<b>GIST</b>	<p>VIENNA — In a 19th-century kaffeehaus here, a handful of political activists nod their heads while sharing opinions many would consider racist, homophobic and awash with conspiracy theories.</p> <p>One topic is never far from their lips: These men believe that historically neutral Austria should turn its back on the West and embrace Russian President Vladimir Putin.</p> <p>"It's our aim to somehow counter this negative image of Russia propagated in Western media," Alexander Markovics, 26, says between sips of fizzy apple juice.</p> <p>"We have to take the side of Russia," the stocky and bearded Markovics adds. "Russia is a country that gets oppressed and is actually the victim of Western imperialism."</p> <p>Here in Austria, pro-Kremlin views aren't just confined to fringe political meetings.</p> <p>The country's government appears to be drifting closer to Putin. With Vienna widely regarded as the spying capital of the world, that has serious implications for Washington and its allies.</p> <p>One factor is at the heart of these concerns: the far-right Freedom Party of Austria (FPÖ) — which is openly supportive of Russia.</p> <p>"Austria is economically and politically integrated in the West, but the FPÖ is trying to play the card of being part of the East," says Gustav Gressel, a former desk officer at the Austrian Ministry of Defense. "If you have an East-West confrontation, you basically have parts of your enemy behind your own lines."</p>

Founded by former Nazis in the 1950s, the FPÖ has been a junior member of the country's coalition government since December. As part of that deal, it was given responsibility for Austria's defense and interior ministries, and with them the domestic and military intelligence services.

The FPÖ won 26 percent of the vote in last year's legislative elections by deploying anti-establishment, anti-immigrant populist rhetoric that was condemned by opponents as racist, Islamophobic and anti-Semitic.

The party and its leading figures are also unashamedly fans of Putin. The idea of a pro-Russia party controlling intelligence services has led to fears that Western secrets aren't safe any more if shared with Vienna.

"Austria is part of the European Union defense policy, and whatever is agreed and discussed there will be leaked to Moscow," predicts Gressel, who is now a senior policy fellow at the European Council on Foreign Relations in Berlin.

"The issue is trust and mistrust," says Siegfried Beer, a leading espionage expert at the Austrian Center for Intelligence, Propaganda and Security Studies, who added that in terms of security and dealing with partners, giving the FPÖ control of the intelligence services "was not the best solution."

Austria's tradition as a playground for espionage dates back to the 19th century and was immortalized in the 1949 film, "The Third Man." Spying is legal here unless it's against the Austrian state itself. It was therefore no coincidence that Vienna was the venue for a high-profile spy swap between the U.S. and Russia in 2010 involving renowned Russian agent Anna Chapman.

The country's neutral status — neither part of NATO nor allied to Russia — means it's home to a large number of nongovernmental and international organizations. Experts say many diplomats working in the city are actually spies, with Beer and others estimating the number at around 7,000.

In 2016, party leader Heinz-Christian Strache signed a formal "cooperation pact" with Putin's United Russia party — unprecedented for a mainstream political group in Western Europe.

It was not just symbolic. After the deal, the parties agreed to "reinforce the links between our parties and countries, including in the field of international security," according to United Russia politician Sergei Zheleznyak.

"There's a cause for concern," says William Eacho, who served as U.S. ambassador to Austria from 2009 to 2013. "It's certainly going to give other nations pause when it comes to sharing intelligence with the Austrians."

Both Eacho and Beer say there is no concrete evidence that the FPÖ has so far used its position in government to help Russia.

But the point, they say, is that Russian links alone would be enough to prompt concern among Western powers.

"In the Austrian Ministry of Defense and the Ministry of Interior, which are controlled by the FPÖ, you have people collaborating with the power you are preparing yourself to go to war against. That's not very reassuring," says Gressel, the former defense official.

Others allege that the FPÖ's fondness for Russia has already had a measurable effect. Austria was one of the few European Union countries that refused to follow the U.K. and others in expelling Russian diplomats after the poisoning of ex-spy Sergei Skripal and his daughter on British soil in March.

The FPÖ's senior coalition partner is the conservative People's Party (ÖVP), led by Prime Minister

Sebastian Kurz. Kurz, 31, explained that he wouldn't expel diplomats because he wanted Austria to be a "builder of bridges between East and West" and "to keep the channels of communication to Russia open."

The FPÖ has also called for an end to anti-Russia sanctions and backed a referendum on leaving the European Union — an institution Putin has long sought to destabilize.

In February, the country's domestic intelligence service was raided, a move the FPÖ-controlled Interior Ministry said was to investigate alleged misuse of data by officials.

But Austria's president and others demanded an explanation after it emerged the police team that carried out the operation was a street crime unit not used to dealing with such cases, and was headed by an FPÖ member.

The scandal dominated the Austria's news cycle for weeks, and according to media reports some of the material seized related to "extremist" far-right groups with FPÖ links.

"The whole thing is outrageous," the leader of the liberal NEOS party, Matthias Strolz, told state broadcaster ORF. "It stinks to high heaven."

#### A REBALANCING ACT

Austria's warmth for Russia is neither new nor confined to the far-right, however.

The Allies and Soviets withdrew from the country in 1955 on the condition it wouldn't take sides in the Cold War. It entered the E.U. in 1995, but never joined NATO.

Many Austrian citizens appear to have a fondness for Russia, too. More than one-third said they favored softer sanctions after the annexation of Crimea in 2014, according to a poll by the Austrian market research company OGM.

Back in the kaffeehaus, Markovics and his friends say that "heavy" Western "propaganda" over Crimea spurred them into creating their activist group, called the Suworow Institute after a Russian military leader from the 1700s.

The institute employs seven people and has around 100 members, according to its founder, 31-year-old Patrick Poppel.

"We try to present a different perspective especially on Russian foreign policy," Poppel says, peering through his small, wire-rimmed glasses.

Poppel and Markovics were both members of the FPÖ, but quit because they feel the party hadn't gone far enough in supporting Moscow while in government. They also say the FPÖ has been too soft on what they call the "Islamization" of Europe by refugees.

They deny any links to the Russian state, and say they are not racist or fascist.

However, Poppel talks of defending "Christian civilization" by closing Austria's borders to immigrants and Muslims. He also wants to repatriate all those deemed non-indigenous — even though his wife is from Armenia — and speaks out against liberals who advocate "extreme homosexuality and feminism."

Ultimately, Markovics says, the group believes that "elites" in the U.S. and its allies are dominating Europe, and "making profit out of actions that could lead us directly into nuclear apocalypse."

They see greater ties with Russia as a way to rebalance that.

#### 'DEFINITELY NOT A THREAT'

The FPÖ insists its links to Moscow are not problematic.

Johannes Hübner is a lawyer, former FPÖ lawmaker and member of the Austrian-Russian Friendship Society. He withdrew his candidacy in last year's legislative elections after giving a speech some claimed had anti-Semitic overtones — something he denies.

Speaking to NBC News over eggs and avocado on the veranda of his spacious Vienna apartment, Hübner recounted his time in Parliament.

"As a politician, I used a lot of my energy to lobby for more understanding for Russia and to lobby against cutting ties with Russia again," he says.

Unlike the fringe Suworow Institute, the Austrian-Russian Friendship Society boasts high-profile politicians, businessmen and academics in Vienna and Moscow among its members.

Its board includes prominent FPÖ lawmaker Johann Gudenus, 41, a square-jawed speaker who studied in Moscow. He is often cited as the prime example of his party's deep ties with Russia. When contacted by NBC News, Gudenus' spokesman said he was not available.

Does Hübner see any problem or malice in fostering ties to a country often criticized by Western watchdogs as undemocratic and a human rights abuser?

"It is definitely not a threat," he says, smiling gently. "I was in politics for almost nine years here and I would have realized if [Russia] tried to influence policy ... or if they bribed people for a dark network. It doesn't exist."

Like many in the FPÖ, he says building bridges to Russia is important to counterbalance the "overwhelming American influence," which is too often presented as the "white knight" of global affairs.

"The Moscow influence in Europe is zero," Hübner adds. "It would be good if we had more influence from Russia. Not 50 percent, but maybe 10 percent or 15 percent. Now it is maybe 1 percent."

<b>HEADLINE</b>	<b>05/22 China blames Australia amid tensions</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-05-22/china-blames-australia-for-strained-relations-as-trade-suffers">https://www.bloomberg.com/news/articles/2018-05-22/china-blames-australia-for-strained-relations-as-trade-suffers</a>
<b>GIST</b>	<p>China has issued a fresh rebuke to Australia as tensions between the two nations continued to simmer, with Foreign Minister Wang Yi blaming its trading partner for the spat and saying it was up to Australia to get their relationship back on track.</p> <p>“Due to the Australian side’s reasons, the relationship between China and Australia has encountered some difficulties,” Wang said in a statement on Tuesday. “If Australia is genuinely hopeful for getting the bilateral relationship back on the right track, Australia should discard its traditional thinking and take off its tinted glasses to take a proactive approach towards China’s development.”</p> <p>The comments, coming directly after a meeting between Wang and his Australian counterpart Julie Bishop in Buenos Aires on Monday, show how far relations have soured since December, when Prime Minister Malcolm Turnbull said reports of Chinese meddling with media, universities and lawmakers were a catalyst for tougher anti-foreign interference laws.</p> <p>The legislation, yet to pass parliament, will ban foreign political donations and require people or organizations acting in the interests of overseas powers to register and disclose their ties.</p> <p>The U.S., Japan and countries in Southeast Asia that haven’t aligned themselves with China will be watching this closely, said Malcolm Davis, a senior analyst at the Australian Strategic Policy Institute and</p>

	<p>a former adviser to the government on defense policy.</p> <p>"Australia shouldn't back down and I don't think the Chinese will, so this cooling off in the relationship could well continue," Davis said by phone. "Australia needs to set an example that nations can maintain a strong resolve against Chinese pressure and not allow China to dictate their foreign and defense policies."</p> <p><b>Business Hurting</b>          Meanwhile, the business community is concerned the spat is hurting trade, with a planned increase in beef exports stalled by China and Treasury Wine Estates Co. saying last week Chinese customs officers have delayed shipments due to new requirements that "seemingly only apply to Australian Country of Origin wines."</p> <p>Bishop used a Sky News interview on Tuesday to downplay the spat and said she intends to visit China "very soon," with Turnbull to follow later this year. Still, Wang said on Tuesday that exchanges and cooperation between the two countries have been affected by the disagreements.</p> <p>"China attaches importance to the China-Australia relationship and we would like to communicate with Australia on how to take concrete measures to improve the bilateral relationship," Wang said.</p>

<b>HEADLINE</b>	<b>05/21 Court upholds arbitration agreements</b>
<b>SOURCE</b>	<a href="https://www.aol.com/article/news/2018/05/21/companies-win-big-at-us-top-court-on-worker-class-action-curbs/23440230/">https://www.aol.com/article/news/2018/05/21/companies-win-big-at-us-top-court-on-worker-class-action-curbs/23440230/</a>
<b>GIST</b>	<p>WASHINGTON, May 21 (Reuters) - The U.S. Supreme Court delivered a blow to the rights of workers on Monday by allowing companies to require them to sign away their ability to bring class-action claims against management, agreements already in place for about 25 million employees.</p> <p>The justices, in a 5-4 ruling with the court's conservatives in the majority, endorsed the legality of the growing practice by companies to compel workers to sign arbitration agreements waiving their right to bring class-action claims on various disputes, primarily over wages and hours.</p> <p>The ruling could apply more broadly to discrimination claims like those raised by women as part of the #MeToo movement raising awareness of sexual harassment in the workplace but the court did not explicitly address that issue.</p> <p>Craig Becker, a former member of the U.S. National Labor Relations Board and now general counsel of the AFL-CIO union federation, said the decision will have a "chilling effect" on employees coming forward to complain of mistreatment.</p> <p>"It will cripple enforcement of all the major employment laws," Becker added.</p> <p>Growing numbers of employers, alarmed by a rise in class-action claims brought by workers on wage issues, have demanded that their workers sign waivers. Class-action litigation can result in large damages awards by juries and is harder for businesses to fight than cases brought by individual plaintiffs.</p> <p>The ruling is the latest in a series of pro-business decisions by the conservative-majority Supreme Court in recent years curbing class-action claims of various types and endorsing arbitration to resolve contractual disputes. Companies have said arbitration is quicker and cheaper than litigation in court.</p>

<b>HEADLINE</b>	<b>05/21 Kremlin: UK pushing hatred of Russia</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/kremlin-russia-spy-uk/2018/05/21/id/861585/">https://www.newsmax.com/newsfront/kremlin-russia-spy-uk/2018/05/21/id/861585/</a>

<b>GIST</b>	<p>The Russian government says the United Kingdom is using the mysterious poisoning a former Russian spy and his daughter in England last March to promote the hatred of Russia.</p> <p>"We are witnessing Great Britain's rather unprecedented Russia-hating mania, which manifests itself in various ways," Russian Presidential Spokesman Dmitry Peskov said, according to Tass, the Kremlin's official news agency.</p> <p>"You can see for yourself that the tidal wave of hate against Russia does not stem from any events regarding Great Britain and its citizens, but it was triggered by a provocation staged by the UK - I mean the so-called Skripal case."</p> <p>Pescov's comments about the March attack on Sergei Skripal and his daughter Yulia, came as the British House of Commons Foreign Affairs Select Committee released a scathing report entitled: "Moscow's Gold: Russian Corruption in the UK."</p> <p>It charges Russia with using London as a "laundromat" for its dirty money and calls for the Britain "to sanction more Kremlin-connected individuals."</p> <p>There is no excuse for the UK to turn a blind eye as President [Vladimir] Putin's kleptocrats and human rights abusers use money laundered through London to corrupt our friends, weaken our alliances, and erode faith in our institutions," the committee said.</p> <p>It added: "The UK must get serious about confronting the full spectrum of President Putin's offensive measures. The robust rhetoric from the Prime Minister following the attempted murder of Sergei Skripal and his daughter has been undermined by the 'business as usual' sign hanging on the UK's front door ...</p> <p>"We can no longer allow 'business as usual'. The UK must be clear that the corruption stemming from the Kremlin is no longer welcome in our markets and we will act."</p> <p>On March 4, Skripal -- convicted in Russia of spying for Great Britain and later swapped for Russian intelligence officers -- and his daughter, were found unconscious on a park bench in Salisbury, a cathedral city in Wiltshire, some 78 miles southwest of London.</p> <p>It was determined they were the victims of a highly toxic nerve gas developed in Russia. Both were admitted to a hospital in critical condition, but survived the attack and have since been discharged.</p>

<b>HEADLINE</b>	<b>05/21 Park Service: flooding from sea level rise</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/national-parks-face-flooding-sea-level-rise-storm/story?">https://abcnews.go.com/US/national-parks-face-flooding-sea-level-rise-storm/story?</a>
<b>GIST</b>	<p>The National Park Service has released its first-ever report on how the impact of sea level rise and flooding from storms could impact national parks around the country.</p> <p>More than a quarter of the property managed by the park system is on a coast, according to the report, and many face increasing threats from rising sea levels connected to global warming and increased threats of flooding from storms in the coming decades.</p> <p>The report had been edited to remove references to the human impact on climate change, causing Democrats to call for an investigation into whether the report was edited to remove references to the human impact on climate change, after a report from a nonprofit journalism organization reported that references to the human impact on climate change were removed from a draft of the report earlier this year.</p> <p>The authors wrote that the National Park Service should be aware of the possible impacts of combined sea level rise and storm surge and that the report will help the National Park Service plan how to adapt.</p> <p>"Sea level change and storm surge pose considerable risks to infrastructure, archaeological sites, lighthouses, forts, and other historic structures in coastal units of the national park system," the authors explained.</p> <p>National parks already face more than \$11 billion in backlog for maintenance. Flooding or hurricanes can cause even more expensive damages. Repairs to national parks after Hurricane Sandy cost more than \$370 million, according to the report.</p> <p>The new report released Friday found that parks in Washington, D.C., face the highest sea level rise by 2100 but that the parks are not directly on a coast and that parks in the Capitol region are very close together so each park would be affected differently.</p> <p>National parks in the Southeast, especially the Everglades National Park, face threats from storm surge that are exacerbated by sea level rise, the report found. By the year 2100, the Wright Brothers National Memorial could be completely flooded if hit by a hurricane category 2 or higher, according to the report.</p> <p>Research shows that global sea levels are changing because rising global temperatures from greenhouse gas emissions cause ice to melt, especially in places like Greenland and Antarctica. The report published by the National Park Service uses models from the United Nations' climate change panel, National Oceanic, and Atmospheric Administration, and research from the University of Colorado Boulder to estimate how national parks could be affected by sea level rise if greenhouse gas emissions continue at current levels.</p>

HEADLINE	<b>05/21 DOH to test for PFAS in water systems</b>
SOURCE	<a href="https://www.seattletimes.com/seattle-news/environment/state-to-test-drinking-water-sites-for-pfas-contamination-linked-to-firefighting-foam/">https://www.seattletimes.com/seattle-news/environment/state-to-test-drinking-water-sites-for-pfas-contamination-linked-to-firefighting-foam/</a>
GIST	<p>The Washington Department of Health plans to test several hundred water systems in the state for trace contamination of more than a dozen chemicals found in some firefighting foams.</p> <p>The chemicals are called per- and polyfluoroalkyl substances or PFAS. They already have been found in five Washington drinking-water systems at levels over the Environmental Protection Agency (EPA) guidelines, as well as dozens of private drinking-water wells near firefighting training areas where the foams were used.</p> <p>Department officials will use the test results to help assess the scope of the problem as they work with the Washington State Board of Health to develop possible state standards for some of the chemicals.</p> <p><i>What are they?</i></p> <p><i>Polyfluoroalkyl and perfluoroalkyl substances are man-made compounds, manufactured since the mid-20th century, and resistant to heat, water and oil. Uses of PFAS have largely been phased out in the United States.</i></p> <p><i>What are they used for?</i></p> <p><i>They are in fire retardants, such as firefighting foam at airfields. Also used in paint, carpets, the manufacture of nonstick cookware, food- takeout containers, clothing resistant to soil, stains and water.</i></p> <p><i>What are the health concerns?</i></p> <p><i>There is debate about health effects, but some studies link the substances to an increased risk of cancer, higher cholesterol, suppressed immune systems and problems in fetal development.</i></p> <p><i>Where are they found?</i></p> <p><i>The highest levels have been detected in watersheds near military bases, industrial sites and wastewater-treatment plants, where these chemicals were commonly used. Humans' most common exposure is through food and dust, with only about 20 percent coming through drinking water.</i></p> <p><i>How prevalent are PFAS?</i></p> <p><i>A survey indicates PFAS are in the blood of 98 percent of the U.S. population.</i></p> <p><i>Sources: Harvard School of Public Health, Washington State Department of Health, EPA</i></p> <p>Washington drinking-water contamination is part of a much larger PFAS pollution problem at sites across the country. These chemicals are now undergoing a federal toxicology review that has drawn scrutiny from the White House, where an unidentified aide — in a January email released under the federal Freedom of Information Act — warned of a “potential public relations nightmare.”</p> <p>The federal review was conducted by the Agency for Toxic Substances and Disease Registry, a federal public-health agency, and recommends “minimal risk levels” for four PFAS chemicals in drinking water. This level, for at least one of these chemicals, is considerably more stringent than the EPA guideline, according to the January email.</p> <p>Now, more than three months after the email was circulated, the draft report has not been made public. This has raised bipartisan concerns in Congress that the Trump administration is trying to delay publication or alter the findings.</p>

In a statement released to The Seattle Times, a spokesperson for the Agency for Toxic Substances and Disease Registry said no date has been set to release the draft study for public comment.

The statement said the document has been through a “normal review process” that has led to “a number of revisions. It also said the agency is working with other federal partners to provide “consistent and proper interpretation” of the minimum-risk levels, which are intended to assist state and federal agencies in setting regulatory standards.

In Washington state, the federal review is of keen interest to state officials, and they want to find out what it has to say.

“Absolutely, I would like to see what a federal agency would think after a thorough assessment,” said Barbara Morrissey, a Washington health-department toxicologist who will head to D.C. this week to attend a two-day “National Leadership” summit the EPA is hosting on chemicals.

The state PFAS testing is financed by a \$150,000 EPA grant, and it is expected to get underway in the months ahead. The Department of Health initially proposed 312 water systems considered to have a potential for contamination, such as those near sites where firefighting foams have been deployed.

The testing can be a sensitive issue, stoking concern when the results are released. So far 18 operators of water systems have turned down the state request to conduct tests, according to Liz Coleman, of the state Department of Health.

The per- and polyfluoroalkyl substances began to be produced in the mid-20th century, and there are more than 3,000 different compounds. In addition to firefighting foams, they are used in many other products such as food wrappers and carpets, and can be detected in the blood of 98 percent of the U.S. population.

Some studies have found they can increase the risks of cancer, higher cholesterol, suppressed immune systems and problems in fetal development. But scientists and policymakers are grappling with what constitutes safe levels for these chemicals when they show up in drinking water.

The email, obtained by the Union of Concerned Scientists, and first reported by Politico, indicates that the unpublished study recommends a level as low as 12 parts per trillion for at least one PFAS chemical. That is far more restrictive than the current EPA guideline level of 70 parts per trillion set for two of the PFAS chemicals.

This email was part of a chain of messages released to the Union of Concerned Scientists. The correspondence indicates the draft report also drew the attention of the Defense Department, which has found more than 120 sites where firefighting foam used around military airstrips appears to have contaminated sources of drinking water.

The Defense Department has paid for alternate sources of water and other assistance when the contamination levels reach or exceed the EPA 70 parts per trillion guidelines. So a much-lower threshold could increase the number of water systems and private wells that would need assistance from the military.

The unpublished study also was scrutinized by EPA staffers, some questioning some of the methodology used by the Agency for Toxic Substances and Disease Registry. Another EPA official suggested an interagency review of the study.

The most blunt language was used by an unidentified White House staffer, whose email was cut and pasted into a second email written by James Herz of the Office of Management and Budget and forwarded to EPA officials.

The staffer declared that the “public, media and Congressional reaction to these new numbers is going to be huge. The impact to the EPA and DOD is going to be extremely painful.”

	<p><b>Bipartisan response</b> The emails became public May 14 when Politico published reporter Annie Snider’s story.</p> <p>They drew a quick response in Congress. Sen Patty Murray, D-Washington, and 10 other senators sent a letter to Trump administration officials requesting the study be released, and Rep. Cathy McMorris Rodgers, R-Spokane, joined 12 other House members in making the same demand of EPA administrator Scott Pruitt.</p> <p>The letter signed by McMorris Rodgers warned that any attempt to withhold the study would be a “clear violation of the public trust. ... Too many communities across the nation are plagued by ongoing, serious questions regarding the threat the contamination may pose to their health and that of their loved ones ... Many of us represent these communities.”</p> <p>In McMorris Rodgers’ district, the Defense Department conducted tests last year around Fairchild Air Force Base. The results indicated that 81 private wells have PFAS contamination above the EPA guidelines, as does the water system for Airway Heights, a community of more than 6,600 that, since the contamination was detected, has secured water from Spokane.</p> <p>The PFAS drinking-water contamination found in Washington in July prompted a coalition of groups led by Toxic-Free Future to petition the state health department to develop a drinking-water standard. The groups requested that standard be set lower than the EPA guideline.</p> <p>State health officials say the process to develop a Washington PFAS plan will extend until 2019. Still uncertain — just how many chemicals will be covered by the plan.</p>

<b>HEADLINE</b>	<b>05/21 Deadly acid cloud rises over Hawaii</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-hawaii-volcano/deadly-acid-cloud-rises-over-hawaii-as-lava-streams-into-ocean-idUSKCN1IM26P">https://www.reuters.com/article/us-hawaii-volcano/deadly-acid-cloud-rises-over-hawaii-as-lava-streams-into-ocean-idUSKCN1IM26P</a>
<b>GIST</b>	<p>PAHOA, Hawaii (Reuters) - Deadly white clouds of acid and fine shards of glass boiled into the sky over Hawaii on Monday as lava from the Kilauea volcano flowed into the ocean, creating a new hazard from a more than two-week eruption.</p> <p>Hawaii’s Civil Defense agency warned motorists, boaters and beachgoers to beware of toxic clouds of so-called “laze” — a combination of “lava” and “haze” — which formed as two streams of hot lava poured into sea water.</p> <p>The caustic plume, which can be fatal if inhaled, was the latest danger in an eruption that shows no signs of stopping, since it started on May 3. It has already produced around two dozen lava-spewing cracks, the same number as a previous 88-day event in 1955.</p> <p>Two thousand people have been ordered from their homes due to lava flows and toxic sulfur dioxide gas, levels of which have tripled in the last two days, according to the County of Hawaii Civil Defense. Hawaii National Guard has warned of more mandatory evacuations if further highways are blocked.</p> <p>Flows of molten rock are traveling at around 400 yards (meters) per hour, twice as fast as earlier streams, Peacheta said. Lava is expected to begin sending fountains of lava up to 600 feet (183 meters) into the air, three times as high as before, she added.</p> <p>The new laze threat, which killed two people when a lava flow reached the coast in 2000, is a mix of hydrochloric acid fumes, steam and fine volcanic glass specks created when erupting lava, which can reach 2,000 degrees Fahrenheit (1,093 degrees Celsius), reacts with sea water.</p> <p>The cloud could extend as far as 15 miles (24 km), mostly along the coast and offshore, geologists said on</p>

	<p>Sunday. Even a wisp can cause eye and respiratory irritation, and it causes acid rain that has corrosive properties equivalent to diluted battery acid, the U.S. Geological Survey said.</p> <p>An air quality index for Kona, about 40 miles (64 km) northwest of the eruption site, was at “orange,” meaning older individuals and those with lung problems could be affected.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>05/21 Hawaii: lava wall blocks crucial exit route</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/05/21/hawaii-volcanos-two-story-lava-wall-blocks-crucial-escape-route-residents-urged-to-steer-clear-toxic-cloud.html">http://www.foxnews.com/us/2018/05/21/hawaii-volcanos-two-story-lava-wall-blocks-crucial-escape-route-residents-urged-to-steer-clear-toxic-cloud.html</a>
<b>GIST</b>	<p>Lava gushing out of cracks caused by Hawaii’s Kilauea volcano over the weekend formed a two-story wall blocking parts of a highway crucial for residents to escape, as authorities warn them to steer clear of the plumes of acid and extremely fine shards of glass billowing into the sky.</p> <p>A "small explosion" was reported just before 1 a.m. at the volcano's summit that sent an ash plume 7,000 feet into the air. The wind carried the ash southwest, USGS Volcanoes reported.</p> <p>"If you are at home, stay indoors with the windows closed. Turn on your radio and listen for updates from authorities," officials said.</p> <p>The active flows from some of the 22 fissures that have opened up on the Big Island since volcanic activity began more than two weeks created a 20-foot wall of lava on Highway 137. Scientists said the new lava is hotter and moves faster to cover a wider area.</p> <p>By Saturday night, the lava flow crossed over the highway, cutting off the route for thousands of residents in the Lower Puna communities, officials said.</p> <p>"[Look at] how huge this thing is," Herman Andaya with Maui Emergency Management, told Hawaii News Now. "The magnitude in the flow, and everything."</p> <p>He added, “I’m speechless.”</p> <p>Hawaii County Civil Defense Agency announced parts of Highway 137 was closed between Kamaili and Pohoiki roads. Highway 130 was open to residents, but cracks that began forming on the road also threatened to shut down that route. Authorities attempted to stiffen the cracks last week with metal plates.</p>

<b>HEADLINE</b>	<b>05/21 School shootings are a stark reality</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/05/21/us/school-shooting-us-versus-world-trnd/index.html">https://www.cnn.com/2018/05/21/us/school-shooting-us-versus-world-trnd/index.html</a>
<b>GIST</b>	<p>(CNN)School shootings are a reality in America, <a href="#">an average of one a week just this year alone</a>. But how does the US compare with other countries in the world?</p> <p>That's difficult to ascertain because very little research exists to quantify that.</p> <p>For the purposes of this analysis, we followed the criteria below –</p> <p><b>The scope:</b> First, we looked at the <b>G7 countries</b> -- the countries with the largest advanced economies in the world. The countries are Canada, the US, Japan, Germany, Italy, France, the UK.</p> <p><b>The time period:</b> From January 1, 2009 to May 21, 2018.</p> <p><b>The definition:</b> The parameters we followed in this count are -</p>

- Shooting must involve at least one person being shot (not including the shooter)
- Shooting must occur on school grounds
- We included gang violence, fights and domestic violence (but our count is NOT limited to those categories)
- We included grades K through college/university level as well as vocational schools
- We included accidental discharge of a firearm as long as the first two parameters are met

**The analysis:** For US stats, CNN reviewed media reports and a variety of databases including those from the Gun Violence Archive and Northwestern Institute on Complex Systems. For international stats, we looked at local and national media reports.

**The caveat:** Reporting on non-fatal school shootings is not always available. There may be additional school shootings with injuries that did not make it into the newspaper or digital publications, and therefore aren't counted in databases that rely on media reports. This is true for shootings in the US and overseas.

#### **What we found:**

There have been **at least 288 school shootings** in the United States since January 1, 2009.

That's **57 times** as many shootings as **the other six G7 countries** combined.

#### **Broadening out the list**

Next, we wanted to broaden our list out to include some countries that were mentioned in a few of the viral posts that were going around this weekend.

In some of the incidents, the casualty count is very high ([the Peshawar siege](#); [the Kenya attack](#)). But when it comes to **the frequency of attacks**, the **US still leads** by a wide margin.

<b>HEADLINE</b>	<b>05/21 Clashes escalate eastern Ukraine</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/clashes-escalate-eastern-ukraine-55332313?">https://abcnews.go.com/International/wireStory/clashes-escalate-eastern-ukraine-55332313?</a>
<b>GIST</b>	<p>Clashes between Ukrainian forces and separatist rebels in eastern Ukraine have escalated, the worst outbreak of fighting so far this year, officials said Monday.</p> <p>The headquarters for the Ukrainian operations in the east said two soldiers were killed and another four were wounded in fighting near the village of Yuzhnoye early Monday.</p> <p>The separatists in the Donetsk region accused Ukraine of using heavy artillery and tanks to shell residential areas. They said four civilians were killed and another four were wounded in Ukrainian shelling last week.</p> <p>Alexander Hug, a deputy chief of the monitoring mission of the Organization for Security Cooperation in Europe, said it has confirmed that two civilians were killed and another three were injured last week, adding that "we have many more cases pending."</p> <p>"Last week was in many ways the worst we have seen so far this year," Hug said at a briefing in Kiev. "In total, we recorded 7,700 cease-fire violations."</p> <p>The conflict in the east erupted after Russia's annexation of the Crimean Peninsula and has killed more than 10,000 since April 2014. A 2015 peace agreement signed in Minsk has helped reduce hostilities, but clashes continue.</p>

<b>HEADLINE</b>	<b>05/21 Cybersecurity and the distributed grid</b>
<b>SOURCE</b>	<a href="https://www.utilitydive.com/news/cybersecurity-and-the-distributed-grid-a-double-edged-sword/523285/">https://www.utilitydive.com/news/cybersecurity-and-the-distributed-grid-a-double-edged-sword/523285/</a>
<b>GIST</b>	<p>Two evolutions are taking place around the power sector today, which could make it more difficult to defend from a growing cyber threat.</p> <p>Hackers are becoming increasingly sophisticated in their attempts to disrupt electric grids. Attacks are more targeted, including spear phishing efforts aimed at individuals, and are shifting from corporate networks to include industrial control systems.</p> <p>At the same time, the grid is becoming increasingly distributed and connected. Older power plants have been spared cyber attacks because they were not connected to the internet (which may not have existed when they were built). New resources are connected — though they are also being constructed with security in mind. And in this growing Internet of Things world, just about every device imaginable can create a potential vulnerability.</p> <p>This creates something of a double-edged sword, say security experts. On the one hand, it distributes risk and the consequences of a successful breach. But it also creates a broader "attack surface" with more vulnerabilities and opportunities for attackers to gain access.</p> <p>"Modern grid technologies expose existing security vulnerabilities in new ways, as well as introduce new benefits," Advanced Energy Economy Institute concluded in an assessment of cybersecurity challenges on a distributed grid, published earlier this year.</p>

The report also found the energy industry is "learning important lessons from the high profile, and high impact, attacks that have affected a large number of users in the United States during the past two years." AEEI noted that several attacks have used internet-connected devices "such as baby monitors, webcams, and other smart home devices."

No major disruptions yet

Thus far, the utility sector in this country has dodged any major disruptions due to cyberattacks. There have been minor intrusions, malware infections and false alarms, but so far, hackers have not been able to turn off the lights. Increasingly, however, security experts concede a successful attack is likely to happen eventually.

"In theory, a grid with more distributed resources can increase the potential attack surface for adversaries because the capacity of distributed generation, including renewables, has grown exponentially over the last decade," Bill Lawrence, director of NERC's Electricity Information Sharing and Analysis Center, told Utility Dive in an email.

Some of the success in deflecting attacks so far, said Lawrence, is because many of the new distributed resources are including cybersecurity concerns and plans from the start of a project, and up-to-date security solutions are coming to market. Some of those security products, he said, have been developed through the Department of Energy's Cybersecurity for Energy Delivery Systems research and development program.

DOE's Office of Electricity developed the R&D program, aiming to help energy sector asset owners. The Office of Electricity's website neatly presents some of the difficulties presented by distributed resources.

While the electric grid is undoubtedly becoming more distributed, Lawrence said that so far there has not been an increased risk to the security and reliability of the bulk system. There are two reasons for that, and the first one could be changing.

"First, distributed resources still provide a small percentage of the overall electricity consumed in North America each year," Lawrence said. "Second, the intermittency of distributed resources already requires grid operators to call on baseload generation to maintain the reliability of the bulk power system by offsetting the frequent reductions in output from solar, wind and other distributed generation."

Lawrence said NERC expects those baseload resources to also be available "in the unlikely scenario that one or more distributed resources became unavailable due to a cyber or physical attack on those facilities."

A turning point in Ukraine

It has happened before: In December 2015, cyberattacks caused widespread blackouts in Ukraine, and since then, the incident has heightened fears and awareness in the United States. Two years later, Sen. John McCain, R-Ariz., confirmed Russia has the capability to shut down American power plants through hacking efforts. And cybersecurity firm Dragos determined the malware used in the Ukraine attack could be modified by its Russian developers to target the United States.

The cyberattack in Ukraine may represent a turning point in the security battle.

The malware used in the attack, named "CrashOverride," was only the second industrial control system-tailored malware to target physical industrial processes, according to Dragos. The first was Stuxnet, designed by the United States and Israel to disrupt Iran's nuclear program and identified less than a decade ago.

Since Ukraine, however, there have been other reports of cyberattacks on industrial control system equipment. Hackers last year were able to penetrate the safety systems of a petrochemical plant in Saudi

Arabia, in part by taking advantage of an older device made by Schneider.

Eddie Habibi, founder and CEO of cybersecurity firm PAS Global, says there is a risk of underestimating the threat, which is dangerous and widespread.

"We have an entire industry — not just industry, but the entire industrial sector — that we believe is at risk," he said. "These systems were never designed with security in mind. They are vulnerable, and control the critical infrastructure of every nation."

Up to \$1 trillion in damages

Lloyd's of London issued a report three years ago estimating the potential impacts of a widespread attack on the U.S. power grid. The firm concluded the total economic loss could range from \$243 billion up to \$1 trillion in the most damaging scenarios.

Given such potential impacts, cybersecurity is of paramount importance in the utility sector, and efforts to harden defenses are ramping up quickly.

Several surveys of executives in the energy space, including Utility Dive's own, have shown many think a successful attack is likely in the next few years. Last year, a report from consulting firm Accenture found 76% of utility executives expect it to happen within the next five years.

The threat has caught the attention of the federal government. This month, DOE published a five-year plan to diminish the risk of energy disruptions due to cyberattacks, focused on strengthening preparedness, coordinating responses, and developing the next generation of resilient energy systems. And in February, the Trump administration announced it would develop The Office of Cybersecurity, Energy Security, and Emergency Response, which will focus on energy infrastructure security and be funded through \$96 million in the White House's Fiscal 2019 budget request.

Regarding other federal activities related to grid cybersecurity, the Federal Energy Regulatory Commission in April approved a revised Critical Infrastructure Protection reliability standard directing NERC to make changes to standards to "further mitigate the risk of malicious code" from devices like laptops and thumbdrives.

Looking at the distributed grid, AEEI's report on cyber threats recommended creation of "guidelines for implementing reliable and secure DER systems," along with "coordination and unification of DER cybersecurity efforts." Ultimately, the report finds the distributed grid to be a net-positive for resilience and security.

"The adoption of [distributed energy resource management systems] by utilities and other grid operators may create an additional opportunity to further harden the cybersecurity of intelligent grids," the report concluded.

"The outlook on grid edge security should be positive."

Despite all the focus on defense, Habibi says the most important thing for utilities may be to have a response plan.

"You can never avoid cyber incidents," he said. "Cyber is inevitable. It will happen to some companies. So as one plans their cyber strategy, they also have to plan a response."

**HEADLINE** 05/21 Spotlight: cybersecurity rail industry

**SOURCE** <https://www.smartrailworld.com/breaches-in-the-usa-and-denmark-cast-a-further-spotlight-on-rail->

	<p><a href="#">cyber-security</a></p>
GIST	<p>Cyber security (or lack of...) has been one of the most consistent themes running through business news stories these recent years. Elements of rail and metro have been slow to wake up to the threat, but two events from last week, have reiterated the importance of a robust and updated cyber-security for both operational and passenger focused systems.</p> <p>Firstly, it was revealed that Americans who booked European train tickets through Rail Europe North America (RENA) may be victims of a near-three month data breach of their e-commerce system. Whilst Danske Statsbaner (DSB) the largest Danish train operating company was struck by a significant Distributed Denial of Service (DDoS) cyber attack. The company has confirmed that this attack was the cause of passengers being unable to buy tickets on the 13th May via the company's app, ticket machines, website and in shops.</p> <p>RENA, the leading worldwide distributor of European rail products, from rail passes to train tickets and reservations, they provide access to over 50 European train companies including SNCF, Eurostar, Thalys and many more. On April 30th, they issued a breach notification with the California Attorney General's Office stating that "On February 16, 2018, as a result of a query from one of our banks, we discovered that beginning on November 29, 2017, through February 16, 2018, unauthorized persons gained unauthorized access to our e-commerce websites' IT platform."</p> <p>The personal information that may have been involved is: name, gender, delivery address, invoicing address, telephone number, email address, credit/debit card number, expiration date and CVV of customers, and, in some cases, username and password of registered users who created personal accounts on a RENA website.</p> <p>The breach notification detailed the response to this, RENA replaced and rebuilt all compromised systems from known safe code, any potentially untrusted components were removed, passwords were changed on all systems and applications, certificates were renewed, and security controls were hardened.</p> <p>Paul Bischoff, Privacy Advocate at Comparitech.com told us; "The breach at Rail Europe is disconcerting not only because of what information was accessed by hackers, but how that information was accessed. Data breaches typically occur when a hacker gains unauthorized access to a database. In this case, however, the hackers were able to affect the front end of the Rail Europe website with "skimming" malware, meaning customers gave payment and other information directly to the hackers through the website. While the details haven't been fully disclosed, the fact that this went on for three months shows a clear lack of security by Rail Europe."</p> <p>Ryan Wilk, vice president at NuData Security, a Mastercard company, stated "This is exactly why so many eCommerce entities, merchants, and financial institutions are turning to multi-layered solutions that incorporate passive biometrics and behavioural analytics. With these technologies, even when consumer information is stolen, the breached credentials cannot be used to log into someone else's account to or to make a fraudulent transaction. With these multi-layered solutions, verification is derived from hundreds of indicators based on the user's online behaviour – not relying on a password or challenge questions. These behaviours cannot be mimicked by hackers, protecting customers and businesses from post-breach damage. Today's news is a call to action for every entity handling customer payment data and other personally identifiable information."</p> <p>Whilst in further news for the rail industry, in Denmark, DSB confirmed that this attack was the cause of passengers being unable to buy tickets yesterday (13th May) via the company's app, ticket machines, website and in shops. This issue was resolved within a day DSB confirmed. Passengers with travel cards were able to use them, while others purchased tickets from ticket inspectors on board trains.</p> <p>"Our technicians and IT contractors have analysed this closely during the night and have concluded this is an outside attack in which someone has attempted to bring our system down," DSB vice-director Aske Wieth-Knudsen told journalists.</p>

	<p>A Distributed Denial of Service (DDoS) attack is an attempt to make an online service unavailable by overwhelming it with traffic from multiple sources.</p> <p>Reported in The Local, the attack also hit DSB Internal mail and telephone, rendering the company able to communicate via social media or provide staff or customers with further information. A similar issue earlier this year was caused by an electronic failure rather than a cyber attack.</p> <p>“They type of attack we saw yesterday is a new way of doing things that we [DSB, ed.] haven’t seen before. So a little more close analysis is required for us to see what exactly happened so we can prevent a re-occurrence,” Wieth-Knudsen told DR.</p> <p>In October 2017, DDoS attacks hit Sweden's transportation network causing delays to operations. They crashed the IT system that monitors trains' locations as well as taking down email systems, websites, and road traffic maps. Customers during this time were unable to make reservations or receive updates on the delays, BleepingComputer reported citing local Swedish news reports.</p> <p>Network Rail, last month also issued a statement reiterating the importance of this area to them; with Wayne Watson, head of security governance stating; “Cyber security is an important element of maintaining a safe and reliable railway. All Network Rail staff are responsible for protecting our rail cyber systems and networks so that they are available, keeping people safe and delivering the service our customers expect.”</p>

<b>HEADLINE</b>	<b>05/22 Claim: Pentagon ‘left of launch’ hacking</b>
<b>SOURCE</b>	<a href="https://www.thedailybeast.com/revealed-pentagon-push-to-hack-nuke-missiles-before-they-launch?ref=home">https://www.thedailybeast.com/revealed-pentagon-push-to-hack-nuke-missiles-before-they-launch?ref=home</a>
<b>GIST</b>	<p>The Pentagon has embraced a controversial policy of destroying enemy nuclear missiles before they launch, an internal policy document from May 2017 shows. It’s an effort that appears to include executing cyberattacks against missile control systems or components.</p> <p>The Pentagon document does not name adversaries. But experts who reviewed it for The Daily Beast considered it aimed at North Korea—and may represent a fallback option for the Trump administration should its June 12 summit with Kim Jong Un fail to result in the denuclearization President Trump desires.</p> <p>Former State Department nonproliferation official Alexandra Bell called the Pentagon plan an “exercise to legally justify a potential attack on a North Korean missile on the launchpad.”</p> <p>Kingston Reif of the Arms Control Association added, “Like the overall U.S. missile defense effort, the intended role and purpose is North Korea, and possibly Iran, too.”</p> <p>For about four years, senior U.S. military officers have feared that the financial costs of developing interceptors to destroy incoming ballistic missiles could jeopardize a domestic missile shield. They’ve sought what’s called “left of launch” options to disable adversary missiles before they leave the launchpad. And they’ve intimated that a more cost-effective approach is to develop digital weapons to corrupt or disable launch controls, guidance systems or aspects of the missile supply chain.</p> <p>The unclassified document from May 2017, acquired by The Daily Beast, asserts that “pre-conflict left of launch operations” would be legal against an “imminent missile attack,” without defining “imminent.” It explicitly cites “non-kinetic options” for destroying missiles that would fall short of a “use of force” under the United Nations charter.</p> <p>Missile experts who reviewed the document understood it as representing what appears to be the first official confirmation that the U.S. reserves the right to infect adversary missile networks with disabling malware. It appears to confirm a March 2017 New York Times report that the Pentagon was looking to</p>

add digital-network assaults to its antiballistic missile arsenal.

"This looks to me like a very elaborate legal justification for left-of-launch cyberattacks," said Bell, now with the Center for Arms Control and Non-Proliferation.

"This would certainly include cyberattacks on command-and-control or guidance of the missile," agreed Vipin Narang, a nuclear strategy expert at the Massachusetts Institute of Technology, as well as corresponding physical or digital efforts to preemptively corrupt an adversary's missile supply chain.

The Pentagon document, titled "Declaratory Policy, Concept of Operations and Employment Guidelines for Left-of-Launch Capability," was acquired by the Protect Democracy Project, a group comprised mostly of Obama administration attorneys, through to a transparency lawsuit seeking internal material relevant to military planning about North Korea. The group provided it to The Daily Beast.

That report, which Congress mandated during the final year of the Obama administration that the Pentagon issue, refers to cyberattacks euphemistically, rather than explicitly, in its unclassified form. A classified annex to the policy document is almost entirely redacted, but includes a brief reference to a "Special Program for Missile Defeat," without elaboration.

"Although left-of-launch actions that would constitute a use of force likely would require the President's approval as an exercise of the inherent right of national or collective self-defense, certain actions would not necessarily constitute a use of force under the U.N. Charter, such as gathering intelligence or developing capabilities that could be used in response to an imminent attack," the document reads.

<b>HEADLINE</b>	<b>05/21 Vulnerabilities in financial web apps</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/majority-of-financial-apps-able-to/">https://www.infosecurity-magazine.com/news/majority-of-financial-apps-able-to/</a>
<b>GIST</b>	<p>Gone are the days when criminals masked their identities and busted into a bank declaring, "This is a stick up!" According to Bank Attacks 2018, published today by Positive Technologies, cybercriminals are reaping big financial gains with relatively low risk by going online to rob banks.</p> <p>Analysis of information systems performed by the company for banks over the past three years found that attackers can obtain unauthorized access to financial applications at 58% of banks.</p> <p>While banks are well armed against external attacks with strong perimeter protections, they remain susceptible to insider threats, according to the report. "Whether by puncturing the perimeter with social engineering, vulnerabilities in web applications, or the help of insiders, as soon as attackers access the internal network, they find friendly terrain that is secured no better than companies in other industries," Positive Technologies wrote in a press release.</p> <p>Using techniques similar to those of the Cobalt gang, known for its attacks on financial institutions, penetration testers compromised the workstations used for ATM management at one-quarter (25%) of the banks tested.</p> <p>The report also noted that during the reconnaissance stage of collecting information about the target, many criminals search for malicious insider on web forums. These unscrupulous insiders are willing to share company information for a fee. Using stolen credentials and phishing campaigns are the most common and effective techniques criminals use to access banks because "it is both difficult and risky to organize attacks on servers or web applications, since the attackers are very likely to get caught," the report said.</p> <p>Vulnerabilities in web applications leaves many banks at risk. Still, remote access is another dangerous feature that often leaves the door open to access by external users. "The most common types are the SSH and Telnet protocols, which are present on the network perimeter of over half of banks, as well as protocols for file server access, found at 42 percent of banks," the report said.</p>

<b>HEADLINE</b>	<b>05/21 Attackers target DrayTek routers</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/attackers-change-dns-settings-draytek-routers">https://www.securityweek.com/attackers-change-dns-settings-draytek-routers</a>
<b>GIST</b>	<p>Attackers have been targeting a zero-day vulnerability in routers made by DrayTek to change their DNS settings and likely abuse them in future attacks.</p> <p>The Taiwan-based manufacturer of broadband Customer Premises Equipment (CPE) has already acknowledged the problem and has issued a firmware update to address it.</p> <p>According to the company, the security vulnerability impacts the web administration feature, allowing for an attacker “to intercept or create an administration session and change settings on your router.”</p> <p>Checking whether a device has been hit is quite easy, as it would show a different DNS server than the one set by the user (or the default blank). The attackers are changing the DNS settings to at least one rogue server, 38[.]134[.]121[.]95, an IP located on the network of China Telecom.</p> <p>The altering of DNS settings on routers is likely the initial phase of a larger attack, where users would be redirected to rogue DNS servers and fake websites. Thus, cybercriminals can harvest usernames and passwords, steal sensitive information such as banking credentials, or serve malicious applications to unsuspecting users.</p> <p>“Shodan shows there are nearly 800,000 Draytek routers worldwide, so the vulnerability provides a big opportunity for malicious redirections which could result in people and businesses losing credentials, data and ultimately money,” Sion Lloyd, Researcher at Nominet, told SecurityWeek in an emailed comment.</p> <p>“Given DNS is basically the underlying protocol that directs traffic around the internet, it often enjoys certain privileges on the corporate firewall. Attackers know this, which is why it is often seen as a weak spot and hijacked and abused,” Lloyd continued.</p>

<b>HEADLINE</b>	<b>05/21 Speech recognition software firm breach</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/speech-recognition-software-firm-breach-exposes-thousands-of-patient-records/article/767531/">https://www.scmagazine.com/speech-recognition-software-firm-breach-exposes-thousands-of-patient-records/article/767531/</a>
<b>GIST</b>	<p>Burlington, Mass.-based speech recognition software firm Nuance announced the breach of thousands of patient records after a third party gained unauthorized access</p> <p>A former Nuance employee breached Nuance's servers and accessed the personal information of 45,000 individuals from several contracted clients between November 20 and December 9 of 2017 and was first announced during a May 10 SEC filing.</p> <p>Names, dates of birth, medical record numbers, patient numbers, and information dictated by the provider such as patient condition, assessment, diagnosis, treatment, care plan and date of service, and the information of approximately 900 San Francisco Department of Public Health patients were affected, according to a May 11 press release.</p> <p>“The San Francisco Department of Public Health is committed to maintain the privacy of our patients and takes its responsibility to address privacy incidents seriously,” San Francisco Health Network Director Roland Pickens said in the release. “We sincerely apologize for any inconvenience or concern that this situation may cause. All of our vendors are required to attest to the protection of patient privacy, as part of their contract, and we continue to audit and improve upon that process.”</p>

	The company discovered the breach in December 2017 however, patient notification was delayed at the request of the FBI and the U.S. Department of Justice, pending their criminal investigation into the incident.
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>05/21 DHS: new BIND vulnerabilities</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/threat-intelligence/new-bind-vulnerabilities-threaten-dns-availability/d/d-id/1331855">http://www.darkreading.com/threat-intelligence/new-bind-vulnerabilities-threaten-dns-availability/d/d-id/1331855</a>
<b>GIST</b>	<p>One of the most common pieces of software for implementing a Domain Name System (DNS) server — BIND — has just become the subject of security advisories from the Internet Systems Consortium and a related notice from DHS.</p> <p>The advisories cite two new vulnerabilities in BIND. Both describe a scenario in which one of the components of BIND, rbtodb.c, can be driven to a failure state and effective denial-of-service for name resolution. In one vulnerability, rapidly changing zones can lead to a miscount of the zones with a resulting failure of the component.</p> <p>In the other vulnerability, a poor implementation of a feature known as serve-stale can lead to a similar failure, with identical results — no access to domain name resolution.</p> <p>Neither of the vulnerabilities have been exploited in the wild and only specific versions of BIND are susceptible. All organizations running BIND are urged to read the CVEs to determine whether they are at risk and should begin remediation.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>05/22 Spectre chip security vulnerability</b>
<b>SOURCE</b>	<a href="https://www.zdnet.com/article/spectre-chip-security-vulnerability-strikes-again-patches-incoming/">https://www.zdnet.com/article/spectre-chip-security-vulnerability-strikes-again-patches-incoming/</a>
<b>GIST</b>	<p>After the first-wave of Spectre and Meltdown attacks were conquered, people relaxed. That was a mistake.</p> <p>Since the CPU vulnerabilities Spectre and Meltdown showed an entirely new way to attack systems, security experts knew it was only a matter of time until new assault methods would be found.</p> <p>They've been found.</p> <p>Jann Horn, a Google Project Zero security researcher, discovered this not long after the first Spectre holes were patched. Horn found a new way to attack microprocessors, which use Spectre-like speculative execution and speculative execution of memory reads before the addresses of all prior memory writes are known. With this, and armed with the right code, a local user can pull data from a system using a side-channel analysis.</p> <p>This is far more than an Intel problem. It also affects x86 (Intel and AMD chipsets), POWER 8, POWER 9, System z, and a few ARM processors. In short, it could allow unauthorized read access to memory on almost any 21st century processor.</p> <p>The Common Vulnerability and Exposures (CVE) number for this security problem is CVE-2018-3639.</p> <p>Intel calls this a Speculative Store Bypass (SSB), also known as Spectre Variant 4. Unlike the bug discovered by Yuriy Bulygin, the former head of Intel's advanced threat team, who showed that the older Spectre CPU flaws could be used to break into the Intel x86 systems' System Management Mode (SMM), SBB is a new method.</p> <p>Another new but less dangerous Spectre-style security hole is CVE-2018-3640, aka Rogue System</p>

	<p>Register Read (RSRE), or Spectre Variant 3a. This one can impact systems with microprocessors utilizing speculative execution that perform speculative reads of system registers.</p> <p>With this, local users may be able to get unauthorized disclosure of system parameters via a side-channel analysis.</p> <p>External attacks, via a web browser processing a malicious payload, are less likely with both these problems according to Intel. That's because, Intel states, "Most leading browser providers have recently deployed mitigations in their Managed Runtimes -- mitigations that substantially increase the difficulty of exploiting side channels in a modern web browser. These techniques would likewise increase the difficulty of exploiting a side channel in a browser based on SSB."</p>

<b>HEADLINE</b>	<b>05/21 Comcast website leaks Xfinity users' info</b>
<b>SOURCE</b>	<a href="https://www.zdnet.com/article/comcast-bug-leaks-xfinity-home-addresses-wireless-passwords/">https://www.zdnet.com/article/comcast-bug-leaks-xfinity-home-addresses-wireless-passwords/</a>
<b>GIST</b>	<p>A bug in Comcast's website used to activate Xfinity routers can return sensitive information on the company's customers.</p> <p>The website, used by customers to set up their home internet and cable service, can be tricked into displaying the home address where the router is located, as well as the Wi-Fi name and password.</p> <p>Two security researchers, Karan Saini and Ryan Stevenson, discovered the bug.</p> <p>Saini, who previously discovered an Uber two-factor bypass bug and a flaw in India's national biometric database, told ZDNet about the bug.</p> <p>Only a customer account ID and that customer's house or apartment number is needed -- even though the web form asks for a full address. That information could be grabbed from a discarded bill or obtained from an email. In any case, a determined attacker could simply guess the house or apartment number.</p> <p>ZDNet obtained permission from two Xfinity customers to check their information. We were able to obtain their full address and zip code -- which both customers confirmed.</p> <p>The site returned the Wi-Fi name and password -- in plaintext -- used to connect to the network for one of the customers who uses an Xfinity router. The other customer was using his own router -- and the site didn't return the Wi-Fi network name or password.</p> <p>The bug returns data even if the Xfinity Wi-Fi is already switched on.</p> <p>Even when the Wi-Fi password changes, running the details again will return the new Wi-Fi password. There appears to be no way for customers to opt out when using Xfinity hardware.</p> <p>It's also possible to rename Wi-Fi network names and passwords, temporarily locking users out.</p> <p>Saini said that it would be nearly impossible to enumerate account numbers.</p> <p>Although it's not believed the sensitive data can be used to access the router's settings, an attacker could use the information to access the Wi-Fi network within its range. On the network, an attacker could read unencrypted traffic from other users on the network.</p>

<b>HEADLINE</b>	<b>05/21 GPON home routers hit by zero-day</b>
-----------------	--

SOURCE	<a href="https://www.bleepingcomputer.com/news/security/gpon-routers-attacked-with-new-zero-day/">https://www.bleepingcomputer.com/news/security/gpon-routers-attacked-with-new-zero-day/</a>
GIST	<p>Attacks on Dasan GPON routers are continuing to happen using two vulnerabilities disclosed last month, but today, researchers from Qihoo 360 Netlab have revealed that one botnet operator appears to have deployed a new zero-day affecting the same router types.</p> <p>The security firm has refused to release further details on this flaw to prevent more attacks but said it was able to reproduce its effects.</p> <p>"We tested this payload on two different versions of [Dasan] GPON home router," the Netlab team said, "all work."</p> <p>The botnet exploiting this new GPON router zero-day is called TheMoon, a very old threat that was first spotted in 2014 infecting Linux servers but has started switching to home routers IoT in recent years.</p> <p>TheMoon is only the latest botnet to add support for exploiting Dasan GPON routers. Five botnets — Hajime, Mettle, Mirai, Muhstik, and Satori— have been exploiting two older exploits for almost a week.</p> <p>The two exploits these five botnets were targeting are CVE-2018-10561 and CVE-2018-10562.</p> <p>These two vulnerabilities allow attackers to take over affected devices —GPON routers made by South Korean vendor Dasan. GPON stands for Gigabit Passive Optical Network and is a type of telecommunications technology for supporting internet connections via fiber optics lines.</p> <p>Despite a botnet party, only 2% of GPON routers were hacked</p> <p>Initially, it was believed the number of exposed devices was over one million, but the device maker later officially stated that the number of devices vulnerable to CVE-2018-10561 and CVE-2018-10562 was only 240,000.</p> <p>The good news is that in spite of the large number of vulnerable devices, all five botnets trying to take advantage of these routers last week failed to do so. The reason was that the exploit packages they were trying to use failed to infect devices properly.</p> <p>Netlab says that these five botnets managed to infect only around 2% of the entire pool of vulnerable GPON routers.</p> <p>This might change in the upcoming days thanks to the new zero-day deployed by TheMoon botnet, but also because botnet operators have been working on improving their exploit payloads in the past days.</p>

HEADLINE	<b>05/21 Roaming Mantis spawns phishing, mining</b>
SOURCE	<a href="https://threatpost.com/roaming-mantis-swarms-globally-spawning-ios-phishing-cryptomining/132149/">https://threatpost.com/roaming-mantis-swarms-globally-spawning-ios-phishing-cryptomining/132149/</a>
GIST	<p>The Roaming Mantis mobile banking trojan is roaming further afield than it ever has before. Recent analysis shows that the malware has rapidly evolved just in the past month. It's now targeting Europe and the Middle East in addition to Asian countries. According to researchers, it's following the cyber-zeitgeist by expanding its capabilities to include cryptomining (and iOS phishing).</p> <p>Roaming Mantis is a mostly-mobile malware which this year has been spreading via DNS hijacking. Potential victims are typically redirected to a malicious webpage that distributes a trojanized application that pretends to be either Facebook or Chrome. Once installed manually by users, a trojan banker will execute.</p> <p>Its sights have become much wider, however.</p>

“Roaming Mantis has evolved quickly,” said Kaspersky Lab researcher Suguru Ishimaru, in an analysis posted on Friday. “The actors behind it have been quite active in improving their tools. The rapid growth of the campaign implies that those behind it have a strong financial motivation and are probably well-funded.”

On the multilingual front, Roaming Mantis (a.k.a. MoqHao or XLoader) was seen this month to have significantly tweaked its landing pages and malicious APK files to support 27 languages – a serious expansion from the four languages it used in campaigns just a month ago.

In campaigns observed in April, its activity was located mostly in Bangladesh, Japan and South Korea, according to Ishimaru. Kaspersky Lab has now confirmed that several more languages have been hardcoded in the HTML source of the landing page.

These include; Arabic, Armenian, Bulgarian, Bengali, both traditional and simplified Chinese, Czech, English, Georgian, German, Hebrew, Hindi, Indonesian, Italian, Japanese, Korean, Malay, Polish, Portuguese, Russian, Serbo-Croatian, Spanish, Tagalog, Thai, Turkish, Ukrainian and Vietnamese.

The expansion is succeeding in terms of garnering more victims: “We believe the attacker made use of an easy method to potentially infect more users, by translating their initial set of languages with an automatic translator,” Ishimaru said. “It’s clear from [our data] that South Korea, Bangladesh and Japan are no longer the worst affected countries; instead, Russia, Ukraine and India [bear] the brunt.”

In addition to broadening its target range, an analysis of the Roaming Mantis code reveals the criminals behind the malware have added a phishing option that targets iOS device users and a cryptomining option targeting PCs. This is a departure from the group’s primary focus on the Android platform, researchers said.

<b>HEADLINE</b>	<b>05/21 Crackdown on cryptocurrency schemes</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/the-switch/wp/2018/05/21/state-regulators-unveil-">https://www.washingtonpost.com/news/the-switch/wp/2018/05/21/state-regulators-unveil-</a>

	<a href="https://www.federalreserve.gov/newswriters/pressreleases/20180522nscryptocurrencies.htm">nationwide-crackdown-on-suspicious-cryptocurrency-investment-schemes/?utm_term=.0cecd6746b7c</a>
GIST	<p>Securities regulators across the United States and Canada announced dozens of investigations Monday into potentially deceitful cryptocurrency investment products, the largest coordinated crackdown to date by state and provincial officials on bitcoin scams.</p> <p>As many as 70 investigations have been opened in the sweep, with more expected in the coming weeks, said the North American Securities Administrators Association, which helped coordinate the probes. As many as 35 cases are pending or already completed, with some resulting in cease-and-desist letters warning the alleged schemes that their unregistered activity violates state securities law.</p> <p>The enforcement actions, which have not been previously reported, take aim at efforts by groups in more than 40 jurisdictions to attract money from unsuspecting investors. They target unregistered securities offerings that promise lucrative returns without adequately informing investors of the risks, according to state regulators. The state agencies are also pursuing suspicious cases of initial coin offerings, or ICOs, a fundraising technique used by both legitimate and illegitimate cryptocurrency projects in ways that resemble initial public offerings of stock.</p> <p>"We're putting ourselves in the shoes of investors. We're seeing what's being promoted to investors. And then we're taking the next step and then we're finding out whether they're complying with securities laws," said Joseph Borg, president of NASAA and the director of the Alabama Securities Commission.</p> <p>Not every ICO or cryptocurrency investment product is fraudulent, Borg added. But consumers face higher risks of being misled at a time when the intense demand for bitcoin has prompted many retail investors to take extreme steps to gain exposure to the currency, such as taking out a bigger mortgage.</p> <p>Posing as members of the public, investigators discovered roughly 30,000 cryptocurrency-related domain names in recent weeks, most of which were registered in the past year as the price of bitcoin soared past \$19,000. Many of the alleged scams use fake addresses, slick marketing materials and promises of over 4 percent daily interest, regulators said. A few have even used unauthorized photos of high-profile individuals, such as Supreme Court Justice Ruth Bader Ginsburg, to portray themselves as aboveboard.</p> <p>Other sites have used images of Prince Charles and actor Jennifer Aniston, but identified them under different names, to provide testimonials, the regulators said.</p> <p>"It's royal wedding fever that's a part of this operation," said Joseph Rotunda, director of enforcement at the Texas State Securities Board.</p> <p>After receiving the cease-and-desist letters warning of illegal activity, the targets of the investigations typically have up to a month to file a response, depending on the jurisdiction, Borg said. Some states allow for a hearing before the state securities commission, and an appeal to a court or administrative law judge. Regulators could also take the schemes to court. But regulators expect many sites to shut down voluntarily or amend their practices to comply with securities laws.</p> <p>In one recent case, regulators sent a warning letter this month to a U.K.-based cryptocurrency scheme known as BTCrush alleging that it was violating state laws by selling securities to Texas residents without registration and by using misleading marketing. BTCrush claimed to run three bitcoin mining farms — one hidden away in a World War II-era bunker — and served up videos on its site to support the claim. But regulators found that the shots of the mining farms turned out to be publicly available stock footage.</p> <p>BTCrush was also allegedly recruiting Texas investors as sales agents, promising them even more money if they promoted the company. As a result, Rotunda said, any Texas resident who agreed to participate was at risk of violating state securities laws themselves.</p> <p>Confronted with the allegations of deception and illegal activity, BTCrush quickly responded, claiming they had no knowledge of its site being used by U.S.-based investors. BTCrush, in a statement Sunday,</p>

	<p>said it “has complied and will continue to comply” with its cease-and-desist.</p> <p>"We sincerely regret that such precedents could have taken place. And we would like to inform you that if such precedents could have taken place, then we were not aware of such facts until today," the operators of BTCrush wrote in a letter to authorities.</p> <p>Borg said he expects many more consumers to come forward to report suspicious bitcoin schemes as a result of the sweep, which will allow regulators to begin to identify real-world cases of harm to consumers and, in some instances, to demand refunds for investors.</p> <p>"A lot of times you don't know who the victims are unless they call you up," Borg said.</p>

<b>HEADLINE</b>	<b>05/21 Experts: state election systems vulnerable</b>
<b>SOURCE</b>	<p><a href="https://www.washingtonpost.com/news/powerpost/paloma/the-cybersecurity-202/2018/05/21/the-cybersecurity-202-we-surveyed-100-security-experts-almost-all-said-state-election-systems-were-vulnerable/5b0189b030fb0425887995e2/?utm_term=.d3023dc4bd14">https://www.washingtonpost.com/news/powerpost/paloma/the-cybersecurity-202/2018/05/21/the-cybersecurity-202-we-surveyed-100-security-experts-almost-all-said-state-election-systems-were-vulnerable/5b0189b030fb0425887995e2/?utm_term=.d3023dc4bd14</a></p>
<b>GIST</b>	<p>We brought together a panel of more than 100 cybersecurity leaders from across government, the private sector, academia and the research community for a new feature called The Network — an ongoing, informal survey in which experts will weigh in on some of the most pressing issues of the field. (You can see the full list of experts here.) Our first survey revealed deep concerns that states aren't prepared to defend themselves against the types of cyberattacks that disrupted the 2016 presidential election, when Russian hackers targeted election systems in 21 states.</p> <p>“We are going to need more money and more guidance on how to effectively defend against the sophisticated adversaries we are facing to get our risk down to acceptable levels,” said one of the experts, Rep. Jim Langevin (D-R.I.), who co-chairs the Congressional Cybersecurity Caucus.</p> <p>Congress in March approved \$380 million for all 50 states and five territories to secure their election systems, but Langevin says he wants more. He introduced legislation with Rep. Mark Meadows (R-N.C.) that would provide election security funding to states if they adhere to new federal guidelines for identifying weaknesses in their systems and auditing election results. “I hope Congress continues to work to address this vital national security issue,” Langevin said.</p> <p>Each state is responsible for running its own elections, and many state officials view attempts by the federal government to intervene with skepticism — if not outright opposition. But some experts said the magnitude of the threats from state-sponsored adversaries is too great for states to deal with alone.</p> <p>“Given the gravity of the nation-state threats we face, much more needs to be done at every level — including a strong declarative policy that this activity is unacceptable and will trigger a strong response,” said Chris Painter, who served as the State Department’s top cyber diplomat during the Obama and Trump administrations.</p> <p>Dave Aitel, chief executive of Immunity Inc. and a former National Security Agency security scientist, went further: “Protecting systems from cyberthreats from nation-states can really only be done on a national level. It's insane we have state-level control of these systems.”</p> <p>Experts generally agreed that most states are more secure than they were in 2016. Officials have undertaken a variety of measures to improve security — including conducting vulnerability tests of computer networks and voting machines and hiring new IT staff.</p> <p>But securing this kind of technology isn't easy. “ ‘Election systems’ are massive, distributed IT systems with thousands of endpoints and back-end systems that hold and process large volumes of highly sensitive data,” said Jeff Greene, senior director of global government affairs and policy at Symantec. “Protecting</p>

such systems is no small feat, and election systems are no different. While [the Department of Homeland Security] and the state and local governments have in recent years dialed up their efforts, there are no easy fixes.”

