history/?xid=homepage</a>
GIST	<p>As people around the world celebrate International Women's Day on Thursday — an annual March 8 observance — countries from Kyrgyzstan to Cambodia will officially honor women's rights and achievements across the political, economic, social and cultural spheres. The day has been designated as an official United Nations observance since 1975, which was International Women's Year, and is a national holiday in many parts of the world.</p> <p>But the day's origins go much further back than 1975 — and are more radical than what we might expect from a day so widely celebrated.</p> <p>Centering around the socialist movements of the early 20th century, here's more on how International Women's Day (IWD) came to be:</p> <p><b>How Did the Day Begin?</b></p> <p>The impetus for establishing an International Women's Day can be traced back to New York City in February 1908, when thousands of women who were garment workers went on strike and marched through the city to protest against their working conditions. "Like today, these women were in less organized workplaces [than their male counterparts], were in the lower echelons of the garment industry, and were working at low wages and experiencing sexual harassment," says Eileen Boris, Professor of Feminist Studies at the University of California Santa Barbara.</p> <p>In honor of the anniversary of those strikes, which were ongoing for more than a year, a National Women's Day was celebrated for the first time in the U.S. on Feb. 28, 1909, spearheaded by the Socialist Party of America.</p> <p>Led by German campaigner and socialist Clara Zetkin, the idea to turn the day into an international movement advocating universal suffrage was established at the International Conference of Working Women in 1910. Zetkin was renowned as a passionate orator and advocate for working women's rights, and her efforts were crucial to the day's recognition throughout much of Europe in the early 1910s.</p> <p><b>The Most Consequential Women's Day Protest</b></p> <p>Although International Women's Day had started with action from the women's labor movement in the U.S., it took on a truly revolutionary form in Russia in 1917.</p> <p>Just as Zetkin's idea was spreading through Europe, Russia (where International Women's Day was established in 1913) was facing unrest for other reasons too. It was against the backdrop of a country exhausted by war, widespread food shortages and escalating popular protest that the nation's 1917 International Women's Day demonstration was held on Feb. 23 of that year — the equivalent of March 8 in the Russian calendar, indicating the significance of the date of the commemorations today.</p> <p>Though it wasn't Russia's first International Women's Day, historian and activist Rochelle Ruthchild of Harvard's Davis Center for Russian and Eurasian Studies points to the differences between earlier protests and this demonstration, which took place in the then-capital Petrograd and involved thousands. "Women were mostly the ones on the breadline, and were the core protesters," she says. "In fact, male revolutionaries like [Leon] Trotsky were upset at them, as these disobedient and misbehaving women were going out on this International Women's Day, when they were meant to wait until May," referring to the annual worker's protests on May 1.</p> <p>Despite the initial directives from revolutionary leaders, the protests that began on March 8 grew to daily mass strikes of workers from all sectors demanding bread, better rights and the end to autocracy. A week later, the Tsar abdicated, signaling the downfall of the Russian Empire and paving the way for socialism and the formation of the Soviet Union in 1922.</p>

“You could argue that these demonstrations sparked the abdication of Tsar Nicholas and the end of the Romanov dynasty,” Ruthchild says. “This was probably the most consequential of any International Women’s Day demonstrations of any time.”

March 8th (23 February in the Julian calendar) the Bourgeois Democratic Revolution, was the first of the two revolutions in Russia in 1917.

### **Suffrage and International Women’s Day**

Russian women demanded — and gained — the right to vote in 1917 as a direct consequence of the March protests and after more than 40,000 women and men again took to the streets demanding universal suffrage. This made Russia the first major power to enact suffrage legislation for women, a year earlier than Britain and three years earlier than the United States. In fact, suffragettes in the U.K. and their counterparts in the U.S. both looked to Russia as an example, and held what they saw as the country’s progress and liberation of women up as a mirror to their own governments, warning that they were lagging behind.

“Women’s movements, be it suffrage or labor rights, have always had an international connection,” says Boris. British suffragette Emmeline Pankhurst visiting Russia in June 1917 and the creation of the Women’s International League for Peace and Freedom during World War I are examples of these early 20th century global links.

These two suffragettes carried their banner to a White House gate on June 22, 1917. The message indicts Woodrow Wilson, but he later came out in favor of the Nineteenth Amendment. The words “free Russia” refer to the women’s voting rights introduced by the provisional regime that had overthrown the Czar in March.

However, the celebration of International Women’s Day itself did not hold as much weight in the U.S. through the 20th century as it did in other countries, largely due to its political associations with the Soviet Union and socialism amid increasing Cold War tensions. The fact that an official U.N. day observance was only established in 1975 underlines this point, and may go some way to explaining why the day still isn’t as widely recognized in the U.S. today as it is elsewhere, though it is no coincidence that March is the nation’s Women’s History Month.

“I think it’s really interesting that all over the world, people observe this day that actually originated in the U.S.,” says Ruthchild, “but the U.S. doesn’t observe it to the same degree.”

### **‘Many More Steps to Take’**

In the century since it was first established, International Women’s Day has come to be marked just as frequently with celebration as it is with protest, but the day’s legacy remains steeped in the struggle for women’s rights — an element that has gained renewed relevance in recent months, particularly as the #MeToo movement has taken on global dimensions.

Looking to the history of International Women’s Day today in Russia, Ruthchild points out the “irony” of recent developments in laws affecting Russian women; for example, last year Vladimir Putin signed a controversial amendment to a law that decriminalized some forms of domestic violence. “How did a society which touted women’s liberation turn so quickly into a society that has reacted so strongly against notions of women’s equality and women’s rights?” she says.

And Russia is by no means the only country where women continue to face challenges to their rights. “Certainly, there are people and leaders in the U.S. who would like to turn back the clock too,” says Ruthchild. In the time since President Trump’s election in 2016 and the Women’s March in early 2017, American women have been mobilized to action by conversations surrounding sexual harassment, equal pay, threats to reproductive healthcare and more.

International Women’s Day doesn’t seem likely to lose its radical flavor any time soon.

	“Days like IWD are a time to celebrate the gains that have been made and to measure how far we have come,” Boris says, “but also to see that there are many more steps to take and to rededicate to the struggle ahead.”

<b>HEADLINE</b>	<b>03/07 China tries to gauge NKorea nuke offer</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/7/china-tries-to-gauge-north-korea-nuclear-offer/">https://www.washingtontimes.com/news/2018/mar/7/china-tries-to-gauge-north-korea-nuclear-offer/</a>
<b>GIST</b>	<p>President Trump praised China for helping drive North Korean leader Kim Jong Un’s toward potential denuclearization talks with Washington, but a cautious Beijing has barely even reacted to reports this week that Mr. Kim is offering to halt all nuclear and missile tests while such negotiations play out.</p> <p>Despite its status as the North’s ally and main link to the outside world, the Chinese government has not made an official statement on the claim by South Korean officials that Mr. Kim made the offer during talks with them this week, and the newspaper of the ruling Communist party even questioned whether the offer really happened.</p> <p>“North Korea still has not confirmed the South’s version of events,” stated an editorial in the Global Times, noting that Pyongyang’s own official state newspaper, the Rodong Sinmun, had said Pyongyang’s actual plan is to proceed with the “advance” of the nation’s “nuclear weaponry.”</p> <p>U.S. officials said the editorials underscored ongoing “puzzlement” inside the White House over the true nature of the offer South Korean officials claim Mr. Kim made with regard to missile and nuclear tests.</p> <p>South Korean President Moon Jae-in’s office said in a statement Tuesday the North in direct talks had expressed a “willingness to hold a heartfelt dialogue with the United States on the issues of denuclearization” and “made it clear that while dialogue is continuing, it will not attempt any strategic provocations, such as nuclear and ballistic missile tests.”</p> <p>But Mr. Moon on Wednesday tried to tamp down expectations for the detente and ease fears that the talks could separate Seoul from Washington and other allies urging a hard line on the North’s nuclear and missile programs. He noted many of the sanctions of the North were imposed by the U.S. or through the United Nations, and would only be eased by “substantive progress” on denuclearization.</p> <p>“These international efforts cannot be loosened by inter-Korean dialogue,” Mr. Moon told a meeting of South Korean party leaders in Seoul. “We don’t aim for that to happen and it’s also impossible.”</p> <p>The issue, according to Michael Pillsbury, a Mandarin-speaking Pentagon consultant and head of Chinese strategy at the Hudson Institute in Washington, is that “that there seems to be no direct message from North Korea to the U.S. government.”</p> <p>“This is all being filtered through the South Korean government,” Mr. Pillsbury said, adding that Chinese officials, who are generally regarded as having better sources on the inner workings of the Pyongyang regime, are still unsure about what is on the table.</p> <p>According to the Global Times editorial, the Chinese government so far “does not see a major shift in North Korea’s negotiating position,” said Mr. Pillsbury, who warned in an interview that “there is often a price to pay just to learn that North Korea has not made any real concessions.”</p> <p>Joseph DeTrani, a former CIA official who served as the State Department’s special envoy to the North Korean talks that broke down in 2009, said the Chinese have appeared to be “as surprised as everyone else” about South Korea’s claim that Mr. Kim has offered to halt tests and discuss denuclearization with Washington.</p> <p>“We’ve got to sit down with the North Koreans and not have anything go through filters,” said Mr.</p>

	DeTrani. “It’s got to be direct so we can figure out what’s going on, what does Kim Jong Un want, and does he know what he’s doing?”
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>03/07 Security clearance system ‘backlog’</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/7/dan-coats-absurd-security-clearance-process-reveal/">https://www.washingtontimes.com/news/2018/mar/7/dan-coats-absurd-security-clearance-process-reveal/</a>
<b>GIST</b>	<p>The process to obtain access to classified government information has become so “absurd” that when then-Sen. Dan Coats, who served on the Senate Intelligence Committee, was named President Trump’s director of national intelligence, he needed to re-apply for a security clearance.</p> <p>“Because there was that short-term gap, he had to go through a whole new security clearance process,” Virginia Sen. Mark Warner, the ranking Democrat on the Senate intelligence panel. “That was pretty absurd.”</p> <p>In January, the Government Accountability Office went so far as to place the security clearance process on its “high risk” list of areas requiring immediate broad-based reform, noting that the backlog for investigating job candidates for security clearances has more than tripled in four years to 710,000.</p> <p>The problems include an antiquated system established to thwart outside threats, but works poorly against internal threats like National Security Agency leaker Edward Snowden; the failure to employ cutting-edge technology to simplify background checks; and, as in Mr. Coats’ case, the reality that a clearance at one government agency often does not transfer to another part of the government.</p> <p>With 23 different agencies, and subcategories within agencies, the duplication is massive, experts told a Senate Intelligence Committee hearing Wednesday.</p> <p>In the past five years, the federal government has attempted to overhaul the background check process since it was revealed that the last firm in charge, Virginia-based USIS, had failed to complete some 665,000 investigations.</p> <p>As a result, the waiting time between getting a job and being cleared to work at a government agency, or private business contracting with the government requiring one — often runs at least a year.</p> <p>Senate Intelligence Committee Chairman Richard Burr, North Carolina Republican, asked David Berteau, president of the Professional Services Council, which represents the government contracting staffing business, about the delays.</p> <p>“Why’s it take so damn long?” Mr. Burr asked.</p> <p>Kevin Phillips, president and CEO of government contractor ManTech, said the process, established during the Eisenhower administration, is “very manual” and requires investigators to make personal visits to check up on someone with handwritten notes, not computer tablets. There is also a matter of trust, he added.</p> <p>“People want to walk through the process and make sure, in this environment, that people are trustworthy,” he said, “and the timeline is taking longer because the assurance is needed.”</p>

<b>HEADLINE</b>	<b>03/07 Pentagon steps up NKorea military plans</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/7/pentagon-steps-up-north-korea-military-planning/">https://www.washingtontimes.com/news/2018/mar/7/pentagon-steps-up-north-korea-military-planning/</a>

GIST

The Pentagon is intensifying military planning for war on the Korean Peninsula despite the apparent thaw between North Korea and the United States over Pyongyang's nuclear weapons and long-range missile program.

Pentagon officials say the military planning has increased in recent weeks and involves reworking and refining Op Plan 5027, as the war plan for a conflict against North Korea is called.

The activity is being done by planners in the Pentagon in coordination with officials from U.S. Forces Korea, the military command in South Korea. The objective is to determine how best to execute President Trump's order to eliminate the North Korean nuclear program.

The stepped-up planning comes as Pyongyang signaled this week that it is ready to hold talks with the United States and South Korea on its nuclear program.

Current administration policy toward North Korea is to impose maximum diplomatic and financial pressure, resulting in dozens of new economic and financial sanctions on the regime of Kim Jong-un in a bid to force him to back down. Intelligence officials assess that the sanctions are beginning to have an impact on North Korea's already weak economy.

Mr. Trump took credit for the latest overture and tweeted on Tuesday that the response indicated "possible progress." But he also said the United States remains ready to use force.

"For the first time in many years, a serious effort is being made by all parties concerned," the president tweeted. "The World is watching and waiting! May be false hope, but the U.S. is ready to go hard in either direction!"

Pre-emptive U.S. military action is widely viewed as producing devastation for South Korea and possibly Japan, which both have U.S. military bases, and could quickly escalate to a nuclear exchange. North Korea's military readiness was discussed on Capitol Hill at a Senate Armed Services Committee hearing this week.

Army Lt. Gen. Robert Ashley, director of the Defense Intelligence Agency, said North Korean threats to turn the South Korean capital of Seoul into a "sea of fire" are not propaganda.

"I'm not sure of the phrase, but it would be a significant amount of casualties," Gen. Ashley said.

North Korea's army uses outdated Soviet-era design weapons, including massive amounts of artillery deployed close to the Demilitarized Zone separating the Koreans.

They include self-propelled artillery and guns and howitzers ranging in size from tubes with 122-millimeter to 152-millimeter barrels. Also deployed are North Korean-produced Koksan guns of 170-millimeter caliber. Rocket artillery includes at least three calibers of multiple rocket launchers, in 107-, 122- and 240-millimeter sizes, many mounted on trucks. Gen. Ashley said the majority of the artillery weapons are well-maintained.

"Now, there is going to be a degree of atrophy over time, but our expectation is those systems will work," he said.

The North Korean military also has a problem with ammunition and parts for its weapons because many are not widely available in the international arms markets.

Asked about North Korean troops' military readiness, the three-star general said: "We've watched their winter training exercises. They've shown a level of discipline and expertise."

"Kim Jong-un is far different from his father in the level of rigor that they've applied to their training regime to make sure their crews are ready," Gen. Ashley said.

A senior administration official told reporters this week that North Korea's latest overture on resuming nuclear talks is being viewed cautiously by White House national security officials. The main worry is that the North Koreans will engage in nuclear talks solely as a means of reducing the administration's "maximum pressure" campaign against Pyongyang.

The administration of President George W. Bush made concessions in a bid to coax the North Koreans into denuclearizing, including lifting some sanctions and removing North Korea from the list of state sponsors of terrorism.

The North Koreans pocketed the concessions and eventually walked away from the talks — all the while building up its nuclear warheads and missiles.

"The president's policy all along has been pursuing maximum pressure in order to change their calculus to help them understand that denuclearization is the only path to a better outcome," the official said, adding that the administration has always kept the door open for talks.

In the past, North Korea has attached "nonstarter conditions" for talks, such as liquidating the U.S. alliance with South Korea and removing troops from the peninsula.

"What we are looking for is concrete steps toward denuclearization, not a rehashing of old positions that did not lead to that outcome," the official said.

On North Korea's offer to halt missile tests in exchange for new talks, the official suggested that would not be enough.

<b>HEADLINE</b>	<b>03/07 Wildland firefighters face different battle</b>
<b>SOURCE</b>	<a href="https://crosscut.com/2018/03/DACA-washington-firefighters-immigration-trump-dreamer">https://crosscut.com/2018/03/DACA-washington-firefighters-immigration-trump-dreamer</a>
<b>GIST</b>	<p>OLYMPIA — All they want to do is to keep fighting fires on millions of acres of private, state and tribal-owned forestlands as part of Washington state's largest on-call fire department.</p> <p>But the firefighting fates of Noe Vazquez and Christian Garcia Herrera, who have each fought more than 20 fires, are in limbo until the federal government reaches a deal on Deferred Action for Childhood Arrivals, otherwise known as DACA.</p> <p>On Tuesday in Olympia, Vazquez and Herrera, dressed in crisp, white shirts and skinny, black ties, held a press conference to put a face on the thousands of people who continue to be impacted by President Donald Trump's decision to end the DACA program last Fall.</p> <p>"It's sad to realize that if my DACA does get canceled I won't be able to continue my dream of becoming a wildland firefighter," Herrera said. "I wanna make a difference in the world some day."</p> <p>"I love the adrenaline you get. I love the work. I just love being able to give back to the community," Vazquez added.</p> <p>Monday was the deadline for Congress and Trump to reach an agreement on the DACA program, which offers two-year work permits to those who have been in the country illegally since they were children.</p> <p>There are an estimated 800,000 people who are DACA recipients nationwide; 17,000 in Washington state. Opponents of DACA argue President Barack Obama's creation of the program, via executive order, was unconstitutional. For now, two federal judges have ordered the administration to maintain the program while legal challenges move forward. Ultimately, however, DACA recipients are counting on Congress and the president to resolve the issue.</p>

On Monday, however, the deadline for a DACA deal came and went with no resolution in sight and only Trump tweeting: "It's March 5th and the Democrats are nowhere to be found on DACA. Gave them 6 months, they just don't care. Where are they? We are ready to make a deal!"

The White House has said that it will maintain the program only under the condition that Congress provides funding for a border wall with Mexico and increased border security. Trump also wants Congress to agree to sweeping reductions to legal immigration, like so-called "chain migration," a visa program that allows immigrants already living in the United States to bring family members over.

Here in Olympia, Washington's Commissioner of Public Lands, Hilary Franz, who is ultimately responsible for the state's on-call fire department, joined Vazquez and Herrera in support of them.

"To become a wildland firefighter we know is not easy. It takes enormous amount of bravery, enormous amount of hard work, and the commitment of caring for your team," Franz said.

"As our wildfire fighter seasons become larger and longer, and we are seeing even greater need for more people stepping up to be firefighters, we need to make sure that we value people like Noe and Christian," Franz continued.

"What are we trying to accomplish by denying legal status to Dreamers. Who is better off?" (According to the state Department of Natural Resources, the average wildfire season across the country today is 78 days longer than it was in the 1970s.)

Vazquez, 20, was born in Guadalajara, Mexico. He says he came to the United States with his mother, who had been a victim of domestic violence. Initially raised in Los Angeles, Vazquez moved to Washington and applied for DACA in 2015. He knew college was probably not right for him but dreamt of becoming a firefighter.

"I would stay at home during the summers, and I would see the clouds miles away getting closer and closer, just plumes of smoke," said Vazquez who, along with Herrera, lives in Tonasket in Okanogan County. "You couldn't be outside for too long because it's toxic. I was wondering what I could do for my community, what was something I could do to help because there was a lot of people who were devastated by it."

Vazquez was able to fight fires in 2017 until his work permit expired. Unable to work, he was short on money and neglected to pay parking tickets. His license was suspended as a result. In January, he was pulled over and detained by Immigration. He served one month in the Northwest Detention Center in Tacoma. Now that he's been released on bond, he hopes to resubmit his DACA application, but he's unsure whether the program will even continue and consequently, whether he will be able to go back to fighting fires.

Herrera, 20, still has his DACA work permit and is currently employed by the Department of Natural Resources but he, too, worries. Herrera was born in Guerrero, Mexico but has been in the U.S. since he was an infant. In fact, Herrera says he would have been born in the U.S. if not for the fact that his mother had to travel back to Mexico to take care of his grandmother, who was dying from cancer. Herrera, who was also raised in California, moved to Washington about six years ago. He wasn't sure fighting fires was right for him but once he got started, he was hooked. He realized it was a good way to serve as a role model for his younger siblings and the community at large.

The two young men's supervisor, Justin Wilson, was also on hand in Olympia to offer support. Wilson said he could see right away that they were right for the job.

"You work and earn your paycheck, you don't expect it, and I've seen that in these two individuals," Wilson said. Wilson also said bilingual firefighters, capable of communicating with various communities about fire safety, are more important than ever and in short supply. Wilson could lose as many as four

	<p>firefighters if the DACA program doesn't continue.</p> <p>"Basically that shuts a whole truck down. I've got four people on a truck. If I lose these four people we'll lose a resource, plain and simple," Wilson said.</p>

<b>HEADLINE</b>	<b>03/07 Sheriff: arrests if protesters block streets</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/920532/sheriff-johanknecht-seattle-protesters/">http://mynorthwest.com/920532/sheriff-johanknecht-seattle-protesters/</a>
<b>GIST</b>	<p>Seattle has drawn sharp criticism after seven protesters blocked downtown traffic without any police intervention.</p> <p>"We have a lot of two-lane roads out there so it will create a backup pretty quickly," King County Sheriff Mitzi Johanknecht told KTTH's Todd Herman. "As a matter of fact, on that day I worked remotely. My office is down there and there was no way I was going to get to it; and some other staff having 2-3 hour commutes that day."</p> <p>Seattle police made no arrests on March 1. The protesters locked arms at 4th Avenue and James Street and blocked traffic. It created a 2.5 mile backup through the city. The backups echoed through area roads and onto I-5. Police did nothing. Sheriff Johanknecht is not in charge of Seattle police, however.</p> <p>"Each agency decides how to handle things differently," she said. "In my jurisdiction if the roadway is blocked, we would make arrests. But we'd work with protesters. Often times, it's them wanting to be arrested. There's a big danger, a big public safety issue, I think, in those situations.</p> <p>The protesters oppose a proposed \$210 million King County juvenile justice center. They sat down at 4th Avenue and James Street around 8 a.m. They later moved to 5th Avenue and Stewart Street. One driver tried to inch her car past the scene. Protesters jumped on her hood. Another woman was forced to park at the bottom of First Hill and limp up to Harborview Medical Center. She was getting foot surgery that day.</p> <p>KIRO Radio's Chris Sullivan was among many critics in town after police did nothing. KTTH's Todd Herman said he would have performed a citizen's arrest. It depends how it's done, but Sheriff Johanknecht said that deputies often encounter a citizen's arrests.</p> <p>"We have people witness stuff all the time and stand by," she said. "You've heard of times when DUIs are kept from driving their cars out of parking lots and so forth; I consider those citizens arrests and people stand by and assist us."</p>

<b>HEADLINE</b>	<b>03/07 Seattle promise: free college by 2020</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/03/07/durkan-aims-to-fulfill-free-college-promise-by-2020/">http://q13fox.com/2018/03/07/durkan-aims-to-fulfill-free-college-promise-by-2020/</a>
<b>GIST</b>	<p>SEATTLE -- Free college could soon become a reality for all high school students in Seattle.</p> <p>Mayor Jenny Durkan, Seattle Colleges Chancellor Shouan Pan and Seattle Public Schools Superintendent Larry Nyland, signed a partnership agreement Wednesday that allows for the expansion of the Seattle Promise Program, which aims to provide free community college tuition to high school students.</p> <p>"How many people think Seattle jobs should go to Seattle kids?" Durkan yelled at a crowd of students at Ingraham High School before signing.</p> <p>Durkan said the affordability crisis is the central problem in Seattle and obtaining a post-secondary degree, credential or certificate is necessary to obtain a living wage job. She pointed to a statistic that said by 2020, 70% of all jobs in Washington state will require some post-secondary education, but only about 31% of Washington's high school students get that by the age of 26.</p>

"In the City of Seattle you should be able to grow up and either work in those shiny new buildings downtown, build those shiny new buildings or own those shiny new buildings," Durkan said.

#### The Timeline

The 2018-19 school year will serve as a transition year, according to the timeline released by the mayor's office.

During this transition year, a total of six Seattle area high schools will be served through the Seattle Promise College Tuition Program in partnership with all three Seattle colleges.

The program is expected to serve about 1,000 high school and college students, including approximately 500 students in six high schools who will have access to support and outreach staff for college readiness and wrap around college preparation services.

Approximately 215 students will receive '13th Year' scholarships at Seattle colleges and approximately 120 students will be eligible to receive '14th Year' scholarships at South Seattle College.

In 2019, all Seattle public high school students will be eligible for Seattle Promise, and by 2021, the Seattle Promise will serve all eligible Seattle public high school graduates.

#### Cost of the program

Durkan's office estimates the program will cost \$6.3 million annually, once the program is fully implemented.

That cost is based on enrollment projections from South Seattle College and includes staff for college preparation and wrap around support at both the high school and college level, "last dollar" scholarships, and additional budget for equity funds for students who require additional assistance.

For the transition year (2018-2019 school year), Durkan estimates the cost at \$1.76 million, which includes \$1.1 million from the city.

Durkan's office didn't specifically say how the program will be funded but said the program will likely include a combination of city investment, private partnerships, and Seattle Colleges.

The Seattle Promise College Tuition Program will expand on the successful 13th Year Promise Scholarship from serving three high schools to serving six high schools – Chief Sealth, Cleveland, Garfield, Ingraham, West Seattle and Rainier Beach. Beginning in the fall of 2018, current 13th Year Promise Scholarship students will be eligible for an additional 14th year of tuition support.

<b>HEADLINE</b>	<b>03/08 Homeland and Hollywood partnership</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/federal-pages/dhs/cbp/homeland-hollywood-partnership-heaven-or-hell/">https://www.hstoday.us/federal-pages/dhs/cbp/homeland-hollywood-partnership-heaven-or-hell/</a>
<b>GIST</b>	<p>Anne Sittmann, head of the Television and Motion Pictures Division at U.S. Customs and Border Protection, joined <a href="#">Women in Homeland Security</a> for a briefing and sat down with HSToday to discuss CBP's strategy with Hollywood. Most recently, Sittmann worked with Netflix to produce <a href="#">Border Security: America's Front Line</a> in addition to <a href="#">Border Wars</a> currently airing on the National Geographic channel.</p> <p><b>HSToday: How does CBP interact with Hollywood? What's the point?</b></p> <p><b>Sittmann:</b> Hollywood and the government are no strangers to each other ever since the great character actor George Kennedy established the first motion picture office under the command of Gen. George</p>

Patton during World War II. The purpose of that office so many years ago was to render technical assistance and advice in order to ensure accuracy in the portrayal of the Army, but also to aid in recruitment during an especially dire time for our country. This was not lost on other agencies, and it was none other than J. Edgar Hoover who worked hand-in-hand with Hollywood to ensure that the FBI became not only America's best-known law enforcement agency, but also America's best-funded. I'm sure many of you are familiar with the Canadian Mounties, the RMCP, which would not have been possible without the cartoon character of RCMP Officer Dudley Do-Right who, despite sometimes glaring ineptitude, "always got his man."

It is from this historical perspective that CBP approaches what is arguably the most subtle and rewarding means of branding and communication. Millions of dollars, even billions, are spent every year on such small things as getting James Bond to switch from the martini (shaken, not stirred) to Heineken beer. In fact, in the first movie about CBP, *The Terminal* with Tom Hanks and Catherine Zeta Jones, Steven Spielberg made almost as much money on product placement as the movie grossed.

First and foremost, when Hollywood comes calling they can make a movie with your help or without it, and by cooperating one can influence what people see and how they react to it. For example, when *The Terminal* was initially pitched, the port director was written as evil and on the take. Spielberg eventually softened the character and made CBP employees among the heroes of the movie. But, just like a press shop, when you pitch a story to the media it is usually always better than if the media seeks you out.

**HSToday: Are you "leaning forward" with any projects to support the CBP mission?**

**Sittmann:** In addition to creating events and tours for producers, directors and writers of non-scripted, fictional television, which is an area we have not been dominant in, we are exploring virtual reality and other futuristic forms of visual communication. We completed our very first virtual reality program this past year and continually work with our Visual Communications Branch to find new, unique ways of conveying our message via technological breakthroughs.

**HSToday: Do you find Hollywood generally supportive of your efforts?**

**Sittmann:** Yes. Our efforts under DHS to connect with Hollywood are actually met with surprise and sometimes astonishment. There is an industry gathering twice a year where the top producers gather and one of the biggest hits was when I attended with a uniformed Border Patrol agent. We use conventions like this and certain DHS/CBP-sponsored events to pitch ideas — either priorities of leadership, or are just plain interesting — and to allow producers, directors and writers to pitch ideas to us.

**HSToday: What's the best thing that has come from your work with Hollywood?**

**Sittmann:** When CBP dove full-time into the world of TV and motion pictures (circa 2007), very few people had any idea of what the border was like and fewer still had ever been there. Even if you lived on the border, chances are you never experienced the vast uninhabited swaths between the cities. [Border Wars](#), our first really successful series, changed that and brought the border into homes all over our country and all over the world. The reality that we all have to deal with is that reality or fiction in TV and motion pictures shapes our perceptions and should be treated and pursued like a press organization pursues *The New York Times*, CNN or Fox.

Our Office of Field Operations (blue uniforms) has its own TV series currently airing on Netflix, [Border Security, America's Front Line](#), which is a perfect example of what I like to call "edutainment." It chronicles the day-to-day operations at ports of entry along the Northern border. It was a huge success in Canada before Netflix bought the rights and is now prepping for its second season. The feedback has been tremendous. The public begins to understand why we do what we do and are better prepared to comply. These shows serve as an excellent recruitment tool.

**HSToday: Have you been able to correct any misperceptions about CBP's work? Was there anything that they thought about CBP that was patently false?**

**Sittmann:** We don't use TV or motion pictures to correct any misconceptions in today's news, because today's news is usually forgotten tomorrow. TV and motion pictures brand and leave lasting impressions of our mission and the strength of the men and women in our workforce. The reason our shows are successful is because we let the inner dedication and competence of our front line employees shine through. Television especially can be the beginning of a very intimate interaction between our employees and the viewers. After all, you often watch television in your living room or even your bedroom, and like anyone you make up your mind about an organization very often by the way you feel about the employees.

Through these television shows, we are slowly correcting that CBP represents three operational units. Everyone has an idea of what the Border Patrol does. People who travel are familiar with our blue uniforms at the Ports of Entry, the Office of Field Operations, and almost nobody knows that CBP has an "air force" bigger than some countries. Amongst their many missions, they patrol the skies during the Super Bowl, and assist with search-and-rescue efforts during natural disasters. Currently, they are featured on one of Smithsonian Channel's top-rated programs, [Aerial America](#).

One of the biggest areas we had to overcome was the often-repeated civil rights charges that the Border Patrol mistreated immigrants. Border Wars was on the border for five years with the same two producers and many of the camera and sound men. They were, for the most part, "Hollywood liberals" yanked from the beaches of Malibu to endure life on the border. Now, if we ever need someone with impeccable liberal credentials, we can count on any number of them to rise publicly to our defense.

<b>HEADLINE</b>	<b>03/07 Seattle to appeal 'truck is home' ruling</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/homeless/city-of-seattle-appeals-ruling-that-a-truck-is-a-home/">https://www.seattletimes.com/seattle-news/homeless/city-of-seattle-appeals-ruling-that-a-truck-is-a-home/</a>
<b>GIST</b>	<p>The city of Seattle will appeal a King County judge's ruling last week that a because a vehicle can be defined as someone's home, it can't be towed.</p> <p>Reached Wednesday night, Deputy City Attorney John Schochet called last week's ruling in King County Superior Court, "legally wrong and unworkable." And while the Superior Court's ruling doesn't necessarily set a precedent, Schochet said the decision could still affect the city's ability to enforce its parking laws.</p> <p>It's a case with potential far-reaching implications for the thousands of people living in their vehicles across the county, and those residents and business owners who are frustrated with their presence on city streets.</p> <p>Steven Long, 58, is among those in the region living in his vehicle because his rent got too high. He sued the city after a parking-enforcement officer ordered his pickup truck towed in October 2016 for violating Seattle's 72-hour parking rule. Long had been living in the truck since he was evicted from an apartment two years earlier.</p> <p>The city eventually waived the parking ticket, but Long was left responsible for \$557 in impoundment fees.</p> <p>He lost his case in Municipal Court last May.</p> <p>But on Friday, Superior Court Judge Catherine Shaffer ruled in Long's favor on two counts: that the towing of the vehicle, and its potential sale at auction if Long couldn't pay the fees, violated the state's homestead act; and that the fees themselves violated the Eighth Amendment's prohibition on excessive fines.</p> <p>In court on Friday, Assistant City Attorney Michael Ryan warned about that interpretation of the law,</p>

	<p>arguing it could put the city at risk of violating the state constitution anytime officials tow a vehicle, because it's not always clear someone is living in it.</p> <p>Jim Lobsenz, one of Long's attorneys, predicted the city may stop towing vehicles they suspect someone is living in simply because they won't be able to collect the fines, based on Shaffer's decision that the vehicle can be a home and shouldn't be subject to such fees.</p> <p>He compared the city's 72-hour parking rule to outdated loitering laws, designed to keep people from remaining any one place too long.</p> <p>"Why? Because you're up to no good?" Lobsenz said. "Because we feel uncomfortable with people that are just hanging around our neighborhood for more than three days."</p>

<b>HEADLINE</b>	<b>03/07 CIA: China trying to infiltrate institutions</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/china-cia-intelligence-foreign-influence/2018/03/07/id/847403/">https://www.newsmax.com/newsfront/china-cia-intelligence-foreign-influence/2018/03/07/id/847403/</a>
<b>GIST</b>	<p>China conducts extensive operations to influence foreign countries, including techniques to permeate American institutions, according to a classified CIA report, The Washington Free Beacon reported on Wednesday.</p> <p>The CIA specifically warns about attempts by the Chinese Communist Party (CCP) to stipulate funding to universities and policy institutes in exchange for academic censorship, according to an unclassified page of the report obtained by the Free Beacon.</p> <p>"The CCP often denies visas to academics who criticize the regime, encouraging many China scholars to pre-emptively self-censor so they can maintain access to the country on which their research depends," the report states.</p> <p>It also accuses the CCP of providing funding to academic institutions and think tanks in order to "deter research that casts it in a negative light . . . [using] this tactic to reward pro-China viewpoints and coerce</p>

	<p>Western academic publications and conferences to self-censor."</p> <p>The revelation of the report comes following last month's testimony to the Senate Intelligence Committee by FBI Director Christopher Wray that the bureau is investigating dozens of Chinese-backed Confucius Institutes hosted by more than 100 universities throughout the U.S for their potential to be used as a spying tool.</p> <p>These cultural centers are managed by a division of the Chinese Ministry of Education and are an integral part of Beijing's \$10 billion a year foreign propaganda campaign.</p> <p>Sen. Marco Rubio, who co-chairs the Congressional-Executive Commission on China, last month asked five schools in his state to close down these institutes, according to the Washington Examiner.</p> <p>The Florida Republican said the Chinese government uses the programs to limit discussion on topics it finds sensitive, such as the Tiananmen Square Massacre or the political status of Tibet.</p>

<b>HEADLINE</b>	<b>03/08 Sick Venezuelans flee to Colombia</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Health/wireStory/sick-venezuelans-flee-colombia-mounting-refugee-crisis-53599960?">http://abcnews.go.com/Health/wireStory/sick-venezuelans-flee-colombia-mounting-refugee-crisis-53599960?</a>
<b>GIST</b>	<p>In a cramped hospital near Colombia's border with Venezuela, migrants fill stretchers bearing the wounds of the deteriorating nation they left behind.</p> <p>An 18-year-old woman rubbed her swollen belly after fleeing with her infant daughter when the wounds from her C-section began to ooze pus. A young man whose femur had torn through his skin in a motorcycle crash needed antibiotics for an infection. An elderly retiree with a swollen foot arrived after taking a 20-hour bus ride from Caracas because doctors there told his family the only treatment they could offer was amputation — without anesthesia or antibiotics.</p> <p>"If you want to sign, sign. But we are not responsible for the life of your father," Teresa Tobar, 36, quoted the doctors in Venezuela as telling her when they handed over the papers to authorize her father's surgery.</p> <p>As Venezuela's economic crisis worsens, rising numbers are fleeing in a burgeoning refugee crisis that is drawing alarm across Latin America. Independent groups estimate that as many as 3 million to 4 million Venezuelans have abandoned their homeland in recent years, with several hundred thousand departing in 2017 alone.</p> <p>Many of those migrants are arriving by foot in Colombia and landing in the Andean nation's emergency rooms with urgent medical conditions that Venezuelan hospitals can no longer treat.</p> <p>According to health officials, Venezuelans made nearly 25,000 visits to Colombian ERs last year, up from just 1,500 in 2015. At hospitals in border cities like Cucuta, patients are packed side by side on stretchers that spill into hallways, not much unlike the deplorable conditions they fled back home. Authorities project that Venezuelan admissions to Colombian hospitals could double in 2018 and say the nation's already overstretched public health system is unprepared to handle the sudden swell.</p> <p>"We are not in a position to assume the cost of the comprehensive care for the migrants arriving," said Julio Saenz, an adviser on migrant affairs to Colombia's Health Ministry. "That's a very big concern."</p> <p>Venezuelan President Nicolas Maduro has refused to allow humanitarian aid to enter the struggling nation, denying there is a crisis and contending that permitting international relief could pave the way for foreign intervention. But what little data officials have released indicates Venezuelans are facing mounting health challenges. Cases of infant and maternal mortality have risen sharply and long-eradicated maladies like diphtheria have re-emerged.</p>

	<p>By law, Colombia's hospitals are required to treat any person, local or foreign, who shows up at an emergency room. But many Venezuelans are arriving with chronic conditions like cancer and diabetes that require expensive, continuing care. Health institutions in Colombia are not required to provide those treatments.</p> <p>"We handle the emergency room care, but beyond that there is no more we can do," said Juan Ramirez, director of the Erasmo Meoz Hospital in Cucuta.</p> <p>Cucuta health officials estimate the cost of caring for Venezuelan migrants will climb millions of dollars this year. Most of that cost ends up being funded by cash-strapped local institutions that say they need the help of the central government and international community.</p>

<b>HEADLINE</b>	<b>03/08 Germany: deaths from nitrogen dioxide</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Health/wireStory/german-government-calculates-deaths-nitrogen-dioxide-53602457">http://abcnews.go.com/Health/wireStory/german-government-calculates-deaths-nitrogen-dioxide-53602457</a>
<b>GIST</b>	<p>Thousands of people die prematurely each year in Germany from the harmful effects of nitrogen dioxide, a gas that's produced by diesel engines, according to a government-sponsored report published Thursday.</p> <p>The study commissioned by the Federal Office for the Environment concluded that almost 6,000 people died prematurely in 2014 from illnesses that are known to be caused or aggravated by nitrogen dioxide, or NO2.</p> <p>The study, conducted by the publicly funded Helmholtz Center Munich and private company IVU Umwelt GmbH, used widely accepted statistical models to determine how many deaths could be attributed to NO2.</p> <p>It compared deaths from diabetes, asthma and other diseases with emissions records in cities and the countryside.</p> <p>The 172-page report was published a week after a German court ruled that cities can ban the use of diesel cars as part of measures to improve air quality.</p> <p>"This study shows how much nitrogen dioxide harms health in Germany," the head of the Federal Office for the Environment, Maria Krautzberger, said. "We should do everything to make our air clean and healthy."</p> <p>The report found that the number of deaths fell from a peak of 8,157 in 2008, in line with a gradual decline in NO2 emissions in Germany.</p> <p>It took a conservative approach, only examining diseases that have a well-established link with NO2 and excluding the impact in areas where emissions are below 10 micrograms per cubic meter.</p> <p>Still, it found the disease burden was up to 50 percent higher in areas with significant NO2 levels than in those areas where emissions were below the study threshold.</p> <p>The study also calculated what's called the "years lost" as a result of elevated emissions, resulting in a figure of 49,726 fewer years of life for the population across Germany in 2014.</p>

<b>HEADLINE</b>	<b>03/07 Teacher unions see momentum build</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/03/07/teacher-unions-see-momentum-build-with-west-virginia-strike.html">http://www.foxnews.com/us/2018/03/07/teacher-unions-see-momentum-build-with-west-virginia-strike.html</a>
<b>GIST</b>	<p>As teachers in West Virginia noisily celebrated a 5 percent raise that ended their nine-day walkout, momentum was building elsewhere for similar protests over pay and benefits for the nation's public school teachers.</p>

Teachers in Oklahoma and Arizona are contemplating actions of their own amid growing frustration over meager pay. Teachers and staff in eight Kentucky school districts were planning "walk in" rallies Thursday to protest proposed cuts to their retirement benefits. Teachers in Pittsburgh reached a tentative agreement after threatening a strike, and hundreds of educators held demonstrations this week in Jersey City, New Jersey.

The unions' victory in the West Virginia strike has given a boost to organizers who say the national spotlight on teacher pay is long overdue.

"To be able to do that there? I think people in Arizona started looking at each other saying, 'Wow!'" said Noah Karvelis, an art teacher in Phoenix who helped launch a campaign urging Arizona teachers to wear red Wednesday as a show of solidarity. The demonstration was meant to gauge interest in stronger action by teachers, who received a 1 percent pay increase this year, Karvelis said.

From West Virginia, which has some of the nation's lowest teacher salaries, unions heard familiar stories of educators struggling to get by. The teachers behind the walkout that shuttered public schools statewide said the 2 percent pay raise initially proposed would not have covered their rising health insurance costs.

Some of the teachers who returned to classrooms on Wednesday said they hope unions around the country will be encouraged by what they accomplished.

"I do think this strike can be the start of something big nationally," said Melinda Monks, a special education teacher at Bridgeview Elementary in South Charleston, West Virginia. "Because the United States, as Gov. (Jim) Justice says, has fallen behind in education, behind some of our other nations, and I think it's time that teachers step forward and demand a more central role in education and more respect for our profession."

Teacher unrest around the United States has grown as strong health care and retirement benefits, viewed in the late 1980s and 1990s as a tradeoff to slower pay growth, have begun to erode at district or state levels, said Becky Pringle, vice president of the National Educators Association.

"They're really feeling it now and they're leaving all of their options open in terms of what kinds of actions they are ready to take," she said.

The daily demonstrations and legislative back and forth were closely watched from Oklahoma, where teachers union President Alicia Priest said large numbers of teachers are leaving the profession and state because of funding cuts and compensation that lags behind surrounding states by \$5,000 to \$20,000. The union there is pushing for pay raises of \$10,000 over three years.

"It certainly does embolden us," Priest said.

Nationally, the average teacher's salary was \$58,950 in 2017, according to the National Center for Education Statistics, more than \$10,000 above what teachers earn in West Virginia, Oklahoma and Arizona.

Tom Ramming, an educational policy professor at the University at Buffalo, attributed much of West Virginia's impact to its statewide scope, whereas in many other states contracts are settled at the district or county level.

"When the entire teaching force ... goes out on strike and they're united," Ramming said, "people take notice."

**HEADLINE** 03/07 Destitute Rohingya in 'race against time'

**SOURCE** <https://www.nbcnews.com/news/world/rohingya-muslims-will-soon-face-cyclones-monsoons->

	<a href="#">bangladesh-n853026</a>
GIST	<p>Refugees driven out of Myanmar by what the U.S. has called "ethnic cleansing" now face a new threat: the looming monsoon and cyclone season.</p> <p>Authorities have warned that more than 100,000 Rohingya Muslims who fled into neighboring Bangladesh are at risk of losing their makeshift homes to the deadly floods and landslides that accompany seasonal rains.</p> <p>Workers are scrambling to reinforce shelters and dig drainage systems before the bad weather is expected next month.</p> <p>“On the hill where my house is built there are 960 houses and this hill will possibly collapse in the coming monsoon season,” said refugee and community leader Sabbir Ahmed, responding to questions asked by NBC News with the help of a translator supplied by the International Organization for Migration, the U.N.'s migration agency.</p> <p>Ahmed is one of the nearly 700,000 refugees — roughly the same number of people who live in Denver or Seattle — who have streamed out of Myanmar since violence erupted in August.</p> <p>On Wednesday, U.N. human rights chief Zeid Ra'ad al-Hussein said that he strongly suspected "acts of genocide" may have taken place against the ethnic minority in Myanmar's northern Rakhine State since then. He also suggested that reports of the bulldozing of mass graves in Myanmar showed a "deliberate attempt by the authorities to destroy evidence of potential international crimes, including possible crimes against humanity."</p> <p>The situation described by Ahmed is largely the same in other makeshift camps housing the refugees near Cox's Bazar, Bangladesh.</p> <p>“It’s a race against time,” said Caroline Gluck, a spokeswoman for the United Nations refugee agency (UNHCR) in the country. “We’re very alarmed, we’re very concerned, we’re doing what we can but we’re not sure it’s going to be enough.”</p> <p>Steep hills that were once covered in trees and foliage have now been cleared to make way for the tarpaulin shelters. Now bare and sandy, the banks have become more vulnerable to landslides in rainy conditions, Gluck explained.</p> <p>“Families have also been digging up the roots to use as firewood for cooking so there is nothing holding the soil together,” she added. “The soil is eroding. It’s like gravel.”</p> <p>Conditions are so cramped in the settlements that some of the shelters have been built on 45-degree slopes. The close quarters fall short of accepted international standards for refugees, Gluck added.</p> <p>“For the people who’ve built at the top of these slopes, then their shelters are at risk of being carried away in mudslides," a spokeswoman for the U.N.'s migration agency (IOM), Fiona MacGregor, said. "For the people at the bottom, they face the threat not only of mud and other debris landing on them from above, but also of flash floods."</p> <p>The rains are likely to start falling in April and could last until September, while May and June tend to be the wettest months, she added.</p> <p>The floods could also leave hundreds of thousands vulnerable to disease and unable to get aid if flooding cuts off parts of the settlements, the IOM warned.</p>

<b>GIST</b>	<p>Brazil's yellow fever outbreak has now infected more people than the previous one, which had been the largest in decades.</p> <p>The Health Ministry said Wednesday that officials have confirmed 846 cases of the mosquito-borne disease. Of those, 260 have died.</p> <p>In the 2016-2017 outbreak, Latin America's largest nation saw 777 cases and 261 deaths.</p> <p>Large swaths of Brazil have long been at risk for yellow fever. But the previous outbreak and the current one are happening in areas not previously considered at risk for the disease and where vaccination rates were low. The current outbreak is hitting the populous states of Sao Paulo and Minas Gerais hard and encroaching on major cities.</p> <p>In response, Brazil has launched a campaign to vaccinate more than 23 million people.</p>

<b>HEADLINE</b>	<b>03/07 Nor'easter prompts flight cancellations</b>
<b>SOURCE</b>	<a href="https://www.cnbc.com/2018/03/07/noreaster-prompts-airlines-to-cancel-more-than-1900-flights.html">https://www.cnbc.com/2018/03/07/noreaster-prompts-airlines-to-cancel-more-than-1900-flights.html</a>
<b>GIST</b>	<p>Forecasters have tweaked their snowfall predictions several times as another powerful winter storm approached the Northeast, but many airlines weren't taking any chances.</p> <p>Airlines canceled more than 2,200 flights scheduled for Wednesday to or from major airports in the Boston, Philadelphia and New York area, according to flight-tracking site FlightAware.</p> <p>Newark Liberty International Airport was closed as of Wednesday afternoon and was expected to reopen before 4 p.m. EST, according to the Federal Aviation Administration. A ground stop was in place at Philadelphia International Airport. A ground stop orders aircraft scheduled to fly to a certain airport to wait until conditions improve before departing. The FAA had earlier issued a ground stop at New York's LaGuardia Airport but that had been lifted as of 2 p.m. ET.</p> <p>The FAA said delays were minimal at most major airports in the Northeast. But carriers had canceled more than a third of flights from the New York City area's three main airports.</p> <p>At Newark, a major hub of United Airlines, about half of the airport's departures, or 329 flights, had been canceled as of Wednesday morning. Carriers canceled 294 flights from LaGuardia Airport and 260 from John F. Kennedy International Airport, according to FlightAware. A similar number of flights to those airports were also canceled. More than 280 flights were canceled to and from Boston Logan International Airport.</p> <p>Airport officials warned travelers to check with their airlines before heading to the airport.</p> <p>Airlines including United, Delta, JetBlue, American waived change fees for travelers affected by the storm if those individuals could move their trips to the coming days.</p>

<b>HEADLINE</b>	<b>03/07 Calif. governor slams DOJ lawsuit</b>
<b>SOURCE</b>	<a href="http://www.sacbee.com/latest-news/article203920624.html">http://www.sacbee.com/latest-news/article203920624.html</a>
<b>GIST</b>	Gov. Jerry Brown on Wednesday slammed U.S. Attorney General Jeff Sessions for "initiating a reign of terror" against immigrants in California.

Sessions on Tuesday filed suit against the state over three new laws, passed last year to protect immigrants living in California illegally, that he argues violate the supremacy clause of the U.S. Constitution and interfere with federal immigration enforcement.

"This is basically going to war against the state of California, the engine of the American economy," Brown said. "It's not wise, it's not right and it will not stand."

Brown and California Attorney General Xavier Becerra held a press conference at the Capitol to defend the laws following a speech by Sessions to a law enforcement conference in downtown Sacramento on Wednesday morning. In the speech, which Brown dismissed as a "political stunt," Sessions accused California officials of creating an open borders system and trying to secede from the United States.

"It's about dividing America," Brown said, adding that Sessions was acting more like Fox News than the country's top law enforcement official. "I call upon him to apologize to the people of California for bringing the mendacity of Washington to California and trying to insert discord and division, and I might add dysfunctionality, in a state that's really working."

Senate Bill 54, Assembly Bill 103 and Assembly Bill 450 – the three laws that Sessions sued over – restrict California law enforcement officials from cooperating on federal immigration actions, limit the ability of local jails to contract with the federal government to house immigrant detainees, and require employers to ask for a warrant before allowing immigration authorities to conduct a workplace raid.

Commonly known as the "sanctuary state" law, SB 54 has been by far the most controversial. In its lawsuit, the federal government argued that it forces the release of immigrants who have already shown a willingness to engage in criminal activity.

Becerra defended the law under the 10th Amendment of the U.S. Constitution, which he said gives California the right to decline to participate in civil immigration enforcement. He said Trump's threats to pull grants from local police agencies over SB 54 amounted to "coercion."

"Here in California, we respect the law and the Constitution. We expect the federal government to do the same," Becerra said at the press conference. "California is in the business of public safety. We're not in the business of deportations."

<b>HEADLINE</b>	<b>03/07 Belgium issues iodine pills</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/07/europe/belgium-iodine-pills-intl/index.html">https://www.cnn.com/2018/03/07/europe/belgium-iodine-pills-intl/index.html</a>
<b>GIST</b>	<p>(CNN)Pharmacies across Belgium are being stocked with iodine pills as part of a new government emergency plan to help protect citizens against a potential nuclear accident.</p> <p>The revised plan, which was issued by the National Crisis Center on Tuesday, sets out a number of safety provisions, focusing in particular on people living within 20 kilometers (about 12 miles) of emergency planning zones surrounding five nuclear sites.</p> <p>Within these zones, which surround sites at Doel, Tihange, Mol-Dessel, Borssele and Chooz (just over the border in France), residents will receive iodine tablets to protect them against radioactive iodine and prevent thyroid cancer in case of a nuclear accident. Elsewhere, the government is stocking pharmacies with iodine tablets to be made freely available to all, with young people under the age of 18 and pregnant women specifically being encouraged to pick up a pack.</p> <p>The emergency zone extends 10 kilometers (about 6 miles) around the Fleurus reactor.</p> <p>The government is also making preparations to swiftly evacuate people living within 10 kilometers of these nuclear sites, as well as encouraging residents to subscribe to the BE-Alert alarm system so they'll</p>

	<p>get information quickly in case of a nuclear accident.</p> <p>A representative for the Federal Agency for Nuclear Control told CNN the measures are merely precautional and do not indicate an imminent threat.</p>

<b>HEADLINE</b>	<b>03/07 NSA leak reveals list enemy hackers</b>
<b>SOURCE</b>	<a href="https://www.wired.com/story/nsa-leak-reveals-agency-list-enemy-hackers/">https://www.wired.com/story/nsa-leak-reveals-agency-list-enemy-hackers/</a>
<b>GIST</b>	<p>WHEN THE STILL-UNIDENTIFIED group calling itself the Shadow Brokers spilled a collection of NSA tools onto the internet in a series of leaks starting in 2016, they offered a rare glimpse into the internal operations of the the world's most advanced and stealthy hackers. But those leaks haven't just let the outside world see into the NSA's secret capabilities. They might also let us see the rest of the world's hackers through the NSA's eyes.</p> <p>Over the last year, Hungarian security researcher Boldizsár Bencsáth has remained fixated by one of the less-examined tools revealed in that disemboweling of America's elite hacking agency: A piece of NSA software, called "Territorial Dispute," appears to have been designed to detect the malware of other nation-state hacker groups on a target computer that the NSA had penetrated. Bencsáth believes that specialized antivirus tool was intended not to remove other spies' malware from the victim machine, but to warn the NSA's hackers of an adversary's presence, giving them a chance to pull back rather than potentially reveal their tricks to an enemy.</p> <p>That means the Territorial Dispute tool might offer hints of how NSA sees the broader hacker landscape, argues Bencsáth, a professor at CrySys, the Laboratory of Cryptography and System Security at the Budapest University of Technology and Economics. In a talk on the leaked software at Kaspersky's Security Analyst Summit later this week—and in a paper he's planning to post to the CrySys website on Friday and asking others to contribute to—he's calling on the security research community to join him in investigating the software's clues.</p> <p>In doing so, Bencsáth hopes to determine which other countries' hackers the NSA has been aware of, and when they became aware of them. Based on some matches he's established between elements of Territorial Dispute's checklist and known malware, he argues the leaked program potentially shows that the NSA had knowledge of some groups years before those hackers' operations were revealed in public research. Since it also includes checks for some malware he hasn't been able to match with public samples, Bencsáth believes the tool demonstrates the NSA's knowledge of some foreign malware that still hasn't been publicly revealed. He hopes that more researchers digging into the software might lead to a better understanding of the NSA's view of its adversaries, and even potentially reveal some still-secret hacker operations today.</p> <p>"The idea is to find out what the NSA knew, to find out the difference between the NSA viewpoint and the public viewpoint," says Bencsáth, arguing that there may even be a chance of uncovering current hacking operations, so that antivirus or other security firms can learn to detect their infections. "Some of these attacks might even still be ongoing and alive."</p> <p>When the leaked version of Territorial Dispute runs on a target computer, it checks for signs of 45 different types of malware—neatly labelled SIG1 through SIG45—by searching for unique files or registry keys those programs leave on victim machines. By cross-referencing those so-called "indicators of compromise" with CrySys's own database of millions of known malware samples, Bencsáth was able to identify 23 of the entries on Territorial Dispute's malware list with some degree of confidence.</p> <p>Bencsáth says SIG1, for instance, is the notorious Agent.btz worm that infected Pentagon networks in 2008, likely the work of Russian state hackers. SIG2 is malware used by another known Russian state</p>

hacker group, Turla. The last—and Bencsath believes, most recent—entry on the list is a piece of malware discovered publicly in 2014, and also tied to that long-running Turla group.

Other specimens on the list range from the Chinese malware used to hack Google in 2010, to North Korean hacking tools. It even checks for the NSA's own malicious code: The joint Israeli and NSA creation Stuxnet, used to destroy Iranian nuclear enrichment centrifuges around the same time, is labelled as SIG8. While the inclusion of the NSA's own malware on the list may seem strange, Bencsath speculates it may have been included as an artifact from a time before tools like Stuxnet were widely known to be a US operation, to prevent low-level operators from distinguishing US malware used in classified operations beyond their security clearance from the malware of foreign countries.

Bencsath believes that the specimens in the list appear roughly in chronological order, seemingly based on when each was first known to be deployed. If that ordering holds, he says, it suggests that the NSA may in some cases have known about different hacker operations years before those hacking campaigns were revealed in public research. A collection of malware known as "Cheshire Cat" is listed before the Chinese malware used in the 2010 attack on Google, and researchers believe elements of the campaign dates back as early as 2002. But that code was only revealed publicly in a talk at the Black Hat conference in 2015.

In another case, Territorial Dispute lists the malware known as Dark Hotel, believed to have been used by North Korean hackers to spy on targeted hotel guests as SIG25. If the chronology theory holds, that would place it before Duqu, a piece of NSA malware discovered by Bencsath's own CrySys lab in 2011. That means the NSA may have kept knowledge of invasive North Korean malware under wraps for three years, even as it was used to target victims that included US executives and NGOs.

"If they knew so much more about the topic, I don't know what they did to help," Bencsath says. "If they don't tell the industry what to protect against, it's a problem." The NSA's public affairs office didn't respond to WIRED's request for comment on Bencsath's research.

#### Unknown Unknowns

To be fair, the exact chronology of Territorial Dispute's malware list is far from confirmed. Some entries on the list do seem to appear out of order. And even if the NSA did keep its knowledge of ongoing attacks secret, that would fit its usual modus operandi, says Matthew Suiche, the founder of security firm Comae Technologies, who has closely tracked the Shadow Brokers' leaks. After all, the NSA keeps plenty of other secrets for the sake of preserving its capabilities, from zero-day vulnerabilities to the proof behind the US government's attribution of hacker attacks to certain countries.

"It doesn't surprise me they do the same thing with APTs," says Suiche, using the industry jargon for "advanced persistent threats" to refer to state-sponsored hacking groups. "They don't want the adversary to understand their actual capacity." If analysis of Territorial Dispute does reveal the NSA's secret knowledge of its adversaries, it could represent another blow to the NSA's advantage of surprise over those adversaries—as with so many other of the Shadow Brokers' leaks.

"They don't want the adversary to understand their actual capacity.

But Suiche also notes limitations in the information that can be gleaned from the Territorial Dispute code. It only includes a few simple indicators of compromise for each type of malware and just 45 types, a vastly simpler collection of data than the average antivirus software—a decision Suiche guesses may have been intended to make the tool more lightweight and less sensitive if it were discovered by an adversary. Like other Shadow Brokers leaks, it may also be a years-old piece of code. Bencsath, for his part, says he's not entirely sure of the freshness date on the NSA's leaked software.

But even if it turns out to be years out of date, Territorial Dispute nonetheless contains evidence of some state-sponsored hacking operations that still haven't been publicly identified, Suiche believes. "This definitely shows that the NSA is tracking APTs that still haven't been discovered," Suiche says, pointing to several of the entries on Territorial Dispute's list for which he couldn't find any public record.

<b>HEADLINE</b>	<b>03/08 Audit: DHS security is insecure</b>
<b>SOURCE</b>	<a href="https://www.theregister.co.uk/2018/03/08/feds_scolded_for_slow_security_patching_and_outdated_operating_systems/">https://www.theregister.co.uk/2018/03/08/feds_scolded_for_slow_security_patching_and_outdated_operating_systems/</a>
<b>GIST</b>	<p>The United States' Department of Homeland Security could do more to keep its IT systems secure, a government report has found.</p> <p>In an agency-wide audit titled "Evaluation of DHS' Information Security Program for Fiscal Year 2017" (PDF), the DHS's watchdog, the Office of Inspector General (OIG), concluded that DHS "could protect its information and systems more fully and effectively."</p> <p>Based on a scale of five possible maturity levels – 1) ad hoc; 2) defined; 3) consistently implemented; 4) managed and measurable; and 5) optimized – DHS' information security program rated level three in three of the five areas evaluated, shy of the passing grade, level 4.</p> <p>DHS fell short implementing the various configuration settings required to protect systems, continued using unsupported operation systems, failed to patch critical vulnerabilities quickly, failed to monitor software licenses on unclassified systems, and didn't plan well enough for recovery from service disruptions.</p> <p>The report, dated March 1 and released on Wednesday, March 7, found that as of June 30, 2017, 64 systems lacked the authority to operate, based on government security criteria. Of these, 16 were classified national security systems and 48 were unclassified systems.</p> <p>The results nonetheless represent an improvement over 2016 when 79 unclassified systems were deemed insufficiently protected.</p> <p>According to the report, the foremost reason that the DHS failed to meet its security goals was lack of security talent.</p> <p>Among the issues identified were:</p> <p>Exchange folders were indexed in cache mode, which means user emails could be accessed if the machine was compromised.</p> <p>Registry auditing was not always enabled, thereby allowing unattributed changes to the Windows registry.</p> <p>Anonymous access to shared network drives was not always disabled.</p> <p>The report also scolds DHS for continuing to use unsupported operating systems. DHS, the Coast Guard, and the Secret Service were all found to be using Windows Server 2003 after Microsoft's July 2015 discontinuation of support.</p> <p>The OIG also noted that Windows workstations at DHS, the Federal Emergency Management Agency (FEMA), and the Coast Guard were missing a variety of patches.</p> <p>"Windows 2008 and 2012 operating systems were missing security patches for Oracle Java, an unsupported version of Internet Explorer, and a vulnerable version of Microsoft's Sidebar and Gadgets applications," the report says. "Some of the missing security patches dated back to July 2013."</p> <p>A number of Windows 8.1 and Windows 7 workstations were missing key security patches, including the WannaCry fix, various browser updates, and patches for Adobe Flash, Shockwave, and Acrobat flaws.</p>

	<p>The report concludes that the observed deficiencies run contrary to the President’s Cybersecurity Executive Order and demonstrate the need for stronger security oversight.</p> <p>"Until DHS overcomes challenges to addressing its systemic information security weaknesses, it will remain unable to ensure that its information systems adequately protect the sensitive data they store and process," the report concludes.</p>

<b>HEADLINE</b>	<b>03/07 Economic crime in Canada leaping</b>
<b>SOURCE</b>	<a href="https://www.itworldcanada.com/article/rate-of-economic-crime-in-canada-is-leaping-report/402551">https://www.itworldcanada.com/article/rate-of-economic-crime-in-canada-is-leaping-report/402551</a>
<b>GIST</b>	<p>After several years of relatively stable numbers the rate of economic crime in Canada took a leap in 2017, according to numbers from PriceWaterhouse Coopers.</p> <p>Fifty-five per cent Canadian respondents reported experiencing economic crime in the last 24 months, the consulting company reported Wednesday, compared to 37 per cent in 2016, and 36 per cent in 2014.</p> <p>Cyber crime (46 per cent), asset misappropriation (38 per cent) and consumer fraud (36 per cent) were the most frequently reported crimes.</p> <p>Within cyber crime, phishing (58 per cent) was the most reported problem in the previous 24 months, followed by malware (45 per cent) and network scanning (20 per cent).</p> <p>The Canadian numbers were part of PWC’s annual global survey on economic crime.</p> <p>Nearly half (48 per cent) of Canadian respondents predicted that cybercrime will be the most disruptive force to their organization in the next two years.</p> <p>The Canadian report concludes from these and other numbers that while economic crime is up, the defence measures necessary to detect and prevent it can — and should — be improved and strengthened across Canadian organizations.</p> <p>“In order to stay competitive and innovate in the digital world, Canadian organizations need to revisit their cybercrime program to balance risk and opportunity,” the report says.</p> <p>“Looking at the data, it’s clear that fighting fraud today requires a shift from macro to micro measures. Companies can no longer rely solely on the loss prevention department or IT reports to detect fraud — they need sophisticated, targeted controls that can be continuously monitored for their effectiveness at all possible touch points, across functional teams, from the back office to the front lines of their business.”</p>

<b>HEADLINE</b>	<b>03/07 Hackers prepping for ‘March Madness’</b>
<b>SOURCE</b>	<a href="https://www.thestreet.com/story/14510668/1/hackers-to-step-up-their-games-during-march-madness.html">https://www.thestreet.com/story/14510668/1/hackers-to-step-up-their-games-during-march-madness.html</a>
<b>GIST</b>	<p>The hype surrounding March Madness will increase daily, followed a surge in cyber attacks as the number of people participating in NCAA brackets and betting pools expands and fraudsters are on the prowl.</p> <p>Cyber criminals are prepped for the hype and the excitement building around the NCAA basketball games by infecting emails with malware, creating fake betting websites and increasing phishing attacks. As millions of Americans fill out tournament brackets as part of their office pool, more phishing attacks and financial scams will occur.</p> <p>"First of all, you should avoid emailed requests to participate in polls, surveys and contests related to</p>

March Madness unless you know that you personally signed up to be a part of such things," said Nathan Wenzler, chief security strategist at AsTech, a San Francisco-based security consulting company:

Some fans are taking the opportunity to place bets and want to cash in on the annual tournament through online betting options and apps to generate additional funds.

While ardent enthusiasts may enter numerous tournament brackets, players should enter the website into their browser directly.

"Phishing emails may eventually forward you on to the right site, but they can simply take over the session to direct you to other sites that download ransomware or malware to your system before they forward you along," said Wenzler.

The number of apps that are available will also rise.

"By participating in March Madness betting, you are quite likely providing important credentials about your own identity to an app developer or website owner that you might not trust or be able to verify," said Joram Borenstein, vice president of marketing at NICE Actimize, a Hoboken, N.J.-based financial crime software solutions provider.

The hackers are seizing the occasion to cash in from the online bets and phishing scams also.

"March Madness is back and with it comes a great opportunity for cyber criminals who are intent on making some quick cash, said Steve Durbin, managing director of the Information Security Forum, a London-based authority on cyber, information security and risk management. "Did you really place that bet and have you really scooped the pot?"

Fraudsters will lure unsuspecting or novice gamblers in with corrupt alerts and websites, even with claims of new winnings.

"The number of 'winners' over the next couple of weeks will be pretty astonishing, however, just be sure you're on the right side and don't end up becoming another statistic on the losing side," he said.

The number of emails individuals receive will also surge and fans should look for warning signals such as an embedded link or attachment.

"Email infection, fake betting websites and traditional phishing attacks are all expected to have their day in the sun," Durbin said. "It is far better to use a well-known brand or one you have used in the past."

The scams perpetrated by cyber criminals are not new ones, said Dan Lohrmann, chief security officer at Security Mentor, a Pacific Grove, Calif.-based provider of security awareness training.

"It is not going to end anytime soon," he said. "If you don't fall for some of these tricks during March Madness, another major event is right around the corner."

These trends will continue even after millions of people stop watching the March Madness games, said Lohrman.

<b>HEADLINE</b>	<b>03/07 India report: 22,000 websites hacked</b>
<b>SOURCE</b>	<a href="http://www.financialexpress.com/industry/technology/cyber-attack-of-mammoth-scale-over-22000-indian-websites-hacked-between-april-2017-january-2018/1090665/">http://www.financialexpress.com/industry/technology/cyber-attack-of-mammoth-scale-over-22000-indian-websites-hacked-between-april-2017-january-2018/1090665/</a>
<b>GIST</b>	Over 22,000 Indian websites, including 114 government portals were hacked between April 2017 and January 2018, Parliament was informed today. "As per information reported to and tracked by Indian

	<p>Computer Emergency Response Team (CERT-In), a total of 22,207 Indian websites including 114 government websites were hacked during April 2017 to January 2018. A total number of 493 affected websites were used for malware propagation,” Minister of State for Electronics and IT K J Alphons said in a written reply to Lok Sabha.</p> <p>Besides, as per the information reported to and tracked by National Informatics Centre (NIC), a total number of 74 and six government websites hosted on NICNET were hacked during 2017 and 2018 (till February), respectively, he added. The minister said 301 security alerts regarding potential vulnerabilities and threats to multiple systems and applications were issued by CERT-In during April 2017-January 2018.</p> <p>In addition, various tailored alerts were sent to key organisations to enable them to detect and prevent cyber attacks. In response to a separate query, Alphons said all the new government websites and applications are to be audited with respect to cyber security prior to their hosting along with audit on a regular basis after hosting.</p> <p>“Organisations use servers to host websites and applications for dissemination of information and providing services to users. The servers not configured properly and having vulnerable software are prone to hacking and could be misused by cyber criminals,” he said. He added that continuous efforts are required to be made by owners to protect servers by way of hardening and deploying appropriate security controls.</p>

<b>HEADLINE</b>	<b>03/07 Energy firms worried over cyberattacks</b>
<b>SOURCE</b>	<a href="https://www.forbes.com/sites/mikescott/2018/03/07/energy-industry-worried-about-cyber-attacks-but-doesnt-really-know-what-to-do/#23ca36668bb7">https://www.forbes.com/sites/mikescott/2018/03/07/energy-industry-worried-about-cyber-attacks-but-doesnt-really-know-what-to-do/#23ca36668bb7</a>
<b>GIST</b>	<p>Energy companies are becoming increasingly concerned about the impact of cyber-attacks on their operations, but many are still struggling to get to grips with the risks, a new survey reveals.</p> <p>The report, by the global insurance and risk management group Marsh, Could Energy Industry Dynamics Be Creating an Impending Cyber Storm?, shows that more than one in four respondents were aware that their company had been hit by a damaging cyber attack in the last year, while more than three quarters of respondents (76%) were worried about cyber attacks interrupting their business operations, with a similar proportion (77%) preparing to increase the amount they invest in managing cyber risks.</p> <p>Yet, despite these fears about the impact of cyber attacks on production and revenues, more than half of energy executives in the survey had not quantified or did not know what their worst possible exposures could be. The Marsh study follows the publication in January of the World Economic Forum’s Global Risk Report 2018, which said: “Cyberattacks are perceived as the global risk of highest concern to business leaders in advanced economies. Cyber is also viewed by the wider risk community as the risk most likely to intensify in 2018, according to the risk perception survey that underpins the Global Risks Report.”</p> <p>Exposure to risks from cyber is growing as firms become more dependent on technology, the WEF added, thanks to the massive growth in devices connected by the internet of things – the number of such devices is expected to jump from 8.4 billion today to 20 billion in 2020. An increase in the use of artificial intelligence in business is adding to companies’ risk exposure. “Attacks are increasing, both in prevalence and disruptive potential,” the WEF said.</p> <p>The energy industry was relatively late to adopt digitalization, even though – as an asset-intensive sector with many remote and hazardous sites – it is in many ways the ideal setting for the industrial internet of things. In part this was because of the importance of energy infrastructure to national economies and companies’ subsequent caution about adopting new technologies. There was also a certain amount of complacency because until recently, most energy installations “did not communicate with traditional IT networks,” according to Greentech Media.</p>

However, the growing complexity and decentralization of the grid, the growth of renewable energy and the increased availability of technologies such as sensors, machine learning and big data, have started to make their mark. As the vehicle sector also becomes more electric and the automotive and energy sectors become more integrated, this trend will only increase. “As the energy sector systems that monitor and run operations become more interconnected from smart grids, smart devices, and the growing internet of things, it increases the risk that a cyber-attack could result in physical damage,” Marsh said.

And this is potentially more serious in the energy sector than other parts of the economy. “An attack on energy infrastructure has the potential to cross from the cyber realm to the physical world – a cyberattack could cause, for instance, a massive operational failure of an energy asset. Large centralized infrastructures are especially at risk due to the potential “domino effect” damage that an attack on a nuclear, coal, or oil plant could cause,” the report noted.

This growing exposure has led the US Department of Energy to set up an office to protect the nation’s power grid and other infrastructure against cyber attacks and natural disasters. The \$96 million in funding for the Office of Cybersecurity, Energy Security, and Emergency Response followed a hacking campaign in 2017 that targeted a number of electricity companies, including at least one nuclear power plant.

Andrew Herring, Energy and Power Practice Leader, for the EMEA region at Marsh commented: “As the energy industry relies more on interconnectivity as a result of greater digitalisation, the potential for cyber-attacks to cause severe disruption to operations, loss of data, and, consequently, high financial losses, should be a key concern for energy executives.

“While it is encouraging that three-quarters of respondents plan more investment in cyber risk management, it is worrying that over half questioned have yet to quantify their exposures. For those firms that have not put plans in place to mitigate and manage attacks or have not measured their cyber exposure, now is the time to take steps to be prepared for the impact an attack could have on their operations and systems.”

**HEADLINE** 03/07 Amazon confirms Alexa problem

**SOURCE** <http://time.com/5190044/amazon-alexa-echo-laughing/?xid=homepage>

**GIST** It turns out that Amazon’s Alexa does indeed think something is funny.

After days of reports that users of the Amazon Echo and other devices with Amazon’s Alexa voice-activated assistant were experiencing random Alexa laughing fits, Amazon confirmed the problem Wednesday.

“We’re aware of this and working to fix it,” an Amazon spokesperson told The Verge.

Reports of the laughing Alexas first surfaced last month when one Twitter user reported on an Echo Dot that randomly started laughing without being prompted. Others then tweeted about similar occurrences with their own Alexa devices. Another Twitter user said an Echo whistled without prompting.

The glitch came after Alexa temporarily “lost her voice” because of another issue. Amazon did not immediately respond to a request for comment from TIME, and it remains unclear how soon the glitch will be resolved.

**HEADLINE** 03/07 Flawed Ammy RAT takes over desktops

**SOURCE** <https://www.infosecurity-magazine.com/news/flawedammy-rat-takes-over-desktops/>

<b>GIST</b>	<p>A previously undocumented remote access Trojan (RAT) called FlawedAmmyy has been discovered as the payload in two massive email campaigns this week.</p> <p>Proofpoint researchers discovered that the RAT has actually been used since the beginning of 2016 in both highly targeted email attacks and massive, multi-million message campaigns. Narrow attacks targeted the automotive industry, among others, while the large, malicious spam campaigns appear to be associated with threat actor TA505, an actor responsible for many large-scale attacks using Dridex, Locky and GlobeImposter, among others, over the last four years.</p> <p>In the most recent campaigns, on March 5 and 6, email messages containing zipped URL attachments were sent from addresses spoofing the recipient's own domain, with subjects such as "Receipt No" with random digits following, with matching attachments.</p> <p>The URL files are interpreted by Microsoft Windows as internet shortcut files, but when clicked, they download and execute a JavaScript file over the Server Message Block (SMB) protocol; the JavaScript file in turn downloads Quant Loader and then FlawedAmmyy RAT as the final payload.</p> <p>The FlawedAmmyy RAT also appeared on March 1 in a narrowly targeted attack.</p> <p>It is based on leaked source code for version 3 of the Ammyy Admin remote desktop software, and its features include remote desktop control, file system manager, proxy support and audio chat.</p> <p>"For infected individuals, this means that attackers potentially have complete access to their PCs, giving threat actors the ability to access a variety of services, steal files and credentials, and much more," Proofpoint researchers said in a blog. "We have seen FlawedAmmyy in both massive campaigns, potentially creating a large base of compromised computers, as well as targeted campaigns that create opportunities for actors to steal customer data, proprietary information, and more."</p>

<b>HEADLINE</b>	<b>03/07 Ransomware struck 55% organizations</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/half-of-all-orgs-hit-with/">https://www.infosecurity-magazine.com/news/half-of-all-orgs-hit-with/</a>
<b>GIST</b>	<p>About 55% of organizations in a recent survey were compromised by ransomware in 2017, down from 61% in 2016.</p> <p>According to Imperva's CyberEdge Group's fifth annual Cyberthreat Defense Report, which polled 1,200 IT security decision makers and practitioners participating from 17 countries, 6 continents, and 19 industries, respondents who were victimized by ransomware and who elected to pay the ransom (usually in Bitcoin) were asked if they successfully recovered their compromised data. Surprisingly, only half confirmed successful data recovery, while the other half acknowledged complete data loss.</p> <p>Out of the companies that refused to pay the ransom, a full 87% recovered their data.</p> <p>"Just over half of the survey respondents admitted that following a ransomware infection they still lost their data even though they paid the fine," said Terry Ray, CTO, Imperva. "This highlights the reality that there is no guarantee a company will get their data back if they pay the ransom. Companies therefore need to stop ransomware attacks from the very beginning, before the encryption of data takes place. The best way to prevent an attack is to immediately detect ransomware file access behaviors before the ransomware spreads across the network and encrypts file servers. Once detected, you can quarantine impacted users, devices and systems."</p>

<b>HEADLINE</b>	<b>03/07 Stolen hard drive exposes Fresno State</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/fresno-state-data-breach-15000-affected/article/749459/">https://www.scmagazine.com/fresno-state-data-breach-15000-affected/article/749459/</a>

GIST	<p>A stolen external hard drive has led to the personal information of more than 15,000 people formerly and currently associated with California State University at Fresno athletic department.</p> <p>The hard drive was found to be missing on January 12, a theft the school believes most likely took place in late December during its winter break. The Porterville Recorder reported that the drive carried the information on 15,000 people, 300 currently at the school with the remainder being former student athletes, sports camp attendees, and athletic corporation employees.</p> <p>Fresno States' statement did not confirm the numbers involved, but did say the information exposed includes names, addresses, phone numbers, dates of birth, full or last four digits of Social Security numbers, credit-card numbers, driver's license numbers, passport numbers, user names and passwords, health-insurance numbers, and personal health information.</p> <p>“Fresno State has no reason to believe that any of the information on the hard drive has been accessed or misused,” the school statement said.</p> <p>The university has begun notifying those involved by letter and is offering free credit monitoring and recommends those included to keeping an eye on credit card usage.</p>

HEADLINE	<b>03/07 GandCrab creators tweak ransomware</b>
SOURCE	<a href="https://www.scmagazine.com/gandcrab-creators-tweak-ransomware-release-v-20/article/749462/">https://www.scmagazine.com/gandcrab-creators-tweak-ransomware-release-v-20/article/749462/</a>
GIST	<p>The developers behind GandCrab have followed up on their promise and released version 2.0 of the ransomware, one that cannot be defeated by the free GandCrab 1.0 decryptor created by Bitdefender.</p> <p>The updated version was first reported by MalwareHunterTeam, according to Bleeping Computer, which said was something the threat actors had recently promised.</p> <p>Some of the improvements include being more secure with the most obvious differentiator being the command and control server names politiaromana.bit, politiaromana.bit and gdcb.bit. The original servers were taken offline last by the Romanian police working with Bitdefender, so those behind GandCrab gave a hat tip to the Romanian police with the first name.</p> <p>Another change is the encrypted files and ransom note now have .CRAB extension and Bleeping Computer noted that the ransom note itself has been reworded to include instructions on how to contact the attackers.</p> <p>The Tor payment page was also redesigned.</p>

HEADLINE	<b>03/07 DDoS exploit code, vulnerable servers list</b>
SOURCE	<a href="https://thehackernews.com/2018/03/memcached-ddos-exploit-code.html">https://thehackernews.com/2018/03/memcached-ddos-exploit-code.html</a>
GIST	<p>Two separate proofs-of-concept (PoC) exploit code for Memcached amplification attack have been released online that could allow even script-kiddies to launch massive DDoS attacks using UDP reflections easily.</p> <p>The first DDoS tool is written in C programming language and works with a pre-compiled list of vulnerable Memcached servers.</p> <p>Bonus—its description already includes a list of nearly 17,000 potential vulnerable Memcached servers left exposed on the Internet.</p> <p>Whereas, the second Memcached DDoS attack tool is written in Python that uses Shodan search engine</p>

API to obtain a fresh list of vulnerable Memcached servers and then sends spoofed source UDP packets to each server.

Last week we saw two record-breaking DDoS attacks—1.35 Tbps hit Github and 1.7 Tbps attack against an unnamed US-based company—which were carried out using a technique called amplification/reflection attack.

For those unaware, Memcached-based amplification/reflection attack amplifies bandwidth of the DDoS attacks by a factor of 51,000 by exploiting thousands of misconfigured Memcached servers left exposed on the Internet.

Memcached is a popular open source distributed memory caching system, which came into news earlier last week when researchers detailed how hackers could abuse it to launch amplification/reflection DDoS attack by sending a forged request to the targeted Memcached server on port 11211 using a spoofed IP address that matches the victim's IP.

A few bytes of the request sent to the vulnerable Memcached server can trigger tens of thousands of times bigger response against the targeted IP address, resulting in a powerful DDoS attack.

Since last week when Memcached has been revealed as a new amplification/reflection attack vector, some hacking groups started exploiting unsecured Memcached servers.

But now the situation will get worse with the release of PoC exploit code, allowing anyone to launch massive DDoS attacks, and will not come under control until the last vulnerable Memcached server is patched, or firewalled on port 11211, or completely taken offline.

Moreover, cybercriminals groups have already started weaponizing this new DDoS technique to threaten big websites for extorting money.

<b>HEADLINE</b>	<b>03/07 Group-1B aids attack group takedown</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/group-ib-helps-suspend-ukrainian-ddos-attack-group/d/d-id/1331201">http://www.darkreading.com/attacks-breaches/group-ib-helps-suspend-ukrainian-ddos-attack-group/d/d-id/1331201</a>
<b>GIST</b>	<p>Group-IB, an international organization dedicated to cyberattack prevention and security product development, announced the takedown of a criminal group that had been launching distributed denial-of-service (DDoS) attacks and extorting companies for over two years.</p> <p>This marks the first large-scale international case of DDoS extortion in Ukraine that ended with a court sentence, Group-IB reports. The organization worked with law enforcement, cybersecurity firms, and online companies to successfully prosecute the criminals.</p> <p>The attackers were found as part of an investigation into the September 2015 DDoS attack on international online dating service AnastasiaDate. They demanded \$10,000 for stopping the attack, which shut down the site for four to six hours each day of the campaign.</p> <p>Specialists in Group-IB's investigation department analyzed the attack, identified the attackers, and discovered other incidents conducted by the same two people: Gayk Grishkyan and Inna Yatsenko, both from Ukraine. The duo later contacted AnastasiaDate in November 2016 to demand ransom and threaten to renew the DDoS attacks on its website.</p> <p>Both attackers pleaded guilty to the crimes and were each given a five-year conditional sentence. Outside the AnastasiaDate case, Grishkyan and Yatsenko had previously targeted American leasing company Stafford Associated and the PayOnline payment service.</p>

HEADLINE	<b>03/07 New online rape kit tracking system</b>
SOURCE	<a href="http://www.king5.com/article/news/local/states-new-online-rape-kit-tracking-system-about-to-launch/281-526759175">http://www.king5.com/article/news/local/states-new-online-rape-kit-tracking-system-about-to-launch/281-526759175</a>
GIST	<p>It's a painful problem that persists, years later. Thousands of rape kits still await testing in Washington state; victims of sexual assault await justice.</p> <p>However, a simple website run by Washington State Patrol will soon provide some answers, allowing victims to track their kits from hospital to lab.</p> <p>“That was the difficult part for a lot of the survivors, is that they had no idea,” said Captain Monica Alexander of WSP. “The information would be collected, their kit taken, and then lots of things were happening, but they didn't know where that kit was.”</p> <p>The online system, modeled after a similar one in Canada, is still in test phase but will begin rolling out to the public in phases, starting in mid-April.</p> <p>Each sexual assault kit will have its own barcode, and medical staff, law enforcement, and prosecutors will have their own portals to input and check cases as they move forward.</p> <p>The new tracking system stems from legislation passed in 2015 to address the state's rape kit backlog, initially estimated at 6,000 kits. It's now believed the backlog is closer to 10,000, according to law enforcement officials.</p> <p>Of the original backlog, WSP says 928 kits have been completely tested. Nearly 2,000 more are pending testing; more than 2,900 have been sent out to Sorenson lab contracted by the state. However, that's still a fraction of the grand total of older kits, on top of a growing number of new kits.</p> <p>“Every day, we're getting more kits in,” explained Captain Alexander. “Then we have the backlog. And so how do we juggle, doing all of this work, and doing it efficiently and effectively.”</p> <p>“A big part of that challenge has to do with not having enough people to process the kits because we're overworking our scientists because we don't have enough of them,” Alexander continued.</p> <p>While funding for ongoing rape kit testing made it into the latest version of the state legislature's supplemental budget, advocates say additional resources and lab staff will be needed in the future to make a significant dent in clearing the shelves.</p> <p>“People want not only to see people brought to justice, but they want to have a feeling that the person who did that isn't going to do it to them again or anyone else,” said Captain Alexander.</p> <p>According to the latest supplemental budget, \$1.5 million over the next three years will fund additional State Patrol lab techs to address the new backlog. The budget also clarifies that the seven lab techs funded in 2015 are to be used for the sole purpose of testing sexual assault kits, according to Rep. Tina Orwall's office. Additionally, the budget preserves the state's SAFE task force for another year. The task force, comprised of lawmakers, law enforcement, medical staff and victims, was formed to problem solve for backlog solutions.</p> <p>Additionally, the Attorney General will use \$3 million in federal grant money to continue testing old kits. Currently, there's no new state dollars for testing the older backlog, according to Orwall's office.</p> <p>"I am very grateful that we will have three more full time lab staff dedicated to testing kits," said Rep. Orwall, D-Des Moines. "We will need to come back next year for dollars to fund old kit, but the State Patrol does have funding now to keep testing until then."</p>

<b>HEADLINE</b>	<b>03/08 UN trade sanction panel hacked</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/briefings/daily-news-analysis/un-trade-sanction-panel-hacked/">https://www.hstoday.us/briefings/daily-news-analysis/un-trade-sanction-panel-hacked/</a>
<b>GIST</b>	<p>The UN panel that is enforcing trade sanctions against North Korea has been hacked, according to a report from the Washington Post.</p> <p>The panel is said to have been hacked repeatedly by a “nation-state actor” who has compromised email accounts of panel members. The Post said it reviewed a heavily redacted draft of a UN Panel of Experts report, which included details of the attack. Although the report does not reveal the nature of data that hackers acquired, the panel regularly review secret intelligence information about North Korean attacks.</p> <p>North Korea is reported to be smuggling goods in and out of the country in order to evade the trade sanctions that have been imposed to try and deter Kim Jong-un from pursuing nuclear weapons programs. The panel is identifying such smuggling so it can be stopped.</p> <p>The Post quotes an excerpt from the report, due to be released later this month: “The panel continues to be targeted by a sophisticated hacking campaign.”</p>

<b>HEADLINE</b>	<b>03/08 Japan penalizes cryptocurrency exchanges</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/japan-penalizes-cryptocurrency-exchanges-hack-53598443?">http://abcnews.go.com/International/wireStory/japan-penalizes-cryptocurrency-exchanges-hack-53598443?</a>
<b>GIST</b>	<p>The Japanese government is slapping penalties on several cryptocurrency exchanges in the country, after 58 billion yen (\$530 million) of virtual coins were lost earlier this year from hacking.</p> <p>The Financial Services Agency, which has been checking the exchanges, said Thursday that FSHO and Bit Station exchanges were ordered to halt operations for a month.</p> <p>It said FSHO was not properly monitoring trades and had not carried out employee training. The agency said it found that a Bit Station employee had taken bitcoins for personal use.</p> <p>Five other exchanges, including Coincheck, targeted in the massive hacking, were ordered to improve their operations.</p> <p>Coincheck had received a similar order earlier to beef up security measures.</p> <p>Japan is unusual in the world for embracing cryptocurrencies and setting up a licensing system to oversee their use.</p> <p>The exchanges ordered to improve their operations must file a plan to the agency by March 22.</p> <p>The theft at Coincheck of the NEM currency was the second major hacking assault on a Japanese crypto exchange after the Mt. Gox debacle in 2014.</p> <p>But Japan has chosen to seize the opportunity and regulate exchanges, setting up a licensing system last year, although experts say such measures are no guarantee against hacking and cybercrime.</p> <p>Japan has officially licensed 16 virtual-currency exchanges, and more, including Coincheck, are applying for licenses. As much as half of the world's bitcoin trading is estimated to be in yen.</p>

HEADLINE	<b>03/07 FBI: hacking now 'economic sabotage'</b>
SOURCE	<a href="https://www.cbsnews.com/news/fbi-director-christopher-wray-says-hacking-has-mushroomed-into-full-blown-economic-espionage/">https://www.cbsnews.com/news/fbi-director-christopher-wray-says-hacking-has-mushroomed-into-full-blown-economic-espionage/</a>
GIST	<p>Hacking, which used to be something people did for "fun or for bragging rights" has mushroomed into something else entirely over the past dozen years, FBI Director Christopher Wray said at a cybersecurity conference in Boston Wednesday. As Americans now "live much of our lives online," we're more vulnerable, Wray noted. And the threat "is coming at us from all sides."</p> <p>"What was once a comparatively minor threat – people hacking for fun or for bragging rights – has now mushroomed into full-blown economic espionage and extremely lucrative cyber crime." It's a far cry from when Wray left the Justice Department in 2005, when, he said, "'Tweeting' was something only birds did."</p> <p>Wray said the FBI is now seeing more computer hacking attacks by other countries. "We're seeing an increase in nation-state sponsored computer intrusions, intrusions like last year's massive WannaCry ransomware attack, recently attributed to North Korea. Or NotPetya – the most destructive and costly cyber attack in history," Wray said during a keynote address at a Boston cyber security conference. "Launched by the Russian military, NotPetya resulted in billions of dollars in damage across Europe, Asia, and the Americas."</p> <p>"We've also been seeing a "blended threat" – nation-states using criminal hackers to do their dirty work," Wray added. "We also see Nation-state turning to more creative avenues to steal information."</p> <p>To counter these rising threats, Wray told the group that the U.S. has white-hat cyber action teams, "highly skilled agents and experts who can deploy at a moment's notice, much like our Counterterrorism Fly Teams do." These cyber task forces are "in every field office that respond to breaches, conduct victim-based investigations, and collect malware signatures and other actionable intelligence." They are, he said, "parallel" to the Joint Terrorism task forces.</p> <p>But Wray also acknowledged the shortage within the bureau of qualified cyber-trained agents. "We've come to the conclusion we need to not only recruit better from the outside -- we need to bolster our training inside the bureau to give more of our agents and analysts the skill set and experience they need to work cyber cases," Wray said.</p> <p>Another recurring topic - smart phones that lock out the FBI, which Wray referred to as a "going dark" problem, Wray said that last year, the FBI alone was not able to access the data from 7,775 devices. "Each one of those nearly 7800 devices is tied to a specific subject, a specific defendant, a specific victim, a specific threat, and specific human beings." And this, he said, impacts "human trafficking, counter terrorism, counterintelligence, gangs, organized crime child exploitation and cyber."</p>

HEADLINE	<b>03/07 Mother of murder victim 'want justice'</b>
SOURCE	<a href="http://komonews.com/news/local/i-want-my-justice-mother-of-murder-victim-has-waited-4-years-to-confront-man-on-jihad">http://komonews.com/news/local/i-want-my-justice-mother-of-murder-victim-has-waited-4-years-to-confront-man-on-jihad</a>
GIST	<p>SEATTLE - Flipping through a photo album Falana Young-Wyatt laughed at her son's silliness.</p> <p>The time she dyed his hair red, his carefully coordinated outfits, his big eyes and sweet smile.</p> <p>It's been nearly four years since Dwone Anderson-Young was shot to death, just steps from their Central Area home and the tears still come easily for Young-Wyatt.</p>

“I had Dwone at a very young age, I was 16 so it was like we grew up together,” Young-Wyatt said, staring at the baby she cuddled in her high school graduation photo. “I’ll never know what his life could have been. I’ll only have these memories.”

Since June 2014, when the 23-year-old’s body was found next to his friend’s on 29th Avenue South, Young-Wyatt has waited for the moment she could confront his killer.

“I heard the gunshots. He was murdered right here, three doors down from our home,” Young-Wyatt said.

The latest turn of events in the trial of Ali Muhammad Brown means the confrontation is one step closer.

On Tuesday, Brown pleaded guilty to a slew of charges inside a New Jersey courtroom, including the slaying of 19-year-old Brendan Tevlin. Tevlin was sitting at a traffic light in West Orange, near Newark, when he was fatally shot.

Brown, 34, confessed to Tevlin’s murder, as well as the slayings of the three men in the Seattle-area.

Anderson-Young and his friend Ahmed Said, 27, had left a Capitol Hill nightclub with Brown when police say the man shot them.

Cloyd Steiger, the retired Seattle police detective who led the case, said he believes Brown targeted the two men because they are gay. He said Brown claimed he was a domestic terrorist.

“He told me these lives were insignificant compared to all of the thousands of lives being killed in Afghanistan, Iraq and Somalia by US bombs every day. That this was his Jihad,” Steiger said in an interview Wednesday.

Brown is charged in King County Superior Court with three counts of aggravated murder for the deaths of Anderson-Young, Said and the April 2014 murder of Leroy Henderson, 30, in Skyway. Brown is not facing the death penalty.

After the slayings Brown fled to New Jersey, Steiger said.

“This was a big case; it shook the community,” Steiger said.

Young-Wyatt refuses to address Brown by name. She said she thinks daily about what she will say to him once they’re in court.

“He’s a friggin’ coward. I want to tell him that to his face,” she said. “I want my justice. I want to be able to see him face to face and say whatever I need to say.”

<b>HEADLINE</b>	<b>03/07 EU: jihadist influx ‘lower than expected’</b>
<b>SOURCE</b>	<a href="https://inews.co.uk/news/uk/jihadist-influx-britain-europe-islamic-state-collapse-lower-expected/">https://inews.co.uk/news/uk/jihadist-influx-britain-europe-islamic-state-collapse-lower-expected/</a>
<b>GIST</b>	<p>The flood of combat-proven jihadists that it was feared would arrive in Europe following the military collapse of the Islamic State terror group has yet to materialise, the head of the EU policing agency said on Wednesday.</p> <p>Britain and other European countries had been braced for an influx of battle-hardened fighters seeking to return after leaving home to support the terror group in its attempts to establish an Islamic caliphate in Syria and Iraq. Combatants Counter-terrorism officers have long been concerned that the defeat of Islamic State would result in a significant number of European combatants, versed in skills from bomb making to frontline fighting, seeking to sneak back to launch attacks at home.</p>

But Rob Wainwright, the head of Europol, the EU policing agency, told a security conference in London yesterday that the flow of returning militants had not been at the expected level.

He said: “Despite our concern for over 12 months about this threat, our general understanding is that the returning numbers are lower than expected.”

Some 850 people from Britain are estimated by the authorities to have travelled to Syria or Iraq to support or fight for jihadist groups, around 100 of whom are known to have died or been killed.

Mr Wainwright said that in all, up to 6,000 people from European countries are thought to have travelled to join IS. He said that the reasons for the reduced influx back to Europe were unclear but include the theory that a significant number of fighters had headed for alternative Islamist battle fronts in Libya and the Sahel region.

Martyrdom Mr Wainwright said it was also possible that many had remained in Syria and Iraq with the aim of perishing there. He said: “Maybe they are still there in larger numbers than we thought. Maybe they’re truly committed to the cause and committed to martyrdom by standing to the last.”

Britain has said it is ready to strip jihadists of their citizenship with Defence Secretary Gavin Williamson saying he was happy to see Britons fighting for IS hunted down and killed. In a newspaper interview in December, he said: “A dead terrorist can’t cause any harm to Britain.”

The Government has already stripped two Britons captured on the Syrian-Iraqi border earlier this year of their citizenship. Londoners Alexandra Kotey and El Shafee Elsheikh, who were the remaining members of the so-called “Beatles” group of IS torturers and executioners, are being held in custody in Iraq while their fate is decided.

<b>HEADLINE</b>	<b>03/07 Curious case of Mohamed Elshinawy</b>
<b>SOURCE</b>	<a href="https://www.lawfareblog.com/only-islamic-state-funded-plot-us-curious-case-mohamed-elshinawy">https://www.lawfareblog.com/only-islamic-state-funded-plot-us-curious-case-mohamed-elshinawy</a>
<b>GIST</b>	<p>Most terrorism cases in the United States follow a well-worn narrative. An individual, usually young and male, reaches out looking to join the Islamic State. He connects with a supporter who feeds his dreams of committing an attack in his own backyard—or as in one case a few years ago, traveling to Syria to become one of the many soldiers of the Caliphate. The outreach out is sometimes successful in ways the young man does not intend. At times the Islamic State sympathizer is an FBI undercover agent; or other times an actual Islamic State operative whose poor tradecraft eventually connects the young man with an FBI informant for the bureau. Over months the plot takes on the contours determined by law enforcement. There is the eventual takedown: an arrest, followed by an appearance in federal district court. Since 2014, over 150 Americans have been charged with Islamic State-related offenses, and their cases are usually mundane.</p> <p>But there is nothing mundane about the case of Mohamed Elshinawy. The Maryland resident was part of a multi-country law enforcement takedown over the course of a few days that spanned three separate continents, included transfers of thousands of dollars, shipping of anti-aircraft parts, and resulted with the killing of a high-ranking Islamic State attack planner in Syria. Terrorism financing cases are standard—but Elshinawy’s is the only known case in which the Islamic State sent thousands of dollars to an individual in the United States to fund an attack.</p> <p>Recently, I spent three days in a nondescript Baltimore courtroom listening to prosecutors unravel a story involving a dizzying array of actors, shell companies, financial transactions, transaction-masking technologies, and a fortunately unsuccessful attack plan. The courtroom proceedings, along with the recently unsealed search warrants, illustrated in rich detail the funding scheme that distinguishes Elshinawy’s case from all other American Islamic State financing cases. Some of the more colorful characters in this narrative include a Bangladeshi entrepreneur from Wales; an Egyptian ex-con who went</p>

straight from prison to the Islamic State in Syria; and finally, the Egyptian's childhood friend, a newspaper deliveryman from the Edgewood suburb of Baltimore named Mohamed Elshinawy.

As with most national security cases, several pre-trial motions were initially filed under seal. Even after Elshinawy eventually plead guilty in August 2017, all sentencing submissions and court orders—totaling more than 70—continue to be filed under seal. My own motion to unseal documents was summarily denied: among other things, the judge stated (incorrectly, based on my knowledge of over 150 other Islamic State-related U.S. legal cases), that is standard fare for a number of documents to be sealed in such cases. Fortunately, the court left the sentencing hearings open to the public. And while the hearings offered only a very limited window into the case, they provided detailed information on how the Islamic State finances would-be supporters in the United States and beyond

Elshinawy's story begins with a budding tech entrepreneur: Siful Sujun, the founder of a Cardiff-based computer equipment company named Ibacstel Electronics Limited, who used his company to initiate transactions to fund attacks in the West. Sujun had renounced his ties to the Western world to live in Islamic State-held territory in Syria, where he became the "Director of the Islamic State's computer operations." The position, which was previously held by the late Islamic State attack-planning guru and hacker Junaid Hussain, afforded him enormous latitude within the Islamic State to engage with would-be recruits. Sujun would ultimately be described by the Department of Defense as an "external operations planner" for the group.

Sujun continued to operate Ibacstel Electronics Limited, putting the company to nefarious use. He used the business to buy drones and "bug sweeping equipment" which he shipped to Sanliurfa, Turkey, a mere 20 miles from territory held by the Islamic State in Syria during that time. Sujun utilized his expertise with computers and years of experience running an online ordering firm to ensure the equipment reached its intended destination. While he primarily purchased equipment to track aircraft—Hussain, his predecessor, had been killed by a coalition strike—he also used his company to direct attacks in the United States.

It was through Sujun, Ibacstel, and Elshinawy's childhood friend Tamer El-Khodary that Elshinawy received \$8,447.23 to commit a terrorist attack in the United States. A specific May 2015 Western Union money transfer of \$1,000 from Egypt to a convenience store in Maryland set things in motion: Law enforcement followed the money trail, which led them directly to Elshinawy. The FBI watched as he picked up his remittance from the convenience store, drove to his bank, deposited \$800 in his jointly owned bank account, and then transferred some of it to his wife's account.

When confronted by the FBI about the money, Elshinawy offered an explanation: He was trying to scam some money from the Islamic State, he said, suggesting that the FBI should be thanking rather than questioning him. He admitted that he reached out to his childhood friend in the Islamic State and received money from him, but claimed it was all a ruse to attain funds to buy home furnishings. The interviewing agents were incredulous but did not yet have enough evidence to determine why Elshinawy had received this money order from an Islamic State member.

Before questioning Elshinawy again, the FBI went to work mapping out the backers and entities behind the transfer of money from Egypt to Maryland. Eventually they unraveled the financial network: Sujun used his employee in England to send money to Elshinawy in Baltimore so that Elshinawy could carry out a terror attack. Five payments, each through PayPal, made their way from Sujun's shell companies in Bangladesh, Turkey and the U.K through an intermediary in Egypt to Elshinawy. The young man used the payments to buy a laptop, a cellphone and a virtual private network for communications, which allowed the co-conspirators to speak with one another incognito.

Investigators found that Elshinawy reached Sujun through his childhood friend El-Khodary, a supporter of both the Egyptian Muslim Brotherhood and the Islamic State. El-Khodary been arrested in Egypt, released and fled to the Islamic State. Upon arrival, he reconnected with Elshinawy and introduced him to other Islamic State members, including those who could assist Elshinawy in U.S. operations—namely, Sujun, who had become a key English-speaking "virtual planner" for the Islamic State after the death of Junaid Hussain.

Through Ibacstel and its subsidiaries, Sujan sent money to Elshinawy. On Sujan's say-so, Abdul Samad, the acting director of an Ibacstel subsidiary in Cardiff, allegedly remitted the monies just as he did for several other vendors. Payments made to Elshinawy were ostensibly for laser printers that were never purchased or delivered.

Elshinawy used encrypted applications such as Surespot and Telegram to communicate with Islamic State operatives. According to prosecutors, they talked "every day, for several months." The Islamic State initially gave Elshinawy three choices: carrying out a suicide bombing, planning and executing a terrorist attack, or traveling to Syria. Elshinawy chose the attack. To ensure that the young Elshinawy could properly fund the attack while subsisting on the salary of a newspaper deliveryman, Ibacstel sent Elshinawy a little more than \$8,000 in smaller increments. As one dogged prosecutor put it, Elshinawy was "on salary with the Islamic State."

The Islamic State also directed Elshinawy to use operating systems that would allow him to render his computer inoperable in the event of capture. For the attack, they directed him to assassinate a specific person (left unnamed during the hearings) who lived in United States. When it became clear that Elshinawy lacked the ability to do so, they shifted their direction to a mass casualty attack. The Islamic State instructed him to create a Dropbox account where, according to the Justice Department and Elshinawy's own admissions, he received "16-17 videos with step by step instructions ... on how to make a peroxide bomb."

There is no evidence that Elshinawy followed through with creating any bombs. All that is publicly known is that he searched the internet for federal buildings in Baltimore; during the sentencing hearings, the prosecutors asked the court to infer that those were his intended targets. Prosecutors also noted that the Islamic State asked for regular progress reports from Elshinawy, arguing that his searches focused on intended targets for a putative attack.

In December 2015, law enforcement officials on three separate continents closed in on the networks. In Bangladesh, local police raided the offices of an Ibacstel subsidiary. Meanwhile, the FBI was searching Elshinawy's house in Edgewood, Md. And in the U.K., authorities were questioning the Cardiff Ibacstel director Abdul Samad along with Sujan's brother, Ataul Haque.

A few short days later, Coalition airstrikes killed Siful Sujan in Raqqa. Combined Joint Task Force-Operation Inherent Resolve spokesperson Col. Steve Warren claimed that "now that he's dead, ISIL has lost a key link between networks." One day later, Elshinawy was arrested in Edgewood.

In between his first FBI interview and his arrest, Elshinawy had grown paranoid and began taking increasingly complex efforts to cover his steps. Although he used the encrypted communications network that Sujan helped him set up, a traffic stop by local police in Baltimore convinced him to take a hammer and destroy his phone. By late spring of 2015, Elshinawy was under 24/7 FBI surveillance—a step that indicates how seriously the FBI considered the threat he potentially posed. According to prosecutors, the FBI interviewed him on at least three separate occasions during the summer of 2015. When they were ready to move on Elshinawy, federal law enforcement authorities executed at least "20-30 search warrants" and the Department of Justice issued more than "300 grand jury subpoenas" to keep their case under wraps and the public safe.

As the Islamic State's territorial reach declines, external financing schemes promoting attacks in the West could become increasingly relevant. With foreign fighters returning to their home countries, the Islamic State virtual entrepreneur who has until now mobilized with moral suasion may shift to providing financial support to the soldier lying dormant in the west. The model that failed in Elshinawy's case may now thrive. Money sent from countries other than Syria may not trigger the same red flags for financial institutions that such transactions previously did when the money flowed from the Middle East. Companies like Ibacstel are easily established in the West, and setting up subsidiaries in countries such as Bangladesh, Indonesia and the Philippines would not be a difficult task.

Had Elshiwany's efforts been successful, financing terror attacks within the West from abroad could have been the new blueprint. Now, with Islamic State's loss of territory, we could easily see the group make a second try at the methodology that failed with Elshinawy. The Islamic State remains able to mobilize its army in the West, be it by providing moral, emotional or—now for the first time in the United States—financial support.

<b>HEADLINE</b>	<b>03/08 UK terror-related arrests at record high</b>
<b>SOURCE</b>	<a href="https://www.theguardian.com/uk-news/2018/mar/08/uk-terror-related-arrests-rose-almost-60-to-record-high-in-2017">https://www.theguardian.com/uk-news/2018/mar/08/uk-terror-related-arrests-rose-almost-60-to-record-high-in-2017</a>
<b>GIST</b>	<p>The number of people arrested for terrorism-related offences in Britain rose by 58% to a record high of 412 in 2017 – one of the most intense periods of terrorist attacks in recent history.</p> <p>The Home Office quarterly statistics published on Thursday show that there were 412 arrests in 2017 compared with the 261 terror-related arrests in the previous year.</p> <p>The record figures include 12 people arrested for the Westminster attacks in March, the 23 people linked to the attack in Manchester in May, 21 arrests connected with the London Bridge attack in June and one person arrested in connection with the Finsbury Park mosque attack later that month. A further seven arrests were made in connection with the attack on Parsons Green tube station in September.</p> <p>The figures reflect the growing threat from Jihadists in Britain. The director general of MI5, Andrew Parker, spoke in October of “a dramatic upshift in the threat this year” to the “highest tempo I’ve seen in my 34-year career”.</p> <p>The detailed Home Office figures show that the 412 terror-related arrests in 2017 resulted in 135 people being charged – 110 of them for terrorism-related offences. More than half – 228 or 55% – were released without charge while a further 33 were released on bail pending further investigation, and 13 faced alternative action.</p> <p>So far 29 of the 110 people charged with a terrorist offence in 2017 have been prosecuted. All of them were convicted. A further 76 are awaiting prosecution. The remaining five cases have either not proceeded or are pending.</p> <p>The latest figures show that by the end of 2017 there were 224 terrorist prisoners in jails in Britain – an increase of 24%, or 43, over the previous year – and continuing the upward trend seen in recent years. The overwhelming majority – 86% – held Islamic extremist views while 9% were rightwing extremists including from the recently banned National Action, and the remaining 5% classified as “other ideologies”.</p> <p>Earlier this month the Home Office announced that MI5 had reduced the threat level to Britain from Northern Ireland-related terrorism from substantial to moderate meaning a terrorist attack was possible but not likely. However, the threat to the UK from international terrorism remained at severe, meaning an attack was highly likely. The threat in Northern Ireland from Northern Irish terrorism also remains at severe.</p> <p>The quarterly terrorism powers statistic also show that the Metropolitan police have stepped up their use of their counter-terror stop and search powers. The number of searches carried out rose 59% in 2017 to 767 from 483 the year before.</p> <p>However, the number of people stopped and examined at ports and airports under counter-terror powers continued to fall in 2017. There were 16,349 examinations last year – a fall of 16% compared with the previous year, reflecting the recent downward trend. The number of people detained under these port</p>

	powers, however, rose 10% in 2017 from 1,539 to 1,700.

<b>HEADLINE</b>	<b>03/07 Pakistan violence drops 3<sup>rd</sup> straight year</b>
<b>SOURCE</b>	<a href="https://www.pakistantoday.com.pk/2018/03/07/violence-drops-for-third-straight-year-report/">https://www.pakistantoday.com.pk/2018/03/07/violence-drops-for-third-straight-year-report/</a>
<b>GIST</b>	<p>ISLAMABAD: Deaths and injuries linked to militancy have dropped in Pakistan for the third consecutive year, with 21 per cent fewer incidents in 2017 than in the previous year, a security think-tank says.</p> <p>Some 2,057 people were killed and 2,074 wounded for a total of 4,131 casualties over the year, according to a report by the Islamabad-based Centre for Research and Security Studies read on Wednesday. That continued the trend from 2016, in which 2,613 people lost their lives due to violence and 1,714 were injured. In 2015, 4,647 people were killed and 1,927 injured, the group's figures show.</p> <p>The dramatic improvement in security came after the army launched an operation in June 2014 to wipe out militant bases in the northwestern tribal areas and end a bloody insurgency that has cost thousands of civilian lives since 2004.</p> <p>It has involved a series of military offensives as well as some attempts to block the militants' sources of funding. Those efforts were in the spotlight again when a global terror financing monitor voted last month to put Pakistan on a watch-list.</p> <p>But the remnants of militant groups are still able to carry out periodic bloody attacks. Washington has also increased pressure on Pakistan in recent weeks, freezing military aid amid accusations that Islamabad has refrained from clamping down on militant groups such as the Haqqani network and the Afghan Taliban.</p> <p>The report warned that even with the security improvement new militant groups have appeared in the country.</p> <p>It also said that the militant Islamic State (IS) group had claimed responsibility for attacks that left at least 143 people dead, while a branch of Sunni group Lashkar-e-Jhangvi claimed 99 fatalities.</p>

<b>HEADLINE</b>	<b>03/07 Syria troops split rebel-held enclave</b>
<b>SOURCE</b>	<a href="https://apnews.com/08c55fcb15a044a89ff9029b1d3e3819/Reports:-Syrian-troops-split-rebel-held-enclave-near-capital">https://apnews.com/08c55fcb15a044a89ff9029b1d3e3819/Reports:-Syrian-troops-split-rebel-held-enclave-near-capital</a>
<b>GIST</b>	<p>BEIRUT (AP) — Syrian government forces seized vast swaths of territory including farmland in the opposition-held suburbs of Damascus on Wednesday, effectively dividing the besieged enclave in two and further squeezing rebels and tens of thousands of civilians trapped inside, state media and a war monitor reported.</p> <p>The government, determined to wrest the eastern Ghouta suburbs from the control of rebels after seven years of war, has resorted to extreme levels of shelling and bombardment to clear the way for its troops to advance on the ground. Hundreds have been killed in the past two weeks, including dozens reported Wednesday.</p> <p>Doctors and residents reported intense shelling and cases of suffocation and difficulty breathing, accusing the government of using chlorine gas Wednesday night. Hamza Hassan, a surgeon working at one of the hospitals in eastern Ghouta, said that staff was overwhelmed with chlorine odor and that he had treated 29 children with difficulties breathing.</p> <p>Such reports, which have been recurrent in the past weeks, could not be independently confirmed. The government has repeatedly denied using chlorine gas.</p>

Earlier on Wednesday, the state-affiliated al-Ikhbariya TV station broadcast live shots from the region, showing dense columns of smoke rising above the town as explosions and rockets could be heard flying overhead. Syria's Central Military Media said troops took control of the town of Beit Sawa and most of Misraba, both rebel-held communities in the heart of the enclave.

The Syrian Observatory for Human Rights said that by nightfall, Syrian government troops and allied militias had seized half of the territory held by rebels in eastern Ghouta and split the enclave in two halves — a north and southern part.

By slicing the territory, the Syrian government succeeds in further squeezing rebels, making it more difficult for them to continue to hang on to the territory.

<b>HEADLINE</b>	<b>03/07 Fight against ISIS eastern Syria slows</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/fight-isis-eastern-syria-slowing-kurds-leave-battlefield/story?">http://abcnews.go.com/International/fight-isis-eastern-syria-slowing-kurds-leave-battlefield/story?</a>
<b>GIST</b>	<p>Offensive ground operations against ISIS in eastern Syria have slowed down as hundreds of Kurdish fighters have left the battlefield to potentially assist Kurdish forces in Afrin, in western Syria, who are fighting the Turkish military.</p> <p>Meanwhile, the U.S. is monitoring the build-up of a pro-Assad regime force massing in the same area, where in February, another similar force attacked Kurdish and U.S. forces. U.S. airstrikes used to repel that attack killed up to 100 pro-regime fighters, including dozens of Russian private military contractors. CNN was first to report the massing of the pro-Assad regime force.</p> <p>Since retaking Raqqa from ISIS last fall, the U.S.-backed Syrian Democratic Forces (SDF) have pushed the shrinking number of ISIS fighters further eastward along the Euphrates River towards the border with Iraq. The SDF is a Kurdish-led force of 60,000 anti-ISIS fighters evenly split between Syrian Kurdish and Arab fighters.</p> <p>As the military fight against ISIS has wound down the shrinking battlefield in eastern Syria has become more complex as the risks increase that Kurdish, American, Russian and Assad military forces could come into potential conflict.</p> <p>In late January tensions increased as Turkey launched a military operation into the Kurdish-held area of Afrin in western Syria. Turkey said its military operation was targeting the YPG that it has branded a Kurdish terrorist force. The YPG make up a large number of the Syrian Kurdish forces fighting for the U.S.-backed Syrian Democratic Forces that are fighting ISIS.</p> <p>In February, small numbers of Kurdish SDF fighters who had been fighting ISIS in eastern Syria headed westward to help Kurdish forces in Afrin.</p> <p>At the time U.S. officials said the movements were not having an overall effect on the SDF's military campaign against ISIS.</p> <p>But that changed last week as the Pentagon acknowledged the SDF was carrying out an “operational pause” in eastern Syria.</p> <p>According to U.S. officials, a contributing factor for the pause was that the number of SDF fighters who had left the fight in eastern Syria had swelled to 1,500. That included Arabic SDF fighters who have been doing the bulk of the fighting against ISIS in eastern Syria. But they left the fight against ISIS as they lost the battlefield support provided by the better trained Kurdish forces who had moved west.</p> <p>Most of the Kurdish SDF fighters who left the eastern battlefields have headed towards the western city of</p>

	<p>Manbij that is close to Afrin. U.S. officials do not have a good grasp on how many Kurdish fighters may have actually moved from Manbij towards Afrin.</p> <p>On Tuesday, the Syrian Democratic Forces formally said in a statement that it was moving its forces from Dayr Az Zawr Province, in eastern Syria, towards Afrin to counter the Turkish incursion.</p> <p>A U.S. official said another contributing factor to the significant decrease in the SDF's offensive operations against ISIS was a shift towards a defensive posture to maintain the SDF's major territorial gains in eastern Syria.</p>

<b>HEADLINE</b>	<b>03/07 TSA eyes self-radicalized terrorists</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/tsa-chief-increasingly-focused-radicalized-terrorists/story?id=53580773">http://abcnews.go.com/US/tsa-chief-increasingly-focused-radicalized-terrorists/story?id=53580773</a>
<b>GIST</b>	<p>The Transportation Security Administration (TSA) is increasingly concerned about preventing self-radicalized individuals from targeting air travel, TSA Administrator David Pekoske told ABC News Wednesday following his first speech on the "State of the TSA."</p> <p>"It's really people that can get self-radicalized by looking at information on the internet and, then, having access to materials and supplies that are commercially available here -- effect an attack on the system," Pekoske said. He noted that the perpetrators of two recent attacks in New York, a truck ramming in October and a subway bombing in December, "weren't people that were on anybody's scope at that point in time."</p> <p>He went on to add that the TSA still focuses "on the organized terrorist groups as well. So we really need to keep our eye on both, make sure that our security systems keep both in mind."</p> <p>The TSA continues to rely on so-called "behavior detection" -- identifying visual and verbal cues indicative of ill intent -- to spot self-radicalized would-be terrorists, as well as members of organized terror organizations who warrant a second look from TSA.</p> <p>Pekoske defended the behavior detection program last fall after a U.S. Government Accountability Office (GAO) report found no evidence that the cues identified by TSA "reliably identify deception."</p> <p>However, Pekoske also said participation by the public, like adhering to the U.S. Department of Homeland Security's "if you see something, say something" campaigns, is key in warding off self-radicalized individuals before they attack. It's why the TSA has tweaked its motto from "not on my watch" to "not on our watch."</p>

<b>GIST</b>	<p>CAMANO ISLAND, Wash. (AP) — A Washington state sheriff says the body of a woman found near a gun- and ammo-filled bunker last weekend had been decapitated, and a man sought in the case is on the loose and possibly headed for California.</p> <p>The Island County coroner identified the victim as 26-year-old Katherine Cunningham. Detectives found her body Saturday on an undeveloped parcel of land on Camano Island, north of Seattle.</p> <p>Nearby, investigators discovered a bunker dug into a hillside containing supplies, guns and ammo.</p> <p>Island County Sheriff Mark Brown said Wednesday that police are looking for 34-year-old Jacob Gonzales, whom he called a person of interest.</p> <p>Gonzales is believed to be armed and driving a green 1990 Mitsubishi Montero, with Washington license plate AYE2639.</p>

<b>HEADLINE</b>	<b>03/07 Amelia Earhart mystery solved?</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Science_News/2018/03/07/Bones-found-on-South-Pacific-island-belonged-to-Amelia-Earhart-study-concludes/4101520448446/?utm_source=fp&amp;utm_campaign=ts_sn&amp;utm_medium=16">https://www.upi.com/Science_News/2018/03/07/Bones-found-on-South-Pacific-island-belonged-to-Amelia-Earhart-study-concludes/4101520448446/?utm_source=fp&amp;utm_campaign=ts_sn&amp;utm_medium=16</a>
<b>GIST</b>	<p>March 7 (UPI) -- The bones found several decades ago on a remote island in the South Pacific were likely those of famed pilot Amelia Earhart. Anthropologist Richard Jantz is 99 percent sure of it.</p> <p>Jantz, a professor and researcher at the University of Tennessee, recently reanalyzed measurements taken of the bones by physician D. W. Hoodless. In 1940, Hoodless determined the bones belonged to a man -- not Earhart, who disappeared along with her plane in 1937.</p> <p>In a new paper published in the journal Forensic Anthropology, Jantz presents evidence contradicting Hoodless' conclusion.</p> <p>Jantz is the co-creator of a computer program designed to analyze the sex, ancestry and stature of a person based on skeletal measurements. When Jantz plugged the measurements made by Hoodless into the Fordisc program, the models determined the remains have more in common with Earhart than 99 percent of the people in a sizable reference sample.</p> <p>Jantz also used a photograph of Earhart and a measurable, scalable object to estimate the lengths of her radius and humerus bones. The estimates matched those recorded by Hoodless.</p> <p>The George Palmer Putnam Collection of Amelia Earhart Papers at Purdue University also turned up measurements taken by a seamstress in preparation for a new pair of trousers, allowing Jantz to estimate the length of the groundbreaking pilot's tibia. The estimate also matched Hoodless' records.</p> <p>"Until definitive evidence is presented that the remains are not those of Amelia Earhart, the most convincing argument is that they are hers," Jantz said in a news release.</p>

<b>HEADLINE</b>	<b>03/08 US closes consular agency in Mexico</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/us-closes-consular-agency-playa-del-carmen-bars/story?">http://abcnews.go.com/International/us-closes-consular-agency-playa-del-carmen-bars/story?</a>
<b>GIST</b>	The U.S. has closed its consular agency in a popular Mexican tourist spot and is barring its employees from traveling there over a "security threat."

	<p>The embassy in Mexico City issued the alert Wednesday night for Playa del Carmen, a coastal resort town near Cancun and Cozumel on the Caribbean.</p> <p>The warnings come after a bomb exploded on a ferry that runs between Playa del Carmen and Cozumel in February and an unexploded ordinance was found on another ferry a week later.</p> <p>The State Department provided few details on what the threat was -- saying only that one was received by the embassy in Mexico City on Wednesday.</p> <p>"We take our obligation to provide information to U.S. citizens seriously as evidenced by the clear, timely, and reliable safety and security information we release worldwide," State Department spokesperson Heather Nauert said in a statement to ABC News, adding that the agency will provide "important updates when information becomes available."</p> <p>Both the closure of the consular agency and the restrictions on personnel travel are in place "until further notice," according to Nauert.</p> <p>Still, Americans were not told to avoid travel to Playa del Carmen. The State Department's alert system puts it at a "Level 2: Exercise Increased Caution."</p>

<b>HEADLINE</b>	<b>03/07 Political row makes Europe clocks slow</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/news/world-europe-43321113">http://www.bbc.com/news/world-europe-43321113</a>
<b>GIST</b>	<p>Are you running late for work and blaming your electric alarm clock?</p> <p>The real reason may lie in a dispute between Kosovo and Serbia, which has affected Europe's power grid.</p> <p>Entsoe, the body representing electricity transmission operators across 25 European countries, said bedside clocks had slowed down by up to six minutes since mid-January.</p> <p>Central heating timers and oven clocks are also affected - but not computers or smart phones.</p> <p>Countries from Spain to Turkey and from Poland to the Netherlands are part of a large area in Europe linked together into an electricity grid that operates at a synchronised frequency. This frequency regulates time-keeping in certain devices.</p>

	<p>The UK and some Nordic countries are not affected.</p> <p>During the crisis period, Kosovo did not generate enough electricity to meet its needs.</p> <p>According to Entsoe, Serbia is legally obliged to meet Kosovo's demand to keep the European grid stable.</p> <p>But because Kosovo and Serbia are in dispute over the issue - and many more related to Kosovo's unilateral secession from Serbia 10 years ago - Serbia did not step in.</p> <p>This failure to act on time forced the frequency to "deviate" - and the drop affected the clocks. Other countries that lost reserves amounting to 113 GWh are seeking compensation.</p> <p>"The deviation stopped yesterday [Tuesday] when Kosovo generated the energy it needs," Entsoe spokeswoman Susanne Nies told the BBC.</p> <p>Surplus energy would need to be generated and fed into the system over time for the balance to be redressed across the continent, Ms Nies said.</p> <p>So yes, you can manually adjust your clocks - but they will automatically stop losing time once the grid stabilises.</p>

<b>HEADLINE</b>	<b>03/08 UK: people jailed knife crimes soar</b>
<b>SOURCE</b>	<a href="https://www.mirror.co.uk/news/politics/huge-rise-people-being-jailed-12148537">https://www.mirror.co.uk/news/politics/huge-rise-people-being-jailed-12148537</a>
<b>GIST</b>	<p>The number of people jailed for knife crime soared by 9% to more than 7,000 last year.</p> <p>The figure of 7,156 immediate custodial sentences - 612 of them for children - is the fourth annual leap in a row and a record since current figures began a decade ago.</p> <p>It comes after police recorded a huge 30% leap in one year in crime involving a knife or other offensive weapon.</p> <p>Some 38% of the prison sentences lasted more than six months, almost double the 20% of those jailed in 2008.</p> <p>Overall 20,982 knife and offensive weapon cases went through the court system, the highest number since 2010.</p> <p>Almost 4,500 of them were children under 18, the highest since 2009.</p> <p>63% of convictions overall resulted in an immediate or suspended jail term, up from 42% a decade ago.</p>

2,394 were let off with a caution, 719 were fined, 4,877 had a community sentence and 4,067 were given a suspended sentence.

Just 331 offenders were given a discharge in 2017, the lowest number on record and down from 1,418 in 2008.

The number of offences that resulted in a caution or conviction overall was lower than in 2008 (28,398) and 2009 (25,100).

But the length of the average prison sentence has risen by 2.2 months since 2008 to 7.5 months.

In 2008 5,734 offenders received an immediate jail term, and until 2016 the number had not risen above 6,000.

Last month Home Secretary Amber Rudd called for a "different approach" to the terrible toll of knife crime.

She said: "We know that young people are increasingly carrying knives and I want to find out why that is and what we can do to turn them away from that.

"We need a different approach in terms of incentives for them, engaging with them, and the old systems don't always work."

**HEADLINE** 03/07 Major meth trafficking leader gets life

**SOURCE** <http://www.koaa.com/story/37672291/major-meth-drug-trafficking-leader-sentenced-to-life-in-prison>

**GIST** COLORADO - The US Attorney's Office for the District of Colorado announced the final defendant of a multi-year drug trafficking investigation was sentenced to life in prison Tuesday.

The attorney's office said Jorge Loya-Ramirez was sentenced to life in prison for his role played in a methamphetamine distribution conspiracy throughout northern Colorado and southwestern Kansas. He was sentenced by US District Judge Robert E Blackburn on Tuesday.

This drug conspiracy has been a multi-year investigation involving 28 people operating in Colorado, California and Kansas. He was the last remaining defendant in the case to be tried before a jury.

Loya-Ramirez was indicted by a grand jury on June 23, 2015. According to trial evidence, Loya-Ramirez was the leader of a methamphetamine organization using a team of "employees" to distribute hundreds of pounds of the drug throughout multiple states.

The US Attorney's Office said violence and deadly weapons were used in drug operations.

He was originally stopped near Lamar in 2015 where a kilo of cocaine and just under a half pound of methamphetamine was found in his possession. "Poison and pain are what this defendant cultivated in Colorado," said U.S. Attorney, Bob Troyer. "Thanks to the FBI, Colorado State Patrol, many other law enforcement partners, and our tireless prosecution team, this dope dealer's day is done."

The US Attorney's Office Organized Crime Drug Enforcement Task Force prosecuted the case, with agents from the FBI and other Colorado agencies who assisted in the investigation.

**HEADLINE** 03/07 Romania, Germany smash trafficking ring

SOURCE	<a href="https://www.washingtonpost.com/world/europe/romanian-german-officials-smash-migrant-trafficking-ring/2018/03/07/e7fa402e-2207-11e8-946c-9420060cb7bd_story.html?utm_term=.c6d6ed001aec">https://www.washingtonpost.com/world/europe/romanian-german-officials-smash-migrant-trafficking-ring/2018/03/07/e7fa402e-2207-11e8-946c-9420060cb7bd_story.html?utm_term=.c6d6ed001aec</a>
GIST	<p>BUCHAREST, Romania — Romanian and German officials raided homes and hotels in both countries Wednesday to smash an illegal migrant trafficking ring they said was one of the biggest of its kind in Europe.</p> <p>Romanian prosecutors from the organized crime and terrorism agency said police conducted 12 searches in western Romania, including in the city of Timisoara, which has become a hub for migrants after Hungary tightened border controls with Serbia.</p> <p>A statement said the group located and guided migrants and organized their accommodation and transport through Turkey, Bulgaria, Serbia, Romania, Hungary, Austria and Germany aided by guides of Arab origin. They said migrants paid between 4,000 to 5,000 euros (\$4,960-\$6,200).</p> <p>Local news website Pressalert.ro quoted local authorities saying the group had trafficked 2,000 migrants through Timisoara. The report said traffickers and migrants used applications such as WhatsApp or Viber, and turned off their mobile phones when they were crossing the border so that their locations were not saved on their devices.</p> <p>German judicial authorities and Europol helped the probe which allegedly involved suspects who “were part of a vast European network of migrants.”</p> <p>Prosecutors said migrants entered Romania illegally from Serbia and were later taken to Hungary and then Germany.</p> <p>Romania’s organized crime chief prosecutor, Daniel Horodniceanu, said the raids were part of a larger Europol investigation in several European countries, including Britain.</p>

HEADLINE	<b>03/07 Brazil gang loots \$5M in airport heist</b>
SOURCE	<a href="https://www.washingtonpost.com/news/worldviews/wp/2018/03/07/brazilian-gang-loots-5-million-in-an-airport-heist-worthy-of-oceans-eleven/?utm_term=.507d477e0f4b">https://www.washingtonpost.com/news/worldviews/wp/2018/03/07/brazilian-gang-loots-5-million-in-an-airport-heist-worthy-of-oceans-eleven/?utm_term=.507d477e0f4b</a>
GIST	<p>SAO PAULO, Brazil — Five gang members wielding rifles infiltrated an international airport in Brazil on Sunday and carried out a carefully choreographed heist worthy of the big screen.</p> <p>Police said the gang, using cars that were painted to resemble airport security vehicles, tore past two gates and drove into the cargo section of Viracopos Airport, 60 miles outside Sao Paulo. They attacked two security guards and stuffed them into a van, then invaded the tarmac and drove up to a parked Lufthansa plane just as employees were transferring bags of cash into an armored vehicle.</p> <p>The group drove out of the airport with \$5 million in cash before police arrived. Nobody was arrested.</p> <p>“Everyone who passes through the Viracopos Airport is at the mercy of thugs,” said Alberto Carvalho, a director at the National Union of Airport Workers, who has documented several instances of muggings, carjackings and kidnappings of employees in the vicinity of the airport. The highway that leads to the airport is notorious for crime, and several kidnapping attempts on the road made headlines here in recent years. “The airport is completely unprepared to deal with these risks,” Carvalho said.</p> <p>The heist is part of a crime wave that has made transporting goods in Brazil particularly dangerous. A record 10,500 cargo thefts were registered in 2017 in Sao Paulo, according to Sao Paulo state figures. In February, police busted a cargo-looting ring that was stashing stolen trucks and merchandise at a rest stop right outside Sao Paulo. In Rio de Janeiro, some areas are so dangerous for truckers that the post office has halted deliveries in nearly half the city.</p>

Transporting merchandise on Brazilian roads became so treacherous that many companies opted to send shipments by plane. Located about an hour from Sao Paulo's city center, the Viracopos Airport has taken on more valuable shipments, and the volume of goods passing through the airport rose by 20 percent in 2017. It is now responsible for the most cargo traffic in Brazil.

While theft at the scale of Sunday's robbery is rare, it sounds another alarm about the country's deteriorating security situation.

Last month, President Michel Temer ordered the military to take over security in Rio de Janeiro after a spike in crime disrupted Carnival celebrations. Armed vehicles have rolled through the streets of Rio, fighting to regain control of some of the city's most dangerous slums.

To many observers, the complexity of the airport heist also illustrates the reach of organized crime.

<b>HEADLINE</b>	<b>03/08 UK's rising retail crime price tag</b>
<b>SOURCE</b>	<a href="https://realbusiness.co.uk/law/2018/03/08/price-tag-700m-put-uks-rising-retail-crime/">https://realbusiness.co.uk/law/2018/03/08/price-tag-700m-put-uks-rising-retail-crime/</a>
<b>GIST</b>	<p>Increases in retail crime are in stark contrast with “record amounts” of investment in prevention measures, it has been revealed.</p> <p>The UK's largest retail businesses each reportedly spending tens of millions per year tackling criminal activity.</p> <p>According to the British Retail Consortium's (BRC) annual Retail Crime Survey, the total direct financial cost of all retail crime has risen to £700m, an increase of six per cent.</p> <p>The survey found that the “biggest concern” has come from the growth in severe violent incidents causing injury to retail employees – with incidents occurring at twice the rate compared to the previous year.</p> <p>Financially, however, the largest single element of the overall cost of crime to retailers remains “customer theft” – or shoplifting – which accounts for £500m per year, an increase of 15 per cent.</p> <p>In the 12 months when the data was collated, from April 2016 to March 2017, BRC members were reported to have spent an average £29m per company on tackling non-cyber crime, compared to £6.7m the previous year.</p> <p>Investment in prevention measures to tackle cyber-crime specifically averaged £8m per member – an increase of 400 per cent. Nearly half of respondents in the survey said they had seen an increase in the number of cyber-attacks in the last year.</p> <p>But while most areas of criminal activity increased, the direct cost of fraud reduced by £27m, or just under 15 per cent, to £155m. The figure includes several different fraud types, including “card not present” and supplier fraud.</p> <p><b>High priority</b> The BRC, which represents 104 members with a combined annual turnover of £137bn, representing almost 40 per cent of the UK retail marketplace, is now calling for retail crime to be treated with a much higher priority, reflecting the industry's impact on the economy and employment.</p> <p>It is “strongly recommending” that police and crime commissioners look carefully at making specific reference to retail crime in their police and crime plans.</p> <p>BRC chief executive Helen Dickenson said: “Retail directly employs nearly one in every ten workers in</p>

	<p>the UK, and millions more indirectly.</p> <p>“Retail already faces its own challenges, with margins shrinking, and against that backdrop the pressures that retail crime exerts are having a stronger impact. In particular, the figures on violence present a deeply concerning picture.”</p> <p>She added: “Retailers are doing everything possible to ensure that staff members and customers are safe and protected.</p> <p>“But they are now spending record amounts on crime prevention, which is a drag on the economic viability of shops and not infinitely sustainable.”</p>

<b>GIST</b>	<p>BOWLING GREEN, Ky. (AP) — Prosecutors say a Kentucky man who made five Molotov cocktails to blow-up a school has been sentenced to 20 years in prison, without the possibility of parole.</p> <p>U.S. Attorney Russell Coleman says in statement 20-year-old Trey Alexander Gwathney-Law was sentenced Tuesday by U.S. District Judge Greg N. Stivers for making and possessing illegal firearms. The statement says Gwathney-Law told an acquaintance he made the cocktails to blow up Franklin-Simpson County Middle School.</p> <p>According to the plea agreement, Gwathney-Law made them in 2015 using glass bottles filled with flammable liquid. One Mountain Dew, one Sprite, and two Dr. Pepper bottles had a cloth wick stuffed inside. A root beer bottle had a carbon dioxide cartridge containing explosive powder and pieces of paper that appeared to have been soaked in the liquid.</p>

<b>GIST</b>	<p>SEATTLE (AP) — The King County Sheriff's Office says detectives seized nearly \$10 million worth of illegally grown marijuana in a series of raids last week.</p> <p>The investigative haul, announced Wednesday, included more than 7,600 plants and 783 pounds of dried pot, which the sheriff's office says may have been destined for the East Coast. Ten people were arrested, and the sheriff's office says they are seeking to have 10 homes, four vehicles, a 32-foot recreational vehicle and more than \$200,000 in cash forfeited to the government.</p>

	<p>The raids occurred in Renton, Auburn, Federal Way, Pacific, Kent, Lakewood, Seattle and unincorporated King County.</p> <p>Douglas Hiatt and Jeffrey Steinborn, two longtime Seattle marijuana defense attorneys who represent people involved the case, said some of the defendants are Chinese immigrants who may have believed they were legally growing marijuana.</p>

<b>HEADLINE</b>	<b>03/07 After Florida 638 threats targeted schools</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/2018/03/07/within-nine-days-after-florida-shooting-there-were-more-than-100-threats-schools-across-u-s-its-not/359986002/">https://www.usatoday.com/story/news/2018/03/07/within-nine-days-after-florida-shooting-there-were-more-than-100-threats-schools-across-u-s-its-not/359986002/</a>
<b>GIST</b>	<p>Breathless and whispering through the phone, a 13-year-old student called for help from her Ohio high school.</p> <p>"Help," she said in between whimpers. "He's got a gun. He's got the gun in my mouth."</p> <p>Anxiety was already running high: It had been only a week after the deadly shooting in Parkland, Fla. Police dispatchers then got three other calls from Withrow University High School in Cincinnati.</p> <p>But it was all a hoax.</p> <p>It's a stunt that other teens and kids across the nation have pulled after tragedies, creating fear in communities and bringing costly investigations by police and federal agents who have no choice but to take the threats with deadly seriousness.</p> <p>The rise in threats after a high-profile mass killing is nothing new. But the incidents are hard to quantify because they are not tracked nationally by any government agency.</p> <p>A review by USA TODAY of published accounts, however, paints a clear picture of a growing problem that is no joke.</p> <p>More than 130 threats were reported and analyzed by the USA TODAY NETWORK in the nine-day span after the Valentine's Day shooting at Marjory Stoneman Douglas High School in Parkland left 17 dead. Also, non-profits such as the Educator's School Safety Network have compiled a list of the threats using news media reports. The group found that a jarring 638 threats targeted schools in the two weeks after the Parkland shootings, a number they say is probably on the low side.</p>

Following the deadly Florida rampage, panic swept schools from Maine to California, leading to lockdowns, school closures and deployment of bomb-sniffing dogs.

The dramatic rise in threats — from 10 to about 70 a day — has left school administrators and authorities walking a fine line in dealing with a threat's credibility. It's also worried parents who fear sending their children to school and shined a spotlight on the legal debate over what penalties kids should face.

At the root of the problem, experts say, are students who are too young to realize the severity of their comments.

"There are usually two common traits in these individuals," said Mary Ellen O'Toole, a former FBI profiler. "They're young, and their judgment is poor. I mean, a brain isn't really fully formed until your early 20s. Then, it's also people who want to be disruptive and affect how the school is operating."

Police arrested a 13-year-old student after multiple 911 calls prompted a lockdown of Withrow High School on Feb. 22, 2018. Audio provided by the Cincinnati Police Department. The Enquirer/Cameron Knight

Texas, with 55 reports, was the state with the most threats since the shooting. Next in line are Ohio, California, Florida and Pennsylvania, according to data from the Educator's School Safety Network, which not only tracks such incidents but also trains schools on how to handle them.

Because of the threats, at least 33 schools closed and more than 15 others locked down, according to a review of the incidents reported across the USA TODAY Network, which encompasses more than 100 news organizations nationwide.

Some threats were real and law enforcement was able to thwart the plot before it came to fruition, but the larger number of the scares weren't credible, meaning the person suspected of making the comments wasn't planning to harm others and didn't have access to weapons.

"It's not funny, and I think this should end," said Bailey Campbell, a student at Central York High School in Pennsylvania. "I want to go back to school, and I want to finish my senior year."

Her high school, along with others in the region, was closed for three days because of a threat sent by a middle school student. Authorities say the student made the threats simply because she didn't want to go to school.

Seeing closures like that in Pennsylvania gives a student a sense of power, O'Toole said, which for a kid is huge.

Before taking intense action, it's important to track the threat and see whether the person behind it even has the means to act, she added. If a threat doesn't result in some effect on a school, a student feels like they failed, thus discouraging the behavior.

Most reported threats aren't followed by shootings or attacks.

Authorities have been going back and forth about how to deal with these threats. On one hand, an arrest could leave a scar on a student's future. But the threats might cease if a hard approach is taken.

Even with jail as a penalty, threats have been prevalent for decades and show no signs of stopping. After the massacre at Columbine High School in 1999, hundreds of threats were sent to schools across the country, leading to more than 350 arrests.

Broward County has been under the microscope since the shooting, and the news media and lawmakers have scrutinized a nationwide program in schools that aims to keep students from serving jail time for minor offenses. The school gunman, Nikolas Cruz, was not part of the program, but some have criticized

	<p>it, including Sen. Marco Rubio, R-Fla., who said it delays and discourages law enforcement from being alerted to dangerous students.</p> <p>Amanda Klinger, director of operations for the Educator's School Safety Network, said the threats, along with violence and issues in schools, could be dampened with a few measures. Chief among them would be schools communicating with students about the severity of threats and parents reinforcing the message at home.</p> <p>"Everyone knows you don't say 'bomb' in an airport. We have to get to that point with kids on this issue," she said. "We need to make it clear that this isn't OK, and it is incredibly serious."</p>

<b>HEADLINE</b>	<b>03/08 Sexual abuse at the Hajj</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/08/middleeast/hajj-sexual-abuse-asequals-iwd-intl/index.html">https://www.cnn.com/2018/03/08/middleeast/hajj-sexual-abuse-asequals-iwd-intl/index.html</a>
<b>GIST</b>	<p>Hundreds of thousands of Muslim women descend on Mecca in Saudi Arabia each year to take part in the Hajj, but in recent weeks some female worshipers have told CNN they experienced incidents of sexual abuse or harassment while participating in the five-day pilgrimage.</p> <p>Five women told CNN they were compelled to share their stories after a Pakistani woman's account of being sexually abused at the Hajj went viral on Facebook last month. That post (since deleted) prompted an outpouring of similar stories from female pilgrims on social media.</p> <p>The Hajj is a spiritual pinnacle for Muslims around the world, with up to three million pilgrims traveling to Mecca to participate each year. In 2016, almost 42% of all worshipers were women. Every Muslim who is physically and financially able to, is required to do the pilgrimage once in their lifetime. As one of the largest annual pilgrimages in the world, crowd control poses a major challenge.</p> <p>Most of the incidents of sexual abuse and harassment reported to CNN happened during the tawaf ritual, a counter-clockwise procession around the Kaaba shrine. Only some of the women who shared their stories with CNN reported the incidents to police in Saudi Arabia but those who did said their complaints were ignored.</p> <p>Responding to CNN, an unnamed Saudi official familiar with Hajj affairs said the Kingdom does not tolerate this kind of behavior anywhere, especially at holy sites and added that allegations made by the women were being taken very seriously by authorities.</p> <p>"Anyone found guilty of committing these acts faces serious consequences including imprisonment and caning," the Saudi official said. "By Royal Order, female police officers and investigators are now being</p>

	<p>added to the police force and security services including the Public Prosecution Department, so there will be a greater female security and police presence within the country and at the Holy sites to handle any issues that may arise."</p> <p>Saudi Arabia already issued a royal decree in September 2017 to outlaw sexual harassment. A new law is currently being drafted.</p>

<b>HEADLINE</b>	<b>03/07 FBI: didn't act on or share Cruz reports</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/school-shootings-florida-fbi/2018/03/07/id/847456/">https://www.newsmax.com/newsfront/school-shootings-florida-fbi/2018/03/07/id/847456/</a>
<b>GIST</b>	<p>The FBI has detailed to Congress a series of mistakes and missed opportunities to intervene before a gunman killed 17 people at a Florida high school last month.</p> <p>FBI Deputy Director David Bowdich made the comments in a closed briefing Tuesday with members of the House Judiciary and Oversight committees.</p> <p>In a summary released Wednesday, Bowdich cited two tips the FBI received about shooting suspect Nikolas Cruz, in September 2017 and January 2018, that were mishandled, including one in which a FBI call taker "did not ask any standard investigative probing questions." The 2018 call taker was able to connect Cruz to the earlier call about a threatening YouTube comment, but after discussing it with a supervisor, they decided not to pursue the matter and the case was closed.</p> <p>The chairmen of the two committees said that "despite multiple opportunities, the FBI did not share information with state and local authorities" about Nikolas Cruz.</p> <p>The FBI is reviewing its handling of the case and will report findings to Congress.</p> <p>Officials say two Florida police officers who responded to last month's school shooting from a neighboring city have been temporarily suspended from the SWAT team.</p> <p>Miramar police spokeswoman Tania Rues said in an email Wednesday that the officers didn't advise supervisors that they were going to Marjory Stoneman Douglas High School in Parkland. The suspension applies only to the SWAT team, so they'll remain on active duty for other assignments.</p> <p>Miramar's SWAT team had been training in nearby Coral Springs the morning of Feb. 14. The team had been placed on stand-by after the active-shooter report, but the Broward Sheriff's Office never called for them.</p> <p>Miramar police say the officers' actions created a lack of accountability and potential safety situation.</p> <p>Rues says a third SWAT team member was suspended for violating the department's social media policy.</p>

<b>HEADLINE</b>	<b>03/07 Italy struggles to help trafficked slaves</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/italy-nigerian-trafficked-sex-slaves-little-help-with-fight-curb-immigration/">https://www.cbsnews.com/news/italy-nigerian-trafficked-sex-slaves-little-help-with-fight-curb-immigration/</a>
<b>GIST</b>	ROME -- Precious survived a trip across North Africa and two sinking boats before making it to Italy, only to be confronted with the reality facing young Nigerian migrants like her: A "madam" gave her

condoms, pantyhose and a G-string, and put her to work.

"I had a mattress. It was in the bush," Precious told The Associated Press recently, her face hidden to hide her identity. "If a white man came who said he wasn't going to have sex inside his car, I would take him to my bed."

Nigerian teenagers and young women selling sex is a common sight for motorists in Italy. Working along roadsides and secondary highways in cities big and small, they are a haunting reminder that while Italy has been successful in curbing immigration from Libya, it has largely failed to help a fraction of the migrants trafficked as sex slaves.

Between 10,000 and 30,000 Nigerian prostitutes are estimated to be walking Italian streets, often to pay off the debts they incurred to get there. Government figures show 1,172 trafficked people were rescued and given special protection in 2016, about 700 of them Nigerian women and girls. More than 100 were minors, like Precious.

She was 17 years old when she was found off Libya's coast with a boatload of other migrants and brought to Italy. After Nigerian traffickers put Precious on a train to Turin, the Nigerian "madam" who met her in the northern city sat the girl down and explained her new life:

"You don't have any choice. This is what is going on, this is how it is going to be," Precious, a nickname she uses, recalled. "You need to prostitute."

The reason? She had to pay off the 20,000-euro debt her traffickers said she had acquired, one customer at a time.

The Italian government has tripled its funding to help trafficked girls get off the streets, from 8 million euros in 2015 to 22.5 million in 2017. The government's equal opportunities office says most of the money has gone to providing more beds in safe houses for trafficked women and girls who want to escape life on the streets.

But advocates say there is no coordinated response or strategy, and not enough beds to go around. The rescued women can't be housed in regular migrant shelters because their pimps will come for them. In fact, many girls still on the streets actually live in migrant shelters, where their traffickers can operate with impunity, said David Mancini, assistant prosecutor in l'Aquila.

"The traffickers work inside the centers, recruiting and running their business," he said. "The girls leave in the morning and come back at night. It's a pressing issue and we don't have any way to prevent this exploitation."

Increasingly, the Nigerian migrants being forced into prostitution are minors, some as young as 13, according to the International Organization for Migration's 2017 report on human trafficking.

Recent arrivals to Italy are coerced into prostitution "under threats, violence, abuses perpetrated by the traffickers, a form of true slavery," Forti said.

Police work to try to break up what they consider to be a "transnational criminal organization" that includes cells of Nigerians in Italy, but with limited success.

In some parts of the country, including around Naples, Nigerian criminals have sought protection from the Italian mafia to be able to conduct their business on mob-run territory. Italy's National Anti-Mafia Investigative Group reported in 2017 that Nigerian gangs reach agreements with Sicilian criminal groups to "obtain protection or at least approval to carry out their exploitation in the form of prostitution."

In the case of Precious, police picked her up on the street near Turin in the spring of last year. She had spent about seven months working, servicing as many as 10 men a day. She was afraid of being sent back

	<p>to Nigeria, but at that point "going back to Nigeria is even better than prostituting every day."</p> <p>Eventually, Precious was placed in the care of an aid group that places trafficked Nigerian girls and women in protective shelters. She lives now in a safe house near Rome and works with elderly people in a paid internship.</p> <p>"I can say I am free now. I am free," Precious said.</p> <p>But she is one of the lucky few.</p>

<b>HEADLINE</b>	<b>03/07 Fla. school shooting suspect indicted</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/nikolas-cruz-florida-school-shooting-suspect-indicted-17-counts-of-first-degree-murder/">https://www.cbsnews.com/news/nikolas-cruz-florida-school-shooting-suspect-indicted-17-counts-of-first-degree-murder/</a>
<b>GIST</b>	<p>FORT LAUDERDALE, Fla. -- Florida school shooting suspect Nikolas Cruz was formally charged Wednesday with 17 counts of first-degree murder, which could mean a death sentence if he is convicted. The indictment returned by a grand jury in Fort Lauderdale also charges the 19-year-old with 17 counts of attempted murder for the Valentine's Day massacre at Marjory Stoneman Douglas High School in Parkland in which 17 people died and more than a dozen others were wounded.</p> <p>Cruz's public defender has said he will plead guilty if prosecutors take the death penalty off the table, which would mean a life prison sentence. The Broward County state attorney has not announced a decision on the death penalty.</p> <p>James and Kimberly Snead, the couple who gave Cruz a home after his mother died late last year, testified before the grand jury Wednesday. Both James Snead and the couple's attorney, Jim Lewis, wore silver "17" pins to honor the victims of the shooting.</p> <p>The couple is "trying to do the right thing" and is mourning along with the rest of the Parkland community, Lewis said.</p> <p>"We'll let justice take its course at this point," Lewis said. "They still don't know what happened, why this happened. They don't have any answers. They feel very badly for everybody."</p> <p>Cruz told investigators he took an AR-15 rifle to Marjory Stoneman Douglas High School in Parkland on Valentine's Day and started shooting into classrooms.</p> <p>Jail records released by the Broward Sheriff's Office show Cruz was being held in solitary confinement. Officers described Cruz as being cooperative but avoiding eye contact.</p> <p>The report said Cruz "often sits with a blank stare," appeared to laugh and exhibited "awkward" behavior during and after a visit with an attorney and had one "family visit." Officers said Cruz also requested a Bible to read in his single-person cell in the infirmary.</p>

**FAIR USE Notice** - All rights to these copyrighted items are reserved. Articles and graphics have been placed within for educational and discussion purposes only, in compliance with 'Fair Use' criteria established in Section 107 of the Copyright Act of 1976. The principle of 'Fair Use' was established as law by Section 107 of The Copyright Act of 1976. 'Fair Use' legally eliminates the need to obtain permission or pay royalties for the use of previously copyrighted materials if the purposes of display include 'criticism, comment, news reporting, teaching, scholarship, and research.' Section 107 establishes four criteria for determining whether the use of a work in any particular case qualifies as a 'fair use'. A work used does not necessarily have to satisfy all four criteria to qualify as an instance of 'fair use'. Rather, 'fair use' is determined by the overall extent to which the cited work does or does not substantially satisfy the criteria in their totality. If you wish to use copyrighted material for purposes of your own that go beyond 'fair use,' you must obtain permission from the copyright owner.