Several experts said that state voter registration databases are particularly vulnerable — and make an appealing target for attackers who want to sow confusion and undermine confidence in the voting process.

“The voting machines themselves are only part of the story,” said Matt Blaze, a cryptographer and computer science professor at the University of Pennsylvania. “The ‘back end’ systems, used by states and counties for voter registration and counting ballots, are equally critical to election security, and these systems are often connected, directly or indirectly, to the Internet.”

There’s no evidence that Russian hackers actually changed any votes in 2016, but they did probe online voter rolls and even breached the statewide voter database in Illinois. “Few if any state and local IT departments are equipped to protect this infrastructure against the full force of a hostile intelligence service, and these systems are very attractive targets for disruption,” Blaze said.

“The level of expertise is quite uneven” across the states, added Daniel Weitzner, founding director of the MIT Internet Policy Research Initiative who was U.S. deputy chief technology officer for Internet policy during the Obama administration. “Of particular concern is the voter registration systems. Imagine how much fear, uncertainty and doubt [that] Russia or any other malicious actor could sow if they raise questions about the accuracy of the voting rolls. That’s every bit as bad as actually changing votes, and much easier to do.”

Jay Kaplan, co-founder of the cybersecurity firm Synack, notes a bright spot: The Election Assistance Commission has a national voting system certification program to independently verify that a voting system meets security requirements.

“However, testing for this certification is completely optional,” said Kaplan, who held previous roles in the Defense Department and at the National Security Agency. “States can set their own standards for voting systems.... As such, some states are significantly more buttoned up than others. The reality is states are understaffed, underfunded, and are too heavily reliant on election-system vendors securing their own systems.”

On top of that, millions of Americans will vote this year on old, hack-prone digital machines that produce no paper trail. Without a paper record, it’s nearly impossible to audit the final vote tally. Federal officials and experts recommend scrapping such machines in favor of paper ballots.

Too many states “have taken a less than strategic approach and once again waited too long to start addressing vulnerabilities within their processes and technology,” said Mark Weatherford, a former deputy undersecretary for cybersecurity at the Department of Homeland Security in the Obama administration and chief information security officer in both California and Colorado.

“Additionally, because of significant investments in electronic voting technology, it’s difficult for non-technologists to acknowledge economic sunk costs and re-prioritize current funding to address these ... problems,” said Weatherford, a senior vice president and chief cybersecurity strategist at vArmour.

Nico Sell, co-founder of the software maker Wickr, put the problem into perspective: “We will teach the kids how to hack the election system this summer at r00tz at Def Con,” she said. (r00tz is an ethical hacking program for children between 8 and 16 years old held in Las Vegas alongside the Def Con security conference.)

Many experts are worried that states lack the resources to build their defenses in time for the midterms, even with more federal assistance. “What isn’t clear is where our defenses and resiliency have improved if at all,” said Jessie Irwin, head of security at Tendermint. “This is a difficult problem to solve, and it takes something we don’t have enough of to get 50 states and a few territories flying in formation: time.”

Less than five percent of experts who responded to the survey said they were confident that state election systems were well protected.

Cris Thomas, who goes by the name Space Rogue and works for IBM X-Force Red, said that while registration databases, websites and other systems may still be vulnerable, “the election systems themselves are sufficiently protected.”

And the patchwork nature of U.S. elections is actually a bonus when it comes to deterring would-be attackers, said one expert who took the survey and spoke on the condition of anonymity. The Cybersecurity 202 allows experts in The Network to answer on the record or anonymously so they can speak more freely.

“State balloting systems are diverse and decentralized. They’re administered by some 3,000 counties, making it difficult for malicious actors to uniformly attack voting infrastructure on a vast scale,” the expert said.

That expert was satisfied with the efforts by state and federal officials to secure the vote. “Public and private authorities are taking steps to defend against nation-state attacks. The recent omnibus spending bill provides monies to states for election security; threat data are being shared between states and federal agencies (albeit probably slowly and tentatively); and election officials are utilizing best practices, such as conducting post-election audits and not connecting voting machines to the Internet,” the expert said.

“But bolstering our cyberdefenses, however fundamental, will only take us so far,” the expert added. “The White House needs to authorize agencies to disrupt cyberattacks and information operations at their sources and up the ante for prospective attackers as part of America’s broader deterrence posture.”

As another expert who participated in the survey put it: “The high level of interest has led to more eyes on the process, which itself helps deter would-be hackers.”

<b>HEADLINE</b>	<b>05/21 What is cryptocurrency?</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/World-News/2018/05/21/Cryptocurrency-What-it-is-how-it-works-and-will-the-bubble-burst/9041526522167/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=1">https://www.upi.com/Top_News/World-News/2018/05/21/Cryptocurrency-What-it-is-how-it-works-and-will-the-bubble-burst/9041526522167/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=1</a>
<b>GIST</b>	<p>May 21 (UPI) -- In an increasingly digital world, cryptocurrencies like bitcoin have been rising in popularity -- a tool for decentralizing money on a global scale without an intermediary.</p> <p>"It relies on a mixture of clever computer science, cryptography and other economic incentives," Massachusetts Institute of Technology assistant Professor Christian Catalini told UPI.</p> <p>Most cryptocurrency transactions are focused on investment, speculation and trading, especially in portions of the world where people have lost faith in government currency.</p> <p>Transactions rely on "miners" who use computers to validate and add timestamp transactions to a "blockchain" -- a continually growing digital ledger secured with cryptography.</p> <p>Only a limited number of cryptocurrencies are produced, unlike government-backed notes, to ensure sufficient values.</p> <p>A few months ago, Venezuelan President Nicolas Maduro launched the cryptocurrency "petro," backed by the nation's oil reserves and other natural resources. It's an attempt to cope with a failing Venezuelan economy and circumvent U.S. sanctions imposed in December.</p> <p>Cryptocurrency has been widely adopted by younger people, particularly South Korean millennials.</p>

Twenty-three percent of South Koreans in their 20s said they've purchased virtual currencies, according to Korea Financial Investors Protection Foundation.

In March, the word "cryptocurrency" was added to the Merriam-Webster dictionary.

What cryptocurrencies exist?

The world's two most valuable cryptocurrencies -- bitcoin and ethereum -- belong to the same family, but have some key differences.

Bitcoin software was made available to the public nearly a decade ago and was valued for the first time in 2010. It was intended to act as a form of money usable on the Internet, designed to be simple and exclusively allow transactions in value.

"It is extremely limited in terms of additional functionality, which is a design choice to make it extremely robust and secure," Catalini said. "It's not very customizable in terms of what else you can do with it."

By contrast, ethereum was launched through a crowdfunding campaign in 2014 out of a desire to create a cryptocurrency that's more expandable and programmable than bitcoin.

"Ethereum was designed from the ground up to be more of a platform for software application," Catalini said.

Ethereum is fueled by its own form of currency called "ether," which incentivizes developers to write quality applications.

"It has a programming language on top of it, which allows it to build much more complex instruments and contracts and small programs that use the cryptocurrency in the background but then can do other things like a sophisticated lending contract, or mortgage contract or prediction market," Catalini said.

Throughout the years, bitcoin has also become more decentralized than ethereum through the process of mining, in which new cryptocurrencies are created and transactions are recorded and verified.

Catalini likened the process of mining to a lottery, in which computers work to solve cryptographic puzzles and the new currency is awarded to whoever is able to solve it.

"It's a tool for allowing the network to operate and be secure, without knowing the identity of who is participating," he said.

There are hundreds of various cryptocurrencies in addition to bitcoin and ethereum -- ripple, EOS, litecoin, tron, IOTA, Qrum and aeternity -- all of which are listed on exchanges and carry a market cap.

They are all available in limited number. There are about 17 million bitcoins, 100 million ethereum and nearly 40 billion ripple. Their values differ, too. As of Monday, each bitcoin carried a value of \$8,481. A far less popular cryptocurrency called 42-coin listed a value of over \$30,000 -- one of only a few valued higher than bitcoin -- but has just 42 in circulation.

## Regulation

Due to the differences between various forms of cryptocurrencies, regulators in the United States and other countries have struggled to find ways to regulate them.

MIT senior adviser and former chairman of the Commodity Futures Trading Commission Gary Gensler said he believes "well over a thousand" cryptocurrencies are operating outside of U.S. law and will need to come under regulatory compliance.

Due to years of mining, bitcoin has become one of the most decentralized forms of cryptocurrency and is now perceived as a commodity.

Earlier this month The Wall Street Journal reported government regulators are working to determine whether ethereum and other cryptocurrencies are securities, which would make them subject to regulation by the U.S. Securities and Exchange Commission.

"There's been a lot of intracoin offerings and those are not decentralized offerings and don't look a lot like bitcoin and ethereum because the team has a lot of control over them," Catalini said. "That's why you're seeing all this debate by the SEC about how to regulate these things that look like unregulated securities at the moment."

Ethereum is believed to exist in a "gray zone" between a commodity and security. Its creation through a crowdfunding campaign is considered an illegal securities sale by some regulators, but ethereum has grown and decentralized over time and begun to resemble bitcoin.

"Both of them are probably commodity-like instruments," Catalini said. "There's still some debate if ethereum is a commodity yet or if it looks more like a security because the team still has a lot of influence over it."

In 2014, the Internal Revenue Service ordered that bitcoin be subject to capital gains taxes, as a property, in the United States.

Pros and cons of cryptocurrency

Investing in cryptocurrency can yield great financial returns, but investors also face a potentially volatile market, as well as potential scams or theft.

Bitcoin prices reached record levels last fall, climbing as high as \$11,000 for a single bitcoin. At the start of 2017, its value was about \$1,000.

Catalini said investing in cryptocurrency presents a big upside, but says potential backers shouldn't invest a single dollar they can't afford to lose immediately.

"This is a very experimental space and so there's still a lot of uncertainty," he said. "Even more established cryptocurrencies like bitcoin are still far from successful and the verdict is still out on which cryptocurrency will become the leading one in the market."

As bitcoin's value soared and would-be investors became more interested in cryptocurrencies last year, bad actors emerged and began presenting misleading initial coin offerings and other scams.

To combat these harmful practices Facebook and Google began implementing plans to block cryptocurrency advertisements.

"It's important for people to do due diligence and make sure that the teams they're looking at are serious teams and this isn't just the promise of a quick return," Catalini said.

Like other forms of property, cryptocurrencies are also subject to theft. In December, nearly \$70 billion worth of bitcoins were stolen from a cryptocurrency mining service called NiceHash.

Catalini said most cryptocurrency thefts occur during the process of attempting to convert them to U.S. dollars or store them in a wallet.

"If that piece of software isn't secure, then it's really easy to lose your bitcoin or to be hacked and have someone steal them," he said.

	<p>Catalini also warned anyone hosting cryptocurrency that losing their private key -- a password made up of 51 alphanumeric characters that allows a person to send and receive coins -- could result in permanent loss of their funds.</p> <p>Argentine entrepreneur Wences Casares launched a startup known as Xapo, which is designed to protect his clients' private keys in encrypted computer servers. As of this month Xapo protects about \$10 billion worth of bitcoin, Bloomberg reported.</p> <p>Catalini speculated that as cryptocurrency ownership becomes more commonplace, new forms of security will emerge to help people protect their funds.</p> <p>"The same way when banking evolved and moved online we developed services around that to make it secure to bank online, we're going to see more services emerge over time to help people manage their bitcoin and other crypto assets," he said.</p>

<b>HEADLINE</b>	<b>05/21 Cyber Command, banks sharing info</b>
-----------------	--

SOURCE	<a href="https://www.cyberscoop.com/project-indigo-fs-isac-cyber-command-information-sharing-dhs/">https://www.cyberscoop.com/project-indigo-fs-isac-cyber-command-information-sharing-dhs/</a>
GIST	<p>A confidential information-sharing agreement between the Financial Services Information Sharing and Analysis Center (FS-ISAC) and U.S. Cyber Command reveals the blurring line between the country's public and private sectors as the U.S. government becomes increasingly receptive to launching offensive hacking operations.</p> <p>The pilot program, codenamed "Project Indigo," recently established an information-sharing channel for a subunit of FS-ISAC known as the Financial Systemic Analysis &amp; Resilience Center (FSARC). That subunit shares "scrubbed" cyberthreat data, including malware indicators, with the Fort Mead-based Cyber Command, according to current and former U.S. officials.</p> <p>The broad purpose of Project Indigo is to help inform U.S. Cyber Command about nation-state hacking aimed at banks. In practice, this intelligence is independently evaluated and, if appropriate, Cyber Command responds under its own unique authorities.</p> <p>It's possible that a bank could tip off the military about a cyberattack against the financial industry, prompting Cyber Command to react and take action. That could include providing unique insight back to FSARC or even taking offensive measures to disrupt the attacker — such as retaliatory hacking — if it's appropriate and the Pentagon approves it, according to current and former U.S. officials.</p> <p>The program is currently organized in a fairly informal manner, but participants have been discussing a more formal arrangement. Eight financial institutions are involved in FSARC: Bank of America, BNY Mellon, Citigroup, Goldman Sachs, JPMorgan Chase, Morgan Stanley, State Street and Wells Fargo. Project Indigo also provides data to the Department of Homeland Security and U.S. Treasury. However, those agencies were already getting data from the banks that is narrowly leveraged for defensive measures.</p> <p>In an emailed statement, a Cyber Command spokesperson acknowledged Project Indigo's existence.</p> <p>"The pilot began in 2017 with USCYBERCOM personnel receiving sector-specific exposure to risks facing critical financial payment systems, and observing exercises related to risk mitigation and recovery around realistic scenarios," said Cyber Command spokesperson Col. Daniel King. "Later, two samples of anonymized cyber threat information were shared with USCYBERCOM to allow the government and its critical infrastructure partners the ability to jointly assess and address emerging threats."</p> <p>"No Personally identifiable Information (PII) was shared with USCYBERCOM as part of this effort," King added.</p> <p>The financial institutions that participate in the arrangement gave consent to FSARC to share the data with the U.S. government, a person familiar with the effort told CyberScoop. Sources spoke on the condition of anonymity due to the sensitive nature of the program.</p> <p>In one recent case, FSARC gave Cyber Command a "combo of open-source derived IOCs [indicators of compromise] associated with DPRK [North Korea] and some observed," one source said. "Open source" in this case means from outside a financial institution, while "observed" refers to internal data.</p> <p>Under the agreement, financial institutions share data "considered not exclusive" to any one financial firm, a former U.S. official said. Another source familiar with the program said that it was challenged by the simple fact that the banks weren't yet "interested in sharing at a level which would be truly useful [for Cyber Command]."</p> <p>An October 2016 press release originally announcing FSARC explained that its mission is to "proactively identify, analyze, assess and coordinate activities to mitigate systemic risk to the U.S. financial system from current and emerging cyber security threats through focused operations and enhanced collaboration between participating firms, industry partners, and the U.S. government."</p> <p>That announcement specifically described "government partners" as Treasury, DHS and the Federal</p>

Bureau of Investigation, but it did not mention U.S. Cyber Command or the National Security Agency.

Wells Fargo, Bank of America and JPMorgan Chase did not respond to multiple requests for comment. The Office of the Director of National Intelligence and NSA deferred to Cyber Command for comment.

It's widely known that large financial institutions face a bevy of sophisticated cyberattacks from both nation states and well-equipped criminal groups. Organized as a private non-profit organization, the FS-ISAC sits at the center of this activity, collecting and sharing information between companies so they can be collectively informed about active cyberthreats.

The collected data can often be extremely sensitive. Not only does it contain malware indicators, but sometimes other sensitive information tied to the targeted institutions. As a result, the intelligence is usually both highly valuable for defenders and potentially dangerous if it's ever made public.

In an emailed statement, an FS-ISAC spokesperson said: “[Project Indigo] focuses on sharing cyberthreat intelligence related to key threats facing systemically important critical infrastructure operators, with the intention of protecting our financial institutions, their networks and their clients. No customer information has been shared with the U.S. Government under Project Indigo.”

While it's common for businesses to voluntarily provide federal agencies with information about incidents in cyberspace, the 2013 Edward Snowden leaks chilled these types of relationships, especially between private companies and intelligence agencies. Cyber Command is not an intelligence unit, but it maintains a close relationship with the NSA, including sharing the same leader and building.

Jason Healey, a former intelligence officer and current senior research scholar at Columbia University's School for International and Public Affairs, told CyberScoop he believed Project Indigo represented a pragmatic step forward.

“We need to be prepared for there to be a role, especially in time critical incidents, for Cyber Command to contribute so long as they are also coordinating with Treasury and [DHS],” said Healey.

#### Blurring government boundaries

Project Indigo raises questions about the existing hierarchy in government and whether decision-makers see a need for the military to be more integrated with the private sector on cybersecurity.

Over the last eight years, the Defense Department's role in working with private companies on cybersecurity has fluctuated significantly.

During the Obama administration, the government took steps to make DHS the lead on public-private partnerships. This push was boosted in 2015, when Congress passed the Cybersecurity Information Sharing Act (CISA). The law gave certain liability protections to private companies whenever they shared cyberthreat data with the government through a portal managed by DHS.

The decision to embolden DHS with CISA came after there was a public outcry over privacy concerns. Just two years after the Snowden leaks, critics worried that the Defense Department would mishandle CISA.

A current U.S. official described Project Indigo as “classic mission creep,” a term used to describe when one agency oversteps its boundaries in regards to another agency's program.

But experts contend that Cyber Command's role will need to evolve if it's to reach its full potential. Additionally, the military is already involved in other information sharing initiatives with the private sector.

In December, a Government Accountability Office (GAO) report called on the Defense Department, including Cyber Command, to clarify and further define how it interacts with companies and civilian

	<p>agencies.</p> <p>“DOD was supposed to develop [a] comprehensive plan for CYBERCOM to support civil authorities in responding to cyberattacks. DOD has rigorous requirements for what plans should look like, and this didn’t match,” Joseph Kirschbaum, director of GAO’s Defense Capabilities and Management office, previously told CyberScoop.</p> <p>Congress is currently weighing what role Cyber Command should play in protecting private companies from hackers. In the past, members of the Senate Armed Service Committee have advocated for the military to be more involved.</p> <p>Last summer, Lt. General Vincent Stewart, the current deputy commander of Cyber Command, said he would like the military to be able to reverse-engineer malware samples in order to create new hacking tools.</p> <p>“Once we’ve isolated malware, I want to reengineer it and prep to use it against the same adversary who sought to use it against us,” Stewart described. The practice is already well known inside NSA, based on leaked classified documents.</p> <p>Generally speaking, the military’s relationship with the banks is still evolving.</p>

## Terror Conditions

[Top of page](#)

<b>HEADLINE</b>	<b>05/21 Vegas \$5M federal grant to fight terror</b>
<b>SOURCE</b>	<a href="https://www.reviewjournal.com/news/politics-and-government/las-vegas-secures-5-million-federal-grant-to-prevent-terror-attacks/">https://www.reviewjournal.com/news/politics-and-government/las-vegas-secures-5-million-federal-grant-to-prevent-terror-attacks/</a>
<b>GIST</b>	<p>WASHINGTON — Las Vegas will receive a \$5 million grant from the Department of Homeland Security to help guard against terrorist attacks, funding that the state’s congressional delegation pressed for following the Oct. 1 mass shooting.</p> <p>The grant announced Monday is an increase over the \$2.8 million the city received last year through the Urban Areas Security Initiative program, which provides financial assistance to urban areas to build infrastructure and train personnel to prevent and respond to acts of terrorism.</p> <p>A change in the funding formula increased the amount that Las Vegas will receive, said Sen. Dean Heller, R-Nev., who lobbied the Trump administration for more funding.</p> <p>The Nevada congressional delegation first sought the formula change and an increase in funds in June. They again pressed the administration for more funds for local law enforcement after the Oct. 1 shooting on the Strip that left 58 dead and more than 500 wounded.</p> <p>The formula now takes into account the tens of millions of tourists that visit Las Vegas annually — nearly 43 million last year — not just the resident population.</p> <p>“It is our responsibility to keep everyone safe,” said Heller, who asked DHS Secretary Kirstjen Nielsen to reconfigure the program.</p> <p>The Trump administration proposed a 25 percent cut to the \$555 million program in its budget for fiscal year 2018, but Congress increased spending by \$25 million instead.</p> <p>Rep. Dina Titus, D-Nev., said she was pleased with the increase in funding for Las Vegas but noted that additional changes to the program’s disbursement formula need to be made to recognize the unique threats that Las Vegas faces as a world-class tourism destination.</p>

	<p>“I’ll continue to push DHS Secretary Nielsen and this administration on the necessary changes to this important security program,” Titus said.</p> <p>While not considered an act of terrorism, the attack in Las Vegas was the worst mass shooting in modern U.S. history. Stephen Paddock, 64, of Mesquite carried out the shooting and died of a self-inflicted gunshot.</p>

<b>HEADLINE</b>	<b>05/21 ISIS recruiting strikes close to home</b>
<b>SOURCE</b>	<a href="https://www.wkyc.com/article/news/investigations/the-investigator-terrorism-isis-recruiting-strikes-close-to-home/95-556748169">https://www.wkyc.com/article/news/investigations/the-investigator-terrorism-isis-recruiting-strikes-close-to-home/95-556748169</a>
<b>GIST</b>	<p>Erick Jamal Hendricks swore his allegiance to ISIS and recruited others to do the same.</p> <p>But his trail ended inside an Akron courtroom, where he was recently convicted of lending support to the terrorist group.</p> <p>“He was a very real threat,” said Justin Herdman, the U.S. Attorney for the Northern District of Ohio. “This was a person who was basically solely committed to identifying people who were in a position to assist ISIS.”</p> <p>His recruiting efforts played out in the courtroom of federal Judge John R. Adams in Akron, where a jury convicted him following a highly-secured trial.</p> <p>Jurors heard Hendricks, 37, speaking to who he thought was a potential ally. In fact, the man was an FBI informant who secretly recorded the conversation.</p> <p>“Preparation is the ability to shoot,” Hendricks says in the recording obtained by Channel 3 News. “That’s our honor. They take away our weapons, our honor is taken away.</p> <p>“As long as you know it’s right and pleasing to Allah, be persistent and be sincere.”</p> <p>Hendricks’ goal was to build cells of ISIS support in the U.S. by recruiting loyalists to the terrorism network.</p> <p>A North Carolina resident, Hendricks was convicted on charges of conspiring and attempting to provide support to ISIS. He faces up to 30 years in prison when he’s sentenced later this year. He remains in federal custody.</p> <p>FBI agents tied him to a Sheffield Lake man, Amir Al-Ghazi, who pleaded guilty to purchasing an AK 47 in support of ISIS and testified against Hendricks.</p> <p>Hendricks was also tied to one of two men who died in a shootout with law enforcement in Garland, Texas in 2015. Those men intended to attack an art exhibit deemed offensive to Muslims.</p> <p>“Somebody could make a movie out of what happened to me,” Hendricks is heard on a recorded phone call from jail prior to trial.</p> <p>He is one of eight men convicted in recent years in Ohio for charges relating to ISIS support.</p> <p>“Those people are in our midst. That’s just the reality,” Herdman said.</p> <p>Hendricks, like many ISIS sympathizers, relied on social media to do most of his recruiting. In his meeting with the undercover informant, which took place in Baltimore, he urges his would-be follower to use</p>

	<p>covert methods to avoid detection while posting to sites such as Twitter.</p> <p>“It’s entirely possible that all he was ever going to do was recruit, but the fact that he was involved with two people that actually did something [in Garland, Texas] is a concern,” said Terry O’Sullivan, a University of Akron professor and director of the Center for Emergency Management and Homeland Security Policy research.</p> <p>The FBI says a top priority is to protect Americans from terrorist attacks. To that end, they say they have about 1,000 active ISIS-related investigations ongoing across the country.</p> <p>Hendricks’ case is one of only four --resulting in a conviction or indictment so far this year. Experts estimate ISIS sympathizers, using thousands of online social media profiles, have successfully recruited at least 250 Americans to their cause.</p> <p>For the FBI and Homeland Security agents, it’s a full-time effort.</p> <p>“Every day,” said Steve Oluic, a retired Army officer and counter terrorism expert who runs his own consulting agency, SVE in Chardon. “It’s scanned 24 hours, seven days a week and their capabilities are growing.</p> <p>“The dilemma with the terrorists, when they act, that one act can kill many or can kill a few. But it really doesn’t matter how many they kill because it does cause terror and panic among the populist.”</p>

<b>HEADLINE</b>	<b>05/21 Ukraine convicts man of 2016 terror plot</b>
<b>SOURCE</b>	<a href="https://apnews.com/e3456f28e27144c29ee533b70354d616/Ukraine-convicts-Frenchman-for-plotting-Euro-2016-attacks">https://apnews.com/e3456f28e27144c29ee533b70354d616/Ukraine-convicts-Frenchman-for-plotting-Euro-2016-attacks</a>
<b>GIST</b>	MOSCOW (AP) — A Ukrainian court has convicted a Frenchman on charges of preparing a terror attack during the 2016 European Championship and buying illegal weapons.

	<p>Gregoire Moutaux was also sentenced Monday to six years in prison at the Liuboml District Court in the northwestern Volyn region, according to Ukrainian Prosecutor General's office spokesman, Andriy Lysenko.</p> <p>Moutaux was arrested in May 2016 as he tried to leave Ukraine with an arsenal of weapons weeks before the start of the tournament hosted by France. Ukrainian security services had followed the man and allowed him to buy weapons and explosives in a sting operation.</p> <p>Ukrainian officials said the man wanted to protest his government's immigration policies and the spread of Islam by launching attacks on bridges, railways, a mosque and a synagogue.</p>

<b>HEADLINE</b>	<b>05/21 Afghans reject Kabul narrative of war</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/you-didn-t-take-action-afghans-reject-official-narrative-of-war-against-taliban-1526933958">https://www.wsj.com/articles/you-didn-t-take-action-afghans-reject-official-narrative-of-war-against-taliban-1526933958</a>
<b>GIST</b>	<p>FARAH, Afghanistan—The weekend visit by a high-level delegation from Kabul to this now calm provincial capital in western Afghanistan promised to be a victory lap of sorts, after the Taliban were driven from the city following two days of fierce fighting last week.</p> <p>But if President Ashraf Ghani's cabinet members and a U.S. commander thought they would bask in the laurels of a hard-earned military victory, local officials and residents quickly, and often scathingly, disabused them of that idea during a Saturday meeting in the heavily-guarded office of the provincial governor.</p> <p>The local meeting participants challenged every element of the government's account of the fighting in Farah and accused the war's administrators of corruption, cowardice and perhaps worst of all, indifference.</p> <p>"I don't want to thank the guests who came from Kabul. As high-ranking officials, they need to do their jobs better," said Nematullah Barakzai, a self-described civil-society activist, addressing the Afghan ministers of defense and interior, the director of the country's intelligence agency and U.S. Army Gen. John Nicholson, who commands international forces in Afghanistan.</p> <p>The outpouring of anger and frustration directed at such an unusual gathering outside Kabul of the most powerful figures in Afghanistan's security establishment comes as the resurgent Taliban, the country's largest Islamist militant group, presses government forces across the country.</p> <p>After calling for the withdrawal of U.S. forces from Afghanistan during the presidential campaign in 2016, President Donald Trump last August announced the U.S. would step up the military campaign here in a bid to force the Taliban to the negotiating table and end America's longest war.</p> <p>But in a sign of how formidable the Taliban have become despite the expansion of American air war and the addition of thousands of U.S. forces to train government security forces and fight alongside them, the Defense Ministry in a rare admission said last week that seven of the country's 34 provincial capitals, including Farah, were "under pressure." The defense minister, Lt. Gen. Tariq Shah Brahimi, said on Saturday that heavy fighting was under way in 15 Afghan provinces.</p> <p>Emerging as another major factor in the war is the role of neighboring Iran. Tensions resulting from Mr. Trump's decision to withdraw from the Iran nuclear deal have spilled over the border, increasing concerns here of increasing Iranian aid to the Taliban aimed at destabilizing the U.S.-backed government.</p> <p>The upbraiding at Saturday's meeting occurred after the province's governor, Abdul Basir Salangi, a Ghani appointee, described how a timely, well-coordinated operation shepherded by top officials in Kabul and carried out by forces from the army, the police and intelligence agency fought gallantly to repel the Taliban assault and prevent Farah, located some 420 miles west of the Afghan capital, from falling into the</p>

hands of the Taliban.

The truth, local residents and officials maintained, was far more complicated and disturbing. The government—in particular, the National Directorate of Security, or NDS, the country’s intelligence agency—had ignored warnings from local officials of a large-scale attack, these people said.

“The people of Farah have been shouting and warning of Farah’s collapse for a year but you were silent. You didn’t take action,” said Homayun Shahid Zada, a university lecturer.

Soon after the Taliban attack on Farah began early last Tuesday, army and police abandoned security checkpoints and fled their posts in droves as the fighting worsened, local officials and residents said at the meeting.

Even as the Defense Ministry and the headquarters of American-led international forces in the country in Kabul issued statements saying that the situation in Farah was “under control,” the city was on the verge of falling to the Taliban, they said. Those who stayed to fight were poorly armed.

Mr. Barakzai described how a handful of surviving soldiers fought for more than 10 hours to defend the NDS’s provincial headquarters, resorting to knives after they ran out of ammunition. Mr. Barakzai said his brother, a soldier in the battle, “was killed because he didn’t have a flak jacket.”

While American air support and the deployment of 500 elite government forces from nearby provinces were needed to force the Taliban from Farah, neither arrived in the city for at least 15 hours to help the “several hundred” Afghan security forces that the U.S. military says were in the city immediately before the assault began. Farah officials said 25 soldiers and five civilians were killed in the fight.

“Their only achievement is getting the money out of the bank and putting it in a safe place,” Mr. Barakzai said, referring to the provincial governor’s boast that deposits in the local branch of the state-owned Kabul Bank had been moved for fear it would be overrun by the Taliban and the funds stolen.

While acknowledging that the reinforcements must mobilize more quickly, Gen. Nicholson and Gen. Brahimi, the defense minister, said that the duration of last week’s delay, as compared with the government’s response in earlier crises, represented progress.

“If such an attack had occurred two years ago, we wouldn’t have been able to manage it,” said the defense chief, who along with Gen. Nicholson and other ministers promised to heed the lessons of Farah, including rewarding those who fought and punishing those who didn’t.

Mr. Salangi, the provincial governor, acknowledged that some security forces disappeared, but he insisted that he and the army had acquitted themselves well.

“Don’t think that the army didn’t fight,” he said. “I swear that bullets were coming from all sides of the NDS. I sent them ammunition — this is called ‘management.’ I’m not selling out this country. I’m not a coward.”

Participants at the meeting also repeatedly suggested that Taliban sympathizers had allowed the militants to escape and that Iran had a role in helping the Taliban in Farah and elsewhere in western Afghanistan near Iran’s border.

No attendee offered direct evidence of Iranian involvement in last week’s attack on Farah or similar proof of direct assistance from Tehran to Taliban forces in the province. Yet none was in doubt about such aid.

“We don’t have a factory in Farah that manufactures ammunition or laser-equipped weapons,” said Abdul Sattar Hussaini, referring to the Taliban’s armory. “We aren’t fighting with the Taliban; we’re fighting with Iran.”

	The Afghan government echoes that sentiment. The Taliban denies any Iranian involvement. Iran says Afghanistan's problems aren't caused by Iran.

<b>HEADLINE</b>	<b>05/21 Son of police captain pleads guilty in plot</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/05/21/son-boston-bombing-1st-responder-pleads-guilty-to-terrorist-bomb-plot.html">http://www.foxnews.com/us/2018/05/21/son-boston-bombing-1st-responder-pleads-guilty-to-terrorist-bomb-plot.html</a>
<b>GIST</b>	<p>The son of a police captain who was one of the first responders at the scene of the 2013 Boston Marathon bombing pleaded guilty Monday to plotting an ISIS-style attack.</p> <p>Alexander Ciccolo faces 20 years in prison for plotting to use guns and homemade bombs to attack a college campus to support the Islamic State group. Sentencing has been scheduled for September.</p> <p>Ciccolo was arrested in July 2015 after he received four guns he ordered from a person who was cooperating with the FBI, as Fox News previously reported. Boston police Capt. Robert Ciccolo tipped off authorities after his son said he wanted to join the Islamic State group.</p> <p>Ciccolo, 25, initially was charged only with being a felon in possession of a firearm and stabbing a nurse in the head with a pen after he was brought to jail. But he later was indicted on attempting to provide material support to a foreign terrorist organization and attempting to use weapons of mass destruction.</p> <p>Ciccolo, who went by the name Ali Al Amriki, pleaded guilty to all charges. His plea came a month before he was set to go on trial.</p> <p>His lawyer did not immediately respond to an email seeking comment.</p> <p>Prosecutors said Ciccolo told the person cooperating with authorities that he planned to commit acts of terrorism to support ISIS, including attacking an unidentified university using assault rifles and homemade bombs similar to the pressure cooker bombs used in the deadly 2013 Boston Marathon attack. The bombing at the marathon finish line killed three people and wounded more than 260 others.</p> <p>Ciccolo was seen buying a pressure cooker shortly before his arrest, prosecutors said.</p> <p>Prosecutors say agents found partially made Molotov cocktails in Ciccolo's apartment after he was</p>

	<p>arrested. Investigators said posts on Ciccolo's Facebook page included a photo of a dead American soldier that said "Thank you Islamic State!"</p> <p>Federal authorities said Ciccolo's case is a reminder that 'homegrown' radicalization remains a threat and that citizens must speak up when they become aware of a potential threat.</p> <p>"Any material support of a terrorist organization threatens our national security, and had Mr. Ciccolo's efforts to advance his agenda not been thwarted by the FBI's Joint Terrorism Task Force, countless lives could have been lost in a lethal terrorist attack," Harold Shaw, special agent in charge of the FBI's Boston field office, said in a statement.</p> <p>Ciccolo's mother, Shelley MacInnes, told New England Public Radio last year that her son was "very compassionate" and "would not hurt a fly." He converted to Islam a few years ago, MacInnes said.</p>

<b>HEADLINE</b>	<b>05/22 Manchester bombing: 1yr observance</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/05/22/europe/manchester-bombing-anniversary-intl/index.html">https://www.cnn.com/2018/05/22/europe/manchester-bombing-anniversary-intl/index.html</a>
<b>GIST</b>	<p>(CNN)Ariana Grande paid tribute to the city of Manchester on Tuesday to mark the one-year anniversary of the terror attack that killed 22 people attending her concert.</p> <p>Suicide bomber Salman Abedi carried out the attack as thousands of people streamed out of the Manchester Arena on May 22, 2017.</p> <p>The American singer Grande, who visited the injured in hospital in the wake of the bombing and returned just two weeks later to host a fund-raising concert, wrote on Twitter: "Thinking of you all today and every day I love you with all of me and am sending you all of the light and warmth I have to offer on this challenging day."</p> <p>Manchester will mark the day with a series of events including a memorial service at the city's cathedral and a musical tribute which will take place in the evening.</p> <p>UK Prime Minister Theresa May and Prince William, the Duke of Cambridge, will attend the cathedral service, along with families of the victims, the injured, emergency services and local and national leaders. There will also be a minute's silence held at 2.30pm.</p> <p>Writing in the Manchester Evening News Tuesday, May paid tribute to the city's courage and spirit in the aftermath of the attack.</p> <p>"Today my thoughts and prayers are with those who were lost on that terrible night, their loved ones who have so bravely battled to rebuild their lives; those who have courageously fought to overcome physical injury or mental scars; our first responders and emergency services and those volunteers and professionals who are continuing to help this community heal," May wrote.</p> <p>"All of you -- and many more in this great city - are the very best of what this country stands for."</p> <p>The cathedral service will be shown on a big screen in the city as well as in other cities across Britain, including York, Liverpool and Glasgow.</p> <p>Later Tuesday, more than 3,000 singers from local choirs will come together to mark the anniversary in Albert Square.</p> <p>One of the groups performing are the Manchester Survivors Choir, a group made up of those who were there on the night of the attack, and a local school choir which performed on stage with Grande at the One Love concert.</p>

	Bells will ring out across the city center at 10:31 p.m. to mark the exact moment of the explosion last year.

<b>HEADLINE</b>	<b>05/22 Afghan official: Taliban kill 14 police</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/14-police-killed-taliban-attacks-eastern-afghanistan-55343891?">https://abcnews.go.com/International/wireStory/14-police-killed-taliban-attacks-eastern-afghanistan-55343891?</a>
<b>GIST</b>	<p>The Taliban launched a wave of attacks in Afghanistan's eastern province of Ghazni, killing at least 14 police officers, including a district police chief and a reserve unit's commander, Afghan officials said Tuesday.</p> <p>Provincial council member Hassan Reza Yusoufi said seven of the officers were killed in the district of Dih Yak, including Faizullah Toofan, the police chief, and reserve commander Haji Baraket. Another seven were killed in Jaghatu district.</p> <p>The attacks started on Monday night and continued on Tuesday in Dih Yak, Jaghatu, Ajristan and Qarabagh districts, according to Arif Noori, spokesman for the provincial governor.</p> <p>Noori said at least 12 other members of the security forces were wounded in the attacks in Dih Yak and Jaghatu districts.</p> <p>Taliban fighters stormed several checkpoints in Dih Yak and Jaghatu, setting off intense battles there, said Latifa Akbari, the head of the provincial council in Ghazni.</p> <p>Taliban spokesman Zabihullah Mujahid claimed responsibility for the attacks in a statement to the media. He claimed the Jaghatu district headquarters was captured as well as several police checkpoints in Dih Yak.</p>

<b>HEADLINE</b>	<b>05/21 Military shifts focus back to Afghanistan</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/05/21/as-isis-targets-disappear-in-iraq-and-syria-us-military-shifts-focus-back-to-afghanistan.html">http://www.foxnews.com/world/2018/05/21/as-isis-targets-disappear-in-iraq-and-syria-us-military-shifts-focus-back-to-afghanistan.html</a>
<b>GIST</b>	<p>As the war against the Islamic State terror group winds down in Iraq and Syria, the U.S. military is increasingly turning its attention to Afghanistan.</p> <p>In April 2017, American and allied jets dropped over 3,000 bombs on ISIS in Iraq and Syria.</p> <p>But a year later, aircrafts dropped just 254 bombs, a sign of how much the war against ISIS has changed, according to a new strike report released over the weekend from the U.S. Air Force.</p> <p>Throughout April, the U.S. military dropped the second-highest amount of bombs in Afghanistan in six-and-a-half years, the Air Force report said. The 562 bombs dropped in Afghanistan last month were more than the combined March and April totals in Iraq and Syria.</p> <p>As of early May, ISIS holds only two small pockets of territory in eastern Syria, and none in Iraq.</p> <p>U.S.-backed fighters from the Syrian Democratic Forces (SDF) have since returned to eastern Syria following Turkey's incursion into northwest Syria, drawing Kurdish fighters from the fight against ISIS. The SDF recently announced it is once again fully committed to defeating ISIS.</p> <p>Air Force A-10 jets and drones were recently called to thwart a battle against the Taliban in western Afghanistan, when the city of Farah was threatened.</p>

	<p>U.S. Forces Afghanistan released a video showing 28 Taliban fighters getting mowed down by American drones in Farah Province, which borders Iran.</p> <p>The Pentagon wouldn't rule out Tehran's influence.</p> <p>"I don't think you can ever rule out how much Iran interferes throughout this region. Iran remains the most destabilizing factor in the Middle East. So no, I don't think you can ever rule out their mischief," Pentagon spokesperson Dana W. White said at a press conference at the Pentagon Thursday.</p> <p>White didn't offer any specific details about the battle last week.</p>

<b>HEADLINE</b>	<b>05/21 World's looming dry water taps</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/best-countries/articles/2018-05-21/lack-of-clean-water-fuels-growing-global-health-crises-un-warns">https://www.usnews.com/news/best-countries/articles/2018-05-21/lack-of-clean-water-fuels-growing-global-health-crises-un-warns</a>
<b>GIST</b>	<p>LIMA, Peru — "We are the poorest of the poor. Why do we have to pay the most?" asks Diana Ureta as she washes a bucket of potatoes using turbid water fetched in a jug from a discolored plastic barrel beside her front door.</p> <p>Two chickens peck at the uneven dirt floor while her 4-year-old daughter, dressed in a baggy, stained T-shirt, watches her mother ferrying yet another quart from the barrel back to the kitchen.</p> <p>Like most of her neighbors here in the Lomo de Corvina neighborhood of Villa El Salvador, a gritty suburb sprawling on the dusty Andean foothills southeast of Lima, the Peruvian capital, Ureta has neither running water nor sewerage.</p> <p>Cooking and cleaning up afterward are one of many daily ordeals. The family, which includes her 38-year-old mototaxi driver husband Nico Catunta, three children, two nephews, and Catunta's 78-year-old father, all share a single "dry" toilet, essentially a hole in the ground. Bathing is in a cement lined tub set in the ground, with cold water given that the family has no electricity and cannot afford gas.</p> <p>Ureta and Catunta are among an estimated 1.2 million residents in this city of 10 million who depend on an unregulated fleet of privately owned tanker trucks for their water needs. The water supply challenge is compounded by Lima's geography: it is the world's second most-populous city, after Cairo, located in a desert.</p> <p>The trucks pass daily through the neighborhood, selling water at around 20 sols (just over \$6) per cubic meter – compared to the 1.3 sols per cubic meter that SEDAPAL, the Lima water utility, charges more-affluent consumers for potable tap water.</p> <p>The trucks' water is often untreated, sucked up from any available source, including streams and even ditches. Some owners conscientiously keep the insides of the tankers clean. Others do not. "We have to boil the water we use for cooking or to drink," says Ureta, 30. "That is another cost. We use firewood and it takes up so much time every day."</p> <p>Ureta and her family's story is typical of some 40 percent of the world's population, roughly 3 billion people, who suffer water scarcity in some form, according to the United Nations Development Programme. It's Sustainable Development Goals aim to ensure "universal and equitable access to safe and affordable drinking water" for all by 2030.</p> <p>The number of people without reliable access to clean water is expected to rise further before it eventually</p>

falls. Meanwhile, 2.4 billion people lack access to toilets or other basic sanitation. No wonder then that 1.8 billion rely on water sources that are contaminated with fecal matter, according to the multilateral agency.

The result is a global public health crisis, with high levels of malnutrition, anemia, diarrhea and other diseases directly attributable to communities' enforced reliance on unclean water sources.

#### 'Day Zero' Approaching for Many Countries

Climate change, a global population boom and rapid urban growth have created an unholy cocktail of challenges that makes the UNDP objective "very ambitious," says Leo Heller, the U.N. Special Rapporteur on Water and Sanitation. "We will have to see in a few years' time if we are on track."

Yet despite that, Heller insists, the problem is not insufficient water supplies but rather inadequate public policy with municipal and national governments frequently failing to prepare for the hydrologically stressed present, never mind the future.

The most obvious current example is Cape Town, which is now forecast to hit "Day Zero" – when the South African city runs completely dry – sometime next year.

However, numerous regions around the world, particularly in the Middle East, sub-Saharan Africa and various parts of Latin America from Mexico to Bolivia, are all facing similar problems. So, too, is a broad swath of the Southwestern United States, particularly Arizona, California, and New Mexico.

In each area, the challenge is distinct and Day Zero may yet be a long way off – but it will eventually arrive unless authorities, business and citizens manage water use in new and more strategic ways.

"What happened in Cape Town?" asks Heller. "Governments cannot say that climate change is a surprise. We have known this was coming for a long time. This is a question of planning. Good infrastructure and systems are essential."

"We know that the quantity of surface water and groundwater fluctuates over the seasons. That is only going to get worse going forward. We need to have the flexibility and adaptability to cope with that."

#### Peru's Challenge: Melting Glaciers, Growing Urban Populations

Few places may be as hydrologically complex as Peru. As the source of the Amazon River, the country is unusually blessed with water resources. However, roughly two-thirds of its 31 million people live on the other side of the Andes, on the arid coast, where there is less than one inch of average annual rainfall.

Indeed, the Incas and other large pre-Columbian population centers were located in the mountains, where there is no shortage of precipitation. It was only thanks to the conquering Spaniards, with their limited environmental awareness and need for a Pacific port to transport gold and silver back to Europe, that Lima was founded in the dust beside the Pacific.

That problematic historical legacy has been compounded in recent decades with massive migration from Peru's mountains and jungles to the capital. Many of the impoverished new arrivals end up, like Ureta and Catunta, squatting on unoccupied and marginal land on the urban outskirts.

That has created a nightmare for SEDAPAL, which is now scrambling to catch up with the shantytowns springing up on often steep terrain around Lima. "Putting a pipe up to the top of a hill is difficult and costly," says Yolanda Andia, the utility's head of production and distribution.

"It's not just the pipe. You need a series of pumps as well. Water doesn't run uphill. If it were up to SEDAPAL, we would have people settling in a more ordered fashion."

Currently, Lima's people require 27 cubic meters of water per second, yet the cities' three seasonal rivers

	<p>have an average flow of just 23 cubic meters per second. Although rainfall patterns in the watersheds that supply Lima, high up in the mountains, are declining and glaciers vanishing, SEDAPAL is investing nearly \$7 billion in the next four years to bridge that gap.</p> <p>New infrastructure will include a desalination plant on the coast just south of the capital, and more high-altitude reservoirs to store precipitation from the rainy season that approximately coincides with the northern winter.</p> <p>Yet for many of Lima's poorest residents desperate for potable tap water, bureaucracy is actually a bigger hurdle than climactic limitations.</p>

<b>HEADLINE</b>	<b>05/22 Sweden issues war survival manual</b>
<b>SOURCE</b>	<a href="http://time.com/5286505/sweden-war-preparation-pamphlet/">http://time.com/5286505/sweden-war-preparation-pamphlet/</a>
<b>GIST</b>	<p>Sweden has not gone to war with another country for over two centuries, but that hasn't stopped the government from reissuing an emergency manual from World War II that advises citizens on how best to cope with hypothetical hostilities.</p> <p>The newly updated 20-page pamphlet, entitled Om krisen eller kriget kommer ('If crisis or war comes'), offers strategies for handling everything from cyber attacks and terrorism to climate change, food shortages and fake news.</p> <p>"What would you do if your everyday life was turned upside down?" the English language version of the manual begins.</p> <p>Since supplies could run low during a crisis, the leaflet provides checklists of what to stock up on, including mineral water, wet wipes and tinned hummus. It also offers tips on where to find bomb shelters, what to do without access to ATMs, cellphones or the internet, and how to spot propaganda.</p> <p>"Although Sweden is safer than many other countries, there are still threats to our security and independence," the brochure says. "If you are prepared, you are contributing to improving the ability of the country as a whole to cope with a major strain."</p> <p>The illustrated instructions went online Monday and are being sent to all 4.8 million households in the country in the first such public awareness campaign since 1961. The handbook was last updated for government officials' use during the Cold War, according to the Guardian.</p> <p>The newly minted pamphlets do not specify an attacker, but their release comes amid escalating security concerns following Russia's annexation of Crimea in 2014. Sweden has accused Moscow of repeatedly infringing on its airspace and territorial waters — claims the Kremlin dismisses as "Russiaphobia."</p> <p>Sweden began increasing its military spending in 2016, reversing years of cuts. It also reinstated the military draft last year, citing Russian assertiveness as one of the justifications, and is considering joining NATO.</p> <p>In the event of a "heightened state of alert," the pamphlet emphasizes the expectation that everyone can be marshaled for Sweden's "total defense."</p> <p>"If Sweden is attacked by another country, we will never give up," the publication reads. "All information to the effect that resistance is to cease is false."</p>

<b>HEADLINE</b>	<b>05/21 China kicks boats out South China Sea</b>
-----------------	--

SOURCE	<a href="https://www.upi.com/Top_News/World-News/2018/05/21/Report-China-drives-boats-out-of-South-China-Sea/8721526908566/?utm_source=fp&amp;utm_campaign=ts_tn_int&amp;utm_medium=5">https://www.upi.com/Top_News/World-News/2018/05/21/Report-China-drives-boats-out-of-South-China-Sea/8721526908566/?utm_source=fp&amp;utm_campaign=ts_tn_int&amp;utm_medium=5</a>
GIST	<p>May 21 (UPI) -- China chased out 10 vessels of foreign origin after searching more than 40 fishing boats in the South China Sea, an international body of water China has claimed as its own.</p> <p>Hong Kong newspaper Ming Pao reported Monday a convoy of Chinese naval ships expelled the 10 boats during a "special patrol mission" near the Paracel Islands on May 4.</p> <p>China is believed to have constructed military facilities on the islands that are also claimed by Vietnam.</p> <p>According to the head of the Chinese convoy that includes patrol boats, the boats that were chased out were interfering with Chinese fishing privileges.</p> <p>"The foreign fishing boats were violating our countrymen's fishing rights and engaging in fishing activities. Our navy is to respond immediately in response to the law," the convoy chief's office said, adding, "We effectively defended our maritime sovereignty through the patrol activity."</p> <p>The South China Sea is home to a wide array of natural resources, including oil and gas, and \$3.4 trillion in trade is reportedly transported through the waters annually.</p> <p>The report of Chinese expulsion of foreign boats comes at a time when Beijing is promoting its military presence on reclaimed islands.</p>

HEADLINE	<b>05/21 Chehalis waitress receives \$3,000 tip</b>
SOURCE	<a href="http://www.khq.com/story/38243530/stranger-leaves-washington-waitress-a-3000-tip">http://www.khq.com/story/38243530/stranger-leaves-washington-waitress-a-3000-tip</a>
GIST	<p>CHEHALIS, Wash. - People tend to leave a couple of extra dollars for good service while dining out. However, one waitress from Lewis County, Washington, got more than just a couple of extra dollars.</p> <p>Waitress Michelle Bozemen got a \$3,000 tip on a \$44 bill at the Rib Eye restaurant in Chehalis, Washington, Sunday.</p> <p>"I was shocked, and I looked at it and I thought no, that can't be right, and then I showed my manager, then we flipped it over and read the note and went, 'oh,'" Bozemen said.</p> <p>On the back of the tab, the big tipper wrote an explanation saying, "Thanks for smiling. You work hard and the country is in a bad place." Bozemen's smile seemed to be just what the costumer needed. He told her to enjoy the money and requested she do something good for someone else.</p> <p>Bozemen has been a waitress for more than 20 years to support her three kids as a single mom. Her regulars say no one is more deserving.</p> <p>"I just really want to thank them and say what a wonderful thing that was for them to do for a stranger," Bozemen said.</p> <p>She shared some of the tip with her coworkers and plans on doing work around the house and spoiling her seven grandchildren.</p> <p>But Bozemen is using the rest of the tip to pay for a trip to Ireland she's always dreamed about.</p> <p>"I'll have a beer, I'll have a Guinness for them."</p>

HEADLINE	<b>05/22 NKorea dismantling or destroying evidence?</b>
SOURCE	<a href="https://www.cnn.com/2018/05/22/asia/north-korea-destroy-nuclear-site-intl/index.html">https://www.cnn.com/2018/05/22/asia/north-korea-destroy-nuclear-site-intl/index.html</a>
GIST	<p>(CNN)Cheryl Rofer is a chemist who spent 35 years working on environmental cleanups everywhere from Estonia to Kazakhstan, disassembling and decommissioning nuclear weapons, and overseeing the destruction of chemical weapons.</p> <p>But unlike international journalists, she is not on the list of people invited this week to witness the destruction of North Korea's Punggye-ri nuclear test site.</p> <p>"I was hoping you were going and I could talk you into bringing me along," she said to CNN.</p> <p>The small contingent of international journalists invited into North Korea departed Beijing Tuesday for Wonsan, a city on the country's east coast.</p> <p>No weapons inspectors or individuals with any kind of expertise were expected to attend the event, which North Korea has said would "ensure transparency of discontinuance of the nuclear test."</p> <p>When it made the announcement on April 20, the Workers' Party of Korea's Seventh Central Committee declared that the country had "realized nuclear weaponization," and to ensure the end of all nuclear testing it would "discard" the test site in the north.</p> <p>Journalists from the US, China, Russia and the UK have all been invited to witness the event. They're expected to view the activity from a distance, without any real opportunity to get a sense of what might have happened inside Punggye-ri's tunnels.</p> <p>Like trampling on a crime scene</p> <p>Bruce Bechtol says evidence that might have been collected will now be lost to the world.</p> <p>"It's kind of like a murder scene where they let people like you and me trample around in it, it's the same concept," said Bechtol, a professor of political science at Angelo State University who has authored several books on North Korea.</p> <p>"The North Koreans have conducted all these tests here, every single weapons test, so if they let experts in to look at these tunnels before they let anyone else in that would be potentially for us an intelligence boon," he said.</p> <p>Some observers have said that the site had become partially unusable anyway due to the damage incurred after six nuclear tests since 2006, while others say the site was still in operation only months ago.</p> <p>Regardless of its operating status, there is still much to be gained from allowing experts in to look around and collect various residue, says Rofer.</p> <p>"If I were going I would want to bring some capability of taking samples, and I would also want to bring a geologist with me. I'd want to have a radiation counter, I would want to go into the tunnel to see if parts of it have caved in in the back, and I would want to take radiation measurements."</p> <p>All those samples and tests could yield information on the kinds of weapons that were being tested, she said.</p> <p>"Isotope measurements could tell you about the design of the device, it would tell you what kind of bombs they're making, what they're making them out of, how much uranium and plutonium is in the bombs. We might be able to infer what they're planning and the shape of their progress," she said.</p> <p>All of that information, experts say, could then be fed back to negotiators to give them a stronger hand in dealing with the Kim regime, including giving them the ability to know whether they are truly extracting</p>

concessions, or just cosmetic changes.

A feeling of déjà vu

The prospect of such a public demolition gives Melissa Hanham, a senior research associate at the James Martin Center for Nonproliferation Studies, a sense of déjà vu.

"A lot of this reminds me of the theater of when they destroyed the cooling tower under the Bush administration, and the media was invited to observe the tower exploding and gave a good visual which the Bush administration and the Kim family promoted," she said.

"It's not irreversible, they eventually found a different way to cool the reactor."

In 2008, North Korea destroyed a water cooling tower at a facility state officials admitted to using to extract plutonium to build nuclear weapons. The massive explosion at the Yongbyon facility was meant to symbolize the end of Pyongyang's nuclear program.

During that time, under pressure from restrictive sanctions and international isolation, the North Koreans were more forthcoming about the extent of their program. Along with the journalists invited to watch the event were US State Department officials and observers from the International Atomic Energy Agency, CNN reported.

Among the disclosures North Korea made at the time about its nuclear program was the revelation that it had produced roughly 40 kilograms of enriched plutonium, something the US State Department said was enough for about seven nuclear bombs.

In response, then-US President George W. Bush said he would lift some US sanctions against North Korea and remove it from the administration's list of state sponsors of terrorism.

It later emerged that the North Koreans had been building a separate facility to continue producing fissile material without disclosing it to international authorities.

Last November, President Donald Trump returned North Korea to the state sponsors of terrorism list.

Critical to understanding North Korea's nuclear history

The world is missing an opportunity in allowing North Korea to unilaterally dismantle the site without having a chance to inspect it first, says Cheon Seong Whun a visiting research fellow at the Asan Institute for Policy Studies.

"It's very critical evidence that helps us understand the history of North Korea's nuclear program, and if North Korea is sincere about giving up its nuclear weapons," he said.

"What they have to do is provide all necessary information and documents to the international community and then invite UN inspections, North Korea doesn't have to dismantle this on its own, this isn't something that should be done in haste."

Cheon, a former South Korean government official who worked in the defense and unification departments, argues rather, that North Korea might be destroying the site now to avoid providing access to it down the road, possibly as part of a concession from a summit with Trump that is planned for June 12 but currently looking uncertain.

"North Korea's arbitrary action to dismantle this facility on its own, this is not something that we can believe is part of North Korea's declared aim of denuclearization. It's nothing more than destroying evidence."

	<p>For longtime North Korea observers, another indicator of Kim Jong Un's motives lie in the timing of the scheduled demolition -- it's happening at the same time South Korean leader Moon Jae-in is visiting President Trump at the White House.</p> <p>"Look at the timing," said Cheon. "This is the time Moon is meeting Trump in Washington, this isn't just a coincidence, he wants to take advantage of this event with political propaganda."</p> <p>Rofer believes even if parts of the tunnels are blown up, they can always be unearthed later should the North Koreans want to reuse the site.</p> <p>"It is absolutely correct that we [the international community] seem to be making all the concessions," she said.</p>

<b>HEADLINE</b>	<b>05/21 BP detained women speaking Spanish</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/latino/border-patrol-agent-detains-women-speaking-spanish-montana-gas-station-n876096">https://www.nbcnews.com/news/latino/border-patrol-agent-detains-women-speaking-spanish-montana-gas-station-n876096</a>
<b>GIST</b>	<p>Video taken by a Montana woman as she and her friend were questioned and detained by a U.S. Border Patrol agent after he overheard them speaking Spanish at a gas station has caught the attention of border patrol officials and civil liberties groups.</p> <p>Ana Suda and Mimi Hernandez — both U.S. citizens — were chatting in Spanish as they went to buy eggs and milk around midnight Wednesday in Havre, a small town about 35 miles from the Canadian border. Suda said that's when a border patrol agent overheard them.</p> <p>"He asked us where we were born, so I looked at him and I said, 'Are you serious?'" Suda told NBC News on Monday. "He said, 'I'm very serious.'"</p> <p>The agent then asked Suda and Hernandez for their identification, she added.</p> <p>They went outside to the parking lot, and Suda began to record on her cellphone.</p> <p>In the video, Suda asked the agent why he was asking for their IDs.</p> <p>"Ma'am, the reason I asked you for your ID is because I came in here, and I saw that you guys are speaking Spanish, which is very unheard of up here," the agent, who identified himself as Agent O'Neill, said in the video.</p> <p>When Suda, 37, asked if she and her friend were being racially profiled, the agent responded no.</p> <p>"It has nothing to do with that," he said. "It's the fact that it has to do with you guys speaking Spanish in the store, in a state where it's predominantly English-speaking."</p> <p>Suda said she began recording because she was uncomfortable and afraid.</p> <p>"I picked up my phone and started recording him because I wasn't doing anything wrong," she said, adding, "That is the only way you can defend yourself."</p> <p>She said the agent took their IDs and kept them in the parking lot for about 35 to 40 minutes.</p> <p>"He didn't say anything when he gave me back the documentation. He said something like 'Thank you, you are free to go,'" Suda said.</p> <p>The incident in Montana is the latest encounter over speaking Spanish to go viral after a New York City</p>

	<p>lawyer's racist rant at a lunch spot last Tuesday showed him threatening to call immigration agents on workers.</p> <p>Suda said she still believes she and Hernandez were being racially profiled. Both are Mexican-American and speak fluent Spanish. She said she was born in El Paso, Texas, and raised across the border in Mexico, but has spent the last 14 years in the U.S. with her husband and 7-year-old daughter.</p> <p>Hernandez was born in central California, she said.</p> <p>A U.S. Customs and Border Protection spokesperson said in a statement that the incident was being reviewed to make sure appropriate policies were followed. Agents have broader authority when operating within 100 miles of a U.S. border, such as putting up checkpoints and questioning people in their vehicles about their citizenship — but CBP policy also says agents cannot stop or detain someone solely on their race or ethnicity.</p> <p>Agents have the "authority to question individuals, make arrests, and take and consider evidence," the spokesperson added. "Decisions to question individuals are based on a variety of factors for which Border Patrol agents are well-trained."</p> <p>The ACLU did not immediately respond to a request for comment, but said in a tweet: "Speaking Spanish is not a valid reason for Border Patrol to question or detain you."</p>

<b>HEADLINE</b>	<b>05/21 US Postal Service: scratch-sniff stamps</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/scratch-sniff-stamps-coming-post-office/story?id=55330195">https://abcnews.go.com/US/scratch-sniff-stamps-coming-post-office/story?id=55330195</a>
<b>GIST</b>	<p>Scratch-and-sniff stamps are coming to a post office near you, the United States Postal Service announced on Monday.</p> <p>With the warm summer weather moving in, Americans love to cool off with a refreshing ice pop on a hot day, bringing inspiration to the latest Forever stamp from the USPS. The colorful stamps feature different designs, shapes and flavors of ice cream pops.</p> <p>The watercolor illustrations of the treats are the work of Margaret Berg of Santa Monica, California, while art director Antonio Alcala designed the stamps with Leslie Badani, both of Alexandria, Virginia. Each stamp is designed with two different ice cream pops on it, with 10 different designs in the booklet.</p> <p>The Frozen Treats Forever stamps will be introduced in Austin, Texas, at the Thinkery Children's Museum on June 20 at 6 p.m. CDT in a special dedication ceremony.</p>

<b>HEADLINE</b>	<b>05/21 Child exposures to ADHD drugs on rise</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Health_News/2018/05/21/Study-Calls-to-poison-centers-in-child-ADHD-drug-cases-up-64-percent/3991526914975/?utm_source=fp&amp;utm_campaign=ts_hn&amp;utm_medium=13">https://www.upi.com/Health_News/2018/05/21/Study-Calls-to-poison-centers-in-child-ADHD-drug-cases-up-64-percent/3991526914975/?utm_source=fp&amp;utm_campaign=ts_hn&amp;utm_medium=13</a>
<b>GIST</b>	<p>May 21 (UPI) -- Child exposure to ADHD drugs is increasing in the United States -- marked by a jump of more than 60 percent over a 14-year period, a new study showed Monday.</p> <p>The study in the journal of the American Academy of Pediatrics looked at calls to U.S. poison control centers to see if ADHD exposures were on the rise. The answer was yes.</p> <p>The study found more than 156,000 calls for unintentional and intentional exposures of the drugs to U.S. children and adolescents between 2000 and 2014 -- an increase of 64 percent.</p>

	<p>The report said exposures increased 71 percent from 2000 to 2011, and decreased 6 percent from 2011 to 2014. More than three quarters involved children under 12.</p> <p>"[ADHD] is the most commonly diagnosed neurobehaviorial disorder in children," said Dr. Gary Smith of the Nationwide Children's Hospital. "Almost 70 percent of children with ADHD are taking medication and the number of children taking ADHD medications is increasing in this country."</p> <p>The study found the most common reason for exposure was therapeutic error, at about 42 percent. Intentional exposures, including suicide and drug abuse, accounted for half for those aged 13-19.</p> <p>The majority, 60 percent, did not seek treatment. Six percent were hospitalized and three died.</p> <p>"Exposures associated with suspected suicide or medication abuse and misuse among adolescents are of particular concern," the study said.</p> <p>"Unintentional and intentional pediatric exposures to ADHD medications are an increasing problem in the United States, affecting children of all ages."</p>

<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-mideast-crisis-syria-russia/russia-shoots-down-unidentified-drone-near-air-base-in-syria-ria-idUSKCN1IM29C">https://www.reuters.com/article/us-mideast-crisis-syria-russia/russia-shoots-down-unidentified-drone-near-air-base-in-syria-ria-idUSKCN1IM29C</a>
<b>GIST</b>	<p>MOSCOW (Reuters) - Russia's military said on Monday it had shot down an unidentified drone that came close to its Syrian air base at Hmeimim, RIA news agency said, citing the Russian Defence Ministry.</p> <p>"There are neither casualties nor physical damage. Russia's Hmeimim air base is operating as normal," it said.</p> <p>The British-based war monitoring group Syrian Observatory for Human Rights said explosions had been heard near the base and appeared to have come from Russian air defenses confronting an attack.</p>

<b>HEADLINE</b>	<b>05/21 Judge: teen must repay \$36M for wildfire</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/teen-who-started-eagle-creek-fire-oregon-ordered-to-pay-36-million-2018-05-21/">https://www.cbsnews.com/news/teen-who-started-eagle-creek-fire-oregon-ordered-to-pay-36-million-2018-05-21/</a>
<b>GIST</b>	<p>PORTLAND, Ore. -- The teen who plead guilty to starting last year's destructive Eagle Creek Fire has been ordered to pay roughly \$36.6 million to cover damages caused by the blaze, CBS affiliate KOIN-TV reports. The boy, who was 15 at the time, said he started the fire by throwing a lit firecracker into the woods in September.</p> <p>District Judge John Olson issued his decision Monday after a lawyer for the teen argued that the cost of restitution was "absurd." Olson said his judgment does not violate the constitution and is "clearly proportionate to the offense" because "it does not exceed the financial damages caused by the youth."</p> <p>The fire burned more than 48,000 acres of forest land. Eleven requests for restitution totaling \$36,618,330.24 were submitted to the court, covering the costs of firefighting, repair and restoration to the gorge and damage to homes.</p> <p>The restitution is solely the responsibility of the teen, not his parents, who came to the U.S. from Ukraine in 2000.</p> <p>The court acknowledged that the teen would not be able to pay the full judgement and will allow him to</p>

	<p>establish a payment plan. After 10 years, the court may grant a full or partial halt of the restitution if the teen completes probation and doesn't commit any additional offenses.</p> <p>In February, the teen pleaded guilty to eight counts of reckless burning of public and private property, two counts of depositing burning materials on forest land, and one count each of second-degree criminal mischief and reckless endangerment of others -- all misdemeanors.</p> <p>Olson sentenced him to more than two and a half months of community service and five years of probation, The Oregonian/OregonLive reported at the time.</p>

<b>HEADLINE</b>	<b>05/21 Feds: \$16M counterfeit items seized</b>
<b>SOURCE</b>	<a href="https://www.chron.com/news/houston-texas/texas/article/Feds-say-counterfeit-items-worth-16-million-12932599.php">https://www.chron.com/news/houston-texas/texas/article/Feds-say-counterfeit-items-worth-16-million-12932599.php</a>
<b>GIST</b>	<p>Federal authorities on Monday announced that they had seized nearly 79,000 counterfeit items valued at more than \$16 million that included apparel and consumer electronics from luxury and sporting trademark designers such as Hermes, Louis Vuitton, Adidas Nike, Apple, Samsung and Sony.</p> <p>A press release said the items were seized last Thursday as a result of an investigation in Laredo by special agents with U.S. Immigration and Custom's Enforcement's Homeland Security Investigations.</p> <p>"Trafficking counterfeit goods poses a triple threat," stated Tim Tubbs, deputy special agent in charge of HSI Laredo, in the press release from ICE. "Counterfeit merchandise wreaks havoc on local economies, threatens the health and safety of the American public, and funds criminal organizations engaged in other illegal activities."</p> <p>On May 17, HSI special agents conducted surveillance of a public storage facility in Laredo and observed several individuals transferring boxes from a leased storage unit to pickup trucks and vans with Mexican license plates, according to the ICE press release.</p> <p>While agents observed the storage facility, a large air courier box truck arrived to unload suspected trademark infringed merchandise to waiting pickup trucks and vans. HSI then detained and seized 275 boxes containing 78,908 items of suspected trademark-infringed merchandise from this location.</p> <p>No one was arrested in connection to this seizure. This is an ongoing investigation</p>

<b>HEADLINE</b>	<b>05/21 Seattle coin shop busted w/stolen goods</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/police-n-seattle-coin-shop-was-buying-selling-stolen-goods">http://komonews.com/news/local/police-n-seattle-coin-shop-was-buying-selling-stolen-goods</a>
<b>GIST</b>	<p>SEATTLE -- Police say a 10-month investigation into a North Seattle coin shop has resulted in the arrest of three men and the recovery of allegedly stolen goods.</p> <p>Police investigated Seattle Rare Coins in the 8600 block of Aurora Avenue North. Police allege that employees were buying stolen goods and reselling them on eBay and Offerup.com</p> <p>Investigators were able to sell purportedly stolen items on a dozen different occasions and later found some for sale online, police said.</p> <p>Investigators served a search warrant on Friday. Among the suspected stolen items recovered were electronics, power tools, knives, boating gear, clothing and health and beauty supplies. police said.</p>

	Police believe stolen items were bought for about 10 percent of their retail value. Police believe thieves then would use to the proceeds to buy drugs.

<b>HEADLINE</b>	<b>05/21 Florida airport shooter in plea deal</b>
<b>SOURCE</b>	<a href="http://www.wdtn.com/news/national/us-files-plea-deal-in-deadly-florida-airport-shooting/1191322630">http://www.wdtn.com/news/national/us-files-plea-deal-in-deadly-florida-airport-shooting/1191322630</a>
<b>GIST</b>	<p>FORT LAUDERDALE, Fla. (AP) - Federal prosecutors filed court documents Monday in which an Alaska man agreed to plead guilty to a Florida airport shooting rampage that killed five people in exchange for a life prison sentence.</p> <p>The agreement says that Esteban Santiago, 28, will plead guilty to 11 of the 22 counts against him in the attack that also left six wounded. Prosecutors reached a deal with Santiago's defense lawyers not to seek the death penalty in exchange for the guilty plea. Instead, Santiago would serve a life prison sentence plus 120 years, according to the documents, and will waive his right to appeal the sentence.</p> <p>The deal is expected to be finalized Wednesday in Miami federal court before U.S. District Judge Beth Bloom.</p> <p>The mentally troubled Santiago, of Anchorage, Alaska, acknowledged in the document that he flew on a one-way ticket from Alaska to Fort Lauderdale-Hollywood International Airport with a 9mm handgun in a checked weapons box in on Jan. 6, 2017. Santiago loaded the gun in a bathroom and came out firing, emptying two ammunition clips before lying on the floor and surrendering to police. Fifteen bullet casings were recovered.</p> <p>"He recounted how he entered a stall, removed the gun from the box, loaded it, and put it in his waistband," prosecutors wrote of Santiago's confession to investigators. "He confessed that, after he left the men's restroom, he shot the first people he encountered."</p> <p>Santiago, an Iraq war veteran who has been diagnosed as schizophrenic, initially told the FBI he was acting under some form of government mind control. Then, he changed his story to claim that he shot his victims in support of the Islamic State extremist group, but no ties to terrorist groups have been found.</p> <p>Since his arrest, Santiago has been treated for his mental illness and his attorneys have repeatedly said he is competent to understand the legal proceedings. Prior to the shooting, he was briefly treated at an Anchorage mental institution after showing up at the local FBI office claiming to be hearing voices, then released with no restrictions on owning a gun, authorities have said.</p> <p>The statement of facts filed Monday - signed by Santiago and his attorneys - lays out in detail the actions Santiago took that day, as well as a few new pieces of evidence. For instance, the document states that Santiago researched the layout of the Los Angeles International Airport three days before flying to Florida, but does not indicate why he did that or why he ultimately chose Florida.</p> <p>It also describes the injuries suffered by the six wounded people along with the multiple surgeries and medical procedures they have had to endure.</p>

<b>HEADLINE</b>	<b>05/21 Interpol database inquiries jump 200%</b>
<b>SOURCE</b>	<a href="https://homelandprepnews.com/stories/28528-interpol-information-database-inquiries-jump-200-percent/">https://homelandprepnews.com/stories/28528-interpol-information-database-inquiries-jump-200-percent/</a>
<b>GIST</b>	Use of the International Criminal Police Organization (INTERPOL) global databases has been on the rise

in recent years amid growing threats of terrorist attacks in Europe, with inquiries to stolen and lost travel documents data increasing by more than 200 percent since 2014.

Delegates recently met at the 48th INTERPOL European Regional Conference in Dublin. Drug trafficking, online child sexual abuse, organized crime, and cybercrime were all addressed the three-day event that drew 130 senior law enforcement officers from 52 countries.

INTERPOL Secretary-General Jürgen Stock noted during the event that law enforcement agencies must adapt and evolve, particularly in the realm of data protection and information sharing.

“Data needed by national police increasingly resides outside of law enforcement. It is in open sources, in battlefields and owned by private industry,” Stock said. “To ensure officers have access to the information they need to successfully investigate cases requires data quality, reliability, and security. INTERPOL is ideally and uniquely placed to meet these needs.”

Charles Flanagan, Ireland’s Minister for Justice and Equality, said INTERPOL’s work over the last 100 years or so “epitomizes the value of police services across the world working together.”

“Thanks to the excellent cooperation fostered by INTERPOL, police officers here in Ireland and across the world are provided with invaluable support in their efforts to protect citizens from terrorism and crime in all its many forms,” Flanagan said. “The global network of INTERPOL National Bureaus that operate around the clock handling enquiries plays a vital role in this, and I’d like to pay tribute to the Irish INTERPOL National Central Bureau based in Garda Headquarters for its contribution to this network, and also to the members of An Garda Síochána who have served in INTERPOL’s General Secretariat Headquarters in Lyon over the years.”

Meanwhile, INTERPOL President Meng Hongwei said police agencies across Europe have made significant contributions toward global security.

<b>HEADLINE</b>	<b>05/22 Mass school shootings: small towns</b>
<b>SOURCE</b>	<a href="https://apnews.com/8660507c56b04dd0b580b248d39d2a2c/Mass-school-shootings-mostly-happening-in-small-town-America">https://apnews.com/8660507c56b04dd0b580b248d39d2a2c/Mass-school-shootings-mostly-happening-in-small-town-America</a>
<b>GIST</b>	<p>ATLANTA (AP) — If you want to know where mass school shootings are most likely to occur, look no farther than small-town and suburban America.</p> <p>The massacre that killed 10 people at a high school in Texas last week was just the latest to happen in a small or suburban city. Of the 10 deadliest school shootings in the U.S., all but one took place in a town with fewer than 75,000 residents and the vast majority of them were in cities with fewer than 50,000 people.</p> <p>These are seemingly idyllic places to grow up: low crime rates, good schools and a sense of community where everyone seems to know your name. And it's exactly those attributes, experts say, that are why small rural and suburban towns are a breeding ground for the next school shooter.</p> <p>“Ironically it's people in small towns and suburbia who think it can't happen here. And that is exactly the type of place where it does happen,” said Peter Langman, a psychologist who has been studying school shootings for years and operates a database of school gun violence in the U.S. and abroad. “People tend to think of violence associated with cities, not violence associated with small-town America, but this type of violence is the one associated with small-town America.”</p> <p>Experts say the phenomenon is due to a variety of factors that include easy access to guns and the copycat effect of disturbed suburban and small-town teenagers emulating each other. It's also blamed on the pressures of living in small towns that make it harder for disgruntled teenagers to adjust.</p> <p>“In small-town America, it's said everybody knows everybody, and that's well and good except when you don't want everybody to know what's going on with you,” said James Alan Fox, a professor at Northeastern University who has been studying mass shootings for decades. “If things are going downhill for you, you did something wrong or someone did something wrong to you and some girl dumps you, everybody knows. So it's much harder to get away from it.</p> <p>“Whereas in the big city, where no one knows your name, that can be a good thing,” he added. “You don't have this feeling that everybody knows what you're going through. Being in a small town has its advantages in terms of a network and a sense of community but sometimes that can be a double-edged sword.”</p> <p>Parkland, Florida, where authorities say a former student in February gunned down 17 people, had just recently been voted the safest town in Florida. Newtown, Connecticut, where a shooting in 2012 at Sandy Hook Elementary School took the lives of 20 children and six adults, is a classic New England town, seemingly a world away from the crime and problems of nearby Bridgeport, one of that state's largest cities.</p> <p>The site of the Columbine High School tragedy was a Denver suburb, the Virginia Tech massacre happened in a college town of about 40,000 people. The shooting last week took place in a town of 13,000 people about 40 minutes southeast of Houston.</p> <p>The prevalence of the mass shootings in smaller cities stands in contrast to the situation in big cities like</p>

New York, Chicago and Los Angeles. They have strict gun laws and their own problems with street gun violence, but it's rare that a mass shooting has been carried out in one of their schools.

In the 1980s and 1990s, urban districts sought to make schools safer from drug- and gang-related violence, taking such steps as installing metal detectors at entrances. That is exactly what pro-gun Republicans and the National Rifle Association have been proposing in the wake of recent massacres.

Some school security and psychology experts, as well as those who have been studying mass shootings for decades, say school designs and talk of arming teachers is a simplistic approach that doesn't get at the heart of preventing it from happening. While students often have a sense that a classmate might be planning an attack or know that someone is troubled, they might be more hesitant in smaller towns to tell anyone about it, said Langman, director of SchoolShooters.info. They know each other well, visit each other's homes and families can be business associates.

"The best prevention is to catch them early before they show up with a gun rather than trying to make it hard for them once they're already at the building with a gun," he said.

Fox also said it's hard to overlook the issue of copycats — and how much that can determine the types of locations where school shootings occur.

"They're all white, male, teenagers in small towns or rural areas because they identify the other white, male teenagers in small towns or rural areas. Whereas a black kid in the Bronx or the streets of Chicago, that's not his world. He's got totally different issues he's dealing with," Fox said.

<b>HEADLINE</b>	<b>05/21 Major pot crime ring w/China ties busted</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/investigators-raid-17-illegal-grow-houses-bust-major-marijuana-crime-ring-with-china-ties">http://komonews.com/news/local/investigators-raid-17-illegal-grow-houses-bust-major-marijuana-crime-ring-with-china-ties</a>
<b>GIST</b>	<p>BURIEN, Wash. - An investigation into a major marijuana crime ring with ties to China has turned up thousands of illegal plants at nearly two dozen homes in greater Seattle area. Several people are now behind bars.</p> <p>Authorities said at a quiet home in Burien on SW 137th Street, the electricity bill was sky high—totaling \$37,000 during a three-month period.</p> <p>Prosecutors said the people there paid the bill in cash to avoid tipping off authorities. But, that didn't stop investigators.</p> <p>Last week, officers seized more than 3,000 illegally-grown marijuana plants from 17 homes in the Seattle-Tacoma area. That includes more than 430 marijuana plants at homes in South Seattle, 400 plants at a home in Kent, and 400 plants in Tacoma.</p> <p>Officers also recovered grow lights, ballasts, ducting and other equipment.</p> <p>Prosecutors said the marijuana was grown illegally and then shipped to New York's black market.</p> <p>In a statement, the U.S. Attorney Annette L. Hayes explained how far-reaching the crime is: "The defendants are charged with growing thousands of pounds of marijuana in Western Washington and then shipping it to the East Coast to take advantage of black market prices...hundreds of thousands of dollars have flowed in from China to pay for grow houses and the massive electric bills associated with them. In the mean time, the communities where these grow houses are located are dealing with a host of negative impacts including distortion of real estate markets with criminals making all cash payments at inflated prices."</p> <p>Qifeng Li went before a judge in federal court Monday. His wife Xiamin Huang was arrested and answered to charges last week. Authorities are still looking for Li's brother Qiwei Li.</p> <p>Prosecutors are now charging all three with conspiracy to manufacture and distribute marijuana.</p> <p>According to the prosecutor's office, if convicted, the defendants could get 10 years up to life in prison and be fined as much as \$10 million.</p> <p>Prosecutors said the investigation continues and more people could be arrested.</p>

<b>HEADLINE</b>	<b>05/22 Parkland 'swatting' large police response</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/south-sound-news/they-were-playing-a-game-the-17-officers-who-responded-to-help-a-teen-in-trouble-werent/754114294">https://www.kiro7.com/news/south-sound-news/they-were-playing-a-game-the-17-officers-who-responded-to-help-a-teen-in-trouble-werent/754114294</a>
<b>GIST</b>	A 21-year-old man accused of calling sheriff's deputies in a so-called "swatting" call is defending himself

against the allegations. Pierce County deputies say the report of a kidnapping last night at a Parkland apartment complex was a prank and they are labeling it "swatting."

The 21-year-old who was arrested spoke to KIRO 7 News. We are not naming him since he has not been charged, but he contends that he's a victim in this incident. The Pierce County Sheriff's Department says a 21-year-old man and 15-year-old girl were arrested after 911 calls drew police to an apartment complex in the 12700 block of C Street South in Parkland around 7 p.m. Sunday looking for children supposedly being held hostage -- a story deputies say wasn't true.

The Pierce County Sheriff's Department posted details on its Facebook page and under a lead statement which read, "If you called 911 on Sunday night in Pierce County and had significant delays or no response from law enforcement, it was due to a very poor choice by a teenage girl and an adult male. A 'swatting' prank took a large amount resources away from REAL emergencies and REAL victims."

The PCSD says it was around 6:44 p.m. Sunday when a woman called 911 to report that she had been on the phone with her son and said her son had told her his 16-year-old friend was in danger. The initial emergency had a scenario where that friend and two younger siblings were being threatened by their father, who was reportedly armed with a firearm in an unknown apartment.

The woman eventually gave dispatchers her son's phone number and they were able to get hold of him. He reported that the incident was playing out at the Heather Court apartments. He also contended that the situation was ongoing and that he was headed to the area and would meet deputies so they could speak to the victim.

He met deputies at a nearby business and was with them when authorities got on the phone with the supposed victim who couldn't give them an apartment number where the incident was taking place.

PCSD spokesperson Ed Troyer says the call drew a heavy response to the apartments late Sunday. "We were pretty much armed and took over a neighborhood because that's what we do when we hear someone's armed and going to kill somebody."

Troyer says dozens of officers raced to the complex after calls said children were being held at gunpoint by their father.

The call was so severe -- deputies abandoned real emergency calls -- but it ended up being a fake cry for help. "This is dangerous for everybody when our guys are armed and they think somebody's being held hostage by somebody in a house. Somebody in that house could have gotten hurt."

Deputies searched the apartments and checked with staff but nobody matched the description that were part of the 911 call. They also traced the 911 call back to the home a 15-year-old girl who deputies say admitted she pretended to be the victim. Deputies also arrested a 21-year-old man who they say played a role.

KIRO 7's crew met the 21-year-old man at his home and he said he feels like he was a victim. "I thought it was real ... I had no idea until after the incident was over and the cop just came over and said you were under arrest and it hit me like a brick."

He said he was frustrated the girl may have targeted him and others. "I hope I come up clean from it...and them (the culprits) paying for it, because this was just wrong." He confirmed he met police and that he had been arrested and had been in the Pierce County jail until he was released Monday. He says his court date will be July 3.

<b>HEADLINE</b>	<b>05/22 Mayor tells NYPD to stop pot arrests</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/US/2018/05/22/NYC-Mayor-Bill-de-Blasio-tells-NYPD-to-stop-marijuana-arrests/8731526967895/?utm_source=fp&amp;utm_campaign=ts_tn_us&amp;utm_medium=1">https://www.upi.com/Top_News/US/2018/05/22/NYC-Mayor-Bill-de-Blasio-tells-NYPD-to-stop-marijuana-arrests/8731526967895/?utm_source=fp&amp;utm_campaign=ts_tn_us&amp;utm_medium=1</a>
<b>GIST</b>	<p>May 22 (UPI) -- New York City Mayor Bill de Blasio this week told the NYPD not to arrest people for smoking marijuana in public and instead give them a summons.</p> <p>The policy will be part of a 30-day review of the racial disparity in marijuana arrests, the New York Daily News reported.</p> <p>It is also part of a process to better understand how to deal with marijuana legalization from a law enforcement perspective. Although de Blasio has not come out in support of marijuana legalization for recreational use, he believes it will eventually be a law-abiding way to imbibe.</p> <p>"With marijuana legalization likely to occur in our state in the near future, it is critical our city plans for the public safety, health and financial consequences involved," de Blasio said in a statement. "While I still have real concerns we must work through, it isn't difficult to see where this is headed, and any responsible policymaker must prepare for that eventuality. My focus now will be helping to craft the critical regulatory framework that must come before legalization is realized."</p> <p>NYPD Deputy Commissioner of Public Information Phil Walzak told CNN that the department is reviewing the mayor's request and could begin the policy towards the end of summer.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>05/22 UN: meth trafficking Southeast Asia</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/05/21/asia/methamphetamine-mekong-intl/index.html">https://www.cnn.com/2018/05/21/asia/methamphetamine-mekong-intl/index.html</a>
<b>GIST</b>	<p>(CNN)The production and trafficking of methamphetamine in the Mekong Delta region of Southeast Asia is rising at "alarming levels," the United Nations has warned.</p> <p>The area has long been notorious for opium and heroin, especially the so-called "Golden Triangle" of Laos, Myanmar and Thailand.</p> <p>But experts say organized criminal groups have invested in methamphetamine as a response to market forces and because it's easy to hide and move the laboratories where the drug is made.</p> <p>The warnings about the escalating drug trade came during a meeting of drug and law enforcement officials in Myanmar's capital of Naypyidaw.</p>

Myanmar Deputy Home Minister Major General Aung Soe said a regional approach was needed to squeeze the supply of materials into the region.

"A top priority for us (Myanmar) is a regional precursor strategy that will slow the supply of chemicals and pharmaceutical products into drug producing areas of the Golden Triangle," he was quoted as saying by the UNODC.

The regional drug market for both heroin and methamphetamine is estimated to be worth around \$40 billion, according to the UN's Office on Drugs and Crime (UNODC).

While opium and heroin production in the Mekong is on the decline, some countries have already performed more seizures of methamphetamine than all of 2017 combined, the UNODC said.

Methamphetamine from the region has been found and seized in large quantities across the Asia-Pacific, including in Australia, Japan, New Zealand, Malaysia, and Indonesia.

Record-breaking drug busts have also been made in Myanmar and Thailand this year, while authorities in Australia seized a record 1.2 metric tonne shipment of methamphetamine in December, though that was believed to have originated from China.

"Significant changes have been underway in the regional drug market for a number of years now," said Jeremy Douglas, the UNODC representative for Southeast Asia.

"Responding to the situation requires acknowledging some difficult realities, and agreeing to new approaches at a strategic regional level."

<b>HEADLINE</b>	<b>05/21 School shooter's father: son was bullied</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/santa-fe-high-school-shooting-suspect-dimitrios-pagourtzis-victims-latest-2018-05-21/">https://www.cbsnews.com/news/santa-fe-high-school-shooting-suspect-dimitrios-pagourtzis-victims-latest-2018-05-21/</a>
<b>GIST</b>	<p>SANTA FE, Texas -- New details have emerged about the heroic effort to confront a young man who opened fire at a school Friday, which prevented a larger tragedy.</p> <p>Ten people were killed and at least 13 others were hurt, including a school resource officer. Authorities say they don't have a motive, though the suspect's father gave his own explanation.</p> <p>Suspect Dimitrios Pagourtzis, 17, sits in a county jail under suicide watch.</p> <p>The tight-knit community of Santa Fe is still reeling from a tragedy that many thought would never happen in their small town.</p> <p>Antonios Pagourtzis, the father of the shooter, told the Wall Street Journal his son was "a good boy" and had been "mistreated at school." He said his son was bullied and said, "I believe that's what was behind the shooting."</p> <p>"It's hard to answer what he realizes at this point. Our conversations have been very stuck in the immediacy of the moment," Nicholas Poehly, one of Pagourtzis' attorneys, said. "We're not able to say right now what he comprehends."</p>

<b>HEADLINE</b>	<b>05/22 Judge: Fiji 4 not guilty of sedition</b>
-----------------	---

SOURCE	<a href="https://abcnews.go.com/International/wireStory/fiji-found-guilty-sedition-media-freedom-case-55344094?">https://abcnews.go.com/International/wireStory/fiji-found-guilty-sedition-media-freedom-case-55344094?</a>
GIST	<p>A judge in Fiji found an opinion writer and three newspaper executives not guilty of sedition on Tuesday in a ruling that many consider a victory for press freedom in the South Pacific nation.</p> <p>Judge Thushara Rajasinghe ruled that prosecutors failed to prove an opinion piece had promoted feelings of ill will and hostility between Muslims and non-Muslims in Fiji. The piece ran in a small indigenous-language newspaper published by The Fiji Times.</p> <p>The men were each facing up to seven years in prison if found guilty. The judge also found Fiji Times Limited not guilty.</p> <p>Many people consider The Fiji Times to be the last independent media voice in a country where many news outlets kowtow to the government.</p> <p>The newspaper's publisher, Hank Arts, who was among those charged, said he was relieved by the ruling.</p> <p>"Winning this gives us all the courage to keep going," he said. "It's an election year and it's very important that we keep doing what we're doing, and do it well."</p> <p>The case centered on an opinion piece written by Josaia Waqabaca, a former taxi driver and political activist. In his column, which ran in the Nai Lalakai newspaper, Waqabaca accused Muslims of historic crimes, including invading foreign lands, rape and murder.</p> <p>Two months after the column appeared, a senior government official complained to the police.</p> <p>Five years ago, The Fiji Times was fined \$170,000 and its editor-in-chief, Fred Wesley, was given a suspended jail sentence after the newspaper reprinted a story in which a soccer official questioned Fiji's judicial system. Wesley was also charged in the latest case and said he was "very pleased" with the ruling.</p> <p>"It actually ends two years of stress," he said.</p>

HEADLINE	<b>05/21 Maryland: officer killed in confrontation</b>
SOURCE	<a href="https://abcnews.go.com/US/baltimore-area-officer-gunned-responding-suspicious-vehicle-report/story?">https://abcnews.go.com/US/baltimore-area-officer-gunned-responding-suspicious-vehicle-report/story?</a>
GIST	<p>A manhunt was underway Monday evening in Baltimore County, Maryland, for four suspects involved in the killing of a police officer, who confronted them after responding to a report of a burglary, authorities said.</p> <p>The suspects, considered armed and dangerous, were still at large Monday evening and police were combing the Baltimore suburb of Perry Hall, where three elementary schools were under lockdown, said Baltimore County Police Chief Terrence Sheridan.</p> <p>Earlier Monday, Maryland Gov. Larry Hogan said on Twitter that the officer had been shot and killed in the line of duty. But Sheridan said detectives "won't know until the medical examiner does the autopsy and gives us a manner and cause of death."</p> <p>He said that just before 2 p.m., the police department's 911 center received a call from a citizen about a possible burglary involving four suspects.</p> <p>"Our patrol officer responded, was confronted and from that point, she was injured and we are investigating this as a homicide," Sheridan said.</p>

	The officer was not immediately identified. She was rushed to Franklin Square Hospital in Baltimore, where she died at 2:50 p.m., officials said.

<b>HEADLINE</b>	<b>05/21 Guilty plea theft of officers' guns</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/crime/houston-baggage-handler-pleads-guilty-to-stealing-guns-from-three-bellevue-police-officers/">https://www.seattletimes.com/seattle-news/crime/houston-baggage-handler-pleads-guilty-to-stealing-guns-from-three-bellevue-police-officers/</a>
<b>GIST</b>	<p>HOUSTON — Federal prosecutors say a 22-year-old man working as a contract baggage handler at Houston's Bush Intercontinental Airport has pleaded guilty to stealing guns last year from the luggage of three Bellevue, Washington, police officers.</p> <p>Mack Stewart faces up to 10 years in federal prison and a \$250,000 fine at his sentencing hearing set for Sept. 11. Stewart entered his guilty plea Monday before U.S. Magistrate Judge Christina Bryan. He remains free on bond pending sentencing.</p> <p>U.S. Attorney Ryan Patrick says the three officers had returned home to Washington Oct. 4 on a United Airlines flight from Houston to Seattle when they discovered their service weapons missing. About a month later, Stewart was found with one of the guns when he was pulled over for a traffic stop.</p>

HEADLINE	05/20 Western State patients face release delays
SOURCE	<a href="https://www.seattletimes.com/seattle-news/western-state-patient-releases-can-be-delayed-years-for-lack-of-outside-beds/">https://www.seattletimes.com/seattle-news/western-state-patient-releases-can-be-delayed-years-for-lack-of-outside-beds/</a>
GIST	<p>JEFFERSON COUNTY — It took more than half a year for Brian’s daughter to get a bed at Western State Hospital after she put a bread knife into an electrical outlet at his Tacoma apartment.</p> <p>A court ruled she needed involuntary psychiatric treatment at the 857-bed facility in Lakewood, but because the waitlist can stretch to more than 100 patients, his daughter instead bounced around Pierce County inpatient treatment centers that provide less-intensive care.</p> <p>“She was just kind of surviving,” Brian said of his 30-year-old daughter, who he said has a history of mental-health disorders. She is also an artist and a passionate traveler who studied science at a top college.</p> <p>Last month, Brian said he was notified his daughter was stable enough to leave Western State. He also was told it might take a while to find a suitable place for her to live, a situation that helps illustrate a complex bottleneck at the root of the hospital’s admission waitlist for civil, or noncriminal, patients.</p> <p>Most patients exiting Western State can’t live independently or with family, and Washington officials are struggling to find appropriate beds in adult family homes and other types of care facilities to discharge them to. That lag time has left scores of Western State patients stuck in limbo, and holds up beds at the facility that other people in crisis need.</p> <p>“They don’t have the places, the physical places and the staff, to treat as many people as there are that need help,” Brian told The News Tribune, The Olympian and public radio’s Northwest News Network at his new home near Port Townsend. Brian asked that his last name not be published and that his daughter not be named, saying he fears employers and others may discriminate against her in the future.</p> <p>Data released by the hospital shows just how big the problem is.</p> <p>About 40 percent of the hospital’s roughly 580 civil patients were on the discharge list earlier this month. The median time currently spent on the discharge list is 104 days. Some people have waited years, even decades to be released after the hospital deemed them ready to go, according to hospital officials.</p> <p>As a result, the average wait for patients to get into Western State is about 62 days for younger adults and 48 days for older adults in the hospital’s civil wards. Marylouise Jones, interim CEO at Western State, said that if the hospital could discharge everyone ready to leave, they “may not have a waiting list” for civil</p>

admissions.

Civil patients at Western State have been involuntarily committed by a judge but aren't in treatment as part of the criminal-justice system. The state-run hospital also serves roughly 270 patients in its forensic wards, which house people who have been charged with or convicted of a crime and need mental health evaluations or treatment.

Brian said his daughter was put on the waitlist to get into the hospital last summer but didn't get a bed until March. Western State would not confirm that time line, citing patient privacy concerns.

Now she's having a hard time getting out.

Brian said it's his understanding that his daughter interviewed with one possible treatment facility for her to discharge to, but that it wasn't the right fit. Brian said he can't safely care for his daughter at home because she is, in his words, "treatment-resistant."

Her discharge efforts hit another snag last week, Brian said, when she refused to take medication and sign paperwork that would ensure she has Social Security and medical benefits in the community.

Diagnosing the backlog

When patients are discharged from Western State, about 75 percent are released to treatment facilities around Washington that contract with state government.

While patients might be stable enough to leave the hospital, they often need ongoing help managing their condition and the daily aspects of their lives, such as taking medication, eating and bathing. Many of them are older.

Most commonly, patients from Western State are discharged to adult family homes or group homes, which are typically located in residential neighborhoods and also can serve people not in the mental-health system. Some discharged patients head to nursing homes or other more-secure treatment centers.

There are a host of reasons why the state has trouble discharging so many Western State patients to these settings.

For one, staff at licensed care facilities need specific training to host patients with complex psychiatric disorders, which not all providers have, said Bea Rector, who runs a division at the Department of Social and Health Services that oversees the process of finding a step-down home for patients who need mental-health care.

It also can be more costly and time-consuming to serve the many needs of Western State patients, said John Ficker, executive director of the Adult Family Home Council, which can be a disincentive for providers on thin budgets.

There are other roadblocks, such as when a patient rejects a proper step-down facility because it's located in a city too far away from family, Rector said.

Jones, Western State's acting CEO, said a home might not take a Western State patient because of the stigma associated with people who have received mental-health treatment at the large institution.

Another reason treatment facilities turn away patients is criminal history. While civil patients generally aren't at Western State due to a criminal charge, some might have charges in their past. Rector said they might have a history of sexually inappropriate behavior, assault or arson.

In some cases it's "really difficult to get a provider to feel like they can accept that resident and still meet the health and safety needs of the people around them," Rector said.

Jones called it a “huge issue” over the last two decades.

“We know the patient is safe, does not present a public safety risk,” Jones said. “Nevertheless it’s still, based on their history, very difficult to find places in the community that can support them.”

Recently, tensions flared over an extreme example of this debate when Western State tried to discharge Lawrence David Butterfield, a man charged with murder, to an adult family home near an elementary school in Lakewood. Local elected officials pushed back and Butterfield stayed at the hospital.

In that case, Butterfield entered Western State as a forensic patient but later flipped to the civil side of the hospital after he was found incompetent to stand trial. A small group of civil patients at the hospital follow that path.

Lakewood is now trying to restrict adult family homes and other facilities in a way that could have implications for more traditional civil patients hoping to discharge in the area.

The city is considering a moratorium on the approval of new licenses for adult family homes, group homes and other treatment centers in residential areas. It also recently passed an ordinance signifying they believe adult family homes should not house people with violent or sexually violent histories and is debating a lawsuit against the state to make that wish reality.

The state Attorney General’s Office has said such a restriction might break anti-discrimination laws. The Adult Family Home Council, which lobbies on behalf of adult family home providers, opposed the idea.

(Some states require treatment centers such as adult family homes to take patients from state hospitals. Some states even run step-down facilities.)

State Sen. Steve O’Ban, a Tacoma Republican whose legislative district includes Western State and parts of Lakewood, said the state should work to develop more of a secure, intensive type of treatment center for patients with violent histories, known as an enhanced services facility.

The enhanced facilities have round-the-clock nursing staff, a behavior specialist on site and more, according to Rector. Washington has three such facilities — one in Vancouver, two in Spokane — holding between eight and 16 beds each. A fourth is to open in Everett in September, Rector said.

### Seeking solutions

There is no easy answer to Western State’s civil-discharge list.

Rector said the state is encouraging enhanced services facilities by offering construction money to those who want to build them. The state has been providing training to some community providers so they can more easily serve hard-to-discharge patients, she said.

State officials also booked money in 2017 for building up bed capacity for hard-to-place patients and have been in talks with providers to develop other ways to increase beds.

Discharging patients has a financial incentive. The average bed rate at Western State is \$790 a day, while enhanced service facilities cost \$425 per day and adult family homes just \$95, according to the governor’s office.

Ficker, of the Adult Family Home Council, said his providers would like to see a bigger boost in state money to pay for costly, hard-to-serve patients.

In the future, Washington lawmakers hope to stop treating most civil patients at Western State altogether

and instead treat them at other smaller, intensive-care facilities around the state. Legislators say patients are better off treated closer to home rather than at a centralized location.

The shift also would free up bed space for the lengthy list of forensic patients waiting to get into Western State. The state has been fined millions by a federal court for its inability to provide timely services to criminal defendants who have mental illnesses.

Gov. Jay Inslee this month set a 2023 deadline for Western State and Eastern State hospitals to stop admitting new civil patients. Lawmakers from both sides of the aisle generally agree with the strategy, and in the last year they have been taking steps to phase out civil patients at the hospitals.

For now, the waitlist remains.

In the interview at his home, Brian said his daughter first had a mental “break” about eight years ago. Since then, he said, she has been hospitalized several times and occasionally been close to homelessness.

Brian said he knows there isn’t a quick fix for his daughter’s challenges with mental health. Once she’s discharged, he’s hopeful she can find a safe place to live where she can “be monitored and get treatment at the same time.”

“It’s really, really sad when something like that first happens,” Brian said of his daughter’s hospitalizations. “Eventually you just have to accept it, and try to do the best you can, and try to be an advocate for them and maybe for other people who have these problems.”

<b>HEADLINE</b>	<b>05/20 Spokane: little appetite for head tax</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/spokane-leaders-dont-want-head-tax-for-homeless-services/">https://www.seattletimes.com/seattle-news/spokane-leaders-dont-want-head-tax-for-homeless-services/</a>
<b>GIST</b>	<p>Don’t expect a levy on businesses in Spokane to pay for homeless services, like the head tax approved last week in Seattle.</p> <p>Elected officials in Spokane said last week there was little appetite for such a move, citing previous investments in shelter services and the work of nonprofits to push affordable housing in the downtown core.</p> <p>Some criticized the move as standoffish with the business community, as evidenced by mega-retailer Amazon and coffee giant Starbucks condemning the unanimous vote of the Seattle City Council last week to impose the tax.</p> <p>“I’ve never been the type of person that wants to link a tax to a specific type of issue,” said Mayor David Condon, calling the move “counterproductive” to creating livable-wage jobs that he said are needed to address homelessness.</p> <p>Spokane has faced a growing number of people living on the streets in recent years, and both the mayor and Spokane City Council have poured money into keeping a shelter system open around the clock. City Council President Ben Stuckart, who has pushed workplace requirements on employers, including mandatory paid sick leave, said he didn’t agree with the way Seattle approved the tax without a vote of the people.</p> <p>“I have plenty of liberal friends over in Seattle, and none of them supported the way the City Council went about supporting the head tax,” Stuckart said.</p> <p>“I can’t believe it passed. That’s shocking,” he added.</p>

Stuckart pointed to Spokane’s investments in homeless shelters, totaling \$850,000 last year, and its work on revising zoning codes to promote infill development and the agreement between Condon and the council to use \$2 million in real-estate excise taxes over the next two years to promote affordable housing construction as evidence Spokane is working to address the issue without raising taxes on businesses.

“We’re not going to let ourselves get in that position,” Stuckart said.

The affordability of real estate in downtown Spokane, compared to other West Coast cities such as Seattle and Portland, also puts charitable organizations in a better position to address the problem here than in other big cities, said Grant Forsyth, chief economist with Avista Corp.

“We still live in a community where land values, prices and availability are such that nonprofits can make a big impact on this homelessness issue,” Forsyth said.

A majority of Stuckart’s colleagues on the City Council said they agreed that taxing businesses of a certain size wouldn’t make sense to address the problems facing the city’s homeless population. The Seattle tax calls for a \$275 payment per employee for firms grossing more than \$20 million annually.

<b>HEADLINE</b>	<b>05/20 Schools spending on high-tech security</b>
<b>SOURCE</b>	<a href="http://www.wavy.com/news/national/schools-are-spending-billions-on-high-tech-security-but-are-students-any-safer-/1189909092">http://www.wavy.com/news/national/schools-are-spending-billions-on-high-tech-security-but-are-students-any-safer-/1189909092</a>
<b>GIST</b>	<p>(NBC) -- With each new school shooting — the latest left 10 dead Friday in Santa Fe, Texas — the routine of death and grief grows numbingly familiar, and so does the inescapable question: Is there any way for schools to stop them?</p> <p>School districts trying to avoid becoming next on the list are urgently chasing answers, with an increasing number staking their hopes on high-tech security systems originally developed for the military, police and private industry.</p> <p>These modern tools range from instant background checks for visitors and social-media monitoring software to gunshot-detection sensors and ID cards equipped with panic buttons. They’re driving a rapidly growing school security market, which has ballooned to a multibillion-dollar industry — despite little proof that the new methods prevent violence.</p> <p>“If all you’re doing is buying something and slapping it on and going about your business, you have wasted your money and you’re no safer than you were before,” said Amy Klinger, director of the Educator’s School Safety Network, an Ohio-based nonprofit.</p> <p>Many states and districts are pursuing low-tech routes as well, welcoming more armed guards, allowing teachers to carry guns, and even handing out rocks or baseball bats. But districts of all sizes are opening up their budgets or chasing government grants to pay for state-of-the-art technology, often acting on the theory that, when it comes to layers of security, more is always better.</p> <p>“How do you know if something is going to happen or not happen?” Jim Scully, superintendent of the 7,300-student school district in Haverhill, Massachusetts, said in an interview last month.</p> <p>While overseeing the recent construction of a middle school, Scully persuaded district officials to install a network that identifies the sound of gunfire and alerts police and administrators. Made by Shooter Detection Systems using technology developed for the military, the network cost \$70,000, covered by state and federal grants.</p> <p>The system has not been deployed since its initial practice run.</p>

“But given what’s going on in the world, who knows?” Scully said. “My feeling was when we had the opportunity to take advantage of the funding, we did, and put that system in.”

#### MILITARY TOOLS FIND A NEW USE

After 17 students and staff members were killed at Marjory Stoneman Douglas High School in Parkland, Florida, on Feb. 14, the school district in Santa Fe, Texas, sent out a reminder of its security procedures. Superintendent Leigh Wall said in a letter to parents and staff that the measures included security cameras, “visitor tracking systems” and a “district-wide connected emergency warning and announcement system.” She also stressed that the district had its own police department, with 12 officers trained to handle active-shooter situations.

One of the district’s police officers was wounded in Friday’s attack, when a 17-year-old student with no criminal record entered Santa Fe High School just before the start of classes armed with a shotgun and handgun owned by his father, and opened fire, authorities said. Eight students and two teachers were killed, and 13 people were wounded.

The uncertainty over what can be done at a local level to prevent school shootings — and the horrifying consequences of failing to do so — has created a business opportunity. Companies seek to convince schools that the technology deployed by police in the U.S. and by the military overseas can also save lives in the classroom, and that their products have already been proven effective.

Alexander S. Carney, a former special operations officer in the Marines, is now a vice president for Critical Response Group, which makes digital and shareable school floor plans based on formats used in counter-terrorism raids. “As we speak, the technique we’re talking about is being used in multiple countries, in multiple places in those countries,” he said.

Dozens of school districts in New Jersey, where the company is based, have adopted the plans. The company saw a spike in inquiries after Parkland, and again after the Santa Fe shooting.

These digitized graphics, along with tools like shot-detection systems, are likely to shorten emergency response times or reduce the number of victims of a mass shooting. The graphics, which start at \$1,880 per school, place building layouts on map-like grids, allowing police to quickly familiarize themselves with the scene, identify where a shooting is happening and plan their response. But whether high-tech products can keep such attacks from happening remains an open question, researchers and safety consultants say.

That was among the concerns raised in a 2015 RAND study on the growing use of school-safety technology. Researchers surveyed a variety of school districts and encountered officials “in desperate need of more evidence on what works.” Some of the products — visitor management systems, anonymous tip lines — were relatively simple, inexpensive and sensible, the researchers said. But they also found scant evidence of most high-tech tools’ effectiveness, and some of the technology might make students feel as if they were under siege, the researchers said.

“I walked away thinking that what districts needed was an independent third party to wade through the marketing from the different companies,” RAND policy researcher Heather Schwartz said. “But my impression was that was not going to happen soon.”

After the December 2012 massacre at Sandy Hook Elementary School in Newtown, Connecticut, the National Institute of Justice made school safety research a priority, doling out tens of millions of dollars each year to projects that sought to understand school violence and how to stop it. Much of that work has not yet been completed.

And now the funding source appears to be drying up. A federal spending bill passed in March eliminated the NIJ grant programs. Instead, after the Feb. 14 massacre in Parkland Congress passed the STOP School Violence Act. It redirected federal funding toward anti-violence training, installation of metal detectors, anonymous tip lines and better mental-health services, rather than research into technology-based

solutions.

## A RAPIDLY GROWING MARKET

The lack of research hasn't stopped districts from investing in high-tech promises. School administrators said they want to be smart about what they buy, but they are also guided by parents' desire for added security — even if those systems are never used.

Scott Laliberte, superintendent of schools in Londonderry, New Hampshire, took advantage of a state grant offering contracts with COPSync, which allows teachers to hit a panic button on their classroom computers and communicate with authorities via text message. The system has not been put to use yet. But in a couple of accidental activations, Laliberte said, he saw that it gets officers to the scene quickly.

“Tools like this come out, and they are certainly useful, but it's important to keep in proper perspective that they are part of larger solution we're trying to create,” Laliberte said.

A post-Parkland analysis by IHS Markit noted that the school security market had surged to about \$2.7 billion a year. The next wave of products available to school districts could include facial-recognition cameras and impenetrable classroom doors, the firm said.

The recent buying spree has troubled some school-safety experts, who stress that no cutting-edge measures compare to old-fashioned student care: communicating with them, listening to what they say, and offering help when they need it.

“Most school shootings around the country, they had cameras and that didn't prevent it,” said Curtis Lavarello, executive director of the School Safety Advocacy Council, which helps districts develop security plans. “Where you're stopping it from occurring is by talking to kids and being active in your hallways, reaching out to students.”

The school district in Toms River, New Jersey, which has more than 15,000 students in 19 schools, takes a “holistic” approach to safety that doesn't just rely on technology, said Superintendent David Healy. That includes programs that identify troubled students and get them help.

Still, the district recently used a grant to enroll in Critical Response Group's system that digitizes the layouts of buildings and makes them shareable with law enforcement. Paired with a network of internet-accessible surveillance cameras, the system allows police to get to the source of a problem quickly, officials say.

“It's all about expediency. The sooner the police get there, the sooner the carnage ends,” Healy said.

In Overland Park, Kansas, John Douglass says he has all the proof he needs that high-tech security is worthwhile.

The former police commander is executive director of emergency services for the Shawnee Mission School District, which issued \$20 million in bonds to pay for security upgrades at five high schools. They included a network of internet-based surveillance cameras and door alarms that can alert and track intrusions remotely, monitored by control centers in each school.

Just after they were installed, nearly four years ago, the system was used to track and arrest a boy who was threatening two students via text message. Officers saw him on camera trying to get in a back door to a school, and when they stopped him, he was on his way home, where police found guns stacked in his bedroom, according to police. He was charged with aggravated criminal threat.

The system has also helped interrupt two less serious intrusions since then, Douglass said.

“That tells us the system is working,” he said.

## 'THE CADILLAC' OF SCHOOL SECURITY PLANS

The ultimate manifestation of the rush to high-tech school security may be 40 miles south of Parkland, in Miami-Dade County.

It is home to the nation's fourth-largest school district, with 345,000 students, 40,000 employees, nearly 400 schools and thousands of reported crimes each year. The district's police department has less than 200 officers. Better technology seemed the only way to try to keep up with potential threats, said Edwin Lopez, the district's police chief.

"We've had to alter our response from traditional law enforcement techniques to a more technological response," Lopez said.

After the Newtown shooting, the Miami-Dade Schools Police Department pitched the National Institute of Justice on a project it called Campus Shield. The police envisioned a system that collected massive amounts of data — social media feeds, attendance records, school incident reports, nearby crimes, citizens' tips — and funneled it through software to identify patterns or signs of trouble. This "fusion center" would be linked to the district's network of surveillance cameras, its school-visitor system, its gunshot-detection system and team of mental-health specialists. If it worked, the massive security package could be copied elsewhere.

The district won a \$4.3 million grant, and the project is now being piloted at 18 schools. An independent research company is comparing crime and student performance with schools that are not part of the project; its results are expected in the fall.

Lopez said that the project has led officers to students expressing suicidal thoughts and uncovered white-collar crimes such as credit card fraud.

Campus Shield was featured in the 2015 RAND report as an example of a district that is "putting it all together." Schwartz, one of the report's authors, called it "the Cadillac" of school security plans — but cautioned that it may only be applicable to the nation's biggest, and big-budgeted, districts.

As Santa Fe mourns the students and teachers killed in Friday's shooting, there is urgency in finding solutions that will work for all school districts, big and small.

<b>HEADLINE</b>	<b>05/20 Canada: asylum seekers put to work</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/the_americas/asylum-seekers-have-flooded-into-canada-the-government-is-putting-them-to-work/2018/05/20/5cd4e218-593b-11e8-858f-12becb4d6067_story.html?utm_term=.1f443eb5d383">https://www.washingtonpost.com/world/the_americas/asylum-seekers-have-flooded-into-canada-the-government-is-putting-them-to-work/2018/05/20/5cd4e218-593b-11e8-858f-12becb4d6067_story.html?utm_term=.1f443eb5d383</a>
<b>GIST</b>	<p>MONTREAL — In a darkened room at a suburban community center last month, a representative from a Canadian meatpacking company showed a huge map on the screen. More than 30 Haitians who had recently walked across the border to file refugee claims in Canada were in the audience.</p> <p>"This is Canada," the woman said. "Here's Quebec." She was trying to recruit workers for her company's pig farm, but first she needed to describe where it was.</p> <p>She zoomed in: "This is Temiscamingue," she said, explaining that it's an eight-hour drive northwest of Montreal. Two men stood up and walked out.</p> <p>Pay starts at \$13.25 an hour and shifts start at 7 a.m., she said, and workers get housing and full benefits. People started to raise their hands.</p>

By the end of the job fair, Olymel managers said they were thrilled: With 10 jobs to fill, at least a dozen people had stayed behind to ask questions.

Tens of thousands of people have surged across the border into Canada from the United States to claim asylum in the past year as the Trump administration's policies on migrants caused worry among asylum seekers and anti-migrant sentiment rose. The flood of migrants has put pressure on Canada's asylum system, accustomed to smaller numbers, and has driven up costs.

The deluge of "irregular" border-crossers into Quebec has been a boon for companies such as Olymel during a time of low unemployment. Olymel, for instance, has hired 250 asylum seekers at other sites.

"There was a big need, an urgent need, for employees," said company spokesman Richard Vigneault. "They're very much willing to work. We train them; they're very fast. . . . We're very satisfied."

Many asylum seekers have also placed their hopes in work. With warnings that their claims will probably be rejected, many say they believe a good employment record will ultimately help them to stay.

"That's why we're here in Canada — so we have a job and a future," said Jean Brize, 38, who attended the job fair. Originally from Haiti, he moved to Canada from New York City last year with his wife and daughters. "The government is also focused on people who work."

Many of the migrants crossing into Canada know little about the distinctions between the Canadian and American asylum systems.

Those differences are stark, especially now. South of the border, claimants wait at least six months before they can legally work, and in recent months a "significant portion" have been kept in detention, according to Eleanor Acer, of the nonprofit organization Human Rights First.

In Canada, and particularly Quebec, asylum seekers get shelter, food, legal aid, basic health care, language classes and help finding an apartment, and they begin to receive welfare payments at the same rate as Canadian citizens. But they're also given work permits and asked to support themselves as soon as possible, paying taxes at normal rates.

That approach has become a crucial safety valve for Canada as the number of refugee claimants has doubled over the past year. In one report, Canadian authorities estimated that resettling Syrian refugees cost \$2,650 per person per year over six years. Other research has shown that spending is much higher in the first year. Asylum seekers in Canada wait an average of 19 months for a hearing, further driving up costs.

The federal response has partly been to try to put people to work. In the fall, the government decreased the wait time for work permits from three months to three weeks, quickly issuing 12,000 permits in Quebec. This spring, it created a "triage" system, busing people from the border to regions other than Montreal, including rural parts of Quebec, with dire labor needs.

The system will attempt to send some asylum seekers "to the regions of Quebec, including issuing work permits more quickly to meet manpower demands," said Chantal Bouchard, a spokeswoman from Quebec's Immigration Department.

Asylum seekers are doing fairly well in finding work. Of 13,072 adult asylum seekers who began receiving Quebec social assistance for the first time last year, 7,132, or about 55 percent, quit the program by the end of 2017, said a spokesman from the provincial labor ministry.

Some of those people probably quit for reasons other than finding a job, such as moving to another province. And that number doesn't include anyone who began receiving welfare in the last months of 2017 — a big group, after the summertime deluge over the border — and who succeeded in finding work early this year.

Those who work with them say their employment rates are high.

“It’s not a difficult period for people to find a job,” said Francine Dupuis, who runs Montreal’s major governmental hub for refugee claimants.

Among the Haitian arrivals, “almost all” are now working, said Marjorie Villefranche, director of the Haitian community center that hosted Olymel’s job fair. Other meatpacking companies also have hired heavily, as well as a canoe and kayak manufacturer and a producer of herbs, spices and teas.

Asylum seekers say that finding work isn’t just a question of earning a good living.

“The government has already spent a lot of money” on refugee claimants, said Éligene Perame, 52, a Haitian migrant who was also considering going to work at the rural pig farm. “But I have to make efforts to find work to help myself, mostly.”

Refugee acceptance rates have been falling swiftly, and this month federal ministers said they expect that 90 percent of the “irregular” border crossers won’t meet refugee criteria.

With those odds, seeking work isn’t a bad strategy. Job status shouldn’t be relevant when people argue their claims, but submitting letters from employers “doesn’t hurt,” said Montreal refugee lawyer Mitchell Goldberg.

It will also be crucial later for the minority of people who manage to appeal their rejections. Then they must show that their families are thriving in Canada and should stay on humanitarian grounds, Goldberg said — and employment is “very, very important.”

Given the current stress, some are even asking the government to take things a step further. Villefranche, whose community center helped resettle thousands of Haitian arrivals last year, has pitched the idea of allowing them to simply switch status to temporary migrant workers, an existing Canadian program, and then to apply for a permanent visa with the help of their employers.

“That would be much faster for them and less expensive for everyone,” she said. “And there is hope at the end.”

The Quebec government said that proposal would fall under the federal government’s jurisdiction; the federal government has said it is up to the province.

“The government would most likely be concerned that it would be a pull factor drawing more people to cross the border,” Goldberg said.

Brize, after filling out forms for the Temiscamingue job, said any option is a good option if it means staying in Canada.

“If the government gives us asylum status, that’s good,” he said. “If the government [says] it will welcome us by sending us to another position, to work, we have no problem. It’s residence status we’re looking for, because we do not want to live in our country.”

<b>HEADLINE</b>	<b>05/21 Police response Texas shooting unclear</b>
<b>SOURCE</b>	<a href="https://apnews.com/4749a4f22fff40b0ab598e401151f83c/Police-response-to-Texas-school-shooting-remains-unclear">https://apnews.com/4749a4f22fff40b0ab598e401151f83c/Police-response-to-Texas-school-shooting-remains-unclear</a>
<b>GIST</b>	<p>AUSTIN, Texas (AP) — Santa Fe High School had conducted active shooter drills, armed police officers patrolled the hallways and students went through a scare in February after a false report of a campus gunman.</p> <p>But in the aftermath of the deadliest public school shooting in Texas history, early witness accounts and recordings from emergency dispatch describe a 30-minute nightmare as the real thing unfolded last week, even as authorities continued to keep details close Sunday.</p> <p>Among the biggest unknowns is when the confrontation began at the high school outside Houston between police and 17-year-old Dimitrios Pagourtzis, who authorities say opened fire on an art lab with a shotgun and .38 caliber handgun shortly after the first bell Friday morning. Pagourtzis wasn't hit in the attack even though officials have described him engaging in a drawn-out firefight with police.</p> <p>Ten people were killed, most of them students. Galveston County District Attorney Jack Roady declined to answer questions about the shootout and investigation Sunday, including whether police may have hit any students in a gunfight with the shooter.</p> <p>He also said autopsy reports won't be released while the case is pending.</p> <p>The length of the attack appeared to go on longer than most mass shootings that last around eight minutes, said Ben Tisa, a former FBI agent. He said that could make the Santa Fe shooting unusual.</p> <p>"It would be unless they couldn't find the guy and they had to hunt him," said Tisa, who now does tactical training in California.</p> <p>Although officials have praised a swift response, it remains unclear just how quickly police got to the art lab on the 1,400-student campus. Galveston County Judge Mark Henry, the county's top administrator, has said police exchanged rounds with Pagourtzis "for quite a while" before he surrendered a half-hour after the first reports of a shooter on campus.</p> <p>"They said there was a lot of firepower and a lot of rounds exchanged," Henry said.</p> <p>Officials have not yet released 911 tapes but on emergency dispatch recordings from Galveston County, captured by Broadcastify.com, a female voice is heard saying "more shots fired" about 10 minutes after authorities first received reports of gunfire. Five minutes later, a male voice says the suspect is "possibly going to be barricaded" with additional reports of shooting a few minutes after that.</p> <p>"He's actively shooting. He's in the art room. We've got, we've got shots fired right now. We need you all</p>

	<p>up here,” a male voice says at what appears to be about 15 minutes after the shooting began.</p> <p>Henry said investigators were still working on the timeline and Tisa cautioned that emergency dispatch traffic doesn’t always reflect real time. One Santa Fe school police officer who responded to the attack was shot and remained in critical condition Sunday, according to the University of Texas Medical Branch.</p> <p>Zach Wofford, an 18-year-old senior, was across the hallway when the shooting began and said he heard gunfire that lasted 10 to 15 minutes from the art classroom. That’s where Breanna Quintanilla, a 17-year-old junior, was when the attack began. She said Pagourtzis had aimed at her and missed but that it ricocheted into her right leg.</p> <p>She recalled the voice she heard after the first sound of gunfire in the class: “If you all move, I’m going to shoot you all.”</p>

<b>HEADLINE</b>	<b>05/20 Seattle mayor eyes backyard cottages</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/993119/durkan-order-backyard-cottages/">http://mynorthwest.com/993119/durkan-order-backyard-cottages/</a>
<b>GIST</b>	<p>After years of studies and discussion, Seattle Mayor Jenny Durkan is streamlining the process to build backyard cottages. The mayor’s office hopes it will incentivize homeowners to build the units while creating more affordable housing in the city.</p> <p>“Seattle faces an affordability and housing crisis, and we are taking urgent action to increase the supply of rental housing options as quickly as possible,” Durkan said. “Too many people are being pushed out of this city or can’t find a place to live. We need to use every tool in our toolbox to boost the supply of housing.”</p> <p>A backyard cottage is essentially what it sounds like — a living space akin to a mother-in-law unit built in a backyard. They have been promoted as one method to address Seattle’s severe lack of affordable housing.</p> <p>But progress toward building the backyard cottages has been stalled at Seattle City Hall for years. Durkan aims to end that bottleneck. She has ordered the Department of Construction and Design to “fast track” pre-approved designs for detached accessory dwelling units (ADAU) aka backyard cottages.</p> <p>“Fast-tracked designs for backyard cottages will allow us to get more housing online faster,” Durkan said. “We will continue to work on all fronts – from adding more shelter beds to innovative permanent housing options – to build a more affordable future for Seattle.”</p> <p>Seattle will pay architects to develop a handful of standard cottage designs that homeowners can choose from. These designs will be permitted more quickly and cheaper. Durkan’s office says this will cut down permitting time by half. The office doesn’t say exactly how much cheaper the process will be, but does note that current costs can range between \$10,000 and \$30,000 just to design the structure. And up to \$300,000 to build it.</p> <p>The Seattle City Council started looking at options for building the units in 2016 — following years of pilot programs testing the idea. Progress was stalled in 2017, when one Seattleite called the issue a “war” between neighbors. Some residents want the ability to rent to people in their own backyard. Others want to slow growth and density in their single-family neighborhoods.</p> <p>This month, the council finally began considering even more options to bring backyard cottages to Seattle. A Draft Environmental Impact Statement will evaluate code changes. This will further remove barriers to building the units. Councilmember Mike O’Brien has been involved in the process much of this time.</p> <p>“For the last few years, we have been working toward increasing opportunities to create more backyard</p>

	<p>cottages and in-law apartments across the city,” O’Brien said. “I am excited to be taking another step in that direction with the release and public comment period for the draft Accessory Dwelling Units EIS, which looks at removing code barriers.</p> <p>“In the next year, I will continue to work towards increasing housing choice in single family neighborhoods, and ensuring the benefits of backyard cottages and in-law apartments can be shared across our diverse Seattle communities,” he said.</p>

<b>HEADLINE</b>	<b>05/20 Activists protest pipeline expansion</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/05/20/activists-protest-kinder-morgan-pipeline-expansion-in-seattle/">http://q13fox.com/2018/05/20/activists-protest-kinder-morgan-pipeline-expansion-in-seattle/</a>
<b>GIST</b>	<p>SEATTLE -- Hundreds of activists took to land and sea in protest of Kinder Morgan and its involvement in the Trans Mountain pipeline expansion project Sunday in Seattle.</p>

	<p>Protesters from Washington, Oregon and Canada came together in an effort to protect the Salish Sea from the pipeline expansion.</p> <p>On the water, dozens of kayactivists and canoes surrounded the Kinder Morgan marine terminal. Others rallied on land near Occidental Park before marching to the Seattle waterfront.</p> <p>Groups like Greenpeace USA stood in solidarity amongst indigenous peoples, with a common goal to protect marine life, the water, and community.</p> <p>"It would make climate change worse, it would trample Indigenous rights, it would run over our clean water here, and it would decimate the final 76 remaining orcas, the Southern Resident killer whale in our waters," said Ben Smith with, Greenpeace USA.</p> <p>Facing waves of protest, Kinder Morgan halted the \$5.8 billion pipeline expansion last month, until May 31.</p>

<b>HEADLINE</b>	<b>05/20 Hawaii faces new threat from volcano</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-hawaii-volcano/hawaii-faces-new-threat-from-volcano-gassy-glassy-laze-idUSKCN1IL0U2">https://www.reuters.com/article/us-hawaii-volcano/hawaii-faces-new-threat-from-volcano-gassy-glassy-laze-idUSKCN1IL0U2</a>
<b>GIST</b>	<p>PAHOA, Hawaii (Reuters) - Hawaii residents coping with Kilauea's volcanic eruption faced a potentially deadly new hazard on Sunday as authorities warned that lava flows reaching the Pacific Ocean could produce noxious clouds of acid fumes, steam and tiny, glass-like particles.</p> <p>The civil defense notices cautioned motorists, boaters and beachgoers to beware of caustic plumes of "laze" formed from two streams of hot lava pouring into the sea after cutting across Highway 137 on the south coast of Hawaii's Big Island late on Saturday and early Sunday.</p> <p>The bulletins also warned that reports of toxic sulfur dioxide gas being vented from various points around the volcano had tripled, urging residents to "take action necessary to limit further exposure."</p> <p>Laze - a term combining the words "lava" and haze" - is a mix of hydrochloric acid fumes, steam and fine volcanic glass specks created when erupting lava, which can reach 2,000 degrees Fahrenheit (1,093 degrees Celsius), reacts with sea water, Hawaii County Civil Defense said in a statement.</p> <p>"Be aware of the laze hazard and stay away from any ocean plume," the agency said, warning that potential hazards include lung damage, as well as eye and skin irritation.</p> <p>Under Sunday's conditions, with strong winds and copious amounts of lava hitting the ocean, the laze plumes could extend as far as 15 miles (24 km), mostly along the coast and offshore, though the hazard would diminish the farther out to sea it blows, according to USGS geologist Janet Babb.</p> <p>Authorities cautioned, however, that wind patterns can change abruptly. The U.S. Coast Guard was "actively monitoring" the area to keep away all vessel traffic except permitted tour boats, the civil defense office said.</p> <p>Laze killed two people when a lava flow reached the coast in 2000, and even a wisp can cause eye and respiratory irritation, the U.S. Geological Survey said. Acid rain from laze has corrosive properties equivalent to diluted battery acid, the agency said.</p>

HEADLINE	<b>05/20 Pakistan confronts 'Me Too' movement</b>
SOURCE	<a href="https://www.usatoday.com/story/news/world/2018/05/20/pakistan-me-too-movement/620273002/">https://www.usatoday.com/story/news/world/2018/05/20/pakistan-me-too-movement/620273002/</a>
GIST	<p>LAHORE, Pakistan — This is Pakistan’s Me Too moment.</p> <p>A handful of Pakistani women recently went public to accuse famous actor and musician Ali Zafar of sexually harassing and abusing them. Their announcement grabbed headlines, prompted outrage and sparked the Me Too movement in conservative Pakistan.</p> <p>The women’s remarkable statements — followed by similar claims in politics and business sectors — are a sea change in this highly traditional Islamic country where female honor killings, child brides and polygamy are commonplace. In Pakistan, women receive only a portion of an inheritance that males get.</p> <p>"I think in any society it is difficult for women to come forward," said Nighat Dad, director of the Digital Rights Foundation and an activist for women's rights. "The Me Too movement has organically come with women coming forward against powerful men, be it Ali Zafar or a CEO of a tech start-up, to finally hold men accountable for their behavior."</p> <p>Victims of sexual abuse and harassment have long suffered in silence in Pakistan, where shame is placed on the woman and not the perpetrator. Most women never report the incidents, but those who do come forward often face shame or questions about their morality.</p> <p>Pakistani pop singer Meesha Shafi, who accused Zafar of sexually harassing her on multiple occasions, is challenging that tradition.</p> <p>"Today I am breaking this culture of silence and I hope that by doing that I am setting an example for young women in my country to do the same," Shafi wrote on Twitter last month. "We only have our voices and the time has come to use them."</p> <p>Zafar denied the claims and demanded that Shafi delete the allegation online and issue an apology, or he would file a \$9 million defamation suit against her.</p> <p>"I am deeply aware and in support of the global Me Too movement and what it stands for," Zafar said in a statement. "I am the father of a young girl and a young boy, a husband to a wife and a son to a mother. I have nothing to hide. Silence is absolutely not an option."</p> <p>Shafi has refused to take down her tweets. Her attorney denied she defamed Zafar.</p> <p>Days after the public dispute erupted, more women came forward against Zafar, who has been compared to Hollywood producer and accused abuser Harvey Weinstein in the Pakistani press.</p> <p>Leena Ghani, a makeup artist based in London, said Zafar had repeatedly "crossed boundaries" with her.</p> <p>"His behavior displays a clear lack of respect for women," Ghani said on Twitter. "Inappropriate contact, groping, sexual comments should not fall in the gray area between humor and indecency."</p> <p>Humna Raza, a blogger from Lahore, accused Zafar of groping her when she asked to take a selfie with him. Another woman, Noor Sehar, a Karachi marketing executive, accused Zafar of sexual misconduct at a party.</p> <p>Such allegations are not isolated. Khalid Bajwa, chief executive of local music streaming company Patari, stepped down from his post last month following sexual harassment allegations.</p> <p>While many have supported the Pakistani singer for bravely speaking out, others questioned her accusations.</p> <p>"I just don't see any truth in these allegations," said film actress Resham, who uses a single name for her</p>

career. "Ali cannot do such a thing. How can he harass a woman and she doesn't slap him back, hit him with a shoe, push him away or complain to his wife?"