- \*Null Character Bug Lets Malware Bypass Windows 10 Anti-Malware Scan Interface

From Bleeping Computer (02.19.2018) Catalin Cimpanu

Malware that embeds a null character in its code can bypass security scans performed by the Anti-Malware Scan Interface (AMSI) on Windows 10 boxes. Microsoft fixed this vulnerability last week when it released the February 2018 Patch Tuesday security updates. The vulnerability resides with Anti-Malware Scan Interface (AMSI), a generic security feature that acts as an intermediary point between

apps and local antivirus engines. AMSI allows an app to send a file to be scanned by the local security software and return the results. AMSI was introduced with Windows 10 and is vendor agnostic, meaning it will automatically send the file to any AMSI-compatible AV engine on the local PC, not just the built-in Windows Defender. While AMSI can be used to scan all types of files, Microsoft specifically developed AMSI to help inspect scripts invoked at runtime, such as PowerShell, VBScript, Ruby, and others, which have become a preferred method of avoiding detection on computers using classic signature-based antivirus engines. In other words, AMSI acts as a post-execution scanner of checks additional resources loaded or triggered by an executed file. Vancouver-based security researcher Satoshi Tanda has discovered that a bug in AMSI truncates files after a null character. This means that AMSI will scan a file up until the null character and drop the rest of the data. An attacker only has to hide malicious commands behind a null character to bypass AMSI checks. The bug Tanda discovered also seems to affect only AMSI's PowerShell interface, and AMSI's Windows Script Host interpreter does not seem to be affected. [Link](#)

### Coldroot RAT Still Undetectable Despite Being Uploaded on GitHub Two Years Ago

From Bleeping Computer (02.20.2018) Catalin Cimpanu

Coldroot, a remote access trojan (RAT), is still undetectable by most antivirus engines, despite being uploaded and freely available on GitHub for almost two years. The RAT was originally only intended for use against macOS users but has since expanded to work all three major desktop operating systems — Linux, macOS, and Windows— according to a screenshot of its builder extracted from a promotional YouTube video. But despite being open-sourced in 2016, the RAT remained in anonymity, never being at the center of major cybercrime operations. Unfortunately, things appear to have changed in the meantime, and the RAT has now entered active distribution. Patrick Wardle, a Mac expert with Digma Security, has recently stumbled on a new version of the Coldroot RAT. Wardle says this new version of the Coldroot RAT that he discovered in a faux Apple audio driver is different from the old version posted on GitHub in 2016. But artifacts he found by analyzing the fake Apple audio driver matched the modus operandi and technical details included in the old Coldroot RAT GitHub code, suggesting the two were very likely connected, if not the same. According to the researcher, this new Coldroot RAT can spawn new remote desktop sessions, take screen captures and assemble them into a live stream of the victim's desktop, can start and kill processes on the target's system, and can search, download, upload, and execute files. All stolen data is sent to a remote web panel, similar to how most RATs work these days. But the problem here is that despite being based on the source code of a remote access trojan shared online for almost two years, none of the AV scan engines available through VirusTotal were able to detect the new Coldroot RAT, at the time of writing. [Link](#)

### North Korean APT37 Hacking Group Expands Targets

From Security Week (02.20.2018) Eduard Kovacs

A lesser known hacker group believed to be working on behalf of the North Korean government has been expanding the scope and sophistication of its campaigns, according to a report published on Tuesday by FireEye. The threat actor is tracked by FireEye as APT37 and Reaper, and by other security firms as Group123 (Cisco) and ScarCruft (Kaspersky). APT37 has been active since at least 2012, but it has not been analyzed as much as the North Korea-linked Lazarus group. Cisco published a report in January detailing some of the campaigns launched by the threat actor in 2017, but APT37 only started making headlines in early February when researchers revealed that it had been using a zero-day vulnerability in Adobe Flash Player to deliver malware to South Korean users. APT37, whose goals appear to align with North Korea's military, political and economic interests, has mainly focused on targeting public and private entities in South Korea, including government, defense, military and media organizations. However, according to FireEye, the group expanded its attacks to Japan, Vietnam and even the Middle East last year. The list of targets includes organizations in the chemicals, manufacturing, electronics, aerospace, healthcare, and automotive sectors. APT37 has exploited several Flash Player and Hangul Word Processor vulnerabilities to deliver various types of malware, including the RUHAPPY wiper, the CORALDECK exfiltration tool, the GELCAPSULE and HAPPYWORK downloaders, the MILKDROP and SLOWDRIFT launchers, the ZUMKONG infostealer, the audio-capturing tool SOUNDWAVE, and backdoors tracked by FireEye as DOGCALL, KARAE, POORAIM, WINERACK and SHUTTERSPEED. This malware has been delivered using social engineering tactics, watering holes, and even torrent sites for wide-scale distribution. [Link](#)

Tesla AWS cloud systems exploited by hackers to mine cryptocurrency

From ZDNet (02.20.2018) Charlie Osbourne

Tesla's cloud environment has been exploited by threat actors to mine cryptocurrencies, researchers have discovered. On Tuesday, cloud security firm RedLock released the firm's 2018 Cloud Security Trends report which documents the discovery of an unprotected Kubernetes console belonging to automaker Tesla. The Kubernetes console is used to automate the deployment, scaling, and operation of application containers, virtualized software, and some cloud-based services. Google's open-source Kubernetes system is used securely by countless enterprise players worldwide, but in this case, an unsecured console exposed access credentials to Tesla's Amazon Web Services (AWS) environment. Researchers from the RedLock Cloud Security Intelligence (CSI) team discovered that cryptocurrency mining scripts, used for cryptojacking -- the unauthorized use of computing power to mine cryptocurrency -- were operating on Tesla's unsecured Kubernetes instances, which allowed the attackers to steal the Tesla AWS compute resources to line their own pockets. Tesla's AWS system also contained sensitive data including vehicle telemetry, which was exposed due to the unsecured credentials theft. The unknown hackers also employed a number of techniques to avoid detection. Rather than using typical public mining pools in their scheme, for example, the threat actors instead installed mining pool software and instructed the mining script to connect to an unlisted endpoint. According to the researchers, this technique makes it more difficult for domain and IP-based threat detection systems to detect such activity. In addition, the cyberattackers hid the true IP address of the mining pool to keep CPU usage low and prevent a level of suspicious traffic which would likely have been quickly detected. [Link](#)

Researchers say Kaspersky web portal exposed users to session hijacking, account takeovers

From SC Media (02.19.2018) Bradley Barth

Security researchers say they discovered several vulnerabilities and security lapses in Kaspersky Lab's my.kaspersky.com web portal earlier this month, adding that the flaws exposed users to potential session hijackings and account takeovers. According to a new report from the cybersecurity firm LMNTRIX – shared first with SC Media – the issues primarily were found in the processes for authentication, session management and validation, and password changes. The researchers say the problems were remedied following private notification, yet Kaspersky Lab is denying that most of the issues existed in the first place. More specifically, the LMNTRIX report notes that my.kaspersky.com suffered from a lack of protections against automated brute force and credential stuffing attacks (which can lead to an account takeover), allowed weak or default passwords (such as admin/admin), employed insecure credentials recovery processes (e.g. knowledge-based security questions), and had missing or ineffective multi-factor authentication. Problems with the session IDs reportedly included exposed IDs in the URL, failure to rotate the IDs after a successful log-in, and a failure to invalidate a session ID after the portal visitor logs out or remains inactive for a long period of time. In a statement provided to SC Media, Kaspersky disputes most of LMNTRIX's account, asserting that the reported vulnerabilities "were never confirmed" in the first place, and therefore no action was taken. [Link](#)

\*Macro-Based Multi-Stage Attack Delivers Password Stealer

From Security Week (02.19.2018) Ionut Arghire

A malicious attack uses a multi-stage infection to deploy malware that is capable of stealing passwords from various applications on a victim's computer, Trustwave reports. The attack starts with spam emails distributed from the Necurs botnet to deliver macro-enabled documents, such as Word docs, Excel spreadsheets, or PowerPoint presentations, to the targets. As part of this infection campaign, DOCX attachments containing an embedded OLE object that has external references was used. Thus, external access is provided to remote OLE objects to be referenced in the document.xml.rels. Once executed on the victim's system, the file attempts to exploit the CVE-2017-11882 vulnerability that Microsoft patched last November in the Office's Equation Editor tool, and which has been already abused in a wide range of attacks. The RTF file executes an MSHTA command line to download and execute a remote HTA file. In turn, the HTA file contains VBScript with obfuscated code which decodes to a PowerShell Script designed to fetch and run a remote binary file. This binary is the final payload that turns out to be a password stealer malware family capable of gathering credentials from email, FTP, and browsers installed on the victim's machine. For that, it concatenates available strings in the memory and uses the RegOpenKeyExW and PathFileExistsW APIs to check if registry or paths of various programs exist. The malware was observed sending the harvested data to its command and control (C&C) server via a HTTP POST request. [Link](#)

\*MS Word's new imbedded video feature opens door to Cryptojacking /Phishing

From Bleeping Computer (02.20.2018) Catalin Cimpanu

Cryptojacking scripts that mine Monero via JavaScript code can also run inside Word files, security researchers have discovered. This is possible via a new feature added to recent versions of Microsoft Word that allows users to embed Internet videos inside Word files without having to inject the actual video file inside the document itself. Users can copy-paste a video's iframe embed code inside a Word popup, and the video will appear in the document the next time they open it. If they press the "Play" button that appears over the video's iframe, the video loads and plays inside a popup. But security researchers from Israeli security firm Votiro have discovered that miscreants could leverage this video embedding system to add cryptojacking scripts with the videos, and mine Monero behind the user's back. According to Votiro's Amit Dori, this is possible because of two reasons. The first is that Word allows the insertion of iframe embed codes from anywhere on the Internet, instead of restricting the video sources to a few whitelisted domains. Second is because the popup that plays the video is actually a headless Internet Explorer browser. A crook can host a video on his own domain, but also make sure to load an in-browser cryptocurrency miner (cryptojacking script) alongside the video. But Dori believes his recent findings will be abused in other ways, and not necessarily for cryptojacking. Dori believes that crooks will abuse Word's video embedding system to embed phishing pages inside Word files primarily. Crooks may limit the viewing of videos to authenticated users and may use this feature to phish credentials for various online accounts. [Link](#)

Lawsuits threaten to hinder infosec research

From ZDNet (02.20.2018) Zack Whittaker

This year, two security reporters and one researcher will fight for their professional lives in court. Steve Ragan, senior staff writer at tech news site CSO, and Dan Goodin, security editor at Ars Technica, were last year named defendants in two separate lawsuits. The cases are different, but they have a common theme: they are being sued by the companies covered in articles they wrote. Although lawsuits targeting reporters, particularly on the security beat, are rare, legal threats are an occupational hazard that reporters are all too aware of -- from companies threatening to call an editor to demand a correction -- or else -- to a full-blown lawsuit. But the inevitable aftermath is a "chilling effect." White-hat hackers and security researchers hesitate to report vulnerabilities and weaknesses to technology firms for fear of facing legal retribution. The most recent act of legal aggression comes from Keeper Security, which filed a civil defamation suit against Goodin in December for allegedly making "false and misleading statements" about the security company's flagship password manager software. In the last year alone, several security researchers have revealed that they have been the target of legal threats. PwC sent cease and desist letters to a researcher who found a critical flaw in one of its security products. These represent only a fraction of cases where legal threats resulted from security research. [Link](#)

Vodafone launches IoT drone tracking trials

From Air Traffic Management (02.20.2018)

Vodafone has launched air traffic control drone tracking trials using 4G Internet of Things (IoT) technology to protect aircraft from catastrophic accidents as well as prevent inadvertent or criminal drone incursions at sensitive locations such as airports, prisons and hospitals. The business said that its IoT drone tracking and safety technology trials support the objectives of the European Aviation Safety Agency (EASA), with whom Vodafone has collaborated and which is currently developing new pan-European rules to regulate the operation of drones. The new technology could, Vodafone said, also enhance the European Union's potential to become the center of global innovation in drone technology in line with the European Commission's "U-space" vision for innovative and safe drone operations. Vodafone has developed the world's first Radio Positioning System (RPS) for drones. This uses a 4G modem and SIM embedded within each drone to enable: real-time tracking of each drone (with up to 50 meter accuracy) by drone operators and authorized bodies such as air traffic control; over-the-horizon/beyond line-of-sight control by the operator, greatly reducing the risk of accidental incursions when operators lose sight of their drones; protective geofencing, with drones pre-programmed to land automatically or return to the operator when approaching predetermined exclusion zones (such as airports and prisons); emergency remote control intervention to provide the authorities with the means of overriding a drone operator's control to alter a drone's flight path or force it to land; and SIM-based e-identification and owner registration. Legislation & Regulation News

Canadian aircraft-parts company feels it's NAFTA-proof

From The Globe and Mail (02.20.2018) David Israelson

Ignoring the shifting winds of the North American trade deal as much as it can, Cyclone Manufacturing Inc. continues to look abroad. The Mississauga-headquartered company, founded in 1964 as a machine shop, has been expanding almost constantly into the global marketplace since it began focusing intensively on manufacturing aircraft components in the mid-1980s. The global nature of aircraft manufacturing enables Cyclone to thrive as an exporter from its Greater Toronto Area base. Tier 1 companies like Cyclone send their manufactured components directly to the OEM, so it's an accomplishment for a Canadian manufacturer to hold its own against global rivals. The company won't likely be affected much by the outcome of difficult talks with the United States and Mexico over renewing the North American free-trade Agreement, Mr. Sochaj says. "We don't have any problems

shipping to the U.S. Aerospace is governed by international aviation agreements," he explains. Aircraft parts that are manufactured all around the world are often assembled into planes in the United States, so international agreements are structured to allow components to move back and forth between countries. That makes trade in the aircraft parts sector relatively seamless compared with other types of goods and services that face barriers, Mr. Sochaj explains. As a participant in a global supply chain, a company like Cyclone is well positioned within the aerospace sector, according to data compiled by Innovation, Science and Economic Development Canada. More than 60 per cent of Canadian aerospace product exports were supply chain related in 2016, the government agency says, with engines, avionics and landing gear making up the bulk of Canadian exports. [Link](#)

## EASA Taps Brakes on Rulemaking in Aviation Safety Plan

From Aviation International Online (02.19.2018) Gordon Gilbert

EASA's 2018-2022 European Plan for Aviation Safety (EPAS) now includes what the agency calls a "rulemaking cooldown." Specifically, the plan states, "Delivery of the number of [regulatory] opinions over the next five years has been reduced as compared to the previous years." The agency said this reflects the need to put more focus on supporting the implementation of recently adopted regulations and give priority to other means of improving safety, notably focused oversight and safety promotion. "The shift to safety promotion is particularly significant in the field of general aviation," EASA said. Overall, the aim of EPAS is to provide a coherent and transparent framework for safety work, helping to identify major risks and defining the actions to take. It also encourages EU member states to implement their own safety programs and share best practices and knowledge. To give aircraft operators a "comprehensive and coherent vision" of what EASA intends to do in the coming years regarding new regulations, the EPAS program and the agency's rulemaking program are combined into one document. The agency believes the combination will "improve safety and the environmental performance of the aviation sector." This year's edition of the EPAS also covers EASA's strategy in the areas of international cooperation and technical training. According to EASA executive director Patrick Ky, "Safety actions need to be coordinated more than ever at regional and international levels, which explains the growing role played by regional safety oversight organizations in the field of aviation and the pivotal activity of EASA in this domain." Lufthansa Pilot mistakenly triggers hijacking alarm

From News.Com (02.20,2018)

The pilot of a Lufthansa flight approaching Germany's busiest airport accidentally raised a national security alarm when he input the code for a hijacking. There had been a technical problem with the

communication device in the cockpit, meaning that the pilot could send but not receive messages from air traffic controllers at Frankfurt airport, a spokesman for the airline says. To alert air traffic control to the problem, the pilot was meant to input a code, but he used the wrong one. The incoming hijacking code led the leaders of the state police force, federal police and army being informed straight away, federal police spokesman Reza Ahmari said. After some 20 minutes the alarm was lifted as the pilot had noticed his mistake and entered the correct code. The plane, which had taken off from Aberdeen in Scotland in the morning, was able to land late, but safely. [Link](#)

## Man Who Breached Peoria Airport Security Might Have Boarded Empty Plane

From Aviation Pros (02.20.2018)

A man who tried to ram a car into the Peoria international airport terminal last weekend has been released from a local hospital, police said Monday. Following that unsuccessful ramming attempt, the man might have boarded an empty, secured airplane that was parked at one of the terminal gates, a police report suggested. Justin T. Deemie, 27, had been hospitalized since his arrest early Saturday. Shortly after 3 a.m. Saturday, Deemie drove a 2005 Ford Escape onto airport property. Once inside the terminal, Deemie accessed a restricted, secured area. A sheriff's department police report stated Deemie ran directly to a roll-up door that leads to the Transportation Security Administration baggage screening area. He pulled up the door and slid under it. Deemie used a similar door to access the baggage carousel area, the report stated. From there, he eventually opened a door on a plane parked at a gate and entered it. After that, Deemie continued to run through the terminal and jumped a fence on its east side, according to the report. Sheriff's deputies apprehended a struggling Deemie in the airport parking lot. [Link](#)

## Miscellaneous News

### Iranian airline covertly bought parts from U.S. suppliers

From CBS News (02.19.2018) Kate Gibson

The U.S. has suspended the export privileges of a Turkish national and three related companies it says obtained American-made aircraft parts for Iranian airlines, violating U.S. sanctions. The move was announced earlier this month but has passed largely unnoticed. Mira Ricardel, Under Secretary of Commerce for Export Administration, said in a February 5 news release from the Commerce Department's Bureau of Industry and Security (BIS) that the sanction shows that trade with Iran that defies U.S. export laws and regulations will not be tolerated. BIS oversees exports of high-technology and other products related to national security. According to the Commerce Department, Turkish

national Gulnihal Yegane set up shell companies to purchase equipment from U.S. suppliers on behalf of Iran's Mahan Air. The carrier is under sanctions by the U.S. for allegedly carrying arms and fighters in Syria. The jet parts were obtained through the Turkish fronts in the past several years, most recently in December. According to the Wall Street Journal, the trade action could support the views of some in the Trump administration who oppose granting permission to Boeing to sell aircraft to another Iranian carrier. The U.S. has loosened sanctions against Iran Air, but they remain in place against Mahan for more than a decade due to its alleged collaboration with Iran's Islamic Revolutionary Guard Corps, the newspaper said. ## Southwest Airlines to Begin Shipping Cargo Internationally

From Aviation Pros (02.20.2018)

Southwest Airlines Co. announced its intention to begin shipping cargo to select international destinations beginning in May 2018, subject to requisite government approvals. The first international destinations Southwest Airlines Cargo expects to serve are Mexico City, Cancun, Cabo San Lucas/Los Cabos, and Puerto Vallarta with more international destinations planned for 2018. The new international shipping options are made possible in part due to the rollout of Southwest Cargo's new point-of-sale and back office accounting system, Southwest Cargo Suite (SCS). SCS is expected to take the place of the current system in March 2018, and along with international capabilities, give Customers the ability to make advanced cargo bookings, and utilize electronic Air Waybills. ## U.S. Department of Transportation Crisis Management Center Daily Report

### Commercial In-Flight Incidents

#### \*Spirit 640, A319

- o February 20, 2018 at 1:35 AM EST
- o Enroute from Las Vegas, NV (McCarran International Airport) to Boston, MA (Boston Logan International Airport)
- o Noxious smell emanating from the A/C pack; oxygen masks not deployed
- o Returned to Las Vegas, NV; landed without incident
- o 3 crew members transported to hospital

#### \*Endeavor 3318, CRJ2

- o February 19, 2018 at 11:06 PM EST

- o Enroute from Atlanta, GA (Hartsfield–Jackson Atlanta International Airport) to Fort Smith, AR (Fort Smith Regional Airport)
- o Engine problem; #2 engine shut down
- o Diverted to Memphis, TN (Memphis International Airport); landed without incident at 11:30 PM EST

\*American 1208, B738

- o February 19, 2018 at 11:15 PM EST
- o Enroute from Chicago, IL (Chicago O'Hare International Airport) to Santa Ana, CA (John Wayne Airport)
- o Hydraulic problem
- o Diverted to Los Angeles, CA (Los Angeles International Airport); landed without incident

\*Southwest 289, B737

- o February 18, 2018 at 5:18 PM EST
- o Enroute from Ladyville, Belize (Philip S. W. Goldson International Airport) to Denver, CO (Denver International Airport)
- o Pressurization problem
- o Diverted to Houston, TX (William P. Hobby Airport); landed without incident at 5:39 PM EST

\*Delta 2767, B738

- o February 18, 2018 at 1:22 PM EST
- o Enroute from Boston, MA (Logan International Airport) to Salt Lake City, UT (Salt Lake City International Airport)
- o Fuel problem
- o Diverted to Grand Junction, CO (Grand Junction Regional Airport); landed without incident at 1:30 PM EST

\*Air Canada 1603, B763

- o February 18, 2018 at 1:07 PM EST
- o Enroute from Fort Lauderdale, FL (Fort Lauderdale–Hollywood International Airport) to Montreal, Canada (Montréal–Pierre Elliott Trudeau International Airport)
- o Engine problem
- o Returned to Fort Lauderdale, FL (Fort Lauderdale–Hollywood International Airport); landed without incident at 1:10 PM EST

## Ground Incidents

\*Appleton, WI (83 miles NNW of Milwaukee, WI), Appleton International Airport

- o February 18, 2018 at 8:35 PM EST
- o SkyWest 4671, CRJ9, from Minneapolis, MN (Minneapolis–Saint Paul International Airport)
- o While taxiing to gate, electronic device in overhead bin began to smoke
- o Flight attendant took bag to the galley
- o Passengers deplaned via stairs at ramp; Fire Department inspected and released aircraft
- o 0 fatalities; 0 injuries

\*Los Angeles, CA, Los Angeles International Airport

- o February 18, 2018 at 3:25 AM EST
- o Delta 1267, B738, scheduled to Cincinnati, OH (Cincinnati/Northern Kentucky International Airport)
- o During pre-check inspection of the aircraft, the flight crew discovered a white powder
- o Law enforcement responded, examined the substance and determined it was non-toxic

<b>HEADLINE</b>	<b>02/12 Flu season continues to worsen</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/feb/12/flu-season-becomes-worst-since-records-first-kept/">https://www.washingtontimes.com/news/2018/feb/12/flu-season-becomes-worst-since-records-first-kept/</a>
<b>GIST</b>	<p>This flu season is the worst since health officials started keeping records on infections in 2004, surpassing all metrics from the previous worst outbreak of 2014/2015 as illnesses, hospitalizations and deaths keep rising across the nation.</p> <p>“Unfortunately, we were hoping that it would start turning around and going the opposite direction, but it’s still going up,” said Dr. Anthony Fauci, head of the Institute of Allergy and Infectious Diseases. “So we really need to just grit our teeth and say hopefully in the next week or two it will turn around, but it’s not doing that right now unfortunately.”</p> <p>Since October, health officials have watched flu cases closely mirror the statistics of the 2014/15 outbreak, with H3N2 the dominant strain then and now. Cases that year started to drop off at the beginning of January, but all measures this season are increasing, according to the Centers for Disease Control and Prevention.</p> <p>“The one thing we can see is that, if you exclude the pandemic of 2009 this clearly is the worst among the seasonal flus,” Dr. Fauci said.</p> <p>The 2009 pandemic was categorized by its worldwide outbreak of a novel strain of H1N1 and its length, from spring through winter.</p> <p>While this flu season began, as usual, in the fall, the number of cases have yet to decline in any meaningful way, and are inching higher.</p>

<b>HEADLINE</b>	<b>02/12 Average pay security guards spike 17%</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/explore/careers/average-pay-for-this-job-has-spiked-17-in-a-year/">https://www.seattletimes.com/explore/careers/average-pay-for-this-job-has-spiked-17-in-a-year/</a>
<b>GIST</b>	<p>Despite the lowest unemployment rate since 2000, wages for American workers rose at a relatively tepid pace last year. For security guards, it’s a different story.</p> <p>Average hourly earnings for employees in security and armored car services jumped 17 percent to \$17.45 in the 13 months through November, compared with a 2.5 percent increase for all U.S. private-sector workers in the same period.</p> <p>Why such big gains? Possible reasons include terrorism, marijuana and organized labor.</p> <p>Terror threats: The threat of mass shootings and domestic terrorism is driving demand for security in atypical venues, according to Steve Amitay, executive director of the National Association of Security Companies in Washington.</p> <p>Amitay pointed to the 2012 movie-theater shooting in Aurora, Colorado, as an example. Other shootings in Orlando, Florida; Las Vegas; and a church in Sutherland Springs, Texas, suggest greater demand for armed security at public venues could rise.</p> <p>“I don’t see there being, in the near future, any downturn for this industry,” Amitay said. The Colorado incident “was a real warning to other movie chains and other types of venues: If you don’t have adequate security you may not be able to prevent a terrorist attack from taking place, and if you don’t have any security you will be held liable,” he said.</p>

Victims of the shooting requested hundreds of thousands of dollars in legal costs, alleging security weaknesses in the theater enabled the attack. The requests were eventually dropped.

Pot security: Another hot area for security is pot. Dispensaries are popping up across the country as more states legalize marijuana. In Denver alone, there are 230 retail marijuana stores, according to the city's website. That's far more than Starbucks, which lists 50 retail locations in the area.

"The cannabis industry has created a lot more security officer jobs," said Michael Julian, president of MPSI, a consulting firm in the cannabis industry. Dispensaries often pay their security guards higher wages than the industry standard due to the merchandise they protect, he said. Armored security vehicles sometimes escort the drugs and cash from the business.

Labor gains: In California, Tiffany Dinkins credits her union for rising wages. Just a year ago, the ex-army officer was working two security jobs in San Francisco to provide for her family, including three children. But in recent months, Dinkins saw her pay steadily increase, finally creeping above \$20 an hour, and she decided to focus on a single job as an ABC News security guard.

Dinkins said she saw a big change in wages when she moved to San Francisco from Atlanta and joined the Service Employees International Union, which has helped secure pay gains.

Working in California "was better because I had increases guaranteed," with raises considerably bigger than the ones in Georgia, Dinkins said. "You go from 10 cents to someone giving you a dollar increase."

<b>HEADLINE</b>	<b>02/13 India warns Pakistan for Kashmir attack</b>
<b>SOURCE</b>	<a href="https://www.sbs.com.au/news/pakistan-will-pay-over-kashmir-militant-attack-india-s-defence-minister">https://www.sbs.com.au/news/pakistan-will-pay-over-kashmir-militant-attack-india-s-defence-minister</a>
<b>GIST</b>	<p>India has warned Pakistan it will "pay for this misadventure" following a deadly attack by militants on an army camp in the northern state of Jammu and Kashmir that has stoked tensions between the nuclear armed rivals.</p> <p>Defence Minister Nirmala Sitharaman told reporters on Monday that the Indian army had ample evidence to prove that "the handlers of the terrorists were back in Pakistan."</p> <p>Saturday's attack on the camp near Jammu, the winter capital of the state, was the worst in months with six soldiers and the father of a soldier killed. Among the 10 wounded were women and children. At least three militants were killed, according to Indian officials, bringing the death toll to 10.</p> <p>"Pakistan is expanding the arc of terror... resorting to ceasefire violations to assist infiltration," Sitharaman said. "Pakistan will pay for this misadventure."</p> <p>Indian officials have said the heavily armed attackers involved in Saturday's attack were members of the Pakistan-based Jaish-e-Mohammad (JeM) militant group.</p> <p>Pakistani officials criticised India for rushing to a conclusion without a full inquiry.</p> <p>India has long accused Pakistan of training and arming militants and helping them infiltrate across the heavily militarised Line of Control into Jammu and Kashmir, India's only Muslim majority state.</p>

<b>HEADLINE</b>	<b>02/12 Life in a hurricane hotel</b>
-----------------	--

SOURCE	<a href="https://www.nytimes.com/2018/02/12/insider/hurricane-maria-puerto-rico-fema-hotel.html">https://www.nytimes.com/2018/02/12/insider/hurricane-maria-puerto-rico-fema-hotel.html</a>
GIST	<p>Soon after Hurricane Maria hit Puerto Rico on Sept. 20, as the vastness of the storm’s wrath became increasingly evident, my boss, the Metro editor of The Times, asked me to focus on stories that examined how the storm’s toll would ripple its way to the mainland United States and to New York, where deep ties had been forged over generations.</p> <p>The storm’s immediate reverberations in New York, Connecticut and New Jersey — my turf as a regional correspondent for The Times — were certainly clear. At first, I talked to Puerto Ricans struggling to make contact with family on the island and then about the obligations those from Puerto Rico feel they have to the island, including politicians on the mainland who try to make up for the island’s lack of federal representation and young people guilty over fleeing.</p> <p>But as I started reporting on a story about the families living in hotel rooms provided by the Federal Emergency Management Agency, which appears on today’s front page, I was struck by how, nearly five months after landfall, the trauma Maria created was still intensifying and metastasizing — reaching all the way to a Red Roof Inn in downtown Hartford.</p> <p>A sense of restlessness pervaded the hotel. I felt it as soon as I stepped off the elevator. In most of the rooms were families who had fled their homes in Puerto Rico after the devastation of Hurricane Maria and were living in the hotel in Connecticut while they tried to figure out whether they could go back home or would have to start over elsewhere.</p> <p>I saw a mother in pajamas bouncing her infant daughter in the very lived-in room her family had stayed in since November, every crevice jammed with diapers and snacks and clothes. Children buzzed around from the rooms into the hallways and lobby downstairs, bursting with energy that needed to be burned.</p> <p>Many of them had spent their weeks looking for jobs or permanent housing, or walked over to a nearby church that had opened up its kitchen for them to cook in. The children went to school. But this was a Friday night, and as they splayed out on beds watching TV, listened to music or played video games, it felt like they were just killing time, one day passing like so many others before it.</p> <p>They had air-conditioning. They were not waiting for hours in lines for food, water and fuel. They had cable television. Still, the aimlessness that plagued them seemed like an extension of the storm’s trauma.</p> <p>“It’s not easy for anybody to live like this,” Janette Febres told me in the room where she, her husband and 12-year-old son had shared a bed for months.</p> <p>I have never traveled to Puerto Rico, before or after Maria. My impressions of how so much had been upended were formed by the stories told by Puerto Ricans, the photographs they showed me, the distress I saw in their lives. On the other hand, my partner on the story, Luis Ferré-Sadurní, who visited a hotel in Queens, was a native of Puerto Rico. He had spent nearly 40 days there reporting after Hurricanes Irma and Maria and had experienced, as he put it, the dire conditions that “disrupted their lives and led thousands to take that leap of faith” to leave behind their homes for the mainland.</p> <p>My reporting was certainly informed by my own experience with storms. I grew up on the Gulf Coast of Texas. I’ve spent hours packed into a minivan with family and the dog, trying to get a couple of hundred miles away, and spent weeks staying with relatives wondering what I would return to. But the scope of the turmoil and uncertainty these families from Puerto Rico faced was well beyond what I knew.</p> <p>Luis and I were taken by similar observations of the dilemma these families faced: “Try to make it on the mainland, where many have struggled to find jobs and housing,” Luis said, “or return to Puerto Rico, where stability is still elusive.”</p> <p>Most of the families he interviewed, he said, “had not yet found what they ultimately left their homeland looking for: a sense of stability.”</p>

Of all the people we met, a young family that Luis found in Queens stuck with me the most. Yanitza Cruz was nearly eight months pregnant; her due date and the expiration date for her family's FEMA-provided hotel were worryingly close. The family traveled from a remote mountain town to New York using almost all of their savings. Her husband, Joel García, even panhandled.

But they maintained an incredible level of optimism. They talked about getting an apartment in New York, and him finding work as a barber. As most of us in New York groan over subway delays, he was astonished at how he could journey across a metropolis for the swipe of his MetroCard. And the family marveled at the generosity they have been shown.

On a visit to the Puerto Rican Family Institute, they met a maintenance worker who took Mr. García to a department store and bought every member of the family a jacket. He did not even look at the price tags. His name was Nate. "I'm never going to forget you," Mr. García said he told Nate.

Of all that remained uncertain, he and his wife had settled one thing: When she gives birth next month, they plan to name their son Nate.

<b>HEADLINE</b>	<b>02/13 Everett schools plan homeless housing</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/news/everett-housing-authority-schools-plan-homeless-housing/">http://www.heraldnet.com/news/everett-housing-authority-schools-plan-homeless-housing/</a>
<b>GIST</b>	<p>EVERETT — The Everett School District has a concentration of homeless students in the north end of the city, particularly the areas served by Garfield and Hawthorne elementaries east of Broadway.</p> <p>In the coming years, some of those families could become eligible for placement in a new \$27.1 million housing project.</p> <p>Cynthia Jones oversees the district's programs supporting homeless students. She spoke this past June at an affordable housing conference for Everett and Snohomish County.</p> <p>In the audience was Steve Yago, the Everett Housing Authority's director of real estate acquisition.</p> <p>He remembers thinking, "This is right in our back yard, and this is not being served."</p> <p>That sparked an idea that might be the first project of its kind in the region, he said.</p> <p>The housing authority is seeking to build a new 82-unit complex in Everett's Delta neighborhood. The units primarily would serve families who are homeless and have children in the school district, which would provide the referrals. Campuses served also would include North Middle School and Everett High School.</p> <p>The numbers show the need. In the 2016-17 academic year, Everett schools counted 1,150 students who were homeless, and the figure is growing, according to public records.</p> <p>Housing projects, both locally and nationally, are trending toward units that serve one or two people, said Ashley Lommers-Johnson, executive director of the Everett Housing Authority. One factor is the recent emphasis on serving the chronically homeless and the mentally ill. Several of those projects are under way in town.</p> <p>Larger units with multiple bedrooms cost more to build and to operate, he said.</p> <p>"We have made families with children a key part of future funding," he said. "It's part of our goal of addressing generational poverty."</p> <p>The site of the new development is what is now the Baker Heights public housing project. The buildings</p>

there have been deemed obsolete. The foundations, floor supports and roofs are failing, and the wood is rotting, according to a June letter issued by the U.S. Department of Housing and Urban Development.

The Everett Housing Authority is an independent public agency whose board members are appointed by elected city leaders. The agency has been relocating more than 240 households from Baker Heights.

Eventually the agency plans to create enough new, subsidized housing, largely through purchasing property, to offset the loss of units in the demolition of Baker Heights, Lommers-Johnson said.

“We have made a public commitment that we will replace all 244 units,” he said.

The land underneath the complex is appraised at \$4.21 million, according to public records. The housing authority plans to keep 3.6 acres and sell the rest, which is about 11 acres. There has been talk about WSU Everett becoming the buyer, a notion that has drawn support from Mayor Cassie Franklin.

That’s far from final, though. Federal policy requires the housing authority to solicit bids for the property through a public process. That hasn’t started yet.

The budget for the new housing project, tentatively named the “Baker Heights Townhomes,” runs about \$27.1 million. Most of that would come from federal tax credits.

Construction is scheduled in two phases. Work on the first phase, with 43 apartments, could start in spring 2019. Most of the units would have two or three bedrooms, Yago said. The second phase, with 39 townhomes, depends on funding but might follow before the end of next year. The rent rates would be based on each family’s income.

The new development would have social services on site, with an emphasis on education and employment, Lommers-Johnson said. Early in the planning, the housing authority asked the school district for feedback. The schools stressed the importance of early learning.

The district has said it likely could run a preschool at the location, primarily serving the children of tenants. If that happens, it would become one of many ways the district aims to help students who lack stable housing, Jones said.

<b>HEADLINE</b>	<b>02/12 Syria war mutates into regional conflict</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/syrias-war-mutates-into-a-regional-conflict-risking-a-wider-conflagration/2018/02/12/87c783fc-0da2-11e8-998c-96deb18cca19_story.html?hpid=hp_hp-top-table-main_syria-1120%3Ahomepage%2Fstory&amp;utm_term=.19b91995ea54">https://www.washingtonpost.com/world/syrias-war-mutates-into-a-regional-conflict-risking-a-wider-conflagration/2018/02/12/87c783fc-0da2-11e8-998c-96deb18cca19_story.html?hpid=hp_hp-top-table-main_syria-1120%3Ahomepage%2Fstory&amp;utm_term=.19b91995ea54</a>
<b>GIST</b>	<p>BEIRUT — A war that began with peaceful protests against President Bashar al-Assad is rapidly descending into a global scramble for control over what remains of the broken country of Syria, risking a wider conflict.</p> <p>Under skies crowded by the warplanes of half a dozen countries, an assortment of factions backed by rival powers are battling one another in a dizzying array of combinations. Allies on one battlefield are foes on another. The United States, Russia, Turkey and Iran have troops on the ground, and they are increasingly colliding.</p> <p>In the space of a single week last week, Russia, Turkey, Iran and Israel lost aircraft to hostile fire. The United States, meanwhile, has been battling for days to hold back Iranian-supported Syrian tribal militias in the eastern desert, drawing U.S. forces closer toward entanglement in Syria’s conflict.</p> <p>“The risks are high,” said Sami Nadir of the Levant Institute for Strategic Affairs. “There is a new Cold War prevailing in Syria and any escalation could pave the way for a regional or international war given the</p>

fact that the big powers are directly present on the ground and not through proxies, as used to be the case in the past.”

The latest confrontations come after years of fighting during which the parties to what long ago ceased to be a civil war have come to rely on outside powers for their sustenance, bringing new weapons, soldiers and also agendas flooding into Syria.

With Assad having prevailed over the rebellion against him and the Islamic State squeezed into a last sliver of territory along the Iraqi-Syrian border, the rival players now are battling to shape the final outcome of the war.

The Syrian government controls the biggest chunk of territory, with over half the country at least under nominal control of Assad loyalists, backed by Russia and Iran.

The United States holds sway over the second-largest area, the 27 percent of Syria that was captured mostly from the Islamic State by Kurdish-led forces in the northeast, with the help of U.S. weapons, air power and Special Operations advisers. The United States says it will remain until there is a peace settlement, leaving open the question of how long that will be.

Turkey holds a pocket of territory in the north alongside Syrian rebels and last month launched an incursion into the adjoining Kurdish enclave of Afrin.

There, the complexity of the war is on full display. America’s NATO ally Turkey is battling U.S.-allied Kurds, who are receiving tacit support from the Syrian government. But the government is at the same time backing the tribal militias that have been attacking the U.S.-allied Kurds and their U.S. advisers in eastern Syria.

Holding the overall balance of power is Russia, which became the dominant military power in Syria when it intervened on behalf of Assad in 2015 and now is awkwardly playing the role of both combatant and peace broker.

But it is the significantly enhanced reach of Iran that poses the biggest danger of a wider conflict. Iran has provided the muscle in the form of manpower and money that enabled the Syrian government to reclaim most of the vast swaths of territory that fell out of government hands in the earliest years of the war, in the process expanding Iranian presence in Syria.

Israel has watched the expanding influence of Iran and its allied militias with growing alarm. Across its borders, Israel now faces Iranian commandos and allied forces, including the Lebanese Shiite Hezbollah movement and some of the most powerful Iraqi Shiite militias that challenged U.S. troops in Iraq a decade ago.

Iran has vowed, however, that the United States will not be allowed to remain in Syria, raising the specter of overlapping U.S.-Iranian and Israeli-Iranian confrontations.

“The U.S. will not succeed in partitioning Syria,” said Ali Akbar Velayati, the foreign affairs adviser of Iran’s supreme leader, Ayatollah Ali Khamenei, according to comments published by Iran’s Mehr News Agency. “Either they will leave Eastern Euphrates in Syria or we will kick them out of there.”

GIST

CARACAS, Venezuela — “Would you like to see the little ones?” asked Magdelis Salazar, a social worker, beckoning me toward a crowded playground.

We were at Venezuela’s largest orphanage, just after lunch. The yard was an obstacle course of abandoned children. A little chunk of a boy, on the cusp of 3, sat on a play scooter. He was called El Gordo — the fat one. But when he was left here a few months ago, he was skin and bones.

He zoomed past a 3-year-old in a pink shirt with tiny flowers. “She doesn’t talk much,” one of the attendants said, tousling the girl’s curly hair. At least, not anymore. In September, her mother left her at a subway station with a bag of clothes and a note begging someone to feed the child.

Poverty and hunger rates are soaring as Venezuela’s economic crisis leaves store shelves empty of food, medicine, diapers and baby formula. Some parents can no longer bear it. They are doing the unthinkable.

Giving up their children.

“People can’t find food,” Salazar told me. “They can’t feed their children. They are giving them up not because they don’t love them but because they do.”

Ahead of my recent reporting trip to Venezuela, I’d heard that families were abandoning or surrendering children. Yet it was a challenge to actually meet the tiniest victims of this broken nation. My requests to enter orphanages run by the socialist government had gone unanswered. One child-protection official — warning of devastating conditions, including a lack of diapers — confided that such a visit would be “impossible.” Some privately run child crisis centers worried that granting access to a journalist could damage their delicate relations with the government.

My Venezuelan colleague Rachelle Krygier introduced me to Fundana — an imposing cement complex perched high on a hill in southeastern Caracas. Her family had founded the nonprofit orphanage and child crisis center in 1991, and her mother remains the head of its board and her aunt its president. Rachelle remembered volunteering there a decade ago, when she was a student and the children were almost exclusively cases of abuse or neglect.

There are no official statistics on how many children are abandoned or sent to orphanages and care homes by their parents for economic reasons. But interviews with officials at Fundana and nine other private and public organizations that manage children in crisis suggest that the cases number in the hundreds — or more — nationwide.

Fundana received about 144 requests to place children at its facility last year, up from about 24 in 2016, with the vast majority of the requests related to economic difficulties.

Venezuela descended into a deep recession in 2014, battered by a drop in global oil prices and years of economic mismanagement. The crisis has worsened in the past year. A study by the Catholic charity Caritas in poorer areas of four states found the percentage of children under 5 lacking adequate nutrition had jumped to 71 percent in December from 54 percent seven months earlier.

For years, Venezuela had a network of public institutions for vulnerable children — traditionally way stations for those needing temporary or long-term protection. But child-welfare workers say the institutions are collapsing, with some at risk of closing because of a shortage of funds and others critically lacking in resources.

So, increasingly, parents are leaving their children in the streets.

In the gritty Sucre district of Caracas, for instance, eight children were abandoned at hospitals and public spaces last year, up from four in 2016. In addition, officials there say they logged nine cases of voluntary abandonment for economic reasons at a child protective services center in the district in 2017, compared with none the previous year. A child-welfare official in El Libertador — one of the capital’s poorest areas

	<p>— called the situation at public orphanages and temporary-care centers “catastrophic.”</p> <p>“We have grave problems here,” said the official, who spoke on the condition of anonymity out of fear of reprisals from the authoritarian government. “There’s definitely more abandoned children. It’s not just that there are more, but also their health conditions and nutrition are much worse. We can’t take care of them.”</p> <p>With the public system overwhelmed, the burden is increasingly falling on private facilities run by nonprofit organizations and charities.</p>

<b>HEADLINE</b>	<b>02/13 Tonga clearing damage after cyclone hit</b>
<b>SOURCE</b>	<a href="https://apnews.com/543b5911586c4ad1b4f5126d9d481e0e/Cyclone-destroys-Parliament-House,-homes-on-Tonga,-Fiji-next">https://apnews.com/543b5911586c4ad1b4f5126d9d481e0e/Cyclone-destroys-Parliament-House,-homes-on-Tonga,-Fiji-next</a>
<b>GIST</b>	<p>WELLINGTON, New Zealand (AP) — The Pacific nation of Tonga began cleaning up damage Tuesday from a cyclone that destroyed its Parliament House, as well as homes and churches, and was intensifying as it headed toward nearby Fiji.</p> <p>Cyclone Gita caused power outages after tearing through the island nation just south of the capital, Nuku’alofa, with winds exceeding 200 kilometers per hour (124 miles per hour) at landfall. Some 5,000 people stayed in evacuation centers overnight, according to officials, and an emergency was declared. There were no immediate reports of serious injuries or deaths.</p> <p>The cyclone was intensifying and was forecast to hit some southern Fiji islands Tuesday night, though it’s likely to miss Fiji’s major population centers, including the capital, Suva.</p> <p>In Tonga, publisher Pesi Fonua said fallen trees were littering the landscape and their absence was opening up new vistas. He said many homes had lost their roofs or were otherwise badly damaged. Many people had endured a terrifying night and were glad to be alive, he added.</p> <p>“Most of them haven’t experienced anything like this before,” he said. “It was a real shock for them.”</p> <p>Tongan noble lawmaker Lord Fusitu’a told the Australian Broadcasting Corp. it was a great disappointment the Parliament building had been knocked down.</p> <p>“Successive legislatures over the years have suggested building a new Parliament House, and I guess that’ll be a necessity now,” he said.</p> <p>About 2,500 people living on two of Fiji’s islands were at risk, the nation’s National Disaster Management Office told Radio New Zealand. Director Anare Leweniqila said emergency supplies of food and water were being gathered and urged elderly and disabled people to begin moving into evacuation centers.</p> <p>The storm has strengthened since hitting Samoa and American Samoa last week, where it caused damage to buildings, widespread power outages and flooding.</p>

<b>HEADLINE</b>	<b>02/12 Seattle most shared electric bikes in US</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/898315/limebike-launches-electric-bikes-seattle/">http://mynorthwest.com/898315/limebike-launches-electric-bikes-seattle/</a>
<b>GIST</b>	<p>Bikeshare company LimeBike has launched more than 500 stationless electric bikes in Seattle, making it the city with the most electrified rides in the nation.</p> <p>LimeBike expanded its brand of bikeshare into 45 markets since launching in the summer of 2017. It was part of the stationless bikeshare pilot in Seattle that is still going (three such companies are currently operating in town). The company's electric bikes — the Lime-E model — is debuting in Seattle before any other city.</p> <p>The electric-assisted bike operates the same as LimeBike's people-powered models — customers unlock a bike with their smart phone and pay for time to ride. The electric bikes come with a different price, however. It costs \$1 to unlock, and then 10 cents for every minute of use after that (students and faculty in Seattle get half off the price).</p> <p>The electric bikes can go 14.5 mph and have a 62 mile range per charge. The company has stated the bikes can easily handle a 30-degree hill.</p> <p>LimeBike also has plans to launch its Lime-E model in Miami, Scottsdale, Southern California, and the greater San Francisco Bay Area.</p> <p>Another bikeshare company, Spin, is also expected to launch its own electric bikes, but it is unclear when, or if, it will bring them to Seattle. The company has mentioned plans to first launch them in Miami, University of California San Diego, and the Rochester Institute of Technology. Spin promotes that its electric bikes can travel up to 50 miles on a charge. According to TechCrunch, Spin's operations teams will travel around and swap out the batteries.</p>

<b>HEADLINE</b>	<b>02/12 Drug shortages hit health care system</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/why-so-many-medicines-are-in-short-supply-after-hurricane-maria/">https://www.cbsnews.com/news/why-so-many-medicines-are-in-short-supply-after-hurricane-maria/</a>
<b>GIST</b>	<p>The nation's health care system is still reeling from Hurricane Maria five months after the killer storm hit. Along with Puerto Rico's electrical grid and infrastructure, Maria also wiped out Puerto Rico's substantial pharmaceutical manufacturing industry, causing huge repercussions for patients in both Puerto Rico and the U.S. mainland.</p> <p>Most problematic is the massive shortage of Puerto Rican-produced IV bags that hold saline solution and are used to dilute and administer medication. This winter's severe flu season has made this shortage even tougher to deal with, said Nicolette Louissaint, executive director of Healthcare Ready, an industry group</p>

that is coordinating recovery efforts in Puerto Rico.

But IV bags are not the only Hurricane Maria-related shortage. U.S. Food and Drug Administration Chairman Scott Gottlieb reported last November that the agency was monitoring a list of 90 medical products for hurricane-related shortages including 40 or so drugs. Since then, the FDA has narrowed down its list of monitored drugs to about 10, as pharmaceutical and medical supply companies source products from other locations and as Puerto Rican recovery efforts take hold, said Erin Fox, senior director of the University of Utah's drug information and support services. Fox tracks drug shortages for the American Society of Health-System Pharmacists.

The FDA does not disclose the names of products being monitored, but Puerto Rico is known for manufacturing drugs for cancer, diabetes and heart disease. Medicine and medical supplies are the island's leading exports and more than a dozen top selling pharmaceuticals are produced there, including blood thinners and arthritis drugs, according to a report in Healthcare and Life Sciences Review.

Hurricane Maria isn't the only culprit. "It's important to understand that drug shortages were a huge problems well before the disaster in Puerto Rico," Fox explained. The hurricane made a bad situation much worse and brought to light how complex the U.S. drug distribution system can be, Louissaint added.

Before Maria, for instance, there was already a problem with saline supply because of quality problems at a California manufacturing plant. Another example: hospital workers have noticed shortages of Atenolol, a commonly prescribed medication for high blood pressure. It isn't clear if this shortage was made worse by the hurricane or stems from another problem. Shortages are also routine for many injectable generic products, Fox said.

Tracking drug shortages due to quality and manufacturing problems is challenging because pharmaceutical companies believe where a product is made and how the plant operates are trade secrets, Fox explained. Companies are not required to disclose where drugs are made. That said, the FDA checks for pharmaceutical quality and can take action against companies that are falling short. In many instances, Fox tracks a shortage after the FDA sends a warning letter to a drug maker because of quality problems.

After Maria, Baxter International, the company that manufactures IV saline bags in Puerto Rico, was open about the crisis it was facing. Baxter accounts for 43 percent of the United States' IV solution market and the bulk of that had been produced in Puerto Rico. As supplies of bags dwindled, hospital workers had to scramble to find other, often less suitable, ways to administer drugs. Pain medication, for instance, may be given in pill form, which is much less fast acting – a real problem for emergency room or severely ill patients. In other cases, doctors or nurses must use more time consuming methods to administer intravenous drugs, taking away from other patient care.

The FDA is working with pharmaceutical and medical supply companies to restore production and find other sources for products, Louissaint said. In addition, power is restored to more than 60 percent of the island and most major manufacturing facilities are resuming production, she added.

But even with the recovery efforts, the disruption in manufacturing and the continued troubles with power stability may mean at least another few months lag in supply, Fox predicted.

What's more, another troubling shortage has cropped up. Now health care facilities across the country are dealing with a severe lack of sterile water, another basic but critical medical supply. "We really need that," Fox explained. "Lots of drugs come in powder form and you have to mix them with very pure water." Increased demand for sterile water from the lack of IV saline bags may be contributing to the shortage, but the exact reason isn't yet clear. Fox is still investigating.

HEADLINE	<b>02/12 Amazon laying off corporate employees</b>
SOURCE	<a href="https://www.seattletimes.com/business/amazon/amazon-laying-off-corporate-employees-in-rare-cutback/">https://www.seattletimes.com/business/amazon/amazon-laying-off-corporate-employees-in-rare-cutback/</a>
GIST	<p>Amazon is laying off hundreds of corporate employees, a rare cutback for a company that has spent most of the last few years in a frantic growth spurt.</p> <p>The layoffs, underway now, will fall on several hundred employees at the online retailer's Seattle headquarters, along with hundreds more elsewhere in Amazon's global operations, one person familiar with the cuts said. The layoffs are primarily focused on Amazon's consumer retail businesses, according to two people familiar with the matter.</p> <p>Hundreds of layoffs are modest for a company that is now the second-largest U.S.-based corporate employer, and pales in comparison to adjustments in recent years that saw Microsoft and Boeing eliminate thousands of jobs in a single cutting drive.</p> <p>But at Amazon, a company with a wide range of growing businesses that prides itself on frugality and efficient allocation of resources, broad layoffs of any kind are rare.</p> <p>The cuts come after a hiring binge that took the company's Seattle head count to more than 40,000 people, from just 5,000 in 2010.</p> <p>According to several employees, the rapid growth of the last two years left some units over budget and some teams with too much staff for their work. Amazon had implemented hiring freezes in recent months across several groups, a move that reduced the company's open job listings in Seattle to their lowest level in years.</p> <p>In a statement to The Seattle Times, Amazon acknowledged the cuts.</p> <p>"As part of our annual planning process, we are making head count adjustments across the company — small reductions in a couple of places and aggressive hiring in many others," a spokesman said. "For affected employees, we work to find roles in the areas where we are hiring."</p> <p>Some employees have already been informed of the elimination of their roles, and layoffs are expected to be completed in the next few weeks, one of the people said.</p>

<b>HEADLINE</b>	<b>02/12 Unsafe water from faucets across US</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Health_News/2018/02/12/Unsafe-water-found-in-faucets-across-the-US/1171518489210/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=4">https://www.upi.com/Health_News/2018/02/12/Unsafe-water-found-in-faucets-across-the-US/1171518489210/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=4</a>
<b>GIST</b>	<p>MONDAY, Feb. 12, 2018 -- Flint, Mich., isn't the only American city where the water hasn't been safe to drink, new research suggests.</p> <p>Almost 8 percent of community water systems are plagued by health-based violations of water quality standards in any given year, the study found. That meant up to a quarter of all Americans were affected.</p> <p>"Generally, the U.S. has high-quality water," said study author Maura Allaire. "But health-related violations do extend well beyond Flint. When I dug into the data, I saw about 21 million people were receiving water from systems that didn't meet standards in 2015.</p> <p>"In terms of hot spots in the country, rural communities and rural low-income communities in Oklahoma and Texas are really struggling," said Allaire, an assistant professor of urban planning and public policy at the University of California, Irvine.</p> <p>"They lack the technical capacity of larger systems, and have small customer bases, which means they can't afford the latest and greatest technologies. And they often have only a part-time technician monitoring their water systems," she explained.</p> <p>In total, violations affected between 9 million and 45 million people in the United States during each year the researchers studied. That's between 4 percent and 28 percent of the U.S. population.</p> <p>So what exactly is in the water?</p> <p>"In terms of what's being reported to the Environmental Protection Agency, the vast majority are microbial concerns," Allaire said.</p> <p>Coliform bacteria, found in the feces of humans and animals, were the germs most often found. Generally, coliform bacteria don't cause illness. But they often indicate the presence of other contaminants that may cause illness, according to the U.S. Centers for Disease Control and Prevention.</p> <p>Other contaminants found in water systems included viruses and the parasites cryptosporidium and Giardia lamblia, the study reported.</p> <p>Waterborne microbial illnesses often cause abdominal cramping, nausea or vomiting, diarrhea and, if severe enough, dehydration, the CDC says.</p> <p>Water quality was also tainted by chemical contamination, along with excess arsenic, lead and copper.</p> <p>Nitrates were also a common contaminant in water systems, the study found. Nitrates can occur naturally, but excess levels of nitrates can occur as a result of contamination from chemical fertilizers, septic systems, animal feedlots, industrial waste or food processing waste, the CDC says.</p> <p>The study found that areas that purchase their water were less likely to experience contamination, Allaire said.</p> <p>"It may be that they're able to afford more robust treatment techniques," she said.</p> <p>Ensuring safe drinking water is likely becoming more difficult in many communities due to aging infrastructure and shrinking budgets, the study noted.</p>

	<p>Jennifer Li, the interim senior advisor of public health programs at the National Association of County and City Health Officials, agreed.</p> <p>"A big challenge is the aging or decaying infrastructure of the old water main lines -- usually made of concrete or fired clay. Small fissures in the pipes allow contaminants and biologicals like Legionella into the water system post-treatment and present a public health risk to recipients," Li said.</p>

<b>HEADLINE</b>	<b>02/12 NKorea still detaining 3 Americans</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/02/12/miles-from-winter-olympics-three-americans-remain-detained-in-north-korea.html">http://www.foxnews.com/world/2018/02/12/miles-from-winter-olympics-three-americans-remain-detained-in-north-korea.html</a>
<b>GIST</b>	<p>Just miles from the Winter Olympics in Pyeongchang, South Korea -- where some observers continue to fawn over Kim Jong Un's sister and North Korea's "smile diplomacy" -- a trio of Americans remain detained in the Hermit Kingdom.</p> <p>Concern has only grown for the three Korean-Americans -- Kim Hak Song, Kim Dong Chul and Tony Kim -- since the death of American college student Otto Warmbier last June after the he spent 17 months locked away in North Korea. And though advocates said they were given some hope during President Trump's State of the Union address, when the image of a North Korean defector defiantly holding his crutches in the air was met with rapturous applause, there's also a desire to see continued action and pressure applied against the rogue regime.</p> <p>To that end, the Trump administration has been working to secure the release of Tony Kim and the others held by North Korea, State Department Spokesperson Heather Nauert told Fox News.</p> <p>"We have seen the video released by Tony Kim's son," Nauert said. "We are working to see U.S. citizens who are detained in North Korea come home as soon as possible."</p> <p>The State Department noted that Ambassador Joseph Yun, the special representative for North Korean policy, met with the three Americans in North Korea in June, when Warmbier was released. No U.S. representative has seen them since.</p> <p>The three detained Americans, ranging in age from 55 to 64, are being held on a variety of vaguely described offenses:</p>

<b>GIST</b>	<p>PYEONGCHANG, South Korea -- A Catholic nun waits eight hours each day at a folding table, ready for a call but praying nothing has happened to cause the phone to ring.</p> <p>Her office, the "Gender Equality Support Centre," a tiny trailer tucked between a bathroom and a police post under the ski lift at the Phoenix Snow Park, is a nondescript acknowledgment of the revolution in women's rights that, outside the Olympic gates, is thundering through the world.</p> <p>Sungsook Kim -- who goes by her religious name, Sister Droste -- speaks little English. But to describe her mission, she says the name of the American movement: "me too."</p> <p>How to watch the 2018 Winter Olympics The Winter Olympics in Pyeongchang arrives amid the reckoning that has brought down celebrities, politicians and the entire board of U.S.A Gymnastics. NBC star Matt Lauer was fired for sexual misconduct, and his accuser said the harassment began at the last Winter Olympics, in Sochi.</p> <p>During the Summer Games in Rio, two athletes were accused of assaulting housekeepers. A horrified world recently watched dozens of women and girls, some of them Olympians, describe in detail how Larry Nassar, the gymnastics doctor, had sexually abused them for decades as layers of elite athletic organizations failed to stop it.</p> <p>"The whole world just got a front row seat to a master class in trauma," said Nancy Hogshead-Makar, a former Olympic swimmer and activist calling on Olympic committees to do much more to protect vulnerable athletes.</p>

	<p>"This is what trauma does. This is what it looks like," she says. "It stops professional careers, it stops somebody's education, it stops people from being close to other people, it invades their ability to feel safe."</p> <p>So this year, for the first time, there is an organized and advertised contingent of offices designed to help sexual assault victims dotted around the sprawling Olympics venues -- from clinics that cater to world-class athletes to Sister Droste's four trailers, organized by the local community for the army of 14,000 volunteers, most of them young, 70 percent of them female.</p> <p>"#metoo' allowed us all to see that it's not the victim's fault, being sexually harassed. It's not because of their appearance. It gives courage to the victims," Droste said through a translator.</p> <p>So far they have responded to four reports of harassment, Droste said, the details of which she could not describe because of confidentiality rules, but said they were not severe.</p> <p>"Having equal rights," the sister said, "men and women, makes it possible for us to accomplish freedom."</p>

<b>HEADLINE</b>	<b>02/13 NKorea warms to South after visit</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-olympics-2018-northkorea-dialogue/north-korea-warms-to-south-korea-after-visit-volume-down-on-border-propaganda-idUSKBN1FW2KT">https://www.reuters.com/article/us-olympics-2018-northkorea-dialogue/north-korea-warms-to-south-korea-after-visit-volume-down-on-border-propaganda-idUSKBN1FW2KT</a>
<b>GIST</b>	<p>SEOUL (Reuters) - North Korea's leader said he wants to boost the "warm climate of reconciliation and dialogue" with South Korea after his high-level delegation returned from a visit to the South, as his foes reiterated the need to keep up maximum pressure and sanctions.</p> <p>Kim Jong Un gave instructions for measures aimed at more inter-Korean engagement after his younger sister Kim Yo Jong led a three-day visit to the Pyeongchang Winter Olympics, North Korea's state media reported on Tuesday.</p> <p>It did not specify what those instructions were.</p> <p>The United States has appeared to endorse deeper post-Olympics engagement between the two Koreas that could lead to talks between Pyongyang and Washington. South's President Moon Jae-in said on Tuesday the United States is open to talking with North Korea, Moon's spokesman told a briefing.</p> <p>"The United States sees inter-Korean dialogue in a positive light and has expressed its openness for talks with the North," Moon told Latvian President Raimonds Vējonis, according to the spokesman.</p> <p>U.S. officials also want tough international sanctions to be ramped up to push North Korea to give up its nuclear program.</p> <p>That sentiment was repeated by Japan's Prime Minister Shinzo Abe on Tuesday, who said Moon had agreed it was necessary to keep up maximum pressure on North Korea.</p> <p>Last year, North Korea conducted dozens of missile launches and its sixth and largest nuclear test in defiance of U.N. resolutions as it pursues its goal of developing a nuclear-armed missile capable of reaching the United States.</p> <p>Japanese officials took pains to stress there was no daylight between Japan, the United States and South Korea on their approach to dealing with North Korea.</p> <p>The United States' "fundamental policy" aimed at denuclearization of the Korean peninsula has not changed, said a senior Japanese diplomat in a briefing to lawmakers.</p> <p>"The goal is denuclearization and the process is dialogue for dialogue, action for action, so if North Korea</p>

	<p>does not show actions, the United States and Japan will not change their policies,” he said.</p> <p>A senior military official stationed at the border between North and South Korea told Reuters North Korea has lowered the volume of its border propaganda broadcasts since the Olympics’ opening ceremony on Feb. 9.</p> <p>“I still hear it, but it is much less than before,” said the official who is stationed on the southern side of the border and spoke on condition of anonymity.</p> <p>Moon, who was offered a meeting with Kim Jong Un in Pyongyang via his sister, has been pushing for a diplomatic solution to the standoff over North Korea’s nuclear and missile programs.</p>

<b>HEADLINE</b>	<b>02/12 Tukwila activists irate w/PD response</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/tukwila-immigration-case-sparks-community-response/281-518034512">http://www.king5.com/article/news/local/tukwila-immigration-case-sparks-community-response/281-518034512</a>
<b>GIST</b>	<p>Community members plan to attend Monday's city council meeting in Tukwila to "reject collaboration between Immigration and Enforcement Agents and Tukwila Police," according to a press release.</p> <p>Last week King 5 reported on a man who called police for help and ended up in ICE custody. Wilson Rodriguez Macarreno, 32, called police when he heard someone prowling outside of his home Thursday morning, according to his friend.</p> <p>Luis Cortes, Macarreno's attorney, says police asked for Macarreno's identification while filling out their report.</p> <p>His name was run through the NCIC database, and on Thursday, Tukwila police said they discovered a "warrant issued by ICE." Macarreno came to the U.S. from Honduras, and had missed a court appointment in Texas in 2004, according to his attorney.</p> <p>Macarreno was transferred into ICE custody, and is being held at the Northwest Detention Center.</p> <p>Friday, Tukwila police said there was some confusion about the warrant. Officer Vic Masters said Tukwila police was not aware it was an administrative warrant. In the future, the department will not take action on administrative warrants.</p> <p>"This is beyond ineptitude. How is it possible that Tukwila officials turn in a resident who called them for assistance? This only further corrodes any confidence that immigrant community members have in law enforcement," noted Juan Jose Bocanegra, an organizer for the Seattle-based El Comite, an Immigrant Rights Group.</p> <p>KING 5 contacted Immigration and Customs Enforcement for comment, and received this statement:</p> <p>"We are working on researching this case, and will provide cleared information as soon as it is available," said Lori Haley, Western Region Communications Director, U.S. Immigration and Customs Enforcement.</p>

<b>HEADLINE</b>	<b>02/12 'Perfect storm' Pierce Co. property taxes</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/perfect-storm-to-hit-pierce-county-property-taxes/281-518103544">http://www.king5.com/article/news/local/perfect-storm-to-hit-pierce-county-property-taxes/281-518103544</a>
<b>GIST</b>	Pierce County Assessor Mike Lonergan calls this year’s property taxes the “perfect storm.”

	<p>Pierce County residents may see that storm rage once their property tax bills are sent out this week.</p> <p>Loneragan says the 2018 property taxes are “uniquely high.”</p> <p>“I think there can be a disconnect for people. They want to have good schools and they want to have a policeman or fireman come when they call. And they like parks. When it comes to paying for it they don't always make the connection," said Loneragan.</p> <p>Homeowners pay property taxes. Even for renters, those costs can often get passed along.</p> <p>"We all saw what happened with the license tabs from Sound Transit. I don't think this is going to be as bad as that, but I do think people are going to say, ‘Man my taxes just keep going up.’"</p> <p>Some of the hardest hit areas in Pierce County will be Gig Harbor and Sumner.</p> <p>Gig Harbor residents are looking at paying \$690.10 more with a tax rate increase of 17.26 percent. Sumner residents will get a \$743.10 increase with a tax rate of 21.88 percent.</p> <p>The reasons: in response to the McCleary decision there's a state school tax in addition to local school taxes. There are also a number of other taxes people voted for to give more money to fire districts and parks.</p> <p>"This is a result of voted taxes locally and a vote in the legislature and those are the reasons why your taxes are going up. It's nothing personal," said Loneragan.</p>

<b>HEADLINE</b>	<b>02/12 Longest blackout in US history</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/2018/02/12/power-outage-puerto-rico-latest-snap-islands-long-recovery-hurricane-maria/329322002/">https://www.usatoday.com/story/news/2018/02/12/power-outage-puerto-rico-latest-snap-islands-long-recovery-hurricane-maria/329322002/</a>
<b>GIST</b>	<p>Five months ago, Puerto Rico began its plunge into the longest blackout in U.S. history.</p> <p>After much struggle and a botched contract to restore power, the embattled island showed some progress in its recovery from Hurricane Maria. Then Sunday, the lights went out again: An explosion and fire at two power plants shrouded much of the northern part of the island in darkness.</p> <p>Most customers hit by the blackout had their power restored by Monday. But the incident underscores the challenges of recovering from a major storm on an island with aging infrastructure. It's a reminder that the U.S. territory will probably have a longer, tougher road to recovery than other states battered by recent storms.</p> <p>Union leader Angel Figueroa Jaramillo, who represents Puerto Rico's public electrical workers, spoke outside one of the damaged power stations and warned against privatizing the electrical system, something Gov. Ricardo Rosselló has favored.</p> <p>“It’s been five months without power,” Jaramillo said, according to The Washington Post. “We could have made much more progress than this.”</p> <p>Hurricane Maria, a Category 4 storm with 155-mph winds, ripped through the middle of the island Aug. 20. It destroyed thousands of homes, killed at least 64 people and left thousands without electricity or water for months. As of Monday, 99% of customers in Puerto Rico had running water, and 84% of the island had power back. More than 400,000 customers still don't have electricity.</p> <p>Restoring power, in particular, has been a challenge. Renewed blackouts occur just as homes regain electricity. Sunday's blackout happened when fires knocked offline two substations near San Juan, power</p>

company spokesman Geraldo Quinones told the Associated Press. The substations were repaired by dawn, and most customers — including Puerto Rico’s largest public hospital and its main international airport — had power restored, he said.

“They’ll be working throughout today to fully restore service,” Quinones said, adding that authorities are investigating what caused the fire.

Photos posted to Twitter by the Puerto Rico Electric Power Authority, or PREPA, showed charred equipment at one of the substations, and a video captured the fire at one of the plants as workers tried to control the blaze.

The outage is the latest in a series of setbacks that has prevented the island’s recovery. PREPA is heavily in debt and struggling to patch up a power grid that is outdated and in dire need of restoration.

A U.S. contractor initially hired by the power company to restore electricity was fired after delays and controversies over how the contract was awarded.

Rosselló said last month that he plans to privatize PREPA, which relies on infrastructure nearly three times older than the industry average. It would be the largest restructuring of a public entity in U.S. history.

<b>HEADLINE</b>	<b>02/13 Drug firms paid \$10M to push opioid use</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/politics/2018/02/13/how-drug-company-money-turned-patient-groups-into-cheerleaders-opioids/321433002/">https://www.usatoday.com/story/news/politics/2018/02/13/how-drug-company-money-turned-patient-groups-into-cheerleaders-opioids/321433002/</a>
<b>GIST</b>	<p>WASHINGTON — The five biggest opioid manufacturers shelled out more than \$10 million to patient advocacy groups, professional medical societies and affiliated individuals — who then “echoed and amplified” messages that encouraged use of those highly addictive drugs and set the stage for the current opioid epidemic.</p> <p>That’s according to a new Senate committee investigation, released on Monday, which examined the financial ties between the pharmaceutical industry and outside groups over the last five years, from 2012 through 2017.</p> <p>"I think these groups were cheerleaders too often ... cheerleaders for opioids," said Sen. Claire McCaskill, a Missouri Democrat who launched the probe last spring. McCaskill is the ranking Democrat on the Senate Homeland Security and Governmental Affairs Committee, a post she has used to investigate other drug-company practices.</p> <p>McCaskill's staff sought information from the five largest opioid drug-makers, measured by global sales in 2015. Those companies are: Purdue Pharma, Janssen Pharmaceuticals, Mylan, Depomed and Insys Therapeutics.</p> <p>Purdue was by far the largest donor to outside advocacy groups, which often bill themselves as grass-roots organizations supporting patients struggling with chronic pain. Among the recipients of drug company largesse: The U.S. Pain Foundation, the National Pain Foundation, and the Academy of Integrative Pain Management.</p> <p>McCaskill said some of these organizations are doing good work on public policy. But others are "totally dependent" on drug companies for their funding, McCaskill said, and their advocacy is suspect.</p> <p>"Our report indicates that in some instances they are merely fronting for these manufacturers, especially if you look at the lobbying they’ve done against restricting prescribing levels of opioids," she said.</p> <p>The report charges that many of the advocacy groups, buoyed by drug company money, started</p>

undercutting state and federal efforts to curb opioid prescribing and using other "opioids-friendly messaging."

The report notes, for example, that the American Academy of Pain Medicine and the American Pain Society have promoted opioids as safe and effective for treating chronic pain and minimized the risk of addiction.

Anesthesiologist and Army Col. Chester Buckenmaier blames Purdue and other drugmakers for saying oxycodone wouldn't lead to addiction. He heads the Uniform Services' University's Defense and Veterans Center for Integrative Pain Management.

Purdue and other drugmakers "have a lot of explaining to do," for their contention that use of oxycodone "for patients in pain wouldn't lead to addiction," says Army Col. Chester Buckenmaier, an anesthesiologist and professor at the Uniformed Services University in Bethesda, Md. "We now know that's not true and use these medications with more respect and more caution."

The report also notes that the American Academy of Pain Medicine and the Center for Practical Bioethics spoke out against the federal efforts to limit opioid prescribing. That effort was led by Centers for Disease Control and Prevention, which issued guidance in 2016 to doctors on when to prescribe opioid pain medication in primary care settings. The CDC recommended offering non-opioid therapies for chronic pain except in cases of active cancer treatment, palliative care and end-of-life care.

Some of the groups and their funders say there's a public health crisis being created by the response to the opioid epidemic. Chronic pain patients say they now have difficulty getting narcotics, which is often the only thing that can address their unremitting pain.

"There are serious moral questions on both sides," says John Carney, executive director of the Center for Practical Bioethics in Kansas City, Mo. The opioid epidemic is "a national crisis, but there are lives ravaged by pain and that's a crisis too and should not be ignored."

As states moved to restrict the length and frequency of opioid prescriptions, drug companies and the patient groups fought back with aggressive lobbying campaigns.

Purdue Pharma, the maker of Oxycontin, said in a statement that it supported groups through annual dues and "unrestricted grants" when they were "interested in helping patients receive appropriate care."

Purdue also said it supports the CDC's guidance as "an important public health tool" and that it has been recommending it to doctors since it was released. And starting Monday, Purdue's employees would no longer visit doctors offices to pitch opioids and it would cut its salesforce by half to 200 people. The drugmaker's medical affairs staff will handle questions pertaining to the drugs, Purdue said.

McCaskill called Purdue's announcement "a major step forward," and said she believed the U.S. was starting to turn a corner on the opioid epidemic. But she said the Senate report was "the tip of the iceberg" in terms of how drug company money shapes health care policy debates and legislative outcomes.

She said she planned to pursue legislation that would force advocacy groups to disclose their funding sources.

<b>HEADLINE</b>	<b>02/12 Pot holiday linked to fatal car crashes?</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Health/wireStory/marijuanas-420-holiday-tied-rise-fatal-car-crashes-53020612?cid=clicksource_26_2_hero_headlines_bsq_hed">http://abcnews.go.com/Health/wireStory/marijuanas-420-holiday-tied-rise-fatal-car-crashes-53020612?cid=clicksource_26_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	Marijuana users' self-proclaimed holiday is linked with a slight increase in fatal U.S. car crashes, an analysis of 25 years of data found.

	<p>The study lacks evidence on whether pot was involved in any of the April 20 crashes, but marijuana can impair driving ability. Previous studies have shown that many pot-using motorists drive after partaking and think it's safe to do so.</p> <p>The researchers analyzed U.S. government data on fatal traffic accidents from 1992 — shortly after 4/20 was popularized as a pot holiday in High Times magazine — through 2016. They compared driver deaths on that date with deaths on a day the week before and the week after during the study period.</p> <p>Deaths increased slightly in most but not all states, amounting to an overall increased risk of 12 percent — or an extra 142 driver deaths linked with the holiday, said lead author Dr. John Staples at the University of British Columbia.</p> <p>Other studies have found a similarly elevated risk linked with alcohol and driving on Super Bowl Sunday and New Year's Eve.</p> <p>Most accidents had no police data on drug testing so there's no way to confirm that marijuana was involved, but researchers think the drug was responsible for some crashes.</p> <p>The study was published Monday in JAMA Internal Medicine.</p>

<b>HEADLINE</b>	<b>02/12 State voting systems remain vulnerable</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/best-states/articles/2018-02-12/state-voting-systems-remain-vulnerable-to-hackers-ahead-of-midterm-elections-report-reveals">https://www.usnews.com/news/best-states/articles/2018-02-12/state-voting-systems-remain-vulnerable-to-hackers-ahead-of-midterm-elections-report-reveals</a>
<b>GIST</b>	<p>With less than nine months until midterm elections, states still have a long way to go to protect their voting systems from security threats, according to a new report released Monday by the Center for American Progress.</p> <p>Following the nation's 2016 elections, in which hackers targeted 21 states and breached Illinois' voter registration system, states are racing against the clock to improve their election infrastructure.</p> <p>In 2017, Colorado became the first state to require risk-limiting post-election audits. Weeks ahead of its November elections, Virginia quickly switched from electronic voting machines to a paper ballot voting system. And many states are working hand in hand on the issue with the Department of Homeland Security or the National Guard.</p> <p>Still, no state received an A in Monday's report, which evaluates how efficiently states (and D.C.) are protecting their elections from hacking and machine malfunction. Eleven states – including Alaska, Colorado, Connecticut, Maryland and New York– received a B, 23 states received a C and 17 states received a D or an F.</p> <p>One of the factors the study considered was whether states meet cybersecurity standards for voter registration systems. Many states use voter registration databases that are at least a decade old, which leave them susceptible to breaches, the report explains.</p> <p>If successful, hackers can not only gain access to voters' personal information, but they can also prevent them from voting. For instance, a hacker can change the spelling of someone's name in the system so it doesn't match their ID, making them ineligible to vote in some states.</p> <p>Various agencies of U.S. intelligence concluded that Russia played a part in trying to interfere in the outcome of the 2016 presidential election and there are warnings the country may try again in 2018. Russia has denied the claims.</p> <p>U.S. Secretary of State Rex Tillerson sounded an alarm Feb. 6 when he said: "The point is, if it's [Russia's] intention to interfere, they are going to find ways to do that."</p> <p>"States need help right now," Center for American Progress President and CEO Neera Tanden said Monday at an election security discussion, where she was joined by Sen. Amy Klobuchar, D-Minn., and former U.S. Secretary of Homeland Security Jeh Johnson.</p> <p>Though state leaders differ in their beliefs about the role the government should play in local elections, the speakers stressed that election security is a nonpartisan issue and that states need government resources in</p>

order to prevent a repeat of 2016, or worse.

They stressed the importance of a partnership between the federal government and local governments in protecting Americans' rights to a free and fair election, where their votes are secure.

Edgardo Cortes, former commissioner of elections in Virginia, said the ability to work with Homeland Security was "phenomenal" when changing the state's voting system a few months ago.

"We never had a moment where we had a question and couldn't get a quick response from them," Cortes said, adding that it was helpful to have DHS experts who could look for vulnerabilities in the state's voting system.

Where the federal government is falling behind, Tanden said, is in supplying the funding needed to "modernize America's outdated voting machines, conduct detailed threat assessments and enact audits, for roughly half the cost of a B-2 Spirit bomber."

Klobuchar said the federal government also needs to send Russia a message that its hacking is unacceptable.

"Hack me once, shame on you. Hack me twice, shame on us," she said.

Similarly, Johnson said the government needs to deter Russia from launching another attack by making the cost of a breach larger than the benefit.

"You cannot prevent all cyberattacks on our nation. It's like trying to catch raindrops. You're on defense, you're the goalie in hockey and you cannot prevent all attacks," he said. "But what you can do is make behavior by nation states cost prohibitive so that they recognize 'it's not worth it to me, it is not worth the cost to do this again.'"

"And I'm afraid the U.S. government has yet to do that," Johnson added.

For the upcoming elections, Colorado's Director of Elections Judd Choate said the largest security concern revolves around voter registration systems since they are connected to the internet.

Election night reporting is also crucial because incorrect news could negatively impact the public's trust that the results are accurate, Choate said.

<b>HEADLINE</b>	<b>02/12 Healthcare still in midst breach season</b>
<b>SOURCE</b>	<a href="http://www.hcanews.com/news/healthcare-still-in-the-midst-of-breach-season">http://www.hcanews.com/news/healthcare-still-in-the-midst-of-breach-season</a>
<b>GIST</b>	<p>Fall and winter are "breach season," according to Dustin Hutchison of cybersecurity firm Pondurance.</p> <p>"You think, people are shopping online more for the holidays, and then right after New Years it's tax time," he told Healthcare Analytics News™. "We see attacks socially engineered around those, like phishing masked as your tax info. People are in a hurry to get their tax information, so they're more likely to click on a link."</p> <p>He said there's a large uptick in the number of cyberattacks detected between November and February. "It's very intentional on the bad guys' side, they've done their homework and they know the best time to strike," he added.</p> <p>Healthcare has seen a rash of debilitating attacks in recent months. Oklahoma State University Center for Health Sciences noticed a breach that began in November and may have compromised hundreds of thousands of patients' records. January's AllScripts attack paralyzed key clinical applications for at least</p>

1,500 small practices. And a week before that, Hancock Health in Indiana detected a ransomware attack that ended up costing them \$47,000. After that incident, the hospital enlisted Pondurance to help advise their next steps.

Both Hancock and Allscripts suffered attacks from the SamSam malware strain. Hutchison's colleague Landon Lewis said that the strain has appeared and disappeared in a cyclical manner, first appearing about 2 years ago and fading away for months at a time between resurgences. But it isn't the only threat out there.

Lewis brought up other attack types that healthcare organizations should keep in mind. Botnet-based attacks like cryptocurrency miners are becoming more common, he said, and he wasn't wrong. The interview was conducted on February 5th. A few days later, reports began to emerge that Decatur County General Hospital in Tennessee had experienced such an attack, first detected by its electronic health records (EHR) vendor in late November.

Cryptocurrency mining attacks can compromise several computers within a network and use as little of their processing power as possible to slowly mine for bitcoin.

"The ransomware is an abrupt stop, right, like 'You're not working anymore, pay me,'" Hutchison said. "They want the bitcoin miner to go on forever, without detection: The organization continues normal operations while that bitcoin miner is in the background sucking up resources."

The attack on Decatur General was not believed to have resulted in any patient data being compromised, the hospital told some 24,000 patients, but noted that it can't yet confirm that.

An important thing that healthcare organizations must keep in mind, Hutchison said, is that they can always be hit. Practices often write off the risk, believing that they're too small to be worth an attacker's time, Hutchison said, which is a fallacy: The cost of running a cyberattack is so low that "everyone is a target."

<b>HEADLINE</b>	<b>02/12 Criminals ramp up server-side attacks</b>
<b>SOURCE</b>	<a href="https://www.scmagazineuk.com/criminals-ramps-up-server-side-attacks/article/743637/">https://www.scmagazineuk.com/criminals-ramps-up-server-side-attacks/article/743637/</a>
<b>GIST</b>	<p>In a report titled Vulnerability and Threat Trends Report by Skybox Security, the firm found that last year, the vast majority of exploits affected server-side applications (76 percent), up 17 points since 2016.</p> <p>It said that the increase in server-side exploits corresponds with the continued decline in the use of exploits kits relying on client-side vulnerabilities, which accounted for only a quarter of exploits in the wild that year. It said that this was due in part to the demise of major exploit kit players like Angler, Neutrino and Nuclear, with no comparable frontrunner rising to replace them.</p> <p>According to Marina Kidron, senior security analyst and group leader of the Skybox Research Lab, this does not mean that exploit kits are gone.</p> <p>"If there's one thing we know about cyber-criminals, it's that they're constantly changing tactics, and so the next 'exploit kit giant' is very likely in development as we speak. We also suspect that some kits have 'gone private,' and are used exclusively by their developers in hopes of prolonging their viability," she said.</p> <p>The report also found that instances of newly-published sample exploit code have also increased, with the monthly average jumping 60 percent in 2017. With minimal adjustments — or none at all — attackers can turn these samples into fully functioning exploits for their own use.</p> <p>The company said that this scenario was the case with the NSA EternalBlue exploit leaked by The Shadow</p>

Brokers and used in the WannaCry and NotPetya attacks, among others. Such leaks are putting advanced attack tools in the hands of lower-skilled cyber-criminals, enhancing the capabilities of an already well-outfitted threat landscape.

“Organisations need to stay up to speed with not only active exploits in the wild,” said Kidron, “but also factor in vulnerabilities with available exploit code to their prioritisation processes. While the latter set doesn't represent an imminent threat, they can make the jump to active exploitation very quickly — security teams need actionable intelligence at-the-ready when they do.”

Ken Gilmour, CTO of Invinsec, told SC Media that the problem with Server-side orchestration systems” is that people perceive that they need to be accessible so that they can perform emergency maintenance as quickly as possible, but they also have full control of the rest of the network. As far as reward goes for an attacker, this is a gold mine and allows them to move across your network with extreme ease, using your own tools against you.”

HEADLINE	02/13 Increasing threats to healthcare industry
SOURCE	<a href="https://www.med-technews.com/news/increasing-hacker-threats-to-the-healthcare-industry/">https://www.med-technews.com/news/increasing-hacker-threats-to-the-healthcare-industry/</a>
GIST	<p>According to a recent report from cybersecurity firm Norton, hackers stole a total of £130 billion from consumers in 2017. These attacks hit over 978 million victims around the world and include large scale attacks on the NHS like WannaCry. However, surprisingly, still more than a quarter of those compromised believe they are safe from future attacks. Norton warns cybercrime victims that they're not doing enough to protect themselves against these types of attacks and that attacks of this nature are only set to increase as new threat vectors are sought in 2018.</p> <p>In fact, in the first days of 2018, published research revealed that nearly every computer chip manufactured in the last 20 years contains fundamental security flaws, with specific variations on those flaws being dubbed Spectre and Meltdown.</p> <p>Additionally, there were two significant cyberattacks reported during the second week of the year. The first one, a ransomware attack targeting Hancock Health hospital, affected over 1,400 files. Hackers compromised a third-party vendor's administrative account to the hospital's remote-access portal and launched SamSam ransomware. The hospital had to pay the ransom to unlock patient data which, according to the FBI, the hackers were not interested in stealing.</p> <p>The second cyberattack involved a hacker (or group of hackers) who stole more than half of the Norwegian population's healthcare data from Health South-East RHF. Evidence of a severe data breach on the Hospital's website was revealed by the parent company Sykehuspartner HF. To understand the scale of such an attack, keep in mind that Health South-East RHF is the largest of Norway's four healthcare regions and manages 2.9 million out of Norway's total 5.2 million inhabitants over 18 counties, including the one that contains Oslo.</p> <p>Even though, according to the 'State of Software Security' report, the vast majority of healthcare providers (85%) have increased their cyber-security spending over the past year, the industry is still struggling to protect its digital assets from hackers. But healthcare organisations have a duty to ensure the security of their patients' data, therefore one of the key objectives in 2018 should be around adopting a better risk management and security strategies and improving their response processes to active threats. Putting at risk such sensitive information can have a disastrous impact on their finances, reputation and databases – not to mention their patients. To put this into context, on average each victim of cybercrime spends up to two days per month dealing with the malware's repercussions.</p> <p>Today's enterprise perimeter has completely eroded and is causing every organisation to think differently about security. The concept of Zero-Trust Networking has been derived from this fact and is particularly relevant to healthcare organisations who, as stated earlier, cannot afford to let any patient data or other</p>

	<p>high value data or apps get into the wrong hands. Complex healthcare networks degrade an organisation's security posture, but healthcare workers demand convenient access to critical systems and patient databases in order to provide the best care possible. Likewise the interconnectedness of healthcare networks also increases the attack surface. For example, there are a lot of temporary contractors who are linked with not just the healthcare organisation itself but also a whole chain of suppliers.</p> <p>So, whilst healthcare organisations try to modernise their processes, their systems and digitise, they are being exposed to growing cybercrime risk, especially if they allow their staff to utilise their own devices such as smartphones.</p>

<b>HEADLINE</b>	<b>02/12 Cryptocurrency exchange hacked; \$160M</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/bitgrail-cryptocurrency-exchange-hacked-nano-stolen/">https://www.hackread.com/bitgrail-cryptocurrency-exchange-hacked-nano-stolen/</a>
<b>GIST</b>	<p>Due to the unprecedented popularity and public acceptance garnered by cryptocurrency, launching a cryptocurrency exchange has become the best way to make quick and easy money. However, in their haste to open an exchange at the earliest, companies have not paid enough attention at the provision of secure and safe trading environment, which is why traders are suffering from all sorts of security glitches off and on.</p> <p>Italy based cryptocurrency exchange BitGrail that was rebranded into Nano (XRB) used to be one of the biggest trading hubs for the RaiBlocks cryptocurrency but recently it has been witnessing a downtime due to its unreliable cyber-security measures. Reportedly, the exchange has become a victim of a hack attack, which further highlighted the underlying issues affecting the cyber-security area of the BitGrail exchange.</p> <p>A post on the BitGrail website revealed that the company ran a security check after which it discovered unauthorized transactions resulting in a shortfall of 17 million Nano, which is approx. \$160 million as per the latest exchange rates and it is speculated that hackers might have managed to get \$595 million because BitGrail has admitted that high amount of cryptocurrency is missing.</p> <p>The cryptocurrency operations of the company have currently been stalled and the authorities have contacted the police to investigate the matter. BitGrail has also claimed that there weren't any other cryptocurrency involved in the hack still all the activities including deposits and withdrawals have been suspended temporarily and the company has released a statement on its website offering "full and sincerest apologies" to its customers.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>02/12 Aggressive bitcoin-stealing campaign</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/lazarus-rises-again-with/">https://www.infosecurity-magazine.com/news/lazarus-rises-again-with/</a>
<b>GIST</b>	<p>An aggressive Bitcoin-stealing phishing campaign mounted by the international cybercrime group Lazarus and using sophisticated, brand-new malware has been uncovered.</p> <p>McAfee Advanced Threat Research (ATR) analysts discovered the campaign, dubbed HaoBao. It resumes Lazarus' previous phishing email efforts, which used lures aimed at employee recruitment and targeted US defense contractors, the energy sector and financial institutions, including cryptocurrency exchanges. The objective was to gain access to the target's environment and obtain key military program insight or steal money. Those efforts ceased in October 2017 but are ramping up again; and this time, the targeted emails are aimed at Bitcoin users and global financial organizations.</p> <p>In mid-January, McAfee discovered a malicious document masquerading as a job recruitment ad for a "Business Development Executive" for a large, multinational bank located in Hong Kong. The document was distributed via a Dropbox account. When recipients open the malicious documents attached to the emails, they are persuaded to enable content through a notification claiming the document was created in</p>

	<p>an earlier version of Microsoft Word. The malicious documents then launch an implant on the recipients' system via a Visual Basic macro.</p> <p>The malware scans for Bitcoin activity and then establishes a secondary implant for long-term data gathering. The interesting thing is that the implants have never before been seen, and indicate a newly sophisticated level of attack.</p> <p>“This is the mark of a new campaign, though it utilizes techniques, tactics and procedures observed in 2017,” explained McAfee analyst Ryan Sherstobitoff in an analysis. “McAfee ATR analysis finds the dropped implants... have not been used in previous Lazarus campaigns from 2017. Furthermore, this campaign deploys a one-time data gathering implant that relies upon downloading a second stage to gain persistence.”</p>

<b>HEADLINE</b>	<b>02/12 Misconfigurations expose personal records</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/thousands-more-personal-records-exposed-misconfigurations">https://www.securityweek.com/thousands-more-personal-records-exposed-misconfigurations</a>
<b>GIST</b>	<p>Two more misconfigured databases exposing the personal details of thousands of people were disclosed late last week.</p> <p>The Maryland Joint Insurance Association (MDJIA, with offices in Ellicott City, MD) left internet access to a data repository of customer files containing information such as customer names, addresses, phone numbers, birth dates, and full Social Security numbers; together with financial data such as check images, full bank account numbers, and insurance policy numbers. Also exposed were MDJIA access credentials for ISO ClaimSearch, a third-party insurance database containing ‘tens of millions of reports on individual insurance claims’ for industry professionals. The problem was a NAS server with an open port 9000.</p> <p>Paris-based Octoly, a brand marketing firm, left open internet access to an AWS S3 bucket. This contained details of its IT operations, including sensitive personal details of more than 12,000 social media influencers used in its marketing campaigns. The details include the real names, addresses, phone numbers, email addresses – including those specified for use with PayPal – and birth dates, together with thousands of hashed passwords.</p> <p>Both misconfigurations were discovered by Chris Vickery, the director of cyber risk research at UpGuard. Researcher Vickery has discovered numerous misconfigurations providing open access to sensitive, often personal, information over the last few years. Examples include details of 191 million U.S. voters, nearly 1.4 billion user records exposed by known spammers, and sensitive military data belonging to the U.S. National Geospatial-Intelligence Agency (NGA) left exposed by contractor Booz Allen Hamilton.</p> <p>None of these misconfigurations require any hacking effort or skill to exploit, merely a computer with internet access. If a white hat researcher such as Vickery can find them, potentially any malicious actor could also find them with disastrous results.</p>

<b>HEADLINE</b>	<b>02/13 Cryptominers pose threat to ICS</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/cryptocurrency-miners-not-uncommon-industrial-systems">https://www.securityweek.com/cryptocurrency-miners-not-uncommon-industrial-systems</a>
<b>GIST</b>	<p>Cryptocurrency miners can pose a serious threat to industrial systems and it’s not uncommon for this type of malware to make its way into operational technology (OT) environments.</p> <p>Industrial cybersecurity firm Radiflow reported last week that it had identified a piece of malware designed to mine Monero on a human-machine interface (HMI) system at a wastewater facility in Europe. The company warned that the resource consumption associated with this type of malware can severely disrupt plant monitoring tools and the affected organization’s response times.</p>

Cryptocurrency mining malware has become increasingly widespread and it has recently been found even on numerous government websites in the United States, the United Kingdom and Australia.

This type of malware is also fairly common on industrial systems, according to several cybersecurity firms contacted by SecurityWeek.

A study conducted last year by Dragos showed that roughly 3,000 unique industrial sites had been hit by traditional, non-targeted malware. The company discovered approximately 6,000 malware infections, including instances of cryptojacking, said Robert M. Lee, CEO and founder of Dragos.

Kaspersky Lab ICS-CERT told SecurityWeek that roughly 3.3 percent of the industrial control systems (ICS) monitored by the company between February 2017 and February 2018 were targeted with cryptocurrency miners, with an increasing trend observed since September 2017.

“Industrial infrastructure is an appealing target for mining attacks due to high power, meaning criminals can earn more in less time. As usually the case with miners, users might notice slowdown of programs and systems performance that inevitably affects the user experience in general,” Kaspersky Lab ICS-CERT said. “In terms of ICS, a spike in CPU load, as a result of miners’ infection, leads to an increase in response time of monitoring tools for SCADA/HIM servers. It’s important to note that most of the ICS are real-time systems designed for process control, where response time is the critical system indicator.”

Darktrace, a security firm known for its AI-based defense technology, said it had identified more than 20 cryptocurrency miner attacks over the past six months among its customers in the energy and utilities sectors.

Overall, Darktrace said it had identified more than 400 crypto-mining related incidents across 5,000 customer deployments in more than 30 industries. There has been a steady increase in the number of detections, with roughly 100 mining scripts and cryptocurrency malware incidents detected in January.

<b>HEADLINE</b>	<b>02/12 Google to mark all HTTP sites ‘not secure’</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/chrome-to-label-non-https-site-as-not-secure-starting-july-2018/article/743657/">https://www.scmagazine.com/chrome-to-label-non-https-site-as-not-secure-starting-july-2018/article/743657/</a>
<b>GIST</b>	<p>Google recently announced that the Chrome browser will soon start flagging every site not using HTTPS encryption as “not secure.”</p> <p>Google said that beginning in July 2018 with the release of Chrome 68, the browser will begin marking the sites as part of its move toward a more secure web by strongly advocating that sites adopt HTTPS encryption, according to a February 8, 2018 press release.</p> <p>Site administrators who take the warning lightly may run the risk of losing visitors may begin to distrust any site potentially flagged as insecure. Chrome has already labeled HTTP pages that collect passwords or credit card information as not secure since early 2017 and the most recent effort is an extension to help adopt the security model.</p> <p>All HTTP sites will be labeled insecure whether or not it include input fields. HTTPS encryption has seen great progress last year with 81 of the top 100 sites on the web using HTTPS by default, according to the release.</p>

<b>HEADLINE</b>	<b>02/12 New crop of Twitter pornbots active</b>
-----------------	--

SOURCE	<a href="https://www.scmagazine.com/new-crop-of-twitter-pornbots-found-advertising-adult-sites-misappropriating-hashtags/article/743825/">https://www.scmagazine.com/new-crop-of-twitter-pornbots-found-advertising-adult-sites-misappropriating-hashtags/article/743825/</a>
GIST	<p>A researcher who in 2016 uncovered roughly 500 bots programmed to create Twitter posts that advertise pornography found that about 20 percent of them were still active two years later.</p> <p>Rob Cook, the senior analyst at Flashpoint who spearheaded the research, told SC Media that although the number of older pornbot accounts "was reduced by Twitter's action against them through abuse reporting," he was nevertheless "able to quickly identify new 'pornbots' using the same technique, which brought my list of accounts to nearly 60 in just a few minutes."</p> <p>Moreover, these new bots were observed employing the same techniques as their predecessors, whose discovery was originally disclosed in a private company intel report. Techniques include using legitimate hashtags used by Fortune 500 brands and placing them beside various unrelated terms.</p> <p>"I don't believe brands were specifically picked; it is possible that the bots used a script to pull hashtags and random word content from other Twitter accounts or some other feed," Cook added. "We think the goal here was to either build followers of the account, tweet numbers, and/or have viewers click on the links in the account's bio."</p> <p>In a Feb. 12 company blog post, Cook reported that the set of observed pornbots "appears to be a mix of compromised accounts and accounts specifically created to advertise pornography... As such, organizations mentioned in these bots' pornographic advertising campaigns on Twitter may suffer reputational damage in addition to distorted social media engagement campaign metrics."</p> <p>According to Cook, a recent analysis took note of three distinct sets of Twitter pornbots -- each of which promoted a different adult website, but all of which used identical hashtags, shared server infrastructure, and often leveraged the same profile pictures, suggesting they were part of the same malicious campaign.</p> <p>All of the accounts' profile pictures were lifted and repurposed from open-source websites such as Instagram and Pinterest. Moreover, the false accounts presented links to adult dating or video websites by either displaying them within hashtagged tweets, or including them in the bio and pinned tweet.</p>

HEADLINE	<b>02/12 Russia hackers behind Olympics attack?</b>
SOURCE	<a href="https://www.scmagazine.com/russian-actors-mentioned-as-possibly-launching-olympics-cyberattack/article/743835/">https://www.scmagazine.com/russian-actors-mentioned-as-possibly-launching-olympics-cyberattack/article/743835/</a>
GIST	<p>Fingering the culprit behind the cyberattack that hit the 2018 Pyeongchang Winter Olympic Games during the opening ceremony will never be nailed down with 100 percent accuracy, but industry executives have gathered some circumstantial evidence is pointing toward a Russian group.</p> <p>The primary reason Russia, or someone acting on that country's behalf, has been singled out is the fact that the International Olympic Committee (IOC) banned that nation from competing due to its athletes using illegal performance enhancing drugs during previous Olympic games. However, the IOC is allowing innocent Russian athletes to compete, but only under the Olympic, and not Russian, national flag.</p> <p>"That certainly seems like a motive for someone inside Russia to disrupt the games," Richard Henderson, Absolute Software's global security strategist, told SC Media.</p> <p>French Caldwell, a former White House cybersecurity advisor and current chief evangelist with MetricStream, pointed out that if you anger Russia in some manner being hit with a cyberattack is always a possible result.</p> <p>"From the public reports, one thing that stands out is that initial access was gained through compromised login information of accredited users. If you know you have the Russian government as your enemy, you</p>

know there is a likelihood that they or their proxies could attack – the question is how,” Caldwell told SC Media.

The games' organizers have confirmed that an attack did take place during the opening ceremonies on February 9 hitting several non-critical systems, including its internet and television systems. Cisco Talos confirmed that the incident took place saying that while the infection vector is unknown the malware was a destroyer as there is no evidence that it attempted to remove any data. The attackers used a list of system credentials to gain access.

CrowdStrike Intelligence said that in November and December of 2017 it had observed a credential harvesting operation operating in the international sporting sector. At the time it attributed this operation to Fancy Bear, but only with a medium level of confidence and Adam Meyers, CrowdStrike's VP of Intelligence, said there is no evidence connecting Fancy Bear to the Olympic attack.

There is other evidence pointing to Fancy Bear. It has already been credited with attacking an Olympic organization. In September 2016 the World Anti-Doping Agency (WADA) stated that the group had hacked its systems and accessed athlete data, including confidential medical related to the Rio Games; and, subsequently released some of the data in the public domain, accompanied by the threat that they will release more.

Henderson also noted that the malware itself shares many similarities with the kind previously used by both Russia and China, but even that is not a true smoking gun.

“Of course, we can expect that various state-sponsored groups will learn from earlier campaigns and malware and integrate components into their future attacks, muddying the waters when it comes to being able to conclusively point the finger at one specific group,” he said.

Interestingly, South Korea's primary cyber opponent, North Korea, is unlikely to be behind any attack as the Hermit Kingdom is using the games to help thaw relations with its southern neighbor. Several high-ranking North Korean officials, including North Korean leader Kim Jong Un's sister Kim Yo Jong and North Korea's nominal head of state Kim Yong Nam, attended the opening ceremony sitting with South Korean president Moon Jae-in. The two nation's athletes also marched together during the event.

<b>HEADLINE</b>	<b>02/12 Australian govt. sites hit by cryptominer</b>
<b>SOURCE</b>	<a href="https://www.itnews.com.au/news/australian-govt-sites-hijacked-by-crypto-miner-484951">https://www.itnews.com.au/news/australian-govt-sites-hijacked-by-crypto-miner-484951</a>
<b>GIST</b>	<p>More than 4000 Australian and global government websites have been hijacked to run the Coinhive crypto currency mining software after a popular accessibility tool was compromised by attackers.</p> <p>Security researcher Scott Helme today published his discovery of 4275 government websites across the globe that have been hijacked by Coinhive.</p> <p>The list spans the US and UK as well as Australia.</p> <p>Both federal and state government websites locally are included in the list.</p> <p>The Queensland government's main site for its legislation has been hijacked, as have websites belonging to the likes of Queensland Urban Utilities, the Victorian parliament, and South Australia's City of Unley.</p> <p>The problem stems from a website plug-in called Browsealoud that helps blind and partially sighted people access the web.</p> <p>The plug-in was tampered with overnight to add the Coinhive program. Coinhive mines for the Monero crypto currency.</p>

	<p>"If you want to load a crypto miner on 1000+ websites you don't attack 1000+ websites, you attack the 1 website that they all load content from," Helme said.</p> <p>Browsealoud operator Texthelp said it taken the tool offline as soon as one of its automated scans had discovered the modified file.</p> <p>AusCERT analyst David Lord told iTnews the use of plug-ins like Browsealoud in numerous websites made the vendors a big target for attackers.</p> <p>"The accessibility aspect, especially, means many of their users will have been government or corporate websites," Lord said.</p>

<b>HEADLINE</b>	<b>02/12 Zombie bots to target Valentine's Day</b>
<b>SOURCE</b>	<a href="https://nypost.com/2018/02/12/zombie-bots-are-coming-for-lonely-singles-on-valentines-day/">https://nypost.com/2018/02/12/zombie-bots-are-coming-for-lonely-singles-on-valentines-day/</a>
<b>GIST</b>	<p>America's lonely hearts are more likely than ever to catch a virus this Valentine's Day — on their computer.</p> <p>An especially aggressive robot network of 6 million "zombie bots" will be set loose this week ahead of the Feb. 14 celebration — each one with an attractive come-on looking to entice a lovesick victim, according to IBM.</p> <p>But don't go looking for love in all the wrong in-boxes, warns IBM's X-Force warns. X-Force is the IBM unit that searches out and tracks down cyber threats.</p>

	<p>Since Jan. 16, US email in-boxes have been inundated with 230 million dating-spam messages, according to X-Force.</p> <p>Now, heading into Valentine’s Day week, X-Force is predicting a massive uptick in computer come-ons. It attributed the uptick to a notorious botnet called Necurs.</p> <p>“Preying on seasonal trends is probably the top characteristic of e-mail spam,” X-Force said in a statement. “Those behind this campaign will likely lure their victims to share revealing photos and extort them, ask for money to come visit, or end up infecting them with malware.”</p> <p>While dating-spam scams are as old as e-mail itself, X-Force credited Necurs with upping their plausibility.</p> <p>Its current campaign continues to feature “Russian women,” but now they are supposedly living in the US and claim to have been drawn to their marks after seeing their profiles on Facebook or Badoo — a popular dating app in Russia with an international presence.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>02/12 Experts: ‘Olympic destroyer’ malware</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/winter-olympics-2018/olympic-destroyer-malware-targeted-pyeongchang-games-firms-say-n847396">https://www.nbcnews.com/storyline/winter-olympics-2018/olympic-destroyer-malware-targeted-pyeongchang-games-firms-say-n847396</a>
<b>GIST</b>	<p>Several U.S. cyber security firms said on Monday that they had uncovered a computer virus dubbed "Olympic Destroyer" that was likely used in an attack on Friday's opening ceremony of the PyeongChang Winter Games.</p> <p>Games Organizers confirmed the attack on Sunday, saying that it affected internet and television services but did not compromise critical operations. Organizers did not say who was behind the attack or provide detailed discussion of the malware, though a spokesman said that all issues had been resolved as of Saturday.</p> <p>Researchers with cyber security firms Cisco Systems Inc , CrowdStrike and FireEye Inc said in blog posts and statements to Reuters on Monday that they had analyzed computer code they believed was used in Friday's attack.</p> <p>All three security companies said the Olympic Destroyer malware was designed to knock computers offline by deleting critical system files, which would render the machines useless.</p> <p>The three firms said they did not know who was behind the attack.</p> <p>"Disruption is the clear objective in this type of attack and it leaves us confident in thinking that the actors behind this were after embarrassment of the Olympic committee during the opening ceremony," Cisco said in its blog.</p> <p>The attack took the Olympics website offline, which meant that some people could not print out tickets and WiFi used by reporters covering the games did not work during the opening ceremony, according to Cisco.</p> <p>The attack did not affect the performance of drones, which were initially scheduled to be included in the opening ceremony, but later pulled from the program, organizers said in a statement.</p> <p>The drone light show was canceled because there were too many spectators standing in the area where it was supposed to take place, the statement said.</p>

<b>HEADLINE</b>	<b>02/12 Worldwide debut 5G network at Olympics</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-02-12/5g-is-here-super-speed-makes-worldwide-debut-at-winter-olympics">https://www.bloomberg.com/news/articles/2018-02-12/5g-is-here-super-speed-makes-worldwide-debut-at-winter-olympics</a>
<b>GIST</b>	<p>The first to experience the future of wireless technology, well before most humans, will be South Korea's wild boars. That's because 5G, the fifth-generation wireless network, is making its worldwide debut at the Winter Olympics in Pyeongchang.</p> <p>The technology will be used to ward off the porcine pests who roam the mountainous region around the Games with fast-acting systems that shoot rays, spew gases and emit tiger roars.</p> <p>That's just the start of 5G -- South Korea's attempt to showcase the first-in-the-world commercial use of the technology that's not scheduled to roll out globally until 2020. At the Games, shuttle buses run with no humans at the wheel, and 360-degree images in real time show competing figure skaters as they glide around the ice.</p> <p>Fifth-generation wireless networks are designed to be wicked fast, about 100 times faster than 4G. At 10 gigabits a second, 5G can send a full-length high-definition movie in seconds. It also paves the way for the "internet of things," where devices from refrigerators to traffic lights to dog collars can talk to each other.</p> <p>The tech industry is counting on the new capabilities: 5G will be important for developing artificial intelligence, drones, self-driving vehicles, robots and other machines that transmit massive data in real time, said Sandra Rivera, Intel Corp.'s California-based senior vice president overseeing network platforms. In other words, if computers talk to each other like children in 4G now, they'll soon speak like grown-ups in 5G.</p> <p>"It really is, we call it, the era of machines," Rivera said in an interview. "Machines are coming, and the 5G is a big enabler with that true convergence of computing and communications."</p> <p>The Pyeongchang showcase, engineered by South Korean telecom carrier KT Corp., uses technology from Intel, Ericsson AB and Samsung Electronics Co. Left out is Huawei Technologies Co., which is also racing to develop 5G technology.</p> <p>After the Games are over, the technology will go offline as developers analyze the data and work out kinks. 5G is due to be rolled out by South Korea's wireless carriers next year.</p> <p>About 1 billion people worldwide are likely to be 5G-enabled within five years, and that will lead to \$12.3 trillion in global economic output by the mid-2030s, according to researchers from Ericsson and IHS Markit.</p> <p>Due to its speed, 5G opens possibilities that even engineers still aren't aware of, much like the explosion of apps after the release of the iPhone.</p>

<b>HEADLINE</b>	<b>02/12 Bitcoin rebounds; closes-in on \$9,000</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/finance/streettalk/bitcoin-price-regulatory-fears/2018/02/12/id/842922/">https://www.newsmax.com/finance/streettalk/bitcoin-price-regulatory-fears/2018/02/12/id/842922/</a>
<b>GIST</b>	<p>Bitcoin extended a rebound on Monday as the regulatory concerns that have plagued digital currencies this year showed signs of subsiding.</p> <p>Bitcoin climbed 2 percent to \$8,720 as of 2:28 p.m. in New York, bouncing back by almost 50 percent since dipping below \$6,000 in intraday trading Feb. 6, according to composite Bloomberg pricing. Alternate coins Ripple, Ether and Litecoin advanced at least 3.5 percent.</p>

After facing weeks of mounting negative headlines that had wiped out billions in value, cryptocurrencies won a reprieve of sorts as top U.S. regulators testifying before a Senate committee called for greater oversight without proposing industry-killing measures. That news gave enough positive momentum for traders to shrug off a cryptocurrency ban from Thailand's central bank.

## Terror Conditions

[Top of page](#)

HEADLINE	<b>02/13 Anbar warns unrest if ISIS relatives return</b>
SOURCE	<a href="https://aawsat.com/english/home/article/1173797/anbar-residents-warn-new-unrest-if-isis-relatives-return">https://aawsat.com/english/home/article/1173797/anbar-residents-warn-new-unrest-if-isis-relatives-return</a>
GIST	<p>In Iraq's Anbar province, residents struggling to rebuild after years of the ISIS terrorist group rule are adamant: there will be no return for the families of terrorists.</p> <p>Omar Shihan al-Alwani, who fought against the group, warned that revenge awaits the relatives of ISIS fighters who try to come back, reported Agence France Presse.</p> <p>"Anbar is a tribal society. If someone's brother or father is killed, he takes blood revenge by killing someone from the murderer's tribe," Alwani said.</p> <p>The bearded 35-year-old wore a red-chequered headscarf as he sat in his traditional reception room, two months since Iraq declared victory over ISIS.</p> <p>"We do not want ISIS to come back and start a spiral of revenge," he said.</p> <p>"We're totally against that. If they come back then blood will flow and neither tribes nor military operations will be able to stop it."</p> <p>That sentiment is a far cry from the support ISIS once enjoyed in the western desert region.</p> <p>The radical group's predecessor emerged from the region 2006 and was welcomed by many Anbaris, who saw it as offering protection against then Prime Minister Nouri al-Maliki's government.</p> <p>Many tribes turned against ISIS, especially as its brutality became apparent.</p> <p>Today residents, still counting the cost of ISIS rule in blood and destruction, insist they do not want to repeat the errors of the past.</p> <p>"They are outcasts and society rejects them," said Khamis al-Dahal, 60, as he got his hair cut at a barbershop.</p> <p>"The government is not going to force us to accept back people who killed men, women and children in Anbar."</p> <p>Some take a more moderate line -- but are still very wary.</p> <p>"We are not against them returning but the timing is bad and would risk provoking unrest and a return to bloodshed in the streets," said former tribal fighter Omar Ibrahim.</p> <p>"They should be in a camp under the supervision of the Iraqi government and they should receive daily instruction on how to live together and to combat extremist ideologies."</p> <p>Some are already living in camps.</p>

Currently around 380 families of ISIS members, women and children, are detained in two Anbar camps where conditions are harsh.

Late last year US advocacy group Refugees International reported that women and girls believed to be linked to ISIS had been sexually abused by camp guards.

Those who do leave often have nowhere to go.

In the city of Ramadi, residents said houses belonging to the families of ISIS members have been destroyed -- reprisal for a similar tactic the terrorists used against their enemies, reported AFP.

No one was willing to say who was responsible.

The city is still heavily scarred by fighting and airstrikes by a US-led coalition during a battle that saw it recaptured by government troops in early 2016.

Erfan Ali, Iraq representative for the UN Human Settlements Program, said that over 8,000 homes are destroyed or badly damaged, as are some 1,200 in the city of Fallujah.

Many still fear Iraq's weak central government will not be able to prevent ISIS' return indefinitely.

Such is the fear that some residents have still not dared remove signs of the group's presence.

The graffiti remains daubed across the walls of their houses: "Property of the ISIS."

<b>HEADLINE</b>	<b>02/13 UK unveils extremism blocking tool</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/news/technology-43037899">http://www.bbc.com/news/technology-43037899</a>
<b>GIST</b>	<p>The UK government has unveiled a tool it says can accurately detect jihadist content and block it from being viewed.</p> <p>Home Secretary Amber Rudd told the BBC she would not rule out forcing technology companies to use it by law.</p> <p>Ms Rudd is visiting the US to meet tech companies to discuss the idea, as well as other efforts to tackle extremism.</p> <p>Thousands of hours of content posted by the Islamic State group was run past the tool, in order to "train" it to automatically spot extremist material.</p> <p>The government provided £600,000 of public funds towards the creation of the tool by an artificial intelligence company based in London.</p> <p>ASI Data Science said the software can be configured to detect 94% of IS video uploads.</p> <p>Anything the software identifies as potential IS material would be flagged up for a human decision to be taken.</p> <p>The company said it typically flagged 0.005% of video uploads. On a site with five million daily uploads, it would flag 250 non-IS videos for review.</p> <p>It is intended to lighten the moderation burden faced by small companies that may not have the resources to effectively tackle extremist material being posted on their sites.</p>

	<p>Similar tools in the past have been heavily criticised by advocates of an "open" internet, saying such efforts can produce false positives - and that means content that is not particularly problematic ends up being taken down or blocked.</p> <p>In London, reporters were given an off-the-record briefing detailing how ASI's software worked, but were asked not to share its precise methodology. However, in simple terms, it is an algorithm that draws on characteristics typical of IS and its online activity.</p>

<b>HEADLINE</b>	<b>02/13 Pakistan: 26/11 mastermind a terrorist</b>
<b>SOURCE</b>	<a href="https://www.khaleejtimes.com/international/pakistan/pakistan-declares-2611-mastermind-hafiz-saeed-a-terrorist">https://www.khaleejtimes.com/international/pakistan/pakistan-declares-2611-mastermind-hafiz-saeed-a-terrorist</a>
<b>GIST</b>	<p>Pakistan president Mamnoon Hussain has signed an ordinance aimed at reigning in individuals and organisations like the LeT, Al Qaeda, JuD and Taliban, which have been banned by the UN Security Council, a media report said on Monday.</p> <p>The ordinance amends a section of the Anti-Terrorism Act (ATA), enabling the authorities to take action against the UNSC-proscribed individuals and terror outfits, like sealing their offices and freezing their bank accounts, The Express Tribune reported.</p> <p>The sources in the National Counter Terrorism Authority (NACTA) confirmed the new move, saying the ministries of Interior, Finance and Foreign Affairs as well as NACTA's Counter Financing of Terrorism (CFT) wing are working together on the matter.</p> <p>An official in the presidency familiar with the development confirmed the said legislation but refused to share details, saying the ministry of defense was the notifying authority.</p> <p>"The relevant ministry will notify and comment on it," the official said.</p> <p>A major impact of the new ordinance would be the proscription of Hafiz Saeed-linked JuD and FIF along with the UN listed outfits of Al Akhtar Trust and Al Rashid Trust, the Dawn reported.</p> <p>It is learnt that the authorities are bound under international obligations to take measures against such outfits under the framework of the Financial Action Task Force (FATF) an international body that combats money laundering and terrorist financing.</p> <p>The UNSC sanctions list includes Al-Qaeda, Tehreek-e- Taliban Pakistan, Lashkar-e-Jhangvi, Jamaat-ud-Dawa (JuD), Falah-e-Insaniat Foundation (FIF), Lashkar-e-Taiba (Let) and others.</p> <p>In December last year, the government had planned to take over two charities belonging to Hafiz Saeed the JuD and the FIF and an action plan in this connection was supposed to be submitted.</p> <p>Last month, the government had also banned companies and individuals from making donations to the JuD, the FIF and other organizations.</p> <p>Jundullah was the last organization declared "proscribed" by the government of Pakistan on January 31, 2018 on the NACTA website. However, the JuD and the FIF continue to be on the NACTA "watch list".</p> <p>Laskar-e-Taiba was declared a banned organization under the UNSC resolution 1267 in 2005.</p> <p>The US State Department in 2014 had named the JuD as a "foreign terrorist organization", a designation that freezes assets the organization has under the US jurisdiction.</p>

	India also blamed JuD leader Saeed for the Mumbai attacks of November 2006, but Pakistan argues that New Delhi has failed to provide incriminating evidence against him, the report said.

<b>HEADLINE</b>	<b>02/12 ISIS leader alive; trapped on 'desert island'</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/isis-leader-baghdadi-alive-trapped-desert-island-us-russia-airstrike-reports-803562">http://www.newsweek.com/isis-leader-baghdadi-alive-trapped-desert-island-us-russia-airstrike-reports-803562</a>
<b>GIST</b>	<p>The elusive head of the Islamic State militant group (ISIS) has survived an airstrike and is believed to be hiding out in a shrinking bastion of jihadi control in a mostly desert stretch of eastern Syria known as Al-Jazeera, or "the Island," according to U.S. and Iraq officials.</p> <p>Abu Bakr al-Baghdadi, the hardline Sunni Muslim cleric who expanded his Al-Qaeda offshoot from Iraq across Syria, has only made one known public appearance and, as his group suffered widespread losses in recent years, unconfirmed reports of his whereabouts and fate have been numerous. In the latest potential development, a senior Iraqi official said Monday that one of the world's most wanted men has been left incapacitated and is clinging to life by air raids in Iraq, forcing him to give up the helm of his militant network that claimed followers and supporters across the globe.</p> <p>"We have irrefutable information and documents from our sources infiltrating the terrorist entity, stating that the criminal Baghdadi is still present today with the help of his collaborators in the Syrian region of Al-Jazeera," Abu Ali al-Basri, director of intelligence and counterterrorism at the Iraqi Interior Ministry and head of the elite Falcons Intelligence Cell, told state-run newspaper Al-Sabah.</p> <p>Basri said that Baghdadi has been forced to cede control of the group due to his severe "physical and psychological deterioration" and said that the jihadi leader was also likely suffering from diabetes.</p> <p>Unnamed U.S. officials cited by CNN also said Monday that Baghdadi was injured by an airstrike that left him unable to lead ISIS, but stated that the attack had occurred near what was once ISIS's de facto capital</p>

of Raqqa, northern Syria, sometime in May, and had likely been conducted by a U.S.-led coalition or Russian air power. While one official accused Moscow of "making stuff up," according to CNN, the timeline coincided with earlier claims made by Russia.

In June, the Russian Defense Ministry first announced that it had received information about Baghdadi's potential demise after Russian warplanes bombarded ISIS positions in the province of Raqqa on May 28. As the investigation continued, Russia said it was increasingly convinced that it had killed the jihadi warlord, but the U.S. said it could not verify if or how Baghdadi died. Ali Shirazi, a member of the elite expeditionary Quds Force of Iran's Islamic Revolutionary Guard Corps, said in June that "terrorist Baghdadi is definitely dead."

Two pro-Syrian opposition monitoring groups, the U.K.-based Syrian Observatory for Human Rights (SOHR) and Syria-based Raqqa is Being Slaughtered Silently (RIBSS), also weighed in last summer. SOHR told Newsweek in July that Baghdadi had in fact been killed, but that he died under unknown circumstances in the eastern, then-ISIS-held city of Deir Ezzor. RIBSS tweeted that same day that rumors of Baghdadi's death were "not true."

ISIS maintained silence about Baghdadi until it released an audio tape in September purported to be a recent recording of the militants' leader-at-large. In the roughly 45-minute recording, a man identified as Baghdadi discussed his group's loss of territory to local forces backed by international campaigns, staging attacks against civilians in the so-called "crusader" countries abroad and the nuclear threat posed by North Korea.

<b>HEADLINE</b>	<b>02/12 Conference: need \$88.2B to restore Iraq</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/war-kuwait-hosts-conferences-rebuilding-iraq-53012992?">http://abcnews.go.com/International/wireStory/war-kuwait-hosts-conferences-rebuilding-iraq-53012992?</a>
<b>GIST</b>	<p>Kuwait on Monday opened a week of conferences seeking aid for rebuilding Iraq after the onslaught of the Islamic State group, seeking tens of billions of dollars for a nation only a generation ago that invaded it.</p> <p>Authorities estimate Iraq needs \$88.2 billion to restore a country smashed after the Sunni extremists seized the country's second-largest city of Mosul and a mass of territory in June 2014.</p> <p>"We finished one battle but we are engaged now with a war for reconstruction," said Mustafa al-Hiti, the head of Iraq's reconstruction fund for areas affected by terrorist operations.</p> <p>Among the hardest-hit areas is Mosul, which Iraqi forces, aided by Iranian-backed Shiite militias and a U.S.-led coalition, recaptured in July 2017. Their victory came at a steep cost for Mosul, as coalition airstrikes and extremist suicide car bombs destroyed homes and government buildings.</p> <p>Of the money needed, Iraqi officials estimate \$17 billion alone needs to go toward rebuilding homes, the biggest single line item offered Monday on the first day of meetings. The United Nations estimates 40,000 homes need to be rebuilt in Mosul alone.</p> <p>"The majority of the damage was to western Mosul as it went through one of the worst and fiercest battles in history," said Nofal al-Akoub, the governor of Iraq's Nineveh province. It "led to the total destruction of its infrastructure."</p> <p>Al-Akoub said \$42 billion was needed for his province alone, as it is home to Mosul. Iraq needs some \$20 billion now to begin its reconstruction, al-Hiti said.</p> <p>The war against the Islamic State group displaced more than 5 million people. Only half have returned to their hometowns in Iraq.</p>

However, officials acknowledge a feeling of fatigue from international donors, especially after the wars in Iraq and Syria sparked the biggest mass migration since World War II.

President Donald Trump himself on Monday tweeted that America was "so stupidly spending \$7 trillion in the Middle East, it is now time to start investing in OUR country." The U.S. has no plans to make any new pledges at this week's conferences. Even in Kuwait, some social media users questioned why more wasn't being done in their own country.

Billions of dollars poured into Iraq after the 2003 U.S.-led invasion that toppled dictator Saddam Hussein, with what feels now like little visible effect.

The U.S. alone spent \$60 billion over nine years — some \$15 million a day — to rebuild Iraq. Around \$25 billion went to Iraq's military, which disintegrated during the lightning 2014 offensive of the Islamic State group, which grew out of al-Qaida in Iraq. U.S. government auditors also found massive waste and corruption, fueling suspicions of Western politicians like Trump who want to scale back foreign aid.

Meanwhile, the Middle East as a whole, especially countries like Kuwait whose deep pockets rely on oil production, have taken a hit in recent years as energy prices crashed and only recently began regaining ground.

Iraq, OPEC's second-largest crude producer and home to the world's fifth-largest known reserves, says it needs \$7 billion to repair its oil and gas fields. It has struggled to pay international firms running them.

Kuwait, hosting the conferences this week, has a deep interest in seeing a stable Iraq, especially after Baghdad's 1990 invasion of their small, oil-rich emirate. It announced \$330 million alone had been pledged Monday for Iraq at a humanitarian conference in Kuwait City.

<b>HEADLINE</b>	<b>02/12 ISIS: disrupt Egypt vote w/attacks</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/middle-east/is-calls-on-fighters-to-disrupt-egypts-vote-with-attacks/2018/02/12/3e96e638-0ff4-11e8-a68c-e9374188170e_story.html">https://www.washingtonpost.com/world/middle-east/is-calls-on-fighters-to-disrupt-egypts-vote-with-attacks/2018/02/12/3e96e638-0ff4-11e8-a68c-e9374188170e_story.html</a>
<b>GIST</b>	<p>CAIRO — A video purportedly by the Islamic State's affiliate in Egypt is calling on its fighters to stage attacks during next month's presidential elections and warning Egyptians to stay away from polling centers.</p> <p>The authenticity of the 23-minute video posted late Sunday on websites known to be sympathetic to the group could not be independently verified, but appeared similar to past releases by IS. The video makes a brief mention of an ongoing offensive by security forces against IS, suggesting it was made after the campaign began Friday.</p> <p>The video showed what appeared to be footage of past IS attacks in Sinai and the gruesome killings of unarmed off-duty soldiers or men suspected of collaborating with security forces. The timing of its release and its contents, however, appear designed to project an image of the group as a resilient force in the face of what is possibly the largest offensive by government forces since the insurgency began nearly five years ago.</p> <p>Egypt's military says it has destroyed dozens of targets, killed scores of militants and detained many suspects as part of the operation, which targets "terrorist and criminal elements and organizations" and involves land, naval and air forces from the army and police. The operation covers north and central Sinai, the Nile Delta and the Western Desert along Egypt's porous border with Libya, home to a number of militant groups.</p> <p>Branding elections an act of "apostasy," an IS operative speaking to the camera in the video called on the "soldiers" of the group to "spoil the day of their apostasy, shed their blood and target the heads of apostasy</p>

among them.” He also called on Muslims in Sinai and elsewhere in Egypt to stay away from polling centers and other vote-related installations, saying they would be targeted on the days of the election. The vote is staggered over three days — March 26, 27 and 28.

Such threats are routine from militant Islamic groups opposed in principle to democratic practices, or even a hollow version of them. They also rarely materialize.

President Abdel-Fattah el-Sissi’s re-election is virtually assured in the March vote. After a string of potentially serious challengers have either been arrested or forced out of the race, el-Sissi’s only challenger is an obscure politician who is also among his ardent supporters. Moussa Mustafa Moussa’s last-minute entry into the race saved el-Sissi and his government from the embarrassment of a one-candidate election.

A coalition of eight opposition parties and scores of prominent pro-democracy figures called last month on voters to boycott the elections. This week, prosecutors began an investigation into complaints by pro-government lawyers accusing them of “incitement against the state” and seeking to destabilize the country.

The move by the prosecutors was the latest sign that authorities were not prepared to allow even a hint of dissent or any questioning of el-Sissi’s continued rule ahead of the vote.

<b>HEADLINE</b>	<b>02/11 What is ‘Complex Coordinated Attack’?</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/subject-matter-areas/counterterrorism/hstindepth-what-is-complex-coordinated-attack/">https://www.hstoday.us/subject-matter-areas/counterterrorism/hstindepth-what-is-complex-coordinated-attack/</a>
<b>GIST</b>	<p>In 2017, FEMA awarded a total of \$35.9 million to 29 public safety agencies across 19 states to strengthen complex coordinated attack (CCAs, also called complex coordinated terrorist attacks) preparedness. But preparing for a CCA is easier said than done, especially when homeland security authorities and experts continue to disagree about what a CCA is, even within single organizations.</p> <p>FEMA’s Office of Counterterrorism and Security Preparedness uses one definition, while FEMA’s National Exercise Program uses another – which makes about as much sense as Donald Duck never wearing pants but always wrapping a towel around his waist after a shower.</p> <p>To prepare effectively, all CCA partners must understand and agree upon the events for which they are preparing. In other words, they need a robust, consensus definition of CCA to make sure everyone is on the same page. But few have even attempted to define CCA, and the few definitions that exist have key problems that are too important to ignore. Instead, homeland security partners should adopt the following definition.</p> <p>A complex coordinated attack (or complex coordinated terrorist attack) is a violent assault or series of assaults that employs one or more types of weapons, intends to injure or kill large numbers of people, and meets the following two criteria:</p> <ol style="list-style-type: none"> <li>1.The attack is multi-phased or takes place at multiple sites, or both. (Phases can include assault phases, such as shootings, bombings, and arsons; and/or non-assault phases such as hostages, car chases, sieges, barricades, kidnappings, and manhunts, etc.)</li> <li>2.The attack must take place within geographic and temporal circumstances that result in unusual strain on command, information sharing/situational awareness, and/or resource allocation.</li> </ol> <p>Since homeland security professionals started using “CCA” before fully defining it, a viable consensus definition must include attacks that homeland security authorities and experts already regard as CCAs. Identifying such a “CCA conventional wisdom” is something of a head-scratcher; however, researchers developed the following summary of CCA conventional wisdom by identifying points of agreement between homeland security authorities and/or experts about which attacks are CCAs.</p> <p>CCA conventional wisdom thus includes attacks that have major differences, including disparities in</p>

numbers of attackers, numbers of assault locations, number of assault modes, whether assaults took place in confined spaces, and differences in time and distance between attack phases. By learning more about the attacks that are definitely CCAs, and understanding their differences, it is possible to work backwards and identify key characteristics that a viable consensus definition must have.

A usable consensus definition must include all 10 “conventional wisdom” CCAs from Table 1, but Table 2 shows that several existing definitions fail to include all 10 and are thus inconsistent and unusable. Six of the ten available definitions from reputable sources fail for at least one of the following five reasons:

**Requires Multiple Attackers:** Viable CCA definitions cannot require multiple attackers because doing so would exclude the [2007 Virginia Tech attack](#), where a single shooter killed a total of 32 at two campus locations.

**Requires Multiple Assault Locations:** Useable CCA definitions cannot require multiple assault locations because doing so would exclude the [attack at Westgate Mall in Nairobi](#), Kenya, where four armed militants killed at least 67 people in 2013.

**Requires Multiple Assault Modes:** Feasible CCA definitions cannot require multiple assault modes. Doing so would exclude the [San Bernardino \(2015\)](#) and Virginia Tech (2007) attacks, which both involved only firearms, and the [London attack \(2005\)](#), which involved only explosives.

**Requires Simultaneous Assaults:** Suitable CCA definitions cannot require multiple assaults to take place simultaneously. Credible sources demonstrate that none of the 10 CCAs in Table 1 included multiple assaults at precisely the same moment.

**Requires Assaults in Confined Spaces:** Useful CCA definitions cannot require that assaults take place in confined spaces. Doing so would exclude the [Boston \(2013\)](#) and [Paris \(2015\)](#). Any useable consensus CCA definition must also withstand at least a modicum of scrutiny, but as Table 2 shows, none of the 10 available definitions do so for at least one of two reasons.

**Failure to Include Non-Assault Phases:** Non-assault phases of attacks should be specifically included in a robust, consensus CCA definition because they can be just as important as assault phases in establishing the unusual complexity that characterizes CCAs. Though non-assault phases posed key challenges in Boston (manhunt), Paris (hostages), and San Bernardino (car chase), none of the 10 existing definitions specifically include them.

**Ineffective Limits on Time and Geography:** A robust CCA definition must also include limitations on the length of time and geographic distance between different portions of an attack. Conventional wisdom shows that CCAs can be spread over many miles and include days between phases, but common sense says that there must be some kind of limitations on time and space beyond which different phases cannot be regarded as part of a single attack. Yet, none of the existing definitions establish temporal or geographic limitations, and it is unclear how to do so.

Table 2 thus shows that none of the 10 available definitions are viable as robust, consensus CCA definition.

Uncertainty remains, however, about how to effectively include geographic and temporal limitations into a robust, consensus definition. One approach to solving the problems of where to draw the lines of time and geography is to consider the issue in reference to the specific aspects of CCAs that distinguish them from active shooters and other violent attacks — and make CCAs worth examining as a distinct phenomenon. Put differently, why do we care about CCAs in particular instead of just treating them as a type of active shooter or bombing incident? And do the reasons we care about CCAs help provide insight into how we should limit time and geography within the definition?

Specific CCA challenges can be summarized as unusual strain on three distinct aspects of managing a terrorist attack: command, information sharing, and resource allocation. It follows, then, that a robust CCA

definition's limitations on time and/or geography must reflect geographic and temporal circumstances that are sufficient to place unusual strain on resource management, information sharing, and/or command capabilities. Though identifying clear temporal and geographic limitations would be more ideal, this more general standard is a better fit for a consensus definition because it is flexible enough to be used by different organizations with vastly different capabilities.

<b>HEADLINE</b>	<b>02/12 Pakistani Taliban confirm deputy death</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/02/12/pakistani-taliban-confirm-no-2-killed-in-drone-us-strike.html">http://www.foxnews.com/world/2018/02/12/pakistani-taliban-confirm-no-2-killed-in-drone-us-strike.html</a>
<b>GIST</b>	<p>DERA ISMAIL KHAN, Pakistan – The spokesman for the Pakistani Taliban has confirmed the death of their deputy leader in a recent U.S. drone strike in Pakistan's northwestern tribal region.</p> <p>Azam Tariq Mehsud, the spokesman for the Tehrik-e-Taliban Pakistan, says the group's deputy chief, Khalid Mehsud, also known as Commander Sajna, was killed in last Thursday's strike in the border village of Gorwak in North Waziristan, once a stronghold of militants.</p> <p>He said another commander, Mufti Noor Wali, has now been appointed as the group's deputy chief.</p>

	<p>Tariq says Wali enjoys the backing of Mullah Fazlullah, the leader of the Pakistani Taliban who is believed to be hiding in Afghanistan.</p> <p>Pakistani officials had earlier reported unconfirmed reports about Sajna's killing in a U.S. strike.</p> <p>Islamabad opposes the drone strikes, saying they violate its sovereignty.</p>

<b>HEADLINE</b>	<b>02/12 Al-Shabaab skims foreign aid funds</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/12/africa/somalia-al-shabaab-foreign-aid-intl/index.html">https://www.cnn.com/2018/02/12/africa/somalia-al-shabaab-foreign-aid-intl/index.html</a>
<b>GIST</b>	<p>Baidoa, Somalia (CNN)The murderous al Qaeda affiliate al-Shabaab is making millions of dollars each year by exploiting foreign aid money sent to Somalia by the very western nations who are trying to eliminate the terror group.</p> <p>A CNN investigation has revealed how money given directly by the United Nations to people displaced by conflict and famine is ending up in the hands of Africa's oldest terrorist organization.</p> <p>Former members of al-Shabaab and Somali intelligence agents said the terror group is extorting thousands of dollars per day through road blocks and taxes on merchants attempting to transport food and supplies to sell to internally displaced people in towns where they are concentrated.</p> <p>People who have fled their homes and are living in a sprawling camp in the central Somali city of Baidoa are screened by the UN and issued cash cards that the UN tops up with around \$80 to \$90 each month, enabling them to buy essentials from local merchants.</p> <p>UN officials say this direct payment system will avoid distorting local markets by flooding them with free food, and relieve the UN of the burden of running food convoys that are vulnerable to attacks and theft.</p> <p>Businessmen now truck food bought on the open market to places like Baidoa, where internally displaced people (IDPs) arrive every day. But they must pay al-Shabaab, which controls the main road into the town, to move their goods.</p> <p>Former members of the terror group and Somali intelligence agents said that tolls taken from trucks and other vehicles at just two al-Shabaab roadblocks on Somalia's busiest road raked in thousands every day.</p> <p>The UN has estimated that a single roadblock generated about \$5,000 per day on the road to Baidoa. 'Tax' collectors</p> <p>Speaking at a secret location on the outskirts of Baidoa, a former zaqat (tax) collector for al-Shabaab, who was captured in a recent raid by agents from Somalia's National Intelligence and Security Agency, confirmed that the extraction of tolls at roadblocks was one of the biggest sources of money for al-Shabaab.</p> <p>The two biggest sources were the road to Baidoa and the main artery which connects the capital Mogadishu with the agriculturally-rich Lower Shabelle region.</p> <p>The gouging is more subtle today than it was in the early 1990s, when local warlords deliberately starved hundreds of thousands of Somalis in order to profit from international aid money. Scenes of mass death on the streets of Baidoa in 1992 provoked the United States to lead a multinational UN-backed military intervention in the same year.</p> <p>In 2018, if local merchants don't pay up, "they're captured and killed," said a former al-Shabaab fighter who collected tax for eight years and now works with Somalia's National Intelligence and Security</p>

	Agency.

<b>HEADLINE</b>	<b>02/13 Terror groups still have interest in WMD</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/subject-matter-areas/counterterrorism/terror-groups-keen-wmd-never-been-more-difficult-prevent/">https://www.hstoday.us/subject-matter-areas/counterterrorism/terror-groups-keen-wmd-never-been-more-difficult-prevent/</a>
<b>GIST</b>	<p>Terrorist groups are as interested as ever in acquiring weapons of mass destruction in a global landscape where chemical, biological, radiological and nuclear agents have grown more difficult to track, senators heard from Defense officials last week.</p> <p>Assistant Defense Secretary for Homeland Defense and Global Security Kenneth Rapuano told the Senate Armed Services Subcommittee on Emerging Threats and Capabilities that “rapid technological advancements and increased access to dual use technologies, expertise, and materials that can be used for both peaceful and military purposes heighten the risk that adversaries can more easily seek or acquire WMD.”</p> <p>“It has never been more difficult to prevent adversaries from acquiring the materials or expertise necessary to develop WMD or use CBRN materials in intentional attacks,” he said. “Additionally, the speed, volume, and coverage of international travel means that naturally occurring pathogens of security concern can spread worldwide in days, potentially having the same catastrophic consequences of a deliberate biological attack.”</p> <p>The Intelligence Community, State Department, Department of Homeland Security, Department of Energy and Justice Department “all play critical roles in detecting threats, preventing attacks on the homeland, and working with foreign partners to stop and respond to incidents,” he added.</p> <p>Rapuano noted that best efforts at prevention only go so far, thus the agency coalition “must be prepared to contain and reduce CBRN threats once they have developed.”</p> <p>“DoD is postured to isolate, identify, neutralize, and dispose of CBRN threats before they can reach our borders,” he said. That includes concern about reports of ongoing use of chemical agents by the regime of Bashar al-Assad in Syria, where “the U.S. and our coalition partners continue to exploit opportunities on the ground to better understand and disrupt their CW networks.”</p> <p>“We must anticipate that our adversaries will continue to evolve and develop increasingly sophisticated methods to pursue, develop, or deploy CBRN weapons,” Rapuano stressed.</p> <p>Marine Corps Lt. Gen. Joseph Osterman, deputy commander of United States Special Operations Command, emphasized the importance of increased integration of intelligence, planning and assessments in a counter-WMD fusion center “dedicated to coordinating information flow and planning, fusing intelligence and operations, and providing the WMD community of action a single point of contact for DOD operational capability.”</p> <p>Chairwoman Joni Ernst (R-Iowa) asked Rapuano which WMD threat concerned him most at this point.</p> <p>Rapuano picked biotechnology, due to the “rapid advances and ubiquitous availability” today.</p> <p>“Things that you can buy on the web now and essentially do a paint-by-numbers instruction were the province of Nobel Prize-winning scientists only decades ago, and that really levels the playing field for any actor looking to develop biotechnology, biological agents and novelly engineered agents that can present a real threat,” he added.</p> <p>The assistant secretary confirmed that “both Al-Qaeda and ISIS are interested in chemical, biological, nuclear,” and “certainly would be if they had opportunity to acquire the materials and know-how.” He</p>

wouldn't elaborate in open session.

Osterman said that "functional campaign planning" helps officials "observe where the technology transfer may occur between state and non-state actors."

"Also, where one non-state actor perhaps is working with another non-state actor in a different geographic location or in a functional capacity," the general added. "So we try to weave that in with the translation of our strategy and policy to actual tactical application of interdiction in order to basically reinforce the larger protocol efforts that are in place."

The CBRN Response Enterprise is nearly 19,000 strong, consisting of National Guard and Title X military arranged into teams. "We have the WMD-CSTs, the civil support teams. We have the enhanced response teams. We have a range of teams with a different mix of capabilities that go from decontamination, detection, medical effects, medical treatment," Rapuano said. "There is air transportation, ground transportation, the whole package that can be integrated that can either be commanded by the state National Guards and there's at least one team in every state. Or they can be authorized under Title X and under DOD command."

Response teams are deployed "on a routine basis starting with National Special Security Events, the Super Bowl, other large events, Fourth of July."

"And these assets will be pre-deployed in the vicinity of activities for which there may be some concern that they would be the target of an attack that might include WMD," Rapuano explained. "And they are prepared to respond in concert with all of the other assets that are typically deployed for those events — law enforcement and others."

DoD has been working "very closely" with Health and Human Services and DHS "to look at bio threats in general, including naturally occurring, to sync our research with them to ensure that we're covering the full landscape of what's naturally occurring and what perhaps could be intensified or developed for malevolent use," the assistant secretary told lawmakers.

Pressed on how the departments wouldn't get caught off-guard, with the 2014 spread of the Ebola virus offered as an example, Rapuano replied that "we're looking at ways that we can get quick production, just in time, but that's very difficult because you need that base in terms of the manufacturing base."

Sen. Martin Heinrich (D-N.M.) mused on whether ISIS stripped of its physical caliphate poses the same WMD threat.

"Because, obviously, this is about talent as much as anything, and intellectual capacity," Heinrich noted.

Osterman replied that "they are still a threat, to put it simply."

"Really, when we look at pathways, we're looking at intent, infrastructure and expertise to your point, production, weaponization, delivery systems in use," the general added. "And they've demonstrated not only that capability over time, but even though as they lose the geographic caliphate, that those individuals that have the technical knowledge and frankly, the level at which they were working and had been working is not one that by loss of that geographic caliphate that it would undermine their ability to continue to pursue the weapons of mass destruction capability."

Osterman stressed that "it's a very, very finite technical capability and human capital issue."

"And they are generally not front-line fighters. There are folks that were not necessarily easy to track, but they're ones that we've been working on for a number of years here and have ideas where they are if we haven't already basically taken them off the battle space," he said. "So that's where my concern is, and where we watch very closely again through the trans-regional approach is to make sure they're not leaving that area of operations and perhaps than becoming an export or, as we term it, an ex-ops threat to the

	United States proper.”

<b>HEADLINE</b>	<b>02/12 Feds: Md. man plotted major attack</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/02/12/maryland-man-who-supported-isis-plotted-major-attack-feds-say.html">http://www.foxnews.com/us/2018/02/12/maryland-man-who-supported-isis-plotted-major-attack-feds-say.html</a>
<b>GIST</b>	<p>A Maryland man who pleaded guilty last year to conspiring to provide material support to the ISIS terror network was planning to carry out bloodshed in the U.S., prosecutors revealed Monday.</p> <p>Mohamed Elshinawy is tentatively scheduled to be sentenced March 9, but CBS Baltimore reported that prosecutors were trying to convince a judge to apply a federal terrorism enhancement to ensure a longer jail term.</p> <p>According to the plea deal to which Elshinawy and prosecutors agreed, he pledged allegiance to ISIS and received \$8,700 from people he believed were linked to the terror network.</p> <p>Prosecutors said Elshinawy was in contact with ISIS leaders who gave him a choice between two plots. One option, according to CBS Baltimore, was assassinating "a Texas businessman." The other option was detonating a bomb that would "kill a lot of people."</p> <p>Elshinawy apparently chose the second option, as prosecutors said he received videos from ISIS that included instructions on how to build a peroxide bomb. Prosecutors also said that Elshinawy was researching federal buildings in Baltimore as possible targets.</p> <p>Elshinawy's lawyers have admitted that their client was contacted by ISIS, but claimed prosecutors had no evidence that a specific plan was in progress.</p> <p>A judge is expected to rule Friday on whether the terrorism enhancement will be applied. Elshinawy faces up to 20 years in prison.</p>

<b>HEADLINE</b>	<b>02/13 Afghan officials, Taliban continue talks</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/afghan-officials-taliban-talk-wave-violence-53037104?">http://abcnews.go.com/International/wireStory/afghan-officials-taliban-talk-wave-violence-53037104?</a>
<b>GIST</b>	<p>Afghan officials are carrying out at least two tracks of talks with the Taliban, The Associated Press has learned, even after a month of brutal bombings and attacks by the militants that killed nearly 200 and despite President Donald Trump's angry rejection of any negotiations for now.</p> <p>The persistence of the back-channel contacts reflects the desire to keep a door open for reconciliation even as the Afghan government and its top ally, the United States, fumble for a strategy to end the protracted war, now entering its 17th year. Rifts within the Afghan government have grown vast, even as the Taliban gain territory and wage increasingly ruthless tactics.</p> <p>The United States has unleashed heavier air power against the Taliban and other militants. After the string of Taliban attacks in recent weeks, Trump angrily condemned the group. "We don't want to talk with the Taliban," he said. "There may be a time but it's going to be a long time."</p> <p>Still, Afghanistan's intelligence chief Masoom Stanikzai and its National Security Chief Mohammed Hanif Atmar continue to each talk separately to the Taliban, say those familiar with the backdoor negotiations. The problem, however, is that neither is talking to the other or to the High Peace Council, which was created by the government to talk peace with the Taliban, they said, speaking on condition of anonymity to discuss the contacts.</p> <p>Hakim Mujahid, a member of the High Peace Council, confirmed that Stanikzai still has regular contacts with the Taliban's point man for peace talks, Mullah Abbas Stanikzai. The two are not related.</p> <p>Mujahid — who was the Taliban's representative to the United Nations during the group's five-year rule of Afghanistan that ended in 2001 — said the group would not respond well to Trump's tough talk. "The language of power, the language of threat will not convince Afghans to surrender," he said.</p> <p>Andrew Wilder, vice president of the Asia Program at the U.S. Institute of Peace, said multiple players in Kabul have contacts with the Taliban. "But this isn't being done in a coordinated manner to achieve clearly defined objectives," he said.</p> <p>Later this month, representatives from dozens of countries are to meet for a second time in the Afghan capital for the so-called Kabul process aimed at forging a path to peace. The first round was held in June.</p> <p>Still, the latest spate of violence has limited options for Afghan President Ashraf Ghani, who is also fending off a mini-revolt within his own government, feuding with the vice president as well as a powerful northern governor.</p> <p>Meanwhile, the former No. 2 of the Taliban, Aga Jan Motasim, who still counts the radical religious movement's leader Mullah Habaibullah Akhunzada among his friends, warned that Trump's strategy of using the military to force a more compliant Taliban to the negotiation table could lead to more suicide attacks.</p> <p>From within his fortress style house in Kabul, protected by steel gates and gunmen, Motasim said he wants to be a bridge between the government and Taliban.</p> <p>Motasim was a senior member of the Taliban leadership shura, or council, until 2010 when he was shot 12 times after advocating peace negotiations with the Afghan government. Blame for the shooting has been directed at both elements within the Taliban who opposed peace talks and Pakistan's powerful spy agency, often seen as the force behind the Taliban.</p>

HEADLINE	<b>02/12 DHS pushes back on NBC report</b>
SOURCE	<a href="http://www.washingtonexaminer.com/dhs-pushes-back-on-nbc-no-evidence-russians-manipulated-elections/article/2648823">http://www.washingtonexaminer.com/dhs-pushes-back-on-nbc-no-evidence-russians-manipulated-elections/article/2648823</a>
GIST	<p>The Department of Homeland Security made the rare move Monday to officially discredit an NBC News report that claimed a top Trump official found that “Russians successfully penetrated the voter registration rolls of several U.S. states prior to the 2016 presidential election.”</p> <p>In a statement, DHS said the “breaking news” report was not only wrong and hyped but is also being ripped by other media.</p> <p>In the report, NBC interviewed Jeanette Manfra, the head of cybersecurity at the Department of Homeland Security, who said, “We saw a targeting of 21 states and an exceptionally small number of them were actually successfully penetrated.”</p> <p>In the statement, Manfra said, “let me be clear: we have no evidence – old or new - that any votes in the 2016 elections were manipulated by Russian hackers.”</p> <p>She added, “NBC News continues to falsely report my recent comments on attempted election hacking – which clearly mirror my testimony before the Senate Intelligence Committee last summer – as some kind of ‘breaking news,’ incorrectly claiming a shift in the administration’s position on cyber threats. As I said eight months ago, a number of states were the target of Russian government cyber actors seeking vulnerabilities and access to U.S. election infrastructure. In the majority of cases, only preparatory activity like scanning was observed, while in a small number of cases, actors were able to access the system but we have no evidence votes were changed or otherwise impacted.”</p> <p>The NBC headline on one story was, “Russians penetrated U.S. voter systems, top U.S. official says.”</p> <p>Here is Manfra’s full statement:</p> <p><b>DHS Statement On NBC News Coverage Of Election Hacking</b></p> <p>WASHINGTON - Today, Jeanette Manfra, National Protection and Programs Directorate (NPPD) Assistant Secretary for the Office of Cybersecurity and Communications, released the following statement regarding the recent NBC news coverage on the Department of Homeland Security’s efforts to combat election hacking.</p> <p>“Recent NBC reporting has misrepresented facts and confused the public with regard to Department of Homeland Security and state and local government efforts to combat election hacking. First off, let me be clear: we have no evidence – old or new - that any votes in the 2016 elections were manipulated by Russian hackers. NBC News continues to falsely report my recent comments on attempted election hacking – which clearly mirror my testimony before the Senate Intelligence Committee last summer – as some kind of “breaking news,” incorrectly claiming a shift in the administration’s position on cyber threats. As I said eight months ago, a number of states were the target of Russian government cyber actors seeking vulnerabilities and access to U.S. election infrastructure. In the majority of cases, only preparatory activity like scanning was observed, while in a small number of cases, actors were able to access the system but we have no evidence votes were changed or otherwise impacted.</p> <p>"NBC’s irresponsible reporting, which is being roundly criticized elsewhere in the media and by security experts alike, undermines the ability of the Department of Homeland Security, our partners at the Election Assistance Commission, and state and local officials across the nation to do our incredibly important jobs.</p>

While we'll continue our part to educate NBC and others on the threat, more importantly, the Department of Homeland Security and our state and local partners will continue our mission to secure the nation's election systems.

"To our state and local partners in the election community: there's no question we're making real and meaningful progress together. States will do their part in how they responsibly manage and implement secure voting processes. For our part, we're going to continue to support with risk and vulnerability assessments, offer cyber hygiene scans, provide real-time threat intel feeds, issue security clearances to state officials, partner on incident response planning, and deliver cybersecurity training. The list goes on of how we're leaning forward and helping our partners in the election community. We will not stop, and will stand by our partners to protect our nation's election infrastructure and ensure that all Americans can have confidence in our democratic elections."

<b>HEADLINE</b>	<b>02/12 Concerns: Amazon closed-door meeting</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/897996/amazons-closed-door-meeting/">http://mynorthwest.com/897996/amazons-closed-door-meeting/</a>
<b>GIST</b>	<p>Some Seattle City Council members tried to hit the “refresh” button with Amazon on Friday, joining a meeting with regional leaders who are trying to build a better relationship with the company.</p> <p>But did their meeting on Friday violate open government laws?</p> <p>Three council members were spotted by KIRO 7 entering Amazon's headquarters for the meeting that was closed to the public and media.</p> <p>Councilmember Sally Bagshaw was asked if the public's business was being done behind closed doors.</p> <p>“That is such a wonderful question to ask,” she said. “What I'm hopeful is that we have this conversation, establish relationships, then bring these meetings back here to City Hall.”</p> <p>Toby Nixon of the Washington Coalition for Open Government says the discussions happening behind closed doors are of great public concern and what happened Friday is likely in violation of the Open Public Meetings Act.</p> <p>Under state law, if the majority of a council attend a meeting to conduct business — or even have a discussion about matters of public concern — it falls under the state's Open Public Meetings Act. In this case, if five of the nine council members attended the meeting, it would be a violation.</p> <p>But it's possible that a last-minute change of plans helped avoid a violation of the meetings act. According to The Seattle Times, council President Bruce Harrell apparently planned to miss Friday's meetings at Amazon.</p> <p>City Councilmember Kshama Sawant, who was not on the list to attend, summed up why the public should be concerned with the matter, “The public should find it troubling that elected officials, who have been elected by votes of ordinary people, are having a private meeting with billionaire interests.”</p> <p>The meeting follows concerns that the city's attitude toward big business has put the relationship with Amazon on shaky ground. Those concerns grew after Amazon announced it would build a second headquarters elsewhere in the country. Only one West Coast city made it onto a shortlist of cities vying for HQ2.</p>

<b>HEADLINE</b>	<b>02/13 Vancouver B.C. offers prescription heroin</b>
-----------------	--

SOURCE	<a href="http://www.king5.com/article/news/local/controversial-program-gives-prescription-heroin-to-users-to-shoot-up/281-517959502">http://www.king5.com/article/news/local/controversial-program-gives-prescription-heroin-to-users-to-shoot-up/281-517959502</a>
GIST	<p>In Vancouver, B.C., a controversial program is fighting heroin-related deaths by giving users the drugs and then making sure they inject safely.</p> <p>Doctors and nurses supervise the process so there are no overdoses. The users say it works.</p> <p>"Up until the time I came to this program, I was living day to day, a bit homeless, in addiction for the last twenty years," says Les, a long time Vancouver resident, as he settles into a small clinic on East Hastings. "The heroin takes away all my problems, so I had a hard time kicking (it). I used to cope really on a daily basis."</p> <p>Now, he's just one of roughly 130 patients at the Crosstown Clinic, run by Providence Health in conjunction with Vancouver Coastal Health. It's been open since 2014, at a time when the opioid crisis exploded in the lower mainland of BC. The BC Coroner's office announced just last month a staggering number of deaths attributed to illicit drugs, more than 1,400 in 2017. That's four a day. BC Health leaders point specifically to a heroin supply contaminated with Fentanyl, heroin's cheaper more potent cousin, as a reason for the surge.</p> <p>"We're providing a legal, sterile, pharmaceutical predictable treatment," says Doctor Scott McDonald, who helps run the clinic, in the rough stretch on Hastings just outside downtown. A patient can come in, get their dosage, and inject under the watchful eye of nurses and doctors. "If people are using in a supervised setting like that - all that injection paraphernalia - contained in one spot - you won't find syringes in playgrounds or on sidewalks it's safe." McDonald says there is a waiting list of more than 330, given the small size and list of people who need help.</p>

HEADLINE	<b>02/13 Philippine workers seek to leave Kuwait</b>
SOURCE	<a href="https://www.cnn.com/2018/02/13/asia/philippines-domestic-workers-intl/index.html">https://www.cnn.com/2018/02/13/asia/philippines-domestic-workers-intl/index.html</a>
GIST	<p>Manila, Philippines (CNN)As many as 10,000 Filipino workers in Kuwait are expected to take up the Philippines government's offer of a free flight home after the body of their compatriot was found stuffed in a freezer.</p> <p>President Duterte's administration has ordered a ban on the deployment of overseas foreign workers to Kuwait after the deaths of several woman, including 29-year-old Joanna Demafelis.</p> <p>Demafelis' body was found in the freezer of her employers' home on Wednesday where authorities believe it could have been stored for up to one year.</p> <p>The offer of a free flight home was extended to the 10,000 Filipinos who had overstayed their visa in the Gulf state.</p> <p>"I will sell my soul to the devil to look for money so that you can come home and live comfortably here," Duterte said Tuesday. The Philippines President said last week he was ready to take "drastic steps" to protect Filipinos working abroad.</p> <p>As of Tuesday, 510 Philippines workers had returned on chartered flights, the country's Overseas Workers Welfare Administration told CNN.</p> <p>Labor Secretary Silvestre Bello III said at a news conference Monday that thousands of Filipinos had turned up at the embassy in Kuwait since January 29 to initiate the repatriation process agreed with the Kuwait government. More than 2,200 had received travel documents so far.</p>

<b>HEADLINE</b>	<b>02/12 Memo: no evidence crime BP agent death</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/12/us/new-memo-us-border-patrol-agent-investigation/index.html">https://www.cnn.com/2018/02/12/us/new-memo-us-border-patrol-agent-investigation/index.html</a>
<b>GIST</b>	<p>(CNN)There was no evidence a crime was committed when a US Border Patrol agent was killed more than two months ago while on patrol in West Texas, according to a new government memo obtained by CNN.</p> <p>The internal memo from Carla L. Provost, acting chief of US Border Patrol, is the third indication that there appears to be no evidence of foul play that led to the mysterious death of US Border Agent Rogelio "Roger" Martinez, who was found critically injured near a concrete-lined culvert along with his partner.</p> <p>Provost's February 8 memo, which was sent to Border Patrol employees, including the rank-and-file agents, lays out the findings of the FBI's investigation up to this point. It also echoes an earlier memo from Kevin McAleenan, acting commissioner of the US Customs and Border Protection, which oversees the border patrol.</p> <p>"Currently there is no evidence indicating the presence of other persons or the commission of a crime," Provost's memo said.</p> <p>"Unfortunately, the investigation up to this point has not revealed exactly what took place prior to the two [border patrol agents] being injured and what might have caused BPA Martinez to fall into the culvert," Provost's memo said.</p> <p>Martinez's family has been updated on the investigation, the memo said.</p> <p>"The family, as we all do, still has unanswered questions," the memo said.</p> <p>Martinez, 36, was patrolling alone near Interstate 10 when he stopped his vehicle about 12 miles east of Van Horn, Texas, on November 18. He died hours later of his injuries after he and his partner, Stephen "Michael" Garland, were found hurt near the culvert, a tunnel structure used for water drainage.</p> <p>The agents were patrolling in separate vehicles and it's unclear why both ended up at the bottom of the culvert, the FBI said.</p> <p>Last week, FBI investigators said they had found no evidence so far of an attack or scuffle in Martinez's death. The FBI said it had interviewed hundreds of people, combed through cellular data and analyzed DNA from the scene.</p> <p>McAleenan's memo said "there were no defensive wounds" on Martinez or his partner and "there was no third-party blood or DNA evidence from the scene or from the agents' clothing."</p> <p>The only footprints at the scene belonged to the agents and first responders, according to McAleenan's memo.</p>

<b>HEADLINE</b>	<b>02/12 Near Olympics, Korea dog meat farm</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/sports/winter-olympics-2018/2018/02/12/inside-grim-scene-korean-dog-meat-farm-miles-winter-olympics/328322002/">https://www.usatoday.com/story/sports/winter-olympics-2018/2018/02/12/inside-grim-scene-korean-dog-meat-farm-miles-winter-olympics/328322002/</a>
<b>GIST</b>	<p>WONJU, South Korea – A short drive from the burning Olympic torch and the excited throng of Winter Games spectators, there was no cheering outside the place where hundreds of dogs are packed in cages until they are killed for their meat.</p> <p>In the rural region of Wonju, down a winding country lane, sits a farm that provides dog meat to some of the thousands of South Korean restaurants where patrons order things such as dog salad, dog ribs, dog stew and dog hot pot.</p>

The grim surroundings of the farm pains the senses. The first thing to be noticed is the sound, pitiful whines and yelps of about 300 animals being kept in filthy cages until their execution.

Step closer and the stench fills the nostrils, a sickening waft that spreads over two long rows of cramped cages.

Some of the dogs do not survive long enough to be slaughtered. Lying discarded on the mud floor by the plastic awning, the carcass of a dead Tosa – a rare breed that originated in Japan. Also in the cages were Jindos, St. Bernards and golden Labradors.

Most were emaciated. Many had gaps in their fur where huge sores grew on their bodies. The cages are elevated, set up so dog feces drops through gaps in the wire bottom, collecting in huge piles beneath.

USA TODAY video journalist Sandy Hooper and myself filmed the gruesome scene for 15 minutes on Saturday morning, using GoPros and iPhones. When we approached the front of the property in an attempt to speak to the owners, a man screamed in Korean: "Turn it off, otherwise I'm going to throw it down!"

The Winter Olympics is supposed to be one giant commercial for South Korea and its winter tourism industry, but no public relations effort can cast a favorable light on the Korean dog meat industry. Pyeongchang organizing officials were aware enough of the likely international reaction to Korean dog meat eating practices that they paid nearby restaurants to take down signs advertising the product's availability and pleaded with them to take it off the menu – at least during the Olympics.

It didn't work. Two miles from Jinbu station, the main hub serving the primary mountain cluster of the Games, a trio of restaurants openly served dog products. They had amended their frontage signs to remove the word "bosintang" (dog meat stew) and promote goat meat instead, but that was only outside.

Walk inside and glance up at the giant white board and the first four menu items, in English and Korean, are derived from man's best friend. An elderly Korean man removed his shoes, entered the room, ordered the stew and sat down at a row of tables on the floor. Soon, he was served the thick brown concoction and began slurping down the soup until it was all gone.

In Korean culture, dog meat is said to have mythical properties that boost restorative powers and increase virility. Fearing a backlash from traditionalists, the Korean government won't amend the law, despite president Moon Jae-In having adopted a dog saved from the meat industry.

Pyeongchang organizers wish government officials would take action.

"We are aware of the international concern around the consumption of dog meat in Korea," an organizing committee statement read. "This is a matter which the government should address. We hope that this issue will not impact on the delivery or reputation of the Games and the province and we will support the work of the province and government on this topic as needed. Also, dog meat will not be served at any Games venue."

Eating dog meat is a custom here and it is hard to dispute that. In the United States millions of animals of countless varieties are slaughtered each year for meat. To some, the plight of Korean dogs is scarcely any different to that of American chicken, cows or pigs. To others, there is something vastly different about a dog, given its relationship to humans.

Activists in Korea don't like the use of dogs for meat but mainly focus their protest efforts on the methods of killing the animals and their conditions in captivity.

"If the Korean people stop eating dog meat there will not be the market for it," Kim Jun-Won, president of the Dasom animal rights organization said, fighting back tears when shown photographs of our footage as we returned to our vehicle. "But this is wrong and it breaks my heart. The people who keep animals this

way and kill them? They are the devil.”

Demand is decreasing, with dog meat meals not particularly popular with younger members of Korean society. As well as the one described above, USA TODAY Sports visited two other farms in the area that showed signs of being operational recently. Both were closed, with the dried feces and even bones of deceased dogs still visible.

“The problem is that while smaller facilities close due to lack of business, larger, better organized ones are popping up,” Kiana Kang, director of programs and special projects of American non-profit rescue organization Animal Hope and Wellness said. “This is the two Koreas. There is the beauty and the culture, and then there is this.”

Korean dog farmers claim their sole intention is to try to make a living and insist the animals are the same as livestock.

A group of Winter Olympic athletes, including Canadian figure skater Meagan Duhamel, freestyle skier Gus Kenworthy and snowboarder Lindsey Jacobellis took part in a recent public service announcement in a bid to raise awareness about the Korean dog meat trade. Duhamel already owns a rescue Korean dog.

Meanwhile, at the Games, the first medals were being doled out. The plight of Korea’s dogs isn’t going to be the major narrative of the Games, the events themselves and the lingering political turmoil dominate the headlines.

But it is here, happening not far from the Olympics, and it’s tough to stomach.

<b>HEADLINE</b>	<b>02/12 Warming accelerating sea level rise</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Technology/wireStory/satellites-show-warming-accelerating-sea-level-rise-53027617?cid=clicksource_79_2_hero_headlines_bsq_hed">http://abcnews.go.com/Technology/wireStory/satellites-show-warming-accelerating-sea-level-rise-53027617?cid=clicksource_79_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>Melting ice sheets in Greenland and Antarctica are speeding up the already fast pace of sea level rise, new satellite research shows.</p> <p>At the current rate, the world's oceans on average will be at least 2 feet (61 centimeters) higher by the end of the century compared to today, according to researchers who published in Monday's Proceedings of the National Academies of Sciences.</p> <p>Sea level rise is caused by warming of the ocean and melting from glaciers and ice sheets. The research, based on 25 years of satellite data, shows that pace has quickened, mainly from the melting of massive ice sheets. It confirms scientists' computer simulations and is in line with predictions from the United Nations, which releases regular climate change reports.</p> <p>"It's a big deal" because the projected sea level rise is a conservative estimate and it is likely to be higher, said lead author Steve Nerem of the University of Colorado.</p> <p>Outside scientists said even small changes in sea levels can lead to flooding and erosion.</p> <p>"Any flooding concerns that coastal communities have for 2100 may occur over the next few decades," Oregon State University coastal flooding expert Katy Serafin said in an email.</p> <p>Of the 3 inches (7.5 centimeters) of sea level rise in the past quarter century, about 55 percent is from warmer water expanding, and the rest is from melting ice.</p> <p>But the process is accelerating, and more than three-quarters of that acceleration since 1993 is due to melting ice sheets in Greenland and Antarctica, the study shows.</p>

Like weather and climate, there are two factors in sea level rise: year-to-year small rises and falls that are caused by natural events and larger long-term rising trends that are linked to man-made climate change. Nerem's team removed the natural effects of the 1991 Mt. Pinatubo eruption that temporarily chilled Earth and the climate phenomena El Nino and La Nina, and found the accelerating trend.

Sea level rise, more than temperature, is a better gauge of climate change in action, said Anny Cazenave, director of Earth science at the International Space Science Institute in France, who edited the study. Cazenave is one of the pioneers of space-based sea level research.

Global sea levels were stable for about 3,000 years until the 20th century when they rose and then accelerated due to global warming caused by the burning of coal, oil and natural gas, said climate scientist Stefan Rahmstorf of the Potsdam Institute in Germany, who wasn't part of the study.

Two feet of sea level rise by the end of the century "would have big effects on places like Miami and New Orleans, but I don't still view that as catastrophic" because those cities can survive — at great expense — that amount of rising seas under normal situations, Nerem said.