Shafi also has been shamed on social media after she went public. "The backlash that Meesha has faced, the misogynistic attitudes that she has had to confront also sends women a message that there is still a cost to coming forward," Dad said.

Others defended her.

"Meesha is a superstar who is really successful and earns as much as the male stars in this country," said actor and model Iffat Omar in an Instagram post. "So why would she do this if she was not hurt? Many people are claiming that she is doing this for fame or money. She already has more than enough of both."

Still, many women are afraid to come forward because of possible repercussions.

<b>HEADLINE</b>	<b>05/20 Preserve: arrest records Rosa Parks, MLK</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/rosa-parks-mlk-records/2018/05/20/id/861434/">https://www.newsmax.com/newsfront/rosa-parks-mlk-records/2018/05/20/id/861434/</a>
<b>GIST</b>	<p>Yellowing court records from the arrests of Rosa Parks, Martin Luther King Jr. and others at the dawn of the modern civil rights era are being preserved and digitized after being discovered, folded and wrapped in rubber bands in a courthouse box.</p> <p>Archivists at historically black Alabama State University are cataloguing and flattening dozens of documents found at the Montgomery County Courthouse, and Circuit Clerk Tiffany McCord hopes electronic versions will be available for viewing as early as late June.</p> <p>Once the records are added to Alabama's online court system, historians and others will be able to read the original pleadings filed by Parks' attorneys following her refusal to give her seat to a white man on a Montgomery city bus on Dec. 1, 1955.</p> <p>Parks' arrest led to the Montgomery Bus Boycott, which launched a young King to prominence as a civil rights leader while the Atlanta-born pastor was working at his first church in downtown Montgomery.</p> <p>The records being preserved include a bail document signed in black ink by King, who was arrested in March 1956 with Parks and more than 100 others on charges of boycotting the city bus system in protest of Parks' treatment.</p> <p>"I think the public ought to be able to see that," said McCord. "It's exciting that it's happening."</p> <p>Alabama State archivist Howard Robinson said the records are important because they provide texture and depth to the story of the early days of the movement.</p> <p>Rather than just containing the familiar names of Parks and King, Robinson said, the records include the names of lesser-known people like witnesses who saw Parks' arrest; bus boycott participants; attorneys; and those who put up bond to free people from jail.</p> <p>"These papers allow us to understand who those folks were," said Robinson.</p> <p>Parks was convicted of violating the city's segregation laws; a federal court deciding another case outlawed segregation on public buses while her case was being appealed. That same ruling effectively ended King's appeal after he was convicted with others of violating an anti-boycott law.</p> <p>McCord said she found documents from the cases, which include records from trial and appeals courts, after taking office in 2013.</p>

	<p>"They were in an envelope box. They were all bent and folded with rubber bands on them probably dating back to the 1950s. The bands were sort of disintegrating into them," she said.</p> <p>After looking at options, including feeding the papers through a scanner that sometimes jams, McCord said she decided to provide them on a 10-year loan for scanning and research by Alabama State, where fliers announcing the boycott were made more than 60 years ago.</p> <p>Some records and photos relating to Parks' arrest already are on display at Montgomery City Hall, and school officials sounded skeptical when first contacted about the boxful of court records, McCord said.</p> <p>"When they came over and saw what it was their mouths dropped open," she said.</p> <p>Robinson said he hopes to locate some of the people mentioned in the documents.</p> <p>"In order to understand the past and all the events that have occurred, particularly as part of the modern civil rights movement, we reduce the bus boycott to Rosa Parks refusing to relinquish her seat and Martin Luther King leading the bus boycott," he said. "But these records sort of indicate that it was much more ... than that, that there were far more people involved and that the city of Montgomery and the state of Alabama mounted a pitched battle to maintain segregation."</p>

<b>HEADLINE</b>	<b>05/21 Indonesia's most volatile volcano erupts</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/indonesias-volatile-volcano-erupts-55319297?">https://abcnews.go.com/Technology/wireStory/indonesias-volatile-volcano-erupts-55319297?</a>
<b>GIST</b>	<p>Indonesia's most volatile volcano spewed smoke and ash early Monday in the latest of several eruptions in less than two weeks.</p> <p>Mount Merapi on the main island of Java erupted twice, sending a column of volcanic material up to 1,200 meters (3,930 feet) into the air and making ash fall in several villages, said Sutopo Purwo Nugroho, the disaster mitigation agency spokesman.</p> <p>He said the alert level of the volcano was not raised, which is at a normal level with no eruption expected in the foreseeable future.</p>

An eruption of Merapi on May 11 sent nearby residents fleeing to safer areas. There have been no reports of casualties, and operations at Adi Sucipto airport in Yogyakarta was not disturbed by Monday's eruptions.

The 2,968-meter (9,737-foot) mountain between Yogyakarta and Central Java provinces is the most active of 500 Indonesian volcanoes. Its last major eruption in 2010 killed 347 people and caused the evacuation of 20,000 villagers.

<b>HEADLINE</b>	<b>05/21 Venezuela president wins re-election</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/maduro-wins-venezuela-election-challengers-call-illegitimate-55319195?cid=clicksource_76_2_hero_headlines_bsq_hed">https://abcnews.go.com/International/wireStory/maduro-wins-venezuela-election-challengers-call-illegitimate-55319195?cid=clicksource_76_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>Embattled socialist incumbent Nicolas Maduro won Venezuela's presidential election by a landslide in a disputed vote marred by irregularities and mass absenteeism that led his main rivals to call for a re-run to prevent a national social crisis from exploding.</p> <p>The National Election Council announced that with more than 92 percent of polling stations reporting, Maduro won nearly 68 percent of the votes Sunday, beating his nearest challenger Henri Falcon by more than 40 points.</p> <p>As the results were being announced, residents of downtown Caracas just a few blocks from where Maduro supporters were celebrating banged on pots and pans in protest. Falcon accused the government of buying votes and dirty tricks to boost turnout among poor voters most hurt by widespread food shortages and hyperinflation in what was once Latin America's wealthiest nation.</p> <p>The election "without any doubt lacks legitimacy and we categorically refuse to recognize this process," Falcon told supporters minutes before the results were announced, vowing to fight on instead of joining a growing list of beleaguered anti-government politicians who've fled into exile of late.</p> <p>The disputed victory is likely to heighten international pressure on Maduro. Even as voting was taking place Sunday, a senior U.S. official said the Trump administration might press ahead on threats of imposing crippling oil sanctions and Secretary of State Mike Pompeo warned "sham elections change nothing."</p> <p>Falcon was joined in his demand for a new election by third-place finisher Javier Bertucci, who won around 11 percent of the vote. Bertucci, a TV evangelist who handed out soup at his campaign rallies, stopped short of challenging the results, partly blaming what he called a mistaken opposition boycott that led to a turnout of around 46 percent — the lowest in a presidential race in two decades of revolution.</p> <p>But he said he nonetheless favors a new election soon and urged Maduro to do the courageous thing and desist from running. If Maduro presses forward, he warned, Venezuela will explode before his new six-year term is scheduled to begin in January.</p> <p>A social crisis years in the making has worsened as Venezuela's oil production — the source of almost all of its foreign income — has collapsed to the lowest level in decades and financial sanctions by the Trump administration has made it impossible for the government to renegotiate its debts. More than 1 million people have fled the country in the past two years and 14,000 percent inflation has crushed the minimum wage to less than \$2 a month.</p> <p>Maduro, 55, immediately called for dialogue with his opponents and put the best face forward on what analysts said were nonetheless disappointing results underscoring how vulnerable his hold on power remains. Despite energetic campaigning his overall vote haul slipped by 1.6 million from 2013, when he was first elected after Hugo Chavez's death from cancer.</p>

	But he showed no sign of replaying Sunday's vote.

<b>HEADLINE</b>	<b>05/19 Starbucks' restrooms open for all</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/starbucks-creates-policy-on-nonpaying-guests-1526745600">https://www.wsj.com/articles/starbucks-creates-policy-on-nonpaying-guests-1526745600</a>
<b>GIST</b>	<p>Starbucks Corp. said Saturday it is creating an official policy that allows all guests to use its cafes, including its restrooms, whether or not they make a purchase.</p> <p>The policy comes a month after a Philadelphia manager called the police in April about two black men who asked to use the bathroom without purchasing anything and then allegedly refused to leave the cafe when asked.</p> <p>Starbucks baristas and store managers have long found the coffee company's guidelines on how to treat lingering nonpaying guests vague at best. One company executive told the Journal the guidance on nonpaying guests had long been a gray area, which the Philadelphia incident brought to the forefront.</p> <p>The company said at the time that it had different guidelines for its 28,000 stores globally, depending on the market. The new policy will apply to its more than 8,000 U.S. company-operated cafes.</p> <p>On Saturday, the company told its employees in a letter that "any person who enters our spaces, including patios, cafes and restrooms, regardless of whether they make a purchase, is considered a customer."</p> <p>Under the new policy, when a customer is "behaving in a disruptive manner," employees should follow the company's procedure on handling disruptive guests, which will contain some new guidance, a spokesman said. Starbucks didn't say what that procedure entails or define what constitutes disruptive behavior. If a situation presents an immediate danger or threat to employee or customer safety, Starbucks employees should call 911, the company said.</p>

<b>HEADLINE</b>	<b>05/19 Detained Saudi feminists face 'traitor' label</b>
<b>SOURCE</b>	<a href="http://www.middleeasteye.net/news/human-rights-groups-slam-saudi-arabia-chilling-smear-campaign-against-activists-786866070">http://www.middleeasteye.net/news/human-rights-groups-slam-saudi-arabia-chilling-smear-campaign-against-activists-786866070</a>
<b>GIST</b>	Human rights groups questioned Saudi Crown Prince Mohammed bin Salman's reform agenda on Saturday

after prominent women's rights activists who campaigned for the right to drive were arrested and branded "traitors" by government-aligned media outlets.

Amnesty International and Human Rights Watch called on the authorities to release the detainees, identifying six of them as Eman al-Nafjan, Lujain al-Hathloul, Aziz al-Yousef, Aisha al-Manea, Ibrahim Modeimigh and Mohammed al-Rabea.

The activists, both women and men, have campaigned for a woman's right to drive, which the conservative kingdom is set to grant from next month after banning it for decades.

The decision hailed as proof of a new progressive trend under Mohammed bin Salman, who has presented himself as a reformist but has been accompanied by a crackdown on dissent.

"Saudi Arabia cannot continue to publicly proclaim support for women's rights and other reforms while targeting women human rights defenders and activists for peacefully exercising their rights to freedom of expression, association and assembly," said Samah Hadid, Amnesty's Middle East Director of Campaigns.

A government statement said seven people had been arrested for suspicious contacts with foreign entities and offering financial support to enemies overseas, without elaborating.

A state security spokesman did not identify the detainees, but online news site Sabq, seen as close to the authorities, linked them to the arrests of the women's rights activists.

Authorities said that they were still identifying others allegedly involved in activities that "encroach on religious and national constants," and fellow activists said others were arrested but the total number was not immediately clear.

Amnesty described it as a "chilling smear campaign" designed to intimidate and discredit the human rights activists, whose faces have appeared online and on a newspaper front page labelling them as traitors.

"Crown Prince Mohammed bin Salman's 'reform campaign' has been a frenzy of fear for genuine Saudi reformers who dare to advocate publicly for human rights or women's empowerment," said Sarah Leah Whitson, Middle East director at Human Rights Watch.

"The message is clear that anyone expressing skepticism about the crown prince's rights agenda faces time in jail."

Women will be allowed to drive starting in Saudi Arabia on 24 June. Activists and analysts say, however, that the government is keen to avoid rewarding activism, forbidden in the absolute monarchy. The authorities also may aim to avoid antagonising the sensitivities of religious conservatives opposed to modernisation.

<b>HEADLINE</b>	<b>05/20 Philippines: won't oppose China on sea</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-05-20/duterte-says-philippines-won-t-oppose-china-on-sea-activity">https://www.bloomberg.com/news/articles/2018-05-20/duterte-says-philippines-won-t-oppose-china-on-sea-activity</a>
<b>GIST</b>	<p>Philippine's President Rodrigo Duterte reiterated that he would not provoke China into a war following reports that the Chinese military landed long-range bombers on an airport in the South China Sea.</p> <p>"You know they have the planes, not stationed in Spratly but near the provinces facing -- Chinese provinces facing the Spratly and the China Sea. And with their hypersonic, they can reach Manila within seven to 10 minutes," Duterte said in a speech on Saturday in Cebu, according to transcript emailed by his office Sunday.</p>

	<p>Facing criticism over his apparent inaction on China's increasing military activity in the South China Sea, Duterte questioned where his country would end up should war erupt in the region. "What will we arm ourselves with if there's a war? Will we resort to slapping each other? I couldn't even buy myself a rifle. It was given to me. So how will we even fight with the Chinese?"</p> <p>Duterte said there was no assurance that the U.S. would remain on the side of the southeast Asian nation if war broke out. A more feasible solution would be to forge a joint exploration pact with China to harness the disputed sea's potential, he said.</p>

<b>HEADLINE</b>	<b>05/20 China pledges to buy more US goods</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-05-19/china-to-significantly-boost-buying-of-u-s-goods-white-house">https://www.bloomberg.com/news/articles/2018-05-19/china-to-significantly-boost-buying-of-u-s-goods-white-house</a>
<b>GIST</b>	<p>China will "significantly increase purchases" of U.S. goods, the White House said as Beijing's special envoy at talks in Washington declared a trade war has been averted between the world's two largest economies.</p> <p>A joint statement released by the White House following the talks didn't place a dollar figure on the increased purchases by China, or address a comment by President Donald Trump's top economic adviser suggesting Beijing had agreed to slash its annual trade surplus with the U.S. by \$200 billion.</p> <p>Vice Premier Liu He, a special envoy of China's President Xi Jinping, told reporters in Washington that talks with Treasury Secretary Steven Mnuchin, Secretary of Commerce Wilbur Ross and U.S. Trade Representative Robert Lighthizer ended with a pledge not to engage in a trade war, according to a Xinhua news agency report.</p> <p>Liu said both sides agreed to stop "slapping tariffs" on each other and called his visit "positive, pragmatic, constructive and productive," Xinhua reported. Cooperation will be enhanced in such areas as energy, agriculture, health care, high-tech products and finance, a "win-win" choice for both nations. The statement said China agreed to "meaningful increases in U.S. agriculture and energy exports" with details to be worked out later.</p> <p>While there's still a long way to go in terms of specifics, the announcement that that a trade war will be averted should boost global stocks Monday, according to Shane Oliver, head of investment strategy at AMP Capital Investors Ltd. in Sydney.</p>

<b>GIST</b>	<p>New evacuations were underway in Hawaii as active lava flows Saturday evening caused brush fires to spread in Puna, the easternmost district on the Big Island.</p> <p>As of 6:30 p.m. local time (12:30 a.m. Sunday Eastern time), officials were unsure how many homes in the</p>

	<p>region the new evacuation orders would affect, but they were going door to door to check on residents.</p> <p>Many of the people in the area had already voluntarily evacuated, a spokesperson for the mayor's office told ABC News.</p> <p>The mayor's office also confirmed the first injury since Kilauea erupted May 3. The spokesperson said a homeowner on Noni Farms Road in the hard-hit town of Pahoa was sitting on his balcony when he was hit with lava splatter. The man was hit on the leg and shattered everything from the shin down to his foot, the spokesperson said. The man was rushed to the hospital for treatment.</p> <p>The lava erupting from Kilauea can be as hot as 2,000 degrees, according to the United States Geological Survey (USGS), though it cools by hundreds of degrees once it hits the open air.</p> <p>Officials were also concerned about two fissures which had merged near MacKenzie State Park and was approaching the ocean, forming what is called laze.</p> <p>"Laze is formed when hot lava hits the ocean sending hydrochloric acid and steam with fine glass particles into the air," the Civil Defense Agency warned in a statement Saturday evening. "Health hazards of laze include lung, eye and skin irritation. Be aware that the laze plume travels with the wind and can change direction without warning."</p>

<b>HEADLINE</b>	<b>05/18 Bike activists protest downtown Seattle</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/local/bike-activists-block-lane-of-traffic-in-downtown-seattle/751989208">https://www.kiro7.com/news/local/bike-activists-block-lane-of-traffic-in-downtown-seattle/751989208</a>
<b>GIST</b>	<p>SEATTLE - Cyclists converged on Seattle City Hall Friday morning as a part of Bike Everywhere Day.</p> <p>One resounding message was a call for the city to create a network of protected bike lanes throughout the city. At one point, about two dozen protesters blocked off a lane to traffic next of the bike lane on 4th Ave between James and Cherry streets.</p> <p>The protesters used cones they brought to block traffic, forcing vehicles to merge. They cheered as cyclists rode past them.</p> <p>KIRO 7 spoke to one driver who was frustrated and said the delay was making him late for work. Another driver said he applauded their effort and thinks a protected bike lane there is a good idea.</p> <p>The protesters removed the cones after about 20 minutes and opened the lane to vehicles.</p> <p>Seattle's new administration pumped the brakes on a planned protected 4th Avenue bike lane through downtown. The delay on the project is slated until 2021.</p> <p>Interim Transportation Director Goran Sparrman said a bike lane would make 4th Avenue slow to a crawl during rush hour.</p> <p>To compensate for the delay, Sparrman promised to accelerate work on an extension of the 2nd Avenue cycling lane from Pioneer Square into Sodo.</p> <p>On Friday, proponents for more bike lanes urged city leaders to take more steps now.</p>

HEADLINE	<b>05/18 Seattle: \$10M on homeless sweeps 2017</b>
SOURCE	<a href="https://www.king5.com/article/news/local/homeless/seattle-spent-10-million-on-homeless-sweeps-in-2017/281-554503199">https://www.king5.com/article/news/local/homeless/seattle-spent-10-million-on-homeless-sweeps-in-2017/281-554503199</a>
GIST	<p>Seattle spent more than \$10 million in 2017 cleaning up and relocating people who live in unauthorized encampments.</p> <p>That’s the number that jumps out of a 50-page memo authored by the Department of Finance and Administrative Services and sent to Councilmember Kshama Sawant earlier this month.</p> <p>The memo, obtained recently by KING 5, will likely be part of a larger debate about how the City spends new revenue from the just-approved \$45 million a year employee head tax.</p> <p>It says the Navigation Team, created in 2017 and spread across resources for six city departments, takes into account labor, outreach, and police costs, as well as garbage cleanup. The FAS estimate says the city spent \$1,289,710 in garbage cleanup alone in the 2017 calendar year. It also details just how many people accepted help and the racial disparity found in unauthorized camps.</p> <p>Between February 20 and December 31 the memo reads, the “Navigation Team made 7,342 total contacts to 1,829 unique individuals living unsheltered in Seattle. Of the 1,829 people the team has engaged, 675 accepted offers of safer shelter (37% acceptance rate), 1,179 accepted some form of service (64%) and 599 declined all offers of service and shelter (32%).”</p> <p>It also noted that a vast majority of the referrals were to newly opened sites including Compass First-</p>

Presbyterian, Navigation Center, Licton Springs Village, Georgetown Sanctioned Encampments, Camp Second Chance, and traditional emergency shelters. The 2017 One Night Count, taken just before the installation of the Navigation Team, showed 5,485 living unsheltered.

The memo concludes, “The data trend has shown enhanced shelters and tiny house villages have and continue to be an attractive option for people the team contacts living in unsanctioned encampments when compared to more traditional forms of emergency shelter.”

The Navigation Team also picked up 6.5 million pounds of garbage, debris and other materials during the same time period.

The document also reports that there is a significant racial disparity among African Americans and American Indians “when compared to the general population of Seattle and King County. The Navigation Team data shows African Americans and American Indians are 4.6 times and three times more likely to be represented in the homeless population than in the general population.”

Sawant has been a vocal opponent of “sweeps,” and the document was addressed to her. It’s not clear what she has done with the information.

Mayor Jenny Durkan wrote the Council this week that she is returning the Council’s spending plan for the head tax revenues “without my signature or concurrence.” She has requested more money for Navigation Teams and immediate shelter, whereas the Council has proposed using two-thirds of the funding to build new affordable housing.

A Fremont group announced Friday afternoon it plans to raise signatures to try and appeal the new law. If nothing changes, the head tax spending plan won’t likely be finalized until the budget cycle this fall.

<b>HEADLINE</b>	<b>05/18 ‘Do something’ Parkland survivors urge</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-texas-shooting-parkland/do-something-parkland-survivors-urge-action-after-texas-school-shooting-idUSKCN1IJ2LU">https://www.reuters.com/article/us-texas-shooting-parkland/do-something-parkland-survivors-urge-action-after-texas-school-shooting-idUSKCN1IJ2LU</a>
<b>GIST</b>	PARKLAND, Fla. (Reuters) - Survivors of the high school massacre in Parkland, Florida, vowed support on Friday for Texas students caught up in the latest deadly school shooting, saying tighter gun laws were needed to stop further bloodshed.  Students at Santa Fe High School, about 30 miles (48 km) outside Houston, were among the thousands across the country who staged a walkout in April to protest congressional inaction after 17 students and staff members were killed by a former student on Feb. 14 at Marjory Stoneman Douglas High School in Florida.

On Friday, the Texas high school came under attack, with at least 10 people killed by a student gunman, police said.

“You deserve more than Thoughts and Prayers, and after supporting us by walking out we will be there to support you by raising up your voices,” Emma Gonzalez, one of the leaders of the Parkland student movement, wrote on Twitter.

There was a heavy police presence outside Marjory Stoneman Douglas High on Friday, as has been typical since the massacre. Friday’s shooting came on what was the last day of school for many Stoneman Douglas seniors, turning a moment of celebration into another somber reminder of the February attack.

“I should be celebrating my last day of high school, but instead my heart is broken to hear of the tragedy at Santa Fe,” student Delaney Tarr said on Twitter. “We cannot let this continue to be the norm. We cannot.”

As school ended for the day hundreds of students, many still wearing controversial clear backpacks ordered for use after the February shooting, streamed onto nearby sidewalks.

“It’s crazy how often this is happening,” said sophomore Michael Gregory, 16. “It’s difficult to see this happen in other places because you know what they’re going through, and it shouldn’t be happening.”

Many of the Parkland students have become outspoken proponents of gun control, pressuring companies to sever ties with the National Rifle Association and calling on legislators to pass gun safety laws as part of the #NeverAgain movement.

They helped lead hundreds of thousands of protesters who participated in the March for Our Lives demonstrations around the country this spring.

Student organizers at the school said each tragedy since theirs served as a reminder of the importance - and difficulty - of their efforts.

“In a way, we’ve been asleep,” said Daniel Tabares, a freshman who was in the middle of an advanced placement geography exam when the Texas shooting occurred. “We’ve been busy with our lives. This will re-energize us. It has to.”

Some Parkland survivors directed frustration at politicians for not doing more.

<b>HEADLINE</b>	<b>05/19 Europe reassures Iran on nuke deal</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-iran-nuclear-eu/europe-reassures-iran-of-commitment-to-nuclear-deal-without-u-s-idUSKCN1IK063">https://www.reuters.com/article/us-iran-nuclear-eu/europe-reassures-iran-of-commitment-to-nuclear-deal-without-u-s-idUSKCN1IK063</a>
<b>GIST</b>	<p>TEHRAN (Reuters) - The European Union’s energy chief sought to reassure Iran on Saturday that the bloc remained committed to salvaging a nuclear deal with Tehran despite U.S. President Donald Trump’s decision to exit the accord and reimpose sanctions.</p> <p>Miguel Arias Canete delivered the message on a visit to Tehran and also said the 28-nation EU, once the biggest importer of Iranian oil, hoped to strengthen trade with Iran.</p> <p>“We have sent a message to our Iranian friends that as long as they are sticking to the (nuclear) agreement the Europeans will... fulfill their commitment. And they said the same thing on the other side,” Arias Canete, European Commissioner for energy and climate, told reporters after talks with Iran’s nuclear chief Ali Akbar Salehi.</p> <p>Salehi said it would be disastrous if EU efforts fail to preserve the 2015 deal, in which Tehran agreed to curb its nuclear work in return for the lifting of most Western sanctions. “The ball is in their (EU leaders)</p>

	<p>court,” Salehi said. “We hope their efforts materialize.”</p> <p>Since Trump’s announcement of the U.S. exit on May 8, EU leaders have pledged to try to keep Iran’s oil trade and investment flowing but admitted that will not be easy to do so.</p> <p>Britain, France and Germany back the deal as the best way of stopping Tehran getting nuclear weapons but have called on Iran to limit its regional influence and curb the missile program.</p> <p>“The EU’s adopted mechanisms ... should be enforced by August 8, when U.S. sanctions begin to take effect,” Iranian TV quoted Behrouz Kamalvandi, spokesman for Iran’s Atomic Energy Organization, as saying.</p> <p>A collapse of the accord could tip the balance of power in Iran’s faction-ridden political establishment in favor of President Hassan Rouhani’s hardline rivals, who have fiercely criticized the president’s failure to deliver greater economic prosperity.</p>

<b>HEADLINE</b>	<b>05/18 Tacoma takes dig at Seattle head tax</b>
<b>SOURCE</b>	<a href="https://www.king5.com/article/news/local/tacoma/no-head-tax-here-tacoma-digs-at-seattle-head-tax-in-new-video/281-554403456">https://www.king5.com/article/news/local/tacoma/no-head-tax-here-tacoma-digs-at-seattle-head-tax-in-new-video/281-554403456</a>
<b>GIST</b>	<p>Tacoma city leaders are seizing an opportunity on the heels Seattle's new controversial head tax.</p> <p>The Pierce County Chamber of Commerce posted a video on YouTube this week, touting its tax-free business climate, lower cost of living and higher quality of life.</p> <p>"No head tax here," says the video. "The South Sound is the place for jobs."</p> <p>The Seattle City Council unanimously passed a compromise proposal Monday on the hotly-debated employee head tax that aims to help the city's affordable housing and homeless crisis. Under the new terms, big businesses will be taxed \$275 per full time employee per year.</p> <p>The tax is expected to raise between \$45 million and \$49 million a year for affordable housing and homeless services, with a sunset clause January 1, 2024. It would only impact businesses with over \$20 million a year in gross revenue, and will begin on January 1, 2019.</p>

	Seattle Mayor Jenny Durkan signed the head tax into law Wednesday. The Seattle head tax is the largest in U.S. history.

<b>HEADLINE</b>	<b>05/19 Active volcanoes in US; likely to erupt?</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/u-s-has-over-160-active-volcanoes-how-likely-are-n875171">https://www.nbcnews.com/news/us-news/u-s-has-over-160-active-volcanoes-how-likely-are-n875171</a>
<b>GIST</b>	<p>Mount Rainier. Mount St. Helens. Yellowstone. From the outside, they're majestic summits, picturesque peaks that are among America's most recognizable landmarks.</p> <p>But inside, these sleeping giants are volcanoes that could, in theory, blow at any time — though early-warning systems would likely prevent casualties.</p> <p>There are more than 160 active volcanoes in the United States, according to the U.S. Geological Survey (USGS). Whether any will erupt soon, like Kilauea did in Hawaii on Thursday, is hard to tell until a few days or weeks in advance.</p> <p>"It's really difficult to predict, because those volcanoes are relatively quiet until they start to activate an eruption," said Ben Edwards, a volcanologist and professor of earth sciences at Dickinson College in Pennsylvania.</p> <p>Experts know that certain volcanoes, such as ones in Alaska, erupt often: sometimes multiple times per year. Since they're in remote areas, they don't usually don't pose a threat to the public, though they can cause disruptions to the aviation routes above them.</p> <p>Volcanoes in more populous areas — like the ones in the Cascade Mountains that weave through northern California, Oregon and Washington — pose much less of a threat.</p> <p>"The time scale of eruptions is long compared to most humans' experience," said Chuck Connor, a volcanologist at the University of South Florida.</p> <p>In some cases, that means centuries, or even thousands of years, between eruptions. Mount Rainier in Washington, for example, last erupted about 1,100 years ago, according to the USGS.</p> <p>Hawaii's Kilauea, on the other hand, is considered one of the most active volcanoes on the planet. It's been erupting nearly constantly since 1983.</p> <p>Scientists are able to predict volcanic activity anywhere from several days to several weeks before it happens — if they have the right tools in place.</p> <p>The USGS currently considers 169 volcanoes in the U.S. to be active, and has in-ground measuring tools to monitor even the slightest change in activity in about half of them — those considered the highest-risk volcanoes, said Charles Mandeville, program coordinator for the USGS volcano hazards program. Mandeville added that in the coming months, the USGS plans to revise the number of active volcanoes in the U.S. down to 161.</p> <p>The 88 currently being monitored the most closely show little activity this week, other than at Kilauea, and the Cleveland volcano in Alaska's remote Aleutian islands, which is under advisory, he said.</p> <p>These instruments were not available before the 1980 eruption of Mount St. Helens in Washington. That eruption killed 57 people and blew ash across a dozen states.</p> <p>Since then, there have been small eruptions at Mount St. Helens. But nothing, scientists added, that should scare anyone away from the area.</p>

	<p>"I don't think there's going to be a major eruption like what happened in 1980 anytime soon. But these [volcanoes] are all considered active. They will erupt in the future, we just don't know when," said David Williams, associate research professor in the school of earth and space exploration at Arizona State University.</p> <p>Volcanoes pose a significant threat, not only from eruptions, but also from other activity, like landslides. While there's not usually any definitive pattern to volcanic activity, scientists have learned a lot since the deadly 1980 Mount St. Helens eruption — and their tools have become a lot more sophisticated since then, meaning anyone who might be affected should be notified in plenty of time to get to safety.</p> <p>"We're actually getting pretty good at forecasting the volcanic eruptions," Connor said.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>05/18 Phone spying devices found D.C. area</b>
<b>SOURCE</b>	<a href="https://www.nbcwashington.com/investigations/Potential-Spy-Devices-Which-Track-Cellphones-Intercept-Calls-Found-All-Over-DC-Md-Va-482970231.html">https://www.nbcwashington.com/investigations/Potential-Spy-Devices-Which-Track-Cellphones-Intercept-Calls-Found-All-Over-DC-Md-Va-482970231.html</a>
<b>GIST</b>	<p>The technology can be as small as a suitcase, placed anywhere at any time, and it's used to track cell phones and intercept calls.</p> <p>The News4 I-Team found dozens of potential spy devices while driving around Washington, D.C., Maryland and Northern Virginia.</p> <p>"While you might not be a target yourself, you may live next to someone who is. You could still get caught up," said Aaron Turner, a leading mobile security expert.</p> <p>The device, sometimes referred to by the brand name StingRay, is designed to mimic a cell tower and can trick your phone into connecting to it instead.</p> <p>The News4 I-Team asked Turner to ride around the capital region with special software loaded onto three cell phones, with three different carriers, to detect the devices operating in various locations.</p> <p>"So when you see these red bars, those are very high-suspicion events," said Turner.</p> <p>If you live in or near the District, your phone has probably been tracked at some point, he said.</p> <p>A recent report by the Department of Homeland Security called the spy devices a real and growing risk.</p> <p>And the I-Team found them in high-profile areas like outside the Trump International Hotel on Pennsylvania Avenue and while driving across the 14th Street bridge into Crystal City. The I-Team got picked up twice while driving along K Street — the corridor popular with lobbyists.</p> <p>"It looks like they don't consider us to be interesting, so they've dropped us," Turner remarked looking down at one of his phones.</p> <p>Every cellphone has a unique identifying number. The phone catcher technology can harness thousands of them at a time.</p> <p>DHS has warned rogue devices could prevent connected phones from making 911 calls, saying, "If this type of attack occurs during an emergency, it could prevent victims from receiving assistance."</p> <p>"Absolutely. That's a worry," said D.C. Councilwoman Mary Cheh, adding that the spy technology should be a concern for all who live and work in the District.</p>

The I-Team's test phones detected 40 potential locations where the spy devices could be operating, while driving around for just a few hours.

"I suppose if you spent more time you'd find even more," said Cheh. "I have bad news for the public: Our privacy isn't what it once was."

Especially in her ward, where many of the streets are lined with embassies.

"They're doing the interrogation, or [checking] who we are, and then the white bar represents when they release us," Turner said as he demonstrated his technology.

The phones appeared to remain connected to a fake tower the longest, right near the Russian Embassy.

The I-Team got picked up twice off of International Drive, right near the Chinese and Israeli embassies, then got another two hits along Massachusetts Avenue near Romania and Turkey.

The spy technology poses a risk to national and economic security, but there's little our government can do to stop devices located on foreign soil.

"A law that we had could not tell these embassies what they can and cannot do," said Cheh.

The phone catchers can also be combined with other technology to listen-in or grab data from phones that are connected, Turner said.

"Most people don't know about it," said Alan Butler, senior counsel for the Electronic Privacy Information Center.

"There's a lot to be concerned about," he said.

Particularly since DHS hasn't disclosed how many devices it found or where. The agency also said it did not determine who was operating them, which Butler finds unacceptable.

"I think they should be taking the time and investing the resources to identify them and to flag them to the carriers and find ways to either have them taken down or have them blocked," he said.

Turner said cell carriers can't completely secure our phones because they have to allow for law enforcement access. Plus, even the oldest phones must be able to reach 911, so low-tech vulnerabilities can't be closed.

"I don't think there's a magic fix here," said Turner. "I don't think Congress can mandate anything to say, Hey, carriers do this right now."

The good news is about half the devices the I-Team found were likely law enforcement investigating crimes or our government using the devices defensively to identify certain cellphone numbers as they approach important locations, Turner said.

The I-Team test detected devices in operation near Langley, the Pentagon and Fort Myer, but also found them in residential areas like Bethesda's Kenwood neighborhood, near Palisades in DC and along Old Dominion Drive in McLean, which Turner said raised questions.

"Maybe someone is involved in high-level negotiations on a business deal, or maybe it's a government employee involved in a regulatory ruling," he said, adding that he's heard of the devices being used in a corporate espionage situation, which is illegal under United States law.

<b>HEADLINE</b>	<b>05/19 Congo: Ebola confirmed in urban area</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Health/wireStory/congo-ebola-cases-confirmed-large-city-55280948?cid=clicksource_26_2_hero_headlines_bsq_hed">https://abcnews.go.com/Health/wireStory/congo-ebola-cases-confirmed-large-city-55280948?cid=clicksource_26_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>Three new cases of the often lethal Ebola virus have been confirmed in a city of more than 1 million people, Congo's health minister announced, as the spread of the hemorrhagic fever in an urban area raised alarm.</p> <p>The statement late Friday said the confirmed cases are in Mbandaka city, where a single case was confirmed earlier in the week.</p> <p>There are now 17 confirmed Ebola cases in this outbreak, including one death, plus 21 probable cases and five suspected ones. It was not immediately clear what link the new cases might have to others.</p> <p>The World Health Organization on Friday decided not to declare the outbreak a global health emergency, but it called the risk of spread within Congo "very high" and warned nine neighboring countries that the risk to them was high. WHO said there should be no international travel or trade restrictions.</p> <p>The outbreak is a test of a new experimental Ebola vaccine that proved effective in the West Africa outbreak a few years ago. Vaccinations are expected to start early in the week, with more than 4,000 doses already in Congo and more on the way.</p>

<b>HEADLINE</b>	<b>05/18 Muslim nations condemn Israel, US</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/turkey-urges-muslim-nations-stand-palestine-55256766?">https://abcnews.go.com/International/wireStory/turkey-urges-muslim-nations-stand-palestine-55256766?</a>
<b>GIST</b>	<p>Muslim nations on Friday condemned Israel and the inauguration of the American embassy in contested Jerusalem as a "provocation and hostility against" the Islamic world, while Turkey's president called for action, including a peacekeeping force.</p> <p>A final communique from the Organization of Islamic Cooperation summit in Istanbul "reaffirmed the centrality of the Palestinian cause" after Turkish President Recep Tayyip Erdogan, the rotating term president of the OIC, called an extraordinary summit.</p> <p>The call came on the heels of a week that has seen Turkey take a leading role in condemning Israeli actions in Gaza — Monday's killing of 59 Palestinians and wounding of hundreds of others was the deadliest day of cross-border violence in Gaza since a 2014 war between Israel and Hamas. As part of its efforts, the Turkish government organized a massive rally and the OIC summit, in a show of solidarity.</p> <p>The OIC threatened other countries considering following suit, including Guatemala, which has already made the move to Jerusalem, with "political, economic and other measures."</p> <p>Iranian President Hasan Rouhani spoke earlier as participants broke their fast for Ramadan, calling the Trump administration a "dangerous threat" to global peace and security. Rouhani said Muslim nations should consider "revising" political and economic ties with the U.S., and called on the international community to "cut ties" with Israel and boycott it through trade.</p> <p>"If Israel faces a united front of Islamic nations, it will never be able to continue its crimes," the Iranian president said. He cited the example of the "new and young generation of Palestine who is aware of their rights and has no intention to withdraw or compromise."</p> <p>Erdogan also urged member states and others to prevent Israeli products produced in "illegal Israeli settlements" from entering their markets.</p>

<b>HEADLINE</b>	<b>05/19 China lands bomber in disputed islands</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/china-lands-bomber-south-china-sea-island-time-55279144?cid=clicksource_76_2_hero_headlines_bsq_hed">https://abcnews.go.com/International/wireStory/china-lands-bomber-south-china-sea-island-time-55279144?cid=clicksource_76_2_hero_headlines_bsq_hed</a>

<b>GIST</b>	<p>The Chinese air force has landed long-range bombers for the first time at an airport in the South China Sea, a state newspaper said Saturday, in a move likely to further fuel concerns about Beijing's expansive claims over the disputed region.</p> <p>The China Daily newspaper reported that the People's Liberation Army Air Force conducted takeoff and landing training with the H-6K bomber in the South China Sea.</p> <p>China is pitted against smaller neighbors in multiple disputes in the South China Sea over islands, coral reefs and lagoons in waters crucial for global commerce and rich in fish and potential oil and gas reserves.</p> <p>A statement from the Defense Ministry late Friday said the exercise was conducted on an island reef, but it did not specify when or where, saying only that it took place recently at a "southern sea area." It involved several H-6Ks taking off from an air base and making a simulated strike against sea targets before landing, the ministry said.</p> <p>Wang Mingliang, a military expert, was quoted in the statement as saying that the takeoff and landing exercises will help the air force improve its "real combat ability against all kinds of marine security threats."</p> <p>The U.S. criticized the move.</p> <p>"The United States remains committed to a free and open Indo-Pacific," a Pentagon spokesman, Marine Lt. Col. Christopher Logan, said in an email. "We have seen these same reports and China's continued militarization of disputed features in the South China Sea only serves to raise tensions and destabilize the region."</p> <p>The Washington-based Asia Maritime Transparency Initiative, using Chinese social media posts, identified the location of the exercise as Woody Island, China's largest base in the Paracel Islands.</p> <p>With a combat radius of nearly 1,900 nautical miles (3,520 kilometers), the H-6K bomber would put all of Southeast Asia in its range from Woody Island, AMTI said.</p> <p>Farther south in the Spratly group of islands, China has constructed seven man-made islands and equipped them with runways, hangars, radar and missile stations, further cementing its vast territorial claims in the busy waterway.</p>

## Cyber Awareness

[Top of page](#)

<b>HEADLINE</b>	<b>05/20 Banks 'fusion centers' fight cybercrime</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/05/20/business/banks-cyber-security-military.html">https://www.nytimes.com/2018/05/20/business/banks-cyber-security-military.html</a>
<b>GIST</b>	<p>O'FALLON, Mo. — In a windowless bunker here, a wall of monitors tracked incoming attacks — 267,322 in the last 24 hours, according to one hovering dial, or about three every second — as a dozen analysts stared at screens filled with snippets of computer code.</p> <p>Pacing around, overseeing the stream of warnings, was a former Delta Force soldier who fought in Iraq and Afghanistan before shifting to a new enemy: cyberthieves.</p> <p>"This is not that different from terrorists and drug cartels," Matt Nyman, the command center's creator, said as he surveyed his squadron of Mastercard employees. "Fundamentally, threat networks operate in similar ways."</p> <p>Cybercrime is one of the world's fastest-growing and most lucrative industries. At least \$445 billion was lost last year, up around 30 percent from just three years earlier, a global economic study found, and the</p>

Treasury Department recently designated cyberattacks as one of the greatest risks to the American financial sector. For banks and payment companies, the fight feels like a war — and they're responding with an increasingly militarized approach.

Former government cyberspies, soldiers and counterintelligence officials now dominate the top ranks of banks' security teams. They've brought to their new jobs the tools and techniques used for national defense: combat exercises, intelligence hubs modeled on those used in counterterrorism work and threat analysts who monitor the internet's shadowy corners.

At Mastercard, Mr. Nyman oversees the company's new fusion center, a term borrowed from the Department of Homeland Security. After the attacks of Sept. 11, the agency set up scores of fusion centers to coordinate federal, state and local intelligence-gathering. The approach spread throughout the government, with the centers used to fight disease outbreaks, wildfires and sex trafficking.

Then banks grabbed the playbook. At least a dozen of them, from giants like Citigroup and Wells Fargo to regional players such as Bank of the West, have opened fusion centers in recent years, and more are in the works. Fifth Third Bank is building one in its Cincinnati headquarters, and Visa, which created its first two years ago in Virginia, is developing two more, in Britain and Singapore. Having their own intelligence hives, the banks hope, will help them better detect patterns in all the data they amass.

The centers also have a symbolic purpose. Having a literal war room reinforces the new reality. Fending off thieves has always been a priority — it's why banks build vaults — but the arms race has escalated rapidly.

Alfred F. Kelly Jr., Visa's chief executive, is "completely paranoid" about the subject, he told investors at a conference in March. Bank of America's Brian T. Moynihan said his cybersecurity team is "the only place in the company that doesn't have a budget constraint." (The bank's chief operations and technology officer said it is spending about \$600 million this year.)

The military sharpens soldiers' skills with large-scale combat drills like Jade Helm and Foal Eagle, which send troops into the field to test their tactics and weaponry. The financial sector created its own version: Quantum Dawn, a biennial simulation of a catastrophic cyberstrike.

In the latest exercise last November, 900 participants from 50 banks, regulators and law enforcement agencies role-played their response to an industrywide infestation of malicious malware that first corrupted, and then entirely blocked, all outgoing payments from the banks. Throughout the two-day test, the organizers lobbed in new threats every few hours, like denial-of-service attacks that knocked the banks' websites offline.

The first Quantum Dawn, back in 2011, was a lower-key gathering. Participants huddled in a conference room to talk through a mock attack that shut down stock trading. Now, it's a live-fire drill. Each bank spends months in advance re-creating its internal technology on an isolated test network, a so-called cyber range, so that its employees can fight with their actual tools and software. The company that runs their virtual battlefield, SimSpace, is a Defense Department contractor.

Sometimes, the tests expose important gaps.

A series of smaller cyber drills coordinated by the Treasury Department, called the Hamilton Series, raised an alarm three years ago. An attack on Sony, attributed to North Korea, had recently exposed sensitive company emails and data, and, in its wake, demolished huge swaths of Sony's internet network.

If something similar happened at a bank, especially a smaller one, regulators asked, would it be able to recover? Those in the room for the drill came away uneasy.

"There was a recognition that we needed to add an additional layer of resilience," said John Carlson, the chief of staff for the Financial Services Information Sharing and Analysis Center, the industry's main

cybersecurity coordination group.

Soon after, the group began building a new fail-safe, called Sheltered Harbor, which went into operation last year. If one member of the network has its data compromised or destroyed, others can step in, retrieve its archived records and restore basic customer account access within a day or two. It has not yet been needed, but nearly 70 percent of America's deposit accounts are now covered by it.

The largest banks run dozens of their own, internal attack simulations each year, to smoke out their vulnerabilities and keep their first responders sharp.

"It's the idea of muscle memory," said Thomas J. Harrington, Citigroup's chief information security officer, who spent 28 years with the F.B.I.

Growing interest among its corporate customers in cybersecurity war games inspired IBM to build a digital range in Cambridge, Mass., where it stages data breaches for customers and prospects to practice on.

One recent morning, a fictional bank called Bane & Ox was under attack on IBM's range, and two dozen real-life executives from a variety of financial companies gathered to defend it. In the training scenario, an unidentified attacker had dumped six million customer records on Pastebin, a site often used by hackers to publish stolen data caches.

As the hours ticked by, the assault grew worse. The lost data included financial records and personally identifying details. One of the customers was Colin Powell, the former secretary of state. Phones in the room kept ringing with calls from reporters, irate executives and, eventually, regulators, wanting details about what had occurred.

When the group figured out what computer system had been used in the leak, a heated argument broke out: Should they cut off its network access immediately? Or set up surveillance and monitor any further transmissions?

At the urging of a Navy veteran who runs the cyberattack response group at a large New York bank, the group left the system connected.

"Those are the decisions you don't want to be making for the first time during a real attack," said Bob Stasio, IBM's cyber range operations manager and a former operations chief for the National Security Agency's cyber center. One financial company's executive team did such a poor job of talking to its technical team during a past IBM training drill, Mr. Stasio said, that he went home and canceled his credit card with them.

Like many cybersecurity bunkers, IBM's foxhole has deliberately theatrical touches. Whiteboards and giant monitors fill nearly every wall, with graphics that can be manipulated by touch.

"You can't have a fusion center unless you have really cool TVs," quipped Lawrence Zelvin, a former Homeland Security official who is now Citigroup's global cybersecurity head, at a recent cybercrime conference. "It's even better if they do something when you touch them. It doesn't matter what they do. Just something."

Security pros mockingly refer to such eye candy as "pew pew" maps, an onomatopoeia for the noise of laser guns in 1980s movies and video arcades. They are especially useful, executives concede, to put on display when V.I.P.s or board members stop by for a tour. Two popular "pew pew" maps are from FireEye and the defunct security vendor Norse, whose video game-like maps show laser beams zapping across the globe. Norse went out of business two years ago, and no one is sure what data the map is based on, but everyone agrees that it looks cool.

Jason Witty, the chief information security officer at U.S. Bank, admits that the blinking map he breaks

out for customer briefings is mostly for show. But it serves a serious purpose, he said: making the command center's high-stakes work more tangible.

"If you show customers the scripts you're actually running, it's just digits on a screen," Mr. Witty said. A big, colorful map is easier to grasp.

What everyone in the finance industry is afraid of is a repeat — on an even larger scale — of the data breach that hit Equifax last year.

Hackers stole personal information, including Social Security numbers, of more than 146 million people. The attack cost the company's chief executive and four other top managers their jobs. Who stole the data, and what they did with it, is still not publicly known. The credit bureau has spent \$243 million so far cleaning up the mess.

It is Mr. Nyman's job to make sure that doesn't happen at Mastercard. Walking around the company's fusion center, he describes the team's work using military slang. Its focus is "left of boom," he said — referring to the moments before a bomb explodes. By detecting vulnerabilities and attempted hacks, the analysts aim to head off an Equifax-like explosion.

But the attacks keep coming. As he spoke, the dial displayed over his shoulder registered another few assaults on Mastercard's systems. The total so far this year exceeds 20 million.

<b>HEADLINE</b>	<b>05/21 Cybercriminals turn to supply chain</b>
<b>SOURCE</b>	<a href="http://www.ciol.com/cyber-criminals-turning-attention-supply-chain/">http://www.ciol.com/cyber-criminals-turning-attention-supply-chain/</a>
<b>GIST</b>	<p>On one hand, ransomware-related outsourced incident response engagements against financial institutions declined from 22% in 2016 to 5% last year, but on the other hand, the business and professional services supply chain has clearly become a prime target for trade secrets and intellectual property theft, potentially exposing customer and business partner data.</p> <p>As per a Dimension Data report, 2017 saw a worrying increase in ransomware and other cyberattacks targeting the supply chain, with the business and professional services sector receiving a significant increase of attacks, particularly in the EMEA region, which saw 20% of all attacks targeting this sector.</p> <p>In 2017, there was a massive 350% rise in ransomware, representing 7% of all global malware attacks (up from 1% in 2016), and is set to continue due to the popularity of cyber adversary campaigns.</p> <p>The businesses and professional services sector received 10% of global ransomware attacks, the third most targeted industry (up from sixth position in 2016), behind finance and technology. It also ranked third in the Americas (9%) and was the most vulnerable sector in EMEA, receiving 20% of all attacks.</p> <p>Despite the drop in outsourced incident response engagements, the finance sector remains the number one target for cyber criminals who carry out regular reconnaissance to spot potential infrastructure and application vulnerabilities.</p> <p>Technology was the second most cyber-attacked industry in 2017, with a 19% attack volume, with business and professional services moving to third place. Interestingly, attacks on the government sector last year dropped to 5% from 9% in 2016.</p> <p>Attacks against education doubled from 9% in 2016 to 18% in 2017.</p> <p>Geography-wise, the technology and finance sectors account for 70% of all attacks in the Americas. The US is a world leader in technology innovation while the finance sector collects and stores a vast amount of personal data which cyber criminals can monetise.</p>

	<p>Education was the most attacked sector in Australia (26%). With an open network model and collaborative environments that enable connectivity and research between students, campuses, colleges, and universities, this is a valuable target.</p> <p>Attacks on the APAC manufacturing sector have dropped to a mere 7% (32% in 2016), because of the adoption of enhanced security governance and proactivity in raising cyber defenses. Attacks against the finance sector decreased from 46% in 2016 to 26% in 2017, but it remained the most attacked sector in APAC. This was caused by service-specific attacks.</p> <p>China was the top attack source for manufacturing cyber-incidents, accounting for 67% of hostile activities targeting the sector in EMEA.</p>

<b>HEADLINE</b>	<b>05/21 Calif. live congressional debate hacked</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/someone-hacked-live-congressional-debate-with-gay-porn/">https://www.hackread.com/someone-hacked-live-congressional-debate-with-gay-porn/</a>
<b>GIST</b>	<p>An online forum designated for California’s First Congressional District debate was hacked by unknown hackers (or call them pranksters) right after opening statements from its participants Lewis Elbinger of Green Party and Lewis Elbinger of the Democratic Party.</p> <p>The debate was hosted by Independent Like the North State group on Thursday night which was being broadcast online via live streaming. However, hackers were quick to take over the live stream to broadcast gay pornography.</p> <p>According to KRCR’s report, the debate was also being broadcast on KFOI station. Once the debate’s moderator Chris Verrill began to ask questions from candidates the debate’s online feed was replaced with two men indulging themselves in sexual acts.</p> <p>The porn clip remained online for several seconds and then taken offline by moderators but Verrill according to KRCR was heard saying “Looks like we got hacked again, we’ll try to fix this.” At the time of defacement, 12 people were watching the debate online.</p> <p>“We had some pranksters decide to go on and not respect ‘Independent Like the North State,’ the two candidates that were there or the democratic process or our community and that’s disappointing. But the North State’s a great community and we’re not going to let a couple bad apples spoil the whole barrel,” Verrill told KRCR.</p> <p>Verrill said he has no idea who the hackers are and what were their motives. However, in a conversation with Motherboard, he said that this was the first time the forum got hacked since this was the first time ever that they hosted a forum like this.</p> <p>This is not the first time when hackers have pulled such a stunt in California. In September 2017, unknown hackers took over TV transmission across the Orange County and disrupted scheduled programs with strange, mysterious warning messages informing viewers about the upcoming invasion of extra-terrestrials and the onset of Armageddon.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>05/21 Hacked Drupal sites: miners, RATs, scams</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/hacked-drupal-sites-deliver-miners-rats-scams">https://www.securityweek.com/hacked-drupal-sites-deliver-miners-rats-scams</a>
<b>GIST</b>	<p>The Drupal websites hacked by cybercriminals using the vulnerabilities known as Drupalgeddon2 and Drupalgeddon3 deliver cryptocurrency miners, remote administration tools (RATs) and tech support scams.</p>

Two highly critical flaws were patched in recent months in the Drupal content management system (CMS). The security holes are tracked as CVE-2018-7600 and CVE-2018-7602, and they both allow remote code execution.

Malicious actors started exploiting CVE-2018-7600, dubbed Drupalgeddon2, roughly two weeks after a patch was released and shortly after a proof-of-concept (PoC) exploit was made public.

CVE-2018-7602, dubbed Drupalgeddon 3, was discovered during an analysis of CVE-2018-7600 by the Drupal Security Team and developer Jasper Mattsson, who also reported the original vulnerability. Hackers started exploiting CVE-2018-7602 immediately after the release of a patch.

Cybercriminals have exploited the vulnerabilities to hijack servers and abuse them for cryptocurrency mining. Some websites have been targeted by botnets known to also be involved in distributed denial-of-service (DDoS) attacks.

Researchers at security firm Malwarebytes recently conducted an analysis of client-side attacks involving Drupalgeddon2 and Drupalgeddon3, i.e. the threats pushed by the compromised sites to their visitors.

Experts noticed that nearly half of the hacked Drupal sites had been running version 7.5.x of the CMS, while roughly 30 percent had been running version 7.3.x, which was last updated in August 2015.

Unsurprisingly, more than 80 percent of the hacked sites had been serving cryptocurrency miners, mostly through Coinhive injections.

Just over 12 percent of the attacks observed by Malwarebytes delivered RATs or password stealers disguised as web browser updates.

Tech support scams accounted for nearly 7 percent of the client-side attacks spotted by the security firm. In these attacks, website visitors are typically redirected to a page that locks their browser and instructs them to call a "tech support" number.

Malwarebytes says it has notified the organizations whose websites have been compromised

<b>HEADLINE</b>	<b>05/20 Roundup: some current phishing trends</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/phishing-roundup-caracal-stealth-mango-tangelo-apple-dhl-efax-and-more/">https://www.bleepingcomputer.com/news/security/phishing-roundup-caracal-stealth-mango-tangelo-apple-dhl-efax-and-more/</a>
<b>GIST</b>	<p>Phishing takes place when a fraudster tricks an individual into sharing sensitive information (account numbers, Social Security numbers, login credentials, etc.) by way of fraudulent emails, texts, or counterfeit websites. Phishing can also enable a scammer to gain access to a computer or network so that they can install malware, such as <a href="#">ransomware</a>, on a victim's computer. Phishers are able to achieve this by spoofing the familiar, trusted logos of established, legitimate companies. Or, they may pose as a friend or family member and are often successful in completely deluding their targets.</p> <p><b>Some Current Phishing Threats</b></p> <ul style="list-style-type: none"> <li>• <a href="#">In carrying out attacks, Dark Caracal uses trojanized WhatsApp and Facebook apps</a> to try to lure users into clicking malicious links and downloading Android malware, called Pallas, which can collect vast amounts of data. Dark Caracal targets include governments, military organizations, utilities, financial institutions, manufacturing companies and defense contractors.</li> <li>• <a href="#">Stealth Mango (Android) and Tangelo (iOS)</a>, discovered by Lookout Security Intelligence, are surveillanceware tools that target government officials, diplomats, activists and military personnel, specifically in Pakistan, Afghanistan, Iraq, India and the UAE. According to Lookout Security, “data from U.S., Australian, and German officials and military have been swept up in the campaign we believe is being run by members in the Pakistani military.”</li> <li>• <a href="#">Fake eFax email</a> deceives email recipients by telling them they have received ‘a new eFax’ and that they need to click on a link button in the email to retrieve the document. The link goes to a phishing page. This is not a new attack, but has recently been spotted in emails again.</li> <li>• <a href="#">Email filtering company, Mailguard, has picked up a fake E-Toll notification</a> containing an infected .doc file. According to Mailguard, the file contains a malicious macro that will download malware to the victim’s computer. The notification also includes the logos of Microsoft Office and Mailguard in order to appear authentic. It even goes as far as to claim that, “this document is protected by MailGuard”.</li> <li>• <a href="#">DHL branding was mimicked</a> and fake shipping notifications were sent out, asking recipients to download an attached file that contained highly destructive trojan malware.</li> <li>• <a href="#">“MEWKit” is a phishing attack that directly steals Ethereum from users of MyEtherWallet</a>. Using MyEtherWallet as bait, it attempts to trick Ethereum investors into logging in to the bogus, cloned version of the website in order to steal their credentials.</li> <li>• <a href="#">The Twitter verification phishing site is still live</a>. Late last year through early 2018, some Twitter accounts launched a promoted tweet campaign, which had been approved by Twitter. But, it was in actuality a phishing attempt. The phishing site, linked to the promoted tweets, claimed that, “to prevent identity confusion, Twitter is now offering the ‘verification form.’ We’re working the establish authenticity with people who deal with impersonation or identity confusion on a regular basis. Accounts with a [blue checkmark] are the official accounts.” It then asks users to fill out information about how many followers they have, their phone numbers and their account passwords.</li> <li>• <a href="#">Gmail’s new Confidential Mode may invite link-baiting phishing attacks</a>. According to analysis by <i>ComputerWorld</i>, “Confidential Mode works by storing your email in a secure space on Google servers in the cloud. When both sender and recipient use Gmail, the email appears normal. But recipients who do not use Gmail get a link for viewing the email in a browser. The messages you send or receive via Confidential Mode are not actually email. The link is an email, but the message is an email-looking page on the internet that’s password-protected. Emails containing the link can, in fact, be forwarded, but only the intended recipient can successfully open the link. When someone gets one of these forwarded mails, they’re prompted for their Google login username and</li> </ul>

password to determine whether or not they're the intended recipient. This is problematic, because it invites link-baiting phishing attacks, which could con people into revealing their login information."

- [A phishing campaign targeting Apple users](#) seeks to dupe victims into updating their profiles in preparation for the EU's General Data Protection Regulation (GDPR) policies, which go into effect on May 25. This is just one of many scams exploiting the coming implementation of GDPR policies.
- On May 8, a *Bleeping Computer* article covered [a zero-day vulnerability known as baseStriker](#). It "allows miscreants to send malicious emails that bypass security systems on Office 365 accounts. Discovered on May 1, 2018, by security researchers from Avanan, baseStriker is a flaw in how Office 365 servers scan incoming emails. But baseStriker isn't just a random vulnerability that researchers found after weeks of pen-testing. Avanan says it discovered baseStriker as part of real-world attacks. 'So far we have only seen hackers using this vulnerability to send phishing attacks, but but it is also capable of distributing ransomware, malware and other malicious content,' Avanan's Yoav Nathaniel wrote in a [report](#) published today."
- ["Rules of Conduct" Office 365 phishing email scam](#), written about by *Bleeping Computer* at the end of April, "pretends to be from a company's human resources (HR) department and requests that the recipient read and acknowledge an attached 'Rules of Conduct' document. This document, though, prompts you to login at a fake Office 365 login prompt, which is used to steal your credentials."
- [Phishing via "voice squatting" attacks](#) is a new way of targeting Amazon Alexa and Google Home Assistants. The idea is to lure the user into opening a malicious app by using voice triggers comparable to those in authentic apps, and then use the malicious apps to either phish users for sensitive data or eavesdrop on their surroundings.
- [High school student receives 14 felony counts after launching a phishing campaign](#) directed at teachers, so he could pilfer their passwords and modify grades.

According to [Verizon's 2018 Data Breach Investigations Report](#), 90% of cyberattacks begin with phishing. And, the rate at which mobile enterprise users get tricked into becoming victims of phishing attacks has increased 85% every year since 2011, according to Lookout Security. Add to that the fact that mobile devices are becoming popular phishing targets and it becomes clear that phishing attacks aren't going away anytime soon.

<b>HEADLINE</b>	<b>05/21 Report: botnet malware infections</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/58-percent-of-botnet-malware-infections-last-under-a-day/">https://www.bleepingcomputer.com/news/security/58-percent-of-botnet-malware-infections-last-under-a-day/</a>
<b>GIST</b>	<p>The vast majority of botnet malware infections last under a day, according to a Fortinet report released last week —the Q1 2018 Threat Landscape Report.</p> <p>The Fortinet data includes information from all types of botnets, targeting desktop, mobile, server, IoT, and networking devices alike.</p> <p>According to the report, the vast majority of botnet infections —58%— last under a day; 17.6% of botnets persist for two days in a row; 7.3% last three days; and so on — while only 5% persist for more than a week.</p> <p>The botnet that has the longer persistence rate per bot is Mirai, a botnet that infects IoT devices, which it mainly uses for DDoS and traffic proxy services.</p> <p>The average lifetime of a Mirai bot is 5.5 days. Mirai is followed by other botnets, such as Sality (spam &amp; proxy), Ramnit (banking trojan), H-worm (downloader), Necurs (spam), and others...</p> <p>Persistence per botnet</p>

But according to Fortinet, despite its increased persistence, Mirai is not the most prevalent botnet. For the first quarter of 2018, that distinction goes to the botnet created by infected victims of the Gh0st malware, a relatively new "malware downloader" that infects victims and then rents out infected PCs to other crooks.

In Q1 2018, Gh0st was by far the most widespread botnet malware version around, being ranked #1 across all continents, followed by the Pushdo spam botnet, and the Andromeda botnet, which despite being the target of a law enforcement takedown, has come back to life.

The reason is that the Andromeda source code had been leaked online a few years back, and while the original botnet has been taken down, other crooks installed and got running new Andromeda botnets within days.

Overall, botnets have been on a declining trajectory in the first quarter of 2018, most of them losing bots, shutting down, or having less activity than the previous quarter...

## HEADLINE 05/20 Leak: teen phone monitoring app

SOURCE <https://www.cbsnews.com/news/teen-phone-monitoring-app-leaked-thousands-of-user-passwords/>

GIST At least one server used by an app for parents to monitor their teenagers' phone activity has leaked tens of thousands of accounts of both parents and children.

The mobile app, TeenSafe, bills itself as a "secure" monitoring app for iOS and Android, which lets parents view their child's text messages and location, monitor who they're calling and when, access their web browsing history and find out which apps they have installed.

Although teen monitoring apps are controversial and privacy-invasive, the company says it doesn't require parents to obtain the consent of their children.

But the Los Angeles, California-based company left its servers, hosted on Amazon's cloud, unprotected and accessible by anyone without a password.

Robert Wiggins, a U.K.-based security researcher who searches for public and exposed data, found two leaky servers.

Both of the servers were pulled offline after ZDNet alerted the company, including another that contains what appears to be only test data.

"We have taken action to close one of our servers to the public and begun alerting customers that could potentially be impacted," a TeenSafe spokesperson told ZDNet on Sunday.

The database stores the parent's email address associated with TeenSafe, as well as their corresponding child's Apple ID email address. It also includes the child's device name -- which is often just their name -- and their device's unique identifier. The data contains the plaintext passwords for the child's Apple ID. Because the app requires that two-factor authentication is turned off, a malicious actor viewing this data only needs to use the credentials to break into the child's account to access their personal content data.

None of the records contained content data, such as photos or messages, or the locations of either parents or children.

TeenSafe claims to have over a million parents using the service.

HEADLINE	<b>05/20 Invisible messages w/subtle font tweaks</b>
SOURCE	<a href="https://www.wired.com/story/fontcode-invisible-messages-steganography/">https://www.wired.com/story/fontcode-invisible-messages-steganography/</a>
GIST	<p>IF YOU'RE GRASPING for the deeper meaning of an essay or article, consider the possibility that it may not be in the words themselves, but hidden in the shape of the letters. It really could be the case, now that researchers from Columbia University have developed a method called FontCode, which plants data in text through tiny changes in how the letters are shaped.</p> <p>The method is a steganographic technique, meaning it hides secret information in plain sight such that only its intended recipient knows where to look for it and how to extract it. FontCode can be applied to hundreds of common fonts, like Helvetica or Times New Roman, and works in word processors like Microsoft Word. Data encoded with FontCode can also endure across any image-preserving digital format, like PDF or PNG. The secret data won't persist after, say, copy and pasting FontCode text between text editors.</p> <p>The most significant format conversion FontCode messages can transcend, though, is digital to physical and back.</p> <p>"Many modern steganographic techniques are always in digital files, but you can argue that the world is much larger than just digital formats," says Changxi Zheng, a computer scientist at Columbia University who worked on the FontCode research. "So the question was how can we design a common physical object to convey digital information without compromising its existing functionality. I call it a hyperlink between a physical object and digital information."</p> <p><b>Invisible Ink</b></p> <p>The text perturbations FontCode uses to embed a message involve slightly changing curvatures, widths, and heights—but crucially it's all imperceptible to the naked eye. You can intuit that some letters, like capital "I"s or "J"s, don't have a lot of complexity in which to hide subtle variations. But lowercase "a"s and "g"s, for example, have lots of edges and curves that can be elongated or shortened and bulked up or paired down.</p> <p>The only easy way to extract the hidden information in all those tiny tweaks is with the research teams' decoding algorithm. A recipient of a FontCode message could use their smartphone to take a picture of text manipulated with FontCode, then run the photo through a dedicated mobile app that decrypts the code to pull out the hidden message. It would also be possible to set up decoding schemes that use a webcam, a scanner, or any other image digitization method.</p> <p>Though FontCode is just begging to be used in spy movies or by White House staffers, the researchers also imagine that it could be used in place of everyone's least-favorite hyperlink method, QR codes, or as a watermarking feature. FontCode messages could convey information about trademarks, patents, or other intellectual property protections in a document, or could even act as an anti-tampering feature to ensure that a document hasn't been manipulated.</p> <p>One difficulty for the FontCode team was maximizing the amount of information they could hide in text while still making the method flexible enough that complete information can still be extracted if physical limitations erode fidelity—for example, if a shadow distorts some letters, or someone drips coffee on a printout that contains a FontCode message.</p> <p>"The main challenge we were facing was how to encode as much information as possible—because if it only works with a tiny bit of information it's useless—while making it robust enough so if you have bad lighting or ink stains on the text it will still work," Zheng says.</p> <p><b>Ch-Ch-Changes</b></p> <p>Steganographic techniques have been around for millennia, but in recent years cybersecurity researchers have noticed hackers adopting them in malicious attacks, and developing new variations to make their hacks more successful. These types of attacks are difficult for network defenders to detect, since they often hide malicious data in things like image files that don't have any set standard to check them against.</p>

	<p>FontCode could be more difficult to weaponize, since anyone could potentially use machine learning algorithms—like those that generate FontCode tweaks—to check text documents against font standards.</p> <p>“This technique is likely easily detected by machine learning, so it is not suitable for sending secret messages where there are people on the lookout for secret messages being sent,” says Owen Campbell-Moore, a security researcher who created the Chrome extension Secretbook to hide messages in Facebook photos. “This is in contrast to other steganography techniques such as JPEG steganography, in which decades of research has been done in order to make it undetectable even when there are people actively scanning for it.”</p> <p>But FontCode does have the advantage of moving between digital and physical mediums, which could have specific applications in high-stakes espionage. And the researchers note that FontCode messages can be additionally encrypted if the sender and receiver agree on a key for reordering whatever data is embedded in a given text. Plus, the technique’s more mainstream uses wouldn’t be impacted by the potential that a scanner could discover the presence of the data—since it wouldn’t be a secret in the first place that more information was stored there.</p> <p>“It’s exciting to see new techniques for steganography being invented,” Campbell-Moore says. “I think this technique has a lot of appeal.”</p>

<b>HEADLINE</b>	<b>05/18 Chrome’s red ‘not secure’ warning</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/chrome-issue-red-not-secure-warning-http">https://www.securityweek.com/chrome-issue-red-not-secure-warning-http</a>
<b>GIST</b>	<p>Google is putting yet another nail in the HTTP coffin: starting with Chrome 70, pages that are not served over a secure connection will be marked with a red warning.</p> <p>The search giant has been pushing for an encrypted web for many years, and suggested in 2014 that all HTTP sites be marked as insecure.</p> <p>Google proposed that Chrome would initially mark HTTP pages serving password fields or credit card interactions as “Not Secure,” and only then move to marking all of them in a similar manner.</p> <p>Now, Google believes that the Chrome security indicators should evolve in line with a wider adoption of HTTPS across the Internet.</p> <p>At the beginning of May 2018, over 93% of the traffic across Google resources was being served over an</p>

	<p>encrypted connection, a major improvement since early 2014, when only 50% of the traffic was encrypted.</p> <p>Similar advancements were observed across the web as well, where around three quarters of the pages loaded via Chrome at the end of last week were served over HTTPS. Three years ago, only around 40% of the loaded pages were using HTTPS.</p> <p>Given the wider adoption of HTTPS, Google is now ready to make another push towards eliminating unencrypted connections by marking HTTP pages with a red “Not Secure” warning.</p> <p>“Previously, HTTP usage was too high to mark all HTTP pages with a strong red warning, but in October 2018 (Chrome 70), we’ll start showing the red “not secure” warning when users enter data on HTTP pages,” Emily Schechter, Product Manager, Chrome Security, notes in a blog post.</p> <p>“Users should expect that the web is safe by default, and they’ll be warned when there’s an issue. Since we’ll soon start marking all HTTP pages as ‘not secure’, we’ll step towards removing Chrome’s positive security indicators so that the default unmarked state is secure,” Schechter notes.</p>

<b>HEADLINE</b>	<b>05/18 Hacking group targets NKorea defectors</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/sun-teams-reddawn-campaign-targets-north-korean-defectors-and-journalist/article/767126/">https://www.scmagazine.com/sun-teams-reddawn-campaign-targets-north-korean-defectors-and-journalist/article/767126/</a>
<b>GIST</b>	<p>The second campaign from the “Sun Team” hacking group managed to sneak its way into the Google Play Store to targeted North Korean defectors.</p> <p>The malware looks to copy sensitive information including personal photos, contacts, and SMS messages and sends them to the threat actors,” according to a May 17 blog post.</p> <p>The malware became active in 2017 with the sole purpose of extracting information from devices.</p> <p>Researchers identified the malwares at an early stage and subsequently alerted Google and as a result, the number of infections was only about 100 infections, quit low compared with previous campaigns from Google Play. Threat actors also used Facebook to distribute malicious links to which linked to that apps.</p> <p>The malware was hidden in three apps named AppLockFree (Unreleased), Fast AppLock (Unreleased), and Food Ingredients Info which offers information about food, all of which have since been removed after staying online for roughly two months.</p> <p>Sun Team also used awkward Korean writing in the descriptions which followed a pattern of using names of celebrities, such as Jack Black, who appeared on Korean TV suggesting the threat actors aren’t native South Koreans but are familiar with the culture and language, researchers said.</p> <p>Researchers believe the apps are multi-staged and use several components with one of the apps being part of a reconnaissance stage which sets the foundation for the next stage for the other two apps. The malware also attempts to spread to a victims friends and asks them the install the other malicious apps and offer feedback via a Facebook account with a fake profile promoted.</p> <p>Researchers also found Sun Team used devices manufactured in several countries and carry installed Korean apps to test the exploits they tried to use.</p>

<b>HEADLINE</b>	<b>05/18 Spectre attack reveals firmware secrets</b>
<b>SOURCE</b>	<a href="https://www.zdnet.com/article/ex-intel-security-expert-this-new-spectre-attack-can-even-reveal-">https://www.zdnet.com/article/ex-intel-security-expert-this-new-spectre-attack-can-even-reveal-</a>

	<a href="#">firmware-secrets/</a>
GIST	<p>Yuriy Bulygin, the former head of Intel's advanced threat team, has published research showing that the Spectre CPU flaws can be used to break into the highly privileged CPU mode on Intel x86 systems known as System Management Mode (SMM).</p> <p>Spectre and Meltdown vulnerabilities enable software attacks using CPU design flaws common to Intel, AMD, and Arm chips to access secrets stored in memory.</p> <p>Bulygin, who has launched security firm Eclipsium, has modified Spectre variant 1 with kernel privileges to attack a host system's firmware and expose code in SMM, a secure portion of BIOS or UEFI firmware.</p> <p>SMM resides in SMRAM, a protected region of physical memory that should only be accessible by BIOS firmware and not the operating system kernel, hypervisors or security software.</p> <p>SMM handles especially disruptive interrupts and is accessible through the SMM runtime of the firmware, known as System Management Interrupt (SMI) handlers.</p> <p>As a former Intel researcher explained in a 2013 paper, when an SMI event occurs, say, due to thermal throttling or system health checks, all the CPU's cores enter SMM or system management mode.</p> <p>"Because SMM generally has privileged access to physical memory, including memory isolated from operating systems, our research demonstrates that Spectre-based attacks can reveal other secrets in memory (eg, hypervisor, operating system, or application)," Bulygin explains.</p> <p>To expose code in SMM, Bulygin modified a publicly available proof-of-concept Spectre 1 exploit running with kernel-level privileges to bypass Intel's System Management Range Register (SMRR), a set of range registers that protect SMM memory.</p> <p>"These enhanced Spectre attacks allow an unprivileged attacker to read the contents of memory, including memory that should be protected by the range registers, such as SMM memory," he notes.</p> <p>"This can expose SMM code and data that was intended to be confidential, revealing other SMM vulnerabilities as well as secrets stored in SMM. Additionally, since we demonstrate that the speculative memory access occurs from the context of SMM, this could be used to reveal other secrets in memory as well."</p> <p>Bulygin said he's been working with Intel since March and that Intel believes its guidance to mitigate Spectre variant 1 and Spectre variant 2 should also be applied to SMM.</p>

HEADLINE	<b>05/20 Japan: 200M users info on hacking forum</b>
SOURCE	<a href="https://www.bleepingcomputer.com/news/security/data-of-over-200-million-japanese-sold-on-underground-hacking-forum/">https://www.bleepingcomputer.com/news/security/data-of-over-200-million-japanese-sold-on-underground-hacking-forum/</a>
GIST	<p>A hacker suspected to be operating out of China has been seen peddling the data of around 200 million Japanese users on an underground cybercrime forum, according to a FireEye iSIGHT Intelligence report shared with Bleeping Computer.</p> <p>The data appears to have been assembled by hacking up to 50 smaller Japanese sites and put up for sale as one big giant archive in December 2017.</p> <p>After analyzing a sample of the data, researchers say they've identified the hacked targets as small Japanese websites activate in the retail, food and beverage, financial, entertainment, and transportation sectors.</p>

FireEye believes the data is authentic and not forged because it contains data on users whose personal info had been leaked in other breaches, but also data for new users.

The mixture between new and old data is also confirmed by other clues suggesting some data comes from hacks taking place in June 2016, but others go as far as May 2013.

The user leaked data varies depending on the website from where it's been stolen, but usually includes real names, email addresses, dates of birth, phone numbers, and home addresses.

Data dump currently sold for only \$150

The price for the entire archive is ¥1,000 CNY (\$150.96 USD). Several actors commenting on the forum thread where the suspected Chinese hacker was selling his data commented that they've bought the PII cache but did not receive their files. It is unclear if these comments are true, or if these were made by other data sellers trying to sabotage their competition.

FireEye says it tracked the hacker's online persona to a QQ social network ID that is also linked to another hacker's online persona. This second hacker persona received bad reviews and had a bad reputation as well.

"This QQ address is connected to an individual living in China's Zhejiang province," researchers said about the hacker's real location.

This same persona seems to have been active online since 2013, the year of the oldest data included in the Japanese files. FireEye says the hacker has been linked to selling data on multiple Chinese hacking forums—data belonging to companies in many other countries such as China, Taiwan, Hong Kong, European countries, Australia, New Zealand, and North American countries.

While the data sold in this most recent dump does not contain very sensitive information, the stolen information can still facilitate identity theft, spam, malware propagation, and fraud.

<b>HEADLINE</b>	<b>05/19 Students hack school to change grades</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/students-hack-high-school-to-change-grades-get-lunch-refunds/">https://www.bleepingcomputer.com/news/security/students-hack-high-school-to-change-grades-get-lunch-refunds/</a>
<b>GIST</b>	<p>Two students from Bloomfield Hills High School are the main suspects of a recent hack discovered at the school this week.</p> <p>The two broke into the school's MISTAR Student Information System portal where they changed grades, attendance records, and attempted to refund lunch purchases.</p> <p>The hack came to light after a school employee logged into his account a noticed an error. School officials investigated the issue and discovered the hack.</p> <p>The two students are said to have used a vulnerability in the school portal to carry out their hack. They tried to disguise their identity by modifying the records for 20 students.</p> <p>Dire repercussions announced in a YouTube video</p> <p>But according to a YouTube video posted by Bloomfield Hills High School superintendent Robert Glass, school employees with the help of forensic data experts managed to track down the two culprits.</p> <p>"As a father myself, my heart aches for the parents of the students who will be learning a very hard lesson," Glass said in the YouTube video.</p>

	"The consequences for these young individuals is likely to be severe. Cyber hacking is a federal crime and we're working with the proper authorities to determine the appropriate discipline and legal ramifications," Glass said. "Due to student privacy laws, we're not able to disclose more information but we can assure you that we're working within the full extent of the Student Code of Conduct and the full extent of the law."

<b>HEADLINE</b>	<b>05/19 Vigilant hacker hits cyberespionage group</b>
<b>SOURCE</b>	<a href="https://koddos.net/blog/vigilante-hacker-steals-and-publishes-cyberespionage-groups-data/">https://koddos.net/blog/vigilante-hacker-steals-and-publishes-cyberespionage-groups-data/</a>
<b>GIST</b>	<p>A vigilante hacker recently stole data belonging to a hacking group called ZooPark. The group is allegedly connected to the Iranian government. Upon receiving \$1,000 payment, the hacker decided to publish the data online.</p> <p>According to recent reports, an unknown hacker has managed to infiltrate systems belonging to the cyberespionage group which is supposedly linked to the government. Researchers claim that the stolen data included phone calls, texts, as well as GPS locations which the group took from their alleged victims. Upon obtaining the data in question, the vigilante hacker decided to publish it publically.</p> <p>It would seem that even the hackers working for the government itself are not untouchable, and will have to face consequences for their actions. Especially when those actions are publically displayed for everyone to download and see.</p> <p>The hacker who stole the data has announced on Monday that they will publish the data on a public domain within 48 hours. The hacker requested that someone pays \$1,000 worth of Bitcoin (BTC) in order to publish the data, and they apparently got their wish. The released files are seemingly legitimate, as they are in line with previously obtained information.</p> <p>According to researchers, the published files came from a server owned by the ZooPark group. This is a hacking unit revealed earlier this month by researchers from Kaspersky. The link to ZooPark was confirmed after comparing the stolen materials with Kaspersky researchers' reports.</p> <p>The report claims that the hacking group has targeted victims in various countries, including Morocco, Egypt, Iran, Jordan, and Lebanon. These results are confirmed by the GPS locations of the victims that came from the stolen files.</p> <p>According to the vigilante, ZooPark might be a group based in Iran, which is something that researchers managed to conclude on their own as well. Unfortunately, Kaspersky did not manage to connect ZooPark to any other known hacking group so far.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>05/19 ISIS message continues to thrive online</b>
<b>SOURCE</b>	<a href="https://www.thenational.ae/uae/isis-message-thrives-online-after-crushing-defeat-on-battlefield-europe-s-globsec-security-forum-hears-1.731884">https://www.thenational.ae/uae/isis-message-thrives-online-after-crushing-defeat-on-battlefield-europe-s-globsec-security-forum-hears-1.731884</a>
<b>GIST</b>	<p>Terror groups such as Isis are reaching ever wider audiences online after their crushing defeat on the battlefield, raising the question of how to defeat an enemy adept at tapping into anger among young people and recruiting them to their ranks.</p> <p>The issue took centre stage at the Globsec forum in Bratislava on Saturday against a backdrop of terror attacks across European cities that have claimed the lives of hundreds in recent years.</p> <p>"They send their messages, they decide on the platform and we're always on the defence, trying to catch up, what they're trying to do and how they recruit," said Maqsood Kruse, executive director of Hedayah,</p>

the Abu Dhabi anti-extremism centre.

Mr Kruse said terrorists today are transcending borders and have been remarkably successful online.

"Their existence in the digital world, in cybercrime, their ability to connect and reconnect and establish different associations..." he said.

He told an audience of European security officials and government ministers there is a need to create an effective counter narrative, an alternative for people susceptible to radicalisation.

"When they join these groups they actually tap into a world of excitement, action, endangerment, but most important they feel they're having a noble cause, they're making a difference in the world, they're part of a group. If you take all of this away from them, the question remains, what is the alternative?"

Mr Kruse said whether it was right-wing, left-wing or religious extremism, there are common themes seen in recruits across the board.

"Perceived grievance, issues of identity - the notion that they need to have a certain purpose and mission and direction in their lives" he said.

Among the other UAE speakers at Globsec in the Slovakian capital was Minister of State for Foreign Affairs Dr Anwar Gargash, who on Friday called for an end to Iranian and Turkish interference in the region.

Nicholas Rasmussen, former director of the National Counterterrorism Centre in the United States, said Isis' ability to bring foreign fighters to a conflict zone "had as much to do with adventure, had as much to do with violence and had as much to do with excitement, changing your life," as it did any religious element.

"It may just be about personal fulfilment in a way. Unfortunately that meant that the pool of potential recruits was much much wider than anything we'd seen during the Al Qaeda years," he said.

"I hesitate to think of the Al Qaeda years as the good old days of dealing with counter terrorism, but it was a small pool of potential actors."

The debate focused on how several key themes: how perpetrators often have a background in low level crime; how recruiters tap into disaffection with targets' lives and how organised crime in Europe has funded terror networks on the continent and in the Middle East.

Magnus Ranstorp, research director of the Centre for Asymmetric Threat Studies at the Swedish National Defence College, said terrorist groups have long been linked to organised criminal activity, from the IRA smuggling fuel and demanding extortion money to Isis smuggling refugees.

"If you look at the microfinancing of foreign terrorist fighters, one thing they're not lacking is money. And the money is generated from a whole array of different activities, everything from welfare benefit fraud to VAT fraud."

He cited one example of a group of shell companies in Denmark that imported cheese and meat from German and the Netherlands.

"They were connected to an Isis cell in Spain, and the extremists in Denmark gave the banking key facilitation devices so they could lift money [from the companies] to fund people going from Melilla to Syria." The cell was exposed last year by Spanish uncover police.

"I came yesterday from Copenhagen, where a huge ring of criminals and extremists were arrested. What they were doing was actually smuggling people into Europe - these were Syrians - and of course the money they got from that was then smuggled back into Syria, to fund the Al Nusra Front."

	<p>All three experts said local communities have a greater role to play in identifying those at risk of radicalisation.</p> <p>"We need to also remind ourselves that only relying on security, policing, intelligence, military approaches alone is no longer enough or efficient," said Mr Kruse, from Hedayah.</p> <p>"If we are truly sincere in countering this phenomenon, we are all part of the solution."</p> <p>Mr Rasmussen added: "In easily 80 per cent of the cases we've looked at over the last decade in the United States, somebody in the aftermath of that case lifted their hand and said 'oh I actually saw something and I didn't really act on it' in a timely way. That person may have been a teacher or a relative or a peer or a coach or a colleague, and those are the individuals that are most likely to spot the signs of radicalisation.</p> <p>"As director [James] Comey of the FBI used to say: 'If I'm involved, if the FBI is involved, it's usually way too late already'."</p>

<b>HEADLINE</b>	<b>05/18 Atlanta's network almost recovered</b>
<b>SOURCE</b>	<a href="https://www.ajc.com/news/local/atlanta-network-almost-recovered-from-cyber-attack-cost-still-unkown/k6srGim85Q8dKwUFPbcDhN/">https://www.ajc.com/news/local/atlanta-network-almost-recovered-from-cyber-attack-cost-still-unkown/k6srGim85Q8dKwUFPbcDhN/</a>
<b>GIST</b>	<p>The City of Atlanta's computer network has nearly recovered from a ransomware cyber attack suffered nearly two months ago, said Chief Operating Officer Richard Cox in an Friday interview with The Atlanta Journal-Constitution and Channel 2 Action News.</p> <p>Cox said the municipal court is the only department whose computers haven't been brought back online.</p> <p>"We are in testing right now," Cox said, adding that he expects them to be operational in about 10 days.</p> <p>Cox said the total cost of the attack has yet to be calculated. But emergency contracts posted on the city's procurement website have a combined not-to-exceed amount of about \$5 million.</p> <p>"If you dig into those numbers a lot of those expenses are inevitably things we were going to have to invest in regardless," Cox said.</p> <p>On March 22, city employees were ordered to turn off their computers to stop a virus from spreading through the network and encrypting data. A cyber criminal group demanded that the city pay it about</p>

\$51,000 in bitcoins — a crypto currency that allows for anonymous transactions online.

The city refused to pay the ransom on the advice of federal agents.

“We were advised, at some point during the attack, this particular threat actor had hit places after the ransom was paid,” Cox said.

Following the attack, the city hired Secureworks, a Dell subsidiary, who has emerged as an early authority on the cyber-criminal group, “Gold Lowell.” That group is being blamed for a rash of cyber attacks involving a variant of SamSam, the type of ransomware that struck Atlanta.

In early 2018, about a month before the Atlanta cyber attack, Secureworks published a report titled “SamSam Ransomware Campaigns,” which noted that the recent attacks involving SamSam have been opportunistic, lucrative and impacted a wide range of organizations.

Cox said on Friday it was too soon to say if any data or other records had been permanently lost.

“We are still in the process of going through files to understand the status,” he said. “That process will continue to take quite a while.”

The city provided a copy of its cyber attack insurance policy to the AJC this week in response to a public records request, but redacted the coverage limits, citing security concerns.

Cyber attack insurance policies are an uncharted area of the market, and security experts have warned that the risks associated with them are difficult to calculate. The policies contain a number of exclusions and require meeting basic security standards.

Asked if he expected an insurance payout, Cox said: “We are having ongoing conversations with our cyber insurance vendor ... Our expectation is that we will be able to partner with them in a very fair manner.”

<b>HEADLINE</b>	<b>05/19 Shooting suspect social media footprint</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/crime-courts/shooting-suspect-dimitrios-pagourtzis-posted-born-kill-t-shirt-n875571">https://www.nbcnews.com/news/crime-courts/shooting-suspect-dimitrios-pagourtzis-posted-born-kill-t-shirt-n875571</a>
<b>GIST</b>	<p>Three weeks before he allegedly killed 10 people at a Texas high school, Dimitrios Pagourtzis posted a photo to what appears to have been his Instagram account with a picture of a knife and a handgun atop a mattress and a profane caption.</p> <p>A source at Facebook confirmed the company deleted the Instagram account after Friday's shooting at Santa Fe High School, along with his apparent Facebook account. (Update: Facebook initially said it had "removed the shooter's accounts" from its platforms. Facebook now says it is not certain of the shooter's ties to the Instagram account.)</p> <p>Another Instagram post was a picture of the arcade game Silent Scope — which allows players to pretend they are a sniper using a controller shaped like a rifle — captioned with a smile emoji. A third photo: the underside of a frog.</p> <p>He followed only 13 other Instagram accounts, and eight of them were fan pages for firearms. The others include the official accounts for the White House, President Donald Trump, Ivanka Trump and Melania Trump's official @FLOTUS account.</p> <p>On his Facebook page, Pagourtzis posted a photo on April 30 that seems chilling in retrospect: a T-shirt spread out on a bed with the slogan "Born to Kill."</p>

The same day the 17-year-old put up a photo of a trenchcoat — like the one classmates say he wore to school most days — covered with pins, including the Iron Cross, a German military medal sometimes associated with Nazis, and a symbol of a goat head that is connected to the Church of Satan.

The caption below the photo appeared to be an explanation of the meaning of some of the other pins: He captioned the photo: "Hammer and Sickle = Rebellion," "Rising Sun = Kamikaze Tactics," "Iron Cross = Bravery," "Baphomet = Evil," "Cthulhu = Power."

While posts could provide clues to Pagourtzis' interests and state of mind before he allegedly barged into a classroom and started shooting, not all of them were so darkly themed.

In one selfie from May 2, Pagourtzis wore a backwards baseball cap adorned with a pink and purple striped pin that is associated with bisexual pride, according to dozens of online retailers. In his profile photo, he wore a black hat with a white peace sign on the front.

A few details of Pagourtzis' life began to emerge in the hours after the shooting. A newspaper story showed he was on the honor roll at Santa Fe when he was a freshman. He had played on the Santa Fe junior varsity football team but was not listed on the current roster.

One student, who was 200 feet away from the shooter when she was told someone had a gun, said she was shocked when she learned Pagourtzis was the alleged gunman.

"He seemed like a nice kid, but I didn't know him personally so there could be something going on that nobody knew about," sophomore Bailee Sobnosky said.

His family attended a Greek Orthodox church, and he participated in traditional Greek dance. One person who knew him from church said he was stunned to hear he might be involved in a horrific crime.

"He's quiet but he's harmless. He's just a regular kid, nothing unusual about him at all," he said.

<b>HEADLINE</b>	<b>05/18 Mugshots.com owners arrested</b>
<b>SOURCE</b>	<a href="https://lawandcrime.com/high-profile/here-are-the-mugshots-of-the-guys-who-allegedly-run-mugshots-com-and-why-they-were-booked/">https://lawandcrime.com/high-profile/here-are-the-mugshots-of-the-guys-who-allegedly-run-mugshots-com-and-why-they-were-booked/</a>
<b>GIST</b>	<p>The alleged owners of Mugshots.com have been charged and arrested. These four men—Sahar Sarid, Kishore Vidya Bhavnanie, Thomas Keese, and David Usdan—only removed a person’s mugshot from the site if this individual paid a “de-publishing” fee, according to the California Attorney General on Wednesday. That’s apparently considered extortion. On top of that, they also face charges for money laundering, and identity theft.</p> <p>If you read a lot of articles about crime, then you’re probably already familiar with the site (which is still up as of Friday afternoon). They take mugshots, slap the url multiple times on the image, and post it on the site alongside an excerpt from a news outlet that covered the person’s arrest.</p> <p>According to the AG’s office, the owners would only remove the mugshots if the person paid a fee, even if the charges were dismissed or if the suspect was only arrested because of “mistaken identity or law enforcement error.”</p> <p>“This pay-for-removal scheme attempts to profit off of someone else’s humiliation,” said Attorney General Xavier Becerra. “Those who can’t afford to pay into this scheme to have their information removed pay the price when they look for a job, housing, or try to build relationships with others. This is exploitation, plain and simple.”</p> <p>The AG’s statement claims that Mugshots.com owners got \$64,000 from about 175 people with billing</p>

	addressed in the state. That's over a three-year period. Of course, that falls way, way short of how much they raked nationwide: The four got over \$2 million in "de-publishing" fees from 5,703 people.

<b>HEADLINE</b>	<b>05/21 Regional approach fighting extremism</b>
<b>SOURCE</b>	<a href="http://www.afr.com/news/world/asia/terrorism-on-our-doorstep-takes-a-region-to-counter-extremism-20180517-h1067z">http://www.afr.com/news/world/asia/terrorism-on-our-doorstep-takes-a-region-to-counter-extremism-20180517-h1067z</a>
<b>GIST</b>	<p>They are every security force's nightmare.</p> <p>Small, mobile terrorist cells that are fiercely loyal and can communicate off the grid, making them almost impossible to detect.</p> <p>Only these have one additional and horrifying characteristic. They are also families.</p> <p>When Dita Oepriarto and his wife Puji Kuswati strapped suicide vests onto themselves and their four children, aged between 8 and 18, and bombed three churches in the busy East Javanese city of Surabaya last Sunday, they exposed a disturbing new frontier for extremist groups.</p> <p>The family unit, previously off-limits for suicide missions, was also mobilised in the bombing of a police station on Monday, while yet another couple and two of their children died on Sunday when a bomb exploded prematurely at their apartment.</p> <p>Indonesia has had its share of terrorism-related violence but the latest attacks, which claimed at least 25 lives and injured dozens more, have left a devastating mark.</p> <p>While women and children have long been an integral part of terrorist organisations, they typically provide spiritual and logistical support. Rarely in Indonesia have they been used as combatants.</p> <p>Analysts are hopeful families willing to put themselves forward for these types of suicide missions will be few, if any, and this is not the start of a new trend.</p> <p>However, it is consistent with the shock tactics of Islamic State (IS), which inspired the Surabaya attacks. It is also distressingly effective as the involvement of children confounds security guards, charged with keeping areas and communities safe, and also attracts worldwide attention.</p>

"We are dealing with IS not al-Qaeda," says Greg Barton, a counter-terrorism expert from Deakin University.

'There is no grey zone'

Al-Qaeda, which was founded by Osama bin Laden and responsible for the September 11, 2001 attacks in the US and the 2002 Bali bombings, "is a ruthless, terrorist organisation which justifies the worst kind of violence but it is also sensitive to image maintenance and avoids provoking outrage in the community to the point that it loses support," says Barton.

"IS is more black and white. There is no grey zone. It sees being provocative as an effective tool for recruitment and building solidarity. It is quite comfortable sending women and children off to their deaths."

Sidney Jones, director of the Institute for Policy Analysis of Conflict in Jakarta, says IS, also known as ISIS, has always been a family affair, with whole families being encouraged to migrate to Syria and women providing key support functions.

"Only by having normal families living normal lives could ISIS hope to make a claim to functioning like a normal state," she wrote in an article for the Lowy Institute's *The Interpreter* this week.

"The problem was that many of the women were not satisfied with the very traditional role ISIS assigned them. Some, as we know from observing social media, wanted more action and admired women suicide bombers in Palestine, Iraq and Chechnya."

The latest attacks are a setback for Indonesia in its fight against terrorism, which has been remarkably successful since the Bali bombings 16 years ago.

As a response to the Bali tragedy, which killed more than 200 people, including 88 Australians, Jakarta set up the Special Forces counter-terrorism squad known as Detachment 88.

Australia and the US provided funding and training for the squad which includes investigators, explosive experts and a tactical response unit. While it has attracted controversy over deaths in custody and claims of heavy-handed treatment of terror suspects, it is widely credited with thwarting dozens of attacks.

Barton says the squad is "Australia's single biggest success in our engagement with Indonesia in decades."

The improvement in Indonesia's counter-terrorism capabilities and response tactics is to a level where Australia is now learning from the Indonesians. Barton says Canberra should now focus its efforts on preventing attacks from happening by countering violent extremism. This involves community work and on-the-ground engagement.

Awkwardly, the recent attacks are a reminder to Australia of the importance of its development assistant programs at a time when the federal government is cutting aid to Indonesia.

A 10 per cent reduction of direct funding to Indonesia was announced in the recent budget, as spending was redirected to the Pacific, where Australia is building a high-speed internet cable to the Solomon Islands and Papua New Guinea.

The government has argued Indonesia is a fast-growing economy and as such, its relationship with Australia is changing.

Changing relationships

Canberra is now focused on signing a new trade and investment agreement with Jakarta to support economic growth and improve living conditions. However, analysts are concerned the inevitable cuts to

existing programs on the ground – the exact details of which are yet to be finalised – will be detrimental to regional security.

"This is not the time to be cutting foreign aid," says Joshua Roose, director of the Institute for Religion, Politics and Society at the Australian Catholic University.

"You can pump as much money into security as you like but you are treating a symptom," he adds.

Barton says the aid budget is not just about helping people overseas but it also works in Australia's favour by improving the security environment and is an effective use of taxpayers' money.

The cut to development assistance in Indonesia is "a relatively small amount of money in the national budget and I think it represents misguided thinking", he says.

"We haven't seen the deliberation process yet over which programs will be funded and which won't but there is no question – even with careful deliberation – there will be an erosion of what we want to do [on the ground.]"

Australia's response to the Surabaya bombings so far has been focused on security.

Home Affairs Minister Peter Dutton ordered "an urgent review of known and active terrorist organisations in the region to consider what further action we should take".

In a statement to AFR Weekend, he said "Australia is committed to working with our partners in the region against the threat from terrorist organisations and foreign fighters returning to the region."

Foreign fighters returning to south-east Asia are of high concern for Canberra. Indonesian police claim that there are more than 500 returnees from Syria or Iraq to the country, a relatively small number given the overall population of about 260 million.

However, Barton says the Surabaya church attacks – the family was initially said to have returned from Syria but police later retracted the claim – show the impact of returnees is not just limited to those people who have been overseas.

"It's not simply the returnees who are a problem but those who are in their orbit or come under their influence," he says.

That can quickly turn 500 people of interest into several thousand.

The heightened security threat in the region comes at a time of increased co-operation on counter-terrorism.

Australia and the 10 countries from the Association of South-East Asian Nations signed a wide-ranging co-operation agreement in March, under which Canberra has pledged to provide "technical assistance" on preparing anti-terror laws, help countries crackdown on terrorism financing, work on detecting foreign fighters as they return home, and bolster countries' capacity to collect and share evidence.

Last year, Australia sent two Orion surveillance aircraft and troops to the Philippines to assist and train its forces as they fought off IS loyalists in Marawi, a predominantly Muslim city on the island of Mindanao.

In a further sign that the unpredictable and often hostile leadership of President Rodrigo Duterte has not torpedoed military and defence ties, Australia took part in the Balikatan military exercises with the US and the Philippines, which concluded this week.

And after the surprise Malaysian election result of last week, ending the six-decades-long grip on power of the former ruling party, which had been isolated by a global corruption scandal, Kuala Lumpur is expected

to be more open to regional co-operation.

The real challenge for Indonesia, which has prided itself on being a model of moderate Islam, will be to combat radicalisation of communities.

The country's largest Islamic organisations, Muhammadiyah and Nahdlatul Ulama, emphatically condemned the Surabaya bombings this week.

"The involvement of families leaving or returning from ISIS has several implications," writes Jones in her article.

"It means deradicalisation has to happen as a family – it can't only be aimed at the men. And deradicalisation programs cannot just be aimed at inculcating nationalism or exposing extremists to other interpretations of Qur'anic texts.

"They have to address how families as a whole, often indoctrinated into believing that anyone outside ISIS is the enemy, can be persuaded to change their objectives as individuals and as a family unit."

A 2015 Pew Research study found that 4 per cent of Indonesians have a favourable opinion of IS, which may seem small, but given Indonesia's large population, adds up to more than 10 million people if extrapolated out.

Roose points out a further 18 per cent are undecided, according to that study.

"Even if they turn 20 per cent of that 18 per cent, they have just doubled their number of supporters," he warns.

For now Indonesia and the region are on high alert as Muslims have just begun the holy month of Ramadan. This has become a time of year when jihadists try to step up their attacks because they are told they gain more rewards in the after world.

<b>HEADLINE</b>	<b>05/20 Threat from returning ISIS to Balkans</b>
<b>SOURCE</b>	<a href="http://moderntokyotimes.com/returning-is-fighters-in-the-balkans-beyond-the-immediate-security-threat/">http://moderntokyotimes.com/returning-is-fighters-in-the-balkans-beyond-the-immediate-security-threat/</a>
<b>GIST</b>	<p>Over the years, the nations of the Western Balkans have seen about 1,000 of their citizens join al-Qaeda's Syria wing, Jabhat Fateh al-Sham (formerly known as Jabhat al-Nusra), and move on to join so-called Islamic State (IS). [1] They have hailed from majority-Muslim communities in Bosnia, Albania, Kosovo, as well as minority Muslim populations in Serbia, Montenegro and Macedonia.</p> <p>Regional governments have responded by criminalizing participation in foreign conflicts and taking measures against recruiters, radical preachers and jihadist propaganda networks. [2] The threat of attack is real but limited, while years since the alarm bells first went off, it remains unclear what effect returning foreign fighters will have in the longer term.</p> <p>While the Western Balkans is not immune to terrorist attacks, as sporadic attempted attacks and some lone actor shootings have demonstrated, there is little consensus on the true threat returning foreign fighters pose for the region. Indeed, the general perception is that the region holds little propaganda value as a target for jihadists, raising the question of whether they intend to move further into Europe and in what way the phenomenon will manifest itself in the region's security landscape.</p> <p>The Returnees</p> <p>Between 250–300 Balkan fighters who quit IS and returned home between 2014-2015 seem to have done</p>

so having become disillusioned by the war and disheartened by the infighting between jihadist groups (Gazeta Tema, October 8, 2017). The authorities appear to believe that few of these returnees pose an immediate security risk. In Albania, for instance, media reports have claimed that only 15 of some of the 40 returnees may pose a threat (Reporter.al, March 23, 2016).

Others seem unable or unwilling to return, instead remaining in Syria and Iraq with their families and children. [4] Security agencies in Kosovo claim that there are still 91 children (37 of whom were born in Syria and Iraq) and 41 women in areas under IS control. Only seven women and three children have so far returned home (BalkanWeb, April 5).

Vlado Azinovic, professor of political science at the University of Sarajevo, commented that there were only “a few groups of women and children desperate to return” to the Balkans. “I don’t think that the men will attempt to come back, short of being faced with the choice of imminent death in Syria and Iraq, or criminal prosecution back home,” he said. [5]

Despite the security implications of leaving a generation of potential jihadist fighters to grow up under the influence of remaining IS leaders, governments across Europe, including those of the Western Balkans, seem hesitant to repatriate those left in Syria and Iraq.

Meanwhile, in Bosnia, there are an undetermined number of children born in territories formerly held by IS as a result of “marriages” between Bosnian men and women of other nationalities, Azinovic claims. There are also orphans, adopted by Bosnians, whose nationalities are unknown.

### Countering the Threat

The possibility of a large-scale act of terrorism in the Balkans became apparent in November 2016, when security forces in Albania and Kosovo thwarted an attempted attack targeting the Israeli national soccer team during a World Cup qualifying match in Shkodër, northern Albania’s second largest city (Gazeta Express, November 9, 2016).

Warning of the planned attack came from Israeli intelligence, which had reportedly intercepted online conversations between Lavdrim Muhaxheri, a Kosovar Albanian militant reportedly killed by coalition airstrikes against IS in Syria in the summer of 2017, and a number of his followers, including recent returnees from Syria (Insajderi, June 8, 2017; Opinion.al, November 14, 2016).

A total of 19 people, including the planned attack’s supposed mastermind, were arrested across Albania, Kosovo and Macedonia. In Albania alone, more than 170 people were detained and questioned in connection with the plot, including 30 recent returnees from Syria (Panorama, November 10, 2016). The operation was an example of strong collaboration between regional intelligence agencies and international partners, but it also highlighted significant security vulnerabilities.

Since then, the IS influence on populations across the Balkans has been much reduced. Key propaganda and operational mouthpieces—such as Muhaxheri from Kosovo, Almir Daci from Albania, and Ines Midzic from Bosnia and Herzegovina—have reportedly been killed. That has left a significant leadership vacuum for IS supporters in the region, which in turn has left the group’s objectives for its Balkan followers unclear (Insajderi, June 8, 2017; Dnevni List, March 13).

As regional media investigations have shown, there remains a wealth of propaganda material translated by IS into local languages available on social media (Balkan Insight, February 2, 2017). New and updated material, however, is more difficult to find. Most IS-supporting channels have moved onto the “dark web” or material is shared on encrypted applications that are hard for the authorities to trace. The remaining videos and propaganda pages found online date back to the height of IS’ media presence, when it first declared the creation of its so-called caliphate. [3]

Despite this good news for regional actors and counter-extremism strategies adopted across the region, radicalization continues in the Western Balkans, albeit that the ideology is evolving, taking different and

possibly non-violent forms. Radical preachers no longer issue calls to action over war-torn territories, but instead hate speech and the incitement of polarization seems to be increasing and intensifying.

### Crossing Borders

It is common for weapons originating in the Balkans to appear in war-torn areas across the Middle East, and to have been used in recent terror attacks in the West (see Terrorism Monitor, December 2, 2015). Indeed, this is not unexpected considering the thriving black market and availability of weapons (Balkan Insight, July 27, 2016). Less understood are reports of key Balkan members of IS repeatedly returning to their countries of origin undetected by the security services. Italian media once claimed that Muhaxheri had returned to Kosovo with his closest aides via the Macedonian border, although Kosovo's authorities quickly denied the reports through an official statement (L'esspresso, December 26, 2016).

Bosnian media has similarly raised alarm bells regarding Midzic returning home several times before his reported death in Syria (Dnevni List, March 13). Both cases, although unconfirmed, raised questions over border controls and the Balkan migrant route toward Western Europe.

Additionally, organized criminal networks can affect transfers and there have been instances where criminal activities have been carried out by adherents of IS ideology. There is still only limited research into the nexus between IS terrorism and organized cross-border criminal networks, and the links between IS terrorists and organized crime have been widely debated. However, high levels of corruption and the already established organized criminal networks in the Balkans could enable this aspect to flourish and facilitate cross-border movement.

Nevertheless, fears of the movement of jihadists from the Balkans into Western Europe should not be overblown, and the situation is at any rate not a one-way trade. There are indications Balkan diaspora communities in the West have already been affected by Islamist ideologies, such as Albanian communities in Italy, and Bosnian communities in Austria (Balkan Insight, January 9). Although these links are yet to be fully explored by the research community, past investigations and terrorism-related trials have helped to shed light on the radicalization processes of some Balkan nationals, dating back to time they spent in the West and links to radical Islamists living in Europe (Balkan Insight, January 9).

<b>HEADLINE</b>	<b>05/21 Kabul violence makes Afghans fearful</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/asia_pacific/worse-than-the-civil-war-kabul-violence-makes-afghans-fearful-of-unseen-enemies--and-each-other/2018/05/19/46ba7ad4-547b-11e8-a6d4-ca1d035642ce_story.html?utm_term=.46c83ed6f387">https://www.washingtonpost.com/world/asia_pacific/worse-than-the-civil-war-kabul-violence-makes-afghans-fearful-of-unseen-enemies--and-each-other/2018/05/19/46ba7ad4-547b-11e8-a6d4-ca1d035642ce_story.html?utm_term=.46c83ed6f387</a>
<b>GIST</b>	<p>KABUL — A pall of fear is settling over this shellshocked capital, where too many bombings, too many funerals, and too many moments of panic and dread in recent months are beginning to take a cumulative toll on people's state of mind.</p> <p>The effects are both subconscious and deliberate. A shopkeeper ducks behind a counter when an unknown customer enters. A man whose son died in a mosque bombing now prays at home. A policeman shouts at journalists to stay away from a crime scene, fearing they will draw new violence. A student with a knapsack arouses instant suspicion.</p> <p>"People are so afraid now that when a tire blows, they run," said Jamshid, a grocery manager in his 30s who uses one name. He was at work May 8 when he heard an explosion across the city. Coming out to the doorway, he said he saw young man take off a backpack and shoot it, blowing himself up.</p> <p>The two bombs, both aimed at police stations, killed six people. The one next to Jamshid's shop blew out hundreds of windows in a cellphone company headquarters across the street. Jamshid was unharmed, but the blast shattered his store windows too — and his nerves.</p>

“This is worse than the civil war,” he said, describing childhood memories of rival militias rocketing the capital. “At least then you knew where they were shooting from, and most rockets didn’t kill people. Now you never know where the next bomb will go off, and they are much deadlier. It affects you mentally.”

Insurgent attacks on Kabul have been occurring periodically for over a decade, but in the past year the pace of bombings and shootings has accelerated sharply. The turning point came last May, when a massive truck bomb shook downtown Kabul during morning rush hour. More than 150 people died and hundreds were wounded.

Since then, both the Taliban and Islamic State militias have claimed several dozen attacks, some of them on the same day. And since Jan. 1, the two groups have struck hotels and mosques, military and police facilities, voter ID centers and commercial markets, and diplomatic and official enclaves, leaving hundreds dead and injured and affecting thousands of families.

With city residents increasingly angry at the government for failing to protect them, security officials have been taking extra measures, such as adding guards and barriers around the main diplomatic zone and putting administrative police officers on street patrols.

But police officials said they are stretched thin, covering a wide urban area full of potential targets — now including 375 voter registration centers for parliamentary elections in October. They also said it is frustrating to try to identify potential suicide attackers who look like everyone else. In a pair of back-to-back bombings April 30, the bomber pretended to be a journalist who was covering a previous blast at the same spot.

“We are supposed to be enforcing the law, catching criminals and stopping terrorists too. Now we have an added focus on the elections,” said Gen. Daoud Amin, Kabul’s police chief, who complained that his roster of 14,700 men is still inadequate. Spotting suicide bombers, he said, is hard without the technical equipment wealthier countries have. “All we can do is watch closely and rely on our instincts.”

On the surface, the capital is still bustling, with weddings halls and shopping malls lit up until late evening, mosques filled on Fridays and high-rise apartments under construction. But in recent interviews, residents said they are now fearful of carrying out their regular activities or have changed their habits — avoiding attack-prone locations such as police stations, praying before they leave home, and keeping in constant cellphone touch with loved ones.

Many people said they had lost a relative, co-worker, friend or neighbor to terrorist attacks in recent months, and some said they had agonized over whether to abandon jobs or worship practices that exposed them to danger. In Dasht-i-Barchi, a Shiite-majority district, produce seller Abdullah Haidari, 69, said his son was killed in a recent mosque bombing and his family had since begged him repeatedly to switch to a different one.

“God knows how much I miss him,” Haidari said, pointing to a spot in the mosque where his son died. “I feel sad every second of my life, but I am not alone. Many people have been going through this. All we hear about these days is suicide, martyrs and death. My wife tells me not to come here, but I can’t abandon this mosque.”

Like others, Haidari blames the government, as much as the insurgents, for his loss. “A hen protects her baby chicks,” he said, but President Ashraf Ghani, “with all the resources he controls, cannot protect us.”

The dilemma is acute for journalists, especially TV crews who are expected to rush to every terrorist attack scene. After the April 30 bombing, which killed nine Kabul-based Afghan journalists, local TV and radio stations went through a period of grief and soul-searching. But almost all of the crews decided to remain on the job, citing both economic need and professional commitment.

Inside the bunkerlike offices of TOLO TV this week, a portrait of Yar Mohammad Tokhi, a cameraman who died in the blast, hung in a tiny room piled with equipment. Another cameraman, Hasib Sadat, was

	<p>badly burned and partly blinded two years ago, when Taliban insurgents bombed a TOLO staff bus. Now he is back on the job, though he acknowledged he tends to cover softer stories.</p> <p>“This is my profession. It is the only way I know to support my family,” Sadat said. Yet he said it was hard on his family, especially his 4-year-old son. “He remembers seeing photos of me in the hospital, and he always tells me not to go to the office,” Sadat said.</p> <p>Another crew member, Ramez Ahmadi, said he has covered so many funerals and violent attacks that he often dreams of gruesome street scenes and panics at sharp sounds. “If someone throws a stone, we get scared,” he said.</p> <p>Rumors also spread panic these days. Last week, when a downtown bank manager heard reports that security forces were looking for a group of insurgent gunmen in the city, he ordered the nervous staff to stay inside for the rest of the day and send customers to another branch. The rumors turned out to be untrue.</p> <p>For bystanders who witness actual attacks, the resulting jittery nerves can trigger overreactions. Ever since Jamshid saw the boy detonate the bomb in front of his shop, the mere sight of a backpack terrifies him. Every time a customer comes in, he said, “I pray he won’t be carrying a bundle or a bag on his shoulder that might explode.”</p>

<b>HEADLINE</b>	<b>05/20 Iraq al-Sadr: next govt. will be ‘inclusive’</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/iraqs-al-sadr-government-inclusive-55305272?">https://abcnews.go.com/International/wireStory/iraqs-al-sadr-government-inclusive-55305272?</a>
<b>GIST</b>	<p>Shiite cleric Muqtada al-Sadr, whose coalition won the largest number of seats in Iraq's parliamentary elections, has sought to reassure Iraqis about their next government, saying it will be "inclusive" and mindful of their needs.</p> <p>No single bloc won a majority in the May 12 vote, raising the prospect of weeks or even months of negotiations to agree on a government. Major political players began talks soon after the election's partial results were announced last week. The latest round was held late Saturday night between al-Sadr and Prime Minister Haider al-Abadi, whose bloc made a surprisingly poor showing in the election.</p> <p>Speaking after the talks, al-Sadr said the first postelection meeting between the two "sends a clear and comforting message to the Iraqi people: Your government will take care of you and will be inclusive, we will not exclude anyone. We will work toward reform and prosperity."</p> <p>He did not elaborate, or provide details about what he and al-Abadi discussed.</p> <p>Al-Sadr, whose followers fought U.S. forces in Iraq after the 2003 invasion, won 54 of the chamber's 329 seats. Al-Abadi's "Victory" bloc took 42 and a coalition of government and Iranian-backed paramilitary forces came in second.</p>

<b>HEADLINE</b>	<b>05/21 Taliban kill workers clearing land mines</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/05/21/afghan-official-taliban-kill-5-workers-clearing-land-mines.html">http://www.foxnews.com/world/2018/05/21/afghan-official-taliban-kill-5-workers-clearing-land-mines.html</a>
<b>GIST</b>	<p>KABUL, Afghanistan – An Afghan official says the Taliban killed at least five members of a demining team in southern Kandahar province.</p> <p>Zia Durrani, spokesman for the provincial police chief, says a sixth worker is missing and his fate is unknown following the attack on Monday morning in the district of Maiwand.</p>

Durrani says the de-miners were working for the TAPI national project, clearing a segment for a planned gas pipeline from central Asia that's headed to Pakistan and India through Afghanistan.

Meanwhile, Karim Yuresh, police spokesman in northern Faryab province, says the Taliban attacked a district headquarters on Sunday night, burning down about 50 shops in Khuaja Sabz Posh district. He says reinforcements repelled the attackers. Six insurgents were killed and 10 were wounded.

<b>HEADLINE</b>	<b>05/19 Psychoanalyzing link terrorism, upbringing</b>
<b>SOURCE</b>	<a href="https://www.rferl.org/a/mothers-terrorism-linksshame-honor--psychoanalyst-kobrin/29237351.html">https://www.rferl.org/a/mothers-terrorism-linksshame-honor--psychoanalyst-kobrin/29237351.html</a>
<b>GIST</b>	<p>When 20-year-old Khamzat Azimov went on a deadly stabbing spree in Paris this month, a May 12 attack claimed by the Islamic State (IS) extremist group, details about his upbringing caught the attention of psychoanalyst and counterterrorism expert Nancy Hartevelt Kobrin.</p> <p>Considering Azimov's infancy in war-torn Chechnya, and the fact that he continued to live with his mother in a one-room Paris apartment until he was shot dead by police in the midst of his attack, Kobrin saw a pattern reflected in other Islamist terrorists she has studied and written about.</p> <p>They include Chechen Islamist separatist leader Shamil Basayev, Jordanian-born Al-Qaeda militant Abu Musab al-Zarqawi, and the Boston Marathon bombers Dzhokhar and Tamerlan Tsarnaev, also of Chechen descent.</p> <p>In a nutshell, Kobrin said all appear to have had relationship issues with their mothers that stemmed from being infants in what anthropologists describe as "shame-honor cultures."</p> <p>"My analysis strips the aberrant violent antisocial behavior down to its naked truth -- a problem buried in their souls but arising early in childhood development run amok," Kobrin tells RFE/RL.</p> <p>Reservoir Of Rage</p> <p>"The problem is that these terrorists are coming from shame-honor cultures, which are dysfunctional by definition," Kobrin explains.</p> <p>"Their reservoir of rage arises from problems nested in early maternal attachment in shame-honor cultures -- the early mother-infant bonding attachment, the first relationship in life," Kobrin says.</p> <p>A shame-honor culture is one where the pursuit of what is considered "honor" can lead to a quest for achieving a sense of "justice" through violence and revenge, anthropologists say.</p> <p>In shame-honor cultures -- as you would find in Chechnya, Afghanistan, Pakistan, and the Arab Middle East -- shame is used to discipline infants and children, Kobrin explains.</p> <p>Infants in shame-honor cultures, she says, are also often treated like objects and learn to repress their feelings to the point that internal rage can boil within.</p> <p>Making matters worse, Kobrin says, women in shame-honor cultures are also often devalued, objectified, or even physically abused.</p> <p>"Women who are abused also become full of rage," Kobrin says, noting that subconscious reactions of young mothers to abuse seriously impact a child's early development.</p> <p>The first four years of a child's life is a crucial time when most infants develop empathy for other human beings, she says, adding that the lack of empathy and concern for the pain that terrorists cause to others is</p>

"almost worse than the terrorist attacks themselves."

Kobrin says psychoanalysts should take care not to "diagnose" an entire group of people.

But she makes an exception in the case of Al-Qaeda and Islamic State extremists "because their behavior is so out of bounds" with "destruction, cruelty, sadism, and revenge leading to heinous crimes against humanity."

Kobrin also says a better understanding of maternal attachment in shame-honor cultures would help in understanding the roots of terrorist violence.

She explains that terrorists from shame-honor cultures are torn between an unconscious rage against their mothers and the cultural expectation that they are not permitted to separate from their mothers.

On one hand, the mother is idealized as a powerful object. But her power is also perceived as something toxic that must be destroyed, she says.

"Maternal attachment and shame play a significantly traumatizing role since children are shamed into behaving, which causes rage," she said. "When these children grow up, they treat others as objects" and the cycle perpetuates itself.

#### Room For More Research

But while much has been written about the political, economic, and religious motivations of terrorists, Kobrin says little has been done to "decode the meaning of the terrorists' aberrant behavior from the perspective of early childhood development and trauma."

Ann Masten, a child development professor at the University of Minnesota, agrees.

Masten's research focuses on the impact of risk, adversity, and trauma upon child development.

In a report for the Society for Research in Child Development, Masten said critical gaps in the understanding of child development in relation to terror include "limited evidence on neurobiological processes, cultural influences, strategic preparedness, peace-building interventions, and the roles of social media in mitigating or enhancing risk for trauma or engagement in terror activities."

"Developmental scientists, even as they carry out additional and better research, have an important body of knowledge to share with parents, educators, policymakers, first responders, and all those charged with ensuring the safety and resilience of children," Masten concluded.

James Garbarino, a child psychologist and founding director of the Center for the Human Rights of Children at Loyola University in Chicago, says a core principle of existing research is that the impact of trauma on "the concrete basics of day-do-day life" matter most in the development of children.

Garbarino says research suggests risk factors that combine to create "a generation of maladjusted children" include "exceedingly high rates of family violence, divorce, coronary disease, incidence of depression and tension, exposure to trauma, and a high pressure socio-political climate."

"Generally, it is the accumulation of risk factors in the absence of developmental assets that does the damage to children in the long run much more so than the presence or absence of any one risk factor," Gabarino says.

Kobrin agrees there are "other intervening factors that can tip the scale" in radicalizing a person to the point that they would kill others.

But she maintains that a "key factor" behind the lack of empathy displayed by IS militants is the use of

	<p>"shaming" by their parents in early child rearing practices.</p> <p>"It's finally starting to come to the table," says Kobrin, whose books include <i>The Banality of Suicide Terrorism</i>, <i>The Maternal Drama Of The Chechen Jihadi</i>, and <i>The Jihadi Dictionary</i>.</p> <p>"We should not be afraid, due to our notions of political correctness, to expose the unconscious behavior of terrorists who come out of shame-honor cultures," she maintains.</p> <p>"To say that a kid radicalizes at age 17 out of the clear blue sky is to really do that kid and his family and the public a disservice," Kobrin concludes. "There are early indicators that a child is in trouble, and we can use these indicators to identify such cases sooner and do an earlier intervention."</p>

<b>HEADLINE</b>	<b>05/19 New clues: ISIS leader alive, busy</b>
<b>SOURCE</b>	<p><a href="https://www.washingtonpost.com/world/national-security/new-clues-bolster-belief-that-isis-leader-is-still-alive--and-busy-with-a-chilling-new-mission/2018/05/19/83c2a62e-5ad2-11e8-858f-12becb4d6067_story.html?noredirect=on&amp;utm_term=.1de3d92f6801">https://www.washingtonpost.com/world/national-security/new-clues-bolster-belief-that-isis-leader-is-still-alive--and-busy-with-a-chilling-new-mission/2018/05/19/83c2a62e-5ad2-11e8-858f-12becb4d6067_story.html?noredirect=on&amp;utm_term=.1de3d92f6801</a></p>
<b>GIST</b>	<p>His self-declared caliphate was in ruins when Abu Bakr al-Baghdadi summoned some of his top aides to a meeting in eastern Syria last year. The Islamic State's capital in Iraq had already fallen, and its Syrian headquarters was under siege.</p> <p>Yet the terrorist leader had something else on his mind: schoolchildren.</p> <p>The gathering near the city of Deir al-Zour was called by Baghdadi personally to discuss rewriting the terrorist group's educational curriculum, according to an Islamic State official who was arrested in a joint operation by Turkish and Iraqi officials earlier this year. Despite the group's dire circumstances, Baghdadi wanted to examine a subject that had less to do with immediate survival than with preserving the organization's ideological core.</p> <p>"Several top leaders were present, as well as the curricula committee, which I headed," the captured officer, known as Abu Zaid al-Iraqi, said in a videotaped statement aired on Iraqi television.</p> <p>The meeting, said to have occurred in mid-2017, was the third convening of a committee that had been a pet project of the man at the top, having been "established by caliph Abu Bakr al-Baghdadi," the officer said.</p> <p>The incident provides a rare glimpse into the secluded life of the Islamic State's leader, a man who has allowed himself to be photographed only once, in July 2014, and has spoken publicly only a handful of times since then. His prolonged absences have given wings to countless false reports portraying Baghdadi as either dead, or gravely wounded and incapacitated.</p> <p>Despite such rumors, U.S. counterterrorism officials are convinced that Baghdadi is alive and is helping direct long-term strategy for the dwindling numbers of Islamic State fighters defending the group's remaining strongholds in eastern Syria. The U.S. view is supported by intelligence intercepts and detainee interrogations, as well as writings and statements by operatives within the terrorist group's network.</p> <p>The evidence, while spotty and difficult to confirm, depicts a leader who has opted to make himself invisible, even within his organization — a decision that has drawn complaints from followers and arguably undercuts his ability to rally his beleaguered forces, terrorism experts say.</p> <p>But the intercepts and reports also suggest that Baghdadi has shifted his attention in recent months to crafting an ideological framework that will survive the physical destruction of the caliphate in Iraq and Syria. In addition to his effort to revamp the group's school curriculum, Baghdadi appears to have been behind a series of missives in recent months that sought to settle ideological disputes between factions of</p>

Islamic State fighters.

Viewed together, such actions convey the impression of a disciplined retreat, with Baghdadi helping manage preparations for a shift from caliphate to underground insurgency and international terrorist movement, current and former U.S. officials said.

“Even as they were losing Mosul and Raqqa, we were seeing indications that they were planning to operate anew, as a clandestine organization,” said Nicholas Rasmussen, who served as director of the National Counterterrorism Center before stepping down in December. “As they were being driven out of these places, they were leaving behind a kind of cell structure.”

The essential strategy also was confirmed by a self-proclaimed Islamic State operative contacted by The Washington Post through an encrypted messaging service. The operative said Baghdadi — a university professor before becoming a terrorist — and other top leaders decided early on to prioritize the indoctrination of children and recruits, both inside Iraq and Syria and also abroad, through the Internet. The effort gained additional urgency as it became clear that the group’s Islamist enclave would not survive, he said.

“The leadership is convinced that, even if the State has disappeared, as long as they can influence the next generation through education, the idea of the caliphate will endure,” said the operative, who agreed to an interview on the condition that his name not be revealed.

Under Baghdadi’s direction, “the values of the caliphate would be seeded in the Umma [Islamic community], and not disappear,” the operative said, “even if the caliphate would.”

'By all indications, he's alive'

The meeting last year in Deir al-Zour was one of a handful of reported appearances by a terrorist leader who has been remarkably successful in staying out of sight. Since July 4, 2014, when Baghdadi entered a Mosul mosque to declare the establishment of the Islamic State, there have been more false reports about his death than confirmed sightings or public pronouncements.

In media accounts, Baghdadi has been killed or gravely injured at least a half-dozen times since 2014. He was said to have died in three different aerial bombings, carried out by Russian or U.S. warplanes. Other reports claimed variously that he had been arrested by Syrian troops, mortally wounded in an artillery strike, and poisoned by assassins.

Last June, after a Russian official claimed that Moscow was nearly “100 percent certain” of Baghdadi’s death, the Pentagon demurred, citing a lack of confirming evidence. More recently, U.S. officials have expressed confidence that Baghdadi survived his group’s defeat in Mosul and Raqqa and remains active, though his exact whereabouts are uncertain.

“By all indications, he’s alive,” said a U.S. counterterrorism official, speaking on the condition of anonymity to discuss intelligence assessments. “We think he’s still coordinating, still helping to run the organization.”

In late 2016, the raising of the bounty for Baghdadi’s capture — from \$10 million to \$25 million — triggered a flurry of reported sightings, none of which panned out. Since then, there have been few credible reports about his specific movements and activities, the official acknowledged. “Our best guess is that he is still in Syria, in one of the remaining parts of the country still controlled by ISIS,” the official said. ISIS is a common acronym for the Islamic State.

In recent weeks, Baghdadi’s presumed final sanctuary has looked slightly less precarious. A Kurdish-led offensive to liberate terrorist-held villages in eastern Syria ground to a halt earlier this spring after the Kurds were forced to defend themselves against Turkish attacks elsewhere in the country. The resulting lull allowed Baghdadi’s men to refortify their positions and bring in supplies and reinforcements, U.S. and

Middle Eastern intelligence officials said. With fewer U.S. warplanes in the skies to pick them off, small convoys of fighters departed the Damascus suburbs for Islamic State bastions in southern and eastern Syria, safely crossing large expanses of desert under deals struck with the Syrian government, the official said. Intensive airstrikes have since resumed.

“They [Islamic State forces] have definitely regrouped,” the U.S. counterterrorism official said. “The pause gave them an opportunity to do that.”

Still, the lull has only delayed what by all indications is an inevitable defeat. The Islamic State has suffered a nearly unbroken string of military defeats since late 2015. Yet, throughout this time, its leader has been remarkably silent, never appearing in public to rally his forces and only occasionally releasing an audiotaped message encouraging his troops to fight on. The last of these surfaced on Sept. 28, 2017, about two weeks before the fall of Raqqa.

#### Preparing for the future

Some observers see Baghdadi’s absence as part of a deliberate strategy within an organization that in recent years has chosen to de-emphasize the importance of individual leaders in advancing the group’s ideals.

“A lot of ISIS supporters say that Baghdadi doesn’t want to make ISIS all about him,” said Cole Bunzel, a Middle East scholar at Princeton University and editor of Jihadica, a scholarly blog about the global jihadist movement. “There has been an effort, in fact, not to elevate any one personality above the organization.”

Yet Baghdadi’s virtual invisibility during a crucial struggle for the group’s survival has stirred controversy within the Islamic State itself. In recent weeks, members of an Islamic State offshoot in Deir al-Zour have posted messages on social media complaining that Baghdadi has removed himself from the field of battle.

“This clearly affects the morale of ISIS and its supporters,” said Steven Stalinsky, executive director of the Middle East Media Research Institute, a Washington nonprofit that monitors jihadists’ websites. Other supporters have responded to the criticism by renewing their oaths of allegiance to Baghdadi, in what Stalinsky described as a possible “indication that he is, or was, facing challenges to his authority from within.”

Baghdadi, who is about 46 and a native of the Iraqi city of Samarra, appears to be willing and able to communicate when he needs to, at least to his scattered lieutenants and senior aides. The captured Islamic State official who led Baghdadi’s curriculum committee described being repeatedly summoned by the caliphate leader for group discussions about education, propaganda and other matters. The captured officer is one of five senior aides arrested since February in operations conducted by Iraqis with U.S. and Turkish assistance.