But when a storm hits like 2012's Superstorm Sandy, sea level rise on top of storm surge can lead to record-setting damages, researchers said.

Some scientists at the American Geophysical Union meeting last year said Antarctica may be melting faster than predicted by Monday's study.

Greenland has caused three times more sea level rise than Antarctica so far, but ice melt on the southern continent is responsible for more of the acceleration.

"Antarctica seems less stable than we thought a few years ago," Rutgers climate scientist Robert Kopp said.

<b>HEADLINE</b>	<b>02/12 Feds: 'fake general' used copter for date</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/feds-military-impersonator-helicopter-impress-woman-53026847">http://abcnews.go.com/International/wireStory/feds-military-impersonator-helicopter-impress-woman-53026847</a>
<b>GIST</b>	<p>A man pretending to be a three-star U.S. Army general wanted to impress a woman when he unexpectedly landed in a chartered helicopter at the headquarters of a North Carolina technology company last year, a federal agent testified Monday.</p> <p>Details about the strange case of Christian Desgroux emerged at a hearing before a federal magistrate, who ordered that the defendant remain in jail pending his upcoming arraignment. The 57-year-old is charged with pretending to be a military officer, which carries a maximum of three years in prison.</p> <p>It was around sunset on Nov. 6 when the pilot of the helicopter chartered by Desgroux landed on a soccer field at the sprawling corporate campus of SAS Institute in Cary.</p> <p>As security officers approached, Desgroux stepped out wearing a "full military battle dress uniform" and displaying three stars that implied a rank of lieutenant general, Homeland Security Special Agent Tony Bell testified.</p> <p>"He saluted the security officers, and they actually saluted him back," Bell said.</p> <p>A suspicious security supervisor confronted Desgroux, who told him he was there to pick up a female employee to take her to Fort Bragg for a classified briefing that had been authorized by President Donald Trump.</p>

But none of it was true: Desgroux later acknowledged to federal agents that he had never served in the U.S. military, Bell said.

The woman, a longtime acquaintance of Desgroux, expected him to arrive in a car for a visit. Instead they went on a 30-minute helicopter ride around Raleigh, Bell said.

"She had no idea that he was flying a helicopter to pick her up," Bell said. Bell testified that Desgroux wanted to pursue a romantic relationship, but the woman is married.

She and the pilot, who has not been charged, appear to have been swept up in Desgroux's strange behavior.

"She didn't know what to make of it," Bell told the judge. "She just went along with it."

Bell testified that investigators suspect Desgroux is mentally ill, but didn't elaborate.

Still, the episode was no laughing matter. After the woman returned, SAS security staff notified local police — and a joint terrorism task force soon joined the case.

<b>HEADLINE</b>	<b>02/12 Suspicious white powder letter to Trump Jr</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/donald-trump-jrs-wife-hospital-letter-white-powder/story?id=53023384">http://abcnews.go.com/US/donald-trump-jrs-wife-hospital-letter-white-powder/story?id=53023384</a>
<b>GIST</b>	<p>Donald Trump Jr.'s wife was taken to a hospital in New York City today after opening a package at her home that contained an unknown white powder, according to authorities.</p> <p>Vanessa Trump, 40, was examined at New York-Presbyterian Weill Cornell Medical Center as a precaution, police said.</p> <p>The suspicious letter was sent to Trump Jr.'s apartment in Manhattan this morning, police said. Emergency medical services, firefighters and police were called to the apartment just after 10 a.m. after Vanessa Trump opened the letter, police said.</p> <p>The letter had a Boston postmark and was addressed Trump Jr., a source told ABC News. It contained a note indicating the sender was angry, said the source, who did not elaborate.</p> <p>Vanessa Trump reported feeling dizzy after she opened the enveloped, according to law enforcement sources. The letter was not anti-President Donald Trump but addressed Trump Jr. directly, the source said.</p> <p>Vanessa Trump and two other people at the apartment were decontaminated by firefighters at the scene before being taken to the hospital, according to police.</p> <p>She thanked New York City firefighters, police and the Secret Service for their "quick response" in making sure she was safe.</p> <p>Trump Jr. thanked first responders in a tweet for their "decisive action" and support.</p> <p>"The substance was deemed to be nonhazardous and is being transported to a lab in New York City for further analysis," NYPD Assistant Commissioner J. Peter Donald said.</p> <p>The U.S. Secret Service is also investigating, the NYPD said.</p>

<b>HEADLINE</b>	<b>02/12 Ex-SCL manager charged w/voyeurism</b>
<b>SOURCE</b>	<a href="https://www.seattlepi.com/local/crime/article/Charge-City-Light-employee-planted-GoPro-in-12607804.php">https://www.seattlepi.com/local/crime/article/Charge-City-Light-employee-planted-GoPro-in-12607804.php</a>
<b>GIST</b>	<p>A 64-year-old former Seattle City Light employee has been charged with attempted voyeurism in connection with a camera that was recovered from a bathroom stall nearly a year ago.</p> <p>Brent Schmidt is accused of planting a GoPro camera inside a toilet paper dispenser at a City Light office. He admitted to installing the camera there, according to court records, but claimed he only used it to film himself and typically removed it from the restroom after he did so.</p> <p>Another employee discovered the camera Feb. 17 at the South Service Center in the 3600 block of Fourth Avenue South in Sodo. He was pulling toilet paper from the dispenser when he found a GoPro camera adhered to the stall with Velcro, according to the incident report.</p> <p>A hole had been cut out of the bottom of the toilet paper dispenser and the camera was situated halfway inside, police reports say. The power was on.</p> <p>The man reported the discovery to a supervisor, who pulled the camera off the wall and switched it off. They brought it to Schmidt and when they mentioned it was in the men's restroom, his eyes reportedly "bugged out," court records indicate. When they showed him where they found it, "he began to physically shake and his face got red," according to the incident report.</p> <p>Schmidt allegedly told the employees he would report the matter to a director and kept the camera.</p> <p>Four days later, he told the workers it was his camera and he placed it in the stall to film himself, police reports say. He claimed he deleted the footage after viewing it and did not use city equipment to look at it.</p> <p>Schmidt then met with the director to report his actions, court records indicate. He is alleged to have admitted to placing the camera in the bathroom since the previous December, but maintained that he did not use it to film others. According to charging papers, he claimed that the last time he used it, he forgot to remove it from the stall.</p> <p>The director seized Schmidt's office keys and access card at that time, Seattle police report. A search of the GoPro yielded three blacked out videos.</p> <p>Schmidt was a manager who made about \$60 per hour, according to city salary data.</p> <p>Employed at City Light since 1995, Schmidt reached a settlement with the city in April 2017 that allowed him to use all accrued paid leave until May 2017, when he was deemed retired.</p>

<b>HEADLINE</b>	<b>02/12 Guns, pills found in West Seattle search</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/hundreds-of-pills-19-guns-found-in-west-seattle-search">http://komonews.com/news/local/hundreds-of-pills-19-guns-found-in-west-seattle-search</a>
<b>GIST</b>	<p>SEATTLE -- Seattle police officers found hundreds of pills and 19 guns Sunday morning when they served a search warrant at a West Seattle home.</p> <p>Police say officers with the Southwest Precinct Anti-Crime Team went to the home in the 7000 block of 18 Avenue Southwest at 10 a.m. Sunday.</p> <p>A 28-year-old man tried to get away from arriving officers though a back door. But officers arrested him, police said.</p>

	<p>Police say a search turned up 189 hydrocodone pills, 276 amphetamine pills and 3.5 grams of methamphetamine. Officers also found 11 pistols, five rifles and three shotguns. Police say one rifle with modified with a bump stock, which allows a semiautomatic rifle to fire faster.</p> <p>The man was book into jail for investigation of drug offenses. Police are working with prosecutors about possible weapons charges.</p>

<b>HEADLINE</b>	<b>02/12 What is Atomwaffen? Linked to violence?</b>
<b>SOURCE</b>	<a href="https://www.boston.com/news/national-news/2018/02/12/what-is-atomwaffen-a-neo-nazi-group-linked-to-multiple-murders">https://www.boston.com/news/national-news/2018/02/12/what-is-atomwaffen-a-neo-nazi-group-linked-to-multiple-murders</a>
<b>GIST</b>	<p>When a Florida man who had recently converted to Islam fatally shot two of his roommates, the name came up.</p> <p>When the roommate he did not shoot was sentenced to five years for homemade explosives, the name came up.</p> <p>And when an arrest was made after a 19-year-old college student was found dead with more than 20 stab wounds, the name came up.</p> <p>That name was the Atomwaffen Division, a tiny paramilitary neo-Nazi group that has been linked to the suspects in at least five killings in the United States. It is among the most violent groups on the far-right, a mostly decentralized organization about which much is unknown.</p> <p>The Southern Poverty Law Center and the Anti-Defamation League have both done research into the group, and spoke to The New York Times about their findings.</p> <p><b>What is Atomwaffen?</b></p> <p>Atomwaffen or the Atomwaffen Division is a small extremist group that hopes to use terroristic violence to bring about the collapse of what its literature calls the "System," the government and other institutions that organize society. It formed in a now defunct online forum, Iron March, and is organized into distinct cells that comprise a handful of members.</p> <p>Researchers disagree on how large the group is. Keegan Hankes, an intelligence analyst at the Southern Poverty Law Center, cited a ProPublica report that said the group had about 80 members.</p>

But Carla Hill, a senior researcher at the Anti-Defamation League, said she had no evidence that the group had that many members. She estimated that there were between 24 and 36 actively participating in weapons trainings and hate camps held by the group. All agree that the group's nebulous nature makes the number hard to pin down.

Atomwaffen means "atomic weapons" in German.

Researchers believe that some cells are based in Texas and Florida, and Hill, based on pictures she has seen of the organized groups, believes there are others in Washington, near the Seattle area, and Richmond, Virginia.

But details about the group are difficult to confirm.

### **What do they believe?**

Atomwaffen describe themselves as national socialists, or neo-Nazis, with an eschatological viewpoint. That means they expect and invite a breakdown of society that will lead to a race war, after which they intend to construct a new society based on their political principles.

They hold virulently racist and anti-Semitic views informed by the writings of James Mason, a member of the American Nazi party who idolized Hitler and Charles Manson.

Hankes said the group fetishized violence and looked to use degeneracy to establish order in a depraved modern world. He said it was difficult to estimate how many members had military training, but said some literature encouraged adherents to join the Armed Forces to get free weapons and combat training while staying underground.

"This group is so extreme that they cause a ton of controversy within the radical right," he said.

Other white supremacist and white nationalist groups have disavowed Atomwaffen, and have even speculated about whether the group is a plot to discredit their movement

Hankes said that recently the group had also embraced ideas associated with the occult and Satanism, ideologies that have further estranged its members from other white supremacists.

### **How is the group linked to violence?**

In the past year, the group's name has cropped up several times in connection with homicide investigations.

— In May, a Florida teenager, Devon Arthurs, told police he had killed two of his neo-Nazi roommates for disrespecting his Muslim faith. (He had recently converted.) His arrest led to the discovery that a fourth roommate, Brandon Russell, had been stockpiling explosive material. Russell, who told law enforcement officials he was a member of Atomwaffen, was revealed to be a founding member of the group, and was sentenced to five years in prison for having stockpiled the explosives.

— In December, a husband and wife were shot dead in their Virginia home three days before Christmas by a teenage neo-Nazi. The suspect was identified as Nicholas Giampa by HuffPost, which found him to have been influenced by neo-Nazi literature republished online by Atomwaffen.

— Last month, ProPublica reported that Samuel Woodward, who has been charged with the murder of a college student, Blaze Bernstein, was a member of the group.

The organization has promoted its cause on college campuses in Washington, Pennsylvania and Illinois, according to the Anti-Defamation League.

**Is the FBI investigating Atomwaffen?**

An FBI spokesman would not comment directly.

“The FBI does not and will not police ideology, but has been investigating the criminal activities of white supremacy extremists for nearly a century,” he said. “When an individual takes violent action based on belief or ideology and breaks the law, the FBI will enforce the rule of law.”

In an interview Friday, Danny Coulson, the former deputy assistant director of the FBI, explained that the bureau was somewhat constrained in what it could do when no violence had been committed.

Coulson was one of the leaders of the investigation into the 1995 bombing of the federal building in Oklahoma City by Timothy McVeigh, who is much admired in Atomwaffen literature. He also led the operation that ended in the death of neo-Nazi leader Robert Jay Mathews and helped bring to justice the white supremacists of the Covenant, Sword and Arm of the Lord.

He said that once a group had been associated with murder or other forms of violence, it would become much easier to place wiretaps on them, and place informers in their midst, which the FBI has found relatively easy to do.

Coulson called participants in such groups “inadequate personalities” who chose to hate others because of their own insecurities.

<b>HEADLINE</b>	<b>02/12 Mexican drug cartels in Colombia</b>
<b>SOURCE</b>	<a href="http://www.mexidata.info/id4507.html">http://www.mexidata.info/id4507.html</a>
<b>GIST</b>	<p>Colombian authorities have claimed that Mexican cartels are attempting to establish themselves in the South American country. However, the presence of suspected cartel members in Colombia is more likely an indication that Mexican organized crime groups are seeking new partners to fill the vacuum created by FARC’s demobilization and the Urabeños’ decline, two of their closest allies.</p> <p>Citing Colombia’s Attorney General’s Office, the counternarcotics police, and the Ombudsman’s Office, El Tiempo reported that Mexican organized crime groups have established a presence in the Colombian departments of Antioquia, Cundinamarca, Norte de Santander, Valle del Cauca, Nariño, Meta, Guaviare, Vichada y Córdoba.</p> <p>According to an intelligence report by Colombia’s Anti-narcotics Police, Mexican cartels including the Sinaloa Cartel, the Jalisco Cartel New Generation (Cartel Jalisco Nueva Generación – CJNG), and the Zetas are attempting to take control of the drug trade after their Colombian partners “failed to meet quotas for Colombian coca,” El Tiempo reported. This failure to meet quotas, the report claims, was the result of FARC’s demobilization and the weakening of the Urabeños.</p> <p>The report added that Mexican cartels are sending their members to the regions with the highest concentration of coca crops as well as to strategic ports within Colombia. According to El Tiempo, authorities have detected groups of as many as ten Mexicans coordinating drug shipments from the Gulf of Urabá.</p> <p>Furthermore, in the beginning of 2017, Colombian authorities investigated 103 Mexicans involved in drug trafficking cases, according to statements made by the Colombian Attorney General, Néster Humberto Martínez, and published by El Tiempo. El Tiempo’s report does not include figures from previous years to allow for comparison.</p> <p><b>InSight Crime Analysis</b></p>

The presence of suspected members of Mexican organized crime groups in Colombia should not be understood as an indication that Mexican cartels are attempting to seize control of the country's drug trade.

Although it might be in the groups' best interests to create more vertical distribution chains, entering into a criminal landscape as complex as Colombia's would present enormous challenges. Since Mexican cartels' current business model has worked relatively well to date, these challenges would likely outweigh the potential benefits.

Therefore, the growing presence of Mexican organized crime groups in Colombia should be considered within the context of the South American country's changing criminal landscape. The FARC, once Mexican cartels' principal partner in the region, have demobilized, and the Urabeños, who succeeded the FARC in that role, have been severely weakened by a sustained government offensive. As a result, Mexican cartels have been forced to seek new allies to ensure that the drug trade continues to flow smoothly.

For years, Mexican organized crime groups have regularly sent emissaries to Colombia to scout new partners, supervise drug production, and ensure quality control. It is not a coincidence that Colombian authorities have recently detected a Mexican presence in regions that were formerly controlled by the FARC and the Urabeños.

Nariño, for example, a department that produces more coca than Bolivia or Peru, used to be a FARC stronghold. Following FARC's demobilization, dissident elements of the guerrilla group, the National Liberation Army (Ejército de Liberación Nacional – ELN), and hybrid groups called “bandas criminales” (BACRIM), or criminal bands, began to operate in the region. Similarly, the historically FARC controlled departments of Guaviare and Meta now serve as the base for the First Front of the FARC dissidence. It therefore makes sense that Mexican organized crime groups would seek to forge alliances with these actors in order to guarantee the continued flow of narcotics.

Another example is the department of Córdoba, which was historically the territory of the paramilitary groups that gave rise to the Urabeños. With the Urabeños facing threats from new criminal groups, it is likely that the Mexicans have begun looking for new alliances in this region as well.

On the other hand, the face of drug trafficking in Colombia is changing. The time when a single cartel controlled the entire supply chain has come to an end and now smaller groups control each separate link of the production and trafficking chain. Mexican cartels must now subcontract to different organizations in order to move their product from its origin to its destination, and must have an understanding of the dynamics between these organizations.

<b>HEADLINE</b>	<b>02/13 Ex-Everett firefighter federal custody</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/news/disgraced-ex-everett-firefighter-now-in-federal-custody/">http://www.heraldnet.com/news/disgraced-ex-everett-firefighter-now-in-federal-custody/</a>
<b>GIST</b>	<p>EVERETT — A convicted sex offender who also is a former Everett firefighter is now at risk of a decade or more in prison after federal authorities took jurisdiction in a case that led to his arrest last month in Wyoming.</p> <p>David “Pete” Vier, 63, appeared last week in U.S. District Court in Cheyenne, Wyoming, where a magistrate ordered him detained in federal custody. He is being held for investigation of knowingly transporting two girls, 12 and 14, across state lines with intent to engage in criminal sexual activity.</p> <p>Vier, of Granite Falls, at one point oversaw emergency medical services for the Everett Fire Department. He retired in 2014 after he was arrested in a Seattle police sting attempting to obtain sex from somebody he thought was a 15-year-old girl. He not only lost his Washington paramedic license, the conviction also requires him to register as a sex offender.</p>

Vier was arrested Jan. 20 by the Sweetwater County Sheriff's Office in Wyoming. Two teen girls used his cellphone to call for help, officials said. They were hiding in a restaurant and asked for help getting away from Vier, whom they accused of sexual misconduct, according to an affidavit filed in court by an FBI agent.

The girls said they met Vier in Seattle and told him they were trying to reach Kansas. He allegedly offered to give them a ride.

Along the way, Vier reportedly groped the girls and demanded sexual activity, eventually paying one \$40 for a sex act, the affidavit said.

The girls told officials they saw homemade pornography involving young girls on Vier's cellphone, as well as messages between Vier and a friend about kidnapping and rape.

The girls said they fled when Vier demanded they agree to sex in a motel room. He told investigators he believed the girls were 16 and had been left homeless by family.

"Vier denied sexual activity with the girls," the affidavit said.

A search of his truck turned up partially used vials of sedatives, including Amidate, a drug that can be used to induce sleep. Investigators also seized a duffle bag that reportedly contained, among other things, sex toys, riding crops, whips, blindfolds, Velcro restraints, a dog collar and a leash, court papers say.

A court-approved search of Vier's phone found "a vast amount of data pertaining to non-consensual sexual acts" and showed "what appeared to be a fixation on younger females," Wyoming officials said earlier.

Vier's 2014 arrest brought to light years of bad behavior on and off his fire department job, much of it revolving around his mistreatment of women. He also took part in a pattern of ambulance billing errors by the city, which led to a recent six-figure federal settlement.

Vier faces 10 years to life in federal prison if convicted of the allegations in Wyoming, court papers say.

<b>HEADLINE</b>	<b>02/13 China charges ex-Politburo w/bribery</b>
<b>SOURCE</b>	<a href="https://apnews.com/41f4fd8eff45489cb14dbae675798b5d/China-charges-former-rising-political-star-with-bribery">https://apnews.com/41f4fd8eff45489cb14dbae675798b5d/China-charges-former-rising-political-star-with-bribery</a>
<b>GIST</b>	<p>BEIJING (AP) — A former Politburo member once seen as a rising star in Chinese politics has been charged with bribery, becoming the highest-ranking serving official to be ensnared by President Xi Jinping's sweeping anti-corruption campaign, now in its sixth year.</p> <p>The Supreme People's Procuratorate announced the indictment of Sun Zhengcai, the former Communist Party leader of the western megacity of Chongqing, on its website Tuesday.</p> <p>The announcement said Sun "illegally accepted huge amounts of money and goods" from others in return for providing them with benefits.</p> <p>The indictment focused on bribery but leaders have made it clear Sun's alleged offenses were largely political in nature.</p> <p>The chairman of China's securities regulator said at a major party meeting last year that Sun and other senior figures prosecuted in the crackdown were "conspiring openly to usurp party leadership."</p> <p>Sun was expelled from the party and dismissed from public office in September because he was suspected of "serious discipline violations," a phrase that usually refers to bribery and other graft.</p>

Sun, 53, sat on the Politburo and had been seen as a candidate for promotion to the body's Standing Committee, the select group of leaders who constitute the apex of political power in China.

He was removed suddenly from his Chongqing post and replaced by protege Chen Min'er, who is tipped to be promoted to the Politburo, but not its Standing Committee.

<b>HEADLINE</b>	<b>02/12 City settles w/cop 'not shooting suspect'</b>
<b>SOURCE</b>	<a href="https://www.msn.com/en-us/news/us/west-virginia-city-pays-former-officer-dollar175000-to-settle-lawsuit-after-he-decided-not-to-shoot-distraught-suspect/ar-BBJ2ASY?li=BBnbfL&amp;ocid=HPCDHP">https://www.msn.com/en-us/news/us/west-virginia-city-pays-former-officer-dollar175000-to-settle-lawsuit-after-he-decided-not-to-shoot-distraught-suspect/ar-BBJ2ASY?li=BBnbfL&amp;ocid=HPCDHP</a>
<b>GIST</b>	<p>A West Virginia city has agreed to pay a former police officer \$175,000 to settle a wrongful-termination lawsuit after he was fired following his decision not to shoot a distraught suspect who was holding a gun.</p> <p>The lawsuit accused the Weirton Police Department of wrongfully terminating officer Stephen Mader after he chose not to shoot a 23-year-old man while responding to a domestic disturbance in 2016.</p> <p>"At the end of the day, I'm happy to put this chapter of my life to bed," Mader said in a news release by the American Civil Liberties Union of West Virginia.</p> <p>"The events leading to my termination were unjustified and I'm pleased a joint resolution has been met. My hope is that no other person on either end of a police call has to go through this again."</p> <p>The incident occurred May 6, 2016, when Mader responded to a domestic-disturbance call and found Ronald "R.J." Williams Jr. with an unloaded handgun.</p> <p>Mader told CNN last year that Williams was "visibly choked up" and told Mader to shoot him. As a Marine veteran who served in Afghanistan, Mader told CNN that he concluded Williams wasn't a threat and so he tried to de-escalate the situation.</p> <p>As Mader was trying to get Williams to drop his gun, two other Weirton police officers arrived. Mader told CNN that Williams raised his gun and was immediately shot and killed by one of the other officers. A state investigation found the officer's actions were justified.</p> <p>On June 7, 2016, the Weirton Police Department fired Mader. The lawsuit, filed in May 2017, claims the department fired him because of "failure to meet probationary standards of an officer" and "apparent difficulties in critical incident reasoning."</p> <p>In September 2016, Weirton City Manager Travis Blosser told CNN that Mader was fired not just for the Williams shooting but for "a totality of circumstances," which included a March 2016 incident where Mader allegedly entered a man's vehicle without a warrant to put a ticket on the dashboard and an April 2016 incident where Mader and other officers failed to report an elderly woman's death as suspicious. The woman's death was later ruled a homicide.</p> <p>Mader told CNN that in the March 2016 incident, he was writing a second parking ticket for a vehicle when the owner came out cursing at him so he responded with using the f-word. In the April 2016 incident, Mader said emergency responders told officers that the woman died of natural causes.</p> <p>When reached for comment Monday, Blosser said the city had "no comment regarding the settlement."</p> <p>Joseph Cohen, ACLU-WV executive director, said Mader's termination was "yet another incident exposing the toxic culture that infects far too many police departments in America."</p>

"We need to give law enforcement officers tools to effectively serve their communities. That means we need to invest in de-escalation training, implicit bias training and crisis intervention training. Hopefully the resolution of this lawsuit will send a message to the City of Weirton and police departments across the country that our communities deserve thoughtful, compassionate, transparent law enforcement."

<b>HEADLINE</b>	<b>02/09 Seattle police: Everett man sold grenades</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/news/everett-area-man-accused-of-peddling-guns-janky-grenades/">http://www.heraldnet.com/news/everett-area-man-accused-of-peddling-guns-janky-grenades/</a>
<b>GIST</b>	<p>EVERETT — An Everett-area man is accused of selling undercover police a bunch of firearms and janky grenades. The latter had been doctored at home with tape and epoxy.</p> <p>He was arrested Wednesday by Seattle police after a months-long operation. He remained in the Snohomish County Jail on Friday, his bail set at \$100,000.</p> <p>The man, 32, is accused of multiple crimes involving explosives, along with trafficking in stolen property and being a felon in possession of a firearm. Court records list addresses for him in Everett, Sultan and Seattle.</p> <p>Detectives from Seattle began investigating a stolen guns ring in July, according to the arrest report. They were told the man had inventory, prompting a meetup in September on Everett Mall Way. At some point, the group moved to Broadway to continue their discussion.</p> <p>There, the man reportedly sold an undercover officer a military-grade assault rifle and a pistol. The rifle later was determined to be stolen. The transaction also included four anti-personnel grenades, known for their resemblance to pineapples.</p> <p>The man allegedly said he had 100 more grenades available, which he could fill with an explosive powder mix.</p> <p>An officer paid \$1,110 for the first round of loot, according to the report. The suspect allegedly floated the idea of burglarizing the home of a firearms dealer to get more guns.</p> <p>Later, explosive experts from the FBI confirmed his devices were viable. The grenades were designed for training exercises but could be altered with the powder to become similar to a pipe bomb, according to the report.</p> <p>In September, the officer met with a woman on Broadway, who was carrying grenades for the suspect. The officer paid \$920 for five grenades, four fuses and the woman's third-party transaction fee.</p> <p>The next month, another purchase was planned at a hotel between Everett and Lynnwood. The suspect brought rifles, a pistol and a shotgun. He said he had more grenades to sell, but they were in storage and a friend needed to finish welding the pieces together. The following day, another half-dozen firearms changed hands, including a sawed-off shotgun.</p> <p>On Oct. 20, the officer purchased four grenades that appeared to be sealed with household epoxy and topped with white tape.</p> <p>The man allegedly warned the officer that some of the powder needed to be removed before the grenades were assembled, so they wouldn't detonate prematurely. The officer asked for the man's assistance, but he declined, "claiming the devices were too unstable," the report says.</p> <p>The papers filed in Everett District Court do not describe the circumstances of the recent arrest. The man was not the only suspect targeted in the regional sting.</p>

<b>HEADLINE</b>	<b>02/12 Military adds 4,000+ to gun ban list</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/12/us/gun-background-check-backlog-military-dishonorable-discharge-invs/index.html">https://www.cnn.com/2018/02/12/us/gun-background-check-backlog-military-dishonorable-discharge-invs/index.html</a>
<b>GIST</b>	<p>(CNN)Since an ex-US airman shot more than two dozen people in a Texas church in November, the US military has added more than 4,000 names to the nation's list of dishonorably discharged military personnel banned from owning firearms -- a sign of what has been a massive hole in the nation's gun buying background check system.</p> <p>The gunman in the Sutherland Springs massacre had been kicked out of the military for assaulting his wife. By federal law, that should have prevented the shooter from purchasing his semiautomatic rifle, but the US Air Force later admitted it had not submitted his records to the FBI's background check system.</p> <p>In the months since, the US Department of Defense has scrambled to ensure all of its branches have properly updated the FBI's system to track personnel kicked out of the military who are barred from owning firearms.</p> <p>That push, a CNN review has found, has uncovered a backlog so significant that the FBI's tally of dishonorably discharged former service members has ballooned by 4,284 names in just three months, a 38% leap.</p> <p>The FBI figures track the reasons civilians and ex-military personnel are barred from owning guns. The agency separately quantifies dishonorable discharges, which includes personnel convicted by a general court-martial. Other types of military dismissals that could legally stop someone from owning a gun are not broken out from the civilian population in the FBI data.</p> <p>Since 2015, the number of people barred from owning firearms because they were dishonorably discharged had hovered at about 11,000, according to FBI statistics published online. That number suddenly jumped to 14,825 last November, then to 15,583 in December. It now stands at 15,597.</p> <p>The Defense Department has not yet publicly acknowledged that the military has vastly expanded its submissions since the shooting. The belatedly filed reports mean that, for an unknown period, more than 4,000 people had the opportunity to buy guns from dealers while they should have been legally barred from it.</p>

<b>HEADLINE</b>	<b>02/12 Pioneer Sq. crime rates dropping</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/02/12/spd-investigating-pioneer-square-shooting-data-shows-neighborhood-crime-rates-dropping/">http://q13fox.com/2018/02/12/spd-investigating-pioneer-square-shooting-data-shows-neighborhood-crime-rates-dropping/</a>
<b>GIST</b>	<p>SEATTLE – A teenager is recovering at Harborview Medical Center after police say someone shot him Sunday evening near Seattle's Pioneer Square neighborhood.</p> <p>It's just the latest in a string of incidents in the neighborhood that has some neighbors worried for their safety.</p> <p>While Seattle police are hunting down suspects, crime rates are actually ticking downwards in the historic area.</p> <p>It's Seattle's original neighborhood; lunch trucks are busy serving food – tourists are visiting landmarks. But less than 24 hours ago, police officers and crime tape swarmed the neighborhood around the 100 block of Cherry Street.</p>

Around 7 p.m. Sunday, investigators said a 19-year-old man got into an argument with people inside a packed car. That's when one of the passengers of a dark-colored smaller Toyota or Honda sedan pulled out a gun and opened fire.

The shooting left the 19-year-old with life-threatening injuries. On Monday, he was listed in serious condition at Harborview.

It's happened before. Police are still hunting for Nicole Westbrook's murderer nearly six years after she was shot and killed in Pioneer Square.

But there is good news for the neighborhood. According to the Seattle Police Department, crimes against people -- like homicide, robbery and aggravated assault -- have mostly been on the decline since 2015.

A spokesperson for Alliance for Pioneer Square shared a statement with Q13 News regarding Sunday's shooting.

"We were saddened to hear about the shooting incident on Sunday evening, and our thoughts are with the young man who is currently recovering from related injuries. Violence of any kind is unacceptable, and we continue to work closely with local police, property owners, neighborhood businesses, and residents to promote the highest degree of safety in Pioneer Square. We've witnessed a marked decrease in incidence of crime in recent years, and recognize that these positive strides are a reflection of a community effort to make Seattle's urban neighborhoods welcoming and safe."

<b>HEADLINE</b>	<b>02/12 US charges ex-Venezuelan officials in probe</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/02/12/us-charges-5-ex-venezuelan-officials-in-oil-bribery-probe.html">http://www.foxnews.com/world/2018/02/12/us-charges-5-ex-venezuelan-officials-in-oil-bribery-probe.html</a>
<b>GIST</b>	<p>BOGOTA, Colombia – U.S. prosecutors believe that Venezuela's former oil czar and ambassador to the United Nations received bribes as part of an alleged multibillion-dollar graft scheme in the South America nation's oil industry, an official familiar with the U.S. investigation said Monday.</p> <p>Rafael Ramirez, who was one of Venezuela's most powerful officials until he resigned from the U.N. post in December, was named as a bribe recipient although not charged in an indictment against five other former senior officials that was partially unsealed.</p> <p>In Monday's indictment, prosecutors in Houston allege two of the charged individuals told businessmen that proceeds from bribe payments they made in exchange for quick payments and contracts with Venezuela's state-run oil giant PDVSA would be shared with a senior Venezuelan official, identified in the unsealed portion as "Official B."</p> <p>That unidentified Venezuelan politician is Ramirez, a U.S. official told The Associated Press. The official agreed to talk about the case only on condition of anonymity because they were not authorized to discuss the matter.</p> <p>In 2016, Venezuela's opposition-led National Assembly said \$11 billion went missing at PDVSA in the 2004-2014 period, when Ramirez was in charge of the company. In 2015, the U.S. Treasury Department accused a bank in Andorra of laundering some \$2 billion stolen from PDVSA.</p> <p>Ramirez in the past has denied any wrongdoing and dismissed the U.S. probe into PDVSA as a politically motivated attempt to undermine President Nicolas Maduro's socialist government. After resigning his U.N. post, Ramirez left the United States for an undisclosed location, and he did not immediately respond to a request Monday seeking comment.</p> <p>Prosecutors in the U.S. as well as Venezuela have been slowly closing in on his inner circle.</p>

	<p>Among those charged Monday was PDVSA's former chief of corporate security, Rafael Reiter, who frequently appeared alongside Ramirez in public. Another was a former deputy energy minister, Nervis Villalobos, who stood in as head of PDVSA when Ramirez was on official business abroad. Both Reiter and Villalobos were arrested in Spain in October on U.S. warrants and are pending extradition along with a third former official, Luis Carlos de Leon.</p>

<b>HEADLINE</b>	<b>02/12 Baltimore 11-day murder free streak</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/02/13/baltimores-11-day-murder-free-streak-longest-since-2015.html">http://www.foxnews.com/us/2018/02/13/baltimores-11-day-murder-free-streak-longest-since-2015.html</a>
<b>GIST</b>	<p>There has not been a recorded murder in Baltimore in nearly two weeks, marking the city's longest streak without a murder since 2015, The Baltimore Sun reported. In 2014, the city went 17 days without a homicide.</p> <p>Erricka Bridgeford, the Baltimore "ceasefire" organizer, has been credited with being a major catalyst behind the peace, according to the paper.</p> <p>"It's really exciting," Bridgeford told the paper, noting she can't take full credit for the peace. "Baltimore deserves this boost of love."</p> <p>The pause in fatalities is a stark contrast to how the city began the year, with 11 killings in the first 12 days, the paper reported. And although there hasn't been a homicide since Feb. 2, there has been five nonfatal shootings -- including three in one day, the paper reported.</p> <p>Last year, Baltimore recorded the highest annual homicide rate with 343 killings, which factored to about 56 killings per 100,000 people.</p> <p>No single reason has been attributed for the surge in violence, but rather a combination of factors including, the 2015 death of Freddie Gray -- a black man who died from a spinal cord injury while in police custody -- illegal guns, the fallout from the opioid epidemic or systemic failures.</p>

HEADLINE	02/13 Trial: killing of NKorea leader's half-brother
SOURCE	<a href="http://abcnews.go.com/International/wireStory/year-kims-killing-suspected-masterminds-evade-trial-53033044">http://abcnews.go.com/International/wireStory/year-kims-killing-suspected-masterminds-evade-trial-53033044</a>
GIST	<p>Lost in the glare of North Korea's missile launches, rhetorical battles with Washington and charm offensive at the Winter Olympics, two women stand accused of a crime that could send them to the gallows — the stunning assassination of Kim Jong Un's estranged half brother.</p> <p>It's a crime the young Southeast Asian women almost certainly had a part in — possibly without even knowing it.</p> <p>But just as certainly, the slaying of Kim Jong Nam one year ago Tuesday must have required a bigger cast of characters. People who could do the meticulous planning, procure the deadly and exotic poison and carefully wait for the exact moment to act so no one would die other than the unwitting target in a crowded airport terminal in Kuala Lumpur, Malaysia.</p> <p>Masterminds, in other words. Professional killers.</p> <p>And those suspects are all long gone.</p> <p>Instead, the sole defendants in one of the highest-profile political hits in decades are Siti Aisyah, 25, of Indonesia and Doan Thi Huong, 29, of Vietnam. Both are accused of smearing the VX nerve agent on Kim Jong Nam's face last Feb. 13. The poison, developed for military use, is so potent that Kim was dead within two hours.</p> <p>From the start of their trial last October, the women, who before getting caught up in the assassination plot left rural poverty to work in Southeast Asia's nightlife scene, have claimed they were duped into playing what they thought was a harmless prank for a hidden-camera show. They face a mandatory death sentence by hanging if convicted.</p> <p>Lawyers for the women say their defense has been handicapped by a sloppy investigation and by the very conspicuous absence of the suspected North Korean masterminds.</p> <p>"As long as the North Korean suspects are away, the actual truth will never be proven. I sincerely believe that the girls should be acquitted because we have clearly shown that they are being used as scapegoats," said Aisyah's lawyer Gooi Soon Seng.</p> <p>Both the prosecution and defense agree the women could not have been acting entirely on their own, and that the crime was carried out as part of a plot by a group of North Korean agents who recruited, trained and supplied them with the VX nerve agent.</p> <p>The prosecution even has a pretty good idea who the suspected masterminds are.</p> <p>Four North Korean suspects were seen on airport security cameras discarding their belongings and changing their clothing after the attack. The North Korean Embassy has also been implicated with an embassy official helping get flights out for the four men, and using the name of one of its citizens to buy a car that was used to take the suspects to the airport.</p> <p>But Malaysian police and prosecutors have shied away from attaching any political motive to the killing.</p> <p>Malaysian officials have never officially accused Pyongyang of involvement in Kim's death. Instead, they have focused narrowly on simply proving the women's guilt. Prosecutors contend the two knew they were handling poison, citing security camera footage showing them rushing to the washroom and holding their hands away from their bodies after the attack.</p> <p>"The Malaysian government wants it all to go away by trying to rush the trial and end it," said James Chin, director of the Asia Institute at the University of Tasmania in Australia. "Once everything is under the</p>

bridge, which will take years, Malaysia and North Korea will likely resume normal relations. The Kim Jong Nam case will be just another footnote in history."

Kim, 46, was the eldest son of former North Korea leader Kim Jong Il and was once seen as the potential heir in the family that has ruled North Korea since its founding.

He had fallen out of favor and had been living abroad as the actual heir Kim Jong Un solidified his powerbase. But while Kim Jong Nam was not an obvious political threat, he may have been seen as a potential rival to his brother.

A police witness told the court last month that Kim met with an unidentified Korean-American man at a Malaysian resort island four days before he was killed. The policeman was asked by defense lawyers about a Japanese newspaper report that the man was a U.S. intelligence agent based in Bangkok and that the meeting might have been one of the reasons why Pyongyang decided to silence Kim.

To bolster the theory, the court heard about forensics analysis of Kim's laptop that showed some data had been accessed from a USB drive inserted into the laptop on the day of the meeting. Kim was also carrying \$138,000 in cash when he was killed.

Close ties between Malaysia and North Korea have badly frayed since the killing.

While it isn't one of North Korea's key diplomatic partners, Malaysia had been one of the few places in the world where North Koreans could previously travel without a visa, providing a quiet destination for North Koreans looking for jobs, schools and business deals.

Malaysian officials have hinted since the assassination about ending diplomatic ties with Pyongyang and chided the regime over its nuclear ambitions.

<b>HEADLINE</b>	<b>02/13 SKorea's political corruption trials</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/latest-confidante-skorean-leader-arrives-court-53036185">http://abcnews.go.com/International/wireStory/latest-confidante-skorean-leader-arrives-court-53036185</a>
<b>GIST</b>	<p>The Latest on South Korea's political corruption trials (all times local):</p> <p>5:15 p.m.</p> <p>The lawyer representing the former South Korean president's confidante has vowed to appeal after the friend was sentenced to 20 years in prison for her role in a wide-ranging political scandal.</p> <p>Choi Soon-sil, a longtime friend of former President Park Geun-hye, was convicted Tuesday for abusing her close ties with Park to gain personal profit and for receiving bribes from Samsung, Lotte and other big South Korean businesses.</p> <p>Lee Kyung-jae, who represents Choi, said he was confident his team can overturn the charges on appeal.</p> <p>After the sentencing was announced, Choi left the courtroom quietly without showing emotion, according to media pool reports.</p> <p>_____</p> <p>4:40 p.m.</p> <p>The chairman of South Korea's Lotte Group has been sentenced to two and a half years in prison for bribery in a wide-ranging corruption scandal that brought down the country's president.</p>

The Seoul Central District Court said Tuesday that Shin Dong-bin, chief of South Korea's fifth-largest conglomerate Lotte, offered 7 billion won (\$6.5 million) in bribery to the former president to curry favors such as to win a license to open a duty free shop and to strengthen his control over the business group.

The sentencing sends another shockwave to the local business community that was relieved to see Samsung heir Lee Jae-yong released from prison last week on a suspended sentence in the same scandal.

The court also sentenced Choi Soon-sil, the former President Park Geun-hye's confidante to 20 years in prison.

Lotte was one of many major companies that donated money to non-profit foundations controlled by Choi.

4:20 p.m.

A South Korean court has sentenced the former President Park Geun-hye's confidante at the center of the influence-peddling scandal to 20 years in prison.

The Seoul Central District Court said Tuesday that Choi Soon-sil was convicted on abuse of power, bribery and other charges. The court also imposed 18 billion won (\$17 million) fine on her.

The court said Choi abused her close tie with the former president to take personal profit. Among her crime was coercing businesses to donate a huge amount of money to foundations under her control and receiving bribes from Samsung and Lotte.

It said her crime was grave given how she triggered an unprecedented impeachment of the president and disappointed the public.

<b>HEADLINE</b>	<b>02/12 Detroit: 3 killed in 'dangerous standoff'</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/women-dead-cop-injured-dangerous-ongoing-barricade-situation/story?id=53017623">http://abcnews.go.com/US/women-dead-cop-injured-dangerous-ongoing-barricade-situation/story?id=53017623</a>
<b>GIST</b>	<p>Three women were killed and three police officers injured in a dangerous barricade incident at a Detroit home that lasted from Sunday night through today, Detroit police said.</p> <p>The suspect, Lance Smith, 49, who police said has seven legal guns registered to his name, was heard saying, "I will not be taken without a fight," Detroit Police Chief James Craig said at a news conference this morning.</p> <p>The three injured police officers suffered non-life-threatening gunshot wounds to the leg, Craig said.</p> <p>The "dangerous" standoff came to an end today when police made entry into Smith's home through robots and found the suspect dead inside, police said, adding that they believe he took his own life.</p> <p>A woman who police said was Smith's girlfriend was also found dead inside, Detroit Police Deputy Chief Elvin Barren said at a news conference.</p> <p>The other two women were found shot outside the home, police said. Two of the victims were in their 50s and another was age 46, Elvin said.</p> <p>There "easily could have been a higher death toll," Barren said.</p>

	<p>The barricade began Sunday night with a 911 call to police about shots fired from a home, Craig said.</p> <p>The suspect fired "an unknown number of rounds, basically attacked first the civilian victims," Craig said.</p> <p>The suspect then allegedly fired at an off-duty officer who lives in the neighborhood and then fired at the responding Detroit police officers, Craig said.</p> <p>The Detroit police officers "were pinned down by gunfire for at least an hour," Craig said. "And during that hour time, they were waiting for the response of our special response team who did a phenomenal job quickly getting in and safely moving out those who were shot, including those who were shot fatally."</p> <p>An armored vehicle was brought in to help get those officers to safety, he said.</p> <p>Then came a second attack on the officers, Craig said, during which the third officer was shot and then rescued by his partner.</p> <p>The last time police heard from Smith was at about 2 a.m. When they attempted to speak with him through the loudspeaker, Smith would not say anything other than the threats he made early on, Barren said.</p> <p>The standoff lasted 14 hours, Elvin said.</p> <p>It is unclear if Smith had a phone, but he did not communicate with anyone during the standoff, Elvin said.</p>

<b>HEADLINE</b>	<b>02/12 Second arrest in slaying of 2 Ohio cops</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/kasich-orders-flags-flown-half-staff-honor-slain/story?id=53018108">http://abcnews.go.com/US/kasich-orders-flags-flown-half-staff-honor-slain/story?id=53018108</a>
<b>GIST</b>	<p>A second man has been arrested in the slaying of two Ohio police officers for allegedly buying the gun used in the killing, federal authorities said.</p> <p>Gerald Lawson III, 30, is accused of acting as a straw purchaser for the suspect, 30-year-old Quentin Lamar Smith, who is a convicted felon and not permitted to buy a firearm, the Justice Department for the Southern District of Ohio said.</p> <p>The Saturday shooting took place when Westerville police officers Eric Joering and Anthony Morelli responded to a 911 hang-up Saturday and were "immediately met with gunfire" and exchanged fire with Smith, police said.</p> <p>Smith, who allegedly had a Glock semi-automatic handgun, was also injured in the shooting and is in the hospital, authorities said. He is expected to survive, police said. The Columbus Division of Police, which is leading the investigation, has filed two counts of aggravated murder charges, according to the city of Westerville. He has not yet entered a plea.</p> <p>Lawson and Smith "have a long history of friendship," according to the Justice Department.</p> <p>The Justice Department said a witness told investigators Smith gave Lawson money for the firearm and an extra \$100 as compensation.</p> <p>Lawson was arrested today and charged with aiding and abetting the possession of a firearm by a prohibited person, the Justice Department said. He is scheduled to appear before a judge this afternoon.</p>

The principle of 'Fair Use' was established as law by Section 107 of The Copyright Act of 1976. 'Fair Use' legally eliminates the need to obtain permission or pay royalties for the use of previously copyrighted materials if the purposes of display include 'criticism, comment, news reporting, teaching, scholarship, and research.' Section 107 establishes four criteria for determining whether the use of a work in any particular case qualifies as a 'fair use'. A work used does not necessarily have to satisfy all four criteria to qualify as an instance of 'fair use'. Rather, 'fair use' is determined by the overall extent to which the cited work does or does not substantially satisfy the criteria in their totality. If you wish to use copyrighted material for purposes of your own that go beyond 'fair use,' you must obtain permission from the copyright owner.

HEADLINE	<b>02/11 Argentina: new US military base</b>
SOURCE	<a href="https://www.telesur.tv/english/news/US-Will-Build-New-Military-Base-in-Northern-Argentina-20180211-0016.html">https://www.telesur.tv/english/news/US-Will-Build-New-Military-Base-in-Northern-Argentina-20180211-0016.html</a>
GIST	<p>Argentina is allowing the U.S. to build a new military base at its northern border with Brazil and Paraguay. Officials of the South American country also announced that it will work with Drug Enforcement Administration (DEA) at the triple border “to analyze where drugs are coming from.”</p> <p>Argentina’s Minister of Security, Patricia Bullrich announced in Washington that the Mauricio Macri administration is going to allow the U.S. to build a military base in Posadas, Misiones, bordering Brazil and Paraguay.</p> <p>Bullrich says her government is creating “an analysis center with Paraguay and Brasil (and the U.S.) to figure out where, how and with whom narco traffickers operate” at the triple border region.</p> <p>This "task force," as its being called, will operate in conjunction with the DEA, the Department of Homeland Security (DHS), and the U.S. Southern Command, which watches over U.S. operations in Latin America and the Caribbean.</p> <p>This will be the second task force against drug trafficking in Argentina. The first one was installed in Salta province located near the borders with Bolivia and Chile during the Barack Obama administration.</p> <p>Human rights organizations are protesting the increased U.S. military presence in Latin American and the Caribbean.</p>

HEADLINE	<b>02/12 CBP to inspect 1B Valentine’s Day flowers</b>
SOURCE	<a href="http://www.washingtonexaminer.com/customs-will-inspect-1-billion-flowers-imported-for-valentines-day/article/2648774">http://www.washingtonexaminer.com/customs-will-inspect-1-billion-flowers-imported-for-valentines-day/article/2648774</a>
GIST	<p>Customs and Border Protection officials are expecting to process and inspect more than 1 billion imported stems of flowers in the weeks leading up to Valentine’s Day next Wednesday, a Department of Homeland Security spokesperson confirmed Friday.</p> <p>Although the DHS agency is often associated with apprehending illegal immigrants and narcotics on land and sea, its Miami branch is known as the headquarters for floral importation inspections between Jan. 1 and Feb. 14 every year.</p> <p>“People don’t think of agriculture when they think of Customs and Border Protection — however, CBP agriculture specialists work diligently to protect our country from invasive species that have the potential to damage ecosystems and our economy,” said DHS Deputy Secretary Elaine Duke.</p> <p>Duke traveled to the Florida city this past week to see how the Miami International Airport Agriculture Air</p>

	<p>Cargo Branch — tasked with inspecting 91 percent of all imported fresh-cut flowers — are processed.</p> <p>CBP officers at the Miami facility processed more than 954 million stems of flowers in 2017 and intercepted more than 1,000 plant pests. Exotic pests and foreign animal diseases cost an average of \$138 billion in economic and environmental losses every year.</p> <p>"When those flowers make it to your home, we want it to be safe, not only for you but the environment and our country," Duke said. "I was proud to spend the day in Miami to see firsthand the important work they are doing to ensure even the tiniest of pests don't enter our country."</p> <p>CBP in Los Angeles processed the second-highest amount of stems at 40 million; followed by Otay Mesa, Calif., at 25 million; and John F. Kennedy Airport in New York, which saw 19 million stems of flowers.</p> <p>A grand total of 1.063 billion stems of flowers were imported during the 2017 Valentine's Day season. Roses made up a third and mixed bouquets were the second-highest type at 190 million.</p> <p>The largest exporter is Colombia. The South American nation shipped 718 million stems of flowers to the U.S. in the six weeks leading up to last year's holiday. Ecuador followed with 243 million and Mexico took third place with 36 million.</p>

<b>HEADLINE</b>	<b>02/12 Puerto Rico substation explosion, fire</b>
<b>SOURCE</b>	<a href="https://apnews.com/4b49c25c3cc94a8aba57acb90c99a685/Blackout-hits-northern-Puerto-Rico-following-fire,-explosion">https://apnews.com/4b49c25c3cc94a8aba57acb90c99a685/Blackout-hits-northern-Puerto-Rico-following-fire,-explosion</a>
<b>GIST</b>	<p>SAN JUAN, Puerto Rico (AP) — An explosion and fire at an electric substation threw much of northern Puerto Rico into darkness late Sunday in a setback for the U.S. territory's efforts to fully restore power more than five months after Hurricane Maria started the longest blackout in U.S. history.</p> <p>The island's Electric Power Authority said several municipalities were without power, including parts of the capital, San Juan, but they were optimistic it could be restored within a day as they worked to repair a substation that controls voltage.</p> <p>The blast illustrated the challenges of restoring a power grid that was already crumbling before it was devastated by the Category 4 hurricane.</p>

	<p>In many cases, power workers are repairing equipment that should have long been replaced but remained online due to the power authority's yearslong financial crisis. PREPA is worth roughly \$4 billion, carries \$9 billion in debt and has long been criticized for political patronage and inefficiency. It also struggled with frequent blackouts, including an island-wide outage in September 2016.</p> <p>It was not immediately known what caused Sunday's fire, which was quickly extinguished. Officials said the explosion knocked two other substations offline and caused a total loss of 400 megawatts worth of generation.</p> <p>"We are trying to restore that as quickly as possible," the company said.</p>

<b>HEADLINE</b>	<b>02/11 Entire Baltimore Metro to close for month</b>
<b>SOURCE</b>	<p><a href="https://www.washingtonpost.com/local/trafficandcommuting/entire-baltimore-metro-system-to-close-for-a-month-for-emergency-repairs/2018/02/11/26301ce0-0f72-11e8-8ea1-c1d91fcec3fe_story.html?hpid=hp_hp-cards_hp-card-local%3Ahomepage%2Fcard&amp;utm_term=.65dd5fb9c3c7">https://www.washingtonpost.com/local/trafficandcommuting/entire-baltimore-metro-system-to-close-for-a-month-for-emergency-repairs/2018/02/11/26301ce0-0f72-11e8-8ea1-c1d91fcec3fe_story.html?hpid=hp_hp-cards_hp-card-local%3Ahomepage%2Fcard&amp;utm_term=.65dd5fb9c3c7</a></p>
<b>GIST</b>	<p>Baltimore's entire Metro SubwayLink system will remain closed for a month, the Maryland Transit Administration said Sunday, after safety inspections showed sections of track needed emergency repairs that couldn't wait until this summer.</p> <p>Gov. Larry Hogan (R) has devoted \$2.2 million in emergency funding to run free coach buses for passengers along the subway's route, in addition to the normal MTA bus routes, the MTA said Sunday.</p> <p>The MTA shut down the system Friday for a safety evaluation after discovering an urgent need for repairs on sections of the aboveground, northwest leg of the system between the Owings Mills and West Cold Spring stations. Sunday's decision expanded the closure to the entire system.</p> <p>"While I understand the inconvenience, safety will always be our top priority," MTA chief executive Kevin Quinn said in a phone interview Sunday. "We don't take any risks with our riders."</p> <p>The track needed to be replaced sooner than the scheduled replacement this summer, Quinn said.</p> <p>The free shuttle buses, or "bus bridge" as the MTA calls it, will begin at 5 a.m. Monday and run until midnight on weekdays, and from 6 a.m. until midnight on weekends.</p>

<b>GIST</b>	<p>Burdened by mounting health, job and family troubles, a Florida woman took to the road and headed north from her Cocoa Beach home, police say.</p> <p>By the time she hit Stafford County on Interstate 95 in Virginia, she was down to her last \$14 and had reached her limit: Soon she would pick up a handgun and plead to die at the hands of officers.</p> <p>The 57-year-old pulled her Kia sedan into a Walmart parking lot just before dawn Dec. 8, triggering a four-hour standoff as she repeatedly waved a silver revolver, cursing Stafford County sheriff's deputies as she demanded that they shoot her.</p>

“She kept talking to herself, yelling profanities and enticing us to shoot her, over and over and over again,” said Capt. Ben Worcester, a member of the Stafford County Sheriff’s Office.

Rather than rush into a situation where they might have to fire, Stafford officials turned to technology: Police pilots flew two drones to monitor the woman from a safe distance and avoid putting officers in a direct confrontation. The airborne cameras gave authorities a close-up view of her and what she had in her car as she flitted between pacing outside and ducking back into the vehicle.

Worcester could see the label on the vodka bottle she lifted to wash down pills. He could tell SWAT officers when she had her finger on the trigger of her gun. And he could watch as her agitation ebbed and flowed.

The use of the drones to de-escalate an incident represents a creative deployment of a tool that police agencies across the country have been adding to their arsenals.

The largest police departments in the District and inside the Capital Beltway do not have drone programs, officials said. FAA airspace restrictions in the city prevent D.C. police from considering such a program, said department spokesman Dustin Sternbeck. Police departments in Montgomery and Fairfax counties also do not use them.

In Stafford, the sheriff’s office has five drones and 12 FAA-certified officers.

Sheriff David P. Decatur decided to launch the drone program there in early 2016, using more than \$50,000 in money seized in drug cases and with the aim of using the craft to find people missing in extreme heat or cold. Stafford County officers now use drones as they execute search warrants, take crime scene photographs and even monitor traffic during events such as Fourth of July fireworks displays.

“I think it’s progressive. We are open. Anything we can use it for to help others, we are all about trying to take advantage of that,” Decatur said. “We are always racing against time.”

Those time pressures played out Dec. 8 when predawn 911 calls came in to the Stafford County Sheriff’s Office saying shots were being fired in the lot of the Walmart on Garrisonville Road. The information was scant: a white woman with long, dirty-blond hair, driving a car with Florida license plates and brandishing a pistol.

What officers did know as they launched was that the woman was armed and continued to shout a command to authorities: “Just kill me! Just kill me!”

Adding to the danger, she had parked directly in front of an 18-wheeler in the lot, trapping the rig driver who had pulled in to catch some sleep, investigators said.

Deputies evacuated the area around the car and truck as a SWAT team stood at the ready. Police idled an armored vehicle — called a BearCat — that can withstand .50-caliber rounds.

Early on, police decided to try to negotiate with the woman over a loudspeaker and started to sketch out plans to rescue the trucker.

The woman kept yelling profanities but did not respond otherwise.

Decatur said the drones acted “like a military scout team” to help officers find cover and places to stay out of view as they braced for a drawn-out confrontation.

The sheriff’s department flew the two drones at an elevation of 70 to 80 feet, relaying real-time video to the on-scene command post with an intimacy that would be nearly impossible for any officer to match on the ground without facing substantial risk.

“She was talking so much to herself, I initially thought she was on the phone, but she was talking with the gun to her head,” Worcester said.

Officers saw her swallowing liquor and pills, and “we knew what we were up against. It was going to get worse,” Worcester said.

About two hours in, SWAT officers quietly approached the tractor-trailer to try to rescue the driver. Aided by the drones, Worcester was able to warn officers that the woman in the car had pointed her gun toward the back of her car in the direction of the hemmed-in truck, apparently thinking police were going to move in on her.

Police paused the trucker rescue until they were told she had turned away. They got the trucker safely out.

The woman’s demands for officers to shoot her did not stop. “Kill me! Kill me!” and “Just shoot me,” she shouted again and again, Decatur and Worcester said.

“She just wasn’t going to do any talking,” Worcester said. “It was hours of this.”

Three hours into the standoff, the woman was highly agitated and alternating between threatening to shoot herself in the head and begging the police to fire on her, Worcester said.

A drone camera zoomed in on her face, showing someone near rock bottom, he said.

It also showed her moving away from her car, and police, fearing she might run and shoot at a nearby convenience store, fired beanbag rounds at her.

Stunned, she retreated to her car. The drone zoomed in to show officers her condition and what she was doing inside the Kia. She looked calmer, was mumbling, and had her eyes closed, Worcester recalled.

The drones stayed up.

At 9:15 a.m., police in the armored vehicle rolled over to the car and fired pepper spray into the Kia’s open window before four officers rushed the car and pulled the woman out and handcuffed her.

Stafford authorities charged Donna Lynn Barnes with reckless handling of a firearm and brandishing a firearm, both misdemeanors, authorities said.

Online court documents show that a hearing in her case is scheduled for Feb. 22. An attorney for the public defender’s office, which court documents show is representing Barnes, declined to comment.

“This lady is from Florida. She said she was just driving. In her world, she had all these things going on, and she was trying to get us to use deadly force,” Decatur said. “Luckily, with our training and the technology, we didn’t have to do that.”

<b>GIST</b>	VANCOUVER, B.C. — Beneath a blue tarp that blocks out a gray sky, Jordanna Coleman inhales the smoke from a heated mixture of heroin and methamphetamine, sucking the addictive vapor deep into her lungs.

The drugs and pipe, acquired elsewhere, are hers. But the shelter, the equipment she uses to prepare her fix and the volunteers standing by to respond if she overdoses are provided by a small nonprofit. Funding and supplies come from the city of Vancouver and the province of British Columbia.

“I was outside. It’s warmer in here,” says Coleman, 22, although the tent is open to the damp and chill of a western Canadian winter. “It’s just safer.”

In barely a year, five sites like this one have opened within a few blocks of one another to contend with a surge of fentanyl on Vancouver’s streets. In December, the organization that runs this location, the Overdose Prevention Society, took over a vacant building next door, giving users a clean indoor place to inject drugs. There are 29 similar sites in British Columbia, the epicenter of Canada’s drug crisis, and more across the country.

“To save lives, you need a table, chairs and some volunteers,” said Sarah Blyth, the manager here. “We literally popped it up in one day. And then you have people saving lives. Immediately.”

As fentanyl rampages across North America, several U.S. cities have announced that they will open the first supervised drug-consumption sites like those in Canada. Their plans illustrate the gulf between the two nations: While Justin Trudeau’s government is doubling down on its “harm reduction” approach, any U.S. organization that tries to follow suit would be violating federal law and risking a confrontation with the Justice Department.

U.S. researchers say that at least one underground site is operating on American soil, and they predict that a public operation will open despite the potential consequences.

“That’s the way that drug policy issues have moved forward in this country [over the] last 25 years,” said Alex Kral, an epidemiologist at the think tank RTI International who has studied supervised drug consumption. Cities enduring the deaths, disease, crime and cost of drug epidemics have taken the lead in handing out free needles and distributing the overdose antidote naloxone — sometimes after legal battles.

San Francisco plans to add supervised injection services to an existing community health facility. Those could start as soon as July 1.

“We just have to do what’s best for the client, and we hope the federal government will understand,” said Barbara Garcia, director of health for the city and county of San Francisco. “I’m not looking to change federal law. I’m looking to save lives.”

Canada’s plans do not stop at supervised injection. Some sites now test users’ drugs for fentanyl, and some are aiming to provide prescription opioids from vending machines.

The most far-reaching intervention is just two blocks from the pop-up site, where the Providence Crosstown Clinic provides 130 of the city’s hardest-core drug users with pharmaceutical-grade heroin and other narcotics. Users come to inject themselves as often as three times a day, and some also swallow a morphine tablet to carry them through the night.

Freed of the need to steal, beg and trade sex for drug money, some now have apartments and jobs. The clinic, run by a medical center, hopes to add 50 more clients soon.

“The ability to say, ‘I’m receiving treatment; I’m not a dirty user,’ does so much for their self-esteem,” said Jennifer Mackenzie, the clinical nurse leader. “It opens so many doors for them. They’re getting medical treatment, and they look at themselves differently.”

Research shows that the approach, like supervised drug consumption, saves lives, cuts criminal justice and health-care costs, limits the spread of diseases such as HIV and helps reduce used needles and other debris in the immediate neighborhood. A similar facility recently opened in Ottawa, and Canada has loosened requirements to encourage others.

But British Columbia's programs have not blunted its opioid crisis. Overdose deaths have skyrocketed from fewer than 400 in 2014, when fentanyl became widely available on the street, to more than 1,400 in 2017. Eighty-one percent of last year's deaths involved fentanyl.

Critics said that statistic speaks to the futility of harm reduction. "To say the best we can do is to revive people who are victims and are going to be victims again . . . is reprehensible," said John P. Walters, drug czar under President George W. Bush and now chief operating officer of the Hudson Institute, a conservative think tank in Washington.

Walters favors a dramatic expansion of drug treatment in the United States, which recorded 42,000 opioid deaths in 2016, coupled with a much more concerted effort to keep drugs such as fentanyl out of the country. He questions the rigor of the academic studies that support harm reduction. And he believes that normalization and tolerance of drug use are reasons that addicts crowd the streets of this city's small Downtown Eastside district.

"Look at Vancouver, it's tried every bad policy you can try," Walters said. "This is another step in that whole policy that has made Vancouver a nightmare."

\*\*\*\*\*

"This is my flail," Coleman said between hits on her pipe, scattering the contents of her backpack on a table. A coloring journal, cellphone, some clean socks. "It's what I do when I'm high."

She does not yet have the battered look of the legions of longtime drug users who are everywhere in this neighborhood. Yet her story is typical: She fled an abusive mother, got into hard drugs at 17 and soon was pimped out by her supplier. She has an 18-month-old son in foster care, lives with friends and is trying, again, to find her way out through treatment.

"It looks like I'm enjoying it because I'm high," she said. "I don't have anything in my life that really means anything. All the drugs that I have [are] not going to fill the emotional void that I have."

Drug smokers like Coleman are restricted to the Overdose Prevention Society's outdoor tents because the new building, a former grocery, has no ventilation system. It is home mostly to injection drug users. A long, narrow main room is nearly bare except for 13 stainless-steel tables and some posters on the walls. Red partitions divide the rest of the floor, making space for a couple of desks, a cot where workers can calm down after resuscitating overdose victims, and supplies piled high in boxes.

The most critical are oxygen and naloxone, the antidote that has saved countless lives. In the 30 years that supervised sites have been open in Europe, and the 15 years that they have existed in Canada, no site has suffered an overdose death, Kral said.

Users enter here through a guarded door off a back alley that used to be the scene of widespread drug use, dealing and prostitution. A small street shrine to a dead woman sits just outside the entrance.

From a small table of supplies they pick up what they need: syringes, matches, elastic strips to tie off veins, water to dilute drugs, small squares of foil, tiny tins for cooking heroin. Also available are condoms and lube.

Some of the volunteers who greet them are current or former users themselves. They usher clients to the tables. On a clipboard, one staff member logs names (usually aliases), gender, the drugs being used and the time a person comes in. Between the indoor and outdoor sections, 300 to 700 people show up daily. The largest crowds are on days when welfare payments arrive.

The pop-up was born of necessity in late 2016, when fentanyl was overwhelming the neighborhood and a 15-year-old supervised-use program. Overdoses on the street would send panicked bystanders to a nearby

open-air market to find naloxone or call an ambulance.

“If there was an overdose, they would come running to the market, and we would have Narcan ready,” Blyth said, using the antidote’s brand name. “Then it became so frequent that it was happening all the time. We had no choice really.” A GoFundMe campaign started the tent facility. Aid from the government followed.

The organizers acknowledge that their main goal is just to keep people alive, though they have seen a few clients get into treatment and off drugs.

“If these services didn’t exist, trust me, it would have been a catastrophe, especially in the past year and a half, when the fentanyl crisis spiked,” said Ronnie Grigg, a large, soft-spoken man with a chest-length beard who helps manage the site. In the past three years, Grigg said, 100 people he knew died of overdoses.

\*\*\*\*\*

At the Providence Crosstown Clinic a short walk down West Hastings Street, the atmosphere is different. Some users here measure their addictions in decades, and it shows.

With an ample supply of diacetyl morphine — the heroin equivalent — and other narcotics on the premises, the clinic is a cross between a medical facility and a bank. Users must first step into a small vestibule. Only when the outside door locks behind them will the inside door open. The drugs are kept in a vault, doled out to users in pre-measured syringes through a thick glass window with a slot at the bottom.

There is a waiting room, an exam table, desks and a big room, where users shuffle in to inject themselves. The doctor and nurses speak of “treatment.” They are prohibited from administering injections themselves.

Nothing else has worked for these men and women, who clinically are in the grip of “severe opioid disorder.” Methadone has proven ineffective, as have therapeutic approaches such as 12-step programs. Most of them no longer feel any pleasure from the drugs; they take them simply to function and prevent severe withdrawal symptoms.

Here, users are sure their drugs contain no fentanyl. And paradoxically, by providing them with the substances they need, the clinic does more than just keep them alive.

“It makes me feel normal,” said a 52-year-old woman named Lori, who did not want her last name used.

Other than more than a decade on drugs, Lori leads a fairly unremarkable life. She has two grown children who don’t know about her twice-a-day clinic visits. She is married and holds a part-time job in a call center, taking customer service complaints. She is clearheaded and contemplative.

Over time, the cost of her habit reached \$200 a day. In 2011, she heard about a research study at the clinic and began getting her drugs there.

“Thank God, because I would be on the street,” she said. “Everything would be finished. My marriage would be over. I don’t think I’d be here.”

The medical staff counsels clients on vein care, HIV, hepatitis C and treatment options. The price of the services is high: about \$25,000 (Canadian) annually per client. But the cost of not having them is much higher, said Scott MacDonald, the clinic’s physician lead.

Remove the stigma attached to narcotics, he says, and the clinic’s model is not much different from therapy for high blood pressure or diabetes.

“One hundred thirty people [here] are able to access injectable treatment,” he said. “And we see that their

	lives are transformed.”

<b>HEADLINE</b>	<b>02/09 NBC: Winter Olympics statistics</b>
<b>SOURCE</b>	<a href="http://money.cnn.com/2018/02/09/media/nbc-winter-olympics-numbers/index.html">http://money.cnn.com/2018/02/09/media/nbc-winter-olympics-numbers/index.html</a>
<b>GIST</b>	<p>The Olympic Games are one of the most-watched telecasts in the world, thanks in part to the massive production efforts that go into broadcasting the event far and wide.</p> <p>That's no different for this year's Winter Games, which opened on Friday in Pyeongchang, South Korea. The event is an undertaking that costs billions of dollars and includes an NBC telecast that stretches across several weeks and time zones.</p> <p>Some of the staggering numbers behind this year's games tells the story of an event that is constantly trying to outdo itself. NBC is pulling out all the stops and sending the most-ever number of commentators to provide insight and commentary for a record 2,400 hours of coverage.</p> <p><b>The Games</b>  <b>February 9th, 2018</b> -- Date of the Pyeongchang Winter Olympics opening ceremony.  <b>February 25th, 2018</b> -- Date of the Pyeongchang Winter Olympics closing ceremony.  <b>\$10 billion</b> -- The <a href="#">estimated cost of the Pyeongchang Winter Olympics</a>. The amount is roughly the <a href="#">GDP of Madagascar</a>. That's five times less than the 2014 Sochi Olympics, which was estimated to be the costliest ever.  <b>2,925</b> -- Number of athletes who will compete in the games. The US is <a href="#">sending 244 athletes</a>, the largest athlete delegation in Olympic Winter Games history.  <b>39</b> -- The age of the oldest US winter Olympian: Hockey player, Brian Gionta. Last year, he <a href="#">played his 1000th game in the NHL</a>.  <b>50</b> - Miles the city of Pyeongchang is from the demilitarized zone that separates the south from North Korea. The DMZ is a border that splits the country in two, it's heavily fortified and is roughly 160 miles long.</p> <p><b>The Telecast</b>  <b>5</b> -- NBCUniversal networks that will broadcast the games (NBC, NBC Sports Network, CNBC, USA and the Olympic Channel).  <b>\$900+ Million</b> -- Money generated in national ad sales for Pyeongchang, which is a Winter Games record. NBC Universal said that it expected its Super Bowl LII coverage to generate <a href="#">\$500 million in ad revenue</a>.  <b>2,000</b> -- Number of NBC employees working in Pyeongchang for the games.  <b>2,400+</b> -- Hours of game coverage. This is the most ever for a Winter Olympics, according to NBC. The last Winter Games to hold this record was the 2014 Sochi Winter Olympics.  <b>127</b> -- Miles of cable that will be used by NBC for the games. That's roughly the distance between Los Angeles and San Diego. For the exceptionally athletic, you'd have to run the length of Manhattan roughly nine times to hit 127 miles.  <b>126+</b> -- NBCUniversal's coverage hours, per day. The network said that's nearly triple the entire coverage of the 1976 Innsbruck Winter Olympics on ABC (43.5 hours).  <b>89</b> -- Number of NBC Olympics commentators. The most-ever for a Winter Olympics, according to NBC. That includes <a href="#">Mike Tirico</a> in his first go as Olympics host, former Olympians like skier Bode Miller, figure skaters Tara Lipinski and Johnny Weir, and <a href="#">Katie Couric</a>, who makes her return to NBC to co-host the opening ceremony with Tirico.  <b>54</b> -- Years since NBC's first Olympic broadcast, which was the 1964 Tokyo Games. NBC's Olympics <a href="#">contract runs through 2032</a>.  <b>17</b> -- Studios and control rooms used for NBC Olympics' coverage in both Pyeongchang and NBC Sports' home base in Stamford, Connecticut.  <b>99</b> -- Shipping containers <a href="#">full of NBC gear</a> that traveled to Pyeongchang. The containers are full of sets, cameras and other supplies.  <b>2</b> -- Helicopters that will provide aerial footage. NBC plans to use the helicopters for shots of</p>

	<p>Pyeongchang and other outdoor events.</p> <p><b>100</b> -- Roughly the number of NBC staffers who went straight from the Super Bowl to the games.</p> <p><b>The Quirky</b></p> <p><b>85</b> -- Number of <a href="#">robots reportedly placed in venues</a> to provide information on schedules, transportation and tourist attractions during the Olympics.</p> <p><b>110,000</b> -- The amount of <a href="#">condoms reportedly distributed for the athletes at the games</a>. That's roughly 37 condoms per person.</p> <p><b>The Future</b></p> <p><b>895</b> -- Number of days until the next Summer Olympics in Tokyo, Japan (July 24, 2020).</p> <p><b>1455</b> -- Number of days until the next Winter Olympics in Beijing, China (February 4, 2022).</p>

<b>HEADLINE</b>	<b>02/11 CDC: flu season breaking records</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/health/health-news/flu-season-breaking-records-cdc-says-n846341">https://www.nbcnews.com/health/health-news/flu-season-breaking-records-cdc-says-n846341</a>
<b>GIST</b>	<p>The flu season is still a bad one and it's broken a few recent records, federal health officials said Friday.</p> <p>It's not time to panic about a new pandemic — it is simply a relatively severe flu season, one that's hitting the whole country at once instead of in waves, the Centers for Disease Control and Prevention says.</p> <p>“Influenza activity is still on the rise overall,” CDC’s acting director, Dr. Anne Schuchat, told reporters.</p> <p>Ten more children have been reported to have died from flu, bringing the total for the season so far to 63.</p> <p>Last season, 110 children died from flu in the U.S.</p> <p>Every year, influenza kills between 12,000 and 49,000 people and can send more than 700,000 people to the hospital, the CDC says. It affects so many people that adult cases and deaths can only be estimated.</p> <p>“This is a difficult season and we can’t predict how much longer the intense flu activity will last,” Schuchat said.</p> <p>“This season, we are on track to break some recent records.”</p> <p>For one, hospitalizations are the highest they’ve been since the CDC started a new way of measuring them in 2010. And while flu usually hits people over 65 the hardest, the CDC says it’s seeing more people aged 50 to 64 being hospitalized.</p> <p>And more people are showing up with flu-like symptoms — 7.7 percent of all doctor visits, which hasn’t been seen since 2003-2004, with the exception of the H1N1 “swine flu” pandemic in 2009.</p> <p>With that many hospitalizations there are sure to be deaths, Schuchat said.</p> <p>“We usually see the increases in influenza-like illness and hospitalizations a couple of weeks before we see what's going on with influenza deaths,” she said.</p> <p>“People may have lengthy hospitalizations before they finally die of flu,” she added.</p> <p>“Almost everything we are looking at is bad news.”</p> <p>Most of the sickness is due to H3N2 influenza, which is notorious for causing more severe disease. Schuchat said there is no indication that the strain has mutated in some way to make it worse than usual, but scientists are looking to make sure there isn’t something unusual about it.</p>

	<p>“This season, we are on track to break some recent records.” And now, some states in the west are seeing a second wave of illness caused by influenza B, she said.</p> <p>At any given time, several different strains of flu will be circulating and this year the four major strains that are include H3N2, H1N1 and two different strains of influenza B. Vaccines protect against three or four strains and Schuchat said it is still not too late to get a vaccine.</p> <p>People who have had flu once can get sick again from a second strain, and people who have already had flu might protect themselves from catching it again if they get vaccinated, she said.</p>

<b>HEADLINE</b>	<b>02/11 La Nina ending; here comes La Nada</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/la-nina-ending-here-comes-la-nada/281-517464056">http://www.king5.com/article/news/local/la-nina-ending-here-comes-la-nada/281-517464056</a>
<b>GIST</b>	<p>Climate troublemaker La Niña, which is partly responsible for the extreme drought now scorching the southwestern U.S. and California, is expected to fade away over the next few months, scientists said.</p> <p>In its place will be the "neutral phase" of the Pacific Ocean climate pattern officially known as ENSO (El Niño-Southern Oscillation).</p> <p>The climate pattern, marked by either unusually warm or cool seawater in the central Pacific Ocean, can affect weather in the U.S. and around the world.</p> <p>The Pacific Northwest may have had a La Niña winter, but not La Niña weather.</p> <p>The La Niña phase is defined by colder-than-average ocean temperatures in the Pacific. It's the opposite of El Niño.</p> <p>ENSO-neutral, colloquially known as "La Nada," is the midpoint between El Niño and La Niña, and occurs when temperatures are near average in the Pacific Ocean.</p> <p>Although La Niña is on the way out, it will "continue affecting temperature and precipitation across the United States during the next few months," the Climate Prediction Center said Thursday.</p> <p>"La Niña will decay and return to ENSO-neutral during the Northern Hemisphere spring 2018," the prediction center said. "The forecast consensus also favors a transition during the spring with a continuation of ENSO-neutral conditions thereafter."</p> <p>The "in between" ocean state of ENSO can be frustrating for long-range forecasters. "It's like driving without a decent road map — it makes forecasting difficult," said climatologist Bill Patzert of NASA's Jet Propulsion Laboratory.</p> <p>The ENSO cycle primarily affects U.S. weather in the fall, winter and spring, and less so in the summer. It can impact the Atlantic hurricane season, however, with El Niño favoring fewer storms and La Niña favoring more.</p> <p>As for what all of this means for our spring weather here in the U.S., the outlook from the prediction center generally favors dry, warm weather across the southern tier of the nation, and cooler, wetter weather across the northern tier.</p> <p>This jibes with AccuWeather's spring forecast released this week, which said that much of the northern U.S. will endure rounds of cold and snow into March and April before springlike air creeps in.</p> <p>It also said the southern half of the country will heat up, with California and parts of the Southeast heading</p>

	toward drought conditions.

<b>HEADLINE</b>	<b>02/10 Fla. citrus reeling from disease, Irma</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/hurricane-irma/one-two-punch-disease-irma-has-left-florida-citrus-reeling-n839996">https://www.nbcnews.com/storyline/hurricane-irma/one-two-punch-disease-irma-has-left-florida-citrus-reeling-n839996</a>
<b>GIST</b>	<p>WINTER HAVEN, Fla. — In the hours after Hurricane Irma raked up Florida's spine, warm sunshine revealed thousands upon thousands of pieces of citrus fruit bobbing in muddied, stagnant water.</p> <p>Millions of dollars worth of oranges, grapefruits, and tangerines were ripped from their branches by fierce winds, never to reach their intended destination of breakfast plates and juice glasses.</p> <p>It was the nightmare many sleepless farmers prayed they wouldn't see.</p> <p>"I remember ... heading out to the fields as soon as it was safe to get out on the roads and being taken back at how much fruit was blown on the ground ... and how many trees had just been blown over," said one citrus farmer, William Roe III, 35, known as Gee.</p> <p>"We were literally blown away by the severity of the damage," said Roe's uncle, Quentin Roe, 59, the chief executive of Wm. G. Roe &amp; Sons, a longtime grower and distributor.</p> <p>Irma knocked 50 to 90 percent of Florida's citrus fruit to the ground in some areas, according to the state commissioner of agriculture, Adam Putnam, causing \$760 million in damage in the worst year for Florida oranges since 1945.</p> <p>But more was damaged than just a year's crop.</p> <p>Citrus accounts for approximately 45,000 full- and part-time jobs in the state. Hurricane Irma is credited with wiping out nearly 56,000 jobs directly and indirectly tied to Florida's agricultural sector and dealing a \$2.39 billion blow to labor income.</p> <p>The storm also signaled the end of a way of life for many farmers who lost their harvest. Those who had no one to pick what remained have since given up and sold their land.</p> <p>Many were already reeling before the winds and rain hit, thanks to a crippling disease known as citrus greening, which has ravaged crops here for years. Greening was responsible for a 31 percent decline in employment in the industry from 2012 to 2015.</p> <p>Last year was eagerly anticipated to be a comeback year for an industry that produces 60 percent of the citrus fruits consumed in the United States. Instead of a revival, they got Hurricane Irma.</p> <p>For consumers, that is likely to mean paying higher prices for juice. For Florida's farmers, and the industry that became synonymous with the state, the future is far less certain.</p> <p>Citrus greening, also known as yellow dragon disease, is spread by a kind of louse called the Asian citrus psyllid, the size of a grain of rice. Psyllids are whipped across the state by wind, making them effective carriers for disease during hurricanes.</p> <p>Citrus greening is harmless to humans and animals, but the disease causes fruit to be misshapen and overly bitter. Most citrus trees in Florida are believed to be infected with it.</p> <p>Tree diseases have already affected the taste, quality and quantity of Florida's citrus fruit.</p> <p>"For anyone who wants to advertise 100 percent Florida orange juice, it's virtually a thing of the past," Bill</p>

	<p>Roe said, adding that imports are making up the difference. It's also not as good as it was 10 years ago, he said.</p> <p>Since Hurricane Irma rolled through Florida, an additional bacteria, known as canker, has begun to infect trees</p> <p>"It functions differently than greening does," Gee Roe, the packing operations manager, said. "It affects the outside of the fruit, primarily just the fruit and the leaves."</p> <p>Because the Roe family sells fresh fruit, meant to be consumed and not turned into another product like juice, aesthetics are almost as important as taste.</p> <p>This seemingly ceaseless list of gut-punches to Florida's citrus industry has caused the cost of production per acre to skyrocket for growers.</p>

<b>HEADLINE</b>	<b>02/12 Violence fuels fear w/Myanmar Muslims</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/feel-trapped-violence-fuels-fear-myanmar-muslims-53011020">http://abcnews.go.com/International/wireStory/feel-trapped-violence-fuels-fear-myanmar-muslims-53011020</a>
<b>GIST</b>	<p>For four straight days last month, Rahim Muddinn watched, amazed, as Myanmar's state-run newspapers published special supplements showing Rohingya Muslims accused of being terrorists — nearly 250 photos each day.</p> <p>For the 41-year-old Rohingya man, it was a surreal moment. He was born and raised in Yangon, Myanmar's biggest city and far from the western state of Rakhine, where bloody military operations that followed Rohingya militant attacks in August have driven nearly 700,000 Rohingya into refugee camps in Bangladesh.</p> <p>"When we first saw those pictures, we started laughing. We wondered: When will it be our turn to have our pictures in the paper?" Muddinn, a teacher, said in an interview in his Yangon home.</p> <p>Behind the laughter, though, there is genuine fear.</p> <p>The pictures are the latest in a series of chilling realizations for the Rohingya minority here. Though Yangon's tree-lined boulevards and weathered colonial architecture seem a world away from the rice paddies and isolated villages of Rakhine — let alone the tarp-walled huts of the teeming refugee camps — the government is increasingly linking Rohingya across the country with what it calls a terrorist threat, Muddinn and others say.</p> <p>Rohingya in Yangon describe a sense of rising persecution and hatred, of vanishing freedoms and opportunities, of Buddhist neighbors and friends suddenly more willing to publicly express sympathies with the military's destruction of Rohingya villages in Rakhine.</p> <p>"One day it really could be my picture in the paper," said Muddinn. Like most of the other Rohingya who spoke with The Associated Press, he used his Rohingya name because of safety worries. "I do have anxiety. The government can detain anyone it says is a supporter of terrorism or anyone viewed as a threat to the state."</p> <p>Though Rohingya have always been persecuted in the country, it got much worse after 2012, when violence in Rakhine killed hundreds and drove about 140,000 people, most of them Rohingya, from their homes to camps. Violence flared again in 2016 and, most dramatically, following the August attacks, when refugees report widespread killing and rape by Myanmar forces. The AP last month confirmed, through extensive interviews with survivors and time-stamped video, a massacre and at least five mass graves, all previously unreported, in the Rakhine village of Gu Dar Pyin.</p>

	<p>Many Rohingya have been in Myanmar for generations, but, increasingly, the government and media have played up their claim that they're not citizens but "illegal Bengali interlopers" who entered Myanmar from Bangladesh with the help of corrupt immigration officers.</p> <p>There are non-Rohingya Muslims in Myanmar, and they often report rising discrimination, especially those in Rakhine. But generally their situation is less precarious than the Rohingya.</p> <p>Myanmar's government denies discriminating against Rohingya and other Muslims.</p>

<b>HEADLINE</b>	<b>02/12 Gunmen attack paramilitary camp Kashmir</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/police-day-gunbattle-ends-indian-army-camp-kashmir-53011128">http://abcnews.go.com/International/wireStory/police-day-gunbattle-ends-indian-army-camp-kashmir-53011128</a>
<b>GIST</b>	<p>At least one paramilitary soldier was killed when two gunmen opened fire near a camp in the main city in Indian-controlled Kashmir, officials said Monday.</p> <p>The attack came hours after government troops ended a two-day gunbattle with three gunmen at an army camp in another part of the disputed region. Five soldiers and one civilian were killed in that clash.</p> <p>Rajesh Yadav, a spokesman for the Central Reserve Police Force, said the building near the camp in Srinagar where Monday's attack occurred has been cleared of all civilians.</p> <p>Police chief S.P. Vaid said the area has been cordoned off and troops are exchanging fire with the gunmen.</p> <p>Late Sunday, government troops ended a gunbattle with militants inside an army camp in the region's Jammu area.</p> <p>Three militants were killed by late Sunday night, ending the attack that began at dawn on Saturday when the militants stormed the Sunjuwan army base on the outskirts of the city of Jammu.</p> <p>The Himalayan region of Kashmir is divided between India and archrival Pakistan. Both claim the region in its entirety.</p>

	Anti-India sentiment runs deep among Kashmir's mostly Muslim population.

<b>HEADLINE</b>	<b>02/11 India, China keep eye on Maldives' crisis</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/india-china-vie-influence-crisis-unfolds-maldives-52993084?cid=clicksource_76_2_hero_headlines_headlines_hed">http://abcnews.go.com/International/wireStory/india-china-vie-influence-crisis-unfolds-maldives-52993084?cid=clicksource_76_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>As a political crisis plays out in the Maldives, a quiet tug of war is taking place around it, with heavyweights China and India vying for strategic dominance in the picturesque Indian Ocean nation.</p> <p>At first glance, Beijing and New Delhi want no part in the turmoil that erupted Feb. 1 when the Maldives' Supreme Court overturned the convictions of several opposition politicians, including the president's main rival. Chinese and Indian officials spoke in usual diplomatic tones, saying they have no interest in interfering in the archipelago's internal affairs. But in reality, both have strategic regional interests to safeguard and are jostling for the upper hand.</p> <p>President Yameen Abdul Gayoom has sent envoys to "friendly nations" China, Pakistan and Saudi Arabia to explain his government's position since he rejected the court ruling, imposed a state of emergency last week and arrested two of the Supreme Court judges. His actions fueled suspicion that he has no intention of easing up on eliminating his rivals and tightening his hold on power ahead of this year's elections.</p> <p>His most powerful opponent, exiled former President Mohammed Nasheed, appealed to India to send troops to end the crisis.</p> <p>"On behalf of Maldivian people we humbly request: 1. India to send envoy, backed by its military, to release judges &amp; pol. Detainees ... We request a physical presence," Nasheed tweeted last week.</p> <p>Traditionally, the archipelago of 1,200 islands and a population of 390,000 Sunni Muslims has been firmly in New Delhi's sphere of influence, with India even intervening in 1988 when a group of mercenaries tried to seize power. Its support helped keep former strongman Maumoon Abdul Gayoom in power for three decades and later aided Nasheed, the country's first democratically elected leader, who became famous when he used his low-lying island nation to highlight the risk of rising sea levels and climate change.</p> <p>But the Maldives began tilting toward Beijing after Yameen, the half brother of Gayoom, came to power in 2013 by defeating Nasheed.</p> <p>Yameen has rolled back many of Nasheed's democratic gains, with all of his potential political opponents either jailed or in exile. His government curbed freedom of speech and assembly, with heavy fines imposed on journalists and social media users found guilty of defamation. In 2015, in a trial widely criticized by rights groups, Nasheed was sentenced to 13 years in prison. He later received asylum in Britain.</p> <p>China saw the developments as an opening.</p> <p>"Until 2011, China didn't even have an embassy in the Maldives. Coming to 2018, it's seen as a big player in this whole Indian Ocean region," said Mahalakshmi Ganapathy, an India-China expert at Singapore's S. Rajaratnam School of International Studies.</p> <p>When Yameen visited Beijing in December, the two countries signed a free trade agreement that eliminates most tariffs on Maldivian exports, primarily fish, and opens the island nation to Chinese goods and services, including in finance, health care and tourism.</p> <p>China is already the Maldives' primary source of tourists, whose spending largely drives the economy, and Beijing is investing hundreds of millions of dollars in an airport expansion, housing development and</p>

	<p>other projects.</p> <p>China now sees the Maldives as a crucial part of its "One Belt One Road" project along ancient trade routes through the Indian Ocean and Central Asia. The initiative envisages building ports, railways and roads to expand trade — and China's influence — in a swath across Asia, Africa and Europe.</p> <p>China's massive lending to poor nations for such projects has raised concerns about their ability to repay. Already, Beijing has taken over ports it developed in Sri Lanka and Pakistan on long-term leases.</p> <p>Nasheed says China is "buying up the Maldives" under Yameen, accusing the president of opening up the floodgates to Chinese investments with little or no oversight and transparency. China has dismissed those allegations.</p> <p>Beijing is watching the Maldives very carefully. If the political situation turns in Nasheed's favor, that may shift the balance of influence back toward New Delhi.</p> <p>India is clearly uneasy with China's growing presence in its backyard. What's less clear is how it will respond to the current upheaval in the Maldives.</p> <p>So far, India hasn't responded publicly to Nasheed's demand that it deploy soldiers to end the crisis, and it's held off formally meeting with Yameen's envoy.</p> <p>But on Friday, India's Ministry of External Affairs issued a carefully worded statement aimed at China.</p> <p>"We note that China has said that Maldives Government has the ability to protect the security of Chinese personnel and institutions in Maldives. We hope that all countries can play a constructive role in Maldives, instead of doing the opposite," the statement said.</p>

<b>HEADLINE</b>	<b>02/11 Utility: Puerto Rico 75% w/electricity</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/electricity-restored-75-percent-customers-puerto-rico-utility/story?id=53005459&amp;cid=clicksource_81_2_hero_headlines_headlines_hed">http://abcnews.go.com/US/electricity-restored-75-percent-customers-puerto-rico-utility/story?id=53005459&amp;cid=clicksource_81_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>Nearly six months after Hurricane Maria decimated Puerto Rico, the island's electricity has been restored to 75 percent capacity, according to its utility company.</p> <p>The Puerto Rico Electric Power Authority said Sunday that 75.35 percent of customers now have electricity. It added that 90.8 percent of the electrical grid, already anemic even before the Sept. 20 storm barrelled through the island, is generating power again.</p> <p>Thousands of power restoration personnel made up of the Puerto Rico Electric Power Authority (PREPA), the Federal Emergency Management Agency (FEMA), industry workers from the mainland, and the Army Corps of Engineers have made marked progress in recent weeks.</p>

<b>HEADLINE</b>	<b>02/11 Drones are changing the world</b>
<b>SOURCE</b>	<a href="https://www.entrepreneur.com/article/306599">https://www.entrepreneur.com/article/306599</a>
<b>GIST</b>	<p>Those who dream of getting an Amazon package, a prescription drug, or even a beer delivered to their doorsteps via drone might have their wishes fulfilled sooner than expected.</p> <p>The Unmanned Aircraft Systems (UAS) Integration Pilot Program has jump-started the development of the drone industry in the United States, aiming to “enhance the safety of the American public, increase the efficiency and productivity of American industry and create tens of thousands of new American jobs.”</p>

Aerial enterprises such as drone delivery and aerial imagery are poised to take off. The potential economic benefit of integrated unmanned airborne systems will generate an estimated \$82 billion and create up to 100,000 jobs by 2025, while aerial imaging is expected to generate \$3.3 billion by 2023.

Driving that growth are new and expanding application areas. Aerial technology is transforming industries of all types by optimizing processes, cutting costs, and reaching both figurative and literal places that were once unattainable. Here are five industries that are being disrupted by this new, lifesaving technology.

#### **Disaster relief and humanitarian aid.**

Just days after Hurricane Harvey, location content companies captured the devastation left by the natural disaster to aid in emergency response and rescue, flood management, and FEMA fund allocation. In times of emergency, image captures can be used to navigate first responders and 911 emergency services as well as analyze road conditions. FEMA and disaster relief agencies can also allocate money based on examinations of the extent of devastation in an area.

Earlier this year, Otherlab, an engineering research and development lab based in San Francisco, created the APSARA glider, an advanced, biodegradable cardboard airplane capable of carrying more than two pounds of supplies like blood and vaccines to those in need.

The biodegradable drone can support canisters, medically sensitive liquids, batteries and other life-saving items and disperse them to an area the size of California. Now medical supplies can be delivered to rural areas without roads or regions rendered inaccessible by natural disasters or war.

High-resolution aerial imagery, like these before and after images of Hurricane Irma, are being used to aid in emergency response and rescue, FEMA fund allocation and flood management.

#### **Public transit.**

Local transportation agencies such as Orange County Transportation Authority and the District Department of Transportation in Washington, DC, are using aerial imagery as a base map -- a collection of GIS data and imagery that form the background setting and orientation of the map.

Aerial photographs integrated with third-party programs like Autodesk and Esri products help in project management oversight, planning and site analysis, and validating construction updates (lane, roadway and sidewalk updates).

#### **Ocean mapping.**

Realizing that the ocean is critical to human existence -- the source of 97 percent of the planet's water and producer of more than half of the oxygen in the atmosphere -- it may come as a surprise that 85 percent of the ocean's surface remains unmapped and unexplored.

Aerial imagery has played a part in bridging that gap. High-resolution photos from aircraft camera systems can capture and retrieve surface current data and measure Doppler shift in waves. This method is cost-effective, timely and scalable; it can cover large surface areas.

This process has implications for the oil and gas industry. Using the data extracted from the aerial captures, oil companies can plan and execute offshore exploration, conduct deep-water drilling operations, reinforce oil spill response and mitigation, and assist in search-and-rescue missions.

#### **Machine learning and AI.**

The combination of machine learning and AI is changing the way the insurance and real estate markets answer questions at scale. Now, with extremely high-resolution imagery, insurers can easily gather the most accurate, inspection-level property data, allowing assessors to easily identify characteristics and potential risks of a property such as swimming pools and the distance between trees and buildings.

Cape Analytics, for example, has developed a cloud-based platform that provides an on-demand data

stream of high-value property features and risks for real estate portfolios across the United States.

### **Precision agriculture.**

Precision agriculture is a farming management concept based on the use of technology to increase crop yields and profitability while reducing a number of traditional components necessary for growing crops such as water, fertilizer, herbicides, and insecticides. Drone aerial imagery is key. Aerial pictures help farmers work smarter in tasks such as surveying entire farm properties, conducting soil and irrigation sampling, scheduling pesticide applications, and finding mechanical errors in equipment.

Large companies such as Monsanto, John Deere, Bayer, Dow and DuPont are investing in precision farming technologies like software, sensors and aerial-based data.

City water districts use aerial imagery to monitor crop production and water supplies and analyze aspects of the water budget. GIS and aerial imagery were used to create models and tools for the Coachella Valley Economic Partnership for examining and assessing the Coachella Valley Aquifer. These maps were used to estimate infiltration as well as change in land cover classifications and water depth surfaces, all visualized in 2D and 3D to find possible trends.

As the aerial technology industry matures, it will only become more ubiquitous. The sky covers everything, from emergency response to public transit, oceanic discovery to large-scale farming and property assets. Sure, you'll still get your package delivered, but the sky is opening up a world of other possibilities.

<b>HEADLINE</b>	<b>02/10 False alarms in national alert system</b>
<b>SOURCE</b>	<a href="https://www.stripes.com/news/us/false-alarms-highlight-weaknesses-in-national-alert-system-1.511041">https://www.stripes.com/news/us/false-alarms-highlight-weaknesses-in-national-alert-system-1.511041</a>
<b>GIST</b>	<p>Weather junkie John Grosso knew it was highly unlikely a monster wave was barreling toward the Connecticut coast. Still, when a tsunami warning appeared out of the blue on his phone Tuesday, he felt a twinge of fear. His co-workers, who got the same alert, asked whether they should evacuate.</p> <p>It turned out to be a false alarm, a computer glitch. The damage? An erosion of trust.</p> <p>"Now I have to check every single time, God forbid, there's a tornado warning, a tsunami alert, pick your poison," said Grosso, 25, a social media manager from Stamford. "I have to look at it and go, 'Is it a test? Was it sent in error?' And I could be wasting precious time in case it was real."</p> <p>Last month's bogus ballistic missile warning in Hawaii and this week's tsunami alert snafu have highlighted trouble spots and prompted calls for change in the nation's increasingly complex system for alerting Americans about dangerous weather, active shooters, kidnapped children, plant explosions and other emergencies.</p> <p>Both incidents have prompted calls for reform, including better training for emergency workers in charge of sending alerts.</p> <p>More than 1,000 federal, state and local government agencies have the ability to issue emergency alerts through an array of federally managed communications networks. It is a patchwork system that usually works as intended but can wreak havoc when it doesn't.</p> <p>In the Senate, legislation introduced this week in response to the false missile alert would establish standards for state and local agencies' participation in the national alert system, require federal certification of their incident management systems, and recommend steps for avoiding false alarms.</p> <p>Additionally, the Federal Communications Commission has ordered wireless providers to do a better job</p>

of targeting emergency alerts to only those in the affected area, with a geographic "overreach" of no more than one-tenth of a mile.

Aside from the false alarms, emergency agencies have been criticized for sending alerts to too many people or too few. In Alaska, for instance, a tsunami warning triggered by an undersea earthquake in January reached residents of Anchorage even though the city wasn't in danger. In Northern California wine country, where wildfires killed dozens of people in October, some residents complained that authorities failed to send an emergency alert to their phones.

"The emergency alerting system is really a whole collection of systems, and there are various places where it can break down," said Dan Gonzales, a scientist at RAND Corp. who studies emergency alert systems. "With so many organizations involved, it's difficult to make it foolproof."

The risk of too many false alarms, Gonzales said, is that "people will ignore warnings if they believe they're not accurate or not relevant."

That was on vivid display Tuesday when AccuWeather, the private forecasting service, took what was intended to be a routine, monthly National Weather Service test message and sent it as a real warning to subscribers up and down the East Coast, the Gulf of Mexico and the Caribbean.

Katia Del Negro, 33, was at home in New York City when she got the alert, her surprise quickly turning to skepticism.

"I definitely got a bit concerned when I saw that many people along the East Coast received the alert," she said. "But at the same time it seemed so weird, so I thought something was off, thinking back about what happened in Hawaii not long ago."

AccuWeather, based in State College, Pennsylvania, blamed the weather service, saying the government agency miscoded the test message. That caused the company's computers to interpret it as real and push it to subscribers' cellphones, according to AccuWeather.

The weather service insisted its message was coded properly.

Daryl Herzmann, a systems analyst in the agronomy department at Iowa State University, said the message contained a "T" flag, indicating test. But the weather service also recycled a tracking number it used in a previous tsunami warning, probably confusing AccuWeather's computers, he said.

The weather service has been recycling tracking numbers for years, said Herzmann, who runs an environmental data project that compiles information from the weather service.

Weather service spokeswoman Susan Buchanan had no comment on Herzmann's observation. She pointed to an earlier statement that said the agency is "working with private sector companies to determine why some systems did not recognize the coding."

It was human error, not a computer problem, that caused last month's panic in Hawaii. A state worker mistook a drill for a missile attack and sent an emergency alert to cellphones and broadcast stations. It took nearly 40 minutes for the Hawaii Emergency Management Agency to figure out a way to retract the alert.

The worker was fired and the agency chief resigned.

"This cry of wolf damaged the credibility of alert messaging, which can be dangerous when a real emergency occurs," Lisa Fowlkes, an FCC official, said Tuesday during a House committee hearing on the nation's emergency messaging system.

Jeremy DaRos, of Portland, Maine, who lives near the water and got the erroneous tsunami alert, said he is concerned that people won't take seriously the emergency alerts they get in an actual crisis.

	"People need to trust the alerts they're pushing out," he said. "This is important stuff, and to have two incidents in the span of a month is just unacceptable."

<b>HEADLINE</b>	<b>02/10 OxyContin maker stops opioid promotion</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/americas-heroin-epidemic/oxycontin-maker-purdue-stop-promoting-opioids-light-epidemic-n846726">https://www.nbcnews.com/storyline/americas-heroin-epidemic/oxycontin-maker-purdue-stop-promoting-opioids-light-epidemic-n846726</a>
<b>GIST</b>	<p>Purdue Pharma, the company best known for selling the prescription painkiller OxyContin, announced on Saturday that they would stop marketing opioid drugs to doctors. The move comes amid a series of state and municipal lawsuits that blame the company for contributing to the opioid epidemic.</p> <p>Purdue has faced criticism for more than a decade that it has aggressively and irresponsibly pushed the sale of its drug OxyContin. The company said Saturday that it would cut its sales force by more than 50 percent, with approximately 200 people remaining in the department.</p> <p>"We have restructured and significantly reduced our commercial operation and will no longer be promoting opioids to prescribers," Purdue said in a statement.</p> <p>The company plans to run all questions about its highly profitable drug Oxycontin — which the American Addiction Centers said has a strong “potential for addiction and subsequent withdrawal symptoms” — through its medical affairs department.</p> <p>Dr. Andrew Kolodny, the co-director of Opioid Policy Research at the Heller School for Social Policy and Management, said he wished that the company had decided to stop marketing the drug years ago and that other opioid manufacturers would agree to do the same.</p> <p>"The problem we have is doctors over-prescribing opioids, and it's difficult to promote more cautious prescribing if manufacturers are sending drug reps into doctor's offices and advertising in medical journals and investing millions to get them to prescribe more," Kolodny said.</p> <p>"Overall, the impact will be small because the genie is out of the bottle," he said of the opioid manufacturer's decision. "But if other opioid manufacturers would do the same, it would have a bigger effect."</p> <p>Purdue generated \$1.94 billion in Oxycontin sales in 2017, according to Symphony Health Solutions. That is approximately \$1 billion less than its all-time high in 2013.</p> <p>Because of Oxycontin's rising cost, many people who developed an addiction to the opioid subsequently turned to heroin, contributing to the ongoing drug epidemic.</p>

<b>HEADLINE</b>	<b>02/11 Iran marks anniversary Islamic Revolution</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/iran-marks-anniversary-islamic-revolution-protests-52996962?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/iran-marks-anniversary-islamic-revolution-protests-52996962?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Hundreds of thousands of Iranians rallied on the streets Sunday to mark the 39th anniversary of the 1979 Islamic Revolution, just weeks after anti-government protests rocked cities across the country.</p> <p>Demonstrators burned American and Israeli flags, as well as images of President Donald Trump, whose refusal to re-certify the nuclear deal with world powers has riled Iranians. A few burned a white sheet reading "BARJAM," the Farsi acronym for the 2015 nuclear accord that Tehran signed with world powers.</p>

Such activities commonly mark the anniversary, which commemorates the overthrow of U.S.-backed Iranian Shah Mohammad Reza Pahlavi. That began a period of hostilities between Iran and the West, including an attack on the U.S. Embassy in Tehran and the subsequent hostage crisis.

However, President Hassan Rouhani made a point to call for unity among Iran's people across its political spectrum, from hard-liners backing the theocratic government to reformists demanding change.

"When the Revolution took place, we pushed some off the revolutionary train that we should have not," Rouhani told a massive crowd at Tehran's central Azadi Square. "Today, we have to let them board the train again."

Rouhani didn't specifically name those pushed aside, though the Islamic Revolution and its aftermath saw the Islamists surrounding Ruhollah Khomeini purge liberals, communists and others. More recently, Iran has put leaders of its 2009 Green Movement under house arrest, where they remain even today despite Rouhani's pledges to free them.

The comments appeared aimed as being a salve following a New Year marred by anti-government protests. The demonstrations initially focused on Iran's poor economy despite the nuclear deal, but quickly spiraled into chants directly challenging Iran's theocratic government.

In his speech, Rouhani promised more job opportunities and better economic condition in the near future. Meanwhile, dozens of hard-liners chanted: "Death to liars, death to the seditious!"

<b>HEADLINE</b>	<b>02/11 Crash: parts shortage grounded plane 2yrs</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/latest-parts-shortage-grounded-crashed-jet-years-53001264">http://abcnews.go.com/International/wireStory/latest-parts-shortage-grounded-crashed-jet-years-53001264</a>
<b>GIST</b>	<p>The Latest on a Russian plane crash Sunday near Moscow (all times local):</p> <p>4:25 p.m.</p> <p>Russia's state news agency Tass says the passenger airliner that crashed outside Moscow on Sunday had been flying since 2010, with a two-year break because of a shortage of parts.</p> <p>The plane, an Antonov An-148 jet, was ordered by Rossiya Airlines, a subsidiary of Aeroflot, but was put into storage during 2015-2017 because of a lack of parts. Tass reports it re-entered service for Saratov Airlines in February 2017.</p> <p>The jet was developed by Ukraine's Antonov company in the early 2000s, and was manufactured in both Ukraine and Russia.</p> <hr/> <p>3:50 p.m.</p> <p>A Russian passenger plane believed to be carrying 71 people has crashed near Moscow, shortly after takeoff from one of the city's airports. No survivors have been reported.</p> <p>The An-148 regional jet disappeared from radar screens Sunday afternoon a few minutes after departing from Domodedovo Airport en route to the city of Orsk, some 1,500 kilometers (1,000 miles) southeast of Moscow. The plane reportedly belonged to Saratov Airlines, a Russian commercial carrier.</p> <p>Plane fragments were found in the Ramenskoye area 40 kilometers (25 miles) from the airport. Footage on Russian state television showed them strewn across a snowy field with no buildings nearby.</p>

<b>HEADLINE</b>	<b>02/09 Baltimore PD officers 'integrity polygraphs'</b>
<b>SOURCE</b>	<a href="http://baltimore.cbslocal.com/2018/02/09/polygraph-testing-baltimore-police/">http://baltimore.cbslocal.com/2018/02/09/polygraph-testing-baltimore-police/</a>
<b>GIST</b>	<p>BALTIMORE (WJZ) — In his first press conference, new Baltimore police commissioner Darryl De Sousa said he is rearranging the department and one of his first moves will be to crack down on officer misconduct. In a somewhat confusing address to reporters, he explained what the department will look like under his leadership, already changing his mind on one of two deputy commissioner spots to be filled.</p> <p>He's in. He's out. He's maybe in again. The confusing back-and-forth at Friday morning's press conference leaves one of the two top spots in the department empty after just 24 hours earlier a chart was distributed to media outlets listing Thomas Cassella as the next Deputy Commissioner of Operations.</p> <p>"During a subsequent background check, I discovered something that made me slow down that process and reconsider," explained De Sousa. "Currently at this point, we're not going to move forward."</p> <p>In his first round with reporters as the newly-appointed commissioner, De Sousa said he's pulling back on Cassella's appointment on the heels of a memo reportedly leaked to media outlets detailing past complaints against the 23-year veteran and now-retired officer. Then, police spokesperson TJ Smith said the leak is still under investigation and Cassella was not out of the running.</p> <p>"The commissioner has not made a decision, so that's the answer," said Smith.</p> <p>As they look into the legitimacy of the leaked document, the commissioner said they will also be watching their own.</p> <p>"I cannot minimize is the fact that there are corrupt cops. GTTF is awful. It sickens me to my stomach to see what occurred," he said.</p> <p>The once-elite gun task force consumed by corruption that was prosecuted federally is now the inspiration for a new "integrity division" which will police the police. It will include random integrity tests, along with random polygraph tests and the launching of an overtime abuse unit.</p> <p>DeSousa emphasized his priorities now are eliminating police corruption while boosting the safety of the city.</p>

<b>HEADLINE</b>	<b>02/11 Hawaii's cesspools threaten tourism</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/hawaiis-cesspools-threaten-drinking-water-tourism-1518357620">https://www.wsj.com/articles/hawaiis-cesspools-threaten-drinking-water-tourism-1518357620</a>
<b>GIST</b>	<p>HONOLULU—Paradise has a sewage problem.</p> <p>Cesspools—holes in the ground where untreated human waste is deposited—have become a crisis in Hawaii, threatening the state's drinking water, its coral reefs and the famous beaches that are the lifeblood of its tourist economy.</p> <p>Sewage from cesspools is seeping into some of Hawaii's ocean waters, where it has been blamed for infections suffered by surfers and snorkelers. It is also entering the drinking water in part of the state, pushing nitrate levels close to the legal limit.</p> <p>Hawaii has 88,000 cesspools across its eight major islands, more than any other state. Collectively, they deposit 53 million gallons of raw sewage into the ground every day, according to the state health department. More than 90% of the state's drinking water comes from groundwater wells.</p>

State lawmakers, who outlawed new cesspools in 2016, are scrambling to find a solution to the thousands that exist.

Replacing all of the state's cesspools with alternate sewage systems would cost at least \$1.75 billion, according to the health department.

The problem is concentrated in suburbs and rural areas outside Honolulu, where cesspools have long been the primary method for storing sewage from homes.

Most beaches remain safe for swimming, and public water remains safe to drink for now, state officials said. The tourism industry continues to grow each year, despite instances of contamination at beaches.

But the problem is growing worse, officials said, as the state's population has continued to grow.

In Upcountry Maui, a rural area in the central part of the island where drinking-water wells are most threatened by cesspools, officials are monitoring water quality closely.

At one groundwater well, nitrate levels are already at 8.7 milligrams a liter; the legal limit is 10, and the Department of Health estimated that some parts of the aquifer are already over that limit. Environmentalists say they are worried about the potential effect of the water on infants, who can be killed by high levels on nitrates, which are chemicals found in fertilizer and sewage.

State Sen. J. Kalani English, who represents Upcountry Maui, said it can cost as much as \$100,000 to replace each cesspool, a prohibitive figure for most property owners. There are about 8,000 cesspools in Upcountry Maui alone.

Replacing the cesspools is "a huge financial burden," he said.

Hawaii's cesspool problem is a remnant of its agricultural past, when many parts of the state were off the electrical grid. Mr. English said, growing up on Maui, he remembered digging holes for outhouses, and then after a few years filling them with lye and digging new ones.

Outside of Honolulu, the state remains largely rural, and the mountainous terrain makes laying sewer lines to connect to sewage treatment plants expensive and, in many areas, not feasible.

Many bathrooms in homes outside Honolulu still pump sewage into nearby holes in the ground.

Before they were outlawed, the state received about 500 requests to put in new cesspools each year. Last year, the state passed a law requiring all cesspools to be replaced by 2050.

Yet, some residents resist plans to replace cesspools, worried about expense. In January, Upcountry Maui residents overwhelmed a Department of Public Health meeting, complaining about potential costs.

"You may want a clean environment, but you can't afford to pay for it," said Keith Kawaoka, deputy director for environmental health at the state agency. "It's a real dilemma."

Lawmakers are still searching for solutions. They recently called on engineers to bring them new ideas, adding that simply converting to septic systems—in which solids and liquids of waste are separated and the solids are later pumped out—wouldn't solve the contamination problems in some areas, because nitrates would still seep into the groundwater.

Health officials said the 740 cesspools around Kahaluu, on the east coast of Oahu, contributed to high bacteria counts in the bay.

"Skin infections consistent with sewage-contaminated surface waters have been documented in this area,"

	<p>the department's report said.</p> <p>Officials said it is difficult to definitively prove that any specific infection resulted from sewage contamination.</p> <p>In Puako, a popular snorkeling destination on the Big Island, residents fear that sewage from the area's 150 cesspools has already harmed the coral reef, which is its signature tourist attraction.</p> <p>Peter Hackstedde, president of Puako Community Association, said he now avoids the water if he has a cut; he has gotten infected before.</p> <p>He said the community had already spent more than \$2.5 million of its own money studying the problem.</p> <p>"We found that sewage is leaking into the ocean, and we swim in it," Mr. Hackstedde said.</p> <p>They now hope to install a small-scale sewage-treatment plant, which would avoid having to dig and install pipes to the nearest town, about 50 miles away.</p> <p>A treatment plant would cost about \$15 million, Mr. Hackstedde said, and residents don't want to put up that money on their own. He said his association is hoping for a public-private partnership.</p> <p>"Everyone who lives down here is pretty much for cleaning up the ocean," Mr. Hackstedde said. "We just need the money."</p>

<b>HEADLINE</b>	<b>02/10 Hezbollah hails Syria; 'new strategic era'</b>
<b>SOURCE</b>	<a href="https://www.timesofisrael.com/hezbollah-downing-of-israeli-f-16-the-start-of-a-new-strategic-era/">https://www.timesofisrael.com/hezbollah-downing-of-israeli-f-16-the-start-of-a-new-strategic-era/</a>
<b>GIST</b>	<p>Hezbollah hailed Syria's air defenses after they reportedly downed an Israeli fighter jet on Saturday, saying it marked the start of a "new strategic era."</p> <p>"This is the beginning of a new strategic era which puts an end to the violation of Syrian airspace and territory," the Lebanese terror group said in a statement published by Lebanon's ANI news agency.</p> <p>Hezbollah, an Iranian proxy backing Syrian President Bashar Assad in his country's civil war, praised the "vigilance of the Syrian army," and said it had "bravely blocked Israeli warplanes and downed an F-16."</p> <p>It also said the Syrian response marked "a decisive end to old arrangements."</p> <p>Hezbollah supporters were celebrating the incident on Saturday across from the Israeli city of Metulla, according to Israeli TV reports.</p> <p>The statement from Hezbollah came after its allies Iran and Syria denied that an unmanned drone Israel said it shot down violated the Jewish state's airspace, calling Israeli allegations "lies," and saying the drone was on a regular mission gathering intelligence on the Islamic State.</p>

<b>HEADLINE</b>	<b>02/11 Israel boosts air defense</b>
<b>SOURCE</b>	<a href="http://www.jpost.com/Arab-Israeli-Conflict/Preparing-for-war-in-the-north-Israel-boosts-air-defense-542284">http://www.jpost.com/Arab-Israeli-Conflict/Preparing-for-war-in-the-north-Israel-boosts-air-defense-542284</a>
<b>GIST</b>	<p>Israel has boosted its air defense in the North following a significant confrontation between the Jewish State, Syria and Iran which led to the loss of an F-16 fighter jet.</p>

While the army refused to comment on the reports, witnesses reported seeing a convoy of missile-defense batteries heading north near the Israeli-Arab city of Baka al-Gharbiya. Other witnesses posted photos of several trucks carrying the batteries on central highways in northern Israel.

Israel's air defenses currently include the Iron Dome, designed to shoot down short-range rockets; the Arrow system, which intercepts ballistic missiles outside of the Earth's atmosphere and the David's Sling missile-defense system, which is designed to intercept tactical ballistic missiles, medium- to long-range rockets and cruise missiles fired from ranges of between 40 km. to 300 km.

Israel also has Patriot missile batteries stationed in the North and has used them to intercept drones infiltrating into Israeli airspace from Syria. In September, an Iranian-built unmanned aerial vehicle breached the "Bravo line" that marks the Syrian demilitarized zone, and was intercepted by an Israeli Patriot anti-ballistic missile launched from a station near the northern city of Safed.

The Arrow system was first used in April when it was launched to intercept three surface-to-air missiles fired toward IAF jets by Syrian-regime air defense.

On Saturday, an Iranian drone, which took off from Syria's T4 airbase in northern Homs province, flew through Jordanian territory before it infiltrated into Israel. It flew for about a minute and a half in the northern Jordan Valley before it was shot down by a helicopter flown by Lt.-Col. "L.", commander of the 113 Squadron.

"The squadron was sent to protect the country's skies," L. said. "We identified the aircraft as an Iranian drone, and when it crossed the border, we shot it down into Israeli territory. The squadron is ready and prepared for any task it is given."

IAF chief-of-air-staff Brig.-Gen. Tomer Bar, who is second in command of Israel's air force, said the drone was an advanced model with a low signature that Israel had never intercepted before. It is currently being examined by the IDF.

In retaliation for the incursion, eight jets took off to strike the drone's launch site. During the operation, Syrian regime forces fired around 20 anti-aircraft missiles at the jets. The pilot and navigator of one of the planes ejected themselves when they recognized that one of the missiles had locked onto their jet.

According to the IDF, Iran and the Quds Force of the Revolutionary Guards have been operating at the T4 base "for a long time, backed by Syrian-army forces and with the approval of the Syrian regime."

"Iran has been using the base in recent months for the purpose of transferring weaponry to be used against Israel," said the IDF Spokesperson's Unit. "These actions by Iran at the base are ostensibly carried out under the guise of supporting the fighting against the global Islamic jihad forces, but the actions carried out in the past 24 hours prove that its real concern is direct, violent action against Israel."

"In the Iranian action, all the Israeli warnings against Iranian consolidation in Syria were realized," it continued. "The attack was initiated and Israel was forced to respond first to the threat in its territory and then to the hostile elements operating from the Syrian territory opposite it."

<b>HEADLINE</b>	<b>02/11 Quake, wind, fire hit Winter Olympics</b>
<b>SOURCE</b>	<a href="https://www.yahoo.com/news/earthquake-wind-fire-extreme-conditions-hit-olympics-073136245--oly.html">https://www.yahoo.com/news/earthquake-wind-fire-extreme-conditions-hit-olympics-073136245--oly.html</a>
<b>GIST</b>	Pyeongchang (South Korea) (AFP) - An earthquake triggered an alert and high winds disrupted competition at the Pyeongchang Winter Olympics Sunday, as officials warned of a severe freeze and urged fans to wrap up warm.

After a bitterly cold first night of competition, a shallow 4.6-magnitude earthquake jolted the eastern portion of South Korea overnight, prompting warnings on mobile phones.

Early on Sunday, ski officials were forced to postpone the showpiece men's downhill until Thursday as buffeting winds made the high-speed slope too dangerous for competition.

Later, the women's slopestyle snowboarding also fell victim to the wind, as the qualifying session was scrapped with riders going straight into the final on Monday.

It comes after the first ski jumping final finished more than an hour behind schedule, past midnight on Saturday, as competitors were held up by swirling winds.

As if to complete the set of extreme conditions, an alert warning of a high risk of fire -- given the dry, windy weather -- also flashed up on mobile phones on Sunday.

Organisers gave assurances that the Games were at no risk from earthquakes, with venues built to withstand even strong tremors. Sunday's quake was measured at magnitude-4.7 by the US Geological Survey and was about 260 kilometres (160 miles) away.

"All the facilities in the Games area are built so they can withstand strong earthquakes over 7.0... so I assure you there was no issue regarding these facilities," said Sung Baik-you, spokesman for the Games organisers.

Of more concern for the sparse crowds at the outdoor events will be the biting cold, which has already made Pyeongchang one of the chilliest Olympics on record -- and which is set to dramatically worsen.

Temperatures are forecast to plunge to -14 degrees Celsius (6.8 Fahrenheit) on Monday, will feel like a shivering -25C in the strong, mountainside wind.

"People are advised to dress warmly and wear hats and gloves to keep themselves warm," warned Sung.

<b>HEADLINE</b>	<b>02/10 Italians protest shooting of migrants</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/10/europe/italy-migrants-protest/index.html">https://www.cnn.com/2018/02/10/europe/italy-migrants-protest/index.html</a>
<b>GIST</b>	<p>Rome (CNN) — The shooting of African migrants allegedly by a suspect aligned with Italy's far-right, neo-fascist parties has sparked serious political debate about how the country is reconciling its fascist past.</p> <p>Luca Traini is accused of going on a shooting rampage February 3 in the central Italian town of Macerata and performing the fascist salute upon his arrest. Six African migrants were injured. The migrants are part of the wave of more than 600,000 people who have arrived by sea from North Africa since 2013 when Italy last went to the polls.</p> <p>On Saturday, thousands of centrist and leftist supporters gathered under heavy police guard in Macerata to demonstrate against the rise of Italy's neo-fascist parties. Organizers say 15,000 people attended.</p> <p>The march was held inside a fenced-off perimeter, and police banned fascist groups from participating. Supporters waved Communist Party and Antifa (anti-fascist) flags. Some held banners with "anti-fascism" and "anti-racism," while others displayed signs with fascist and Nazi symbols crossed out.</p> <p>Few migrants joined the march, according to Sammy Kunoun, head of the Nigerian Community of Macerata. Police had strongly discouraged migrant groups from protesting.</p> <p>Anti-fascist demonstrations were held in other Italian cities, including Piacenza, where the far-right, neo-fascist fringe group CasaPound engaged in violent clashes with police, according to Italian news reports.</p>

	On Wednesday, a group of supporters of the Forza Nuova neo-fascist party, which openly supports the recent shooting spree and has offered to pay the suspect's legal bills, clashed with police in Macerata, which has a high concentration of African migrants and those seeking political asylum.

<b>HEADLINE</b>	<b>02/11 Israel PM: airstrikes dealt 'severe blows'</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/10/middleeast/israel-military-jet-crash/index.html">https://www.cnn.com/2018/02/10/middleeast/israel-military-jet-crash/index.html</a>
<b>GIST</b>	<p>CNN) — Israeli Prime Minister Benjamin Netanyahu said his nation dealt "severe blows" to Iranian and Syrian forces following the weekend downing of an Israeli fighter jet over northern Israel.</p> <p>The Prime Minister said Israel would do so again if necessary.</p> <p>"We made it unequivocally clear to everyone that our rules of action have not changed one bit; we will continue to strike at every attempt to strike at us. This has been our policy and it will remain our policy."</p> <p>An Israeli F-16 fighter jet was hit and went down Saturday in northern Israel after coming under "massive anti-aircraft fire" from Syrian forces, according to the Israeli army.</p> <p>The incident came after an Israeli combat helicopter successfully intercepted an Iranian unmanned aerial drone that had been launched from Syria, the Israel Defense Forces said.</p> <p>Both pilots aboard the Israeli jet ejected, the Israeli army said. One pilot was severely injured during the ejection, while the second was lightly wounded.</p> <p>In retaliation for the downed jet, Israeli forces attacked 12 targets in Syria, including three aerial defense batteries and four targets described as Iranian, the IDF said.</p> <p>An IDF statement described the four Iranian targets as "part of Iran's military establishment in Syria."</p> <p>Netanyahu defended Israel's actions.</p> <p>"Our policy is absolutely clear: Israel will defend itself from every attack and from every attempt to harm our sovereignty," Netanyahu said. "Iran made such an attempt today. They violated our sovereignty, they</p>

	<p>infiltrated a drone into Israel's territory from Syrian territory."</p> <p>The US firmly backs Israel, with White House Press Secretary Sarah Sanders issuing a statement saying, "Israel is a staunch ally of the United States, and we support its right to defend itself from the Iranian-backed Syrian and militia forces in southern Syria."</p> <p>US State Department spokeswoman Heather Nauert said in a statement Saturday that the US was "deeply concerned about today's escalation of violence over Israel's border."</p> <p>"Iran's calculated escalation of threat, and its ambition to project its power and dominance, places all of the people of the region -- from Yemen to Lebanon -- at risk," Nauert said. "The US continues to push back on the totality of Iran's malign activities in the region and calls for an end to Iranian behavior that threatens peace and stability."</p> <p>Meanwhile, Russia's Foreign Ministry was much more even-handed in its statement, saying that "the latest developments and attacks on Syria were viewed with serious concern" and that the losses to Syria and damage resulting from them were being examined.</p>

<b>HEADLINE</b>	<b>02/10 UN condemns bloody week in Syria</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/10/middleeast/syria-violence-untied-nations-intl/index.html">https://www.cnn.com/2018/02/10/middleeast/syria-violence-untied-nations-intl/index.html</a>
<b>GIST</b>	<p>(CNN) — Waves of deadly airstrikes against rebel-held areas in Syria have made this week "one of the bloodiest periods of the entire conflict," the UN human rights chief said Saturday.</p> <p>Opposition-controlled areas in Syria's northwestern province of Idlib and Eastern Ghouta, outside the capital, Damascus, have suffered intensified bombardment by what observers say are Russian-backed Syrian government forces.</p> <p>UN High Commissioner for Human Rights Zeid Ra'ad Al Hussein called for urgent international action to halt the bloodshed after reports of 277 civilian deaths between Sunday and Friday. More than 800 civilians also were reported injured, the UN human rights office said.</p> <p>"The past week has been one of the bloodiest periods of the entire conflict, with wave after wave of deadly airstrikes leading to civilian casualties in areas of Eastern Ghouta and Idlib," Zeid said in a strongly worded statement.</p> <p>"The no-holds-barred nature of this assault is evidenced by reports that at least nine medical facilities, six of them in Idlib and three in Eastern Ghouta, were hit by airstrikes. Even by Syria's atrocious standards, these are exceptionally deplorable developments."</p> <p>Paramedics and volunteers were also killed and injured in a number of places "after second, third or fourth rounds of airstrikes apparently deliberately targeted places that had already been hit earlier in the day," the statement said.</p> <p>More than 200 of those killed were in Eastern Ghouta -- more than a quarter of them were children.</p>

<b>HEADLINE</b>	<b>02/10 Surveillance system or public safety tool?</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/surveillance-system-or-public-safety-tool-seattle-dismantles-controversial-wireless-mesh-network/">https://www.seattletimes.com/seattle-news/surveillance-system-or-public-safety-tool-seattle-dismantles-controversial-wireless-mesh-network/</a>
<b>GIST</b>	Seattle's wireless mesh network, a node of controversy about police surveillance and the role of federal funding in city policing, is coming down.

Megan Erb, spokeswoman for Seattle Information Technology, said the city has budgeted \$150,000 for contractor Prime Electric and city employees to remove dozens of surveillance cameras and 158 “wireless access points” — little, off-white boxes with antennae mounted on utility poles around the city.

When the mesh network was bought and installed in 2013, with \$3.6 million from the Department of Homeland Security, the Seattle Police Department (SPD) said it would be a valuable public-safety device for port security and first-responder communication during emergencies. Critics from the American Civil Liberties Union (ACLU) of Washington argued it was an apparatus for state surveillance hiding behind a public-safety smile.

Either way, it took the Seattle City Council by surprise.

The mesh network, according to the ACLU, news reports and anti-surveillance activists from Seattle Privacy Coalition, had the potential to track and log every wireless device that moved through its system: people attending protests, people getting cups of coffee, people going to a hotel in the middle of the workday.

In November 2013, shortly after the news stories about it came out, SPD spokesman Sean Whitcomb announced: “The wireless mesh network will be deactivated until city council approves a draft (privacy) policy and until there’s an opportunity for vigorous public debate.”

That policy never materialized. Now crews are tearing its hardware down and repurposing the usable parts for other city agencies, including Seattle Department of Transportation traffic cameras.

Erb said the city had hoped to remove the hardware earlier, but couldn’t because of work-schedule delays. “Seattle City Light is eager for us to remove old equipment from their poles,” she added, “so others, including possibly commercial cellular carriers, can upgrade their equipment.”

SPD declined several times to discuss the removal of the network.

“This is one good, granular victory,” said Shankar Narayan, Washington state’s technology and liberty director of the ACLU. “It’s an issue we’d advocated around for a very long time. We have a longstanding principle that suspicionless surveillance of general populations is not useful and chills people’s constitutionally protected rights.”

When the mesh-network debate first erupted in 2013, SPD spokesman Jonah Spangenthal-Lee wrote on the department’s blotter that the system “can and will be used a number of ways by a variety of different agencies.”

That versatility turned out to be a public-relations bug, instead of a feature.

Digital networks with surveillance potential, Narayan said, have a cost: “Not just in terms of public dollars, but community trust, willingness to attend a protest — we know that people who know they’re being watched will act differently. We’re glad to see the mesh network taken away.”

This isn’t the first time SPD has been pressured to abandon a Homeland Security-funded tool. In 2013, it gave up its drones. Like the mesh network, they were quietly bought with federal money and became a flashpoint for public outcry.

“We live in a brave new world where data and algorithms can be used against you without transparency,” Narayan said. “We don’t know who collected data, sold it to a data packager, then sold it, for example, to an HMO that will raise your health-insurance premium based on your reckless driving.”

The life cycles of the drones and the mesh network, Seattle City Council President Bruce Harrell said, have been a learning experience for Seattle.

SPD “needed to respect the public process, explain the technology to the public in a transparent manner, listen to the public’s concerns and obtain council approval via ordinance prior to installation.”

In 2013, the city council passed a surveillance ordinance giving it more oversight in the acquisition of devices with surveillance capabilities.

Last year, that ordinance was amended and bulked up, requiring city departments to report their surveillance-enabled technologies already in use and present them for review by the council.

To date, city departments have identified 28 technologies — from Seattle Department of Transportation’s license-plate readers to SPD tools like iBase, a “crime analysis tool allows for configuring, capturing, controlling, analyzing and displaying complex information and relationships in link and entity data.”

So what, exactly, does that do?

“That’s the point,” Narayan said with a chuckle. “All we have now are vague descriptions — it could be anything from a simple graphic representation of a spreadsheet to a complex analytic tool that establishes relationships to show that somebody might be a gang member.”

The council’s scrutiny of the city’s surveillance tools, Narayan said, will probably begin in March.

In the aftermath of the drones and mesh-network controversies, he added, the ACLU has had productive conversations with SPD: “They have a better understanding that if they want to roll out these technologies, they will have to be ready to answer tough questions.”

Removal of the mesh network is “a clear win for privacy,” said Phil Mocek, co-founder of Seattle Privacy Coalition. “Hopefully, this move is indication that city leaders have learned their lesson and that we will continue to see increased sanctuary from unwarranted surveillance in Seattle.”

<b>HEADLINE</b>	<b>02/11 Snohomish Co. flu deaths lead state</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/news/county-leads-state-in-flu-deaths-now-at-27/">http://www.heraldnet.com/news/county-leads-state-in-flu-deaths-now-at-27/</a>
<b>GIST</b>	<p>EVERETT — Influenza’s spread seems to have ebbed slightly, but that doesn’t mean the influenza season is over.</p> <p>Four more people have died in Snohomish County due to complications from the flu. That brings the season’s death toll to 27, the most of any county in Washington. King County was second highest, with 23 flu-related deaths.</p> <p>Statewide, 151 people have died from influenza, according to state Department of Health data.</p> <p>The most recent deaths in Snohomish County were two women from Marysville, one in her mid-60s and another in her late 60s; a woman in her mid-80s from Edmonds; and a woman in her mid-80s from Everett. All had health conditions that made them more vulnerable to the flu.</p> <p>Other measures of local flu activity include 256 hospitalizations for flu-related illnesses and four long-term care facilities reporting flu outbreaks, said Heather Thomas, a Snohomish Health District spokeswoman.</p> <p>“We expect the flu season to be here for several more weeks,” Thomas said. “It does go through spring on occasion. Last year we had flu deaths through May.”</p> <p>Although flu activity remains high in Snohomish County, Washington seems to have gotten a bit of a</p>

	break from influenza compared to much of the rest of the nation.  While flu activity remains high here, it is not continuing to rise.

<b>HEADLINE</b>	<b>02/10 Seattle school bus strike over</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/896894/seattle-school-bus-strike-ends/">http://mynorthwest.com/896894/seattle-school-bus-strike-ends/</a>
<b>GIST</b>	<p>The Seattle school bus driver strike came to an end Saturday after nine days of picketing. Students can expect yellow school bus service to start back up Monday morning.</p> <p>“This is life-changing,” said driver Olivia Moore, a member of the Teamsters Local 174. “This is what we have been fighting for. I can go to the doctor. I can retire someday. I can't even tell you how much that</p>

	<p>means.”</p> <p>The union’s website notes that Moore has been “struggling to receive treatment for cancer despite having no health insurance.” Health care was among the two main points of disagreement between employer First Student and the union. The union also fought for a better retirement package. The Teamsters report that they achieved both in negotiations that wrapped up late last week — with the help of a federal negotiator.</p> <p>The union voted 97 percent in favor of accepting the contract Saturday morning. The vote put an end to the strike that began on Feb. 1 with about 400 drivers in Seattle. It is estimated that about 12,000 students had to find alternate transportation to school last week.</p>

<b>HEADLINE</b>	<b>02/11 Seattle: homeless collide w/donation bins</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/895908/seattle-homeless-donation-bins/">http://mynorthwest.com/895908/seattle-homeless-donation-bins/</a>
<b>GIST</b>	<p>It’s a case of compassion versus compassion as Seattle’s homeless crisis collides with charity donation bins.</p> <p>“The homeless have been a real challenge for us because they do get into these boxes, steal clothing, dump them over, and do activity around the boxes which gives us a bad reputation for trying to do good,” said a representative with Northwest Center.</p> <p>Donation boxes are often hosted on private property, where people can drop off used clothing for charities. But they have become targets for thieves and those experiencing homelessness, prompting neighbor complaints, and damaging charity operations.</p> <p>“They get in there, crawl in there, sleep in there, use it as a restroom, do drugs in there,” the representative said. “And then we might catch them in there. A driver will go to service it and someone is sleeping in there.”</p> <p>The representative with Seattle’s Northwest Center did not want to be named in this article, but would discuss how the charity is dealing with the homeless crisis. The charity collects used clothes in donations bins around town, then sells the clothes to Value Village. The revenue goes to programs supporting children and adults with disabilities in the region.</p> <p>“I have complete compassion,” the representative said. “We work with people who have a huge barrier to employment and opportunities in their communities already. With the homeless, you want to be compassionate. But it doesn’t seem to work. It doesn’t seem they want to get out. It’s like a lifestyle – an off-the-grid lifestyle. They don’t want to deal with the pain; they have this lifestyle.”</p> <p>The bin issue is now so severe that it is cutting into revenue for the charity. They regularly receive complaints about the bins from neighbors. One Seattle citizen group has had the issue go viral on Facebook.</p> <p>Northwest Center says that complaints about the donation bins are so common they often have to remove them and find another place to locate the boxes. Northwest Center has two employees dedicated to doing this – scheduling a bin removal in response to complaints, then finding a new home for it.</p> <p>“We lose an average of 10 (bins) a month, but we are constantly trying to find new places – it’s a game,” the Northwest Center rep said.</p> <p>While donations at Northwest Center are up for other methods (drop offs at the center, scheduling home pick-ups), donations at the bins are down. The representative estimated it was about a 10 percent drop over 2017 and attributes the decline to the homeless problem. The charity is now exploring new bins that are harder to get into.</p>

"I don't know if it will really help," the representative said. "If they want to get in, they will get in ... They cut the locks, break the locks."

Other charities with donation bins in Seattle would not go on the record. One charity said they have moved its bins indoors or to more secure locations. Another organization removed their bins out of the city altogether more than a year ago.

Northwest Center has dealt with donation theft for years. But over the past four years, it has gotten dramatically worse. It has halted its former home pickup program. Drivers used to take a route to get donations from porches, but people would find out their route, drive ahead and steal the donations. It now requires a scheduled home pickup.

The trucks at Northwest Center have also been broken into.

"We've had homeless cut off a fire extinguisher inside our van," the representative said. "It costs us."

"I have personally called (police) out to our headquarters with a theft in progress ..." they said. "After hours. I happened to be there working late at the office. They did eventually come, but I wasn't hopeful that it was going to result in anything."

That's because Northwest Center employees have often called the police about thefts and the donation bin issue in the past. The representative received a message from Seattle police officers that is commonly reported by other residents: there's nothing police can do — that it's not a high priority for officers. The representative said they have seen officers catch people breaking into cars near the headquarters, and then just send them along down the road.

The charity is therefore left to do business as usual — which has become the "game" of moving around the bins after each complaint, and taking a financial hit.

"The homeless situation in Seattle has gotten so bad it's affecting the way you do business," the representative said. "It affects how we get our revenue. It's costing us, it's costing other businesses, society, my tax dollars that have to pay to clean up the camps."

<b>HEADLINE</b>	<b>02/09 WA does not collect 'road rage' data</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/washington-state-does-not-collect-road-rage-data/697427782">http://www.kiro7.com/news/local/washington-state-does-not-collect-road-rage-data/697427782</a>
<b>GIST</b>	<p>BOTHELL, Wash. - Bridget Johns and her brothers own the Defensive Driving School based in Kirkland. So she spends her days teaching others how to drive. But even she couldn't avoid a speeding, aggressive driver.</p> <p>"There was a car behind me, a sports car, that was on my tail," she said. "Really, really pressing me to go faster. But there really wasn't any place for me to go."</p> <p>Then along came a second speeding car.</p> <p>"The flashing lights (were) going," she said. "He was a trooper in an unmarked car; pulled over the first one."</p> <p>And perhaps that trooper spared another from what happened to Abel Loreda.</p> <p>"I want to make this noticeable," said Loreda. "So I'll put this here."</p> <p>Loreda removed his prosthetic leg in a Pierce County Courtroom today. He wanted to show it to the man</p>

who sheared off his left foot in a fit of rage on I-5 in 2016.

Then just last night, a Pierce County man was shot dead by a motorcycle rider following a road-rage incident near Milton in what may be a case of self-defense.

The state has been trying to cut off road rage for decades. A video was produced by the Washington Traffic Safety Commission in the late 1990s. Officers described the aggressive driving they were seeing on the highway.

"Oh, she's following that car too close," one officer said.

"There we go," said another officer, as he watched a vehicle swerve into another lane. "That's what I was waiting for right there."

Nationwide, nearly 80 percent admit to raging on the road. KIRO 7 wanted to find out how many incidents of road rage happen here in Washington state. We called Washington State Patrol, WASH DOT, and the Washington Traffic Safety Commission.

And we found out something startling: Nobody tracks road rage incidents in this state.

"One of the things that we teach our students to do starting from the first driving lesson, is to notice what's going on around them," said Bridget Johns.

She says she teaches her students to leave enough space to avoid tangling with another driver.

"Have a space cushion," she said. "And so there's one in front of me. There's one in back of me. I can't really control what's going on in back of me. I can a little bit. But if someone cuts in front of me, I don't care because I have space."

So why doesn't the state collect data on road rage? Those to whom KIRO 7 spoke say they don't have a code or box to check for road rage when these incidents happen.

<b>HEADLINE</b>	<b>02/09 WA Task Force 1 for local response</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/wa-task-force-1-approved-for-local-response/281-516947927">http://www.king5.com/article/news/local/wa-task-force-1-approved-for-local-response/281-516947927</a>
<b>GIST</b>	<p>Next week, Pierce County and Washington State Emergency Management will sign an agreement to enable Washington State Task Force 1 (WA-TF1), one of 28 national Federal Emergency Management Agency (FEMA) urban search and rescue teams, to respond to state and local emergencies in Washington.</p> <p>WA-TF1 has responded to several federal disasters including Hurricane Harvey in Houston, Texas.</p> <p>But leaders say because they are a federal resource it's been harder to mobilize this team to respond to a disaster at home. During OSO, Pierce County had to make a special agreement with Snohomish county just to jump in and help.</p> <p>"It didn't delay the response for Oso it just created an extra layer of bureaucracy," said Scott Heinze, Deputy Director of Pierce County Emergency Management. "It's nice to know that if the call comes next week we have this agreement in place we won't have to go through the process and we'll hit the ground to save people."</p>

<b>HEADLINE</b>	<b>02/09 Claim: US Olympic system 'failed' athletes</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-gymnastics-usa-nassar-michigan-state/u-s-olympic-system-failed-abused-gymnasts-usoc-idUSKBNIFT32B">https://www.reuters.com/article/us-gymnastics-usa-nassar-michigan-state/u-s-olympic-system-failed-abused-gymnasts-usoc-idUSKBNIFT32B</a>
<b>GIST</b>	<p>PYEONGCHANG, South Korea (Reuters) - The U.S. Olympic system "failed" the hundreds of young female athletes sexually abused by former USA Gymnastics doctor Larry Nassar, United States Olympic Committee (USOC) Board of Directors Chairman Larry Probst said on Friday.</p> <p>"The Olympic system in the United States failed these athletes and we are part of the Olympic system in the United States," said Probst, speaking ahead of the opening ceremony of the Pyeongchang Winter Games.</p> <p>He also said the USOC had not taken steps quickly enough to contact gymnasts abused by Nassar and that it had erred by failing to attend earlier sentencing hearings.</p> <p>"That was simply a mistake," he said. "We should have been there."</p> <p>Former sports doctor Nassar last year pleaded guilty to molesting female athletes under the guise of medical treatment for nearly 20 years, and has been given two prison sentences in Michigan of 40 to 125 years and 40 to 175 years.</p> <p>He is also serving a 60-year federal term for child pornography convictions.</p> <p>UltraViolet Action, a women's advocacy group in the United States, on Friday called for USOC Chief Executive Scott Blackmun to resign for failing to adequately respond to reports of Nassar's abuse before he was criminally charged.</p> <p>A letter by the women's group signed by sexual abuse survivors says, "It's unconscionable and unacceptable that no one has been held accountable at the USOC."</p> <p>Dozens of the victims have accused officials at the USOC, USA Gymnastics and Michigan State University of failing to investigate complaints stretching back decades.</p> <p>The board of directors of USA Gymnastics stepped down after U.S. Olympic officials threatened to decertify the governing body.</p> <p>The USOC has announced an independent investigation into its own conduct that would help them understand "who knew what about Nassar's abuse, when and what they did with that information".</p>

<b>HEADLINE</b>	<b>02/08 Mass exodus San Francisco Bay Area</b>
<b>SOURCE</b>	<a href="http://sanfrancisco.cbslocal.com/2018/02/08/san-francisco-bay-area-mass-exodus-residents/">http://sanfrancisco.cbslocal.com/2018/02/08/san-francisco-bay-area-mass-exodus-residents/</a>
<b>GIST</b>	<p>SAN JOSE (KPIX 5) – The number of people packing up and moving out of the Bay Area just hit its highest level in more than a decade.</p> <p>Carole Dabak spent 40 years living in San Jose and now she’s part of the mass exodus that is showing no signs of slowing down.</p> <p>The retired engineer’s packing up and calling it quits about to move to the state of Tennessee.</p> <p>“I loved it here when I first got here. I really loved it here. But it’s just not the same,” Dabak said.</p> <p>Of course people come and go from the Bay Area all the time, but for the first time in a long time, more people are leaving the Bay Area than are coming in. And the number one place in the country for out-migration is now, right here.</p> <p>Russell Hancock with Joint Venture Silicon Valley said, “Silicon Valley has been this place that is growing. And it was mostly growing because...people relocating here and relocating from other parts of the world. That’s changing.”</p> <p>Joint Venture Silicon Valley’s own study of the out-migration says workers are moving to Sacramento, Austin, and Portland due to a number of factors. But topping the list is the high cost of housing.</p> <p>“You can’t even contemplate getting into the housing market here,” Hancock said. “And I don’t mean just service workers, I mean highly skilled professionals. The tech elite are having a hard time affording reasonable housing in Silicon Valley. So this is difficult, this makes it very difficult for employers trying to recruit.”</p> <p>Operators of a San Jose U-Haul business say one of their biggest problems is getting its rental moving vans back because so many are on a one-way ticket out of town.</p> <p>Dabak cites crowding, crime and politics as the reasons for her own exodus.</p> <p>“We don’t like it here anymore. You know, we don’t like this sanctuary state status and just the politics here,” she said.</p> <p>She plans to sell her home for about \$1 million, buy a much larger place near Nashville for less than half that and retire closer to family and friends.</p> <p>Nationwide, the cities with the highest inflows, according to Redfin are Phoenix, Las Vegas, Atlanta, and Nashville.</p>

<b>HEADLINE</b>	<b>02/09 Flu season still getting worse</b>
<b>SOURCE</b>	<a href="https://apnews.com/da19ce2ea2354b5db3cc1cf78220fc/Flu-season-still-getting-worse;-now-as-bad-as-2009-swine-flu">https://apnews.com/da19ce2ea2354b5db3cc1cf78220fc/Flu-season-still-getting-worse;-now-as-bad-as-2009-swine-flu</a>
<b>GIST</b>	NEW YORK (AP) — The flu has further tightened its grip on the U.S. This season is now as bad as the swine flu epidemic nine years ago.

A government report out Friday shows 1 of every 13 visits to the doctor last week was for fever, cough and other symptoms of the flu. That ties the highest level seen in the U.S. during swine flu in 2009.

And it surpasses every winter flu season since 2003, when the government changed the way it measures flu.

"I wish that there were better news this week, but almost everything we're looking at is bad news," said Dr. Anne Schuchat, acting director of the Centers for Disease Control and Prevention.

Flu season usually takes off in late December and peaks around February. This season started early and was widespread in many states by December. Early last month, it hit what seemed like peak levels — but then continued to surge.

The season has been driven by a nasty type of flu that tends to put more people in the hospital and cause more deaths than other more common flu bugs. Still, its long-lasting intensity has surprised experts, who are still sorting out why it's been so bad. One possibility is that the vaccine is doing an unusually poor job; U.S. data on effectiveness is expected next week.

Some doctors say this is the worst flu season they've seen in decades. Some patients are saying that, too.

Last week, 43 states had high patient traffic for the flu, up from 42, the CDC reported. Flu remained widespread in every state except Hawaii and Oregon and hospitalizations continued to climb.

But reports of deaths — some in otherwise healthy children and young adults — have caused growing fear and concern, health officials acknowledge.

The CDC said the amount of suspected flu cases at doctor's offices and hospital emergency rooms last week matched that seen in 2009, when a new swine flu pandemic swept the world. Swine flu, also called pandemic H1N1, was a new strain that hadn't been seen before. It first hit that spring, at the tail end of the winter season, but doctor visits hit their height in late October during a second wave.

<b>HEADLINE</b>	<b>02/09 Dow rebounds; still worst week in 2yrs</b>
<b>SOURCE</b>	<a href="https://www.cnbc.com/2018/02/09/us-stock-futures-dow-data-earnings-market-sell-off-and-politics.html">https://www.cnbc.com/2018/02/09/us-stock-futures-dow-data-earnings-market-sell-off-and-politics.html</a>
<b>GIST</b>	<p>The Dow Jones industrial average rebounded more than 300 points Friday, paring deep losses for investors in what still amounted to the worst week in two years.</p> <p>The Dow ended the day up 330.44 points, or 1.38 percent, closing at 24,190.90. The S&amp;P 500 rallied 1.49 percent to finish at 2,619.55, while the Nasdaq composite added 1.44 percent to close at 6,874.49. The index swung more than 1,000 points in volatile trading Friday.</p> <p>The Dow and the S&amp;P 500 both lost 5.2 percent on the week, while the Nasdaq shed 5.1 percent as rising interest rates spooked investors. The Dow average experienced two drops of more than 1,000 points and two gains of more than 300 points during this volatile week. At their lows this week, all three major indexes were in correction territory from the record highs reached in January.</p> <p>"What's happened here is an understanding that inflation is returning and that the central bank quantitative easing that we've grown accustomed to is coming to an end," said Jim Bianco, head of the Chicago-based advisory firm Bianco Research. "Since the financial crisis, this is the first 10 percent correction in stocks that has not been accompanied by a significant fall in rates."</p> <p>The Dow dropped 1,032 points Thursday and the average posted its worst point drop in history on Monday, closing 1,175 points lower. Monday's decline of 4.62 percent was also its worst daily percentage drop</p>

	<p>since Aug. 10, 2011, when it also fell 4.62 percent.</p> <p>The recent turmoil in equities began last Friday, when the Dow fell 666 points after a better-than-expected jobs report ignited inflation fears. That fall was exacerbated Monday after the yield on the benchmark 10-year Treasury note hit a 4-year high, sending the Dow tumbling another 1,175 points as investors grew more nervous about an overheating economy.</p> <p>Trouble with securities called exchange-traded notes that decline in value when volatility increases likely helped create more turmoil in the markets this week. The Cboe Volatility index (VIX) — the market's best fear gauge — shot above 40 again Friday after jumping as high as 50 earlier in the week. At the end of January, the VIX was below 14.</p> <p>Yields backed off their multi-year highs on Tuesday, giving the Dow a 560-point bounce and relative stability on Wednesday. But between another round of strong economic news, hawkish comments from the Bank of England and an expensive government funding bill, yields rallied again, sparking Thursday's sell-off.</p> <p>The 10-year Treasury ticked up to 2.85 percent Friday. The note yield flirted with 2.885 percent Thursday, a 4-year high that sparked major equity sell-offs earlier in the week.</p>

<b>HEADLINE</b>	<b>02/09 China's corruption problem in Africa</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/09/world/patrick-ho-corruption-china-africa/index.html">https://www.cnn.com/2018/02/09/world/patrick-ho-corruption-china-africa/index.html</a>
<b>GIST</b>	<p>(CNN)It sounds like a Hollywood movie. A respected Hong Kong financial magnate allegedly plans a clandestine meeting with the president of Chad in the middle of the dusty Sahara Desert, and offers him a \$2 million gift to secure oil rights for a Chinese conglomerate.</p> <p>In another scheme, Chi Ping Patrick Ho, according to United States prosecutors, sends the now foreign minister of Uganda, who was then the president of the UN General Assembly, a \$500,000 bribe for business advantages, through the New York banking system.</p> <p>All this was allegedly planned under the noses of the world's top diplomats in the corridors of the United Nations in New York, where Ho ran an energy NGO.</p> <p>In November 2017, Ho and Cheikh Gadio -- the Senegalese failed presidential candidate and former foreign minister, who allegedly arranged the deals -- were arrested in New York on multiple bribery and money laundering charges. This week, the trial date was set for November 5, 2018. Aged 68 years old and in ailing health, Ho risks spending his remaining years behind bars. He has pleaded not guilty.</p> <p>This case, however, is about more than one man's spectacular fall from grace. It offers a rare window into Chinese corruption in Africa -- something academics, politicians and business people have long suspected existed but found difficult to prove.</p> <p>What's more, with the mountain of evidence seemingly against the defendant, legal experts are wondering whether Ho might be asked to expose other corrupt parties to reduce his sentence.</p> <p>Western companies in Africa have "long spoken of the competitive advantage Chinese companies have on the continent," says Andrew Spalding, a professor at the University of Richmond and expert in anti-corruption law. "And the dramatic increase in China's commercial presence tends to confirm it."</p> <p>China's goods trade alone with Africa totaled \$188 billion in 2015, compared with \$53 billion for the US. As China has become the continent's biggest economic partner, Chinese companies have found themselves operating in countries with high corruption ratings without domestic legislation to answer to. Thirteen Sub-Saharan African nations ranked in the bottom 30 of the 2016 Corruption Perceptions Index.</p>

"If I am an American company and I want to do a deal, particularly in Africa and less developed areas, and I am approaching African officials but losing out because Chinese companies are bribing those officials, I am going to be irked," says Rob Precht, president of New York-based legal think tank Justice Labs.

American and British companies have been living with the Foreign Corrupt Practices Act (FCPA) and the UK Bribery Act for years. Although China formally adopted a foreign bribery law to comply with the UN Convention Against Corruption in 2011, it has done "next to nothing to enforce it," says Spalding. He adds: "The hope is that if Western companies continue to pressure overseas governments to change, that competitive advantage will eventually disappear."

Chinese president Xi Jinping's high-profile corruption crackdown at home virtually ignores foreign bribery, according to some observers. "For centuries, bribery has not even been considered a bad thing in China," says Precht. "But as China becomes a partner in the world community, these issues are going to become more important."

In November 2017, the US Department of Justice formalized a new anti-corruption policy prioritizing bringing cases against individuals rather than corporations. Heavy fines against companies, it said, only penalized shareholders.

US Deputy Attorney General Rod Rosenstein cited the conviction of one of the richest men in China, real estate magnate Ng Lap Seng, of bribing UN officials, as an early example of this strategy's success. He thanked the governments of the United Kingdom, Brazil, Austria, Germany, the Netherlands, Singapore, and Turkey for helping the US to enforce this approach during a two-year trial period.

China was notably absent from that list.

<b>HEADLINE</b>	<b>02/09 Flights canceled; storm slams Midwest</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/09/us/winter-weather/index.html">https://www.cnn.com/2018/02/09/us/winter-weather/index.html</a>
<b>GIST</b>	<p>(CNN)More than 1,500 US flights have been canceled Friday as a winter storm slammed the Midwest with at least 1 inch of snow per hour.</p> <p>Heavy snow and strong winds already pounded Chicago and Detroit, where public school systems opted not to open Friday, CNN meteorologist Haley Brink said.</p> <p>"We are getting more snow today, tomorrow and Sunday than we have normally gotten in the last two winters in any one period of time," Chicago Mayor Rahm Emanuel said in a Friday morning news conference, adding that the city's top priority is the safety of residents.</p> <p>"Whether that's young kids, homeless, elderly, sick, commuters -- in every capacity we are responding and ensuring that people are able to handle this weather."</p> <p>About 23 million Americans are under winter weather alerts as an arctic front pushes from Montana through the Midwest, CNN meteorologists said.</p> <p>Chicago could get around a foot of snow -- 8 to 14 inches -- by late Friday, and between 2 to 4 inches through the weekend, forecasters said. Much of northern Illinois had seen between 8 and 12 inches of snow by Friday afternoon, CNN meteorologist Taylor Ward said.</p> <p>The bulk of flight cancellations affected Chicago's O'Hare and Midway airports and Detroit Metropolitan Wayne County Airport, according to the tracking site FlightAware.com.</p> <p>Kieran Sheridan, chief operating officer for the Chicago Department of Aviation, said in a Friday press</p>

	<p>conference that the city's airports were "well-prepared."</p> <p>About 280 heavy snow equipment operators were working on the airfields at Midway and O'Hare, said Sheridan, who warned travelers to give themselves extra time when heading to the airport.</p> <p>Four major US airlines -- Delta, United, Frontier and Southwest -- issued weather waivers for passengers, allowing travelers to change their reservations without incurring fees.</p>

<b>HEADLINE</b>	<b>02/11 Militants attack India army Kashmir camp</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/dead-militant-attack-indian-army-base-kashmir-52998290?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/dead-militant-attack-indian-army-base-kashmir-52998290?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Shooting between soldiers and militants holed up inside an army camp in Indian-controlled Kashmir has left at least five soldiers and one civilian dead, officials said Sunday, the second day of the battle.</p> <p>The fighting, which began at dawn Saturday when the militants stormed the Sunjuwan army base on the outskirts of the city of Jammu, continued into Sunday afternoon, said the region's top police official, S.P. Vaid. At least 11 people were injured.</p> <p>Security forces were sweeping through the camp slowly, since soldiers and their families live there, Vaid said. It was unclear how many militants were involved in the attack.</p> <p>The Himalayan region of Kashmir is divided between India and archrival and neighbor Pakistan. Both claim the region in its entirety.</p> <p>Anti-India sentiment runs deep among Kashmir's mostly Muslim population.</p> <p>Several militant groups have been fighting for Kashmir's independence from India or its merger with Pakistan since 1989. Around 70,000 people have been killed in the uprising and the ensuing Indian military crackdown.</p> <p>India accuses Pakistan of arming and training the militants, a charge Islamabad denies.</p>

<b>HEADLINE</b>	<b>02/09 Drones in opening ceremony Olympics</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/thousands-drones-light-show-olympics-opening-ceremony/story?id=52941985&amp;cid=clicksource_76_2_hero_headlines_headlines_hed">http://abcnews.go.com/International/thousands-drones-light-show-olympics-opening-ceremony/story?id=52941985&amp;cid=clicksource_76_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>Thousands of drones were used to put on a pre-recorded light show during the opening ceremony for the 2018 Winter Olympics in Pyeongchang, South Korea, Friday morning for the first time, according to Intel, which is overseeing the event.</p> <p>A total of 1,218 drones outfitted with LED lights were used to paint "colorful illustration in the sky," setting a new Guinness World Record on the number of drones flown at the same time, according to an Intel spokeswoman. Intel holds the current record after 500 drones were flown simultaneously for a light show in Krailling, Germany, on Oct. 7., the spokeswoman said.</p> <p>The drones are controlled through an automated software program, though they do have one pilot for backup, Intel said.</p> <p>In addition to the opening ceremony, the drones will be used throughout the games, creating light-filled formations every night from Feb. 10 to Feb. 24 during the nightly victory ceremonies.</p>

	"It's something that we wanted to integrate that experience into the Olympics on a daily occasion, because not everyone is going to be at the opening ceremony, and we want to give everyone in Korea a chance to see these shows," said Natalie Cheung, the general manager for Intel's drone light shows.

<b>HEADLINE</b>	<b>02/10 Israel downs Iran drone; strikes Syria</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/israel-downs-iranian-drone-strikes-syria-16-crashes-52978982?cid=clicksource_76_2_hero_headlines_bsq_hed">http://abcnews.go.com/International/wireStory/israel-downs-iranian-drone-strikes-syria-16-crashes-52978982?cid=clicksource_76_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>The Israeli military shot down an Iranian drone that infiltrated the country early Saturday before launching "large-scale attack" on at least a dozen Iranian targets in Syria. Israel called it a "severe and irregular violation of Israeli sovereignty."</p> <p>The military said its planes faced massive anti-aircraft fire from Syria that forced two pilots to abandon an F-16 jet that crashed in northern Israel. One pilot was seriously wounded and the other lightly.</p> <p>The military called the drone infiltration a "severe and irregular violation of Israeli sovereignty" and said Iran would be held responsible for its outcome, marking a dramatic escalation in tensions along its northern border.</p> <p>"This is a serious Iranian attack on Israeli territory. Iran is dragging the region into an adventure in which it doesn't know how it will end," Israel's chief military spokesman, Brig. Gen. Ronen Manelis, said in a special statement. "Whoever is responsible for this incident is the one who will pay the price."</p> <p>The Israeli military then carried out what it called a "large scale attack" against Iranian and Syrian targets in Syria.</p> <p>The military said it struck 12 targets including three aerial defense batteries and four Iranian targets that are part of Iran's military establishment in Syria. During the attack, anti-aircraft missiles were fired toward Israel jets triggering sirens that were sounded across northern Israel.</p> <p>Defense Minister Avigdor Lieberman was convening the top brass at military headquarters in Tel Aviv to discuss a further response.</p> <p>Israeli military spokesman Jonathan Conricus said Iran was "responsible for this severe violation of Israeli sovereignty" and that the military was "fully prepared for further action."</p> <p>Syrian state TV quoted a military official saying Syrian air defenses hit more than one Israeli plane. The official said the Israeli raids hit a base in the country's central area, and called it a "new aggression."</p> <p>Later, Syria state TV said its air defenses responded to new Israeli raids near the capital Damascus.</p>

<b>HEADLINE</b>	<b>02/09 Study: phishing attacks that do work</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/study-shows-most-clicked-phishing-attempts/article/743513/">https://www.scmagazine.com/study-shows-most-clicked-phishing-attempts/article/743513/</a>
<b>GIST</b>	<p>People are very predictable when it comes to designing phishing attacks that appeal to a potential victims with people most likely to click on messages concerning money.</p> <p>A recent KnowBe4 study sent phishing test emails to roughly 6 million and found users were most likely to click on the mock phishing emails when they promised money or threatened the loss of money. People were also likely to fall for phishing attacks appealing to their appetite offering free food or drinks, emails</p>

that evoked the fear of missing out on non-monetary opportunities and attacks that appealed to basic curiosity such as new contact requests or photo tags.

Researchers also saw an increased click rate with certain email subjects as well with missed deliveries and false security notifications gaining the most clicks. The top subject lines of included “A Delivery Attempt Was Made” with an 18 percent click rate, “UPS Label Delivery 1ZBE312TNY00015011” with a 16 percent click rate, “Change of Password Required Immediately” with a 15 percent click rate, “Unusual sign-in activity” with a 9 percent click rate, and “Happy Holidays! Have a drink on us.” With an 8 percent click rate.

“Email is an effective way to phish users when disguised as legitimate email,” the report said. “These methods allow attackers to craft and distribute enticing material for both random (general phishing) and targeted (spear-phishing) means, leveraging multiple psychological triggers and engaging in what amounts to a continuous maturity cycle.”

Researchers were more convincing when targeting users via social media themed email phishing attacks. LinkedIn notifications were by far the most convincing with requests to add people, join networks, reset passwords, and new messages convincing 53 percent of test subjects to click.

The study also found that login Alerts, 19 percent, tagged photos, 12 percent, free pizza and new voice message respectively gained clicks from 18 percent of test subjects.

“The most effective templates or phishes are those that cause a knee-jerk reaction in the user,” Stu Sjouwerman, CEO, KnowBe4 said. “They make him/her react without thinking due to the alarming or urgent nature of the subject.”

Sjouwerman added that cybercriminals already know this and that these kind of subject lines will consistently work with the softest of targets and serve as an effective vector into a company. Some of the attacks may have benefited from the seasons with the package delivery phishing attacks making an uptick in Q4 near the holiday season when people are more likely to be expecting things in the mail.

“Seasonal differences really show up as Q4 was very concentrated on package delivery, no surprises there,” Sjouwerman said. “Q3 saw a larger amount of data breach or password related clicks, most likely due to the Equifax breach.”

He went on to say that initially the users were easy to trick however, the researchers quickly found that they couldn’t use the same email template on the same people or subjects would wise up to the tricks so researchers had to continue to switch the templates. Regardless, researchers found that the same tactics ultimately can be used on organizational employees and still work with success before they are worn out.

<b>HEADLINE</b>	<b>02/09 Sacramento Bee hit by ransomware</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/sacramento-bee-databases-hit-with-ransomware-attack/d/d-id/1331023">http://www.darkreading.com/attacks-breaches/sacramento-bee-databases-hit-with-ransomware-attack/d/d-id/1331023</a>
<b>GIST</b>	<p>The Sacramento Bee reported that two of its databases, both on a third-party server, were hit with a ransomware attack in January 2017. A Bee employee discovered the attack last week following a tip from a reporter with a different organization, the publication reports.</p> <p>One affected database contained California voter registration data from the California Secretary of State and was obtained for reporting purposes. Another, a subscriber database, contained contact data for 53,000 current and former Bee subscribers who activated digital accounts before 2017. The Bee is informing those whose names, addresses, email addresses, and phone numbers were compromised.</p> <p>Publisher Gary Wortel reports neither database contained credit card numbers, bank account data, or</p>

	<p>Social Security numbers. The voter registration data had been previously exposed online, and the same database had been shared with organizations that had been subject to attack.</p> <p>An anonymous attacker demanded a Bitcoin ransom in exchange for the data. The Bee chose not to pay and has deleted both databases to prevent further attacks.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>02/09 Top nation-state hacking groups</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/8-nation-state-hacking-groups-to-watch-in-2018/d/d-id/1331009">http://www.darkreading.com/attacks-breaches/8-nation-state-hacking-groups-to-watch-in-2018/d/d-id/1331009</a>
<b>GIST</b>	<p>The nation-state threat landscape is constantly shifting. Threat actors alter strategies, switch targets, change tools - and for organizations who need to defend against these groups, keeping track of the players can seem impossible.</p> <p>Some hotbed regions are getting hotter, and some big-name actors are getting bigger. A perfect example is Fancy Bear (also known as APT28 and Sofacy), one of many groups believed to act out of Russia and Eastern Europe. The group is thought to be an arm of the Russian military intelligence agency GRU.</p> <p>"[Fancy Bear] is probably the most famous group right now," says John Hultquist, FireEye director of intel analysis, who expects Fancy Bear will become even more brazen over the course of this year. Security experts point to Fancy Bear as the predominant threat group to watch in 2018 as it widens its bullseye to include more corporate targets.</p> <p>North Korea is another hotbed for cyberattacks. The North Korean regime has invested significant resources in its cyber capabilities and groups from the area have been linked to a variety of activity, from the infamous Sony breach, to WannaCry and cryptocurrency mining.</p> <p>Here are the nation-state threat groups security researchers are watching most closely - and the aliases, geographies, behaviors, past attacks, and changing strategies related to each one.</p> <p>-----</p> <p><b>Fancy Bear</b>  <b>Also known as:</b> Fancy Bear, APT28, Sofacy, Strontium, Sednit</p> <p><b>Believed to operate out of:</b> Russia</p> <p><b>Usual targets:</b> Fancy Bear's targets are primarily based in Europe and tend to include government ministries, though past attacks have targeted global embassies and the United States. The group has been known to target based on policies and it's interested in anything related to NATO, says Brian Bartholomew, principal security researcher at Kaspersky Lab. These days, he says Fancy Bear has its eyes on the Olympics.</p> <p><b>Behavior:</b> Its strength is spearphishing, says Bartholomew, adding that this is the main tactic for most threat groups. Fancy Bear has splintered into different subgroups, each of which is responsible for a different part of the attack. One subset focuses on phishing as many targets as possible. Once they're on a system, the next subset uses toolsets to maintain persistence.</p> <p>Fancy Bear has also been known to leverage social media in its attacks, and spread disinformation campaigns, Bartholomew says. For example, it's believed to have hacked the anti-doping administration and tried to feed altered data to journalists, says Bartholomew. Some don't attribute this to Sofacy, he notes, but "we're pretty certain it is them." The group's toolkit is constantly evolving, but it does use a core backdoor called XAgent, says Alexis Dorais-Joncas, security intelligence team lead at ESET.</p> <p><b>Tied to:</b> Attacks on the Democratic National Committee, International Association of Athletics</p>

Federations, and German Parliament; influencing the 2016 US presidential election.

"I think what's so surprising about their activity is, despite continued accusations and exposures, they had not let up," says Hultquist, who expects increased activity during the Olympics and elections.

"They've shown disregard for global norms and willingness to cross lines we never thought we'd see crossed."

-----

## Lazarus Group

**Also known as:** [DarkSeoul](#), [Hermit](#)

**Believed to operate out of:** North Korea

**Usual targets:** South Korea, United States, financial organizations for monetary gain.

**Worth noting:** "We believe there is more than one North Korean group," says Hultquist. It's difficult to break down groups in the region because of the way they operate. There aren't many Internet streams coming from North Korea so oftentimes activity from different groups gets muddled together.

**Behavior:** Groups in the region are strong at social media attacks, says Bartholomew. Attackers typically target victims on Facebook Messenger, LinkedIn, Twitter, and other platforms. "They'll spend a lot of efforts doing social campaigns figuring out who to target, then go after them slowly," he explains.

"We're not seeing an end to financially motivated activities," says Hultquist. "It's global and it is multi-million -- we're talking hundreds of millions of dollars at stake." Most nation-state threat groups limit their activities to espionage or destruction; the additional practice of financial cybercrime seems to be unique to North Korea, researchers say. Lazarus Group was behind the [massive Sony data-destruction and doxing attack](#), and one of its subgroups has been tied to attacks on cryptocurrency exchanges and the SWIFT banking network.

-----

## Bluenoroff (subgroup of Lazarus Group)

**Believed to operate out of:** North Korea

**Usual targets:** Financial institutions

**Behavior:** "Basically, they're the financiers of the cyber world," says Bartholomew of Bluenoroff, a branch of Lazarus Group specifically focused on financial businesses. Its goal is to gain cryptocurrency to finance their attack efforts.

**Tied to:** High-profile crypto hacks involving large sums of money from specific exchanges, including the attacks on the SWIFT network. Security researchers expect this activity to continue - especially as sanctions on the North Korean government and economy continue. "Sanctions are going to be tightened more, and these guys are going to get more active so they can continue to finance things," Bartholomew explains.

-----

## Turla

**Also known as:** [Snake](#), [Venomous Bear](#), [Waterbug](#)

**Believed to operate out of:** Eastern Europe

**Usual targets:** Typically, former Soviet republics (Kazakhstan, Turkmenistan), as well as embassies in Moscow. Campaigns have also targeted diplomats in Eastern Europe, global consulates and embassies, and ministries of foreign affairs of European countries, says Dorais-Joncas. It has also targeted the US Department of State.

**Behavior:** The group has been known to leverage social engineering to trick targets into installing malware. Attackers often use watering hole attacks, which Bartholomew predicts will continue as it doesn't often change tactics - only a few times each year, and not much in 2017, he says.

"We've seen distribution of [fake, infected Flash updater on an Adobe subdomain](#) pointing to one of their legitimate CDN IP addresses," Dorais-Joncas says, adding that Adobe has confirmed it hadn't been compromised or distributed the malicious files. Turla combined one of its backdoors with a legitimate Adobe Flash installer and downloaded the malware from real Adobe URLs and IP addresses, then got

infected machines to return sensitive data to legitimate Adobe URLs. Turla has been around for a while but began to increase activity in 2017 after a period of quiet. This past summer, it began using an undocumented [backdoor](#) to spy on embassies and consulates. A separate campaign, dubbed WhiteBear, is believed to be phase two of Turla project White Atlas. Like this campaign and others by Turla, its C&C infrastructure is made up of hijacked websites and satellite connections. Later that summer, researchers noticed Turla [targeting](#) G20 participants and interested parties (policymakers, nations, journalists) with KopiLuwak, a backdoor it has been known to use.

## Sandworm

**Also known as:** [BlackEnergy](#), [Electrum](#), [Iridium](#)

**Believed to operate out of:** Eastern Europe

**Usual targets:** Ukraine

**Behavior:** Sandworm has been known to appear then disappear in waves with its attacks, which primarily target Ukraine, and experts agree we'll see more of these attacks in 2018. The group frequently uses spearphishing and has recently begun targeting the supply chain, a move likely to increase its target base, says Hultquist. While Ukraine is its primary target for ICS/SCADA attacks, there's always a chance Sandworm will broaden its reach. It previously researched a potential attack on US utility systems. "Given that this activity doesn't appear to be declining or shrinking, the danger of them shifting and targeting outside Ukraine continues to increase," says Hultquist. "That could have serious repercussions for corporations operating all around the world."

**Tied to:** Ukraine power grid attacks of [December 2015](#) and [December 2016](#). Hultquist and other security researchers have also linked the group to last summer's NotPetya attack, a destructive campaign which also primarily targeted Ukraine.

## Scarcraft

**Also known as:** [Reaper](#), [Group 123](#)

**Believed to operate out of:** North Korea

**Usual targets:** South Korean government, military, and defense industrial base

**Behavior:** Scarcraft, or Reaper (not to be confused with the IoT botnet named Reaper) has so far been less prolific, but is starting to cause concern, according to researchers. Up until now, the group hadn't demonstrated strong sophistication or focus outside the Korean peninsula. Now the group has been [linked to latest Adobe Flash zero-day](#), a sign that it is growing in strength. Hultquist says Scarcraft has been seen doing strategic Web compromises, specifically on websites related to North Korean interests like unification or defectors.

## APT29

**Also known as:** [Cozy Bear](#), [CozyDuke](#), [The Dukes](#)

**Believed to operate out of:** Eastern Europe/Russia

**Usual targets:** Western European governments, foreign policy groups, similar organizations. APT29 has also targeted think tanks and NGOs.

**Behavior:** APT29 usually hides activity on victims' networks by disguising infrequent communication to resemble legitimate traffic, and by using legitimate popular Web services and taking advantage of encrypted SSL connections. It only uses compromised servers for C&C communication and deploys its own backdoors to fix bugs and add new features, [report](#) researchers at FireEye.

APT29 has also used social media platforms like Twitter and GitHub, and cloud storage services, to relay commands and take data from compromised networks. Spearphishing campaigns in recent years have targeted the US government.

**Tied to:** Attacks related to US election, post-US election [spearphishing](#) attacks, Democratic National Committee [hack](#).

## APT35

	<p><b>Also known as:</b> <b>News caster, Charming Kitten</b></p> <p><b>Believed to operate out of:</b> Middle East - specifically Iran</p> <p><b>Usual targets:</b> Global range but recent focus is on Middle East, particularly Saudi Arabia and Israel</p> <p><b>Behavior:</b> "They've been carrying out global incidents," says Hultquist. "We've seen some overlap between them and destructive incidents and haven't been able to completely connect the two."</p> <p>APT35 focuses on social engineering through social networks. Attackers create fake personae in social networks and use them to infiltrate organizations by sending links to employees. Unlike email, which typically has built-in defenses, social media is less monitored and businesses don't have as much control. While the group's targets have shifted as relations between the US and Iran have improved, Hultquist anticipates we'll see more of them going forward.</p>

<b>HEADLINE</b>	<b>02/11 Energy riches fuel bitcoin craze in Iceland</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Technology/wireStory/gold-rush-energy-demands-soar-iceland-bitcoins-52997828?">http://abcnews.go.com/Technology/wireStory/gold-rush-energy-demands-soar-iceland-bitcoins-52997828?</a>
<b>GIST</b>	<p>Iceland is expected to use more energy "mining" bitcoins and other virtual currencies this year than it uses to power its homes.</p> <p>With massive amounts of electricity needed to run the computers that create bitcoins, large virtual currency companies have established a base in the North Atlantic island nation blessed with an abundance of renewable energy.</p> <p>The new industry's relatively sudden growth prompted lawmaker Smari McCarthy of Iceland's Pirate Party to suggest taxing the profits of bitcoin mines. The initiative is likely to be well received by Icelanders, who are skeptical of speculative financial ventures after the country's catastrophic 2008 banking crash.</p> <p>"Under normal circumstances, companies that are creating value in Iceland pay a certain amount of tax to the government," McCarthy told The Associated Press. "These companies are not doing that, and we might want to ask ourselves whether they should."</p> <p>The energy demand has developed because of the soaring cost of producing and collecting virtual currencies. Computers are used to make the complex calculations that verify a running ledger of all the</p>

transactions in virtual currencies around the world.

In return, the miners claim a fraction of a coin not yet in circulation. In the case of bitcoin, a total of 21 million can be mined, leaving about 4.2 million left to create. As more bitcoin enter circulation, more powerful computers are needed to keep up with the calculations — and that means more energy.

The serene coastal town of Keflavik on Iceland's desolate southern peninsula has over the past months boomed as an international hub for mining bitcoins and other virtual currencies.

Local fishermen, chatting over steaming cups of coffee at the harbor gas station, are puzzled by the phenomenon, which has spawned oversize construction sites on the outskirts of town.

Among the main attractions of setting up bitcoin mines at the edge of the Arctic Circle is the natural cooling for computer servers and the competitive prices for Iceland's abundance of renewable energy from geothermal and hydroelectric power plants.

Johann Snorri Sigurbergsson, a business development manager at the energy company Hitaveita Sudurnesja, said he expected Iceland's virtual currency mining to double its energy consumption to about 100 megawatts this year. That is more than households use on the island nation of 340,000, according to Iceland's National Energy Authority.

"Four months ago, I could not have predicted this trend — but then bitcoin skyrocketed and we got a lot more emails," he said at the Svartsengi geothermal energy plant, which powers the southwestern peninsula where the mining takes place.

"Just today, I came from a meeting with a mining company seeking to buy 18 megawatts," he said.

At the largest of three bitcoin "farms" currently operating within Keflavik — called "Mjólnir" after the hammer of Thor, the Norse god of thunder — high metal fences surround 50 meter-long (164 foot) warehouse buildings stacked with computer rigs.

The data centers here are specially designed to utilize the constant wind on the bare peninsula. Walls are only partial on each side, allowing a draft of cold air to cool down the equipment.

"What we are doing here is like gold mining," said Helmut Rauth, who manages operations for Genesis Mining, a major bitcoin mining company. "We are mining on a large scale and getting the gold out to the people."

In the capital, Reykjavik, some are more skeptical about bitcoin.

The last time Iceland was an international hub for finance, the venture ended with a giant bank crash, making the country one of the symbols of the 2008 global financial crisis.

The political turmoil following the crash swept the upstart Pirate Party into Iceland's parliament, where it currently holds 10 percent of seats.

Pirate Party legislator McCarthy has questioned the value of bitcoin mining for Icelandic society, saying residents should consider regulating and taxing the emerging industry.

"We are spending tens or maybe hundreds of megawatts on producing something that has no tangible existence and no real use for humans outside the realm of financial speculation," he said. "That can't be good."

<b>HEADLINE</b>	<b>02/10 UAE minister: data is oil of the future</b>
<b>SOURCE</b>	<a href="http://www.arabnews.com/node/1243956/business-economy">http://www.arabnews.com/node/1243956/business-economy</a>
<b>GIST</b>	<p>DUBAI: Data is the “oil of the future,” Mohammad Al-Gergawi, UAE minister for cabinet affairs and the future, told the opening session of the World Government Summit in Dubai.</p> <p>A packed audience heard the minister set out the agenda for the three-day event, which has attracted 4,000 leaders from the worlds of business and economic and public policy. Digital communications giants such as Google and Facebook would soon know more about individuals than governments do, Al-Gergawi said.</p> <p>“By 2045, we will be able to transfer and upload the contents of the human mind to a data center. Governments must be prepared for these coming changes. The aim of this summit is to find answers and set priorities to meet these challenges and opportunities.”</p> <p>The theme of the summit is “shaping future governments,” and Al-Gergawi detailed the challenges policymakers will face in health, artificial intelligence, crypto currencies and their impact on global finance, climate change and the issues of digital connectivity.</p> <p>Klaus Schwab, founder and chairman of the World Economic Forum, who also spoke at the opening session, harked back 10 years to the onset of the global financial crisis, which he said threatened a series of other crises in economies, in societies and between generations.</p> <p>“We avoided a complete breakdown of the financial system, but there was a cost. The world’s debts now add up to 200 per cent of global GDP,” he said.</p> <p>Schwab said most experts, such as the Organisation for Economic Co-operation and Development and the International Monetary Fund, were forecasting two years of “sound, comprehensive growth,” but he said financial markets were still addicted to low interest rates and cheap capital.</p> <p>There were still risks of a social crisis, he said, with levels of inequality and an unfair system of wealth distribution, as well as a generational crisis. “The world’s education systems do not satisfy the requirements of the 21st century.”</p> <p>He highlighted global risks such as geopolitical issues, inequality, cybersecurity, gender parity and failures of leadership.</p> <p>The pace of technological change was increasing all the time and adding to the pressures on policymakers, Schwab said. “Never before has the speed of change been so fast as in 2018. But also, never again will the speed of change be so slow as it is in 2018.”</p>

<b>HEADLINE</b>	<b>02/10 Equifax breach more widespread</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/US/2018/02/10/More-Equifax-info-exposed-than-originally-disclosed-after-breach/2771518282337/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=3">https://www.upi.com/Top_News/US/2018/02/10/More-Equifax-info-exposed-than-originally-disclosed-after-breach/2771518282337/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=3</a>
<b>GIST</b>	<p>Feb. 10 (UPI) -- Equifax's reported hacking of consumers' personal information was more widespread than originally disclosed, according to new documents submitted to a U.S. Senate committee.</p> <p>The credit reporting agency said cyberthieves accessed tax identification numbers, email addresses and driver's license information of 145.5 million customers -- stretching beyond the scope the company originally revealed, according to documents received by the Senate Banking Committee.</p> <p>The Wall Street Journal and CNN reviewed the documents sent to the Senate.</p> <p>In September, Equifax said it had been breached, compromising personal information belonging to 145.5 million consumers, including names, Social Security numbers, dates of birth and addresses, from May through July 2017</p> <p>Now, documents show that the license state and issue date might have also accessed. Equifax said an insignificant number of email addresses were affected and they are commonly searchable in public domains.</p> <p>Equifax spokesperson Meredith Griffanti told CNN Money the original disclosure wasn't meant to represent the full list of potentiality exposed information.</p> <p>"As your company continues to issue incomplete, confusing and contradictory statements and hide information from Congress and the public, it is clear that five months after the breach was publicly announced, Equifax has yet to answer this simple question in full: what was the precise extent of the breach?" Sen. Elizabeth Warren, D-Mass., wrote in a letter to interim CEO Paulino do Rego Barros Jr.</p>

	<p>Barros replaced Richard Smith, who announced after the breach he would retire.</p> <p>With the data, criminals can open bank accounts and lines of credit, including a credit card or mortgage.</p> <p>"The more information scammers have about you, the easier it is for them to impersonate you," said Lauren Saunders, associate director at the National Consumer Law Center. "And the easier it is for them to get by the protocols that banks and others use to make sure they are dealing with the right individual."</p> <p>Equifax, TransUnion and Experian are the top three credit reporting agencies. They gather information on individuals from banks, credit card companies, retailers and public records. to create credit reports, which are used by lenders to determine the risk of a potential borrower.</p> <p>Equifax has sent mail notices to consumers affected by the breach.</p>

<b>HEADLINE</b>	<b>02/09 Digital devices more revealing?</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/mach/science/our-digital-devices-may-be-revealing-more-about-us-we-ncna845966">https://www.nbcnews.com/mach/science/our-digital-devices-may-be-revealing-more-about-us-we-ncna845966</a>
<b>GIST</b>	<p>The digital footprints we leave behind as we go about our Internet-browsing, cellphone-calling, app-using lives may be revealing more about us than we realize — and opening us up to some surprising risks.</p> <p>The potential pitfalls were highlighted recently when an Australian college student discovered that maps released by the fitness-tracking app Strava could be used to identify U.S. military bases.</p> <p>The company had used anonymized GPS data from its users' jogging and cycling routes to create a global "heat map" of activity. But because the app is popular with military personnel, the maps revealed the locations of bases as well as sensitive details about their layouts and even service members' routines.</p> <p>It was even possible to identify individual military personnel by uploading routes to Strava's website to see who had the fastest times at these locations.</p> <p>"It really demonstrates our inability to comprehend the consequences of what we're sharing," says Dr. Mani Srivastava, a UCLA professor with a special interest in security and privacy issues arising from the use of mobile devices.</p> <p>Military personnel aren't the only ones at risk. Unless you opt out of publicly sharing your location data, other Strava users who exercise in the same area can pull up your profile details and see when and where you're working out. That opens up the possibility that someone could find you during a workout — and that burglars might be able to tell when you're away from home.</p> <p>Even if you don't use a fitness tracker, you may be unwittingly revealing your location to others.</p> <p>Twitter lets users stamp tweets with a location, and researchers at MIT and Oxford University showed in 2016 that even non-experts could use a day's worth of tweets to identify someone's home with 65 percent accuracy.</p> <p>Facebook also allows users to "check-in" to locations, and SnapChat's SnapMap function broadcasts your location each time you open the app. Both reveal the information only to your friend list, but security researchers showed in 2011 that one-fifth of Facebook users accepted friend requests from strangers.</p> <p>In a 2011 survey of 50 convicted burglars in the U.K., four fifths said thieves use social media to case their targets. Three burglars robbed at least 18 homes in New Hampshire in 2010 after checking Facebook for people announcing they weren't home.</p>

Even when our data isn't public, we may be sharing more than we realize. Location data tracked by smartphone apps can reveal our shopping habits and how and where we drive, as well as which place of worship we visit, says Srivastava, while motion sensors in fitness-tracking wristbands can show everything from sleep patterns to hand movements that suggest we're smoking or eating.

In his own house, Srivastava has an internet-connected thermostat that tracks people from room to room to help optimize the settings. "Maybe they could tell I'm a late-night eater because I spent some time in the kitchen at 1 a.m.," he says.

Personal data is valuable to advertisers, and some tech companies' business models rely on harvesting it. "Many services are only available with your data as your currency," says Srivastava.

Digital assistants like Amazon Echo and Google Home, which record voice data when users speak to them, could prove particularly intrusive. Dr. Joseph Turow, a University of Pennsylvania professor who specializes in marketing and privacy, says Amazon's privacy policy gives it wide latitude in determining how it will use user data.

"How they build that into their model of who you are I don't know," he says, "but I don't think most people who have Echoes understand it's certainly a possibility."

These profiles can be turned against consumers. In 2012, online travel agency Orbitz acknowledged that it showed Apple Mac users different, often more expensive, options compared to Microsoft Windows users — because data showed Mac users were bigger spenders.

A 2012 Wall Street Journal investigation found that online retailers adjusted prices based on users' browsing history and location. Displayed prices were higher in areas with little competition from brick-and-mortar stores, which often overlapped with rural and poor areas.

British car insurer Admiral even announced plans in 2016 to assess customer's personalities by analyzing their Facebook posts, though Facebook forced them to scrap the scheme. It would have denied discounts to motorists whose posts suggested they might be comparatively reckless behind the wheel.

Emerging "social credit scores" in China may be a harbinger of where this kind of profiling might lead, says Turow.

Sesame Credit combines credit history, shopping habits, and social media data to assign consumers a "trustworthiness" score that governs their access to loans and fast-track visas as well as VIP treatment at hotels. A government-run system scheduled to go online by 2020 would go further, giving users with low scores slower internet speeds, restricted travel, reduced employment opportunities, and limited access to insurance and loans.

"That may seem absurd to us," says Turow. "But the distance between social credit scores and behavioral activity tracking that today's marketers use is not necessarily all that large."

Want to do more to limit your digital footprint and plug as many data leaks as possible? Slate's Futurography project has useful tips. Both Apple iOS and Android version 6.0 allow you to switch off apps' access to data streams like location (check the privacy settings). Privacy-protecting apps like Signal can also help by encrypting text and voice calls. And DuckDuckGo is one search engine that doesn't collect user data.

Experts say you should also delete apps you don't use.

**HEADLINE** 02/10 Software upgrade NYC traffic light glitch

<b>SOURCE</b>	<a href="http://newyork.cbslocal.com/2018/02/10/nyc-traffic-light-glitch/">http://newyork.cbslocal.com/2018/02/10/nyc-traffic-light-glitch/</a>
<b>GIST</b>	<p>NEW YORK (CBSNewYork) — Drivers and pedestrians alike were urged to tread carefully after a glitch during a routine software upgrade caused problems with traffic lights across multiple intersections in New York City Saturday morning.</p> <p>The city’s Department of Transportation said the problems appeared after a software upgrade, done regularly on weekend nights, experienced an interruption around 5 a.m.</p> <p>Approximately 600 intersections — about 5 percent of the city’s traffic lights — were affected at one point, according to authorities. Some became flashing red lights, others went completely dark.</p> <p>Officials said the problem did not cause any accidents.</p> <p>City Councilman Justin Brannan (D-43) said it’s a good thing it didn’t happen during the work week.</p>

<b>HEADLINE</b>	<b>02/10 Olympics: cyberattack opening ceremony</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-olympics-2018-cyber/games-organizers-confirm-cyber-attack-wont-reveal-source-idUSKBN1FV036?utm_source=twitter&amp;utm_medium=Social">https://www.reuters.com/article/us-olympics-2018-cyber/games-organizers-confirm-cyber-attack-wont-reveal-source-idUSKBN1FV036?utm_source=twitter&amp;utm_medium=Social</a>
<b>GIST</b>	<p>PYEONGCHANG, South Korea (Reuters) - Pyeongchang Winter Olympics organizers confirmed on Sunday that the Games had fallen victim to a cyber attack during Friday’s opening ceremony, but they refused to reveal the source.</p> <p>The Games’ systems, including the internet and television services, were affected by the hack two days ago but organizers said it had not compromised any critical part of their operations.</p> <p>“Maintaining secure operations is our purpose,” said International Olympic Committee (IOC) spokesman Mark Adams.</p> <p>“We are not going to comment on the issue. It is one we are dealing with. We are making sure our systems are secure and they are secure.”</p> <p>Asked if organizers knew who was behind the attack, Adams said: “I certainly don’t know. But best international practice says that you don’t talk about an attack.”</p> <p>The Winter Games are being staged only 80km (50 miles) from the border with North Korea, which is technically still at war with the South since their 1950-1953 war ended in a truce rather than a peace treaty.</p> <p>Russia, which has been banned from the Games for doping, said days before the opening ceremony that any allegations linking Russian hackers to attacks on the infrastructure connected to the Pyeongchang Olympic Games were unfounded.</p> <p>“We know that Western media are planning pseudo-investigations on the theme of ‘Russian fingerprints’ in hacking attacks on information resources related to the hosting of the Winter Olympic Games in the Republic of Korea,” Russia’s foreign ministry said.</p> <p>“Of course, no evidence will be presented to the world.”</p> <p>Cyber security researchers said in January they had found early indications that Russia-based hackers may be planning attacks against anti-doping and Olympic organizations in retaliation for Russia’s exclusion from the Pyeongchang Games.</p>

<b>HEADLINE</b>	<b>02/09 Scientists arrested in bitcoin mining plot</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/news/world-europe-43003740">http://www.bbc.com/news/world-europe-43003740</a>
<b>GIST</b>	<p>Russian security officers have arrested several scientists working at a top-secret Russian nuclear warhead facility for allegedly mining crypto-currencies.</p> <p>The suspects had tried to use one of Russia's most powerful supercomputers to mine Bitcoins, media reports say.</p> <p>The Federal Nuclear Centre in Sarov, western Russia, is a restricted area.</p> <p>The centre's press service said: "There has been an unsanctioned attempt to use computer facilities for private purposes including so-called mining."</p> <p>The supercomputer was not supposed to be connected to the internet - to prevent intrusion - and once the scientists attempted to do so, the nuclear centre's security department was alerted. They were handed over to the Federal Security Service (FSB), the Russian news service Mash says.</p> <p>"As far as we are aware, a criminal case has been launched against them," the press service told Interfax news agency.</p> <p>Crypto-currencies like Bitcoin do not rely on centralised computer servers. People who provide computer processing power to the crypto-currency system, to enable transactions to take place, can get rewards in Bitcoins.</p>

<b>HEADLINE</b>	<b>02/12 US: let ISIS fighters face trial at home</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/let-isis-fighters-go-home-us-says-802860">http://www.newsweek.com/let-isis-fighters-go-home-us-says-802860</a>
<b>GIST</b>	<p>The United States is lobbying its partners to let their fighters from the Islamic State militant group (ISIS) return home from Syria to face justice there.</p> <p>Top U.S. officials are calling on coalition allies to repatriate the foreign fighters who have been captured by the Syrian Kurds.</p> <p>"We're working with the coalition on foreign fighter detainees, and generally expect these detainees to return to their country of origin for disposition," said Kathryn Wheelbarger, the principal deputy assistant defense secretary for international security affairs, the Associated Press reported.</p> <p>"Defense ministers have the obligation and the opportunity to really explain to their other ministers or their other Cabinet officials just the importance to the mission, to the campaign, to make sure that there's an answer to this problem."</p> <p>European security services have long feared the return of thousands of foreign ISIS fighters to their home countries. But those who are returned as captives also pose problems for governments about what they should do with them.</p> <p>Last week, two British nationals believed to have been members of the infamous ISIS cell known as The Beatles because of their British accents were detained in Syria. The British government has appeared reluctant to accept the return of El Shafee Elsheikh and Alexanda Amon Kotey to face justice.</p> <p>Any trial of a returnee would require evidence, and when these militants are captured in the field, there is not always sufficient evidence to prosecute them at home, meaning they could be released into society.</p>

	The fear is that they will seek to carry out extremist attacks on home soil.

<b>HEADLINE</b>	<b>02/11 Taliban remains dominant jihadist force</b>
<b>SOURCE</b>	<a href="http://www.businessinsider.com/isis-taliban-afghanistan-terrorism-2018-2">http://www.businessinsider.com/isis-taliban-afghanistan-terrorism-2018-2</a>
<b>GIST</b>	<p>A number of high-profile attacks in Afghanistan towards the end of January were claimed by competing terrorist groups ISIS and the Taliban — putting the spotlight back on a country that has been at war for over a decade.</p> <p>An attack on the Intercontinental Hotel in Kabul on January 20 that killed at least 40 people and an ambulance bombing in Kabul on January 27 that killed 103 were claimed by the Taliban.</p> <p>An attack on Save the Children's Jalalabad office on January 24 that killed six people and an attack on Kabul's military academy on January 29 that killed at least 11 Afghan soldiers were claimed by ISIS' Afghan branch — known as Islamic State of Iraq and the Levant — Khorasan Province (ISIS-K).</p> <p>Since its creation in 2015, ISIS has pushed to have a bigger presence in Afghanistan. The recent attacks, and the fact that ISIS-K has proven to be stubbornly resilient, have made some in the West more worried about the group.</p> <p>Seth G. Jones, an expert on Afghanistan and a senior adviser to the International Security Program at the Center for Strategic and International Studies, told Business Insider that the Taliban and ISIS have been "at each others throats" since day one — but there is no question who the more threatening group is.</p> <p>"The Taliban is a much larger organization, controls roughly 10-12% of the population of Afghanistan, has conducted a lot more attacks, and has some support among Afghanistan's conservative rural population," Jones said.</p> <p>"ISIS-K, on the other hand, is shrinking in size, controls virtually no territory, has conducted far fewer attacks, and has virtually no support among Afghanistan's population."</p> <p>ISIS first came to South Asia in 2014, using the group's substantial funds and weak local governments to co-opt high-ranking members of the Pakistani Taliban and disaffected members of the Afghan Taliban.</p> <p>But almost as soon as it was founded, ISIS-K began suffering losses, as they found themselves fighting the Pakistani and Afghani governments, the NATO Coalition, and the Taliban all at the same time.</p> <p>Angry that ISIS had taken some of their members in southern Afghanistan, the Taliban hit back and essentially wiped out ISIS-K in Helmand and Farah provinces.</p> <p>ISIS has also suffered major losses in its fight against the Afghan government in NATO. All three of its top leaders (called "emirs") have been killed since the group was founded, and, according to Jones, their numbers have almost been halved since their founding.</p> <p>ISIS-K is now more of a deadly nuisance than a strategic threat to Afghanistan.</p> <p>"ISIS-K controls virtually nothing other than a small segment of territory. They're not competing in any meaningful way," Jones said. "Its in a bad situation. It has got everybody against it."</p> <p>Jones said ISIS-K has been so surprisingly resilient because it mostly operates in parts of Nangarhar Province, particularly the Achin District, where neither the Taliban or the Afghan government have much control. Instead the region is mostly controlled by local tribes and clans.</p> <p>Jones believes, however that ISIS-K will eventually become a transnational movement — forced to move</p>

into Pakistan or Bangladesh as operations against them continue.

"They're down in numbers, it looks like they are down in recruitment, they've stuck around but it looks like under most accounts they are probably weakening," he said.

All of this is in stark contrast to the Taliban, where "there is absolutely no comparison," according to Jones.

Recent reports suggest that the Taliban has tripled in size since 2014 to up to 60,000. This is compared to ISIS-K's 1,000-2,000.

The Taliban have complete control of some areas in Afghanistan's countryside, have their own court systems and governmental structures in place, a military structure based in Pakistan, and, according to a recent BBC report, threaten 70% of the country.

They also, as Jones points out, have support from state actors; most notably Pakistan and possibly even Russia.

ISIS-K and the Taliban are likely to continue attacks like the ones that plagued Afghanistan in January. Those high-profile attacks are important because even though neither ISIS or the Taliban control any urban territory, they gain international media attention and put them in the spotlight.

Jones said the attacks "may give an impression that groups like the Taliban are omnipresent," even though they are not. "That's really a psychological impact."

<b>HEADLINE</b>	<b>02/11 Woman accused of arson tried to join AQ</b>
<b>SOURCE</b>	<a href="http://kstp.com/news/us-attorneys-office-memo-in-support-of-detention-of-tnuza-jamal-hassan-facing-federal-terrorism-charge-st-kates-arson/4783815/">http://kstp.com/news/us-attorneys-office-memo-in-support-of-detention-of-tnuza-jamal-hassan-facing-federal-terrorism-charge-st-kates-arson/4783815/</a>
<b>GIST</b>	<p>A woman accused of starting nine fires in multiple buildings on the campus of St. Catherine University and now facing federal charges of arson and terrorism had twice attempted to leave the country to join al-Qaida, according to a court document filed on Friday.</p> <p>In the document filed ahead of an arraignment and detention hearing for 19-year-old Tnuza Jamal Hassan, the United States Attorney's Office in Minneapolis argues Hassan "presents an extraordinary danger to the community and a significant risk of flight and therefore should remain in custody pending trial."</p> <p>The attorney's office announced a three-count indictment last week against Hassan that includes charges of attempting to provide material support to a designated foreign terrorist organization, making a false statement, and arson.</p> <p>Hassan, of Minneapolis, was arrested by FBI agents Thursday at Ramsey County jail, where she had been detained since she allegedly set the fires on campus Jan. 17, including in one building that housed a day care center in which 33 kids and eight adults were present, according to the memorandum.</p> <p>The document points to evidence that Hassan tried to travel to Kabul, Afghanistan, on Sept. 19 of last year to join al-Qaida and the "'Islamic Resistance,' which she defined as (al-Qaida) and the Taliban."</p> <p>The memo says Hassan reached Dubai in that effort, but was prevented from traveling further because she lacked a visa.</p> <p>Prior to that, the document alleges, she attempted to recruit two female classmates to join al-Qaida or other organizations. She initially denied, but later admitted, to authoring a recruitment letter in March 2017.</p>

Hassan was an English major, but is not currently enrolled at St. Kate's or employed.

The document says she again tried to leave the country on Dec. 29, 2017, on a ticket to Ethiopia with her mother, though authorities prevented her from boarding the flight and her mother chose not to go.

Josh Johnson, an attorney representing Hassan, did not immediately return a phone call seeking comment.

After she was arrested in connection to the St. Kate's fires, Hassan admitted to authorities she set the fires in an act of jihad "in retaliation for the alleged misconduct of U.S. military forces in Muslim lands," according to the document. She admitted she hoped her actions would kill innocent people, the document says.

In arguing for her detention ahead of Monday's hearing, the U.S. attorney's office also cited her admission that if released from custody but not allowed to leave the country, she would have the "right' to wage violent jihad here in America."

The attorney's office says it also plans to offer additional evidence to support their argument for keeping Hassan in custody, including statements with multiple references to "violent jihad, including those evidencing a desire to kill innocent Americans," as well as a copy of the alleged recruitment letter written by Hassan in March 2017.

It also plans to argue Hassan's family has been unable to control or account for her behavior, citing three missing persons reports the family filed after each of Hassan's alleged attempts to leave the country.

Hassan, a former St. Catherine student, was charged with first-degree arson in Ramsey County last month in connection to the fires on campus.

The criminal complaint in connection to that incident includes a statement from Hassan that alleges she said she started the fires because "this was the same thing that happened in 'Muslim land' and nobody cares if they got hurt." Attorneys stated she's "become dangerously radicalized."

<b>HEADLINE</b>	<b>02/11 Germans shocked by young jihadists</b>
<b>SOURCE</b>	<a href="https://learningenglish.voanews.com/a/german-shocked-by-young-jihadists/4241601.html">https://learningenglish.voanews.com/a/german-shocked-by-young-jihadists/4241601.html</a>
<b>GIST</b>	<p>"Put on a thick jacket," the 18-year-old son of Albanian immigrants told the 12-year-old German-Iraqi boy over the Internet.</p> <p>The young man was explaining how to bomb a Christmas market last year in the Rhineland town of Ludwigshafen. He told the boy to hide, light the explosive device and run.</p> <p>Luckily, the bomb failed to explode. Police arrested the 12-year-old in December 2017. They say it was the second time he tried to carry out a bomb attack.</p> <p>The step-by-step guidance by the 18-year-old was described in court papers last month. He communicated online with the boy from his home in Austria.</p> <p>Now, a top German official is calling for cancellation of laws restricting security surveillance of children under the age of 14. Hans-Georg Maassen is the head of the country's domestic intelligence agency. He argues that Germany is facing serious risks from what the media calls "kindergarten jihadists."</p> <p>The intelligence chief told a reporter that the Islamic State (IS) group and its followers target children in Germany. He added that IS agents search the internet for children who can be reached and try to persuade them to carry out terrorist attacks.</p>

Maassen said he was worried about the risks from women and children who once lived in areas controlled by the militant group. He described the children of jihadist parents as “ticking... bombs.”

“We see that children who grew up with Islamic State were brainwashed in the schools and the kindergartens of the Islamic State,” Maassen said. He noted that some boys and girls heard IS teachings at an early age, learned to fight, and may have abused or even killed prisoners.

Only a few of the 290 children who left Germany with jihadist parents — or who were born in Syria or Iraq — have returned to Germany. Some rights activists have warned that Germany should not quickly change civil rights protections, questioning whether the danger is being overstated.

The threat from children exposed to militancy has become a major political issue in Germany. Three out of five Islamist attacks in the country in 2016 were carried out by youngsters.

This is the second time Maassen has publicly expressed his concerns about children working for militants. He also said it in October when he told Germans to “take a serious look at the threat” and to call the police if they saw anything.

Last year, experts warned that Western governments were not giving enough thought about what to do with the children raised under IS rule or of Syrian and Iraqi children enlisted by militants.

IS leaders were clear about their plan to teach children to be “the generation that will conquer Baghdad, Jerusalem, Mecca and Rome.” As the group’s territory shrank, the militants released videos explaining what would happen to their enemies in the future.

German officials aren't the only ones worried about the children of IS foreign fighters or the continuing efforts by the group to get new members.

Last week, the head of London police’s anti-terrorism command, Dean Haydon, warned of children taught by Islamic State coming back to Britain to carry out attacks.

<b>HEADLINE</b>	<b>02/12 HM leader: training Kashmiris for jihad</b>
<b>SOURCE</b>	<a href="https://www.kashmirmonitor.in/Details/142889/were-still-training-kashmiris-for-jihad">https://www.kashmirmonitor.in/Details/142889/were-still-training-kashmiris-for-jihad</a>
<b>GIST</b>	<p>The supreme commander of Hizbul Mujahideen (HM), Syed Salahuddin – a Pakistan-based Kashmiri militant who was declared a global terrorist by US authorities last year – appears quite determined to take the Kashmir struggle forward to its “logical conclusion,” come what may.</p> <p>While Pakistan is under pressure from the Trump administration to clean up its act, Salahuddin remains as defiant as ever.</p> <p>The US move against Salahuddin and his Kashmiri militant organization looks to have had zero impact. Salahuddin, labeled a ‘Specially Designated Global Terrorist’ (SDGT), simply laughs the designation off.</p> <p>“Pakistan has just ignored the Trump administration’s wrong-headed decision of terming a ‘freedom fighter’ a ‘terrorist,’” which violates United Nations resolutions and the US Constitution,” he tells Asia Times in an exclusive interview. “Pakistan knows very well that a ‘mujahid’ cannot be a ‘terrorist,’ [and therefore] continues to provide ‘moral’ and ‘diplomatic’ support to the forces fighting for the right of self-determination in Kashmir.”</p> <p>His assertion reinforces India’s claims that Pakistani authorities have been lending support to militant outfits in the region.</p> <p>Pakistan issued a fatwa known as ‘Paigham-e-Pakistan’ (“Pakistan’s message”) on January 16 this year. It</p>

empowers only Pakistan's federal government, rather than militant groups, to announce holy wars (jihad). Terming the decree a "blessing," Salahuddin's response is to suggest that the government use it to declare a holy war in Kashmir.

"Pakistan is pursuing a weak Kashmir policy in the face of deepening political chaos," Salahuddin says. Mounting international pressure to end support for the "Kashmir resistance struggle" and other Islamist movements against US intervention in the region has diverted the focus of Pakistan's policymakers, he contends.

Government sources told Asia Times that Pakistan has asked such militants to keep a low profile.

Salahuddin denies, however, that the government has laid any restrictions on his movements or barred the HM from participating in public activity. "I participated in the public meetings held on October 27 last year and again addressed the Kashmir Martyrs Day rally on November 27," he claims.

Despite minimal activity in most of Pakistan, HM leaders are certainly active on the Muzaffarabad side of Pakistan-held Kashmir. They enjoy high-level security cover there – provided by the country's premier agencies. Salahuddin insists that "the HM struggle for Kashmir 'liberation' has gained momentum after the India-US nexus conspired to crush Kashmiris."

<b>HEADLINE</b>	<b>02/11 Terrorist reveals secret Gitmo perks</b>
<b>SOURCE</b>	<a href="https://www.msn.com/en-us/news/us/admitted-terrorist-testifies-about-his-secret-guantanamo-perks/ar-BBJ05WL?li=BBnbfcL&amp;ocid=HPCDHP">https://www.msn.com/en-us/news/us/admitted-terrorist-testifies-about-his-secret-guantanamo-perks/ar-BBJ05WL?li=BBnbfcL&amp;ocid=HPCDHP</a>
<b>GIST</b>	<p>GUANTANAMO BAY NAVAL BASE, Cuba — A tortured al-Qaida terrorist turned prosecution witness is being rewarded with a comfortable cabin-style lockup where he can garden, paint, exercise, learn English, cook meals for his interrogators and attorneys and watch American television.</p> <p>In sworn testimony Saturday, Ahmed al Darbi, 42, described changing from a lying, feces-flinging prisoner with a bad behavior record in the maximum-security Camp Five prison to a cooperating witness now cloistered in Camp Echo, an annex of the prison compound across the street.</p> <p>Darbi has his own kitchen with a freezer stocked with meat and spices, and other never-before-disclosed perks to pass his time preparing to testify as a witness for the war court prosecutor in two cases, one that seeks the death penalty.</p> <p>The prison provides him with lamb, rabbit, chicken, shrimp and other halal meat, he said as defense attorney Air Force Maj. Yolanda Miller read from what sounded like a shopping list.</p> <p>"Goat," the Saudi volunteered with a grin, adding, "I love chicken, and I don't see any issue with that. I still have it in my freezer until now."</p> <p>Darbi is scheduled to go home to a Saudi rehabilitation program Feb. 20 under a plea agreement if diplomats can close the deal and Secretary of Defense Jim Mattis approves the release. Four years ago he pleaded guilty to being an accomplice in a 2002 al-Qaida attack on a French oil tanker, the Limburg, in Yemeni waters.</p> <p>The attack did not achieve its goal of upsetting global oil prices or shipping, but a Bulgarian crew member died in the attack, which occurred after Darbi was already a U.S. prisoner. Last year he recorded testimony, a deposition, to be used as possible evidence against the alleged mastermind of the attack, Abd al Rahim al Nashiri.</p> <p>He also separately testified about his life as a jihadist in al-Qaida, pointed to an Iraqi captive in court and identified him as a former al-Qaida commander named Abd al Hadi al Iraqi, to counter the Iraqi's claim</p>

that his true name is Nashwan al Tamir.

This weekend, Hadi's attorneys questioned Darbi on the truthfulness of his statements and memory for what could be used as time-capsule testimony if the Trump administration releases him. And the image he portrayed of his life in Guantanamo prison offered a stark contrast to a glimpse a weekend earlier of medium-security communal prison life — prepared food in plastic-foam containers, up to four hours in a new recreation cell block, a now hidden art program for the indefinite detainees known as "forever prisoners."

Across the street, Darbi has a plethora of quality-of-life accommodations provided by the prison, interrogators or the prosecution. Cilantro, cumin and cloves to cook with using a hot plate, blender and microwave oven in his kitchen; treats like Strawberries n' Creme Oreos, baklava, Turkish delight and a pecan pie; a garden where he said he was growing what sounded like the ingredients for ratatouille — eggplant, tomatoes, zucchini and green pepper. Papaya too, he noted.

Cooperation also earned him monthly phone calls with his Yemeni wife and children, now living in Saudi Arabia.

Deposition questioning Sunday delved into what Darbi called "the torture times" — his 2002-03 interrogations in Bagram, Afghanistan, and Guantanamo.

Defense attorney Adam Thurschwell, in an apparent bid to discredit Darbi's identification of the Iraqi Hadi, led Darbi through a lurid description of his first year or more in U.S. custody, drawn from sworn court documents. The Saudi was beaten, sleep deprived, hung by the wrists, threatened with rape in interrogation, and then sent to unwanted rectal exams by U.S. military doctors, kept nude and forced to empty other detainees' feces buckets with his fingers.

He said a focus of the interrogations was: Where was Osama bin Laden?

In one notorious episode, Darbi described how, after he cried out for God while he was being beaten and questioned at Bagram, a U.S. soldier serving as an interrogator pulled out his own penis, put it "very close to my face" and declared, "This is your God."

The Saudi said he was kept shackled to the door of a cage there, his toes unable to touch the ground and in plain sight of what Darbi called the guards' "torture tools" — baseball bats, chains, shackles and hoods.

Darbi got to Guantanamo 14 months after it opened. He testified Sunday that he was kept in solitary confinement, deprived of sleep and subjected to midnight-to-dawn, no-bathroom-break questioning in an interrogation room stinking of urine and vomit. Threats included rape, sending him to Israel or Camp X-Ray, which supposedly closed a year earlier. Interrogators had photocopies of pages of the Koran, Darbi testified, and would throw them on the ground with sex photos and pictures of mutilated bodies.

Darbi has a battery-powered toothbrush, with replacement heads, a Magic Bullet blender, free weights and a spin bike for exercising, and Under Armour T-shirts and athletic socks to wear when he works out in his compound. "Yes, Nike also," he told Miller. "Don't forget that."

Miller, Hadi's defense attorney, framed the stuff as incentive items to show that life gets good for captives turned prosecution witnesses at Guantanamo. Darbi confirmed under questioning that he would set a table and cook for his interrogators during some visits, and that he had the makings for Arabic and Turkish coffee.

**HEADLINE** 02/09 Coast Guard waterway watch program

**SOURCE** <https://www.hstoday.us/briefings/daily-news-analysis/coast-guard-launches-waterway-watch->

	<a href="#">program/</a>
GIST	<p>The Coast Guard developed the Waterway Watch Program to encourage the reporting of suspicious activity around America's Waterways.</p> <p>The program, which has a similar basis to the well-known Neighborhood Watch program, aims to keep waterways as safe as possible and preempt activities that could be a threat to national security.</p> <p>USCG is calling for anyone involved with, or in the proximity of, waterways, from marina operators to those who live or work nearby, to sign up for the initiative. Participants are not formally joining an organization and do not become members of the Coast Guard or any other law enforcement agency – the Waterway Watch Program just provides an arena for safely reporting suspicious activity.</p> <p>Anyone who spends time on or near water, whether that's ports, docks, beaches or waterfront communities, will know what is normal and what is not, and will be in the best position to identify potential threats to homeland security. The initiative asks participants to be particularly vigilant about suspicious activity near industrial facilities, military bases or places with a high volume of passengers such as ferry terminals.</p> <p>The program has a hotline and detailed instructions about reporting suspicious activity – first, call the National Response Center at 877-24WATCH. For immediate danger to life or property, call 911, or call the U. S. Coast Guard on Marine Channel 16. USCG is quick to stress, though, that members of the public should not approach anyone about to commit a crime; instead, observe, take notes or even photos, but keep a safe distance.</p>
<a href="#">Return to Top</a>	<i>USCG is looking for organizations to become partners of the initiative and spread the word. To become an America's Waterway Watch partner, sign up <a href="#">here</a></i>

HEADLINE	<b>02/12 Turkey assails US ties w/Kurdish militia</b>
SOURCE	<a href="http://www.foxnews.com/world/2018/02/12/turkey-assails-us-over-ties-with-syrian-kurdish-militia.html">http://www.foxnews.com/world/2018/02/12/turkey-assails-us-over-ties-with-syrian-kurdish-militia.html</a>
GIST	<p>ANKARA, Turkey – Turkey's foreign minister is assailing the United States, claiming American forces in Syria are intentionally stalling the fight against Islamic State militants as an excuse not to cut ties with Syrian Kurdish fighters as Ankara has demanded.</p> <p>Mevlut Cavusoglu says U.S. forces are leaving "pockets" with IS militants intact to justify continued cooperation with the Kurdish militia.</p> <p>Cavusoglu says ties with the U.S. are "at a critical stage" and that Washington needs to take "concrete steps" to regain Turkey's trust.</p> <p>Ankara is riled over Washington's support for the Syrian Kurdish People's Protection Units, or YPG — the top U.S. ally in the anti-IS fight. Turkey considers the YPG a "terrorist" group linked to Kurdish insurgents within Turkey.</p> <p>U.S. Secretary of State Rex Tillerson is due in Ankara later this week.</p>

HEADLINE	<b>02/12 Claim: ISIS leader injured in May strike</b>
SOURCE	<a href="https://www.cnn.com/2018/02/12/middleeast/isis-leader-abu-bakr-al-baghdadi-wounded-intl/index.html">https://www.cnn.com/2018/02/12/middleeast/isis-leader-abu-bakr-al-baghdadi-wounded-intl/index.html</a>
GIST	(CNN)ISIS leader Abu Bakr al-Baghdadi was wounded in an airstrike in May last year and had to relinquish control of the terror group for up to five months because of his injuries, according to several US officials who spoke exclusively to CNN.

US intelligence agencies have assessed with a high degree of confidence that the world's most wanted man was near Raqqa, Syria in May when the missile struck, the US officials said.

Their assessment is based on reports from ISIS detainees and refugees in Northern Syria that emerged months after the airstrike, the officials added.

Baghdadi's injuries were not considered life-threatening but they did mean he couldn't continue to command the daily operations of the group.

At the time, ISIS was about to lose control of the Iraqi city of Mosul and its so-called capital Raqqa had been nearly encircled by US-backed forces.

It is unclear whether Baghdadi was hit in a targeted attack or if he was "collateral damage." It's also unclear who fired the missile. US officials do not know the exact date of the strike so are unsure if a Coalition aircraft was involved, or whether Baghdadi's injury was the result of a Russian missile.

"There have been isolated strikes by Russians in Raqqa, but as there's no timeline to it, we don't know if it's ours," a US official said.

It's believed the airstrike occurred close to the date offered by the Russian military in June when they claimed to have killed or injured the ISIS leader.

At the time, Russia's Defense Ministry said it was investigating reports Baghdadi had been killed in an airstrike on May 28, on the outskirts of Raqqa, the group's primary stronghold, which US-backed forces took back in October.

Analysts warned at the time reports of Baghdadi's death should be treated with skepticism given the high number of previous false reports.

One US official said the Russian claim was a case of Moscow "making stuff up."

Another US official, asked if the injuries meant Baghdadi had been able to return to his leadership role, albeit of a diminished organization, said: "Yes. I do not know how much Baghdadi is day-to-day running the shop."

<b>HEADLINE</b>	<b>02/10 Study: little US foreign fighters threat</b>
<b>SOURCE</b>	<a href="https://learningenglish.voanews.com/a/us-foreign-fighters/4244746.html">https://learningenglish.voanews.com/a/us-foreign-fighters/4244746.html</a>
<b>GIST</b>	<p>United States citizens who joined extremist groups fighting in Syria and Iraq appear to present little immediate threat to Americans or U.S. territory.</p> <p>A new study found that the same is true of non-citizens who left their American homes to fight in Syria and Iraq.</p> <p>In fact, only a handful of the fighters have returned to the U.S. from the battlefield, the study notes.</p> <p>The findings are from a project of the Program on Extremism at The George Washington University in Washington, D.C. It identified 64 individuals who fought or assisted Islamic State, al-Qaida and other groups in Syria and Iraq.</p> <p>Of the 64 travelers, only 12 are known to have returned to U.S. territory, the study found. Nine of them have been arrested and charged with crimes relating to terrorism.</p> <p>The study noted that none have successfully carried out an attack in the United States.</p>

“The risk of returned travelers being engaged in terrorist attacks has, to date, been limited,” said a report on the study.

The writers of the report noted, “There is currently no publicly available evidence to suggest that American travelers have slipped into the country without the knowledge of authorities.” They said that “homegrown” extremists currently appear to be more likely to carry out jihadist attacks than returning travelers.

Compared to European countries, the U.S. faces a smaller risk from returning travelers. That is partly because of the greater distance and difficulty in reaching the Middle East from the United States.

U.S. intelligence officials estimated that more than 40,000 foreign fighters have traveled to Syria and Iraq. Of these, only 5,000 to 6,000 were said to come from Western countries.

The exact number who successfully left from the United States is unclear. Officials have said that about 250 to 300 U.S.-based people left or tried to leave to join groups fighting in Syria. Not all of them made it.

The study found at least 50 were arrested before leaving the United States. That represents about one-third of all U.S. residents who have been charged with crimes related to the Islamic State group.

Of the 64 travelers identified in the study who did leave the U.S., 22 are thought to have died in Syria or Iraq. Officials are unsure of the condition and whereabouts of the others.

The study identified a single returning traveler who sought to carry out an attack in the United States. That was 23-year-old Abdirahman Sheik Mohamud, a naturalized citizen from Somalia.

Mohamud left his home in Ohio to join Jabhat al-Nusra, a group allied with al-Qaida, in April 2014. While in Syria, he was trained in explosives and hand-to-hand fighting. He was sent back to the United States in June to carry out an attack.

But in February 2015, while still plotting the attack, Mohamud was arrested. He admitted guilt to the charges and was sentenced to 22 years in prison.

Other than Mohamud, only one other traveler sought to carry out a terror attack. But that attack, a suicide bombing, happened only upon returning to Syria after avoiding prosecution in the United States.

In any case, the study’s authors say the findings suggest fears once voiced by U.S. officials of a “terrorist diaspora” seem to be overstated.

Yet the George Washington University study did find some reasons for concern.

Study co-author Seamus Hughes says the average prison sentence for those who went overseas to take part in the fight in Syria and Iraq is only 10 years. He noted that that sentence is shorter than the average prison term for a would-be U.S.-based jihadist arrested at the airport.

Part of that might be linked to the difficulty in making a criminal case based on terrorist activity in another country.

Hughes said another issue could be that the returnees may have been able to share information with investigators and anti-terrorism officials in exchange for lighter sentences.

But just like with the would-be jihadists, these travelers will eventually get out of prison. And Hughes and others believe the United States should be doing more to help these individuals. They note the lack of U.S. programs for former prisoners returning to society could lead to problems in the future.

HEADLINE	<b>02/10 New era of terror money?</b>
SOURCE	<a href="http://nationalinterest.org/feature/new-era-terror-money-24452">http://nationalinterest.org/feature/new-era-terror-money-24452</a>
GIST	<p>Bitcoin, along with other cryptocurrencies, has attracted considerable scrutiny in the past few months due to a consider run up in prices. While the press devotes a great deal of attention towards the crypto nouveau riche or the usual proclamations that the entire phenomenon is a bubble comparable to the tulip mania policymakers and regulatory authorities are preoccupied with a different set of concerns: the potential for terrorist and criminal organizations to make use of these financial instruments.</p> <p>These fears are warranted. Bitcoin originally attained infamy as a medium to acquire drugs and other illegal narcotics off of darknet markets such as the Silk Road. To this day, Bitcoin is still used at times when transacting on the Silk Road's shady successors. In the realm of terrorism, jihadis have gradually developed an understanding of how cryptocurrencies can aid them in their endeavors. In 2014, an article entitled "Bitcoin wa Sadaqat al-Jihad" appeared on an online blog and put forward various reasons for jihadist to embrace Bitcoin, explaining that the existing global banking system has "eliminated [charity] for jihad on a large scale" and presenting Bitcoin is a way to circumvent this system. More recent research has revealed that the Islamic State and other extremist outfits are relying on Bitcoin as a new fundraising mechanism in order to stay afloat.</p> <p>Today Bitcoin is no longer the cryptocurrency of choice when conducting illicit transactions or attempting to move money undetected. The currency is not completely anonymous; rather, it is pseudonymous. Users are sending Bitcoin from their "address" to another address, with all of this information being recorded on a public ledger. Researchers from Qatar University and Hamad Bin Khalifa University have demonstrated that it is possible to exploit this model, writing that "historical pieces of information could be used to identify a certain user." If one can tie a user's Bitcoin address to some identifying piece of information (for example, a user's Bitcoin address on his/her account on a fiat-to-cryptocurrency exchange), then a user's identity can be revealed.</p> <p>Those trying to hide their tracks have migrated to what are known as "privacy coins": cryptocurrencies that are designed to grant users privacy in their financial dealings, often by obscuring the specific details of cryptocurrency transactions. The most well-known of these is Monero, which encrypts the user's address and creates fake addresses to hide the original sender. The exact quantity of Monero being transacted is also hidden. The cryptocurrency is so secure that when authorities seized the holdings of Alphabay, a darknet market, they were unable to determine the exact quantity of Monero that it's operator possessed.</p> <p>Mercifully, the danger of ISIS and other organizations employing privacy coins is overstated at this time. As explained by a report from the Center for New American Security,</p> <p><i>[terrorists] seek to move money from places outside the locations where they operate to the areas in which they plan and from which they launch attacks. Often they use many layers of intermediaries so that donors and ultimate recipients may not be known to one other. [...] terrorists use the funds to buy things they need to sustain the group or to conduct attacks. And because they do so from the general economy, they often would need to reconvert the [cryptocurrencies] they receive into fiat currency. This final step introduces both an unnecessary layer of complexity and an increased vulnerability to the disruption of their operations by adding additional actors and entities into the fundraising matrix. [...] But the final—and most important—reason that terrorist groups have not adopted [cryptocurrencies] at scale is that these groups, and individual terrorist operatives, have not yet perceived the need to do so. They still find it possible to circumvent global rules governing terrorist financing with sufficient ease and frequency that using [cryptocurrencies] is unnecessary. They exploit incomplete implementation of regulatory requirements and global standards at banks, use unlicensed and undersupervised money services businesses (MSBs), or simply cart around cash. As long as these value transfer methods are readily available, there is no great need to invest in new, complicated techniques to transfer value.</i></p> <p>Likewise, a report from the Commission to the European Parliament from last year finds that "the</p>

technology is quite recent and in any case requires some knowledge and technical expertise which has a dissuasive effect on terrorist groups. The reliance on [cryptocurrencies] to fund terrorist activities has some costs and is not necessary attractive.”

As such, terrorists still prefer to make use of traditional fiat currency. Jennifer Fowler, the deputy assistant secretary for terrorist financing and financial crimes at the Treasury Department, stated that “although [cryptocurrencies] are used for illicit transactions, the volume is small compared to the volume of illegal activity through traditional financial services.” A recent study by the Foundation for Defense of Democracies and the cryptocurrency analysis firm Elliptic found that “the total percentage of identified ‘dirty bitcoins’ going into conversion services is relatively small. Only 0.61 percent of the money entering conversion services during the four years analyzed were verifiably from illicit sources, with the highest proportion (1.07 percent) seen in 2013.”

Nonetheless, regulators and counterterrorism authorities have begun to plan ahead in anticipation of cryptocurrencies one day gaining traction with terrorists. Speaking at the World Economic Forum in Davos last month, U.S. Treasury Secretary Steven Mnuchin called for other nations to join the United States in pursuing more extensive regulation of cryptocurrencies. He explained that his “number-one focus [is] on cryptocurrencies, whether that be digital currencies or bitcoin or other things, is that we want to make sure that they’re not used for illicit activities.” Under Secretary for Terrorism and Financial Intelligence Sigal Mandelker has urged financial institutions and regulators in Asia to do more in preventing illicit activity fueled by cryptocurrencies.

Policymakers are also keeping an eye on cryptocurrencies and are taking some proactive steps. The most notable action thus far is the introduction of a new bill by Republican Rep. Ted Budd titled the “Financial Technology Innovation and Defense Act.” Budd’s bill seeks to “establish an Independent Financial Technology Task Force” dedicated to “conduct[ing] independent research on terrorist and illicit use of new financial technologies, including digital currencies; and ... develop[ing] legislative and regulatory proposals to improve counter-terrorist and counter-illicit financing efforts.” The report to the European Parliament concluded that “the most important element of vulnerability for [cryptocurrencies] is the fact that there are not regulated in the EU.” Both France and Germany intend to make joint proposals on regulating Bitcoin at the next summit of the G20 group.

Regulating cryptocurrencies will be a complicated affair; cryptocurrencies alone represent a new sort of financial asset class which regulators are still developing rules for. However, a few ideas have emerged. Both the reports from the Center for New American Security and the Foundation for Defense of Democracies/Elliptic provide suggestions, such as increased Know Your Customer and Anti-Money Laundering enforcement on businesses that transmit cryptocurrencies (particularly those that are unlicensed), a specialized commission or task force (like the one proposed by Budd), the creation of common compliance architecture, and so forth.

While these efforts may certainly help though, they will likely be unable to prevent every illicit transaction. The market will grow increasingly competitive as newer, more secure privacy coins and services such as decentralized exchanges (exchanges where a third party does not hold a client’s funds, instead facilitating peer-to-peer transactions) are introduced. In the coming years, expect more stories concerning the battles between financial regulators and counterterrorism experts versus terrorists and others that use privacy coins for nefarious purposes.

HEADLINE	<b>02/11 Nigeria: Boko Haram frees hostages</b>
SOURCE	<a href="https://www.nst.com.my/world/2018/02/334316/boko-haram-militants-hand-over-13-hostages-nigerian-government">https://www.nst.com.my/world/2018/02/334316/boko-haram-militants-hand-over-13-hostages-nigerian-government</a>
GIST	MAIDUGURI: Boko Haram freed 13 hostages, Nigeria’s presidency said on Saturday, after authorities negotiated their release with the Islamist militants.

	<p>The kidnappings were part of a campaign of attacks last year by the jihadist group whose bid to create an Islamic state in the northeast has killed at least 20,000 people and forced some 2.7 million to flee their homes since 2009.</p> <p>Three of the hostages were lecturers from the University of Maiduguri who were abducted while on an oil exploration trip in Magumeri, in the northeastern Borno state, in July 2017. The other 10 were women police officers kidnapped in a raid on a convoy the previous month.</p> <p>“Their release followed a series of negotiations as directed by President (Muhammadu) Buhari and was facilitated by the International Committee of the Red Cross, ICRC,” a presidency spokesman said in an emailed statement.</p> <p>The ICRC said it had acted as a neutral intermediary in the hostage release.</p> <p>“The ICRC was not involved in any negotiations that led to the handover of the 13 people. The armed opposition handed the 13 people over to ICRC representatives who transported them to Nigerian authorities,” it said in a statement.</p> <p>The ICRC also acted as an intermediary in the release in October 2016 and May 2017 of some of the more than 200 girls kidnapped by Boko Haram from the northeastern town of Chibok in 2014. --REUTERS</p>

<b>HEADLINE</b>	<b>02/10 Drone strike kills Taliban chief Pakistan</b>
<b>SOURCE</b>	<a href="https://www.arabtimesonline.com/news/us-drone-strikes-kill-taleban-chief-pakistan-7-militants-get-death/">https://www.arabtimesonline.com/news/us-drone-strikes-kill-taleban-chief-pakistan-7-militants-get-death/</a>
<b>GIST</b>	<p>PESHAWAR/DERA ISMAIL KHAN, Pakistan, Feb 10, (Agencies): A pair of suspected US missile strikes killed a senior Pakistani Taleban deputy and other militants in the border regions of Afghanistan and Pakistan, officials said on Friday.</p> <p>Four Pakistani intelligence officials and three Taleban commanders told Reuters on Friday that two separate US missile strikes on Wednesday killed the fighters. One of the strikes, they said, killed a Pakistani Taleban commander, Khan Said, alias Sajna, and three more people, when missiles struck his pick-up truck in Margha village of Birmal district in Paktika province of Afghanistan.</p> <p>The NATO-led Operation Resolute Support in Afghanistan said it had no information about the strike. The officials sought anonymity because they weren't authorized to disclose the information. They are based in Pakistan's northwestern Khyber Pakhtunkhwa province and have informants on the ground on both sides of the border. They said on Friday they have also been picking up militants' chatter through phone intercepts in which they were talking about Sajna's killing.</p> <p>Three Pakistani Taleban commanders confirmed their account. Sajna has been an important militant commander of the Pakistani Taleban and had close links with the Afghan Taleban, the officials said. Two of the officials said they were trying to confirm reports of another suspected US drone strike in North Waziristan on Pakistani side of the border.</p> <p>The second strike hit a compound in Gurwek town of North Waziristan, killing seven militants, the three Taleban commanders said. North Waziristan and Paktika province in Afghanistan are adjacent to the border, and the officials and the militant commanders may have been reporting the same strike as two separate ones. The border region has long been home to local and al-Qaeda linked foreign militants. It is off limits to journalists and verifying any information independently is difficult.</p>

<b>HEADLINE</b>	<b>02/11 Greece: terrorist returns from furlough</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/convicted-terrorist-greece-returns-jail-furlough-52997937?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/convicted-terrorist-greece-returns-jail-furlough-52997937?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Dimitris Koufodinas, a convicted terrorist and member of Greece's most notorious terrorist group, 17 November, has returned to prison after a 48-hour furlough, his second overall.</p> <p>Koufodinas, 60, arrived at Athens' Korydallos prison about 30 minutes before the 48 hours expired, accompanied by his wife and son. He greeted the waiting media but made no statement.</p> <p>Koufodinas, who was arrested in 2002, is serving 11 life terms plus 25 years for his role in assassinations of prominent people, including U.S., British and Turkish diplomats and military personnel. He has acknowledged his crimes and never repented.</p> <p>As with his first furlough in November, his temporary release prompted protests. U.S. State Department spokeswoman Heather Nauert said "convicted terrorists do not deserve a vacation from prison."</p>

<b>HEADLINE</b>	<b>02/11 Egypt strikes Sinai targets; kill militants</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/egypt-reports-successes-sinai-operation-militants-52997897?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/egypt-reports-successes-sinai-operation-militants-52997897?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Egypt's military has destroyed dozens of targets, killed 16 militants and detained over 30 suspects as part of its latest operation against Islamic militants in the restive northern Sinai Peninsula, the army said on Sunday.</p> <p>Spokesman Col. Tamer el-Rifai said that airstrikes hit vehicles, weapons caches, communications centers and illegal opium fields in the sweep, which began on Friday and comes as a response to a pickup in extremist violence in Egypt.</p> <p>"The air force targeted and destroyed 66 targets used by terrorist elements to hide from air and artillery attacks," for shelter during raids by security forces, he said in a statement. With North Sinai closed off for non-residents and journalists, the army's casualty figures could not be independently confirmed. Telephone connections to the area, both mobile and landlines, are often shut down as well.</p> <p>The operation, which targets "terrorist and criminal elements and organizations," involves land, naval and air forces from the army and police, and covers north and central Sinai, the Nile Delta and the Western Desert along the porous border with Libya.</p>

<b>HEADLINE</b>	<b>02/10 New leads to find remains US hostages</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/08/politics/isis-captures-fighters-jihadi-john/index.html">https://www.cnn.com/2018/02/08/politics/isis-captures-fighters-jihadi-john/index.html</a>
<b>GIST</b>	<p>Washington (CNN) — A team of military and law enforcement forensic experts has been formed to explore a site near Raqqa Syria where remains of US hostages may be located, a US official tells CNN. The team is working to see what remains may be there, how they can be removed and shipped to a laboratory for potential identification. It is not clear if the remains would be shipped directly back to the United States. The exact location of the team and the work they are doing is not being disclosed by the Pentagon.</p> <p>Information about the possible location of the remains of US hostages killed by ISIS in Syria has been provided in recent days by two ISIS fighters captured in eastern Syria in early January, according to multiple US officials.</p> <p>The two men have given Kurdish Syrian Democratic Forces details about potential burial locations of</p>

several US and Western hostages killed by Mohammed Emwazi, the British ISIS operative known as Jihadi John responsible for the beheading of several American hostages, the officials said.

The ISIS fighters have been identified by US intelligence as Alexandra Kotey and El Shafee Elsheikh, known associates of Jihadi John.

The New York Times was the first to report the capture of the two men.

Emwazi was killed in a US airstrike in Syria in 2015.

It has long been believed the hostages he beheaded in a series of violent videos were killed outside Raqqa. US intelligence has long suspected a general location, but had not been able to send US personnel on a search without more specific details and because there has been fighting in the area until recently.

US personnel will have to recover the remains and then confirm any potential identities through DNA testing.

The US is informing the families of Americans and others held and killed in Syria there are new leads on the possible whereabouts of the remains of their loved ones.

But the officials have cautioned it is very early in the process. The remains still have to be fully recovered and undergo an identification process the officials say.

Kurdish forces, mainly SDF are holding 'hundreds' of detainees, many of whom are foreign fighters says one official. The current interrogations of those with the most valuable information are also yielding fresh intelligence about the state of ISIS capabilities and planning. The US is working on a list of identities of all of those being held. Many gave false names when captured the official said. Learning their identities has helped guide interrogations and yielded to fresh information about potential ISIS attacks. It was after they were able to identify the two detainees associated with Jihadi John that interrogators were able to get information on the remains of the hostages.

One US assessment is that thousands of ISIS operatives have escaped Syria in recent months and are potentially back in Europe, potentially plotting new attacks, one US official with direct knowledge of the latest information tells CNN.

The assessment includes growing concerns these one-time foreign fighters are now able to plan fresh attacks in the West officials say.

In particular, there is concern that the Turkish Syrian border has again become porous in recent weeks since Turkish forces began conducting their incursion into northern Syria.

There is also intelligence that shows a significant number of fighters are crossing back into Turkey and then moving into Libya and Egypt.

Fighters have been caught with sophisticated forged documents made by ISIS, contributing to a continuing concern that the terrorist group remains far from down and out, one official said.

<b>HEADLINE</b>	<b>02/09 Treasury sanctions ISIS 'facilitators'</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/US/2018/02/09/US-sanctions-Islamic-State-facilitators-in-Middle-East-Africa/9111518191087/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=10">https://www.upi.com/Top_News/US/2018/02/09/US-sanctions-Islamic-State-facilitators-in-Middle-East-Africa/9111518191087/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=10</a>
<b>GIST</b>	Feb. 9 (UPI) -- The U.S. Treasury announced sanctions Friday against three Islamic State facilitators in Southeast Asia, the Middle East and Africa.

The Treasury's Office of Foreign Assets Control said it designated Abdulpatta Escalon Abubakar, Yunus Emre Sakarya and Mohamed Mire Ali Yusuf and three entities as "Specially Designated Global Terrorists."

The move is part of an effort to identify and expose individuals who provide support to the Islamic State, which also is known by the acronym ISIS.

All three men are now prohibited from making transactions with Americans and their U.S. assets have been blocked.

"The [Trump] administration is committed to defeating ISIS wherever it operates, denigrating its illicit revenue streams, and pursuing all financial conduits," Sigal Mandelker, Treasury Under Secretary for Terrorism and Financial Intelligence, said in a statement.

"Each individual and entity targeted has contributed to the spread of ISIS's terror reach in their respective corner of the world. Treasury will continue to relentlessly target ISIS support networks, and ensure that the U.S. and international financial systems are not being exploited by terror operatives."

The men were sanctioned for assisting in, sponsoring or providing financial, material or technological support for the terror network.

For the last two years, Abubakar is known to have served as a key facilitator for the militant group's Philippine network -- helping transfer about \$50,000.

Sakarya was found to have been involved in transactions for equipment worth over \$500,000 for the Islamic State in early-to-mid-2016.

Liibaan Trading and the Al-Mutafaq Commercial Company were designated for being owned or controlled by Mire Ali, an Islamic State financial operative.

<b>HEADLINE</b>	<b>02/11 Claim: intel agencies kill damning report</b>
<b>SOURCE</b>	<a href="https://www.thedailybeast.com/us-intelligence-shut-downs-damning-report-on-whistleblower-retaliation?ref=home">https://www.thedailybeast.com/us-intelligence-shut-downs-damning-report-on-whistleblower-retaliation?ref=home</a>
<b>GIST</b>	<p>The nation's top intelligence watchdog put the brakes on a report last year that uncovered whistleblower reprisal issues within America's spy agencies, The Daily Beast has learned. The move concealed a finding that the agencies—including the CIA and the NSA—were failing to protect intelligence workers who report waste, fraud, abuse, or criminality up the chain of command.</p> <p>The investigators looked into 190 cases of alleged reprisal in six agencies, and uncovered a shocking pattern. In only one case out of the 190 did the agencies find in favor of the whistleblower—and that case took 742 days to complete. Other cases remained open longer. One complaint from 2010 was still waiting for a ruling. But the framework was remarkably consistent: Over and over and over again, intelligence inspectors ruled that the agency was in the right, and the whistleblowers were almost always wrong.</p> <p>The report was near completion following a six-month-long inspection run out of the Intelligence Community Inspector General office. It was aborted in April by the new acting head of the office, Wayne Stone, following the discovery that one of the inspectors was himself a whistleblower in the middle of a federal lawsuit against the CIA, according to former IC IG officials.</p> <p>Stone also sequestered the mountain of documents and data produced in the inspection, the product of three staff-years of work. The incident was never publicly disclosed by the office, and escaped mention in</p>

the unclassified version of the IC IG's semiannual report to Congress.

The IC IG's office declined to comment for this story.

The affair casts serious doubt on the intelligence agencies' fundamental pact with the rank and file: that workers who properly report perceived wrongdoing through approved channels won't lose their job or, worse, their security clearance, as a result. It also adds another layer of controversy to the Intelligence Community Inspector General office, already under fire for cuts to its whistleblower protection program and the unexpected sacking of the program's executive director in December. In a confirmation hearing last month, Trump's pick to head the watchdog agency acknowledged the apparent chaos in the office, citing a detailed expose by Foreign Policy magazine. "My first objective as Inspector General, if confirmed, will be to make sure the IC IG's house is in order," said former Justice Department prosecutor Michael Atkinson.

Stone shut down the whistleblowing inspection just days after taking over for Charles McCullough III, who'd served as the intelligence community inspector general from the day the office was founded in 2010 until his retirement in March of last year.

None of this was supposed to happen. In 2012, then-President Barack Obama signed a policy directive called PPD-19, which prohibits intelligence agencies from punishing workers who report abuses through approved government channels. The directive has been left in place under President Trump.

Among other things, PPD-19 requires the Office of Inspector General (OIG) at each agency to carry out an investigation when a worker complains he or she suffered retaliation for lawful whistleblowing. If, after investigating, the OIG finds no evidence of reprisal, the whistleblower can appeal up to the Intelligence Community Inspector General, who can choose to impanel a three-person appellate board, comprised of IGs from other agencies, to review the case and either affirm or disagree with the OIG's decision.

The investigators found that basically never happened. "Absent a review process which adheres to mandated legal standards for reprisal investigations, the protections remain weak with minimal chance for a complainant to have a reprisal complaint substantiated," read one of the conclusions in the suppressed inspection. "From the data it appears PPD-19 has had no impact on Agency reprisal investigations and/or protections for complainants making protected disclosures."

Rob Johnson, the former deputy IC IG under McCullough, broadly confirmed the findings in an interview with The Daily Beast, attributing some of the problems to the expected growing pains in implementing a new policy.

"We saw a couple of cases from some offices that showed that they didn't speak to witnesses that they should have, or that the cases had languished," says Johnson. "And we saw cases where they took no action... Whether it was systemic or not, well, that's why we were doing the inspection."

The IC IG probe was billed as the first independent check-up on how seriously the intelligence inspector generals were taking the presidential directive, and a possible first step in setting a formal peer review process in the future. Six experienced inspectors had been chosen for the probe: three permanent members of the IC IG staff, and three more who were on extended loan from other agencies, the Defense Intelligence Agency, the FBI, and the CIA.

Of the six, the CIA officer—we're calling him James Pars, the alias the CIA assigned him for his lawsuit—was likely the least accustomed to working in the comfortable climes of the IC IG's air-conditioned office. Cuban-American and now in his early fifties, Pars was part of the CIA's controversial Directorate of Operations, the small group responsible for carrying out covert actions abroad. A mosaic of interviews with colleagues, court filings and details in other documents seen by The Daily Beast paint a picture of a man who has seen a lot of nasty stuff over the years, serving in war zones in Iraq and Afghanistan, South American jungles, and cities like Bagdad and at least one other Middle East capital.

A sanitized autobiography Pars prepared in connection with his court action is riddled with staccato bursts of trauma: "... sleep deprived, and having to constantly relay threat information to appropriate entities..."; "... the direct line of fire for one rocket which must have missed my exact location by meters as it tore through our living quarter..."; "... helicopters which had to take evasive maneuvers and discharge flares because of a perceive threat..." "... a leaking casket by my feet and two decomposing dead bodies in body bags not far from me..." The anecdotes, shorn of locations and dates, don't lend themselves to easy verification, but a former intelligence colleague confirms the gist of it. "He understands what happens in the field. He's been in the mud and blood."

There are notes of regret in Pars' subjective career rundown—particularly over the long stints away from his wife and young daughter—but few traces of resentment or personal grievance. That is, until he recounts, with agonizing precision, two occasions when he clashed with a superior, and felt mistreated by the CIA's bureaucracy afterward. The first incident in 2009 ended with him being sent home from a long-term assignment in South America. The second, and the one that ultimately led to his lawsuit, began in December 2014 when he was made the CIA's deputy chief of base at a U.S. military site that Pars doesn't name, but which matches the sprawling Bagram Air Base in Afghanistan.

At Bagram, Pars had issues with his new boss, the chief of base, who he believed was running her command "like a college dormitory," as Pars later wrote in a court filing. She allegedly adopted favorites within her staff, and placed "her personal needs of cooking, baking, socializing, entertainment, exercise and shopping above the needs of the mission, often going days and sometimes more than a week without meeting with key personnel."

Pars' most serious complaint charged that the base chief frequently led her personnel on unnecessary errands—"food, shopping or to the gym"—that took them through parts of the base hit frequently by Taliban rocket fire; one such excursion allegedly crossed a flight ramp that was hit by a rocket just 10 minutes later.

Without more information it's hard to weigh the merits of Pars' complaint, and his version of events contains obvious echoes of longstanding gender stereotypes. But under PPD-19 the relevant question isn't whether Pars' concerns were well founded, completely imagined or something in between. Only whether he faced retaliation for reporting them.

Following procedure, Pars sent his concern up the chain of command. Word of his complaint got back down to the base chief, who allegedly retaliated on a scale that ranged from the petty—assigning him to duty as the compound "noise monitor"—to the serious, writing a critical performance review of Pars faulting him for poor communication skills and lack of leadership. Soon after, the CIA's station chief in Afghanistan issued a "short-of-tour" cable reporting that Pars no longer had the confidence of the chief of base. The cable cut short Pars' one-year detail after four months, and sent him home to Virginia with a reduction in take-home pay.

Upon his return, Pars spent months applying for new CIA assignments that would fit his experience and qualifications, according to his lawsuit, but with the poor performance review and short-of-tour cable on his record, he was rejected again and again. His finances went to ruin, as did his family life; his wife left the country, taking their daughter with her. Pars appealed to the Equal Employment Opportunity office for aid, and worked through the CIA bureaucracy to try and clear his name. He finally lodged a whistleblower reprisal complaint in April 2015.

While waiting for the reprisal investigation to run its course, he applied to a detail that would take him outside the CIA for a while. In September 2015, Pars reported for work at a Reston, Virginia, office park that houses the office of the Intelligence Community Inspector General.

Pars worked as an inspector at the office for nearly a year before he was recruited onto the team that would examine whistleblower retaliation issues. It was a delicate inspection from day one. The intelligence OIGs had recently lost enthusiasm for the PPD-19 whistleblower protection regime, after the very first reprisal case to reach an appeal panel was decided by an independent review board.

In that case, the whistleblower claimed that the NSA's own inspector general, George Ellard, had retaliated against him for reporting wasteful spending on a conference. The Defense Department's OIG ruled against the whistleblower, but the decision was reversed on appeal. In the aftermath, an incensed NSA director Mike Rogers fired Ellard.

"That really did tarnish the IGs perception of PPD-19," says Irvin McCullough, an investigator at the nonprofit Government Accountability Project (and the son of the former IC IG). "They thought the first case would be a manager, and instead it was an IG. They didn't like that."

At a setup meeting for the whistleblower inspection on Sept. 1, 2016, Jeanette McMillian, the IG's general counsel, suggested the inspection should focus on the five largest intelligence agencies—CIA, NSA, NRO, NGA, and DIA—as well as the Office of the Director of National Intelligence, according to an official memorandum memorializing the meeting seen by The Daily Beast. She added that PPD-19 might go away after the next president was sworn in, and, in a departure from protocol, urged the inspectors to conduct a quick evaluation that would end by Inauguration Day and reach a positive conclusion. "Conducting a review and affirming that PPD-19 is working would help to continue these protections with a new presidential administration," reads the memo, paraphrasing McMillian.

Continuing in that vein, McMillian noted that a positive finding would also provide a nice send-off for departing Director of National Intelligence James Clapper, according to the memo. Clapper's term had largely been defined by the Edward Snowden revelations, and he was a staunch supporter of PPD-19, hoping that clear, protected avenues would encourage American spies to keep their complaints in the intelligence family instead of in the press. (Contractors like Snowden aren't covered by PPD-19, but a measure renewed by Congress last month offers contractors similar protections.) McMillian expressed the view that "an evaluation that affirms that PPD-19 is working would be a 'feather in the cap' for DNI Clapper, and a good way to send DNI Clapper on his retirement," according to the memo.

The IG officially kicked off the inspection in early October 2016, and the six inspectors, including Pars, began conducting interviews inside the agencies (the three inspectors on joint detail were recused from the interviews inside their home agency), gathered the procedures, forms, and manuals used in reprisal cases, and collected and crunched the internal numbers.

Two months later, Pars quietly filed his retaliation lawsuit against the CIA.

Getting into court is a complicated process for an undercover CIA officer. Pars first had to receive his agency-assigned alias, and hire a lawyer who had, or could get, a security clearance—in this case, Washington, D.C., employment law attorney Susan Kruger. "I sent the complaint to be reviewed by the CIA first, because I didn't want to file something that contained information that was secret," said Kruger. "So you might say they were on notice."

When the lawsuit finally hit the docket in December 2016, some 630 days had elapsed since Pars lodged his reprisal complaint—two-and-a-half times the 240-day limit endorsed by PPD-19. And still there was no decision. Without an OIG ruling one way or the other, Pars couldn't appeal to the IC IG (where he worked) for an external review board, for the simple reason that there was no ruling to appeal. It's PPD-19's Catch-22. "We just wanted them to take the first step and complete their investigation," Kruger said.

For whatever reason, though, Pars didn't tell his superiors that he was suing the CIA for whistleblower retaliation at the exact same time that he was serving on a large-scale inspection of the same.

By February, it was clear that the results of that inspection would be a feather in nobody's cap. The data alone was troubling. The inspectors general at the six agencies had received 190 allegations of reprisal from 2010 through 2016, according to unclassified memoranda from the inspection seen by The Daily Beast. Less than half, 61 complaints, had been investigated, and of those 57 were ruled unsubstantiated.

The NSA had received 56 of the retaliation complaints and investigated 12; the CIA got 62, investigated

13 and shunted 21 to other offices, primarily Equal Employment Opportunity. The Defense Intelligence Agency, or DIA, received 50 complaints, and investigated 19. In the entire batch of 190 cases, only once did an OIG find in favor of the whistleblower. That was in a DIA case that took 742 days to complete. Other cases remained open longer. One complaint from 2010 was still waiting for a ruling.

Beyond the numbers, the inspectors found endless obstacles to effective whistleblower protection in the spy agencies, according to documents from the probe. There was no clear standard for conducting reprisal investigations; even the standard of proof—probable cause? preponderance of the evidence?—was murky to the OIGs. The investigation manuals at most agencies gave retaliation probes only cursory attention. There were mixed incentives in play: The primary metric for weighing an OIGs effectiveness was how much money the office saved taxpayers through its waste and fraud investigations, and a successful whistleblower claim could cost the government money in the form of back wages or attorneys fees. Some inspectors complained that reprisal cases were too difficult and time consuming compared to other OIG tasks, and even the most dedicated investigator might struggle to definitively prove a connection between an intelligence worker's subpar performance review, reduced security clearance or missed promotion to their prior whistleblowing.

In March the inspection moved into the final stage and the team was preparing the official report, earmarked for Donald Trump's newly confirmed director of national intelligence, Daniel Coats. Copies would have gone to all the intelligence IGs, as well, according to Johnson, and probably to Congress. A public release was also on the table.

Instead, it went nowhere.

In early April, rumors of Pars' lawsuit reached the IG IC's office. Under questioning, Pars acknowledged he was the pseudonymous plaintiff in the case. Stone immediately removed Pars from the inspection and sent him back to the CIA.

Pars wasn't a zealot, and his work was always diligent and thorough, say former colleagues. But removing him from the project was largely uncontroversial. "We have a standard in the IG to not only avoid a conflict of interest, but to avoid the appearance of a conflict of interest," Johnson says, and Pars wouldn't have been permitted to work on the inspection if they'd known he had a whistleblower retaliation complaint pending at CIA.

But Stone's next action was more puzzling. The following day he ordered the entire inspection halted, according to sources from the agency. Data, files, memos, charts, and graphs were locked down and work on the final report stopped on a dime. The official explanation was that the inspection had been tainted by Pars' involvement. But even now questions loom over the decision.

Johnson says there's virtually nothing a single inspector could do to contaminate a report that relies heavily on verifiable numbers. "Everything has to be backed up with data... There's not a lot of opinion on those reports." Some former IC IG officials believe that Stone used the Pars affair as an pretext to kill an inspection that was producing inconvenient results. "Pars was told to cease and desist and they walked him out the door and buried the program," says one former IC IG official who worked with Pars. "They pulled the carpet out from under him because they wanted an excuse to quash the report."

Though the whistleblower report never appeared, last October the nonprofit Project on Government Oversight got ahold of a leaked copy of one of the inspection memos. They quoted from it in an article. "A complainant alleging reprisal for making a protected disclosure has a minimal chance to have a complaint processed and adjudicated in a timely and complete manner."

Calling the language "stark," Dianne Feinstein brought up the memo the next day in a tense exchange at the Senate confirmation hearing for Christopher Sharpley, the acting CIA inspector general and Trump's pick for the permanent position.

"I would ask that you provide a copy of that document to our office, the Intelligence Committee's office,"

	<p>she told Sharpley.</p> <p>“Senator, I am unfamiliar with that document,” said Sharpley, seemingly taken aback. “I am not aware of its contents... The IC IG did not make me aware of it as acting IG at CIA. This is the first I’m hearing of this particular program.”</p> <p>One source familiar with the abortive whistleblower inspection says this particular memo was written by Pars.</p> <p>Pars’ lawsuit is still pending, but the Justice Department has asked the court to dismiss the claim, pointing to language in PPD-19 that more or less says the directive can’t be used as the basis for a lawsuit. After the drama in the IC IG, Pars’ future in the CIA is even dimmer. Two sources with knowledge of the matter say the agency recently referred Pars to an executive review board as the first step to possibly terminating his service to the CIA. Attorney Kruger said she couldn’t comment on anything beyond the lawsuit, but after a pause added, “In general we believe that the CIA is taking further actions in retaliation against him.”</p>

<b>HEADLINE</b>	<b>02/12 Saudi Arabia sends a signal</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-europe-attacks-belgium-saudi-insight/giving-up-control-of-brussels-mosque-saudi-arabia-sends-a-signal-idUSKBN1FW0R3">https://www.reuters.com/article/us-europe-attacks-belgium-saudi-insight/giving-up-control-of-brussels-mosque-saudi-arabia-sends-a-signal-idUSKBN1FW0R3</a>
<b>GIST</b>	<p>BRUSSELS/RIYADH (Reuters) - Saudi Arabia has agreed to give up control of Belgium’s largest mosque in a sign that it is trying to shed its reputation as a global exporter of an ultra-conservative brand of Islam.</p> <p>Belgium leased the Grand Mosque to Riyadh in 1969, giving Saudi-backed imams access to a growing</p>

Muslim immigrant community in return for cheaper oil for its industry.

But it now wants to cut Riyadh's links with the mosque, near the European Union's headquarters in Brussels, over concerns that what it preaches breeds radicalism.

The mosque's leaders deny it espouses violence, but European governments have grown more wary since Islamist attacks that were planned in Brussels killed 130 people in Paris in 2015 and 32 in the Belgian capital in 2016.

Belgium's willingness to put its demands to oil-producing Saudi Arabia, a major investor and arms client, breaks with what EU diplomats describe as the reluctance of governments across Europe to risk disrupting commercial and security ties.

Riyadh's quick acceptance indicates a new readiness by the kingdom to promote a more moderate form of Islam - one of the more ambitious promises made by Crown Prince Mohammed bin Salman under plans to transform Saudi Arabia and reduce its reliance on oil.

The agreement last month coincides with a new Saudi initiative, not publicly announced but described to Reuters by Western officials, to end support for mosques and religious schools abroad blamed for spreading radical ideas.

The move towards religious moderation - and away from the extreme interpretation of Islam's Salafi branch that is espoused by modern jihadist groups - risks provoking a backlash at home and could leave a void that fundamentalists try to fill.

But Saudi Arabia's recent moves on religion are seen by Belgian diplomat Dirk Achten, who headed a government delegation to Riyadh in November, as a "window of opportunity".

"The Saudis are disposed to dialogue without taboos," he told Belgium's parliament last month after the mission was hastily put together after the assembly urged the government to break Saudi Arabia's 99-year, rent-free lease of the mosque.

But he also cautioned: "Some do not, or barely, admit that this form of Salafism leads to jihadism."

Details of the mosque's handover are still being negotiated but will be announced this month, Belgian Interior Minister Jan Jambon told Reuters.

The diplomatic contacts, led by the countries' foreign ministers, were intended by Belgium to prevent what Jambon called an "exaggerated response" from Saudi Arabia -- indicating the Belgian government had sought to ensure there was no diplomatic backlash.

This, he said, was "under control" following a visit to Belgium last month by Saudi Foreign Minister Adel al-Jubeir.

Before Saudi Arabia took control in the late 1960s, the Grand Mosque was a disused relic of the Great Exhibition of 1880 - an Oriental Pavilion.

Saudi money converted it to cater to migrants from Morocco invited to work in the country's coal mines and factories. It is run by the Mecca-based Muslim World League (MWL), a missionary society mainly funded by Saudi Arabia.

Concerns about the mosque grew as militant groups such as Islamic State started recruiting among the grandchildren of those migrants, many of whom say they still feel they do not belong in Belgian society, opinion polls show.

Belgium has sent more foreign fighters to Syria per capita than any other European country. Belgian

officials now suggest the Muslim Executive of Belgium, a group seen as close to Moroccan officialdom, should run the Grand Mosque.

Although the Saudi government has denied any role in the Sept. 11, 2001 attacks against the United States which killed more than 3,000 people, 15 of the 19 airplane hijackers who carried them out were from Saudi Arabia and linked to late Al Qaeda leader Osama bin Laden, the plot's Saudi-born mastermind.

Bin Laden was a follower of Wahhabism, the original strain of Salafism which has often been criticized as the ideology of radical Islamists worldwide. Yet many of Islamic State's positions are far more radical than Wahhabism, the ultra-conservative branch of Islam dominant in Saudi Arabia and founded by 18th century cleric Mohammed ibn Abd al-Wahhab.

A classified report by Belgian security agency OCAD/OCAM in 2016 said the Wahhabi branch of Islam promoted at the mosque led Muslim youth to more radical ideas, sources with access to the report said.

"The mosque has influence to spread this hateful 'software'," a senior Belgian security source said. "Nobody paid attention for decades."

Belgium's parliament said what it preached was "a gateway or even a predisposition to a more combative Islam that is violent", calling in October for an end to the Saudi lease.

The same month, immigration minister Theo Francken tried to expel the Grand Mosque's Egyptian imam of 13 years, calling him "dangerous", but a judge reversed that decision.

But Belgian security sources say there is no proof imams at the Grand Mosque preached violence or have had links to attacks.

Some who went to fight in Syria had studied there but men are more prey to recruiters for militant groups online and on the streets of underprivileged boroughs such as Molenbeek, in Brussels, where some of the Paris attackers lived, they say.

Tamer Abou El Saod, who was appointed director of the Grand Mosque in May, says there are problems over the way it is perceived but denies it espouses a fundamentalist version of Islam. He says he is ready to work with Belgian officials.

"There are changes happening already and there are even more changes coming in the very near future," he told Reuters.

Belgian leaders say they want the mosque to preach a "European Islam" better aligned with their values - a familiar refrain across Europe following the Islamic State attacks of the last few years.

But it is unclear who will operate the sprawling mosque complex, which receives about 5 million euros (\$6 million) a year through the MWL which has for decades promoted a hardline interpretation of Islam at dozens of institutions worldwide

The MWL has recently adopted a more conciliatory tone. In just over a year since being appointed, its secretary-general, Mohammad bin Abdul Karim al-Issa, has met with Pope Francis and taken a public stance against Holocaust denial. Issa told Reuters in November the organization's new mission was to annihilate extremism.

For Saudi Arabia, the mosque is a chance to prove it is turning over a new leaf after years of accusations it turned a blind eye to - if not actively endorsed - extremist ideology.

SOURCE	<a href="https://www.militarytimes.com/news/your-military/2018/02/09/battlefield-acupuncture-yes-it-exists-and-the-military-is-using-it-to-fight-troops-pain/">https://www.militarytimes.com/news/your-military/2018/02/09/battlefield-acupuncture-yes-it-exists-and-the-military-is-using-it-to-fight-troops-pain/</a>
GIST	<p>The U.S. military has added the ancient holistic therapy of acupuncture to its arsenal for fighting opioid abuse in the ranks.</p> <p>The practice, which first originated in China about 8,000 years ago, provides immediate relief for acute and chronic pain, and, without the risk of addiction, can be used without any restrictions.</p> <p>One of the most popular forms used in the military has been dubbed ‘battlefield acupuncture,’ or BFA, because it’s simple to administer and easily transportable, according to Dr. Richard Niemtow, who developed BFA in 2001. With BFA, service members can continue to participate, unimpaired, in work and life.</p> <p>“They don’t have to wait hours for medications to take maximal effect or endure side effects, like drowsiness or allergic reactions, of common pain medications,” said Air Force Col. Lynda Vu, who recently administered BFA while deployed in Qatar. “This allows personnel to go back to the fight with minimal impact to continuing mission operations.”</p> <p>Service members who use BFA can still fly aircraft, unlike those who use opiates, according to Vu. The one challenge she faces is a lack of BFA-trained physicians on deployment.</p> <p>“This requires either training prior to deployment or having a trained instructor administer the provider BFA course in the deployed location,” Vu said. But once learned, the technique is easy to use.</p> <p>BFA, which involves a small needle inserted into the ear, has a “central effect” on the nervous system and the cingulate gyrus, an area of the brain that processes pain, according to Niemtow, who is the director of the U.S. Air Force Acupuncture and Integrative Medicine Center at the Malcolm Grow Medical Clinics and Surgery Center on Joint Base Andrews, Maryland.</p> <p>Most patients who seek BFA are those who have tried traditional Western treatments and have not responded well, according to Niemtow. But with BFA, many patients can immediately begin to feel relief.</p>

<b>HEADLINE</b>	<b>02/10 Opioid scourge hits state health workers</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/news/local/article199418169.html">http://www.thenewstribune.com/news/local/article199418169.html</a>
<b>GIST</b>	<p>Spokane — A Spokesman-Review analysis of Washington death records, health care provider licenses and Department of Health disciplinary records found at least 33 medical professionals in the state have died from opioid overdoses from 2010 to 2015, the most recent year that overdose death data is available.</p> <p>Most of the deceased are not physicians. They're nurses, pharmacy technicians and, in some cases, chemical dependency counselors.</p> <p>None were disciplined by the Department of Health for suspected drug or alcohol abuse or diversion before their deaths, records show, though a Cowlitz County nurse died in 2014 before a pending investigation into his drug use could be completed. His death certificate listed nine drugs, more than any other professional on the list.</p> <p>Two others were reported, but both had their cases closed. A Port Townsend nurse practitioner had a complaint of drug and alcohol abuse, falsifying records and mental disorder dismissed in 2010 due to insufficient evidence. She fatally overdosed in 2015 with fentanyl, morphine and hydrocodone found in her system.</p> <p>A Longview chemical dependency counselor accused of drug or alcohol abuse in 2011 also had his case closed with no recorded discipline. He died of a heroin overdose in September 2013.</p> <p>Some of the deaths made headlines. A Tacoma doctor, Nick Uruga, had been charged with kidnapping and harassing his ex-wife shortly before he was found dead in his Gig Harbor home of what was described at the time as an apparent suicide. The medical examiner later ruled it an accidental drug poisoning with oxycodone, according to his death certificate.</p> <p>The deceased include a Wenatchee-area hospital pharmacist who died at 58 with six prescription drugs, including methadone and hydromorphone, in her system. A Mukilteo pharmacy technician, devoted Irish-Catholic and diabetes advocate, died at 34 from a hydrocodone overdose.</p> <p>Almost none used heroin or other illegal drugs, a marked contrast to the 4,020 Washingtonians who died of opioid overdoses during the same time period.</p> <p>Heroin is by far the most common drug on death certificates, and methamphetamine is in the top five statewide. But medical professionals tend to use prescription painkillers. Oxycodone, hydrocodone and fentanyl top the list.</p> <p>Without exception, the obituaries do not mention a cause of death. They speak only of people who "passed away suddenly," often leaving behind surviving parents, siblings, spouses and children.</p> <p>The medical profession has long struggled with how best to handle providers struggling with drug addiction.</p> <p>Though doctors, nurses and pharmacists are among the people best-equipped to see the consequences of drug addiction, they're also susceptible to drug abuse thanks to an intersection of factors: high-stress jobs, odd hours and a belief that they know how to stay in control of the drugs they prescribe or administer routinely.</p> <p>Doctors with an addiction problem tend to abuse alcohol most frequently, said Chris Bundy, the director of</p>

the Washington Physician's Health Program, which helps doctors get treatment for addiction and mental illness.

Nurses are far more likely to abuse opioids or other prescription drugs. Most seeking treatment in Washington through the Department of Health have either an opioid addiction or an addiction to multiple substances, including opioids.

"A lot of that is because they have direct hands-on access to those medications," said John Furman, director of Washington Health Professional Services, a group within the Department of Health that treats nurses for drug addiction.

State law requires medical providers – anyone with a Department of Health license – and health care employers to report license holders who are unable to work "with reasonable skill and safety due to a mental or physical condition," including drug or alcohol addiction. Providers are also supposed to self-report.

A total of 558 health care providers were sanctioned by the health department from 2010 to 2016 for drug or alcohol violations, and the department took 1,023 reports of suspected drug and alcohol violations involving 843 individual providers during the same period, according to data obtained through a public records request.

Washington Health Professional Services takes a carrot and stick approach to suspected substance abuse among nurses, including nurse practitioners.

WHPS, a part of the Department of Health, handles referrals from family, colleagues and nurses themselves who may be struggling with drug addiction.

If the program finds a nurse is abusing drugs, they'll be put on a monitoring agreement and be expected to comply with a treatment program. If they comply with counseling, group therapy and pass drug tests, they'll be able to keep their license and continue practicing once it's deemed safe.

"If they're successful in the program, the nursing commission will never know that they participated and that's an incentive," Furman said.

That's the carrot. The stick? Screw up, and the program can report nurses to the nursing commission for non-compliance, and they could lose their licenses and jobs.

A similar program exists for doctors: the Washington Physician's Health Program. Unlike WHPS, it's completely independent from the Department of Health, and deals with any issue making it difficult for a doctor to practice safely, including mental or cognitive illnesses.

"We want to encourage early intervention and treatment without creating a safe harbor for people who are potentially putting patients at risk," Bundy, the program director, said.

The physician's program has a higher success rate than the nurse's, but providers in both fare better than the general public in addiction treatment.

During the 30 years the doctors' program has existed, 81 percent of graduates have stayed clean after five years, based on random drug tests, Bundy said.

Among nurses who graduate, an average of 79 percent were employed in 2017, according to the program's annual report. Fewer than 1 percent of nurses who graduate return to monitoring later for new violations.

Typically, 40 to 60 percent of people treated for drug addiction will relapse, according to the National Institute on Drug Abuse, the federal government's main funder of addiction research. They define relapse as "recurrence of symptoms that requires additional medical care."

Still, many health care providers already fear reporting colleagues out of concern that they're "tattling" or going to get someone in trouble.

And reaching out for help remains difficult, even when nurses and other professionals are aware of resources.

Anne Mason, director of Washington State University's doctoral program in nursing, said nurses are aware of WHPS and are taught that anyone, from any background, can become addicted to narcotics.

But that's not always enough to make people willing to seek help.

"There's so much stigma around addiction whether you're a health care professional or any other professional," Mason said. "There's oftentimes a message that addiction is about people making a choice, a bad choice, and people could choose not to be addicted if they wanted to but they don't want to."

Most reports of drug abuse to both the physicians' health program and the Department of Health don't result in discipline or monitoring.

"We often hear after the fact that there were others who knew that individual, often several others, who knew that individual and had a concern and failed to act," Bundy said.

In 2016, Bundy said they had 216 people referred to them and had 70 end up in monitoring agreements. In 2017, they had 189 referrals and 80 monitoring agreements. Most doctors are able to return to work.

WPHS, the program for nurses, had 371 nurses participating in the program for some part of 2017, and 83 new nurses sign monitoring agreements.

<b>HEADLINE</b>	<b>02/09 Another asteroid heading close to Earth</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/another-asteroid-heading-close-to-earth/">https://www.cbsnews.com/news/another-asteroid-heading-close-to-earth/</a>
<b>GIST</b>	<p>CAPE CANAVERAL, Fla. -- Another asteroid is headed our way -- the second this week -- but there's no need to worry. The newly discovered space rock will pass within 39,000 miles (64,000 kilometers) of Earth on Friday afternoon. That's less than one-fifth the distance to the moon.</p> <p>Designated 2018 CB, the asteroid is an estimated 50 feet to 130 feet (15 meters to 40 meters) in size, possibly bigger than the one that exploded over Russia five years ago this month.</p> <p>The manager of NASA's Center for Near-Earth Object Studies, Paul Chodas, said asteroids this size usually don't come this close - just once or twice a year.</p> <p>While Friday's close approach isn't a huge deal, Chodas said in an email, "it is a reminder that asteroids can pass very close to our planet and it's important that we find these objects when they do get close."</p>

<b>HEADLINE</b>	<b>02/09 Shadowy Russian bilked US spies \$100K</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/02/09/us/politics/us-cyberweapons-russia-trump.html">https://www.nytimes.com/2018/02/09/us/politics/us-cyberweapons-russia-trump.html</a>
<b>GIST</b>	<p>BERLIN — After months of secret negotiations, a shadowy Russian bilked American spies out of \$100,000 last year, promising to deliver stolen National Security Agency cyberweapons in a deal that he insisted would also include compromising material on President Trump, according to American and European intelligence officials.</p>

The cash, delivered in a suitcase to a Berlin hotel room in September, was intended as the first installment of a \$1 million payout, according to American officials, the Russian and communications reviewed by The New York Times. The theft of the secret hacking tools had been devastating to the N.S.A., and the agency was struggling to get a full inventory of what was missing.

Several American intelligence officials said they made clear that they did not want the Trump material from the Russian, who was suspected of having murky ties to Russian intelligence and to Eastern European cybercriminals. He claimed the information would link the president and his associates to Russia. Instead of providing the hacking tools, the Russian produced unverified and possibly fabricated information involving Mr. Trump and others, including bank records, emails and purported Russian intelligence data.

The United States intelligence officials said they cut off the deal because they were wary of being entangled in a Russian operation to create discord inside the American government. They were also fearful of political fallout in Washington if they were seen to be buying scurrilous information on the president.

The Central Intelligence Agency declined to comment on the negotiations with the Russian seller. The N.S.A., which produced the bulk of the hacking tools that the Americans sought to recover, said only that “all N.S.A. employees have a lifetime obligation to protect classified information.”

The negotiations in Europe last year were described by American and European intelligence officials, who spoke on the condition of anonymity to discuss a clandestine operation, and the Russian. The United States officials worked through an intermediary — an American businessman based in Germany — to preserve deniability. There were meetings in provincial German towns where John le Carré set his early spy novels, and data handoffs in five-star Berlin hotels. American intelligence agencies spent months tracking the Russian’s flights to Berlin, his rendezvous with a mistress in Vienna and his trips home to St. Petersburg, the officials said.

The N.S.A. even used its official Twitter account to send coded messages to the Russian nearly a dozen times.

The episode ended this year with American spies chasing the Russian out of Western Europe, warning him not to return if he valued his freedom, the American businessman said. The Trump material was left with the American, who has secured it in Europe.

The Russian claimed to have access to a staggering collection of secrets that included everything from the computer code for the cyberweapons stolen from the N.S.A. and C.I.A. to what he said was a video of Mr. Trump consorting with prostitutes in a Moscow hotel room in 2013, according to American and European officials and the Russian, who agreed to be interviewed in Germany on the condition of anonymity. There remains no evidence that such a video exists.

The Russian was known to American and European officials for his ties to Russian intelligence and cybercriminals — two groups suspected in the theft of the N.S.A. and C.I.A. hacking tools.

But his apparent eagerness to sell the Trump “kompromat” — a Russian term for information used to gain leverage over someone — to American spies raised suspicions among officials that he was part of an operation to feed the information to United States intelligence agencies and pit them against Mr. Trump. Early in the negotiations, for instance, he dropped his asking price from about \$10 million to just over \$1 million. Then, a few months later, he showed the American businessman a 15-second clip of a video showing a man in a room talking to two women.

No audio could be heard on the video, and there was no way to verify if the man was Mr. Trump, as the Russian claimed. But the choice of venue for showing the clip heightened American suspicions of a Russian operation: The viewing took place at the Russian Embassy in Berlin, the businessman said.

There were other questions about the Russian’s reliability. He had a history of money laundering and a

thin legitimate cover business — a nearly bankrupt company that sold portable grills for streetside sausage salesmen, according to British incorporation papers.

“The distinction between an organized criminal and a Russian intelligence officer and a Russian who knows some Russian intel guys — it all blurs together,” said Steven L. Hall, the former chief of Russia operations at the C.I.A. “This is the difficulty of trying to understand how Russia and Russians operate from the Western viewpoint.”

American intelligence officials were also wary of the purported kompromat the Russian wanted to sell. They saw the information, especially the video, as the stuff of tabloid gossip pages, not intelligence collection, American officials said.

But the Americans desperately wanted the hacking tools. The cyberweapons had been built to break into the computer networks of Russia, China and other rival powers. Instead, they ended up in the hands of a mysterious group calling itself the Shadow Brokers, which has since provided hackers with tools that infected millions of computers around the world, crippling hospitals, factories and businesses.

No officials wanted to refuse information they thought might help determine what had happened.

“That’s one of the bedeviling things about counterintelligence and the wilderness that it is — nobody wants to be caught in a position of saying we wrote that off and then five years later saying, ‘Holy cow, it was actually a real guy,’” Mr. Hall said.

American intelligence agencies believe that Russia’s spy services see the deep political divisions in the United States as a fresh opportunity to inflame partisan tensions. Russian hackers are targeting American voting databases ahead of the midterm election this year, they said, and using bot armies to promote partisan causes on social media. The Russians are also particularly eager to cast doubt on the federal and congressional investigations into the Russian meddling, American intelligence officials said.

Part of that effort, the officials said, appears to be trying to spread information that hews closely to unsubstantiated reports about Mr. Trump’s dealings in Russia, including the purported video, whose existence Mr. Trump has repeatedly dismissed.

Rumors that Russian intelligence possesses the video surfaced more than a year ago in an explosive and unverified dossier compiled by a former British spy and paid for by Democrats. Since then, at least four Russians with espionage and underworld connections have appeared in Central and Eastern Europe, offering to sell kompromat to American political operatives, private investigators and spies that would corroborate the dossier, American and European intelligence officials said.

American officials suspect that at least some of the sellers are working for Russia’s spy services.

The Times obtained four of the documents that the Russian in Germany tried to pass to American intelligence (The Times did not pay for the material). All are purported to be Russian intelligence reports, and each focuses on associates of Mr. Trump. Carter Page, the former campaign adviser who has been the focus of F.B.I. investigators, features in one; Robert and Rebekah Mercer, the billionaire Republican donors, in another.

Yet all four appear to be drawn almost entirely from news reports, not secret intelligence. They all also contain stylistic and grammatical usages not typically seen in Russian intelligence reports, said Yuri Shvets, a former K.G.B. officer who spent years as a spy in Washington before immigrating to the United States after the end of the Cold War.

American spies are not the only ones who have dealt with Russians claiming to have secrets to sell. Cody Shearer, an American political operative with ties to the Democratic Party, has been crisscrossing Eastern Europe for more than six months to secure the purported kompromat from a different Russian, said people familiar with the efforts, speaking on the condition of anonymity to avoid damaging their relationship with

him.

Reached by phone late last year, Mr. Shearer would say only that his work was “a big deal — you know what it is, and you shouldn’t be asking about it.” He then hung up.

Mr. Shearer’s efforts grew out of work he first began during the 2016 campaign, when he compiled a pair of reports that, like the dossier, also included talk of a video and Russian payoffs to Trump associates. It is not clear what, if anything, Mr. Shearer has been able to purchase.

Before the Americans were negotiating with the Russian, they were dealing with a hacker in Vienna known only to American intelligence officials as Carlo. In early 2017, he offered to provide them with a full set of hacking tools that were in the hands of the Shadow Brokers and the names of other people in his network, American officials said. In exchange, he wanted immunity from prosecution in the United States.

But the immunity deal fell apart, so intelligence officials decided to do what spies do best: They offered to buy the data. That is when the Russian in Germany emerged, telling the Americans he would handle the sale.

Like Carlo, he had previously dealt with American intelligence operatives, American and European officials said. He served as a fixer, of sorts, brokering deals for Russia’s Federal Security Service, or F.S.B., which is the successor to the Soviet K.G.B. American intelligence officials said that he had a direct link to Nikolai Patrushev, a former F.S.B. director, and that they knew of previous work he had done helping move illicit shipments of semiprecious metals for a Russian oligarch.

By last April it appeared that a deal was imminent. Several C.I.A. officers even traveled from the agency’s headquarters to help the agency’s Berlin station handle the operation.

At a small bar in the former heart of West Berlin, the Russian handed the American intermediary a thumb drive with a small cache of data that was intended to provide a sample of what was to come, American officials said.

Within days, though, the deal turned sour. American intelligence agencies determined that the data was genuinely from the Shadow Brokers, but was material the group had already made public. As a result, the C.I.A. said it would not pay for it, American officials said.

The Russian was furious. But negotiations limped on until September, when the two sides agreed to try again.

Late that month, the American businessman delivered the \$100,000 payment. Some officials said it was United States government money but routed through an indirect channel.

A few weeks later, the Russian began handing over data. But in multiple deliveries in October and December, almost all of what he delivered was related to the 2016 election and alleged ties between Mr. Trump’s associates and Russia, not the N.S.A. or C.I.A. hacking tools.

In December, the Russian said he told the American intermediary that he was providing the Trump material and holding out on the hacking tools at the orders of senior Russian intelligence officials.

Early this year, the Americans gave him one last chance. The Russian once again showed up with nothing more than excuses.

So the Americans offered him a choice: Start working for them and provide the names of everyone in his network — or go back to Russia and do not return.

The Russian did not give it much thought. He took a sip of the cranberry juice he was nursing, picked up his bag and said, “Thank you.” Then he walked out the door

<b>HEADLINE</b>	<b>02/08 Study: viruses, bacteria falling from sky</b>
<b>SOURCE</b>	<a href="https://www.studyfinds.org/viruses-bacteria-fall-from-sky/">https://www.studyfinds.org/viruses-bacteria-fall-from-sky/</a>
<b>GIST</b>	<p><b>VANCOUVER</b> — This study will make you think twice about stepping outside for a breath of fresh air. A team of scientists from around the world confirmed millions of viruses rising into the atmosphere, traveling — sometimes for thousands of miles — and falling back down to the surface.</p> <p>The study, carried out by researchers from the U.S., Canada, and Spain, is the first of its kind to confirm viruses are being swept up into the free toposphere — the layer of atmosphere between the area where Earth’s weather systems develop — and below the stratosphere, where airplanes fly.</p> <p>“Fresh air” may not be so fresh after all. A new study finds that millions of viruses and bacteria are swept into the atmosphere and travel long distances before eventually falling back down to earth.</p> <p>The numbers are “astonishing” the researchers say, but remember, a virus is a tiny particle, little more than a strand of DNA and a mechanism for attaching to organic matter.</p> <p>“Every day, more than 800 million viruses are deposited per square metre above the planetary boundary layer — that’s 25 viruses for each person in Canada,” says University of British Columbia virologist Curtis Suttle, lead author of the study, in a media <a href="#">release</a>.</p> <p>Scientists have been finding genetically similar viruses in disparate parts of the planet.</p> <p>“Roughly 20 years ago we began finding genetically similar viruses occurring in very different environments around the globe,” says Suttle. “This preponderance of long-residence viruses travelling the atmosphere likely explains why—it’s quite conceivable to have a virus swept up into the atmosphere on one continent and deposited on another.”</p> <p>Suttle and his team found that viruses and bacteria are often swept up into the atmosphere by attaching themselves to particles in soil dust and sea spray. The researchers used platforms in Spain’s Sierra Nevada Mountains to detect how many viruses and bacteria were settling there every day. They found billions of viruses and tens of millions of bacteria being deposited there per square meter every day.</p> <p>“Bacteria and viruses are typically deposited back to Earth via rain events and Saharan dust intrusions. However, the rain was less efficient removing viruses from the atmosphere,” adds study author Isabel Reche, a microbial ecologist from the University of Granada.</p> <p>The <a href="#">full study</a> was published in <i>International Society for Microbial Ecology Journal</i>.</p>

<b>HEADLINE</b>	<b>02/11 Germany rising trend anti-Semitic crimes</b>
<b>SOURCE</b>	<a href="http://www.dw.com/en/germany-averaged-four-anti-semitic-crimes-per-day-in-2017-report-says/a-42538545">http://www.dw.com/en/germany-averaged-four-anti-semitic-crimes-per-day-in-2017-report-says/a-42538545</a>
<b>GIST</b>	<p>The rising trend of anti-Semitic crimes in Germany shows no signs of abating, according to a newspaper report on last year's crime statistics that was published on Sunday.</p> <p>In 2017, German police registered a total of 1,453 crimes that targeted Jews or Jewish institutions, reported German newspaper Tagesspiegel, citing figures from the German government. The data was compiled in response to an inquiry from Bundestag vice president and Left party lawmaker Petra Pau.</p> <p>Last year's crimes included 32 acts of violence, 160 instances of property damage, and 898 cases of incitement.</p> <p>The German government expects the figures to rise even further since the data provided by the states is not yet final, the paper said.</p> <p>In 1,377 of the cases — 95 percent of the total — police determined that a right-wing motive had driven the crimes.</p> <p>Police attributed 33 of the offenses to foreign-born anti-Semites, not including Islamists.</p> <p>Another 25 of the cases were "religiously motivated," including those involving either foreign-born or</p>

	<p>German Muslims with extremist beliefs, according to the Tagesspiegel report.</p> <p>Read more: Germany pays too little attention to current anti-Semitism, report says</p> <p>In 17 of the cases, authorities were unable to determine a political motive behind the crime. Police determined a left-wing motive in one case of incitement.</p> <p>Pau, who initiated the anti-Semitic crime inquiry, said she was deeply concerned about last year's figures. Speaking with Tagesspiegel, Pau noted that "the number of unreported cases could be considerably higher" since many of those affected are reluctant to report the crime.</p> <p>Last month, German lawmakers passed a bill to implement tougher laws to tackle anti-Semitism, including the creation of a commissioner post to develop and carry out a strategy for rooting out anti-Semitic sentiment and crime.</p>

<b>HEADLINE</b>	<b>02/10 Coast Guard probes false mayday calls</b>
<b>SOURCE</b>	<a href="https://www.stripes.com/news/us/coast-guard-looking-for-man-suspected-of-making-8-false-maydays-in-california-1.511037">https://www.stripes.com/news/us/coast-guard-looking-for-man-suspected-of-making-8-false-maydays-in-california-1.511037</a>
<b>GIST</b>	<p>The U.S. Coast Guard has spent the last month looking for the aquatic version of the boy who cried wolf.</p> <p>Since Jan. 3, an unknown man is suspected of making eight mayday radio calls to the Coast Guard's Los Angeles command center, a felony that could land the caller in prison for up to six years.</p> <p>Such fake maydays, officials say, wastes resources and can put rescuers in danger.</p> <p>"Coast Guard operations are inherently dangerous and our servicemembers face risks every time we launch for a search-and-rescue mission," said Capt. Charlene Downey, the Los Angeles-Long Beach commander. "Limited resources should not be diverted away from legitimate emergencies."</p> <p>In one of the recordings, released this week by the Coast Guard as it seeks the public's help in finding the suspect, a male's voice spits out the universal distress signal rapid-fire: "Mayday, mayday, mayday. ... Mayday, mayday, mayday."</p>

	<p>The accent of his voice appears to change between bursts.</p> <p>Other recordings from the past two weeks are undergoing forensic voice analysis, the Coast Guard said in a statement.</p> <p>The man made the calls to Channel 16, the international channel for communicating distress signals to the Coast Guard, law enforcement and other mariners, Petty Officer DeVante Marrow said. The Coast Guard monitors that channel 24 hours a day.</p> <p>It is unknown if the man made the calls from the sea or from land.</p> <p>“The calls were only one to three seconds long, so they couldn’t get a bearing on it,” Marrow said about why officials couldn’t track the calls. “When you have the search-and-rescue calls, they try to get out as much information as possible. In this case, he just said, ‘mayday.’”</p> <p>The Coast Guard typically sends out crews anytime a mayday call comes in – and they will keep looking until they determine a call is fake. The released call did not cite a location.</p> <p>How the Coast Guard determined these calls were fake is unclear, but Marrow said the commanders have criteria they follow to determine a call’s legitimacy.</p> <p>Besides a prison sentence, someone convicted of making a false distress call could face a \$250,000 fine and a \$10,000 civil penalty and have to repay agency costs.</p>

<b>GIST</b>	<p>SLEMAN, Indonesia – Police in Indonesia shot a sword-wielding man who attacked a church congregation during Sunday Mass, injuring four people, including a German priest.</p> <p>The reason for the attack Sunday morning in Sleman district in Yogyakarta province was not immediately clear. The 22-year-old attacker decapitated statues of Jesus Christ and the Virgin Mary during the incident, photos showed.</p> <p>Churches are a common target for Islamic militants in Indonesia, the world's most populous Muslim nation.</p> <p>Local police detective Fendi Timur said counterterrorism police would be involved in the investigation.</p> <p>Video shows people in the church throwing books at the man as he lunged toward them with his sword. Witnesses and police said the injured included a police officer who tried to subdue the attacker and the 81-year-old priest Karl Edmund Prier, a longtime resident of Indonesia.</p> <p>They suffered back, neck and head wounds and are in stable condition.</p> <p>The suspect, identified only as Sulyono, was hospitalized.</p>

<b>HEADLINE</b>	<b>02/11 Kentucky 'murder spree': man kills 4, self</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/11/us/kentucky-four-people-killed/index.html">https://www.cnn.com/2018/02/11/us/kentucky-four-people-killed/index.html</a>
<b>GIST</b>	<p>(CNN) — Five people died in a "murder spree" in eastern Kentucky Saturday, the Johnson County sheriff said.</p> <p>"This has been a horrific murder spree. The lives of four innocent victims were taken. The perpetrator then took his own life," Sheriff Dwayne Price said.</p> <p>Authorities responding to reports of a shooting found the bodies of two victims at a home in Johnson County, the sheriff's office said in a statement.</p> <p>While deputies were searching for a suspect, they found two more victims and the suspected shooter dead at an apartment in Paintsville -- about 10 miles away from where the first victims were found.</p> <p>Price said he was not releasing names of any of the victims until their families were notified.</p> <p>"There are no words to describe the heartbreak in seeing four lives taken due to the actions of one man. I have worked in law enforcement for 34 years. This is one of the most disturbing acts of violence I have ever seen," he added.</p>

<b>HEADLINE</b>	<b>02/09 Maine governor orders prison shutdown</b>
<b>SOURCE</b>	<a href="http://wgme.com/news/local/gov-lepage-orders-prison-shut-down">http://wgme.com/news/local/gov-lepage-orders-prison-shut-down</a>
<b>GIST</b>	<p>AUGUSTA (WGME) -- Before dawn, Governor Paul LePage emptied a minimum security prison of all the inmates and locked the workers out.</p> <p>Staff of the Downeast Correctional Facility say they were given no warning of the governor's order to transfer all 63 inmates. State Police pulled up to the gate at 4:30 Friday morning to load inmates on buses, while employees were given layoff notices and placed on administrative leave.</p>

	<p>State Senator Joyce Maker says the facility was fully funded through June and says there was bipartisan support to continue that funding. She says Governor LePage was determined to close Downeast, regardless of who it hurt.</p> <p>"There's no reason why he has to do it to these people at this time," Maker said. "It's devastating to Washington County."</p> <p>Governor LePage says he closed Downeast because it was outdated, inefficient and too costly to run.</p> <p>"I have a jail that costs more to operate than the maximum security prison in the State of Maine," LePage said.</p> <p>Governor LePage says Downeast was bound to close at some point.</p> <p>"I saw today as an ability to save the state a little bit more money," LePage said.</p> <p>The state employees' union says all 63 inmates were taken to Mountain View Correctional Facility. A union rep. says staff at the Charleston facility have concerns about taking those inmates.</p> <p>Downeast was established by a state law. The Attorney General's Office says the governor cannot unilaterally amend that law and close Downeast without violating the Constitution, but even critics say the governor does have the power to remove all the inmates.</p> <p>"Unless we find a loophole here, I don't know that there's any hope," Maker said.</p> <p>Washington County lawmakers and the state employees' union both say they're exploring their options to challenge Governor LePage and try and keep the Downeast Correctional Facility open, but both say it will do little good if the governor refuses to house inmates there.</p>

<b>SOURCE</b>	<a href="http://mynorthwest.com/896725/police-washington-man-raped-dying-woman-texted-photos/">http://mynorthwest.com/896725/police-washington-man-raped-dying-woman-texted-photos/</a>
<b>GIST</b>	<p>EVERETT, Wash. (AP) — A 19-year-old Washington state man, who police say raped a high school student as she died from a drug overdose and texted semi-nude photos of her, has been charged with manslaughter.</p> <p>Brian Roberto Varela of Lynnwood was also charged Friday in Snohomish County Superior Court with second-degree rape and controlled substance homicide in the death of 18-year-old Alyssa Mae Noceda.</p> <p>According to court documents, Varela told detectives that Noceda snorted Percocet and also ingested liquid marijuana before collapsing in his room the previous weekend.</p> <p>Authorities say Varela never sought help for Noceda, instead sending semi-nude photos of her to friends and texting “LOL, I think she od’d, still breathing.”</p> <p>Authorities say his co-worker contacted police Tuesday after Varela said he didn’t know if Noceda was still alive when he was having sex with her. Court records say he told a friend that “she died having sex with me.”</p> <p>Police arrested Varela later that day after executing a search warrant and finding Noceda’s body in a plastic crate at the suspect’s home.</p> <p>Varela told investigators he planned to bury Noceda with onions to minimize the odor, police said. He also told detectives that after Noceda died, he used her thumb to unlock her phone Feb. 4 and send messages to make it appear she had run away.</p>

<b>HEADLINE</b>	<b>02/09 King Co. unique crime mediation program</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/king-county-teens-hold-peers-accountable-through-unique-crime-mediation-program/697239285">http://www.kiro7.com/news/local/king-county-teens-hold-peers-accountable-through-unique-crime-mediation-program/697239285</a>
<b>GIST</b>	<p>SEATTLE - While some teenage criminals are sent to jail, there's a King County program that aims to keep them out.</p> <p>These young offenders must face the people they've harmed, and a teenage mediator helps break through decides their fate.</p> <p>Jerell Colman is a 16-year-old who now spends a lot of time at the Federal Way Boys and Girls Club, mostly volunteering with Charissa Eggleston and the Helping Youth Perform Excellence, or HYPE, program.</p>

He's now a youth leader, but was headed down a much different path.

"He could've been walking around with a criminal record doing time" Eggleston said. "He could have been incarcerated."

In late 2016, Colman was arrested with other teenagers for breaking into DBM Contractors in Federal Way.

Combined, the teens did \$50,000 worth of damage. Colman said he had started hanging out with some kids at his apartment complex who were known troublemakers.

"I really had a weak mindset at that time," he said.

Dustin Pulley, Colman's stepfather, got the call at work of the arrest.

"I was pretty disappointed," Pulley said, "because we try to steer him in the right direction."

While he was trying to figure out the legal situation, Pulley was told that the prosecutor considered Colman a candidate for the Alternative Dispute Resolution program.

He was told it was a mediation that could reduce Colman's charges if he faced the people he'd harmed.

And they agreed to do it.

"I had no idea that a program like that existed," Pulley said.

Colman told KIRO 7 about the moment he first saw the people from the construction company.

"When I walked in the room, my stomach completely dropped," he said.

What makes the program even more unique is the presence of a youth mediator in the room.

Cheyenne Brashear was the teenage volunteer assigned to Colman's case.

"That kid reminded me of my brother," she said. "Just another multiracial, black kid growing up in the wrong neighborhood making the wrong friends."

Brashear is one of about a dozen teenage leaders in King County trained to be part of the restorative mediations.

Polly Davis, a longtime mediator with King County, came up with the first-of-its-kind program three years ago. She worked with prosecutors, defense attorneys and youth probation officers to determine how it would work.

"Having the youth in the room is an incredibly powerful dynamic changer," Davis said. "For one thing, they are a subject matter expert."

The victim or a victim's advocate has to agree to be in the room in order for the teen to get a chance to go through the mediation. The victim comes up with the action plan or punishment for the teen.

The youth mediation program averages one case per month.

It started with minor crimes such as petty theft but the seriousness of the crimes they cover has increased.

Recently, the program successfully diverted a weapons charge and a charge of an assault on an officer.

It's ultimately up to a judge to sign off on the action plan.

Davis said the youth mediator has made a big difference.

“That's who the youth look at,” she said.

During Colman's mediation, he heard the victims detail the impact of his actions.

While he was only part of one break-in, there had been three consecutive nights of break-ins.

Workers at DBM were afraid to come to work and had no idea it was just some teens causing mischief.

In the mediation, Colman gave a soft-voiced apology, but the victims weren't feeling it. The breakthrough came when Brashear talked one-on-one with Colman and asked how he wanted to be heard.

“He was just, like, ‘I'm really sorry, I just don't know how to say it,’” she said. “And I was, like, ‘Well, you just need to go in there and say it and mean it, you know?’”

Colman said that moment gave him the confidence to go in and give a more heart-felt apology.

Davis said, at that point, the victims' attitude toward Colman changed.

They asked Colman about his interests. He told them how he to play basketball. So they used his love of basketball to determine his action plan. He had to do community service hours running the scoreboard at the Boys and Girls Club in Federal Way.

And he had to join Eggleston's HYPE program.

“He met that and he's surpassed that,” Eggleston said. “I'm just super impressed with Jerell. As soon as he completed his hours, he was, like, ‘Does this mean I can't come anymore?’ I was, like, ‘No, you've got to keep coming as long as you want.’ So, he's been coming consistently for a year. He often volunteers.”

KIRO 7 anchor John Knicely asked Davis how she'd respond to someone saying Colman is getting off easy.

“I think it's incredibly brave for youth to be in the room with the people they did something to,” she said. “And it takes guts to do that.”

Colman did just that.

And now, instead of being locked up with other youth criminals, Colman is spending his time helping other kids make better choices.

His stepfather says he's become a leader.

“He doesn't have a record,” Pulley said. “It's been expunged. He's just a regular kid going about his business now.”

The teen mediation program is one example of how King County is shifting Juvenile Justice under the direction of Public Health.

**HEADLINE** 02/09 Illegal cheers killing 2 Calif. deputies

SOURCE	<a href="http://www.foxnews.com/us/2018/02/09/illegal-immigrant-cheers-after-being-found-guilty-killing-two-california-deputies-threatens-to-kill-more-cops.html">http://www.foxnews.com/us/2018/02/09/illegal-immigrant-cheers-after-being-found-guilty-killing-two-california-deputies-threatens-to-kill-more-cops.html</a>
GIST	<p>An illegal immigrant charged with killing two California deputies in 2014 cheered after being found guilty of murder and threatened “to kill more cops soon” as he was taken away.</p> <p>The defendant, Luis Enrique Monroy Bracamontes, 37, was found guilty of the Oct. 24, 2014, shootings that killed Sacramento County Sheriff’s Deputy Danny Oliver and Placer County Sheriff’s Detective Michael Davis Jr. He now faces a potential death penalty.</p> <p>Bracamontes smiled and softly said, “Yay,” after the first verdict was read. Later, as he was being taken out of the courtroom, he said, “I’m going to kill more cops soon.”</p> <p>Bracamontes has had other outburst since his trial began on Jan. 16. He interrupted the court with a profanity-laced rant, calling one of the slain officers a “coward.”</p> <p>"I wish I had killed more of the mother-----s," Bracamontes told the court. He continued: "I will break out soon and I will kill more, kill whoever gets in front of me. ... There's no need for a f---ing trial."</p> <p>Defense attorneys argued that Bracamontes was mentally ill and high on methamphetamine during the shootings and should be spared. But a judge found him competent to stand trial.</p> <p>Prosecutors will seek the death penalty for Bracamontes when the sentencing phase of his trial begins March 5.</p> <p>Bracamontes, a Mexican citizen who repeatedly entered the United States illegally, has shouted in court that he is guilty and asked to be put to death. He has also threatened to kill his defense attorneys.</p>

HEADLINE	<b>02/09 Violence stalks Venezuela lawless roads</b>
SOURCE	<a href="https://www.reuters.com/article/us-venezuela-economy-trucks-widerimage/mad-max-violence-stalks-venezuelas-lawless-roads-idUSKBNIFT1G9?il=0">https://www.reuters.com/article/us-venezuela-economy-trucks-widerimage/mad-max-violence-stalks-venezuelas-lawless-roads-idUSKBNIFT1G9?il=0</a>
GIST	<p>LA GRITA, Venezuela (Reuters) - It’s midnight on one of the most dangerous roads in Latin America and Venezuelan trucker Humberto Aguilar hurtles through the darkness with 20 tons of vegetables freshly harvested from the Andes for sale in the capital Caracas.</p> <p>When he set off at sunset from the town of La Grita in western Venezuela on his 900-km (560-mile) journey, Aguilar knew he was taking his life in his hands.</p> <p>With hunger widespread amid a fifth year of painful economic implosion under President Nicolas Maduro, Venezuela has seen a frightening surge in attacks on increasingly lawless roads.</p> <p>Just a few days earlier, Aguilar said he sat terrified when hundreds of looters swarmed a stationary convoy, overwhelming drivers by sheer numbers. They carted off milk, rice and sugar from other trucks but left his less-prized vegetables alone.</p> <p>“Every time I say goodbye to my family, I entrust myself to God and the Virgin,” said the 36-year-old trucker.</p> <p>While truck heists have long been common in Latin America’s major economies from Mexico to Brazil, looting of cargoes on roads has soared in Venezuela in recent times and appears to be not just a result of common crime but directly linked to growing hunger and desperation among the population of 30 million.</p> <p>Across Venezuela, there were some 162 lootings in January, including 42 robberies of trucks, according to the consultancy Oswaldo Ramirez Consultores (ORC), which tracks road safety for companies. That</p>

compared to eight lootings, including one truck robbery, in the same month of last year.

“The hunger and despair are far worse than people realize, what we are seeing on the roads is just another manifestation of that. We’ve also been seeing people stealing and butchering animals in fields, attacking shops and blocking roads to protest their lack of food. It’s become extremely serious,” said ORC director Oswaldo Ramirez.

Eight people have died in the lootings in January of this year, according to a Reuters tally.

The dystopian attacks in a country with one of the world’s highest murder rates are pushing up transport and food costs in an already hyperinflationary environment, as well as stifling movement of goods in the crisis-hit OPEC nation.

They have complicated the perilous life of truckers who already face harassment from bribe-seeking soldiers, spiraling prices for parts and hours-long lines for fuel.

Government officials and representatives of the security forces did not respond to requests for comment for this story.

Barred by law from carrying guns, the Andean truckers form convoys to protect themselves, text each other about trouble spots - and keep moving as fast as possible.

Even once Andean truckers reach cities, there is no respite.

Armed gangs often charge them for safe passage and permission to set up markets.

“The government gives us no security. It’s madness. People have got used to the easy life of robbing,” said Javier Escalante, who owns two trucks that take vegetables from La Grita to the town of Guatire outside Caracas every week.

“But if we stop, how do we earn a living for our families? How do Venezuelans eat? And how do the peasant farmers sell their produce? We have no choice but to keep going.”

The looters use a variety of techniques, depending on the terrain and the target, according to truckers, inhabitants of towns on highways, and videos of incidents.

Sometimes gunmen on motorbikes surround a truck, slowing it down before pouncing like lions stalking prey. In other instances, attackers wait for a vehicle to slow down – at a pothole for example – before jumping on, cutting through the tarpaulin and hurling goods onto the ground for waiting companions.

The looters use tree trunks and rocks to stop vehicles, and are particularly fond of “miguelitos” - pieces of metal with long spikes - to burst tires and halt vehicles.

Though events on Venezuela’s roads may seem like something out of the Mad Max movie, truckers say they are often more akin to Robin Hood as assailants are careful not to harm the drivers or their vehicles provided they do not resist.

“The best protection is to be submissive, hand things over,” said Roberto Maldonado, who handles paperwork for truckers in La Grita. “When people are hungry, they are dangerous.”

However, all the truckers interviewed by Reuters said they knew of someone murdered on the roads - mainly during targeted robberies rather than spontaneous lootings.

With new tires now going for about 70 million bolivars - about \$300 on the black market or more than two decades of work at the official minimum wage - looters often swipe them along with food.

<b>HEADLINE</b>	<b>02/09 Navy probes widespread drug selling</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/u-s-navy-probes-suspected-drug-selling-use-among-sailors-in-japan-1518210550">https://www.wsj.com/articles/u-s-navy-probes-suspected-drug-selling-use-among-sailors-in-japan-1518210550</a>
<b>GIST</b>	<p>WASHINGTON—The U.S. Navy is investigating at least a dozen U.S. sailors based in Japan, some serving aboard the USS Ronald Reagan aircraft carrier, for suspicion of buying, selling, and using LSD, ecstasy and other drugs, U.S. Navy officials said Friday.</p> <p>The Navy also is probing whether U.S. sailors were using the internet to buy or sell drugs or were distributing them to local Japanese residents.</p> <p>The Navy first learned about allegations of widespread drug sales on Feb. 6, when it received a tip about a petty officer third class using drugs, the officials said. He was subsequently detained and released, they said.</p> <p>That sailor pointed investigators to others aboard the ship who the sailor said were distributing or using drugs, a U.S. military official said. The official said that others could be detained or charged in the continuing probe.</p> <p>The Naval Criminal Investigative Service confirmed it was conducting an investigation. Among questions are whether the drug use and distribution reached other parts of Seventh Fleet, which operates in the Pacific, the officials said.</p> <p>“The Navy has zero tolerance for drug abuse and takes all allegations involving misconduct of our sailors, Navy civilians and family members very seriously,” NCIS said in a statement. “These allegations are still under investigation and it would be inappropriate to comment further.”</p> <p>Japanese authorities also have been brought into the investigation, two Navy officials said, because of suspicions that drugs were sold to Japanese residents. In addition, a suspicious package related to one of the sailors was intercepted by a local postal service, a Navy official said.</p> <p>The USS Reagan currently is stationed at its home port, in Yokosuka, Japan, headquarters of the Navy’s Seventh Fleet. Seventh Fleet officials said they couldn’t immediately comment.</p>

Egypt targets terrorists in 'Sinai 2018' military operation

UPI.com

9 (UPI) -- Egypt's military launched an attack targeting terrorist hotbeds in different parts of the Sinai Peninsula, parts of the Nile Delta and the Western Desert. The military action, named 'Sinai 2018,' starts a "comprehensive counter-terrorist plan" in the country, Col. Tamer Rifai announced Friday.

HEADLINE	02/09 Major storm continues to pound Midwest
SOURCE	<a href="http://abcnews.go.com/US/major-winter-storm-continues-pound-midwest/story?id=52956660&amp;cid=clicksource_4380645_1_hero_headlines_headlines_hed">http://abcnews.go.com/US/major-winter-storm-continues-pound-midwest/story?id=52956660&amp;cid=clicksource_4380645_1_hero_headlines_headlines_hed</a>

GIST	<p>The biggest snowstorm of the season hit the Midwest hard overnight, where up to 9 inches of snow has already fallen with more to come.</p> <p>But today's storm is not the end, as yet another storm is forecast to hit Midwest, parts of the South and the Northeast this weekend.</p> <p>Because of all the snow -- and flooding forecast -- storm alerts are issued for 20 states from Wyoming down to Georgia and into New York.</p> <p>The storm system is moving through southern Great Lakes Friday morning bringing snow from Iowa to Ohio. Snowfall rates are 1 to 2 inches per hour from Chicago to Detroit.</p> <p>Snow will be done in Chicago by Friday's evening commute, and mostly over in Detroit. Snow will continue to fall from Buffalo, New York, to Albany, New York, and parts of western New England.</p> <p>By Saturday morning, the storm system will begin to weaken but will bring light rain and snow to parts of the Northeast and New England from Buffalo, New York, to Burlington, Vermont, and into Maine.</p> <p>Just as one storm system moves out, a new storm system moves right behind it for Saturday night into Sunday morning.</p> <p>This second system will be much larger, stretching from the Midwest into the South and Northeast.</p> <p>More snow is expected for cities like Chicago and Detroit with heavy rain expected from Nashville to Charleston, West Virginia, that could cause some flooding. Heavy rain is also forecast for Washington, D.C., Philadelphia, New York City and Boston.</p>

HEADLINE	<b>02/08 Rattlesnake Ridge Q &amp; A</b>
SOURCE	<a href="http://kimatv.com/news/local/rattlesnake-ridge-your-questions-answered">http://kimatv.com/news/local/rattlesnake-ridge-your-questions-answered</a>
GIST	<p>With the Yakima County Emergency Management Teams no longer doing press conferences, we took the most common questions we get on social media and took them to those studying the Rattlesnake Ridge landslide.</p> <p><b>Why haven't they blown up the ridge?</b> It seems like the easiest way to put this all past us. Just blow up the ridge force everything to come down and clean up the mess on our own terms.</p> <p>It's one of the first things Yakima County Emergency Management Teams considered when it came to dealing with the landslide. But the experts they spoke with said they don't think it's that simple.</p> <p>"In effort to move this landslide, it would take an immense number of explosives to even have an effect on this landslide, and there may be some unnecessary consequences from that," Senior Emergency Planner Horace Ward said.</p> <p>Some of the unnecessary consequences include having to put people on an active landslide and drill into it. Plus, if for some reason the bombs don't blow up as planned, the ridge will be filled with live explosives and no way to take them out safely.</p> <p><b>What is the current rate of the slide and is it accelerating?</b> The Department of Natural Resources has been monitoring the slide since the beginning of the year. "We still have all the pieces of monitoring equipment up there and they all show that it's still moving at about 1.6 feet per week. The same rate it has been for the last several weeks," Joe Smillie said.</p>

There have been rates of 1.5 or 1.7 feet a week reported, but Smillie said when you average all the data it's still moving at the average of 1.6 a week.

He said this slide is different than most they see in Washington because of how slow it's moving and the makeup of the ridge itself.

“We have a column of basalt that was built up by lava flow and it's on a thin layer of sediment so that's why it is moving slower,” Smillie said. “It's more of gravity pulling the rock down the hill.”

#### **Why is I-82 still open?**

Driving down I-82 you might have wonder if it's safe being so close to the landslide. Emergency teams said there is no risk, as of right now, when it comes to the highway and The Department of Transportation has a plan to reroute traffic.

“It's moving so slow that, right now there's no risk to travelers on I-82. Dot has a plan in place where the detour route would go off of granger over to 97 and then back up to union gap in both directions,” Emergency Management Director Jeff Emmons said.

Thorp Road right next to I-82 was closed and evacuated right away, but as of right now Emmons doesn't see the slide making its way down to the interstate. As a safeguard, The Department of Transportation put up large metal containers along Thorp Road to protect I-82 from any rocks that may fall.

While some of Thorp Road has opened for people living there, they will keep the containers there and the rest of the road closed for the time being.

#### **How do I stay up to date with the ridge?**

You might not be living right next to the landslide, but we've been getting a lot of comments from people living here in Union Gap and surrounding cities of how they can stay up to date with what's going on. You can sign up for emergency alerts on the county's website by clicking "notify me" at the top of the page.

Then you can set up for what kind of alerts you want to get.

There are up to five email addresses you can sign up to make sure everyone in your house hold can get them. And even though the county recently let people move back into their homes off Thorp Road, Emergency teams highly suggest they sign up for alerts and be ready to leave at any time.

"Make sure you have some extra water in the house,” Jeff Pfaff with the Yakima Fire Department said. “Try to make sure that you have some food supplies, because we could lose power there could be things that happen in that small percentage but that great catastrophic thing that could happen at any time.”

#### **Which brings us to our final question: will the landslide reach the river?**

With the landslide so close to the Yakima River, we've gotten a lot of comments about the danger that poses. It would probably be the worst-case scenario, but also the most unlikely to happen when you combine how far the landslide would need to go and how slow it is moving.

Emmons said that geologists monitoring the slide told him it would take years for it to reach the water. He said they're watching the landslide to see if it will keep moving south, but as of right now there is no risk of it reaching the river.

“It would have to come south, go over both lanes of 82, up over it and into the river. With moving a foot and a half a week that could take some time and we would see it coming, so that it a really, really, really low risk,” Emmons said.

<b>HEADLINE</b>	<b>02/08 Russia angry over US extradition efforts</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/world/2018/02/08/russia-angry-over-alleged-hackers-extradition-alleged-hacker-warns-u-s-stop-hunting-down-our-citizen/318770002/">https://www.usatoday.com/story/news/world/2018/02/08/russia-angry-over-alleged-hackers-extradition-alleged-hacker-warns-u-s-stop-hunting-down-our-citizen/318770002/</a>
<b>GIST</b>	<p>The Russian foreign ministry demanded Thursday that the U.S. "stop hunting down our citizens around the globe."</p> <p>The strongly worded request comes one week after the U.S. secured the extradition of an alleged Russian botnet hacker from Spain.</p> <p>"The number of Russians arrested in other countries at the request of the U.S. continues to increase," said Foreign Ministry spokesperson Maria Zakharova, according to the MFA Twitter account. "There were 11 such cases in 2017. We demand that the U.S. stop hunting down our citizens around the globe."</p> <p>Zakharova singled out the case of Peter Levashov, who was detained in Spain in April 2017 on federal charges of Internet scamming. He was extradited to the U.S. last week to face the charges.</p> <p>U.S. prosecutors charged that Levashov, 37, operated the Kelihos botnet, a network of more than 100,000 infected devices used by cyber criminals to spread viruses, ransomware, phishing emails and other spam. The charges carry a prison sentence of up to 52 years if convicted.</p> <p>Although Russian media has tied him to efforts to influence U.S. elections, the federal indictment does not include any election-related charges.</p> <p>Levashov, who denies the charges, was scheduled to appear in court in Bridgeport, Conn., on Friday. He also faces federal civil allegations in Alaska in connection with the Kelihos botnet, The Hartford Courant reports.</p> <p>Levashov, who fought the extradition, told Spain's High Court he worked for Russian President Vladimir Putin's United Russia party for the last 10 years, Russia's RIA news agency reported. He was arrested while on vacation in Barcelona.</p> <p>Zakharova said Levashov has complained about his detention conditions.</p> <p>"We regard this as an attempt to pressure the Russian citizen into making him more compliant," she said.</p> <p>Levashov told the Spanish court that U.S. authorities would torture him for information about his political activity if he was extradited, RIA said.</p> <p>Other Russian nationals extradited to the U.S. from third countries in recent years include Konstantin Yaroshenko, a professional pilot convicted in 2011 of cocaine trafficking, and Viktor Bout, convicted in 2012 on terrorism charges related to intent to smuggle weapons. Both denied the charges.</p> <p>Yaroshenko was arrested by FBI agents in 2010 in Liberia, and Bout, a businessman dubbed the "merchant of death," was arrested in Bangkok in 2008, Russia's RIA Novosti reports.</p> <p>In November, the Justice Department charged six members of the Russian government in the hacking of Democratic National Committee computers before the 2016 U.S. elections, the Wall Street Journal reported.</p> <p>In addition, two Russian intelligence agents and two hackers were charged in early 2017 with masterminding the 2014 theft of 500 million Yahoo accounts.</p>

<b>HEADLINE</b>	<b>02/08 Port's deal leaves truck drivers worried</b>
-----------------	---

SOURCE	<a href="http://crosscut.com/2018/02/ports-seattle-tacoma-deal-leaves-truck-drivers-worried-emissions/">http://crosscut.com/2018/02/ports-seattle-tacoma-deal-leaves-truck-drivers-worried-emissions/</a>
GIST	<p>After a one-day walkout that helped win a delay of a clean-air rule, hundreds of independent truckers at the ports of Seattle and Tacoma say they still can't fathom how their meager earnings will allow them to buy newer and cleaner trucks by the new deadline of next Jan. 1.</p> <p>The truckers remained nervous as they got behind the wheel again Wednesday after winning a nine-month reprieve from the ports on a looming April 1 deadline for the more modern but far more expensive trucks.</p> <p>The drivers said they were unsatisfied by the port commissioners' vote Tuesday to delay putting the clean-truck requirement into effect until Jan. 1 and establish a \$1 million loan program to help drivers buy newer, cleaner trucks. Port staff members said they will also seek grants for new trucks from other sources.</p> <p>"They didn't solve the problem," said 50-year-old Yemane Behane, whose 2001 truck fails to meet the federal air-quality standards for diesel trucks that went into effect in 2007.</p> <p>He said the extension doesn't change any of the fundamental challenges of trying to buy a new truck without expectations of a higher income.</p> <p>Many of the ports' independent drivers are immigrants who own their trucks and contract with dispatching companies to pick up and deliver containers filled with consumer goods to warehouses and rail yards. With some earning as little as minimum wage once their expenses are paid, they said there is no way they can afford the \$40,000 to \$60,000 cost of a truck outfitted with a newer diesel filter system.</p> <p>Several hundred drivers staged Tuesday's walkout in order to attend the port commissioners' meeting, a crowd large enough that it filled the main meeting room at Seattle Tacoma International Airport and spilled out into the hallway. Dozens more filed into a second viewing room set up by port officials to allow drivers to watch the meeting remotely.</p> <p>The ports in 2008 committed to upgrading the truck fleet to the newer and cleaner trucks by Jan. 1 of this year. But only about half the trucks hit that deadline. On Tuesday port commissioners met to impose a new April 1 deadline. But commissioners agreed they do not have much information about the independent drivers who make up an estimated 80 percent of truckers serving the ports.</p> <p>"Ultimately, whose lives are we impacting?" said Commissioner Fred Felleman. "I feel irresponsible in taking a vote not knowing who I'm impacting."</p> <p>In fact, the ports, which handle their waterfront operations jointly under an alliance, don't even know exactly how many truck drivers are affected. It says 53 percent of the approximately 4,500 trucks registered to do business at the ports comply with the clean-air rules. Driver Yared Meconnen, who helped organize the walkout and lobbying campaign, told port commissioners that more than 2,000 drivers still own the older trucks.</p> <p>Seattle Port Commissioner Stephanie Bowman, who is also executive director of a nonprofit that serves low-income populations, said the drivers' concerns amount to an "economic justice issue."</p> <p>"There are a lot of brown faces in this room," Bowman said.</p> <p>Under the compromise approved Tuesday, the ports will begin enforcing the new standards on April 1, 2018, but older trucks will still be allowed to pick up and deliver shipping containers provided they register with the ports, according to Jason Jordan, director of environmental and planning services at the Seaport Alliance.</p> <p>A group of 10 trucking company owners who bought new trucks in anticipation of the original deadline at the start of this year have said they intend to file a lawsuit against the Seaport Alliance if the April deadline was extended. The owners say the enforcement delay forces them to compete with other drivers</p>

	and companies who opted not to invest in new trucks.

<b>HEADLINE</b>	<b>02/08 Seattle City Light harassment settlement</b>
<b>SOURCE</b>	<a href="http://crosscut.com/2018/02/seattle-city-light-settlement-harassment-discrimination/">http://crosscut.com/2018/02/seattle-city-light-settlement-harassment-discrimination/</a>
<b>GIST</b>	<p>Three years before #MeToo — and before the City of Seattle’s own public reckoning with harassment — a group of four Seattle City Light female employees complained of a department and an HR director uninterested in taking discrimination, harassment or hostility seriously. The director, they alleged in a lawsuit, was quick to retaliate for their speaking out.</p> <p>The City of Seattle agreed last spring to pay \$375,000 to three of the women, quietly ending that 2014 lawsuit. The settlement was signed last March but was not made public until now.</p> <p>None of the three women still work for Seattle City Light. One agreed as a condition of her settlement to never again seek employment with the City of Seattle. Another now works in the city’s Information Technology Department. The third no longer works for the city and is the co-founder of a DIY home improvement company, See Jane Drill.</p> <p>Meanwhile, the HR director accused of ignoring discrimination complaints and fostering the hostile work environment remains in her position. Years later, as City Light once again finds itself the target of harassment, discrimination and sexism complaints, employees continue to point the finger at the department’s HR unit for not doing enough.</p> <p>The settlement, provided to Crosscut by the City Attorney’s Office, was borne out of a 2014 lawsuit in King County Superior Court. It was filed by Annette “Nettie” Dokes, Olayinka Ogunyemi and Karen DeVenaro as well as a fourth woman, Patsy Taylor. Taylor withdrew from the litigation in 2016 and no longer works for the City.</p> <p>“City Light has a long-standing history of discrimination and retaliation against older female employees,” their complaint read. “City Light has a history of discriminating against employees substantially motivated by the sexual orientation of the employees.”</p> <p>In the complaint, all four women alleged theirs was a troubled work environment. Each also singled out the department’s HR director DaVonna Johnson, who has held the position since 2008. In the suit, Johnson was repeatedly described as ignoring the employees’ complaints of hostility and discrimination. When the matters were brought to Johnson’s attention, the four women said they were met with retaliation.</p> <p>At the time of the original lawsuit, Dokes was described as being older than 50 and an electrical lineworker, which the complaint describes as a “nontraditional trade for women.” She said since 2010 she “repeatedly reported to Ms. Johnson about the hostile work environment she was enduring and about the ongoing discrimination that was occurring against her in the workplace by union officials and union members.”</p> <p>But after meeting with Johnson, Dokes says no action was taken. The work environment became so hostile, according to the complaint, that Dokes was forced to take an extended medical leave.</p> <p>Dokes was shortly thereafter fired from her job, which she claims was retaliation for complaining. As part of the settlement, Dokes will switch her status from termination to “retirement” but on the condition she not apply for a job with the City again.</p> <p>Ogunyemi, who was also over 50 at the time of the complaint, had been working as a Personnel Specialist since 1999. She similarly says she complained to Johnson about discrimination in City Light based on age and race. (Her race was not listed in the complaint.) But after raising the issue, Ogunyemi says Johnson subjected her “to false allegations of policy violations and suspended [her] from work.” Like Dokes,</p>

Ogunyemi said she was forced into taking medical leave due to stress.