Rasmussen, the former National Counterterrorism Center director, said the slow-but-steady military campaign against the Islamic State has given Baghdadi ample opportunities to develop secure lines of communication and to prepare for the future. Those preparations probably include plotting future terrorist operations and honing a system for persevering and disseminating the group’s core ideas after the Islamic State ceases to exist as a caliphate.

“They knew this was happening — it wasn’t as though they had a theory of victory where they were going to hold Mosul and Raqqa forever,” Rasmussen said. “But the narrative that has underpinned the Sunni extremist project — whether it’s al-Qaeda or ISIS — is that the mantle is going to be picked up and advanced by some other set of actors. The project may not be tied to the Syria conflict, but it’s not going to go away just because ISIS is defeated on the battlefield.”

<b>HEADLINE</b>	<b>05/18 Al-Shabaab faces leadership battle</b>
<b>SOURCE</b>	<a href="https://jamestown.org/program/al-shabaab-faces-leadership-battle-as-speculation-over-emirs-health-mounts/">https://jamestown.org/program/al-shabaab-faces-leadership-battle-as-speculation-over-emirs-health-mounts/</a>
<b>GIST</b>	<p>The secretive head of al-Shabaab is reportedly critically ill, giving rise to speculation that the Somali Islamist group is re-organizing itself ahead of his possible demise. Ahmed Umar has been emir of the al-Qaeda affiliate in East Africa for nearly four years, but now reportedly bedridden for more than six months, the installation of a new leader could be imminent (Daily Nation, April 20; Tuko, April 23).</p>

## Splits Within the Shura

Details of Umar's ailment are scarce. While it is possible he was badly injured in an attack, a Mogadishu-based source familiar with the militant group's activities told the Terrorism Monitor that Umar is suffering from a serious kidney problem that affected first one and now both kidneys, and has left him fighting for his life.

Umar's current location is unclear, but some reports say he is in the town of Jilib, in southern Somalia, where al-Shabaab maintains a stronghold. Others indicate the ailing leader may have fled to an undisclosed hideout in Gedo region, near the Kenyan border, following intensified bombardment by international forces (Daily Nation, December 14, 2017; Mareeg, December 7, 2017).

Since the advent of Umar's illness, the group has acted to save its leader's life, paying doctors and providing costly treatments that are depleting the group's financial resources. A consequence of this has been a failure to release funds to pay its fighters at battlefronts in parts of southern Somalia (Tuko, April 23).

Umar's condition is allegedly causing concern among the group's top leadership, at a time when al-Shabaab is pinned down by troops with the African Union Mission in Somalia (AMISOM). Sources say the situation is so critical that Umar's deputies in the Shura, al-Shabaab's executive council, have been meeting to discuss his possible succession. That has led to heated exchanges, splitting the council into different factions (Tuko, April 23).

At the moment, the Shura, which has a mandate to make important decisions regarding targets, finances and the group's ideological direction, is composed of eight members, among them Umar's deputies Mahan Karate, who heads the Amniyat, al-Shabaab's intelligence wing, Maalim Osman, the infantry commander, and Ali Dheere, the group's spokesman. It is believed the three do not see eye to eye on the matter of succession.

The deputies are concerned that a leadership vacuum would result in reduced operational capacity and the further loss of territory. Under Umar, the group has lost key areas and strategic towns in southern Somalia, which are crucial to revenue collection, recruitment and arms replenishment. It has also faced a split, with key leaders defecting to the government (The Star, July 1, 2017).

## Controversial Rise to Power

A ruthless hardliner, Umar—who is also known as Abu Ubaidah or Ahmed Diriye—took over as al-Shabaab's leader on September 6, 2014, replacing the former supreme leader Ahmed Abdi Godane, who was killed in a U.S. airstrike on September 1, 2014 (Daily Nation, September 5, 2014).

Prior to this, Umar was a little-known cleric, an alleged member of the Amniyat, the secret intelligence group Godane formed to expose and eliminate dissident within the group. He was allegedly a close confidant of the late leader, who attempted to shape al-Shabaab into a regional jihadist group, and is believed to have participated in the bloody purge of dissenters ordered by Godane.

Umar is believed to be in his mid-40s and was known to be a hardliner within the movement (WardheerNews, September 10, 2014). He was born in the Kalafe area of the Ogaden region before moving to southern Somalia, where he helped establish Islamic schools. He also served as al-Shabaab's governor for the Bay and Bakool regions (Somali Current, September 6).

His ascendancy to al-Shabaab leadership was controversial. The Shura's decision to appoint him following Godane's death had not been unanimous, and it was clear that some Shura members disliked him and considered him uneducated (Intelligence Brief, June 20, 2016).

While analysts expected Umar to instigate a fresh wave of violence, an uncomfortable silence followed the weeks and months after his appointment. This sparked speculation that the poorly educated cleric lacked

the leadership skills to re-energize al-Shabaab (Sabahi, October 31, 2014).

However, after nearly four years at the helm, his death would leave the militant group in a precarious situation with no obvious successor. Possible candidates include Mahad Karate, who the Shura by-passed when they picked Umar in 2014, Ali Mohammud Rage, alias Ali Dheere, and Hussein Ali Fiidow.

#### Possible Successors

Karate (a.k.a. Abdirahman Warsame) is al-Shabaab's deputy leader and continues to play a key role within the Amniyat. Like Umar, he is believed to be in his 40s. He hails from the Eyr sub-clan of the Habar Girir, an influential clan that was the backbone of the Islamic Courts Union (ICU), from which al-Shabaab splintered.

The U.S government designated Karate a terrorist in 2015 and put a \$5 million bounty on his head. He allegedly played a key role in the 2015 Garissa University attack, in which 148 students were killed (The Standard, November 11, 2015). In 2016, Karate, whose name is spelled variously as Mahad Mohammed Karatey or Mahat Karetey, was erroneously reported to have been killed in a strike by the Kenyan military (New Vision, February 18, 2016).

Sources describe Karate as battle-hardened and a religious hardliner, factors that boost his chances. He also worked as a deputy to Godane and now Umar, and both leaders came to trust him.

The other significant militant in the race is Rage, who is from the Hawiye Mursande clan and, like Karate, is a deputy emir for al-Shabaab. There was speculation that he too had been killed in a Kenyan-Somali commando operation in 2014 (Terror free Somalia, March 6, 2014). Months later, the rumors were disproved.

Hussein Ali Fiidow, a deputy who oversees al-Shabaab's governorates, is another possible successor. Fiidow is thought to be in charge of the group's finance and administration. He is influential and a rival to Umar. With the high number of recent defections to the government, some al-Shabaab members suspect that Fiidow is plotting a coup against Umar (Daily Nation December 14, 2017). He is thought to have recently attempted to eliminate the leader, forcing Umar to flee with his supporters (Mareeg, December 7, 2017).

#### An Opportunity to Strike

With Umar potentially incapacitated, it appears a leadership change within al-Shabaab is likely. While the group faces significant challenges that constrain its operations, the loss of strategic territory, the death of its commanders through airstrikes, defections and reduced revenue sources, a change of leadership could revitalize what remains one of Africa's deadliest militant groups.

That may mean increased attacks in Somalia as any new leader seeks to prove himself, with attacks potentially spreading to other East African nations—a growing al-Shabaab presence already exists in Kenya's Boni forest.

<b>HEADLINE</b>	<b>05/18 US ends aid for northwest Syria</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/trump-administration-ends-aid-for-northwestern-syria/">https://www.cbsnews.com/news/trump-administration-ends-aid-for-northwestern-syria/</a>
<b>GIST</b>	<p>The Trump administration has withdrawn all assistance from Northwest Syria, according to administration officials. This is the newest demonstration of the administration's intent to briskly exit the country once ISIS is fully defeated.</p> <p>The decision, made through an inter-agency process over the last few weeks, will mean that tens of millions of dollars will be cut off from previous U.S.-backed efforts to strengthen and stabilize the local</p>

society. Projects included countering violent extremism, supporting independent society and independent media, strengthening education, and advocating for community policing. The region will become the first area of the country where, other than humanitarian aid, the U.S. is officially disengaging.

After President Trump's request to review all U.S. assistance to Syria, administration officials were tasked with looking at where the U.S. could save money and, in short, get more bang for their buck in the country. The U.S. assistance in the northwestern region is viewed as not having a great impact on Syria in the long-term. Some of the money that has been cut from the northwest is being reprogrammed, those decisions are ongoing.

The administration intends to narrow its focus onto the fight against ISIS and has recently halted funding to groups like the White Helmets, a famed rescue and civilian assistance operation in Syria. ISIS has been cleared from 95 percent of the territory it once occupied, but is clinging on to its last strongholds. Last month, when Secretary of Defense Jim Mattis was asked about withdrawing from Syria, he said there would be a "re-energized" fight in the Middle Euphrates River Valley against ISIS. Mattis did not say what would happen after that fight had concluded.

A State Department official told CBS News, "\$200 million of stabilization assistance for Syria is currently under review at the request of the President. Distinct from that amount, U.S. assistance for programs in northwest Syria are being freed up to provide potential increased support for priorities in northeast Syria, as will be determined by the outcome of the ongoing assistance review, including the D-ISIS campaign and stabilization efforts."

The northwest, where the U.S. is now completely withdrawing, has been cleared of ISIS. The region includes Idlib, which is the largest area of Syria that is still under rebel control in that country's civil war. Idlib also has close to 3 million displaced Syrians that need both humanitarian and stabilization assistance. The region also includes Afrin where, earlier this year, Turkish forces battled the U.S.-backed Kurdish YPG militia, exacerbating tensions between Washington and Ankara.

The rest of the region is largely under control of the Assad regime. Yet there are also pockets of territory controlled by terrorist groups in the area, including al-Qaeda and al-Nusra.

<b>HEADLINE</b>	<b>05/18 Putin to Assad: foreign forces to leave</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/05/18/middleeast/assad-putin-intl/index.html">https://www.cnn.com/2018/05/18/middleeast/assad-putin-intl/index.html</a>
<b>GIST</b>	<p>(CNN)Russian President Vladimir Putin told Syrian President Bashar al-Assad Thursday that "foreign armed forces" would leave Syria, according to Syria's state-run news agency, SANA.</p> <p>Assad was on a surprise visit to Russia. He and his counterpart hailed the beginning of the "political process" in Syria amid an ongoing "fight against terrorism."</p> <p>"We presume that, in connection with the significant victories and success of the Syrian army in the fight against terrorism, with the onset of a more active part, with the onset of the political process in its more active phase, foreign armed forces will be withdrawn from the territory of the Syrian Arab Republic," Putin said after Thursday's meeting.</p> <p>The US, Iran, Turkey, Russia and some other countries have troops in Syria. Russia emerged as Assad's most powerful backer, helping to put down a rebellion against the Syrian President when it intervened on his behalf in 2015.</p> <p>Iran is another important Assad ally. Along with Hezbollah and other Iran-backed armed groups, Iran has helped to prop up the embattled President.</p> <p>Assad's visit comes just over a week after Israeli Prime Minister Benjamin Netanyahu's trip to Moscow.</p>

	<p>After meeting with Putin, Netanyahu said Russia was unlikely to interfere in Israel's actions in Syria, despite Russia's condemnation of Israel's latest airstrikes on May 9.</p> <p>"Given what is happening in Syria at this very moment, there is a need to ensure the continuation of military coordination between the Russian military and the Israel Defence Forces," Netanyahu told reporters.</p>

<b>HEADLINE</b>	<b>05/19 Anti-US cleric bloc wins Iraq election</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/militant-turned-populist-cleric-sadr-wins-iraqi-election-55275344?">https://abcnews.go.com/International/wireStory/militant-turned-populist-cleric-sadr-wins-iraqi-election-55275344?</a>
<b>GIST</b>	<p>Influential Shiite cleric Muqtada al-Sadr's political coalition has won the most seats in Iraq's national parliamentary elections, according to complete results released by Iraq's electoral commission early Saturday.</p> <p>The announcement came nearly a week after Iraqis cast their votes on May 12 and put Iraqi Prime Minister Haider al-Abadi in third place, according to seat allocations. An alliance of candidates with close ties to mostly Iranian-backed paramilitary forces came in second.</p> <p>"Your vote is an honor for us," al-Sadr said in a statement released on Twitter just moments after the official announcement.</p> <p>"We will not disappoint you," he continued, adding "the blame, all the blame is on those who failed Iraq."</p> <p>The election win marks the most significant victory of al-Sadr's political career.</p> <p>Partial results were announced earlier in the week, but allegations of irregularities and fraud delayed the complete count.</p> <p>The vote was marked by record low turnout that benefited al-Sadr who maintains loyal supporters who made it out to the polls when apathy kept many millions away.</p> <p>No one alliance won an outright majority and negotiations over forming the government are expected to drag on for months as parties try to form a bloc large enough to gain a majority in parliament.</p> <p>While al-Sadr's coalition won the largest number of seats, it is yet unclear if the next prime minister will come from his camp. Prolonged negotiations could result in a compromise candidate from a rival coalition.</p> <p>Following the 2003 U.S.-led overthrow of Saddam Hussein, Al-Sadr burst onto the scene as a renegade champion of poorer Shiites, leading militant fighters who carried out deadly attacks on American forces and were notorious for sectarian killings of Sunni Muslims.</p> <p>In recent years, al-Sadr has gained popularity as a nationalist voice, opposing Iranian influence and waging a public campaign against corruption. For this election, he ran a non-sectarian campaign focused on issues of social justice, allying with secularists and Iraq's communist party, and broadening support beyond his traditional base.</p>

<b>HEADLINE</b>	<b>05/21 Europe: 25% migrants infected w/AMR</b>
<b>SOURCE</b>	<a href="http://www.homelandsecuritynewswire.com/dr20180521-a-quarter-of-migrants-to-europe-infected-with-drugresistant-bacteria">http://www.homelandsecuritynewswire.com/dr20180521-a-quarter-of-migrants-to-europe-infected-with-drugresistant-bacteria</a>
<b>GIST</b>	<p>A new review of research on migrant populations in Europe has found that more than a quarter are infected or colonized with antibiotic-resistant bacteria, with evidence suggesting that the pathogens are being acquired along the migration route or in host countries.</p> <p>The findings are from a review and meta-analysis of observational studies on antimicrobial resistance (AMR) in migrants conducted by researchers from Imperial College London and published yesterday in the <i>The Lancet Infectious Diseases</i>. The researchers also found that the prevalence of AMR carriage or infection was even higher among refugees and asylum seekers and in high-migrant community settings. But they did not find high rates of AMR transmission from migrants to host populations.</p> <p>CIDRAP notes that the findings come amid a recent wave of immigration that has brought more than two million migrants to Europe since 2015, an influx that's been driven in part by conflicts and instability in the Middle East and Africa. The authors of the study suggest that the poor conditions that many migrants are exposed to in transit and in host countries—including crowded refugee camps and detention centers with poor sanitation and little access to healthcare—may promote the spread of antibiotic-resistant bacteria. The role of these settings in the spread of infectious diseases has been highlighted in previous studies.</p> <p>“Poor social conditions in these settings, such as inadequate sanitation, overcrowding, and restricted access to health services (including antibiotics or vaccinations), favor the spread of antibiotic-resistant infections,” the authors write.</p> <p>In their review of papers published from January 2000 through January 2017, the researchers identified 23 studies reporting on antibiotic resistance in 2,319 migrants. Countries of origin included Syria, Afghanistan, Eritrea and other countries in the Middle East, Africa, and Asia. Of these migrants, 77 percent were refugees or asylum seekers.</p> <p>Nineteen of the studies reported on methicillin-resistant <i>Staphylococcus aureus</i> (MRSA), and 12 of the studies reported on AMR in gram-negative bacteria. When they were reported, the clinical manifestations were mainly skin and other soft-tissue infections and diarrhea.</p>

Overall, the pooled prevalence of any detected AMR infection or carriage among migrants was 25.4 percent, with MRSA accounting for 7.8 percent and drug-resistant gram-negative bacteria accounting for 27.2 percent. The pooled prevalence of infection was 3 percent, and the pooled prevalence of carriage was 23 percent.

Among refugees and asylum seekers, pooled prevalence of AMR infection or carriage was 33 percent, compared with 6 percent in other migrants. In high-migrant community settings, the prevalence was 33.1 percent.

None of the articles showed evidence of high rates of onward transmission of AMR pathogens to host populations, a finding the authors say could be linked to high-migrant communities being segregated from local communities.

While many of the countries and regions that the migrants came from are known to have high rates of AMR, the authors say they found evidence in the included studies that suggests the antibiotic-resistant organisms were acquired either during migration or in the host countries, which included Spain, Italy, Greece, Germany, Austria, the Netherlands, Sweden, and Switzerland.

Three of the countries where the studies were conducted—Greece, Italy, and Spain—are the main points of entry for migrants to Europe. They have also been found to have a high prevalence of MRSA (39.2 percent, 34.1 percent, and 25.3 percent, respectively), which raises the possibility that migrants could have acquired the pathogen from people in those countries.

But it's the poor conditions in the places where refugees are housed while they await resettlement that may be the most important factor in spreading AMR bacteria among migrants, the authors argue.

<b>HEADLINE</b>	<b>05/20 Mystery: Maria death toll Puerto Rico</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/months-hurricane-maria-death-toll-puerto-rico-remains/story?">https://abcnews.go.com/US/months-hurricane-maria-death-toll-puerto-rico-remains/story?</a>
<b>GIST</b>	<p>In the days after Hurricane Maria blasted through Puerto Rico, President Donald Trump told officials that, considering the seemingly low death rate, the Caribbean island should be "proud."</p> <p>"If you look at the real catastrophe like Katrina and you look at the tremendous hundreds and hundreds and hundreds of people that died," he said, referring to the hurricane that ripped through New Orleans and killed more than 1,800 people, "16 people versus in the thousands, you can be very proud of all of your people."</p> <p>But in the eight months since the president attempted to rally Puerto Ricans with those words, one of the most perplexing challenges remains the mystery of how many of the island's 3.4 million residents actually died as a result of the Category 4 storm.</p> <p>The current death toll, according to the Puerto Rican government, is 64.</p> <p>Skepticism has lingered, however, with some Puerto Ricans and its officials believing the number is much higher.</p> <p>Carmen Yulín Cruz, the mayor of San Juan who was critical of the Trump administration's recovery response, early on questioned whether the death count was way off.</p> <p>There was a spike in the mortality rate in the months after Hurricane Maria. According to Alexis Santos, director of graduate studies in applied demography at Pennsylvania State University who has studied the daily mortality data from the Puerto Rico government, says there were approximately 1,000 more deaths on the island in the month after Maria.</p>

In February, Governor Ricardo Rossello announced that George Washington University would lead efforts to review the death count associated with the storm. The Milken Institute School of Public Health at the George Washington University is heading an independent effort in partnership with institutions on the island.

Dr. Lynn Goldman, dean of that school, told ABC News the task of counting the deaths is an exhausting one. The team will be working with data coming in from various sources.

The George Washington University team will be looking at deaths starting with Maria's landfall on September 20 through February.

A government official told ABC News that the group will be presenting two reports: a preliminary range of the number of deceased followed by a more extensive report about a year later.

<b>HEADLINE</b>	<b>05/18 NKorea's secret army abroad</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/north-koreas-secret-army-how-operatives-abroad-aid-the-regime-1526652387">https://www.wsj.com/articles/north-koreas-secret-army-how-operatives-abroad-aid-the-regime-1526652387</a>
<b>GIST</b>	<p>KUALA LUMPUR— Ri Jong Chol, a slight man in his mid-40s, led what appeared the routine life of a businessman. He lived in an apartment complex with a pool and gym, a family man who took his wife and two children bowling.</p> <p>Mr. Ri's computers and phones, seized last year by Malaysia authorities, reveal much more. He was a North Korean operative, one of hundreds living abroad who U.S. and United Nations investigators say help the regime skirt sanctions by generating cash and sourcing goods.</p> <p>Material from Mr. Ri's three laptops, four phones and a tablet computer, viewed by The Wall Street Journal, revealed evidence of his secret life. He helped export hundreds of thousands of dollars worth of palm oil and soap to a military controlled trading company in Pyongyang under U.N. and U.S. sanctions. He arranged to procure 50,000 bottles of Italian wine, valued at \$250,000, despite U.N. curbs on luxury goods bound for North Korea's elite. And he is suspected of providing the getaway car for a high-profile killing.</p> <p>North Korea has for decades built trade ties with friendly countries and sent its operatives abroad. These operatives, usually attached to the regime's embassies, are suspected by U.S. and U.N. authorities of illegal alcohol sales in Pakistan, weapons sales in Africa and gold smuggling into Bangladesh. The various schemes yielded hundreds of millions of dollars a year in cash and goods, according to estimates by U.N. investigators.</p> <p>This is the model North Korea used to try to evade a blanket of international sanctions. If a June 12 summit with the U.S. succeeds in resolving the future of the regime's nuclear program, and starts to integrate the country into the global economy, these networks will likely recede in importance.</p> <p>If diplomacy fails, and heated rhetoric from Pyongyang has raised that possibility, then North Korea will have a ready-made system to mitigate international pressure.</p> <p>"Ri is not an anomaly. North Korea has an army of these people," said Daniel Russel, a former diplomat for Asia at the State Department and now a vice president at the Asia Society Policy Institute in New York City.</p> <p>Mr. Ri's earnings for North Korea from Malaysia were small, but he had broad ambitions. He corresponded with hackers in China about plans to steal and resell U.S. medical-imaging software. And he shopped for secondhand Japanese construction cranes, the kind North Korea has used in its missile</p>

program.

Mr. Ri was allowed to travel and live with family abroad, a special status afforded by the regime. His work in Malaysia ended with the killing last year of Kim Jong Nam, the estranged half brother of Kim Jong Un. Mr. Kim was attacked in a passenger check-in area at Kuala Lumpur International Airport.

Malaysian investigators allege Mr. Ri may have arranged to buy a car used by suspects in the Feb. 13, 2017, killing. Among the thousands of Mr. Ri's emails, text messages, documents and photographs viewed by the Journal is an image from one of his phones of a Malaysia-brand car—Naza Ria—with the seller's contact information on the dashboard.

The same model, registered to Mr. Ri, ferried North Korean agents away from the airport after the killing, according to Malaysian investigators. He was deported but not charged with any crime and denied any wrongdoing.

Malaysian prosecutors say the masterminds were North Korean operatives, who worked through North Korea's Embassy in Malaysia and escaped.

Two women who smeared the lethal agent on Mr. Kim's face are on trial for murder and have pleaded not guilty, saying they were told it was just a prank.

Malaysia expelled several North Korean diplomats and revoked visa-free travel for North Koreans. A foreign ministry spokesman said the country was vigilant in preventing North Korean front companies and businessmen from operating illicit businesses in Malaysia.

Calls to the North Korea Embassy in Malaysia rang unanswered.

Mr. Ri had seemingly landed in Malaysia by chance. In 1997, Malaysian businessman Chong Ah Kow had traveled to Pyongyang, where he met Mr. Ri's uncle, a well-known scientist in North Korea. Mr. Chong, who runs a traditional medicine company, said he was interested in cancer remedies, and Mr. Ri's uncle had developed a mushroom extract to treat tumors.

In late 2013, Mr. Ri offered to help export the extract to Malaysia. Mr. Chong, as a favor, sponsored him and his family for a work visa, describing Mr. Ri as "a very humble man." Mr. Chong said he and Mr. Ri explored several business deals, but none got off the ground.

Mr. Ri settled his family in a middle-class section of Kuala Lumpur, where neighbors said they largely stayed out of sight.

Mr. Ri wasn't fluent in English, the language of business in Malaysia, so he turned to his teenage daughter, Yu Gyong. She studied at Help University, a private college that in 2013 awarded Kim Jong Un an honorary doctorate in economics.

In text messages reviewed by the Journal, she chats about amusement park trips and lunch plans with friends—and, on her father's behalf, talks about completing deals with Mr. Ri's Malaysian business partners.

In one text from September 2016, Mr. Ri's daughter talks with him about her efforts to arrange a meeting with a business contact, where she would act as a translator. After some back and forth, Mr. Ri wrote: "Take your time and finish your studies. You can call him after your class."

She is listed in Mr. Ri's contacts as "my darling daughter," and he mixed business with such fatherly concerns as making sure she didn't get sunburned while waiting for him to pick her up from school.

Mr. Ri started out in Malaysian business buying wholesale palm oil, soap and other commodities for export to North Korea. By 2015, his main supplier was Octo Plus Resources, registered at the home of

owner Gan Chee Lim, near Port Klang, west of Kuala Lumpur, documents show.

With the help of Mr. Gan and a network of ethnic Koreans in China, Mr. Ri and his daughter arranged to ship the goods from Malaysia via Dalian in China to the North Korean port of Nampo, according to invoices, messages and documents viewed by the Journal.

The products weren't prohibited under sanctions, but one company Mr. Ri represented was Singwang Economics & Trading General Corp. The U.S. sanctioned Singwang in March 2016, calling it a subsidiary of the North Korea military. The U.N. also imposed sanctions on the company that year. Ms. Ri told Mr. Gan, the Malaysian supplier, that the soap buyer in North Korea was Singwang, according to a May 2016 phone message exchange.

The U.S. designation made it illegal for funds going to or from Singwang to be cleared through the U.S., as typically happens in dollar transfers. In phone message traffic during July 2016, Mr. Gan told Ms. Ri not to send payments of more than \$10,000 at a time, presumably to avoid bank scrutiny. He also raised concerns that Malaysia's central bank would be monitoring foreign-currency transactions, text messages show.

One \$25,000 transaction, in August 2016, was a "bit dangerous because (the) amount is quite big," Mr. Gan said.

In November 2016, Mr. Gan asked for a payment, but advised Ms. Ri to say on the wire documents that the money was for the "purchase of souvenir, necklace, pendant," according to their text message exchange.

"I haven't put anything," she said. "But since it's small amount isn't it ok?"

"Shud be ok...only worry the bank will hold the payment and query," he replied. Mr. Gan declined requests for comment.

Mr. Ri's work appeared to earn profits for Pyongyang and support a comfortable life for his family. A ledger in the computer files shows he shipped around \$250,000 worth of commodities to North Korea over the nine months through January 2017.

Mr. Ri, who didn't appear to have a bank account in Malaysia, relied on North Korean controlled entities in Hong Kong and Malaysia to finance transactions, documents show. Sometimes, Mr. Gan stepped in to help.

Communications with Mr. Gan were often tense. He complained about Mr. Ri's erratic orders and slow payments. "Sometimes we have money," Ms. Ri wrote him, "sometimes we don't."

Mr. Ri appeared to use an insurance company in the Malaysian offshore financial center of Labuan to pay for goods, according to messages and copies of checks on his phone. The company, Golden Sunrise Finance Broking, was controlled by North Koreans, but owned by a Malaysian shareholder to avoid scrutiny of its financial flows, according to a person familiar with the matter.

No one answered the insurance company's listed phone number.

Invoices on Mr. Ri's computers show two North Korean banks, Kumgang Bank and North East Asia Bank, were also used to funnel payments to buy commodities. The banks were blacklisted under U.S. sanctions in 2016.

As business expanded, so did Mr. Ri's horizons. He and his daughter made plans to import North Korean coal to Malaysia via Russia, which would earn them a broker fee. They also talked about buying warehouses in Port Klang.

With a new Malaysian business contact, they discussed farming rice in the country's northwest. A letter explained how the venture would team with a North Korean company controlled by the regime's agriculture ministry. "This is a big project and also big money. Your profit will be big if our deal is made. pls try best to make a deal ASAP," Ms. Ri wrote in November 2016.

Mr. Ri pursued another venture with a team of ethnic Korean computer programmers in Shenyang, China, to market medical-imaging software used in CT scans.

A business partner of Mr. Ri's in Malaysia lined up potential buyers, even though they had no software to sell. Messages on Mr. Ri's devices suggest the plan was to make pirated versions after hacking firms that made them.

In October 2016, Mr. Ri sent one of the China-based programmers the website of Able Software Corp., a Lexington, Mass., company, according to text messages. Ted Wu, Able's founder, said the Federal Bureau of Investigation had previously investigated hackers who stole Able's software and sold it online in the late 2000s.

The Ris also shopped for industrial cranes. In January 2017, Mr. Ri requested a price quote for two used cranes from TL Mobile Crane Services Sdn. Bhd. in Malaysia. The firm said no deal involving North Korea was made.

In May 2017, North Korean state television showed a Kato-brand Japanese crane used in the launch of an intermediate range missile. A photo on Ms. Ri's phone showed a similar Kato crane. The U.N. later expanded a ban on heavy machinery exports to North Korea to include all cranes.

The day Kim Jong Nam was killed at the airport, Ms. Ri met with Mr. Gan to discuss a new soap-importing plan. But there would be no more deals.

Four days later, Mr. Ri was taken into custody. Mr. Gan sent Ms. Ri a message: "Are you affected by the recent news...?" He got no reply.

The Ri family was allowed to leave Malaysia, part of a deal giving Malaysians held in North Korea permission to return home. Malaysian police said they lacked evidence to charge Mr. Ri in the killing.

Around 90 North Koreans remain in Malaysia, according to Asian and Western diplomats. Some have set up new front companies to avoid detection, according to a person who has worked with them in past business deals.

<b>HEADLINE</b>	<b>05/20 Cougar kills biker; injures fellow rider</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/cougar-kills-mountain-biker-injures-fellow-rider-washington/story?">https://abcnews.go.com/US/cougar-kills-mountain-biker-injures-fellow-rider-washington/story?</a>
<b>GIST</b>	<p>Two mountain bikers in rural Washington state were attacked by a cougar on Saturday with one man being killed and another seriously injured.</p> <p>The bikers were on a remote road north of North Bend, Washington, when the cougar attacked one of the riders, according to the King County Sheriff's Office. The cougar then attacked the second rider.</p> <p>The first rider managed to get back on his bike and ride to an area where he received cellphone service and call authorities, according to Seattle ABC affiliate KOMO.</p> <p>The 31-year-old who managed to escape was taken to Harborview Hospital, according to the facility, where he was in satisfactory condition. The rider told authorities he was bitten on the head by the animal, according to KOMO.</p>

	<p>The sheriff's office said the second biker was found dead with the cougar standing over it when they arrived.</p> <p>The King County Sheriff's Office tweeted at about 4 p.m. local time that officials had tracked the cougar and it had been killed.</p> <p>"Fish and Wildlife has euthanized the cougar that is believed to be responsible for killing one man and attacking another earlier today," the sheriff's office tweeted.</p> <p>The attack, let alone a death, was exceedingly rare.</p> <p>The Department of Fish and Wildlife said in a press conference this is only the second cougar attack death in Washington state in the last 100 years. There have been 15 nonfatal attacks over that period.</p>

<b>GIST</b>	<p>KUALA LUMPUR (Reuters) - The potential reopening of a probe into the murder 12 years ago of a Mongolian model could spell more trouble for former Malaysian premier Najib Razak, as the new government pressed ahead with investigations into alleged corruption.</p> <p>On Saturday, Mongolia's president requested Malaysia's new leaders to find justice for the dead woman,</p>

	<p>Altantuya Shaariibu, while a fugitive policeman convicted of the crime said he would cooperate with any new probe if he was given a full pardon.</p> <p>Prime Minister Mahathir Mohamad has already barred Najib from leaving Malaysia after surprisingly defeating his one-time protege in an election on May 9.</p> <p>The new government is seeking answers to how billions of dollars disappeared from a state fund that Najib founded, and its anti-graft agency has asked the ex-premier, who has consistently denied any wrongdoing, to make a statement at its headquarters on Tuesday.</p> <p>In the case of the murdered Mongolian model, two policemen from Najib's security detail were convicted, and have death sentences hanging over them, but the question of who ordered them to kill 28-year-old Altantuya has never been answered.</p> <p>While released on bail during an appeal one of those officers fled to Australia.</p> <p>Speaking from an immigration detention centre, where he has been held since 2015 for overstaying his visa, Sirul Azhar Umar told news portal Malaysiakini that he would help any move by the government to resurrect the case so long as he walked free.</p>

<b>HEADLINE</b>	<b>05/19 Bishop's American flair to royal wedding</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/05/19/fiery-us-bishop-brings-american-flair-to-royal-wedding.html">http://www.foxnews.com/world/2018/05/19/fiery-us-bishop-brings-american-flair-to-royal-wedding.html</a>
<b>GIST</b>	<p>WINDSOR, England – Nothing captured the trans-Atlantic nature of Saturday's royal wedding as much as the guest preacher whose sermon brought American fire and flair to a very English church service.</p> <p>The Most Rev. Michael Bruce Curry, the first black leader of the Episcopal Church in the United States, was hand-picked by Prince Harry and Meghan Markle to address their 600 wedding guests.</p> <p>The bishop's passionate sermon on the theme of love, studded with quotes from the bible, Martin Luther King Jr and African-American spirituals, was a contrast to the more solemn and muted Anglican style the royal family is used to.</p> <p>Many observers were surprised and delighted. BBC broadcaster Jeremy Vine tweeted: "The preacher is doing 50 in a 30 zone and it's brilliant."</p> <p>Supermodel Naomi Campbell hit Caps Lock and tweeted: "BISHOP MICHAEL CURRY GIVING ME LIFE."</p> <p>Quoting civil rights King on the "redemptive power of love," Curry told the bride and groom "it's not just for, and about, a young couple who we rejoice with, it's more than that."</p> <p>Curry, who like Markle's mother has African ancestors who were slaves in the U.S., said that even during their time of bondage, love helped those in captivity persevere.</p> <p>"When love is the way, we actually treat each other, well, like we are actual family," he said in a sermon that touched on poverty, inequality and the healing power of love.</p> <p>"When love is the way, we know that God is the source of us all and we are brothers and sisters, children of God and brothers and sisters," he said. "That's a new heaven, a new earth a new world, a new human family."</p> <p>Harry and Markle exchanged a quick glance at one another at one point as Curry drifted from his prepared</p>

	<p>remarks and ad libbed while the queen looked on stoically. Camilla and Kate — the Duchess of Cornwall and the Duchess of Cambridge — traded sidelong glances.</p> <p>Queen Elizabeth II, who as monarch holds the title of Supreme Governor of the Church of England, did not show any sign of discomfort and looked as stoic as she had through the entire ceremony.</p> <p>There may have been a touch of royal relief when Curry wrapped up with "We gotta get y'all married now."</p> <p>The crowds waiting outside for a glimpse of the royal couple loved it. Cheers greeted Curry as he walked uphill from the chapel along the procession route after the service. One man shouted "well done" — prompting a smile and "God bless you" from the bishop.</p> <p>Former Labour Party leader Ed Miliband, an atheist, tweeted: "Rev Michael Curry could almost make me a believer."</p>

## Crime, Criminals

[Top of page](#)

<b>HEADLINE</b>	<b>05/21 Organized crime illegal wood trafficking</b>
<b>SOURCE</b>	<a href="https://www.eurasiareview.com/21052018-illegal-logging-an-organized-crime-that-is-destroying-latin-american-forests/">https://www.eurasiareview.com/21052018-illegal-logging-an-organized-crime-that-is-destroying-latin-american-forests/</a>
<b>GIST</b>	<p>Illegal wood trafficking is the most profitable crime against natural resources and the world's third most important crime, according to a report titled "Transnational crime and the developing world," published in March 2017 by Global Financial Integrity, a US-based organization that investigates illicit financial flows.</p> <p>The report estimates that, globally, this transnational crime generates US\$52 billion to US\$157 billion a year. The United Nations Environment Program (UNEP) estimates that 30 percent of the wood sold in the world has been illegally obtained.</p> <p>According to Insight Crime, a research center on organized crime, most illegal timber logging occurs in the Amazon rainforest. Illegal timber logging, illegal mining and drug trafficking are the most investigated crimes in Latin America.</p> <p>Latin American forests are the second most vulnerable in the world to illegal timber logging, after Asian forests, says UNEP. In 2014 alone, illegal timber exports from South America — for both raw wood and sawn timber — totaled an average of US\$387 million, according to the International Union of Forest Research Organizations (IUFRO).</p> <p>Rolando Navarro, a researcher at the Center for International Environmental Law (CIEL), who has closely</p>

studied the illegal timber trade in South America, told Latinamerica Press that “over 75 percent of the wood sold in South America both domestically and for export, is illegally obtained.”

A massive amount of wood is illegally traded in Latin America. In late 2012, INTERPOL confiscated over 50,000 m<sup>3</sup> of illegally obtained timber with an estimated value of US\$8 million as a result of an operation named Project LEAF (Law Enforcement Assistance for Forests), in which law enforcement agencies from 12 Latin American countries worked together to crack down on illegal timber logging.

Illegal wood trafficking is a complex type of organized crime and it leads to a long spiral of inter-related crimes like a tree’s annual growth rings.

Alicia Abanto, Peruvian Human Rights Ombudsman’s Office representative for the Environment, Public Services and Indigenous People, told Latinamerica Press that wood trafficking is linked to a series of crimes such as deforestation, labor exploitation, land invasions, tax evasion, document forgery, state corruption and even the murder of community leaders who are fighting to preserve forests.

“These crimes also occur in other Latin American countries and the Caribbean. However, they are more common in the Amazon rainforest, because it’s a much larger rainforest,” says Abanto. “The illegal timber trade often begins with indigenous or peasant communities that are hired by a timber logging company. Very often they are unaware of the fact that what they’re doing is illegal and companies take advantage of that.”

A report titled “A spatio-temporal analysis of forest loss related to cocaine trafficking in Central America,” published in May 2017 by scientific journal IOPscience, refers about the impact of cocaine trafficking on deforestation in Central America. According to the report, as a result of the cocaine trade, Guatemala, Honduras and Nicaragua have lost annually between 15 percent and 30 percent of their forestland over the past decade. Forests in Costa Rica, El Salvador, Jamaica, Panama and the Dominican Republic are also under threat from the cocaine trade.

The Environmental Investigation Agency (EIA), a US-based organization that monitors the illegal timber trade, shared information with Latinamerica Press about the scale of the illegal timber trade in Latin America.

According to Julia Urrunaga, director of the EIA’s Peru Programs, Mexico is one of the countries that purchase the greatest volume of wood “that has a high risk of being illegally obtained as part of the value chain.” Almost all of the wood imported by Mexico comes from Brazil and Peru.

Figures published by the IUFRO based on World Bank data for 2006, show that percentage of wood sold in each Latin American country is illegally obtained: Bolivia (80 percent), the Brazilian Amazon rainforest (20 percent-47 percent), Colombia (42 percent), and Ecuador (70 percent).

Navarro points out that the 80 percent figure for Peru has increased since 2006. “I would dare to say that more than 90 percent of the timber sold in Peru has been illegally obtained,” said the CIEL researcher.

HEADLINE	<b>05/21 Earnings of human smuggling cartels?</b>
SOURCE	<a href="https://www.washingtonpost.com/news/fact-checker/wp/2018/05/21/are-human-smuggling-cartels-at-the-u-s-border-earning-500-million-a-year/?utm_term=.0f526bd514ef">https://www.washingtonpost.com/news/fact-checker/wp/2018/05/21/are-human-smuggling-cartels-at-the-u-s-border-earning-500-million-a-year/?utm_term=.0f526bd514ef</a>
GIST	<p><i>“To be clear — human smuggling operations are lining the pockets of transnational criminals. They are not humanitarian endeavors. Smugglers prioritize profit over people. And when aliens pay them to get here, they are contributing \$500 million a year — or more — to groups that are fueling greater violence and instability in America and the region.”</i></p> <p>— Homeland Security Secretary Kirstjen Nielsen, in testimony before the Senate Homeland Security and</p>

Governmental Affairs Committee, May 15, 2018

Nielsen's claim that smuggling cartels make \$500 million a year bringing people across the U.S. border caught our eye after the Washington Times made it the main story of its print edition. Regular readers know that we've often warned about accepting at face value numbers concerning illicit activities, such as human trafficking or smuggling, so we were curious to learn how this figure was developed.

### **The Facts**

The math is pretty simple. A Homeland Security official explained that the agency assumed that transnational criminal organizations receive an average of \$5,000 per person smuggled, a number based on interviews with undocumented immigrants who are caught. DHS apprehends about 300,000 people a year who try to illegally cross the border each year, so the agency took one third of that number — 100,000 — and multiplied it times \$5,000, yielding a figure of \$500 million.

“We think the number of people paying smugglers is actually much higher but wanted to provide a conservative estimate,” the official said. “This, of course, also does not include those who pay to be smuggled across our borders and are not caught.”

Some might say it's conservative. Others might say it's arbitrary. There's really no rhyme or reason for why one-third of the people caught are being counted, especially since presumably people who are not caught also might rely on smugglers.

Gabriella Sanchez is the author of “Human Smuggling and Border Crossings,” a 2016 book based on interviews with smugglers. She researches migrant smuggling at the Migration Policy Center in Florence. When it comes to smuggling estimates, she said, “the numbers are almost always made up.”

Sanchez said one problem with Nielsen's figure is that it assumes a \$5,000 smuggling fee. That's a reasonable figure for getting across the border between the United States and Mexico, which she said is between \$4,500 and \$5,500, though in March smugglers were offering a 20 percent discount because they were not getting enough clients.

But Sanchez said Mexicans are no longer migrating to the United States — over the past 10 years, migration from Mexico has statistically vanished, according to the Pew Research Center — so the fees paid by the Central Americans fleeing Guatemala, Honduras and El Salvador are likely to be higher.

But there's another wrinkle: Many people will never finish paying off their fees. “The facilitators are flexible because if not, they know a client can go to someone else, so they cut prices to get clients and then clients vanish,” she said.

Moreover, she said, the money paid to smugglers stays along the trail, as smugglers need to pay rent, too, contrary to the image conjured up by Nielsen of “transnational criminals.” Smugglers are often just low-level independent operators, loosely connected to others, trying to make a buck. She said the biggest cost in the smuggler operation was corruption — the fees paid to police and border agents.

One smuggler told Sanchez his profit margin was just 25 to 30 percent. The Pulitzer Prize-winning report by the Arizona Republic on the impact of President Trump's proposed border wall quoted a smuggler, “Alexis,” as saying he kept about \$2,500 of the \$5,000 to \$6,000 fee, with the rest going to pay off helpers and police.

Interestingly, Nielsen's figure appears to be a lowball estimate. It is much lower than a previous estimate from Immigration and Customs Enforcement (ICE), from 2003, that global profits from human smuggling amount to \$9.5 billion. ICE never explained how that figure was calculated, and it later morphed into the incorrect claim that child sex trafficking in the United States yielded profits of \$9.5 billion, but that's another story.

More recently, the United Nations Office on Drugs and Crime estimated in a 2010 report that human

smuggling into the United States earned revenue of \$6.6 billion in 2008. But those numbers were based on previous high rates of migration by Mexicans — 661,000 apprehensions a year, with a probability of being apprehended at 20 percent — and the report noted that the Mexican market had been in sharp decline since 2005. But it also assumed smugglers charged \$2,000 per person.

The Mexican Migration Project, the source of the United Nations' 20 percent apprehension rate for Mexicans, says the rate is now about 12 percent. But researchers warn that's based on a very small number and so it is unreliable.

“Undocumented migration from Mexico has been negative for 10 years: More people are going back to Mexico than are entering the U.S.,” said Douglas Massey, of Princeton University, co-director of MMP. “In fact, the number of apprehensions reported by the DHS is very small — the lowest number of since 1971 — and in that year there were only 1,500 Border Patrol Officers, whereas today there are 19,000 officers. The number of apprehensions per officer are at their lowest point since 1942. In 2016, less than half of all apprehensions were Mexicans. Illegal migration from Mexico is effectively over.”

The U.N. report estimates that without Mexican migration, revenue earned by smugglers might be about \$1 billion, assuming costs as high as \$10,000 for a trip from the southeastern coast of Mexico.

### **The Pinocchio Test**

Nielsen's \$500 million estimate is not wildly off base but it appears derived from arbitrary metrics. It is based on smuggling costs at the border, even though many illegal immigrants these days have a longer route to travel. She's only counting one-third of those apprehended, even though many people who use smugglers are not caught. So the overall figure of smuggler revenue could be higher.

<b>HEADLINE</b>	<b>05/21 Drugs land more women behind bars</b>
<b>SOURCE</b>	<a href="https://apnews.com/b46bbe14e0e945888ac9ccc55aeb9504/Revolving-door-of-despair:-Drugs-land-more-women-behind-bars">https://apnews.com/b46bbe14e0e945888ac9ccc55aeb9504/Revolving-door-of-despair:-Drugs-land-more-women-behind-bars</a>
<b>GIST</b>	<p>Women in jail are the fastest-growing correctional population in America. Their numbers rose from 13,258 in 1980 to 102,300 in 2016, with the biggest jump in smaller counties, according to the Bureau of Justice Statistics. Similarly, the female prison population skyrocketed from 5,600 in 1970 to more than 110,000 in 2016. Between 1980 and 2009, the arrest rate for drug possession or use tripled for women, while it doubled for men.</p> <p>Opioid abuse has exacerbated the problem.</p> <p>In Montgomery County, Ohio, more than 3,600 women have been jailed for addiction-related crimes in the last two years, twice the number since 2014. In Henrico County, Virginia, the female jail population has grown from about 60 daily in 2000 to nearly 300; a survey of inmates found more than 4 in 10 women had their kids removed from them while on drugs. The jail has responded with an opiate treatment program.</p> <p>Rural America, in particular, lacks resources and readily accessible treatment to help curb the problem, says Jessica Hulsey Nickel, president of the Addiction Policy Forum, a patient advocacy group. If someone in recovery has to drive several hours to visit a specialist or receive regular doses of methadone, she says, “It’s going to make staying on that path nearly impossible.”</p> <p>Mary-Linden Salter, director of the Tennessee Association of Alcohol, Drug &amp; Other Addiction Services, says her state doesn’t have enough psychiatrists, social workers, counselors and nurses in rural areas. Residential drug treatment, a key part of recovery, also is scarce in those communities — and Campbell County has none, she says, adding: “It’s unrealistic for people to travel 700 miles for treatment because that’s where there’s an open bed.”</p> <p>Salter also notes there are twice as many residential programs in the state for men as there are for women.</p>

That's partly because women have costlier, more complicated treatment; many have experienced trauma and abuse as children or adults. Generally, women also are slower to seek help because of societal pressures to maintain a family. Many are single mothers who fear losing their children.

"Women are the caregivers of their families," Salter says. "They get blamed and shamed for not taking care of their children. But they get blamed and shamed for not being in recovery. It's a horrible choice."

Many of these women say jail should help prepare them for life outside, maybe with a Narcotics Anonymous group, counseling or education programs such as those offered in state prisons. They'd also like to work and be exposed to people who don't use drugs. (Some male inmates have jobs.)

Lt. Mallory Campbell, assistant jail administrator, is sympathetic. It took a year, she says, to start a high school equivalency diploma program, partly because a teacher had to be found who then had to be trained to work in the jail.

She'd like to offer college courses or vocational training, she says, because "if they don't leave here with a skill, they're going to go back to what they know." But there isn't money for programs or staff.

Medical costs for both male and female inmates also are an enormous burden, nearly doubling since 2015 to top \$1 million last year, according to county officials. Hepatitis, infections or dental problems are not unusual.

And drugs remain a powerful lure. The women speak candidly about what they had to do to feed their habits — shoplift, rob, trade sex for drugs. While some welcome the fresh start, the cravings persist.

<b>HEADLINE</b>	<b>05/20 Cameroon holiday hit by violence</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/cameroon-holiday-hit-violence-english-speaking-areas-55311861?">https://abcnews.go.com/International/wireStory/cameroon-holiday-hit-violence-english-speaking-areas-55311861?</a>
<b>GIST</b>	<p>Cameroon's national day Sunday was marked by violence in its troubled English-speaking region, with two policemen killed, soldiers wounded and a mayor kidnapped by suspected armed separatists.</p> <p>In the capital, Yaounde, in central Cameroon, President Paul Biya, who has ruled since 1982, presided over a public show of the country's military might.</p>

But in the English-speaking town of Bangem in southwest Cameroon, the mayor, Ekuh Simon, was kidnapped. In a video shared by suspected armed separatists Simon said he and his deputy were kidnapped by separatists for planning independence celebrations. He said he is being held hostage by the Ambazonia Restoration Forces that had said the national day should not be celebrated. Ambazonia is the name separatists have given to the English-speaking area they want to become independent from French-speaking Cameroon.

Fighting was also reported in the English-speaking towns of Konye, Batibo, Ekona and several villages of Kupe Muanenguba, an administrative area in southwestern Cameroon.

At least two policemen and several people were killed, according to the governor of the south west region Bernard Okalia Bilai. In the towns that were attacked, many escaped to the bushes and safer neighboring towns.

In the northwestern city of Bamenda, there was a strong show of force to prevent any violence, but only a few residents turned up for the celebrations, saying that they feared retaliation from the separatists. Some students at the University of Bamenda showed up for the parade, saying they were forced by officials to come under the penalty of expulsion. Government officials also said they were also forced to come.

The Cameroon government had asked the population to come out in numbers and celebrate the national day as a sign of national unity adding that the military will protect the people from armed separatists who had vowed the day will not be celebrated in the English-speaking regions.

Cameron again imposed a curfew on its English-speaking regions. In spite of the curfew and heavy presence of the military, the armed separatists were able to chase out some public officials and close some schools.

Both the government and separatists have committed abuses, according to the U.S. ambassador. Ambassador Peter Henry Barlerin last week met with Biya and urged the president to initiate dialogue to lead the way out of violence.

<b>GIST</b>	<p>A father allegedly sat his family near the front door of a restaurant in North Carolina on Sunday, then promptly left, got in his car and plowed full speed into them on purpose, according to police and eyewitnesses. Two people were killed in the crash, police said.</p> <p>Roger Self, 62, has been charged with two counts of murder over the alleged incident in which his daughter, Katelyn, and another person sitting at the table were killed, the Gaston County Sheriff's Office said.</p> <p>Katelyn Self was a deputy with the Gaston County Sheriff's Office. She was off-duty at the time of the crash.</p> <p>Charlotte ABC affiliate WSOC identified the other person killed in the crash as Roger Self's daughter-in-law, Amanda Self.</p> <p>Several other people, including those not related to the family at neighboring tables, were injured, according to police.</p> <p>None of the other injuries are considered life-threatening, police said.</p> <p>According to Caleb Martin, who was busing tables at the Surf and Turf Lodge restaurant in Bessemer City, the driver plowed through the front of the restaurant at full speed.</p> <p>The family's pastor, Austin Rammell, told WSOC that Roger had been dealing with mental health problems recently and "this was not a conscious act by their father and they know that."</p> <p>Rammell said he was set to officiate Katelyn's wedding to her fiance in September.</p>

	<p>Police said a Gaston County police officer and a Gastonia police officer were also injured in the crash. Their conditions are unknown.</p> <p>Roger Self is being held in Gaston County Jail without bond. He is expected to appear in court on Monday.</p>

<b>HEADLINE</b>	<b>05/20 School shooter confesses; no clear motive</b>
<b>SOURCE</b>	<a href="https://apnews.com/cb5e0dca766e4845acf02b6bff8b62c7/In-deadly-school-shooting,-a-confession-but-no-clear-motive">https://apnews.com/cb5e0dca766e4845acf02b6bff8b62c7/In-deadly-school-shooting,-a-confession-but-no-clear-motive</a>
<b>GIST</b>	<p>SANTA FE, Texas (AP) — The mother of one of the 10 people killed at a Texas high school said her daughter recently rejected the romantic advances of the 17-year-old charged in the shootings, a possible motive for the violent tragedy.</p> <p>Sadie Rodriguez said her daughter, Shana Fisher, had made clear that she was not interested in Dimitrios Pagourtzis.</p> <p>“He continued to get more aggressive,” Rodriguez told The Associated Press in an interview conducted Saturday via Facebook. “She finally stood up to him and embarrassed him.”</p> <p>The incident took place one week before the shooting, Rodriguez said. Police have not yet said what might have motivated the attack.</p>

Asked about Rodriguez's allegation, a lawyer for the Pagourtzis's family said he hadn't heard about any such interaction between Pagourtzis and any of the victims and therefore couldn't comment.

"That's news to me," said lawyer Nicholas Poehl, though he cautioned that he'd spent much of the day disputing false rumors about the teen's personal life. Earlier Saturday, Poehl issued a statement from the family saying that they were "as shocked and confused as anyone else by these events that occurred" and asked for privacy.

"While we remain mostly in the dark about the specifics of yesterday's tragedy, what we have learned from media reports seems incompatible with the boy we love," the family's statement said.

Representatives of the school district did not immediately respond to questions about Rodriguez's comments.

A junior at Santa Fe High, Pagourtzis hid a shotgun and a handgun under his trenchcoat before opening fire in a first-period art class on Friday, according to an affidavit filed by police. The FBI announced Saturday that it had taken the lead in the joint investigation, at the request of local authorities.

"He gave a statement admitting to shooting multiple people inside the Santa Fe High School with the intent on killing people," the police affidavit said. "Dimitrios advised he did not shoot students he did like so he could have his story told." The attack ended when Pagourtzis walked out of a classroom and surrendered to police.

Authorities say Pagourtzis planned the killings, carried out with weapons owned by his father. Though Pagourtzis allegedly wrote about his intention to carry out the attack, authorities have not indicated a motive for the violence.

Gov. Greg Abbott said Pagourtzis had planned to kill himself after the shooting, but that Pagourtzis told police "that he didn't have the courage to commit the suicide."

Some Santa Fe High students indicated that Pagourtzis may have had one or more targets, though details were not clear. Breanna Quintanilla, 17, a junior, said she was in her art classroom Friday morning in what she described as a "perfectly normal day" when she heard gun shots.

Quintanilla said when Pagourtzis first walked in, he pointed at one person and said, "I'm going to kill you." Quintanilla, who was wounded escaping the classroom, did not identify that student.

At a news conference, Abbott said Pagourtzis had not previously been in trouble. "The red-flag warnings were either nonexistent or very imperceptible," he said.

In the absence of a clear motive, attention turned to a hodge-podge of incendiary posts by Pagourtzis on social media, which were quickly removed when his identity first emerged. One Facebook post was a picture of a T-shirt reading "Born to Kill." Another showed a trench coat adorned with various pins associated with conflicting ideologies and Cthulhu, a mythical creature drawn from the work of horror fiction writer H.P. Lovecraft.

In the wake of the shooting, various reports that Pagourtzis was bullied have surfaced from his classmates. However, two Santa Fe High students who said they knew Pagourtzis said they had no reason to suspect that he was planning Friday's attack.

Student Michael Farina said he had known the alleged gunman since fifth grade and considered him a friend. He recalled Pagourtzis talked about buying a gun "when I grow up," but never discussed his dad's guns or anything about his family.

Farina said he and Pagourtzis also talked a lot about video games they liked, including so-called first-person shooter games. They'd talked about one, "Escape from Tarkov," as recently as lunch on the day

	<p>before the shooting, he said.</p> <p>Farina did not recall Pagourtzis ever being notably angry.</p> <p>“He seemed relatively happy for the most part,” he said.</p>

<b>HEADLINE</b>	<b>05/19 Heroes emerge in Texas school shooting</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/politics/2018/05/19/texas-school-shooting-officer-john-barnes-others-called-heroes/625847002/">https://www.usatoday.com/story/news/politics/2018/05/19/texas-school-shooting-officer-john-barnes-others-called-heroes/625847002/</a>
<b>GIST</b>	<p>Hours after a massacre in Texas left 10 people dead and 13 injured when a gunman opened fire at Santa Fe high school, stories of heroes began to emerge. School police officer John Barnes entered the art complex and was the first one to confront the shooter. Elsewhere in the complex another teacher ran out and pulled the fire alarm to let others know something was wrong.</p> <p>Here are some stories of bravery in the face of tragedy:</p> <p><b>School resource officers</b></p> <p>Steven McCraw, the director of the Texas Department of Public Safety, said Friday that two “brave officers” from the school district “stepped up to the plate” and engaged the shooter.</p> <p>One of the officers, identified as John Barnes, was the first person to engage 17-year-old suspect Dimitrios Pagourtzis. Barnes was shot in the process and is in critical condition. Another officer, the district chief, got Barnes to safety, according to McCraw. McCraw said a state trooper also engaged the shooter.</p> <p>“Once again we want to thank the heroes of law enforcement who stepped forward to respond to and confront the shooter. Their action probably ensured that more lives were not lost,” Texas Gov. Greg Abbot said.</p> <p>Barnes spent more than 20 years as an officer with the Houston Police Department before retiring in January. Houston Police Department Chief Art Acevedo tweeted that Barnes was known for “for his tireless work in Houston Metro Internet Crimes Against Children (ICAC) task force.”</p> <p><b>Teachers</b></p> <p>Zach Lawford, a student who was in a classroom a few doors down from the shooting, told KHOU that his teacher ran out of the classroom and “pulled the fire alarm while we were barricading the door.”</p> <p>“To get everyone out of the school obviously, to get the rest of the school out,” Lawford said.</p> <p>Steve Rose, a teacher at Santa Fe high school, ordered all the students to hide under their desks and crouched next to the door, waiting to jump on the shooter if he came in, student Kaylee Haaga said. Haaga said Rose told the students: “It’s my life before y’alls.”</p> <p>Other teachers also helped get students out of the building as bullets rained through the halls, authorities said. Two teachers, Ann Perkins and Cynthia Tisdale, died in the shooting.</p> <p>“We thank the incredible heroes that we saw today, those of law enforcement that rushed into harm’s way. Teachers, students ... we know that we are going to hear the bravery that manifested in the face of evil. Bravery that we know was done at least in some instances at great cost and great sacrifice,” Cruz said during a press conference Friday.</p> <p><b>Students</b></p> <p>Student Chris Stone, was one of the 10 people killed in Friday’s massacre, according to the Associated Press. Stone's classmate Abel San Miguel told the AP that Stone was one of multiple students trying to</p>

	block a classroom door, but that the gunman fired through the door and hit Stone in the chest.

<b>HEADLINE</b>	<b>05/19 Timeline Texas school shooting: 30min.</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/2018/05/19/texas-school-shooting-timeline-how-30-minute-attack-unfolded/625913002/">https://www.usatoday.com/story/news/2018/05/19/texas-school-shooting-timeline-how-30-minute-attack-unfolded/625913002/</a>
<b>GIST</b>	<p>SANTA FE, Texas — Students were just starting their day. It was first-period art class.</p> <p>Then it became a war zone.</p> <p>For 30 minutes, authorities say Santa Fe High School was under siege by a teenager armed with a shotgun and .38 caliber revolver. In the end, 10 were killed and another 13 were injured.</p> <p>Dimitrios Pagourtzis carried out Friday’s deadly rampage entirely within the art complex at the high school, barricading himself inside from the fusillade of police officers’ bullets that followed him there, Galveston County Judge Mark Henry said.</p> <p>Law enforcement received the first calls at 7:32 a.m. CT, according to an affidavit filed in Galveston County court Friday evening. It wasn’t until 30 minutes later that Pagourtzis would surrender and admit to targeting students he didn’t like inside the school, authorities said.</p> <p>The art complex is made up of four rooms, each connected via interior hallways. Pagourtzis walked into the area Friday morning and began shooting students and teachers, said Henry, the county’s top administrator.</p> <p>All of the injuries and deaths occurred within the art complex. Henry said he didn’t know how many students were in that part of the school when the shooting began.</p> <p>“It’s tragic,” Henry said. “I don’t know how you make any sense of this.”</p> <p>Zachary Muehe, a sophomore at the school of roughly 1,400 students, was in one of the rooms in the art complex when he heard three loud booms.</p> <p>Muehe told The New York Times that he recognized Pagourtzis from the school’s football team — then he</p>

realized the teen was holding a shotgun.

"It was crazy watching him shoot and then pump. I remember seeing the shrapnel from the tables, whatever he hit. I remember seeing the shrapnel go past my face," he told the Times.

As he ran from the classroom, he told the newspaper he looked back and saw students lying on the ground.

"There was a girl on the ground, and he shot her in the head one or two times," he said.

The first one to confront Pagourtzis was one of the school's police officers, John Barnes, who tried entering the art complex looking for the shooter, Henry said.

But Pagourtzis appeared to be ready for Barnes and fired at him, hitting him in the upper arm, Henry said. As of Saturday afternoon, Barnes was in stable but critical condition at University of Texas Medical Branch in Galveston.

"He was going to try to neutralize the shooter and the shooter was waiting for him," Henry said.

Ten people were killed and ten others were injured in a shooting at Santa Fe High School outside Houston. USA TODAY

As the shooting unfolded in the art complex, students and teachers in other parts of the school braced for the shooter or fled the scene.

Kaylee Haaga, 17, was just settling into Steve Rose's first-period economics class when a person in the hall outside told Rose that someone had a shotgun in the school.

The teacher immediately closed the door, ordered all the students to hide under their desks and crouched next to the door, waiting to jump on the shooter if he came in, Haaga said.

"It's my life before y'all," he told the class.

Haaga hid under Rose's desk and pulled a chair over the opening. She texted her mom and dad and frantically tried to reach her little sister, Shelby, 15, a freshman at Santa Fe High.

After a while, she put her phone away.

"I already told the people I love that I loved them," she said.

After what seemed like an hour, police officers entered her class and told the students to move out. The halls were filled with officers in tactical gear armed with long guns, searching classrooms and closets.

One of the officers instructed Haaga and her classmates to go out to the front of the school, rather than the back, she said.

"He told me if you hear any shots, run as fast as you can," Haaga said. "Soon as you get out those doors, take your shoes off, run to the other side and don't look back."

She did just that.

Inside the art complex, Pagourtzis roamed from room to room, taunting students and shooting at them as they scrambled behind desks or hid in closets. When a group of students hid in a supply closet, the shooter yelled "Surprise!" followed by an expletive, and opened fire, killing two of the eight students hiding in there, according to a Facebook post by Deedra Van Ness, whose daughter, Isabelle, survived the ordeal.

"She and her friends had been in the same room with the gunman the ENTIRE TIME," Van Ness wrote.

More law-enforcement officers — from Santa Fe Police, Texas Department of Public Safety and other agencies — poured into campus and zeroed in on the art complex. They had an exchange of gunfire with the suspect, Henry said.

"There were a lot of spent rounds on the ground," he said.

Not until 8:02 a.m. — 30 minutes after the shooting started — did Pagourtzis exit one of the art classrooms and surrender, authorities wrote in a court filing.

"Our officers went in there and did what they could," Walter Braun, Santa Fe school district police chief, said Saturday. "They did what they're trained for and went in immediately."

Rep. Michael McCaul, R-Texas and head of the U.S. House Homeland Security Committee, said the teen suspect "sort of fell to the ground and surrendered" in an apparent hope of avoiding a police confrontation.

It's unclear how long Pagourtzis was actively shooting and whether the teen was holed up with injured students, potentially slowing first responders from treating them.

Authorities recovered a couple of explosive devices at the school and "several" in Pagourtzis' vehicle and home, McCaul said, and they've been sent for testing to the FBI laboratory in Quantico, Va.

It's still unclear whether any of the devices were used in the shooting.