DeVenaro was hired by City Light in 1994 and worked as an Apprenticeship Manager. She says she reported to Johnson that an employee was accepting alcohol from apprentices in exchange for positive evaluations. As a result of her actions, she says the HR director began excluding her from discussions and that her job duties were eventually reassigned to “younger, less experienced employees.” In the complaint, she was described as being over the age of 40.

In 2012, DeVenaro complained she was being discriminated against due to her sexual orientation. And in 2013, DeVenaro “was forced to relinquish her position at City Light because all of her job duties had been reassigned.”

“City Light’s hostile, discriminatory, and retaliatory actions against Ms. DeVenaro have caused her severe emotional distress and economic damages,” reads the complaint.

According to City Attorney’s Office spokesperson Kimberly Mills, the City did not settle with Taylor, who made similar allegations as the other three women before withdrawing from the lawsuit.

At the time the suit was filed, the city strongly denied the employees’ allegations and pointed out their shortcomings. “We will vigorously defend City Light against these unfounded claims,” Katrina Kelly, the assistant city attorney assigned to the case, told the Seattle Times in 2014.

City Light also defended Johnson, whom they noted is an African-American woman. The department credited her for making “fundamental changes to streamline the hiring process and shift the focus of the Personnel Specialists from processing hiring paperwork to customer service — providing internal clients with professional consultation and support and guidance for their hiring processes,” according to papers filed with the court.

On Wednesday, when reached for comment, City Light spokesperson Scott Thomsen said, “The parties have resolved the matter and agreed not to discuss it further.”

The city has not admitted to any wrongdoing. The City Attorney’s Office declined to comment on the settlement.

Attorneys for the women, Joel Nichols and Susan Mindenbergs, said neither they nor their clients could discuss the settlement due to the confidentiality clause. The same confidentiality agreement, Nichols said in an email, bars the attorneys from explaining more fully why Taylor withdrew from the litigation in 2016.

In late 2017, more than 40 City Light employees signed onto complaints of sexism inside the department, The Stranger reported then. They petitioned the department for more anti-sexism training and better training for supervisors on how to receive employee complaints; they also asked that management be more communicative.

Spurred on in part by those complaints, City Light employees took the lead in organizing a new group for City employees who say Human Resources hasn’t been doing enough. In recent weeks, the group that calls itself the Seattle Silence Breakers has seen its membership grow to more than 50 people.

Over the past several months, employees from City Light and other departments have told Crosscut about their frustrations with their respective HR departments. Many echo the allegations of the 2014 lawsuit.

Last January, the City reached a \$220,000 settlement with two library security guards who accused two supervisors of sexual harassment, according to The Seattle Times. One woman said she was spanked by a colleague, and when she complained her supervisor only laughed.

Both women had to leave their City jobs as a condition of the settlement while the manager retained his.

	<p>The incident sparked outrage among members of the Silence Breakers, in part catalyzing their desire to go public.</p> <p>In January, Mayor Jenny Durkan told Crosscut she had no sense of whether the City had a sexual harassment problem. “At any given time as the mayor if I said, ‘Do we have a problem with sexual harassment? How many complaints have been brought?’ No one could answer that,” Durkan said. “[Departments] were settling things in darkness.”</p> <p>In response, she’s demanded all departments notify the City’s Department of Human Resources before settling. She also said she favors consolidating the City’s disparate HR functions into one central system, a process already begun under her predecessor Ed Murray.</p> <p>Members of the Seattle City Council are also considering new and more independent avenues for employees to bring harassment complaints.</p>

<b>HEADLINE</b>	<b>02/08 USA Swimming facing scrutiny in probe</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/895403/swimmings-governing-body-faulted-following-sex-abuse-probe/">http://mynorthwest.com/895403/swimmings-governing-body-faulted-following-sex-abuse-probe/</a>
<b>GIST</b>	<p>SEATTLE (AP) — Another national sports governing body is facing scrutiny over how it dealt with sexual misconduct allegations after a U.S. champion swimmer said a team coach sexually abused her when she was 16.</p> <p>Ariana Kukors, now 28, also told authorities that coach Sean Hutchison took thousands of sexually explicit photographs of her. Hutchison denies abusing Kukors and has not been charged with a crime. U.S. authorities and police executed a search warrant at his Seattle apartment this week, seizing electronic devices.</p> <p>Hutchison faced an investigation by USA Swimming in 2010 over his ties to Kukors but it was closed with no misconduct found. USA Swimming, the national governing body for the sport, said Thursday that it learned of the underage abuse allegations this week.</p> <p>The investigation of Hutchison comes amid scrutiny over the supervision of people who work with young athletes. Former sports doctor for USA Gymnastics, Larry Nassar, was sentenced recently to decades in prison for sexual abusing young girls in his care.</p>

<b>HEADLINE</b>	<b>02/08 US body brokers supply the world</b>
<b>SOURCE</b>	<a href="https://ca.news.yahoo.com/special-report-u-body-brokers-supply-world-torsos-133238485--finance.html">https://ca.news.yahoo.com/special-report-u-body-brokers-supply-world-torsos-133238485--finance.html</a>
<b>GIST</b>	<p>PORTLAND, Oregon (Reuters) - On July 20, a Hong Kong-flagged cargo ship departed Charleston, South Carolina carrying thousands of containers. One of them held a lucrative commodity: body parts from dozens of dead Americans.</p> <p>According to the manifest, the shipment bound for Europe included about 6,000 pounds of human remains valued at \$67,204. To keep the merchandise from spoiling, the container’s temperature was set to 5 degrees Fahrenheit.</p> <p>The body parts came from a Portland business called MedCure Inc. A so-called body broker, MedCure profits by dissecting the bodies of altruistic donors and sending the parts to medical training and research companies.</p> <p>MedCure sells or leases about 10,000 body parts from U.S. donors annually, shipping about 20 percent of</p>

them overseas, internal corporate and manifest records show. In addition to bulk cargo shipments to the Netherlands, where MedCure operates a distribution hub, the Oregon company has exported body parts to at least 22 other countries by plane or truck, the records show.

Among the parts: a pelvis and legs to a university in Malaysia; feet to medical device companies in Brazil and Turkey; and heads to hospitals in Slovenia and the United Arab Emirates.

Demand for body parts from America — torsos, knees and heads — is high in countries where religious traditions or laws prohibit the dissection of the dead. Unlike many developed nations, the United States largely does not regulate the sale of donated body parts, allowing entrepreneurs such as MedCure to expand exports rapidly during the last decade.

No other nation has an industry that can provide as convenient and reliable a supply of body parts.

Since 2008, Reuters found, U.S. body brokers have exported parts to at least 45 countries, including Italy, Israel, Mexico, China, Venezuela and Saudi Arabia. Whole bodies are studied at Caribbean-based medical schools. Plastic surgeons in Germany use heads from dead Americans to practice new techniques. Thousands of parts are shipped overseas annually; a precise number cannot be calculated because no agency tracks industry exports.

Most donor consent forms, including those from MedCure, authorize brokers to dissect bodies and ship parts internationally. Even so, some relatives of the dead said they did not realize that the remains of a loved one might be dismembered and sent to the far reaches of the globe.

“There are people who wouldn’t necessarily mind where the specimens were sent if they were fully informed,” said Brandi Schmitt, who directs the University of California system’s anatomical donation program. “But clearly there are plenty of donors that do mind and that don’t feel like they’re getting enough information.”

MedCure shipments are now the subject of a federal investigation. In November, the Federal Bureau of Investigation raided the company’s Portland headquarters. Though the search warrant remains sealed, people familiar with the matter say it relates in part to overseas shipping.

MedCure is cooperating with the investigation, said its lawyer, Jeffrey Edelson. He declined to comment on the FBI raid, but said: “MedCure is committed to meeting and exceeding the highest standards in the industry. It takes very seriously its obligation to not only deliver safe specimens securely, but to do it in a way that respects the donors.”

Edelson also said MedCure “partners with government and industry agencies to follow and exceed requirements for shipping human tissue,” and that “shipping handlers, drivers and carriers are specially trained for the safe handling and transportation of human specimens.”

#### INFECTED PARTS AT THE BORDER

As a Reuters series last year revealed, the body donation industry is so lightly regulated in the United States that almost anyone can legally buy, sell or lease body parts.

Although no federal law expressly regulates the body trade, there is one situation in which the U.S. government does exercise oversight: when body parts leave or enter the country. Border agents have the authority to ensure that the parts are not infected with contagious diseases and are properly shipped.

This authority played a leading role in the government securing a conviction last month of Detroit broker Arthur Rathburn, who stored body parts in grisly, unsanitary conditions, according to trial testimony. The FBI began to focus intently on Rathburn’s business, International Biological Inc, after repeated border stops in which he was found ferrying human heads, court records show.

The jury found that Rathburn defrauded customers by supplying body parts infected with HIV and hepatitis.

“The fraud scheme orchestrated by IBI shocked even the most experienced of our investigative team,” said FBI special-agent-in-charge David Gelios. Even in death, Gelios said in a statement after the verdict, donors were “victimized as IBI intentionally and recklessly marketed and transported contaminated human remains... Personal greed overcame decency.”

Rathburn was also convicted of transporting hazardous materials — the head of someone who had died of bacterial sepsis and aspiration pneumonia. The transportation conviction underscored the U.S. government’s growing concern about shipments of body parts that might endanger public health, officials said.

Martin Cetron, director of Global Migration and Quarantine for the Centers of Disease Control and Prevention, said that when brokers dissect a body that is infected, there is added risk of transferring that disease to anyone who handles the parts.

“In the case of saws (used) to cut bones or limbs, there may be additional procedures that could potentially turn a fluid into an aerosol that could be inhaled and be communicable,” Cetron said.

A Reuters review of government records shows that border agents intercepted body parts suspected to be infected at least 75 times between 2008 and 2017. Border agents pay more attention to goods entering the country than those departing, and virtually all of the intercepted shipments were remains of American donors whose body parts were being returned to United States. Typically, body parts are returned to America for three reasons: to comply with foreign laws on final disposition; when cremation is not available in the foreign country; or when a U.S. broker intends to reuse the parts.

In 2016 and 2017, for example, federal agents stopped shipments being returned to MedCure at the border, law enforcement records show. The body parts they stopped included torsos carrying infectious biological agents that cause sepsis, a body’s extreme response to infection. At least one carried the life-threatening MRSA bacteria, the records show.

For more than a year, records show, U.S. officials and some body brokers have disagreed over whether the presence of sepsis in a corpse — without further information about a person’s cause of death — poses enough of a risk to warrant special packaging and warning labels.

“Sepsis itself is not a disease diagnosis but it raises a red flag,” said Cetron, the CDC official. The pathogen that caused sepsis, he said, “could be a bacteria, could be Ebola, could be salmonella, could be E. coli.” That’s why further documentation, including a death certificate, must accompany any body part imported into the United States, he said.

The CDC has an exemption intended to allow for shipping blood and other lab testing samples. Reuters found dozens of examples of brokers labeling customs manifests and packages with a version of the term “exempt human specimen” to ship body parts.

“I think that’s a deceptive practice,” Cetron said. “If they are human remains, part or in whole — heads, arms, limbs, etc. — they are not exempted.”

Several brokers said the government should clarify the rules — whether the CDC’s or those of other regulatory entities. They cited, for example, a U.S. Department of Transportation regulation that, they believe, exempts body parts. Transportation officials declined to comment on their regulations.

Alyssa Harrison, executive director of Oklahoma-based broker United Tissue Network, said most in her industry want to follow the law. But, she added, “there are many guidelines that are unclear and or contradictory to other department’s regulations.”

	<p>The disconnect between what the industry and government believe is dangerous, and what precautions are required by law, should be resolved, said Matthew Zahn, chairman of the public health committee for the Infectious Diseases Society of America, a group that represents doctors, researchers and other health professionals.</p> <p>“It’s a situation where we don’t have a huge amount of regulation or clarity as to what the risks are,” Zahn said. “It feels like one of those cracks in the system where a practice has developed and the risk factors and oversight have not fully matured.”</p>

<b>HEADLINE</b>	<b>02/08 ACLU: citizenship checks on buses, trains</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/02/08/immigration-activists-decry-citizenship-checks-on-buses-trains.html">http://www.foxnews.com/us/2018/02/08/immigration-activists-decry-citizenship-checks-on-buses-trains.html</a>
<b>GIST</b>	<p>U.S. Customs and Border Patrol agents in the far north do far more than keep watch over the country's frigid border with Canada. At a bus station in Bangor, Maine, where people often hop on rides to bigger cities, agents recently asked boarding passengers if they were U.S. citizens.</p> <p>One of those questioned reached out to the American Civil Liberties Union of Maine. Lawyers for the organization find the practice troubling.</p> <p>"None of us want to live in a society where we're consistently being told we need to show our papers," said Zachary Heiden, legal director for the ACLU of Maine.</p> <p>Though they declined our request for an interview, U.S. Customs and Border Patrol officials confirm their agents routinely engage in operations at transportation hubs throughout the state.</p> <p>The law grants immigration officers broad powers, enabling them to search for illegal immigrants on boats, planes, trains, buses and other vehicles – without a warrant – within 100 miles of the border.</p> <p>According to the ACLU, that puts the whole of Maine within reach and the entirety, or near entirety, of 10 other states, too.</p> <p>ACLU attorneys are now seeking federal records.</p> <p>"We do not know nearly enough about the stops. We don't know why they're doing it. We don't know how often they're doing it and we don't know what the results have been," said Heiden.</p> <p>"We don't know how widespread it is but we are hoping to learn more. It does seem like there's been an increase."</p> <p>Last week, a passenger on an Amtrak train in Syracuse, N.Y., captured video of agents asking those on board about their citizenship.</p> <p>In Maine, reaction to the agents' actions was mixed.</p>

<b>HEADLINE</b>	<b>02/08 Exploratory drilling Mount St. Helens?</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/us-forest-service-to-allow-exploratory-drilling-near-mount-st-helens/696724319">http://www.kiro7.com/news/local/us-forest-service-to-allow-exploratory-drilling-near-mount-st-helens/696724319</a>
<b>GIST</b>	The U.S. Forest Service gave authorization for a Canadian company to conduct exploratory drilling to create a hard-rock mine near Mount St. Helens. But it's just a step in the process for the permits filed by Ascot USA, Inc.

U.S. Forest Service Cowlitz Valley District Ranger Gar Abbas signed off on the decision with specific conditions on Thursday.

It's now up to the Bureau of Land Management to decide whether to issue the prospecting permits and approve the exploration plans. Before the plans go to BLM, the Forest Service has to give consent.

The company wants to drill to collect mineral samples like copper, gold, molybdenum and silver, according to a local lawmaker. The Forest Service found that no significant impact would come from the project and gave consent.

If approved, the sites would be adjacent to the south-facing slope of Goat Mountain, approximately 12 miles northeast of Mount St. Helens. It would not be on land within the Mount St. Helens National Volcanic Monument.

The sites would include 2-to-3 inch boreholes covering about .23 acres of land.

In his decision notice, Abbas writes that the Goat Mountain area historically has been dominated by logging, recreation, mineral prospecting, and limited mineral development.

Multiple options for the sites were discussed over the last year, and the Forest Service said they picked the one that's not supposed to impact water or wildlife.

But some are still expressing their displeasure for the consent, including ranking member of the Senate Energy and Natural Resources Committee Maria Cantwell (D-Wash.)

“Opening the door to drilling at the edge of Mount St. Helens is a short-sighted decision that undervalues the important benefits these public spaces offer both to our booming recreation economy and to families who come from near and far to enjoy their beauty. This mountain should be managed for current and future generations to enjoy, and I hope the Trump administration will cease their efforts to jeopardize that by allowing it to be explored for drilling,” she wrote.

Last year Cantwell asked the Forest Service to deny the drilling permits. She believes mineral exploration and development would likely interfere with the recreation and conservation purposes.

<b>HEADLINE</b>	<b>02/08 Native Americans homeless at high rate</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/homeless/native-americans-are-this-regions-original-residents-and-they-are-its-most-likely-to-be-homeless/">https://www.seattletimes.com/seattle-news/homeless/native-americans-are-this-regions-original-residents-and-they-are-its-most-likely-to-be-homeless/</a>
<b>GIST</b>	<p>In King County, Native Americans and Alaskan Natives are less than 1 percent of the overall population but nearly 6 percent of its homeless population, a pattern that repeats in cities across the U.S. Once homeless, they also find housing at lower rates than any racial or ethnic group.</p> <p>The city of Seattle, wrestling with a growing homelessness crisis, is trying to address the racial disparity for the first time this year.</p> <p>Last year, when the city rebid its homeless-services contracts, five Native-led organizations were awarded \$3.2 million to prevent and end homelessness; four of those groups had never received city funding for those programs. The idea was that Native American organizations could best serve their own communities.</p> <p>“These guys have an understanding of how to tailor their care for Indian people,” said Michael Reichert, president and CEO of Catholic Community Services and Catholic Housing Services of Western Washington and a member of the Minnesota Chippewa Tribe.</p>

But with the new opportunities and resources come new requirements.

Seattle, after the contract rebidding, is pledging to house 7,400 homeless people by the end of this year, more than double the total from 2017. To reach that goal, the city is requiring service providers — including the Native-led groups — to hit quarterly performance targets.

Despite the city’s desire to reduce racial disparities, housing can’t actually be prioritized based on race — the federal Fair Housing Act prohibits explicit set-asides. And organizations receiving public dollars for housing can’t turn anyone away, even if they typically cater to specific cultural or racial groups.

Add to these potential limitations the historical discrimination of Native people, and the resulting social ills within that community, plus a regionwide affordable-housing shortage.

These realities are perhaps all the more distressing in a city named for Chief Seattle of the Duwamish and Suquamish peoples.

“There’s something out of balance when the First Nations people of this country are the most likely to be homeless,” said Colleen Echohawk, executive director of Chief Seattle Club, one of the newly funded organizations.

Across the country, other cities, like Seattle, are focusing on the intersection of homelessness and race. The Center for Social Innovation, a Massachusetts-based think tank, recently launched partnerships with eight communities, including Tacoma and Pierce County, to understand the wide racial and ethnic disparities in homelessness.

But no cities have come up with a cure-all. The efforts are focused on analyzing data to understand who is more likely to be homeless, but there are no proven strategies to reduce the disparities.

Locally, King County has for several years funded culturally specific organizations to provide homeless services. Seattle is also trying to reduce the high rates of homelessness among African Americans, but has emphasized addressing Native homelessness.

The city, however, hasn’t set an overall target for housing homeless Native Americans — the focus on disparities is just a broad objective.

But it is holding individual organizations to the specific performance goals. They must get 80 percent of their clients, participating in certain programs, into permanent housing; if they fail, they could lose 12 percent of their funding.

Leaders in the Native community say they need time to develop their programs, and tailor them to a community suffering from high levels of substance abuse and long-term homelessness. At least 75 percent of Chief Seattle Club’s members, for example, have mental-health and substance-abuse issues.

That’s why the cultural connections are so important, said Mother Nation’s Executive Director Norine Hill. Their clients participate in sweat-lodge ceremonies. They do traditional beading and participate in talking circles, telling their stories as part of their therapy.

Chief Seattle Club refers to people they serve as “members” or “relatives,” not clients.

“A lot of organizations, they just throw homeless people into housing,” Hill said. “And if you don’t heal them, how do you expect them to stay there?”

**HEADLINE** 02/08 Study: youth violence declines

SOURCE	<a href="https://www.upi.com/Health_News/2018/02/08/Youth-violence-in-US-declines-but-the-wars-not-over/1391518141976/?utm_source=fp&amp;utm_campaign=ts_hn&amp;utm_medium=15">https://www.upi.com/Health_News/2018/02/08/Youth-violence-in-US-declines-but-the-wars-not-over/1391518141976/?utm_source=fp&amp;utm_campaign=ts_hn&amp;utm_medium=15</a>
GIST	<p>THURSDAY, Feb. 8, 2018 -- Far fewer young people are turning up in U.S. emergency rooms with assault injuries, but youth violence remains a serious issue, a new government study shows.</p> <p>The good news: The number of nonfatal assault patients aged 10 to 24 dropped 28 percent between 2011 and 2015, reaching the lowest level in the 15 years studied, the U.S. Centers for Disease Control and Prevention reported.</p> <p>Still, almost 486,000 youths were treated in ERs for assault-related injuries in 2015. Most were males in their early 20s, the researchers found.</p> <p>More than 81 percent had been intentionally struck. Stabbing, cutting and piercing accounted for more than 8 percent of the injuries. Guns led nearly 6 percent to seek treatment.</p> <p>The cost of all this bloodshed: \$3.4 billion, including lost work.</p> <p>"Youth violence remains a major public health problem," said psychiatrist Dr. Victor Fornari, who wasn't involved in the research.</p> <p>"The underpinnings of this violence include mental health problems, substance abuse and histories of childhood adversity," said Fornari. He's director of child and adolescent psychiatry at Zucker Hillside Hospital in Glen Oaks, N.Y.</p> <p>The CDC researchers noted that certain policies and programs can reduce the risk for youth violence. They include school-based programs that build communication and problem-solving skills.</p> <p>Also, working with parents or caregivers to set age-appropriate rules and monitor youth activities can help stem conduct problems and violence, the researchers said.</p> <p>"Violence among young persons is preventable," wrote researchers led by Corinne David-Ferdon, of the CDC's National Center for Injury Prevention and Control.</p>

<b>HEADLINE</b>	<b>02/08 SoCal: no more 'voluntary' evacuations</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/02/08/california-mudslides-spur-evacuation-terminology-changes.html">http://www.foxnews.com/us/2018/02/08/california-mudslides-spur-evacuation-terminology-changes.html</a>
<b>GIST</b>	<p>SANTA BARBARA, Calif. – Emergency authorities in a Southern California county are eliminating the word "voluntary" from language used in evacuation orders following the devastating mudslides that struck last month.</p>

	<p>Santa Barbara County officials said Thursday that the new terminology will be "pre-evacuation advisory," "recommended evacuation warning" and "mandatory evacuation order."</p> <p>A huge downpour unleashed raging torrents laden with large boulders and other debris that bulldozed through the sleeping community of Montecito, sweeping away homes and people. More than 100 homes were destroyed, many others were damaged, 21 people were confirmed killed and two others remain missing.</p> <p>Many residents remained despite mandatory or voluntary evacuation orders when the deadly storm hit on Jan. 9.</p> <p>"We recognize that with respect to the latter category, the voluntary evacuation order, we found after the January 9th event that for some the focus was on the word 'voluntary' rather than on the word 'evacuation,'" Sheriff Bill Brown said at a press conference.</p> <p>"And the reality is that some people misinterpreted that and believed that there was a measure of safety there that there really wasn't."</p> <p>Brown said the new terminology is clearer by stressing that evacuation is still recommended.</p>

<b>HEADLINE</b>	<b>02/09 NKorea guards against Olympic defection</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/09/asia/north-korea-olympic-defection-fears-intl/index.html">https://www.cnn.com/2018/02/09/asia/north-korea-olympic-defection-fears-intl/index.html</a>
<b>GIST</b>	<p>Seoul, South Korea (CNN)Almost 500 North Koreans are in South Korea for the Winter Olympics -- in a land they have been brought up to see as enemy territory; one clearly more prosperous and more free than their own.</p> <p>It's also a place to which more than 31,000 of their comrades have defected over the past six decades -- a fact not lost on North Korea, which isn't taking any chances with its delegation this time.</p> <p>The group of athletes, officials, performers, reporters and cheerleaders -- including the younger sister of Kim Jong Un -- will be surrounded by support staff, minders and informants. They're also likely to be vetted, well-treated and loyal members of North Korea's elite.</p> <p>North Korean athletes have defected before. A women's ice hockey player defected in 1997 and a judo athlete defected while at a competition in Spain in 1999.</p> <p>While unlikely, it isn't impossible for a member of North Korea's Pyeongchang delegation to defect as the world watches the Games -- and it would be both a huge embarrassment for the North, and geopolitical mess for host South Korea.</p> <p>Now living in South Korea after defecting in 2006, Han Seo-hee was chosen in her twenties to be part of a North Korean cheerleading troupe after she performed for late leader Kim Jong Il.</p> <p>She says it's unlikely that cheerleaders would defect during such a high-profile visit.</p> <p>The team would be monitored everywhere they go and would be keenly aware of the consequences their family back home would face were they to make such a move, Han says.</p> <p>"I wouldn't have even considered it." Han says. "It will be the same for the cheerleading squad this time. They have family back home, they know if they defect, their family will be terrified and punished."</p> <p>"A North Korean group sent abroad is always composed of three parties. Party members, security members and administrative members. This time will be the same."</p>

	<p>The relentless glare of public scrutiny would be intense -- even intimidating -- for any athlete competing in the Games, which officially begin Friday.</p> <p>A former North Korean police officer, who didn't want to be identified because he still has family in the North, told CNN scrutiny would continue for the North Korean athletes out of the public eye.</p> <p>He said team members would be under 24-7 surveillance -- unable to go to the bathroom alone and informants would monitor who is talking to whom.</p> <p>Han said the very nature of North Korean life means everyone is encouraged to look for unusual or suspicious behavior in friends or family and report it.</p> <p>"Not only the leaders but also the rest of the performers will be punished for not reporting suspicious signs of a defector."</p> <p>The North Korean athletes have taken three floors of accommodation in the Gangneung Olympics village. Each apartment has two or more beds — the North Koreans would not be staying in rooms alone, according to the former police officer.</p>

<b>HEADLINE</b>	<b>02/08 Dow plunges in full market correction</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/business/markets/dow-plunges-1000-points-entering-correction-territory-n846091">https://www.nbcnews.com/business/markets/dow-plunges-1000-points-entering-correction-territory-n846091</a>
<b>GIST</b>	<p>The Dow plunged more than 1,000 points just before the final bell clanged Thursday. It represented a full market correction, defined as a 10 percent drop from its 52-week high, the first time it had done so since 2016.</p> <p>The S&amp;P 500 also dropped 3.7 percent to a new low for the week.</p> <p>After a record run-up, stock markets have been newly volatile following a stronger-than-expected January jobs report. Some investors saw the fastest rate of wage increases in recent times as a signal that the Fed might hike interest rates higher and sought to lock in gains, leading to the sell-off.</p> <p>"It's really about people thinking the Fed is either behind the curve or actually has to be more aggressive," Stephanie Link, global asset management managing director at TIAA, told CNBC. "That fear, that unknown, is really what's driving a lot of the anxiety."</p> <p>By closing at 23,860 points, the Dow Jones industrial average was set back to its level on Nov. 17, 2017, and officially corrected. The index peaked at 26,616 points just two weeks ago.</p> <p>On average, the stock market corrects about once a year, according to research from Deutsche Bank. The last time the market corrected was two years ago, in February 2016. By many measures, stocks have been overvalued and due for a come-down for some time.</p> <p>And the ride isn't over.</p> <p>"With the market closing at the low end of the day's range, expect more gyrations in the days and weeks to come," Greg McBride, chief financial analyst for Bankrate.com, said in an email.</p>

<b>HEADLINE</b>	<b>02/08 EPA enforcement actions hit 10yr low</b>
-----------------	---

SOURCE	<a href="https://www.nbcnews.com/politics/white-house/epa-enforcement-actions-hit-10-year-low-2017-n846151">https://www.nbcnews.com/politics/white-house/epa-enforcement-actions-hit-10-year-low-2017-n846151</a>
GIST	<p>WASHINGTON — The number of new enforcement actions by the Environmental Protection Agency has fallen significantly over the past year, according to data released Thursday by the Trump administration.</p> <p>The EPA initiated 20 percent fewer civil cases against polluters for violating environmental laws from the beginning of September 2016 to end of September 2017, as compared to the previous fiscal year, according to the EPA's latest enforcement numbers.</p> <p>The EPA also opened 30 percent fewer criminal enforcement cases during the same time period.</p> <p>The past fiscal year marked a historic low for enforcement actions across the board: The number of new civil and criminal cases, defendants charged, and federal EPA inspections and evaluations all reached their lowest levels in at least a decade, according to the data.</p> <p>The EPA said the declining numbers were not a sign of lax enforcement.</p> <p>"EPA is focusing on finding efficient ways to deter noncompliance and return facilities to compliance with the law," said EPA spokesperson Liz Bowman. "EPA is increasing the deterrent effect of EPA's enforcement program through criminal enforcement actions to address the most egregious cases."</p> <p>But environmental advocates say the new data makes it clear that EPA administrator Scott Pruitt and the Trump administration are letting polluters off the hook.</p> <p>"The drop-off in actions is very worrying," said Andrew Rosenberg of the Union of Concerned Scientists, an advocacy group. "It shows across the board a lack of desire to hold polluters accountable and that means the public health risks are greater."</p>

HEADLINE	<b>02/09 Government facing limited shutdown?</b>
SOURCE	<a href="https://www.usatoday.com/story/news/politics/2018/02/08/trump-administration-advises-federal-agencies-prepare-limited-government-shutdown/321883002/">https://www.usatoday.com/story/news/politics/2018/02/08/trump-administration-advises-federal-agencies-prepare-limited-government-shutdown/321883002/</a>
GIST	<p>WASHINGTON – The federal government shut down early Friday morning for the second time in less than three weeks after Congress failed to pass a spending bill to keep the agencies running.</p> <p>But this shutdown is likely to be short-lived – maybe just a few hours.</p> <p>The government ran out of money at midnight Thursday when plans to pass a sweeping bipartisan budget deal hit a snag in the Senate, causing Congress to miss a funding deadline and triggering a partial government shutdown.</p> <p>Sen. Rand Paul, a conservative Kentucky Republican and one-time presidential contender, temporarily blocked a Senate vote on the bill to lift strict budget caps and pave the way for lawmakers to spend an extra \$300 billion over the next two years on defense and domestic programs. The deal is attached to a short-term spending bill that will fund the government through March 23.</p> <p>Paul's objection slowed the bill's progress, but didn't stop it altogether. His right to object will expire in the wee hours of Friday morning and the Senate is expected to pass the bill.</p> <p>Congress and the White House had hoped to avoid another shutdown, especially coming less than three weeks after the government was shuttered for three days after lawmakers failed to pass a short-term spending bill.</p> <p>But late Thursday, the Trump administration began advising federal agencies to get ready – just in case.</p>

	The Office of Management and Budget sent word to federal agencies that they should prepare for a "limited shutdown" of perhaps a few hours while Congress gives final approval to the spending bill.

<b>HEADLINE</b>	<b>02/08 Claim: Myanmar starving Rohingya</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/ap-exclusive-rohingya-military-cut-off-food-myanmar-52946493?">http://abcnews.go.com/International/wireStory/ap-exclusive-rohingya-military-cut-off-food-myanmar-52946493?</a>
<b>GIST</b>	<p>Abdul Goni says the Myanmar government was starving his family one stage at a time.</p> <p>First, soldiers stopped the Rohingya Muslim from walking three hours to the forest for the firewood he sold to feed his family. Then Buddhist neighbors and seven soldiers took his only cow, which he rented out to fertilize rice fields. Next, he says, they killed his uncle and strung him up on a wire for trying to stop the theft of his buffalos.</p> <p>By the time Goni saw bodies floating down the local river, of fellow Rohingya killed for illegal fishing, he knew his family would die if they didn't leave. On bad days, they carved the flesh out of banana plant stalks for food. On the worst days, his children ate nothing.</p> <p>"I felt so sorry that I couldn't give them enough food," the 25-year-old says, tears running down his face, in a refugee camp in Bangladesh, just across the border from Myanmar. "Everything just got worse and worse. ... Day by day, the pressure was increasing all around us. They used to tell us, 'This isn't your land. ... We'll starve you out.'"</p> <p>First, massacres, rapes and the wholesale destruction of villages by the Myanmar military in western Rakhine state forced nearly 700,000 Rohingya Muslims to flee to Bangladesh, in reprisal for Rohingya militant attacks on Aug. 25. Now, the food supply appears to be another weapon that's being used against the dwindling numbers of Rohingya in Myanmar.</p> <p>The accounts of hunger could not be independently confirmed, as Myanmar's government does not allow reporters into the northern part of Rakhine state, where most of the Rohingya lived. However, more than a dozen interviews by The Associated Press with the most recent refugees show growing desperation, as the noose tightens around their communities in what U.N. officials have said may be a genocide. The U.N. and human rights groups such as Amnesty International have also warned of increasing hunger among the Rohingya in areas where conflict and displacement have been most rampant.</p> <p>Repeated calls to Myanmar's military weren't answered, but the Myanmar government denies ethnic cleansing and says it is battling terrorists. Social Welfare Minister Win Myat Aye says the government has been distributing food aid to as many people as possible.</p> <p>"There are many ways that we have been reaching out to villagers frequently," he says. "And that's why it's not possible that there are people who are completely cut off from food or facing hunger."</p> <p>The Rohingya Muslims, who have been loathed by Myanmar's Buddhist majority for decades, are locked down in their villages — sometimes even in their homes — and prevented from farming, fishing, foraging, trade and work, the refugees and aid groups say. In other words, they can no longer do what they need to do to eat. While restrictions on freedom of movement and access to food have long been in place, they have tightened dramatically in recent weeks, the AP interviews show.</p> <p>The hunger the Rohingya faced at home is evident when they come to the Bangladesh camps, where new refugees, especially children and women, suffer from "unbelievable" levels of malnutrition, according to Dr. Ismail Mehr.</p> <p>"They are definitely coming in starving," says Mehr, who recently returned to the United States from</p>

treating refugees in the camps. "We saw the vitamin deficiencies in the children and the adults; we saw ... severely malnourished people who are basically skin and bones. It looked like the pictures from the Nazi camps."

Activists, aid groups and researchers say Myanmar squeezed the Rohingya by severely hampering many of the humanitarian operations that were crucial for their survival. Food aid was further disrupted by violence in 2016 and the bloodshed after Rohingya insurgents staged an unprecedented wave of 30 attacks on security posts across Rakhine state in August and killed at least 14 people.

Even before August, aid agencies in 2017 predicted a spike in severe malnutrition in children. In a report released today, Amnesty International details evidence of forced starvation by the military, including stopping the Rohingya from harvesting their rice fields in November and December. The Food and Agriculture Organization has also warned that the lack of access to food and fuel is adding to hunger in Myanmar.

Buddhists in Rakhine state began blocking food aid when they noticed that the Muslims were getting more than they were, according to Thomas MacManus, a specialist in international state crimes at Queen Mary University of London who has researched the Rohingya since 2012. Tightened curfews meant people couldn't harvest shrimp or rice, tend to their cattle, gather firewood or fish. Since August, an almost 24-hour-a-day curfew means no one is leaving their villages, he says.

MacManus says the Myanmar government has regularly employed a scorched-earth strategy that has denied food to other ethnic groups it has battled, including the Shan and the Kachin.

<b>HEADLINE</b>	<b>02/08 DACA recipients in military 'protected'</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/mattis-says-daca-recipients-in-military-are-protected-even-if-program-expires/">https://www.cbsnews.com/news/mattis-says-daca-recipients-in-military-are-protected-even-if-program-expires/</a>
<b>GIST</b>	<p>Defense Secretary James Mattis said immigrant members of the military who are currently protected by the Deferred Action for Childhood Arrivals program will continue to be protected — even if the program expires without congressional action next month.</p> <p>Mattis, speaking to CBS News Pentagon correspondent David Martin and other reporters Thursday, said he has spoken with Homeland Security Secretary Kirsten Nielsen and confirmed that anyone who has enlisted in the military and is waiting to report to boot camp, anyone on active duty or in the active reserves or anyone with an honorable discharge will not be deported. Two exceptions for that would be for anyone who has committed a serious felony or is the subject of a deportation order.</p> <p>If Congress fails to act before March 5 — the deadline upon which the program is set to expire — "they're protected," Mattis said.</p> <p>But relatively few members of the military currently benefit from DACA. In September, the Pentagon said fewer than 900 people currently serving or who have signed contracts to serve are recipients of the program.</p>

<b>HEADLINE</b>	<b>02/08 Colombia tightens border controls</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/colombia-tightens-border-control-venezuela-migrants-surge-52938756?">http://abcnews.go.com/International/wireStory/colombia-tightens-border-control-venezuela-migrants-surge-52938756?</a>
<b>GIST</b>	Colombia will tighten control of over its porous border with Venezuela as thousands of migrants fleeing a rapidly deteriorating political and economic crisis escape into the neighboring Andean nation.

In a visit to a border city at the epicenter of Colombia's mounting migration crisis, President Juan Manuel Santos on Thursday announced new measures that could make it more difficult for Venezuelan migrants to cross into the country illegally or remain there without any official status.

"Colombia has never lived a situation like the one we are encountering today," Santos said.

Migration into Colombia has surged as Venezuelan President Nicolas Maduro has moved to consolidate his rule and the nation's economy plummets. Colombia migration authorities say there are an estimated 600,000 Venezuelans currently in Colombia — double the number six months ago. Venezuela exile associations and some border city officials have said they believe that number is higher.

The unprecedented migration wave is putting strains on Colombia at a delicate time in its history. The nation is crawling out of a five-decade-long armed conflict following the signing of a peace deal with leftist rebels in 2016. Many of the Venezuelans are arriving illegally and in need of medical attention.

"This is a tragedy," Santos said. "And I want to reiterate to President Maduro: This is the result of your policies."

More than 2,000 additional military officers will be deployed to control the hundreds of dirt-road crossings known as "trochas" that dot Colombia's 1,370-mile (2,200-kilometer) border with Venezuela. A new migration patrol unit will also police public spaces where Venezuelan arrivals congregate, provide them orientation and to control ills like prostitution that have surfaced in the migration wave's wake.

Migration authorities will no longer issue temporary border crossing cards, which have already been granted to 1.5 million Venezuelans to allow them short visits to purchase food and medicine. All Venezuelans inside the country will also be required to present themselves to officials and enroll in a registry.

<b>HEADLINE</b>	<b>02/08 Russia denounces US airstrike at UN</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/latest-syria-confirms-us-airstrike-reports-casualties-52925188?">http://abcnews.go.com/International/wireStory/latest-syria-confirms-us-airstrike-reports-casualties-52925188?</a>
<b>GIST</b>	<p>The Latest on the situation in Syria (all times local):</p> <p>10:30 p.m.</p> <p>Russia's U.N. Ambassador Vassily Nebenzia says he has told the U.N. Security Council that the U.S.-led coalition's airstrikes on Syrian government-backed troops were "inadmissible" and "deplorable." He says they cannot be repeated — no matter what reasons the coalition gives to justify an attack.</p> <p>Nebenzia said U.S. Ambassador Nikki Haley raised the issue of the airstrikes at a closed council meeting Thursday where she defended the bombing that the U.S. military says killed about 100 fighters. The U.S.-led coalition said its action in eastern Syria was in "self-defense," citing a major attack on its allied forces and U.S. advisers in Deir el-Zour province.</p> <p>Nebenzia told reporters at U.N. headquarters in New York that he reminded the council that the coalition wasn't invited into Syria, and Russia sees that its fight against "international terrorism" is going "beyond that."</p> <p>Nebenzia also said that while the humanitarian situation in Syria is "deplorable," it is "in no way much more different than it used to be a month ago — but now we are being presented with it as if something dramatic has happened."</p>

<b>HEADLINE</b>	<b>02/08 Alaska dangerous state for online dating</b>
<b>SOURCE</b>	<a href="http://www.ktva.com/story/37463493/alaska-most-dangerous-state-for-online-dating-report-says">http://www.ktva.com/story/37463493/alaska-most-dangerous-state-for-online-dating-report-says</a>
<b>GIST</b>	<p>Alaska is the most dangerous state in the nation in which to date people online, according to a ranking released Thursday.</p> <p>A SafeWise.com overview of the nation's five most dangerous online-dating states – compiling risks of rape, fraud and sexually transmitted diseases – put Alaska at the top of the list followed by New Mexico, Louisiana, Nevada and Arkansas. The group's 2017 report had listed Alaska second behind Washington, D.C.</p> <p>The 2018 report was compiled using states' cybercrime and violent crime data from the FBI's Uniform Crime Reports for 2016, as well as their chlamydia and gonorrhea infection rates from the federal Centers for Disease Control and Prevention.</p> <p>Alaska's FBI data for 2016, which led to an online report calling Alaska the nation's most dangerous state last month, shows a rise of more than 16 percent in rape cases that year-- which included 960 rapes and 89 attempted rapes. Although Alaska's data didn't include specific categories for rapes resulting from online dating, a VICE News report from 2016 said the United Kingdom reported a 450 percent rise in reported rapes linked to online dating over the previous five years.</p> <p>According to SafeWise, Alaska has the nation's second-highest rate behind Nevada of "romance scams," during which criminals cajole money from people during quickly formed relationships-- including those online. Alaska's 2016 cybercrime data from the FBI's Internet Crime Complaint Center lists a total of 50 reported victims from romance and confidence scams; the total losses from those crimes, \$894,062, work out to an average loss of \$17,881 per victim.</p> <p>State health officials said this week that Alaska continues to suffer a wave of gonorrhea cases amid high STD rates nationwide in recent years. Alaska also suffers the nation's highest infection rate of chlamydia infections, with nearly 5,700 reported in 2016 – almost 80 percent of them among people under 30.</p> <p>Susan Jones, with the state Department of Health and Social Services, said in October that one factor in Alaska's higher gonorrhea rates was an apparent rise in high-risk sexual activities. Those activities, she said, included "finding your partners through sex-seeking websites or apps and not knowing the STD status of that individual."</p> <p>The report's five safest states for online dating were Vermont, Maine, New Hampshire, Idaho and Utah.</p>

<b>HEADLINE</b>	<b>02/08 Attempted online fraud jumps 113%</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/fraud-attempts-soar-113-in-q4/">https://www.infosecurity-magazine.com/news/fraud-attempts-soar-113-in-q4/</a>
<b>GIST</b>	<p>Attempted online fraud jumped 113% year-on-year in the final quarter of 2017, to hit a massive 251 million attacks, with e-commerce firms hit particularly hard, according to ThreatMetrix.</p> <p>The fraud prevention company analyzed 7.6 billion transactions to compile its Q4 2017 Cybercrime Report.</p> <p>The firm claimed that companies are most exposed to fraud during the period straight after a major data breach but before it has been reported or detected.</p> <p>Given that Q4 covers the busy Christmas shopping period, it's perhaps no surprise that e-commerce firms came under particular scrutiny from the fraudsters. Almost 193 million transactions were rejected by ThreatMetrix as fraudulent, a 173% increase on the same time in 2016.</p> <p>However, fraudsters seem to be eschewing payment fraud in favor of account takeover and creation attacks.</p> <p>In fact, e-commerce account creation and login attacks were four times more likely than payment fraud, with the log-in attack rate growing 294% compared to the same quarter in 2015.</p> <p>Automated bots are playing an ever-increasing role in fraud, used on an unprecedented scale again during Q4, according to the report. There were 34 million bot attacks during the peak festive shopping period alone, rising to 800 million for the quarter.</p> <p>They're increasingly used for more than merely to test stolen credentials, the firm claimed.</p> <p>"Bot attacks continue to evolve from their basic velocity-based functions, to complex bots that are used in more advanced ways to spoof IP addresses, emulate browsers or spoof apps, to masquerading bots, that are attempting to mask their true context and pretend to be legitimate user traffic," the report noted.</p> <p>Also last quarter, Russia and Vietnam emerged as top five attack originators, alongside the UK, US and Germany. However, more attacks are said to originate in Europe than anywhere else.</p>

<b>HEADLINE</b>	<b>02/08 Malware pervasive across cloud platforms</b>
-----------------	---

SOURCE	<a href="http://www.securityweek.com/malware-pervasive-across-cloud-platforms-report">http://www.securityweek.com/malware-pervasive-across-cloud-platforms-report</a>
GIST	<p>Cloud Access Security Brokers (CASBs) provide visibility into the cloud. Some CASBs provide malware protection. Some clouds provide malware protection. Bitglass analyzed the efficacy of cloud-only protection by scanning the files of its customers that had not implemented its own Advanced Threat Protection (actually Cylance).</p> <p>Bitglass scanned tens of millions of customer files and found (PDF) a remarkably high number of infections: 44% of organizations had at least one piece of malware in their cloud applications; and nearly one-in-three SaaS app instances contained at least one threat. Among the SaaS apps, 54.4% of OneDrive and 42.9% of Google Drive instances were infected. Dropbox and Box followed, both at 33%.</p> <p>The research discovered that the average company had nearly 450,000 files held in the cloud, with more than 20 of the files containing malware. Forty-two percent of the infected file types were script and executable files, 21% were Office documents, 10% were Windows system files, and 8% were compressed formats. The other 19% were in various different file formats.</p> <p>Among the infections it discovered a malware that Cylance confirmed as a zero-day ransomware -- which it calls ShurL0ckr. ShurL0ckr is ransomware-as-a-service , "meaning," says Bitglass, "the hacker generates a ransomware payload and distributes it via phishing or drive-by-download to encrypt files on disk in a background process until a Bitcoin ransom is paid." No analysis of the malware and its inner workings is provided.</p> <p>It is, however, undetected by either Microsoft's or Google's cloud offerings.</p> <p>"The sad truth," comments Meni Farjon, co-founder and CTO at SoleBIT Labs, "is that today, most cloud services providers still do not supply advanced malware detection capabilities, thus making this vector a perfect choice for attackers who aim to infect corporate users on a massive scale. I believe we will definitely see more ransomware variants targeting cloud application in the coming months, at least until the major cloud services providers offer malware detection capabilities to those services."</p> <p>Bitglass checked whether mainstream anti-malware would detect the ShurL0ckr ransomware. "The team," writes Bitglass, "then leveraged VirusTotal to scrutinize a file containing the ransomware across dozens of antivirus engines. Only 7% of said engines (five in sixty-seven) detected the malware - one of these engines was Cylance, a Bitglass technology partner."</p> <p>VirusTotal was acquired by Google in 2012.</p> <p>The key takeaways from this research are that security teams' concerns about cloud security are valid, and there's a new ransomware that goes largely undetected. That last point is, however, not clear cut. The purpose of VirusTotal (VT) is to allow concerned users to gain insight into a suspect file -- could it be, or is it likely not, malicious? It is not an anti-malware comparative tool.</p> <p>VirusTotal itself says, "Antivirus engines can be sophisticated tools that have additional detection features that may not function within the VirusTotal scanning environment. Because of this, VirusTotal scan results aren't intended to be used for the comparison of the effectiveness of antivirus products."</p> <p>"In other words," comments ESET senior research fellow David Harley, "a VirusTotal report is not a reliable indicator as to whether a product detects or blocks a given sample out in the field, because VirusTotal doesn't necessarily make use of all the layers of protection made available by a specific product in the real world. To draw any conclusions about the efficacy of any product based on one sample isn't testing at all," he added; "it's just marketing."</p> <p>Lenny Zeltser, VP of products at Minerva Labs, isn't surprised by the VT engines' low detection rate. "Attackers continually find ways of getting around AV tools, due to the inherent weaknesses of any approach to detecting malicious software on the basis of previously-seen patterns. This is a reality for all types of AV solutions," he told SecurityWeek, "regardless of whether they employ AI or not."</p>

<b>GIST</b>	<p>The first documented cryptominer attack on a SCADA network of a critical infrastructure operator was seen in the wild.</p> <p>Radiflow researchers spotted the malware attacking the OT network of a water utility company in order to mine the Monero cryptocurrency, according to a Feb. 8 press release.</p> <p>The malware was designed to run in a stealth mode on the networks' devices and even disable the device's security tools to operate undetected and maximize its mining processes for as long as possible.</p> <p>“While it is known that ransomware attacks have been launched on OT networks, this new case of a cryptocurrency malware attack on an OT network poses new threats as it runs in stealth mode and can remain undetected over time,” Radiflow Chief Technology Officer (CTO) Yehonatan Kfir said in the release.</p> <p>The malware was discovered after researchers detected several abnormalities, including unexpected HTTP communications and changes to the topology of the customer's OT network and communication attempts with suspicious IP addresses.</p>

<b>HEADLINE</b>	<b>02/08 Dark web vendors moving to Litecoin</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/litecoin-emerges-as-popular-bitcoin-alternative-among-dark-web-underground-community/article/743007/">https://www.scmagazine.com/litecoin-emerges-as-popular-bitcoin-alternative-among-dark-web-underground-community/article/743007/</a>
<b>GIST</b>	<p>An analysis of 150 of popular dark web message boards, marketplaces and illegal services has revealed that underground vendors have been gravitating toward Litecoin cryptocurrency as a viable alternative to Bitcoin when conducting transactions.</p> <p>Conducted by Recorded Future's Insikt Group research team between Jan. 20 and Feb. 1, the study found that Litecoin – the second oldest cryptocurrency in existence (after Bitcoin) – is now accepted as a Bitcoin</p>

alternative by 30 percent of the 150 observed dark web vendors. The next most widely accepted cryptocurrencies are Dash (20%), Bitcoin Cash (13%, not to be confused with Bitcoin itself), Ethereum (9%), and Monero (6%).

Recorded Future suspects that this development could portend a greater diversification of cryptocurrency-based transactions on the dark web in the next six to 12 months.

"Bitcoin will lose its place as a dominant payment method in the dark web in the next six to 12 months. However, contrary to a widespread assumption that criminals are abandoning Bitcoin altogether, we are convinced it will remain one of the main payment instruments, albeit with a significantly smaller market share," wrote Andrei Barysevich, Recorded Future's director of advanced collection, and intelligence analyst Alexandr Solad, in a company report that was released today. "On the other hand, Litecoin and Dash will take their place next to Bitcoin as the everyday payment currencies of the dark web."

Bitcoin has already notably fallen out of favor with cybercriminals who extort their victims in ransomware attacks, because other digital currencies are more anonymity. In this instance, however, the dark web vendors are seeking Bitcoin alternatives because Bitcoin has become too mainstream and popular, resulting in higher fees.

"The meteoric rise in popularity of Bitcoin among household users, speculators, and institutional investors around the world since mid-2017 has placed an enormous load on the blockchain network, resulting in larger payment fees," the report states. "As a result, Bitcoin payments have become economically infeasible, because the subsequent cost of transaction increased ten-fold, sometimes as much as 30 percent of the smaller payment amounts."

<b>HEADLINE</b>	<b>02/08 Tenn. hospital hit by mining malware</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/tennessee-hospital-hit-with-cryptocurrency-mining-malware/d/d-id/1331014">http://www.darkreading.com/attacks-breaches/tennessee-hospital-hit-with-cryptocurrency-mining-malware/d/d-id/1331014</a>
<b>GIST</b>	<p>Decatur County General Hospital (DCGH) in Parsons, Tennessee, recently discovered cryptocurrency mining malware on its Electronic Medical Record (EMR) server. The hospital began informing 24,000 patients of the attack on January 26.</p> <p>On November 27, 2017, the hospital received a security incident report from its EMR system vendor, which said unauthorized software, designed to mine cryptocurrency, had been installed on the server supported by the vendor. An ongoing investigation has indicated an unauthorized attacker accessed the server with the EMR system and injected the software.</p> <p>The hospital's EMR server contained data including patient names, addresses, birthdates, and social security numbers, as well as diagnosis and treatment data. There is no evidence either type of data was taken or viewed, and so far it doesn't seem data theft was the attacker's goal. However, the hospital cannot definitively prove data was not compromised and is therefore notifying patients.</p> <p>DCGH has not named the EMR system vendor and is offering patients the myTrueIdentity online credit monitoring service for one year.</p>

<b>HEADLINE</b>	<b>02/08 New POS malware designed to steal</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/vulnerabilities---threats/new-pos-malware--steals-data-via-dns-traffic/d/d-id/1331022">http://www.darkreading.com/vulnerabilities---threats/new-pos-malware--steals-data-via-dns-traffic/d/d-id/1331022</a>
<b>GIST</b>	<p>Researchers at Forcepoint have discovered new point-of-sale (POS) malware disguised as a LogMeIn service pack that is designed to steal data from the magnetic stripe on the back of payment cards.</p>

	<p>The malware, which Forcepoint is calling UDPoS, is somewhat different from the usual POS tools in that it uses UDP-based DNS traffic to sneak stolen credit and debit card data past firewalls and other security controls. It is also one of the few new POS malware tools to surface in some time, according to the company.</p> <p>In recent years, the US, like many other countries, has switched from magnetic cards to chip and PIN cards based on the Europay, Mastercard, and Visa (EMV) standard. The transition has made it harder for criminals to steal payment card data using POS malware—like they did with the massive theft at Target in 2013.</p> <p>However, malware like UDPoS suggests that criminals still see an opportunity to steal data from POS systems. For instance, Trend Micro last year reported on MajikPOS, a POS malware family that was used to steal data on more than 23,300 payment cards. Retailer Forever 21, which is investigating a data breach first reported last November, recently disclosed finding malware on some of its POS systems.</p> <p>Luke Somerville, head of special investigations at Forcepoint, says there's no evidence to show that UDPoS is currently being used to steal credit or debit card data. But Forcepoint's tests have shown that the malware is indeed capable of doing so successfully.</p>

<b>HEADLINE</b>	<b>02/08 Seattle pushes Facebook on political ads</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/894681/seattle-facebook-political-ads/">http://mynorthwest.com/894681/seattle-facebook-political-ads/</a>
<b>GIST</b>	<p>Once again, tech companies are finding themselves in a gray area of regulation. This time, Seattle is pushing Facebook to reveal who paid for political ads during 2016 campaigns.</p> <p>“Seattle’s law requires that the media keep books and records showing who paid for ads running on their radio and TV stations...” Former Washington Attorney General Rob KcKenna told KIRO Radio’s Dave Ross. “... you can see who paid for the ads they’ve been seeing and hearing.”</p> <p>Seattle’s election law dates back to 1977, long before the internet and online advertising was a daily fact of life. But now, Seattle’s Ethic’s and Elections Commission is demanding Facebook provide similar information that other media is required to do. It wants Facebook to document and reveal who pays for political ads. Facebook could face fines of up to \$5,000 for each advertisement. Reuters notes that it’s the first such attempt to regulate political ads on social media.</p>

Facebook has also recently come under scrutiny for political ads purchased by Russian agents during the 2016 campaign. The problem with Seattle's current request is that it's in that gray area of regulation. Where does a social media company like Facebook fall when it comes to political advertising?

"It's never been thought that (this law) applies to online advertising," McKenna said. "That's not really surprising, even though online advertising has been around for a while and use of online ads has been growing dramatically by political campaigns ... it's not surprising no one ever thought of it before because online advertising has been treated very differently than conventional newspaper, radio, and TV advertising."

#### Political ads on Facebook

While TV and radio ads fall under the purview of the FCC, the internet does not. Beyond that, there is the Communications Decency Act, McKenna notes, which states websites cannot be held liable for advertising content on their pages. This is because online advertising is often provided by third parties and not the websites themselves. Facebook could be different, however, in that people directly place the ads onto the social media site.

McKenna knows people who work for Facebook. He's actually signed the wall at the company. So he reached out to find out what they plan to do about challenges like Seattle's.

"One thing they told me is that they are looking beyond what they legally have to do, to what they think they should do," McKenna said. "They predict that if it's not them, some other company that hosts online political advertising will argue that federal law shields them from having to disclose who is paying for the ads."

"But they're not saying they are going to do that; they are looking at their options beyond the legal requirements," he said. "I think that is the right position for them to take. Even though I wouldn't be surprised if they immediately said 'Hey, Communications Decency Act; you cannot touch us; we are not regulated by the FCC' and so forth."

McKenna doesn't know Facebook's official plan, but he said that the company could be considering making political advertising more transparent.

"The best solution is sunshine," he said. "As Slade Gorton once said to me, 'Money in politics is like water on a sidewalk. It always finds the cracks.'"

<b>HEADLINE</b>	<b>02/08 Social media 'influencer marketing'</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/social-media-influencers-brand-advertising/">https://www.cbsnews.com/news/social-media-influencers-brand-advertising/</a>
<b>GIST</b>	<p>Picture this: You're scrolling through your feed on Instagram and notice what appears to be an endorsed advertisement for a new workout supplement. The post has received hundreds of thousands of likes and dozens of comments.</p> <p>Bewilderment overcomes you as you try to figure out why the Instagram user looks familiar. But at the same time, you feel intrigued to learn more about the product based on the amount of attention the post has received. And that glowing review, which acts as the photo caption, makes you feel inclined to purchase the supplement.</p> <p>Don't fret, this isn't a scam. In fact, thousands of companies have been using this relatively new concept. It's simply a modern form of advertising called "influencer marketing," which allows for so-called influencers -- users who have a large following on social media platforms like Facebook (FB), Instagram, YouTube (GOOG), Twitter (TWTR) and Snapchat (SNAP) -- to partner with brands that are in sync with</p>

their lifestyles.

In recent years, traditional celebrity endorsements have taken a back seat to brands' influencer-created content. So stars like Paris Hilton and Kim Kardashian have been replaced by that familiar, yet unfamiliar face that popped up in your feed moments ago.

And as long as Instagram and other platforms continue as go-to places for many shoppers, influencers will keep racking in thousands of dollars as quickly as their posts acquire likes.

What does it mean to be a social media influencer?

Influencers can be fitness gurus, gaming addicts, beauty bloggers, fashionistas, foodies, travel experts, etc. They offer an authentic presence on social media based on their copious numbers of followers and level of engagement. Generally speaking, each influencer maintains an audience of at least 10,000 followers on one platform, if not more.

But it takes more than having an attractive physique and a coveted blue "verified" badge to acquire digital celebrity status.

Influencers use social media platforms to connect with their audience on a personal level. They brand themselves within a specific industry by promoting content that coincides with their values and interests. For example, someone who correlates with fashion would be more inclined to promote a clothing company's T-shirt as opposed to a travel agency's sale on a vacation package to an exotic destination.

Brands hire influencers and pay them to endorse their product(s) or service(s) within photos and videos, which essentially act as word-of-mouth opinions similar to what you might seek from a close friend. Many consumers value the opinions of influencers, which subsequently makes them more inclined to purchase the product that's being advertised.

Last year, Forbes released a comprehensive list of the world's top influencers. The going rate for influencer-created content ranges anywhere from \$500 to upwards of \$20,000, or more, for each sponsored post.

Does influencer marketing work?

Influencer marketing -- sometimes described as the "Wild West" for its lack of strategic guidance -- has gained a competitive edge in the industry due to its tendency to form viral conversations about brands online. Over the years, companies have developed applications to help brands determine which influencers are best suited for their digital campaigns.

Still, the big question remains: Does influencer marketing actually work? Most would agree that it does, because influencers can reach a larger audience than what a traditional ad may target.

As the power of social media continues to grow, it's arguably fair to say influencers will continue to have a stronger impact on consumer brand awareness. In turn, brands will be required to shift their strategies, conforming to this new norm as influencer-follower relationships expand.

<b>HEADLINE</b>	<b>02/08 Russian trolls posed as black activists?</b>
<b>SOURCE</b>	<a href="http://www.homelandsecuritynewswire.com/dr20180208-russian-tumblr-trolls-posed-as-black-activists-to-stoke-racial-resentment-ahead-of-2016-u-s-election">http://www.homelandsecuritynewswire.com/dr20180208-russian-tumblr-trolls-posed-as-black-activists-to-stoke-racial-resentment-ahead-of-2016-u-s-election</a>
<b>GIST</b>	<p>Internet trolls working for the Russian government posed as black activists on Tumblr to share political messages before the 2016 U.S. presidential election, BuzzFeed reports.</p> <p>As was the case with the fake accounts created by Russian government operatives on other social media platforms such as Facebook, Twitter, and Instagram, the fake Tumblr accounts aimed to help Donald Trump win the 2016 election by spreading messages which stoked racial and ethnic resentment and intensified political polarization.</p> <p>The Russian accounts on Tumblr disseminated content on issues such as police violence against young African-Americans.</p> <p>Buzzfeed says that a digital forensic analysis tied the fake Tumblr accounts to the St. Petersburg-based Internet Research Agency (IRA), a hacking and disinformation organization employed by the Kremlin to disseminate fake news and commentary on social media as part of the broad Kremlin campaign to weaken Western democracies and undermine organizations such as NATO and the EU.</p> <p>A researcher at the University of Oxford told BuzzFeed that there were “parallels” with Russian activity on Facebook.</p> <p>Jonathan Albright of the Tow Centre for Digital Journalism, who worked with BuzzFeed on the Tumblr investigation, said the accounts seemed to be part of an “ongoing campaign” which began in early 2015.</p> <p>Buzzfeed notes that the more popular Russian posts on Tumblr criticized Hillary Clinton, supported independent Senator Bernie Sanders during the Democratic primaries, and highlighted police violence against black communities.</p> <p>In one message, the account 4mysquad shared gifs supposedly showing a black girl being sexually assaulted by a police officer. The officer was falsely identified as a member of the NYPD.</p> <p>Twitter's official blog notes that the Tumblr accounts often used the same names as some of the 3,814 IRA-backed Twitter accounts identified by Twitter in its report to Congress.</p> <p>Facebook and Twitter have been asked to testify before the Senate Intelligence Committee on Russian interference in the U.S. election, but, until now, Tumblr had not been linked to Russian misinformation campaigns.</p> <p>Lisa-Maria Neudert, a researcher at the Computational Propaganda Project at the Oxford Internet Institute, said that there were “a lot of parallels” between the trolls' strategy on Tumblr and other social media sites.</p> <p>“It's not about promoting one candidate or message, but about sowing political distrust and confusion, and feeding into fears that society is already having,” she told the BBC.</p> <p>“Tumblr is really popular among teens, who are very vulnerable and very susceptible to political messages</p>

	because they haven't formed political identities yet.”
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>02/08 Official: pot tracking system hacked</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/marijuana/washington-marijuana-traceability-system-dogged-with-problems-was-hacked-state-says/">https://www.seattletimes.com/seattle-news/marijuana/washington-marijuana-traceability-system-dogged-with-problems-was-hacked-state-says/</a>
<b>GIST</b>	<p>The state's new pot-tracking system was hacked last weekend, and an “intruder” stole route information associated with four days of marijuana deliveries, as well as other information.</p> <p>“It was a breach of the system and indications show they downloaded a copy of the traceability database,” said Brian Smith, a spokesman for the Liquor and Cannabis Board (LCB). “It did something in the system — I’m not at liberty to talk about — that affected the transfer and manifest data — that was, in part, responsible for the issues this week.”</p> <p>The state on Feb. 1 transitioned to a new marijuana-traceability system, Leaf Data Systems, which has been dogged by problems since its launch. The technology issues have kept marijuana growers and sellers scrambling to keep their businesses running. Some have worried about keeping marijuana on increasingly sparse store shelves.</p> <p>Problems associated with the hack were discovered Saturday by MJ Freeway, the company providing the data service and pot-tracking software. On Monday, the company identified the problem as a “possible security incident” and notified the LCB, according to a message that went out to all marijuana licensees Thursday. At that point, the LCB contacted the Washington State Office of CyberSecurity, which is investigating the hack. Smith said marijuana businesses were not notified of the attack until Thursday because of that agency’s protocol.</p> <p>The security flaw was resolved on Monday, Smith said. The state agency plans to continue using MJ Freeway as a vendor.</p> <p>“No online presence is 100 percent safe,” he said. “There are steps that MJ Freeway has taken to ensure that it’s secure and meets modern standards. ... We’re sticking with MJ Freeway.”</p> <p>In addition to transportation manifests, delivery-vehicle information like type, license-plate number and VIN number were also taken. That information is available through public-record requests, Smith said.</p> <p>MJ Freeway has had products hacked several times before, and source code for some of its software was posted online last year, according to Marijuana Business Daily, an industry publication.</p> <p>Pot proprietors Thursday questioned the LCB’s selection of MJ Freeway, considering its previous breaches.</p> <p>“It’s been a pretty well-known fear: MJ Freeway was not Fort Knox. Boy, was everybody right straight out of the gate,” said Steve Lee, who owns two marijuana businesses and is a Kennewick city councilman.</p> <p>Marijuana-traceability systems were designed, in part, to help regulators satisfy Obama-era federal guidelines about marijuana diversion. If pot could be tracked, the theory went, then federal officials would have more assurances it wasn’t crossing state lines or going into the black market.</p> <p>Lee said the hack has eroded the traceability system’s integrity, and will have him sleeping less easy about federal involvement in the state’s legal marijuana market.</p> <p>“It’s a catastrophic failure at the state level, and it leaves us all worrying about our futures,” he said.</p> <p>What the hacker(s) were after is not immediately clear, but pot proprietors worried that data could be</p>

	manipulated.
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>02/08 Hackers head start on Winter Olympics</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/02/08/technology/winter-olympics-hackers.html">https://www.nytimes.com/2018/02/08/technology/winter-olympics-hackers.html</a>
<b>GIST</b>	<p>The Department of Homeland Security is warning Americans planning to attend the 2018 Winter Olympic Games in Pyeongchang that cybercriminals are likely to be targeting the Games.</p> <p>Officials in South Korea are facing a double threat. At the Olympic Committee's Security Command Center in an unmarked facility in Pyeongchang, security experts from around the world are monitoring threats from North Korean hackers who have been probing the computer networks that manage South Korean finance, media and critical infrastructure systems for years.</p> <p>And while some people believe that diplomatic efforts may have eased the North Korean threat to the Games, others are bracing for the impact of a hacking campaign by Russian groups retaliating for a ban on Russian athletes. Security companies said these groups had successfully targeted the computer systems of Olympic-related organizations months ago.</p> <p>Just how those hacks could lead to broader attacks is not clear. But cybersecurity researchers said the Olympic Games — more digitized than ever — are ripe targets for hackers searching for embarrassing information on everyone from athletes to organizers or simply looking to cause trouble by manipulating scoring or lighting systems.</p> <p>More than 300 Olympics-related computer systems have already been hit, with many of them compromised, the security company McAfee said last month, in what its investigators described as a preliminary hacking campaign. On Friday, the second stage of that attack appeared to be underway, as assailants siphoned data from victims' machines back to their own computers systems, McAfee's researchers said.</p> <p>Who was doing it and why they were doing it could take several months to figure out. Ryan Sherstobitoff, a senior analyst at McAfee, said the hacks had appeared to be well organized and backed by substantial resources, with "the hallmarks of a nation state." What that nation state planned to do with the stolen data and its foothold in victims' machines, Mr. Sherstobitoff said, was still anyone's guess.</p> <p>A spokesman for the International Olympic Committee declined to comment on how the organization was addressing the heightened threats.</p> <p>Security researchers often discuss risks with a level of informed paranoia. Some of their warnings are based on what is possible but has not actually occurred in the real world. On other occasions, their warnings are based on what has already happened, and where those incidents could lead.</p> <p>But cyberattacks on international events have become common. The 2015 nuclear negotiations in Geneva and the 2009 climate talks in Copenhagen, for example, were plagued by hackers from various nation states. The Olympics are another alluring target — but with wall-to-wall television coverage.</p> <p>"The Olympics involve so many countries, and so many sports, many of which have their own infrastructure, that it has become a rich target environment for many adversaries," said John Hultquist, director of threat intelligence at the security firm FireEye.</p> <p>He has been tracking the activities of Russian hackers and other groups as they lay the groundwork for attacks on Olympic organizations. In the past few months, Mr. Hultquist said, his team at FireEye has seen several examples of Russian groups tampering with the computers of Olympic-related organizations. The activity is "obviously meant to drag Olympics-related organizations through the mud and discredit them," he said.</p>

The Russian cyberespionage group known as Fancy Bear, which has been tied to the 2016 hack of the Democratic National Committee and has links to Russia's main military intelligence unit, has already started posting hacked emails intended to highlight discord among global sports officials and investigators who exposed systemic Russian doping.

Last month, the group posted emails and other documents online from the International Luge Federation, claiming they demonstrated violations of antidoping rules. And earlier in January, the group released hacked emails and documents from the International Olympic Committee, which it advertised as proof "the Europeans and the Anglo-Saxons are fighting for power and cash in the sports world."

Trend Micro, the Tokyo-based security company, said its researchers had also witnessed Fancy Bear attacks on the International Ice Hockey Federation, the International Ski Federation, the International Biathlon Union, and the International Bobsleigh and Skeleton Federation in the final months of 2017. The attacks occurred while an International Olympic Committee disciplinary panel was preparing bans for dozens of Russian athletes caught doping in the 2014 Winter Olympics in Sochi, Russia.

"The Kremlin has its fingerprints on cyberattacks that were retribution for exposing the Russians' Sochi games doping scheme, which was a fraud on the purity of sport," said Doug DePeppe, a founder of Sports ISAO, a nonprofit cybersecurity organization in Colorado Springs. The group is trying to help sports associations, including Olympic organizations, combat threats.

"Their goal is to say, 'No one is following the rules, and Russia shouldn't be singled out,'" Mr. DePeppe said.

FireEye, McAfee and other security companies said that over the past few months they had seen attack groups from Russia, and others of unknown origin, dispatch hundreds of "spearphishing" emails, laced with malicious links and attachments, to target Olympic-related groups.

They also have seen the groups set up computer servers under the names of some of their targets and seemingly innocuous organizations like the South Korean Ministry of Forestry. They warn that those activities could be a prelude for a broader Russian campaign.

To protect the Olympics, South Korea has mobilized tens of thousands of security personnel, including cybersecurity analysts and 50,000 soldiers, in what has been described as one of the most militarized security forces in Olympic history.

Over the past few weeks, the United States State Department has set up a temporary security monitoring operation on one floor of its embassy in Seoul. Analysts from the State Department, the intelligence community and the Department of Homeland Security are scheduled to arrive there this week.

But an official who was briefed on the State Department-led operation, and who was not allowed to discuss it publicly, worried that the operation was too focused on combating traditional threats like physical attacks on venues.

The State Department did not reply to a request for comment.

Elsewhere in Pyeongchang, an alliance of security personnel from South Korea, various Olympic sponsors, technology suppliers and cybersecurity sleuths from around the world are monitoring computer screens and potential threats at the unmarked Security Command Center.

While cybersecurity experts believe the North Korean threat was lessened by the last-minute addition of a North Korean delegation to the Games, they have not ruled out that North Korea may be looking to embarrass its southern neighbor.

HEADLINE	<b>02/08 Ex-Marine pleads guilty in terror sting</b>
SOURCE	<a href="http://www.sun-sentinel.com/local/broward/fl-reg-terrorism-sting-guilty-palm-beach-20180207-story.html">http://www.sun-sentinel.com/local/broward/fl-reg-terrorism-sting-guilty-palm-beach-20180207-story.html</a>
GIST	<p>A former U.S. Marine and sculptor is facing a dozen years in federal prison after he pleaded guilty on Thursday to being part of a conspiracy to help the terrorist group ISIS.</p> <p>Gregory Hubbard, 54, was arrested in a controversial FBI terrorism sting in 2016 in Palm Beach County.</p> <p>Under the terms of the plea agreement, the prosecution and defense will recommend that the judge sentences Hubbard to 12 years in federal prison. That's significantly less than the 20-year maximum penalty the offense carries and the 30 or more years he had been facing if convicted of all three charges that were filed against him.</p> <p>The case ran into problems last year when it became public that the main undercover informant in the case, Mohammed Agbareia, had defrauded more than \$300,000 from victims — while he was working undercover for the FBI and heavily involved in the terrorism sting.</p> <p>Handcuffed, shackled and dressed in dark blue jail scrubs in court on Thursday, Hubbard told the judge he was pleading guilty because he had committed the offense.</p> <p>Hubbard was arrested July 21, 2016 at Miami International Airport. He thought he and an undercover informant were flying to Germany and would then take a train and other transportation to Syria, where Hubbard planned to fight alongside the terrorist group.</p> <p>Before he left, Hubbard gave much of his artwork to one of the informants for safekeeping, placed most of his other possessions in a storage unit in Georgia and saved \$6,000 he was bringing with him to fight in Syria. He also said he might never return from Syria.</p> <p>Hubbard was diagnosed with depression and anxiety several years ago and was receiving therapy and prescription medication at a local Veterans Affairs hospital before his arrest, his attorneys Assistant Federal Public Defenders Anthony Natale and Vanessa Chen said in court.</p> <p>“Depression lingers over me pretty consistently ... But, depressed? I am,” Hubbard told the judge.</p> <p>Two other local men, Dayne Antani Christian and Darren Arness Jackson, who were also arrested in the sting, previously pleaded guilty to related offenses.</p> <p>All three men were secretly recorded talking about their support for the terrorist group and one of its leaders.</p> <p>“They shared links for ISIS propaganda videos and websites, including ISIS beheading videos, and lectures by Anwar al-Awlaki espousing jihad,” according to the plea agreement.</p> <p>Under the terms of the plea agreement, prosecutors Karen Gilbert and Ed Nucci said they will dismiss the two other charges filed against Hubbard – attempting to provide material support to a terrorist group and providing ammunition to a convicted felon – when Hubbard is sentenced in April.</p> <p>Christian and Jackson will also be sentenced later this year.</p> <p>The main informant who worked on the case, Agbareia, 52, pleaded guilty to a federal fraud charge in October and is serving a two-year federal prison term. The Palestinian man is expected to be deported to Israel after he serves his sentence.</p>

<b>HEADLINE</b>	<b>02/09 Egypt: massive anti-terror operation</b>
<b>SOURCE</b>	<a href="http://www.xinhuanet.com/english/2018-02/09/c_136962332.htm">http://www.xinhuanet.com/english/2018-02/09/c_136962332.htm</a>
<b>GIST</b>	<p>CAIRO, Feb. 9 (Xinhua) -- Egypt announced on Friday the launch of a major operation across the country to eradicate terrorism, the army said in a statement.</p> <p>Egyptian troops and the police have been put on "maximum alert" ahead of a comprehensive military operation against terrorism "at all strategic fronts," said Tamer el Refai, an army spokesperson, in the statement.</p> <p>The major operation will target all areas plagued by extremism to uproot terrorism, it said.</p> <p>The law enforcement forces started in the morning implementing the comprehensive plan against the terrorist and criminal elements and organizations in north and central Sinai along with other desert areas in western Delta, Refai said.</p> <p>He added that the operation is launched as part of the efforts to reach the three-month deadline set by President Abdel-Fattah al-Sisi to eliminate terrorism after the mosque attack that killed more than 300 people in the northern Sinai city of Arish in November, 2017.</p> <p>Meanwhile, strict security measures have been adopted near the vital institutions, national projects, religious houses, electricity and water plants, and major important tourist areas, an official security source was quoted by the state news agency MENA as saying.</p>

<b>HEADLINE</b>	<b>02/08 Left to join ISIS; many abandon fight</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/post-nation/wp/2018/02/08/young-men-left-america-to-join-isis-they-fled-when-it-didnt-live-up-to-their-expectations/?utm_term=.a486610a7057">https://www.washingtonpost.com/news/post-nation/wp/2018/02/08/young-men-left-america-to-join-isis-they-fled-when-it-didnt-live-up-to-their-expectations/?utm_term=.a486610a7057</a>
<b>GIST</b>	<p>When Mohamad Khweis fled his home in the United States in 2015 and headed to Islamic State territory in Syria and Iraq, he was "curious" about life in the group's self-declared caliphate, he later recalled.</p> <p>"I would see . . . people from all around the world leaving their countries and going to live in this state," Khweis said when he testified last summer during his federal trial on terrorism charges. "It was kind of interesting."</p> <p>What he found did not live up to the hype. Khweis was tasked with running errands such as grocery shopping, taking out the trash at his Islamic State house and caring for wounded fighters. He eventually became "frustrated with waiting" for military training, according to an FBI special agent who testified during Khweis's trial. He ended up fleeing and was captured in Iraq.</p> <p>Khweis, who was found guilty of supporting terrorism and sentenced to 20 years in prison, was not alone in feeling disillusioned by what he encountered. Many of the Americans who traveled to Syria and Iraq to join the group wound up coming back because "life in jihadist-held territory did not live up to their expectations," according to a new study from George Washington University's Program on Extremism that provides a sweeping look at their experiences.</p> <p>These Americans had seen "an idealized version of reality" in online propaganda they consumed, but that contrasted unfavorably with the harsh living conditions, infighting and menial assignments that greeted them, the report found. For Americans like Khweis — who later insisted he was not part of the group and only wanted to see the situation in Syria for himself — household chores could lead to their decisions to abandon the fight.</p>

“Many of the Americans had little to no combat experience and were assigned duties such as cleaning safe houses, cooking, and caring for the sick and injured,” the report states. “This was hardly the glamorous experience they anticipated, and some sought a way back to the comforts of home.”

The Americans who went overseas tended to be male, with an average age of 27, according to the report. They were like thousands of others drawn by the Islamic State — also known as ISIS or ISIL — as the terrorist group seized territory in Syria and Iraq, creating its own society on the ground. The Islamic State’s physical territory has since dwindled following punishing military losses, but its online propaganda machine continues to churn out material as part of a “virtual caliphate” rallying its followers.

More than 150 Americans were arrested on Islamic State-related charges between 2011 and 2017, and about a third of them were people who sought to travel abroad but were stopped, according to the report, which notes that attempts to travel to Iraq or Syria have steadily fallen since 2015. Dozens of people in the United States already have been convicted on federal charges relating to the group. (Far more people left Europe to join the Islamic State — estimates range from 5,000 to 6,000, the report says — though that flow of volunteers also plummeted as the group lost territory.)

The report’s authors examined 64 people — described as “travelers” — who left the United States to join Islamist militant groups in Syria and Iraq since 2011, the year protests began against the Syrian regime. Most of them were associated with the Islamic State, either at the outset or joining up with the group as it expanded, according to the report. Just a handful — four — reached leadership positions in the Islamist militant groups they joined.

Most of the travelers were described as “networked,” meaning they had some connection with Islamist militant supporters in the United States or others traveling with them, according to the study, which is based on interviews with law enforcement officials, reviews of legal documents and interviews with some Americans who went to Islamic State territory and returned. Khweis was in the smaller category of “loners,” those who apparently traveled without any personal connections to the fight and still made it to Syria or Iraq.

Relatively few of the travelers returned to the United States, the study found. Just a dozen of them are known to have come back, and nine of them were arrested and faced terror charges. One of that dozen returned intending to carry out an attack, the report said, but was taken into custody early in the planning stages; he was sentenced last month to 22 years in prison. About one-third of the travelers examined in the report are believed to have died overseas.

The report states that returning travelers do pose a risk, because they can help with recruiting other Islamist militants or provide knowledge about travel or conducting attacks. While the Trump administration has repeatedly argued that stronger immigration restrictions are needed to keep terrorists out of the United States, the report notes that most of the 64 travelers were U.S. citizens or legal permanent residents.

“The traveler phenomenon, like the domestic terrorist threat, is primarily homegrown,” the authors wrote.

The report concludes that people who never left the United States pose a greater danger than those who went overseas and came back, noting that none of the terrorist attacks in the United States in recent years have been carried out by people who traveled to Syria or Iraq first. In high-profile case after high-profile case, U.S. officials have determined that attackers were radicalized in the United States after consuming online propaganda.

“The risk that ‘homegrown’ extremists will commit attacks on U.S. soil outweighs the risk of attacks from returning travelers,” the authors wrote.

<b>HEADLINE</b>	<b>02/08 Resurgence of al-Shabaab</b>
<b>SOURCE</b>	<a href="https://jamestown.org/program/resurgence-al-shabaab/">https://jamestown.org/program/resurgence-al-shabaab/</a>
<b>GIST</b>	<p>As al-Shabaab continues to lose leaders to U.S. airstrikes and territory to troops with the African Union Mission in Somalia (AMISOM), analysts have contemplated the possible defeat of the Somalia-based militant group. Indeed, Somali President Mohammed Abdullahi Farmajo stressed this possibility at a conference in London last May, saying that with international support and better military equipment, the terrorist group could be defeated in just two years (Jamhuri News, May 11, 2017).</p> <p>In October, however, a massive bomb blast in the Somali capital of Mogadishu killed more than 300 people (The Star, October 16, 2017). Meanwhile, the group has carried out a series of smaller attacks, terrorizing civilians and assassinating public figures, in an attempt to undermine the UN-backed government, even as the better armed U.S.-backed AMISOM troops' pound its strongholds.</p> <p>In neighboring Kenya, the al-Qaeda affiliate has also stepped up its operations, forcing Nairobi to redoubled efforts to tackle militants in the Boni Forest, the thick expanse of coastal forest in Lamu, by the border with Somalia. The resurgence pours cold water on predictions of al-Shabaab's possible defeat, prompting security experts to call for new strategies to combat the militant group (Daily Nation, January 23).</p> <p><b>Increase in Attacks</b></p> <p>In January, the militants bombed a telecommunications tower in the town of Elwak, in Mandera County, on the Kenyan border. The downing of the tower, owned by Somalia's Hormuud Telecom, disrupted communications within the town and the surrounding area. Local residents said the destruction was intended to cut off communications between local people and the Kenyan and Somalia security forces. The militants reportedly suspected locals were spying for AMISOM troops, who were gathering information and planned to build a medical camp in the area (Daily Nation, January 20).</p> <p>Ahead of the attack, increased militant activity had been reported in the area. On January 6, the militants destroyed a telecommunications tower belonging to Safaricom, Kenya's leading mobile phone service provider, in Katulo area in Wajir. The militants used Rocket Propelled Grenades (RPGs) to down the tower, before engaging security officers at a facility nearby (The Star, January 7; The Standard, January 7).</p> <p>Days earlier, five security officers were killed in the area while on patrol along the Elwak- Katulo Road. In the attack, a lorry belonging to the paramilitary General Service Unit (GSU) was set on fire (Mediamax, January 3).</p> <p>In December 2017, the militants destroyed an important water well that had been drilled by the Kenyan army in Lafey town, Mandera County, leaving hundreds of resident without water (Kulan Post, January 25).</p> <p><b>Resurgence in Boni Forest</b></p> <p>In another significant development, analysts fear the militants have regained a foothold in Boni Forest in Kenya. The militants have been building their presence on the Kenyan side of the forest since 2012, according to intelligence sources. It is from these bases they are believed to be executing the current attacks on the Kenyan military, the police and local villagers.</p> <p>In mid-January, heavily armed militants attacked and briefly occupied Ishakani police station, before fleeing to Somalia (The Standard, January 15). Earlier, the militants had rounded up villagers and forced them into a mosque, where they popularized their ideology. Local people said the militants had informed them that their target was the security agencies, and that civilians would not be harmed.</p> <p>Terrorist activity in Lamu is being orchestrated by Jaysh al-Ayman, a faction within al-Shabaab named after its top leader Maalim Ayman (a.k.a. Abdiiaziz Dobow Ali). Its fighters are largely Kenyans from the</p>

coastal region and some international jihadists. Ayman, who is thought to be a Kenyan Somali, founded the group in 2009.

The group began by carrying out small grenade and Improved Explosive Devices (IED) attacks in Kenyan towns and villages in Lamu, and staged its first major attack in June 2015, when nearly 50 heavily armed militants targeted Mpeketoni town, killing 60 people. Since then, the faction has continued to carry out attacks in the Kenyan coastal region (Daily Nation, January 23).

The same year as the Mpeketoni attack, the Kenyan government launched Operation Linda Boni, a multi-security agency operation aimed at countering militants' operation in the forest. More than two years since the launch of the operation, however, militants continue to carry out attacks across the coastal region (The Star, July 12, 2017).

While clashes with the military have resulted in casualties on both sides, the security forces have yet to capture any al-Shabaab fighters or their leaders, raising concerns that local residents may be helping hide the militants and offering them support (Daily Nation, January 23).

Joseph Kanyiri, the Operation Linda Boni commander, made that plain in comments on January 22, accusing local residents of helping fighters avoid capture. The security agencies are also reportedly investigating whether local dispensaries and health centers are treating injured al-Shabaab fighters or providing them with medicine (Intelligence Brief, January 22).

#### A 'Faceless' Enemy

Although al-Shabaab is weakened militarily, financially and politically in Boni, it has been acting to boost its forces through the conscription and recruitment of locals, including children.

The group is allegedly using women as spies, who gather intelligence even from the security forces (Daily Nation, December 18, 2017). Kenyan security forces deployed to the area complain they are dealing with unknown fifth columnists, unlike Somalia where they can be more certain about the identity of their enemies.

A further development, one that began in mid-2017, has been the aggressive recruitment of child soldiers. Reports in January told of forcible child abductions and of reprisals against communities that refuse to hand their children over to militants (Daily Nation, January 27).

In late September, al-Shabaab commanders ordered elders, teachers in Islamic schools and communities in rural areas to hand over hundreds of young children or face attack. The groups have also warned parents against sending their children to secular schools, demanding they attend Islamic ones that the group controls (Somali Press Online, April 21, 2017).

In the past decade, al-Shabaab has recruited thousands of children for indoctrination and as frontline fighters (KassFM, January 15). Since 2015, the group has opened large Islamic schools teaching its own curriculum in areas under its control, strengthening indoctrination and facilitating recruitment.

#### Potential for Larger Attack

Reports last year that al-Shabaab was on the back foot, while pleasing government officials and Somalia's international backers, appear to have been premature. Forecasts of the group's defeat may need to be tempered by the fact it has proven its resilience time and again.

Kenyan analysts warn that the increased rate of small attacks in Lamu may be an attempt to divert the attention of security forces from Somalia, where the militants have been forced out of their bases and need time to regroup. They warn too that this increase maybe intended as a diversion while the militants plan a potentially much larger attack (The Standard, January 15).

<b>HEADLINE</b>	<b>02/08 Iran-backed militias warn US forces</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/feb/8/top-iranian-backed-militias-threaten-attacks-us-fo/">https://www.washingtontimes.com/news/2018/feb/8/top-iranian-backed-militias-threaten-attacks-us-fo/</a>
<b>GIST</b>	<p>The two main Iranian-backed Shia militias in Iraq warn that U.S. forces in the country face possible attack by their forces, should Washington not carry out a full withdrawal of American troops from the country.</p> <p>Members of Shia-led Kata'ib Hezbollah, Badr Organization and other Iranian-linked paramilitaries under the Popular Mobilization Forces (PMF) banner stood ready to battle back against the American "occupation force" inside Iraq, said Kata'ib Hezbollah spokesman Jafar al-Hussaini.</p> <p>"Iraq will not see stability with America's presence. The Americans have not entered Iraq based on the Iraqi government's consent," Mr. al-Hussaini said in an interview with Lebanese news outlets.</p> <p>"Our combatants have limited weapons but a confrontation with the American forces may begin at any moment. Unlike in the past, the Americans this time will not benefit from any mediation," he added. Leaders from the Badr Organization say a continued U.S. military footprint in Iraq would only increase the chances of extremist movements to sprout up, in the wake of Islamic State's defeat in the country.</p> <p>There are now an estimated 140,000 registered fighters under the PMF banner in Iraq according to military officials in Baghdad, which constitutes nearly half of the Iraqi army and a quarter of the security forces under the Interior Ministry.</p> <p>Washington and Baghdad "should co-ordinate to ensure a full withdrawal," Badr Organization spokesman Kareem Nuri said. "A U.S. presence will be cause for internal polarization and a magnet for terrorists," he added.</p> <p>American and coalition forces have already begun to pull back air assets and manpower from northern Iraq, following the liberation of Islamic State's Iraqi capital of Mosul in last year. Iraqi officials within the government of Prime Minister Haider al-Abadi say nearly 60 percent of the over 8,000 U.S. troops in Iraq would be pulled out, recent reports claim.</p> <p>However, command officials reiterate the U.S. would retain a military presence in the country, despite the defeat of the Islamic State, or ISIS.</p> <p>"Continued coalition presence in Iraq will be conditions-based, proportional to the need and in coordination with the government of Iraq," coalition spokesman Col. Ryan Dillon said in a statement earlier this week.</p> <p>Should that timeline hold, U.S. troops will likely still be in country during national elections slated for later this year.</p> <p>Leaders from the Badr Organization, Kata'ib Hezbollah, Asa'ib Ahl al-Haq — also known as the Khazali Network — and other Shia militias that battled Islamic State have banded together to form a Shia political movement designed specifically to take on the ruling party during the upcoming elections.</p> <p>Dubbed the Mujahedeen Coalition, the new coalition seeks to leverage the militia's battlefield victories against ISIS over the last three years into political clout within the Iraqi parliament.</p> <p>A successful bid by the Mujahedeen Coalition to secure seats in the country's legislature could fracture Mr. Abadi's delicate balance of power inside Iraq, while potentially expanding Iran's influence in the country.</p>

HEADLINE	<b>02/08 Rare US strikes on pro-regime forces</b>
SOURCE	<a href="https://www.cnn.com/2018/02/08/middleeast/syrian-us-airstrikes-analysis-intl/index.html">https://www.cnn.com/2018/02/08/middleeast/syrian-us-airstrikes-analysis-intl/index.html</a>
GIST	<p>(CNN)The United States' air artillery strikes in northeastern Syria overnight Wednesday were a forceful response to attempts by pro-regime forces to push into areas held by the coalition's allies. The US has drawn a line in the sand -- indicating that any attempt by Syrian President Bashar al-Assad's regime to recover territory east of the Euphrates River will be met with powerful retaliation.</p> <p>US officials estimate that more than 100 of approximately 500 pro-regime troops involved were killed. The remainder retreated across the Euphrates. The official Syrian state news agency SANA reported that the overnight attack had hit "tribal fighters."</p> <p>The Euphrates has become a de facto border between regime-held areas and the 23% of Syrian territory held by the US-backed Syrian Democratic Forces (SDF) -- a mix of Kurdish and Arab militia. They hold ground all the way from oil-rich Deir Ezzor in the east to Raqqa and up to the Turkish border.</p> <p>The US strikes followed what the coalition said was an "unprovoked attack" by forces allied with Assad against a SDF headquarters where coalition advisers were located. The headquarters was at Khusham, almost five miles east of the Euphrates and adjacent to important oil and gas fields. The area was taken from ISIS by the SDF last September, when a rapid advance south supported by coalition air power brought much of the oil-rich countryside east of the Euphrates under SDF control.</p> <p>The US military assesses that Russian contractors, that are believed to be funded by the Russian government, participated in the assault on US and SDF forces on Wednesday, according to two US defense officials. One official says the assessment comes from monitoring of communications in the area and from drone surveillance.</p> <p>Col. Thomas F. Veale said Wednesday's attack by pro-regime forces was large-scale, involving battle tanks, rocket launchers and artillery. It was more than a probing operation. A US official said that "20 to 30 artillery and tank rounds landed within 500 meters" of the SDF headquarters. A statement from the US coalition said that "Syrian pro-regime forces moved in an approximately battalion-sized dismounted formation."</p> <p>US attacks on pro-regime forces in Syria are rare, and the size of this action was unprecedented. Last year, US airstrikes took out small militia columns advancing within a "de-confliction" zone toward a coalition-backed base at al-Tanf on the border with Iraq.</p> <p>And a US fighter shot down a Syrian plane that had attacked SDF forces near Raqqa last June.</p> <p>With the defeat of much of the ISIS presence in eastern Syria, it was perhaps only a matter of time before the regime and its allies focused on recovering land to the east of the Euphrates. However, the US has made it clear that it does not intend to leave the area. US officials say that the continued presence of coalition advisers in support of the SDF is essential to prevent the re-emergence of ISIS, and that there may be two or three months more fighting against ISIS remnants in remote areas close to the border with Iraq.</p> <p>The larger picture is that for the US and pro-western groups such as the Kurdish YPG, those parts of northern Syria beyond the regime's control are a powerful negotiating tool when the future of Syria comes to be discussed, not least because they contain much of Syria's oil. Kurdish politicians have spoken of a confederation that would give them autonomy in northern Syria, but so far they have been excluded from peace talks at Turkey's insistence.</p>

HEADLINE	<b>02/08 Syria slams US strike as 'war crime'</b>
----------	---

<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/World-News/2018/02/08/Syria-slams-deadly-US-strike-as-war-crime/2791518115557/?utm_source=fp&amp;utm_campaign=ts_tn_int&amp;utm_medium=6">https://www.upi.com/Top_News/World-News/2018/02/08/Syria-slams-deadly-US-strike-as-war-crime/2791518115557/?utm_source=fp&amp;utm_campaign=ts_tn_int&amp;utm_medium=6</a>
<b>GIST</b>	<p>Feb. 8 (UPI) -- Syria's foreign ministry appealed to the United Nations Security Council Thursday to condemn a U.S. assault that killed more than 100 government troops.</p> <p>The U.S. military said the overnight airstrike in Deir el-Zour was retaliation for an "unprovoked attack" against the U.S.-led coalition occupying Syria.</p> <p>The Syrian government, though, called the act a "barbaric aggression" and said the real purpose of the "so-called international coalition" was to support the Islamic State terror network.</p> <p>Syria's foreign ministry wrote a letter to the Security Council Thursday calling for international condemnation.</p> <p>"This new aggression, which represents a war crime and a crime against humanity and a direct support to terrorism, affirms the nature of the low U.S. intentions against the sovereignty of Syria, the unity of its land and people and the U.S. exploitation of the pretext of fighting terrorism to establish illegal bases on the Syrian territory," the letter states.</p> <p>"The government of the Syrian Arab Republic calls on the UNSC to condemn the massacre and hold the international coalition responsible for the killing and wounding of thousands of civilians, including children, women and elderly and to pay compensation to the families of the victims."</p> <p>The letter also said the Syrian government wants the "illegal" U.S.-led coalition dissolved, as it is "a force of protection and support to terrorism."</p> <p>"The Syrian institutions and forces will continue to carry out their responsibilities regardless of the sacrifices in order to prevent the U.S. coalition from achieving its declared terrorist objectives," it said.</p>

<b>HEADLINE</b>	<b>02/09 Endgame for US in Syria gets murky</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/02/09/as-is-shrinks-end-game-for-us-in-syria-gets-murky.html">http://www.foxnews.com/us/2018/02/09/as-is-shrinks-end-game-for-us-in-syria-gets-murky.html</a>
<b>GIST</b>	<p>WASHINGTON – The closer the U.S. gets to its original goal in Syria of defeating the Islamic State group, the murkier its end game. The battlefield is shifting as demonstrated by a deadly barrage of American air and artillery strikes on a shadowy attacker.</p> <p>The Pentagon insists it is keeping its focus on defeating IS, but Defense Secretary Jim Mattis said Thursday U.S.-backed fighters in eastern Syria faced a "perplexing" overnight assault by about 300 pro-Syrian government fighters whose nationalities, motives and makeup he could not identify.</p> <p>A number of U.S. military advisers were present alongside local allied forces, and the Americans led a punishing response that other officials said killed about 100 of the assailants.</p>

<b>HEADLINE</b>	<b>02/09 Security alert Trinidad, Tobago Carnival</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/09/americas/trinidad-tobago-carnival-terror-threat/index.html">https://www.cnn.com/2018/02/09/americas/trinidad-tobago-carnival-terror-threat/index.html</a>
<b>GIST</b>	<p>(CNN)Days before the Carnival on the islands of Trinidad and Tobago, multiple US officials tell CNN they are aware of a terror-related threat to the popular annual event.</p> <p>This year's Carnival will be held Monday and Tuesday.</p> <p>The US Embassy in Port of Spain, capital of the two-island Caribbean nation, issued a security alert</p>

	<p>Thursday night, saying a plot had been thwarted but advising US government personnel "to exercise additional caution and increased situational awareness if they participate in Carnival events."</p> <p>The United Kingdom also issued a "Foreign Travel Advice" for the West Indies country on Thursday.</p> <p>"Terrorists are very likely to try to carry out attacks in Trinidad and Tobago. Attacks could be indiscriminate, including in crowded spaces and places visited by foreigners," the advisory said, adding authorities in that country have made arrests.</p> <p>The US military and intelligence have long considered Trinidad and Tobago a home to ISIS sympathizers. Individuals who have left Trinidad and Tobago have been involved in terrorist acts and committed killings in Syria, Adm. Kurt Tidd, head of US Southern Command, said in April 2017.</p> <p>In a news conference Thursday, a Trinidad and Tobago police official, Michael Jackman, said the disruptions were in the form of "criminal activities." He did not elaborate on whether the threat was terror-related.</p> <p>Police uncovered a threat to disrupt the Carnival activities and detained "several persons of interest," Jackman said in video provided by CNN affiliate CNC3 Television.</p>

<b>HEADLINE</b>	<b>02/08 DOJ: strip terror group leader citizenship</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/doj-leader-terrorist-group-lose-citizenship-52936137?">http://abcnews.go.com/International/wireStory/doj-leader-terrorist-group-lose-citizenship-52936137?</a>
<b>GIST</b>	<p>The Department of Justice is seeking to revoke the citizenship of the former leader of a Missouri-based organization that illegally funneled money to Iraq.</p> <p>The federal agency filed a complaint Wednesday in U.S. District Court in Kansas City, seeking to revoke the naturalization of Mubarak Hamed, once the director of the Islamic American Relief Agency, which posed as a charity that assisted famine victims in Africa. The organization collected \$1 million to \$3 million in contributions each year from 1991 to 2003.</p> <p>According to the complaint, Hamed regularly transferred funds from the organization to an account in Jordan controlled by a man who transferred the money, or goods bought with the funds, to Iraq, which violated U.S. sanctions against that country.</p> <p>IARA, based in Columbia, Missouri, was the U.S. office of the Sudan-based Islamic Relief Agency. It secretly funneled a total of about \$1.4 million to Iraq, the department said.</p> <p>The U.S. group was dissolved in 2004, after the government deemed it a terrorist organization. At the time, the organization was ordered to transfer more than \$800,000 in assets to a charity that assists farmers and drought victims in East Africa.</p> <p>Hamed, a native of Sudan, pleaded guilty to conspiracy, lying to federal agents and misusing the tax-exempt status given to charities. He served nearly five years in prison before being released in August 2016.</p> <p>It wasn't immediately clear where Hamed has been living since his release from prison. Charles Swift, the attorney who represented Hamed during his criminal case, did not reply to a phone message.</p> <p>If he loses his citizenship, he would revert back to permanent resident status and the Department of Homeland Security would begin removal proceedings.</p>

HEADLINE	<b>02/09 Extremists flourish in Indonesia prisons</b>
SOURCE	<a href="http://abcnews.go.com/International/wireStory/study-extremists-flourishing-indonesias-prisons-52952345?">http://abcnews.go.com/International/wireStory/study-extremists-flourishing-indonesias-prisons-52952345?</a>
GIST	<p>Indonesia's overcrowded prisons are ill-equipped to deal with Islamic militant inmates, hampering efforts to prevent the spread of violent radicalism in institutions that have become known as jihadist breeding grounds, a study has found.</p> <p>The research by University of Indonesia psychologists, which adds to years of warnings by experts, found that prison staff lack the ability to identify "high-risk" prisoners who could recruit other inmates because they're given limited information and little specialist training.</p> <p>Indonesia, the world's most populous Muslim-majority nation, has arrested and imprisoned hundreds of Islamic militants in a crackdown that followed a terror attack on the island of Bali in 2002. Yet many remained committed to violent extremism — both during and after their incarceration — and used their time in prison to radicalize others, who went on to commit acts of terror.</p> <p>The eight-month study at the four largest Indonesian prisons found prison staff who have close contact with inmates don't know how to limit the influence of hard-line ideologues or identify the less ideologically committed who could be disentangled with simple interventions, said Faisal Magrie, coordinator of the research, which was released Thursday.</p> <p>The problems in the prison system are often defeating efforts to turn convicted militants away from radicalism, he said.</p> <p>The challenges are exacerbated by poor coordination among government agencies and non-government organizations, which leads to duplicated efforts and unclear de-radicalization programs, Magrie said.</p> <p>"As a result, inmates are confused by the program, bored, and eventually refuse to participate," he said.</p> <p>Irfan Idris, director of de-radicalization at National Counter-Terrorism Agency, said the radicalization of ordinary criminals by militants who support the Islamic State group continues to be nightmare for police and prison officials.</p> <p>He said at least 18 former prisoners have been involved in extremist cases in Indonesia since 2010, and most were radicalized in prison.</p> <p>Efforts have since been made to isolate high-profile militant leaders to prevent the spread of violent ideology.</p> <p>Overpopulated prisons are the main reason de-radicalization efforts are struggling, said Bahrul Wijaksana, a senior program manager of Search for Common Ground, a nongovernment organization based in Washington that works with Indonesia's Directorate-General of Corrections.</p> <p>Currently, he said, the 477 prisons in Indonesia, which were built to accommodate 115,000 inmates, are holding about 254,000 prisoners. In big cities, prisons are four to five times overcapacity. Jakarta's Cipinang Prison, built to hold 900 inmates, has nearly 4,000 prisoners.</p> <p>Meanwhile, at current staffing levels in prison, there is one officer to every 55 inmates, making it difficult if not impossible to closely monitor all prisoner activities.</p> <p>"The deradicalization program is not going to be effective unless some of these issues are addressed," said Wijaksana.</p>

<b>HEADLINE</b>	<b>02/09 Turkey resumes strikes on Kurd enclave</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/turkish-jets-resume-airstrikes-syrian-kurdish-enclave-52953866?">http://abcnews.go.com/International/wireStory/turkish-jets-resume-airstrikes-syrian-kurdish-enclave-52953866?</a>
<b>GIST</b>	<p>Turkish jets have resumed airstrikes in the Syrian Kurdish-run enclave of Afrin after a brief lull, the military and media reports said Friday.</p> <p>The state-run Anadolu Agency said F-16 jets resumed their aerial bombing campaign late Thursday, striking the northwestern enclave's Mount Bafilun, the villages of Sheik Huruz and Kefer Jenne and the regions of Sheran, Jinderes and Raju, among other targets.</p> <p>Turkey's military issued a brief statement Friday saying its jets bombed a total of 19 targets, including shelters, ammunition depots and gun positions belonging to "terror" organizations. All planes returned to base safely, the statement added.</p> <p>Unconfirmed Turkish media reports had said that Turkey halted flights after Russia, which effectively controls the skies over the region, had closed the airspace over Afrin after militants shot down a Russian Su-25 fighter in northern Idlib province on Feb. 3.</p> <p>Turkey launched an offensive into the enclave three weeks ago to rout Syrian Kurdish fighters whom Ankara considers to be a security threat because of their links to outlawed rebels in Turkey.</p>

<b>HEADLINE</b>	<b>02/08 Military targets Chinese Uighur militants</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/world/u-s-targets-chinese-uighur-militants-well-taliban-fighters-afghanistan-n845876">https://www.nbcnews.com/news/world/u-s-targets-chinese-uighur-militants-well-taliban-fighters-afghanistan-n845876</a>
<b>GIST</b>	<p>The U.S. military says it carried out a series of punishing bombings last weekend of Taliban militant camps that also support a separatist Chinese terror group.</p> <p>A bombing raid Sunday on a region bordering China and Tajikistan set a record for the number of precision-guided munitions launched at one time from a B-52 bomber, according to Air Force Maj. Gen. James Hecker, who spoke to reporters at the Pentagon in a video teleconference from Kabul on Wednesday. The B-52 — a Cold War workhorse — had recently been modified to carry more munitions, the military said in a statement.</p> <p>The camps in remote Badakhshan Province supported Taliban operations within Afghanistan and by the East Turkestan Islamic Movement — set up by members of China's minority Uighur community — on the border region with China and Tajikistan, the military said.</p> <p>"There will be no safe haven for any terrorist group," Gen. John Nicholson, the head of U.S. Forces in Afghanistan, said in a statement Thursday. "We continue to hunt them across the country."</p> <p>Hecker said the strikes "support Afghanistan in reassuring its neighbors that it is not a safe sanctuary for terrorists who want to carry out cross border operations."</p> <p>Hecker added that the destruction of the training facilities would prevent "terrorists from planning any acts near the border with China and Tajikistan."</p> <p>China blames violence in its far-western Xinjiang region, home to some 10 million Uighurs, a Turkic-speaking Muslim minority, on Islamist extremists and separatists, some of whom it has long said have links to groups outside the country. Rights groups and Uighur exiles counter that unrest is due more to Uighur frustration at Chinese controls on their culture and religion. China denies any repression.</p>

<b>HEADLINE</b>	<b>02/08 Last 2 ISIS 'Beatles' captured in Syria</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/isis-uncovered/last-2-british-isis-beatles-have-been-captured-syria-n846011">https://www.nbcnews.com/storyline/isis-uncovered/last-2-british-isis-beatles-have-been-captured-syria-n846011</a>
<b>GIST</b>	<p>WASHINGTON — Two ISIS fighters notorious for imprisoning and murdering Western hostages were captured on the battlefield in Syria in January, according to three U.S. officials.</p> <p>The men were part of a group of four jihadis dubbed the Beatles by observers because of their British accents, and were caught by the Syrian Democratic Forces (SDF), a Kurdish and Arab militia fighting both ISIS and the Assad regime. Their capture was first reported by The New York Times.</p> <p>Officials identified the two as Alexandar Amon Kotey and El Shafee Elsheikh, and they were the last of the four Beatles on the battlefield. The best-known member of the group, Mohammed Emwazi, aka Jihadi John, who was seen and heard on videos beheading prisoners, was killed in an airstrike in Raqqa, Syria, in November 2015. The fourth member, Aine Davis, is in Turkish custody. All four men were from West London.</p> <p>The four men tortured their hostages, according to U.S. officials, and are linked to more than two dozen beheadings. Emwazi was suspected of killing Americans James Foley and Steven Sotloff.</p> <p>According to the Times, U.S. officials were told in mid-January that the militia might be holding Kotey and Elsheikh, and U.S. forces used biometric data to confirm their identities.</p>

## Suspicious, Unusual

[Top of page](#)

HEADLINE	<b>02/08 Drones size, numbers can overwhelm</b>
SOURCE	<a href="https://www.economist.com/news/science-and-technology/21736498-their-small-size-and-large-numbers-can-overwhelm-defences-home-made-drones-now">https://www.economist.com/news/science-and-technology/21736498-their-small-size-and-large-numbers-can-overwhelm-defences-home-made-drones-now</a>
GIST	<p>AN ATTACK on Russian forces in Syria on January 5th by 13 home-made drones is a good example of “asymmetric” warfare. On one side, exquisite high-tech weapons. On the other, cheap-as-chips disposable robot aircraft. Ten of the drones involved attacked a Russian airbase at Khmeimim. The other three went for a nearby naval base at Tartus. Rather than being quadcopters, the most popular design for commercial drones, the craft involved in these attacks (some of which are pictured above) resembled hobbyists’ model aircraft. They had three-metre wingspans, were built crudely of wood and plastic, and were powered by lawnmower engines. Each carried ten home-made shrapnel grenades under its wings.</p> <p>According to the Russian Ministry of Defence, which has so far refused to say who it thinks was responsible for the attack, the drones were guided by GPS and had a range of 100km. The electronics involved were off-the-shelf components, and the total cost of each drone was perhaps a couple of thousand dollars. The airframes bore a resemblance to those of Russian Orlan-10 drones, several of which have been shot down by rebel forces in Syria. The craft may thus have been a cheap, garage-built copy of captured kit.</p> <p>These particular drones, the Russians claim, were intercepted before they could cause any damage. However, several Russian aircraft were apparently damaged in an attack in Syria four days earlier, which was also, according to some accounts, carried out by drones. And there will certainly be other assaults of this sort. Guerrillas have been using commercial drones since 2015. Islamic State (IS), one of the groups active in Syria, makes extensive use of quadcopters to drop grenades. In 2017 alone the group posted videos of over 200 attacks. IS has also deployed fixed-wing aircraft based on the popular Skywalker X8 hobby drone. These have longer ranges than quadcopters and can carry bigger payloads. Other groups in Syria, and in Iraq as well, employ similar devices. Their use has spread, too, to non-politically-motivated criminals. In October, four Mexicans allegedly linked to a drug cartel were arrested with a bomb-carrying drone.</p> <p>Cheap shots</p> <p>Compared with military hardware, drone technology is both readily available and cheap. In 2014 a team at MITRE, a security think-tank based in Virginia, made a military-grade drone using commercial</p>

electronics, a 3D-printed airframe and open-source software. It cost \$2,000. A whole squadron of such craft could thus be assembled for less than the cost of a single shoulder-fired missile, let alone a modern combat aircraft. America's F-22 fighter, for example, costs over \$300m. A B-2 bomber is even more expensive.

Even a lone drone can do plenty of damage. In Ukraine last year, drones operated by Russian separatists (or perhaps by Russian special forces) attacked several ammunition dumps with incendiary grenades. They destroyed a number of these dumps, in one case setting off explosions which blew up a staggering 70,000 tonnes of munitions.

A growing appreciation of the threat from small drones has led to a rush for protection. Lieutenant-General Stephen Townsend, a former commander of Operation Inherent Resolve, America's anti-IS campaign, has called weaponised drones "the number one threat facing soldiers fighting IS". An American navy budget document describes the navy as "scrambling to improve defences against the rapidly evolving capabilities of remote-controlled devices". Existing defences are not geared up to cope with small drones, which are difficult to spot, identify and track, and which may be too numerous to stop. Jamming might be thought an obvious solution. Breaking the radio links between the operator and the drone, or confusing its GPS navigation, would make a drone crash or send it off course. Many jammers, with names like DEDRONE, DroneDefender and DroneShield, have already been employed by various countries. Six of the drones in the Syrian attack were brought down by such jammers, the others by guns and missiles.

Drones are, however, becoming increasingly autonomous. This means there is no operator link to jam. The Syrian drones were vulnerable to jamming because they relied on GPS and so crashed when their link to it was blocked. But new technologies such as optical navigation (which permits a drone to compare its surroundings with an on-board electronic map, and thus to know where it is) will make even GPS jammers useless. Hence the need for "kinetic solutions", to shoot drones down.

Small drones are surprisingly hard targets, however. Iraqi forces in Mosul used to joke that trying to deal with an IS drone attack was like being at a wedding celebration: everyone fired their Kalashnikovs into the air with no effect. A recent American army manual describes small drones as "very difficult to defeat using direct fire weapons". A single rifle bullet is likely to miss. A shotgun would work, but only at close range, and would mean that squaddies had to carry around an extra weapon all the time on the off chance of a drone attack. Also, since drones are not of standard sizes, the range to one is hard to estimate. The manual therefore suggests that rather than aiming directly at a drone, the entire squad should fire their weapons at a fixed point ahead of it, hoping to bring the craft down with a curtain of fire. The manual also advises commanders that the best course of action may be "immediate relocation of the unit to a safer location".

#### A numbers game

Among other projects, the American army is hurriedly upgrading its shoulder-launched Stinger missiles, which are used to attack low-flying aeroplanes and helicopters. Stingers were not designed to hit small drones, though, so the upgrade adds a proximity fuse which detonates when the missile is close enough to destroy a drone without actually having to make contact with it. Up to 600 "Manoeuvre Short Range Air Defence" teams equipped with these upgraded missiles will join American infantry units around the world. But the upgrades cost about \$55,000 each (on top of the basic \$120,000 cost of a Stinger), so only 1,147 are being purchased—about two per team, which is hardly enough to tackle a swarm of drones.

Another approach being tried out by the American army is a system called BLADE (Ballistic Low-Altitude Drone Engagement). This fits armoured vehicles' existing machine-gun turrets with radar guidance and computer control. That should provide some protection, but may still be impotent against a mass attack.

A similar problem applies at sea, where billion-dollar ships might have their defences overwhelmed by squadrons of cheap, jerry-built drones. The mainstay of American naval air defence is Aegis, an orchestrated arrangement of radars, computers, missiles and cannons. The short-range element of Aegis is

a Dalek-like, rapid-fire cannon called Phalanx, which spits out 75 rounds a second and can shoot down incoming cruise missiles. This will not cope well with lots of small drones, though. The navy is now upgrading Aegis's software to handle multiple simultaneous incoming targets by scheduling bursts of fire to destroy as many members of a swarm as possible. It is doubtful, however, whether one gun could account for more than a handful of attackers coming in from all directions at once. An unclassified study suggests that it could be overwhelmed by as few as eight.

Developers of drone-countering measures hope to overcome that by using laser weapons. Lasers hit their targets at the speed of light, have an unlimited supply of ammunition and cost less than a dollar a shot. Though such weapons have yet to achieve their designers' intentions of being able to shoot down crewed aircraft, they have been tested extensively and successfully against target drones. A variety of specifically anti-drone laser systems are now being developed, including Lockheed Martin's Athena, Raytheon's dune-buggy-mounted anti-drone laser, and LaWS, a creation of the American navy itself.

The crucial question is how rapidly such a laser system can spot, track and aim at its target, and how long the beam must play on the target in order to destroy it. The whole process is likely to take several seconds, and until it is complete, the laser cannot move on to repeat the procedure on another target. As with Phalanx, a simple calculation suggests individual anti-drone lasers would be able to deal with only a small number of attackers. If even one drone got through, the laser would probably be the priority target—for destroying it would leave the way open for a subsequent, unchallenged attack.

An American army document from 2016 thus emphasises the importance of stopping drones "left of launch"—that is, before they can take off. IS drone workshops and operators have been attacked to stop the drone threat. The Russians say they destroyed the unnamed group responsible for the mass drone attack in January, along with their drone-assembly and storage facility in Idlib, using laser-guided artillery. But when there are no runways or hangars, and drones can be operated from houses and garages, finding bases to attack is far from easy. Until adequate defences are in place, then, guerrilla drone swarms will be a real danger.

<b>HEADLINE</b>	<b>02/08 Mysterious death Border Patrol agent</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/08/us/border-patrol-agent-death-what-we-know/index.html">https://www.cnn.com/2018/02/08/us/border-patrol-agent-death-what-we-know/index.html</a>
<b>GIST</b>	<p>(CNN)The mystery surrounding the death of US Border Patrol agent Rogelio "Roger" Martinez is nowhere close to being solved.</p> <p>In the more than two months since Martinez's patrolled the West Texas desert for the last time, the FBI interviewed hundreds of people, combed through cellular data and analyzed DNA from the scene.</p> <p>Yet, authorities are still trying to determine how Martinez got injured and eventually died. Here is what we know about the mysterious death and the investigation.</p> <p><b>What happened?</b> Martinez, 36, died late on the evening of November 18. He was patrolling alone near Interstate 10 when he stopped his vehicle about 12 miles east of Van Horn, Texas.</p> <p>About 11:20 p.m. Martinez and another agent, Stephen "Michael" Garland, were found injured near a concrete-lined culvert -- a tunnel used for water drainage.</p> <p>The agents were patrolling in separate vehicles and it's unclear why both ended up at the culvert, according to the Border Patrol.</p> <p>Martinez had severe head injuries and other wounds such as broken bones. He was flown to a hospital in El Paso that night and died a few hours later, the FBI said.</p> <p>Garland was also injured but he survived. He told investigators he doesn't remember anything about what happened.</p> <p><b>They called for help</b> The FBI says Garland spoke to a Border Patrol dispatcher on the phone. He was disoriented and unsure of his location, but he told the dispatcher he and Martinez were hurt.</p> <p>"The second Border Patrol agent also made a statement to the effect of, 'We ran into a culvert,' 'I ran into a culvert,' or 'I think I ran into a culvert,'" the FBI said.</p> <p>The Border Patrol dispatch told Garland to go to his vehicle and activate his emergency lights so that first responders could find them, the FBI said.</p> <p>Authorities were also alerted by Garland's wife, who called the Van Horn Border Patrol station saying she'd received a cell phone call in which her husband seemed confused and disoriented, according to an agent who spoke with her.</p> <p><b>No evidence of murder</b> Authorities appear ready to rule out the possibility that Martinez and his partner were attacked or ambushed.</p> <p>The agents did not suffer "defensive wounds" and investigators did not find "third-party blood or DNA evidence" in the scene or the agents' clothing, according to an internal memo, from acting US Customs and</p>

Border Protection Commissioner Kevin McAleenan, which was obtained by CNN.

In the memo, McAleenan also indicated that no evidence suggested other people other than the agents were at the scene the night of the incident.

"None of the more than 650 interviews completed, locations searched, or evidence collected and analyzed have produced evidence that would support the existence of a scuffle, altercation, or attack," the FBI said in a statement released Wednesday.

In December, agents were chasing a tip that two undocumented brothers, suspected drug smugglers, had attacked the agents, according to a search warrant filed unsealed in New Mexico. But they are not connected to Martinez's death, or his partner's injuries, the FBI said Wednesday.

No other suspects have been linked to the incident.

The FBI has considered other theories, such as an accident or an altercation between the two agents, a Department of Justice official with knowledge of the investigation had said.

Emmerson Buie Jr., the special agent in charge of the FBI's El Paso division, said investigators have not "conclusively determined" how the two agents ended up at the bottom of the culvert.

A Customs and Border Protection spokesperson declined to comment on the case.

#### **Autopsy results are inconclusive**

A medical examiner in Texas said Martinez died from blunt injuries to his head, but the manner of his death is "undetermined," according to an autopsy report released Tuesday.

Martinez had fractures to his skull, right jaw, upper ribs and his right collarbone, the report by the El Paso County Medical Examiner's Office says.

The agent had cuts in his scalp, the report says, and a large bruise on his right shoulder. There was also a purple discoloration behind his right ear.

A toxicological test found a small amount of the barbiturate butalbital in Martinez's blood. The drug is often combined with aspirin or acetaminophen to treat headaches and pain.

#### **Some believe it was an attack**

Despite the FBI's conclusion that there's no evidence of an attack, the Border Patrol union still believes the agent's injuries were the result of an attack.

"Our view hasn't changed. Our view is he was attacked," Chris Cabrera, a spokesman for the National Border Patrol Council told CNN referring to the FBI's investigation. "It seems to me that they don't have any leads."

The union was quick to say the agents were attacked after the incident. The assertion has been echoed by Texas politicians such as Gov. Greg Abbott, Sen. Ted Cruz and others.

On Twitter, President Donald Trump said the injured agent had been "brutally beaten" and called again for the construction of a wall between the United States and Mexico.

Culberson County Sheriff Oscar Carrillo, who responded that night, said it didn't look like an attack to him.

#### **Agent's family finds it hard to believe**

Martinez's fiancée, Angela Ochoa, and his family have said they don't understand how the agent suffered such severe injuries.

	<p>"I find it hard (to believe) that a fall could have caused all the damage that he had," she said. "And as far as him being sideswept, that couldn't have happened because he was not off the freeway, he was on the side road. From the damage to his face, there's no way -- there's no way," she said.</p> <p>She believes the answers may lie with surviving agent Garland.</p> <p>"I mean, I know he saw something," Ochoa told CNN in December. "I know he knows. But what he knows, I can't tell you. I don't know."</p> <p>Neither she nor the Martinez family had heard from Garland since the agent's death, she said.</p>

<b>HEADLINE</b>	<b>02/08 Mysterious wind blows down big trees</b>
<b>SOURCE</b>	<a href="https://www.seattlepi.com/local/weather/article/Mysterious-wind-blows-down-big-trees-in-W-12562651.php">https://www.seattlepi.com/local/weather/article/Mysterious-wind-blows-down-big-trees-in-W-12562651.php</a>
<b>GIST</b>	<p>What in the world could possibly blow down more than 100 trees in the middle of a national park when no other major weather event was recorded in the area?</p> <p>That's a good question, and one that could be explained either simply — it was a downdraft wind — or through a Sherlock Holmes-style breakdown of events, courtesy local weather guru Cliff Mass.</p> <p>To wit: In the wee morning hours of Jan. 27, 2018, some kind of significant wind event managed to blow down 110 trees across a large swath of forest on the north shore of Lake Quinault, on Washington's Olympic Peninsula.</p> <p>Such wind was not recorded at nearby weather stations, nor did radar records from the time show anything more than some high and low pressure systems meeting, according to Mass.</p> <p>The explanation espoused by The Daily World was that the wind came from a "microburst," a rare wind event that creates a downward wind in a localized area.</p> <p>But a National Weather Service meteorologist told Mass it would've taken winds of 70 to 80 mph to snap trees off in the way it happened that night, so Mass dismissed that possibility.</p>

National Park Service reports to Mass indicated that the wind event likely came from the north — a northerly wind — and records showed a seismic record of the event. In other words, it was such a force of trees falling that it looked like a small earthquake.

That's some wind.

But surface wind records from around the time of the incident didn't show any major winds, and those that were recorded were blowing in the wrong direction.

No convective system that would created a "microburst," either, according to Mass.

The only thing that could, possibly, have created the wind to down the trees was this: "a frontal zone was approaching, with warm air and southerly flow surging in aloft, while cooler easterly flow dominated near the surface."

Mass noted that the front was linked with a low pressure system that did produce some strong winds around Western Washington later that day, but still, at the time, no major winds recorded nearby.

So what caused 110 trees to blow down in the middle of a forest?

That mystery remains unsolved.

<b>GIST</b>	<p>VERONA, Italy – When hundreds of hardcore fans of Italy's Hellas Verona Seria A soccer club chanted "Adolf Hitler is my friend" and sang that their team embraced the swastika, at a festive gathering in the summer, Italian Jewish communities complained — and waited.</p> <p>Local officials initially dismissed the video as a "prank," and condemnation only came several months later, after another video from the same event, profaning Christian objects, also began circulating on social media.</p> <p>"These episodes should absolutely not be dismissed," said Bruno Carmi, the head of Verona's tiny Jewish community of about 100, speaking in an interview at the Verona synagogue, which is flanked by two armed police patrols. "In my opinion, whoever draws a simple swastika on the wall knows what it means. And we know very well where that swastika brought us."</p> <p>Racist and anti-Semitic expressions have been growing more bold, widespread and violent in Italy. Anti-migrant rhetoric is playing an unprecedented role in shaping the campaign for the March 4 national elections, which many says is worsening tensions and even encouraging violence.</p> <p>Hate crimes motivated by racial or religious bias in Italy rose more than 10-fold, from 71 incidents in 2012 to 803 in 2016, according to police statistics. The five-year period corresponded with an explosion in migrant arrivals.</p> <p>On Saturday, a right-wing extremist shot and wounded six African immigrants in the small central Italian city of Macerata. Police say the suspect claims to have been acting out of revenge after a Nigerian immigrant was accused of dismembering an 18-year-old teen whose remains were found three days earlier. The shooting drew widespread, but not universal, condemnation.</p> <p>The attack also had a political taint. The alleged gunman, Luca Traini, was a failed candidate for the right-wing, anti-migrant Northern League last year and had previously flirted with more extreme neo-fascist movements. Police seized Nazi and white supremacist propaganda from his bedroom.</p>

The night before the shooting, Northern League leader Matteo Salvini had cited the teen's murder in a campaign appearance in Verona, pledging to send home 150,000 migrants if elected. He only dug in further after the attack.

Former Premier Silvio Berlusconi, who is competing with Salvini for leadership of the center-right coalition, significantly upped the political ante after the shooting. He claimed that 600,000 migrants were in Italy illegally, calling them "a social bomb ready to explode because they are ready to commit crimes," and threatened to deport many.

"The facts of Macerata in some ways show that in recent years there has been a process of cultural, social and political legitimization of racism that is creating enormous damage, most of all at the expense of people's lives," said Grazia Naletto, president of Lunaria, a Rome-based non-governmental agency that compiles a database of racist incidents in Italy.

Lunaria counts 84 cases of racist violence against individuals in the last three years, including 11 racially motivated murders, a statistic that Naletto called unprecedented in Italy.

A report on hate for the Italian parliament last summer reported that 40 percent of Italians believe other religions pose a threat, especially the Muslim faith. It also said anti-Semitism is shared by one in five Italians. The IPSOS MORI polling company found that Italy is the least informed country in the world regarding immigration, with most people overestimating by more than three times the number of immigrants living in Italy.

Findings by the swg research institute based in Trieste published in January said the demographic most vulnerable to neo-Nazi ideals are those aged 25-34, and that among Italians overall, 55 percent of those in the lowest income range either indulge in or oppose combating neo-Nazi and neo-fascist ideals.

Experts cite many reasons for the spread of extremism and racist expressions that until recently were mostly relegated to the margins of society. They include a superficial understanding of history, as well as an economy weakened by a long crisis that sidelined many ordinary workers and barred many young people from entering the work force.

More recently, there is the added pressure of migrants arriving from across the Mediterranean, with arrivals nearing 120,000 last year and topping 180,000 the year before.

The head of the immigration office at the Verona diocese concedes that many Italians have not accepted that theirs has become a multicultural society, despite the fact that about 9 percent of the nation's residents are foreigners. The diocese where he works hosts 11 foreign Christian communities, but resistance to integration is entrenched, he said.

"Romanian youths have less trouble integrating than ones from Ghana or Sri Lanka," the Rev. Giuseppe Mirandola said. "That is to say, we still have difficulty with the color of the skin."

He said even Pope Francis' calls to welcome migrants in this predominantly Roman Catholic nation have fallen on some deaf ears.

HEADLINE	<b>02/08 Official: NYPD ignored all ICE requests</b>
SOURCE	<a href="http://www.foxnews.com/us/2018/02/08/nypd-ignored-more-than-1500-federal-requests-to-detain-immigrants-last-year-official-says.html">http://www.foxnews.com/us/2018/02/08/nypd-ignored-more-than-1500-federal-requests-to-detain-immigrants-last-year-official-says.html</a>
GIST	New York City police ignored all 1,526 requests from federal Immigration and Customs Enforcement (ICE) to detain undocumented immigrants for up to 48 hours last year, a top NYPD official said Wednesday.

	<p>The Daily News reported that Oleg Chernyavsky, the NYPD's legislative affairs director, revealed the numbers at a City Council meeting.</p> <p>The number of requests for 2017 was nearly 20 times higher than the 80 the department received over the previous year. Chernyavsky said the department responded to just two of ICE's 2016 requests because those immigrants had federal arrest warrants.</p> <p>Under New York City law, prisoners can only be handed over to ICE if they've been convicted of one of 170 crimes and federal officials present a warrant.</p> <p>Chernyavsky said the police response to ICE requests "speaks volumes to our intent as a city. ... It's important for victims of crimes, irrespective of their immigration status, to trust their police and to come forward and inform their police."</p>

<b>HEADLINE</b>	<b>02/08 Study: alarming find on ibuprofen use</b>
<b>SOURCE</b>	<a href="https://www.aol.com/article/news/2018/02/08/many-people-take-dangerously-high-amounts-of-ibuprofen/23356829/">https://www.aol.com/article/news/2018/02/08/many-people-take-dangerously-high-amounts-of-ibuprofen/23356829/</a>
<b>GIST</b>	<p>(Reuters Health) - Many adults who use ibuprofen and other so-called nonsteroidal anti-inflammatory (NSAID) drugs take too much, increasing their risk of serious side effects like internal bleeding and heart attacks, a U.S. study suggests.</p> <p>About 15 percent of adults taking ibuprofen (Motrin, Advil) or other NSAIDs like aspirin, naproxen (Aleve), celecoxib (Celebrex), meloxicam (Mobic) and diclofenac (Voltaren) exceeded the maximum recommended daily dose for these drugs, the study found.</p> <p>"NSAIDs are among the most commonly used medicines in the U.S. and worldwide," said lead study author Dr. David Kaufman of Boston University.</p> <p>"These drugs can have serious side effects, including gastrointestinal bleeding and heart attacks, and are often taken without medical oversight because many products are available over-the-counter," Kaufman said by email. "The attitude that users can choose their own dose regardless of label directions, along with poor knowledge of dosing limits, is associated with exceeding the daily limit."</p> <p>One limitation of the study is that researchers only focused on recent and current ibuprofen users, which may not reflect what doses might be typical for sporadic or new users, the authors note.</p> <p>Even so, the findings highlight a potential downside of making NSAIDs widely available without a prescription, said Dr. Gunnar Gislason, director of research for the Danish Heart Foundation in Copenhagen.</p>

<b>HEADLINE</b>	<b>02/09 Expert: Sinaloa cartel moved to fentanyl</b>
<b>SOURCE</b>	<a href="http://www.bostonherald.com/news/local_coverage/2018/02/expert_sinaloa_cartel_moved_to_fentanyl_to_meet_demand">http://www.bostonherald.com/news/local_coverage/2018/02/expert_sinaloa_cartel_moved_to_fentanyl_to_meet_demand</a>
<b>GIST</b>	The Sinaloa cartel is involved in fentanyl now because they realize it's extraordinarily profitable. The cost is very low, but the scary thing is it's being shipped in powder form. The easiest way to die is to inhale it.

It's synthetic so all you need is a chemist. It's a no-brainer for them. They don't need to wait for a harvest. The business dictates that fentanyl now replaces heroin. They can even package it and make it look like pills.

This is the latest permutation in the drug organization. It was started by hillbillies literally firing guns in the air. Those days are gone.

The Sinaloa cartel is morphing like any capitalist business. And they understand distribution like FedEx does.

They are very, very brutal in Mexico, but like to keep a low profile in the States. They've learned their lessons from the Bloods, Crips and Colombians who taught them don't make a big mess.

But like all the cartels in Mexico, they have become savage, medieval. They have no mercy for adversaries. The local papers in Mexico run monthly totals of beheadings.

It's a free-for-all in Mexico now since El Chapo's arrest over who will run the Sinaloa cartel.

These guys as a state and a culture begins in the 1970s. Sinaloa is a Mexican state along the Pacific coast with the resort city of Mazatlan the capital.

The region is known for its tomatoes, melons and cucumbers. But there was never any money for the poorest of the poor. Then they began growing marijuana.

Then they helped the Colombians traffic cocaine across the border and ultimately took that business over, too.

The cartel never really cared about heroin, it was too scuzzy. But America's culture of pain pills led to addiction and had those folks switching to heroin. The cartel saw it would be a big market.

Fentanyl is now showing up because our demand is so high we've just used up all the heroin.

<b>HEADLINE</b>	<b>02/08 Judge: neo-Nazi must reveal location</b>
<b>SOURCE</b>	<a href="https://www.thedailybeast.com/neo-nazi-andrew-anglin-must-come-out-of-hiding-judge-rules-anglins-lawyer-says-he-lives-in-cambodia-now?ref=home">https://www.thedailybeast.com/neo-nazi-andrew-anglin-must-come-out-of-hiding-judge-rules-anglins-lawyer-says-he-lives-in-cambodia-now?ref=home</a>

<p><b>GIST</b></p>	<p>Vanished neo-Nazi Andrew Anglin must give up his whereabouts, a federal court in Montana ordered Wednesday.</p> <p>Anglin, who runs the white supremacist website Daily Stormer, has been on the lam for a year, fleeing a lawsuit by a Jewish woman whose address Anglin posted online. The woman, Tanya Gersh, is suing Anglin for intimidation and emotional distress after Anglin encouraged his anti-Semitic following to call her family members or “stop by” her Montana home. Anglin’s attorneys have attempted to dodge the lawsuit by claiming he lives outside the country, and that he worries for his personal safety if he reveals his location.</p> <p>A federal court isn’t buying it.</p> <p>Anglin has until February 16 to tell the court where he’s living, ruled U.S. Magistrate Judge Jeremiah Lynch.</p> <p>The lawsuit against him originated in the Montana hometown of fellow white supremacist Richard Spencer.</p> <p>Spencer, who has called for ethnic cleansing and shouted “hail Trump” to a crowd of followers throwing Nazi salutes, is from Whitefish, Montana. After Spencer’s profile as a white supremacist rose in 2016, Spencer’s mother became involved in a dispute with Gersh, a local real-estate agent. Gersh said she had simply decided not to work with Spencer’s mother.</p> <p>But Spencer’s mother (or Spencer himself, Gersh’s lawyers claim) wrote a blog post accusing Gersh of harassment. Anglin quickly took up the story on the Daily Stormer. “Jews Targeting Richard Spencer’s Mother for Harassment and Extortion,” Anglin wrote. “TAKE ACTION!”</p> <p>Anglin posted Gersh’s phone number, address, and contact information for her family.</p> <p>“Please call her and tell her what you think. And hey—if you’re in the area, maybe you should stop by and tell her in person what you think of her actions,” he wrote, adding homophobic and anti-Semitic slurs about Gersh’s 12-year-old son.</p> <p>The subsequent “troll army” bombarded Gersh with threatening phone calls, emails, and text messages. In April 2017, she partnered with the Southern Poverty Law Center to sue Anglin for distress and intimidation.</p> <p>The neo-Nazi hasn’t been seen since.</p> <p>Anglin’s lawyer Marc Randazza claims Anglin can’t face the lawsuit because he does not belong to any U.S. state. Randazza said Anglin fears for his physical safety if his address was revealed, even if it’s in court documents and not in a blog post, like Anglin did to Gersh.</p>

<p><b>HEADLINE</b></p>	<p><b>02/09 ICC probes Philippines, Venezuela</b></p>
<p><b>SOURCE</b></p>	<p><a href="http://time.com/5141039/icc-hague-venezuela-philippines/?xid=homepage">http://time.com/5141039/icc-hague-venezuela-philippines/?xid=homepage</a></p>
<p><b>GIST</b></p>	<p>(THE HAGUE, Netherlands) — The prosecutor of the International Criminal Court announced Thursday that she is opening preliminary probes into alleged crimes by police and security forces in the Philippines and Venezuela.</p> <p>Prosecutor Fatou Bensouda said that the probe on Venezuela will look at allegations that since April 2017 government forces “frequently used excessive force to disperse and put down demonstrations,” and abused some opposition members in detention.</p>

The Philippines probe will focus on allegations since July 2016 that thousands of people have been killed in the government's war on drugs.

"While some of such killings have reportedly occurred in the context of clashes between or within gangs, it is alleged that many of the reported incidents involved extra-judicial killings in the course of police anti-drug operations," Bensouda said.

A Filipino lawyer last year presented documents to the court which he said contained evidence of the alleged involvement of President Rodrigo Duterte in the killings of suspected drug dealers and other crime suspects.

"It is a case for crimes against humanity against President Rodrigo Duterte and senior officials in his government," lawyer Jude Sabio told The Associated Press outside the court after presenting to prosecutors a 77-page file outlining the allegations.

Bensouda said in 2016 she was deeply concerned about the reports of the killings, and that statements by "high officials" in the Philippines "seem to condone such killings."

In the Philippines, Duterte's spokesman, Harry Roque Jr., told reporters Thursday that the government had been notified that the ICC was to start a preliminary examination. He said Duterte welcomed the development because it gives him a chance to clear his name.

Regarding the probe on Venezuela, Bensouda said some protesters had also resorted to violence that left members of the security forces dead or injured. The so-called "preliminary examinations" are a first step toward possible full-blown investigations that could lead to indictments by the global court.

The ICC is a court of last resort that takes on cases when national authorities cannot or will not launch domestic prosecutions. Both the Philippines and Venezuela are members of the court, meaning that crimes there could fall under its jurisdiction.

<b>HEADLINE</b>	<b>02/08 'Far-reaching' Mass. wiretap in drug sting</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/fentanyl-drug-bust-operation-high-hopes-boston-massachusetts-wiretap-investigation/">https://www.cbsnews.com/news/fentanyl-drug-bust-operation-high-hopes-boston-massachusetts-wiretap-investigation/</a>
<b>GIST</b>	State and federal law enforcement officials announced Thursday they seized some 77 pounds of various illicit drugs in the Boston area -- including more than 30 pounds of fentanyl -- as the result of "Operation High Hopes," according to a press release by the Suffolk County District Attorney's office. They say it's

"one of the longest, most far-reaching, and most successful state wiretap investigations in Massachusetts history."

Suffolk County District Attorney Daniel Conley says the investigation led to more than a dozen arrests and dismantled two Boston-area drug trafficking organizations. About \$300,000 in alleged drug money was also seized. He added that fentanyl, heroin, cocaine and opiate tablets are believed to have originated from Mexico's Sinaloa Cartel.

Fentanyl is so powerful, Conley says, that mere milligrams can be lethal.

"The number of overdoses it could have caused is truly staggering," Conley wrote in the press release. "Individuals who buy and sell at this level aren't users. They're not small time dealers, either. They're certainly not selling to support a habit. They're trafficking in addictive substances that claim more lives in Massachusetts than all homicides, all suicides and all car crashes, statewide, combined."

Boston Police Commissioner William B. Evans heralded the successful sting in the written statement: "These arrests and seizures will have a tremendous impact on the quality of life in Boston and many other Massachusetts cities and towns," Evans said. "I commend the work of my detectives and all our law enforcement partners who worked tirelessly over the past six months of Operation High Hopes."

The DEA Special Agent in Charge Michael J. Ferguson echoed that sentiment: "Those responsible for distributing lethal drugs like fentanyl to the citizens of Massachusetts need to be held accountable for their actions. DEA's top priority is combating the opioid epidemic by working with our local, county and state law enforcement partners to bring to justice those that distribute this poison."

Edward Soto-Perez, 43, of Roxbury, Nelson Catala-Otero, 37, of Brockton and Julio Cuello, 52, of Dorchester were arraigned in November on multiple drug trafficking charges after the execution of wiretap-based search warrants, according to the press release. They were held on bails ranging from \$100,000 to \$250,000 and will return to court Feb. 13.

Robert Contreras, 42, of Roxbury, is their alleged supplier and was one of more than a dozen people arrested Thursday. He's being held on \$1 million bail and will return to court Feb. 28.

The investigation began in July 2017 as authorities were closing in on Soto-Perez's operation using cooperating witnesses, controlled purchases, physical surveillance and other means -- but he was smart in concealing where he stored his supply or who his supplier was.

"In the months that followed, the court extended the wiretap 11 times and approved interceptions on more than two dozen phones. Investigators doubled as codebreakers to reveal the criminal enterprise as it unfolded ... Ironically, the wiretap that Soto-Perez's precautions made necessary revealed facts and evidence we might never have obtained otherwise.

<b>HEADLINE</b>	<b>02/08 Mexico officials bust corrupt police ring</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/mexico-arrests-police-kidnapping-man-52933253?">http://abcnews.go.com/International/wireStory/mexico-arrests-police-kidnapping-man-52933253?</a>
<b>GIST</b>	<p>Authorities in Mexico's Gulf coast state of Veracruz announced charges Thursday of "forced disappearance" against 19 current or former state police officials and officers, saying they kidnapped and killed 15 innocent civilians.</p> <p>Veracruz Gov. Miguel Angel Yunes said the victims included two women and two minors, and the alleged perpetrators reached to very top of the police structure.</p> <p>Veracruz has been the scene of grisly police kidnap-killings before but in the cases announced Thursday, state police officials and their subordinate officers were apparently working for gangs or drug cartels,</p>

	<p>Yunes said. The crimes occurred during the 2010-2016 administration of former Gov. Javier Duarte, who himself is in prison facing corruption charges, and his predecessor.</p> <p>Yunes said the state's former Public Safety Secretary — in effect the top police commander — and his directors of special forces, prisons and state police headed a ring that abducted, tortured, interrogated, raped and killed private citizens.</p> <p>"These corrupt police, like the regime they served, placed themselves at the service of the criminals," Yunes said. Two of the high-ranking officials were already under arrest on other charges, one is a fugitive, and the rest were placed under arrest.</p>

<b>HEADLINE</b>	<b>02/08 Texas: 13 cases biker shooting dropped</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/02/08/texas-prosecutor-dismisses-13-cases-tied-to-biker-shooting.html">http://www.foxnews.com/us/2018/02/08/texas-prosecutor-dismisses-13-cases-tied-to-biker-shooting.html</a>

<b>GIST</b>	<p>FORT WORTH, Texas – A Texas prosecutor on Thursday dismissed 13 cases stemming from a 2015 shootout in Waco involving bikers and police and recused himself from two others, placing into doubt the criminal prosecution of the more than 130 bikers still awaiting trial.</p> <p>The actions came hours before a scheduled hearing for Jorge Salinas, whose case was among those dismissed. Current and former staff had been due to speak at the hearing about corruption allegations against District Attorney Abel Reyna, who faces a Republican primary election in March. The hearing was canceled.</p> <p>According to a motion filed Thursday, the prosecutor dismissed Salinas' case "in order to focus its efforts and resources on co-defendants with a higher level of culpability."</p> <p>The May 2015 shootout outside a Twin Peaks restaurant left nine bikers dead and 20 injured. Local police arrested 177 bikers after the mayhem, and more than 150 people were eventually indicted on felony charges of engaging in organized criminal activity resulting in the deaths and injuries. Ballistics evidence showed that police bullets struck four bikers, killing at least two of them. The three officers involved in the shooting were no-billed by a grand jury after being cleared by an internal investigation.</p> <p>Nearly three years later, only one biker, Dallas locomotive driver Christopher "Jake" Carrizal, has been tried. Carrizal's November trial resulted in a mistrial when jurors were unable to reach a unanimous verdict. The second biker set for trial rejected a plea deal in December.</p> <p>"The way people were arrested was fairly indiscriminate, it was predictable that some of these cases would be dropped," said Sandra Guerra Thompson, a University of Houston law professor, adding, "I wouldn't doubt if we see more."</p> <p>More than 100 bikers, including 11 whose cases were dismissed Thursday, have civil suits pending against the district attorney's office and the Waco police department claiming that they were wrongfully arrested.</p> <p>A federal judge in Austin had stayed the cases pending the outcome of their criminal cases. Dallas attorney Don Tittle, whose firm is representing 122 bikers' civil cases, said he hopes the dismissals mean "that there's no longer any impediment" to proceeding in civil court.</p>

<b>HEADLINE</b>	<b>02/08 Suburban mom takes down drug ring</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/suburban-mom-takes-down-synthetic-marijuana-drug-ring-she-says-killed-her-son/">https://www.cbsnews.com/news/suburban-mom-takes-down-synthetic-marijuana-drug-ring-she-says-killed-her-son/</a>
<b>GIST</b>	<p>A suburban mom has taken down a drug ring she says killed her son, CBS Chicago reports. "I always felt like he was by my side helping me," said Karen Dobner of her 19-year-old son, Max Dobner.</p> <p>In 2011, he suffered hallucinations and a panic attack after taking a form of synthetic marijuana sold as "potpourri" and drove 100 mph into a house, accidentally killing himself.</p> <p>Karen Dobner partly blames Ruby Moshin, who sold Max and his friend a product called iAroma — a type of synthetic marijuana made of mushroom leaves sprayed with chemicals. The teens bought it in 2011 at a store Moshin owned at a mall in Aurora, a Chicago suburb.</p> <p>"I don't know what kind of mother sells drugs in the mall to kids," Dobner said.</p> <p>Moshin did not comment as she entered the federal courthouse to be sentenced for her role in selling iAroma. Evidence showed she bought more than 1,000 packets of iAroma to sell out of the store, calling it potpourri.</p> <p>"Nobody buys potpourri by the gram ... \$20 a gram," said Dobner.</p>

After her son's death, she wanted justice. For seven years, she fought to take down everyone involved in the manufacturing, distribution and sale of iAroma to her son.

Dobner credits CBS2 Chicago with helping her cause.

"The CBS investigation started everything rolling," said Dobner.

The station's investigative team went undercover and showed that months after Max Dobner's death, Moshin was still selling the product. Police also made undercover buys.

"She continued to sell, and that's why she's going to prison," Dobner said.

Dobner also hired Attorney Shawn Collins, who filed suit against those involved with the iAroma that led to Max Dobner's crash.

"Through our investigation, we learned that there was literally a nationwide distribution network — North Carolina, Iowa, Texas, Louisiana," Collins said.

Four people involved in Max's death have been indicted, said Dobner. Three people, including Moshin, pleaded guilty to conspiracy to distribute synthetic drugs. A fourth, a wholesaler, pleaded guilty to intentionally distributing drugs in Illinois, North Carolina and Louisiana.

Dobner said she won for her son, but would trade everything to have him back. She has been working for years to warn people about the dangers of synthetic marijuana, which can be 800 times stronger than real marijuana and especially dangerous because consumers don't know what ingredients are used.

Moshin will serve two years in federal prison.

<b>HEADLINE</b>	<b>02/08 Toronto police: serial killer probe</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/08/americas/toronto-landscaper-killings-charges/index.html">https://www.cnn.com/2018/02/08/americas/toronto-landscaper-killings-charges/index.html</a>
<b>GIST</b>	<p>(CNN)Toronto police have recovered the remains of at least six people on a property linked to accused serial killer Bruce McArthur, Detective Sgt. Hank Idsinga said Thursday.</p> <p>At least some of the remains have been identified as belonging to Andrew Kinsman, who was last seen in June 2017 and who is one of five missing men McArthur is charged with killing, Idsinga said.</p> <p>Authorities have not identified the five other sets of remains.</p> <p>Idsinga said McArthur, 66, stored landscaping equipment at the property and the remains were found in potted plants.</p> <p>Police have identified more than 30 properties where McArthur worked. They urged his past clients to come forward.</p> <p>McArthur is due in Toronto provincial criminal court on February 14.</p>

Articles and graphics have been placed within for educational and discussion purposes only, in compliance with 'Fair Use' criteria established in Section 107 of the Copyright Act of 1976. The principle of 'Fair Use' was established as law by Section 107 of The Copyright Act of 1976. 'Fair Use' legally eliminates the need to obtain permission or pay royalties for the use of previously copyrighted materials if the purposes of display include 'criticism, comment, news reporting, teaching, scholarship, and research.' Section 107 establishes four criteria for determining whether the use of a work in any particular case qualifies as a 'fair use'. A work used does not necessarily have to satisfy all four criteria to qualify as an instance of 'fair use'. Rather, 'fair use' is determined by the overall extent to which the cited work does or does not substantially satisfy the criteria in their totality. If you wish to use copyrighted material for purposes of your own that go beyond 'fair use,' you must obtain permission from the copyright owner.

<b>HEADLINE</b>	<b>02/05 IOC refuses Russian athletes to Olympics</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/05/sport/ioc-russia-winter-olympics/index.html">https://www.cnn.com/2018/02/05/sport/ioc-russia-winter-olympics/index.html</a>
<b>GIST</b>	<p>(CNN)In a fresh twist to the doping saga that threatens to overshadow the Winter Olympics, the International Olympic Committee (IOC) has refused a request for 15 previously banned Russian athletes and coaches to attend the PyeongChang Games.</p> <p>The 13 athletes and two coaches were among 28 Russians whose lifetime bans for doping were overturned by the Swiss-based Court of Arbitration for Sport (CAS) Thursday.</p> <p>CAS ruled there was insufficient evidence to show they had broken doping rules during the 2014 Sochi Winter Olympics.</p> <p>But the IOC said Monday its invitation review panel examined applications on behalf of the 15 individuals and had lingering suspicions about potential anti-doping violations.</p> <p>The row puts the IOC, which has always claimed to have the final say on which athletes compete in the Games, at loggerheads with sports law's highest court just days before the Olympics begin in South Korea on February 9.</p>

<b>HEADLINE</b>	<b>02/04 Wildfires scorch northeast Oklahoma</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/best-states/oklahoma/articles/2018-02-04/wildfires-scorch-thousands-of-acres-in-northeastern-oklahoma">https://www.usnews.com/news/best-states/oklahoma/articles/2018-02-04/wildfires-scorch-thousands-of-acres-in-northeastern-oklahoma</a>
<b>GIST</b>	<p>HOMINY, Okla. (AP) — Firefighters say wildfires have scorched thousands of acres of dry grasslands in northeastern Oklahoma</p> <p>Dozens of firefighters fought a grassfire along Oklahoma Highway 20 in Osage County Saturday evening that officials say burned up to 10,000 acres. Officials say another large fire in Mayes County burned hundreds of acres more.</p> <p>Authorities say no homes or other structures were damaged in the fires and no injuries were reported.</p> <p>The Oklahoma National Guard used helicopters to drop large buckets of water to help fight the Osage County fire.</p> <p>The National Weather Service says the combination of dry air, windy conditions and warm temperatures will likely create critical wildfire conditions across the state. Mayes County Emergency Management Director Michael Dunham says a small spark is all it takes to ignite the dry grasslands.</p>

HEADLINE	<b>02/04 Inside W. Va. Intelligence/Fusion Center</b>
SOURCE	<a href="https://www.wvnews.com/statejournal/government/state-intelligence-fusion-center-staying-ahead-of-next-threat-pauley/article_a2c0643c-ad7f-5f65-8c72-97ca72a92694.html">https://www.wvnews.com/statejournal/government/state-intelligence-fusion-center-staying-ahead-of-next-threat-pauley/article_a2c0643c-ad7f-5f65-8c72-97ca72a92694.html</a>
GIST	<p>CHARLESTON — High above the congested traffic on Kanawha Boulevard, across the river from the state Capitol, Scott Pauley helps manage a team of eight intelligence analysts constantly searching for the next potential threat.</p> <p>Pauley is deputy director of the West Virginia Intelligence/Fusion Center located inside the old Columbia Gas Building in Charleston. The highly secure facility is a single point of contact allowing information to flow — whether it’s from the federal level or what Pauley calls the “boots on the ground.”</p> <p>“These are the police officers, local law enforcement and the everyday folks out developing cases,” Pauley said.</p> <p>Fusion centers were born from the ashes of 9/11, charged with a universal mission to bring the national security and intelligence-gathering mentality to local law enforcement. The West Virginia facility is one of 79 across the nation, with bigger states like California and Texas having multiple centers.</p> <p>“We saw a bigger use for it here in West Virginia,” Pauley said. “We fall under the ‘all crimes, all hazards banner’ meaning we will help all law enforcement in murder cases, if there are terrorism cases, cyber-related cases, a fraud case or even a local drug gang issue.”</p> <p>An example of the mission Pauley explained took place last year. He said in 2017 there were a high number of local school bomb threats across the state. He explained that during any given situation, his intelligence analysts would deal with many different levels of law enforcement up to the FBI.</p> <p>“That’s why it’s very good for us to have those working relationships with all those agencies,” Pauley said.</p> <p>The staff working at the Fusion/Intelligence Center also help when disaster strikes. Pauley said his team played a critical role during the devastating floods in 2016.</p> <p>“When a natural disaster hits, we really rely on whatever information people can give us — whether that’s through the internet or the telephone,” Griffith said. “They send in that real-time information; we compile it into a report; and we get it to the Emergency Operations Center for the state or we get it to the National Guard so they can get the resources out to help people.”</p> <p>Receiving critical, threat or sometimes life-and-death information is the core responsibility of the Fusion Center. Working to accomplish this is Supervisory Analyst and Fusion Liaison Officer Coordinator Jessica L. Griffith. On a daily basis, Griffith and the intelligence analyst staff work with fusion liaison officers, or “FLOs,” who are the literally the eyes and ears within their communities and report suspicious activity.</p> <p>“They’re also responsible for getting information from us that we’re distributing out and sending it to the people in their agencies,” Griffith said.</p> <p>Griffith said there are 209 FLOs working in nearly every community across the state with each FLO having a law enforcement, emergency services or other community-oriented background. They serve as the main point of contact for their agency, communicating with the Fusion Center in matters related to suspicious activity. The idea, Griffith explained, is to provide extra help through intelligence to small, short-staffed police departments struggling to keep their communities safe.</p> <p>“That’s the purpose of the FLO program,” she said. “To enhance the mission of the Fusion Center, to enhance communication and to be a force multiplier for those smaller agencies who may not have the resources.”</p>

	<p>The program’s success has not gone unnoticed. Pauley said Griffith’s FLO program was recognized in 2017 for training by the Department of Homeland Security as one of the best training programs in the nation.</p> <p>“We’re doing great things here and we have great people, Griffith said. “The people in our FLO program are there to protect the people in their communities and the state as a whole.”</p> <p>Always working to set a higher standard and stay ahead of the bad guys, Griffith said the West Virginia center is only the second in the nation to utilize and promote the use of the Suspicious Activity Reporting (SAR) mobile app.</p> <p>“That’s our front line,” Pauley said of the app. “You don’t have to be a police officer. If you see something and your gut tells you it’s not right, then there’s a good chance something is wrong.”</p> <p>In hopes of getting more people providing information by way of the mobile app, Griffith said Intelligence Analyst Steven Patterson developed a QR code, designed to automatically take a person to the Suspicious Activity Report app for both Apple or Android devices.</p> <p>“It’s a very fast way for people to get us information if they do see something,” Patterson said.</p>

<b>HEADLINE</b>	<b>02/05 Claim: deadly Amtrak crash preventable</b>
<b>SOURCE</b>	<a href="http://time.com/5133095/amtrack-crash-preventable-carolina/?xid=homepage">http://time.com/5133095/amtrack-crash-preventable-carolina/?xid=homepage</a>
<b>GIST</b>	<p>(CAYCE, S.C.) — Federal investigators are trying to figure out why a switch was in the wrong position, sending an Amtrak train into a freight train and killing a conductor and an engineer in South Carolina.</p> <p>But they already know what could have prevented the wreck that injured more than 100 passengers — a GPS-based system called “positive train control” that knows the location of all trains and the positions of all switches in an area to prevent the kind of human error that can put two trains on the same track.</p>

	<p>“It could have avoided this accident. That’s what it’s designed to do,” said National Transportation Safety Board Chairman Robert Sumwalt, referring to technology that regulators have been demanding for decades with mixed success.</p> <p>He said the passenger train hurtled down a side track near Cayce (CAYsee) around 2:45 a.m. Sunday after a stop 10 miles (16 kilometers) north in Columbia because a switch was locked in place, diverting it from the main line. A crew on the freight train had moved the switch to drive it from one side track — where it unloaded 34 train cars of automobiles — to the side track where it was parked. The switch was padlocked as it was supposed to be, Sumwalt said.</p> <p>The system that operates the train signals in the area was down, so CSX Corp. — the freight railroad operator which runs that stretch of track — was manually operating the signals. Sumwalt said it was too early to know if the signal was red to warn the Amtrak crew that the switch was not set to continue along the main train line.</p> <p>Just hours after Sunday’s crash, which also sent 116 of the 147 people on board the New York-to-Miami train to the hospital, Amtrak President Robert Anderson said there must be no more delays from the federal government in installing the safety system by the end of 2018.</p> <p>He deferred to investigators about whether the system would have stopped this crash. “Theoretically, an operative PTC system would include switches in addition to signals, so it would cover both speed and switches,” Anderson said.</p> <p>The Silver Star was going an estimated 59 mph (94 kph) when it struck the freight train, Gov. Henry McMaster said. It was the middle of the night, and many people were jolted from sleep by the crash and forced into the cold.</p> <p>Of the 116 people taken to four hospitals, only about a half dozen were admitted. The rest had minor injuries such as cuts, bruises or whiplash, authorities said.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>02/02 City Light months behind on hook-ups</b>
<b>SOURCE</b>	<a href="http://crosscut.com/2018/02/seattle-city-light-delays-construction-growth-engineering/">http://crosscut.com/2018/02/seattle-city-light-delays-construction-growth-engineering/</a>
<b>GIST</b>	<p>If Erich Armbruster finishes a construction project in nine months or less, he’ll often need to wait at least another three before he’s able to put the new home on the market. That’s because Seattle City Light is struggling to keep up with requests to connect new homes, commercial buildings and industrial warehouses to the grid.</p> <p>The process, which until about three years ago took two to four weeks, has stretched to as long as six months. The delay is the result of new review processes for City Light engineers and a staff that’s been overwhelmed by new construction in America’s fastest growing city.</p> <p>The result, says Armbruster, owner of Ashworth Homes and Board President of the Master Builders Association, is that while demand is huge, his productivity suffers. He’s had homes “twice in the last twelve months sitting, waiting to be sold, but I couldn’t get final inspections because I had no power,” he told Crosscut. “I can’t qualify for unlimited loans, so I sit on that twiddling my thumbs and calling every day. I can’t market them for sale. I’m dead in the water.”</p> <p>As Seattle adds more than 1,000 people a month, allowing for new and more housing is among the city’s solutions for stemming the housing crisis. The Seattle City Council has already approved taller buildings and more densely packed lots in several Seattle neighborhoods and is considering a proposal to do the same in more areas across the city. In its hunt for more construction, the city is also looking for ways to streamline review processes and green light construction projects more quickly.</p>

City Light spokesperson Scott Thomsen acknowledged, “It has taken us longer recently to process all the new accounts. That corresponds with the construction boom Seattle has experienced. Many of the new homes have been multi-family buildings in a densely developed area, which adds to the complexity of the work.”

Armbruster’s company, which he’s owned for nearly 20 years, specializes in row houses, which can be packed into lots once set aside for a single home. His company completes 40-50 homes a year, almost exclusively in Seattle.

It used to take between three and four weeks for a City Light crew to come to a new project and connect it to the grid. But several years ago, says Armbruster, City Light began paying closer attention to existing land use codes regulating how electrical lines are run to new construction. The new attention meant putting more cables underground. The change meant a more complicated engineering task.

Around the same time, the amount of process increased. Where requests for connection used to go straight to City Light crews, now it went through a separate engineering review.

Between the new process and the overwhelming number of construction projects, City Light was not prepared to keep up. “This is real and affects our work with our customers every day,” said one City Light employee, speaking on the condition of anonymity. “Engineering is like a black hole. ... The engineers cannot keep up with the building boom and management has not gotten their heads around it.”

A second employee echoed the concerns. “If you have a new building or house it is taking 5 months for an engineer to even review it and many more months to get it designed and constructed,” this person said. “Customers are getting pissed.”

<b>HEADLINE</b>	<b>02/02 Declassified controversial 4-page memo</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/president-declassifies-house-committee-releases-nunes-memo-on-alleged-fisa-abuses/article/741775/">https://www.scmagazine.com/president-declassifies-house-committee-releases-nunes-memo-on-alleged-fisa-abuses/article/741775/</a>
<b>GIST</b>	<p>Against the advice of the Justice Department and FBI, President Trump declassified and the House Intelligence Committee released a controversial four-page memo distilled from voluminous classified information and penned by the staff of committee Chairman Devin Nunes alleging that investigators abused their surveillance authority when they sought a FISA warrant to spy on former Trump campaign advisor Carter Page.</p> <p>Nunes, who reportedly did not review the underlying classified information because he'd recused himself from the Russian probe in early spring pending an ethics investigation, defended the memo as revealing "serious violations of the public trust, and the American people have a right to know when officials in crucial institutions are abusing their authority for political purposes.</p> <p>"It is my hope that the committee's actions will shine a light on this alarming series of events so we can make reforms that allow the American people to have full faith and confidence in their governing institutions," Nunes said in a statement.</p> <p>Trump, who has railed against simultaneous Russia investigations, called the revelations in the document “a disgrace.”</p> <p>The memo, the release of which was hotly debated, had drawn criticism from Democrats and other detractors as being little more than cherry-picked talking points and sparked concern that it would reveal confidential intelligence sources as well as intelligence-gathering methods.</p> <p>Rep. Adam Schiff, D-Calif., ranking member of the House committee, who opposed the release of the memo and whose own rebuttal memo was rejected by the committee for release, said "The Republican</p>

document mischaracterizes highly sensitive classified information that few members of Congress have seen, and which Chairman Nunes himself chose not to review.”

The Congressman, who has locked horns with Nunes and who believes releasing the memo is an attempt by Nunes and others to provide cover for the president and his associates as the Russia probe led by Special Counsel Robert Mueller seemingly heats up. The memo “fails to provide vital context and information contained in DOJ’s FISA application and renewals, and ignores why and how the FBI initiated, and the special counsel has continued, its counterintelligence investigation into Russia’s election interference and links to the Trump campaign,” Schiff said in a statement.

Sen. Mark Warner, D-Va., vice chairman of the Senate Select Committee on Intelligence, contended in a statement that “unlike almost every House member who voted in favor of this memo’s release, I have actually read the underlying documents on which the memo was based. They simply do not support its conclusions.”

The document contends that an anti-Trump bias fueled Steele’s research, which was originally commissioned by a right-wing organization to gather research on Trump during the primaries and that the FBI and Justice, with their own biases against the president, knew of Steele’s bias, deciding to use the research anyway to gain the FISA warrant.

It also says that Steele “improperly concealed and lied” to investigators about his dealings with the press.

Shortly after the memo broke, MSNBC confirmed that four separate FISA judges had signed off on surveillance warrants for Carter Page.

The document also contradicts earlier contentions by some members that Steele’s research spurred the investigation of the Trump campaign and potential collusion with the Russians. While it claims that former FBI Deputy Director Andrew McCabe allegedly said a surveillance warrant for Page wouldn’t have been requested without Steele’s dossier, compiled as oppositional research for Hillary Clinton’s campaign and paid for by her campaign. However, the memo’s last page acknowledges that the counter-intelligence probe grew out of comments made by former Trump aide George Papadopoulos to an Australian diplomat in the U.K.

During a night at London’s Kensington Wine Rooms in May 2016, Papadopoulos, who has pleaded guilty to lying to the FBI, revealed to Australian Alexander Downer that Russia had damaging information on Trump opponent Hillary Clinton.

“It’s important to know what the memo doesn’t say. It doesn’t say the relevant parts of the dossier are false. It doesn’t say the Russia investigation would not have started but for the dossier,” Rep. Ted Lieu, D-Calif., said in a statement. “It doesn’t say the FISA judge did not have probable cause to issue a surveillance order on Carter Page. It doesn’t say anyone at the FBI or DOJ violated the FISA law.”

The Nunes memo confirms that the FISA surveillance warrant on Page was approved in October 2016 well after the investigation, then under the leadership of former FBI Director James Comey, who was fired, President Trump said, for his handling of the Hillary Clinton email case. In a later interview with NBC, Trump indicated that the Russian probe figured into his firing of Comey.

Democrats fear that Trump will use the memo to oust Deputy Attorney General Rod Rosenstein, who oversees the Mueller probe, and possibly jeopardize that investigation.

But rather than undermine Mueller’s probe, the “memo has done exactly the opposite,” Lieu said. “The release of this memo shows a desperate President and his enablers trying to undermine and obstruct an investigation because it is getting closer to arriving at the truth of what happened in 2016.”

Pundits also expressed concern that Nunes’s actions would unfairly taint the FBI and would upend congressional oversight of the intelligence operations. Intelligence committees in the House and Senate

	<p>were created as bipartisan bodies post-Watergate to monitor intelligence functions but in the past year, the House committee has been ripped by partisan clashes.</p> <p>"This unprecedented public disclosure of classified material during an ongoing criminal investigation is dangerous to our national security," said Warner. "This will make it far more difficult for the Intelligence Committees to conduct meaningful, bipartisan oversight of intelligence activities in the future. This action was also taken without regard to the damage it could do to our ability to protect Americans from threats around the globe." He pledged his committee "will continue our bipartisan investigation into what happened in the 2016 election and the dedicated men and women of the FBI continue to have my full support."</p> <p>Comey took to Twitter to challenge the memo and defend the Justice Department and the FBI. "That's it? Dishonest and misleading memo wrecked the House intel committee, destroyed trust with Intelligence Community, damaged relationship with FISA court, and inexcusably exposed classified investigation of an American citizen," he tweeted. "For what? DOJ &amp; FBI must keep doing their jobs."</p> <p>Lieu believes that the memo will backfire. "When the American people see the facts that Trump and Nunes are trying to hide, the people will be angry at the President and the GOP, and proud of the professionals at the FBI and DOJ," said Lieu. "The Nunes memo omits significant material facts in an attempt to blatantly mislead the public. That is why the Democratic memo, which provides the omitted facts, must be released."</p>

<b>HEADLINE</b>	<b>02/04 Mudslides close tracks north Seattle</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/889558/mudslides-close-tracks-to-passenger-trains-north-of-seattle/">http://mynorthwest.com/889558/mudslides-close-tracks-to-passenger-trains-north-of-seattle/</a>
<b>GIST</b>	<p>SEATTLE (AP) — More mudslides have covered train tracks north of Seattle, further halting passenger service between Seattle and Everett.</p> <p>BNSF Railway spokesman Gus Melonas says rains washed mud down a steep slope just north of Seattle early Sunday morning and covered the track's main line.</p> <p>A moratorium on passenger trains had been in place because of a previous mudslide Friday. It has now been extended. That means no passenger train service will be running between Seattle and Everett until at least early Tuesday morning.</p> <p>Melonas says a mudslide also covered tracks in Canada Sunday morning and temporarily halted passenger trains between Bellingham and Vancouver, British Columbia.</p> <p>Freight trains, however, are running through the area.</p>

<b>HEADLINE</b>	<b>02/02 Punxsutawney Phil: 6 more weeks winter</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/02/us/groundhog-day-2018-shadow-trnd/index.html">https://www.cnn.com/2018/02/02/us/groundhog-day-2018-shadow-trnd/index.html</a>
<b>GIST</b>	<p>(CNN) — The groundhog hath spoken! Welcome to six more weeks of winter.</p> <p>On Friday morning, Punxsutawney Phil scurried out of his little marmot hole and saw his shadow. This omen indicates a long winter. Great.</p> <p>Why do we do this?</p> <p>Every February 2, all eyes turn to a small central Pennsylvania borough as winter-weary Northeasterners await weather guidance from the predictive rodent.</p>

	<p>It's a 132-year-old tradition that is held every year at the location known as Gobbler's Knob and conducted by top hat-donning members of the Inner Circle of the Punxsutawney Groundhog Club, according to the official Pennsylvania tourism website. The idea is, the groundhog wakes up from hibernation on the 2nd, and if it sees its shadow, there will be six more weeks of winter. If it doesn't, warmer weather is just around the corner.</p> <p>This tradition started in Europe as Candlemas Day, an early Christian holiday involving candles. Germans who settled in Pennsylvania in the 1700s brought the custom to America.</p> <p>Pennsylvania's Punxsutawney Phil is the most well known, but more than a dozen states celebrate with their own groundhogs, such as Georgia's General Beauregard Lee and Buckeye Chuck in Ohio.</p>

<b>HEADLINE</b>	<b>02/02 Airport gun seizures hit record high</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-02-02/u-s-airport-gun-seizures-hit-record-high">https://www.bloomberg.com/news/articles/2018-02-02/u-s-airport-gun-seizures-hit-record-high</a>
<b>GIST</b>	<p>A record number of firearms were found in bags at Transportation Security Administration airport checkpoints across the U.S. last year, the agency announced this week. In 2017 the TSA found 3,957 firearms, an average of 10.8 per day and a 16.7 percent increase from the 3,391 found in 2016. The rising popularity of carrying concealed firearms, in addition to a boost in passenger numbers, could be to blame for the record-setting number, experts said.</p> <p>“While it's impossible to ascertain an exact, scientific reason for the increase, there does seem to be a correlation between the increase in the number of firearms caught and the increase in passenger volume,”</p>

said TSA spokesman Mike England. The spike in seizures far outpaced the rise in passenger volume. In 2016, 738.3 million passengers went through federal airport checkpoints, compared with 771.5 million in 2017, a 4.5 percent increase.

Of the firearms discovered at checkpoints, 84 percent were loaded. Hartsfield-Jackson Atlanta International Airport led the nation in firearms found by the TSA, with 245, followed by Dallas Fort Worth International, George Bush Continental Airport in Houston and Denver International. Atlanta's airport is the world's busiest.

Jeff Price, a professor of aviation management at Metropolitan State University of Denver, said the rates of recovered firearms at TSA checkpoints could be higher in states where concealed carry is more common. "In Georgia they have a situation at the Atlanta airport where you can lawfully carry into the airport as long as you don't get into the TSA line," he explained. "The states where there's more firearms typically carried, there's just more of a chance you'll have it at the checkpoint."

Price also attributes the increase to new screening policies the TSA introduced last year. The updated security measures require that flyers put electronics larger than a phone into bins. "That could be responsible for some of the higher numbers because they're better able to see what's left in the bag," he said.

Confusion surrounding concealed carry laws is one of several contributing factors to the increased number of firearms found at checkpoints, Price added. "I think, unfortunately, there's a lot of people who forget they have [a gun]. A lot of people, they'll put it in their laptop bag and they'll put it in a purse. They'll forget they have it with them."

<b>HEADLINE</b>	<b>02/04 Newborns as victims of opioid epidemic</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/local/2018/02/04/newborns-have-become-most-innocent-victims-americas-opioid-epidemic/999698001/">https://www.usatoday.com/story/news/local/2018/02/04/newborns-have-become-most-innocent-victims-americas-opioid-epidemic/999698001/</a>
<b>GIST</b>	<p>Opioids were involved in 42,200 overdose deaths nationwide in 2016, according to the U.S. Centers for Disease Control and Prevention, and they harmed the lives of thousands more. Many of those victims were children, and none are more vulnerable than the newborns undergoing treatment in intensive care units across the country.</p> <p>An estimated 21,700 babies in 2012 were born with neonatal abstinence syndrome, often caused by a mother's use of opioids during pregnancy. The number represents a fivefold increase since 2000, according to the National Institute on Drug Abuse, a branch of the National Institutes of Health.</p> <p>Baptist Health delivers 1,000 babies a year, including some from families in far Western North Carolina counties. Roughly one in four are found to have been exposed to opioids while in the womb. Of those, 25 percent will need treatment for withdrawal.</p> <p>For many, their first days of life are torturous. Whether they will suffer long-term damage is unclear.</p> <p>The opioid epidemic has hit the Appalachian region particularly hard and left Baptist Health in its wake.</p> <p>Only five other states had an opioid overdose death rate higher than Kentucky in 2015, according to the nonprofit Kaiser Family Foundation. Those five included neighboring West Virginia and Ohio, also Appalachian states.</p> <p>Jobs outside the hospital, one the area's top employers, often come with physical demands that can lead to injury — and then to a prescription for painkillers often later used to cope with the stress of living paycheck-to-paycheck.</p>

Other hospitals in and surrounding WNC have seen surges in the number of babies born to mothers who used during pregnancy, including those in Asheville and the Tennessee cities of Knoxville, Chattanooga and Nashville.

“We were left wondering: What is happening outside the NICU to these mothers that’s contributing to what’s going on inside?” said Dr. Stephen Patrick, an assistant professor of pediatrics and health policy at Vanderbilt University School of Medicine in Nashville and an attending neonatologist at Monroe Carell Jr. Children’s Hospital at Vanderbilt.

The numbers recorded at Mission Hospital have been steadily rising for seven years but spiked from 2010-13, said Dr. Susan Mims, the hospital vice president for children’s services and executive medical director for Mission Children’s Hospital.

Fewer than 50 babies were born to substance-using mothers before their numbers began to surge in 2010. That has since risen to more than 400 last year.

“We saw this as a really big problem,” Mims said.

East Tennessee Children’s Hospital in Knoxville saw its numbers almost double from 2011-13, from 139 babies born dependent to 258.

In Greensboro, North Carolina’s third most populous city, Moses H. Cone Memorial Hospital delivers close to 7,000 babies a year. More than 600 last year were born to mothers who had abused substances, mainly opioids and poly substances, which can be a mixture of opioids with other substances.

Of those 600 newborns, 10 percent were transferred to the hospital’s neonatal intensive care unit to be treated for opioid withdrawals, which could mean close to a monthlong stay in the NICU. That amounts to about 60 opioid-dependent babies a year, said Jennifer Grayer, a nurse practitioner.

With the increases have come financial burdens for hospitals.

“A NICU stay is probably one of the costliest things we have in our health care system,” Mims said.

An infant born without complications has an average two-day stay in a hospital, which costs around \$3,500, according to the CDC.

An infant needing treatment for neonatal abstinence syndrome will stay 16 days on average, costing \$66,700 a baby.

Babies needing treatment for neonatal abstinence syndrome cost U.S. hospitals \$1.5 billion in 2012, with most charges paid by state Medicaid programs, according to the National Institute on Drug Abuse.

To meet the needs of their growing opioid-dependent newborn population, many hospitals have had to get creative. At Baptist Health, Mission and Cone Health, volunteers cuddle babies for hours. The skin-to-skin contact eases a baby’s pain, Grayer said.

When a mom or dad is available to hold their baby for long periods of time, Grayer said it is the best medicine for withdrawal.

“Their heart rates slow down, they wean off medications earlier, and they calm down with more parental involvement,” she said.

This type of extreme nurturing has become normal at hospitals in recent years. Staff members have been retrained and taken trauma sensitivity workshops to learn about the opioid epidemic so they could better treat both affected babies and mothers without judgment.

	<p>“We experienced a lot of frustration at first because most of us were wondering, how could this happen to babies? How could a mama let this happen?” said Mays, the vice president and chief nursing officer at Baptist Health. “But as you dive into it, the addiction piece is very strong and you have to treat the mama, too, in order to stop this.”</p> <p>Nurses and doctors today compare opioid addiction to diseases like diabetes: It's a lifelong battle.</p> <p>Medical professionals debate whether babies born dependent on opioids will suffer long-term damage.</p> <p>“There have been talks of linkages to long-term challenges, but we can't really say one way or the other,” said Dr. Chris DeRienzo, chief quality officer at Mission Hospital and a neonatologist.</p> <p>For Dr. Gary Bell, a neonatologist at Erlanger Medical Center in Chattanooga, it is obvious: Opioid dependency at birth will show in the behavior of child years later, he said.</p> <p>"I do believe that there are more kids in schools now with behavioral issues because of their experiences with drug withdrawals as a baby," said Bell, who has been working with newborns for more than 30 years. "I don't believe it is anything life threatening, but there are problems long term."</p>

<b>HEADLINE</b>	<b>02/04 Bitter cold Midwest; record high California</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/bitter-cold-upper-midwest-california-braces-record-breaking/story?">http://abcnews.go.com/US/bitter-cold-upper-midwest-california-braces-record-breaking/story?</a>
<b>GIST</b>	<p>A developing system in the central U.S. brought light snow Saturday to parts of the upper Midwest, including Minnesota, Wisconsin, Iowa and Michigan.</p> <p>Snowfall totals have been generally light from Minnesota to southern Michigan with 1 inch to 3 inches in general falling in the aforementioned areas. But across northern Michigan, enhanced lake effect snow</p>

dumped around 4 inches to 5 inches of snow. And near Watertown, New York, lake effect snow dumped nearly 10 inches of new snow.

Fast forward to Sunday morning, and more light snow is falling across the Ohio River Valley and into the western Appalachian mountains. Winter weather advisories have been posted for much of the hillier areas from Northern Georgia to New York. During the day on Saturday, new snow will fall from Kentucky to Maine. Locally, 1 inch to 4 inches of snow will fall, with possibly slightly higher totals in New York State and in the Appalachians in Central Pennsylvania.

Some of the precipitation is falling as a mixture in the northern suburbs of Atlanta, extreme western South Carolina, North Carolina and southwest Virginia. The risk for icy conditions will continue from northern Georgia through western Maryland through this morning. Locally, over a tenth of an inch of ice is expected in that region through Sunday morning.

Parts of the upper Midwest, including Minneapolis and Fargo are under a wind chill advisory Sunday morning due to wind chills as low as -20 degrees to -30 degrees. Frost bite could set in as soon as 30 minutes in these conditions. The wind chill advisory will expire and end at noon on Sunday, as temperatures will "moderate" during the afternoon and evening in Minneapolis.

Another disturbance will move towards the Midwest on Monday. On Monday night, a quick burst of snow should arrive near Chicago and Indianapolis, just in time for the evening commute. This disturbance will fizzle out by the time it reaches the Appalachians. Accumulations will be light.

On Tuesday, another disturbance will form in the south central U.S. that should bring some more rain to the Southeast. There is increasing concern that some ice and snow could develop on the northern side of this system and hamper travel Tuesday night from Oklahoma and Kansas to the Tennessee/Kentucky Valley.

Over on the West Coast, there is a chance for records to be broken Saturday across parts of California. High temperatures from New Mexico to Washington will be nearly 10 degrees to 20 degrees above average in some spots.

The current drought monitor is showing a significant part of the southern U.S. in some form of a drought. Of most concern is parts of Arizona, northern Texas, and western Oklahoma where extreme drought has developed. Parts of southern California are back into the severe drought category.

While the Southeast has been starting to get a few good shots of beneficial rain, there is currently no rain in the forecast for the entire southwest U.S. through the next 7 days. The February climate outlook is showing likely drier than average conditions for this region of the country. Unless a significant pattern change were to take place in the next 1-2 months, as we head towards the end of winter and beginning of spring, it seems drought will continue to be a developing story across the southwest US.

<b>HEADLINE</b>	<b>02/05 Amtrak train on wrong track in crash</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/amtrak-passenger-train-collides-freight-train-sc-injuries/story?">http://abcnews.go.com/US/amtrak-passenger-train-collides-freight-train-sc-injuries/story?</a>
<b>GIST</b>	<p>A Miami-bound Amtrak train appeared to be on the wrong track when it collided with a freight train in South Carolina early Sunday, killing two people and injuring 116, according to authorities.</p> <p>Robert Sumwalt, chairman of the National Transportation Safety Board, said at a news conference Sunday afternoon that the track the Amtrak train was on had been manually switched and "lined and locked." It caused it to divert from the main line and onto a side track, where the freight train was parked.</p> <p>"Of course key to this investigation is learning why that switch was lined that way because the expectation is the Amtrak would be cleared and would be operating straight down" the main line, Sumwalt said.</p>

	<p>South Carolina Gov. Henry McMaster said at a news conference that a CSX freight train appeared to be on a loading track when the Amtrak train with 147 people aboard slammed into it at 2:35 a.m. in Cayce, South Carolina, just east of Columbia.</p> <p>"It appears that the Amtrak was on the wrong track," McMaster said at the news conference midday Sunday. "They weren't supposed to be meeting right there by the bridge, clearly. And it may be a time factor, but that's what it appears to me. But I defer to those who are experts in that and do have the correct information, but it appears that Amtrak was on the wrong track."</p> <p>The two people who died were the train conductor and engineer, the county coroner said.</p> <p>Amtrak officials said in a statement that they are "deeply saddened" by the deaths of its employees and that the agency is cooperating fully with the National Transportation Safety Board and the Federal Railroad Administration in the investigation of the crash.</p>

<b>HEADLINE</b>	<b>02/03 Troopers false statements botch probe</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/homicide-charge-dismissed-against-driver-of-car-that-killed-cyclist-outside-spokane/">https://www.seattletimes.com/seattle-news/homicide-charge-dismissed-against-driver-of-car-that-killed-cyclist-outside-spokane/</a>
<b>GIST</b>	<p>The woman who crashed into and killed a bicyclist on New Year's Day last year on Highway 2 in Eastern Washington will no longer face a vehicular homicide charge after defense attorneys successfully argued that State Patrol troopers made false statements in affidavits to obtain search warrants.</p> <p>As a result of the botched investigation, the Spokane County Prosecutor's Office did not oppose a request in December to dismiss the vehicular homicide charge against Melissa A. Paul, 28, with prejudice, meaning it cannot refile those charges against her in the future.</p> <p>"Instead of saying they lied, that the information in the affidavit was wrong, (prosecutors) dismissed it," Assistant Public Defender Anna Nordtvedt said. "I would expect that it would at least be investigated because, certainly, the video does not show what is reflected in the affidavit."</p>

State Patrol spokesman Trooper Jeff Sevigney said his office learned that the case had been dismissed under allegations of false statements by troopers only after a reporter's inquiry Friday.

"We will be following up with the prosecutor's office next week to determine what happened in the matter," he said.

Around 4 a.m. Jan. 1, 2017, Paul's 2004 Toyota 4Runner drove deep onto the shoulder of westbound Highway 2 near Flint Road. The SUV then struck 44-year-old Ty M. Olds, who was either riding or walking next to a bicycle, near the Rusty Moose Bar and Grill.

The collision forced Olds' body into and partially through the Toyota's windshield, and he was declared dead at the scene.

Nordtvedt said she never learned why Olds was riding or walking with a bicycle at 4 a.m.

Trooper Joe Leibrecht initially responded to the wrong location but eventually located the damaged 4Runner about 30 minutes after the collision. Troopers Robert Spencer and Troy Corkins later arrived to assist the investigation.

Also inside the SUV was a passenger Stephan A. Goodwin. Troopers reported finding baggies with small amounts of both methamphetamine and cocaine in the car and later charged Goodwin with felony possession with intent to distribute.

When the troopers asked Paul to undergo field sobriety tests, the case began to fall apart.

According to charging documents, Leibrecht noted that Paul missed one step in the "walk and turn" test. The documents say Trooper Spencer later conducted a second test, and she again missed a step in the "walk and turn" test. The troopers then had Paul blow into a portable device that showed Paul had a blood alcohol content of 0.067 percent. The legal limit to drive is 0.08 percent.

A WSP sergeant then "asked Trooper Spencer to complete a blood warrant for Paul."

Paul and Goodwin were booked into the Spokane County Jail, and both were initially held on \$150,000 bonds. Paul later had her bond reduced to \$30,000, but she served three months in jail and temporarily lost custody of a child, Nordtvedt said.

"I just got into the case late in the game," Nordtvedt said, noting she assisted another public defender, John Whaley. "Then I watched the video. They have her in the affidavit wobbling and missing steps. She did perfectly, not just once, but twice."

The video also contains audio of the troopers discussing how well Paul performed on the tests.

"One says that he does not see any impairment, that he thought he smelled alcohol, but doesn't think it was her," Nordtvedt wrote. The troopers "decided that based on the lack of impairment" the portable breath test "would not be administered."

But they later gave Paul the test anyway.

"The affidavit does not state that a trooper shoved a PBT machine in Ms. Paul's face without cause to administer the test, and also fails to mention that the trooper did not inform Ms. Paul that the test was purely voluntary," Nordtvedt wrote.

At one point, one of the troopers says on the video: "I don't know how I am going to get a warrant," she wrote.

"One only need view the body camera of Trooper Leibrecht ... to see that there are numerous false

	<p>statements and omissions in the affidavit in support of the blood warrant,” Nordtvedt wrote.</p> <p>She filed a motion to dismiss the case in November, and Deputy Spokane County Prosecutor Katherine McNulty did not object. Superior Court Judge James Triplet dismissed the case on Dec. 19.</p> <p>“Because impairment cannot be established by the probable cause affidavit, the warrant for blood is therefore invalid,” Triplet wrote. “Aside from impairment, there are no other grounds to support further action.”</p>

<b>HEADLINE</b>	<b>02/04 State cancels salmon farm's lease</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/state-cancels-salmon-farms-lease">http://komonews.com/news/local/state-cancels-salmon-farms-lease</a>
<b>GIST</b>	<p>OLYMPIA, Wash. -- The state has canceled the lease for a Cypress Island salmon farm where thousands of fish were accidentally released in August.</p> <p>Hillary Franz, the state lands commissioner, announced on Sunday the termination of the lease for Cooke Aquaculture. It raises Atlantic salmon on the site and leases land from the Department of Natural Resources.</p> <p>Last week, the state fined Cooke \$332,000 for alleged violations of Washington state water quality laws because of the salmon release.</p> <p>Cooke Aquaculture Pacific failed to adequately clean nets holding farmed salmon, leading to a net pen failure last summer that allowed the fish to swim away into Puget Sound, officials said in a report compiled by the state's departments of fish and wildlife, ecology and natural resources.</p> <p>The nets failed because they were excessively laden with mussels and other marine organisms, the report said. That increased the drag on the nets from tidal currents and overwhelming their mooring system, the report said.</p> <p>On Sunday DNR said in a letter to Cooke that its failure to maintain the facility “in good order and repair, in a clean, attractive, and safe condition” is a clear violation of the lease and the basis for termination, the agency said in a news release.</p> <p>“Cooke has flagrantly violated the terms of its lease at Cypress Island,” Franz said in the news release. “The company’s reckless disregard endangered the health of our waters and our people, and it will not be tolerated.</p> <p>“On behalf of all Washingtonians, and in fulfillment of my duty to protect our state’s waters, I am terminating the lease.”</p>

<b>HEADLINE</b>	<b>02/04 Iran: world 'closer to annihilation'</b>
<b>SOURCE</b>	<a href="http://www.france24.com/en/20180204-iran-usa-nuclear-policy-closer-annihilation">http://www.france24.com/en/20180204-iran-usa-nuclear-policy-closer-annihilation</a>
<b>GIST</b>	<p>The United States' new nuclear policy brings humanity "closer to annihilation", Iran's Foreign Minister Mohammad Javad Zarif has said.</p> <p>His comments late Saturday came a day after the Pentagon revealed plans to revamp its nuclear arsenal, largely in response to a perceived renewed threat from Russia.</p> <p>Zarif said the new policy was "in violation" of the international Nuclear Non-Proliferation Treaty (NPT).</p>

	<p>"The US Nuclear Posture Review reflects greater reliance on nukes in violation of the #NPT, bringing humankind closer to annihilation," Zarif said on Twitter.</p> <p>Zarif said the same impulse was driving the United States to undermine the 2015 nuclear deal with Iran, which President Donald Trump has demanded be renegotiated.</p> <p>"Trump's obduracy in killing the #JCPOA stems from the same dangerous imprudence," Zarif wrote, using the technical name for the nuclear deal.</p> <p>The latest Nuclear Posture Review published by the Pentagon called for a larger arsenal of smaller, low-yield nuclear weapons to act as a more "credible" deterrent to threats, particularly from Russia.</p> <p>The NPT, which came into force in 1970 and has been signed by almost all countries including the United States, calls on nations "to achieve at the earliest possible date the cessation of the nuclear arms race and to undertake measures in the direction of nuclear disarmament".</p> <p>Iran's nuclear deal, reached with six world powers, lifted some international sanctions in exchange for curbs to its nuclear programme.</p> <p>Trump has consistently attacked the accord and said in January he would not continue to waive sanctions unless new restrictions were placed on Iran's missile programme and wider actions in the Middle East.</p> <p>The other parties -- Britain, France, Germany, Russia and China -- as well as the European Union have strongly defended the deal, saying it has achieved its aim of limiting Iran's ability to build a nuclear weapon.</p>

<b>HEADLINE</b>	<b>02/04 EU warns US on trade: will hit back</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/eu-official-warn-us-trade-eu-hit-back-52826554?">http://abcnews.go.com/International/wireStory/eu-official-warn-us-trade-eu-hit-back-52826554?</a>
<b>GIST</b>	<p>A senior European Union official is warning that the 28-nation bloc will hit back if U.S. President Donald Trump takes trade measures against it.</p> <p>EU budget commissioner Guenther Oettinger told Sunday's edition of Germany's Welt am Sonntag newspaper: "If European exporters have to pay tariffs, that will become a two-way street. Then U.S. exporters will have to pay tariffs here."</p> <p>Trump expressed his annoyance with EU trade policy a week ago, saying that it "may morph into something very big." The EU then said it stands ready to hit back "swiftly and appropriately" if Trump imposes unfair trade measures.</p> <p>Oettinger said: "Anyone who uses the instrument must know that we also have it. And the European market is at least as big as the American one."</p>

<b>HEADLINE</b>	<b>02/04 Israel deportation notices to Africans</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/israel-begins-distributing-deportation-notices-africans-52826248?">http://abcnews.go.com/International/wireStory/israel-begins-distributing-deportation-notices-africans-52826248?</a>
<b>GIST</b>	<p>Israeli authorities have begun distributing deportation notices to thousands of African migrants.</p> <p>In letters delivered Sunday, Israel says the migrants have 60 days to accept the offer to leave the country for an unnamed African destination in exchange for \$3,500 and a plane ticket. Those who don't by Apr. 1 will be incarcerated indefinitely.</p>

	<p>Some 40,000 migrants, nearly all from Eritrea and Sudan, fled danger for the safety and opportunities of Israel in recent years. Many have expressed fear of being sent to Rwanda, their likely destination.</p> <p>The deportation plan has sparked outrage in Israel, where groups of pilots, doctors, writers, rabbis and Holocaust survivors have appealed to have it halted. They say the deportations are unethical and would damage Israel's image as a refuge for Jewish migrants.</p>

<b>HEADLINE</b>	<b>02/04 NKorea slams 'State of Union' address</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/north-korea-slams-trumps-state-union-address-52826350">http://abcnews.go.com/International/wireStory/north-korea-slams-trumps-state-union-address-52826350</a>
<b>GIST</b>	<p>North Korea on Sunday slammed President Donald Trump's State of the Union address and said its nuclear capabilities would "deter Trump and his lackeys from showing off on the Korean peninsula."</p> <p>In his address last week, Trump said that "no regime has oppressed its own citizens more totally or brutally than the cruel dictatorship in North Korea."</p> <p>"We need only look at the depraved character of the North Korean regime to understand the nature of the nuclear threat it could pose to America and to our allies," Trump said.</p> <p>On Sunday, a North Korean foreign ministry official shot back at the president.</p> <p>"If Trump does not get rid of his anachronistic and dogmatic way of thinking, it will only bring about the consequence of further endangering security and future of the United States," the official said, in comments carried by the North's official Korean Central News Agency.</p> <p>The official disputed Trump's claim in his address that the United States had "made incredible progress and achieved extraordinary success" over the last year, calling it "the height of Trump-style arrogance, arbitrariness and self-conceit."</p> <p>Trump also said in his speech that the U.S. was "waging a campaign of maximum pressure" to prevent North Korea from being able to attack the U.S. with nuclear weapons.</p> <p>The foreign ministry official said that North Korea's "self-reliant defense capability with the nuclear force as its backbone will, however, completely deter Trump and his lackeys from showing off on the Korean peninsula."</p>

<b>HEADLINE</b>	<b>02/04 Greeks rally in Athens over name</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/protesters-gathering-athens-macedonia-rally-52825895?">http://abcnews.go.com/International/wireStory/protesters-gathering-athens-macedonia-rally-52825895?</a>
<b>GIST</b>	<p>Well over 100,000 protesters from across Greece converged Sunday on Athens' main square to protest a potential Greek compromise in a dispute with neighboring Macedonia over the former Yugoslav republic's official name.</p> <p>Hundreds of chartered buses brought protesters in from around the country to the Greek capital, while more people arrived on ferries from the islands. Traffic was blocked throughout the city center and three major subway stops were closed.</p> <p>Chanting "Hands off Macedonia!" and "Macedonia belongs to Greece!" tens of thousands of protesters converged on Syntagma Square in front of parliament, many waving flags bearing the Star of Vergina, the</p>

	<p>emblem of the ancient Greek kingdom of Macedonia.</p> <p>Police officials estimated the attendance at 140,000. Organizers, who claimed 1.5 million were protesting, used a crane to raise a massive Greek flag over the square.</p> <p>"We are trying to show the politicians ... that they must not give up the name 'Macedonia'," said 55-year-old protester Manos Georgiou.</p> <p>About 700 left-wing and anarchist protesters set up a counter-demonstration nearby, bearing banners calling for Balkan unity.</p> <p>Dozens of riot police were deployed to keep the two demonstrations separate.</p> <p>Suspected far-rightists attempted to attack the counter-demonstration, but were prevented by police, who used stun grenades and tear gas to hold them back. The far-rightists responded by throwing rocks at police. There were also reported incidents of anarchists attacking some bikers.</p> <p>The name dispute broke out after Macedonia gained independence from Yugoslavia in 1991.</p> <p>The country is recognized by international institutions as the Former Yugoslav Republic of Macedonia, even though about 130 countries refer to it simply as Macedonia. Many Greeks refer to it by the name of its capital, Skopje.</p> <p>Greece argues use of the name implies territorial claims on its own province of Macedonia, home of one of the most famous ancient Greeks, Alexander the Great.</p> <p>Officials in Skopje counter that their country has been known as Macedonia for a long time.</p>

<b>HEADLINE</b>	<b>02/04 Strong quake off east Taiwan coast</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/strong-earthquake-strikes-off-taiwans-east-coast-52828611?">http://abcnews.go.com/International/wireStory/strong-earthquake-strikes-off-taiwans-east-coast-52828611?</a>
<b>GIST</b>	<p>A strong and shallow earthquake struck off Taiwan's east coast on Sunday night, but there were no immediate reports of any injuries or damage.</p> <p>The U.S. Geological Survey said the magnitude-6.1 quake's epicenter was 14 kilometers (9 miles) northeast of the city of Hualien, at a depth of just 7.8 kilometers (4.9 miles). Shallow quakes tend to cause more damage than deeper ones.</p> <p>Taiwan's Central News Agency said the island's earthquake monitoring agency registered seven tremors around that time, with the strongest recorded at a magnitude of 5.8 and a depth of 16 kilometers (10 miles).</p> <p>Earthquakes frequently rattle Taiwan, but most are minor and cause little or no damage. However, a magnitude-7.6 quake in central Taiwan in 1999 killed more than 2,300 people. In 2016, a shallow earthquake in southern Taiwan killed at least two dozen people.</p>

<b>HEADLINE</b>	<b>02/03 DNR changes firefighting approach</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/washington-dnr-changes-approach-to-fighting-wildfires/281-514130871">http://www.king5.com/article/news/washington-dnr-changes-approach-to-fighting-wildfires/281-514130871</a>
<b>GIST</b>	<p>SPOKANE, Wash. -- Leaders from state and local fire agencies are changing their way of thinking when it comes to fighting wildfires.</p> <p>After the Carlton Complex and the Okanogan Complex fires, it was clear that changes were needed.</p> <p>KREM 2 talked to some folks at Department of Natural Resources and they agreed Washington fire seasons are changing. They are starting earlier and lasting longer. It is not just a June, July and August problem anymore. There is now a shift in how our firefighters, state and local, are trying to keep the fires we do get from getting any worse.</p> <p>DNR is now bringing staff on earlier than they ever have before to get them trained so they can be in place and ready to go as soon as the fire call comes in. In fact, they have already started. In the Northeast region of our state, we are also bringing in more aircraft to be pre-positioned and on standby. There is nothing that can replace air support in a big wildfire, so those kinds of planes and choppers are critical.</p> <p>There is also a greater effort underway to keep the fires from getting that big in the first place. So right now, there is a big emphasis on hazardous fuels reduction on private land, state, and federal land. We are talking about places like Fish and Wildlife land, Colville National Forest, DNR land, or Riverside State Park that will all be seeing fuel reduction, clearing away that lower brush and debris that burns so easily and allows those fires to climb and spread. DNR officials said Stevens County, and Okanogan County have a lot of land that needs attention, as well as Ferry, Pend Orielle and Spokane County.</p> <p>The reduction may come in the form of prescribed burns. This is something that just has not been done much lately at all, and they are trying to get back to that because they know it makes a difference. It may also come in the form of additional prison crews from Airway Heights. DNR said those initial attack crews are instrumental in the immediate response of a major fire. So, they are hoping to expand that program even more.</p> <p>Lastly, those federal, state and local agencies are going to start doing a lot more inter-agency training. Learning how to work and communicate with each other better than in the past, pooling their resources, and making sure they are taking advantage of every tool we have to protect lives and property.</p>

<b>HEADLINE</b>	<b>02/03 Flu epidemic is not letting up</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/flu-epidemic-is-not-letting-up-with-42-states-report-high-levels-of-activity/">https://www.cbsnews.com/news/flu-epidemic-is-not-letting-up-with-42-states-report-high-levels-of-activity/</a>
<b>GIST</b>	<p>The flu epidemic is not letting up. Forty-two states saw high levels of activity last week.</p> <p>So far this season, 53 children have died.</p>

"We're seeing deaths increase in children and in adults," said Dr. Anne Schuchat is acting director of the Centers for Disease Control. "So far this year, 53 children have died from influenza. So it's proving to be a very difficult season."

That's in part because this season the most common virus is H3N2, which typically means more cases, hospitalizations and death, especially among the elderly.

On top of that, a report from Canada out this week found the vaccine has only been 17 percent effective against that strain of the flu.

Still doctors and public health officials say vaccination is still the best defense from flu. Someone who gets flu, after receiving the flu shot, is less likely to suffer severe symptoms.

"We may have several weeks left in this year's flu season," Schuchat said.

There is widespread flu activity in every state across the country, except Oregon and Hawaii. In Minnesota, where Super Bowl LII will be played in Minneapolis, the name of the game is disinfecting.

<b>HEADLINE</b>	<b>02/03 China acquires Sri Lanka port</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/03/asia/china-sri-lanka-string-of-pearls-intl/index.html">https://www.cnn.com/2018/02/03/asia/china-sri-lanka-string-of-pearls-intl/index.html</a>
<b>GIST</b>	(CNN)When Sri Lanka's government first looked to develop a port on its southern coast that faced the Indian Ocean, it went not to China, but to its neighbor, India.

Then-Sri Lankan Prime Minister Mahinda Rajapaksa said he urgently needed funding to transform the harbor of his home town and asked Indian officials for help with the project.

New Delhi showed little interest in funding a costly and massive port construction project in the underdeveloped fishing village of Hambantota, a district that had been crushed by the Indian Ocean tsunami in 2004.

"It was offered to India first. I was desperate for development work, but ultimately the Chinese agreed to build it," Rajapaksa said in an interview with Singapore's Straits Times in 2010.

Beijing invested \$1.5 billion in 2010 to build the port.

The venture was considered economically unviable and indeed, in the years that followed, the port sat empty and neglected, and Sri Lanka's debt ballooned.

But India's economic foresight might have cost it in terms of strategic geopolitics, since the debt incurred on the port and the surrounding infrastructure undertakings now belong to its great rival.

China's official licensing of the port in December last year gives it yet another point of access over a key shipping route, and the prospect of providing it with a sizeable presence in India's immediate backyard and traditional sphere of influence, bringing China closer to India's shores than New Delhi might like.

Moreover, Sri Lanka's decision to sign a 99-year lease with a Chinese state-owned company for the Hambantota port to service some of the billions it owes to Beijing has some observers concerned other developing nations doing business with China as part of China's One Belt One Road initiative might fall into similar financial straits.

A trap, they warn, that may well have them owing more than just money to Beijing.

"China is, in many cases, the only party with the interest and the capital to deliver on these projects," said Jeff Smith, a research fellow on South Asia at the Heritage Foundation in Washington DC. "The relevant question for everyone is: at what cost?"

Jeff Smith points out that along with the Hambantota port investments, Beijing loaned Sri Lanka \$200 million in 2010 for a second international airport and a year later a further \$810 million for the "second phase of the port project."

There was more. \$272 million for a railway in 2013 and more than \$1 billion for the Colombo Port City project, ventures that hired mostly Chinese workers (one Sri Lankan report put the number of Chinese workers dedicated to projects in 2009 at 25,000), and all with money Sri Lanka could barely afford to repay.

By 2015, Sri Lanka owed China \$8 billion, and Sri Lankan government officials predicted that accumulated foreign debt -- both owed to China and other countries -- would eat up 94% of the country's GDP.

After an equity swap, an IMF bailout and more control over the projects ceded to Beijing, the terms of the debt were restructured, giving Sri Lanka some breathing space.

In 2017, however, the Hambantota port proved too costly for Sri Lanka to sustain.

"They (the Chinese) called in the debt, and the debt has been paid by Sri Lanka giving them the (Hambantota) port. That port then gives them not only a strategic access point into India's sphere of influence through which China can deploy its naval forces, but it also gives China an advantageous position to export its goods into India's economic sphere, so it's achieved a number of strategic aims in that regard," said Malcolm Davis, senior analyst at the Australian Strategic Policy Institute in Sydney.

	"This is part of a determined strategy by China to extend its influence across the Indian Ocean at the expense of India and it's using Sri Lanka to achieve it," he said.

<b>HEADLINE</b>	<b>02/04 Yemen stalemated civil war rages on</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/yemens-rebel-held-capital-stalemated-war-rages-52825761">http://abcnews.go.com/International/wireStory/yemens-rebel-held-capital-stalemated-war-rages-52825761</a>
<b>GIST</b>	<p>In the rocky highlands outside of Yemen's rebel-held capital, it quickly becomes clear how the Arab world's poorest country remains mired in a stalemated civil war.</p> <p>Soldiers and militiamen loyal to Yemen's internationally recognized government describe having a tantalizing view on a clear day of Sanaa's international airport from the moonscape mountains. The price is a steady barrage of incoming fire on the exposed hillside from Shiite rebels, known as Houthis, that makes any further advance treacherous, even with the aid of Saudi-led airstrikes.</p> <p>The nearly three-year civil war, pitting the Saudi-led coalition against the rebels, has killed more than 10,000 people, displaced 2 million and helped spawn a devastating cholera epidemic — and yet the front lines have hardly moved.</p> <p>"In mountainous areas like this it's difficult. The American Army struggled with that in Afghanistan," Yemeni Maj. Gen. Nasser Ali al-Daibany told Associated Press reporters who were granted access to the front lines on a tour organized by the Saudi-led coalition. "But for us this won't slow us down ... because our boys, our fighters, were trained in these mountains, so they are the sons of this area."</p> <p>The comparison to Afghanistan, where the U.S. war is now 16 years old, feels apt.</p> <p>Yemen has also seen decades of conflict, first with the 1960s civil war that ended North Yemen's monarchy. Fighting between Marxist South Yemen and the north followed. Yemen unified in 1990, but resentment persisted under 22 years of kleptocratic rule by Ali Abdullah Saleh.</p> <p>Yemen's 2011 Arab Spring protests ultimately forced Saleh to resign, but he continued to wield power</p>

behind the scenes and maintained the loyalty of many armed forces commanders. In 2014 he formed an alliance with the Houthis — who he had gone to war with in the past — and helped them capture the capital, Sanaa.

Saudi Arabia entered the conflict the following year, at the head of an Arab coalition heavily supported by the United Arab Emirates. They have sought to restore the internationally recognized government, led by President Abed Rabbo Mansour Hadi, who is based in Saudi Arabia and whose rule is largely confined to the southern port city of Aden.

Riyadh views the Houthis as an Iranian proxy, and both Saudi Arabia and the United States say Tehran has provided the long-range missiles the rebels have fired into the kingdom. While Tehran supports the Houthis, it denies arming them.

The Saudi-led coalition has waged a devastating air campaign, repeatedly striking markets, medical facilities and civilian targets. The U.N. has attributed over half of reported child civilian casualties in the conflict to the coalition, and calls Yemen the worst humanitarian crisis in the world.

As the war has dragged on, it has become more muddled, with internal conflicts erupting on both sides. Saleh broke with the Houthis last year and appeared to switch sides, only to be gunned down by the rebels. In recent days, southern separatists backed by the UAE have clashed with forces loyal to Hadi in Aden. Al-Qaida in the Arabian Peninsula, long seen as one of the most sophisticated offshoots of the global terror network, has exploited the chaos to regroup.

"Yemen has become in many senses a 'chaos state,' a place where the central government has either collapsed or lost control of large segments of the territory," Chatham House expert Peter Salisbury recently wrote. "Yet 'chaos' is a relative term. Although Yemen indeed appears to be chaotic from the outside . it contains its own internal logic, economies and political" powers.

All that can be seen in Marib, a province bordering Saudi Arabia and the northeastern highlands held by the Houthis. Nearly every man and some boys have Kalashnikov assault rifles slung over their shoulders, making it difficult to tell civilians from combatants at first glance. Many drivers don't bother with license plates.

Saudi Arabia backs Marib's local governor, Sultan al-Aradah. He holds power with tribal militias and fighters from Islah, Yemen's main Sunni Islamist political party with ties to the Muslim Brotherhood, of which the UAE remains wary. Irregular forces man checkpoints across the province, and gunfire echoes day and night in the provincial capital.

<b>HEADLINE</b>	<b>02/03 Tax filing season begins</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/business/what-you-need-to-know-as-tax-filing-season-begins/">https://www.seattletimes.com/business/what-you-need-to-know-as-tax-filing-season-begins/</a>
<b>GIST</b>	<p>Tax season has begun — the Internal Revenue Service officially began accepting individual returns Monday — so it's time to get your documents organized if you haven't already.</p> <p>While much attention has been paid to the federal tax overhaul, most provisions will not affect tax returns filed this year for 2017, said Lisa Greene-Lewis, a tax expert with TurboTax.</p> <p>There is at least one change, though, that tax filers may want to consider as they fill out forms this year. "Folks should take a close look at their medical expenses," said Melissa Labant, director of tax policy and advocacy with the Association of International Certified Professional Accountants.</p> <p>The tax law expanded the availability of the deduction for medical expenses not just for 2018 but also for 2017. The deduction previously applied to medical expenses over 10 percent of adjusted gross income, but the law lowered the bar to 7.5 percent for those two years. (So if your adjusted gross income is \$40,000,</p>

you can write off medical expenses over \$3,000, rather than over \$4,000.) But there is a catch: You must itemize to take the deduction. After 2018, the bar is scheduled to move back up to 10 percent.

The IRS says it expects to issue most refunds within three weeks for electronically filed returns (refunds for paper returns can take several weeks longer). Last year, the average refund was just under \$3,000.

But anti-fraud measures first put in place for last tax season will continue to affect the delivery of tax refunds for people who claim the earned-income tax credit or the additional child tax credit. By law, the IRS can't issue refunds for such filers before mid-February. The agency said it expected filers who claim those credits to receive refunds no earlier than Feb. 27, if they choose direct deposit and there are no other problems with their returns.

Many filers claiming those credits tend to file early because they depend on their tax refunds to pay off holiday credit-card debt or other bills. Nearly 70 percent of clients filing with tax preparer Jackson Hewitt Tax Service in January and February 2017 received at least one of those credits, according to the company.

In large part because of those delays, some tax-preparation chains are offering [no-fee, zero-interest advances of refunds](#).

The advances — often issued on a debit card — are generally safer than the notorious refund anticipation loans that such services offered in the past, which were often larded with high interest charges and fees, said Chi Chi Wu, a lawyer with the National Consumer Law Center. But, she cautioned, tax filers typically must have their returns prepared by the company to get the no-fee advance, and tax-preparation fees vary widely. So it's sometimes hard to know if the package is a good deal. "Tax- preparation fees are very opaque," she said.

Wu noted that there are free tax-preparation services available for eligible filers through the IRS's Volunteer Income Tax Assistance program.

At least one online service, offered by Credit Karma, promotes a no-fee online tax- preparation service as well as no-fee advances of up to \$1,000.

Here are some questions and answers about tax season:

**Q:** When is the filing deadline this year?

**A:** Taxpayers have an extra two days to file this year. The federal deadline is Tuesday, April 17. The usual deadline, April 15, falls on a Sunday, and April 16 is a holiday in Washington, D.C.

**Q:** Why does my Form W-2 have a special code on it?

**A:** As part of an expanded test to reduce tax fraud and identity theft, the IRS has assigned 16-character codes to some W-2 forms to help verify income data on electronically filed tax returns. If you see a code on your W-2, you'll be asked to include it on your return. (The code isn't used for returns filed on paper, according to the IRS.) The codes will appear on roughly a quarter of all W-2 forms, the agency said.

**Q:** How can I track my tax refund?

**A:** The IRS recommends using its IRS2Go app for smartphones or its online refund tool to check the status of refunds. Filers claiming the earned-income credit or the additional child tax credit, however, won't see updates for projected refund dates before Feb. 17, the agency has said.

<b>HEADLINE</b>	<b>02/03 Another government shutdown looms</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-usa-immigration/no-progress-on-dreamers-as-another-u-s-shutdown-looms-idUSKBN1FM2MY">https://www.reuters.com/article/us-usa-immigration/no-progress-on-dreamers-as-another-u-s-shutdown-looms-idUSKBN1FM2MY</a>
<b>GIST</b>	<p>STERLING, Va./ WHITE SULPHUR SPRINGS, W. Va. (Reuters) - The U.S. Congress made no notable progress this week toward a deal on the status of 700,000 “Dreamer” immigrants, with President Donald Trump saying on Friday that one “could very well not happen” by a deadline next month.</p> <p>Whether the lack of progress signaled the possibility of another federal government shutdown next week was unclear, but it worried the Dreamers, young people who were brought illegally into the United States as children.</p> <p>Trump said last year that he would end by March 5 a program that was set up by former President Barack Obama to protect the Dreamers from deportation, and he urged Congress to act before that date. No action has resulted.</p>

“We want to make a deal,” Trump said at an event in Virginia with U.S. Customs and Border Protection officials. And he blamed Democratic lawmakers for the impasse.

“I think they want to use it for political purposes for elections. I really am not happy with the way it’s going from the standpoint of the Democrats,” he said.

Democrats have said repeatedly that they want protections written into law for the Dreamers, who were given temporary legal status by Obama’s Deferred Action for Childhood Arrivals (DACA) program, which lets them study and work in the United States without fear of deportation.

Republicans, who control Congress, are undecided on what to do about DACA and the Dreamers. They ended a three-day retreat at a mountain resort in West Virginia on Friday not much nearer to consensus than they were a week ago.

The partisan standoff caused a partial shutdown of the federal government for three days last month after Congress failed to pass a stopgap spending measure needed to keep the lights on at federal facilities across the country.

The House of Representatives plans to vote on Tuesday on legislation to keep federal agencies operating beyond Feb. 8, when existing funds expire, a senior House Republican aide said.

The aide did not provide details, however, on the duration of this latest-in-a-series of temporary funding measures.

<b>HEADLINE</b>	<b>02/03 Pentagon plans nuke weapons expansion</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/politics/2018/02/03/pentagon-announces-plan-to-expand-nuclear-arsenal-in-face-russian-threat.html">http://www.foxnews.com/politics/2018/02/03/pentagon-announces-plan-to-expand-nuclear-arsenal-in-face-russian-threat.html</a>
<b>GIST</b>	<p>The Pentagon plans to develop two "low-yield" nuclear warheads to be launched from ballistic-missile submarines and warships, to send a message to Moscow -- which the Trump administration accuses of amassing a stockpile of tactical nuclear weapons.</p> <p>The new plan is outlined in Defense Secretary Jim Mattis's Nuclear Posture Review, released Friday afternoon.</p> <p>"Expanding U.S. tailored response options will raise the nuclear threshold and help ensure that potential adversaries perceive no possible advantage in limited nuclear escalation, making nuclear weapons employment less likely," the new review said.</p> <p>The Pentagon says Russia’s buildup of similar "low-yield" nukes is the reason it must match the threat.</p> <p>“The United States would only consider the use of nuclear weapons in extreme circumstances,” said Deputy Defense Secretary Patrick M. Shanahan. “Extreme circumstances could include significant non-nuclear strategic attacks,” he added without offering specifics.</p> <p>Russian and Chinese officials were briefed by State Department officials Friday morning about the nuclear posture review.</p> <p>It's the first such review in seven years, but much has changed since 2010, when the U.S. unilaterally reduced portions of its nuclear arsenal.</p> <p>“Over the past decade, while the United States led the world in these reductions every one of our potential nuclear adversaries has been pursuing the exact opposite strategy,” said Deputy Energy Secretary Dan Brouillette. “These powers are increasing the numbers and types of nuclear weapons in their arsenal.”</p>

	<p>After Russia annexed Ukraine's Crimean Peninsula, it deployed nuclear-capable intermediate range missiles to Kaliningrad, a Russian enclave on the border with Poland, leaving NATO leaders feeling helpless.</p> <p>"Russia's nuclear saber-rattling is unjustified, destabilizing and dangerous," said NATO Secretary General Jens Stoltenberg in 2015. Any deployment of nuclear forces to Crimea would "fundamentally change the balance of security in Europe," he added.</p> <p>Russia is bound by a decades-long arms treaty, known as the INF, from deploying ground-launched intermediate-range missiles. The Pentagon has accused Russia of violating the treaty, noting that Russia is also developing nuclear depth charges, torpedoes and anti-aircraft missiles among its 2,000 tactical nukes.</p>

<b>HEADLINE</b>	<b>02/03 NKorea dodging sanctions w/fish firms</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/03/africa/north-korea-mozambique-sanctions-intl/index.html">https://www.cnn.com/2018/02/03/africa/north-korea-mozambique-sanctions-intl/index.html</a>
<b>GIST</b>	<p>Maputo, Mozambique (CNN)On the surface, there is nothing remarkable about this sleepy fishing port in Maputo.</p> <p>But hidden from view, wedged between the other boats and ships docked there, are the rusty Susan 1 and Susan 2. These are not ordinary fishing vessels, but sanctions-busting trawlers manned by crews from North Korea.</p> <p>Pyongyang's interest in a couple of aging African trawlers may seem odd at first. But fishing is big business in Mozambique -- it's one of the country's most lucrative industries. North Korea wants a slice of that much-needed cash, and boats are easy to move and conceal.</p> <p>Joint fishing ventures are just one area of illicit trade the two countries are engaged in. In a months-long investigation, CNN uncovered a secret web of front companies, military cooperation and elite-forces training deals between North Korea and Mozambique, all in violation of international sanctions, according to United Nations investigators.</p> <p>Documents reviewed by CNN show that the cooperation is sealed with illegal contracts worth millions of dollars. The money is funneled through regionally based North Korean diplomats to Pyongyang, some</p>

	<p>7,500 miles away.</p> <p>US officials have long maintained that the money from ventures like this goes straight into North Korean leader Kim Jong Un's notorious nuclear slush fund, known as Office 39.</p> <p>With crippling sanctions squeezing the pariah state, Kim needs hard currency to further develop his nuclear and ballistic missile programs.</p> <p>The Trump administration wants to stop the money flowing. Tougher UN and US sanctions, sustained pressure on China and executive orders are all part of Washington's playbook to squeeze North Korea. The plan, so far, doesn't appear to be working.</p> <p>North Korea earned nearly \$200 million by exporting coal and other banned commodities between January and September 2017 in violation of UN sanctions, according to an unpublished UN report.</p> <p>The report, sections of which have been obtained by CNN, found that North Korea "is already flouting the most recent resolutions by exploiting global oil supply chains, complicit foreign nationals, offshore company registries and the international banking system."</p>
<a href="#">Return to</a> <a href="#">Top</a>	

<b>HEADLINE</b>	<b>02/03 UN: NKorea violating sanctions</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/03/politics/north-korea-un-report-sanctions/index.html">https://www.cnn.com/2018/02/03/politics/north-korea-un-report-sanctions/index.html</a>
<b>GIST</b>	<p>(CNN)North Korea earned nearly \$200 million from exporting coal and other banned commodities last year in violation of UN sanctions, according to a new United Nations report.</p> <p>The report was authored by a panel of experts investigating North Korea and has been sent to a UN committee on North Korea. CNN has obtained key sections of the report from a UN diplomat who is not authorized to speak publicly.</p> <p>CNN has not reviewed the entire document.</p> <p>Despite numerous rounds of international sanctions, North Korea exported almost all the commodities that had been prohibited in the resolutions between January and September of last year, the report indicates. It also indicates that North Korea exported coal to China, Malaysia, Russia and Vietnam, in addition to falsifying documents to conceal the origin of the coal.</p> <p>China has consistently denied breaching sanctions.</p> <p>Investigators highlighted that North Korea "is already flouting the most recent resolutions by exploiting global oil supply chains, complicit foreign nationals, offshore company registries and the international banking system," the document states.</p> <p>Investigators also suggested that Pyongyang has supplied weapons to Syria and Myanmar.</p>
<a href="#">Return to</a> <a href="#">Top</a>	

<b>HEADLINE</b>	<b>02/03 Hawaii 'button pusher' blames others</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/03/us/hawaiis-false-alarm-sender-speaks/index.html">https://www.cnn.com/2018/02/03/us/hawaiis-false-alarm-sender-speaks/index.html</a>
<b>GIST</b>	<p>(CNN)The man who says he sent out the false ballistic missile alert last month in Hawaii that caused more than a half hour of panic said Friday he thinks he is being treated unfairly, and he was positive at the time the drill was real.</p> <p>The man, who said he doesn't want to be identified for security reasons, was fired by the Hawaii</p>

Emergency Management Agency (HI-EMA) earlier this week. He told CNN on Friday that he feels terrible about what happened, but he did what he was trained to do.

He hopes that by speaking out, he can help prevent a similar incident from happening in the 49 other states.

The drill began on the morning of January 13 as the man, who had been with the agency for 11 1/2 years, according to his lawyer, and his coworkers were just logging on to their computers at the beginning of their shifts, he said.

"I thought 100 percent it was real," said the former employee, who said he had been involved in about five prior missile drills.

The man said this time he never heard "exercise, exercise, exercise" over the secure phone for emergencies because someone picked up the handset before transferring it to a speaker.

The man said he heard the words "This is not a drill" in a voice he did not recognize and reacted as he was trained to do. He went on his computer and used a pull-down menu to send out the alert.

Bruce Oliveira, who conducted an HI-EMA investigation into the incident, said earlier this week that five other employees in the room heard the guidance that it was an exercise.

Oliveira, who retired from the Hawaii National Guard as brigadier general, also told reporters, "When it became apparent that the real-world alert was issued," the employee who sent it out "seemed confused, he froze and another employee had to take over his responsibilities."

The employee "had a history of confusing drill and real-world events," Oliveira said.

The man disagreed with the state's version of what happened and said there was no one in the room that said it was a drill.

The man blamed the incident on a variety of factors -- it was shift change, he and others lacked training, the drill was unannounced -- for the alert that wasn't corrected for 38 minutes.

He also said protocols for the drills he was involved in changed each time.

"The (state and the Federal Communications Commission) have false information in the reports," the man said.

Attorney Michael Green said his client was a scapegoat.

"No one was ready for this day," Green said by phone. "They were not ready and they were not programmed to do what they were supposed to do when this happened."

Green and his client pointed out there was no safeguard measures to withdraw the alert. Employees had to call in people from the IT department to get it canceled. The former employee said the whole thing was a failure in planning from top to bottom.

An internal investigation found "that insufficient management controls, poor computer software design and human factors contributed" to the alert and a delayed correction message.

Maj. Gen. Joe Logan, Hawaii's state adjutant general, said Vern Miyagi, administrator of the state emergency management agency, resigned Tuesday.

Miyagi accepted full responsibility for the incident and the actions of his employees, Logan said. Another employee was suspended without pay and a third employee resigned before any disciplinary action was

	taken, Logan said.  Logan said he appointed Brig. Gen. Moses Kaoiwi, director of joint staff with the Hawaii National Guard, as interim agency administrator.

<b>HEADLINE</b>	<b>02/05 Virtual currencies worldwide backlash</b>
<b>SOURCE</b>	<a href="http://www.nationmultimedia.com/detail/asean-plus/30337965">http://www.nationmultimedia.com/detail/asean-plus/30337965</a>
<b>GIST</b>	<p>TOKYO - A worldwide trend is gaining strength towards more strictly regulating virtual currencies that are traded online.</p> <p>China has gone so far as to ban the trading of virtual currencies, and Europe and the United States are searching for ways to strengthen regulations.</p> <p>In Japan, an exchange that lost a huge amount of virtual currency was subjected to an on-site inspection by the Financial Services Agency on Friday. The virtual currency market, which has grown extremely rapidly, appears to be at a turning point.</p> <p>On Thursday, the Indian Finance Minister Arun Jaitley indicated in a speech to the nation's parliament that his government would seek to put a stop to illegal financing and other transactions linked to virtual currencies. The government does not consider crypto-currencies legal tender, he said in the speech.</p> <p>Virtual currency markets have subsequently seen a significant sell-off, reflecting concerns that the markets could be more tightly regulated worldwide. According to CoinDesk, a website that specializes in virtual currencies, the price of one bitcoin (BTC) temporarily fell below \$8,000 on Friday. This represents a drop of about 30 per cent compared to five days before, and is less than half of the peak value of about \$20,000, reached in mid-December 2017.</p> <p>There has long been concern that the strong anonymity offered by virtual currencies will lead to malicious use, such as money laundering. Moreover, virtual currencies have been repeatedly stolen via cyber-attack as the rapid worldwide growth in the usage of virtual currencies has led exchange operators to hold vast amounts of customer assets.</p> <p>Behind the calls for increased regulation also lies a dramatic increase in the number of people who hold virtual currencies for speculation purposes. Asian countries have taken a particularly hard line. China, which once had the largest trading volume in the world, now has the strictest rules.</p> <p>China's central bank, the People's Bank of China, implemented a total ban on initial coin offerings (ICO), in which companies and other vendors raise funds from investors by issuing their own virtual currencies or coins. China has essentially banned trading in virtual currencies, which has caused exchanges to close.</p> <p>Chinese authorities say they acted because of negative effects on the financial market, but some analysts believe China wants to stop capital flight overseas. Indonesia's central bank, Bank Indonesia, indicated in January that it would not permit virtual currency trading. Europe and the United States are also exploring regulations. Senior officials of the U.S. Securities and Exchange Commission and others are scheduled to testify Tuesday in a U.S. Senate hearing on virtual currency scams and ICOs.</p> <p>Germany and France have called for international cooperation. They are expected to jointly propose regulations at a March meeting of finance ministers and central bank governors from the Group of 20 nations.</p> <p>Japan was one of the first in the world to introduce a registration system for exchanges by establishing</p>

	<p>relevant legislation that takes virtual currencies into account as a means of payment. However, rather than being used for payment, virtual currencies are being used more as a financial product for speculation purposes.</p> <p>So Saito, a lawyer who is knowledgeable about virtual currencies, said Japan’s regulations “did not envision [this kind of situation] and have not kept up with the current state of affairs.” Concerns have been voiced over a general lack of transparency — including suspected market manipulations — for some virtual currencies and exchange operators. Some corporations have started to review their stances toward virtual currencies.</p> <p>Peach Aviation, a low-cost carrier, announced Friday that it would indefinitely postpone a plan to allow customers to purchase tickets using bitcoin. The latest virtual currency theft will likely lead to heightened discussion in Japan regarding whether, or how, its regulatory scheme should be reassessed.</p>

<b>HEADLINE</b>	<b>02/05 Cybercrime threat growing in Australia</b>
<b>SOURCE</b>	<a href="http://www.technologydecisions.com.au/content/security/news/cybercrime-threat-growing-in-australia-407713585#axzz56E2NMZt5">http://www.technologydecisions.com.au/content/security/news/cybercrime-threat-growing-in-australia-407713585#axzz56E2NMZt5</a>
<b>GIST</b>	<p>Cybercrime in Australia grew by more than a quarter in 2017, the second-highest rate of growth among seven countries surveyed by Accenture and the Ponemon Institute.</p> <p>The average Australian business experienced 53 security breaches last year, up by 25% from 2016 but still well below the global average of 130, the survey indicates.</p> <p>The most costly attack types involve malicious insiders, phishing and social engineering, with each attack costing well over \$100,000. Meanwhile businesses are spending around a third of their security costs on detection.</p> <p>The most expensive consequences of cyber attacks in Australia are business disruption and information loss.</p> <p>But despite the rising scale and severity of attacks, the research shows that only 24% of Australian businesses have implemented AI and 32% have implemented analytics into their cybersecurity systems and processes.</p> <p>By contrast, 64% of Australian respondents have deployed security intelligence systems and 60% have installed identity and access governance.</p> <p>“With cyber incidents on the rise, and ever evolving in terms of scale and sophistication, Australian businesses should ensure they are appropriately prepared,” Accenture Security Asia Pacific Managing Director Josh Kennedy-White said.</p>

<b>HEADLINE</b>	<b>02/05 Terror groups eye infrastructure attacks</b>
<b>SOURCE</b>	<a href="https://www.thenational.ae/world/europe/isil-likely-to-switch-to-cyber-war-after-battlefield-loss-1.701733">https://www.thenational.ae/world/europe/isil-likely-to-switch-to-cyber-war-after-battlefield-loss-1.701733</a>
<b>GIST</b>	<p>ISIL and other terrorist groups are turning to the underworld to try to secure tools to carry out cyber-attacks on critical infrastructure.</p> <p>Terrorist groups have taken part in low-grade “cyber vandalism” and their ability to wage more damaging attacks will only increase, according to a former operations chief at the UK’s spy centre GCHQ.</p>

Many of the required tools to launch crippling attacks are becoming increasingly available on criminal markets on the so-called Dark Web, part of the world wide web that needs special software to penetrate.

Committed extremists could seek to accelerate those efforts by recruiting knowledgeable insiders, said Conrad Prince in a report for government-backed insurance company Pool Re. “A well-placed insider can go a long way to simplifying the work involved in delivering a destructive cyber-attack,” he wrote.

He cited the case of Rajib Karim, a former IT worker for British Airways, who used his position to investigate how to cause international travel chaos by bringing down the airline’s systems. He was jailed for 30 years in 2011 for plotting to blow up a plane.

Mr Prince said that as ISIL lose control of more physical territory it seemed likely that they would focus their efforts on cyberspace. “The cyber conflict... has a long way to run yet,” he wrote.

“Their capability to do so is limited at present, but all the trends indicate that their ability to deliver such attacks will increase over time.”

ISIL has so far failed to carry out any major successful cyber-attack in part because of the targeting of its cyber experts by the US and other anti-ISIL forces, according to the most recent internet threat assessment published by the European Union’s policing agency Europol.

It said that the concerted action had led to a scaling down of the activities of Pro-ISIL hackers - such as a group known as the “United Cyber Caliphate”.

The group had specialised in the publication of “kill lists” of potential targets in the US and UK and called on followers to “kill them wherever you found them”. There has been no confirmed incident of anyone being targeted on the list.

Many previous known cyber-attacks amounted to little more than attention-grabbing stunts and hacks of public accounts, rather than the penetration of critical infrastructure. Junaid Hussain, a British militant who was killed in a US drone strike in Syria in 2015, was believed to have been involved in obtaining the passwords of the US Central Command’s Twitter account to briefly send pro-ISIL messages.

He was jailed in the UK for six months while part of a hacking group known as Team Poison after hacking the address book of former UK premier Tony Blair and publishing information. He also was involved in tying up the phonelines of a UK anti-terror hotline.

“The absence of any major cyber-attacks by terrorist organisations can be interpreted as the result of not enough technical skills on their side, at least for the present time,” Europol said in its internet organised crime threat assessment for 2017.

Despite the apparent amateurish nature of some of the hacks, the 2017 Europol report concluded that the militants’ receptiveness to new technologies and a stated commitment to waging the fight in the virtual world “leaves little room for complacency”.

<b>HEADLINE</b>	<b>02/04 'Great British firewall' blocked 54M attacks</b>
<b>SOURCE</b>	<a href="https://www.ft.com/content/ece41146-081c-11e8-9650-9c0ad2d7c5b5">https://www.ft.com/content/ece41146-081c-11e8-9650-9c0ad2d7c5b5</a>
<b>GIST</b>	<p>UK security chiefs took down more than 120,000 fake websites last year and blocked 54m malicious online attacks as part of a “great British firewall” designed to stop cyber criminals targeting the public for money and secret data.</p> <p>According to a report to be released on Monday, GCHQ’s National Cyber Security Centre says its “active defence programme” has led to a 2 per cent reduction in the volume of global “phishing” and “malware”</p>

attacks hosted in the UK since July 2016.

While the report, seen by the Financial Times, does not cover severe cyber attacks launched by hostile state actors such as North Korea or Russia, the NCSC said it was the first time the UK had outlined the scale of what it called “commodity attacks” that caused “the majority of people the majority of harm”.

Ciaran Martin, chief executive of the NCSC, who warned last month that it was a question of “when not if” a big cyber attack hit the UK, launched the active cyber defence initiative in September 2016, announcing plans to work with internet companies to tighten online security.

Spoofing and phishing attacks fool people into handing over personal details through seemingly legitimate emails purported to be from trusted organisations and government departments. They are one of the most common types of attack.

The email usually redirects people to a fake website that then either infects the user’s computer or asks them to input their details. Hackers can also target a service provider’s domain name service — the internet’s phone book — to automatically launch malware, software that can disrupt or penetrate a computer system.

The NCSC said that while there was some overlap between hostile state actors who employed similar tactics, the vast majority of attacks were run by criminal gangs who looked to profit from selling on people’s data or hacking into their bank accounts.

“You don’t need to beat cyber crime — and it would be unrealistic to think we could,” said Ian Levy, technical director for the NCSC. “But we do want to make it as hard as possible and that means making it as unprofitable and risky as we can for cybercriminals to act in the UK.”

<b>HEADLINE</b>	<b>02/02 Fraudulent money transfers on rise</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/fraudulent-money-transfers-352k-on-1/">https://www.infosecurity-magazine.com/news/fraudulent-money-transfers-352k-on-1/</a>
<b>GIST</b>	<p>Cybercriminals are using ever-more sophisticated methods to exploit human weaknesses in an organization’s cyber-defenses, including business email compromise (BEC, or fraudulent instruction scams), which are significantly on the rise and costing businesses crippling damage.</p> <p>Claims data recorded by Beazley, a specialist provider of cyber-insurance, indicates that organizations are facing an increased threat to their operations from fraudulent instruction scams. The number of incidents reported to Beazley Breach Response Services (BBR Services) quadrupled in 2017, with policyholders incurring losses ranging from a few thousand dollars up to \$3 million. With claims amounts in 2017 averaging \$352,000, fraudulent instruction has rapidly become a significant financial threat to many organizations.</p> <p>In the gambit, criminals use hacking and phishing techniques to accumulate information that allows them to send plausible-looking requests to transfer funds to bogus accounts. In addition to losing money, organizations may also have to conduct exhaustive systems analysis to ensure that individuals’ personal and private data has not been compromised.</p> <p>“Cybercriminals are finding new ways of getting organizations to part with their hard-earned cash,” said Katherine Keefe, global head of BBR Services. “In 2017 we saw fraudulent instruction emerge as a new trend which offers significant reward for the perpetrators in return for little effort but brings potentially devastating financial consequences for the victim.”</p> <p>The top three industry sectors affected in 2017 were professional services (22% of the total reported to Beazley), financial services (21%) and retail (12%), but incidents are growing across all sectors, and in particular where single large transactions, such as real estate purchases, are involved, the firm found.</p>

<b>HEADLINE</b>	<b>02/02 Japan raids hacked crypto exchange</b>
<b>SOURCE</b>	<a href="http://www.securityweek.com/japan-raids-hacked-crypto-exchange-bitcoin-plunges-further">http://www.securityweek.com/japan-raids-hacked-crypto-exchange-bitcoin-plunges-further</a>
<b>GIST</b>	<p>Japanese authorities on Friday raided virtual currency exchange Coincheck, a week after the Tokyo-based firm lost \$530 million in cryptocurrency to hackers.</p> <p>The raid comes as bitcoin dipped below \$9,000 for the first time since November after India said Thursday it would take measures to prevent the use of cryptocurrencies.</p> <p>The search of Coincheck's headquarters in Tokyo's Shibuya district was carried out by the Financial Services Agency, which had already slapped the company with an administrative order following the hack.</p> <p>"We have launched an on-site inspection to ensure preservation of clients' assets," Finance Minister Taro Aso said at a briefing.</p> <p>Japanese officials have suggested Coincheck lacked proper security measures, making itself vulnerable to theft.</p> <p>The January 26 hack, which saw thieves syphon away 523 million units of the cryptocurrency NEM, exceeds the \$480 million stolen in 2014 from another Japanese virtual currency exchange, MtGox.</p> <p>Earlier this week, Japan's FSA gave Coincheck until February 13 to investigate the cause of the incident, "properly" deal with clients, strengthen risk management and take preventive measures.</p>

<b>HEADLINE</b>	<b>02/02 Court: UK 'snooper's charter' unlawful</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/uks-snoopers-charter-inconsistent-with-eu-law-says-court-of-appeal/article/741570/">https://www.scmagazine.com/uks-snoopers-charter-inconsistent-with-eu-law-says-court-of-appeal/article/741570/</a>
<b>GIST</b>	<p>Earlier this week the Court of Appeal found the UK's Data Retention and Investigatory Powers Act 2014, commonly known as the Snoopers' Charter, unlawful as far as the prevention, investigation, detection and prosecution of serious crimes are concerned.</p> <p>The Data Retention and Investigatory Powers Act was passed in 2014 to enable the government to carry out mass surveillance and to collect data belonging to citizens to prevent or investigate serious crimes in the UK.</p> <p>However, soon after it was passed, the law drew criticism from concerned citizens for being too draconian and for giving enormous and unvetted powers to authorities to carry out surveillance and to collect sensitive data belonging to citizens.</p> <p>The criticism had its desired effect. Following a petition by MP Tom Watson who challenged the law, the Court of Appeal found Section 1 of the 'Snoopers' Charter' unlawful and in violation of EU law for allowing authorities to collect data when the objective was not strictly restricted to fighting serious crime, and for allowing access without prior review by a court or an independent administrative authority.</p> <p>"The common-sense approach taken by the judges will ensure that the most contentious part of the "snooper's charter" – the carte blanche ability to collect data with neither a warrant nor oversight – will have to be swiftly removed," said Lee Munson, security researcher at Comparitech.com.</p> <p>He added, 'While no-one in their right mind would argue against surveillance of legitimate terrorist and criminal targets, this Act went way too far in casting a dragnet over ordinary citizens while failing to</p>

address the fact that the bad guys are actually quite adept at using technology, such as encryption, that the Bill simply cannot legislate against.

"Talking of which, it will be interesting to see how a rewrite of the Investigatory Powers Act affects the government's views on technology and its obsession with backdoors, not to mention its lack of understanding of either,' he added.

In November last year, the Home Office conceded that certain provisions in the Snoopers' Charter were too far-reaching and thus introduced the new Investigatory Powers Act to rectify rights violations. However, Liberty, the human rights group that represented Watson in the Court of Appeal, said that the new legislation did not fully comply with past court rulings requiring mandatory safeguards and is now challenging it in a separate case along with Watson.

"Ministers aren't above the law – they don't get to pick and choose which rights violations they address and they can't haggle with the courts to avoid properly protecting people's freedom. All of the fundamental safeguards demanded by the court must now be implemented," said Watson.

The Court of Appeal's ruling has also been backed by the Internet Services Providers' Association. In a statement, the association said that it always backed a legal framework "that would comply with existing rights and rulings so that it would not be revisited on a regular basis".

It continued: "We feel it is imperative that the Government fully and unambiguously meet the requirements of the court's judgment as it consults on additional safeguards to the Investigatory Powers Act, including independent authorisation for communications data acquisition requests. A failure to do so could lead to a situation in the near future where the UK's regime is again open to further challenge and has to be revisited once more."

<b>HEADLINE</b>	<b>02/02 APIs 'mushrooming' security risk</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/application-security/apis-pose-mushrooming-security-risk/d/d-id/1330966">http://www.darkreading.com/application-security/apis-pose-mushrooming-security-risk/d/d-id/1330966</a>
<b>GIST</b>	<p>The application economy has now become the API economy. And as the importance of application programming interfaces (APIs) grows within the enterprise, organizations must keep their security top-of-mind, lest they put the entire software stack at risk.</p> <p>Software is powering digital disruption today and the secret sauce to this success is not just the features of the software itself, but how well it integrates with other software. Integrations between internal applications across business groups, with external platforms and applications held by partners, and with other consumer-based applications on customer devices is what fuels business success today. APIs are the glue that holds all these integrations together.</p> <p>But APIs deployed without security measures expose organizations to yet another class of attack vectors.</p> <p>"APIs represent a mushrooming security risk because they expose multiple avenues for hackers to try to access a company's data," explains Terry Ray, CTO of Imperva. "To close the door on security risks and protect their customers, companies need to treat APIs with the same level of protection that they provide for their business-critical web applications."</p> <p>Nevertheless, APIs remain greatly important for business and IT strategy.</p> <p>"The greatest revenue potential (APIs) provide is removing barriers to growing revenue by integrating platforms and apps so organizations can quickly launch new business models and scale fast," explains Louis Columbus, an enterprise software strategist and principal at IQMS, a manufacturing ERP vendor, in a Forbes piece last year.</p>

What's more, APIs are also fueling new methods of developing and deploying software. As organizations seek means to deliver and tweak software faster, they're increasingly breaking up large monolithic code bases into smaller chunks of independent code called microservices. Advanced organizations develop applications using segmented microservices that fit together like bricks into a larger software structure, making it easier to execute quick changes to parts of the software without accidentally breaking something else in the code base. But these microservices must interface with one another, and it takes APIs to accomplish that.

According to a study out this week from Imperva, these trends in software strategy have translated to the kind of proliferation where the typical organization is managing an average of 363 APIs within their application ecosystem. So, the obvious question for cybersecurity is where do the risks lie?

According to the survey, more than two-thirds of organizations expose APIs to the public in order to enable partners and external developers to hook into the power of their software. This kind of exposure may open up a world of business opportunity, but it also brings risk to the table. Among the 250 IT and security practitioners questioned, the biggest proportion - 39% - were most concerned about the risks that bots and DDoS attacks posed to APIs.

Nearly a quarter of respondents also expressed concerns about authentication enforcement, a tricky topic when it comes to allowing access to only some data within an application without exposing other sensitive data. A bank, for example, might want its application to easily interface with other consumer applications, but wouldn't want its credentials shared with those applications on sign-on. And that's just the start of the threat exposure.

Some 76% of organizations report that they currently treat API security differently than Web security. Only about 63% of organizations use a Web application firewall to secure their APIs. Approximately 63% also report using an API gateway, though that number does bump up to 80% for public-facing APIs. Meanwhile, fewer than half of organizations use runtime application self-protection (RASP) to prevent attackers from tampering with or reversing API code for future attacks.

<b>HEADLINE</b>	<b>02/02 UK: role of internet in radicalization</b>
<b>SOURCE</b>	<a href="http://www.independent.co.uk/news/uk/crime/far-right-darren-osborne-police-terrorism-radicalise-a8190386.html">http://www.independent.co.uk/news/uk/crime/far-right-darren-osborne-police-terrorism-radicalise-a8190386.html</a>
<b>GIST</b>	<p>Police will “look at the role of the internet” in the rapid radicalisation of terrorists in the wake of the Finsbury Park mosque attack, a leading anti-terror officer has said.</p> <p>Dean Haydon, of the Metropolitan Police, said that “some individuals could look at material today and decide to go and do an attack later on this evening”.</p> <p>Finsbury Park attacker Darren Osborne is thought to have been radicalised within the space of a few weeks before he carried out his van attack last year.</p> <p>On Thursday he was found guilty of murder. The trial heard how Osborne became “obsessed” with far-right material online in the lead-up to the 19 June attack.</p> <p>The material he accessed was “unpalatable” but difficult to police, however, Mr Haydon said.</p> <p>The head of Scotland Yard’s counter-terror command said: “We have to be alive to the fact that people are accessing this material and they are using it to self-radicalise, and that’s what happened in this case.”</p> <p>He added: “Yes, there’s material as I said that’s unpalatable, not particularly pleasant, but it doesn’t cross the threshold in relation to either a crime or a terrorism offence – and that’s really difficult for us then to</p>

	<p>police.</p> <p>“It is out there, people can access it and – as we’ve seen in this case – it certainly affected Osborne in the way it did and certainly played a key part in his radicalisation.</p> <p>“Some of this material is easily accessible, so we have to look at the role of the internet.”</p> <p>Mr Haydon, who described the far-right as an “emerging threat”, said: “We are committed to tackling all forms of extremism including this particular aspect.”</p>

<b>HEADLINE</b>	<b>02/05 Campaign against social media addiction</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/US/2018/02/05/Tech-experts-launch-campaign-against-social-media-addiction/9661517812402/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=3">https://www.upi.com/Top_News/US/2018/02/05/Tech-experts-launch-campaign-against-social-media-addiction/9661517812402/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=3</a>
<b>GIST</b>	<p>Feb. 5 (UPI) -- A group of former employees from some of the biggest companies in tech have banded together to preach the ills of having too much technology in our lives.</p> <p>The Center for Humane Technology, founded by Tristan Harris, a former ethicist at Google, has launched a lobbying effort with media watchdog group Common Sense Media to build awareness about tech addiction, The New York Times reported.</p> <p>The \$7 million ad campaign is expected to target 55,000 public schools across the country.</p> <p>"There's an invisible problem that's affecting all of society," CHT says on its website. "Facebook, Twitter, Instagram, and Google have produced amazing products that have benefited the world enormously. But these companies are also caught in a zero-sum race for our finite attention, which they need to make money. Constantly forced to outperform their competitors, they must use increasingly persuasive techniques to keep us glued. They point AI-driven news feeds, content, and notifications at our minds, continually learning how to hook us more deeply-from our own behavior."</p> <p>CHT says each of the largest social media sites can make people's lives worse in their own way. "Snapchat turns conversations into streaks, redefining how our children measure friendship," the group says. "Instagram glorifies the picture-perfect life, eroding our self worth. Facebook segregates us into echo chambers, fragmenting our communities. YouTube autoplays the next video within seconds, even if it eats into our sleep. These are not neutral products. They are part of a system designed to addict us."</p> <p>Harris says the people associated with his organization and should know because they worked at those companies.</p> <p>"We were on the inside," he told The Times. "We know what the companies measure. We know how they talk, and we know how the engineering works."</p> <p>Jim Steyer, the CEO of Common Sense Media, said on Twitter that the Truth About Tech campaign "will initially focus on legislation at the [federal] level."</p> <p>Steyer said Sen. Ed Markey, D-Mass., is working on introducing legislation that would fund research about the effects of technology ad social media on children's brains.</p> <p>Common Sense Media said its campaign is "modeled on anti-smoking drives and focuses on kids due to their vulnerability."</p>

<b>HEADLINE</b>	<b>02/03 FBI warns on Facebook child porn video</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/02/03/fbi-asks-people-to-stop-sharing-child-pornography-video-on-facebook/">http://q13fox.com/2018/02/03/fbi-asks-people-to-stop-sharing-child-pornography-video-on-facebook/</a>
<b>GIST</b>	<p>Law enforcement officials across the country are asking people to stop sharing a video on Facebook that depicts child pornography.</p> <p>People across the country have contacted media outlets and police departments about the video. Many people are sharing the video in hopes of identifying the man shown abusing the child.</p> <p>Investigators are asking people to stop sharing the video or screenshots of the video on social media — and this includes sharing it with police departments and media outlets on Facebook.</p> <p>“If you saved it, if you posted it to your page, if you sent it to someone else... you’re disseminating child porn, and that’s a felony,” Tim Gann, an attorney in Alabama, told WHNT. “If you are in possession of (the video), no matter your good intentions, that is also a felony.”</p> <p>FBI officials and federal prosecutors are investigating the case. There have been multiple reports of a suspect being arrested in connection with this case. Because of the nature of the investigation, investigators are not confirming any information about arrests.</p> <p>“Every time it gets posted, the victim in this case gets re-victimized for more people to see what they have been subjected to,” Gann said. “There’s no need to repost this video. Law enforcement are doing their jobs. They are investigating. They are doing their best to identify the parties. There is no need for social media to be involved.”</p> <p>What should you do if you see the video?</p> <p>A spokesman for Central Alabama CrimeStoppers said you should report the video to the social media platform and call your local law enforcement office. Do not share the video to the department’s Facebook page and do not disseminate the video using Facebook Messenger. Do not save the video or screenshots of the video on your phone. You can also contact the National Center for Missing and Exploited Children at 1-800-THE-LOST (1-800-843-5678).</p>

<b>HEADLINE</b>	<b>02/02 Email scam takes couple’s money</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/its-gone-scam-takes-tacoma-couples-money-dash-dream-of-buying-home">http://komonews.com/news/local/its-gone-scam-takes-tacoma-couples-money-dash-dream-of-buying-home</a>
<b>GIST</b>	<p>TACOMA, Wash. -- A young couple about to become first-time home buyers had their dreams dashed when scammers swiped their \$12,000 closing costs.</p> <p>Serenity Isom said it was all the money they had.</p> <p>"I'm only 20 years old," said Serenity. "He's only 21. We were going to finally own our home but we fell for this stupid scam."</p> <p>Serenity said it was just a modest home in Tacoma, but it was going to be "their" home. The family with a young boy got an email instructing them to wire the \$12,000 closing costs to complete the deal. "We were just so excited that we sent the money over," said Serenity. "We didn't think twice about it."</p> <p>The emails had all the right information including the closing date. But Serenity realized it was all a scam when she contacted the loan officer. "I called him and like 'Hey the money came in.' and he goes, 'Oh, what money?' and my heart just dropped."</p> <p>She says the bank traced the wired money to a branch in Florida and to a man who had already taken out \$9,000. "They couldn't arrest him or anything because right now because it's a 'he-said-she-said' kind of</p>

	<p>thing, and he's taken the money out so it's gone."</p> <p>"It's heartbreaking," said David Quinlan of the Better Business Bureau. "... It puts a fire in my stomach." Quinlan said emails can be easily hacked and responses forged. In this case by simply adding the word "gmail" to the address.</p> <p>"Take a deep breath," said Quinlan. "Relax. If you get one of these emails, obviously contact your Realtor first to make sure it's authentic."</p> <p>The Isoms aren't alone. This is a scam that is sweeping the country. Connie Thompson of KOMO News has done several stories on it. Her reports say often it's the emails of the mortgage or title companies that are hacked. But those companies told Serenity they believe it was he email that was hacked.</p>

<b>HEADLINE</b>	<b>02/03 Scammers stealing phone numbers</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/scammers-stealing-phone-numbers-from-t-mobile-customers-to-steal-money/693898809">http://www.kiro7.com/news/local/scammers-stealing-phone-numbers-from-t-mobile-customers-to-steal-money/693898809</a>
<b>GIST</b>	<p>REDMOND, Wash. - Redmond Police say they are investigating seven cases of scammers stealing phone numbers from T-mobile customers so they can access their bank accounts.</p> <p>KIRO 7 also discovered another case in Everett, where a woman nearly lost \$1,920 when thieves attempted the scam on her.</p> <p>"They basically yeah stole my number - they had my phone cut off," victim Carrie Hartwig said.</p> <p>The scam is not just specific to T-mobile. Redmond police say the phone porting scam could affect anyone with a mobile phone who does not have a second layer of protection, an additional passcode, set up.</p> <p>Redmond Police spokesperson Andrea Wolf-Buck said they had never seen this specific scam until cases started popping up in December.</p> <p>"People are very creative and inventive with finding ways to steal," she said.</p> <p>She explained it all starts with thieves getting your personal information: your name, phone number and likely your social security number.</p> <p>Then, in this case, the thieves take their victim's T-mobile phone number, and using that personal information, they transfer that number to a Metro PCS phone. That means their Metro PCS phone now has the victim's phone number attached to it, and the victim's phone no longer works.</p> <p>Technology experts say thieves then contact the victim's bank and when they want to reset the password on that account, a verification code is sent to the phone number on the mobile device in the scammer's hands. That allows thieves to get in and empty out, or at least try to empty out, the account.</p> <p>"The victims we've seen in the seven different reports we've had -- there's been anywhere from \$1,000 to \$3,000 taken each time," Wolf-Buck said.</p> <p>KIRO 7 reached out to Bellevue-based T-mobile for comment. Its media relations team did not want to talk on camera, but it did provide a link to a part of the T-mobile website dedicated to this scam. It states in part, "Our industry is experiencing a phone number port out scam that could impact you."</p> <p>The site recommends people "call 611 from your T-mobile phone ... [and] create a 6-to-15-digit passcode that will be added to your account."</p>

	<p>If anyone tries to steal your number, "the new carrier will be required to validate the request with T-mobile using your passcode."</p> <p>It's something Carrie Hartwig wishes she had known before. She received a text from T-mobile warning her about the scam more than a week after she was targeted.</p> <p>"I'm angry," she said.</p> <p>Bellevue Police and Seattle Police said they do not have any cases of using this kind of scam at this point.</p>

<b>HEADLINE</b>	<b>02/03 Spain extradites Russia hacker to US</b>
<b>SOURCE</b>	<a href="https://www.thelocal.es/20180203/spain-extradites-hackware-spammer-to-us">https://www.thelocal.es/20180203/spain-extradites-hackware-spammer-to-us</a>
<b>GIST</b>	<p>A Russian man accused of victimizing thousands of Americans with ransomware and spam has been extradited to the United States from Spain, US officials announced on Friday.</p> <p>Peter Levashov, 37, was due to appear before a federal judge in Connecticut where he faces hacking, wire and email fraud, identity theft and conspiracy charges.</p> <p>Prosecutors say Levashov ran the "Kelihos" botnet, a network of thousands of infected computers used to harvest internet login credentials, distribute bulk spam emails sometimes used for fraudulent "pump-and-dump" stock promotions and install malicious software on unsuspecting users' computers.</p> <p>In any given 24-hour period, Levashov's network allegedly generated more than 2,500 spam emails advertising such schemes as services to other potential cyber-criminals.</p> <p>John Cronin, the acting head of the Justice Department's criminal division, said in a statement that the extradition proved the US would hunt down international cyber-criminals and "hold them accountable for their conduct."</p> <p>Originally from Saint Petersburg, Levashov was arrested at Barcelona airport on April 7 by Spanish authorities acting on a US warrant. Spain's High Court authorized his extradition in October.</p> <p>Levashov's lawyers in Spain said he had served in the Russian army and worked for President Vladimir Putin's United Russia party.</p> <p>They argued he feared being forced to turn over confidential information to American authorities, but Spanish judges rejected these claims.</p>

<b>HEADLINE</b>	<b>02/02 Rugby, social media aid capture suspect</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/crime/how-rugby-social-media-helped-capture-seatac-deadly-hit-and-run-suspect/281-513797606">http://www.king5.com/article/news/crime/how-rugby-social-media-helped-capture-seatac-deadly-hit-and-run-suspect/281-513797606</a>
<b>GIST</b>	<p>A man suspected in a deadly hit-and-run in SeaTac Friday was captured, state troopers said Friday night.</p> <p>The incident occurred on the eastbound State Route 518 on-ramp from Des Moines Way near SeaTac just after 2 a.m. A Chevrolet Blazer had run out of gas and was in the gore point, according to Washington State Patrol.</p> <p>The suspect allegedly drove on the on-ramp to 518, then veered into the stopped vehicle, striking and killing the 44-year-old man standing outside the passenger door of the SUV. The driver was still in his seat.</p>

	<p>The Washington State Patrol says social media played a huge role in the arrest. They had one important clue at the scene.</p> <p>"A large bag of rugby balls that had fallen out of the truck," said Trooper Chase Van Cleave.</p> <p>They tweeted out their clues and it didn't take very long.</p> <p>"The rugby community across the country saw that tweet and we started to receive information and tips," said Van Cleave.</p> <p>With detectives closing in, ultimately, the suspect chose to give up.</p> <p>"The peer pressure, the commitment to do the right thing by the people who weren't involved and by the rugby community convinced him to contact his lawyer and turn himself in," he said.</p> <p>Troopers were then were told where to find the vehicle, hidden on private property in Des Moines. The entire driver's side is badly damaged and it's missing the driver's side rear wheel.</p> <p>"I think there's just some determination to not be at the scene anymore," said Van Cleave.</p> <p>Now the truck is impounded, the suspect in jail awaiting his first court appearance.</p>

## Terror Conditions

[Top of page](#)

<b>HEADLINE</b>	<b>02/05 Super Bowl anti-terror papers on plane</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/05/us/dhs-super-bowl-national-security-documents-left-on-plane-invs/index.html">https://www.cnn.com/2018/02/05/us/dhs-super-bowl-national-security-documents-left-on-plane-invs/index.html</a>
<b>GIST</b>	<p>(CNN)The Department of Homeland Security documents critiquing the response to a simulated anthrax attack on Super Bowl Sunday were marked "For Official Use Only" and "important for national security."</p> <p>Recipients of the draft "after-action" reports were told to keep them locked up after business hours and to shred them prior to discarding. They were admonished not to share their contents with anyone who lacked "an operational need-to-know."</p> <p>But security surrounding the December 2017 reports suffered an embarrassing breach: A CNN employee discovered copies of them, along with other sensitive DHS material, in the seat-back pocket of a commercial plane. The reports were accompanied by the travel itinerary and boarding pass of the government scientist in charge of BioWatch, the DHS program that conducted the anthrax drills in preparation for Super Bowl LII in Minneapolis.</p> <p>The reports were based on exercises designed to evaluate the ability of public health, law enforcement and emergency management officials to engage in a coordinated response were a biological attack to be carried out in Minneapolis on Super Bowl Sunday.</p> <p>The exercises identified several areas for improvement, including the problem that "some local law enforcement and emergency management agencies possess only a cursory knowledge of the BioWatch program and its mission."</p> <p>CNN decided to withhold publication of this article until after the Super Bowl after government officials voiced concerns that publishing it prior to the game could jeopardize security for the event. A DHS official told CNN that areas for improvement identified in the draft reports had been addressed prior to Sunday's game and that the agency had "great confidence" in its preparedness.</p>

"This exercise was a resounding success and was not conducted in response to any specific, credible threat of a bioterrorism attack," said Tyler Q. Houlton, an agency spokeswoman.

Juliette Kayyem, a former DHS official who now serves as a CNN contributor, said it was not surprising that the documents highlighted deficiencies.

She said such exercises are designed to expose gaps in planning and preparedness so that authorities "are better equipped if something bad were to happen."

Nonetheless, she said, the misplacement of the documents was "a really stupid thing."

"Who knows who else could have picked this up," she said.

"The biggest consequence of this mistake," Kayyem said, "may have less to do with terrorists knowing our vulnerabilities and more to do with confidence in the Department of Homeland Security. In the end, confidence in the federal government at a time of crisis is what the American public deserves."

In addition to requesting that CNN not publish prior to the Super Bowl, DHS officials argued that disclosure of some material contained in the draft reports could threaten national security, regardless of when it was published. Based on that concern, CNN is withholding some details contained in the documents.

The after-action reports obtained by CNN are based on a pair of exercises conducted as part of DHS's BioWatch program, which operates a nationwide aerosol detection system designed to provide an early warning of a biological attack across all levels of government.

The exercises -- one in July, the other in early November — were built around the response to an intentional anthrax release that coincides with the Super Bowl.

Among the findings was that there were "differences of opinion" over how many people had been exposed, "which led to differences of opinion on courses of action."

The reports also noted there was confusion among local health agencies about the meaning of alerts issued during the exercise and with whom information could safely be shared during an emergency.

This "made it difficult for them to assess whether their city was at risk," the documents stated, and "creates a situation where local officials are deciding on courses of action from limited points of view."

CNN was unable to verify who left the documents on the plane. The travel itinerary and boarding pass accompanying the documents was in the name of Michael V. Walter.

Walter, a microbiologist, has been the program manager of BioWatch since 2009, according to his LinkedIn profile.

A DHS official said the missing documents were the subject of an "operational review" and that "DHS does not comment on personnel matters or potential pending personnel action."

There has been a drumbeat of criticism surrounding the BioWatch program since its inception in 2003. Multiple government reports issued over the course of more than a decade have raised questions about its cost and effectiveness.

"Since 2003, approximately \$1 billion has been spent on this program," according to a 2013 memo by the House Committee on Energy and Commerce's oversight subcommittee. "After more than a decade of operation, DHS still lacks crucial data demonstrating the effectiveness of the current technology."

	<p>The report also noted differences of opinion within the government about the program.</p> <p>"Several statements by DHS about the performance of the BioWatch program are disputed by other government scientists or contradicted by information obtained in this investigation," the document said.</p>

<b>HEADLINE</b>	<b>02/04 Iraq issues 'most wanted' terror list</b>
<b>SOURCE</b>	<a href="http://www.arabnews.com/node/1239456/middle-east">http://www.arabnews.com/node/1239456/middle-east</a>
<b>GIST</b>	<p>BAGHDAD: Iraqi security authorities have revealed a "most wanted" list of people involved in terrorism in the country over the the past 14 years.</p> <p>The list seen by Arab News on Sunday includes about 60 names, mostly of senior aides of the former Iraqi president Saddam Hussein, his family members and top Daesh and Al-Qaeda leaders.</p> <p>Among the most prominent names are Saddam's daughter, Raghad Saddam Hussien, and his nephews, Omar and Ayman Saba'awi, and Ahmed Wattban Ibrahim Al-Hassan. Saddam's cousin, Rafei'a Abdulatief Telfah, is also included.</p> <p>While some of the names are already on a US wanted list for 55 Saddam-era officials, the Iraqi list provides allegations that show how far leaders from the banned Ba'ath Party have been involved with militant groups operating in Iraq since the 2003 downfall of Saddam's regime.</p> <p>The Iraqi list links the Ba'ath officials to the Army of Muhammad, the Naqshbandi Army, the Army of Mujahideen, Al-AUssra Army, Al-Qaeda and Daesh.</p> <p>The lists also included the names of many Ba'athist leaders who managed to maintain and run the party's work after the fall of Saddam in 2003 from outside Iraq. The leaders set up fixed and mobile cells in Syria, Yemen, Egypt, Jordan and Qatar, while others have been commanding armed groups fighting inside Iraq. A senior Iraqi intelligence official told Arab News that the names on the list are the "leaders of the terrorism organizations" and "all who run terrorism in Iraq."</p>

<b>HEADLINE</b>	<b>02/04 Thousands ISIS fighters flee in Syria</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/02/04/world/middleeast/isis-syria-al-qaeda.html">https://www.nytimes.com/2018/02/04/world/middleeast/isis-syria-al-qaeda.html</a>
<b>GIST</b>	<p>WASHINGTON — Thousands of Islamic State foreign fighters and family members have escaped the American-led military campaign in eastern Syria, according to new classified American and other Western military and intelligence assessments, a flow that threatens to tarnish American declarations that the militant group has been largely defeated.</p> <p>As many of the fighters flee unfettered to the south and west through Syrian Army lines, some have gone into hiding near Damascus, the Syrian capital, and in the country's northwest, awaiting orders sent by insurgent leaders on encrypted communications channels.</p> <p>Other battle-hardened militants, some with training in chemical weapons, are defecting to Al Qaeda's branch in Syria. Others are paying smugglers tens of thousands of dollars to spirit them across the border to Turkey, with an eventual goal of returning home to European countries.</p> <p>The sobering assessments come despite a concerted effort to encircle and "annihilate" — as Defense Secretary Jim Mattis put it — Islamic State fighters in Raqqa, the group's self-proclaimed capital, which fell in the fall, and pursue other insurgents who fled south into the Euphrates River Valley toward the border with Iraq.</p>

“ISIS fighters are fleeing Syria and Iraq,” the homeland security secretary, Kirstjen Nielsen, said in remarks in Washington last week. “Jihadists are going underground, dispersing to other safe havens, including on the internet, and returning to their home countries.”

Gen. Paul J. Selva, the vice chairman of the Joint Chiefs of Staff, told reporters last week that the remaining Islamic State leadership, even while on the run, still had “fairly robust” communications with its shadowy network of fighters now on the lam.

Analysts say they are also seeing signs that Islamic State fighters are adopting guerrilla tactics to terrorize civilians.

“The group is transitioning into an underground organization that places more weight on asymmetric tactics, like suicide bombings against soft targets in government-secured areas like Baghdad,” said Otso Iho, a senior analyst at Jane’s Terrorism and Insurgency Center at IHS Markit in London.

Mr. Iho cited an attack by two suicide bombers in Baghdad last month that killed three dozen people and injured 90 more. The attack took place in a busy Baghdad square where day laborers gather to look for work.

Estimates of how many fighters may have escaped into the deserts of Syria or Iraq and beyond are difficult to pin down, but American and other Western intelligence and counterterrorism analysts with access to classified assessments put the number in the low thousands. Many are traveling with spouses and children who are likely to have been radicalized during more than three years of Islamic State control of the region and could pose security risks as well, analysts say.

In December, Col. Ryan Dillon, the chief spokesman for the American-led military campaign in Iraq and Syria, said in a briefing with Pentagon reporters: “Syrian regime commanders in eastern Syria suggest that ISIS fighters” from the Middle Euphrates River Valley “may have slipped through porous Syrian and Russian defenses to arrive in areas near Damascus.”

Asked late last month by The New York Times about indications that as many as 1,000 fighters and family members had fled the Euphrates River area just in recent days, Colonel Dillon’s command replied in a statement: “We know that the Syrian regime has given ISIS the leeway to travel through their area of operations, but we cannot confirm any alleged incidents or operations that are taking place outside our area of operations.”

The United States military is concerned that a Turkish offensive against the Kurdish-dominated Syrian Democratic Forces in Afrin, in northern Syria, has worsened the problem. The S.D.F. has been working with the Americans in former Islamic State-held areas to interdict fleeing jihadists, but those efforts have been greatly reduced as the Kurds have shifted resources to reinforce Afrin.

Mustafa Balli, a spokesman for the Syrian Democratic Forces headquarters, blamed the Turkish assault on Afrin for what he said was the Islamic State’s resurgence.

“Since this invasion of Afrin by Turkey, ISIS is getting stronger in the south,” he said. “The battle against ISIS in the south, and the Turks in Afrin, is the same battle. The Turks want to give another chance to ISIS to grow again. Before the Turkish invasion, we were very close to finishing ISIS.”

Some 40,000 fighters from more than 120 countries poured into the battles in Syria and Iraq over the past four years, American and other Western officials say. While thousands died on the battlefield, officials say many thousands more probably survived to slip away to conflicts in Libya, Yemen or the Philippines, or have gone into hiding in countries like Turkey. About 295 Americans are believed to have traveled to Iraq or Syria, or tried to, American officials said.

Of more than 5,000 Europeans who joined those ranks, as many as 1,500 have returned home, including many women and children, and most of the rest are dead or still fighting, according to Gilles de Kerchove, the European Union’s top counterterrorism official.

“The thought that these foreign fighters who have participated in this fight now for over two years will quietly leave Syria and return to their jobs as shopkeepers in Paris, in Brussels, in Copenhagen, is ludicrous,” said General Selva, the vice chairman of the Joint Chiefs. “That’s a very compelling problem.”

Still, the number of Islamic State fighters returning home to Europe and North Africa has been much smaller than anticipated, counterterrorism officials say. That is in part because the Trump administration intensified its focus on preventing fighters from seeping out of Raqqa and Mosul, their former stronghold in Iraq, and more militants fought to the death than expected. Hundreds also surrendered in Raqqa.

Hundreds of others have been captured and are being held by American-backed Kurdish militias in northern Syria, raising fears among United States military officials of potentially creating a breeding ground for extremists — repeating a key security mistake of the Iraq war.

But the new assessments, bolstered by reports from analysts and smugglers in the region, suggest that Islamic State fighters are fleeing to more hospitable parts of Syria and Iraq, or to third countries where they can lie low.

Beyond the recent suicide bombings in Baghdad, a major American airstrike last month demonstrates the Islamic State’s continued resiliency and threat, military officials said.

Armed Reaper drones and Navy F/A-18 fighters from the aircraft carrier Theodore Roosevelt carried out a strike on Jan. 20 in Al Shafah, Syria, in the Euphrates River Valley, that killed about 150 fighters, the American military said. The strike, one of the largest single aerial assaults against the Islamic State in three years, was based on intelligence collected over about a week. The strike hit two large buildings that were used as a command headquarters and a media distribution center, military officials said.

The size and concentration of fighters took American officials by surprise. “The ISIS headquarters contained a heavy concentration of ISIS fighters who appear to have been massing for movement,” Maj. Gen. James B. Jarrard, commanding general for Special Operations forces in Iraq and Syria, said in a statement.

“ISIS continues to demonstrate the ability to mass large numbers in its attempt to retain a stronghold in Syria,” the American-led command in Iraq said in the same statement.

Ahmad Ramadan, the head of the Euphrates Center Against Violence and Terrorism in Istanbul, said that the Islamic State was still present in many villages east of the Euphrates River — the informal demarcation line between Russian-backed Syrian troops to the west and American-backed Syrian militias to the east. “ISIS nowadays are spreading all over Syria,” he said via Facebook chat.

Government and independent analysts in Syria and in Washington, including the Institute for the Study of War, said there was a thriving trade in smuggling Islamic State fighters across the border into Turkey, where intelligence officials believe they are linking with clandestine cells.

According to the independent British-based Syrian Observatory for Human Rights, senior Islamic State operatives from Raqqa and Deir al-Zour, in the Euphrates River Valley, have paid bribes of \$20,000 to \$30,000 for safe passage into Turkey.

<b>HEADLINE</b>	<b>02/05 ISIS, AQ support in West Africa attacks</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-02-05/islamic-state-al-qaeda-support-fuels-attacks-in-west-africa">https://www.bloomberg.com/news/articles/2018-02-05/islamic-state-al-qaeda-support-fuels-attacks-in-west-africa</a>
<b>GIST</b>	Islamist militant groups in West Africa’s Sahel region are using increased support from al-Qaeda and Islamic State and enhanced cooperation among themselves to carry out more sophisticated and deadly

attacks, according to the chief of United Nations mission in Mali.

“When we examine the explosives, the types of mines, shells and weapons they use, our experts tell us that a fairly advanced level of expertise is required that they didn’t have before,” the UN special representative in Mali, Mahamat Saleh Annadif, said Friday in an interview in the capital, Bamako.

The militant groups are operating across a semi-arid region stretching along the southern end of the Sahara from Mali to Nigeria. France has almost 4,000 soldiers in the region, and the U.S. has troops in Niger and is building a drone and airbase in the northern city of Agadez. The UN has more than 13,000 members in its Mali mission, which suffered the greatest loss of life of any of its peacekeeping operations last year.

Despite the increased military involvement by foreign powers and West African armies, the violence shows no sign of abating. The militant’s outside support is probably coming through Libya, Annadif said. They also have acquired funds from kidnappings and trafficking of drugs and migrants seeking to reach Europe.

“What is happening in Libya, what is happening in the Middle East, Syria and Iraq, has an influence,” he said. “There is a relationship between what is happening here and what is happening there, through Libya.”

A group known as the Islamic State in the Greater Sahara claimed responsibility for an attack in October on a joint patrol of U.S and Nigerien forces in which four U.S. soldiers were killed. It mostly operates near the borders of Mali, Burkina Faso and Niger, Annadif said.

The Group for the Support of Islam and Muslims, an affiliate of al-Qaeda formed last year by four local groups and known by the acronym JNIM, operates in northern and central Mali including in the towns of Kidal, Timbuktu and Mopti, Annadif said. The merger has “given an new impetus” to these groups and also explains the rising number of attacks, he said.

In Mali, militant groups have expanded their area of operations, increasingly targeting more populated central Mali. More attacks occurred in the central Mopti and Segou regions during the last three months of 2017 than in the five northern regions combined. Violence has also spread to neighboring Burkina Faso and Niger.

Attacks in Mali intensified in late January. At least 22 Malian soldiers were killed in five separate raids in north and central Mali between Jan. 25 and Jan. 31, prompting the army to impose a ban on motorcycles and pickups in some areas.

There’s also growing evidence that both al-Qaeda and Islamic State-linked groups in West Africa are now cooperating at the operational level and that there are connections with IS-affiliates in the Lake Chad region close to northeastern Nigeria, Annadif said.

Mali has been gripped by violence since ethnic Tuareg rebels began a separatist insurgency and joined forces with Islamist militants to seize control of the sparsely populated north in 2012. While a 2013 French military intervention prevented the insurgents from marching southward to the capital, jihadists resorted to attacking Mali’s military and the UN peacekeeping force that arrived after the French operation.

Militants used to mainly carry out hit-and-run attacks and bombings but are now also carrying out more complex assaults. As many as 26 civilians died when their bus hit a landmine near the town of Boni in central Mali, on Jan. 25. The mine was meant for UN peacekeepers patrolling in the region, according to Mali’s Security Minister, Salif Traore.

Delays in implementing a 2015 peace deal between Mali’s government and insurgents in the north have left a stalemate in which militants can easily recruit young fighters, Annadif said. Last month, the UN Security Council threatened to impose sanctions on the parties blocking the implementation of the accord.

	<p>“The main clauses of the accord aren’t implemented, which means that all the hopes placed on the accord have started to wane,” he said. “Many youth, who were part of armed groups and who accepted the ceasefire after the accord was signed, found themselves with a lack of guidance and have fallen prey to terrorists.”</p>

<b>HEADLINE</b>	<b>02/05 Battle over bodies quietly rages in Mosul</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-mideast-crisis-mosul-bodies-insight/battle-over-bodies-rages-quietly-in-iraqs-mosul-long-after-islamic-state-defeat-idUSKBN1FP129">https://www.reuters.com/article/us-mideast-crisis-mosul-bodies-insight/battle-over-bodies-rages-quietly-in-iraqs-mosul-long-after-islamic-state-defeat-idUSKBN1FP129</a>
<b>GIST</b>	<p>MOSUL, Iraq (Reuters) - The Iraqis who have come home to Mosul’s Old City knew it would be hard living in the rubble left by the battle against Islamic State, but there is one aspect of their surroundings they are finding unbearable seven months on.</p>

“I don’t want my children to have to walk past dead bodies in the street every day,” said Abdelrazaq Abdullah, back with his wife and three children in the quarter where the militants made their last stand in July against Iraqi and U.S.-led coalition forces.

“We can live without electricity, but we need the government to clear the corpses – they’re spreading disease and reminding us of the horrors we’ve just lived through.”

The stench of death wafts from rubble-filled corners in the dystopian wasteland of what was once West Mosul, from rusting cars still rigged with explosives and from homes abandoned as those who could, fled the bloody end of the militants three-year rule.

The corpses lying in the open on many streets are mainly militants from the extremist Sunni group who retreated to the densely-packed buildings of the Old City, where only the most desperate 5,000 of a pre-war population of 200,000 have so far returned.

Local residents and officials in predominantly Sunni Mosul say there are also thousands of civilian bodies yet to be retrieved from the ruins, a view which has put them at odds with the Shi‘ite-led government in Baghdad.

“There are no more civilian bodies to be picked up in Mosul,” said Brig Gen Mohammad Mahmoud, the head of Mosul’s Civil Defence, first responders who report to the Interior Ministry and are tasked with collecting them and issuing death certificates.

The Civil Defence says it had collected 2,585 civilian bodies by mid-January – many of them still unidentified - and has completed operations. It does not want to waste resources on the militants.

“Why should we have to give terrorists a proper burial?” Mahmoud said.

The standoff over the dead threatens to stoke the anger of a population already beaten down by a grueling war and the militants’ draconian rule in a place where Islamic State initially found some sympathy. The final civilian death toll is also a highly sensitive political issue in Iraq and beyond.

The municipal government has had to set up its own specialized team to field requests filed by city residents to find more than 9,000 missing people, most of them last seen in the Old City and assumed to be buried under the rubble.

The team is working through a backlog of 300 bodies, dispatching groups to collect them when it can. But these are just the ones where exact coordinates have been given by neighbors, family members or passers-by who saw the bodies.

“We don’t know how many more are under the rubble,” said Duraid Hazim Mohammed, the head of the municipal team. “If the family or a witness who saw the people die doesn’t call us to tell us exactly how many bodies are at a site, we have no way of knowing if one, five or 100 bodies are buried there.”

Locals say common graves were dug as the battle raged. In the courtyard of Um al-Tisaa mosque in the Old City, they say 100 of their neighbors were buried in groups of shallow graves.

“I buried between 50 and 60 people myself, by hand, as planes flew overhead and bombed the city,” resident Mahmoud Karim said.

Several families have since come to excavate the bodies of their relatives, to bury them in proper cemeteries. “But others, we don’t know where their families are,” Karim said. Some are dead, while others are among the thousands lingering uneasily in refugee camps or paying high rents elsewhere in the city.

The municipal government in Mosul has not given an exact figure for civilian casualties, but its head, Abdelsattar al-Hibbu, told Reuters it coincided with estimates of 10,000 civilians killed during the battle,

based on reports of missing people and information from officials about the dead. The toll includes victims of ground fighting and coalition bombing.

While the most visible problem in Mosul is the corpses of fighters left in the streets, residents say they have also found bodies of suspected Islamic State family members in their homes.

The owner of a house in the Old City, who asked Reuters to withhold his name for fear of retaliation from officials, said he had asked the Civil Defence for weeks to come and remove two bodies from the main bedroom of his basement home.

They were badly decomposed but the clothing was clearly that of a woman and child.

“Civil Defence refused, because they say the woman and child are Daesh,” he said using the Arabic acronym for Islamic State. “They said they’re punishing me because they think I supported Daesh.”

The municipality team has collected 348 bodies of militants so far, but there are many more still around. Residents regularly walk by them to collect water from temporary pumps and on one street, young children played not far from two corpses on a doorstep.

Some of the fighters are recognizable from their clothing, some were identified to the government by neighbors, some yet, were found clutching the weapons they used to make their last stand against surrounding Iraqi and coalition forces.

The municipal government team’s efforts are hampered by very limited funds. On several days in January, they had to halt operations amid a shortage of gloves, masks and body bags.

Some families have resorted to digging out their dead themselves, like 23-year-old Mustafa Nader, who came back to look for his great-uncle Abdullah Ahmed Hussain.

“We weren’t sure if we would find him here,” Nader said of his elderly sculptor uncle, tears in his eyes after an hour of digging unearthed his body. “I thought maybe he could have left or gone to a neighbor’s house.”

Others still have resorted to drastic measures.

Ayad came back in early January after six months in a refugee camp and found the corpses of three Islamic State fighters rotting in what remained of his living room. “The flies, the smell, the disease,” he said. “It was awful.”

The municipality team said it would be weeks before they could get to him so Ayad asked a soldier on patrol to look over the bodies and make sure there were no explosives.

Then, Ayad set them on fire.

With most of his money spent on a tarp to cover the gaping hole where his front door once stood, he borrowed \$20 from his sister, for bleach to try to erase the traces so his family of ten could move back in.

“The smell still hasn’t fully gone away,” he said.

GIST	American troops have started to draw down from Iraq following Baghdad's declaration of victory over the

	<p>Islamic State group last year, according to Western contractors at a U.S.-led coalition base in Iraq.</p> <p>Dozens of American soldiers have been transported from Iraq to Afghanistan on daily flights over the past week, along with weapons and equipment, the contractors said.</p> <p>Two Iraqi officials confirmed to The Associated Press that the U.S.-led coalition and the Iraqi government have reached an agreement to draw down troops in Iraq for the first time since the war against IS was launched over three years ago.</p> <p>The Iraqi officials said the process has not officially begun.</p> <p>However, an AP reporter at the Al-Asad base in western Iraq saw troop movements reflecting the contractors' account of a drawdown. The contractors and the Iraqi officials spoke on condition of anonymity in line with regulations and declined to reveal the exact size of the drawdown.</p> <p>"Continued coalition presence in Iraq will be conditions-based, proportional to the need and in coordination with the government of Iraq," coalition spokesman Army Col. Ryan Dillon told the AP when asked for comment.</p> <p>One senior Iraqi official close to Prime Minister Haider al-Abadi said 60 percent of all American troops currently in country will be withdrawn, according to the initial agreement reached with the United States. The plan would leave a force of about 4,000 U.S. troops to continue training the Iraqi military.</p> <p>A Pentagon report released in November said there were 8,892 U.S. troops in Iraq as of late September.</p>

<b>HEADLINE</b>	<b>02/03 Italian mob peddling pills to ISIS</b>
<b>SOURCE</b>	<a href="https://www.thedailybeast.com/the-italian-mob-is-peddling-pills-to-isis">https://www.thedailybeast.com/the-italian-mob-is-peddling-pills-to-isis</a>
<b>GIST</b>	<p>ROME—Americans may love their fentanyl, a powerful opioid responsible for a public health crisis and countless accidental overdose casualties, including those of pop stars Prince and Tom Petty. But terrorists apparently prefer tramadol, a cheaper numbing opioid that is legal in the Middle East. And they are getting plenty of it on the black market thanks to Italian ‘Ndrangheta mobsters, according to Italy’s financial police. In the last year alone, the cops have confiscated nearly 100 million tramadol tablets meant for ISIS operatives in Libya.</p> <p>Once in Libya, the pills are used to pump up fighters there, or they’re smuggled into Egypt and Syria, or they are sold to Boko Haram fighters in Nigeria, according to Marta Sarafini, whose recent exposé in the Italian daily Corriere della Sera unravels the tramadol trade. “They end up in the hands of the desperate in Gaza, the prostitutes in Amman, and child laborers in Turkey,” she says. “They are the drug for anyone who wants to escape misery.”</p> <p>They may also find their way into the American market, and with a vengeance. The barriers are low.</p> <p>On the Drug Enforcement Administration’s list of “scheduled” drugs, or “controlled substances,” where heroin, LSD and, yes, marijuana are Schedule I; fentanyl is among those listed as Schedule II; ketamine and Tylenol with codeine are Schedule III, tramadol is only Schedule IV: a substance with “a low potential for abuse relative to substances in Schedule III.”</p> <p>As the Wall Street Journal reported in 2016, tramadol is “the opioid crisis for the rest of the world.” And the combination of low penalties in the U.S., the organized peddling by the mob, along with the financial needs of the embattled “Islamic State” create a situation ripe for organized crime to push tramadol as a new drug of choice for opioid addicts.</p> <p>In Europe and North Africa, peddling the pills, which have a street value of around \$5 a piece, is fast</p>

becoming one of the Calabrian 'Ndrangheta crime syndicate's most successful enterprises. Gaetano Paci, an anti-mafia prosecutor in Calabria, confirmed the narcotic trafficking links between the deadly Calabrian mob and terrorist groups late last year after a third shipment of millions of tramadol tablets was discovered in the southern Italian port of Gioia Tauro, widely known as the mafia gateway for all things illicit.

The sprawling Calabrian mafia port has been at the center of a number of recent raids where everything from stolen antiquities to dead bodies have been found hidden in cargo crates. The average daily value of contraband and trafficked materials suspected to be run through the port is estimated to top \$1 million, according to Italy's finance police. Most of the illegal goods are hidden in shipments of pineapples, frozen fish and coconut milk, which often are rushed through because of their shorter shelf life.

(The port, the largest in Italy, was also the curious choice by the Organization for the Prohibition of Chemical Weapons (OPCW) to facilitate the 2014 transfer of 700 metric tons of Syrian chemical weapons and their precursors, which were delivered, transferred and eventually neutralized on board the U.S. Navy ship Cape Ray. Some speculated that the port was chosen because of the apparent high surveillance by police thanks to mafia activities. Others speculated that if something went awry, they could just blame it on the mob. Nothing went wrong with the Syrian weapons operation, at least as far as anyone knows.)

Italy's anti-drug trafficking agency estimates that 80 percent of all Europe's cocaine comes in from Colombia through the Calabrian port, which is also the main hub for illegal weapons, so it is little wonder it would be the port of choice for those pushing terror narcotics, too.

Gioia Tauro is now the main gateway for tramadol brought in from pill mills in India and Sri Lanka redistributed to ISIS in Libya, according to Paci, who says the 24 million pills found hidden in a fabric shipment in November were easily worth €50 million. They have also found smaller shipments of Captagon, another widely used psychostimulant known as chemical courage, which, unlike tramadol, is illegal in the Middle East and North Africa.

"Everything passes through Gioia Tauro, so it comes as no surprise to find a trafficked substance of this kind there," he told the Italian daily La Repubblica recently. "For a while we have known about ties between 'Ndrangheta and organizations in the Middle East. Even if the port has become a less secure zone for the clan, thanks to the pressure from investigations, we have traced some trafficking links and are trying to put the dots together."

Similar shipments had been sequestered in Greek ports in 2016 and 37 million pills were hidden among shampoo bottles arriving by container in Genoa in northern Italy in early 2017, all destined for a distributor in Libya who has since been proven to be affiliated with Islamic State militants there, Paci says.

Most of the pill mills are in Sri Lanka and India, but there are known manufacturers of tramadol and counterfeit Captagon, another widely used psychostimulant known as "chemical courage" in Bulgaria and Turkey.

Paci points to the fact that tramadol was found in the apartments and bodies of the terrorists who attacked the Bataclan in 2013, and in the beach massacre in Tunisia in 2015, as a worrying factor.

Tramadol, when mixed with components like caffeine, has the same effect as a powerful amphetamine, erasing fear, pain and fatigue and altering the senses. Paci's team is concerned that the recent spike in pills coming through Calabria may mean ISIS fighters are preparing for more attacks or supplying others, like Boko Haram militants, to rain down terror in Nigeria.

"They are certainly not intended for the Libyan people," a source close to the Italian anti-drug investigations told The Daily Beast. "They will be used by the fighters or sold by them."

On Wednesday, the Guardian reported that Interpol has identified 50 foreign fighters who have come into Italy through Libya on the migrant trail in the last year, apparently ready to launch new attacks in Europe. A day later, Europe's border patrol agency, Frontex, launched a new operation called Themis, named after

	<p>the Greek goddess of law and order, under which they said they would employ an “enhanced law enforcement focus.”</p> <p>“We need to be better equipped to prevent criminal groups that try to enter the E.U. undetected,” Executive Director Fabrice Leggeri said in a statement. “This is crucial for the internal security of the European Union.”</p> <p>Rita Santacroce, head of the Research Centre on Security and Crime in Vicenza, Italy, is leading a study called NarcoMap about the new terrorism drug trafficking trade. She told The Daily Beast that Europe is increasingly involved in narco-terrorism in three distinct ways. “As a manufacturer of psychoactive substances, as a route of their trafficking, and as a designated victim of the terrorists—often intoxicated by drugs that may come from the very same place they aim to destroy.”</p>

<b>HEADLINE</b>	<b>02/03 Cairo approved Israel airstrikes in Egypt</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/02/03/world/middleeast/israel-airstrikes-sinai-egypt.html">https://www.nytimes.com/2018/02/03/world/middleeast/israel-airstrikes-sinai-egypt.html</a>
<b>GIST</b>	<p>The jihadists in Egypt’s Northern Sinai had killed hundreds of soldiers and police officers, pledged allegiance to the Islamic State, briefly seized a major town and begun setting up armed checkpoints to claim territory. In late 2015, they brought down a Russian passenger jet.</p> <p>Egypt appeared unable to stop them, so Israel, alarmed at the threat just over the border, took action.</p> <p>For more than two years, unmarked Israeli drones, helicopters and jets have carried out a covert air campaign, conducting more than 100 airstrikes inside Egypt, frequently more than once a week — and all with the approval of President Abdel Fattah el-Sisi.</p> <p>The remarkable cooperation marks a new stage in the evolution of their singularly fraught relationship. Once enemies in three wars, then antagonists in an uneasy peace, Egypt and Israel are now secret allies in a covert war against a common foe.</p> <p>For Cairo, the Israeli intervention has helped the Egyptian military regain its footing in its nearly five-year battle against the militants. For Israel, the strikes have bolstered the security of its borders and the stability of its neighbor.</p> <p>Their collaboration in the North Sinai is the most dramatic evidence yet of a quiet reconfiguration of the politics of the region. Shared enemies like ISIS, Iran and political Islam have quietly brought the leaders of several Arab states into growing alignment with Israel — even as their officials and news media continue to vilify the Jewish state in public.</p> <p>American officials say Israel’s air campaign has played a decisive role in enabling the Egyptian armed forces to gain an upper hand against the militants. But the Israeli role is having some unexpected consequences for the region, including on Middle East peace negotiations, in part by convincing senior Israeli officials that Egypt is now dependent on them even to control its own territory.</p> <p>Seven current or former British and American officials involved in Middle East policy described the Israeli attacks inside Egypt, all speaking on the condition of anonymity to discuss classified information.</p> <p>Both neighbors have sought to conceal Israel’s role in the airstrikes for fear of a backlash inside Egypt, where government officials and the state-controlled media continue to discuss Israel as a nemesis and pledge fidelity to the Palestinian cause.</p> <p>The Israeli drones are unmarked, and the Israeli jets and helicopters cover up their markings. Some fly circuitous routes to create the impression that they are based in the Egyptian mainland, according to American officials briefed on their operations.</p>

In Israel, military censors restrict public reports of the airstrikes. It is unclear if any Israeli troops or special forces have set foot inside Egyptian borders, which would increase the risk of exposure.

Mr. Sisi has taken even more care, American officials say, to hide the origin of the strikes from all but a limited circle of military and intelligence officers. The Egyptian government has declared the North Sinai a closed military zone, barring journalists from gathering information there.

Behind the scenes, Egypt's top generals have grown steadily closer to their Israeli counterparts since the signing of the Camp David accords 40 years ago, in 1978. Egyptian security forces have helped Israel enforce restrictions on the flow of goods in and out of the Gaza Strip, the Palestinian territory bordering Egypt controlled by the militant group Hamas. And Egyptian and Israeli intelligence agencies have long shared information about militants on both sides of the border.

Israeli officials were concerned in 2012 when Egypt, after its Arab Spring revolt, elected a leader of the Muslim Brotherhood to the presidency. The new president, Mohamed Morsi, pledged to respect the Camp David agreements. But the Israelis worried about the Muslim Brotherhood's ideological kinship with Hamas and its historic hostility to the Jewish state itself.

A year later, Mr. Sisi, then the defense minister, ousted Mr. Morsi in a military takeover. Israel welcomed the change in government and urged Washington to accept it. That solidified the partnership between the generals on both sides of the border.

The North Sinai, a loosely governed region of mountainous desert between the Suez Canal and the Israeli border, became a refuge for Islamist militants in the decade before Mr. Sisi took power. The main jihadist organization, Ansar Beit al Maqdis — the Partisans of Jerusalem — had concentrated on attacking Israel, but after Mr. Sisi's takeover it began leading a wave of deadly assaults against Egyptian security forces.

A few weeks after Mr. Sisi took power, in August 2013, two mysterious explosions killed five suspected militants in a district of the North Sinai not far from the Israeli border. The Associated Press reported that unnamed Egyptian officials had said Israeli drones fired missiles that killed the militants, possibly because of Egyptian warnings of a planned cross-border attack on an Israeli airport. (Israel had closed the airport the previous day.)

Mr. Sisi's spokesman, Col. Ahmed Ali, denied it. "There is no truth in form or in substance to the existence of any Israeli attacks inside Egyptian territory," he said in a statement at the time, promising an investigation. "The claims of coordination between the Egyptian and Israeli sides in this matter are totally lacking in truth and go against sense and logic."

Israel declined to comment, and the episode was all but forgotten.

Two years later, however, Mr. Sisi was still struggling to defeat the militants, who by then had killed at least several hundred Egyptians soldiers and policemen.

In November 2014, Ansar Beit al Maqdis formally declared itself the Sinai Province branch of the Islamic State. On July 1, 2015, the militants briefly captured control of a North Sinai town, Sheikh Zuwaid, and retreated only after Egyptian jets and helicopters struck the town, state news agencies said. Then, at the end of October, the militants brought down the Russian charter jet, killing all 224 people aboard.

It was around the time of those ominous milestones, in late 2015, that Israel began its wave of airstrikes, the American officials said, which they credit with killing a long roster of militant leaders.

Though equally brutal successors often stepped in to replace them, the militants appeared to adopt less ambitious goals. They no longer dared trying to close roads, set up checkpoints or claim territory. They moved into hitting softer targets like Christians in Sinai, churches in the Nile Valley or other Muslims they view as heretics. In November 2017, the militants killed 311 worshipers at a Sufi mosque in the North

Sinai.

By then, American officials say, the Israelis were complaining to Washington that the Egyptians were not holding up their end of the arrangement. Cairo, they said, had failed to follow the airstrikes with coordinated movements of its ground troops.

Although Israeli military censors have prevented the news media there from reporting on the strikes, some news outlets have circumvented the censorship by citing a 2016 Bloomberg News report, in which an unnamed former Israeli official said there had been Israeli drone strikes inside of Egypt.

Zack Gold, a researcher specializing in the North Sinai who has worked in Israel, compared the airstrikes to Israel's nuclear weapons program — also an open secret.

“The Israeli strikes inside of Egypt are almost at the same level,” he said. “Every time anyone says anything about the nuclear program, they have to jokingly add ‘according to the foreign press.’ Israel’s main strategic interest in Egypt is stability, and they believe that open disclosure would threaten that stability.”

Inside the American government, the strikes are widely known enough that diplomats and intelligence officials have discussed them in closed briefings with lawmakers on Capitol Hill. Lawmakers in open committee hearings have alluded approvingly to the surprisingly close Egyptian and Israeli cooperation in the North Sinai.

In a telephone interview, Senator Benjamin L. Cardin of Maryland, the ranking Democrat on the Senate Foreign Relations Committee, declined to discuss specifics of Israel's military actions in Egypt, but said Israel was not acting “out of goodness to a neighbor.”

“Israel does not want the bad stuff that is happening in the Egyptian Sinai to get into Israel,” he said, adding that the Egyptian effort to hide Israel's role from its citizens “is not a new phenomenon.”

Some American supporters of Israel complain that, given Egypt's reliance on the Israeli military, Egyptian officials, diplomats and state-controlled news media should stop publicly denouncing the Jewish state, especially in international forums like the United Nations.

“You speak with Sisi and he talks about security cooperation with Israel, and you speak with Israelis and they talk about security cooperation with Egypt, but then this duplicitous game continues,” said Representative Eliot L. Engel of New York, the ranking Democrat on the House Foreign Relations Committee. “It is confusing to me.”

Israel's prime minister, Benjamin Netanyahu, has also pointedly reminded American diplomats of the Israeli military role in Sinai. In February 2016, for example, Secretary of State John Kerry convened a secret summit in Aqaba, Jordan, with Mr. Sisi, King Abdullah of Jordan and Mr. Netanyahu, according to three American officials involved in the talks or briefed about them.

Mr. Kerry proposed a regional agreement in which Egypt and Jordan would guarantee Israel's security as part of a deal for a Palestinian state.

Mr. Netanyahu scoffed at the idea.

Israeli's military was already propping up Egypt's military, he said, according to the Americans. If Egypt was unable to control the ground within its own borders, Mr. Netanyahu argued, it was hardly in a position to guarantee security for Israel.

**HEADLINE** 02/04 Attacker as intersection of crime, terror

SOURCE	<a href="http://abcnews.go.com/International/wireStory/islamic-state-attacker-shows-intersection-crime-terror-52827231">http://abcnews.go.com/International/wireStory/islamic-state-attacker-shows-intersection-crime-terror-52827231</a>
GIST	<p>He is the mute survivor of the 10-man Islamic State cell that terrorized Paris in November 2015, refusing all pleas to shed light on the attack that left 130 dead or another one in Brussels just four days after his arrest.</p> <p>After nearly three years jailed in isolation and silence, Salah Abdeslam goes on trial Monday in his hometown of Brussels for a police shootout that he himself fled. The man who covered for his getaway with a spray of automatic gunfire died. Abdeslam's escape was short-lived — he was captured on March 18, 2016, in the same Brussels neighborhood where he and many of his Islamic State fighter colleagues had grown up.</p> <p>Four days later, Islamic State suicide attackers struck again, this time at the Brussels airport and subway. In all, that sprawling network of IS fighters killed 162 people in the two European capitals. Most of the extremists were French speakers, raised in one of the cities they struck. The plot's execution depended upon Islamic State's success in wedding crime and religion.</p> <p>Abdeslam, who along with his brother was suspected of dealing drugs from the bar they ran, is the starkest example of that convergence. But in Paris, the trial of three men accused of giving safe haven to the attackers also provides a revealing look at the intersection that made possible the deadliest terror attacks in Europe since World War II.</p> <p>The operational commander of the cell was Abdelhamid Abaaoud, a petty criminal who used his home neighborhood of Molenbeek in Brussels as a fertile recruiting ground for IS. Abaaoud even recruited his younger brother, then 14. But many of the young men who followed him into IS were small-time criminals themselves, part of the extremist organization's deliberate attempt to make use of "skills" that include accessing black market weapons, forging documents and handling covert logistics .</p> <p>When the night of carnage in Paris — Nov. 13, 2015 — was finally over, seven attackers were dead and three were on the run: Abdeslam, Abaaoud and another Molenbeek native named Chakib Akrouh. Abdeslam called friends in Brussels to drive through the night and pick him up. Abaaoud also called his cousin, Hasna Ait Belkacem, who lived in a suburb of Paris and vacillated between hard-line Islam and even harder drug use. She was happy to help. She called her dealer. He called another dealer.</p> <p>It took a few days of sleeping under bushes, but for 150 euros (\$187) wired from Belgium, they secured a room in the Paris neighborhood of Saint-Denis, near the national stadium they had attacked on Nov. 13. In the pre-dawn hours of Nov. 18, frantic French investigators tipped off by a friend of Ait Belkacem tracked them to the building and sealed off the neighborhood.</p> <p>Abaaoud, Ait Belkacem and Akrouh all died when Akrouh detonated a suicide vest.</p> <p>Just before his building crumbled to the ground, one of the drug dealers, Jawad Bendaoud, showed up to find out what was happening and explained on live television that he was just "doing a service" by renting out his room. With the cameras still rolling , Bendaoud was taken into custody.</p> <p>At their trial, his fellow dealer, Mohammed Soumah, explained how he framed the world: Good citizens, delinquents, rapists, and terrorists.</p> <p>"Me, I don't fit in the terrorist box. I'm a thug, a scumbag," Soumah told the judge. But there he was sitting in the box for terrorism defendants in central Paris alongside Bendaoud. As for why neither man made the connection between the two Belgians desperate for a hideout amid a massive police manhunt and an outpouring of grief for France's 130 victims, Soumah had another explanation.</p> <p>"The criminal life goes on," he said.</p> <p>But the lines between terrorists and criminals are less clear now than ever, said Peter Neumann, director of</p>

the International Centre for the Study of Radicalisation.

"ISIS is perhaps the first jihadist group that has explicitly targeted this demographic, and they've done it very consciously and especially in Europe," he said. "What we saw in Brussels and Paris — this is not an isolated case. This is actually reflecting the situation across Europe. If you go to Sweden, Norway, Holland, Germany, they will all tell you that 50 percent plus of the people who have turned up traveling to Syria or involved in domestic plots have previous criminal convictions, often for petty crime."

On Friday, a Belgian career criminal was transferred into French custody over allegations that he housed the jihadi who attacked the Thalys high-speed train between Brussels and Paris. The suspect, Youssef Siraj, is also believed to have put up some of the Brussels attackers, according to the Belgian news site DH. The same group is also linked to a raid in the Belgian town of Verviers, where authorities say a jihadi cell was on the verge of a coordinated attack against police.

"We are coming to realize that Verviers, Thalys, Nov. 13, the attacks of March 22, it's a large and perhaps single operation of Daesh," Belgian federal prosecutor Frederic Van Leeuw said, using another term for IS. All were bound by ties of crime and extremism.

The jihadi who wired the money to pay Bendaoud and Soumah was himself a petty criminal in Sweden before joining the Islamic State group, a thief who picked up firearms skills during his time in Syria named Mohamed Belkaid. It was also Belkaid who opened fire on Belgian police as they raided Abdeslam's Brussels hideout. He was shot dead in the March 15, 2016, raid.

Abdeslam escaped through a window over the rooftops.

He was traced to a cousin's apartment on March 18, 2016, near his Molenbeek home. Still more members of the cross-border Islamic State cell struck Brussels on March 22, 2016, including the bomb-maker for both attacks. Thirty-two people were killed in Brussels, along with three suicide attackers.

Abdeslam has been imprisoned ever since. This week's trial marks the first time he has been seen in public since his capture.

According to the French network France Inter, Abdeslam stored a message in his computer similar to the farewells written by other jihadis ahead of suicide attacks.

In it, France Inter reported, he explained that his suicide belt malfunctioned in Paris and that, although he dreamed of going to Syria "upon reflection, I concluded that the best thing would be to finish the job with the brothers."

<b>HEADLINE</b>	<b>02/03 Singapore prepares for militant attack</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-singapore-security/its-when-not-if-singapore-worries-and-prepares-for-militant-attack-idUSKBN1FO04L">https://www.reuters.com/article/us-singapore-security/its-when-not-if-singapore-worries-and-prepares-for-militant-attack-idUSKBN1FO04L</a>
<b>GIST</b>	<p>SINGAPORE (Reuters) - Armed officers patrol a train station where television screens and giant posters warn of the threat from militants. Nearby, fake gunmen storm a shopping mall in one of many recent terror attack simulations.</p> <p>But this is not some war-ravaged country. It is one of the safest in the world, Singapore.</p> <p>The wealthy island-state has a near-perfect record of keeping its shores free from terror, but as it prepares to host defence ministers from around Southeast Asia this week, it appears to have good reason to have prioritized stopping the spread of militancy in the region.</p> <p>The cosmopolitan financial hub, which was second only to Tokyo in The Economist Intelligence Unit's</p>

Safe Cities Index in 2017, says it has been the target of militant plots for years, some stemming from its Muslim-majority neighbors, and that it's a matter of 'when' and not 'if' militants will strike.

"Singapore continues to face a serious security threat from both homegrown radicalised individuals and foreign terrorists who continue to see Singapore as a prized target," Singapore's Ministry of Home Affairs (MHA) said in response to e-mailed questions from Reuters.

Singapore authorities say they have been a target of Islamic extremism since the 1990s, but efforts to deter terrorism have stepped up markedly in recent years with more frequent attacks on Western countries and after Islamic State (IS) militants briefly took over a town in the southern Philippines last year.

Raising further concerns about the threat to the island, a Singaporean soldier has featured on a number of Islamic State promotional videos, most recently in December where he was filmed executing men alongside other militants.

In its inaugural Terrorism Threat Assessment Report released last year, the MHA said Islamic State has demonstrated that Singapore is "very much on its radar" and that the threat to the country remains "the highest in recent years" - claims that are backed up by security experts.

"Singapore, being known as safe and secure, makes it such a risk target," said Dan Bould, Asia director of crisis management at professional services firm Aon and a former captain in the British army.

"If there's an attack in the Philippines, it may get half an hour in a 24-hour news cycle. An attack in Singapore with all the multicultural individuals operating here, will be within the narrative for a few days at least."

In early 2017, Aon lifted Singapore in the terrorism and political violence category of its annual risk map from negligible to low risk.

The reality is that Singapore has so far escaped the attacks seen in other major world cities like New York, London and Berlin in recent years. That's why it is at the bottom of the 2017 Global Terror Index, with no reported terror-related attacks post 9/11.

But three in four Singaporeans believe that it's only a matter of time before the country experiences a terror attack, a poll by the local newspaper Sunday Times last year showed.

Singapore authorities certainly do not want their citizens to be complacent. Everyone, including school children, is encouraged to download a mobile app that alerts them to emergency situations and allows them to send in videos and photos of suspicious events.

The MHA said that as of the end of last year, more than 1.3 million devices were equipped with the SGSecure app, a large chunk of the population of around 5.6 million.

Simulations of terror attacks - including one just over a week ago where masked gunman stormed a children's activity center on the resort island of Sentosa - are regular. Last month, Singapore's military undertook its biggest mobilization exercise in more than three decades, including an inter-agency response to the simulation of a gunman at its national stadium.

Authorities said last year there was reliable information that IS militants were considering carrying out an attack in Singapore in the first half of 2016, a threat which they said was countered.

In August 2016, neighboring Indonesia, which has the world's largest Muslim population, arrested six suspects with links to IS who were accused of plotting rocket attacks on Singapore's iconic Marina Bay Sands hotel.

Malaysia, Singapore's northern neighbor which also has a Muslim-majority, and Indonesia say thousands

of their citizens sympathize with IS and hundreds are believed to have traveled to Syria to join the group. Regional security officials say many are returning home after reverses in the Middle East.

Singapore takes a hardline approach to suspected radicals and Bilveer Singh, an adjunct senior fellow at the Rajaratnam School of International Studies, says it is one of the reasons behind its success so far.

The most controversial measure at its disposal is its colonial-era Internal Security Act which allows for suspects to be held for lengthy periods without trial.

The MHA said it currently has 20 people detained under the Act for “terrorism-related” activities, and since 2002 has held close to 90 for such activities.

“ISA is a fantastic deterrent, and so far it has worked,” Singh said.

Authorities have also deported scores of foreigners for suspected radicalism in recent years, and in October banned two popular Muslim preachers from Zimbabwe and Malaysia from entering the city-state, saying their views bred intolerance and were a risk to its social harmony.

<b>HEADLINE</b>	<b>02/03 Group: Turkey shooting Syria refugees</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/03/middleeast/turkey-border-guard-syria-hrw/index.html">https://www.cnn.com/2018/02/03/middleeast/turkey-border-guard-syria-hrw/index.html</a>
<b>GIST</b>	<p>(CNN)Syrians attempting to flee violence and seek refuge in Turkey are facing indiscriminate fire by Turkish border guards, Human Rights Watch said Saturday.</p> <p>Syrian asylum seekers leaving the brutality of Idlib province in northwest Syria "are being forced back with bullets and abuse," according to Lama Fakih, deputy director of Human Rights Watch's Middle East and North Africa division.</p> <p>In just a month, from December 15 to January 15, about 247,000 Syrians were displaced to the border area, according to the United Nations.</p> <p>"As fighting in Idlib and Afrin displaces thousands more," Fakih said, "the number of Syrians trapped along the border willing to risk their lives to reach Turkey is only likely to increase."</p> <p>The Human Rights Watch report comes amid rising tensions along the Turkey-Syria border as Turkey's military has moved into northern Syria. The incursion has opened up another front in the long-running Syrian conflict, now stretching into its seventh year.</p> <p>Asylum seekers also must travel a dangerous terrain "littered with landmines, steep climbs, narrow paths along ravines, and valleys." The rights group said most families exhaust all their resources paying smugglers anywhere from \$300 to \$8,000 per person to reach Turkey.</p> <p>Turkey is home to more Syrian refugees than any other country in the world, hosting around 3.5 million, according to Human Rights Watch. But the group said, "Turkey's generous hosting of large numbers of Syrians does not absolve it of its responsibility to help those seeking protection at its borders."</p> <p>On January 20, Turkey launched a ground offensive across the border into northern Syria, which it dubbed Operation Olive Branch. Turkey said the operation, with the help of the Free Syrian Army, aims to clear Syrian territories of all terrorist groups and create a safe environment to facilitate the permanent return of Syrian refugees to their country.</p>

<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/04/middleeast/syria-aftrin-turkish-soldiers-killed/index.html">https://www.cnn.com/2018/02/04/middleeast/syria-aftrin-turkish-soldiers-killed/index.html</a>
<b>GIST</b>	<p>(CNN)Turkey's Prime Minister warned that Kurdish YPG forces will pay "twice as much" following the deaths of seven Turkish soldiers in Syria's Afrin province.</p> <p>Prime Minister Binali Yildirim made the threat in a tweet Saturday, Turkey's state media said, which marked Turkey's deadliest day in its military operation dubbed "Operation Olive Branch" in northern Syria.</p> <p>Turkish forces entered the Afrin area in an attempt to drive US-backed, Syrian-Kurdish YPG militia from the area last month.</p> <p>Five Turkish soldiers were killed when a tank was destroyed by a missile in Sheikh Haruz, northeast of Afrin, Turkish state media reported.</p> <p>Footage of the attack, released by the militia's media center, showed a speck of light flying across a field, hurling toward a distant target. Moments later, a tank explodes in a powerful ball of orange flames.</p> <p>Turkish armed forces said a sixth soldier was killed near the border town of Kilis, and another died in an undisclosed location fighting militia forces, Anadolu reported.</p> <p>Turkey launched "Operation Olive Branch" on January 20 with the aim of ending the US-allied militia control of Afrin and the surrounding region along the Syrian-Turkish border. Turkey has long wanted to establish a safe zone: a 19-mile-wide strip of land in Syria along the border that Turkey helps control.</p> <p>In Ankara's eyes, Syrian Kurds are virtually indistinguishable from Kurdish separatists in Turkey, a group it has long considered terrorists. The Kurdish YPG control a large chunk of northern Syria, so a safe zone would create a buffer along the border.</p>

<b>HEADLINE</b>	<b>02/03 Turkey: 8 troops killed Syria operation</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/rebel-stronghold-northwestern-syria-heavily-bombed-52814668">http://abcnews.go.com/International/wireStory/rebel-stronghold-northwestern-syria-heavily-bombed-52814668</a>
<b>GIST</b>	<p>Turkey said eight of its troops were killed Saturday in Ankara's military operation against a Syrian Kurdish militia, the deadliest day in the two-week-old offensive in the enclave of Afrin, while in another part of Syria, al-Qaida-linked militants downed a Russian fighter jet, then shot and killed the pilot.</p> <p>In a statement late Saturday, the Turkish military said five soldiers were killed after their tank in Syria came under attack near Afrin. The soldiers could not be saved despite all attempts, it said.</p> <p>Earlier in the day, three Turkish soldiers were reported killed in the Afrin offensive — one was killed in the area of the tank attack, another in northern Syria and the third on the Turkish side of the border in what Ankara said was an attack by Syrian Kurdish militiamen.</p> <p>The total death toll for Turkish troops since the operation, codenamed Olive Branch, started on Jan. 20 now stands at 13.</p>

<b>HEADLINE</b>	<b>02/02 Reserve soldiers to deploy overseas</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/citizen-warriors-to-support-operation-enduring-freedom/281-514072557">http://www.king5.com/article/news/local/citizen-warriors-to-support-operation-enduring-freedom/281-514072557</a>
<b>GIST</b>	In Marysville, Army Reserve Soldiers prepare to go overseas in support of Operation Enduring Freedom.

Families and friends are not told details about what their loved ones will be doing, or even when they will return.

The 477th Transportation Company is made up of about 100 citizen warriors. They will soon be in Kuwait.

Friday night was not easy for families who gathered at Marysville Armed Forces Reserve Center.

Barry Lovell traveled from Bellingham to say goodbye to his son, Tyler.

"As long as I can remember, he always wanted to serve his country and be in the military, and this is his first opportunity to go overseas and put his boots on the ground. This is a moment for us to be proud of him," said Lovell.

Specialist Taylor Walton will have to be away from girlfriend, Olivia. His parents traveled from Idaho to see him off.

Mom, Jeni Walton said she is "honored and proud." Dad, Mark Walton said it was his son's first deployment.

It is a first for the Carpenter family too. Toni remembers when she first learned that her husband, Mika, would be deployed.

"I was pretty shocked and scared at the same time. A lot of things run through your mind," said Toni.

While he's away, she'll take care of 1-year-old Isabella and Caleb who is almost 4-years-old.

"This is going to be a hard challenge for all of us that go, but what people don't realize is it usually is a harder challenge for everyone who is back here," said Lt. Jacob Brewer.

The Army says world events can create a need to activate reserve units. Deployment for Army Reserve Soldiers can last up to two years.

<b>HEADLINE</b>	<b>02/03 Suicide bomber kills 11 in Pakistan</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-pakistan-attack/suicide-bomber-kills-at-least-11-soldiers-in-northern-pakistan-idUSKBN1FN0IK?il=0">https://www.reuters.com/article/us-pakistan-attack/suicide-bomber-kills-at-least-11-soldiers-in-northern-pakistan-idUSKBN1FN0IK?il=0</a>
<b>GIST</b>	<p>PESHAWAR, Pakistan (Reuters) - At least 11 soldiers were killed and 13 wounded on Saturday in a suicide attack near an army base in northern Pakistan, officials said, in a region that was once controlled by a local faction of the Taliban.</p> <p>Attacks have decreased sharply in the picturesque Swat Valley but can cause alarm in a region where Pakistani Taliban insurgents took partial control in 2007, before being ousted two years later in a major military operation hailed as an important blow against Islamist violence.</p> <p>Swat was the first sizeable region outside Pakistan's lawless tribal regions bordering Afghanistan to fall to the militants. More than 2,000 Taliban fighters have been driven out of the region, government officials say.</p> <p>The Pakistan Army's public relations wing said in a statement that the "suicide attack" in the Swat Valley took place at the "army unit sports area".</p> <p>The attack was claimed by the Tehreek-e-Taliban, also known as the Pakistani Taliban, in a statement sent to the media.</p>

	“God willing Tehreek-e-Taliban has started the process of revenge attacks,” Taliban spokesman Mohammad Khurasani said in the statement. “Wait for more (attacks) to follow.”

<b>HEADLINE</b>	<b>02/03 Afghan attacks ‘want to spark uprising’</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/news/world-asia-42929370">http://www.bbc.com/news/world-asia-42929370</a>
<b>GIST</b>	<p>Militants are targeting civilians in Kabul hoping chaos will spark an uprising, Afghanistan's interior minister has told the BBC.</p> <p>In the past two weeks four major attacks - two by the Taliban and two by the Islamic State group - have killed a total of 130 people across the country.</p> <p>Interior Minister Wais Barmak says the two groups share the same aim - "to provoke people against the government".</p> <p>But a jailed ex-IS fighter told the BBC that the two had distinct approaches.</p> <p>"For the Taliban if someone from the government repents he should be forgiven. But IS say he should be killed," said the man, to whom the BBC was given rare access, with members of the Afghan intelligence agencies present during the interview.</p> <p>"IS preaches that only they are real Muslims, not the Taliban", and "does not believe in mercy", the prisoner, who did not want to be identified, added.</p> <p>While the Taliban control far more territory across Afghanistan than Islamic State, IS has been more focused on attacking Kabul - carrying out at least 14 major attacks in in the city over 2017, significantly more than the Taliban.</p> <p>Some analysts believe that the recent spate of attacks by the Taliban in Kabul represent a competition between the two groups for international notoriety.</p> <p>But Afghan officials often say that there is no tangible difference between the Taliban and IS.</p> <p>The two are targeting civilians "to provoke people against the government, so the government will fall apart... and there will be chaos," the interior minister told the BBC.</p> <p>They both "come from the same source," alleging that Pakistan provides safe havens to both groups.</p> <p>Many Afghans have expressed anger at the government's failure to prevent the attacks.</p> <p>Many IS fighters in Afghanistan were former Taliban. The prisoner said he was among many in his unit who had been forced to switch allegiance.</p> <p>He said he had received one month's training by IS in northern Pakistan, but did not mention that the group had any ties to Pakistani officials. He said IS would dismiss the Taliban as "Pakistani agents".</p> <p>Many of the IS attacks in Kabul have targeted the capital's Shia minority, whom IS militants hold to be heretics.</p> <p>Journalist Syed Azizullah survived a suicide bombing in December on a cultural centre that killed over 40 people.</p> <p>"In the past, Shias living in the countryside used to come to Kabul because it was safer," he told the BBC.</p>

	"Now my relatives in the outskirts tell me to leave Kabul because it's become so dangerous here."

<b>HEADLINE</b>	<b>02/03 Outcry over mutilated Kurdish fighter</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/news/world-middle-east-42929247">http://www.bbc.com/news/world-middle-east-42929247</a>
<b>GIST</b>	<p>Kurds in Syria have reacted furiously to videos showing Turkish-backed rebels abusing the body of a female Kurdish fighter killed in battle.</p> <p>Barin Kobani was part of all-female unit challenging a Turkish-led offensive in north-west Syria.</p> <p>Kurdish officials accused fighters allied with Turkey of "playing with her corpse" and mutilating it.</p> <p>Last month, Turkish troops and allied Syrian rebels launched a campaign to capture the Kurdish-held Afrin region.</p> <p>Barin Kobani was killed during fighting earlier this week in the northern part of the region, reports say. She was in her mid-20s, and joined the Kurdish all-female unit known as the YPJ in 2015.</p> <p>The group is part of the YPG (People's Protection Units), seen by Turkey as a terrorist group and an extension of the banned Kurdistan Workers' Party (PKK), which has fought for Kurdish autonomy in south-eastern Turkey for three decades.</p> <p>The US has provided the YPG and allied Arab fighters with weapons and air support to help them battle the jihadist group Islamic State (IS) in Syria.</p> <p>Two videos emerged earlier this week, and the woman was soon identified as Barin Kobani.</p> <p>The footage shows a group of rebels standing around the bloodied body of a woman lying on the ground. Parts of her torso appear to have been cut.</p> <p>"We hold the Turkish government responsible for this heinous act," Kurdish-led authorities said. One unconfirmed report claimed she had been captured alive before being killed.</p> <p>Local official Aldar Khalil condemned the rebels' "moral decadence".</p> <p>Turkey has not publicly commented on the issue. The rebels involved in the videos have not been identified.</p>

<b>HEADLINE</b>	<b>02/03 Families sue Chiquita over deaths</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/02/03/families-sue-chiquita-over-deaths-americans-in-colombia.html">http://www.foxnews.com/us/2018/02/03/families-sue-chiquita-over-deaths-americans-in-colombia.html</a>
<b>GIST</b>	<p>MIAMI – The families of six Americans kidnapped and killed in Colombia during the 1990s by the terrorist organization known as FARC are seeking potentially tens of millions of dollars in damages from banana giant Chiquita Brands International because of payments the company made to the group.</p> <p>Trial is scheduled to begin with jury selection Monday in West Palm Beach federal court in lawsuits that accuse Chiquita of violating the Anti-Terrorism Act. Chiquita has admitted paying FARC — the Spanish acronym for the Revolutionary Armed Forces of Colombia — about \$220,000 but insists it did so only to protect its employees and interests from violence.</p> <p>One \$10,000 payment to the guerrillas was hidden in a spare tire on the back of a Jeep, according to court documents.</p> <p>The families claim Chiquita's financial support of FARC, as a known terrorist group, means it should be held responsible for the Americans' deaths and pay damages. The families must prove that Chiquita executives knew FARC was engaged in violent terror acts that could affect Americans and that the deaths of their loved ones were foreseeable when the payments were made, said plaintiffs' attorney Gary Osen.</p> <p>"These are folks who have been through an enormous amount in their lives. They've waited 10 years for their day in court," Osen said.</p> <p>In a statement issued in January, Switzerland-based Chiquita said its only motivation in paying FARC was protecting its own employees from violence.</p> <p>"We have been clear that, at all times, the company prioritized the safety of its employees and their families, and acted accordingly," the statement said.</p> <p>FARC and other paramilitary groups were engaged in a decades-long civil war in Colombia that took thousands of lives. The bloodshed finally ended in 2016 when a peace accord was signed. Chiquita also admitted paying \$1.7 million to a right-wing group opposed to FARC, eventually pleading guilty in 2007 to a U.S. crime and paying a \$25 million fine.</p> <p>It was only after that case became public that family members of the six Americans slain by FARC learned that Chiquita had also paid FARC, leading to the lawsuits.</p> <p>Five of the Americans killed by FARC were members of a missionary group based in Sanford, Florida, called New Tribes Mission: David Mankins, Rich Tenenoff, Mark Rich, Stephen Welsh and Timothy Van Dyke. The sixth, Frank Pescatore Jr., was a geologist for an Alabama company working on a project in Colombia who was shot trying to escape his kidnapers, according to court documents.</p> <p>Tania Julin of Winter Springs, Florida, was married to Rich the night he was kidnapped on Jan. 31, 1993 in the village of Pucuro, Panama, about 15 miles from the Colombian border. She said armed men burst into their home — where their two young daughters were sleeping — tied Rich up and ordered he, Mankins and Tenenoff to march into the jungle.</p>

She never saw her husband again.