<b>HEADLINE</b>	<b>05/18 Guilty plea: ricin used in retirement home</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Health/wireStory/woman-admits-deadly-toxin-ricin-retirement-home-55270361">https://abcnews.go.com/Health/wireStory/woman-admits-deadly-toxin-ricin-retirement-home-55270361</a>
<b>GIST</b>	<p>A 70-year-old woman accused of manufacturing the deadly toxin ricin and testing it on fellow residents at a retirement community has pleaded guilty to possessing it.</p> <p>Betty Miller, who has an extensive mental health history, was arrested last November after telling investigators she made ricin at her home at the Wake Robin community in Shelburne because she wanted to injure herself, the FBI said.</p> <p>A federal complaint said Miller told investigators she tested the ricin's effectiveness by putting it in residents' food or drinks. No one became seriously ill from consuming the ricin, which is found naturally in castor beans and can cause nausea, vomiting, abdominal pains and kidney and liver problems.</p> <p>Miller said she harvested 30 to 40 castor beans from plants growing on Wake Robin's property and made two or three tablespoons of ricin twice in her kitchen and exposed residents to the ricin on at least three occasions, the federal complaint said.</p> <p>Miller entered her plea on Friday. The plea agreement calls for a sentence of time served with a recommendation for three years of supervised release to include placement at a secure mental health treatment facility. A judge must approve the deal.</p>

<b>HEADLINE</b>	<b>05/20 India: Maoist rebels bombing; 6 dead</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/maoist-rebels-detonate-bomb-east-india-police-killed-55304740?">https://abcnews.go.com/International/wireStory/maoist-rebels-detonate-bomb-east-india-police-killed-55304740?</a>
<b>GIST</b>	At least six police officials were killed and another was critically injured on Sunday when Maoist rebels

	<p>targeted their vehicle with a bomb in eastern India, police said.</p> <p>The rebels detonated a land mine as the police vehicle ran over it in Dantewada district of Chhattisgarh state, said D.M. Awasthi, the chief of counterinsurgency operations in the state. The explosion extensively damaged the vehicle.</p> <p>Awasthi said the police were escorting a truck carrying material to a road construction site in a forested area when the rebels triggered the blast.</p> <p>Five police officials died at the scene of the blast. Two others were critically injured and sent to a hospital, where one of them later died, police said.</p> <p>Reinforcements of police and paramilitary soldiers rushed to the scene and launched a hunt to track down the attackers.</p> <p>The Maoist rebels, inspired by Chinese revolutionary leader Mao Zedong, have been fighting the Indian government for more than four decades, demanding land and jobs for tenant farmers, the poor and indigenous communities.</p> <p>The government has called the rebels India's biggest internal security threat. With thousands of fighters, the rebels control vast swaths of area in the country.</p> <p>The rebels, also known as Naxalites, have ambushed police, destroyed government offices and abducted government officials for more than four decades. The insurgency began in 1967 as a network of left-wing ideologues and young recruits in the village of Naxalbari outside Kolkata, the capital of West Bengal state.</p>

<b>HEADLINE</b>	<b>05/18 Feds: money from China funded pot grow</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/feds-money-from-china-helped-fund-huge-pot-grow-here">http://komonews.com/news/local/feds-money-from-china-helped-fund-huge-pot-grow-here</a>
<b>GIST</b>	<p>SEATTLE -- Money from China helped to pay for a massive marijuana-growing operation in the Seattle area that sent pot to the New York City area, federal prosecutors say.</p> <p>In the last several days, investigators have executed search warrants at 17 locations in the Puget Sound area and one commercial property in New Jersey.</p>

	<p>Properties in Seattle, Burien, Kent, Tacoma and Renton were searched, and more than 3,000 marijuana plants were seized.</p> <p>Some of the houses were bought with wire transfers from China, prosecutors say. Money from China also helped to pay for the huge electrical bills at the grow houses, prosecutors said.</p> <p>The high electrical bills attracted law enforcement attention. One house on South 124th Street in Burien had electrical bills of as much as \$2,500 over two months. Another property paid cash for more than \$37,000 for just three months of electricity, prosecutors say.</p> <p>Prosecutors contend that thousands of pounds of marijuana were sent to he New York City area.</p> <p>One person Xaimin Huang, 37, is in custody. Her husband and brother are being sought. Al three face a charge of conspiracy to manufacture and distribute marijuana. Huang has been ordered detained pending trial.</p>

<b>HEADLINE</b>	<b>05/19 Officials: few red flags school shooter</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/05/19/few-red-flags-showed-up-for-texas-school-shooting-suspect-officials-say.html">http://www.foxnews.com/us/2018/05/19/few-red-flags-showed-up-for-texas-school-shooting-suspect-officials-say.html</a>
<b>GIST</b>	<p>The nation experienced another tragic school shooting Friday in Santa Fe, Texas, but unlike the previous ones, there were very few red flags, according to authorities.</p> <p>Dimitrios Pagourtzis, the 17-year-old suspect, is being held without bond in the Galveston County jail on charges of capital murder. He used his father’s Remington 870 shotgun and .38 caliber pistol in the attack that left 10 dead and 10 wounded at Santa Fe High School, according to a probable cause affidavit and complaint charged against him.</p> <p>"Unlike Parkland, unlike Sutherland Springs, there were not those types of warning signs," Texas Gov. Greg Abbott said at a news conference Friday night. "The red-flag warnings were either nonexistent or very imperceptible."</p> <p>Abbott was referring to the Feb. 14 Parkland, Florida, school shooting that killed 17 people, where law enforcement – from FBI to the Broward County Sheriff’s Office – was accused of ignoring several tips and warning signs surrounding shooting suspect Nikolas Cruz, as well as the shooting that killed 26 people in November inside a church in a town near San Antonio.</p> <p>Pagourtzis had recently posted a picture of a T-shirt reading “Born to Kill” on his Facebook page and he followed a number of accounts on Instagram like “sickguns” and “gunspictures,” Abbott said, but classmates described Pagourtzis as a quiet, avid video game player who routinely wore a black trench coat and black boots to class. He quit playing football on the school’s junior varsity squad last fall and danced as part of a church group.</p> <p>According to the affidavit, Pagourtzis told investigators “he did not shoot students he did like so he could have his story told,” and authorities found journals on his phone and computer saying he was planning to commit suicide after carrying out the shooting.</p> <p>Those who know him expressed shock that he might be involved in the massacre.</p> <p>Michael Farina, 17, grew up with Pagourtzis and said he would play video games with him. He recalled Pagourtzis knew a lot about guns and remembered him asking which gun he should get when he was older.</p> <p>"I'm kind of dumbfounded," Farina said. "We didn't get any warning."</p>

HEADLINE	05/18 Average: 1 school shooting a week
SOURCE	<a href="https://www.cnn.com/2018/03/02/us/school-shootings-2018-list-trnd/index.html">https://www.cnn.com/2018/03/02/us/school-shootings-2018-list-trnd/index.html</a>
GIST	<p>We're only 20 weeks into 2018, and there have already been 22 school shootings where someone was hurt or killed. That averages out to more than 1 shooting a week.</p> <p>The parameters CNN followed in this count are:</p> <ul style="list-style-type: none"> <li>• A shooting that involved at least one person being shot (not including the shooter)</li> <li>• A shooting that occurred on school grounds</li> <li>• We included grades K through college/university level</li> <li>• We included gang violence, fights and domestic violence</li> <li>• We included accidental discharge of a firearm as long as the first two parameters are met</li> </ul> <p>May 18: Santa Fe, Texas At least eight people -- and as many as 10 -- were killed in a shooting at Santa Fe High School.</p> <p>May 11: Palmdale, California A 14-year-old boy went to Highland High, his former school, and began shooting a semiautomatic rifle shortly before classes were scheduled to begin, officials said. A 15-year-old boy was struck in the shoulder.</p> <p>April 20: Ocala, Florida A 17-year-old student at Forest High School was shot in the ankle shortly before students were to walk out as part of a national protest against gun violence.. The suspect was a 19-year-old former student.</p> <p>April 12: Raytown, Missouri A man was shot in the stomach in the parking lot of Raytown South Middle School during a track meet.</p> <p>April 9: Gloversville, New York A student shot another student with a BB gun in Gloversville Middle School.</p> <p>March 20: Lexington Park, Maryland An armed student shot two others at Great Mills High School before a school resource officer fired a round at the shooter. The shooter was killed. One of the students, 16-year-old girl Jaelynn Willey, was taken off life support two days later.</p> <p>March 13: Seaside, California A teacher accidentally discharged a gun during a public safety class at Seaside High School, injuring a student.</p> <p>March 8: Mobile, Alabama One person was hospitalized after a shooting at an apartment building on the campus of the University of South Alabama.</p> <p>March 7: Birmingham, Alabama One student was killed and another critically wounded after an accidental shooting during dismissal time at Huffman High School. Police wouldn't elaborate further.</p> <p>March 7: Jackson, Mississippi A student was shot inside a dormitory at Jackson State University. His injuries were not life-threatening.</p> <p>March 2: Mount Pleasant, Michigan Two people were shot to death at a dormitory on the campus of Central Michigan University. The victims</p>

were not students and police think the incident stemmed from a domestic situation.

February 27: Norfolk, Virginia

A student at Norfolk State University was shot from an adjacent dorm room while he was doing homework. He was not seriously injured.

February 27: Itta Bena, Mississippi

A person was shot in a rec center at Mississippi Valley State University. Police said the person was not a student and the injury was not life-threatening.

February 24: Savannah, Georgia

A person was shot on the campus of Savannah State University and taken to a nearby hospital where he later died. Neither the victim nor the shooter were university students, the college said.

February 14: Parkland, Florida

A 19-year-old man gunned down students and staff with a rifle at Marjory Stoneman Douglas High School in Parkland, slaughtering at least 17 unsuspecting students and adults. The shooter, Nikolas Cruz, had been expelled from the high school over disciplinary problems, officials said.

February 9: Nashville

A high school student was shot five times in the parking lot of Pearl-Cohn High School.

February 5: Oxon Hill, Maryland

A high school student was shot in the parking lot of Oxon Hill High. The victim was treated and later released. Police arrested two teens and said they are acquaintances of the victim.

February 1: Los Angeles

A 15-year-old boy was shot in the head and a 15-year-old girl shot in the wrist at Sal Castro Middle School in Los Angeles, officials said. Two other students were grazed by bullets. A 12-year-old girl was booked for negligent discharge of a firearm in that shooting, which was considered "unintentional," Los Angeles police said.

January 31: Philadelphia

A fight led to a shooting in the parking lot of Lincoln High School, fatally wounding a 32-year-old man.

January 23: Benton, Kentucky

A 15-year-old student shot 16 people -- killing two other 15-year-olds -- at Marshall County High School, authorities said. The student faces two charges of murder and 12 counts of first degree assault.

January 22: Italy, Texas

A 15-year-old student was wounded in a shooting at a high school in Italy, Texas, authorities said. The suspect, also 15, was quickly apprehended.

January 20: Winston Salem, North Carolina

A Winston-Salem State University football player, Najee Ali Baker, was shot to death at a party on the campus of Wake Forest University.

<b>HEADLINE</b>	<b>05/19 School shooter spared people he liked</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/05/19/us/texas-school-shooting/index.html">https://www.cnn.com/2018/05/19/us/texas-school-shooting/index.html</a>
<b>GIST</b>	(CNN)The teen who allegedly used a shotgun and a revolver to kill 10 people at his high school in Texas spared the people he liked during the deadly rampage, a probable cause affidavit says.  Suspect Dimitrios Pagourtzis, 17, has cooperated with police, Galveston County Magistrate Mark Henry

said. Pagourtzis told an investigator he acted alone and spared people he liked because he wanted his story told, the probable cause affidavit says.

He was held without bail and is accused of capital murder of multiple people and aggravated assault on a public servant. Nine students and one teacher were killed, a law enforcement official told CNN. At least 10 people were injured.

Pagourtzis said little during a video court appearance Friday, answering, "Yes, sir," when asked whether he wanted a court-appointed attorney. He was not asked to enter a plea, and bond was denied.

The gunfire at Santa Fe High School, not far from Houston in southeastern Texas, started Friday morning. The alleged shooter used a shotgun and a .38 revolver legally owned by his father, Gov. Greg Abbott told reporters.

Gunfire erupted at the school not long after classes began around 7:30 a.m. local time, officials said. Two school resource officers were on the campus and confronted the shooter, Abbott said.

Authorities later found explosive devices -- including pipe bombs and pressure cookers -- in and near the school, a law enforcement official said.

Henry told reporters that the suspect had devices but none were functional. One was a pressure cooker with an alarm clock and nails, but no explosive material. Authorities also found an unlit Molotov cocktail, he said.

Investigators on Friday searched a trailer where they believe the devices were assembled, a law enforcement source said.

Investigators believe Pagourtzis acted alone, a law enforcement official told CNN on Saturday.

Earlier, Abbott and other officials indicated that two other people were being interviewed to see whether they were involved. But authorities now believe those two were not connected to the crime, the official said.

<b>HEADLINE</b>	<b>05/18 New DNA technology leads to arrest</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/man-arrested-1987-killing-couple-washington-state-55274500">https://abcnews.go.com/International/wireStory/man-arrested-1987-killing-couple-washington-state-55274500</a>
<b>GIST</b>	New DNA technology has led to the arrest of a 55-year-old man in the killing of a young Canadian couple

in Washington state more than three decades ago, police said.

William Earl Talbott II of SeaTac, Washington, was arrested Thursday for investigation of first-degree murder as he left his job at a trucking company in Seattle, The Daily Herald reported.

Authorities announced his arrest at a news conference Friday in Everett where they said Talbott is believed to be responsible for the 1987 killing of 18-year-old Tanya Van Cuylenborg. Detectives said they also are trying to connect him to the death of her boyfriend, 20-year-old Jay Cook.

"He was never on any list law enforcement had, there was never a tip providing his name," Snohomish County sheriff's Detective Jim Scharf said of Talbott. "If it hadn't been for genetic genealogy, we wouldn't be standing here today."

Talbott was identified as a suspect through genetic genealogy, the same technique used to arrest Joseph James DeAngelo, who police said was the Golden State Killer in California.

It wasn't immediately clear if Talbott has an attorney.

"Yesterday, the killer had his last sleep in his own bed, his last coffee break, his last day of freedom," Cook's sister Laura Baanstra said. "It's hard to put into words the relief, joy, and great sorrow this arrest brings."

Van Cuylenborg and Cook left their Saanich, British Columbia, homes on Nov. 18, 1987, for an overnight trip to Seattle. They were driving a brown 1977 Ford van to buy furnace parts for Cook's family business.

When the couple failed to return home, their families filed a missing persons report.

On Nov. 24, a man walking on an isolated road south of Bellingham, Washington, discovered Van Cuylenborg's body. She had been sexually assaulted, bound with plastic ties and shot in the head.

Cook's battered body was found the next day about two miles (3.2 kilometers) south of Monroe, Washington. The two locations where the bodies were found are about 75 miles (120 kilometers) apart.

Police were able to obtain DNA from the van.

In April, investigators from Snohomish and Skagit counties said they had sent DNA belonging to Van Cuylenborg's killer to a lab that provided scientific approximations of what the killer might look like based on traits embedded in his genetic code.

From there, DNA genotype data was uploaded to a public genetic-genealogy website that found likely matches for two of Talbott's relatives and further work by the genealogist led to Talbott, the Snohomish County Sheriff's Office said.

Police acquired a DNA sample from a cup Talbott had used and discarded. The sample was found to match DNA from crime-scene evidence, the sheriff's office said.

Detectives are still seeking tips about Talbott's activities in 1987 and 1988.

HEADLINE	<b>05/19 Chechnya: police kill church attackers</b>
SOURCE	<a href="https://abcnews.go.com/International/wireStory/police-kill-gunmen-raided-orthodox-church-chechnya-55292572?">https://abcnews.go.com/International/wireStory/police-kill-gunmen-raided-orthodox-church-chechnya-55292572?</a>
GIST	Chechnya's leader says four gunmen who attacked a Russian Orthodox church in the mostly Muslim province have been killed by security forces and one policeman has died.

	<p>Ramzan Kadyrov says the gunmen attempted to take people hostages inside the Archangel Michael Church on Saturday. He says in remarks carried by Russian news agencies that he personally oversaw a special operation in which the assailants were killed.</p> <p>Kadyrov says a police officer was fatally wounded in the confrontation and a churchgoer was wounded.</p> <p>Past attacks in Chechnya have involved radical Islamist rebels.</p> <p>The Kremlin has relied on Kadyrov to stabilize Chechnya after two separatist wars. He has used generous federal subsidies and his feared security forces to crush the Islamist rebellion, but violent clashes still happen occasionally in the region.</p>

<b>HEADLINE</b>	<b>05/18 Genetic genealogy match catches killer</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/investigators-genetic-genealogy-arrest-suspect-cold-case-1987/story?">https://abcnews.go.com/US/investigators-genetic-genealogy-arrest-suspect-cold-case-1987/story?</a>
<b>GIST</b>	<p>Investigators in Washington state have used the same genetic genealogy methods to catch a suspect in a 1987 double murder cold case that was used to catch the "Golden State Killer."</p> <p>William Earl Talbott II, 55, was arrested in Seattle Thursday and charged with first-degree murder in connection with the death of 18-year-old Tanya Van Cuylenborg.</p> <p>Van Cuylenborg and her boyfriend, 20-year-old Jay Cook, were found dead in two separate locations in western Washington in November 1987 after they left their home in Victoria, British Columbia, for an overnight trip to Seattle, the Snohomish County Sheriff's Office said in a press release.</p> <p>The purpose of the trip was to buy furnace parts for Cook's family business, and the two planned to sleep in their 1977 bronze Ford van in Seattle's SoDo district overnight, ABC Seattle affiliate KOMO reported.</p> <p>They were last seen alive after taking a ferry to Seattle, authorities said. Their families filed a missing persons report two days later when they did not return home, KOMO reported.</p> <p>Talbott, who would have been 24 at the time of the murders, was identified through the use of genetic genealogy, which uses DNA testing in combination with traditional genealogical methods to establish the relationship between an individual and their ancestors, according to the sheriff's office.</p> <p>A successful identification for Talbott was established with the assistance of Virginia-based DNA technology company Parabon NanoLabs, authorities said. A digital file containing DNA data derived from the crime scene was uploaded to public genealogy website GEDMatch, and "promising matches were found for two of the suspect's relatives," according to the sheriff's office.</p> <p>Genealogists then deduced Talbott's identity, and police acquired a DNA sample from a cup he had used, authorities said.</p> <p>"We never gave up hope that we would find Jay and Tanya's killer," said Snohomish County Sheriff Ty Trenary. "Yesterday's arrest shows how powerful it can be to combine new DNA technology with the relentless determination of detectives."</p> <p>This is the first time a murder suspect has been arrested using Parabon's genetic genealogy service, which just became available less than two weeks ago, authorities said.</p>

<b>HEADLINE</b>	<b>05/18 Deadly school shooting; explosives found</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/active-shooter-incident-santa-fe-high-school-texas/story?id=55258606&amp;cid=clicksource_81_2_hero_headlines_headlines_hed">https://abcnews.go.com/US/active-shooter-incident-santa-fe-high-school-texas/story?id=55258606&amp;cid=clicksource_81_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>At least 10 people are dead after a 17-year-old student allegedly opened fire at Santa Fe High School in Texas this morning, sending students fleeing for their lives, the governor said.</p> <p>Ten others were wounded, including a police officer who is in critical condition, officials said.</p> <p>A teacher is among the dead, according to law enforcement officials.</p> <p>Gov. Greg Abbott called the shooting "one of the most heinous attacks that we've ever seen in the history of Texas schools."</p> <p>The suspect, 17-year-old Dimitrios Pagourtzis, is in custody and has been charged with capital murder, officials said. The suspect allegedly wrote in journals that he wanted to carry out the shooting and then commit suicide, but he gave himself up to authorities, according to Abbott.</p> <p>At the Santa Fe Police Department, Pagourtzis gave a statement admitting to shooting multiple people inside the school with the intent of killing people, according to an probable cause affidavit.</p> <p>Pagourtzis also allegedly stated during the interview that he did not shoot students he liked "so he could have his story told," the affidavit states.</p> <p>There were no warning signs and the suspect doesn't have a criminal history, officials said.</p> <p>A second individual, a person of interest, has been detained, officials said.</p> <p>Two weapons were used in the massacre -- a shotgun and a .38 revolver -- both of which appear to be legally owned by the suspect's father, the governor said.</p> <p>"I have no information if the father was aware the son had taken these weapons from the father," Abbott added.</p> <p>Explosive devices were also found at the school, and devices including a Molotov cocktail were found in a car and a home, authorities said.</p>

The principle of 'Fair Use' was established as law by Section 107 of The Copyright Act of 1976. 'Fair Use' legally eliminates the need to obtain permission or pay royalties for the use of previously copyrighted materials if the purposes of display include 'criticism, comment, news reporting, teaching, scholarship, and research.' Section 107 establishes four criteria for determining whether the use of a work in any particular case qualifies as a 'fair use'. A work used does not necessarily have to satisfy all four criteria to qualify as an instance of 'fair use'. Rather, 'fair use' is determined by the overall extent to which the cited work does or does not substantially satisfy the criteria in their totality. If you wish to use copyrighted material for purposes of your own that go beyond 'fair use,' you must obtain permission from the copyright owner.

<b>HEADLINE</b>	<b>05/18 Army turning to robot soldiers</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-05-18/the-u-s-army-is-turning-to-robot-soldiers">https://www.bloomberg.com/news/articles/2018-05-18/the-u-s-army-is-turning-to-robot-soldiers</a>
<b>GIST</b>	<p>From the spears hurled by Romans to the missiles launched by fighter pilots, the weapons humans use to kill each other have always been subject to improvement. Militaries seek to make each one ever-more lethal and, in doing so, better protect the soldier who wields it. But in the next evolution of combat, the U.S. Army is heading down a path that may lead humans off the battlefield entirely.</p> <p>Over the next few years, the Pentagon is poised to spend almost \$1 billion for a range of robots designed to complement combat troops. Beyond scouting and explosives disposal, these new machines will sniff out hazardous chemicals or other agents, perform complex reconnaissance and even carry a soldier's gear.</p> <p>"Within five years, I have no doubt there will be robots in every Army formation," said Bryan McVeigh, the Army's project manager for force protection. He touted a record 800 robots fielded over the past 18 months. "We're going from talking about robots to actually building and fielding programs," he said. "This is an exciting time to be working on robots with the Army."</p> <p>But that's just the beginning.</p> <p>The Pentagon has split its robot platforms into light, medium and heavy categories. In April, the Army awarded a \$429.1 million contract to two Massachusetts companies, Endeavor Robotics of Chelmsford and Waltham-based QinetiQ North America, for small bots weighing fewer than 25 pounds. This spring, Endeavor also landed two contracts worth \$34 million from the Marine Corps for small and midsized robots.</p> <p>In October, the Army awarded Endeavor \$158.5 million for a class of more than 1,200 medium robots, called the Man-Transportable Robotic System, Increment II, weighing less than 165 pounds. The MTRS robot, designed to detect explosives as well as chemical, biological, radioactive and nuclear threats, is scheduled to enter service by late summer 2019. The Army plans to determine its needs for a larger, heavier class of robot later this year.</p> <p>"It's a recognition that ground robots can do a lot more, and there's a lot of capabilities that can and should be exploited," said Sean Bielat, Endeavor's chief executive officer. Specifically, he points to "the dull, the dirty and the dangerous" infantry tasks as those best suited to robotics.</p> <p>During combat operations in Iraq and Afghanistan, the Defense Department amassed an inventory of more than 7,000 robots, with much of the hardware designed to neutralize improvised explosive devices (IEDs). Military brass were trying to quickly solve a vexing problem that was killing troops, but the acquisition strategy led to a motley assortment of devices that trade journal Defense News last year called "a petting zoo of various ground robots."</p> <p>This approach also meant that each "pet" was essentially a one-off device used for a single task. The Army's current approach is to field more inter-operable robots with a common chassis, allowing different sensors and payloads to be attached, along with standardized controllers for various platforms, said McVeigh, a retired Army colonel.</p> <p>This strategy is also geared toward affordability. "If we want to change payloads, then we can spend our money on changing the payloads and not having to change the whole system," he said. While it ramps up to use its newer robots, the Army will retain about 2,500 of the medium and small robots from the older</p>

fleet.

Amid their many capacities, none of the current or planned U.S. infantry robots is armed—yet. Armed robots are hardly new, of course, with South Korea deploying sentry gun-bots in the demilitarized zone fronting North Korea and various countries flying drones equipped with a variety of weapons.

“Just strapping a conventional weapon onto a robot doesn’t necessarily give you that much” for ground troops, said Bielat, the Endeavor Robotics CEO. “There is occasional interest in weaponizing robots, but it’s not particularly strong interest. What is envisioned in these discussions is always man-in-the-loop, definitely not autonomous use of weapons.”

Yet, depending on one’s perspective, machines that kill autonomously are either a harbinger of a “Terminator”-style dystopia or a logical evolution of warfare. This new generation of weaponry would be armed and able to “see” and assess a battle zone faster and more thoroughly than a human—and react far more quickly. What happens next is where the topic veers into a moral, perhaps existential, morass.

“It seems inevitable that technology is taking us to a point where countries will face the question of whether to delegate lethal decision-making to machines,” said Paul Scharre, a senior fellow and director of the technology and national security program at the Center for a New American Security.

Last year, 116 founders of robotics and artificial intelligence, including Elon Musk, the billionaire founder of Tesla Inc. and SpaceX, sent a letter to the United Nations urging a ban on lethal autonomous weapons.

“Once developed, they will permit armed conflict to be fought at a scale greater than ever, and at timescales faster than humans can comprehend,” the letter stated, warning of a “Pandora’s box” being opened with such systems.

To date, 26 countries have joined calls for a ban on fully autonomous weapons, including 14 nations in Latin America, according to the Campaign to Stop Killer Robots. Notably absent from this list are nations with robust defense industries that research AI and robotics—countries such as the U.S., Russia, Israel, France, Germany, South Korea and the United Kingdom.

The campaign was launched five years ago by activists alarmed at the prospect of machines wielding “the power to decide who lives or dies on the battlefield.”

“If you buy into the notion that it’s a moral and humanitarian issue—that you have machines making life-and-death decisions on the battlefield—then it’s a very simple issue,” said Steve Goose, director of Human Rights Watch’s arms division and a co-founder of the campaign. “People have a sense of revulsion over this.”

Not long ago, such futuristic software seemed, if not quite impossible, at least 30 years away. Given the pace of research, however, that’s no longer the case—a fact that has given the effort by Musk, Goose and others new urgency.

“It seems that each year, that estimate has come down,” Goose said. Autonomous weapons systems are “years, not decades” hence, he said in an interview last month from Geneva, where a UN group convened its fifth annual conference on Lethal Autonomous Weapons Systems.

Much of the recent discussion has focused on defining the terms of debate and where human control for lethal decisions should lie. There are also questions as to how quickly such machines will proliferate and how to deal with such technology in the hands of rogue, non-state actors.

Over time, Goose said, the campaign will “convince these governments that every nation is going to be better off if no nation has these weapons.” But Scharre said there’s no chance the UN will agree to a legally binding treaty to ban autonomous weapons. He predicts that “a critical mass” of nations supporting some type of ban could pursue an agreement outside the UN.

While proponents may argue that autonomous robot soldiers will shield soldiers from harm, they will also remove the bloody consequences of armed conflict, a knowledge that “puts a valuable brake on the horrors of war,” said Scharre, a former Army Ranger.

“There’s a value of someone being able to appreciate the human consequences of war,” he said. “A world without that could be potentially more harmful. If we went to war and no one slept uneasy at night, what does that say about us?”

<b>HEADLINE</b>	<b>05/17 ‘Realistic’ military exercises in Seattle</b>
<b>SOURCE</b>	<a href="http://www.seattlemag.com/news-and-features/bomb-scare-nearly-shut-down-seattle-central-library-turned-out-be-army-training">http://www.seattlemag.com/news-and-features/bomb-scare-nearly-shut-down-seattle-central-library-turned-out-be-army-training</a>
<b>GIST</b>	<p>On Saturday, April 14, staffers at the downtown Seattle library discovered two alarming objects on its third-floor shelves: Two books, including <i>South of Broad</i>, a family drama by Pat Conroy, that had been hollowed out and filled with what appeared to library staffers to be two primitive homemade bombs, according to an internal library email about the incident.</p> <p>Each of the books contained batteries, wires, and computer chips. According to the police report, obtained through a public disclosure request, staffers considered the objects to be "potential explosive device[s]."</p> <p>The staffers on duty that Saturday morning, according to multiple accounts of the incident, then called 911, stationed security guards on several floors, and prepared to evacuate the entire 363,000-square-foot building and its approximately 3,500 occupants in response to the apparent potential bomb—a complicated process in any building, made more so by the fact that the downtown library, with its meandering "book spiral" and hard-to-find emergency stairs, is not designed for easy evacuation.</p> <p>As security staffers prepared to pull the fire alarm, a Seattle Police Department officer arrived on the scene. Although accounts differ on the precise details of what happened next, library staffers were quickly told to call off the evacuation, and the responding police officer, along with a man in street clothes (identified after the fact, according to the police report, as U.S. Army Sgt. Maj. Mike Merzke) and two other plainclothes officers left the building, carrying the mysterious devices with them.</p> <p>Merzke, who works at the U.S. Army's Special Operations Command (SOCOM) in Fort Bragg, NC, did not return a call to his direct line seeking comment. According to SOCOM public affairs director Matthew Bockholt, the exercise was part of a larger series of "realistic military training" exercises that took place in locations across the city between April 8 and April 22. "Seattle, like other cities, provide an excellent training area for the challenges of an urban environment and afford our Soldiers the opportunity to refine our techniques needed for overseas operational missions," Lt. Col. Bockholt said in an email. "The Seattle Police Department approved and coordinated with USASOC from October of 2017 through April of 2018, including two in-person meetings in Seattle prior to training commencement."</p> <p>According to Bockholt, "The training and evaluation device[s]"—the books—"included an embedded recorder [and] allowed military training staff the ability to evaluate the students['] training." Bockholt did not provide additional information about the other training exercises it conducted in Seattle in April.</p> <p>Library spokeswoman Andra Addison says the library was not informed in advance about the exercise.</p> <p>In an email to library staffers a week after the near-evacuation, city librarian Marcellus Turner wrote that he had talked to SPD at length about "why we aren't a good place to hold" military exercises, and that "Chief [Carmen] Best and her staff at the police department ...apologized immediately" for the incident and assured him that "[t]he Seattle Public Library (and our neighborhood libraries) will not be an exercise site again."</p>

"I have been assured that the exercise itself never placed the library or any of our staff or public in danger or harm of any sort and the devices that were found had no ability to harm or physically disrupt our space or use of the building," Turner continued. "The exercise was a constitutionally-protected and non-criminal exercise meaning having a conversation in a public space and possessing no weapons in the course of the exercise was legal. The exercise itself was described as a meeting between several people in a public space and the device that was found was a recorder which was being used to record the discussion between these people. In truth, an exercise of the agency / agents, not the Library."

The Seattle Police Department declined to comment on its role in the incident. Bockholt said that the Army's policy "with regards to informing local governments when conducting these kind of exercises in public buildings is to coordinate and follow local law enforcement guidance. In this case, Seattle Police Department evaluated the training and determined their supervision of the training was sufficient."

Library spokeswoman Addison says library staffers "did a great job of responding calmly and appropriately" when they found the devices.

HEADLINE	05/18 UN: Israel's 'disproportionate response'
SOURCE	<a href="http://www.bbc.com/news/world-middle-east-44167900">http://www.bbc.com/news/world-middle-east-44167900</a>
GIST	<p>The UN human rights chief says Israel used "wholly disproportionate" force against Palestinian border protests which have left over 100 people dead.</p> <p>Zeid Raad Al Hussein told a meeting in Geneva that Gazans were effectively "caged in a toxic slum" and Gaza's occupation by Israel had to end.</p> <p>Israel's ambassador said Gaza's militant Islamist rulers had deliberately put people in harm's way.</p> <p>The UN meeting is considering calling for an independent investigation.</p> <p>Some 60 Palestinians were killed by Israeli forces on Monday on the seventh consecutive week of border protests, largely orchestrated by Hamas, which politically controls the Gaza Strip.</p> <p>It was the deadliest day in Gaza since a 2014 war between Israel and militants there.</p> <p>The protests had been dubbed the Great March of Return, in support of the right of Palestinian refugees to return to land they or their ancestors fled from or were forced to leave in the war which followed Israel's founding in 1948.</p> <p>The Israeli government, which has long ruled out a mass return of Palestinians, said terrorists wanted to use the protests as cover to cross into its territory and carry out attacks.</p> <p>Mr Zeid told the emergency session on Gaza that the "stark contrast in casualties on both sides is... suggestive of a wholly disproportionate response" by Israel.</p> <p>An Israeli soldier was "reportedly wounded, slightly, by a stone" on Monday, he said, while 43 Palestinians were killed at the site of the protests. Seventeen more Palestinians were killed away from what he called the "hot spots".</p> <p>He said there had been "little evidence of any [Israeli] attempt to minimise casualties". Israel's actions might, he said, "constitute 'wilful killings' - a grave breach of the Fourth Geneva Convention", an international law designed to protect civilians under occupation.</p> <p>Mr Zeid said he supported a call for an "international, independent and impartial" investigation into the violence in Gaza, adding that "those responsible for violations must in the end be held accountable".</p>

	Israel's Ambassador Aviva Raz Shechter rejected the blame, saying Israel had done everything possible to avoid harming civilians.

<b>HEADLINE</b>	<b>05/17 State honors Lummi Nation w/award</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/news/state-honors-lummi-nation-for-its-emergency-response-to-escaped-atlantic-salmon/">https://www.seattletimes.com/news/state-honors-lummi-nation-for-its-emergency-response-to-escaped-atlantic-salmon/</a>
<b>GIST</b>	<p>State officials awarded the Lummi Nation tribe this week for its emergency response to the escape of thousands of Atlantic salmon from a net pen at Cypress Island.</p> <p>The Washington Department of Fish and Wildlife (WDFW) recognized the tribe with its Director's Award.</p> <p>In August, the failure of Cooke Aquaculture's net pen at Cypress Island sent more than 150,000 Atlantic salmon into the Salish Sea.</p> <p>The fish, at 10 pounds, infiltrated Puget Sound rivers. As both Cooke Aquaculture, the owner of the pen, and the WDFW struggled to manage the spill, the Lummi Nation launched an emergency response.</p> <p>Tribal fishermen dropped their work to launch a 24-hour fishery on the Atlantics, declaring a state of emergency to provide a rapid response. Tribal fishers captured 43,522 of the invasive species — 90 percent of all the fish recovered.</p> <p>Joe Stohr, acting director of the WDFW, this week said the department “was proud and happy,” to give the award to Lummi Nation “for all the oversight and quick response to the Atlantic salmon escape.” It is believed to be the first time the award has been made to a tribe.</p> <p>An investigation of the incident by three state agencies found Cooke Aquaculture was responsible for the escape because it had not properly maintained and cleaned its nets, leading to a build up of mussels and other sea life that caused the nets to collapse.</p> <p>The fish escaped as native Pacific salmon were returning to their spawning grounds.</p> <p>“Lummi Nation’s work to protect our treaty-fishing areas from invasive Atlantic salmon is just part of our commitment to preserving our schelangen, our way of life, for all generations,” said Jay Julius, chairman of the Lummi Nation. “We only survive if our salmon survive, so it wasn’t a question whether we would respond quickly to clean up our waters.”</p> <p>The tribe was also at the forefront of efforts urging the Legislature to pass a bill in February to end net-pen aquaculture of Atlantic salmon in Washington state.</p>

<b>HEADLINE</b>	<b>05/17 Lithium: hot new acquisition target</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/why-lithium-and-cobalt-producers-are-the-hot-new-acquisition-target-1526558400">https://www.wsj.com/articles/why-lithium-and-cobalt-producers-are-the-hot-new-acquisition-target-1526558400</a>
<b>GIST</b>	<p>Tesla Inc. and a large Chinese firm each struck deals with lithium producers, the latest sign that big users are rushing to secure supplies of the material used in electric-car and cellphone batteries.</p> <p>Both lithium and cobalt, which is also used in these batteries, face potential shortages in the years ahead as electric-vehicle use increases.</p> <p>That concern is driving a number of companies like technology firms and car makers reliant on lithium and cobalt to strike deals now, even if it means joining with suppliers that haven't started producing yet.</p> <p>Tesla reached a three-year supply agreement with lithium firm Kidman Resources Ltd. , which begins when the Australian company begins producing battery-grade material, Kidman said Thursday. The firm isn't expected to begin producing lithium compounds before 2021.</p> <p>Chinese firm Tianqi Lithium Corp. also said Thursday that it has agreed to buy a 24% stake in Chilean lithium company Sociedad Quimica y Minera de Chile SA from Canadian fertilizer firm Nutrien Ltd. for about \$4.1 billion.</p> <p>In addition to the sector's dominant players such as Glencore PLC and Albemarle Corp. , analysts estimate there are more than 100 smaller lithium miners and about 25 cobalt firms. Many are publicly traded in Canada and Australia, and some have already clinched deals with big users. "It just looks like we're on the precipice of this wave," said Chris Berry, founder of House Mountain Partners LLC, a New York-based adviser to battery-metals companies and investors. "You're going to need a lot of investment in a hurry to meet demand."</p> <p>Japan's SoftBank Group Corp. last month paid nearly \$80 million for a roughly 10% stake in Nemaska Lithium Inc., a Quebec-based producer. It marked SoftBank's first investment in a lithium company. Nemaska has produced just small samples of lithium compounds at this point, and its mine and plant are expected to be fully operational in the second half of 2019.</p> <p>The trading arm of Toyota Group, the parent company of Toyota Motor Corp. , also said in January that it was taking a 15% stake in Australian lithium firm Orocobre Ltd. for roughly \$225 million.</p> <p>Chemical company FMC Corp. is expected to spin off its lithium business this year, and multiple Chinese lithium companies are also expected to go public, analysts said. Apple Inc., BMW AG and Volkswagen AG have been working to secure future cobalt supplies.</p> <p>But the rush to lock in deals could turn out to be a speculative bust. Prices of lithium and cobalt more than doubled from 2016 through last year, but the rally has cooled off recently amid worries about oversupply. Some investors also think manufacturers will replace pricey materials like lithium and cobalt using different types of batteries with a higher concentration of cheaper metals such as nickel.</p> <p>Shares of lithium and cobalt producers have slipped, too, following recent declines in the commodities. Nemaska's stock price has fallen 3.1% on the Toronto Stock Exchange over the past month.</p> <p>The number of companies producing lithium and cobalt has also soared from early 2014, when Tesla CEO</p>

	<p>Elon Musk announced plans for a big electric-car battery plant. Back then, there were about 16 lithium exploration firms and a handful of cobalt ones, Mr. Berry said.</p> <p>Because most investors looking for exposure to cobalt and lithium take positions in mining companies, analysts said the recent share-price declines reflect uncertainty about which ones will end up on top and the risk still involved in the fledgling market.</p> <p>Analysts expect demand for the materials used to power electric vehicles and smartphones to more than double by 2025, pushing transportation and technology companies into exploring unconventional deals to meet that pressing need.</p> <p>Many lithium and cobalt mines are located in regions that have historically been unstable: Congo in the case of cobalt, and South America for lithium, adding to worries about a supply shortage.</p>

<b>HEADLINE</b>	<b>05/17 Trump 'new doubts' on NKorea summit</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/trump-says-north-koreas-kim-would-remain-in-power-if-nuclear-deal-is-reached-1526586515">https://www.wsj.com/articles/trump-says-north-koreas-kim-would-remain-in-power-if-nuclear-deal-is-reached-1526586515</a>
<b>GIST</b>	<p>President Donald Trump acknowledged new doubts about the fate of his coming meeting with North Korean leader Kim Jong Un, expressing surprise over the uptick in harsh language from Pyongyang while shifting blame to China for the latest uncertainty.</p> <p>Still, the president sought to entice Mr. Kim to the negotiating table by pairing an offer of political safeguards with a fresh round of threats.</p> <p>Mr. Trump, speaking in the Oval Office on Thursday, said Mr. Kim could remain in power if the two sides reach a deal to rid the North of nuclear weapons. Otherwise, the country should expect “total decimation,” the president said in his first direct threat to the North since the two sides agreed to talks.</p> <p>“If we make a deal, I think Kim Jong Un is going to be very, very happy,” Mr. Trump said, referring to the North Korean leader.</p> <p>The new sense of uncertainty about the summit came after North Korea spent a second straight day harshly criticizing the U.S. and South Korea, dousing the sense of North-South warmth that had been on display since before the Winter Olympics in February and calling into question the prospect of a U.S.-North Korean meeting.</p> <p>Administration officials and international experts were unable to say whether the series of ominous and insulting statements by high-ranking North Korean officials merely represented a hardball approach to the coming talks or were a re-evaluation by Pyongyang on the utility of the summit.</p> <p>Mr. Trump posited that the tough talk stemmed from Mr. Kim’s meeting with Chinese President Xi Jinping last week. The two leaders met for the second time in as many months on May 8, two days before Secretary of State Mike Pompeo arrived in North Korea and left with the three U.S. citizens who had been imprisoned there.</p> <p>“There has been a big difference since they had the second meeting,” Mr. Trump said, adding that “President Xi could be influencing Kim Jong Un.”</p> <p>Mr. Trump offered no other details to bolster his theory, but argued that no other U.S. president has put similar trade pressures on China. Coincidentally, Chinese officials were in Washington on Thursday on a planned trip to discuss the trade dispute.</p> <p>China has generally backed North Korea’s preference for a step-by-step denuclearization approach, while</p>

the Trump administration has insisted on speedy denuclearization.

Others saw North Korea's repeated denunciations of U.S.-South Korean air drills as an attempt by Pyongyang to persuade South Korea that its military alliance with the U.S. is an obstacle to peace.

"They are laying the foundation for the argument that South Korea's alliance with a nuclear superpower is an obstacle to denuclearization and that both sides will need to take reciprocal steps to disarm," said Daniel Russel, a former State Department official and now vice president of the Asia Society Policy Institute. "And they are also warning the South Koreans that the alliance is an obstacle to the inter-Korean rapprochement that President Moon is pursuing."

North Korea earlier in the day said it would shelve inter-Korean talks indefinitely unless Seoul made concessions on military exercises and dialed back its public criticism of the North's attempts at dialogue. Ri Son Gwon, a senior North Korean official, slammed South Korea's liberal Moon Jae-in administration as "an ignorant and incompetent group devoid of the elementary sense of the present situation."

<b>HEADLINE</b>	<b>05/17 Gina Haspel: CIA's first female director</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/senate-confirms-gina-haspel-as-cia-director-1526587318">https://www.wsj.com/articles/senate-confirms-gina-haspel-as-cia-director-1526587318</a>
<b>GIST</b>	<p>WASHINGTON—The Senate confirmed Gina Haspel to be the next director of the Central Intelligence Agency, making her the first woman to lead the nation's premier spy organization.</p> <p>Ms. Haspel, 61 years old, is only the second person to lead the agency after spending almost an entire career undercover. She rose through CIA ranks from junior case officer to hold senior jobs in counterterrorism and covert operations.</p> <p>Her confirmation battle to be President Donald Trump's second CIA chief wasn't without drama. Several prominent Republicans, including Sen. John McCain of Arizona, urged that she be rejected over a number of episodes in her three-decade career with the agency. Six Democrats supported her, while two Republicans voted against her nomination. Mr. McCain didn't vote as he is home in Arizona recuperating from brain-cancer treatment.</p> <p>Mr. McCain, who was tortured as a prisoner of war in Vietnam, said her involvement in a program of interrogations run by the agency after the Sept. 11, 2001, terrorist attacks disqualified her. Other senators said her authorship of a memo that led to the destruction of 92 videotapes of those interrogations raised concerns.</p> <p>In a 54-45 vote Thursday, the Senate confirmed Ms. Haspel to the top job at the agency.</p> <p>During her confirmation, many Democratic lawmakers voiced frustration over the limited amount of information available about her past and long CIA career, a restriction the agency said was necessary to protect intelligence sources and methods. The only other CIA director to have spent an entire career undercover was Richard Helms, who served as the fifth director of Central Intelligence, from 1966 to 1973.</p> <p>Ms. Haspel takes over as director from Mike Pompeo, a former congressman whom Mr. Trump tapped as secretary of state when he fired Rex Tillerson two months ago. Ms. Haspel has been the agency's deputy director and acting director.</p> <p>She inherits an agency that Mr. Trump himself has criticized as part of his wider condemnation of the U.S. intelligence community's finding that Russia attempted to boost him over his Democratic rival in the 2016 election. The CIA signed onto that assessment.</p> <p>The major opposition to Ms. Haspel's nomination stemmed from her involvement in an interrogation</p>

program many critics say amounted to torture. At the time of the program in the early 2000s, she held several senior positions in the CIA's counterterrorism operations.

The Democratic-run Senate Intelligence Committee in 2014 detailed the treatment of detainees in CIA custody under that program, describing them as being imprisoned in boxes, chained to walls and waterboarded, which simulates drowning, to the point of unconsciousness.

Ms. Haspel initially resisted disavowing the program, saying in her public confirmation hearing only that the agency was ill-prepared and vowing never to restart such a program. In a letter this week, she expanded upon her views, saying that the agency shouldn't have undertaken the program.

Ms Haspel is a native of Ashland, Ky., the eldest of five children, and the daughter of an airman who raised her all around the world as he served at various bases. She graduated from high school in the U.K., the agency said, without naming which city.

Ms. Haspel wanted to attend the U.S. Military Academy at West Point, but her father told her girls weren't welcome at the time, according to the agency. Instead, she graduated with honors from the University of Louisville with a degree in languages and journalism, according to the agency biography.

She worked as a case officer in the late 1980s and early 1990s in Africa and Europe. After the collapse of the Soviet Union, Ms. Haspel became an intelligence-operations officer and then rose up the ranks in the agency's Russia operations. Already partially fluent in Spanish and French, Ms. Haspel also learned Turkish and Russian while serving at the agency.

Over the course of her career, Ms. Haspel four times served as chief of station—the top CIA official in a country responsible for all the agency's operations there. In recent years, Ms. Haspel served in several top roles in the division of the CIA responsible for covert operations.

<b>HEADLINE</b>	<b>05/17 New homeowner law erases racist past</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/991628/2514-washington-racism-housing-deed/">http://mynorthwest.com/991628/2514-washington-racism-housing-deed/</a>
<b>GIST</b>	<p>There is a street in Tacoma that determines the fate of many. And it serves as a historical marker reminding the city of a shameful past which still affects modern residents.</p> <p>“We have a street called 6th Avenue, where there is literally a \$100,000 difference in sales price for homes based on which side of that street you are on,” said Anders Ibsen, deputy mayor for the City of Tacoma. “In certain neighborhoods in Pierce County there are 20-year differences in life expectancy between some of the richer neighborhoods and the poorer zip codes. All that is a direct reflection of historical and current racism.”</p> <p>Ibsen, along with State Rep. Christine Kilduff, recently chipped away at one little-known corner of the region's racist past – language hidden in covenants. These are the ownership documents passed down between homeowners, which can include requirements for the properties — bigoted requirements. The language can also be found in some home owner association agreements (HOA) and was used to segregate communities — known as housing segregation or redlining. Just as 6th Avenue historically divided Tacoma.</p> <p>“In West Tacoma in particular, there are a lot of homes that have really ugly language written into their covenants,” Ibsen said. “Even my mom's house has some of this stuff written, saying things like, ‘The house shall not be conveyed to members of the Hebrew or oriental race.’ Nasty stuff like that.”</p> <p>Tacoma is not alone. Seattle, for example, has struggled with the same issue, where many homes north of the ship canal have deeds with sentences like: “No property in said plat shall at any time be directly or indirectly sold conveyed or leased in whole or in part to any person or persons not of the White race.”</p>

Of course, this language has been unenforceable for decades under Washington’s discrimination laws. But that’s not the point, according to Ibsen.

“This language is hideous, it’s hurtful and the impacts of racism are still very real for many people,” he said. “...if you are a Jewish homeowner or an Asian American homeowner, and that language is in your deed, that is something that makes you feel inherently different and set apart.”

Washington’s new law

Tacoma residents have been pointing out the racist deed language more and more recently, and the very inconvenient process to change it. So Ibsen and Kilduff spearheaded an effort to pass HB 2514. It passed the state Legislature last session and it will go into effect this summer.

The new law makes it far easier for homeowners to remove racist language in legal documents without having to go through a costly process of getting a court order.

“It’s just a simple form you apply to your county auditor,” Ibsen said.

It could come in handy as Tacoma experiences a real estate surge. Seattle’s economic boom has radiated out as far as Tacoma, where people are buying up homes at increasing rates.

“The more we can make it convenient for people disavow this language ... these hurtful words, the more we can promote reconciliation and move forward to a better society,” Ibsen said. “Redlining was prevalent everywhere throughout the country. We never had Jim Crow in the Northwest, but we certainly had our share of racism as evidenced by this HOA language and covenant language.”

Ibsen argues that this is one corner of the racism issue modern leaders face, from the school-to-prison pipeline to law enforcement and community relations.

“All these things are connected and the more we can be aware of that, the more we can make better decisions and make better policy,” he said.

“This came at the instigation of our constituents and frankly it’s disgraceful we’ve waited this long,” Ibsen said. “You say ‘why?’ I say, why not? Why not 50 years ago? Better late than never.”

HEADLINE	<b>05/17 More police encrypting communications</b>
SOURCE	<a href="https://www.wsj.com/articles/want-to-listen-to-police-scanners-cops-say-no-more-1526558400">https://www.wsj.com/articles/want-to-listen-to-police-scanners-cops-say-no-more-1526558400</a>
GIST	<p>A report of a suspicious person crackled from John Messner's RadioShack police scanner, one of two he keeps at his home in Knoxville, Tenn.</p> <p>When an officer was heard yelling "Shots fired!" minutes later, Mr. Messner knew it was time to go. The 52-year-old construction worker and photographer grabbed his two cameras, his portable scanner, jumped in his 1999 Plymouth Voyager minivan, and raced to the scene 3 miles away, where a suspected burglar was shot by police.</p> <p>"When I got there, the guy was still on the ground, they hadn't put him in the ambulance yet," said Mr. Messner of the November incident. "It didn't look like he was dead, but he was definitely hit."</p> <p>Mr. Messner snapped pictures and posted them on his Knoxville Crime Facebook group, which has 94,000 members in a city of 186,000. They come to see photos, read Mr. Messner's live updates on police chases and burglaries that he gets from the police scanner, and discuss neighborhood crime issues.</p> <p>Social-media groups like Knoxville Crime are one reason that Knoxville police officials say they will begin encrypting police radio communications beginning in August, making it impossible for the public—and Mr. Messner—to listen in live. The move comes as more police departments around the country are seeking to shield their live radio communications, now easily accessible via smartphone apps. Police say the effort will keep officers safe and bad guys from finding out what they're doing.</p> <p>"When you're putting out information that only a suspect and a victim and an officer knows, then all of the sudden you have someone put that on social media, that takes your advantage away," said Darrell DeBusk, a Knoxville police spokesman.</p> <p>Earlier this year, the Las Vegas Metropolitan Police Department encrypted its radio traffic, alleging that bad guys "monitor police radio frequencies in order to better facilitate their crimes and gather intelligence about the whereabouts of police officers." Pueblo, Colo., police blocked their scanner traffic recently, citing suspects using scanner apps to avoid officers.</p> <p>Local media still has access to the live radio transmissions in Las Vegas—police allow them to purchase their own radios. In Knoxville, the radio traffic will be posted after a one-hour delay, said Mr. DeBusk.</p> <p>These moves have rankled scanner enthusiasts who range from people curious about police activity in their neighborhood to modern-day Weegees, the New York City freelance photographer known for his raw crime-scene photos. Many scanner buffs are police supporters who want to help solve crimes, making the decision to go dark a difficult one, police officials say.</p> <p>"It's a tough choice because many of the pro-police people out in the community who support their local police get that way because they listen to their police on these scanners or phone apps," said Richard Myers, executive director of the Major Cities Chiefs Association.</p> <p>Some police departments have found a solution by using encrypted channels for more sensitive work, such as a SWAT team readying for a raid, while keeping the more mundane police patrol work on the publicly available channel, he said.</p> <p>In Colorado, a push to encrypt police radio traffic inspired a bill backed by scanner enthusiasts earlier this year that would have banned encryption, except for sensitive situations. The bill failed with strong opposition from law enforcement.</p> <p>"These are government agents working for the taxpayers and I think citizens have the right to know what they're doing," said Robert Wareham, an attorney who helped draft the bill.</p>

Mr. Wareham, a former police officer, said he uses his scanner to find out about police activity in his neighborhood or on the roads. “There are six or seven times a year where I avoid a dangerous situations where I know what’s going on,” he said.

In Knoxville, Mr. DeBusk, the police spokesman, said the prevalence of smartphone apps that broadcast police communications, such as Broadcastify, has made it easier for criminals to listen in.

“You’ve always had people that had scanners, but it was not as common as the smartphone apps,” said Mr. DeBusk. “We actually have arrested people, they’ve had the smartphone on them and we could hear our own dispatchers, the sound coming from their smartphone.”

Lindsay Blanton, the CEO of Broadcastify’s parent company RadioReference.com, called this an “overdone complaint.” The approximately 200,000 daily unique listeners tuning in to Broadcastify’s 6,600 feeds typically hear police communications on a 45 second to three minute delay and the company bans sensitive content, he said.

“It’s providing more an entertainment type perspective than the ability to gain an advantage over law enforcement,” said Mr. Blanton said.

People can listen to public safety, aircraft, rail and marine audio streams from across the country on Broadcastify. The company relies on volunteers who send local feeds from their scanners and in some cases police departments who do the same because “there are a lot of agencies that value the general public being more involved,” said Mr. Blanton.

<b>HEADLINE</b>	<b>05/17 Rape case intensifies homeless debate</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/homeless/seattle-homeless-camp-did-not-check-for-warrants-on-a-resident-before-ballard-rape/">https://www.seattletimes.com/seattle-news/homeless/seattle-homeless-camp-did-not-check-for-warrants-on-a-resident-before-ballard-rape/</a>

## GIST

The impassioned debate over Seattle's homelessness crisis, already intense following the passage of a new tax to address the problem, took another emotional turn this week after a homeless man was charged with sexually assaulting a woman in an auto dealership restroom.

The man arrested in Monday's sexual assault had recently lived in Ballard Nickelsville, one of the city's six sanctioned encampments. He was wanted on a 2017 warrant at the time of the attack, raising concerns among many community members about who is living in the camps.

However, people associated with the camp and who work in the homeless-service system argue the man's housing status is irrelevant, a cipher for people's broader frustrations about homelessness in the city.

Christopher Teel, 24, has been charged with first-degree rape and unlawful imprisonment with sexual motivation after he was arrested Monday in connection with the rape of a woman in a temporary restroom of the Carter Motors in Ballard.

That same day, the Seattle City Council adopted a tax that will collect \$275 per employee, per year starting in 2017 on Seattle for-profit companies that gross at least \$20 million a year. The tax is expected to generate an average of \$47.5 million a year to fund affordable housing and homelessness.

The events capped off weeks of burgeoning frustration over how to address the rising number of people living on Seattle's streets. To Sara Rankin, a Seattle University law professor who studies homelessness, the reaction to the sexual assault, coming the same day as the council vote, points to a city at a point of reckoning about homelessness.

"The reason why I think this (assault) has been such a hot issue in the last 24 hours is because it's occurring at the same time that we are really navigating some thorny discussions about how we should approach homelessness and poverty, and its making a lot of people very uncomfortable," said Rankin.

Teel moved to Seattle in summer 2016, according to King County prosecutors. He had been living in Nickelsville since at least November, when his photograph appeared in a Seattle Times story about the tent camp moving to Wallingford.

Nickelsville, like many other shelters and sanctioned camps, does not check for warrants on their residents, so they were not aware that Teel was wanted on a misdemeanor warrant for failing to appear in court, according to statement issued by Scott Morrow, a founder of Nickelsville.

The bench warrant was issued in March 2017 after Teel failed to appear at a Seattle Municipal Court hearing on a gross misdemeanor charge of first-degree criminal trespass.

The Seattle Police Department's Fugitive Unit tracks down violent offenders wanted on felony warrants, but Teel's bench warrant wouldn't have risen to their attention, said police spokesman Sgt. Sean Whitcomb.

An officer would have run Teel's name and checked for warrants had he been contacted by police before his arrest Monday — provided they had reasonable suspicion to do so, said Whitcomb.

"When we stop people — for a motor vehicle violation, a pedestrian violation, suspicious circumstances or we have probable cause to arrest them — we're going to check their ID" and see if there are any warrants, protection orders or missing persons reports associated with them, he said.

But police don't have the authority to randomly check rosters of encampment residents to fish for people who may have outstanding warrants, Whitcomb explained.

"Our authority is tempered by people's guaranteed, constitutional rights" — including the right to privacy and protection against unlawful searches and seizures, he said.

When Teel moved into Ballard Nickelsville, he was required to present valid identification. His name was also run against King County’s sex-offender list because sex offenders are not allowed on site. His name was not on it, according to Morrow.

Officials with the city’s Human Services Department said five of the six sanctioned camps, and many shelters, do sex offender checks upon intake.

Some shelters and homeless service providers also do “a range of background and warrant checks” and can elect to remove a person. But not all shelters do these checks, the department said.

For example, the Downtown Emergency Service Center (DESC) does not do background checks.

“The point of shelter is to bring people inside for safety and when you put up various kinds of barriers then you will not reach the people you’re trying to help,” said DESC Executive Director Daniel Malone.

And, if a background check is used to determine someone is somehow not worthy of shelter, that person is likely to live outdoors and not receive any assistance and no one will know where they are, Malone said.

At Nickelsville, residents can be temporarily or permanently barred for breaking camp rules, including engaging in “violent, aggressive behavior, intoxication, inappropriate language ... on site or (in the) surrounding neighborhood,” according to the camp Code of Conduct.

Teel had not signed into the camp or been there since May 9, according to Morrow. The Code of Conduct requires all residents to sign in to the camp every day. Failure to do so for three days qualifies as “a voluntary move.”

When camp residents met for a regular meeting on Monday night, they were not aware Teel had been arrested in connection with the rape.

Other residents were concerned for his safety because he recently “seemed to be decompensating,” with worsening symptoms of mental illness, and they planned to check hospitals and jails, or file a missing-person report.

Nickelsville staff learned Wednesday that Teel was charged, and notified the Low Income Housing Institute (LIHI), a Seattle nonprofit agency that provides case management at the camp.

“We are shocked to learn of a violent act like this, by someone who had recently left Nickelsville,” Morrow said in the statement.

He said in nine years of operations “there has never before been a confirmed criminal act of such terrible significance by either someone living in Nickelsville, or who had recently left.” Morrow’s statement said.

LIHI executive director Sharon Lee said her organization is the site’s fiscal sponsor and does its case management, and they are not responsible for criminal background checks. LIHI only gets the names of camp residents who are engaged in case management, which is not a requirement of living at Nickelsville.

Ballard Nickelsville, which was Seattle’s first authorized camp, opened in 2015. The camp recently moved to Wallingford, near Fourth Avenue Northeast and Northeast Northlake Way.

Like all of Seattle’s sanctioned homeless camps, Nickelsville sits on public property. Each camp is managed by a separate organization. Nickelsville is its own nonprofit, and runs the Wallingford site, in addition to two other sanctioned camps in South Seattle.

<b>HEADLINE</b>	<b>05/18 UK: poisoned ex-Russian spy out hospital</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/05/18/ex-russian-spy-sergei-skripal-discharged-from-uk-hospital-after-being-poisoned-with-nerve-agent.html">http://www.foxnews.com/world/2018/05/18/ex-russian-spy-sergei-skripal-discharged-from-uk-hospital-after-being-poisoned-with-nerve-agent.html</a>
<b>GIST</b>	Sergei Skripal, the former Russian spy who was poisoned with a nerve agent in the U.K. more than two

months ago, was released from the hospital Friday, health officials said.

Skripal, 66, and his daughter Yulia were found unconscious on a public bench in the city of Salisbury on March 4, and spent weeks in critical condition. Officials suspect the father and daughter were poisoned with novichok, a Soviet-engineered nerve agent.

What to know about Novichok, the lethal Russian nerve agent reportedly used in Great Britain  
Video Nerve agent Novichok: What to know about Russia's spy poison  
Yulia, 33, recovered more quickly than her father and was discharged last month.

Salisbury District Hospital said Friday that all three people hospitalized in the attack -- the Skripals and a police officer who came to their assistance -- have now been released. The Skripals have been taken to an undisclosed location for their safety.

"We have been able to discharge Sergei Skripal," said Lorna Wilkinson, director of nursing at the hospital. "This is an important stage in his recovery, which will now take place away from the hospital."

Sergei Skripal served with Russia's military intelligence agency, often known by its Russian-language acronym GRU, and retired in 1999. He then worked at the Foreign Ministry until 2003, and later became involved in business.

Skripal was arrested in 2004 in Moscow and later confessed to having been recruited by British intelligence in 1995. He also said at the time that he provided information about GRU agents in Europe, receiving over \$100,000 in return.

In 2006, Skripal was convicted on charges of spying for Britain and sentenced to 13 years. However, he later was pardoned and released from custody in July 2010 as part of a U.S.-Russian spy swap, which followed the exposure of a ring of Russian sleeper agents in the U.S.

He had been living quietly in the cathedral city of Salisbury, 90 miles southwest of London, when he was struck down.

Britain blamed Russia for the attack while Moscow denied all allegations. In response, more than two dozen Western allies, including the U.S., ordered out over 150 Russian diplomats in a show of solidarity. In response, Russia ordered out 60 U.S. diplomats and closed the consulate in St. Petersburg in a tit-for-tat response.

<b>HEADLINE</b>	<b>05/17 Power grid change could impact clocks</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/clocks-cuckoo-power-grid-change-55237088">https://abcnews.go.com/Technology/wireStory/clocks-cuckoo-power-grid-change-55237088</a>
<b>GIST</b>	<p>Running late for work or just miss that bus? You could have a good excuse: Your electric clock might be running a bit cuckoo.</p> <p>Because of a change in federal energy regulations, some scientists say your trusty, older plug-in clock may be losing or gaining a few ticks over time.</p> <p>Electric clocks keep time based on the usually stable and precise pulses of the electric current that powers them. In the U.S., that's 60 hertz (cycles per second). In the past, regulators required power companies to immediately correct the rate if it slipped off the mark. But that precision is expensive to maintain, so last year, the correction part was quietly eliminated by the Federal Energy Regulatory Commission.</p> <p>Energy officials insist other standards will keep the time in check, and so far the problem has not amounted to more than a few seconds here and there. But some scientists looked at what could happen without the time correction rule and concluded clocks could gradually go off-kilter if the grid's power was</p>

delivered consistently at higher or lower rates than 60 hertz. That can happen when power demand surges or slows because of weather and the grid can't adjust right away.

This would affect clocks that get their power from a wall socket, such as alarm clocks and those on microwaves and coffeemakers. Cellphones, newer clocks with GPS, those connected to cable TV and modern ones that don't rely on the grid to keep time aren't affected, experts said.

The changes could be just matters of seconds and all but unnoticeable, but the time could drift by as much as seven and a half minutes between time changes in March and November, when people reset their clocks, according to a study conducted by researchers at the National Institute of Standards and Technology and the U.S. Naval Observatory.

In some extreme cases, Americans might miss their bus, parts of television shows and even be slightly late or, shudder, early for work, said Demetrios Matsakis, co-author of the study and chief time scientist at the Naval Observatory.

"They'll think something is wrong with their clock but they won't know what," said Matsakis, co-author of the study.

The request to retire the long-standing time correction rule came from the North American Electric Reliability Corporation (NERC), which coordinates the grid. NERC standards director Howard Gugel says newer standards prevent veering from 60 hertz so the rule isn't needed. NERC has guidelines for what to do if time corrections are necessary, he said in an email.

Earlier this year, in the eastern half of the country, a time error of 10 seconds too fast went uncorrected for a week or more. It was during a bitter cold snap and utilities didn't think it was wise to tinker with power levels, said Bill Henson of the system operator for New England. Generally, time errors are fixed every three to five days in the eastern U.S., he said.

<b>HEADLINE</b>	<b>05/17 TSA: '95 list' of unruly passengers</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/tsa-reveals-keeping-a-list-unruly-passengers/">https://www.cbsnews.com/news/tsa-reveals-keeping-a-list-unruly-passengers/</a>
<b>GIST</b>	Following an "alarming spike" in assaults on transportation security officers at airport checkpoints, the

Transportation Security Administration began what's referred to as a "95 List" of unruly passengers.

The list so far is a short one. For now, it has less than 50 people, the Transportation Safety Administration says. In fiscal year 2017, TSA notes, there were over 34 assaults transportation security officers.

"In most cases this is someone where there was assaultive behavior or someone tried to circumvent security screening," Executive Assistant Administrator for Security Operations Darby LaJoye told CBS News Transportation Correspondent Kris Van Cleave in a phone interview Thursday.

The matter would be significant enough that police would be called and prompt a report to headquarters. Since its creation in February, LaJoye says two to three dozen people have been added to the list, which is shared with airports as a "law enforcement awareness measure."

LaJoye was asked about the list by members of a House Homeland Security Subcommittee during a hearing Thursday. It was the first time the list had been discussed publicly.

"I am concerned about the civil liberty implications of such a list," Rep. Watson Coleman, D-N.J., said during the hearing.

Being placed on the 95 list does not, on its own, result in a flyer being denied the ability to board a plane or additional secondary screening.

"This is simply an awareness that somebody is going through the checkpoint that has demonstrated concerning assaulting behavior in the past to our officers," LaJoye told members of the Transportation and Protective Services Subcommittee.

The existence of the 95 list was first reported by the New York Times, but the agency says it posted a Privacy Impact Statement on DHS.gov in July, asking for public comments. TSA says it received no comments.

The agency disputes the assertions in the Times that loitering by a checkpoint or simply swatting the hand of a screener during a pat down or being rude or arguing with a screener could land a flyer on this list.