"It was so terrifying. I just never imagined. It was so out of the blue and unexpected. I was only 23 years old, with two little kids," said Julin, who now teaches kindergarten. "I was just terrified of what might happen and so confused about why anyone would do this to us. We were only there to help people."

"I have never been so afraid in all of my life."

Later, FARC demanded a \$5 million ransom for the three, but it soon became apparent the men had likely been killed, Julin said. It took years for the families to find out for sure, and they never received any remains.

"The years of not knowing were so difficult. Christmases would go by and the one thing the girls wanted for Christmas was for their dad to come home. It was lots of years of disappointing heartaches and hard to watch to girls grow up without their dad," she said.

Well before their deaths in the 1990s, Chiquita had established about 35 banana farms in the Uraba region of Colombia that employed about 3,000 people. It was well known that FARC was active in the area and routinely used extortion and threats to obtain payments from people and businesses — a practice called "vacuna," which is Spanish for "vaccine."

FARC's initial payment demand from Chiquita came in 1989, when the group sought \$10,000. Court papers show Chiquita executives decided to make the payment, the first of 57 it would give to FARC over the next decade.

A consulting company called Control Risks that worked with Chiquita outlined the dire nature of the issue in a memo at the time, court documents show:

"You have to pay. These people are serious. The military is not able to control them," the memo said. "You can't just turn them in, give their names to someone. Because they will take retribution for that, and you can expect violence."

Ultimately, a Chiquita executive traveled to Colombia with \$10,000 in cash, exchanged it for Colombian pesos and arranged to deliver the money hidden in the Jeep spare tire to a FARC guerrilla, court documents show.

Despite their insistence the money was paid to protect employees, Chiquita executives at the time discussed it in terms of a cost of doing business — and the company had no intention then of ending its banana operations in Colombia, the documents show.

"We're not going to stop doing business in Colombia because, you know, we're going to have to spend an extra \$25,000. That's not realistic. Right?" one executive was quoted as saying.

U.S. District Judge Kenneth Marra, who will preside over the estimated four-week trial, ruled in January that Chiquita cannot use a defense that the payments were made solely under duress.

<b>HEADLINE</b>	<b>02/02 Super Bowl city was home for terrorists</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/sports/super-bowl-city-was-home-dozens-isis-other-terror-suspects-n844066">https://www.nbcnews.com/news/sports/super-bowl-city-was-home-dozens-isis-other-terror-suspects-n844066</a>
<b>GIST</b>	<p>MINNEAPOLIS — A city that's spawned a surprising number of terror suspects is hosting this year's Super Bowl, but local law enforcement officials say they're ready to protect Sunday's big game.</p> <p>The Minneapolis-St. Paul area has been home to the third highest number of terror prosecutions in the U.S. since 9/11, behind only the much larger metropolitan regions of New York and Washington, D.C. Twelve Twin Cities residents have been charged with providing support to ISIS and 20 have been arrested for alleged support of the Somali terror group al Shabab in the past nine years. Between 2011 and 2014, 13 locals died fighting for al Shabab and ISIS, according to U.S intelligence officials.</p> <p>ISIS has continually called for attacks on large-scale events and the possibility of someone hearing those calls is not lost on the FBI's Joe Rivers, who's in charge of terrorism investigations in Minneapolis.</p> <p>Rivers says the FBI and local law enforcement are more concerned about the potential for lone wolves to attack with a vehicle or a firearm than a sophisticated operation. "I think we're more worried about the fact that an individual is inspired to potentially do something," said Rivers, "and that they find the means and the mechanisms to go ahead and do that either on their own or with very little help."</p> <p>To prepare and respond to any potential incident the FBI says it has brought in 200 extra agents who are a part of 1,000 federal agents from multiple agencies composing the largest deployment in Super Bowl history. Minneapolis and other nearby police departments will add nearly 1,000 extra officers, for a total uniformed presence of 2,000.</p> <p>The game between the New England Patriots and the Philadelphia Eagles kicks off at about 6:30 p.m. at U.S. Bank Stadium in downtown Minneapolis, and features halftime performances by Justin Timberlake and Pink. The venue holds nearly 67,000 people.</p> <p>Minneapolis Police Commander Scott Gerlicher, who is in charge of the city's Super Bowl security operation says, "There are no credible threats currently to the Super Bowl or any activities but there's a large group of people who are looking at that and monitoring that hour by hour."</p> <p>One of the tactics for thwarting any would-be terrorist, say law enforcement officials, is creating secure perimeters for the stadium and other public event spaces, and positioning Humvee-style trucks to prevent vehicle attacks.</p> <p>Around the city and at Super Bowl events, said FBI Supervisory Special Agent Brandon Grant, state, local and federal bomb squad teams from across the region and the country are ready to respond to any suspicious package. Grant said that the teams have brought in 16 small x-ray devices, worth over \$35,000</p>

	<p>each, to deploy with technicians – the largest-ever such deployment of the technology.</p> <p>The devices are designed to quickly scan a suspicious bag or item and produce an image of the contents on a handheld tablet. Grant said the compact size of the x-ray kits means technicians can hand-carry them in a crowd and get an image 10 times faster than older devices.</p> <p>If someone simply forgot a bag in the crowd of thousands, said Grant, the bomb techs can address it and “just move on.”</p> <p>In the air, the FBI will use Blackhawk helicopters equipped with infrared cameras to surveil key Super Bowl sites. The Blackhawks can also be used to move heavily armed agents to any potential attack site, or to evacuate injured people to local hospitals or triage centers.</p> <p>The FBI says it isn’t disclosing where the armed teams are situated but says they will be on standby leading up to and during the big game to respond to any crisis</p>

<b>HEADLINE</b>	<b>02/03 Drone ship joins US Navy fleet</b>
<b>SOURCE</b>	<a href="https://www.digitaltrends.com/cool-tech/darpa-sea-hunter-joins-navy-fleet/">https://www.digitaltrends.com/cool-tech/darpa-sea-hunter-joins-navy-fleet/</a>
<b>GIST</b>	<p>A prototype autonomous ship known as the Medium Displacement Unmanned Surface Vehicle (MDUSV) has officially been transferred to the U.S. Navy from the Defense Advanced Research Projects Agency (DARPA) after a two-year testing and evaluation program. Named “Sea Hunter,” the Office of Naval Research will continue to develop the vessel from this point forward.</p> <p>Although there’s no specific timetable for when the Sea Hunter would join active naval operations, the statement from DARPA indicated that it could happen as early as this year. The anti-submarine warfare vessel could be the first of an entirely new class of warship.</p> <p>“[Sea Hunter] represents a new vision of naval surface warfare that trades small numbers of very capable, high-value assets for large numbers of commoditized, simpler platforms that are more capable in the aggregate,” said Fred Kennedy of DARPA. “The U.S. military has talked about the strategic importance of replacing ‘king’ and ‘queen’ pieces on the maritime chessboard with lots of ‘pawns.’”</p> <p>The collaboration between the Navy and DARPA began in 2014, with the ship designed and developed by Virginia-based defense company Leidos, and christened in April 2016. A rigorous series of open-water tests followed, including surveillance and mine counter-measures.</p> <p>According to Newsweek, the ship got its name from the mission the Navy envisions for it — stalking foreign submarines at sea. It’s relatively cheap to build at \$20 million, and it’s far less expensive to run than a similar manned vessel.</p> <p>“This is an inflection point,” former Deputy Defense Secretary Robert Work said in an interview with Reuters in 2016. “This is the first time we’ve ever had a totally robotic, trans-oceanic-capable ship.”</p> <p>“I would like to see unmanned flotillas operating in the western Pacific and the Persian Gulf within five years,” he added.</p>

HEADLINE	<b>02/04 Cursing is good for your health?</b>
SOURCE	<a href="https://www.nbcnews.com/better/health/when-cursing-good-your-health-ncna843776">https://www.nbcnews.com/better/health/when-cursing-good-your-health-ncna843776</a>
GIST	<p>From an early age we're taught not to curse — usually right around the first time we hear an adult let an expletive slip in front of us (and immediately repeat it back to them). While we typically try to curb our "dirty mouth" when in the presence of family or co-workers, swear words make up almost one percent of our daily vocabulary, according to research done by Timothy Jay, psychological scientist and author of <i>Cursing in America</i>. To put that number into perspective, we use words like "we, our and ourselves" at around the same daily rate.</p> <p>The repercussions of inappropriate cursing are pretty obvious (calling your boss that expletive likely won't end well), but are there any pros to letting the occasional expletive slip when something doesn't go our way? Hell yes there are. As it turns out, that potty mouth of yours can be beneficial in certain scenarios. Here's a look at when and how cursing can actually be helpful for your health.</p> <p><b>IT HELPS WITH PAIN MANAGEMENT</b></p> <p>You're rushing to get ready for work in the morning. Just as you're about to head out the door you stub your toe on the corner of the kitchen table and yell your expletive of choice as a knee-jerk reaction. If that stinging foot doesn't feel quite as painful immediately after you've cursed it out, it's not just in your head.</p> <p>A study done at Keele University in the U.K. measured the effects swearing had on pain tolerance, and found that we can withstand more pain when using profanity. Why is that? "When we swear, it sends a message to the amygdala in the brain," explains Amy Cooper Hakim, Ph.D, practicing in Florida.</p> <p>"The words themselves don't help us to better tolerate pain — but the emotional and physical reaction that we have by saying the words triggers the fight or flight response, which then gives us that burst of energy to make it through the difficult or painful task." So the next time you hurt yourself, feel free to curse at whatever inanimate object is to blame.</p> <p><b>IT IMPROVES YOUR WORKOUT</b></p> <p>If the most grueling parts of your workout have you cursing your instructor in your head, there's research to support that vocalizing those swear words can actually help boost your performance. (Though you might want to stick to a general expletive rather than directing it at Chad during TRX.) The study found that participants who swore saw a 2 to 4 percent increase in performance and 8 percent boost in strength compared to those who kept their mouths shut. Why does this help?</p> <p>Researchers surmise that when you're alone with your thoughts, suffering through your workout in silence, there's nothing distracting you from the task at hand. Cursing diverts your attention, which makes you work harder than if you were only focusing on how tough the workout is.</p>

### IT RELEASES STRESS

As it turns out, there's some science behind why cursing when you're angry or frustrated makes you feel better. "Cursing can be an effective emotional release, especially for anger and frustration," explains Laura MacLeod, LMSW practicing in New York. "By using words that are not welcomed or appropriate in most settings (professional, family, social) it can be very liberating to throw caution to the wind and curse."

According to MacLeod, this stress release initiates from the physical exercise of cursing. "Curse words are usually uttered with fury or frustration — the whole body is involved," she explains. This provides a different release than when we're simply venting without expletives, because we're doing so without self-imposed limitations. "When we complain, vent or share anger without cursing, we are keeping ourselves in check," she says. "The stress is not released because we are sharing within guidelines, not totally releasing all feelings. When cursing, our whole body and all emotions are connected — no guidelines, no filter. The release is complete, and thus stress relieving."

### IT CAN HELP YOU EXPRESS YOURSELF

You'd probably think that frequent cursing is a sign of limited vocabulary — but one study published in the journal *Language Sciences* actually shows the opposite. The study had a group of 43 men and women say as many curse words as they could in one minute. Next, they had to name as many animal names as they could in the same amount of time. Researchers found that the more curse words a participant was able to generate, the more expansive a vocabulary they had. They hypothesized that having an expansive vocabulary of taboo words means that person is better able to express themselves in a verbose, nuanced way. So get creative with your swear words!

### IT MAKES YOU APPEAR MORE HONEST AND AUTHENTIC

You probably don't want to curse during your next performance review. But clinical therapist Amy Deacon, explains that cursing can make you appear more genuine within your social circles. "Cursing in a positive scenario makes us come across as honest, authentic and assertive because swearing is such a raw form of expression," she says.

"You are getting an uncensored, raw, unfiltered response that is a gut reaction and reflective of what the person is really feeling or thinking." A recent study found that profanity is correlated with genuine feelings and emotions in social interactions, which indicated that those who curse may also be more likely to be truthful.

So the next time you're venting to friends, in pain or doing another round of burpees, let your inner sailor come out and play!

<b>HEADLINE</b>	<b>02/03 Extortion scam preys on secrets</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/investigations/extortion-scam-preys-on-those-with-vulnerable-secrets/283-514062697">http://www.king5.com/article/news/investigations/extortion-scam-preys-on-those-with-vulnerable-secrets/283-514062697</a>
<b>GIST</b>	<p>If you have a deep, dark secret you want to keep to yourself, you may be vulnerable to a pricey scam.</p> <p>Extortion letters are starting to circulate in Portland. They say, for a hefty fee -- your secret is safe!</p> <p>"They are consistently looking for areas where people are vulnerable," said Pamela Levy, whose husband received an extortion letter in the mail.</p> <p>"The more information somebody has, the more effective it is," said Renn Cannon, a special agent with the FBI.</p> <p>The details in these extortion letters are just "specific" enough, to make them believable. And at the same time, they're just "vague" enough to cover a range of secrets, from infidelity, to financial, to criminal. Of course, if you live a clean life, you've got nothing to worry about.</p> <p>That was the case for Levy, happily married for years, but it's not the case for everyone.</p> <p>The letters start with a threat:</p> <p>"I know about the secret you are keeping from your wife, and everyone else, more importantly, I have evidence of what you've been hiding. I'm going to give you two options, ignore this, and I'll tell your wife, her friends and family. Or you can pay me."</p> <p>Levy says she opened it and called her husband.</p> <p>"My husband wasn't there with me at the time, and I called him up and said you're not going to believe what just came in the mail," she said</p> <p>Luckily, Levy and her husband have been happily married for years but the FBI says these kind of extortion letter scams are becoming common.</p> <p>"The more information they have about you the more it seems like 'Well, boy they really know their stuff,' so it does make it more effective," said Cannon.</p> <p>The scammers use your name, and reference your city, just enough to make it convincing. The letter goes on to demand a "confidentially fee." Pay \$3,600 dollars and your secret remains safe.</p>

"It's the kind of threat that may ring true for a small selection of those where they may actually decide, I'm going to go ahead and send some cash," Cannon said.

"I knew instantly it was a scam, and I called my husband and he knew instantly it was a scam, and we both started laughing about it," Levy said. "But as a concerned citizen, I started to be really worried about all the people who might not know it was a scam."

Extortion is a federal crime, but catching someone is tough because the letter wants the payment in bitcoin, and even gives step-by-step instructions on how to pay the hush money. The FBI says that makes it hard to trace the scammers.

"Because its decentralized, because there's no central authority, because its new technology, because its encrypted; it makes it very hard to trace," said Cannon.

But the FBI, state and local investigators are successfully working these cases, especially when there's a lot of money lost. Levy says a sense of humor helps. She says she never once considered paying a ransom, even if her husband was up to no good.

"No, I considered jewelry. No bitcoin for anybody else," she joked.

For the scammers, it's a phishing scheme. They send out thousands of these letters across the country. Odds are some of the recipients will be up to no good, and will pay to keep their secrets safe.

If you get one of these letters, you can go to the FBI's "internet crime complaint center" at [www.ic3.gov](http://www.ic3.gov). They also advise people to be careful about personal details they share online.

<b>HEADLINE</b>	<b>02/04 Mystery of the strangled billionaires</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/news/world-us-canada-42864082">http://www.bbc.com/news/world-us-canada-42864082</a>
<b>GIST</b>	<p>The killing of a wealthy Canadian couple made headlines around the world. Then the news they had been found hanging by men's belts next to their indoor pool, with no apparent motive, deepened the intrigue. So who were Barry and Honey Sherman?</p> <p>In an unpublished 1996 memoir, Barry Sherman wrote he had "always been very conscious of my personal mortality".</p> <p>His unfinished musings only became public because of a court case in the 1990s. They revealed a man with strong beliefs - that there is no God, free will is an illusion, and life has "no meaning or purpose".</p> <p>But Sherman thought these memoirs may one day be of interest to others - a "perhaps arrogant belief", he wrote.</p> <p>Now, the text offers some insight into a couple whose mysterious deaths have captured worldwide interest and left those who knew them grief-stricken and dumbfounded.</p> <p>In mid-December, 75-year-old Barry and his wife Honey, 70, were found dead in their Toronto home.</p> <p>Police confirmed this month their death is being investigated as a "targeted" double murder. They were found strangled, fully clothed on the deck of their indoor pool, hanging by belts.</p> <p>Authorities have so far offered no suspects and no motive for the suspected killings.</p> <p>More than 10,000 people, including Prime Minister Justin Trudeau and Ontario Premier Kathleen Wynne, attended the funeral.</p>

The turnout was unsurprising - the Shermans had amassed a personal fortune estimated at \$3bn. They had touched much of Canada, whether through the impact on Canadian healthcare of Apotex, Inc, the generic drug empire Barry founded, or through the millions they gave away in philanthropy.

At their funeral, their son Jonathon called them "yin and yang".

"They completed a circle that encompassed everything important about what it means to be human," he said. "Neither one perfect but together wholly balanced and exceptional."

Barry was a self-described workaholic, someone who brought business files with him on vacation. He was an ardent atheist, an aggressive businessman and a loving, though often absent father.

Honey was warm, the "magnet and the glue" that held the family together, an inveterate party animal who refused to let a bout of throat cancer or painful arthritis get in the way of either a good time or her charity work.

Honey Sherman grew up in modest circumstances, born to two Polish Holocaust survivors who later immigrated to Canada.

Barry Sherman was born in Toronto in 1942, and though he didn't excel at school early on, it was clear he was a brainy child. He joined the University of Toronto's engineering science programme at 16 - the youngest ever student to do so - and went on to study aeronautics at the Massachusetts Institute of Technology.

The couple were introduced in August 1970, and married almost exactly a year later.

Where Honey was gregarious, Barry could be aloof and lack in social graces.

At the couple's funeral, Honey's sister Mary said she was unimpressed with her sibling's beau at first sight.

"He was standing at our kitchen. There he was reading the paper, ignoring everyone, being Barry. And all I could think was 'my sister's going out with this? What's the deal?'" she recalled.

"And then over time I saw that he was the most brilliant, wonderful, kind man."

The couple had four children, three through surrogacy after Honey had a series of miscarriages.

The pair depended on each other.

Honey would make sure Barry was dressed properly for events and galas, picking out his clothes down to his socks.

At the funeral, Jonathon remembered his father on a family trip "driving around in a jeep in Israel looking for mom's lost wallet, and her lost keys, and her lost sunglasses, and her jacket too".

"You were like a lock and a key, each pretty useless on your own. But together you unlocked the whole world for yourselves, and for us, and so many others."

The Shermans' philanthropy created an undeniable legacy. They donated multiple millions of dollars to hospitals, Jewish organisations, universities, and charities like the United Way. A state-of-the-art research university facility in Toronto bears their name, as does a Jewish community centre campus.

Through its foundation, Apotex has also donated over C\$50m (\$40m; £28m) around the world, including sending medicine to a children's charity in Kenya.

But the billionaires didn't flaunt their wealth, despite being among the richest Canadians.

Honey told Toronto Life magazine in 2008 the couple "live nice lives, not large lives" and worried about the influence of their wealth on their children, saying they worked hard to instil in them a "sense of reality".

Barry was known to drive cars until they were ready for the junkyard, and met the magazine's reporter at the Apotex headquarters wearing a wrinkled shirt and "well-worn trousers".

"[Barry] didn't care about things - making money was a way of keeping score," says Murray Rubin, who was friends with Barry for some 50 years. Rubin calls Barry the smartest guy he ever knew.

He learned the drug business from family, working at his uncle's pharmaceutical company before founding Apotex in 1974.

Barry told the New York Times in 2006 that he did "everything in those days from cleaning the floor to writing the cheques".

The generic drug-mogul also earned a reputation for using the courts freely to build his company and defend his business interests.

Apotex has been involved in more than a thousand court cases in Canada, using the legal system to aggressively challenge drug patents.

"It definitely makes it the most litigious pharma company in Canada and probably the most litigious company period," says University of Ottawa law professor Amir Attaran.

"It's fair to observe the way he did business he would have had many enemies," he says.

Canadians pay some of the highest prices in the world for generic drugs, and Attaran argues Sherman's business practices contributed to that.

"He was unethical in business. His drugs were overpriced and gouged Canadians," he said on Twitter.

Apotex did not respond to a request for comment.

Rubin says his friend was "as a person, very gentle. As a businessman, very tough".

Barry was also involved in a couple of long-running, very public conflicts.

In the 1990s, Apotex became embroiled in a high-profile and protracted dust-up with a haematologist at Toronto's Hospital for Sick Children over negative research results related to one of the company's drugs.

When the researcher, Dr Nancy Olivieri, said she needed to disclose the risk to patients involved in the trials, Apotex, which disputed the results, pulled the trials and threatened legal action if she divulged those potential risks.

She did anyway. Sherman was later recorded calling her "nuts" when discussing the case with CBS's 60 Minutes.

In September, he scored a victory in another lengthy feud, this over a group of cousins who alleged he breached an agreement that entitled them to a 20% stake in Apotex.

An Ontario Superior Court judge dismissed the C\$1bn lawsuit, though that ruling is being appealed.

The acrimonious battle, which played out in court and in the press for over a decade, included Sherman

	<p>suing the cousin who spearheaded the fight to recover some C\$8m in loans.</p> <p>The bad blood spilled into the press again in the wake of Barry and Honey's death.</p> <p>Rubin says while Barry was tough, he can't comprehend who would kill him and Honey with such "hatred".</p> <p>"I can't believe that my friend Barry... would die in this horrible way," he said. "The riddle is - who did it and why?"</p>

<b>HEADLINE</b>	<b>02/02 Drone hovers over plane during landing</b>
<b>SOURCE</b>	<a href="https://www.cnet.com/news/drone-hovers-over-jet-landing-at-las-vegas-airport/">https://www.cnet.com/news/drone-hovers-over-jet-landing-at-las-vegas-airport/</a>
<b>GIST</b>	<p>The Federal Aviation Administration is investigating an incident in which someone apparently piloted a drone right above a jet landing at McCarran International Airport in Las Vegas.</p> <p>The KLAS TV station's LasVegasNow.com website published video Thursday taken at an unknown time from a drone hovering over the city as a jet approaches and then passes underneath. The FAA said Friday it's "aware of the incident and is investigating" but declined further comment.</p> <p>Drones, piloted from the ground but providing an eye in the sky, promise new business opportunities for everybody from real estate photographers to oil refinery operators. And they can help police handle dangerous gunfire scenes. But anyone can buy one of the aircraft, and enforcing restrictions can be tough.</p> <p>The Know Before You Fly website, from the FAA and drone and model aircraft groups, steers people toward 2,500 designated model aircraft flying sites. It can be tricky knowing where drone use is illegal, though. Airports are on the list, of course, but so are many military sites, US landmarks and the Super Bowl.</p> <p>The FAA can fine individuals up to \$1,437 for each violation of flight safety rules. Business' fines can reach \$32,666 per violation. Then there are criminal penalties of up to \$250,000 in fines and three years in prison.</p> <p>Remote-control aircraft have been around for decades, but drones are a novelty and add photos and videos into the mix. And the existing model-aircraft industry isn't happy about the Las Vegas drone flight.</p> <p>"All drone and model aircraft pilots must stay well clear of manned aircraft. We condemn the type of operation depicted in this video," said Chad Budreau, director of government affairs for the Academy of Model Aeronautics, in a statement. "Anyone who violates aviation regulations or endangers public safety must be held accountable for their actions. We urge the FAA to take strong enforcement action against this drone pilot, and against any future violators."</p>

<b>HEADLINE</b>	<b>02/02 Tech workers use LSD for creativity</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/tech-workers-use-lsd-to-help-expand-creativity-1/693364436">http://www.kiro7.com/news/local/tech-workers-use-lsd-to-help-expand-creativity-1/693364436</a>
<b>GIST</b>	<p>LSD and high tech seem like opposites, but KIRO 7 discovered some workers are turning to the drug, which hit a high in popularity in the '60s, to increase their problem-solving ability and creativity. Instead of a full dose, they're microdosing.</p> <p>Paul Austin is the founder of the company The Third Wave and calls himself a microdosing coach.</p> <p>"So microdosing is the act of consuming really low doses of psychedelics, usually on a two-times-per-</p>

week basis, for a period of a month or two months," according to Austin.

Austin told KIRO-7 he's done it, by taking 1/10th of a normal dose.

"I was looking for something that could help with creativity, that could help with entering a flow state, that could help with a process of building my business," said Austin.

He's studying the impacts and making a business of helping others maximize their experience with the controlled substance.

"For creativity, to help with problem-solving, to give them a little more energy. It's kind of to get another extra edge in what they're doing," Austin said

The popularity of LSD microdosing caught the attention of UW psychology professor Jaime Diaz. Diaz is behavioral pharmacologist and wrote the book "How Drugs Influence Behavior." He's been teaching at UW for 40 years.

"There's the danger that someone's going to take too much LSD," explained Diaz, "You're already in micrograms, and so microdosing LSD is very difficult to do."

Diaz told KIRO-7 he's very interested in the science of what LSD does to the brain.

"Not much of the LSD actually crosses into the brain. So you're dosing in micrograms and not much of that is getting into the brain side. So this is amazing to me that just a few molecules can have this profound effect. This is amazing," said Diaz.

According to the U.S. Drug Enforcement Administration, "LSD is a Schedule 1 drug and is illegal, regardless of the quantity. It simply has no accepted medical use and has a high potential for abuse."

Paul Austin is not a doctor, and says as a coach he has his clients sign waivers. They have to find LSD on their own. He's advertising his business, The Third Wave, to subscribers of Rolling Stone and other sites. He says anyone with schizophrenia, bi-polar disorder, general anxiety or colorblindness should not microdose.

To really know the benefits of LSD microdosing, professor Diaz says researchers need a scientific study.

"Any drug that will increase our experience on this planet positively, I think, is something we should look into," said Diaz.

He says the information that is out there now hasn't taken into account the purity of the drug or the placebo effect, and likely was not done in a controlled environment.

That's exactly what researchers at Johns Hopkins are doing now.

Diaz cautions anyone who tries it on their own. "The thing with LSD, as with most of these hallucinogens, you can't take it back. Once you take it, you have to play out that ride."

HEADLINE	<b>02/03 Britain's first 'private police force'</b>
SOURCE	<a href="http://www.dailymail.co.uk/news/article-5346699/First-private-police-force-caught-400-criminals.html">http://www.dailymail.co.uk/news/article-5346699/First-private-police-force-caught-400-criminals.html</a>
GIST	The country's first 'private police force' is investigating hundreds of crimes that regular officers are too busy to look at.

A firm led by former Scotland Yard senior officers has successfully prosecuted more than 400 criminals and is now carrying out murder inquiries.

TM Eye, which has a 100 per cent conviction rate, is thought to bring more private prosecutions than any organisation besides the RSPCA.

The company, the country's first de-facto private police force, is operating against a backdrop of rising crime rates and police budget cuts. Its activities include:

- A service called 'My Local Bobby' costing wealthy households up to £200 a month each for guards to patrol their streets;
- Three high-profile murder investigations that police have been unable to complete, including one case dogged by allegations of corruption and cover-up;
- Help in cases of rape, missing persons, burglary, theft, stalking and blackmail.

Co-founder Tony Nash, an ex-Metropolitan Police commander, said: 'This is going back to Dixon of Dock Green to a degree. It's what people want. There is no substitute for going out and knocking on doors. But with the current state of finances, police are solving cases behind their desks and that has become the culture.'

In the past two years the company has brought successful private prosecutions against 403 criminals for fraud, intellectual property theft and other offences. A total of 43 were jailed.

The company, staffed by retired detectives and cyber-crime experts from Scotland Yard, the National Crime Agency and GCHQ, is now expanding its services beyond predominantly financial investigations.

It comes as police chiefs admit they do not have the money to investigate high-volume crimes such as shoplifting and stretched officers complain that they are at breaking point.

But critics fear the rise of private policing could lead to a two-tier system where only the wealthy get protection from criminals.

Metropolitan Police Federation chairman Ken Marsh described the rise of private detectives as a 'staggering indictment' of the state of policing.

'Eventually there will be a two-tier system with the haves and the have-nots, and if you have money and live in a £20million house in Chelsea you can pay for private security,' he said.

'My concern would be, where is the public scrutiny if it goes wrong? If they are allowed to go and do police's job for them, that is a dangerous status quo.'

Last week official police figures revealed the largest recorded annual increase in crime for more than a decade, with surging levels of violence, sex attacks, knife and gun offences across the country.

But what was not recorded in the figures is the astonishing number of criminals being locked up – and in some instances even deported – through the work of private investigators.

TM Eye currently has 36 criminal cases pending at Crown and magistrates' courts around the country and is working on a further 60 investigations in London, Cheshire, Dorset, Avon and Somerset and Essex.

In the past six months, its 60 investigators have snared suspects wanted by police for attempted murder and rape.

Recently a stalker was jailed for four years on the basis of its work.

Using covert surveillance and undercover operatives, the private firm has managed to smash a major

counterfeit goods gang, securing convictions for 60 offenders in Manchester selling fake designer handbags and clothing.

All of its convictions and suspects' DNA and fingerprints are recorded on the Police National Computer.

It does not charge for its investigative services, seeking instead to recoup costs from courts after offenders are convicted.

The firm has offices in London, Manchester, Essex and Mumbai in India, where investigators have helped to catch a major manufacturer of fake medicines.

The firm launched its subscription service My Local Bobby last March and its staff now patrol some of London's most expensive streets in Belgravia, Mayfair and Kensington.

Individual uniformed 'bobbies' cover up to 250 houses, whose owners each pay a fee of £100 to £200 a month.

In return, clients get a 'meet-and-greet' service from their car or the Tube, and have a hotline to their bobby whose location they can track on their iPad.

If there is a crime, the firm promises to have a local response officer on the scene within five minutes.

Like police, the patrol teams have body cameras to record evidence. They can apprehend suspects using a citizen's arrest.

Mr Nash said his ambition is to get local authorities to outsource their patrols to the firm.

TM Eye also offers more traditional security work such as bodyguards for foreign dignitaries.

The firm's managing director David McKelvey, a retired Scotland Yard detective chief inspector, said: 'We probably do more undercover work than any other law enforcement agency. We have a better surveillance capability and equipment than most forces.'

He added: 'It's about catching the bad guys and protecting the public, and we can help with that.'

'Police are on their knees, sick to the teeth with what is going on in their job. The bottom line is we have better uniforms, better pay and better support at work. It's a huge growth industry.'

David Green, of the think-tank Civitas and a former adviser to the Government, said: 'This seems a reflection of the fact that the police are overstretched, underfunded and unable to cope and this group has emerged to fill the gap.'

'There is nothing wrong with private security or private patrols.'

'But if they take on some of the functions of the police and the call for this grows, there is a danger there is not the same safeguards that we have with the police.'

'If the police do something wrong there is a clear disciplinary structure, a chain of accountability and independent scrutiny. If these private firms exercise police powers without public accountability, there could be dangers there.'

**HEADLINE** 02/03 US: Russia nuclear armed torpedo

**SOURCE** <https://www.cnn.com/2018/02/02/politics/pentagon-nuclear-posture-review-russian-drone/index.html>

<b>GIST</b>	<p>Washington (CNN)Just as the White House is caught in a political minefield over the Russia investigation, the Pentagon is taking its toughest line yet against Russia's resurgent nuclear forces.</p> <p>In its newly released Nuclear Posture Review, the Defense Department has focused much of its multibillion nuclear effort on an updated nuclear deterrence focused on Russia.</p> <p>"Russia considers the United States and the North Atlantic Treaty Organization (NATO) to be the principal threats to its contemporary geopolitical ambitions," the report says.</p> <p>"The Defense Intelligence Agency currently estimates Russia has a stockpile of 2,000 "non-strategic" nuclear weapons including short-range ballistic missiles, gravity bombs and depth charges that can go on medium range bomber aircraft," according to the report.</p> <p>"DIA also estimates Russia has nuclear armed anti-ship, anti-submarine missiles and torpedoes. What do they need nuclear depth charges for?" one US official asked.</p> <p>The report also publicly acknowledges, for the first time, that Russia is "developing" a "new intercontinental, nuclear armed, nuclear-powered, undersea autonomous torpedo."</p> <p>Known in English as the "Status-6" system, the program is described by US officials as essentially a drone-type device fired underwater that can potentially travel thousands of miles and strike US coastal targets such as military bases or cities.</p> <p>Upon detonation, the device is designed to cause large zones of radioactive contamination.</p> <p>Some analysts have called it a "doomsday weapon," and US Sen. Tom Cotton, R-Arkansas, has labeled the concept "destabilizing."</p> <p>"The concept is a horror of the Cold War," according to Adam Mount, a senior fellow and the director of the Defense Posture Project at the Federation of American Scientists. "It is clearly inspired by overblown Russian worries that US missile defenses will make their missile forces obsolete."</p> <p>"There is no indication from public information that Russia is actively developing the system, but it is alarming to see it in a Pentagon document," Mount said, adding that while the program is referenced in the Nuclear Posture Review, it is not mentioned in other government reports.</p>

<b>HEADLINE</b>	<b>02/02 Study: polar bears extinction sooner</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/02/world/polar-bears-extinction-intl/index.html">https://www.cnn.com/2018/02/02/world/polar-bears-extinction-intl/index.html</a>
<b>GIST</b>	<p>(CNN)Polar bears are starving and could face extinction faster than previously thought, according to a new study.</p> <p>Published Thursday in the journal Science, the study was conducted by researchers who fixed collars on nine bears and recorded their activity levels for up to 11 days. They found that the Arctic creatures were suffering an extreme shortage of food.</p> <p>As a result of climate change, the sea ice in the Arctic is melting and forcing the bears to travel further and use more energy to catch their prey.</p> <p>The three-year study conducted by the US Geological Survey and University of California, Santa Cruz, found that the Arctic predators are moving 1.6 times more than previous studies have reported. That increased movement in the search for food leaves them shorter on the calories they need.</p> <p>"The purpose was to get a better understanding of what the changes in sea levels are and how they are</p>

	<p>impacting the polar bears," Anthony Pagano, a lead researcher in the study, told CNN.</p> <p>"We wanted to understand what the basic mechanisms were, what the polar bears were doing on the ice and what their energy needs are."</p> <p>The study found that for one polar bear to sustain its energy level it would require an intake of 12,325 calories a day, usually one adult ringed seal every 10 days.</p> <p>Over the course of the study, four of the nine seals did not reach that calorie level and lost a combined mass of 20 kilograms (44 pounds), which "reinforced the famine lifestyle the polar bears have," Pagano said.</p> <p>According to the World Wildlife Fund, polar bears spend more than 50% of their time hunting and are successful less than 2% of that time.</p> <p>"I'm not surprised to have seen this," said Liz Greengrass, a director at UK animal conservation charity Born Free Foundation. "Polar bears are reliant on seals for food and seals rely on sea ice. Global warming is melting the ice so it has a chain reaction on how polar bears can survive."</p> <p>Polar bears have been listed as endangered species by the US Fish and Wildlife Service, and the protection program repeatedly emphasizes the importance of climate change.</p> <p>"Without decisive action to address Arctic warming, the long-term fate of this species is uncertain," Greg Siekaniec, Alaska regional director of the wildlife agency, told CNN last year.</p>

<b>HEADLINE</b>	<b>02/05 Migrant workers exploited in Jordan</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/05/middleeast/migrant-domestic-workers-jordan/index.html">https://www.cnn.com/2018/02/05/middleeast/migrant-domestic-workers-jordan/index.html</a>
<b>GIST</b>	<p>Amman, Jordan (CNN)Isa Al-Maeda says her life as a farmer in the Philippines was hard, but they were good days, surrounded by her siblings and parents.</p>

She wanted to help support her family, which struggled to make ends meet, so in 2006 she took a job as a domestic worker in Jordan. She says she was promised \$500 a month, which would have greatly helped her ailing parents.

Al-Maeda's recruitment agency got her a job with a Jordanian family living in a town near the Syrian border. She was kept busy with the house chores, most of the time working 17 hours a day. The first month she received the \$500, the following two she got \$300; then the money stopped.

The family told her they were going through financial troubles and would pay her as soon as they got money, she says. They never did.

Al-Maeda says she could not leave because she was too scared to go outside, she didn't know the country and didn't know if anyone would help her.

It took her nine years to gather the courage to escape, something that was made harder after her residency and work permits expired and years' worth of fines accumulated, which made her illegal.

Now 36 years old, Al-Maeda told CNN she understands she was a slave. Wiping tears from her eyes, she says what she has been through haunts her even in her sleep. The thought of wanting to send money to her family, but having nothing, has been the hardest thing.

Hers is not an isolated case. Rights groups have documented many cases where migrant workers are not paid on time; some are deceived by employers who promise to pay them at the end of a contracted period, but fail to do so. Some employers lock their workers in the home, forcing them to work up to 20 hours a day, seven days a week.

Withholding passports and restricting movement are also common, according to advocacy groups.

According to official government figures, there are more than 50,000 migrant domestic workers in Jordan and another estimated 20,000 operating without proper documentation.

Most of the women come from South and Southeast Asia, and East Africa. Monthly salaries range from about \$200 to \$500 and many are expected to do everything from cleaning to cooking, ironing to gardening and childcare.

Linda Al-Kalash established the NGO Tamkeen in 2007 to provide legal aid to migrant workers. With her team of lawyers Al-Kalash took employers to court for labor violations and mistreatment of workers, winning several high profile cases.

"Through our experience and meeting with the workers themselves ... they feel they don't have any access to redress," she said.

"Some of them are difficult to talk to, because they are afraid, they don't have any trust in anybody. We try to let them feel that they are safe. It is very important to shake hands with them, to hug them sometimes, to let them feel that you and they are in an equal situation."

In 2010 Al-Kalash received the US State Department Trafficking in Persons Hero award for her efforts to combat modern day slavery in Jordan.

She now works closely with government agencies, including the country's Anti-Human Trafficking department, which has been credited with investigating hundreds of cases since it was established in 2013.

The Jordanian government acknowledges that there is a problem when it comes to migrant domestic workers, but officials say it is only individual cases, not a widespread issue.

HEADLINE	<b>02/05 'Iceberg' of unseen crimes</b>
SOURCE	<a href="https://www.nytimes.com/2018/02/05/nyregion/cyber-crimes-unreported.html">https://www.nytimes.com/2018/02/05/nyregion/cyber-crimes-unreported.html</a>
GIST	<p>Utah's chief law enforcement officer was deep in the fight against opioids when he realized that a lack of data on internet sales of Fentanyl was hindering investigations. So the officer, Keith D. Squires, the state's public safety commissioner, created a team of analysts to track and chronicle online distribution patterns of the drug.</p> <p>In Philadelphia, hidebound ways of confronting iPhone thefts let thrive illicit networks to distribute stolen cellphones. Detectives treated each robbery as an unrelated street crime — known as “apple picking” — rather than a vast scheme with connected channels used by thieves to sell the stolen phones.</p> <p>And in Nashville, investigators had no meaningful statistics on a nasty new swindle of the digital age: The “cheating husband” email scheme. In it, anonymous extortionists mass email large numbers of men, threatening to unmask their infidelities. The extortionists have no idea if the men have done anything wrong, but enough of them are guilty, it turns out, that some pay up, sometimes with Bitcoin.</p> <p>Each case demonstrates how the tools used to fight crime and measure crime trends in the United States are outdated. Even as certain kinds of crimes are declining, others are increasing — yet because so many occur online and have no geographic borders, local police departments face new challenges not only fighting them, but keeping track of them. Politicians often tout crime declines without acknowledging the rise of new cyber crimes.</p> <p>Detectives only learned of the “cheating husband” scheme from faithful spouses who were not victims. The crime did not fit into any existing category, and since the police had made no arrests, they had no statistics to feed to a national crime database in Washington that can prepare other jurisdictions for the scheme.</p> <p>“Suspects take advantage, knowing that, ‘Hey, I’m basically committing crimes blindly,’ without the fear of prosecution,” said Capt. Jason M. Reinbold, commander of the Metropolitan Nashville Police Department’s criminal investigations division. “And I can’t analyze something if I don’t have data.”</p> <p>Many of the offenses are not even counted when major crimes around the nation are tallied. Among them: identity theft; sexual exploitation; ransomware attacks; Fentanyl purchases over the Dark Web; human trafficking for sex or labor; revenge porn; credit-card fraud; child exploitation; and gift or credit-card schemes that gangs use to raise cash for their traditional operations or vendettas.</p> <p>In a sense, technology has created an extraordinary moment for industrious criminals, increasing profits without the risk of street violence. Digital villainy can be launched from faraway states, or countries, eliminating physical threats the police traditionally confront. Cyber perpetrators remain unknown. Law enforcement officials, meanwhile, ask themselves: Who owns their crimes? Who must investigate them? What are the specific violations? Who are the victims? How can we prevent it?</p> <p>“It’s incredibly challenging,” the police chief in Tucson, Chris Magnus, said. “There’s such a lack of clarity.”</p> <p>The rise of the crimes flies in the face of the proclamations of politicians who declare crime an all but defeated societal ill.</p> <p>“You have to go back to the 1950s to see crime this low,” Mayor Bill de Blasio, New York City’s second-term Democratic mayor, said recently on MSNBC’s “Morning Joe.” His comments reflected last year’s historically low numbers of murders and shootings, burglaries, robberies and auto thefts — offenses measured by the police CompStat tracking program.</p> <p>But to many criminologists, academics and law enforcement leaders, crimes like car theft are</p>

anachronisms in a modern era in which the internet's virtual superhighways have supplanted brick-and-mortar streets as the scenes for muggings, prostitution rings or commercial burglaries. They see dips in traditional violence and larceny as offset by a twin phenomenon: A surge in the evolving crimes of the digital era, and the fact that they are not fully captured in law enforcement's reporting systems.

"It's the old iceberg metaphor," said Nola Joyce, a former deputy commissioner of Philadelphia's police department. "What we know about is above the surface. But in terms of value, and in terms of harm, a lot of that crime is below the surface."

"There's an old saying that came out of the Vietnam War," she added, "that said, 'If you can't measure what matters, what you measure matters a great deal.'"

Ms. Joyce is working with others on a panel of the National Academies of Sciences, Engineering, and Medicine, to modernize local and federal crime-classification systems.

New solutions are a priority, too, for the Federal Bureau of Investigation and progressive police commanders. They say that without timely, accurate data on crime, criminal justice leaders cannot see and respond coherently to national trends or make informed policy and spending decisions or tailor deployment strategies to best battle them.

As Chuck Wexler, the executive director of the Police Executive Research Forum, a Washington-based research group that has studied the issue, put it: "The problem is, to use an overused expression, 'You don't know what you don't know,' and by that I mean we don't know the extent of these incidents in our communities or from a national perspective."

Indeed, an Internet Crime Complaint Center established by the F.B.I. in 2000, to capture internet crime, received 298,728 complaints in 2016, reflecting \$1.3 billion in combined losses, according to a new report by Mr. Wexler's group. But Donna Gregory, the head of the center, said that number of complaints only represented about 10 to 12 percent of all estimated cybercrime victims in the United States in 2016, and a fraction of all victims worldwide. In fact, a single category of internet crime — identify theft — generated \$15.4 billion in losses in 2014, according to a crime victimization survey by the federal Bureau of Justice Statistics.

In its report, Mr. Wexler's group said its findings represented a wake-up call for the nation's 18,000 policing agencies facing an increase in technology-based crimes, that sprawl across jurisdictions, and recommended they fight back with similar tools by: Developing their own digital expertise; hiring civilian analysts; mining technology, to help solve crime; encouraging banks to forward reports of theft rather than write off their losses.

Above all, policing needs "better systems for gathering data," the report said.

It is an issue that dates back to 1929, when the F.B.I. first rolled out its Uniform Crime Reporting system that still stands today. Designed as a summary count, it mainly tracks a handful of so-called Part One index crimes: murder, rape, robbery, assault, burglary, grand larceny, arson and auto theft. The counts include only the top charge in a given episode.

In the 1980s, the F.B.I., with Bureau of Justice Statistics, tried to improve the reporting by building the so-called National Incident-Based Reporting System to capture deeper levels of data across more categories. It created, for instance, "crimes against a person" which includes: assault, murder, kidnapping, abduction and sexual offenses. Each act is counted separately, within an incident or a crime that encompasses several criminal elements.

But 40 years later, data collection is still haphazard as policing agencies that protect just 31 percent of the country's population volunteer to abide by the deeper reporting standards. (An example: There is no national database of police officers' use of deadly physical force.) Still, the F.B.I. is charging forward, vowing to move fully to its 1980s-era vision by 2021. Only last year did it begin collecting data on two

new offenses in its fraud category: hacking/computer invasion and identify theft.

“Crime data reporting — in its current state — is not collecting the right information to understand and analyze current events,” Stephen G. Fischer Jr., an F.B.I. spokesman, said. “Today’s information age has changed how we see the world and what the world expects from policing.”

The panel of the National Academy of Sciences is looking past the F.B.I.’s unmet goals — which it sees as one component of a new approach. The panel wants a fresh system for understanding the nature and extent of crime today, said Janet L. Lauritsen, the panel’s chair and a criminology professor at the University of Missouri.

It envisions a format modeled in part, on an international framework organized by the United Nations that would reflect 11 prime categories of crime and 189 sublevels, including many that “are just not even part of the national conversation on crime,” Ms. Lauritsen said. It would, for instance, capture reports from federal agencies, she said, that have never reported crime data to the F.B.I., “even though there is actually a law on the books,” the Uniform Federal Crime Reporting Act, from 1988, that compels it.

Better data fosters transparency, which can build trust with civilians even if it yields static crime increases, said Col. Edwin C. Roessler Jr., the police chief in Fairfax County, Va., who is the F.B.I. director’s chairman for converting policing to a new crime classification system. Data offers the evidence to lobby government for more money or better laws, he said. In fact, when Colonel Roessler demonstrated how each gang homicide, on average, required 25 search warrants for “cyber data, cellphones and other social media,” it helped win financing for a new Cyber Bureau and new “cyber experts” to work gang cases and build meaningful statistics and intelligence.

“We’ve got gaps here, where we’re not catching the root causes of all kinds of criminal activity,” the colonel said, a flaw with real-life consequences.

So too, for Chief Magnus, in Tucson, who sees the lack of modern-day crime classification as, “one of our biggest frustrations.” Leading a force of 850 officers, patrolling 300-square-miles, lapses in accurate statistics on property crime, fraud, human trafficking and digital crime hurts his ability to deploy thin resources.

“Once you get into Cyberspace,” he said, “data about anything is so limited that it’s really, really hard to figure out even what might be happening locally that impacts that crime.”

<b>HEADLINE</b>	<b>02/04 MS-13 vying for control inside jails</b>
<b>SOURCE</b>	<a href="https://www.sfgate.com/news/article/Vying-for-control-How-MS-13-uses-violence-and-12550810.php">https://www.sfgate.com/news/article/Vying-for-control-How-MS-13-uses-violence-and-12550810.php</a>
<b>GIST</b>	<p>The Bloods gang member was sitting at a table inside the Prince George's County, Maryland, jail last spring when two other inmates approached from behind.</p> <p>They belonged to MS-13. And in their hands they held pieces of metal, sharpened into prison shanks.</p> <p>As other inmates in orange jumpsuits played dominoes or watched TV, the MS-13 members suddenly began stabbing the Blood in the head and upper body until guards at the Maryland facility intervened.</p> <p>The attack on May 5, 2017, came at a moment when MS-13's ranks in the jail were at an all-time high - the result of a nationwide crackdown on the violent street gang. Of the jail's 900 or so inmates at the time, officials said, about 50 were tied to MS-13.</p> <p>"Our incidents every month are predominantly MS," said a Prince George's jail investigator, speaking on the condition of anonymity for his safety. "They are vying for control of these housing units."</p>

As bodies bearing MS-13's trademark stab wounds and machete slashes have appeared in quiet suburbs and secluded parks across the country, authorities have increasingly gone after the gang. From New York to Virginia to Texas, they have arrested hundreds of members of MS-13 over the past two years.

But that effort is now posing its own problems.

As jails fill with MS-13 members, facilities are feeling the strain. Fights are up. So is extortion. And jailers are struggling to keep MS-13 members away from one another and their rivals.

"MS-13 presents unique challenges not only to the criminal justice system but also to the correctional system," said Robert Green, head of corrections in Montgomery County, Maryland, where the gang has been linked to nearly a dozen killings since 2015.

"Gang altercations have significantly increased" over the past year, he said, as the jail's MS-13 population has risen 20 percent.

On Long Island, where a string of MS-13 killings has been invoked repeatedly by President Trump, the gang's jailhouse ranks are also up 20 percent compared to two years ago, Suffolk County officials said.

In Prince William County, Virginia, MS-13 jail membership is up 32 percent over the same time period.

And in neighboring Fairfax County, Virginia, the gang's jailhouse ranks have doubled in the past year, leading to what officials call a "turf war" between MS-13 and a coalition of other gangs.

Organized crime is nothing new inside the American correctional system: The Bloods, Crips, Latin Kings, Aryan Brotherhood, Mexican Mafia and Black Guerrilla Family have long held sway in jails and prisons across the country.

While jail officials acknowledge that the recent influx of MS-13 inmates has made their jobs harder, they also emphasize that the gang is just one of many within their walls and that the situation is under control.

Nonetheless, the rising number of MS-13 members in America's jails reflects both the gang's resurgence and law enforcement's renewed efforts to combat it.

"We have sent thousands and thousands and thousands of MS-13 - horrible people - out of this country or into our prisons," Trump said during his State of the Union address, as the parents of two girls killed by the gang in Long Island watched and wept from the balcony.

Officers at Prince George's jail began to notice a rise in MS-13 five years ago. As the gang gained strength, it began to flex its muscle by demanding a "tax" from other inmates, particularly Hispanics. Promising them protection, MS-13 members took a share of their commissary: from chips and candy to T-shirts and boxer shorts.

"They control the Hispanic population," the investigator said. "They make them pay rent like they do on the streets. They make them work out. They make them join with them in fights."

By the spring of 2016, however, inmates in two of the jail's 18 housing units had grown tired of the extortion, the official said. Whenever an MS-13 member was transferred into those units, other inmates would immediately attack him.

"When it happened two or three times in one month in the same unit, that's when we figured out what was going on," he recalled. "They said they couldn't take it anymore."

A similar revolt is underway in Fairfax County, Virginia, jail, where MS-13 has grown from less than 20 members a year ago to about 40 today. In response to that rise, a few dozen of the jail's 1,000 inmates have rallied behind another gang, the 43 Mob, for protection.

Extortion by both gangs has gone up, according to Georgi Hovhannisyan, commander of the Sheriff's Intelligence Unit at the jail. And gang fights that used to occur roughly twice a year are now monthly affairs, he said.

Unlike state and federal prison systems, where inmates are often sent to far-flung facilities to serve lengthy sentences, county jails are designed to hold defendants as they await their trials. Many counties only have one jail, and it's often attached to the courthouse.

These limitations have left jails scrambling to deal with the MS-13 influx.

Adding to the challenge is the sheer size of many MS-13 cases.

"It seems like the days of one person committing one crime is gone," said Green, the corrections chief in Montgomery, adding that cases with a half-dozen co-defendants are now common. "That requires us to keep those people separate as best we can."

Compounding the problem is the high percentage of MS-13 cases that are slayings, in which bail is unlikely and proceedings move more slowly than they do for less serious crimes.

"We're not going to deal with those guys for a day, a week or even a month," said a Montgomery jails investigator, speaking on the condition of anonymity to maintain his safety. "We're dealing with them for a year, a year and a half."

In addition to keeping co-defendants apart, jails also have to separate MS-13 members from their rivals, particularly those belonging to bitter enemy 18th Street.

"MS-13 and 18th Street gang have something called a J.O.S., or 'jump on sight' order," Green said. "If they come in contact with each other, they're going to fight."

Some skirmishes are personal, like last year when an 18th Street member ended up in Prince George's jail at the same time as the MS-13 shooter who'd targeted him.

This complex web of cases, grudges and rivalries requires officials to quickly determine which inmate belongs to which gang. Sometimes officials know an inmate's affiliation ahead of time thanks to police or criminal records. But identifying gang members has grown more difficult as MS-13 has moved away from the tattoos for which it was once known.

Many jails conduct sporadic shakedowns, scouring cells for signs of gang affiliation, like clique acronyms in gothic lettering or devil horns drawn on the wall.

"We're seeing a lot more graffiti," said Hovhannisyan. "It's their way of letting everyone know, 'We're here.'"

In the Prince George's jail, investigators' office walls are lined with confiscated MS-13 drawings of women in clown paint, skulls wearing fedoras and demons dancing in hellfire. Sometimes gang members subtly try to escape their censors, as when one MS-13 member drew a clock with its hands at 1 and 3.

Officials occasionally discover coded letters during shakedowns, which they send to the FBI to be deciphered. Evidence of gang ties isn't just useful for keeping rivals apart. It can also be used against gang members in court.

When particular MS-13 members prove too problematic, or when one snitches, officials will sometimes trade them with another jail.

Prince William's jail was already at capacity before the recent MS-13 influx. Now that 4 percent of the

jail's population - or about 40 inmates - are allegedly MS-13, officials are increasingly having to swap gang members with neighboring jails, like a juggler with ever more balls in the air.

"It's very logistically challenging," Maj. Mandy Lambert said with a sigh.

When a reporter for The Washington Post visited the Prince George's jail in November, the number of alleged MS-13 members had dipped to 23, including one woman. More than half had been charged with murder, and at least four others were accused of attempted killings.

Small signs of the gang's influence were everywhere, from the names of cliques carved into the beige paint to the soccer goals drawn in soap on the basketball court to the nightly Spanish TV shows that stirred the ire of non-Hispanic inmates, especially during sports playoffs.

"The non-MS Hispanic guys will join in with MS for that because they want their right to watch TV," the investigator said.

Among the MS-13 members left at the jail were the two accused of attacking the Blood in May. Marvin Vazquez-Juarez, 20, had been locked up for killing his girlfriend, whose body was discovered in a Hyattsville park on New Year's Day 2016. He would later be convicted. Julio Lopez-Gomez, 26, had been charged with multiple assaults and robberies.

The attack sent their victim to the hospital and led to attempted murder charges.

<b>HEADLINE</b>	<b>02/04 Fake cartel busted money launderer</b>
<b>SOURCE</b>	<a href="http://www.abc.net.au/news/2018-02-05/the-billion-dollar-bust/9383890">http://www.abc.net.au/news/2018-02-05/the-billion-dollar-bust/9383890</a>
<b>GIST</b>	<p>IT WAS already a high-risk strategy: hand more than \$1 million to a known criminal and hope to catch him laundering it.</p> <p>What made the idea perilous, however, was the fact the money belonged to Australian taxpayers. And the criminal, holed up in Dubai, was notoriously elusive.</p> <p>"My arse was in the sling," said Richard Grant, a career cop from Melbourne.</p> <p>The plan was "lawfully audacious", but it was the only plan that might work.</p> <p>For the first time, he has explained its intricate detail to Four Corners.</p> <p>At the time of the operation, Grant was in charge of covert investigations at the Australian Crime Commission. From a non-descript building in Canberra, the agency operated in utter secrecy, and it wielded extraordinary powers. It could jail those who failed to answer its questions.</p> <p>Grant already knew which questions he wanted answered: Who was laundering drug money for bikies? Where did they hide their cash? How did they get payment overseas for the next shipment?</p> <p>"What we needed to do," he said, "is to go up the tree."</p> <p>The cash collectors they picked up could tell him little. They were mere mules who didn't know the true identity of those hiring them. Typically, they were alerted to money jobs by text message.</p> <p>With time, however, the couriers led Grant to brokers, and the brokers led him to middle men.</p> <p>What he and his team were discovering was alarming. These people seemed to be connected - not always to each other, but to a thriving network being run somewhere offshore.</p>

Remitters in the mortgage belts of Sydney and Melbourne were running off-book transactions with business partners overseas, often in the Middle East. Criminal informants were talking about staggering sums of money leaving Australia.

Eventually, Grant had a name: Altaf Khanani.

"I think we had trouble even spelling Khanani's name at the time that we started," Grant said.

The global money laundry he ran appeared to wash illicit profits for everyone, whether they knew his name or not: Lebanese mafia syndicates in western Sydney, Hezbollah financiers, ice traffickers, and bikies who wore the words Lone Wolves or Comancheros emblazoned on their backs.

Grant didn't know it when he began the work, but it turned out that the name Altaf Khanani had long featured in classified intelligence holdings from Spain to Turkey and from London to Washington.

The 56-year-old married father of four was clearly a threat to Australia. But Grant was actually looking at a few pieces of a much larger jigsaw.

Altaf Khanani was running the underworld's equivalent of Goldman Sachs. His business measured in the billions.

In 1961, Karachi's seething Bolton Market was an epicentre for dirty money.

Currency traders hawked US dollars from stalls and shanties, hoping to snare a passing businessman or corrupt official.

Among these street dealers was Abdul Sattar Khanani, a Gujarati who settled in Karachi after the partition of India and Pakistan.

He was a Memon, a line of mercantilists which dated to the 15th century renowned for a canny grasp of numbers. Yet the gift seemed to have skipped a generation. Abdul Khanani's family business struggled.

Then, in May that year, his fortunes changed forever. His wife gave birth to identical twin boys, Muhammad Javaid and Altaf Sattar. The twins would soon demonstrate the knack for business that had eluded their father.

In 1984, they formed Khanani and Kalia International, or KKI. By the late 1990s, the company had transformed into one of the largest currency traders in Pakistan, with a web of remittance agents across the world.

The company's reach relied heavily on hawala, an informal money transfer system so old it once greased the Silk Road.

When a customer in Sydney needed to send \$100,000 to an associate in Dubai, Khanani's agents in both cities ran a line of credit between each other.

The Sydney agent kept the money given to him but assigned it as a debt he owed to his counterpart in the UAE, who disbursed \$100,000 from his own funds. When the time came for money to travel in the opposite direction, the reverse took place, the debt was discharged and the ledger wiped clean.

When it came to evading police scrutiny, the scheme was brilliant for its 8th century simplicity. And Khanani's business soared.

While in 2007 and 2008 alone, KKI's official banking records showed the company handled \$2.3 billion, the Australian Federal Police told Four Corners the true figure was many times higher.

David Stewart, an assistant commissioner, said the hawala-based operation was "turning over between 14 and 16 billion dollars US annually".

Khanani was shifting huge volumes of hard currency across the border into war-ravaged Afghanistan, much of it going to heroin producers.

Authorities believed Altaf Khanani to be a close associate of India's most-wanted crime boss, Dawood Ibrahim, the man blamed for bombings in Mumbai in 1993 that killed 257 people. Khanani was also washing money for Al Qaeda.

The businessman was careful, however. To evade the central bank, whose headquarters were directly across the road from Bolton Market, he and his family ensured they ran the criminal transactions separately, through a parallel business.

The shadow operation had its own staff, its own computer servers, its own accounting software.

"And how money moved between these two streams, the legitimate and illegitimate, was a very clever game," said Karachi journalist Khurram Husain.

It was a game which Altaf Khanani personally administered. He awed others with a remarkable ability to recall large volumes of transaction data. A confidential report prepared by the Pakistan federal police described him as a "mastermind".

Later, investigators who interviewed him would marvel at the man's intellect.

"He could recall phone numbers from memory when asked, he knew bank account numbers, business names, multiple exchange rates," US Drug Enforcement Administration agent John Clayton said. It was "uncanny".

As KKI grew in prominence, it was inevitable that it would attract the interest of law enforcement.

Her Majesty's Customs and Excise and the National Crime Agency in the UK ran complex international investigations targeting Khanani's network from as early as 1997. They traced hundreds of millions of pounds across Spain, Italy, Germany and the Netherlands.

But Altaf Khanani would evade capture. He was cautious, and miserly. He didn't stray from his bases of Karachi and Dubai, where the rules were lax and where he wielded political influence.

He had become indispensable to many within Pakistan's corrupt body politic: civil servants, politicians, army generals.

"Some of the most powerful people in Pakistan and institutions in Pakistan were clients of KKI," Husain said. It had "tremendous clout".

Finally, a financial crisis in 2008 forced Islamabad to move on KKI. At the time, the company was handling 40 per cent of all of Pakistan's foreign currency transactions.

On November 8 that year, the Federal Investigation Agency raided its head office in Karachi and franchises in Lahore and Abbottabad. Eight senior figures, including Javid Khanani, were arrested. But at the time of the raids, Altaf Khanani was in Dubai.

The FIA alleged the company had illegally siphoned \$US10 billion out of Pakistan. But few in the centres of power seemed to want to see the case proceed.

"For fear of their own identities being revealed," Khurram Husain said, "a very wide spectrum of very

powerful interests mobilised in order to try and protect these [KKI] people."

The prosecution was spectacularly undermined.

In 2010, a critical affidavit omitted the names of the very KKI directors who had been originally arraigned. A new national financial crimes statute was introduced which was so full of holes that a senior FIA figure complained publicly it was "drafted by a money-lauderer".

The following year, a specially convened banking court acquitted the eight company officials, and in 2013, Altaf Khanani was also exonerated by the District and Sessions Court.

In Karachi rumours ran rife that the bribe paid was in nine figures.

It rained hard all day as they filed into the federal building in Chantilly, Virginia. There were about 100 of them in all - detectives, agents, analysts.

The building was the clandestine headquarters for the US Drug Enforcement Administration's special operations division. On October 22, 2014, its hall filled with foreign accents.

Police from Britain, Canada, New Zealand and Australia had flown in to be briefed on the top-secret plot to capture Altaf Khanani. The work of Canberra detectives had morphed into an unprecedented Five Eyes operation.

The intelligence-sharing powers of the Western nations were being marshalled not against an espionage target, but a money-lauderer. It had never happened before.

The DEA's specialist Group 44 would be the tip of the spear. Its supervisor, Rob Cassitta, had known of Khanani - and his ties to heroin traffickers - since his days stationed at the DEA's office in Turkey. Now, he and his team was asked to bring him down.

"The plan was to infiltrate a DEA undercover agent into the Khanani organisation," Cassitta explained to Four Corners. They hoped to establish themselves in Khanani's eyes, as "the highest traffickers or money launderers that we can ... [and] to develop the evidence that we would then be able to indict him in the United States".

The DEA and the ACC were confident. Posing as a cartel on the rise, they had already inserted undercover agents into Khanani's network. They had successfully dropped small amounts of money into it from all over the world: Auckland, Toronto, The Hague.

There was only one problem. The DEA couldn't raise more money.

"This was one of the more interesting parts of the strategy," Grant said ruefully. If the Australians wanted Khanani, they'd have to put up the cash themselves.

Grant's boss eventually signed off on the taxpayer funds but then he "did say to me that my arse was in the sling".

"I get that. If you don't take risks, you don't get the results."

The ACC raised \$250,000, but the AFP put up the bulk of it — another \$1 million. The Australians had never done anything like this before.

"Whilst it was a different approach to how we would normally go about those types of investigations, it was certainly a managed risk," Stewart said.

By January 2014, the operation had the green light. One undercover agent told Altaf Khanani the emerging

syndicate was made up of "serious guys" who needed to move more money, more quickly.

"I've been in the market 30 years," Khanani replied. "Don't worry."

He agreed to take up to \$200,000 every few days and have it wired back into an American bank. The receiving account was secretly under DEA control.

On the evening of January 7, a special agent stood in the carpark of a tired Dunkin' Donuts franchise opposite the North Arlington public library in New Jersey. He was holding a black duffle bag. Inside was \$100,000.

The money pick-up had been arranged beforehand with Khanani personally. The Pakistani money-launderer was talking directly with DEA undercover officers using an encrypted iPhone messaging service.

At one point, one of them even dialled up Khanani on Skype from his laptop.

The evidence gained from the 19-minute call was "phenomenal", said John Clayton.

"To make sure Khanani knew that this money was drug money, we were talking plain English ... we would tell him we were offloading 'kilos' or we had 'white bricks' ... at some point [we] used 'cocaine' in the conversation."

One night fell, Khanani's money courier arrived as planned. The two men compared \$1 note serial numbers — one had the banknote, the other a photograph of it — and the DEA handed over the money.

Twelve days later, an obscure company in the UAE, Mazaka General Trading, wired back \$96,936 - Australia's tax money minus a 3 per cent commission. Khanani had been taken in.

The operation ramped up. Two hundred thousand dollars was dropped to him the following day, and another \$300,000 within the next nine days. Khanani was picking up the money from any city they asked — Houston, Atlanta, Dallas, New York — and it was all being wired back via legitimate companies with no apparent connection to Khanani.

"It was kind of amazing to see how we can throw out a state or an area where we needed money picked up and Khanani was able to reach into his rolodex and dial up somebody to help us with that," Cassita says.

"I was with the guys, John and the other guys in the office, and it was, holy shit this is working, we can do this as long as we want."

By the 16th of April 2015, the DEA had unassailable evidence. Altaf Khanani was an industrial scale launderer. There wasn't a courtroom in the country that would disagree.

"Once we went to the lure and capture phase, we had to find a place that Khanani would be comfortable travelling to," Cassita says. They couldn't pull him from Dubai or Pakistan.

In the February Skype call, the undercover agent had planted a seed that would help.

"You can come ... if I go to Costa or Panama, no?" he asked Khanani. He said the cartel bosses "want to know who they're dealing with".

"I can come there, easy," Khanani replied.

The fictitious cocaine syndicate talked up access to senior drug traffickers who wanted to shift their laundering contracts over to Khanani. The agents also promised they could corruptly procure for him a Panamanian passport.

	<p>Finally, Khanani booked a KLM flight to Tocumen International Airport in Panama, via Amsterdam.</p> <p>It was scheduled to land on September 11, which Cassitta and Clayton, both staunchly patriotic, considered a sweet irony. They had agents watch him in Amsterdam to make sure he got on his connecting flight.</p> <p>Once he did, they knew they had him.</p> <p>"He was expecting the big trip, to meet all these big players," Clayton says. "He had no idea."</p> <p>Richard Grant was at home in Canberra. His phone beeped.</p> <p>"I looked down and there was a text with a photograph of Khanani surrounded by DEA agents in cuffs," he says. "It was a wonderful thing."</p>

<b>HEADLINE</b>	<b>02/03 FBI probe dragged; gymnasts molested</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/nation-world/as-fbi-dragged-its-feet-dozens-of-gymnasts-were-molested/">https://www.seattletimes.com/nation-world/as-fbi-dragged-its-feet-dozens-of-gymnasts-were-molested/</a>
<b>GIST</b>	For more than a year, an FBI inquiry into allegations that Lawrence G. Nassar, a respected sports doctor,

had molested three elite teenage gymnasts followed a plodding pace as it moved back and forth among agents in three cities. The accumulating information included instructional videos of the doctor's unusual treatment methods, showing his ungloved hands working about the private areas of girls lying facedown on tables.

But as the inquiry moved with little evident urgency, a cost was being paid. The New York Times has identified at least 40 girls and women who say Nassar molested them between July 2015, when he first fell under FBI scrutiny, and September 2016, when he was exposed by an Indianapolis Star investigation. Some are among the youngest of the now-convicted predator's many accusers — 265, and counting.

The three alleged victims then at the center of the FBI's inquiry were world-class athletes; two were Olympic gold medalists. Nearly a year passed before agents interviewed two of the young women.

The silence at times drove the victims and their families to distraction, including Gina Nichols, the mother of the gymnast initially known as "Athlete A": Maggie Nichols, who was not contacted by the FBI for nearly 11 months after the information she provided sparked the federal inquiry.

"I never got a phone call from the police or the FBI" during that time, Gina Nichols, a registered nurse, said. "Not one person. Not one. Not one. Not one."

The FBI declined to answer detailed questions about the speed and nature of its investigation or to provide an official who might put the case in context. Instead, it issued a statement asserting that the sexual exploitation of children "is an especially heinous crime" and that "the safety and well-being of our youth is a top priority for the FBI."

The statement also said the many allegations against Nassar "transcended jurisdictions," an apparent suggestion that internal efforts to coordinate among its bureaus and with other law-enforcement agencies partly explained the inquiry's slow tempo.

The agency left unaddressed the oft-repeated claim by USA Gymnastics officials that after initially presenting the sexual-assault allegations to the FBI in July 2015, they came away with the impression that federal agents had advised them not to discuss the case with anyone. The ensuing silence had dire consequences, as the many girls and young women still seeing Nassar received no warning.

Only three years ago, Nassar was a popular doctor among the athletes he treated for USA Gymnastics. His treatments were also in demand at Michigan State, where he worked, as well as at a gymnastics academy called Twistars.

Issues had cropped up: a parent raising concerns about his behavior at Twistars; a female athlete or two at Michigan State complaining to no avail about inappropriate exams. In 2014, a university investigation of another complaint cleared Nassar of misconduct, but he was now required to have a third person present when treatment involved sensitive areas of the body — and to wear gloves.

Still, the doctor was trusted enough to conduct his procedures — including one called "intravaginal adjustment" — without supervision when treating the country's best gymnasts at the Karolyi ranch, the exclusive and secluded national team training camp, about 60 miles north of Houston. Gymnasts of international caliber, like Nichols, of suburban Minneapolis, would spend a week each month at the ranch.

There, in late spring 2015, Nichols' personal coach, Sarah Jantzi, overheard the 17-year-old girl talking with another elite gymnast, Aly Raisman, about Nassar's invasive and inappropriate techniques. The alarming information was quickly shared with the girls' parents and, by June 17, with officials at USA Gymnastics.

Gina Nichols, Maggie's mother, recalled telling Steve Penny, then the president of USA Gymnastics, that the police had to be called immediately. But he insisted that she not tell anyone, she said. The organization would take care of alerting law enforcement.

Weeks of silence passed, Gina Nichols said, although the U.S. Olympic Committee has said USA Gymnastics reported one of its physicians had been accused of abusing athletes “and was in the process of contacting the appropriate law enforcement authorities.”

USA Gymnastics eventually retained what it called “an experienced female investigator.” The investigator recommended Friday, July 24, that Nassar be reported to law enforcement.

On Monday, July 27, gymnastics officials contacted the FBI in Indianapolis, where USA Gymnastics has its headquarters. The next day, its chairman, Paul Parilla, and Penny met with FBI agents who, they later said, assured them they had come to the right place. Forty-one days had passed since USA Gymnastics first received the report of the sexual abuse of one of its charges.

The gymnastics officials provided the agents with contact information for three gymnasts: Nichols, Raisman and someone emerging as the central complainant: McKayla Maroney, then 19, a retired Olympic gold medalist.

They also turned over copies of videos of Nassar demonstrating his technique as he chatted clinically about pulled hamstrings, buttocks and trigger points. Reporters for The New York Times have seen the videos, which show him kneading the legs of girls before his ungloved hands begin to work under a towel, between the girls’ legs.

“It’s not a fun place to dig,” Nassar says to the camera.

Nassar first molested Emma Ann Miller when she was 10, she recalled. She was having back and neck issues, and he had her remove her leggings and put on loose shorts. In a medical supply room that doubled as a treatment room, he began exploring “down there.”

“He was like, ‘Is this OK?’ and I was like, ‘I don’t know,’” she said. “And he was like, ‘Just hang in there.’ I didn’t know how it felt. I just knew that it hurt.”

At some point, Emma Ann told her mother that she preferred not to be alone with Nassar. But he continued to abuse her, she said, while positioning himself so that her mother couldn’t see what he was doing. Emma Ann now knows that she was not alone.

In late July or early August 2015, FBI agents interviewed Maroney by phone. It was the first substantive interview of an alleged victim of child molestation.

Meanwhile, Nichols and Raisman had received no word from any law-enforcement official about the allegations now lodged with the FBI.

Some of the delay appears to have been related to questions concerning federal-versus-state jurisdiction, as well as jurisdiction within the FBI itself. Although the Indianapolis bureau had received the information, the alleged sexual abuse by Nassar had taken place in Texas, at the Karolyi ranch, and in Michigan, where he lived and worked. And Maroney lived in California.

According to W. Jay Abbott, who at the time was the special agent in charge of the FBI bureau in Indianapolis, his agents did not have the case for long. “When we consulted with the U.S. attorney, we knew right away that we would not have venue,” he said. “It was never really our case.”

USA Gymnastics officials said that around this time, they were told that pertinent interviews had been completed and that the case had been transferred to another jurisdiction. Indeed, on Sept. 12, Maroney was directed by USA Gymnastics to contact the FBI East Lansing office.

Two weeks later, on Sept. 27, Nassar announced on Facebook that he was retiring from the women’s national team staff.

In April 2016, Raisman shared a gold medal with the national team at the Pacific Rim Championships in Seattle, while Nichols damaged a knee during training, underwent surgery and was out for several weeks. Meanwhile, neither she nor her parents heard anything about the federal investigation that USA Gymnastics had instructed them to remain silent about.

Finally, the absence of information about the federal investigation prompted Penny and Parilla, the USA Gymnastics officials, to visit the FBI's Los Angeles bureau in early May.

"As time passed, concern about a perceived lack of development prompted Board Chair Paul Parilla and CEO Steve Penny to report the matter a second time to a different FBI office," USA Gymnastics said in a statement to The Times on Friday.

Through a lawyer and a spokeswoman, Parilla and Penny declined to be interviewed for this article.

On May 17, the FBI finally interviewed Maroney in person. It had been 294 days since the FBI was first notified of accusations against Nassar.

On Sept. 12, 2016, The Indianapolis Star published an in-depth investigation detailing allegations that Nassar had repeatedly molested two gymnasts when they were young.

Suddenly, the Nassar case took on urgency.

By the close of 2016, Nassar was in custody. By the close of 2017, he had been convicted. Given that he has been sentenced to nearly two centuries in prison, Nassar will likely die there.

<b>HEADLINE</b>	<b>02/03 PCSO: 2 dead in shooting</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/2-dead-over-guns-and-or-drugs-in-key-peninsula/281-514144978">http://www.king5.com/article/news/local/2-dead-over-guns-and-or-drugs-in-key-peninsula/281-514144978</a>
<b>GIST</b>	<p>A man and a woman were shot dead Saturday morning in the Key Peninsula in a dispute over "guns and/or drugs," said Pierce County Sheriff's Department spokesperson Ed Troyer.</p> <p>Deputies responded just before 3 a.m. to a 911 call about shots fired in the Longbranch area of the Key Peninsula. The caller reported two people had been shot and a known suspect had fled the property.</p> <p>Deputies en route to the scene located the 27-year-old known suspect walking along Whiteman Road and placed him in custody.</p> <p>"The person who did the shooting called and turned himself in," said Troyer. "We picked him up in the woods just a short distance away."</p> <p>Once they arrived, deputies found the bodies of a husband and wife - a 35-year-old man and a 24-year-old woman - in the driveway at a mobile home in the 5500 block of Whiteman Road. Multiple weapons were also recovered at the scene.</p> <p>"It appears this may be in retaliation for a previous domestic violence incident that occurred some time back. And we also believe that guns and/or drugs are involved," said Troyer. "It appears everyone knew each other through family relationships."</p> <p>Deputies also found the victims' 2-year-old son in the back seat of the vehicle the victims drove to the scene. He was uninjured and has been placed with a relative who does not live at the location, said Troyer.</p> <p>The 27-year-old suspect was booked into the Pierce County Jail for two counts of Murder in the 2nd</p>

	degree. Deputies were not currently looking for any additional suspects.

<b>HEADLINE</b>	<b>02/02 B.C. money laundering probe pivots</b>
<b>SOURCE</b>	<a href="http://vancouversun.com/news/national/huge-b-c-money-laundering-investigation-pivots-to-drugs-and-guns">http://vancouversun.com/news/national/huge-b-c-money-laundering-investigation-pivots-to-drugs-and-guns</a>
<b>GIST</b>	<p>In December 2015, a new leg of the RCMP's E-Pirate money-laundering investigation delved into Metro Vancouver's underworld of fentanyl labs, gun sales and violent dial-a-dope gangs.</p> <p>It started with undercover officers tracking the movements of a Burnaby man named Ge 'Gary' Wang.</p> <p>The offshoot investigation, code-named Prophet, grew from extensive surveillance of the many alleged employees of E-Pirate's primary target, Paul King Pao Jin. In E-Pirate, the RCMP and B.C. government documents allege a network of organized criminals established a massive underground banking channel between Richmond and Mainland China, using VIP gamblers from Macau to buy chips, mostly at River Rock Casino, in order to launder hundreds of millions in drug cash. The operation allowed ultra-wealthy Chinese businessmen, some allegedly with ties to organized crime, to move money from China to Canada while evading China's tight capital export controls.</p> <p>Postmedia News has pieced together the story of Prophet through extensive investigation of B.C. property, lending and legal documents, including two major civil forfeiture claims, and interviews with law enforcement sources not authorized to be identified on the record.</p> <p>Prophet built on E-Pirate intelligence, a source with knowledge of both investigations said, by connecting the dots between Asian organized criminals accused of importing narcotics, and the Red Scorpions, a notorious Metro Vancouver dial-a-dope gang.</p> <p>B.C. government records obtained by Postmedia illustrate just how closely Jin and his associates had been watched in Richmond from mid-2014 through 2017.</p> <p>"Our main target at River Rock had been extremely active of late and has actually been on the property several times making deliveries of cash himself!" says an October 2014 email from B.C. Lottery Corp. to the B.C. police anti-gang unit, the Combined Forces Special Enforcement Unit. "Their main vehicle is a white SUV that parks on River Road, avoiding our licence plate recognition system most times. Last week, Jin dropped two loads of a half million per load to the same guy and a few smaller loads of 200-300 K each, so hour (sic) is a busy boy."</p>

A June 2014 email from B.C. Lottery Corp. to the anti-gang unit regarding a top-10 list of cash lenders working around Lower Mainland casinos — “with the majority devoted to River Rock patrons” — said Jin, the top “cash facilitator,” was “extremely active and has numerous people working for him.”

But Jin wasn’t involved only in recruiting whale gamblers in China and lending them cash to use at River Rock. A November 2016 B.C. Supreme Court ruling, which permitted the Canada Revenue Agency to get E-Pirate evidence, says Jin and several associates were allegedly connected to probable offences involving narcotics importation and trafficking, as well as operating illegal casinos, evading taxes and conspiring to launder money.

So far, money-laundering charges have been laid against Silver International, an alleged illegal Richmond money services business named in the B.C. Supreme Court ruling, and two people. The E-Pirate probe is nearing completion and more charges are expected, a source with knowledge of the investigation said.

According to a May 2017 B.C. civil forfeiture claim, RCMP’s federal serious and organized crime unit started an investigation in December 2015 into a group operating drug labs in Richmond.

Surveillance was established on Ge Wang, and police observed Wang “providing pails believed to contain chemicals” to suspects from several Richmond homes. Police obtained search warrants, and found drug labs in the homes. Almost a year would pass in the investigation, until Nov. 25, 2016, when officers observed Wang loading buckets believed to contain chemicals. Police searched Wang’s Nissan Pathfinder and seized drums containing NPP, a fentanyl precursor chemical.

In a series of email responses to questions from Postmedia, Wang insisted he has no idea why police associated him with Paul Jin and placed him under surveillance. Wang provided Postmedia a copy of a legal application filed by the RCMP to extend an order to hold items seized from Wang’s Pathfinder, and said the RCMP won’t respond to his questions about why the vehicle was searched.

“I am doing moving and delivering — part time job — when the polices (sic) took my vehicle unlawfully. They took some drums from the vehicle,” Wang said. “I don’t know what is NPP. I just realized, but I don’t know where the NPP come from. I am just a mover. I don’t know about Paul King Jin. I think the police got wrong one.”

The question asked of Wang — where did the NPP come from — is an important one, as Metro Vancouver is plagued with a crisis of fentanyl overdose deaths.

In a 2017 study titled “China’s Deadly Export to the U.S.,” a United States security commission reported that because fentanyl is not widely used in China, state authorities “place little emphasis on controlling its production and export.”

The fentanyl precursor NPP is also not controlled by China, according to the report. And U.S. Drug Enforcement Administration agents report that fentanyl precursors including NPP are mailed from China for use in clandestine labs in Canada.

In January 2017, according to legal filings, police learned that within a six-week period Wang had acquired 18 restricted firearms from West Coast Hunting Supplies in Richmond. Corporate records show that Hai Peng Yang is the gun shop’s director. The shop is involved in firearms training courses and “wildlife specimen” exports, according to its website. Yang and shop employees didn’t respond to a request for comment on the civil claim allegations regarding Ge Wang’s restricted gun purchases from West Coast Hunting.

On Feb. 8, 2017, legal filings allege, Wang went to West Coast Hunting and purchased seven firearms, placed the weapons in two blue plastic bags, and put them in his vehicle. He drove to a home on on 55 Street in Delta, allegedly in contravention of his firearms licence. The filings don’t explain the regulation that Wang allegedly broke. However, the RCMP specifies that under the Firearms Act, a gun owner must have the registration for any restricted firearm in their possession and an authorization to transport a

restricted firearm from one location to another.

According to police, another man arrived at the 55 Street home, driving a 2016 Cadillac CTS, and loaded the two blue bags into the trunk. It drove several minutes to a French-style mansion on 5th Avenue, which is near the ocean in Tsawwassen, and about three kilometres from the U.S. border in Point Roberts. Csongor Szucs, 30, is a resident of the mansion, according to the legal filings.

Szucs is the sole defendant in a separate civil claim dated August 2017 and seeking forfeiture of two vehicles. The claim says that in April 2016 — around the time of the RCMP's final E-Pirate raid in Richmond — undercover RCMP officers started investigating a network of alleged dial-a-dope traffickers in Richmond. From June 2016 to January 2017, officers completed 28 drug deals with traffickers associated with Szucs, the claim alleges. The officers bought fentanyl, cocaine and heroin either supplied by Szucs, or sold to them inside five vehicles leased to Szucs, the claim alleges.

Through surveillance, officers identified that a 2007 Cadillac Escalade and a 2007 Mazda CX-7 leased to Szucs were connected to several Richmond homes, including a drug "stash house," a unit of a multi-storey building on River Road, the forfeiture claim alleges.

The court filing also claims that in September 2016, undercover officers observed Szucs driving the Escalade to meet an associate. Szucs supplied the man with drugs, it alleges, and the man drove another vehicle registered to Szucs to fill an order with an undercover officer. The police officer bought pills which he was told were OxyContin, the claim alleges, but which contained fentanyl.

The investigation accelerated in January 2017 with a dramatic arrest. RCMP officers staking out the River Road stash-house spotted Szucs transferring a shopping bag from the 2007 Mazda to the Escalade. Then he entered the stash house and carried a black snowboard bag to the Escalade. As Szucs got into his Escalade, an officer approached, and Szucs tried to speed away as the officer jumped into the Cadillac, "in an attempt to stop Mr. Szucs from fleeing."

With the officer in the front seat of the Escalade, Szucs accelerated and smashed into a concrete pillar, injuring the officer, the claim alleges.

Police arrested Szucs and searched his Cadillac. They allege they found a loaded Sig Sauer SP2022 handgun with its serial number filed off. And, hidden inside the black snowboard bag, an SKS rifle. The SKS, a Soviet-era semi-automatic military rifle that preceded the Soviet AK-47, is not restricted in Canada. However, in 2014, the RCMP issued safety warnings saying that at least one SKS was found to have fired as a fully automatic weapon in Ontario. And in 2014 in Nanaimo, Mounties said they were concerned to find two SKS rifles in a raid of a drug lab.

"Any time you have something capable of firing more than one bullet (in rapid succession), it's concerning," Sgt. Sheryl Armstrong was quoted in the Nanaimo Daily News. "You think about the massacres we've had with AK-47s."

After Szucs's arrest, police searched the River Road stash house, and allege they found drugs including fentanyl, crack, methamphetamine, heroin and 215 Xanax tablets, along with eight computers and 20 cellphones.

Through surveillance, officers identified that a 2007 Cadillac Escalade and a 2007 Mazda CX-7 leased to Szucs were connected to several Richmond homes, including a drug "stash house," a unit of a multi-storey building in on River Road, a forfeiture claim alleges.

The Cadillac and Mazda were seized as property related to alleged crimes. And "on Feb. 7, 2017, the RCMP Integrated Homicide Investigation Team searched the Mazda pursuant to a search warrant."

The claim doesn't explain why IHIT homicide investigators became involved in the investigation, or the team's basis for obtaining a warrant to search the Mazda. But officers located a hidden compartment in the Mazda, the claim says, and in the following days police executed repeated search warrants inside and

nearby Szucs's home, the mansion in Tsawwassen.

On the next day, Feb. 8, after meeting Ge Wang in Delta and receiving seven firearms, a man driving a Cadillac SUV arrived at the French-style mansion.

Delta police stopped the man as he left the mansion, which is about 100 metres from English Bluff Elementary School, and searched the Cadillac. From the rear they seized a bag with heroin, cocaine, and methamphetamine, all packaged for sale. On the passenger seat was a "black man-purse" containing \$4,295 bundled in elastic bands, and a money order for \$400 from Szucs, payable to Justin Haevischer.

Haevischer is the younger brother of convicted Surrey Six killer Cody Haevischer, of the Red Scorpions. In September 2016, Justin Haevischer was sentenced to 20 months in jail for helping to dispose of evidence related to the October 2007 Surrey Six murders.

Police struck again on Feb. 9. Delta police officers stopped a man driving a GMC Sierra as it left the 5th Avenue property, and found three cellphones.

Hours later, police stopped a Hyundai as it left the 5th Avenue mansion. According to the civil claim, Kyle Latimer was the passenger, and his father Craig Latimer was driving. Kyle Latimer was the subject of a firearms prohibition stemming from a 2011 assault. Police allege they found a hidden compartment containing \$51,000 in cash stuffed into a copper box, \$52,000 packed in a yellow cloth bag, and \$7,300 in a silver briefcase. Next to the cash, police found a digital scale, a Lee Enfield Ishapore .303 calibre rifle, a Siminov SKS 1952 Tula Factory rifle, a Winchester Model 1200 12-gauge pump-action with a filed down serial number and sawed off barrel, and an Arms Machine pistol AP9 9mm.

The AP9 is a prohibited weapon in Canada, according to online databases, and is described as a submachine pistol that was banned in many U.S. states in the 1990s. According to online sniper forums, the Lee Enfield Ishapore, a non-restricted rifle in Canada, is valued by long-range shooters.

"During the Soviet-Afghan War of the 1980s, Mujahedeen found the .303 Enfield had twice the effective range of the AK assault rifle and could punch through Soviet flak jackets," one description reads.

Police also found about \$7,000 cash on Kyle Latimer and, in the Mazda's secret compartment, cocaine, heroin, methamphetamine and various pills packaged for sale, along with "scoresheets." In the drug world, score sheets are lists that keep track of money owed for inventory.

On the same day, police raided Ge Wang's residence on Kathleen Avenue in Burnaby. Police arrested Wang and found various firearms registration certificates, various pieces of lab equipment, two drums containing 57 kilograms of phosphoric acid, a precursor in methamphetamine production, and a 25-kg drum of potassium iodide, also a drug precursor, according to the forfeiture claim.

Postmedia asked Wang if he obtained the firearms registration certificates from West Coast Hunting Supplies.

"I got my firearm licence legally," Wang responded. "The registration certificates were mailed to my place."

While police raided Wang's home in Burnaby, the arrests continued at the 5th Avenue property in Tsawwassen. Delta police stopped a 2015 Fiat 500, and inside were three young men, some of them previously charged with drug dealing in Surrey.

Police searched the Fiat and allege they found \$84,865 in cash, scoresheets, identification for Kyle Latimer, a money counter, two digital scales, a Sig Sauer 9 mm pistol, plus heroin, crack, methamphetamine, marijuana, and counterfeit Xanax pills.

Later in the day, a Surrey woman left the 5th Avenue property and placed a Louis Vuitton bag in a

Tsawwassen taxi. Delta police stopped the cab, and found a black satchel containing eight cellphones and business invoices made out to Kyle Latimer. Tucked into the Louis Vuitton bag was \$54,650 in cash, and a lockbox with six divided compartments. In each of the six compartments were keys for various residences and vehicles. Also in the lockbox, police found a chequebook and several pieces of I.D. in the name of Csongor Szucs, and “a notebook referencing locations of rental properties and corresponding rents.”

Finally that day, police executed a search warrant at the 5th Avenue mansion. They found a safe, \$46,125 in cash stuffed into a shoebox, records of deals completed and debts owed, and 11 prohibited high-capacity firearms magazines. High-capacity magazines are designed to hold more rounds of ammunition than a weapon is legally designed for, and generally allow gunmen to fire additional rounds without pausing to reload.

Ten defendants are named in the May 2017 civil forfeiture claim, including Kyle Latimer, Csongor Szucs and Ge Wang. Latimer has been charged with a number of criminal cases and is considered violent, according to Richmond RCMP. Court records show that Szucs faces a number of weapons charges stemming from his arrest in January 2017.

In response to Postmedia’s questions, Wang said B.C.’s Chief Firearms Office has cancelled his gun licence.

“No charges against me yet,” Wang wrote in an email. “Just forfeiture, my same vehicle two times by unlawful.”

The RCMP would not answer questions for this story, including whether West Coast Hunting Supplies is under investigation.

“What I can tell you, is that CFSEU-B.C. is aware of West Coast Hunting Supply, however, I don’t have information on the specific questions you have outlined in your email,” Sgt. Brenda Winpenny said. B.C.’s Chief Firearms Office also did not respond to Postmedia’s requests for comment.

The cash, vehicles, guns, phones and computers seized in these claims are proceeds and instruments of crime, the forfeiture claims allege. These assets will likely lead to “serious bodily harm to a person,” if defendants are allowed to retain them, the May 2017 claim says.

B.C.’s civil forfeiture office is not seeking to seize the Delta homes named in the May 2017 claim. But in an interview, Phil Tawtel, B.C.’s executive director of civil forfeiture, said that seizure claims can be “dynamic.”

Tawtel said he could not comment on these continuing cases, but generally, his office can amend claims and pursue additional assets if police produce strong-enough evidence. The office’s lawyers can also discover in litigation that properties are connected to crimes, Tawtel said, which can lead to amended claims.

According to land title records, the 5th Avenue property named in the claim, from which police seized cash and weapons in February 2017, is owned by Jasmine Xu, who lists her occupation as “housewife.” The property is valued at \$1.96 million. According to title records, Jasmine Xu’s residential address is a Vancouver home on the 2600-block of 19th Avenue West, worth \$3.94 million. The Vancouver home is not named in the claim. A review of B.C. title records shows that a “housewife” named Jasmine Xu owns a \$1.26 million home on Parkgrove Crescent in Tsawwassen (also not named in the claim), which is about 30 metres from the U.S. border in Point Roberts, and a six-minute drive from the 5th Avenue mansion.

According to title records, the second Delta property named in the civil claim, where Ge Wang allegedly delivered seven guns to another man, is owned by Junchen Xue, “homemaker.” That property is valued at \$1.1 million.

In a 2016 study, global anti-corruption agency Transparency International pointed to the rising use of

opaque ownership structures in Vancouver real estate, including shell companies, legal trusts, and so-called nominee owners with occupations such as “student” and “housewife.” The study’s author, Adam Ross, says these occupations can’t possibly produce the income needed to buy a house in Metro Vancouver, which is why housewives and students are considered front buyers. Of Vancouver’s 100 most expensive homes, the study found, about half of ownerships were hidden, with 29 held through shell companies and at least 11 through nominees including students and housewives.

In an interview, Tawtel said his office attempts to unveil nominees in some cases.

“It adds a layer of complexity and work for the office, because there are instances where the registered owner, we believe is not the beneficial owner,” Tawtel said. “And it is extremely challenging to produce the evidence, in order to prove this in court. “

Several Richmond homes are named in the August 2017 civil forfeiture claim against Csongor Szucs, which seeks seizure of two vehicles. In a response, Szucs denies any wrongdoing, and argues that police illegally searched his vehicle.

The alleged Richmond drug stash-house in the 6200-block of River Road was owned at the time of Szucs’s arrest by a woman named Mary Chan, whose listed occupation is “homemaker.” The property is valued at \$600,000. Title records for the home say that Mary Chan’s owner address is 3280 River Rd. in Richmond, a property valued at \$3.05 million.

However, the land title for 3280 River Rd. says that its owner is “Saree Chan ... business person.”

And a transaction document for 3280 River Rd. says that “Saree Chan” is also the owner of 5811 Gibbons Rd., a \$3.3-million Richmond property. However, the land title document for 5811 Gibbons indicates that its owner is “Mary Chan” of 3280 River Rd.

In 2017, in a presentation explaining the E-Pirate investigation and various targets involved in suspected real estate money laundering, RCMP Insp. Bruce Ward said that officers were making the case for home seizures to B.C.’s civil forfeiture office, but investigators have encountered extremely complex side-deals.

“The actual investment by the conspirators was very little, because they are just paying a really exorbitant rent,” Ward explained. “That is another business deal, (in which) organized crime is involved. So you agree to buy a house, and lease it to someone, who is going to lease it again to someone else. And then I show up a month from now, and you give it to me for rent. And I pay (something like) \$10,000, per month, rent.”

<b>HEADLINE</b>	<b>02/02 Court: FBI surveillance confidential</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/fbi-spying-muslims-court-surveillance-798219">http://www.newsweek.com/fbi-spying-muslims-court-surveillance-798219</a>
<b>GIST</b>	<p>A federal appeals court overturned a ruling by a judge in California on Thursday that would have required the FBI to release documents describing the bureau’s efforts to spy on Muslims in Northern California and recruit informants from among Muslim communities.</p> <p>A lawsuit, filed in 2010 by the American Civil Liberties Union, the Asian Law Caucus, and the Bay Guardian Newspaper, sought to obtain documents on whether the FBI was using educational and “community outreach” to infiltrate Muslim communities. The FBI turned over tens of thousands of documents, some of which showed that the bureau’s agents had taken notes on the religious viewpoints of some members of the Muslim community. But some of the information was deleted from the documents, and other documents were withheld.</p> <p>A district judge ruled that the FBI should hand over the additional material, but an appeals court decided Thursday that the agency does not need to provide the missing information.</p>

	<p>Some advocates for the Muslim-American community said they were disappointed by the decision, but that the ruling would not change the widespread perception that the FBI is spying on Muslim Americans.</p> <p>“We don’t need additional information to know that the FBI has saturated our community with informants and set up listening posts that continuously monitor the Muslim community,” Gadeir Abbas, an attorney with the Council on American-Islamic Relations, told Newsweek. "You don’t have to convince people in the Muslim community that this unwanted surveillance has been ongoing.”</p> <p>“Even for those of us who have worked on surveillance issues it’s always a struggle to see the openness of the anti-Muslim sentiment that pervades federal law enforcement,” Abbas continued. “It’s disappointing that we won’t get the documents, but we know enough from our own experiences that the federal government views Muslims and Islam with a presumption of suspicion.”</p> <p>The documents requested in the lawsuit included information about how the FBI handles and recruits confidential informants.</p>

<b>HEADLINE</b>	<b>02/02 Claim: deputy killed was ‘ambushed’</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/investigators-deputy-killed-was-essentially-ambushed-by-gunman/693378254">http://www.kiro7.com/news/local/investigators-deputy-killed-was-essentially-ambushed-by-gunman/693378254</a>
<b>GIST</b>	<p>FREDERICKSON, Wash. - Law enforcement sources close to the investigation tell KIRO 7 they have new information into a gun battle that killed Pierce County Sheriff's Deputy Daniel McCartney.</p> <p>McCartney, a father of three, was shot and killed while responding to a call of an armed, drug-related robbery near Spanaway in the Frederickson area -- near Tacoma -- in early January.</p> <p>There are a total of four suspects in the investigation. Three were arrested, as one person died at the scene.</p> <p>According to sources, it was Frank Pawul, not deceased suspect Henry Carden, who fired the shot that killed McCartney.</p> <p>Law enforcement sources close to the investigation told KIRO 7 Friday it was Frank Pawul, not deceased</p>

suspect Henry Carden, who fired the fatal shot that killed Pierce County Sheriff's Deputy Daniel McCartney.

The sources, who would only speak anonymously, said the 34-year-old McCartney was essentially ambushed by Pawul and died from a gunshot wound that shattered his spine.

McCartney and Carden got into a gun battle according to investigators, with the deputy striking the body armor Carden was wearing five times. The 35-year-old Carden fell, then shot himself in the head.

Investigators first thought Carden may have fired the fatal round that killed McCartney during that brief gun battle, but sources now say it was Pawul, who emerged seconds after Carden died, shooting the deputy and killing him instantly.

Pawul then ran from the scene and was arrested hours later when a state trooper spotted him leaving a containment area established during the hunt for a second suspect.

A re-arraignment for Pawul is scheduled for Tuesday Feb. 6 in Pierce County Superior Court.

KIRO 7 contacted Pierce County Prosecuting Attorney Mark Lindquist's office to ask about any new charges but were told through a spokesman the office would have no comment until Tuesday's court appearance.

Deputy first to arrive at robbery scene

Deputies were called to the area of 45th Avenue Court East and 200th Street East for an attempted drug-related armed robbery at a home at 11:30 p.m. on Jan. 7.

Four adults and two children, ages 2 and 3, live in the mobile home near 200th Street East and 45th Avenue Court East. The home had no beds and was filthy, according to investigators.

In the past two years, deputies responded to 18 prior calls there.

The residents were inside the home at the time of the incident and screaming could be heard in the background, police said.

When the first deputy arrived within six minutes, a suspect fled and the deputy ran after him. Police said they believe there was a gun battle and the deputy was hit.

He was taken to an area hospital in critical condition where he later died.

A gun that was found is believed to be the one used to shoot the deputy.

A suspect in the armed robbery was found dead at the scene. The second suspect was arrested hours later.

Pierce County Sheriff's Department spokesman Ed Troyer said the site of the robbery was a "known house" to the sheriff's department and that a warrant would be obtained to search the premises.

Four people are suspected of being involved in the home invasion on Sunday. One suspect, 35-year-old Henry Michael Carden, was found dead at the scene.

Three other suspects were arrested.

A manhunt was underway for hours for Frank William Pawul. He was arrested and is now charged with first-degree murder.

Pawul, 32, has a criminal record that includes identity theft, residential burglary and drug possession.

	<p>Police arrested a third suspect in mid-January regarding about rendering assistance in connection with the incident.</p> <p>Brenda Troyer, 52, is accused of driving two male suspects to the home. She is charged with first-degree murder, but she pleaded not guilty. According to authorities, she was supposed to be their getaway driver but abandoned them when she heard police sirens.</p> <p>On Tuesday, authorities told KIRO 7 that a third suspect, 29-year-old Samantha Dawn Jones, was booked into the Pierce County jail on Jan. 23. She was arrested at a house in Roy by SWAT. According to authorities, "she was involved with planning to the end."</p> <p>The investigation continues.</p>

<b>HEADLINE</b>	<b>02/02 Iran: 29 arrests for hijab protest</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/02/middleeast/iran-arrests-29-women-after-hijab-protest-intl/index.html">https://www.cnn.com/2018/02/02/middleeast/iran-arrests-29-women-after-hijab-protest-intl/index.html</a>
<b>GIST</b>	<p>(CNN)Police in the Iranian capital, Tehran, have arrested 29 people for their involvement in protests against the country's compulsory headscarf law.</p> <p>Women across Iran have been removing their headscarves in public to protest Iran's strict Islamic dress code. Videos and photos shared on social media have shown demonstrators standing on utility boxes on street sidewalks, defiantly waving their hijabs.</p> <p>Tehran police suggested that their actions were incited by foreigners, saying those arrested were "deceived" into removing their hijabs, Iran's semiofficial Tasnim News Agency reported. The 29 protesters been transferred to judicial authorities, the report said.</p> <p>Masih Alinejad, the Iranian activist behind the "White Wednesday" social media campaign against mandatory hijabs, who is now based in the US, told CNN that the movement has not been influenced from abroad.</p> <p>"The movement started inside Iran. It has nothing to do with forces outside of Iran," Alinejad said.</p> <p>"This is a campaign that's been going on for years and years. The women of Iran have long been ignored. We're just giving them a platform."</p>

	<p>News of the arrests came just days after the release of Vida Mohaved, a woman who was detained in December after removing her headscarf at an anti-regime protest.</p> <p>The wave of anti-government demonstrations last month was sparked by concerns over rising living costs and a stagnant economy, but also provided an opening for Iranian women to push for equal rights. Women have been required to wear the hijab since the Islamic Revolution in 1979.</p>

<b>HEADLINE</b>	<b>02/02 Ammo seller to Vegas shooter arrested</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/02/us/douglas-haig-las-vegas-massacre/index.html">https://www.cnn.com/2018/02/02/us/douglas-haig-las-vegas-massacre/index.html</a>
<b>GIST</b>	<p>(CNN)Douglas Haig, an Arizona man who says he sold tracer ammunition to the gunman in October's Las Vegas massacre, was arrested Friday on a charge of manufacturing and selling armor-piercing bullets in violation of federal law.</p> <p>A criminal complaint alleges two unfired .308-caliber rounds found in gunman Stephen Paddock's hotel room had Haig's fingerprints on them as well as tool marks from his workshop. The bullets in the cartridges were classified as armor-piercing, the complaint says.</p> <p>The FBI on October 19 searched Haig's Mesa home and seized ammunition the agency says is classified as armor-piercing, the complaint said. Haig did not have a license to manufacture armor-piercing ammunition, documents said.</p> <p>Police say Paddock opened fire on October 1 from his room at Las Vegas' Mandalay Bay hotel onto a crowd attending a music festival, killing 58 people and shooting and injuring 422 others. More than 850 others suffered other injuries in the attack.</p> <p>Douglas Haig's name was revealed in the release of search warrant records.</p>

	Haig, 55, appeared in court Friday and was released on this own recognizance with specific conditions not spelled out in court proceedings. He is due in court again February 15 for a preliminary hearing.

HEADLINE	02/01 Hawaii 'button pusher' to sue state
SOURCE	<a href="http://khon2.com/2018/02/01/emergency-worker-behind-false-missile-alert-to-file-lawsuit-against-the-state/">http://khon2.com/2018/02/01/emergency-worker-behind-false-missile-alert-to-file-lawsuit-against-the-state/</a>
GIST	<p>The emergency worker fired by the state for sending a false missile alert has hired an attorney, and plans to sue the state for defamation.</p> <p>The state has not identified the worker, but his attorney, Michael Green, says many people already know who he is, because the worker has received numerous death threats.</p> <p>So what does it take to prove that the state is liable?</p> <p>Green says his client has been made a scapegoat in all this. The worker has been living in fear because of the death threats, and Green says it's because the state lied about what happened.</p> <p>Once the panic died down on Jan. 13, state officials, including the governor, announced that the Hawaii Emergency Management Agency worker who issued the missile alert had mistakenly pressed the wrong button.</p> <p>On Tuesday, Jan. 30, the FCC and the state added that the worker didn't know it was a drill, and actually thought there was a missile attack.</p> <p>"He never pressed the wrong button. He pressed the button he wanted to press, because the way it came out, he thinks we're in imminent danger. Within 20 minutes, we might not be here anymore," Green said.</p> <p>The state has not released the workers name, but says it plans to.</p> <p>"People want to kill him. They identified him as a male, 10 years in the office. They show the back of a man sitting on a desk. It's not rocket science to figure out who it is," Green said.</p> <p>KHON2 reached out to David Major, a constitutional law attorney for the firm Bays Lung Rose Holma, who also handles defamation lawsuits. He says the state has a wide range of immunity against defamation lawsuits.</p> <p>"It provides for protections for the state, because if every time somebody disagreed with what the state said, they could sue them, it would lead to a huge problem in the court system," Major said.</p> <p>Major says the worker would have to prove that what the state said about him and the incident was false.</p> <p>Green says he might also sue the state for slander and libel.</p> <p>"Because they're saying that he made a mistake?" KHON2 asked.</p> <p>"No, because they lied about what happened. It's got to be untrue what they said about him. It's got to be false," Green said.</p> <p>It's not clear yet if the worker wants his job back.</p> <p>We reached out to the state, and a spokesman says it does not comment on pending litigation.</p>

<b>HEADLINE</b>	<b>02/01 Russia warns: US 'hunting' for Russians</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-russia-usa-travel-extradition/russia-says-u-s-hunting-for-russians-to-arrest-around-the-world-idUSKBN1FM0J2">https://www.reuters.com/article/us-russia-usa-travel-extradition/russia-says-u-s-hunting-for-russians-to-arrest-around-the-world-idUSKBN1FM0J2</a>
<b>GIST</b>	<p>MOSCOW (Reuters) - Russia has issued a travel warning recommending its citizens think twice before traveling abroad, saying the United States was hunting for Russians to arrest around the world.</p> <p>The Foreign Ministry statement warns Russian citizens that when abroad they face a serious threat of arrest by other countries at Washington's request, after which they could be extradited to the United States.</p> <p>"Despite our calls to improve cooperation between the relevant U.S. and Russian authorities ... U.S. special services have effectively continued "hunting" for Russians around the world," the travel warning said.</p> <p>"Considering these circumstances, we strongly insist that Russian citizens carefully weigh up all the risks when planning trips abroad," the Foreign Ministry said.</p> <p>It said more than 10 Russians had been detained in foreign countries with U.S. involvement since the start of 2017.</p> <p>By way of example, it pointed to at least four Russians arrested on U.S. cyber crime charges in Spain, Latvia and Greece. U.S. action against suspected Russian cyber criminals surged to a record high last year.</p> <p>Seven Russians were arrested or indicted in 2017 in the United States and abroad, compared to an average of two a year in the preceding six years.</p> <p>The ministry pointed to the case of Stanislav Lisov, accused of creating a computer virus that targeted customers of financial institutions, causing millions of dollars of damage, who was extradited from Spain to the United States last year.</p> <p>It mentioned earlier cases as well, including the detention of Roman Seleznev for cyber crime in the Maldives in 2014, which it described as a kidnapping by American agents.</p> <p>The statement, published on Thursday, also warns Russian citizens that upon extradition they will face biased treatment at the hands of the U.S. justice system.</p> <p>The U.S. State Department declined to comment.</p>

<b>HEADLINE</b>	<b>02/02 SoCal brief escape from drought ends</b>
<b>SOURCE</b>	<a href="https://apnews.com/982a4445806649a7a24f44b96442fa1a/Southern-California's-brief-escape-from-drought-ends">https://apnews.com/982a4445806649a7a24f44b96442fa1a/Southern-California's-brief-escape-from-drought-ends</a>
<b>GIST</b>	<p>PHILLIPS STATION, Calif. (AP) — California's brief escape from severe drought ended Thursday after scientists declared more than 40 percent of the state in moderate drought and water officials confirmed lower-than-normal snowpack in the Sierra Nevada.</p> <p>Los Angeles, Ventura and Santa Barbara counties, which hold nearly a quarter of the state's population, were rated in severe drought.</p> <p>During a week of rainless skies and some record-high temperatures in Southern California, water officials also trekked into the Sierra Nevada on Thursday and manually measured the vital snowpack, which stood</p>

at less than a third of normal for the date.

“It’s not nearly where we’d like to be,” Frank Gehrke, a state official, said of the snow, which supplies water to millions of Californians in a good, wet year.

Los Angeles and some surrounding areas have received only one significant rainstorm in nearly a year.

In Ventura and Santa Barbara counties, which are about 100 miles (160 kilometers) north of Los Angeles, the lack of rain and dry vegetation fueled a December wildfire that grew to be the largest recorded in state history. When it finally rained, the storm triggered mudslides that killed at least 21.

For people who survived the mudslides, looking out at clear and sunny skies again Thursday was a relief despite the deepening drought.

“I know we need rain, but another mudslide would be awful,” said Santa Barbara restaurant hostess Cayla Stretz.

Survivors in her area are still digging out homes, many beaches and roads are closed by mud, and business is down in the beach town, Stretz said.

It took a near-record rainy winter in Northern California last year to snap the near-record five-year dry spell.

Last year’s rain has most of the state’s reservoirs higher than usual, a bright spot, said Doug Carlson, a state Department of Water Resources spokesman. Two months remain in the state’s peak rain and snow season, leaving room for hope, Carlson said.

Gov. Jerry Brown lifted California’s drought state of emergency in April, but it took until September for the last bit of the state to emerge from the severe category of that drought — until now.

Only 13 percent of the state was considered in drought last week, according to the U.S. Drought Monitor, which is a project of several government agencies and their partners.

During the peak of the state’s dry spell, 99.9 percent of California was in some stage of drought and nearly half fell into the very highest category.

<b>HEADLINE</b>	<b>02/02 NKorea: US threatens inter-Korea relations</b>
<b>SOURCE</b>	<a href="https://apnews.com/7ed9e1028a4f40abb42b52b60f4f86c8/North-Korea-says-US-actions-threaten-inter-Korean-relations">https://apnews.com/7ed9e1028a4f40abb42b52b60f4f86c8/North-Korea-says-US-actions-threaten-inter-Korean-relations</a>
<b>GIST</b>	<p>UNITED NATIONS (AP) — North Korea’s foreign minister is warning the United States that its deployment of nuclear-powered aircraft carriers and planned military exercises immediately after the Winter Olympics threaten improved relations between the two Koreas.</p> <p>Ri Yong Ho urged the United Nations not to remain silent about what he called “the U.S. dangerous game of aggravating (the) situation in and around the Korean peninsula and driving the whole world into a possible disaster of nuclear war.”</p> <p>In a letter to U.N. Secretary-General Antonio Guterres circulated late Thursday, he urged the U.N. chief to exert efforts to halt the U.S. deployment of equipment and the upcoming military maneuvers.</p> <p>Ri warned that the U.S. military actions are aimed “to provoke a nuclear war, which will undermine the improvement of inter-Korean relations and the easing of tensions.”</p>

The North Korean minister also accused U.S. authorities of “misleading public opinion” to believe the new inter-Korean dialogue is the result of “their harshest sanctions and pressure imposed on our country.”

Rather, Ri said, the “dramatic turning point” for peace and stability on the Korean peninsula “where a touch-and-go war danger was prevailing is entirely thanks to the noble love for the nation by the respected comrade Kim Jong Un,” North Korea’s leader.

Kim unexpectedly said in his New Year’s address that he was willing to send a delegation to the Winter Olympics being held Feb. 9-25 in the South Korean county of Pyeongchang — and the South Korean government and International Olympic Committee responded positively.

As part of the rapprochement with Seoul, hundreds of North Korean officials, athletes, artists, journalists and a 230-member cheering group will be attending the Olympics, and athletes from the two Koreas will march together under a single flag during the opening ceremony.

Ri asked the U.N. Security Council in the letter to take up “the issue of welcoming the process of improved inter-Korean relations and discouraging the neighboring countries from disturbing the process.”

The efforts at reconciliation follow a year of heightened animosities over North Korea’s increasingly sophisticated nuclear weapons and ballistic missiles, which Pyongyang says can now reach the U.S. mainland. There has been escalating rhetoric between Kim and U.S. President Donald Trump, including back-and-forth over their “nuclear button.”

Some experts say North Korea may want to use improved ties with the South as a way to weaken U.S.-led international sanctions. Liberal South Korean President Moon Jae-in sees the Olympics as an opportunity to resume meaningful contact with North Korea following the extended period of tension and a diplomatic stalemate over the North’s nuclear and missile programs.

Ri charged in the letter that the U.S. military is “intentionally” aggravating the situation in and around the Korean peninsula by deploying military reinforcements, including aircraft carrier strike groups, designed to make a “pre-emptive strike” on North Korea at a time when the two Koreas “are charting a course of peace together.”

“This is a primary factor which would block the inter-Korean reconciliation process and drive the situation of the Korean peninsula into an unpredictable dangerous phase,” Ri warned.

<b>HEADLINE</b>	<b>02/01 Doping ban 28 Russia athletes overturned</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/world/articles/2018-02-01/olympic-doping-ban-overturned-for-28-russian-athletes">https://www.usnews.com/news/world/articles/2018-02-01/olympic-doping-ban-overturned-for-28-russian-athletes</a>
<b>GIST</b>	<p>The doping bans on 28 Russian Olympic athletes were overturned Thursday by the Swiss-based Court of Arbitration for Sport just a week before the start of the 2018 Winter Games in South Korea.</p> <p>Following an investigation into the Russian doping scandal during the 2014 Winter Olympics in Sochi, Russia, the International Olympic Committee handed down lifetime bans on 43 Russian athletes and banned the entire Russian team from the 2018 games. All but one athlete filed an appeal with CAS.</p> <p>The court upheld the appeals of 28 athletes accused of doping, citing insufficient evidence. The ruling means the athletes' results will be reinstated and they may seek to compete in this year's games in Pyeongchang, South Korea — though it was not made immediately clear if they would.</p> <p>"In 28 cases, the evidence collected was found to be insufficient to establish that an anti-doping rule violation (ADRV) was committed by the athletes concerned," the ruling stated.</p> <p>In 11 more cases, appeals were partially upheld. The court ruled evidence was sufficient enough to prove doping took place and rules were violated, but lifetime bans were not appropriate punishments. Instead, those athletes will be barred from competing in PyeongChang, but the lifetime ban will be lifted.</p> <p>The remaining three cases have been postponed.</p> <p>The IOC said the decision "may have a serious impact on the future fight against doping," CNN reported. It also said it could appeal the decision in the Swiss Federal Tribunal, the country's highest court.</p> <p>Currently, Russia has 169 athletes competing in South Korea as neutrals. In order for the 28 athletes to participate they would need to be selected to join the Russian team and be cleared by the IOC Invitation Review Panel.</p>

<b>HEADLINE</b>	<b>02/01 Official: Navy suffers budget uncertainty</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/feb/1/navy-ops-suffering-toxic-effect-budget-uncertainty/">https://www.washingtontimes.com/news/2018/feb/1/navy-ops-suffering-toxic-effect-budget-uncertainty/</a>
<b>GIST</b>	<p>The congressional stalemate over defense budgets is having a "toxic effect" on Navy operations, which are progressing at a speed and pace not seen since the peak of the Cold War, Chief of Naval Operations Adm. John M. Richardson warned Thursday.</p> <p>The lack of funding certainty is preventing the Navy from keeping its fleet in good order, the Navy chief added, saying the shortfalls were in part to blame for the service's deadly 2017 summer in which 20 sailors died in sea accidents. Top Navy officials faced sharp criticism on Capitol Hill over the state of the service.</p> <p>To date, two American carrier strike groups, two amphibious ready groups and a total of six cruisers and destroyers armed with ballistic missile defense systems are steaming across international waterways, the admiral said in a speech at the Washington-based Heritage Foundation.</p>

Submarine operations are also experiencing an significant uptick with 14 subs currently at sea, which “is a bit of a high point” for the underwater fleet, Adm. Richardson said. That deployment rate, coupled with the surface warships also at sea, represents nearly a third of its roughly 300-vessel fleet forward deployed throughout the waterways and sea lanes that crisscross the globe.

But problems arise when there isn’t the money for up-to-date equipment and maintenance.

“As we increase capacity, as we increase capability, the readiness has to be there,” he said Thursday, noting that “ship maintenance has taken one of the biggest hits” under current budget environment.

“It really starts to have a toxic effect. ... A ship that cannot go out because it is not maintained is a ship that does not project naval power,” he added.

The high operational tempo for the Navy, not seen since the dying days of the Cold War, comes as the clock winds down on yet another short-term, stopgap defense budget, passed by Congress to end last month’s three-day government shutdown.

The continuing resolution to finance defense spending and other segments of the federal government is set to expire on Feb. 8.

“I trust Congress will do their job and write the check. ... Continuing resolutions are no way to run a military,” told reporters Thursday on the looming deadline.

Adm. Richardson said the uncertainty over whether and when the money will be available poses special problems for the Navy.

“You cannot write the [maintenance] contract if you do not have the funding,” he said. With less ships ready to embark out on operations, the Navy’s comparatively small fleet is grappling to keep place with the demands of “a very dynamic and changing maritime environment.”

The Navy is not the only branch of the military complaining that its missions are being hindered by political infighting in Washington.

“Continuing resolutions are no way to run the military. It’s a lot of uncertainty, it’s wasteful, three weeks at a time, a month at a time, six weeks at a time. It’s wasteful,” Defense Department spokeswoman Dana White told reporters at the Pentagon on Thursday.

<b>HEADLINE</b>	<b>02/01 Rattlesnake Ridge evacuation lifted</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/888027/evacuation-ends-for-residents-near-rattlesnake-ridge-slide/">http://mynorthwest.com/888027/evacuation-ends-for-residents-near-rattlesnake-ridge-slide/</a>
<b>GIST</b>	<p>YAKIMA, Wash. (AP) — A month-long evacuation prompted by a slow-moving landslide on Rattlesnake Ridge has been lifted.</p> <p>KOMO-TV reports dozens of families received notice on Thursday that they could head home.</p> <p>Residents had been evacuated in early January when concerns grew about the landslide. At that time, geologists felt a sudden failure of the land might send rocks tumbling onto Interstate 82 or the small group of houses below the ridge.</p> <p>But this week, a new third-party report indicates the landslide may slowly “creep” along for years — the way it currently is. It’s moving about 3 inches (7.6 centimeters) per day.</p> <p>The Department of Natural Resources says it will continue to use data-gathering equipment to monitor the landslide.</p>

<b>HEADLINE</b>	<b>02/01 Seattle removes surveillance cameras</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/887570/150k-remove-seattle-surveillance-cameras/">http://mynorthwest.com/887570/150k-remove-seattle-surveillance-cameras/</a>
<b>GIST</b>	<p>They never got their shot at taking shots around Seattle, but these surveillance cameras are coming down anyway and it will cost the city.</p> <p>“We’ve budgeted \$150,000 for this project,” said Megan Erb with Seattle’s IT department. “Each removal is different depending on how the equipment was installed; some will be easier to remove than others, thus making them less expensive than the ones that are a little more complicated to remove.”</p> <p>Erb said that the total cost of the camera removal throughout Seattle — 28 in all — won’t be known until the job is done.</p> <p>The West Seattle Blog reports that the Seattle Police Department installed the surveillance cameras in 2013 with a grant from the Homeland Security Department. But after the community objected, they were never used. They were installed during the Mayor Mike McGinn era, and sat idle during the Ed Murray era. Crews began taking them down over this past week.</p> <p>The Blog explains that the cameras were proposed for port security, but ended up being placed in public parks and residential areas, too.</p> <p>Bellevue-based Prime Electric has been contracted to remove the cameras. The ones in West Seattle have been taken down already. Other surveillance cameras in Magnolia and Golden Gardens are also being taken down. There are more than a dozen in the downtown area also slated for removal.</p> <p>The security cameras are expected to be turned over to SDOT to be used for traffic monitoring.</p>

<b>HEADLINE</b>	<b>02/01 L.A. homelessness surges 75% in 6yrs</b>
<b>SOURCE</b>	<a href="http://www.latimes.com/local/lanow/la-me-homeless-how-we-got-here-20180201-story.html">http://www.latimes.com/local/lanow/la-me-homeless-how-we-got-here-20180201-story.html</a>
<b>GIST</b>	<p>Some of the poorest people in the city spend their days in the shadow of Los Angeles City Hall, napping on flattened cardboard boxes.</p> <p>On any given day, as many as 20 people take to the City Hall lawn, across the street from LAPD headquarters. They're there to "escape the madness" in downtown streets, a 53-year-old homeless man named Lazarus said last week. At night, they fan out to doorways or deserted plazas to wait for daybreak.</p> <p>The growth of a homeless day camp at the halls of civic power speaks to the breadth of Los Angeles' burgeoning homelessness problem.</p> <p>The number of those living in the streets and shelters of the city of L.A. and most of the county surged 75% — to roughly 55,000 from about 32,000 — in the last six years. (Including Glendale, Pasadena and Long Beach, which conduct their own homeless counts, the total is nearly 58,000.)</p> <p>Three out of four homeless people — 41,000 — live in cars, campers, tents and lean-tos, by far the biggest single group of unsheltered people in any U.S. city. If you took out Los Angeles, national homelessness would have dropped last year for the first time since the recession.</p> <p>People left behind by the economic recovery can't compete with young professionals who have bid rents up to record levels.</p>

In another era, they might have found refuge in crumbling hotels and tenements. But many of those buildings were lost in the city's post-recession spree of building, evictions and renovations.

The problem has only gotten worse since Mayor Eric Garcetti took office in 2013 and a liberal Democratic supermajority emerged in 2016 on the county Board of Supervisors.

Tent cities stretch from the Antelope Valley desert to the Santa Monica coast, with stopovers in unlikely communities — even Bel-Air, where a homeless cooking fire was implicated in December's Skirball fire.

During an October hygiene survey, county public health officials identified 222 encampments, including 50 with 30 or more people living in them. These ragtag outposts have altered the basic terms of urban life.

People in Koreatown step outside their fancy condos to find tents, rotting food and human feces at their doorsteps. Buses and trains have become de facto shelters, and thousands of people sleep in fear and degradation.

Officials and philanthropic groups have been housing more homeless people than ever before — 26,000 between 2014 and 2017. But L.A. has a severe housing shortage, and city and county homeless programs have been slow to start and too limited to absorb the waves of people forced into the streets.

Officials are hoping reinforcements will breathe new life into the effort to end homelessness. Over the last 16 months, voters have agreed to tax themselves \$4.6 billion to build housing — 10,000 units in 10 years — and provide supportive services for homeless people. A long-delayed developer fee that's expected to pump out \$100 million for affordable housing was finally adopted, although some observers wonder whether it comes too late to capitalize on the building boom.

The county money started flowing in October; officials have quadrupled homeless outreach teams, added 600 shelter beds, expanded winter shelter hours and ramped up hotel vouchers. Some 1,000 new employees are being hired at every level of homeless services, including support for people in the new housing projects.

But the crisis has been decades in the making. If homelessness continues to escalate at current rates, it will swamp even the best efforts.

"We are moving more homeless families and adults into housing," said Phil Ansell, director of the Los Angeles County Homeless Initiative. "What we have less control over is the inflow: people who simply are unable to pay the rent."

<b>HEADLINE</b>	<b>02/01 Germany limits migrant family reunions</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/german-parliament-debates-migrant-family-reunification-issue-52760200?">http://abcnews.go.com/International/wireStory/german-parliament-debates-migrant-family-reunification-issue-52760200?</a>
<b>GIST</b>	<p>German lawmakers approved a measure Thursday extending rules limiting migrants' rights to bring close relatives to the country, paving the way for a new migrant plan this summer agreed to between Chancellor Angela Merkel's conservative Union bloc and the center-left Social Democrats.</p> <p>The measure proposed by Merkel's conservatives passed 376 to 298, extends the current temporary ban on relatives joining migrants whose status in Germany is below full asylum. The ban will stay until new rules come into effect in August allowing 1,000 migrant relatives in per month.</p> <p>The suspension of family reunification rules for people with "subsidiary protection" was instituted in early 2016, after Germany was overwhelmed with the arrival of 890,000 asylum-seekers from the year before.</p> <p>The issue has been a major point of contention between Merkel's conservatives and the Social Democrats, but they were able to agree this week in coalition talks to form a new government. Under that plan, in addition to allowing in 1,000 relatives per month for migrants whose status is less than full asylum, they will also allow in additional people considered hardship cases.</p> <p>Interior Minister Thomas de Maiziere had pushed for parliament to extend the suspension to pave the way for the new agreement, calling it a fair compromise.</p>

<b>HEADLINE</b>	<b>02/01 Bitter cold, snow for eastern US</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/bitter-cold-snow-forecast-entire-eastern-us-days/story?">http://abcnews.go.com/US/bitter-cold-snow-forecast-entire-eastern-us-days/story?</a>
<b>GIST</b>	<p>Two systems will be moving through the Northeast and Midwest over the next few days bringing light snow to most heavily populated areas, but bitter cold to the whole eastern United States.</p> <p>The first system already moved through the Midwest and the Great Lakes bringing a heavy burst of snow from Minneapolis to Green Bay, Wisconsin, and into Michigan overnight.</p> <p>Snow is flying this morning from Michigan to western Pennsylvania, New York and into New England.</p> <p>The storm system will make its way into the I-95 corridor from the Carolinas all the way into Maine on Thursday night into Friday morning.</p> <p>Because it is going to be a mild day today in the Northeast, the precipitation will begin as rain, then change to snow as the cold front moves through. Most areas will see minor snow accumulations, but there could be a few slick spots.</p>

	<p>After that, our attention turns to the next storm system coming out of the Pacific Northwest and crossing the country over the weekend.</p> <p>On Saturday, this storm system will move into the Midwest, bringing several inches of snow from the Dakotas into the Great Lakes, including the Twin Cities, Chicago, Indianapolis and Detroit.</p> <p>On Sunday evening, as the system moves east, it will pick up a southern component and bring rain and snow to the East Coast. The heaviest snow will be inland, away from the I-95 corridor.</p> <p>The snowfall totals for the Midwest and Northeast over the next several days shows the heaviest snow will be found near the Great Lakes and in the interior Northeast.</p>

<b>HEADLINE</b>	<b>02/01 Cape Town cuts water rations 45%</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/01/africa/cape-town-water-crisis-intl/index.html">https://www.cnn.com/2018/02/01/africa/cape-town-water-crisis-intl/index.html</a>
<b>GIST</b>	<p>(CNN)Cape Town -- a city once at the forefront of Africa's green movement -- implemented new emergency water restrictions Thursday as the sprawling metropolis prepares for the day its taps run dry.</p> <p>Residents are now being asked to curb the amount of municipal water they use each day to just 50 liters (a little over 13 gallons). Only a month ago, level six restrictions had placed residents on a daily allowance of 87 liters (about 23 gallons), illustrating the severity of the looming crisis.</p> <p>Officials estimate that if water levels continue to fall as expected, South Africa's second most populous city will run out of water by April 16, which has been dubbed "Day Zero."</p> <p>Experts are keeping a close eye on daily consumption in a desperate bid to avoid the disaster, warning residents tempted to ignore measures that they face fines and the installation of water-management meters if they do not comply.</p> <p>It may seem unthinkable that a developed city of four million could run out of water but it's been a slow-burning catastrophe exacerbated by some uncontrollable factors.</p> <p>Cape Town been enduring the worst drought in a century for the past three years. A changing climate and rapidly growing population have made matters worse.</p> <p>And as the crisis has taken hold, Capetonians have not been doing enough to curb their water use, further aggravating the scarcity. Only an estimated 55% of the city's residents are actually sticking to their allotted water per day, according to last week's figures issued by authorities.</p> <p>"It is quite unbelievable that a majority of people do not seem to care and are sending all of us headlong towards Day Zero," the mayor's office said in January. "We can no longer ask people to stop wasting water. We must force them."</p>

<b>HEADLINE</b>	<b>02/01 Flu onslaught: ERs into waiting rooms</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/to-deal-with-a-flu-onslaught-emergency-rooms-expand-into-waiting-rooms-and-hallways-1517481000">https://www.wsj.com/articles/to-deal-with-a-flu-onslaught-emergency-rooms-expand-into-waiting-rooms-and-hallways-1517481000</a>
<b>GIST</b>	<p>Emergency departments across the U.S. have been slammed in recent weeks by an onslaught of flu visits, forcing hospitals to devise new spaces to house patients, to restrict visitors and to postpone elective surgeries.</p>

Visits to hospital emergency departments, urgent care centers and other outpatient clinics by people with flu symptoms have been skyrocketing for several weeks. As of mid-January, such visits had surpassed every flu season except 2009-10, when a new flu strain caused a global pandemic. The dominant strain this season, H3N2, is particularly virulent, and the vaccine isn't very effective against it.

NYC Health & Hospitals has seen a 40% increase in the number of people being tested for the flu compared with this time last year, according to Sean Studer, deputy chief medical officer of the group, which runs New York City's public hospitals, clinics and long-term care facilities.

To cope with greater traffic to the emergency department, hospitals in the network are opening up so-called "flex" spaces that aren't usually needed for routine care. Patients coming to the hospital reporting flu symptoms are also placed in a separate waiting area and given masks to help prevent transmission, Dr. Studer said. If they need to be admitted, patients are given a room with a single bed when possible.

In Atlanta, the emergency department at Grady Memorial Hospital is caring for up to 25% more patients than it did at this time last year. The department usually sees around 400 patients a day, but there have been times this month when that number shot up to 502, according to Hany Atallah, Grady Memorial Hospital's chief of emergency medicine.

"Our emergency department is full, and our inpatient services are full," he said. "Overfull, actually."

But people are still coming, so the hospital has set up a temporary mobile medical unit on its premises for 30 days to deal with the overflow. Fully equipped with medical supplies and 14 beds, it is essentially a second emergency room, Dr. Atallah said. Staff began seeing patients in the mobile unit on Tuesday.

In addition to the mobile unit, Grady Memorial is using "family waiting rooms, holding areas and literally some hall spots" for patient beds, said Dr. Atallah.

Not everyone who comes to the emergency department needs to be admitted to the hospital, Dr. Atallah said. A patient who is young and otherwise healthy will likely be treated for fever, muscle aches and dehydration and then sent home to rest. Those most at risk for complications are the elderly, very young children, or people who have other health issues that the flu can exacerbate.

Given the severity of the flu this season and its potential complications, the hospital isn't allowing children 14 years old and younger to visit hospitalized patients. Children tend to harbor more infections, Dr. Atallah said, and they may not be as diligent about hand sanitization.

The University of Alabama at Birmingham Hospital, which sees an average of 250 to 300 patients each day, has experienced a jump in volume of about 10%, largely because of the flu outbreak. "We've not only seen an increase in volume, but an increase in acuity," said Sarah Nafziger, physician adviser for the Center for Patient Flow at UAB Hospital. "People are sicker than they were in previous years.

"It's not just people with flu symptoms, but people who have chronic medical conditions that are exacerbated by the flu," she added.

To deal with the higher number of emergency department visits, UAB is placing patients in areas that would normally be used for postoperative patients, such as anesthesia recovery rooms. The hospital has also delayed some elective surgeries that would require an overnight stay to open up more beds for admitted patients.

"As you can imagine, that's a costly decision for the hospital because elective surgeries and nonelective surgeries are the way hospitals increase their revenue," said Dr. Nafziger. "But sometimes you have to make those decisions to make sure you can safely care for patients."

<b>HEADLINE</b>	<b>02/01 Auburn officials to Winter Olympics</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/auburn-officials-head-to-pyeongchang-for-olympics/281-513763314">http://www.king5.com/article/news/local/auburn-officials-head-to-pyeongchang-for-olympics/281-513763314</a>
<b>GIST</b>	<p>The City of PyeongChang in South Korea invited the City of Auburn to the opening ceremony of this year's Winter Olympics.</p> <p>"To the best of my knowledge, we are the only one that has been invited," said Auburn Mayor Nancy Backus.</p> <p>Auburn and PyeongChang are sister cities, a global diplomacy network that aims to strengthen relationships between American and international cities.</p> <p>"The theme for the Winter Olympics is peace and I think it's the most appropriate theme right now because we can use a little peace in our world," said Backus. "The economic development and the trade, that's really the opportunity we see and the benefit that we've had. We've taken some of our local business owners on these trips, and they have benefitted. So there's importing and exporting going on, and it really has been beneficial to our city."</p> <p>In preparation for their trip, the City of Auburn is bringing a token of appreciation with them.</p> <p>"We've found this beautiful prism. We have the Winter Olympics on the inside, and on one side is the City of Auburn logo and the other side is a PyeongChang logo."</p> <p>"That's history in the making. And to know that I was there, to know that we'll have a delegation from Auburn that will be there. I'm very very proud," said Backus.</p>

<b>HEADLINE</b>	<b>02/01 Spring arrive early in Washington?</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/weather/blog/could-spring-arrive-early-in-washington/281-513626650">http://www.king5.com/article/weather/blog/could-spring-arrive-early-in-washington/281-513626650</a>
<b>GIST</b>	<p>Although we have La Niña conditions in the Pacific, our Northwest weather hasn't been behaving exactly the way we expect.</p> <p>Usually, La Niña winters increase the odds of below normal temperatures and above normal precipitation with lots of snow in the mountains during the period November into April.</p> <p>In the first 3 months of that period, Sea-Tac rainfall is above normal, as we would expect, but temperatures have been well above normal. In fact, in January the mean temperature at Sea-Tac was a significant 3 degrees above normal.</p> <p>However, the mountain snowpack that was lagging behind normal at the start of the January had a good month.</p> <p>All of the areas are slightly above normal with the exception of Mt. Baker which is much above normal. January was a great month for Baker. The ski area reported 225 inches of new snow in January – almost 19 feet! It's the most they have had in January in 20 years.</p> <p>Right now we are almost exactly in the middle of winter, so we may see some changes in these averages.</p> <p>However for the next week, it looks like it may feel as though spring has arrived. Over the weekend it will still be showery, but highs will push into the low to mid 50's when they would normally be in the upper 40's.</p> <p>We may turn dry and mild by the middle of next week. The latest two-week forecast from the Climate Prediction Center calls for above normal temperatures and below normal rainfall for February 7-14.</p>

	We won't hear officially from the Ground Hog until Friday, but right now it looks like it might be an early spring in Washington.

<b>HEADLINE</b>	<b>02/01 Tacoma Fire hands out Narcan kits</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/02/01/tacoma-fire-hands-out-narcan-kits-to-opioid-addicts/">http://q13fox.com/2018/02/01/tacoma-fire-hands-out-narcan-kits-to-opioid-addicts/</a>
<b>GIST</b>	<p>TACOMA, Wash. – The opioid epidemic is hitting Washington state hard. These days, most of us know someone who’s been affected in some way, either as addicts themselves or the victim of crime related to addiction.</p> <p>Now, there are two local efforts to try and fight back. The Pierce County prosecutor is taking this battle to court to sue not one but three opioid makers, accusing them of being complicit in the crisis that’s killing hundreds of people in our state every year.</p> <p>Tacoma’s fire department is taking things a step further. It’s giving away free Narcan kits. It’s a drug that can reverse the effects of an opioid overdose. Since 2013, the Tacoma Fire Department has seen a 50% increase in having to use an opioid overdose antidote, Narcan. Now it’s working to put that life-saving drug into more hands.</p> <p>“What we’ve done in the past isn’t necessarily working today or in the future,” said Tacoma Fire Department Medical Services Officer Mike Newhouse.</p> <p>It’s a new action plan for Tacoma Fire first responders to tackle the growing opioid problem in the city. Instead of giving overdosing addicts a shot of Narcan and then sending them to the emergency department, paramedics will give addicts Narcan kits.</p>

<b>HEADLINE</b>	<b>02/01 Claim: real costs to live in Seattle</b>
<b>SOURCE</b>	<a href="http://www.seattlepi.com/seattlenews/article/2018-edition-What-does-it-really-cost-to-live-in-12540736.php">http://www.seattlepi.com/seattlenews/article/2018-edition-What-does-it-really-cost-to-live-in-12540736.php</a>
<b>GIST</b>	<p>It's been decades since Seattle could be considered a cheap place to live.</p> <p>And for much of its short life, it's been a boom town with ever-rising costs of living, albeit never more costly than they are today.</p> <p>In recent history, the city has seen only one significant decline in those costs -- during the Great Recession. Since then, everything from housing prices to the cost of a loaf of bread has been on the rise, the steep rise.</p> <p>This is how we arrive at the end of January 2018 to begin reckoning with a cost of living that is even less bearable than it was one foul year ago.</p> <p>In years past, this analysis started with the intent of comparing the cost of living in Seattle to its \$15-per-hour minimum wage. But each year, the numbers have demonstrated that living in Seattle (or, for that matter, much of the metro area) on \$15 an hour is a hell of a challenge.</p> <p>So, for the third annual installment, we'll set that aside and simply run the numbers.</p> <p>Let's start with the news that Seattle has risen to sixth place on the list of the most expensive places to live, according to figures from the Arlington, Virginia-based Center for Regional Economic Competitiveness (CREC).</p>

The Seattle metro area was given the composite index of 152.8 for the third quarter of 2017, meaning it's 52.8 percent more expensive to live here than the median cost of living in the U.S.

Certainly, we fared better than New York's Manhattan borough, with a score of 242.9, or San Francisco, with a score of 191.8.

Those numbers are helpful for tracking changes (Seattle, for instance, moved up two spots from its score of 147.5 in 2016) or for comparisons, but they don't actually reveal the true cost of living.

CREC's latest index did include costs for a number of items in the Seattle market, including grocery items, energy, doctors, dentists and more. But tallying those things is a bit clumsy, so we'll turn back to Numbeo.com to run some comparisons.

To start out, the cost of living estimator was set up this way: one person in the household who eats out at lunch or dinner 5 percent of the time and only at inexpensive restaurants, rarely drinks coffee away from home, rarely drinks alcohol, doesn't smoke, uses only public transit, doesn't own a car, never takes a vacation, doesn't belong to a gym or other sports club and rarely buys clothing.

This will be the bare bones, no-frills cost of living. We'll adjust later for a lifestyle that is more realistic.

The grand total monthly cost came to \$814.58. Now for the fun part: rent.

Rents (and real estate prices) in Seattle have been on an unstoppable upward trend since 2011. For December 2017, Zillow put the median one-bedroom apartment rent for the Seattle metro area at \$1,724. We chose a one-bedroom because the median rent for studios was actually higher.

Add that to the monthly costs calculated by Numbeo and we get \$2,539 per month, or \$30,463 per year. And of course, since that's what we'll need to spend, that's after taxes. The effective tax rate around that income level should wind up around 9.24 percent, so we'll need a gross annual salary of \$33,278 (if you worked full-time, that would be about \$15.90 per hour, in case you were wondering).

Keep in mind, that income assumes no debt, no medical expenses, no savings, only a tiny sliver for phone service, and about \$156 per year for clothing. And never mind the fact that our theoretical lifestyle won't include any kind of vacation or recreation that costs money.

Once more, these calculations reflect the fact that the poorest among us are forced to forego many of the things that make life in the Seattle area so wonderful. The amazing food, the hiking and camping, the fishing, boating and even regional trips are virtually nonexistent for our bare-bones resident.

Going back to the Numbeo calculator, we changed things to allow for a bit more eating and drinking out, some travel (one week per year), a gym membership and a car (with a \$142/month payment and only one tank of fuel each month).

We also made it a household of two people in the interest of sharing some of the burden.

With those changes in place, the monthly total, before rent, is \$2,457.92. Assuming our residents are still frugally minded, we'll let them share the one-bedroom apartment, bringing the total monthly cost to \$4,181.92, or \$50,183 per year.

Assuming a tax rate that ends up around 10 percent, those two will need to earn about \$55,201 a year before taxes.

Mind you, that's still \$27,600 each, but it certainly shows the value of teaming up to make that income stretch further.

	<p>If we kept the same standards but for just one person, they would need to earn about \$41,000 per year. Again, neither of these calculations allow for debt payments, medical bills or even insurance, or savings.</p> <p>The U.S. Department of Housing and Urban Development (HUD) said last year that an income of \$50,400 per year or less in the Seattle area is considered low-income. Our frugal friends would be in the very low-income bracket for certain.</p> <p>Now, as readers will no doubt point out in emails and comments, people come up with creative ways to make a go of it in any city, regardless of how expensive it is. Seattle is no exception, but those creative opportunities are getting harder to find as the city continues to be transformed by a booming economy that doesn't benefit everyone equally.</p>

<b>HEADLINE</b>	<b>02/02 ICE raids hit northern Calif. businesses</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/02/02/ice-raid-hits-77-businesses-in-northern-california.html">http://www.foxnews.com/us/2018/02/02/ice-raid-hits-77-businesses-in-northern-california.html</a>
<b>GIST</b>	<p>Less than a month after federal immigration officials raided nearly 100 7-Eleven stores nationwide, U.S. Immigration and Customs Enforcement (ICE) agents conducted another sweep this week in Northern California, officials said Thursday.</p> <p>This time, ICE agents searched 77 businesses in the San Francisco and Sacramento areas in what was believed to be the largest localized raid since President Donald Trump took office, the San Francisco Chronicle reported.</p> <p>The raid underscores ICE acting director Thomas Homan's call for a "400 percent increase" in agency operations focusing on workplaces, the paper reported.</p> <p>Unlike the 7-Eleven raids in January, which resulted in 21 arrests, ICE didn't identify the businesses hit this week, nor did the agency make any immediate arrests, the paper reported.</p> <p>However, federal immigration officials issued notices of inspection, and ordered the businesses to provide proof their employees are legally allowed to work in the U.S. -- giving them three days to comply, the paper reported.</p>

	<p>Democratic lawmakers and California Attorney General Xavier Becerra had been on edge since a report in the Chronicle last month that federal officials were planning such a raid.</p> <p>"We will, as always, work with our federal partners in every respect to go after drug dealers, human traffickers, potential terrorists," Becerra said in January. "We're not in the business of deportation. We're in the business of public safety."</p>

<b>HEADLINE</b>	<b>02/01 'Super sick Monday'?</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/2018/02/01/why-14-million-people-planning-take-off-work-super-sick-monday/1088188001/">https://www.usatoday.com/story/news/2018/02/01/why-14-million-people-planning-take-off-work-super-sick-monday/1088188001/</a>
<b>GIST</b>	<p>If you don't plan on being at work Monday after the Super Bowl, you might want to think of a better excuse than having a bad cough. About 14 million others might be using the same excuse.</p> <p>A new survey released Wednesday by the Workforce Institute at Kronos and Mucinex details an estimated 13.9 million Americans will call in sick Monday after Super Bowl LII, making it one of the biggest sick days of the year.</p> <p>The Monday after the Super Bowl has been notoriously known as a day where people call out of work. Last year, 16.5 million Americans said they planned to call in sick because of the game, according to a study done last year by the same companies.</p> <p>"We've been researching the Big Game's effect on the workforce for more than a decade and while numbers may fluctuate each year, one clear fact remains: #SuperSickMonday is often the biggest day in America for calling out of work," said Joyce Maroney, Executive Director, The Workforce Institute at Kronos Incorporated.</p> <p>The numbers could go up, too, because of a harsh flu season this year.</p> <p>Cases of influenza have risen sharply across the nation, according to the Centers for Disease Control. This year is on track to be as bad the 2014-15 outbreak that caused an estimated 56,000 deaths, federal health officials said.</p> <p>"There's been a bad flu strain this year and it may have an impact on people calling out on Monday, but we don't anticipate it playing a major role in changing the stats," said Brian Dolan, Equity Lead for U.S. Health at RB, which owns Mucinex.</p> <p>He said what coast you live on could play a small role due to differing time zones, but most people will still be up late with the post-game show and parties.</p> <p>Over the years, 1 in 5 Americans said they have called in sick the Monday after the Super Bowl, according to the survey.</p>

<b>HEADLINE</b>	<b>02/02 Turmoil in the Maldives</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/ap-explains-turmoil-maldives-52786544">http://abcnews.go.com/International/wireStory/ap-explains-turmoil-maldives-52786544</a>
<b>GIST</b>	<p>The Maldives' Supreme Court ordered the release of imprisoned politicians, including exiled ex-President Mohamed Nasheed, saying their guilty verdicts had been politically influenced.</p> <p>The ruling set off hours of clashes in the streets of Male, the capital, and could allow Nasheed, the nation's first democratically elected president and the main rival of President Yameen Abdul Gayoom, to challenge</p>

Yameen when he seeks re-election later this year.

A look at what led to the turmoil:

#### AN AUTOCRAT AND ELECTIONS

The Maldives, an Indian Ocean archipelago of nearly 1,200 islands with a population of just 390,000 people, was ruled for three decades by strongman Maumoon Abdul Gayoom. He was voted from office in 2008 in the first democratic elections. Mohamed Nasheed won that vote but resigned in 2012 amid public protests for ordering the arrest of a senior judge. In 2013, Nasheed lost a chaotic presidential election to the current president, who is half brother of the longtime ruler.

#### DEMOCRATIC SETBACK

Yameen and his ruling Progressive Party of Maldives have rolled back many of the democratic gains seen in the archipelago since 2008, with all of his potential political opponents either jailed or in exile. The government has also curbed freedom of speech and assembly, with heavy fines imposed on journalists and social media users found guilty of defamation. In 2015, Nasheed was sentenced to 13 years in prison for ordering the judge's 2012 arrest. He received asylum in Britain after traveling there on medical leave.

#### THE OPPOSITION AND THE AUTOCRAT (AGAIN)

Former strongman Maumoon Abdul Gayoom has broken with his half brother and at least eight ruling party lawmakers loyal to Gayoom have defected from the ruling party, saying they would work with Nasheed's opposition Maldivian Democratic Party to stop the reversals in democracy. In March 2017, Nasheed, Gayoom and two other parties signed an agreement to form an opposition alliance. In July, Maldivian security forces locked down parliament on Yameen's orders, as the alliance mounted an attempt to impeach the parliamentary speaker, the president's ally.

<b>HEADLINE</b>	<b>02/01 NTSB: 'issues' reported at grade crossing</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/witnesses-report-issues-crossing-amtrak-accident-ntsb/story?id=52767496">http://abcnews.go.com/US/witnesses-report-issues-crossing-amtrak-accident-ntsb/story?id=52767496</a>

GIST	<p>Witnesses interviewed by the NTSB reported "issues" at the grade crossing where an Amtrak train carrying GOP lawmakers slammed into a garbage truck near Charlottesville, Virginia, NTSB officials confirmed today.</p> <p>In the days leading up to the crash -- which killed one person and injured at least six -- the gates "weren't working right," a neighbor told ABC News. The gates would sometimes block the crossing for hours, even when a train was nowhere in sight, he said.</p> <p>Buckingham Branch Railroad, the company responsible for track and signal maintenance, declined to comment on alleged malfunctions.</p> <p>The NTSB hopes information from the lead locomotive's forward-facing camera, which has been transported to Washington, D.C., for download and evaluation, will shed light on what occurred at the crossing Wednesday.</p> <p>Data downloaded from the trailing locomotive's event data recorder reveals that the train was traveling at about 61 mph when the throttle transitioned from full to idle. Twenty seconds later, the train came to a stop after colliding with the truck.</p> <p>The impact separated the cab from the freight, with garbage strewn alongside the tracks. Lawmakers, including several who are doctors, attempted CPR on the occupants, who were thrown from the vehicle.</p> <p>Time Disposal, the owner of the truck, has been "very cooperative" through the investigation, NTSB officials said.</p> <p>The 30-year-old driver of the truck worked for Time Disposal for about seven years, according to the NTSB, which said it is "in the process of trying to interview the driver."</p>

HEADLINE	<b>02/01 Federal officials blame Puerto Rico</b>
SOURCE	<a href="http://abcnews.go.com/International/wireStory/us-puerto-rico-lacked-leadership-communication-post-storm-52768743?">http://abcnews.go.com/International/wireStory/us-puerto-rico-lacked-leadership-communication-post-storm-52768743?</a>
GIST	<p>Federal officials on Thursday blamed a lack of leadership, money and communication in Puerto Rico for setting back hurricane recovery efforts in the U.S. territory.</p> <p>FEMA Deputy Regional Administrator Ahsha Tribble said the island's bureaucracy and the power company's inability to pay for supplies it ordered after Hurricane Maria slowed efforts to restore electricity. Nearly half a million power customers remain in the dark more than four months after the Category 4 storm, which destroyed two-thirds of the power distribution system, killed dozens of people and caused up to an estimated \$94 billion in damage.</p> <p>Tribble said it was "extremely difficult" to work with Puerto Rico's Electric Power Authority immediately after the storm to figure out what it needed to rebuild the system. She also said the company's financial constraints led to a lack of trust among FEMA suppliers and that appointing an interim power company director in the middle of the disaster led to challenges with leadership. In addition, communication was strained, she said.</p> <p>"In an emergency, when you have eight layers of approval to get something done, it's not working for us," she said. "You put all that together, and it's a recipe for disaster."</p> <p>Tribble was among several officials who spoke before a federal control board that oversees Puerto Rico's finances and is considering a plan to privatize the power company, which is \$9 billion in debt. It would be the largest restructuring of a public entity in U.S. history.</p>

Energy experts told the board that a lack of maintenance, heavily loaded lines and shoddy work done by Puerto Rico's power company over the years contributed to the power grid's extensive failure after the hurricane.

Sanjay Bose, an official with ConEdison who was helping after the hurricane, said his crews in Puerto Rico observed many problems, including poles that had been installed at a more shallow depth than industry standard.

"It's not one single thing that I can point my finger at," he said. "Maintenance would have prevented some of the damage."

Power company spokesman Geraldo Quinones referred a request for comment to the island's financial authority, whose spokesman did not respond.

Col. Donovan Ollar of the U.S. Army Corps of Engineers told the board that only 61 percent of the power company's transmission system is now complete. Part of the problem is that some of the equipment Puerto Rico uses is unique to the island and is no longer made by manufacturers in the U.S. mainland. In addition, Puerto Rico uses 200 to 300 types of transformers when the industry standard is three to four, he said.

Ollar also said that makeshift repairs done by the power company to keep the system running prior to the hurricane created more work for his crews.

"It makes it problematic to come back and do it properly," he said, adding that he wants to rebuild the system to mirror those in the U.S. mainland so when companies fly in, they can use the same equipment.

Officials noted that Puerto Rico did not activate a mutual aid agreement with mainland power companies until Oct. 31, more than a month after Hurricane Maria hit. Meanwhile, shortly after the storm, the power company's former director signed a \$300 million contract with a small Montana company called Whitefish Holdings Inc. to help with restoration efforts. The director has since resigned and the contract was cancelled.

FEMA official Ahsha Tribble defended that contract, saying that U.S. power companies under the mutual aid agreement were not capable of repairing the transmission system given the extent of the damage.

<b>HEADLINE</b>	<b>02/01 Ex-Mayor Murray \$116K a year for life</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/times-watchdog/ed-murrays-time-as-seattle-mayor-boosted-his-pension-past-100000-a-year-for-life/">https://www.seattletimes.com/seattle-news/times-watchdog/ed-murrays-time-as-seattle-mayor-boosted-his-pension-past-100000-a-year-for-life/</a>
<b>GIST</b>	<p>Former Seattle Mayor Ed Murray, who resigned in September amid child sexual-abuse allegations, has started drawing public retirement benefits that will pay him \$115,920 a year for the rest of his life.</p> <p>Murray's retirement benefits include gross monthly pension payments of about \$8,460 from the state and \$1,200 from the city, records show.</p> <p>His total retirement pay was significantly enhanced by the nearly \$185,000 annual salary he drew during his first two years as mayor — Murray's final stop along a more than two-decade career in Washington politics.</p> <p>All told, Murray's annual retirement pay easily will surpass earnings for 18 of his 21 years as an elected official, records show. It's also about \$35,920 more — or almost 1½ times greater — than Seattle's median annual household income of about \$80,000.</p> <p>Murray, who declined an in-person interview about his retirement, answered some questions through his attorney, Steve Fogg.</p>

“Ed was a public servant not making a lot of money each year until he became mayor,” Fogg said. “His focal point was on being mayor and his public service, it wasn’t on retirement.”

Though seemingly comfortable, Murray’s retirement isn’t peculiar; he’s reaping benefits entitled to him under state law and pension plan rules.

Murray is among a small subset of Washington public employees who retire as dual members of pension plans from both the state and one of three large cities (Seattle, Tacoma and Spokane) that provide their own. That guarantees him two monthly pension payments for life. And, because his state and city benefit plans are “portable,” they can be used to help each other maximize retirement benefits.

Both of Murray’s pensions are calculated in part based on his highest average monthly pay for any two consecutive years along with the total number of years worked.

Murray, who turned 62 in May, qualified for his state pension at age 60. When he resigned as mayor, he chose January 1, 2016, as the effective date of his state retirement, giving him two full years of city pay — or an average \$15,405 per month — to calculate his state pension benefits. He also received a one-time retroactive retirement payment of \$83,025, records show.

His 18 years of state employment, in turn, helped Murray qualify for a city pension. With less than four years as Seattle’s mayor, Murray otherwise would not have met his city retirement plan’s five-year employment requirement to become fully vested.

The former mayor downplayed his financial prospects during the scandal that last year that derailed his political career. Between April and September, when the mayor resigned, five men accused Murray of paying for sex or sexually assaulting them as teenagers decades ago.

Murray denies all the allegations.

<b>HEADLINE</b>	<b>02/01 SEA: renovations, record growth</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/record-number-of-passengers-pushes-expansion-at-sea-tac-airport/692754662">http://www.kiro7.com/news/local/record-number-of-passengers-pushes-expansion-at-sea-tac-airport/692754662</a>
<b>GIST</b>	<p>SEATAC, Wash. - The Port of Seattle says Sea-Tac Airport is hitting a record-breaking seventh year of passenger growth as billions of dollars’ worth of renovations and expansions are underway.</p> <p>President of the Port Commission, Courtney Gregoire, told KIRO 7 the opening of a new International Arrivals Facility is needed to be able to serve more passengers and improve the travel experience.</p> <p>“By opening up the facility, using new technology and by encouraging our federal government to have a few more customs and border protection agents to give everyone a better experience when they come to our region,” Gregoire said at a news conference Thursday.</p> <p>Sea-Tac Airport saw nearly 47 million passengers come through last year, and they expect to break records again in 2018.</p> <p>The airport expects to spend \$3.2 billion on development between 2017 and 2022. No taxpayer dollars are used to fund airport projects.</p> <p>Port commissioners say the expansion projects include the arrivals facility, a renovation of the Central Terminal dining area and a North Satellite modernization.</p> <p>Work on the \$17 million renovation of the Central Terminal dining area will begin Feb. 8. It will add</p>

	10,000 more square feet and provide more dining and retail options, including charging stations for travelers to plug in their personal electronic devices, new sit-down restaurants and more food options closer to passenger gates.

HEADLINE	<b>02/01 Apple removes Telegram app from store</b>
SOURCE	<a href="https://www.usatoday.com/story/tech/news/2018/02/01/apple-removes-secretive-telegram-messaging-app-app-store/1086302001/">https://www.usatoday.com/story/tech/news/2018/02/01/apple-removes-secretive-telegram-messaging-app-app-store/1086302001/</a>
GIST	<p>Telegram’s founder and CEO said Apple removed the company’s controversial messaging apps from the iOS App Store because of content that apparently violated Apple’s guidelines.</p> <p>“We were alerted by Apple that inappropriate content was made available to our users, and both apps were taken off the App Store,” Pavel Durov remarked on Twitter. “Once we have protections in place, we expect the apps to be back on the App Store.” He did not comment on timing.</p> <p>Telegram’s free apps are still available for Android in the Google Play store. The apps can still be downloaded onto a computer via the Mac version of the App Store.</p> <p>Apple also confirmed the removal of the iOS apps but gave no reason. In general terms, Apple’s guidelines indicate that “apps should not include content that is offensive, insensitive, upsetting, intended to disgust or in exceptionally poor taste.” Nor should they be inflammatory or intended to cause physical harm, the company says.</p> <p>Telegram has not yet responded to a USA TODAY request for comment.</p> <p>Durov, a Russian programmer who has been referred to as the “Mark Zuckerberg of Russia,” fled his native country in 2014. He has since run Telegram from various overseas outposts, most recently Dubai. On its website, the company said it is “ready to relocate again if local regulations change.”</p>

<b>HEADLINE</b>	<b>02/01 Hackers already targeted Winter Olympics</b>
<b>SOURCE</b>	<a href="https://www.wired.com/story/pyeongchang-winter-olympics-cyberattacks/">https://www.wired.com/story/pyeongchang-winter-olympics-cyberattacks/</a>
<b>GIST</b>	<p>THE OLYMPICS HAVE always been a geopolitical microcosm: beyond the athletic match-ups, they provide a vehicle for diplomacy and propaganda, and even, occasionally, a proxy for war. It stands to reason, then, that in 2018 they've also become a nexus of hacker skullduggery. The Olympics unfolding next week in Pyeongchang may already be the most thoroughly hacked in the games' history—with potentially more surprises to come.</p> <p>More so than any previous Olympics, the run-up to Pyeongchang has been plagued by apparent state-sponsored hackers: One Russia-linked campaign has stolen and leaked embarrassing documents from Olympic organizations, while security researchers have tracked another operation, possibly North Korean, that appears to be spying on South Korean Olympics-related organizations.</p> <p>Security researchers tracking those two operations say the full scope of either remains far from clear, leaving the looming question of whether they could still present new disruptions timed to unfold during the games themselves. And more broadly, the intrusions signal that the geopolitical tensions that have long underscored the Olympics now extend into the digital realm as well.</p> <p>"The Olympics have always been the most politicized sporting event of them all," says Thomas Rid, a professor of strategic studies at Johns Hopkins University's School of Advanced International Studies. "It's not a surprise at all that they've become a high-profile target for hacking."</p> <p><b>Operation GoldDragon</b></p> <p>The far stealthier of the two known Olympics hacking operations—and perhaps the most troubling—has quietly targeted South Korean Olympics-related organizations for well over a month. Researchers for security firm McAfee discovered just this week that the campaign, which they've named Operation GoldDragon, has attempted to plant three distinct spyware tools on target machines that would enable hackers to deeply scour the compromised computers' contents. McAfee identifies those malicious tools by the names GoldDragon, BravePrince, and GHOST419.</p> <p>The firm's researchers say they've linked those malware samples to a phishing campaign that lures victims with Korean-language emails, indicating South Korean targets. The messages, which spoof a note from South Korea's National Counter-Terrorism Center—and, according to McAfee, were timed to actual terrorism drills in Pyeongchang—targeted a BCC'd list of more than 300 Olympics-related targets, McAfee says, with only the address "icehockey@pyeongchang2018.com" visible in its "to" line. Analyzing the email's metadata, however, McAfee identified other intended victims, including local tourism organizations in Pyeongchang, ski resorts, transportation, and key departments of the Pyeongchang Olympics effort.</p> <p>The hackers attached a Korean-language Word document to the email, crafted to run a malicious script on the target machine. If the victim clicked "enable content" after opening that tainted attachment, they would give the attacker remote access to the computer. The attackers could use that initial, temporary foothold to install their spyware for more persistent visibility into any hacked machine. McAfee notes that script is hidden in an innocent-looking image file with clever steganography and other obfuscation tactics.</p> <p>McAfee traced the phishing scheme to a remote server in the Czech Republic, registered with fake credentials to a South Korean government ministry. And they found publicly accessible logs on that remote server that showed victim machines were in fact connecting to it from South Korea, a sign of actual infections. "Was this a successful campaign? The answer is yes," says McAfee chief scientist Raj Samani. "We know that it's had victims."</p>

Despite all of those findings, the origin and the ultimate aim of that relatively sophisticated malware campaign remains unclear. But based on the Korean language and targeting, Samani hints that his working theory points to a North Korean espionage operation keeping tabs on its southern neighbor.

That spying may seem to run counter to a recent thawing of diplomatic relations between the two Koreas, one that has even resulted in a combination of the two countries' national women's hockey teams. But North Korea likely wouldn't call off its aggressive hacking over a momentary olive branch. "I would guess it's a 'keep your friends close and your enemies closer' approach," Samani says.

#### Anti-Doping Bears

A far louder and more explicit hacker threat has come from a notorious outfit linked with the Kremlin's GRU military intelligence agency, known as Fancy Bear, or APT28—according to many security researchers, almost certainly the same Fancy Bear that hacked the Democratic National Committee and Clinton campaign in the midst of the 2016 election.

Since as early as September of that year, those brazen hackers have repeatedly targeted athletic organizations, with the intent of exposing evidence of what they claim is widespread doping in Western countries, an apparent retaliation for the ban of Russian athletes from the 2016 and 2018 games for the same charge. "We will start with the US team which has disgraced its name by tainted victories," the hackers wrote in a message on their website when they first began leaking documents from the World Anti-Doping Association in September of 2016. "Wait for sensational proof of famous athletes taking doping substances any time soon."

At the time, the Fancy Bear hackers released the private medical records of star US athletes Serena Williams, Venus Williams, and Simone Biles, touting permissions they had received to use potentially performance-enhancing drugs to treat attention deficit disorder and muscle inflammation.

This year, Fancy Bear planned its Olympic-hacking far more proactively. Starting in early January, they published two collections of hacked documents from Olympics-related agencies: One set revealed political tensions between officials at the International Olympic Committee and the WADA officials tasked with policing the games' athletes. A second release later in the month again pointed to special permissions given to certain athletes—a member of the Swedish luge team takes asthma medication, for instance—and an Italian athlete who had at one point missed a drug test. And a third leak on Wednesday pointed to the case of Shawn Barber, a Canadian pole vaulter allowed to compete in the 2016 games despite at one point testing positive for cocaine.

None of Fancy Bear's recent releases has proven any clear wrongdoing—at least, nothing remotely comparable to Russia's systematic doping program for thousands of athletes—and all have generally been ignored by the sporting world and the Western media. But Russian state news outlets have nonetheless faithfully rehashed the leaks. And Johns Hopkins' Rid says the hacks, like the attacks on the DNC and Clinton campaign in 2016, have an effect that's not easily measured or dismissed.

Rid compares the operation to the KGB's tactics in 1984, after Russia was banned from the Summer Olympics in Los Angeles. The spy agency responded by mailing forged KKK pamphlets threatening race-based attacks to members of 20 visiting Asian and African teams. "There's no great goal they want to achieve," Rid says. "It's more one of throwing wrenches and sand into the gears of a machine, to make life more difficult for your adversary, engender debate and internal conflict among allies to distract from the confrontation that's harming you."

#### More Ammunition

Fancy Bear may yet have more leaks in store. Security firms Trend Micro and ThreatConnect have linked the group's propaganda campaign with collections of spoofed domains they've discovered, likely used in the group's well-honed phishing attacks. Many of those fake domains haven't yet resulted in leaks, but may have nonetheless led to compromises of Olympics-related organizations. They've spotted registrations for spoofed domains designed to mimic the US Anti-Doping Agency, British counterpart UK Anti-Doping,

the Olympic Council of Asia, European Ice Hockey Federation, the International Ski Federation, the International Biathlon Union, the International Bobsleigh and the Skeleton Federation.

Security firms, to be clear, have no evidence that those organizations have been compromised. But they point out that the same group that's registered fake domains that seem to have been used in earlier Fancy Bear phishing and leaking operations registered fake domains for those targets, too. Any one of them might be a source of new, disruptive secret-spilling before or during the games. "In the run-up to the Olympics, we'd expect to see continuing activity from Fancy Bear and other APTs," says ThreatConnect researcher Kyle Ehmke, using the abbreviation for "Advanced Persistent Threat," an industry term for sophisticated state-sponsored hackers. "There's no reason to think they'll conclude operations just because of what's already been released."

In the parallel case of the likely North Korean espionage campaign, McAfee's chief scientist Samani notes that hacking operation could also get worse before it gets better. If the hackers behind that campaign change their motivation, nothing prevents them from using machines they've compromised on target networks to launch attacks that go beyond espionage, such as destroying data or disrupting networks.

"We do know that other campaigns have gone down the intelligence path and then used it as a vehicle to cause destruction," Samani says, noting that there's no indication of the hackers' motivation beyond mere spying one way or another in this case. "We have no idea what may follow."

All of those indicators of digital meddling, from leaks to espionage campaigns, don't quite add up to a cyberdoomsday scenario. But for the Olympics' organizers—or the athletes waiting for their once-in-a-lifetime spotlight—the notion of multiple, determined hacker teams targeting the world's biggest sporting event should provide enough anxieties to last until the closing ceremony.

HEADLINE	<b>02/01 Hostile states using proxy hackers</b>
SOURCE	<a href="https://www.washingtonpost.com/news/monkey-cage/wp/2018/02/01/heres-how-hostile-states-are-hiding-behind-independent-hackers/?utm_term=.ae0410119aff">https://www.washingtonpost.com/news/monkey-cage/wp/2018/02/01/heres-how-hostile-states-are-hiding-behind-independent-hackers/?utm_term=.ae0410119aff</a>
GIST	<p>More and more states are using supposedly independent hackers as proxies to project power both at home and abroad. According to James R. Clapper Jr., former director of national intelligence, more than 30 countries are now <a href="#">pursuing</a> offensive cyber capabilities. Some of them rely on hackers who are not part of the government. In the past, there has been more rumor than fact about how these proxy relationships are organized and structured. However, the veil of secrecy is beginning to lift.</p> <p>For example, in November, a 22-year-old Canadian hacker pleaded <a href="#">guilty</a> to having worked with two officers of the Russian intelligence agency FSB. A year earlier, Germany <a href="#">extradited</a> a member of the Syrian Electronic Army to the United States. Meanwhile, the seven Iranian hackers accused of being responsible for the massive distributed denial of service DDoS attacks against financial institutions in the United States in 2012 <a href="#">remain</a> at large. These and other cases provide new information about these proxy relationships and their consequences.</p> <p><b>Malicious nonstate hackers are a real threat</b></p> <p>Policymakers and academics have had a hard time keeping up with how cybersecurity is changing on the ground. Alarmist debates about whether “<a href="#">cyberwar</a>” would take place did get senior policymakers and the public to care about cybersecurity, but at the expense of making them focus on the threat from other states and interstate conflict. This means that they have systematically neglected the role that hackers detached from the state play as proxies and how they facilitate state actors to develop and quickly deploy offensive cyber capabilities.</p> <p>It is now clear that actors other than states can cause significant harm through hacking. In fact, less sophisticated actors can potentially pose a greater risk than sophisticated actors because they often lack the skills to develop more precise code that would limit the effect of the malware. The <a href="#">WannaCry ransomware</a></p>

that hit computer systems worldwide last year, and forced hospitals in the United Kingdom to turn patients away, demonstrates what can happen if a less sophisticated actor uses malware with the intent to cause harm.

Here's what we know about the Kremlin's playbook for creating division in the U.S. (Jenny Starrs/The Washington Post)

### **It is possible to identify hackers**

One of the big problems in cybersecurity is identifying attackers. This is referred to as the “[attribution problem](#).” However, attributing malicious activity online has become easier in recent years. The Russian, Syrian and Iranian attacks mentioned above led to detailed indictments, which the U.S. government decided to unseal over the past two years. These indictments illustrate that, while attribution remains difficult, for the U.S. government it has become less a question whether it is possible but how long it will take and whether it is [willing to disclose](#) what it knows to the public.

Of course, part of the reason is that attackers make mistakes and can afford to be sloppy because they have to fear few consequences (if they remain [beyond reach](#) of U.S. agencies). That is why some governments, including the United States, and some specialized private threat intelligence companies, are able to successfully identify the source of an attack with sufficient confidence and evidence to make the case stick in court.

### **What hackers do tells us how states think**

What proxies do helps tell us how their state sponsors think about cyberthreats and how they try to project power online. [Tehran](#), for example, cares at least as much about hacking the accounts of dissidents and potential challengers to the regime as about espionage against other countries. Moscow, Beijing, Tehran and other governments don't think in terms of cybersecurity but information security — a more expansive concept including content and the control of information. High-profile incidents during the past five years reflect this worldview; the attacks include the [Sony cyberattack](#), the combination of information and cyberoperations in [Ukraine](#) and the [GitHub incident](#). These differences among states explain why the international cybersecurity debate cannot be separated from discussions about human rights, at least not as long as some governments care more about regime stability and the perceived threat of information than about technical vulnerabilities and improving the resilience of computer systems.

### **Hacking is changing international relations**

A decade ago, very few policymakers and media outlets paid serious attention to cybersecurity. After the Sept. 11, 2001, terrorist attacks and the Iraq War, they focused on terrorism and conventional war. Many were skeptical that hacking would have a systematic impact on international affairs. Today, it is clear that this hacking wasn't just hype. It has given actors the ability to cause harmful effects around the globe — assuming there is Internet access — far more cheaply than through conventional means.

This increase in reach is the single most important reason why hacking poses new risks to international peace and security. For example, the tensions between the United States and North Korea did not first change from a regional to a global conflict because of the development of an intercontinental ballistic missile but because of North Korea's ability to hack systems such as Sony's. More recent incidents [targeting SWIFT](#), the central nervous system of global finance, highlight how vulnerable even major financial institutions remain to third tier cyber-powers like North Korea.

### **More states are using proxies**

More states have gotten a taste for exploiting the Internet for their purposes. Mercenaries like the 22-year old in Canada, who was paid by the Russian FSB, or politically driven hacktivists like the four Iranians in their mid-20s are helping countries to develop and deploy offensive cyber tools. Ensuring that proxy hackers do not escape their masters and countering their malicious behavior poses major policy challenges. Over the next few years, we will find out whether the new administration's [focus](#) on trying to impose greater consequences in order to deter attacks will work. If successful, it will nudge other countries to tighten the leash on their proxies. If it raises the costs of malicious hackers only a little, it will likely just make them invest a little more time and money to become stealthier and better at hiding their tracks.

<b>HEADLINE</b>	<b>02/01 FBI warns of fake FBI IC3 email</b>
<b>SOURCE</b>	<a href="https://www.theregister.co.uk/2018/02/01/fbi_malware_emails/">https://www.theregister.co.uk/2018/02/01/fbi_malware_emails/</a>
<b>GIST</b>	<p>Some scammers may have bitten off more than they can chew after they tried impersonating the FBI to spread malware.</p> <p>The Feds' Internet Crime Complaint Center (IC3) issued an alert on Wednesday warning that it has received numerous complaints from citizens who have received emails purporting to be from IC3. Each message states that the recipient is due money as compensation from a cyber-attack, and asks them to fill out the attached document with their personal details – and, yup, you guessed it – that file is laden with malware.</p> <p>The email claims a Nigerian had been arrested by the FBI in Atlanta, USA, and that the recipient's email address had been found on the imaginary scammer's computer. All the mark has to do to pocket their windfall is return the document with their contact details and wait for the cash to arrive.</p> <p>"At least three other versions of the IC3 impersonation scam have been identified," the FBI warned. "As of July 2017, the IC3 has received numerous victim complaints regarding the scam."</p> <p>Two other variants of the emails are in circulation. One claims to come from the FBI IC3 office in Houston, Texas, and informs the lucky recipient that they are due \$10.5m in compensation from banking fraud.</p> <p>The third letter take a more threatening tone, saying that the IP address associated with the recipient's computer has been under investigation since September 2017 for online crimes. The receiver is instructed to fill out the enclosed booby-trapped form and return it.</p> <p>So far the FBI says no one appears to have been financially hurt by the scam, and it is probing the con. Agents are also seeking out the scammers – and very few things piss off the G-Men like someone taking their name in vain. Expect arrests.</p>

<b>HEADLINE</b>	<b>02/01 HHS issues cyber extortion newsletter</b>
<b>SOURCE</b>	<a href="https://www.dataprotectionreport.com/2018/02/hhs-ocr-issues-cyber-extortion-newsletter/">https://www.dataprotectionreport.com/2018/02/hhs-ocr-issues-cyber-extortion-newsletter/</a>
<b>GIST</b>	<p>This week, the US Department of Health and Human Services (HHS) Office for Civil Rights (OCR) published a <a href="#">January 2018 newsletter</a> focusing on “cyber extortion.”</p> <p>Cyber extortion often involves an attacker gaining access to an organization’s computer system, stealing sensitive information, and threatening to publish the information. Healthcare and public health organizations are often the targets of these attacks, so affected data frequently includes protected health information, or PHI. The OCR newsletter indicates that incidents of cyber extortion have been steadily increasing over the past several years and will continue to disrupt many organizations.</p> <p>Cyber extortion can take many forms. The OCR newsletter highlights ransomware and Denial of Service (DoS) attacks in particular.</p> <p>Ransomware involves the denial of access to a user’s data –typically, a hacker encrypts an organization’s data with a key known only to the hacker, and the hacker will demand payment from the organization in order to provide the decryption key.</p> <p>Ransomware may also involve the deployment of malware that destroys data. A U.S. government interagency <a href="#">report</a> indicates that there have been approximately 4,000 daily ransomware attacks since early</p>

	<p>2016.</p> <p>In response, OCR published a <a href="#">factsheet</a> to provide guidance on preventing and responding to ransomware attackers for HIPAA covered entities and business associates. The factsheet urges covered entities and business associates to maintain frequent backups and ensure the ability to recover data from backups.</p> <p>DoS and Distributed Denial of Service (DDoS) are other forms of cyber extortion highlighted in the OCR newsletter. These typically direct an abnormally high volume of network traffic to targeted computers so that the affected computers appear down or otherwise inaccessible. Attackers either initiate an attack and demand payment to halt the attack, or they may threaten the attack and demand payment to stop it from happening in the first place. OCR also highlighted DoS and DDoS attacks in a <a href="#">prior security newsletter</a>, which includes tips on identifying and stopping an attack.</p> <p>Cyber attackers constantly create new versions of malware and organizations must be vigilant to protect their data from attack. The HHS <a href="#">website</a> includes a number of guidance materials for HIPAA professionals including standards, checklists, and awareness newsletters to assist with the vigilance required to protect sensitive data from attackers.</p>

<b>HEADLINE</b>	<b>02/01 Massive wave of attacks on Dutch banks</b>
<b>SOURCE</b>	<a href="http://www.zdnet.com/article/ddos-mystery-whos-behind-this-massive-wave-of-attacks-targeting-dutch-banks/">http://www.zdnet.com/article/ddos-mystery-whos-behind-this-massive-wave-of-attacks-targeting-dutch-banks/</a>
<b>GIST</b>	<p>There is as yet no indication of who is behind the massive distributed denial of service (DDoS) attacks on Netherlands banks and government websites that ran from last weekend to Tuesday. Initial reports suggesting a Russian connection appear baseless.</p> <p>The attacks began just a couple of days after media reports stated that Dutch intelligence tipped off their American counterparts about state-sponsored Russian spies hacking the apparatus of the Democratic Party and stealing the infamous "leaked emails" that may have swayed the 2016 election.</p> <p>The publication NL Times reported that the Bratislava-based security company ESET had identified the attacks as coming from servers in Russia.</p> <p>That fact would, of course, be less than solid evidence that Russian attackers are to blame, because DDoS attacks can bounce all over the place before finally hitting their target, always making attribution troublesome.</p> <p>But when ZDNet contacted the security firm, it denied ever making a claim about a Russian connection. "This report about an ESET claim was an unfortunate mistake and misrepresentation by one Dutch news outlet and was corrected by them," spokesman Branislav Ondrasik said.</p> <p>The bank ABN Amro became the first victim on Saturday, while Rabobank and ING Bank were hit on Monday, along with the Dutch Taxation Authority. All four were hit again on Tuesday, but this time their defenses reportedly fared better.</p> <p>ABN Amro told ZDNet on Wednesday morning that the attack was "not ongoing at the moment". The bank stressed in an earlier statement that the DDoS did not threaten the security of its services -- it just knocked them out.</p> <p>"This weekend's DDoS attacks were heavier than previous ones and lasted longer. At the moment, it is unknown who is behind the attacks, and in by far most cases, the source of an attack is never discovered," ABN Amro said.</p>

HEADLINE	<b>02/02 Bitcoin continues downward trend</b>
SOURCE	<a href="https://money.usnews.com/investing/news/articles/2018-02-02/bitcoin-slides-further-headed-for-worst-week-since-2013">https://money.usnews.com/investing/news/articles/2018-02-02/bitcoin-slides-further-headed-for-worst-week-since-2013</a>
GIST	<p>LONDON (Reuters) - Bitcoin fell 9 percent on Friday, leaving the best-known cryptocurrency down more than 30 percent this week and headed for its worst weekly performance since April 2013.</p> <p>The cryptocurrency dropped to as low as \$8,155 at 0915 GMT on the Luxembourg-based bitstamp exchange amid a broader rout in the market. Other large cryptocurrencies have lost more than 20 percent of their value in the last 24 hours of trading, according to Coinmarketcap.com.</p> <p>A growing regulatory backlash against digital coins has sent investors scrambling to sell this week. Bitcoin is down more than half from a December peak of almost \$20,000 after it notched up a more than 1,000 gain last year.</p>

HEADLINE	<b>02/02 New Monero mining malware infects PCs</b>
SOURCE	<a href="https://www.hackread.com/monero-mining-malware-using-2-nsa-exploits/">https://www.hackread.com/monero-mining-malware-using-2-nsa-exploits/</a>
GIST	<p>Another day, another Monero mining malware – This one uses two NSA exploits and so far it has mined over 8,900 Monero.</p> <p>It looks like the craze of cryptocurrency mining is taking over the world by storm as every new day there is a new malware targeting unsuspecting users to use their computing power to mine cryptocurrency. Recently, the IT security researchers at Proofpoint have discovered a Monero mining malware that uses leaked NSA (National Security Agency) EternalBlue exploit to spread itself.</p> <p>Dubbed Smominru by researchers, this highly sophisticated malware has infected 526,000 Windows-based computers since May 2017 and is capable of mining around 24 Monero (XMR) per day which is currently \$5,657. So far, the malware has generated 8,900 Monero which is around \$2 million from targets in India, Russia, and Taiwan.</p> <p>“Based on the hash power associated with the Monero payment address for this operation, it appeared that this botnet was likely twice the size of Adylkuzz,” researchers wrote in their blog post.</p> <p>Adylkuzz is another cryptocurrency malware appeared after the WannaCry attack. Adylkuzz also uses EternalBlue and targets Windows-based computers to mine Monero cryptocurrency.</p> <p>The EternalBlue exploit was leaked by Shadow Brokers hacking group after hacking the agency. The same exploit was then used by hackers to spread WannaCry ransomware campaign which affected over 200,000 victims and more than 300,000 computers around the world.</p> <p>According to researchers, hackers are also using another NSA exploit called EsteemAudit to spread Smominru malware. The EsteemAudit exploit was leaked by Shadow Brokers in April 2017. The ex-NSA spy Edward Snowden had described the leak as “The mother of all exploits.”</p> <p>Furthermore, Smominru’s command and control (C&amp;C) infrastructure is hosted on SharkTech, a DDoS protection company in Las Vegas, NV. Proofpoint informed SharkTech about the ongoing cybercriminal activity on their server but did not receive any reply from the company.</p> <p>“As bitcoin has become prohibitively resource-intensive to mine outside of dedicated mining farms, interest in Monero has increased dramatically. While Monero can no longer be mined effectively on desktop computers, a distributed botnet like that described here can prove quite lucrative for its operators,” said Proofpoint researchers.</p>

	“The operators of this botnet are persistent, use all available exploits to expand their botnet, and have found multiple ways to recover after sinkhole operations,” researchers added.

<b>HEADLINE</b>	<b>02/01 JenX botnet targets IoT devices</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/jenx-botnet-emerges-to-target-iot/">https://www.infosecurity-magazine.com/news/jenx-botnet-emerges-to-target-iot/</a>
<b>GIST</b>	<p>A new botnet, dubbed JenX, shares characteristics with the Satori botnet, and is using Grand Theft Auto (GTA) to recruit internet of things (IoT) devices.</p> <p>According to Radware, the botnet uses hosted servers to find and infect new victims, leveraging one of two known vulnerabilities that have become popular in IoT botnets recently: CVE-2014-8361 and CVE-2017-17215. Both have related exploits.</p> <p>Both exploit vectors are known from the Satori botnet. The malware is based on the Satori code that was part of a recent public Pastebin post by the author of BrickerBot, along with attributes from the PureMasuta botnet, which had its source code published in an invite-only dark forum, the firm said.</p> <p>Interestingly, the bot herder seems to be a big gaming fan: Radware researchers found that the command and control server is hosted under the domain sancalvicie.com, a site that provides mod servers for Grand Theft Auto: San Andreas, in addition to cybercrime offerings like distributed denial of services (DDoS) via the botnet.</p> <p>One of those services is dubbed “Corriente Divina” (which translates to “divine stream”). It’s described as “God’s wrath will be employed against the IP that you provide us.”</p> <p>According to Radware researcher Pascal Geenens, it provides a DDoS service with a guaranteed bandwidth of 290 to 300 Gbps.</p> <p>Interestingly, it doesn’t have scanning and exploit payloads, meaning that this functionality is centralized. This provides the bot herders with more flexibility to add and improve the functionality as they go.</p>

<b>HEADLINE</b>	<b>02/02 Study: more ICS accessible via web</b>
<b>SOURCE</b>	<a href="http://www.securityweek.com/increasing-number-industrial-systems-accessible-web-study">http://www.securityweek.com/increasing-number-industrial-systems-accessible-web-study</a>
<b>GIST</b>	<p>The number of industrial control systems (ICS) accessible from the Internet has increased significantly in the past year, reaching more than 175,000 components, according to a new report from Positive Technologies.</p> <p>Using the Shodan, Censys and Google search engines, researchers identified 175,632 ICS components accessible from the Web. In comparison, similar searches conducted in the <u>previous year</u> uncovered just over 162,000 systems.</p> <p>Of all the systems identified in 2017, more than 66,000 were accessible via HTTP, followed by the Fox building automation protocol associated with Honeywell’s Niagara framework (39,000), Ethernet/IP (25,000), BACnet (13,000), and the Lantronix discovery protocol (10,000).</p> <p>The highest percentage of exposed devices, representing 42% of the total, was spotted in the United States. The number of Internet-accessible ICS components in the U.S. increased by 10% compared to 2016, from roughly 50,000 to 64,000. The U.S. is followed at a distance by Germany (13,000 accessible systems), France (7,000), and Canada (7,000).</p> <p>Many of the industrial systems connected to the Web come from Honeywell (26,000), Lantronix (12,000),</p>

SMA (9,000), Beck IPC (9,000), Siemens (6,000) and Rockwell Automation (5,000).

The distribution of Internet-exposed components by type has remained largely the same compared to 2016.

Type of ICS component	Share in 2017	Share in 2016
SCADA/DCS/HMI and/or PLC/RAP (RTU) <sup>13</sup>	14.2%	13.6%
PLC/RAP (RTU)	13.2%	12.9%
Network equipment	12.9%	5.1%
SCADA/DCS/HMI	7.1%	7.8%
Electrical measuring equipment	6.3%	5.2%
Other	46.5%	55.5%

John Matherly, CEO of the search engine Shodan, has confirmed for *SecurityWeek* that there has been an increase of roughly 10% year-over-year in terms of ICS exposure on the Internet.

“The increase is mostly in building automation protocols and despite the news coverage we haven't seen any decrease in devices,” Matherly said.

According to Positive Technologies, a total of nearly 200 new vulnerabilities were disclosed in 2017, compared to 115 in 2016. Worryingly, 61% of the flaws whose existence was made public last year were rated critical and high severity.

The most common types of vulnerabilities were remote code execution (24%), information disclosure (17%), and buffer overflows (12%). “Most vulnerabilities detected in 2017 can be exploited remotely without needing to obtain any privileges in advance,” Positive Technologies said in its [report](#).

A report published in October by CyberX revealed that one-third of industrial and critical infrastructure systems had been [connected to the Internet](#), based on data obtained by the industrial security firm by passively monitoring traffic from hundreds of operational technology (OT) networks.

**HEADLINE** 02/01 US CERT guidelines Olympics visitors

**SOURCE** <https://www.scmagazine.com/us-cert-posts-cybersecurity-suggestions-for-pyeongchang-winter-olympic-attendees/article/741026/>

**GIST** With the torch lighting for the Winter Olympics in Pyeongchang just over a week away U.S. CERT has issued cybersecurity guidelines for those visiting the games, tips that can also be used in any public environment.

Considering the on-the-go nature of attending the Olympics all of the recommendations center on mobile security hygiene and are very similar to what attendees of Black Hat and Def Con are told.

- Switch off Wi-Fi and Bluetooth connections when not in use.
- Use a credit card to pay for online goods and services.
- When using a public or unsecured wireless connection, avoid using sites and applications that require personal information like log-ins.
- Update mobile software.
- Use strong PINs and passwords.

Other suggestions include have two-factor authentication for your accounts, keep a screen lock active on your device and most importantly take a minute and think before you click on a link.

	<p>There have already been several hacking attempts centered on the Olympics with documents and emails stolen from the International Luge Federation being leaked and McAfee reported in early January campaign targeting organizations involved with the Pyeongchang Olympics that used the games as part of a social engineering plan to trick folks into opening phishing emails.</p> <p>While nation-state backed cyberattacks cannot be ruled out, most experts believe that with North Korea now attending the games and attack from that direction is unlikely, but it does not mean the games are safe.</p> <p>“The largest cyber threat to the Winter Games comes from non-state actors. Hacktivists, cyberterrorists, and fame seekers all see the Olympics as a great venue for their personal cause, whether it's personal fame, the propaganda of a political message or harm for a political purpose,” Ross Rustici, senior director for intelligence services for Cybereason.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>02/01 Hackers scam BeeToken users of \$1M</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/phishing-attacks-net-initial-coin-offering-investors-second-time-this-week/article/741031/">https://www.scmagazine.com/phishing-attacks-net-initial-coin-offering-investors-second-time-this-week/article/741031/</a>
<b>GIST</b>	<p>BeeToken customers were duped out of more than \$1 million worth of Ethereum in a phishing scam targeting BeeToken's initial coin offering (ICO) in a scam similar to the one that targeted Experty earlier this week.</p> <p>BeeToken confirmed the attacks on its Twitter and Medium accounts warning customers to be wary of emails and Telegram urging users to send funds as they are most likely fraudulent. Affected users said the attackers were targeting individuals who signed up for the BeeToken newsletter and its KYC process for the ICO, according to TNW.</p> <p>It is unclear how the hackers obtained the information but some users have accused the company of failing to properly store customer data on Reddit forums. BeeToken CEO Jonathan Chou desputed the claims and told the publication that his company does not “store customers' data in a centralized database like Airbnb.”</p> <p>“We are not at risk of exposing all of our customers' data in one go if there is a security breach,” Chou said. “Things do not seem that way now, at least when it comes to their email system.</p> <p>In the Experty attack, cybercriminals also tricked ICO participants into sending funds to the scammer's wallet instead of to the intended company. In this instance, the hacker was able to compromise the computer of an Experty user in order to obtain the victims' email address to send the phishing emails.</p> <p>Some researchers expect to see many more attacks like this moving forward.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>02/01 Scarabey ransomware w/new tactics</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/scarabey-ransomware-introduces-new-tactics-distribution/article/741452/">https://www.scmagazine.com/scarabey-ransomware-introduces-new-tactics-distribution/article/741452/</a>
<b>GIST</b>	<p>The malicious actors behind Scarab ransomware have rolled out a new variant, one that uses a different distribution method and ransom threat in order to infect computers and ensure payment.</p> <p>Unlike Scarab the new incarnation, called Scarabey, does not use the Necurs botnet to spread and is targeted at Russian, not English, language speakers, said Malwarebytes researcher vhioureas.</p> <p>On the surface the first difference between the two is distribution, Scarabey favors using Remote Desktop</p>

	<p>Protocol and being manually dropped on servers.</p> <p>The most obvious differentiator is the ransom note. With Scarab the note is written in English, but contains many errors that are synonymous with having been run through an online translator. For the Scarabey note the authors simply used the original source for the Scarab text.</p> <p>“What's interesting is that when you throw the Scarabey note into Google translate...it contains the same grammatical errors as the Scarab note,” vhioureas said, adding, “It would then seem quite likely that, since they decided to target Russians. They released the Scarabey note in their native language to cover more victims.”</p> <p>The threat being used to induce payment was also altered. With Scarab the victim is told that the ransom price will rise the longer it takes to pay up, with Scarabey the attacker says they will begin permanently deleting files, 24 files per 24 hours, if payment is not made.</p> <p>However, vhioureas noted this is a lie as there is nothing in the code to indicate the attacker has in fact copied any files to another location nor does the code contain the ability to delete files remotely.</p> <p>“The conclusion here is that the deletion of files or the idea that the malware authors have access to delete files is purely a scare tactic used to urge users into sending money quickly,” he said.</p>
<p><a href="#">Return to</a> <a href="#">Top</a></p>	

<b>HEADLINE</b>	<b>02/01 Stolen adult site login credentials</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/kaspersky-research-highlights-cyber-threats-facing-users-of-adult-websites/article/741464/">https://www.scmagazine.com/kaspersky-research-highlights-cyber-threats-facing-users-of-adult-websites/article/741464/</a>
<b>GIST</b>	<p>Cybercriminals have been using pornography and adult content as a lure to spread malware and steal information since adult content hit the internet, but recent research shows that access to legitimate sites are also fueling a lucrative trade on the dark web.</p> <p>Researchers at Kaspersky Lab examined some of the cyber threats that the users of adult websites and applications face. As more adult content sites begin to turn into content sharing platforms where users can submit their own content, create loyal communities, and like and share content, cybercriminals have found value in stealing and selling adult site login credentials on the dark web, putting more users at risk.</p> <p>And while the outcome of said malware remains the same as in most cases of cybercrime, victims are less likely to report the crimes to anyone because of the stigma associated with admitting to looking for or watching porn.</p> <p>Kaspersky Lab researchers spotted at least 27 variations of PC malware, belonging to three infamous families, specifically designed to hunt for credentials to paid-for porn websites. Among these malware, where banking trojans that had been modified to steal adult website credentials. Cybercriminals also used phishing attacks to obtain the stolen credentials as well.</p> <p>The firm's Naked Online report found that in 2017, these malicious families were seen more than 300,000 times attempting to attack more than 50,000 PCs across the world. The motivation for the stolen credential market is may be price of legitimate services as an annual unlimited account could cost as much as \$119.99 or \$9.99 per month. The desire for anonymity could also be a driving factor as users may not want to deal with purchasing showing up on bank statements.</p> <p>It's also worth noting the average list prices on the dark market for an unlimited account are usually one tenth of the official costs, a stark contrast to other services and products sold which often command a premium. In addition to the low prices, the accounts were being sold in almost unlimited numbers.</p> <p>Researchers spotted more than five thousand unique sales offerings during the course of their researcher</p>

and speculated that many of the breached credentials may have come from the sites themselves.

Since 2016 more than 72 million sets of account credentials for adult content websites were stolen and later appeared online from sites including Cams.com (62.6 million), Penthouse.com (7.1 million), Stripshow (1.42 million), 380,000 of xHamster accounts, and about 791,000 from Brazzers data.

The top five most most-often sold credentials were those for accounts on Naughty America (2,575 sales offers), Brazzers (1,228 sales offers), Mofos (789 sales offers), Reality Kings (294 sales offers), and Pornhub (153 sales offers). Researchers said it's important to not view the ranking as some sort of testament to the security of the sites, but more so as a testimony to the popularity of the sites.

Despite the vast market for stolen credential, researchers warn purchasers of the stolen content put themselves at risk buying stolen credentials is illegal and it's likely the credentials will have already been blocked by the time they are purchased.

<b>HEADLINE</b>	<b>02/01 Cryptomining attacks rise as big threats</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/crypto-mining-attacks-emerge-as-the-new-big-threat-to-enterprises/d/d-id/1330965">http://www.darkreading.com/attacks-breaches/crypto-mining-attacks-emerge-as-the-new-big-threat-to-enterprises/d/d-id/1330965</a>
<b>GIST</b>	<p>In an ominous trend for businesses, hijacking computers for cryptocurrency mining appears to have become the go-to strategy for cybercriminals looking for a safe and reliable way to generate illegal revenues.</p> <p>Several vendors in recent days have reported a huge surge in illegal crypto-mining activity involving millions of hijacked computers worldwide. Professional cybercriminals are moving away in droves from less profitable exploits to making money via the surging global interest in digital currencies, said Digital Shadows in the latest warning on this trend.</p> <p>The activity has begun to pose as much of a threat to businesses as it does to consumers. Security vendor CrowdStrike recently reported that it had seen multiple instances of businesses being impacted by illegal crypto-mining activity. In some cases, mining tools installed illegally on business systems have caused applications and hardware to crash, causing operational disruptions lasting days and sometimes even weeks, says Bryan York, director of services at CrowdStrike.</p> <p>"We've seen an uptick in unauthorized crypto-mining, or cryptojacking, targeting businesses," he says. "While cryptocurrency mining has typically been viewed as a nuisance, we've recently seen several cases where mining has impacted business operations," York warns.</p> <p>Mining 101</p> <p>Crypto mining is a fairly complex process where a computer's processing resources are used for blockchain transaction verification. Mining is a very CPU-intensive, resource-hogging activity and some digital currencies like Bitcoin require special-purpose hardware to do it. Several other digital currencies like Monero, Zcash, and Ethereum, however, can also be mined by pooling the resources of multiple computers.</p> <p>In return for installing a mining tool and allowing their computer resources to be pooled for mining, the miners or owners of the computers, receive digital coins in return. Mining itself is a legal activity, and many people around the world allow their systems to be used for the purpose in hopes of making some money on the side.</p> <p>In recent months, however, cybercriminals have begun surreptitiously installing crypto-mining tools on victim computers and using resources of those compromised systems for the same purpose. Instead of taking over computers to steal data or install ransomware, cybercriminals have simply begun stealing</p>

system resources and using this to illegally profit from digital currency mining.

"These attacks are much stealthier than their predecessors," Cisco's Talos threat group said in a report this week. "Attackers are not stealing anything more than computing power from their victims and the mining software isn't technically malware."

When installing mining software, some criminals have even begun putting limits on things like CPU usage and amount of cores being used to ensure users don't notice any obvious performance hit as result of mining software running on their system. In theory, victims could remain part of the adversary botnet indefinitely, Talos said in its report.

Driving the trend is the easy availability of do-it-yourself kits that almost anyone can use for illegal mining. Criminals can rent mining botnets for as little as \$30 to \$130 per month, and software for distributing miners for as little as \$29, according to Digital Shadows.

<b>HEADLINE</b>	<b>02/01 Cybercriminals target cryptocurrencies</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-cryptocurrency-cybercrime/cybercriminals-target-booming-cryptocurrencies-report-idUSKBN1FL5Q7">https://www.reuters.com/article/us-cryptocurrency-cybercrime/cybercriminals-target-booming-cryptocurrencies-report-idUSKBN1FL5Q7</a>
<b>GIST</b>	<p>NEW YORK (Reuters) - Bitcoin's popularity and the emergence of about 1,500 other digital coins or tokens have drawn more hackers into the red-hot cryptocurrency space, expanding opportunities for crime and fraud, cybersecurity firm Digital Shadows warned in a report on Thursday.</p> <p>"Cybercriminals follow the money and right now they see in the unregulated and largely unsecure world of digital currencies a huge opportunity to target people, businesses and exchanges and make money quickly and easily," said Rick Holland, vice president of strategy at Digital Shadows.</p> <p>Digital currencies have quickly grown into a more mainstream asset class over the last two years as corporations and financial institutions have expanded use of the underlying blockchain technology.</p> <p>With weekly launches of new alternative coins, or "altcoins," cybercriminals have developed several schemes to defraud cryptocurrency holders. "Crypto jacking", account takeovers, mining fraud, and scams against initial coin offerings (ICOs) have all grown more common, the report said.</p> <p>In crypto jacking, cybercriminals secretly take over another computer user's browser and use it to fraudulently mine or create cryptocurrencies, according to Digital Shadows' report. Miners use special software to solve math problems and are issued a certain number of bitcoins or cryptocurrencies in exchange.</p> <p>Crypto Jacker software allows users to clone popular websites and initiate spam campaigns.</p> <p>The cybersecurity company said criminals also perpetrate mining fraud using botnets, collections of internet-connected devices, which may include PCs, servers, and mobile devices that are infected and controlled by a common type of malware. Users are often unaware a botnet has infected their system.</p> <p>Botnets were first used to mine bitcoin in 2014. The process was too complex to be financially viable, but botnets have made a comeback because newer cryptocurrencies like Monero are easier to "mine", Digital Shadows said.</p> <p>The company said botnets could be rented for \$40. It said one such offering had "flown off the shelves" with almost 2,000 rentals so far.</p> <p>Cybercriminals have also been drawn to the surging initial coin offering market, the report said. ICOs have raised roughly \$5 billion for various startups and projects in 2017, according to data from Crunchbase.</p>

	That is up exponentially from just \$100 million in 2016.
	Rather than selling scam tokens, criminals target legitimate currencies, either by stealing funds from ICOs or by manipulating prices through the type of “pump and dump” schemes often used with penny stocks and other less-liquid assets, the report said.

<b>HEADLINE</b>	<b>02/01 Slow death of al-Qaeda in Algeria</b>
<b>SOURCE</b>	<a href="http://www.middleeasteye.net/news/analysis-slow-death-al-qaeda-algeria-143324001">http://www.middleeasteye.net/news/analysis-slow-death-al-qaeda-algeria-143324001</a>
<b>GIST</b>	<p>ALGIERS - It was an admission from the very top: his men were on the run or dead, popular support was almost zero, and allies across North Africa had fallen silent. Algeria was a dead zone for al-Qaeda, admitted its chief in northern Africa.</p> <p>In his April 2017 interview for Inspire, the propaganda sheet of al-Qaeda in the Arabian Peninsula, Abdelmalek Droukdel, the "emir" of al-Qaeda in the Islamic Maghreb, or AQIM, painted a sorry picture.</p> <p>"Support for the cause is generally good, with the exception of the Algerian front," he said.</p> <p>"We are bogged down in a long war. The Algerian front suffers from scarcity, and sometimes an almost complete lack of support - inside and out.</p> <p>"This has had a terrible impact."</p> <p>Little did he realise things would get worse. The rank-and-file was being thinned by repeated attacks by the Algerian army, but more costly was the loss of many of its executive branch.</p> <p>Bilel Kobi, the special envoy of Droukdel in Tunisia, and Bashir Ben Neji, emir of a group in Tunisia, were shot dead by the Tunisian military in January, In Algeria this week, Abu Rouaha al-Qassantini - real name Adel Seghiri - was killed by the Algerian army in Jijel, about 400km from Algiers.</p> <p>He was the propaganda chief of AQIM, creator of the al-Andalus magazine and mastermind of the propaganda forum "Ifriquya al-Islamiyah" (Islamic Africa), which acted as message board between groups in the region and al-Qaeda in the Middle East.</p> <p>Documents, a telephone and computer equipment found after his death proved invaluable material for the security services. Much of his network was compromised.</p> <p>"He was among the 15 most dangerous AQIM fighters," an Algerian security source told Middle East Eye. "Not for his actions in the field but because he was in charge of encrypting and decrypting the information."</p> <p>Born in 1971 in Constantine, Qassantini gained an electronic engineering degree in 1994 before joining the Armed Islamic Group (GIA) and later the notorious Salafist Group for Preaching and Combat (GSPC) in 2002.</p> <p>"It is thought that he has probably continued to train in encryption practices through the internet," said one of the Algerian investigators who handled his case.</p> <p>"Undoubtedly, it's a blow for the organisation and it will be weakened."</p> <p>By law, Algerian military officials - both active and retired - are forbidden to speak to the media and Middle East Eye is unable to quote them by name. But all those who spoke have said the fight against al-</p>

Qaeda and its allies, after several years of setbacks, has swung decisively in the favour of the Algerian state.

AQIM has failed to carry out major attacks in Algeria for several months. The Algerian army says it eliminates an average of 200 militants each year and armed groups are finding it increasingly difficult to maintain their numbers.

So much so that last October, according to an Algerian security source, militant leaders pleaded for reinforcements from its allies in Tunisia and Libya.

How can the change in fortunes be explained? According to a retired Algerian major general, the state is "reaping the benefits of an anti-terrorism policy it has been pursuing for more than 20 years".

"This terrorism, we have always understood as both a security problem but also psychological, economic and cultural," he said.

Military operations, he said, were being run in tandem with efforts to marginalise armed groups' influence on the population.

As a result, "an almost complete absence of support inside", to use Droukdel's expression, is now manifest.

This was evident in 2015, when Madani Merzag, the former "emir" of a group known as the Islamic Salvation Army, a group notorious in the 1990s for a series of massacres, tried to form a political party. His attempt was roundly rejected by Algerians.

"There is no a secret recipe," said the retired general. "Eliminating a terrorist is not a victory if, at the same time, a recruit rises to take their place."

"We fail if [armed groups] are allowed to mobilise the youth. Draining terrorist financing can be an endless thing if you do not target their support networks."

A counter-terrorism source said: "The other mainstay of the security services has been to hit terrorist logistics.

"Some 1,000 members of support networks have been arrested in the last three years. For them, it is a real disaster that has forced dozens of terrorists and their families to surrender to the authorities. "

The tactics have not been received positively by all. NGOs are critical of Algeria's military tactics, and say regular announcements about the "elimination of terrorists" are opaque, and show there is no effort made to bring militants to justice.

But there is international support. In October, the deputy coordinator of the US State Department's counter-terrorism office called on Algeria "to share this experience with other countries around the world".

The tactics have had significant impacts as, according to an army analyst, militants have decided that "rather than fighting a far superior enemy, they would be better off moving elsewhere - Tunisia and especially Libya".

But AQIM is not dead yet. In the south, in the Sahel, the situation is much different.

Thanks to strong alliances and money made from the ransom business, the organisation is able to sustain itself even in the face of pressure from an international force, known as Operation Barkhane, led by French soldiers.

Faced with the vastness of the desert and difficult weather conditions, the contingent that makes up the Barkhane force barely contain the attacks of AQIM under the unified banner of the Support Group for

	<p>Islam and Muslims in the Islamic Maghreb.</p> <p>An Algerian security source solicited by MEE admits: "From an operational point of view, AQIM is in bad shape. I cannot over-emphasise how the elimination of Abu Rouaha al-Qassantini has hurt them."</p> <p>He added that the Algerian army would soon flush out Droukdel, who is presumed to be hiding in the mountains of the Jijel region.</p> <p>"But as long as AQIM has fighters, it remains a threat. We must never forget the story of Abdelhakim Belhadj's Islamic Fighting Group.</p> <p>"It was said to have been completely destroyed but from 2011 was to reconstitute itself and fan out to several cities of the country."</p>

<b>HEADLINE</b>	<b>02/01 Guilty plea in false terror threats</b>
<b>SOURCE</b>	<a href="http://www.oregonlive.com/pacific-northwest-news/index.ssf/2018/02/clackamas_man_made_false_threa.html">http://www.oregonlive.com/pacific-northwest-news/index.ssf/2018/02/clackamas_man_made_false_threa.html</a>
<b>GIST</b>	<p>A Clackamas man Thursday pleaded guilty to placing calls to two airports in Nevada and Texas, reporting his father and brother as terrorists because they got an invitation to a family wedding and he didn't.</p> <p>Sonny Donnie Smith, 38, admitted to placing anonymous phone calls to security offices at McCarran International Airport in Las Vegas and the Midland International Air and Space Port in Midland, Texas. He falsely claimed that his father and brother were terrorists traveling through the airports, according to prosecutors.</p> <p>Both calls were made Sept. 3, 2016, Assistant U.S. Attorney Hannah Horsley said.</p> <p>The calls prompted an FBI investigation that revealed no terrorist threats. Smith's father and brother were temporarily detained and questioned by investigators as a result, and the brother missed his flight that day.</p> <p>The calls resulted from a family feud, according to court documents. Sonny Smith made the threatening calls because he was told he wasn't welcome at a family wedding they were heading to, according to the plea agreement.</p> <p>"Thanks to the FBI agents and partner agencies who worked this case, Mr. Smith quickly found his harassment was far from anonymous," said Loren Cannon, Oregon's FBI special agent in charge.</p> <p>Smith faces a maximum sentence of two years in prison, a \$250,000 fine and one year of supervised release. He's set to be sentenced May 10.</p>

<b>HEADLINE</b>	<b>02/01 Groups: ancient Syria temple bombed</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/ancient-syrian-temple-reduced-rubble-airstrike-syrian-government/story?id=52765093">http://abcnews.go.com/International/ancient-syrian-temple-reduced-rubble-airstrike-syrian-government/story?id=52765093</a>
<b>GIST</b>	<p>The world has lost another valuable piece of ancient heritage.</p> <p>More than 50 percent of the remains of a Syrian temple built 3,000 years ago was destroyed in a Turkish air strike on Jan. 29, according to the Syrian antiquities ministry and the Syrian Observatory for Human Rights, an independent watchdog.</p> <p>The temple at Ain Dara was constructed by an early Iron Age society and was one of Syria's most</p>

	<p>important monuments. It was famous for its well-preserved lions and sphinxes that were intricately carved from basalt stone.</p> <p>Photos published by the Syrian Directorate-General of Antiquities and Museums show the site before and after Monday's bombing. Many of the statues have been reduced to piles of rubble.</p> <p>Air strikes against Ain Dara and several other protected areas nearby caused outrage among locals, according to the Syrian Observatory for Human Rights. People living in the area "accused the Turkish forces of an attempt to eliminate the archeological sites that represent the civilizations in the area of Afrin," the group said.</p> <p>A Turkish military official told The Associated Press the airstrikes did not target religious or cultural sites. The official spoke on condition of anonymity in line with military rules, according to the AP. The extent of the damage to the temple could not be independently assessed but the Observatory said it was badly damaged, the AP reported.</p>

<b>HEADLINE</b>	<b>02/01 Turkey bombs families into caves</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/01/middleeast/syria-kurds-assault-civilians-intl/index.html">https://www.cnn.com/2018/02/01/middleeast/syria-kurds-assault-civilians-intl/index.html</a>
<b>GIST</b>	<p>(CNN)Kurdish families huddle on blankets in a dimly lit cave. Others hide in the rubble of a bombed-out building, gathered around a campfire. Those that have basements seek shelter there.</p> <p>This is life in Afrin.</p> <p>Turkey's cross-border military offensive against US-backed Kurdish militias has driven civilians living in the northwestern Syrian enclave underground. An estimated 16,000 people have been displaced by the fighting, which has been punctuated by relentless airstrikes and shelling, according to the United Nations.</p> <p>Footage obtained exclusively by CNN captures the city's deserted streets -- littered with crumpled cars, debris and gaping holes where shops once stood.</p> <p>"We don't know where to go," says Mohammed Khaled, 10, speaking in Kurdish.</p> <p>"The airplane has been dropping bombs for five days now. They are dropping missiles and bombs. My dad says not to go out because of the war planes and so we are sleeping in the huts. All our homes are destroyed."</p>

Khaled stands outside one of the structures where civilians are seeking shelter. Children mill around behind him, restless. According to the United Nations Children's Fund (UNICEF), families have been prevented from leaving the area by local authorities. The humanitarian organization has had to suspend child protection services there amid the violence.

Um Muhammed, Khaled's mother, asks why Turkish President Recep Tayyip Erdogan is bombing her people.

"What did we do to him?" she says in Arabic.

"We lost our homes our children, nothing is left ... why would this happen to us? Is not this a shame that children have to live like that? We are human beings, are we not? Why are they doing this to us?"

Afrin has borne the brunt of Turkey's attacks since January 20, when Ankara launched Operation Olive Branch to remove Kurdistan Workers' Party (PKK), Kurdish Democratic Union Party (PYD) and ISIS militants from the area along its border.

The military operations have predominately targeted Kurdish fighters of the People's Protection Units, or YPG. The militia, which has been critical to the US-backed Syrian Democratic Forces (SDF) in the fight against ISIS, is viewed by Ankara as a terrorist organization.

Turkey sees the quest by the Kurds -- who are spread out in Turkey, Syria, Iran and Iraq -- to establish an independent homeland as an existential threat to its territorial integrity. And Turkey has long warned that it will not tolerate YPG control of much of its border with Syria.

Hevi Mustafa, the co-president of the executive council of Afrin, praises the resolve and confidence of the forces fighting the onslaught.

Mustafa calls the Turkish attacks "barbaric" and says she hopes the international community will hold the Turkish government accountable for the violence.

Turkey views the YPG as indistinguishable from the PKK and says those entities have been hiding out in Afrin since Syrian President Bashar al-Assad's regime left in 2012.

According to the Turkish General Staff, the operation is being carried out under the framework of Turkey's rights based on international law. The military also says avoiding civilian casualties is of the "utmost importance."

"Only the terrorists and their shelters, barracks, weapons, tools and equipment are targeted, and all kinds of attention and sensitivity are shown to avoid damage to civilian/innocent people and to the environment," the Turkish Armed Forces said in a statement.

The people hiding in Afrin's caves have a different view.

One woman asks, "What are the planes wanting from us? What are they bombing us for? What do they want from us and what do they want from the little children?"

HEADLINE	<b>02/02 Turkey: rocket attacks from Syria enclave</b>
SOURCE	<a href="http://www.foxnews.com/world/2018/02/02/turkey-rocket-attacks-from-syrian-enclave-wound-9-people.html">http://www.foxnews.com/world/2018/02/02/turkey-rocket-attacks-from-syrian-enclave-wound-9-people.html</a>
GIST	ANKARA, Turkey – Turkish media say nine people were wounded in a barrage of rockets fired at two border towns in Turkey across from the Syrian Kurdish enclave of Afrin.

	<p>The state-run Anadolu Agency says three rockets targeted the town of Reyhanli in Hatay province on Friday, hitting a house, a road close to a marketplace and the outer wall of a workplace. Six people were hospitalized from that attack.</p> <p>Governor Mehmet Tekinarslan says three more rockets hit the town of Kilis, northeast of Reyhanli, where at least three people were wounded.</p> <p>Ankara launched a cross-border offensive into Afrin on Jan. 20 to rout the Syrian Kurdish militia it says is linked to insurgents fighting inside Turkey.</p> <p>At least four people have been killed in rocket attacks on the two towns since then.</p>

<b>HEADLINE</b>	<b>02/01 Airstrikes Yemen dramatically jump</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/mideast/u-s-airstrikes-yemen-have-increased-sixfold-under-trump-n843886">https://www.nbcnews.com/news/mideast/u-s-airstrikes-yemen-have-increased-sixfold-under-trump-n843886</a>
<b>GIST</b>	<p>The U.S. military stepped up its air campaign in Yemen dramatically in 2017, conducting more than six times as many airstrikes as in 2016, according to U.S. Central Command (CENTCOM) data.</p> <p>In addition to the airstrikes, the Pentagon acknowledges there is now a small intermittent U.S. military presence inside Yemen.</p> <p>In 2017, the U.S. military carried out 131 airstrikes, both manned and unmanned, against al Qaeda in the Arabian Peninsula (AQAP) and ISIS in Yemen, the data shows. That's up from 21 strikes in 2016, the last year of the Obama administration. There have been at least 10 additional strikes since Jan. 1, 2018.</p> <p>The airstrikes were carried out by drones, AC-130 gunships and fighter-bombers.</p> <p>A senior U.S. intelligence official said the increased level of activity "has killed fighters, eviscerated AQAP's propaganda network, cut off external support and enabled UAE partners to regain territory."</p> <p>The official confirmed an earlier U.S. military report that more than 50 ISIS fighters were killed in one October raid alone.</p> <p>The increase is the result of a policy change made by President Trump almost immediately after taking office in January 2017.</p> <p>Soon after the Trump administration took office, it declared parts of Yemen as well as neighboring Somalia to be "areas of active hostilities," giving the U.S. military more leeway to target terrorists from the air and on the ground without White House approval.</p> <p>Initially, the Pentagon operated off a target list developed during the transition between the Obama and Trump administrations. That target list focused almost exclusively on AQAP. Some additional strikes were conducted in support of counterterrorism operations by the special forces of the United Arab Emirates and Yemen, according to a senior intelligence official. As the year progressed, both air and ground strikes increased.</p> <p>By October, the U.S. military counterterrorism operations grew to include strikes and missions against ISIS, specifically a regional group called ISIS-Yemen (ISIS-Y). CENTCOM spokesperson Lt. Col. Earl Brown said in December that targeting ISIS "is required to prevent ISIS-Y from filling the vacuum left by a diminished AQAP footprint or influence in the region."</p> <p>Despite that, a U.S. intelligence estimate contends that ISIS-Y doubled in size in 2017.</p>

	In December, CENTCOM acknowledged that the U.S. military had conducted "multiple ground operations" in Yemen in 2017, but did not provide a specific number or details about the raids.  Asked how many U.S. forces are stationed in Yemen, a spokesperson declined to provide details.

<b>HEADLINE</b>	<b>02/01 Wave of attacks rock Afghanistan</b>
<b>SOURCE</b>	<a href="http://time.com/5126270/terrorist-attacks-afghanistan-taliban-isis/?xid=homepage">http://time.com/5126270/terrorist-attacks-afghanistan-taliban-isis/?xid=homepage</a>
<b>GIST</b>	<p>About 90-minutes before dawn broke on Jan. 28, Kabul residents woke to the sound of explosions and gunfire. A group of insurgents armed with rocket-propelled grenades and automatic rifles had stormed an army post near a military academy in Afghanistan's capital.</p> <p>Monday's pre-dawn raid lasted an hour and ended in the death of 11 soldiers, as well as four of the five militants who instigated it. It was the fourth brazen attack in a little over a week that saw more than 140 people killed in around Kabul and exposed gaping holes in Afghanistan's security structure.</p> <p>For many, the four atrocities—two claimed by the Taliban and two by a local ISIS affiliate—also underscore the futility of a 16-year United States military campaign (the longest war America has been involved in). Despite a threefold increase in aerial ordinance dropped on the Taliban in 2017, the insurgent group made considerable territorial gains and is now openly active in 70% of Afghanistan, according to a recent BBC study.</p> <p>For all the talk of the Taliban resurgence in the countryside, the latest spate of attacks shows that urban spaces remain highly vulnerable and lay bare the intelligence gathering frailty of the country's Western-backed government, says Michael Kugelman, an Afghanistan specialist at the Wilson Center.</p> <p>"Afghanistan simply is in no position to preempt large-scale attacks, even in supposedly more highly secured areas," Kugelman tells TIME.</p> <p>Here's more.</p> <p><b>What did insurgent groups target in the latest wave of violence?</b></p> <p>On January 20, Taliban fighters in suicide vests laid siege to Kabul's Intercontinental Hotel, killing more than 20 people over the course of a 13 hour-long gun battle. At least 14 foreigners, including four Americans, were among the dead, according to the U.S. State Department. The Taliban struck again on January 27. This time the death toll breached 100 after attacker blew up an explosives-laden ambulance on a busy Kabul street.</p> <p>Five day after the Taliban hit Kabul's Intercontinental, suicide bombers and gunmen attacked the Jalalabad offices of international NGO Save the Children, about 100 miles east of downtown Kabul. "Incidents like this have a direct impact on the children and communities we work to protect and yesterday programs across the country were brought to a halt," Save the Children said in a statement confirming a fourth member of its staff had died after the attack.</p> <p>That attack, as well as the Jan 28 assault on the military outpost, was claimed by local ISIS affiliate Islamic State Khurasan (ISK).</p> <p>The brazen nature of the assaults—and the way in which they came in such quick succession—has thrust Afghanistan back into the headlines. Sadly, it is never far from them. A little more than a month ago ISK claimed responsibility for killing 41 people at a Shia cultural center; in May last year a truck bomb near Kabul's presidential palace killed more than 150 people, the majority of them civilians.</p> <p><b>Is the insurgency entering a bloodier phase?</b></p> <p>It depends on who you ask. Responding to reporters questions about how attackers penetrated ostensibly</p>

	<p>well-defended urban sites with apparent ease, the head of Afghanistan's spy agency Mohammad Masoom Stanekzai said that the terrorists were "changing their tactics," according to Agence France Presse.</p> <p>The ambulance attack in the city center did "not mean a lapse (in security). We have foiled many attacks but some are difficult to control," Stanekzai said.</p> <p>However, Taliban-led campaigns of violence in cities have long accompanied the group's advances in the countryside.</p> <p>What has changed is the insurgents' willingness to claim responsibility for attacks targeted at civilians, rather than police and the military. That is likely a product of the insurgents' desire to heap pressure on the state that it wishes to overthrow.</p> <p>Says Kugelman: "[The Taliban] wants to make the state look weak, and what better way of doing so than making it clear that the state is unable to protect its own people?"</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>02/01 Turkey-backed forces push into enclave</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/turkey-calls-french-warning-syria-insult-52760517">http://abcnews.go.com/International/wireStory/turkey-calls-french-warning-syria-insult-52760517</a>
<b>GIST</b>	<p>Intense battles raged Thursday as Kurdish fighters attempted to repel a new advance by Turkish troops and allied Syrian fighters on their encircled enclave in northwestern Syria.</p> <p>Meanwhile, Syrian government forces pushed into Idlib province, an opposition stronghold nearby, inching closer to a key highway that connects Syria's two largest cities, Damascus and Aleppo.</p> <p>The separate offensives have sharply worsened the humanitarian situation in northern Syria. Some 15,000 civilians have been displaced inside the Kurdish-controlled enclave Afrin, with no place to run except the district's center, according to U.N. humanitarian adviser Jan Egeland. The figure could not be independently verified.</p> <p>The U.N. says more than 270,000 have been displaced in Idlib because of the government onslaught since Dec. 15.</p> <p>Turkey has mobilized some 10,000 Syrian opposition fighters to fight in its campaign against a Kurdish militant group in Afrin. That campaign, codenamed Operation Olive Branch, has drawn protest from the U.S. and France, who consider the Kurdish militia an ally in the war on the Islamic State group.</p> <p>Turkey's state-run Anadolu news agency said the Turkish military cleared Bulbul, an area north of Afrin, Thursday. But the Syrian Observatory for Human Rights said that while the Turkish troops and allied Syrian fighters have reached Bulbul, "crushing" battles were continuing with the Kurdish fighters.</p>

<b>HEADLINE</b>	<b>02/01 Filmmaker: D.B. Cooper case solved</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/feb/1/filmmaker-claims-he-has-solved-db-cooper-case/">https://www.washingtontimes.com/news/2018/feb/1/filmmaker-claims-he-has-solved-db-cooper-case/</a>
<b>GIST</b>	<p>A documentary filmmaker claims he has solved the D.B Cooper hijacking case.</p> <p>Tom Colbert, whose 40-member investigative team has spent years probing the 1971 hijacking, alleged that Cooper is a CIA operative whose identity has been covered up by the FBI.</p> <p>He also claims that Cooper is Robert W. Rackstraw, a 74-year-old former army paratrooper who is living in the San Diego area.</p> <p>"Our criminal investigation is finished," Mr. Colbert said at a Tuesday morning press conference in front of the FBI headquarters in Washington, D.C.</p> <p>Mr. Rackstraw could not be reached for comment. But Dennis Williams, an attorney who represents Mr. Rackstraw, denied the allegation that his client is the notorious criminal.</p> <p>"He says he's not D.B. Cooper and I don't believe he is," Mr. Williams said accusing Mr. Colbert of "harassing" his client.</p> <p>D.B., or Dan Cooper, hijacked Northwest Orient Flight 305 in November 1971. He jumped off the plane somewhere over the Pacific Northwest after collecting \$200,000 in ransom. He disappeared and the FBI concluded he died while jumping out of the airplane.</p> <p>In 2016, the agency closed the investigation.</p> <p>Over the years various suspects have emerged but there has never been conclusive evidence linking anyone to the crime.</p> <p>Now Mr. Colbert claims he has conclusive evidence linking Mr. Rackstraw to Cooper. Mr. Colbert claims he has discovered codes in five letters someone claiming to be Cooper mailed to the FBI. He alleges that</p>

the code refers to three Army units connected to Rackstraw during his service in Vietnam. Mr. Rackstraw is the only person connected to all three units, Mr. Colbert alleged.

“The only soldier that had these three units is Robert W. Rackstraw,” Mr. Colbert said. “That confirmed it for us.”

Among the codes inserted at the bottom of the letters, include the initials SWS, which stands for Special Warfare School, according to Mr. Colbert. In another letter, Cooper claims to be CIA and includes the letters RWR. That stands for Robert W. Rackstraw, Mr. Colbert said.

Mr. Colbert alleged that Mr. Rackstraw worked for the CIA and the agency pressured the FBI to look the other way, enabling Mr. Rackstraw to avoid capture. There are 17 examples linking Mr. Rackstraw to the CIA — including evidence he was in Iran during the 1978 fall of the Shah and played a role in the Iran-Contra affair — Mr. Colbert alleged.

An FBI spokeswoman said it was “inappropriate” to comment about Mr. Colbert’s allegations.

“The FBI continues to receive tips from members of the public, but none to date have resulted in a definitive identification of the hijacker,” FBI spokeswoman Ayn S. Dietrich-Williams said. “The tips have conveyed plausible theories, descriptive information about individuals potentially matching the hijacker, and anecdotes—to include accounts of sudden, unexplained wealth. In order to solve a case, the FBI must prove culpability beyond a reasonable doubt, and, unfortunately, none of the well-meaning tips or applications of new investigative technology have yielded the necessary proof.”

<b>HEADLINE</b>	<b>02/01 Australian government secrets revealed</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/01/31/asia/australia-cabinet-papers-leaked-intl/index.html">https://www.cnn.com/2018/01/31/asia/australia-cabinet-papers-leaked-intl/index.html</a>
<b>GIST</b>	<p>(CNN) — Australian intelligence officers have delivered safes to two offices of the country's national broadcaster to secure top secret Cabinet documents that were accidentally sold in second-hand furniture.</p> <p>The Australian government is investigating the discovery of thousands of files, dating back 10 years and spanning five governments, in filing drawers at a furniture store in the Australian capital of Canberra.</p> <p>The documents were obtained by the Australian Broadcasting Corporation (ABC), which has called the discovery "one of the biggest breaches of Cabinet security in Australian history."</p> <p>The Prime Minister's department confirmed the documents were "secured" in the early hours of Thursday morning, but stressed the delivery of the safes at 1 a.m. "was not a raid."</p> <p>Later Thursday, security agency personnel visited the ABC's Melbourne office to secure documents inside a safe, the broadcaster said.</p> <p>ABC News director Gaven Morris said the organization had worked with Australian security agencies to make sure the documents were secure.</p> <p>The ABC reported that it still has access to the files, and talks are underway with the government about how to proceed.</p> <p>The existence of the documents and their unlikely discovery was revealed by ABC Wednesday in a series of shock articles.</p> <p>Among the revelations reported by the ABC from the documents were allegations Australia's then-immigration minister Scott Morrison intervened in 2013 to demand extra checks on a group of asylum seekers to stop them getting permanent protection visas in Australia.</p>

Former Prime Minister John Howard's government was also alleged to have discussed removing Australians' right to remain silent in custody around 2007, according to ABC reporting.

Former Australian leader John Howard's government was one of those whose documents were contained in the cabinet.

The Cabinet is the top decision making body in a parliamentary system, composed of the prime minister and his or her most senior ministers.

All discussions inside Cabinet are considered confidential and documents on Australian Cabinet decisions are supposed to remain confidential for at least to 20 years.

A number of other prominent Australian leaders were also the target of embarrassing domestic allegations, including former Prime Ministers Kevin Rudd and Tony Abbott.

Abbott told Sydney radio station 2GB someone needed to "pay a price" over the blunder.

"If you are going to throw out a filing cabinet that has got a whole lot of sensitive and confidential information in it you have got to make sure it is empty before it goes out of the building," he said Wednesday.

Rudd announced early Thursday morning he would be suing the ABC one of their articles published based on his government's controversial home insulation scheme, describing it as "a lie."

According to the ABC, the two sets of drawers were sold at a second-hand furniture store in an undisclosed neighborhood in Canberra. They were both locked and no set of keys was provided with them.

They were eventually bought and left unopened until the purchaser used a drill to break off the locks. The ABC did not identify who bought the drawers and how the documents found their way to the news organization.

In an interview on ABC television Wednesday night, Australia's opposition Labor Party leader Bill Shorten said the situation was "absurd."

"I mean all these spies who are meant to be spying on us they should just be going shopping in second-hand furniture stores in Canberra," he said.

<b>HEADLINE</b>	<b>02/01 Mystery: 1lb. meth delivered to doorstep</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/package-containing-pound-of-meth-shows-up-on-skyway-couples-doorstep">http://komonews.com/news/local/package-containing-pound-of-meth-shows-up-on-skyway-couples-doorstep</a>
<b>GIST</b>	<p>SKYWAY, Wash. -- A Skyway couple that found a package filled with methamphetamine on their doorstep is trying to figure out who sent it to their home.</p> <p>"I was home, and I heard a knock on the door," the woman who lives at the home told KOMO News.</p> <p>The contents of the package she and her husband found on their doorstep has left them worried about revealing their identities.</p> <p>The box, which was addressed to their Skyway home, arrived last Thursday.</p> <p>Digging through layers of tissue inside revealed a can containing a package that was sealed in bubble wrap.</p>

"As soon as I started pulling out the bubble wrap, it occurred to me that this is ... this has to be some sort of drugs," the woman said. "I put it back in the box, and I told my husband, 'This is up to you now.'"

She immediately stopped and waited for her husband to come home to inspect it further, she said.

The couple called sheriff's deputies, who confirmed through tests that the package indeed contained about a pound of meth.

The address listed on the box was the couple's address. But no one recognized the name it was shipped to, including the couple's current paying house guests.

"To know that somebody is probably casing out your house waiting for this package, and then now the package has gone missing ... it was a no-brainer to go to the cops," the man said.

The King County Sheriff's Office has now launched an investigation to figure out who sent the package, a spokeswoman told KOMO News.

A return address lists Palmdale, California, so deputies plan to work with police there to see if they can track down the sender, she added.

"We don't have a rash of these," said King County Sheriff's Sgt. Cindi West. "In fact, we couldn't think of any other instances anytime recently in the last few years where we've had anything even close to this."

<b>HEADLINE</b>	<b>02/01 Jail inmate death under investigation</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/crime/death-of-snohomish-county-jail-inmate-under-investigation-2/">https://www.seattletimes.com/seattle-news/crime/death-of-snohomish-county-jail-inmate-under-investigation-2/</a>
<b>GIST</b>	<p>Snohomish County sheriff's deputies are investigating the death of a 62-year-old inmate at Snohomish County Jail in Everett.</p> <p>A corrections deputy discovered the woman needing medical help in her cell around 2:30 p.m. Thursday, the sheriff's office said in a news release.</p> <p>The deputy called medics and began CPR, the release says, but life-saving attempts by jail staff and first responders were unsuccessful. Authorities pronounced the woman dead at the scene.</p> <p>The release does not describe the nature of the woman's symptoms.</p> <p>Everett police booked the woman, whom the Snohomish County Medical Examiner's Office will formally identify, into the jail on Jan. 19 on suspicion of second-degree domestic violence and criminal trespassing. The sheriff's office described her as transient.</p> <p>Medical staff initially "declined to accept the inmate for pre-existing medical conditions" and sent her to Providence Regional Medical Center, the release says. There, staff cleared her for jail booking.</p> <p>Detectives from the sheriff's office's Major Crime Unit are investigating her death, per standard protocol, the release says. Separately, health professionals will review the woman's death "from a clinical standpoint."</p> <p>The medical examiner's office will determine her manner and cause of death.</p>

HEADLINE	<b>02/01 Small town awash w/prescription pills</b>
SOURCE	<a href="https://www.nbcnews.com/news/us-news/welcome-williamson-w-va-where-there-are-6-500-opioid-n843821">https://www.nbcnews.com/news/us-news/welcome-williamson-w-va-where-there-are-6-500-opioid-n843821</a>
GIST	<p>WILLIAMSON, West Virginia — The deadly math in this struggling but proud West Virginia town breaks down like this: For over a decade, two pharmacies just four blocks apart dispensed some 20.8 million prescription painkillers in a town of just 3,191 residents.</p> <p>That’s more than 6,500 prescription painkillers per person in this coal-mining town that sits just across the Tug Fork River from Kentucky.</p> <p>Those jarring figures were released this week by the congressional committee investigating the epidemic that has ravaged the Rust Belt — and the two regional drug wholesalers, Miami-Luken and H.D. Smith, that are accused of swamping Williamson with millions of highly addictive opioid pills.</p> <p>The doctors and drug wholesalers are “making a fortune off of our downfall, you know,” recovering addict Wes Thomasson told NBC News on Thursday at a Williamson treatment center.</p> <p>“If you’re trying to figure out how to get rid of the epidemic, trying to figure out how to resolve the problem, start with the prescription,” he said.</p> <p>That’s exactly what the House Energy and Commerce Committee is doing.</p> <p>“These numbers are outrageous, and we will get to the bottom of how this destruction was able to be unleashed across West Virginia,” the committee chairman, Rep. Greg Walden, R-Ore., and ranking member, Rep. Frank Pallone, D-N.J., vowed in a joint statement.</p> <p>Last year there were 13 fatal drug overdoses in Mingo County, of which Williamson is the county seat, and 711 deaths from drugs in the 54 other counties that make up the state, according to the West Virginia Health Statistics Center.</p> <p>Other recovering addicts, like Deiana Warrix and Mindy Leffe, said that Williamson feels awash with opioids.</p> <p>“If you want it you can get it,” Warrix said. “You go to the pharmacy and you get five prescriptions of it.”</p> <p>She added, “It’s just not right, really.”</p> <p>Attorney Mike Troy, who represents Williamson and Mingo County in its legal battle with drug wholesalers, said even he was taken aback by the sheer number of painkillers in the town.</p> <p>“You can’t live and breathe and not be shocked by the numbers,” Troy said. “But you also can’t live in these communities and really be all that amazed when you see how it touches every family, you know? I mean, there’s none of us that don’t have a family member who’s addicted, in treatment, and homeless. It’s just all-consuming in these communities.”</p> <p>In 2016, West Virginia had the nation’s highest fatal drug overdose rate with 52 per 100,000 people, far out pacing Ohio, which had 39.1 fatalities per 100,000 people, according to the federal Centers for Disease Control and Prevention.</p> <p>West Virginia was also one of the states with the highest rates of opioid prescriptions, according to the CDC.</p>

HEADLINE	<b>02/02 New Zealand: January hottest ever</b>
----------	--

<b>SOURCE</b>	<a href="http://abcnews.go.com/Technology/wireStory/january-hottest-month-recorded-zealand-52783475?">http://abcnews.go.com/Technology/wireStory/january-hottest-month-recorded-zealand-52783475?</a>
<b>GIST</b>	<p>January was the hottest month ever recorded in New Zealand according to figures released Friday, and experts say climate change is one factor.</p> <p>The heat has led to a shortage of fans that Prime Minister Jacinda Ardern jokingly referred to as "fan-ageddon." Ardern said that while many people are probably enjoying a great summer, they also need to consider the long-term consequences of climate change, including sea-level rise.</p> <p>Figures released by the National Institute of Water and Atmospheric Research indicate the average temperature during January was 20.3 degrees Celsius (68.5 Fahrenheit). That was more than 3 degrees Celsius above normal and beat the previous record of 19.6 Celsius set in February 1998.</p> <p>Record-keeping began in 1909.</p> <p>Gregor Macara, a climate scientist with the weather agency, said that warmer seas, generally settled weather and more winds from the tropical north had led to the higher temperatures. He said climate change was an underlying and contributing factor.</p>

<b>HEADLINE</b>	<b>02/01 Cuba: Fidel Castro son kills self</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/cuba-state-media-fidel-castros-son-killed-52780887?cid=clicksource_76_2_hero_headlines_bsq_hed">http://abcnews.go.com/International/wireStory/cuba-state-media-fidel-castros-son-killed-52780887?cid=clicksource_76_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>The oldest son of late Cuban leader Fidel Castro killed himself on Thursday after months of treatment for depression, state media reported. He was 68.</p> <p>Official website Cubadebate said Fidel Castro Diaz-Balart had been in a "deeply depressed state." A brief note read on state television said his treatment had "required an initial hospitalization then outpatient follow-up."</p> <p>The oldest son of Cuba's late revolutionary leader was known for his resemblance to his father, earning him the nickname Fidelito or Little Fidel.</p> <p>Castro Diaz-Balart studied nuclear physics in the former Soviet Union and served as scientific adviser to Cuba's Council of State. He was vice president of the Cuban Academy of Sciences. He previously led its nuclear program.</p> <p>Castro Diaz-Balart was born to Fidel Castro's first wife, Mirta Diaz-Balart, a woman from Cuba's aristocracy who Fidel married in his youth before beginning the revolutionary struggle that later brought him and his brother Raul to power.</p> <p>Because of his maternal lineage, Castro Diaz-Balart is cousin to Republican Congressman Mario Diaz-Balart, who represents Cuban exiles in Florida.</p>

<b>HEADLINE</b>	<b>02/01 Baby milk contamination 'began in 2005'</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/news/world-europe-42908706">http://www.bbc.com/news/world-europe-42908706</a>
<b>GIST</b>	<p>The French dairy group at the centre of a baby milk scandal, Lactalis, has admitted some of its products may have been tainted over more than a decade.</p> <p>Millions of boxes of powdered milk have been recalled worldwide following a salmonella outbreak last year.</p>

	<p>Researchers say that the exact same strain of salmonella was responsible for another outbreak in 2005.</p> <p>The company said it was possible other babies could have been affected by Lactalis products since then.</p> <p>In a newspaper interview published on Thursday, Lactalis CEO Emmanuel Besnier said tests had shown that a factory at the centre of the latest scare, in Craon in north-western France, was also responsible for the 2005 outbreak.</p> <p>The factory - owned by Lactalis since 2006 - was closed in December after it emerged that contamination had started in one of its drying towers.</p> <p>In the 2005 outbreak, 146 children fell ill. In last year's outbreak, at least 38 cases in France and Spain were traced to Lactalis milk.</p> <p>On Thursday, researchers from the Pasteur Institute in Paris said the salmonella bacteria had remained at the Craon factory until it was closed.</p> <p>As a result, they said, a total of 25 babies had been affected between 2005 and 2016.</p> <p>Mr Besnier appeared to point to a similar conclusion in his interview with Les Échos newspaper.</p> <p>"The possibility that babies consumed tainted milk over this period cannot be ruled out," he said.</p>

<b>HEADLINE</b>	<b>02/01 United tightens support animal rules</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/united-airlines-changes-policy-on-comfort-animals-after-peacock-incident/">https://www.cbsnews.com/news/united-airlines-changes-policy-on-comfort-animals-after-peacock-incident/</a>
<b>GIST</b>	<p>DALLAS -- United Airlines wants to see more paperwork before passengers fly with emotional-support animals -- and don't even try to bring a peacock on board. The airline announced Thursday it will tighten rules starting March 1. The changes are similar to those coming at Delta Air Lines.</p> <p>United said owners will have to confirm that their animal is trained to behave in public, and they will need a vaccination form signed by a veterinarian. The vet will have to vouch that the animal isn't a health or safety threat to other people.</p>

	<p>"United has seen a 75 percent year-over-year increase in customers bringing emotional support animals onboard and has experienced a significant increase in onboard incidents involving these animals," the airline said in a statement. "We understand that other carriers have seen similar trends. The Department of Transportation's rules regarding emotional support animals are not working as they were intended, and we need to change our approach in order to ensure a safe and pleasant travel experience for all of our customers."</p> <p>The airline bounced a passenger on Sunday who showed up at the airport with a peacock for emotional support. New York City-based photographer and performance artist Ventiko said she bought a ticket for her peacock, Dexter, so he would have his own seat on Sunday's flight from New Jersey's Newark Liberty International Airport to Los Angeles.</p> <p>United already bans exotic animals and non-household birds. Still, the fact that a passenger tried to bring a peacock on board "helped illustrate why we needed to revise our policy," United spokesman Charles Hobart said.</p>

<b>HEADLINE</b>	<b>02/01 Sex ring moved hundreds of women</b>
<b>SOURCE</b>	<a href="https://www.seattlepi.com/seattlenews/article/Sex-ring-moved-hundreds-of-women-through-12545043.php">https://www.seattlepi.com/seattlenews/article/Sex-ring-moved-hundreds-of-women-through-12545043.php</a>
<b>GIST</b>	<p>Zhaofeng “Brandon” Zhang was the kind of new arrival to Seattle who seemed to have everything going for him.</p> <p>At 18, Zhang landed in the United States from China and enrolled in the University of Washington to study computer science. He obtained permanent legal residency and was on track toward a life in the United States.</p> <p>By 20, Zhang’s American dream had vanished. The young man had been busted for assisting a now-notorious Seattle madam, Fang “Cindy” Wang, in operating a prostitution ring thought to have involved hundreds of women.</p> <p>Wang, 29, and five others – including Zhang, now 23 – were charged in May after a years-long investigation into the ring, which operated residential brothels out of apartments around Seattle and the rest of Washington. Wang, a Queens, New York, resident with Seattle ties, was described as the ringleader and has been sentenced to 2½ years in prison.</p> <p>Appearing Thursday in U.S. District Court at Seattle, Zhang described the sex trafficking ring as one of many operating in the region. While Wang’s ring largely involved Chinese women, Zhang told U.S. District Judge Thomas Zilly similar brothel circuits were staffed by women from South Korea and India, as well as the United States.</p> <p>Zilly sentenced Zhang to 21 months in federal prison, the second-heaviest term handed down as part of the investigation. For his part, Zhang apologized for posting advertisements and shuttling women between the brothels.</p> <p>Zhang will likely be deported to China, which may prove particularly problematic for him. Zhang joined the U.S. Army while under investigation, and his attorney expressed concerns regarding China’s enthusiasm for that decision.</p> <p>As prosecutors tell it, Zhang was a mid-level player in the prostitution ring. Wang stood at the center.</p>

The ring's business was staffing and maintaining residential brothels, a method of prostitution that has received increased scrutiny in recent years.

Operators recruit women – often internationally, and sometimes disingenuously – to live in apartments rented to provide a space for liaisons. In recent years, such brothels have been discovered inside high-end apartment complexes in Eastside suburbs. A 2013 federal prosecution targeted a group running bogus massage parlors out of luxury apartments in Bellevue and Kirkland.

The brothels were also central to “The Review Board,” a prostitute-ratings site shuttered in January 2016 after a large sting operation. The board had been well-known to police for more than a decade prior to that bust, which law enforcement leaders argued was necessary in part to stop the exploitation of foreign-born women.

Wang's ring followed a well-established pattern. Women were recruited abroad or inside the United States, often through the WeChat messaging app. Couriers like Zhang would retrieve them at Sea-Tac International Airport and deliver them to the brothels. Some women also performed “outcall” services for sex buyers at hotels.

Investigators contend Wang's ring formed in October 2013 and ran until an FBI-led organized crime unit intervened in May. Most of the advertising was done on Backpage.com, though Zhang said interest in the notorious site waned in the ring's final years.

Women involved in the ring testified that Wang recruited them to Seattle to perform “massage work.” While some knew Wang meant prostitution, others apparently believed they would be performing legitimate massage.

The women paid Wang and her confederates portions of their earnings. Assistant U.S. Attorney Catherine Crisham noted that the women had few if any connections in Seattle. Many also lacked legal status in the United States and were entirely reliant on Wang's crew for their daily needs.

“Many of the women stated that they felt isolated and vulnerable, living in unfamiliar apartment complexes where they did not know anyone, did not speak the language, and were reliant upon Wang and her co-conspirators for food and transportation,” Crisham said.

“Although some of the women told law enforcement that they knew when they agreed to work for Wang that they would be engaging in prostitution, many others stated that the experience had been emotionally traumatic for them, and that they had only worked as prostitutes because they felt that they had no other options for making money,” the prosecutor continued.

Wang herself previously worked as a prostitute, an experience that included “horrific sexual and physical abuse,” according to defense attorney Stephan Illa. Though her attorney, Wang denied leading the ring.

The ring operated in apartments or hotels located in Bellevue, Kent, Kirkland, Lynnwood, Olympia, Lacey, Puyallup, Renton, Tukwila, Seattle and Federal Way. Other locations where the ring operated include Eastern Washington cities such as Richland, Kennewick, Wenatchee and Spokane.

Yongguang Wu, 28, of Seattle and Steven Thompson, 59, of Renton, were each sentenced to eight months in prison for their roles in the ring. Yunzhong Chen, 45, and Yaoan He, 33, of Seattle, were each sentenced to one year in prison. All of the defendants pleaded guilty to prostitution-related offenses.

<b>HEADLINE</b>	<b>02/02 Judge tosses Fla. ex-felons voting ban</b>
<b>SOURCE</b>	<a href="https://apnews.com/34875385904644f5b77773277d9a0ed8/Federal-judge-knocks-down-Florida's-voting-ban-for-ex-felons">https://apnews.com/34875385904644f5b77773277d9a0ed8/Federal-judge-knocks-down-Florida's-voting-ban-for-ex-felons</a>
<b>GIST</b>	<p>TALLAHASSEE, Fla. (AP) — In a ruling that could have reverberations on this year’s crucial elections, a federal judge Thursday ruled that Florida’s current ban on former felons voting is unconstitutional and needs to be changed as soon as possible.</p> <p>U.S. District Judge Mark Walker issued a blistering ruling that says the state’s current process to restore voting rights — which can take years — is flawed. The lawsuit was filed last year against Gov. Rick Scott by a voting rights organization on behalf of several people who had completed their prison sentences but had their request for voting rights turned down.</p> <p>Walker, who was appointed by President Barack Obama, said he will decide soon what Florida should do to fix the process. His 43-page ruling blasted Scott and state officials for the current system in place.</p> <p>“A person convicted of a crime may have long ago exited the prison cell and completed probation,” Walker wrote. “Her voting rights, however, remain locked in a dark crypt. Only the state has the key — but the state has swallowed it.”</p> <p>John Tupps, a spokesman for Scott, defended the process and suggested that an appeal was likely.</p> <p>“The governor believes that convicted felons should show that they can lead a life free of crime and be accountable to their victims and our communities,” said Tupps. “While we are reviewing today’s ruling, we will continue to defend this process in the court.”</p> <p>The ruling comes just months before Florida voters will be asked to alter the current ban. Backers of a constitutional amendment last week won a place on the November 2018 ballot. If sixty percent of voters approve, most former prisoners would have their rights automatically restored.</p>

<b>HEADLINE</b>	<b>02/01 Police: L.A. school shooting was accident</b>
<b>SOURCE</b>	<a href="http://time.com/5129917/los-angeles-school-shooting-accident/?xid=homepage">http://time.com/5129917/los-angeles-school-shooting-accident/?xid=homepage</a>
<b>GIST</b>	<p>(LOS ANGELES) — A shooting at a Los Angeles middle school classroom Thursday that left one boy in critical condition, injured four others and had panicked parents in tears was an accident, police said.</p> <p>The shooting was reported just before 9 a.m. and within minutes a 12-year-old girl was taken into custody</p>

without incident. Police interviewed her and by evening they announced that they would book her on a charge of negligent discharge of a firearm on school grounds.

The determination capped a frantic day at Salvador B. Castro Middle School in downtown Los Angeles and corroborated what some students told reporters after the lockdown was lifted and they were reunited with parents on the school's athletic field.

In a telephone interview with his mother alongside, Jordan Valenzuela, 12, told The Associated Press he was in the classroom next door when he heard a loud bang. He said he talked to the girl just after the shooting and she was sobbing.

"She was like, 'I didn't mean to. I had the gun in my backpack and I didn't know it was loaded and my backpack fell and the gun went off,'" he said.

**HEADLINE** **02/01 Seattle: man stabbed on metro bus**

**SOURCE** <http://mynorthwest.com/887886/man-stabbed-on-metro-bus-in-seattle/>

**GIST** SEATTLE (AP) — Authorities say a 53-year-old man was stabbed in the abdomen while riding a King County Metro bus in Seattle.

The Seattle Times reports the incident happened Thursday afternoon south of downtown.

The King County Sheriff's Office says the circumstances that led to the stabbing remain unknown, according to Sheriff's Sgt. Cindi West.

The sheriff's office says deputies are searching for the assailant.

The sheriff's office said Thursday night that the 53-year-old man was conscious and alert at Harborview Medical Center.

No further information was immediately available.

**HEADLINE** **02/01 NAACP official charged w/attempted theft**

**SOURCE** <http://mynorthwest.com/888028/seattle-naACP-official-accused-of-cheating-voucher-program/>

**GIST** SEATTLE (AP) — A former City Council candidate has been charged with a misdemeanor for allegations that she tried to cheat Seattle's "democracy vouchers" program.

The Seattle Times reports that false-reporting and attempted-theft charges were filed Wednesday against Sheley Secret, an attorney and vice president of the local NAACP chapter.

Secret's lawyer Jennifer Miller says she and her client look forward to their defense.

Seattle voters receive \$100 in vouchers, which they can donate to candidates. To qualify for the money, candidates are required to collect contributions and signatures from at least 400 voters.

Seattle police Detective Lawrence Meyer had begun investigating Secret last year. Meyer says that in an attempt to qualify for the vouchers, Secret appeared to have put her own money into her campaign while claiming voters donated the funds.

<b>HEADLINE</b>	<b>02/01 Smash-grab robbery suspects charged</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/02/01/police-find-suspects-to-do-list-in-serial-rolex-smash-and-grab-robberies-hit-a-ben-bridge/">http://q13fox.com/2018/02/01/police-find-suspects-to-do-list-in-serial-rolex-smash-and-grab-robberies-hit-a-ben-bridge/</a>
<b>GIST</b>	<p>SEATTLE — King County prosecutors have charged three of the four suspects accused of stealing \$236,000 worth of Rolex watches during a smash and grab robbery at the downtown Seattle Ben Bridge jewelry store on Dec. 22, 2017.</p> <p>The suspects used a large sledge hammer to smash the glass, causing half a million dollars in damage to 50 other watches in the case.</p> <p>Christopher Patterson, Aufu Snow and Nathaniel McRae are all in the King County jail charged with first degree robbery.</p> <p>Patterson is also a suspect in similar smash-and-grab robberies at Ben Bridge stores in Lynnwood and Seattle, as well as two other robberies. Police say anonymous tips from Washington’s Most Wanted viewers to Crime Stoppers of Puget Sound helped identify the suspects.</p> <p>When detectives in the Seattle Police Robbery Unit arrested Patterson on Jan. 25 at his home on 60th Avenue West in Mountlake Terrace, they say the found a to do list written on a yellow piece of paper that said, “Hit a Ben Bridge.”</p> <p>Court documents show that after the Alderwood Mall robbery, Patterson posted a photo on social media under the name ‘Du King’ of him wearing the Rolex bragging about doing a ‘lick’ which is a colloquial term for robbery.</p> <p>Investigators also recovered an Adidas sweat suit matching the one worn by one of two suspects in a robbery at the Go Mobile store on S. Graham St. in South Seattle on Nov. 20, 2017.</p> <p>When questioned, Patterson denied any wrongdoing and said it was a ‘case of mistaken identity’. Patterson posted a picture of himself on social media wearing a Rolex watch that matched one stolen from a similar robbery at the Alderwood Ben Bridge store.</p> <p>His criminal history includes convictions for Unlawful Possession of a Firearm, 3 counts of Residential Burglary, Theft of a Firearm, Vehicle Prowling,</p> <p>Reckless Driving and Burglary 2nd Degree. Patterson is being held on \$200,000 bail and is scheduled to be formally arraigned on Feb. 12.</p> <p>Detectives say Snow is also a suspect in a theft of \$1,600 worth of jackets from the REI store in Issaquah on Jan. 2, 2018. Surveillance video shows him wearing a braided wig which gang detectives say he has been known to do in the past. He has not been charged yet in the case. Snow is being held on \$250,000 bail.</p> <p>McRae is accused of opening the door closest to the Rolex cases to let the suspects enter quickly. He told detectives he was paid \$100 and that he was asked to exit the store like he had just purchased some jewelry because they were making a move. Police say surveillance video from nearby stores showed McRae, Snow and Patterson meeting before the Ben Bridge Robbery. He is being held on \$250,000 bail.</p>

<b>HEADLINE</b>	<b>02/01 US school shootings w/female shooters</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/02/01/school-shootings-with-female-shooters.html">http://www.foxnews.com/us/2018/02/01/school-shootings-with-female-shooters.html</a>
<b>GIST</b>	<p>A 12-year-old girl was accused in a shooting at a middle school in Los Angeles on Thursday.</p> <p>One classmate was left critically wounded and three others were hurt, according to authorities.</p>

While female shooters are rare, there have been a series of violent incidents in the past involving children, teens and adult women. Read on for a look at other some school shootings involving female shooters.

### **2016**

Dorothy Dutiel, 15, shot and killed her 15-year-old girlfriend May Kieu at Independence High School in Glendale, Ariz., before shooting herself, KPNX reported.

“She hasn’t loved me like that for a long time,” the station quoted Dutiel as saying in a note. “That she’s been iffy about us for years. This week has been the worst in my life.”

### **2015**

Sunghee Kwon, 46, repeatedly shot her 45-year-old professor ex-husband Raja Farhad at the University of South Carolina before shooting herself in the abdomen, Reuters reported.

“They had continued in a relationship after their divorce, including sharing a home, until just recently,” Richland County Coroner Gary Watts said in a statement at the time.

### **2010**

Professor Amy Bishop killed three people and hurt another three in a shooting at the University of Alabama in Huntsville, the FBI said in a report on mass shootings. She was in a biology department meeting for a half-hour before she “stood up and began firing,” it said.

Bishop was sentenced in 2012 to life without parole after she pleaded guilty to capital murder and attempted murder charges.

Bishop has filed numerous appeals in the case, WAFF reported in 2015.

### **2008**

Teah Wimberly was 15 years old when police said she shot 15-year-old Amanda Collette in the back at Dillard High School in Fort Lauderdale, Florida, in November 2008. Wimberly later was convicted of second-degree murder and received a 25-year prison sentence, WTVJ Miami reported.

“I will never forgive myself for what I have done, and I don't expect you to forgive me,” she reportedly told Collette’s family in court. “You have no idea how sorry I truly am.”

### **2008**

Latina Williams, 23, killed two students in a Louisiana Technical College classroom before killing herself, according to the FBI report.

“She fired six rounds, then reloaded and committed suicide before police arrived,” the report said. Killed were Karsheika Graves, 21, and Taneshia Butler, 26.

After the shooting, Baton Rouge police reportedly said Williams had been exhibiting signs “of paranoia and losing touch with reality.”

### **2001**

Elizabeth Bush, 14, was accused of shooting 13-year-old Kimberly Marchese in the shoulder at a parochial school in Williamsport, Pa. Bush told a judge in 2001 that she initially planned “to shoot myself and show everybody how much (teasing) hurts so they could see,” The Associated Press reported at the time.

“It just happened, sir. I don't know,” Bush later said when the judge inquired about her changed decision. “I just wanted to scare her.”

The judge said he thought Bush “intentionally sought to cause her death” and sentenced Bush to a juvenile psychiatric facility, the AP reported.

**1996**

Jillian Robbins, 19, was accused of opening fire at Penn State University with a rifle, killing 21-year-old student Melanie Spalla, The Collegian reported.

Robbins, who was mentally ill, pleaded guilty to third-degree murder and attempting to kill another four people, the AP reported in 1998. She was sentenced to 30 to 60 years behind bars.

**1988**

Laurie Dann, 30, killed 8-year-old Nicky Corwin and hurt five other children in a shooting at Hubbard Woods School in Winnetka, Illinois, as part of a crime spree, WMAQ Chicago reported.

Dann took off and held a family hostage in a home, the report added. She shot one of the family members, a 20-year-old college student who survived, and ultimately killed herself.

**1979**

California teenager Brenda Spencer carried out an attack on Cleveland Elementary School in San Diego.

The 16-year-old “opened fire at an elementary school, killing the principal and a custodian and wounding eight children and a police officer,” according to an NYPD report on active shooters. “Spencer fired the shots from her house across the street from the school.”

Spencer purportedly said it was because she didn't like Mondays.

She later pleaded guilty to two counts of murder and assault with a deadly weapon and remains behind bars, History.com reported.

<b>HEADLINE</b>	<b>02/02 Fake Super Bowl merchandise seized</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/sports/2018/02/02/15m-in-counterfeit-super-bowl-merchandise-seized-authorities-say.html">http://www.foxnews.com/sports/2018/02/02/15m-in-counterfeit-super-bowl-merchandise-seized-authorities-say.html</a>
<b>GIST</b>	<p>More than \$15 million in bogus Super Bowl merchandise and other items has been seized through Operation Team Player, which has also resulted in 65 arrests and 24 convictions, authorities said Tuesday.</p> <p>In all, nearly 172,000 items were confiscated, representatives of federal law enforcement agencies and the Minneapolis Police Department said at a news conference Tuesday.</p> <p>“Intellectual property theft is a serious crime, and black-market organizations descend on the Super Bowl and other major sporting events to sell counterfeit goods and substandard merchandise to unsuspecting consumers,” Thomas D. Homan, acting director of U.S. Immigration and Customs Enforcement (ICE) said.</p> <p>“ICE agents are committed to investigating the trafficking of counterfeit goods that wreak havoc on local economies, threaten the health and safety of the American public and fund criminal organizations engaged in other illegal activities,” Homan added.</p> <p>The year-round Operation Team Player was a joint operation involving the NFL, ICE, the FBI, Customs and Border Protection and the Minneapolis Police Department (MPD).</p> <p>The operation led to the seizure of fake jerseys, hats, cell-phone paraphernalia as well as thousands of other items that were intended to be sold to customers.</p> <p>“We’ve been at major mailing facilities, we’ve been intersecting packages, we’ve been seizing counterfeit goods,” Matthew Bourke, spokesman for the National Intellectual Property Rights Center, told Fox 9 in</p>

	<p>Minneapolis-St. Paul. “We have targeting capabilities; we know where it’s coming from. We know who’s getting it.”</p> <p>Operation Team Player was set up after last year’s Super Bowl. Since then, there has been a 16 percent increase in arrests. Major sporting leagues have teamed up with the HSI-led Intellectual Property Rights Coordination Center (IPR) to combat criminal counterfeiting and piracy.</p> <p>"(I)llicit trade carries consequences that linger far after the fourth quarter," said David Hirschmann, president and CEO of the U.S. Chamber’s Global Innovation Policy Center. "Counterfeiters sell substandard products, jeopardize consumers’ personal and financial information, and undermine American jobs and innovation.</p>

<b>HEADLINE</b>	<b>02/02 France: police reinforcements to Calais</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/france-sends-police-calais-migrant-gunfight-52787850">http://abcnews.go.com/International/wireStory/france-sends-police-calais-migrant-gunfight-52787850</a>
<b>GIST</b>	<p>Police reinforcements are arriving in the French port city of Calais after clashes among migrants left 22 people injured, as the interior minister warned of a worrying spike in violence.</p> <p>Interior Minister Gerard Collomb told reporters in Calais on Friday that five of the victims were injured by gunfire in Thursday’s fighting, blaming "totally organized" gangs. Police are seeking a shooting suspect but have made no arrests.</p> <p>Collomb said two extra police units were en route and warned of growing tensions in Calais, where migrants converge in hopes of crossing to Britain.</p> <p>Authorities said that Afghan and Eritrean migrants had been fighting with sticks and stones after a meal distribution before the shots were fired. Firearms are rare among migrants.</p> <p>The government closed a vast Calais migrant camp in 2016.</p>

<b>HEADLINE</b>	<b>02/01 ‘Slender man’ teen 40yrs institution care</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/2nd-teen-slender-man-stabbing-case-remain-institutional/story?">http://abcnews.go.com/US/2nd-teen-slender-man-stabbing-case-remain-institutional/story?</a>
<b>GIST</b>	<p>A Wisconsin judge has sentenced the second of two teenage girls accused of the 2014 attempted homicide of their friend by stabbing her in the woods to please the fictional character Slender Man.</p> <p>Morgan Geysler, 15, was sentenced to 40 years under a mental health institution’s supervision. While she may periodically petition for release from the hospital in the future, she will be under institutional supervision for that time.</p> <p>“I just want to let Bella and her family know that I’m sorry,” Geysler told the court after arguments, breaking into tears. “I never meant this to happen. I hope that she’s doing well.”</p> <p>Bella is the nickname Geysler had given the victim, Payton Leutner, when they were younger.</p> <p>Geysler and Anissa Weier were arrested May 31, 2014, after attacking Leutner with a knife and leaving her behind in the Waukesha woods. All three girls were 12 years old at the time.</p> <p>Leutner was stabbed 19 times, but able to crawl to a nearby road where a passing bicyclist stopped to help her. Now 15, she survived her life-threatening injuries.</p>

	Prosecutors have said that both Geyser and Weier were obsessed with Slender Man, a character often depicted in fan fiction online as a horror figure who stalks children.

<b>HEADLINE</b>	<b>02/02 Robert Wagner 'person of interest'</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/wireStory/witnesses-emerge-actress-natalie-woods-1981-drowning-52786087">http://abcnews.go.com/US/wireStory/witnesses-emerge-actress-natalie-woods-1981-drowning-52786087</a>
<b>GIST</b>	<p>New witnesses have emerged in the 1981 drowning of actress Natalie Wood, prompting investigators to deem it a "suspicious death" and name her former husband, 87-year-old actor Robert Wagner, a "person of interest," Los Angeles sheriff's officials said.</p> <p>For nearly four decades, mystery and speculation have swirled around the death of the actress who was nominated for three Academy Awards and starred in "West Side Story" and "Rebel Without a Cause."</p> <p>She was on a yacht with Wagner, actor Christopher Walken and the boat captain on Thanksgiving weekend of 1981. After a night of drinking, her body was found floating in the waters off Southern California's Catalina Island. She was 43.</p> <p>Investigators initially ruled it an accident but reopened the case in 2011 to see whether Wagner or anyone else played a role after the boat's captain said he heard the couple arguing the night of her disappearance. The coroner's office amended Wood's death certificate the next year to include "drowning and other undetermined factors."</p> <p>In a statement Thursday, sheriff's spokeswoman Nicole Nishida said new witnesses interviewed since the case was reopened gave statements that "portray a new sequence of events on the boat that night."</p> <p>One of the witnesses described hearing yelling and crashing sounds coming from the couple's stateroom, she said. Shortly after that, separate witnesses heard a man and woman arguing on the back of the boat and believe the voices were those of Wood and Wagner, Nishida said.</p> <p>The statements differed from the original version of events provided by witnesses, including those who were on the boat, she said.</p> <p>The sheriff's department said Wagner is considered a person of interest.</p> <p>"Do we have enough to make an arrest at this moment? No," Nishida said.</p>

<b>HEADLINE</b>	<b>02/01 Migrant melee in Calais; 4 shot</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/migrants-calais-shot-french-police-break-melee-52772116">http://abcnews.go.com/International/wireStory/migrants-calais-shot-french-police-break-melee-52772116</a>
<b>GIST</b>	<p>Four migrants were shot and wounded Thursday during a confrontation in France's port city of Calais, with an Afghan migrant apparently firing the shots, the French Interior Ministry said.</p> <p>Afghan and Eritrean migrants in the city, a gateway to Britain, had been fighting with sticks and stones before the shots were fired, regional authorities said.</p> <p>Police had moved in to try to protect migrants who were being attacked, the ministry said in a statement. The four who were shot were listed in serious condition, while 14 others were slightly injured. The nationalities of the people hurt were not immediately clear.</p> <p>The prefecture of the Pas-de-Calais had said earlier that two confrontations between Afghan and Eritrean</p>

	<p>migrants culminated in the gunfire. It is unusual for migrants to carry firearms.</p> <p>The shootings are the most serious clash in recent times between migrants around Calais. French Interior Minister Gerard Collomb headed to the city for late-night meetings with officials.</p> <p>Tensions have been high in Calais, where hundreds of migrants hoping to sneak across the English Channel huddle against the cold and police have orders to try to keep them from setting up camp. However, some officers have been criticized for overzealous policing.</p> <p>The Pas-de-Calais prefecture said security forces were trying to protect Afghan migrants during a melee with Eritreans when the injuries happened.</p> <p>The prefecture said the gunfire was the culmination of a showdown between Afghan and Eritrean migrants, fighting each other with sticks and stones, after a meal distribution near the Calais hospital, outside the town center.</p> <p>In a second confrontation, up to 200 Eritrean migrants cornered 30 Afghans near the former site of a makeshift migrant camp that housed thousands of people before it was evacuated and destroyed in October 2016.</p> <p>After police moved in "to protect the Afghan migrants," the four were shot, the prefecture said.</p>

<b>HEADLINE</b>	<b>02/01 Jan. smuggling busts find 200 illegals</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/02/01/nearly-200-illegal-immigrants-found-in-just-three-january-smuggling-busts.html">http://www.foxnews.com/us/2018/02/01/nearly-200-illegal-immigrants-found-in-just-three-january-smuggling-busts.html</a>
<b>GIST</b>	<p>Nearly 200 people from Mexico and Central America were stuffed inside large trucks and caught trying to enter the United States illegally during three huge January smuggling busts that occurred in just nine days.</p> <p>Officials in southern California said 77 people, including 5 children, were found near the Mexico border Monday packed inside a sweltering truck that had been painted to resemble a UPS truck.</p> <p>The San Diego Union-Tribune reported a U.S. border patrol agent in Boulevard, Calif., noticed the truck was riding low and “could smell body odor mixed with a distinct type of pungent soap which is commonly used in Mexico.”</p> <p>Inside the truck's cargo area, officials found people sweating and standing shoulder-to-shoulder.</p> <p>Border Patrol found a tunnel on the U.S. - Mexico border after a cave in at construction site</p> <p>A similar scene greeted authorities last week in Laredo, Texas, where border patrol agents found 76 immigrants, including 13 children, from Mexico, Honduras, El Salvador and Guatemala lying on the floor or crouching against the walls of a tractor-trailer rig.</p> <p>A week earlier, also in Laredo, border agents stopped a tractor-trailer with 29 illegal immigrants from Mexico and Guatemala crossing into the U.S.</p> <p>Laredo and southern California are home to two of the largest trade and transportation ports along the U.S.-Mexico border, and hundreds, if not thousands, of tractor-trailers move goods between the two countries.</p> <p>Smugglers are taking advantage and carrying human cargo that can be easily transported across country lines without easy detection.</p> <p>Jessica Vaughn, director of policy studies for the Center for Immigration Studies, told Fox News on</p>

Thursday that these locations are funnels for an “enormous” volume of international trade, making them easy targets for smugglers.

“There is no way that all of them are screened [as closely as they should be],” she said, adding the financial incentive from smugglers and drivers is just too high to discard.

In the case out of Boulevard earlier this week, the driver was identified as Shawn Lee Seiler, a U.S. citizen who told authorities he was “an alien smuggler” who expected to get paid \$100 per immigrant that he got across. According to court documents, Seiler was surprised to learn there were 77 people in the truck as he was only expecting 50.

“[This] is only a fraction of what the smugglers [who are putting them on the trucks] are getting,” Vaughn said. “It’s a couple thousand – I believe the going rate was around \$3,000 a person.”

She continued: “The cartels that control the flow are making a huge amount of money...It’s a multi-million dollar business.”

All of the immigrants swept up during the three January busts were in good condition when they were found -- but this is not always the case.

Last July, 10 people died as they were being smuggled through Texas. Thirty-nine immigrants were found packed into a semitrailer in the parking lot of a San Antonio Walmart. Eight were already dead when officials opened the trailer's door and two more died at hospitals.

The truck's refrigeration system wasn't working and the day's temperature had climbed to 101 degrees.

The truck driver, identified as 60-year-old James Mathew Bradley Jr., of Clearwater, Fla., later pleaded guilty to conspiracy and to transporting immigrants resulting in death.

“These criminal organizations view these individuals as mere commodities without regard for their safety,” Gabriel Acosta, assistant chief patrol agent for the Laredo Border Patrol sector, said about the recent incidents. “The blatant disregard for human life will not be tolerated.”

It’s unclear how many tractor-trailers cross the border filled with human cargo and go undetected. A spokesman for U.S. Customs and Border Protection did not immediately respond to Fox News’ request for comment on Thursday.

<b>HEADLINE</b>	<b>02/01 Puerto Rico: 78 killings in Jan.</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/puerto-rico-reports-78-killings-deadliest-months-52773055?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/puerto-rico-reports-78-killings-deadliest-months-52773055?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>One of Puerto Rico's deadliest months in recent years has closed, with 78 killings reported in January as the U.S. territory struggles with a surge in violent crime and growing discontent among thousands of police officers.</p> <p>The killings included a 20-year-old woman found kneeling and burned to death inside a car in the upscale city of Guaynabo and a triple homicide reported in the eastern mountain town of San Lorenzo.</p> <p>Puerto Rico's homicide rate is roughly 20 killings per 100,000 residents, compared with 3.7 per 100,000 residents on the U.S. mainland.</p> <p>"I'm gravely concerned about these violent incidents reported in recent days," said Sen. Miguel Laureano. "It's a dramatic situation that requires immediate attention."</p>

	<p>The majority of people killed last month were young men shot to death. The central mountain town of Caguas reported the highest number of homicides at 18, followed by the capital of San Juan with 14.</p> <p>Police have issued warrants or arrested suspects in only a handful of the cases. On Thursday, authorities asked the public for help in solving the case of the young woman found burned inside the car. Police said they believe she was on her way to pick up a family member the day she was killed.</p> <p>Hector Pesquera, head of Puerto Rico's newly created Department of Public Safety, has said most of the killings in January were tied to drugs but added that there was "no rhyme or reason" to explain the surge.</p> <p>In mid-January, local and federal officials announced they would implement a "broken windows" policing campaign to help reduce the number of killings. The plan is to crack down on all types of violations, including traffic infractions and illegal tints on car windows, to help get criminals off the street and prevent bigger crimes.</p> <p>The increase in killings came weeks after thousands of police officers began calling in sick daily to protest millions of dollars owed in overtime pay following Hurricanes Irma and Maria. Absences have returned to the normal daily average, Pesquera says, but thousands of police officers are still upset about austerity measures, including a sharp reduction in their monthly pensions and an end to being able to cash in unused sick days.</p>

<b>HEADLINE</b>	<b>02/01 Men indicted gun smuggling for Kurds</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/charged-seattle-smuggle-guns-turkey-52773989?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/charged-seattle-smuggle-guns-turkey-52773989?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Two Seattle-area men face federal charges that they smuggled guns to Turkey — weapons that were ultimately destined for Kurdish fighters in Iraq.</p> <p>A grand jury late Wednesday indicted 51-year-old Paul Brunt, of Bellevue, and 29-year-old Rawnd Khaleel Aldalawi, an Iraq native who lives in Seattle.</p> <p>Prosecutors say Brunt bought the firearms and the men shipped them hidden in the side panels of vehicles.</p> <p>The U.S. attorney's office says the first shipment, in February 2017, involved 30 guns hidden in three cars. The second, last November, included 47 guns hidden in two cars. The latter shipment was discovered by Turkish authorities, prompting the investigation.</p> <p>Aldalawi's lawyer declined to comment. Brunt's did not immediately return an email seeking comment.</p> <p>Investigators say the men acknowledged their actions in interviews and that Aldalawi said he was supporting the Peshmerga military in northern Iraq, because the Iraqi government did not help defend the region from the Islamic State group.</p>

<b>HEADLINE</b>	<b>01/31 NY prison inmates to get tablets</b>
<b>SOURCE</b>	<a href="https://www.wkbw.com/news/state-news/all-inmates-in-nys-prisons-to-get-free-tablets">https://www.wkbw.com/news/state-news/all-inmates-in-nys-prisons-to-get-free-tablets</a>
<b>GIST</b>	<p>BUFFALO, N.Y. (WKBW) - Under a new state contract, all inmates in New York State prisons will receive free tablets.</p> <p>The Department of Corrections and Community Supervision (DOCCS) is partnering with JPay, a company that specializes in inmate and corrections-related services. JPay is providing the tablets at no cost to the state or inmates, and DOCCS is not taking commissions for the tablets.</p>

	<p>The tablets will be preloaded with educational content and DOCCS plans to make additional services available through the tablets, such as Prison Rape Elimination Act reporting, Grievance filing, and the potential for placing commissary orders.</p> <p>According to DOCCS, JPay will get money from transactions that happen via the tablets (ebooks, music, videos). The tablets are only part of a larger contract with JPay who are also handling commissary and care packages sent from families to inmates.</p> <p>The tablets will not be able to connect to the internet, but inmates will be able to use the tablets to purchase music, e-books, videos, and other entertainment. There will also be controlled kiosks where inmates can plug their tablet in to send emails to an approved list of recipients. Inmates will only have supervised access to the kiosks at scheduled times.</p> <p>State corrections officials say they believe using the tablets will help inmates stay in touch with their families and be better prepared to reenter into the community.</p>

<b>HEADLINE</b>	<b>02/01 L.A. school shooting: 12yr-old suspect</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/02/01/us/los-angeles-sal-castro-middle-school-shooting/index.html">https://www.cnn.com/2018/02/01/us/los-angeles-sal-castro-middle-school-shooting/index.html</a>
<b>GIST</b>	<p>(CNN)Two 15-year-old students were shot Thursday morning in a classroom at Sal Castro Middle School in Los Angeles, and a 12-year-old female student is in custody as a suspect, officials said.</p> <p>One boy was shot in the head and is in critical condition, and a girl was shot in the wrist at the school, which shares a campus with Belmont High School, Los Angeles fire Capt. Eric Scott said.</p> <p>Three others -- a woman and two children -- were being treated for minor cuts, including some from glass, Scott said.</p> <p>"Our campus, while it's on lockdown, is safe. There is no more safety threat to the students of this school," city schools Police Chief Steven Zipperman said late Thursday morning.</p> <p>The shooting was reported to Los Angeles police at 8:55 a.m. Police found and confiscated a gun at the scene, Los Angeles police Lt. Chris Ramirez said.</p> <p>Police didn't say what led to the shooting, and little information was immediately released about the girl who was detained. Zipperman said she was 12.</p> <p>The motive is under investigation, Ramirez said. Ramirez and Los Angeles police spokesman Drake Madison both said the girl in custody is a suspect.</p>

<b>HEADLINE</b>	<b>01/29 Russia team banned from Paralympics</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Sports/wireStory/russian-team-banned-paralympics-compete-52676830">http://abcnews.go.com/Sports/wireStory/russian-team-banned-paralympics-compete-52676830</a>
<b>GIST</b>	<p>Russia was banned Monday from the upcoming Pyeongchang Paralympics because of its doping past.</p> <p>However, the International Paralympic Committee said about 30-35 Russians will be allowed to compete in five sports as neutral athletes at the games, which run from March 8-18.</p> <p>That mirrors the situation for next month's Olympics. The Russian team has been barred, but 169 Russians have been invited to compete.</p> <p>"We are not rewarding Russia but we are allowing athletes that we believe are clean to compete under a neutral flag," IPC president Andrew Parsons said.</p> <p>It will be the second Paralympics without a Russian team. The country was also excluded from the Rio de Janeiro Paralympics in 2016. Since then, there has been enough improvement to justify allowing Russians to compete as neutral athletes after extra drug testing, Parsons said.</p>

<b>HEADLINE</b>	<b>01/29 State workers' birthdates private, public?</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/news/politics-government/article196974279.html">http://www.thenewstribune.com/news/politics-government/article196974279.html</a>
<b>GIST</b>	<p>A group of Democratic lawmakers is pushing to cut off a long-brewing court battle over public records between state labor unions and their foes by banning the disclosure of the birthdates of state employees.</p> <p>While that lawsuit relates to an effort by the conservative Freedom Foundation to notify certain state workers about how to legally avoid paying union dues, new legislation on the topic has set off a wider battle over balancing privacy with government transparency.</p> <p>Rowland Thompson, the executive director of The Allied Daily Newspapers of Washington, told a Senate panel on Jan. 19 that access to the names and corresponding birthdates of state employees is critical for the public to know "exactly who works for them."</p> <p>State Sen. Patty Kuderer, D-Bellevue, testified at the same hearing that Senate Bill 6079 would protect public employees "so that hackers and stalkers and crooks and other unsavory folks can't get it for illegitimate purposes."</p> <p>Kuderer and 18 other Democrats introduced the legislation, which cleared a Senate panel Friday.</p> <p>The disagreement over birthdates stretches back years. In May of 2016, a coalition of unions sued to stop records requests made by the Freedom Foundation, a conservative nonprofit dedicated to shrinking the size and influence of public-sector unions.</p>

The organization has been trying to get the names and matching birthdates of certain state workers, hoping to use the information to get home addresses for canvassing and mail campaigns related to union dues.

State unions have been concerned the Freedom Foundation is trying to drain their membership. They've argued in court the requests for birthdates to match employee names might violate privacy laws.

In November, a three-judge panel in Division II of the state Court of Appeals ruled largely in the favor of unions, saying state workers have constitutional privacy protections that bar the Freedom Foundation from getting the names and corresponding birthdates of employees through public records requests.

The Freedom Foundation since has petitioned the state Supreme Court to review the matter, arguing releasing the information is not private and should be disclosed. The court has not yet decided whether to take the case.

Jami Lund, a senior policy analyst for the Freedom Foundation, painted Kuderer's measure in part as a kickback for unions worried about losing money and members. Labor unions often favor Democrats when spending campaign cash, adding to the chances of the bill passing, Lund said in an interview with The News Tribune and The Olympian.

"This is the unions afraid of our ability to inform public employees of their constitutional right to reduce their payment to the union," Lund said.

Lund also said he believes the privacy concerns are overblown. Birthdates with matching names aren't enough information for someone "to commit any fraud or identity theft," he said.

Thompson, the newspaper group's lobbyist, said Kuderer's bill reaches beyond a battle over union dues.

He testified that robust scrutiny of state employees is necessary when workers are entrusted to teach children, care for vulnerable adults or wield weapons to protect the public. That scrutiny sometimes requires birthdates of state employees, Thompson said.

Thompson brought up a 2003 investigation by The Seattle Times into coaches at public schools who sexually molested students. Reporters at the paper found 159 coaches in the decade before 2003 that were fired or reprimanded for sexual misconduct ranging from harassment to rape. Of those 159 coaches, at least 98 continued to coach or teach at the time, the Times reported.

Thompson said the paper used the birthdates of those coaches to track them through state databases when they transferred schools after an allegation of sexual misconduct.

Without birthdates, just having an employee's name "is virtually useless in terms of trying to ascertain someone's identity," Thompson said.

State workers and union representatives also say the measure has implications beyond keeping unions whole. But they say privacy trumps the public's right to know, in this instance.

Tim Welch, spokesman for the Washington Federation of State Employee, said in an interview that the bill is needed to prevent "serious threat to privacy and security of state employees."

Melissa Kover, a state worker for the Department of Social and Health Services Division of Child Support, had a similar response when testifying at the January hearing.

Kover said her job entails establishing and enforcing child-support orders. She said people have threatened her, propositioned her and made records requests for her information.

"It's really scary as a single parent of two teenagers to know that they can get that information and potentially show up at my house," Kover said. "I just feel like the safety of state employees should be of

	the utmost importance, especially for what we do.”

<b>HEADLINE</b>	<b>01/29 Malaysia annuls unilateral conversion</b>
<b>SOURCE</b>	<a href="https://apnews.com/e092a86857ed4cde8981ac8de183b5ee/Malaysia's-top-court-annuls-unilateral-conversions-of-minors">https://apnews.com/e092a86857ed4cde8981ac8de183b5ee/Malaysia's-top-court-annuls-unilateral-conversions-of-minors</a>
<b>GIST</b>	<p>KUALA LUMPUR, Malaysia (AP) — Malaysia’s top court said in a landmark decision Monday both parents must consent to the religious conversion of a minor, ruling unanimously in favor of a Hindu woman whose ex-husband converted their three children to Islam without telling her.</p> <p>The ruling ended a nine-year legal tussle for M.Indira Gandh, whose former husband became a Muslim and converted their three children in 2009. He also snatched their daughter, then 11 months old, from the family home.</p> <p>She won custody of the three children and challenged their conversions in civil courts of Malaysia’s dual-court system. A lower court annulled them, but the Court of Appeal overturned the ruling, saying civil courts had no jurisdiction over Islamic conversions. The ruling was appealed to the nation’s highest court.</p> <p>The five-member panel in the Federal Court found the children’s conversions unlawful as they were done without Gandhi’s consent.</p> <p>“This is a landmark decision and a victory for all Malaysians,” said M.Kulasegaran, Gandhi’s lawyer.</p> <p>He said the ruling clearly showed civil courts are the paramount courts and can hear matters related to Islamic affairs even if there is a contradictory Sharia court decision. There are many similar disputes involving the unilateral conversion of children to Islam and that the ruling meant that non-Muslims now can seek redress in the civil courts, he added.</p> <p>Muslims, who are 60 percent of Malaysia’s 31 million people, are governed by Islamic courts while non-Muslims go to civil courts to settle family, marriage and other personal disputes. But the law is vague on which court has authority over disputes between Muslims and non-Muslims, especially within a family.</p> <p>Civil courts have generally avoided taking a position in such cases, allowing Sharia courts to lead. This has raised questions about freedom of religion guaranteed by the Constitution, and strained racial relations in this multiethnic country, which has enjoyed largely peaceful race relations for nearly five decades.</p>

<b>HEADLINE</b>	<b>01/29 Road salt taking toll on US waters</b>
<b>SOURCE</b>	<a href="https://apnews.com/bb34e41bb95a4dfa85301621ec0c50ca/Salt,-the-solution-to-winter's-dangers,-threatens-US-waters">https://apnews.com/bb34e41bb95a4dfa85301621ec0c50ca/Salt,-the-solution-to-winter's-dangers,-threatens-US-waters</a>
<b>GIST</b>	<p>CONCORD, N.H. (AP) — When roads turn into ice rinks, consider trying beet juice, molasses, and even beer or cheese waste to make them safer. So say experts who fear road salt is starting to take a toll on the nation’s waterways, putting everything from fish and frogs to microscopic zooplankton at risk.</p> <p>Tossed onto sidewalks and dumped onto highways, salt for decades has provided the cheapest and most effective way to cut down on traffic accidents and pedestrian falls during winter storms. But researchers cite mounting evidence that those tons of sodium chloride crystals — more than 20 million nationwide each year — are increasing the salinity of hundreds of lakes, especially in the Northeast and Midwest.</p> <p>“There has been a sense of alarm on the impacts of road salt on organisms and ecosystems,” said Victoria Kelly, a road salt expert at the Cary Institute of Ecosystem Studies in New York. “We’ve seen increasing concentrations in river water, lakes, streams. Then, scientists started asking the question: What is going to</p>

happen to the organisms living in freshwater bodies and what will happen to the freshwater bodies as a whole?”

Believed to be first used in the 1940s in New Hampshire, salt became the go-to de-icing agent as cities expanded, highways were built and motorists came to expect clear roads. More than a million truckloads a year are deployed in ice-prone climes, most heavily in the Northeast and Midwest.

But many state and local agencies are seeking ways to reduce salt use as its environmental impacts are becoming more apparent.

They have turned to high-tech equipment to spread salt more efficiently, better weather forecasting to time their salting, and liquefied organic additives that help salt stick to pavement. That reduces salt use by preventing it from washing away immediately.

Agencies from New Jersey to North Dakota are using a mixture that includes beet juice; New Hampshire and Maine use one with molasses. Highway departments also have turned to beer waste, pickle brine and, in at least one Wisconsin county, cheese brine.

“Adding salt to the environment does have negative impacts, but for those of us in the Northeast, especially in rural states, where driving is the predominant way of getting around, we need mobility,” said Jonathan Rubin, director of the Margaret Chase Smith Policy Center and lead author on a 2010 report on the cost and benefits of salting Maine roads.

“In my opinion, we are always going to be using some degree of road salt,” he said. “The question is, can we use less?”

Salt corrosion already causes billions of dollars in damage each year to cars, roads and bridges — and now there are growing signs it’s making freshwater ecosystems saltier. In the past 50 years, chloride concentrations in some lakes and rivers quadrupled and, in a few, increased a hundredfold.

Last year, a study in the Proceedings of the National Academy of Sciences concluded that more than 40 percent of 327 lakes examined had experienced long-term salinization, and that thousands more were at a risk. Researchers also estimated nearly 50 lakes in the study, including small ones in Minnesota, Wisconsin and Rhode Island, could surpass the Environmental Protection Agency’s chloride threshold concentration by 2050, potentially harming aquatic life.

Experiments at the Rensselaer Polytechnic Institute aquatic lab in Troy, New York, have found that higher salt concentrations reduced growth rates in rainbow trout and decreased the abundance of zooplankton 7/8— tiny animals or larvae that are critical to the aquatic food chain and play a role in keeping lakes and streams clean.

Other studies have shown that salinization of lakes and streams reduces the numbers of fish and amphibians, kills off plants, and alters the diversity of these freshwater ecosystems.

“At high road salt concentrations, you can see reductions in growth, reduction in the diversity of species within a system and you can also see effects on reproduction of certain species,” said William Hintz, of Rensselaer Polytechnic.

Despite such environmental concerns, Caleb Dobbins, New Hampshire’s highway maintenance engineer, doesn’t envision salt being replaced anytime soon by substitutes, such as magnesium acetate, which he says are 30 times more expensive and have their own environmental challenges.

“Everybody is looking throughout the world,” he said. “Nobody is finding that silver bullet.”

HEADLINE	<b>01/26 Florida's migrant worker problem</b>
SOURCE	<a href="https://www.usnews.com/news/best-states/articles/2018-01-26/florida-farmers-fear-backlash-over-migrant-worker-visa-program">https://www.usnews.com/news/best-states/articles/2018-01-26/florida-farmers-fear-backlash-over-migrant-worker-visa-program</a>
GIST	<p>The U.S. Department of Homeland Security probably surprised no one when it announced that as of now, Haitians are ineligible for the H-2A guest farmworker visa program. Officials cited "high levels of fraud and abuse" and "a high rate of overstaying" visas.</p> <p>The cutoff tracks administration moves against migrants who enter the country legally but stay on illegally. It also closely follows President Donald Trump's consequential use of an expletive to characterize Haiti and, by extension, its people.</p> <p>Florida agriculture has its share of illegal immigrants from Haiti and many other places. But the state's farmers, harvesters and packers are adamant that the industry runs on H-2A visas and disrupting the program could be ruinous.</p> <p>An H-2A temporary visa is good for up to 10 months and does not provide a path to citizenship. When the picking season ends, the worker must return home, generally to Mexico or Central America if the fields are in Florida. A breakdown of visa holders by nationality could not be obtained, but Haitians apparently constitute a small percentage of them in Florida.</p> <p>The visas' importance to an \$8 billion industry cannot be overstated, insiders and savvy observers agree. There simply aren't enough domestic workers willing and able to harvest crops, sometimes while perched on ladders wearing bags around their necks to free both hands for picking.</p> <p>"Where would we be without H-2A? We'd be out of business," says Steve Johnson, owner of a wide-ranging harvesting company based in Wauchula, south of Tampa. Of the 900 workers he employs to gather berries, citrus and onions, 90 percent are in the program.</p> <p>Florida leads the nation in H-2A worker positions certified by the Department of Labor. In fiscal year 2017, the state had 15.9 percent of the total 97,285, topping Georgia (13.2 percent) and North Carolina (9.8 percent).</p> <p>There are an estimated 25,000 visa holders in Florida, or about a quarter of the roughly 100,000 eligible crop workers. (Plant nurseries account for another 100,000 who can't apply because their work is continuous, not seasonal.) And the number of H-2A applications is rising.</p> <p>"The program nationwide will continue to grow exponentially, and that just speaks to not necessarily the greatness of the program, but to the need to gain an accessible workforce for our agricultural producers. That's the best avenue and the compliant, legal way to get those workers," says John-Walt Boatright, national affairs coordinator for the Florida Farm Bureau Federation.</p> <p>Yet no one is delighted with H-2A. Farmers chafe under extensive regulations and paperwork and complain it's too expensive. "Our producers find it incredibly difficult and cost-prohibitive to participate, and yet in order for them to produce their crops they have to have a workforce," Boatright says.</p> <p>Labor advocates say established farmworker communities such as Immokalee are being destroyed while employers cherry-pick young males from Mexico and other countries with no fair-labor laws. The system is abused by recruiters who illegally charge migrants substantial fees. And employers who want to cheat workers can get away with it because they have the upper hand – in the current anti-immigrant climate, more than ever.</p> <p>Gregory Schell, an attorney with Southern Migrant Legal Services, tells the story of a Mexican laborer who complained to his foreman about being shortchanged.</p> <p>"The foreman told him, well, yes, you are being cheated, but I have the magic pen," Schell says. He explained that the foreman recorded the names of returning workers and, when he came to "a complainer,</p>

the pen ran out of ink."

The worker was a named plaintiff in a federal class action against Sorrells Brothers Packing Co. of Arcadia, east of Sarasota. The lawsuit claimed the citrus concern failed to pay sufficient wages to dozens of workers as required by federal law and the H-2A program.

Sorrells denied the allegations but settled the case in 2008 for about \$600,000, plus \$150,000 in fees to plaintiffs' counsel from Florida Legal Services.

But these days the courts may be less hospitable to immigrant worker complaints.

On Jan. 9, a federal judge in Tampa ruled in an H-2A case that Fancy Farms, a Plant City strawberry grower, was not liable for failing to reimburse workers the \$3,000 to \$4,000 they paid recruiters who were working for the employer.

Under the Fair Labor Standards Act farmers must warn recruiters in writing against extracting fees from laborers. But Fancy Farms did not include this contract clause because it was "not aware of any federal regulations requiring it to do so," U.S. District Judge Susan Bucklew wrote in her opinion.

Schell was an adviser to the Florida Rural Legal Services attorneys who brought the case on behalf of 54 Hondurans. He indicated the decision will be appealed.

"The government adopted this requirement to try to enlist employers into the struggle against labor trafficking by reining in their foreign recruiters," Schell says. "If employers can ignore this requirement with impunity, the regulation ceases to be much of a tool against labor trafficking."

There are efforts to clean up the recruitment system. The Coalition of Immokalee Workers, celebrated for exposing slavery rings, is encouraging the Mexican National Employment Service to recruit and screen H-2A applicants.

Johnson, owner of the Wauchula harvesting company, says he doesn't need recruiters. He uses word of mouth, asking his best workers to recommend other workers.

"You get one name, you build it slowly so that you build it right and you build it with the right people," he says. "They hear how we treat people so that spreads, too."

"The biggest thing is morale," Johnson says. "If somebody is happy they'll be more productive."

Yet migrant advocates say the reverse is also true, that if the prevailing policy message is all about deportation, the main motivator is fear and the result is flight.

Reggie Brown notes the connection between policy and labor availability. Brown will retire at the end of January from running the Florida Tomato Committee, the state's tomato regulator and marketer.

"It's one of the biggest challenges in the business and it's been that way for a number of years now," Brown says. He agrees the Trump administration's push for deportations is counter-productive.

"The policy of increasing the pressure certainly does not add in numbers to the workforce and any reduction in the workforce is a challenge to the business," Brown says.

**HEADLINE** 01/28 Ex-Amtrak conductor: safety non-existent

**SOURCE** <http://q13fox.com/2018/01/28/former-train-conductor-says-safety-is-virtually-non-existent-at-amtrak/>

<b>GIST</b>	<p>SEATTLE - Just over a month after Amtrak Train 501 derailed in DuPont killing three people, a number of employees have spoken to news outlets including, our news partners at the Seattle Times and CNN, saying that they didn't have enough training to familiarize themselves with the new Portland to Seattle route.</p> <p>John Hiatt, a former train engineer, who now investigates train accidents for a law firm says he is representing an injured employee now suing Amtrak.</p> <p>"Training is money. In this case, it looks like they were worried about money and time and safety was number three," said Hiatt.</p> <p>A former Amtrak train conductor says safety is virtually non-existent at Amtrak. "If you talk about safety to your manager you're punished," said Michael Callanan.</p> <p>He worked for Amtrak for nine years and is now a railroad safety expert. Callanan says lack of training at Amtrak has been going on for as long as he can remember.</p> <p>"This is gross culpable negligence," said Callanan.</p> <p>According to our news partners at The Seattle Times, people working for Amtrak say the training for the new routes consisted of cramming a bunch of people into one train car, some sitting backward, and training at night.</p> <p>Callanan says conductors should do at least three to five roundtrip runs of the route to get familiar. He says if that's properly done it would also be during daylight to get accustomed to surroundings.</p> <p>"Where the signals are and that's done during the day looking out the window," said Callanan.</p> <p>He says as more people come forward with safety concerns, riders will have them too.</p> <p>"Nobody would be riding the train anymore, there is no safety at Amtrak," said Callanan.</p> <p>He says it's aggravating to see accidents keep happening, but unless a major overhaul happens, he doesn't think anything will change.</p> <p>Amtrak does have a new CEO who comes from Delta Airlines.</p> <p>The National Transportation Safety Board's latest report on the DuPont derailment says the engineer operating Train 501 did feel he had enough training on the new route. But the agency says they'll look at training as part of the investigation into the crash.</p> <p>Amtrak has not responded to a request to comment on trainings and safety.</p>

<b>HEADLINE</b>	<b>01/29 Seoul: 50,000 in NKorea military parade</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/World-News/2018/01/29/Seoul-North-Korea-mobilizes-50000-for-upcoming-military-parade/3771517214179/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=2">https://www.upi.com/Top_News/World-News/2018/01/29/Seoul-North-Korea-mobilizes-50000-for-upcoming-military-parade/3771517214179/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=2</a>
<b>GIST</b>	<p>SEOUL, South Korea, Jan. 29 (UPI) -- North Korea appears to have mobilized tens of thousands of troops and civilians for a massive military parade next week, South Korean officials said Monday.</p> <p>Earlier this month, Seoul detected 13,000 personnel near Pyongyang's Mirim Airport, training in what appeared to be a rehearsal for a military parade to mark the founding of the North Korean army on Feb. 8.</p> <p>However, the figure has risen to roughly 50,000 as of late, according to multiple officials in Seoul.</p>

	<p>One official said the parade is likely to include card stunts, given the large number of participants, and that there haven't been signs that indicate transporter-erector-launcher missile vehicles will be deployed at the event.</p> <p>North Korea's military parades usually showcase the regime's latest weapons and hardware.</p>

<b>HEADLINE</b>	<b>01/28 Workers: warned Amtrak before crash</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/01/28/us/amtrak-501-derail-training-safety-investigation/index.html">https://www.cnn.com/2018/01/28/us/amtrak-501-derail-training-safety-investigation/index.html</a>
<b>GIST</b>	<p>Portland, Oregon (CNN)In the days before Amtrak 501 careened off the tracks last month in a deadly crash, engineers and conductors warned their supervisors that they did not feel adequately trained on the new route, according to more than a dozen sources.</p> <p>Several train cars flew off an overpass, landing on Interstate 5 in the December 18 accident near DuPont, Washington, which left three dead and more than 100 injured. At the time, Amtrak 501 was making its inaugural journey of a new Seattle-to-Portland run called the Point Defiance Bypass route.</p> <p>Engineers and conductors had safety concerns, citing rushed and "totally inadequate" training which left them feeling dangerously unprepared for the new route, according to multiple sources, including several directly involved in the training. Crew members traditionally train on new routes to familiarize themselves with the signs, terrain and other physical characteristics which vary from route to route.</p> <p>Some training runs were performed at night, with as many as six or more crew members stuffed into cars with just three seats, which meant some trainees rode backwards, in the dark, the sources said. Engineers felt they did not get enough practice runs at the controls and could not properly see to familiarize themselves with the route.</p> <p>Adding to the training concerns, the new locomotives for the maiden run were unfamiliar to many of the crew members up until the brief training runs, the sources said.</p> <p>The engineer for Amtrak 501 told investigators he took seven to 10 observational training trips on the new route, but was only at the controls for three one-way trips, and only one of those was in the direction the train was traveling when it crashed, according to an interim report released this week by the National Transportation Safety Board.</p> <p>The engineer did not respond to CNN's requests for comment, but according to the report he told the NTSB "he would not have gotten behind the throttle if he had any reservations about his readiness to operate the train."</p> <p>Amtrak 501 was travelling at near 80 miles an hour while heading into a turn with a maximum speed of just 30 mph. The engineer told the NTSB he missed at least two signs which would have warned him to slow down, then "as soon as he saw the 30 mph sign at the start of the curve, he applied brakes. Seconds later, the train derailed as it entered the curve," according to the NTSB report.</p> <p>When asked about allegations of inadequate training, Amtrak referred CNN to the NTSB, which said in a statement, "NTSB investigators are aware of the issues that have been raised regarding training of the Amtrak 501 crewmembers."</p> <p>Amtrak also said in a statement to CNN, "Our highest priority is ensuring the safety of our passengers, our crew and the communities we serve. We are actively taking measures to strengthen the safety of our operations, from adopting a safety management system approach used by commercial aviation to advancing Positive Train Control across the network. We will continue to work with the NTSB to learn from this accident and improve."</p>

Amtrak employees who spoke to CNN insisted on remaining anonymous out of fear of losing their jobs. More than a half dozen lawsuits have been filed so far in the crash, all alleging that inadequate crew training contributed to the accident. One of the lawsuits was filed by a conductor who was training in the lead locomotive when Amtrak 501 crashed.

His attorney, Anthony Petru, told CNN that warnings to managers about the lack of training went unheeded.

"In an environment where there is a quick trigger by management to charge employees with insubordination, or to go after them if they report safety concerns, there was some hesitancy by employees to do anything other than go along with the program," Petru said.

Train accident investigator John Hiatt says it is clear to him the engineer had lost track of his location on the route, and blames the problems with training and preparation, at least in part, for the crash. Hiatt is an investigator with the Bremseth Law Firm of Minnetonka, Minnesota, which has filed a lawsuit on behalf of another Amtrak employee.

"Training is money, and in this case it looks to me like they were worried about money and time and safety was number three, at best, on their list," Hiatt said.

The Point Defiance Bypass was the final piece of an \$800 million project under a federal economic stimulus for high-speed rail.

But the federal money was due to run out, and the pressure to get the maiden voyage done and open the line resulted in sped-up training, sources told CNN.

The crash of Train 501 is again raising larger concerns about what many call a failing safety culture at Amtrak.

<b>HEADLINE</b>	<b>01/28 Canada next frontier for shale oil?</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-canada-oil-shale-insight/why-canada-is-the-next-frontier-for-shale-oil-idUSKBN1FI0G7">https://www.reuters.com/article/us-canada-oil-shale-insight/why-canada-is-the-next-frontier-for-shale-oil-idUSKBN1FI0G7</a>
<b>GIST</b>	<p>CALGARY, Alberta (Reuters) - The revolution in U.S. shale oil has battered Canada's energy industry in recent years, ending two decades of rapid expansion and job creation in the nation's vast oil sands.</p> <p>Now Canada is looking to its own shale fields to repair the economic damage.</p> <p>Canadian producers and global oil majors are increasingly exploring the Duvernay and Montney formations, which they say could rival the most prolific U.S. shale fields.</p> <p>Canada is the first country outside the United States to see large-scale development of shale resources, which already account for 8 percent of total Canadian oil output. China, Russia and Argentina also have ample shale reserves but have yet to overcome the obstacles to full commercial development.</p> <p>Canada, by contrast, offers many of the same advantages that allowed oil firms to launch the shale revolution in the United States: numerous private energy firms with appetite for risk; deep capital markets; infrastructure to transport oil; low population in regions that contain shale reserves; and plentiful water to pump into shale wells.</p> <p>Together, the Duvernay and Montney formations in Canada hold marketable resources estimated at 500 trillion cubic feet of natural gas, 20 billion barrels of natural gas liquids and 4.5 billion barrels of oil, according to the National Energy Board, a Canadian regulator.</p>

“The Montney is thought to have about half the recoverable resources of the whole oil sands region, so it’s formidable,” Marty Proctor, chief executive of Calgary-based Seven Generations Energy, told Reuters in an interview.

Canada’s shale output stands at about 335,000 bpd, according to energy consultants Wood Mackenzie, which forecasts output should grow to 420,000 bpd in a decade. The pace of output growth could quicken and the estimated size of the resources could rise as activity picks up and knowledge of the fields improves, according to the Canadian Association of Petroleum Producers.

Seven Generations and Encana Corp, also based in Calgary, are among leading producers developing the two regions. Global majors including Royal Dutch Shell and ConocoPhillips - who pulled back from the oil sands last year - are also developing Canadian shale assets.

Chevron Corp announced its first ever Canadian shale development in the Duvernay in November. Spokesman Leif Sollid called it one of the most promising shale opportunities in North America. ConocoPhillips sees potential for the Montney to deliver significant production and cash flow to the company, executive vice president of production drilling and projects Al Hirshberg said in November.

Shell will invest more money this year in the Duvernay than any other shale field except the Permian Basin in West Texas, the most productive U.S. shale play, spokesman Cameron Yost said.

“We may learn something in the Permian that becomes applicable in the Montney, and vice versa,” Yost said.

The oil sands boom dates back two decades, when improved technology, rising crude prices and fears of global oil shortages sparked a rush to develop the world’s third-largest reserves. But in the last five years, much of that investment has migrated south as U.S. shale firms pioneered new drilling techniques and flooded global oil markets with cheaper-to-produce crude.

The oil sands currently account for two-thirds of Canada’s 4.2 million barrels per day of crude. They will continue to contribute heavily to Canada’s energy output because oil sands projects, once built, produce for decades.

But the era of oil sands mega-projects will likely end with Suncor Energy’s 190,000 barrel-per-day Fort Hills mining project, which started producing this month.

Canadian energy officials are now counting on shale, also known as “tight” oil, to lure new investment.

“Increasingly we are going to see light tight oil and liquids-rich natural gas forming a key part of Alberta’s energy future,” said Margaret McCuaig-Boyd, energy minister for the province where the oil sands and much of the nation’s shale reserves are located.

<b>HEADLINE</b>	<b>01/25 GAO: security clearance process high risk</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/politics/national-security/government-accountability-office-breaks-tradition-name-security-clearance-process-high-n841096">https://www.nbcnews.com/politics/national-security/government-accountability-office-breaks-tradition-name-security-clearance-process-high-n841096</a>
<b>GIST</b>	<p>WASHINGTON — The Government Accountability Office on Thursday warned that the security clearance process is one of the most significant “high risks” programs in the U.S. government.</p> <p>The agency was not due to update its threat list until early next year, but it broke tradition to raise its concern with the process that vets employees at government agencies who receive secret and top secret security clearances.</p>

	<p>The announcement follows the release of a Defense Department report on Wednesday that found 165 defense contractors were able to work for years before it was discovered that they had problems in their past, such as committing a felony, that would disqualify them.</p> <p>“A high-quality and timely personnel security clearance process is essential to minimize the risks of unauthorized disclosures of classified information and to help ensure that information about individuals with criminal histories or other questionable behavior is identified and assessed,” U.S. Comptroller General Gene Dodaro said in a letter released Thursday.</p> <p>Recent reports from the GAO found that there is a significant backlog in the process, which allows unvetted employees to work and receive sensitive information on a provisional basis for years. The Department of Defense said their backlog is approximately 700,000 applications long.</p>

<b>HEADLINE</b>	<b>01/28 Panera recalls cream cheese products</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/health/health-news/panera-bread-recalls-cream-cheese-products-over-listeria-fears-n841801">https://www.nbcnews.com/health/health-news/panera-bread-recalls-cream-cheese-products-over-listeria-fears-n841801</a>
<b>GIST</b>	<p>Panera Bread, the soup-and-sandwiches restaurant chain found in shopping centers across the country, said it would recall cream cheese products sold in its U.S. cafes over possible Listeria contamination.</p> <p>The bakery-café chain went ahead with the recall after samples of one type of 2-ounce cream cheese from a single production day tested positive for the presence of Listeria monocytogenes, Panera said Sunday in its announcement.</p> <p>The recall covers only cream cheese sold in Panera locations in the United States. It doesn't include Panera cafés in Canada or other Panera food products. As of last fall, the chain said it operated about 2,100 locations.</p>

<b>HEADLINE</b>	<b>01/28 Dutch face issues w/manmade quakes</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Technology/wireStory/manmade-quakes-force-dutch-face-future-gas-52661967">http://abcnews.go.com/Technology/wireStory/manmade-quakes-force-dutch-face-future-gas-52661967</a>
<b>GIST</b>	<p>When Nienke Bastiaans fell in love with and bought a 17th-century thatched house in a rural Dutch village, there was one person who warned about possible earthquakes due to gas extraction.</p> <p>"Nobody listened to him," she said.</p> <p>Now, 20 years later, thousands of homes in the northeastern Groningen province are facing reinforcement or even demolition because of hundreds of small tremors caused by decades of gas extraction. The scope of the problem is forcing the Dutch government to confront the prospect of a future without locally produced gas and lucrative gas tax revenue years earlier than previously expected.</p> <p>Bastiaans and her husband Tom Robinson just had the entire front wall of their home reinforced — paid for by the gas extraction company — and two chimneys replaced because of fears that another tremor could send them crashing through the roof.</p> <p>The work was completed shortly before a shallow 3.4-magnitude earthquake on Jan. 8 directly under their village jolted the region and rekindled calls for the government to end gas extraction. The quake — the most powerful to hit the region in five years — triggered nearly 3,000 reports of property damage, including a long vertical crack in Zeerijp's historic church tower.</p> <p>Thousands marched in Groningen on Jan. 19 to protest the gas extraction-caused earthquakes.</p>

	<p>The quakes occur because gas extraction lowers the pressure in a layer of porous sandstone about 3 kilometers (1.9 miles) below the Earth's surface. This causes layers in the sandstone to be squashed together. If this happens along natural fault lines in the rock, it can cause tension and lead to sudden shifts.</p> <p>"(The January quake) makes crystal clear the deep impact of the downside of gas extraction on Groningen and Groningers. The damage to their houses, the concerns, the feelings of insecurity, but also the lack clarity about when their damage will be dealt with," Gerald Schotman, director of the Netherlands Petroleum Company, known by its Dutch acronym NAM, said.</p> <p>But the government can't just order NAM to turn off the gas extraction machinery that dots the flat Groningen landscape. Some 90 percent of Dutch homes use the gas and the government has long-term contracts to sell gas to neighboring countries.</p> <p>"They call our gas extraction 'the Dutch disease,'" said Jorien de Lege of Friends of the Earth. "(Gas) gave us great wealth, because our governments ... got the revenue from all the gas and so our cities have blossomed because of the gas money. And now we've gotten sort of lazy, because every time that we want to change something we realize that our whole society is made out of gas."</p>

<b>HEADLINE</b>	<b>01/29 Many Puerto Ricans adrift in hotels</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/puerto-ricans-adrift-us-hotels-hurricane-maria-52675363?">http://abcnews.go.com/International/wireStory/puerto-ricans-adrift-us-hotels-hurricane-maria-52675363?</a>
<b>GIST</b>	<p>After they lost their home in Puerto Rico to flooding during Hurricane Maria, Enghie Melendez fled with her family to the U.S. mainland with three suitcases and the hope it wouldn't take long to rebuild their lives. It hasn't worked out that way.</p> <p>More than four months later, the family of five is squeezed into two rooms in a hotel in Brooklyn. While her husband looks for work, they are stuck in limbo, eating off paper plates and stepping over clothes in cramped quarters as they try to get settled in an unfamiliar city.</p> <p>"After the hurricane hit we told the kids that every day was going to be an adventure, but not like this," said the 43-year-old Melendez. "This is turning out to be really hard."</p> <p>Around the U.S., many Puerto Ricans are similarly adrift in hotels because of the Sept. 20 hurricane. The move north spared them from the misery of the storm's aftermath on the island. But the transition has often proved to be difficult, disruptive and expensive as people try to find housing, jobs, schools and even furniture and clothes to start fresh on the mainland.</p> <p>Melendez and her family shuffled between staying with relatives to a homeless shelter to a small hotel in the Williamsburg section of Brooklyn, forcing her to change schools for her three daughters in the middle of the semester.</p> <p>"The instability is terrible," she said as her husband, who worked as a cook at an Army base near San Juan, used a glass bottle to mash plantains to make a traditional Puerto Rican dish.</p> <p>Adding to the worries for large numbers of Puerto Ricans is that hotel reimbursements from the Federal Emergency Management Agency have started to run out and many say they can't afford temporary housing without assistance.</p> <p>"It's stressful," said Yalitza Rodriguez, a 35-year-old from the southern Puerto Rico town of Yauco who has been staying at a hotel in Queens with her elderly mother and husband while he looks for work. "If we don't get an extension we will have nowhere to live."</p>

Maria destroyed between 70,000 and 75,000 homes and damaged an additional 300,000, said Leticia Jover, a spokeswoman for Puerto Rico's Housing Department. The effects of the storm included the widespread loss of power, which is still not restored in some places. Many businesses closed. The result has been an exodus to the mainland.

The Center for Puerto Rican Studies at Hunter College estimated in an October study that between 114,000 and 213,000 Puerto Ricans would move to the U.S. mainland over the next 12 months. Most were expected to settle in Florida, followed by Pennsylvania, Texas and New York.

FEMA says there are nearly 4,000 families, more than 10,000 people, receiving hotel assistance from the agency in 42 states because their homes in Puerto Rico are too damaged to occupy. The agency has set March 20 as a deadline for the program to end overall but all cases are reviewed for eligibility every 30 days. It's impossible to know how many are in temporary housing without any aid or staying with families.

Leslie Rivera, from the central town of Caguas, has been shuffling among hotels in Tampa, Florida, since December with her three kids, ages 13, 10 and 2. She was approved for subsidized housing and expects to be settled soon but it has been difficult.

"I feel like I am on the streets because I have no clothes. I have nothing for my kids," the 35-year-old said with tears in her eyes.

Marytza Sanz, president of Latino Leadership Orlando, which has been helping displaced families, said many don't know where they will go after FEMA stops paying for their rooms.

"There are people with five dollars in their pockets," she said. "They can't buy detergent, deodorant, medicine."

In Kissimmee, in central Florida, Desiree Torres feels nervous. She has spent more than two months in a hotel with her three children. She says she can't find a job and several local shelters have told her there is no space for her and her children.

"I can't sleep at night," said the 30-year-old Torres, who lost her home in Las Piedras, a southeastern town near where the eye of the storm first crossed the island. "I'm worried about my kids."

<b>HEADLINE</b>	<b>01/29 Floodwaters peak Paris; threaten Normandy</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/floodwaters-hit-peak-paris-now-threaten-normandy-52676825?">http://abcnews.go.com/International/wireStory/floodwaters-hit-peak-paris-now-threaten-normandy-52676825?</a>
<b>GIST</b>	<p>Floodwaters have reached a peak in Paris and are now threatening towns downstream along the rain-engorged Seine River.</p> <p>The national flood monitoring agency Vigicrues said the water levels hit a maximum height of 5.84 meters (19 feet, 2 inches) on the Austerlitz scale early Monday. That's below initial fears last week, and well below record levels of 8.62 meters in 1910.</p> <p>But weeks of heavy rains have swollen the Seine and its tributaries, forcing road closures, engulfing scenic embankments and halting river boat cruises through the French capital.</p> <p>The waters are expected to stay unusually high for days or weeks.</p> <p>The floods have caused damage in 242 towns along the river, and are now threatening more towns as the Seine heads downstream west of Paris toward Normandy and the English Channel.</p>

<b>HEADLINE</b>	<b>01/28 Russia: arrests in anti-govt. protests</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/top-putin-opponent-arrested-amid-anti-government-protests/story?id=52663068&amp;cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/top-putin-opponent-arrested-amid-anti-government-protests/story?id=52663068&amp;cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>A top Russian opponent of President Vladimir Putin was arrested and violently dragged into a van by police today amid protests around the country against the lack of political competition in presidential elections this year.</p> <p>Alexey Navalny, an anti-corruption campaigner who has become Putin's most substantial political challenger, was arrested in Moscow as demonstrations in his support were held in cities around Russia. At least 243 people overall were arrested in the protests.</p> <p>"I was detained," Navalny tweeted in Russian after his arrest. "It does not matter ... You don't go for me, but for yourself and your future."</p> <p>Navalny also tweeted a video of his arrest and photos from the protests.</p> <p>Navalny was recently barred from running for president because of a fraud conviction that is widely believed to be trumped up. In response, he called for a "voter strike," including protests and an election boycott.</p> <p>Today's demonstrations are the first major protests since Russia's election season formally began and since Navalny was barred by authorities from running.</p> <p>The protests were held despite authorities' banning such rallies in Moscow, St. Petersburg and other cities.</p> <p>Earlier Sunday, police broke in the door of Navalny's office in Moscow, claiming there was a bomb threat inside. In the days ahead of the protests, police had repeatedly searched his offices in different cities and detained several organizers.</p> <p>Protests began early today in Russia's far east, which is many hours ahead of Moscow. Video from the Siberian city of Novosibirsk appears to show a few hundred people marching with banners in ferociously-cold temperatures.</p>

<b>HEADLINE</b>	<b>01/28 Growls grow over Delta's animal rule</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/business/travel/growls-are-growing-over-delta-s-new-rules-flying-service-n841376">https://www.nbcnews.com/business/travel/growls-are-growing-over-delta-s-new-rules-flying-service-n841376</a>
<b>GIST</b>	<p>Travelers and advocates are baring their teeth at Delta's new rule that passengers with service animals must submit paperwork two full days before flying.</p> <p>While some fliers are cheering Delta Air Lines' new, stricter rules for those traveling with service or emotional support animals, many long-time guide dog users and organizations that advocate for travelers with disabilities say the guidelines, which require added documentation and pre-planning, are over-reaching, discriminatory and illegal.</p> <p>Citing a significant increase in the numbers and types of "comfort" animals passengers bring on planes — and an 84 percent increase in reported animal incidents such as urinating/defecating, biting and attacks — Delta announced last week that certification of a flyer's need for an animal and proof of an animal's training and vaccinations will be required for both service and emotional support animals.</p> <p>However, organizations such as The National Federation of the Blind believe elements of Delta's policy, which goes into effect March 1, violate the Department of Transportation's Air Carrier Access Act.</p>

“We are particularly troubled by the requirement that guide dog users submit paperwork to Delta 48 hours before flying,” the NFB said in a statement, noting that “Travelers without guide dogs are not required to plan their travel 48 hours in advance.”

The 48-hour ‘intent-to-fly’ requirement means guide dog users “will no longer be able to fly on Delta for family, medical or other emergencies,” said the NFB.

“We stand with NFB,” said Eric Lipp, Executive Director of the Open Doors Organization. “People with properly trained service animals are being punished by Delta.”

Noting that it has “long been concerned with the abuse and fraud of animals purporting to be service or support animals,” the American Council of the Blind also said Delta’s revised policy discriminates against passengers with legitimate service dogs and makes travel more difficult for individuals who rely on their service animals for travel.

“I sympathize with the airlines,” said Pat Pound, a disability consultant who is blind and travels with a guide dog. “More people are cheating. Airlines are trying to maintain the system. But I don’t think Delta’s new policies will address the problem. And, as a person with a disability, I’ll end up being penalized.”

An on-line petition with more than 75,000 signatures is asking Delta not to make it harder for people to travel with emotional support animals — but other airlines are already exploring following Delta’s lead.

“We agree with Delta’s efforts,” American Airlines said in a statement. “We are looking at additional requirements to help protect our team members and our customers who have a real need for a trained service or support animal.” The carrier said from 2016 to 2017 it saw an almost 15 percent increase in the number of customers traveling with emotional support animals.

United Airlines is reviewing its existing policy on service and emotional support animals, said airline spokesman Charles Hobart. “This is something that is important to our employees and to our customers, including those with disabilities and those who do not have disabilities,” he said. “We understand this needs to be resolved soon.”

The Department of Transportation had planned to draft new rules on service animals by July 2017, but those guidelines have yet to be released.