Names aren't added to the list frequently -- putting new names on the list is not a daily occurrence, but over time the size of the list could grow. According to LaJoye there is a monthly and quarterly review process during which someone could be removed from the list.

TSA acknowledged flyers may not know they've been added to this list which drew criticism from Rep Bill Keating, D-Mass., during the hearing.

"If you're going to, you know, affect behavior, it would be great that they knew they were on the list, and it would be great if they're on the list that they have a way to appeal that," Keating said to LaJoye.

Sources familiar with the matter confirm the list is described in a 5-page directive that prohibits the use of profiling based on race, religion or gender as the sole reason for being on the list, although these could be considered as factors when relevant or coinciding with specific intelligence.

Federal security directors, top T.S.A. security officials at airports and top Air Marshals supervisors can request a person be added to the 95 list. Only the T.S.A. administrator, his deputy and the top two officials at the agency's Office of Intelligence and Analysis may add or remove people from the database.

**HEADLINE** 05/17 Latin America's 'Ni Una Menos' spotlight

**SOURCE** <https://www.nbcnews.com/news/latino/while-u-s-has-metoo-latin-america-s-ni-una-n875091>

## GIST

LIMA, Perú — Three weeks and six surgeries after being doused with gasoline and set alight by a former coworker unable to accept her rejection of his advances, Eyvi Agreda remains in intensive care in Lima's Almenara Hospital, strips of pigskin covering the second and third degree burns on 60 percent of her body.

Having moved from her native Andean region of Cajamarca, the sociable 22-year-old had been working hard here in the Peruvian capital, studying international business while also paying her bills by doing shifts in a call center.

All that came to a juddering halt on April 24 when Carlos Javier Hualpa, a 37-year-old restaurant worker, launched his horrific attack on an unsuspecting Agreda on a bus in the upmarket neighborhood of Miraflores.

The incident has shocked Peru and shone a light on the issue of misogynistic violence and femicide — the act of killing a woman simply because she is a woman — that plagues both this Andean nation and, more generally, Latin America and the Caribbean.

Reliable statistics for sexual assault, domestic battery and other forms of violence against women are in short supply, experts say, in part because of official disinterest and victims' fear of coming forward. But the few numbers that do exist point to an epidemic of gender-based physical attacks on women and girls in the region. According to the Geneva-based Small Arms Survey, 10 of the 25 nations with the highest recorded rates of femicides are in Latin America with another four in the Caribbean.

That is partly attributable to the region's high overall levels of violence including its well documented status as being, statistically, the world's most homicidal. But many also blame it on a deeply ingrained culture of "machismo", which has generated what activists call a continuum of patriarchal behavior that runs from mundane everyday acts of condescension, disdain and exclusion towards women and girls, through to its most extreme expressions, rape and femicide.

Indeed, it is only 20 years since the concept of femicide even became an issue in Latin America, following the notorious wave of unresolved killings of women in Ciudad Juárez, the Mexican city on the U.S. border, in the 1990s.

While the United States is having its "me too" moment regarding harassment principally in the workplace, Latin America lags several steps behind, with femicides from Mexico to Argentina periodically triggering protests from the "ni una más" ("not one more") and the more recent "ni una menos" movement in Perú.

Arrested just the day after his unspeakable attack on Agreda, Hualpa, seeking to play down his culpability, told prosecutors: "I wanted her face to be scarred, but not her body. It all went out of control."

María Ysabel Cedano García, head of Demus, a Lima-based women's rights nonprofit, says: "Those who commit femicides, or attempted femicides, claim they are being disrespected or cheated on. They are not able to accept being rejected because they believe they have a right, a right over women's bodies. Femicides typically involve cruelty. There is a level of viciousness and planning. The objective is to punish."

Responding to the attack on Agreda, psychoanalyst Eduardo Gastelumendi, meanwhile, has warned that machismo harms the well-being of men as well as women.

"Boys raised in macho homes end up being adults who are really like big children: emotionally infantile, dependent, spoilt, violent, demanding and impulsive," he wrote in the Peruvian newspaper El Comercio.

"Girls who grow up in these homes are treated in a more demanding way and tend to be devalued for being women, which leads them to struggle with feelings of guilt and an absurd and socially cruel handicapping."

For activists like Cedano García, extreme attacks such as that on Agreda need to be seen in the context of a

full spectrum of violations of women's rights, from teenage pregnancies and rape to murder, while frequent disinterest from law enforcement feeds a climate of impunity.

She says the National Police of Peru (PNP) open four new rape investigations every hour. "But those are just the ones that are reported. What is the real figure? Sexual violence and harassment don't seem to worry the police. They just don't see it as part of public safety, part of their job."

That view of the disinterest in — and even downright hostility to — victims of misogynistic violence has been crystallized in Peru by the high-profile case of Arlette Contreras, a young lawyer beaten up by her boyfriend, Adriano Pozo, in a hotel in the mountain city of Ayacucho in 2016.

Part of the attack, including a naked and enraged Pozo dragging Contreras by the hair, was caught on the hotel's closed circuit television. Yet a local court absolved him, supposedly for lack of evidence, and is now threatening Contreras with a year behind bars, allegedly for including false information in a CV.

The refusal to take femicide seriously— and women's rights more generally — also comes straight from some of the most powerful players in Peruvian society.

Last year, Maritza García, a member of the hard-right Fujimorista party, was forced to step down as president of the Congressional committee on women's rights after suggesting that "sometimes, without thinking, women give the opportunity to men" to kill them.

Meanwhile, Lima's ultra-conservative Archbishop Juan Luis Cipriani has dismissed the notion that minors who become pregnant might be victims of sexual abuse. "The statistics tell us that girls have abortions, but it is not because they have abused these girls, but because, often, the woman puts herself [on display] like in a shop window, provoking" the men, he said in 2016.

Peru's last two governments have attempted to address the ingrained cultural sexism by including issues of equality in the national curriculum. However, the education ministry has been forced to back down after a sustained series of protests, led in part by Cipriani, against what conservative activists have attacked as "gender ideology."

No wonder, perhaps, that Peru also has one of Latin America's highest rates of domestic violence. One report found that 39.5 percent of Peruvian women had experienced physical or sexual violence from their partner, including 14.9 percent in the past 12 months, levels second only to Colombia and Bolivia.

Other Latin American countries have been more successful, however, at addressing the problem within their education systems. In 2015, Colombia passed a law that now sees schoolchildren studying how gender impacts society.

Several other nations in the region have also seen new legislation, sometimes involving novel solutions, aimed at prevention. That includes a project in Uruguay in which women deemed at high risk are given electronic beepers that send a signal to the police should their abusers, who wear electronic bands, draw too close to them.

Yet much remains to be done, starting with better quantifying the problem to allow policy solutions to more effectively target it.

Kathleen Taylor, an expert on violence against women with the Latin American and Caribbean office of UN Women, the United Nations agency that addresses women's rights, adds: "We just don't know the full impact [of misogynistic violence] because of the underreporting and misreporting."

"Many murders are not classified as femicides even though they are. For example, if a woman disappears, it is not categorized as femicide. Mexico has some very high levels of women going missing and a lot of them could be femicides. But we just don't know."

	<p>As for Agreda, she has at least now been able to wake from an induced coma, reportedly crying and asking her family to take her home to Cajamarca, an impossible wish for her right now.</p> <p>She faces an agonizing rehabilitation expected to take another six months, including several more surgeries to allow doctors to place strips of her own skin taken from her back and grown in the lab, on her extensive burns.</p>

<b>HEADLINE</b>	<b>05/18 ACE ending Puerto Rico recovery work</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/corps-leaving-puerto-rico-hurricane-recovery-unfinished-55252133">https://abcnews.go.com/International/wireStory/corps-leaving-puerto-rico-hurricane-recovery-unfinished-55252133</a>
<b>GIST</b>	The Army Corps of Engineers is ending its work to rebuild Puerto Rico's electric grid, despite residents'

fears that the island's government won't be able to restore power on its own to more than 16,000 people who remain blacked out eight months after Hurricane Maria.

The federal agency will keep operating more than 700 generators on the island, including three "mega generators" supplementing Puerto Rico's aging and storm-damaged power plants. But on Friday the restoration of thousands of miles of downed power lines will be handed back to the U.S. territory's bankrupt public utility, the Puerto Rico Electric Power Authority, or PREPA.

The Corps took over power restoration efforts in Puerto Rico on Sept. 30 after PREPA failed to call in mainland utility companies under a disaster response plan known as mutual aid, in which power companies from around the U.S. send staff to help stricken areas.

Puerto Rican officials said 98.86 percent of PREPA's customers had electricity Thursday, but 16,723 remained without power as the longest blackout in U.S. history continued.

Trump administration officials say a big federal presence is no longer needed to hook up the relatively few remaining connections in the often-remote areas where people are still without power. But many people on and off the island are dissatisfied by the decision to pull out the Corps without Puerto Rico's power fully restored.

"It's not in our culture to walk away from a mission when it hasn't been fully accomplished, but we follow orders," Charles Alexander, the Corps' director for contingency operations, told the Senate Energy and Natural Resources Committee at a May 8 hearing.

The Corps has operated under the orders of the Federal Emergency Management Agency, which says it has deferred to Gov. Ricardo Rossello's requests on the extent and duration of federal assistance to Puerto Rico. FEMA on Thursday indefinitely extended the Corps' power generation mission but did not extend the grid repair work because Rossello did not request that.

Most of those still without power live in the town of Yabucoa, which was the first place in Puerto Rico struck by Hurricane Maria on Sept. 20.

The Corps of Engineers has received more than \$2 billion to restore power to Puerto Rico, overseeing more than 1,200 personnel on the ground and more than 1,000 contractors, with more than 650 of them working directly on distribution and transmission lines. Contractors included Fluor Corp., an Irving, Texas company that obtained two contracts worth a total of \$1.3 billion.

The Corps helped energize some 80 percent of transmission lines and nearly 90 percent of distribution lines across Puerto Rico, erecting more than 52,000 power poles and stringing more than 5,700 miles of wire.

Corps contractors planned to work in the northern cities of Arecibo, Bayamon and Caguas and the southern city of Ponce through the end of Friday. A group of Corps officials plans to remain in Puerto Rico for several weeks to demobilize contractors and hand logistic operations back to FEMA and PREPA.

<b>HEADLINE</b>	<b>05/18 Venezuela soldiers desert in droves</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/empty-stomachs-drive-venezuela-soldiers-desert-droves-55252136?">https://abcnews.go.com/International/wireStory/empty-stomachs-drive-venezuela-soldiers-desert-droves-55252136?</a>
<b>GIST</b>	Not even Venezuela's once-proud military is immune to the oil-rich country's deepening economic crisis of food shortages and skyrocketing prices, and while top commanders deny there is any discontent, analysts say thousands of soldiers are asking for honorable discharges or deserting their posts by simply walking away.

Since taking office after the death of Hugo Chavez, his mentor who installed Venezuela's socialist administration, President Nicolas Maduro has sought to lock in support from the armed forces by pampering troops with outsized bonuses and awarding loyal officers with top government posts.

He is counting on the backing of the military to ride out any turbulent reaction if he is declared the winner of Sunday's presidential election, which has been condemned by much of the international community for barring some of his leading critics from running.

But as Venezuela quickly goes broke and hyperinflation pulverizes the paychecks of civilians and soldiers alike, discontent is penetrating the barracks, raising doubts whether the troops will remain trustworthy as their stomachs growl.

On the Caribbean island of Margarita, soldiers in olive green uniforms and rifles slung over their shoulders openly wander the market each morning begging merchants for fruits and vegetables.

Even the rations served in military mess halls have dramatically diminished in size and quality. To compensate, soldiers are often given leave several hours during the day to hunt for meals off base, several told the AP.

Soldiers once made up a privileged class at the height of Venezuela's oil boom under Chavez, who himself was a former tank commander. They had access to quality housing, cars and home appliances at subsidized prices.

But the largesse has dried up under Maduro, who has tried to compensate by giving top-ranking officers an even bigger slice of power. They head nearly half of Venezuela's ministries, including control of the primary food-supply program.

Most notably, six months ago Maduro named Maj. Gen. Manuel Quevedo to revive the state-run oil company, PDVSA, and its plummeting production though he had no previous experience in the industry.

The 150,000 men and women serving in Venezuela's military are now the lowest paid in Latin America, with monthly salaries worth only to \$2 to \$12, said Rocio San Miguel, a Caracas-based military analyst. Base pay for troops in Colombia begins at \$75, while soldiers in Mexico earn \$300 to start.

Nobody knows exactly how many soldiers have deserted. But San Miguel and other experts say they number several thousand.

In addition to the economic strains, many soldiers fear being deployed again to hold back masses of angry protesters calling for a new government. Experts say desertions surged in 2017 as the National Guard clashed with anti-Maduro protesters almost daily for four months, leaving more than 140 people dead and hundreds more injured and arrested.

There has been a spike in court martials. A handful of soldiers and officers were jailed in 2017 on suspicion of various crimes, yet 90 have already been arrested so far this year, experts say.

<b>HEADLINE</b>	<b>05/17 Congo: Ebola outbreak 'very concerning'</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/ebola-outbreak-democratic-republic-congo-spreads-large-city/story?id=55229613&amp;cid=clicksource_76_2_hero_headlines_headlines_hed">https://abcnews.go.com/International/ebola-outbreak-democratic-republic-congo-spreads-large-city/story?id=55229613&amp;cid=clicksource_76_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	The current Ebola outbreak in the Democratic Republic of Congo has spread from rural areas to a city of nearly 1.2 million people, the country's health ministry said Wednesday.  Situated along the Congo River, Mbandaka is a densely populated transit hub at the crossroads of Equateur province, the health ministry said, raising fears that the Ebola virus will be easily passed on. Ebola spreads

	<p>through direct contact with bodily fluids of infected people.</p> <p>Downstream from Mbandaka is the country's capital, Kinshasa, which is home to roughly 10 million people.</p> <p>"The arrival of Ebola in an urban area is very concerning and WHO and partners are working together to rapidly scale up the search for all contacts of the confirmed case in the Mbandaka area," said Matshidiso Moeti, the World Health Organization's regional director for Africa.</p> <p>A new suspected case of Ebola was recorded this week in Wangata, one of the three health zones of Mbandaka, the capital of the northwestern Equateur province. Laboratory tests on two samples from Wangata confirmed one specimen as positive for Ebola, while the other was negative.</p> <p>It's the first time in the region's ongoing outbreak that a case has been detected in an urban health zone, with all other cases reported in remote, rural areas of Equateur province. And until now, all the confirmed cases of Ebola were in Bikoro health zone, some 90 miles south of Mbandaka.</p> <p>"We are entering a new phase of the Ebola outbreak that is now affecting three health zones, including an urban health zone," the Democratic Republic of Congo's Minister of Health Oly Ilunga Kalenga said in a statement in French late Wednesday. "Since the announcement of the alert in Mbandaka, our epidemiologists are working in the field with community relays to identify people who have been in contact with suspected cases."</p> <p>As of Thursday, a total of 45 cases of hemorrhagic fever had been recorded in the Democratic Republic of Congo since the outbreak was announced on May 8. That number includes 14 confirmed cases of Ebola, 21 probable cases and 10 suspected cases. Health care workers have been among those infected, according to the country's health ministry.</p>

<b>HEADLINE</b>	<b>05/17 Hawaii: new eruption massive ash cloud</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/eruption-kilauea-evacuation-dangerous-ash-plume/story?id=55201949&amp;cid=clicksource_81_2_hero_headlines_bsq_hed">https://abcnews.go.com/US/eruption-kilauea-evacuation-dangerous-ash-plume/story?id=55201949&amp;cid=clicksource_81_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>A powerful but short-lived explosion occurred at the summit of the Kilauea volcano on Hawaii's Big Island, producing a massive volcanic cloud, officials said.</p> <p>The cloud reached 30,000 feet above sea level -- higher than Mount Everest, officials said at a news conference.</p> <p>Staff from the Hawaii Volcanoes National Park were evacuated and officials warned residents in the path of the ash plume to shelter in place. Officials later said the ash fall was mostly localized.</p> <p>Activity may become more explosive at any time, the U.S. Geological Survey said today, "increasing the intensity of ash production and producing ballistic projectiles near the vent" within Halemaumau Crater at the volcano's summit.</p> <p>The newest eruption follows a damaging earthquake, dangerous volcanic smog and large lava flows that are all threatening Hawaii's Big Island.</p> <p>Kilauea erupted May 3, and since then, fissures have been steadily cracking open near residential areas. Nearly 40 structures have been destroyed, officials said.</p> <p>Volcanic smog -- known as "vog" -- is now being emitted by the fissures, traveling toward populated areas and threatening residents with dangerous sulfur dioxide.</p>

## Cyber Awareness

[Top of page](#)

HEADLINE	<b>05/17 Claim: LA County 211 hotline data exposed</b>
SOURCE	<a href="https://www.upguard.com/breaches/la-county-211-hotline">https://www.upguard.com/breaches/la-county-211-hotline</a>
GIST	<p>The UpGuard Cyber Risk Team can now disclose that sensitive data from the Los Angeles County 211 service, a nonprofit assistance organization described on their website as “the central source for providing information and referrals for all health and human services in LA County,” was publicly exposed online.</p> <p>The contents of the downloadable files include access credentials for those operating the 211 system, email addresses for contacts and registered resources of LA County 211, and most troubling, detailed call notes. These notes describe the reason for the calls, including personally identifying information for people reporting the problem, persons in need, and, where applicable, their reported abusers. Included in the more than 3 million rows of call logs are 200,000 rows of detailed notes, including graphic descriptions of elder abuse, child abuse, and suicidal distress, raising serious, large-scale privacy concerns. In many of these cases, full names, phone numbers, addresses, and even 33,000 instances of full Social Security numbers are revealed among the data.</p> <p>This information was stored in an Amazon AWS S3 bucket configured to be publicly and anonymously accessible. Though some of the files in the bucket were not publicly downloadable, those that were included Postgres database backups and CSV exports of that data, with hundreds of thousands of rows of sensitive personal information. Despite 211’s dedication to preserving the confidentiality of reports, a technical misconfiguration - in this case, an inadvertently public cloud storage instance - exposed not only email addresses and weakly hashed passwords for LA County 211 employees, but six years of highly sensitive call logs regarding some of the most vulnerable people in LA County.</p> <p><b>The Discovery</b> On March 14th, 2018, the UpGuard Cyber Risk team discovered an Amazon Web Services S3 cloud storage bucket located at the subdomain “lacounty.” After initial analysis revealed the sensitive nature of the information inside, the team began notification efforts immediately, calling LA County 211 and emailing the recommended contact. Ultimately the team's notification efforts culminated in reaching a member of information security on April 24, 2018. Our contact at LA County 211 assured us the problem would be taken care of, and in less than 24 hours, UpGuard confirmed the bucket itself was no longer publicly accessible.</p> <p>Amazon S3 access rules can be set for both the bucket as a whole and for the files within it. In the case of the “lacounty” bucket, permission settings allowed anyone to list the contents; some of the files inside, however, had additional rules preventing public users from downloading them. Other files did not and were publicly downloadable, including the Postgres database backup and CSV exports containing the call records. Such combinations of permissions levels can get convoluted quickly, explaining why misconfigurations, like those due to complex security rules, are the leading cause of breaches and outages for users of cloud services.</p> <p><b>The Contents</b></p> <p>Several CSV files found within the bucket contain personal information critical to the operation of the LA County 211 service. In “users.csv”, the names, email addresses, and hashed passwords for 384 users were exposed, with 153 marked as active. Almost all of the email addresses were at the @211LA.org domain. The passwords, while hashed, were done so using the MD5 algorithm— an algorithm that is considered weak relative to modern computing power and security standards, and one where many hashes have already been broken, compromising the encryption entirely. In the event the encryption was defeated, these passwords would not only make 211LA.org accounts vulnerable, but open individuals up to attacks on other platforms if they have reused their passwords, as many people do. The other contents of the bucket indicate that LA County 211 uses remote desktop applications to administer their resources,</p>

meaning that users and passwords compromised from this public file could potentially be used to remotely access other systems and gain further data.

However, the bulk of the find is contained in a 1.3GB CSV file titled “t\_contact.” This file, exported from a Postgres table of the same name, contains a massive amount of PII, including the call notes themselves, for over 200,000 calls logged between 2010 and 2016.

Relevant home addresses, phone numbers, and birth dates were included in many reports, as well as what relationship the person reporting the incident had to the person in need.

#### The Significance

LA County 211 is frequently cited as a leader in delivering badly needed services to people in need with few alternatives, effectively organizing and providing assistance to the citizens it serves. According to their website, they “provide over 500,000 people every year with information and referrals to the services that best meet their needs.” LA County 211 is a top of the funnel operation, triaging reports to the appropriate areas, and assisting people with the sometimes confusing bureaucracy of getting the right help. This top of the funnel position means that they cast a wide net when it comes to the data they gather. Reports of all types are centralized into a single database. From a functional perspective, this makes sense: centralized and standardized technology makes administration and collaboration faster and easier, and reduces the overhead of multiple systems.

But from a cyber risk perspective, it means that you are creating a crown jewel— a single asset with nearly the value of your entire operation. If this dataset is not carefully handled, the magnitude of exposure is far greater than if it occurred at any of the more specialized links down the triage chain. Furthermore, the specific work done by 211 adds another layer of sensitivity on top of the normal things digital businesses have to worry about, such as user credentials being exploited, or systems being compromised. Those could damage the business. But it should be self-evident how the detailed and not-anonymized call records of an emergency, crisis, and abuse hotline could be used to hurt any number of individuals involved. There are few situations that call for greater confidentiality.

When critical social infrastructure like LA County 211 is placed on top of technological infrastructure, it takes on the risks of that technology. For example, the LA County 211 website has a cyber risk score of 608 out of 950, according to the UpGuard Cloud Scanner, meaning that while some data protection is in place, improvements could be made to further harden systems. The public dispersal of the information contained in the LA County 211 files could be extremely damaging to those involved, and measures taken to protect such information should be equal to those repercussions. The obvious and necessary advantages to using centralized databases, cloud hosting, and online storage must be seen alongside the threats they pose to the business being conducted with them; not so that such innovations can be avoided, but so that the risks can be accounted for upfront and controlled as best as possible.

Any loss of trust in a crisis and abuse reporting system will deter people from using it, removing one of the few mechanisms available to people in need. This problem isn’t unique to 211 or to their sector, but a problem facing all organizations using cloud technology and internet applications to store and process their data. This incident highlights the importance of building a resilient digital ecosystem that can provide privacy and reliability as effectively as it does speed and power.

<b>HEADLINE</b>	<b>05/17 Jihadi content on Facebook, Google+</b>
<b>SOURCE</b>	<a href="https://www.wired.com/story/jihadi-content-still-on-facebook-google/">https://www.wired.com/story/jihadi-content-still-on-facebook-google/</a>
<b>GIST</b>	Facebook announced this week that algorithms catch 99.5 percent of the terrorism-related content it deletes before a single user reports it. Thanks to steadily advancing AI tools, that’s an improvement from last year, when that figure hovered around 97 percent. But promising as those developments may be, a new report by the internet safety nonprofit Digital Citizens Alliance demonstrates how easy it still is to find grisly images of dead bodies, calls to jihad, and ISIS and Al Qaeda imagery on both Facebook and

## Instagram.

The report contains dozens of screenshots of beheadings and terrorist recruitment content linked to accounts that, as of this week, remained live on both platforms. It also includes links to even more graphic content that lives on Google+, a platform that has largely gone undiscussed amid its parent company Alphabet's overtures about eliminating radical content on both YouTube and Google Search.

"It seems based on everything we know the platforms are stuck in a loop. There's criticism, promises to fix, and it doesn't go away," says Tom Galvin, executive director of the Digital Citizens Alliance, which has conducted research on topics like the sale of counterfeit goods and illicit drugs online.

Working with researchers at the Global Intellectual Property Enforcement Center, or GIPEC, the Digital Citizens Alliance amassed a trove of evidence documenting terrorist activity on these online platforms. The researchers used a combination of machine learning and human vetting to search for suspicious keywords and hashtags, then scoured the networks connected to those posts to find more. On Instagram and Facebook, they found users sharing copious images of ISIS soldiers posing with the black flag. One Instagram account reviewed by WIRED on Tuesday posted a photo of two men being beheaded by soldiers in black face masks. By Wednesday, that particular photo had disappeared, but the account, which has posted a slew of equally disturbing images including executions and dead bodies strewn on the sidewalk, remained live. It's not clear whether the post was deleted by the user or by Instagram.

In many cases, the most hideous photos contained captions with innocuous hashtags in Arabic, including #Dads, #Girls, and #Cooking. Below are some of the researchers' more tame discoveries.

On Facebook, the researchers spotted public posts inciting people to violence. One, written in Bangla, urges followers to "kill the unbelievers," complete with tips on how to do it, including by motorbike. It was posted in November 2016, and remained online this week.

In a statement, a Facebook spokesperson told WIRED, "There is no place for terrorists or content that promotes terrorism on Facebook or Instagram, and we remove it as soon as we become aware of it. We take this seriously and are committed to making the environment of our platforms safe. We know we can do more, and we've been making major investments to add more technology and human expertise, as well as deepen partnerships to combat this global issue."

Screenshots taken by WIRED from accounts flagged by the Digital Citizens Alliance. **FACEBOOK**  
The fact that in some cases individual posts were taken down but the accounts remained up suggests to Eric Feinberg, GIPEC's founder, that while Facebook and Instagram may proactively spot millions of terrorism-related posts, they're not adequately dealing with the networks connected to those posts. Chasing down hashtags has become central to Feinberg's work. A hashtag like #Islamic\_country, in Arabic, will lead Instagram users down a gruesome and disturbing rabbit hole full of violent imagery. As a result, Feinberg says, "We're finding stuff they're not."

Facebook does try to automatically detect clusters of terrorist accounts and Pages by analyzing a given account's friend networks. But, the spokesperson acknowledged, this automation effort is only about a year-and-a-half old, and still has "a long way to go."

While Facebook is a much larger platform, the researchers found ample evidence of similar jihadi content on Google+, as well, a long-forgotten property that's being abused by terrorists. One especially graphic series of images included in the report shows a bearded man in orange staring into a camera in what appear to be the last moments of his life. In the next shot, his bloodied, detached head is resting on his own dead body.

'We're not seeing inter-platform collaboration, the way the casinos might catch a card cheat.'

In Alphabet's ongoing fight against terrorist groups on its platforms, it rarely mentions Google+. Like Facebook, YouTube has developed technology that automatically deletes terrorist content before users flag

it. Today, 98 percent of the content YouTube takes down related to terrorism has been identified by algorithms. The company has even been accused of overcorrecting in its quest, removing videos that were used for academic and research purposes. YouTube's CEO Susan Wojcicki said the company would scale up to 10,000 human moderators by the end of this year. And yet, it seems far less attention has been paid to cleaning up Google+. Google did not respond to WIRED's request for comment.

"Google+ feels like an abandoned warehouse that ISIS felt was a great place to work," Galvin says.

These disturbing discoveries couldn't come as a surprise to either tech giant. Congress called both Facebook and YouTube to testify about this very topic in January. Facebook has also said it will employ 20,000 safety and security moderators by the end of the year. Meanwhile, the two companies joined with Microsoft and Twitter in 2016 to form the Global Internet Forum to Counter Terrorism, a joint effort aimed at blocking terrorist content across platforms. The companies submit images and videos along with a unique identifying signature that can help other companies identify that same content on their platforms. So far, 80,000 images and 8,000 videos have been marked.

Still, a Facebook spokesperson notes that this system only works if the content posted to another platform is an exact match. The companies don't currently share any information about who's behind those initial posts, either. Galvin views that as a problem. "We're not seeing inter-platform collaboration, the way the casinos might catch a card cheat," he says. Another notable blind spot: While YouTube is part of the forum, the broader Google family is not.

<b>HEADLINE</b>	<b>05/17 Iran's hacker hierarchy exposed</b>
<b>SOURCE</b>	<a href="https://www.informationsecuritybuzz.com/study-research/irans-hacker-hierarchy-exposed/">https://www.informationsecuritybuzz.com/study-research/irans-hacker-hierarchy-exposed/</a>
<b>GIST</b>	<p><b>Executive Summary</b></p> <p>Since at least 2009, the Islamic Republic of Iran has regularly responded to sanctions or perceived provocations by conducting offensive cyber campaigns. The Islamic Republic has historically preferred to use proxies or front organizations both in physical conflict — Hezbollah against Israel and Yemen rebels against Saudi Arabia — and <a href="#">cyberattacks</a> to achieve its policy goals.</p> <p>Currently, Iran faces the prospect of negative economic impact via renewed sanctions. On May 8, 2018 President Trump <a href="#">announced</a> that the United States <a href="#">would not renew the waivers</a> on sanctions against Iran.</p> <p>The U.S. will instead impose additional economic penalties, the combination of which amounts to a de facto U.S. withdrawal from the 2015 <a href="#">Joint Comprehensive Plan of Action (JCPOA)</a> (commonly referred to as the “Iran nuclear deal”).</p> <p>We assess, based on Iran's previous reactions to economic pressure, that with President Trump's exit from the JCPOA, Iran is likely to respond by launching cyberattacks on Western businesses within months, if not faster. Judging from historical patterns, the businesses likely to be at greatest risk are in many of the same sectors that were victimized by Iranian cyberattacks between <a href="#">2012</a> and <a href="#">2014</a> and include banks and financial services, government departments, critical infrastructure providers, and oil and energy.</p> <p><b>Key Judgments</b></p> <ul style="list-style-type: none"> <li>• The Islamic Republic has abandoned its typically deliberate and methodical approach to cyber operations on only two known occasions, in 2012 and in 2014, when a quick reactionary response was required. We assess that when Iranian cyber operators respond to the U.S. withdrawal from the JCPOA that the operations will be staffed and executed by capable, but less trusted contractors.</li> <li>• Further, we assess that staffing these operations with less trusted contractors could result in a scenario where the Islamic Republic has difficulty controlling the scope and scale of the destructive cyberattacks once they have begun.</li> <li>• Iranian cyber operations are administered via a tiered approach, where an ideologically and</li> </ul>

politically trusted group of middle managers translate intelligence priorities into segmented cyber tasks which are then bid out to multiple contractors. This creates a quasi-capitalistic system that pits contractors against each other for influence with the Iranian government.

- The Islamic Republic operates with embedded paranoia, where ultimately, no one can be trusted. The situation creates unique trade-offs in Iran's government-sanctioned offensive cyber campaigns; individuals with demonstrated adherence to the government's ideology and individuals with the greatest offensive cyber skills are almost always mutually exclusive.
- Based on our source's conversations with other hackers in Iran, there are over 50 estimated contractors vying for Iranian government-sponsored offensive cyber projects. Only the best individuals or teams succeed, are paid, and remain in business.
- Insikt Group analyzed internet traffic relating to various institutes affiliated with the Iranian cyber ecosystem from March 1, 2018 to April 30, 2018. As this is the first profiling of Iranian internet activity for these institutes, we cannot determine whether the suspicious activity we analyzed was in preparation of the U.S. announcement.
- According to Insikt Group's source, to find and retain the best offensive cyber talent, Iranian government contractors are forced to mine closed-trust communities. The links between the forums and contractors may illustrate that the trust communities begin with the Iranian security forums.

### **The History of Iranian Geopolitical Response and the Nuclear Agreement Decision**

*Editor's Note: Where applicable, information in this section was provided by a former Iranian hacker with direct access to the information provided. Based on additional corroboration, we assess high confidence in this information. We refer to this individual as "Insikt Group's source" in other sections where their information is cited.*

Since [1979](#), Iran's reactions to perceived Middle Eastern adversaries' foreign policy has been a study in the use of proxies. Specifically, [Israel](#), [Saudi Arabia](#), [United States](#), and [Iraq](#) have been frequent targets of Iranian-funded military actions, most recently through [Houthi rebels in Yemen](#), and [Hezbollah](#) everywhere else.

Since 2009, Iran has developed proxies in the cyber domain to partially obfuscate government fingerprints from foreign attacks. Subsequent to starting a cyber operations program in 2009, the Iranian government had an immediate need to use the program in the fall of 2012 after U.S. President Obama imposed severe financial sanctions on Iran, including [removing Iran from the SWIFT money transfer system](#).

According to Insikt Group's source, the Iranian government authorized denial-of-service attacks on America's largest financial services companies as an immediate response to the sanctions in a campaign dubbed [Operation Ababil](#). A quick response was top priority, so time and planning were forgone luxuries for the Iranian government. Instead, the Iranian government opted for speed and the most capable actors, regardless of demonstrated ideology.

Similarly, a year later in the fall of 2013, Sheldon Adelson (the CEO of Sands Corporation) publicly suggested that the [United States should attack Iran with an atomic weapon](#). In February 2014, [Iran launched a destructive attack on the Sands Las Vegas Corporation](#) that caused significant network damage. This was the second public Iranian attack campaign on an American business, where the response called for speed over time and preparation.

The Iranian attacks in 2012 and 2014 were in contrast to the relatively slow and methodical work of APT 33 ([Intel Card](#)), APT 34 ([Intel Card](#)), and APT 35 ([Intel Card](#)), developing custom malware, targeting data exfiltration from strategic intelligence targets such as U.S. military contractors, Middle East energy companies, and [university research networks](#).

### **Building a National Capability — History and Relationships Between Proxies**

The Iranian Revolution replaced the Persian monarchy and transitioned the Shah's power to the Islamic Republic, led by Ayatollah Ruhollah Khomeini. Loyalty to the resulting theocracy was defined by

alignment to the [Supreme Leader's moral precepts](#).

The new leaders of Iran also established an intelligence and security organization, the Islamic Revolutionary Guard Corps ([IRGC](#)), “charged with defending the Islamic Republic against internal and external threats.” Currently, the IRGC is Iran’s premier security organization and possesses an army, navy, and air force, and manages “Iran’s ballistic missile arsenal and irregular warfare operations through its elite Quds Force and proxies such as Hezbollah.”

The IRGC has a vast [domestic information security](#) and monitoring mandate, as well as [broad foreign mission](#), and has been linked to cyberattacks against Western institutions since at least 2011.

According to Insikt Group’s source, during the 2009 Green Revolution, Gerdab.ir emerged as the IRGC’s domestic hacking group tasked with targeting opposition news websites and individuals considered immoral by the regime. Iranian hackers targeting Iranian government resources (one example was defacing Khamaneh.ir) were identified by Gerdab and imprisoned. Gerdab continues to act as the Iranian government’s internal censor.

Following the Green Revolution, the Iranian government considered adding a formal offensive cyber component to its existing intelligence apparatus, and was forced to address a personnel problem. Iran needed a talented, but politically and religiously reliable workforce. [Stuxnet](#) and [scientist assassinations](#) reminded Iran of the efficacy of Mossad and CIA programs, and according to Insikt Group’s source, fervent religious ideology was the only way to demonstrate loyalty and build trust. The emergence of the [Iranian Cyber Army \(ICA\)](#) as an extension of the IRGC was an initial attempt by the Islamic Republic at conducting internationally focused operations. These operations were a departure from Gerdab’s focus on maintaining domestic moral values and defending government rhetoric. In 2011, the IRGC’s ICA formed the foundation of the Khaybar Center for Information Technology. According to a [former IRGC cyber commander](#), the Khaybar Center was established in 2011 and has been linked to a number of attacks against the United States, Saudi Arabia, and Turkey.

Even today, the balance between ideology and cyber skills remains problematic. One example of the conflict between ideology and skill was Mohammad Hussein Tajik, a [former cyber commander](#) within the IRGC. According to Insikt Group’s source, Tajik’s father maintained a strong religious background and was a veteran of Iran’s ministry of intelligence. Yet Tajik was [arrested and killed](#) because the Iranian government feared that Tajik was not ideologically aligned and posed a betrayal and flight risk.

Following the [Green Revolution](#), Iran’s government needed to [quickly](#) improve its cyber capabilities, but according to Insikt Group’s source, the talent was primarily young and focused on financial benefits. This motivation bred government mistrust, as the Islamic Republic feared that the financially motivated could be bought by foreign intelligence services. Additionally, many of the original Iranian hackers responsible for mass defacements hated authority and lacked the discipline necessary for government work.

According to Insikt Group’s source, the government answer was a tiered approach, with a network of people unofficially associated with the IRGC and Iranian government — a type of ideologically aligned middle management — that were loyal to the regime and demonstrated sufficient religious commitment.

This middle tier translated intelligence priorities into segmented cyber tasks which were then bid out to multiple contractors. Sometimes the contractors would compete with each other, sometimes they would work together, but payment was only made once the objective was completed. The result was (and presently remains) a quasi-capitalistic system that pitted contractors against each other for influence with the Iranian government.

In the Islamic Republic, influence can lead to security and wealth, but it can also lead to a false sense of security (no one is above being imprisoned and questioned at any given time). Thus, contractors must learn to play the game — enough surface-level adherence to the regime’s ideology — to gain temporary reprieves from suspicion long enough to be given contracted work. To the Iranian government, ideology is more important than skills. Deep belief in the Ayatollah’s precepts and the government’s goals helps to

avoid defections and traitors.

Today, based on ongoing contact between Insikt Group's source and Iranian hackers, it is estimated that there are over 50 organizations vying for government-sponsored offensive cyber projects. Only the best teams succeed, are paid, and remain in business. The government does its best to compartmentalize — one job might be creating a remote code exploit (RCE) for a popular software application, while another job might be using the RCE and establishing persistent unauthorized access. Two different contractors (or more) are typically required to complete the government-defined objective.

Public knowledge has also established that Iranian academic institutions play a contractor-like role. Specific examples include [Shahid Beheshti University \(SBU\)](#) and the [Imam Hossein University \(IHU\)](#), which have comprehensive science and technology departments attracting some of the best academic talent in Iran. In fact, the [SBU](#) has a specific [cyberspace research institute](#) dedicated to such matters. The [IHU](#) has strong ties to the Iranian government; it was [founded by the IRGC](#) and was extensively reported as being responsible for conducting [attacks in 2014 and 2015](#).

As the Mabna Institute [indictments](#) highlight, despite the lifting of sanctions and an appetite to re-engage with the international community, Iran has continued a subversive and aggressive global cyber operations campaign. This ongoing campaign, which targets universities for scientific and technological intellectual property theft, demonstrates a fundamental lack of trust in the international agreements, including the [Joint Comprehensive Plan of Action \(JCPOA\)](#).

#### **Relationship Between the Iranian Government, Contractors, and Security Forums**

[Clearsky](#), [FireEye](#), [Symantec](#), and [PhishLabs](#) have all performed significant research on Iranian nation-state-sponsored campaigns that provide historical insight into technical capabilities and relationships between the Iranian government and contractors.

The work of the aforementioned security companies and recent [U.S. Department of Justice indictments](#) provides consistent evidence that Iranian government-sponsored offensive campaigns are executed by contractors.

[FireEye](#) disclosed that the Nasr Institute was an APT 33 contractor in an operation that used publicly available backdoors and remote access trojans. The handle "[xman\\_1365\\_x](#)" (self-identified on security forums as Mahdi Honarvar) was found by FireEye in malware artifacts, which [open sources](#) linked to the Nasr Institute. Previously, Nasr Institute had been [associated](#) with Operation Ababil's distributed denial-of-service attacks against American banks, an organization which a U.S. Department of Justice [indictment](#) confirms had been hired to build attack infrastructure by the Iranian government.

The actor [xman\\_1365\\_x](#) was then [linked](#) to a security company called Kavosh Security via OSINT by Iran Cyber News Agency. The actor was linked to a destructive operation, which used [NewsBeef](#) and [StoneDrill](#) malware families. According to [Kaspersky](#), the latter data wiping operation targeted sectors across Saudi Arabia and Europe.

Command and control (C2) domains used by StoneDrill and NewsBeef in Kaspersky's findings were found to share an SSL certificate, which surfaced an additional three domains in [research](#) by the Iran Cyber News Agency. WHOIS information was then connected via open sources to Imam Hossein University (IHU). IHU was named in sanctions [by the U.S. Treasury](#) "for providing, or attempting to provide technological, or other support for and services in support of the IRGC."

Additional publicly known Iranian contractors include [ITSecTeam \(ITSEC\)](#) and [Mersad Company](#), also linked to Operation Ababil.

The links between the Iranian government and contractors are well documented; however, the identity of specific groups and individuals within the Iranian government and IRGC responsible for offensive cyber campaigns is murky, as is the relationship between contractors and security forums.

Yet, our research and analysis suggest that Iranian security forums may play a role in staffing and knowledge sharing for Iranian contractors. First, FireEye referenced the publicly available ALFA TEaM Shell in [APT33 spear phishing email campaigns](#). The ALFA Shell is discussed in multiple web locations, including Ashiyane and Iranian Dark Coders Team Forum.

Second, xman\_1365\_x created an [Ashiyane profile](#) on August 8, 2010, allegedly not long after Ashiyane temporarily became the primary security forum in Iran, following Behrooz Kamalian's ([Intel Card](#)) visit to prominent cleric, Ayatollah Naser Makarem Shirazi.

Finally, according to Insikt Group's source, Iranian contractor ITSEC specifically employed hackers from the respective online forums Simorgh and Delta Security. Further, [Hossein Asgari, a self-proclaimed Iranian hacker](#), managed the Simorgh forum and worked with his father, who was employed by the IRGC.

According to Insikt Group's source, to find and retain the best offensive cyber talent, Iranian government contractors are forced to mine closed-trust communities. The links between the forums and contractors may illustrate that the trust communities begin with the Iranian security forums.

HEADLINE	05/18 Cyberattacks on supply chains rising
SOURCE	<a href="https://www.supplychaindigital.com/scm/cyber-attacks-supply-chains-significantly-2017">https://www.supplychaindigital.com/scm/cyber-attacks-supply-chains-significantly-2017</a>
GIST	<p>2017 saw a worrying increase in ransomware and other cyberattacks targeting the supply chain, with the business and professional services sector receiving a significant increase of attacks, particularly in the EMEA region, which saw 20% of all attacks targeting this sector.</p> <p>This is according to Dimension Data that today published its Executive Guide to the NTT Security 2018 Global Threat Intelligence Report.</p> <p>The businesses and professional services sector received 10% of global ransomware attacks, the third most targeted industry (up from sixth position in 2016), behind finance and technology. It also ranked third in the Americas (9%) and was the most vulnerable sector in EMEA, receiving 20% of all attacks.</p> <p>As ransomware-related outsourced incident response engagements against financial institutions declined (a drop from 22% in 2016 to 5% last year), the business and professional services supply chain has clearly become a prime target for trade secrets and intellectual property theft, potentially exposing customer and business partner data.</p> <p>Despite the drop in outsourced incident response engagements, the finance sector remains the number one target for cyber criminals who carry out regular reconnaissance to spot potential infrastructure and application vulnerabilities.</p> <p>Mark Thomas, Dimension Data's Group CTO for Cybersecurity said, "There are numerous moving parts to supply chains and outsourcing companies, which often run on disparate and out-dated network infrastructures, making them easy prey to cyber threat actors.</p> <p>"Service providers and outsourcers are also a prime target, due to their trade secrets and intellectual property. Businesses need to wise-up to the very real threats against them and ensure all aspects of their operations are robustly and securely protected."</p> <p>Technology was the second most cyber-attacked industry in 2017, with a 19% attack volume, with business and professional services moving to third place. Interestingly, attacks on the government sector last year dropped to 5% from 9% in 2016.</p> <p>In 2017, there was a massive 350% rise in ransomware, representing 7% of all global malware attacks (up from 1% in 2016), and is set to continue due to the popularity of cyber adversary campaigns.</p>

<b>HEADLINE</b>	<b>05/18 Railway systems as next big target?</b>
<b>SOURCE</b>	<a href="http://www.businessinsider.com/cyber-attacks-targeting-railway-systems-next-2018-5?r=UK&amp;IR=T">http://www.businessinsider.com/cyber-attacks-targeting-railway-systems-next-2018-5?r=UK&amp;IR=T</a>
<b>GIST</b>	<p>In early May of last year, the world was rocked by the WannaCry cyber attack, which affected more than 200,000 victims and spread to over 150 countries. Computers had essentially been taken hostage by ransomware, and users were asked to pay up in the form of bitcoin.</p> <p>Law enforcement agencies, health services, telecommunication networks, universities, businesses, and railway systems were all affected by the attack. Estimates of the total damage ranged from hundreds of millions to billions of dollars.</p> <p>While a fluke in the coding allowed the attack to be stopped in a matter of days, the ordeal was a prescient reminder that cyber attacks don't merely stay in the virtual world — they can have real, and potentially devastating consequences in the physical world.</p> <p>Particularly when hackers begin targeting vital systems.</p> <p>"The next kind of attacks we will see will target critical infrastructure in the form of electrical networks, water companies, and other transportation systems," Amir Levintal, former director of the Israel Defense Forces' cyber research and development unit and CEO of cybersecurity firm Cylus, told Business Insider.</p> <p>But railway networks are particularly at risk because rail companies often operate with modern technological components but archaic physical components. That disconnect, Levintal said, leaves their systems vulnerable to hacking.</p> <p>Modern command centers use wireless connections to control activities, like monitoring train speeds or regulating traffic signals. It's these types of wireless signals can expose a network's vulnerabilities and leave the infrastructure wide open for attack.</p> <p>"Some train networks use Wi-Fi connections to control critical components of the train, like brakes and doors. Attackers can find ways to access the wireless network to send commands to those components and change the behavior of the train," Levintal said.</p> <p>"Once attackers succeed in breaching a network to gather information, they can attack the physical elements of the network," he said.</p> <p>Hackers, Levintal said, "might change the controls on the train or could even access commands in order to derail the train. These kinds of attacks are probable, and once a system is breached it's just a matter of deciding what commands a malicious actor wants to send."</p> <p>The scenario isn't that far-fetched. In the WannaCry attacks, Germany's rail network, Deutsche Bahn, was incapacitated by its ticketing and information systems going down.</p> <p>Yet hackers don't need to rely on obvious flaws within a major railway system.</p> <p>"Attackers can find one company that is not secure, access its tools and software, and find similarities in other components in other countries and companies, allowing them to attack more 'secure' companies," Levintal said.</p> <p>The key to preventing future attacks, Levintal said, is protecting the physical components.</p> <p>"We must converge old and new technologies and close a complicated security gap," Levintal said.</p>

	"We can no longer think that attacks like these won't happen in the future. Rail networks are huge, complex and connected. It's easier than ever to find ways to get into the systems."

<b>HEADLINE</b>	<b>05/17 Election attack smokescreen for hack</b>
<b>SOURCE</b>	<a href="https://www.knoxnews.com/story/news/local/2018/05/17/knox-county-election-cyberattack-smokescreen-another-attack/620921002/">https://www.knoxnews.com/story/news/local/2018/05/17/knox-county-election-cyberattack-smokescreen-another-attack/620921002/</a>
<b>GIST</b>	<p>Knox County IT director Dick Moran and county IT staff were ready for Election Day and the higher amounts of traffic that would undoubtedly come to the county election commission website with former WWE wrestler, Glenn Jacobs, on the Republican ballot.</p> <p>At 7:50 p.m. Moran instructed the website be checked to make sure the early voting results could be posted when the polls closed 10 minutes later. Everything checked out. Everything was working.</p> <p>Seven minutes after his request, Knox County's election commission website was attacked and the results, although not impacted by the attack, wouldn't be displayed until nearly 9 p.m., sowing more chaos into an already energetic and unpredictable night.</p> <p>All of the disruption, it has been determined since, was an effort to distract the county while another, simultaneous attack was happening behind the scenes accessing county information, according to Moran and Deputy IT Director David Ball.</p> <p><b>A smokescreen</b> The original and much less hidden cyberattack, a distributed-denial-of-service attack, was an attempt to overload the county server's capacity with high internet traffic. It worked.</p> <p>The internet protocol addresses - unique numbers that identify individual web portals - tied to the cyberattack spanned every continent but Antarctica, 65 countries in all.</p> <p>The attack worked by tying up space in the server. A request came to the server, the server accepted it and sent a message back to the requester. By this time, the request had ended and another request had been made from a different IP address, but the server was still waiting on a response from the original request.</p> <p>"That's one way these DDOS attacks work," Ball said. "You tie up all of the available connections within the web server with something that will make it time out ... we were seeing them in the thousands and thousands.</p> <p>"The (hackers) don't want everything knocked down to where they can't get in," he said. "They just want to have something that ties you up."</p> <p>All of this was enough to shut down the site.</p> <p>Screens in the Knox County Republican Party's suite at the downtown Crowne Plaza hotel showed nothing but the message, "Service Unavailable."</p> <p>Elections results, however, were not affected.</p> <p>Election officials gather data at each polling station and hand-carry the memory cards from voting machines to the election commission to be totaled on computers that can't access the Internet.</p> <p><b>Elaborate hack</b> By Wednesday, Sword &amp; Shield Enterprise Security, a Knox County-based IT security firm, was busy dissecting the attack. The firm charges \$250 an hour and within a day had a good grasp on what had happened.</p>

It wasn't until the following Monday, May 7, six days after the attack, that Sword and Shield became aware of the other attack, Ball said.

"It took (Sword & Shield) until Monday to find this because you only had four or five malicious things going on between millions of kinds of errors."

The attackers had hacked into a county server and looked around. No personal or confidential information was in the server, only publicly available information like court dockets, Moran said.

"It was not an attempt to actually change any data or put anything onto our servers; it was an attempt to take things off of our servers, to read what was there ... they were looking to get things, not give things," Ball said.

Ball said the original DDOS attack wasn't overly impressive, the county has had DDOS attacks before. The background attack, however, was more sophisticated, he said.

Once Sword and Shield found the other attack, they performed, with the county's permission, a similar attack to see if they could replicate it. They, too, were successful.

"They (did it) and brought us right to our knees (even) with all of the resources we had," Moran said.

With that, Sword and Shield knew what happened and how it happened and the two worked to patch up the county's system to prevent another breach.

Moran said the hole has been plugged.

What's next?

Law enforcement officials from the Department of Homeland Security and the FBI, both the Knoxville regional office and the headquarters in Washington, D.C., are investigating the attack.

<b>HEADLINE</b>	<b>05/17 Cutting thru Privacy Policy gibberish</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/privacy-policies-flooding-your-inbox-how-to-cut-through-the-gibberish-1526565342">https://www.wsj.com/articles/privacy-policies-flooding-your-inbox-how-to-cut-through-the-gibberish-1526565342</a>
<b>GIST</b>	<p><i>This policy applies to all operations of the Service. Our lawyers said so. We may refer to the Company as "we," "us," or "our"... because companies have feelings, too. Thereto whilst we hope you are discouraged from reading this legalese, henceforth you expressly consent to the collection, use, and disclosure of all your personal information, defined as that which defines you.</i></p> <p>If you've ever read a privacy policy (you probably haven't), it has required a law degree and the focus of an anesthesiologist. But that's changing—well, sort of.</p> <p>On May 25, the European Union's General Data Protection Regulation (GDPR) goes into effect. As a result, companies are updating their data security and privacy rules—often even outside of Europe. Hence the emails you've been getting from every app, service or operating system you've ever used.</p> <p>In addition to requiring that companies provide greater data controls and transparency, GDPR requires those privacy policies be "concise, easily accessible and easy to understand." They also need to be written in "clear and plain language." (Ironically, that's found on page 11 of the 88-page official document.)</p> <p>I rounded up 35 privacy policies for the services, apps and operating systems I use on a fairly regular basis. The ones revised to meet the GDPR requirements are, in fact, written in a language humans can understand. But they're longer. Much longer.</p>

Take Twitter . The old version was around 3,800 words. It's now around 8,890. (By comparison, this column is typically around 1,000 words.)

So... Many... Words...

Companies that sell targeted ads are rewriting privacy policies to be clearer—but not shorter.

Why longer? GDPR requires companies to detail more about where your data is going. If a service is ad-supported, your data is going lots o' places. Turns out, explaining these often-shady practices isn't easy.

Are you really going to read policies that stretch the length of a football field? (Seriously, 35 printed policies can score a touchdown—just watch the video.) No, but you can't continue to be blind to what these companies are doing and keep clicking "accept," either.

So here's the trade: Read my next 500-or-so words now on how to quickly dissect a privacy policy, and save yourself from reading millions of words in the future. I'll even show you how to get out of some unnecessarily intrusive stuff without quitting the service altogether.

Learn the outline

Privacy policies tend to have a formula:

Part 1: Company tells you what data is collected. This tends to be info you give them, info they collect when you use the service and info from third parties. Facebook even collects "mouse movements."

Part 2: Company tells you why it needs that data and which other companies may get to access it. Snapchat, for instance, says it will "provide you with an amazing set of products and services that we relentlessly improve." (Apparently, GDPR doesn't require humility.)

Part 3: Company tells you what controls—if any—are in place to limit abuse of the data. As LinkedIn helpfully reminds us, "we offer you choices regarding personalized ads, but you cannot opt-out of seeing other ads."

It has become so boilerplate that robots can read it for you. A tool called Polisis, from data scientists at Switzerland's Federal Institute of Technology and others, uses machine learning to read the policy and organize what it says into a graphic flow chart, all in under a minute. Hover over different areas to see the original text from the policy in context. I urge you to try it, at least for the big ones like Facebook and Google.

You should also open the policies themselves and skim the headlines. Many of the revised policies have bold summaries—some even have videos. Welcome to 2010!

Search the terms

The stuff you'll really want to know is hiding in the crowds of sentences and is just a Ctrl + F away from possibly freaking you out. Experts suggest searching the mass of text for the following keywords:

"Third parties." How is your data shared with outside developers and marketers? What data is acquired by third parties? About 900 words in, Facebook reveals that it receives "information about your online and offline actions and purchases from third-party data providers."

"Retain" or "store." How long is your data retained or stored by the company, and why? Turns out Google keeps most of your stuff for a very long time. But don't worry, there's a cheery video explaining how and why—and that section also tells you how to delete a lot of it.

"Children." Most policies confirm that 13 is the age when children can set up their own accounts, but some policies, often from games, make exceptions and give parents more controls.

	<p>“Delete.” Can you delete your data and/or take it with you? GDPR’s “the right to be forgotten” regulation requires this to be an option to those in the EU.</p> <p>Adjust the settings Maybe you like so-called interest-based ads—search for nail salon, nail-clipper ad pops up—but maybe you’d change your mind if you realized how much of your information is required to power them.</p> <p>Either way, it’s important to have control over what the company gets to use, so do yourself a favor and search “settings” or “opt-out.”</p> <p>I was quickly able to activate a bunch of new advertising controls LinkedIn has put in place. A number of apps that use Google’s advertising platform, including Sonos and Runkeeper, provide links to opt out of the search giant’s massive web-tracking program. Facebook and Instagram vaguely refer to their settings, but don’t tell you how to locate specific controls. It’s like simply directing someone to a cockpit to fly a plane.</p> <p>The real utility of these policies should be to allow us to pull the levers on the data we do or don’t want to share.</p> <p>As we await more and better controls, here’s the TL;DR (too long; didn’t read) version: Read the headlines and search the keywords.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>05/17 Bitcoin wannabes w/hallmarks of fraud</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/buyer-beware-hundreds-of-bitcoin-wannabes-show-hallmarks-of-fraud-1526573115">https://www.wsj.com/articles/buyer-beware-hundreds-of-bitcoin-wannabes-show-hallmarks-of-fraud-1526573115</a>
<b>GIST</b>	<p>Hundreds of technology firms raising money in the fevered market for cryptocurrencies are using deceptive or even fraudulent tactics to lure investors.</p> <p>In a review of documents produced for 1,450 digital coin offerings, The Wall Street Journal has found 271 with red flags that include plagiarized investor documents, promises of guaranteed returns and missing or fake executive teams.</p> <p>“Jeremy Boker” is listed as a co-founder of Denaro, an online-payment project. In investor documents for a public offering in March, which claimed to have raised \$8.3 million, Mr. Boker boasted of his cryptocurrency startup’s “powerhouse” team. In his biography, he noted a “respectable history of happy clients” in consulting before he launched Denaro.</p> <p>In fact, Mr. Boker’s bio image was a stock photo, there is no evidence he exists and the rest of his team appears to be fictional, except for two freelancers who said they were paid by people unknown to them to market the project, the Journal found.</p> <p>The principals behind Denaro couldn’t be identified and attempts to reach the company went unanswered. The real person whose image was repurposed as Mr. Boker’s turns out to be Jenish Mirani, a banker in Poland. Mr. Mirani, who had posted the photo on his personal website, said “it was really shocking” to find out about its afterlife.</p> <p>Investors have poured more than \$1 billion into the 271 coin offerings where the Journal identified red flags, according to a review of company statements and online transaction records—nearly one in five of those reviewed. Some of the firms are still raising funds, while others have shut down. Investors have so far claimed losses of up to \$273 million in these projects, according to lawsuits and regulatory actions.</p> <p>Companies use coin offerings to raise funds by selling their own digital currency. Led by the bitcoin fever,</p>

the 1,450 projects analyzed by the Journal—a number believed to encompass most of those aimed at an English-speaking audience since 2014—say they have raised at least \$5 billion. Since 2017, cryptocurrency offerings have generated more than \$9 billion in proceeds globally, according to research and data firm Satis Group.

Recently, the Securities and Exchange Commission issued warnings to investors that many deals in the booming private market for cryptocurrencies could be violating securities laws, and on Wednesday launched a website touting a fake coin offering as an example of what to avoid.

Since December the agency has filed civil charges against companies and individuals in four separate cases involving initial coin offerings, known as ICOs. At least a dozen companies put their offerings on hold after the agency raised questions, an SEC official said in February.

At the heart of most coin offerings is a company’s “white paper,” a document that typically details mission statements, team biographies and the technical specifics of a project.

Of the 1,450 white papers downloaded from three popular websites that track coin offerings, the Journal found 111 that repeated entire sections word-for-word from other white papers. The copied language included descriptions of marketing plans, security issues and even distinct technical features such as how other programmers can interact with their database.

At least 121 of the projects didn’t disclose the name of a single employee and several of them listed team members who either didn’t appear to exist, as with Denaro, or were real people who said their identities were being used without their knowledge.

The Journal also identified more than two dozen companies that promised investors financial rewards without any risk—something the SEC prohibits. These white papers went as far as pledging weekly payouts or doubled returns. The SEC has recently taken action against ICOs making such guarantees, including PlexCorps, which raised as much as \$15 million by promising a 1,354% profit in less than a month. In December, the agency obtained a court order freezing the company’s assets.

PlexCorps didn’t respond to emails seeking comment. On April 23, somebody posted a statement on the company’s Facebook page saying that “the PlexCoin project is not dead, it is simply on hold because some court orders prevent us from continuing the development of the project for the moment.”

Interest in bitcoin and other cryptocurrencies exploded as a frenzied rally pushed coin prices to all-time highs late last year. Now reality has set in for many in the industry as regulators step up their scrutiny and issue warnings to investors about fraud in the lightly policed market.

Unlike public offerings, ICOs generally happen outside the strict framework of regulation and don’t require filing much official paperwork, if any. That leaves it to investors to do a lot of the detective work about what’s real and what’s not.

Copied language, the absence of named employees and promised high returns are “warning signs for investors,” said Bradley Bennett, a former enforcement chief at the Financial Industry Regulatory Authority.

“There are going to be some legitimate players that emerge from this but it’s going to be a handful—a lot of it looks like penny-stock fraud with lower barriers to entry,” Mr. Bennett, now a partner at law firm Baker Botts LLP, said of the broader coin market.

To feed the growing market, ranks of freelancers have sprouted up to write white papers for as little as \$100.

At least five projects filled out their white papers or websites with executive images pulled directly from online stock photography or other sites, the Journal found.

Among the most extreme was investment startup Premium Trade. The images for its five-member executive team were simultaneously being used on nearly 500 unrelated websites: Premium's co-founder Andrew Ravitsky was also "Dr. John Watsan," in an online cardiology course.

Premium Trade didn't respond to several requests for comment and Messrs. Ravitsky and Watsan weren't reachable, if in fact they exist.

LoopX, which began soliciting money last year, vowed to build "the most advanced" trading platform in the cryptocurrency market. The company didn't name any team members or detail how the platform would be built. Its white paper featured several key entries identical to another coin project's.

"Along this journey, we found great partners and mentors who were strongly committed and excited to work with the ever-progressing vision of LoopX," the company wrote in one of several passages identical to those in an earlier online payment startup called UTrust.

After claiming to raise \$4.5 million, LoopX disappeared from the internet in early February. Its website is now down and its Twitter account features a single message linking to a news article alleging the founder or founders ran off with the money. LoopX couldn't be reached for comment.

When contacted by the Journal, Swiss-based UTrust's CEO, Nuno Correia, said he was aware his white paper had been plagiarized but didn't think there was anything to be done about it.

"We get a lot copies of our white paper," Mr. Correia said. "My picture, my description, my team, even our website was copied."

Seven other coin offerings also featured passages that appeared earlier in UTrust's white paper.

Along with Mr. Correia's biography, the Journal found lawyers in California, an escrow agent based in Ukraine and the co-owner of a media company whose identities had been hijacked in order to lend credibility to a range of cryptocurrency projects involving education, e-commerce and crypto mining.

"I'm a little creeped out by the whole thing," said Amanda Gavin, co-owner of a media production company in San Francisco, whose image and name were taken from her LinkedIn page and used for a coin offering she had never heard of called Pixiu.

Pixiu didn't respond to several requests for comment via email and social media.

At least four coin promoters have been sued by investors seeking to start class-action cases. During its 2017 offering, Paragon Coin raised more than \$70 million, according to a lawsuit filed in a California federal court alleging the business was an "overly ambitious, vague, and impractical" venture to raise funds to purchase real estate.

Paragon, founded by a Russian internet entrepreneur named Egor Lavrov and his wife, Jessica VerSteeg, promises to "connect the cannabis industry through the blockchain," according to the company's white paper. This July, the company plans to open a co-working space in Los Angeles paid for "exclusively in cryptocurrency," according to the company's website.

"Paragon is dedicated to staying compliant with all applicable laws, and endeavored to do so throughout the entire ICO process," said Ms. VerSteeg, who was the 2014 Miss Iowa United States and is currently Paragon's chief executive, in a statement provided by the company. "Paragon holds itself to a high standard of compliance with our token holders and will continue to do so as it moves forward." Mr. Lavrov couldn't be reached.

After the coin offering for Denaro closed in March, the entity's website went dark and investors are now alleging on social media that the founders ran off with millions.

Daniel Armstrong, who said he worked for Denaro as a freelancer through February, proofreading company literature, now believes the startup was run by Lithuanians, based on evidence he saw from payment details, documents he edited and a message posted to Slack by one of the founders written in another language.

"I did some marketing text for them," Mr. Armstrong said. "When they sent it to me it was terrible and written by a non-native writer."

Denaro didn't die entirely. An offering for a new payment system recently emerged called Pluto Coin with a similar website and an identical white paper. Half of the Denaro team members had also been recycled for Pluto Coin, including an image of Mr. Boker, which appears in coding for the website but isn't visible to casual viewers. He has been renamed "Ivan Denver."

So far, Pluto Coin claims on its website to have collected at least \$10 million from investors. It couldn't be reached for comment.

HEADLINE	05/17 Experts: US lacks policy deter cybercrime
SOURCE	<a href="https://www.infosecurity-magazine.com/news/us-lacks-policy-to-deter-cyber/">https://www.infosecurity-magazine.com/news/us-lacks-policy-to-deter-cyber/</a>
GIST	<p>Key stakeholders in government and private industry experts gathered today in Washington D.C. to talk with Bloomberg News investigative reporter, Michael Riley about The Future of Cybersecurity: Risk and Resilience Across Critical Infrastructure.</p> <p>The discussion was also streamed live and included a panel of four cybersecurity experts who weighed in on the government's role in protecting private industry from cyber-attacks. Alarmingly, most of the discussion confirmed a high level of distrust for the government. Members of the private sector don't feel the government would protect them if they were attacked.</p> <p>Scott Goodhart, VP and CISO, AES Corporation said that much can be done to improve information sharing, particularly since most of the intelligence that is collected is information that people wouldn't understand. "I need indicators of compromise in order to take action," Goodhart said.</p> <p>"In our sector, we are strong with sharing information with each other. There's a level of trust there," Goodhart said. However, in a regulated industry, sharing is less frequent because people don't want regulators on their backs.</p> <p>The problem, said renowned cybersecurity expert, Niloofar Razi Howe, is that there is an authority and capability mismatch. "The Department of Homeland Security (DHS) has the authority, but the Department of Defense (DOD) and the National Security Agency (NSA) have the capability. That creates issues with communicating in real time."</p> <p>Lack of a coordinator, clarity, policy and strategy contribute to this fissure between the public and private sectors, especially when it comes to things that only a government can do.</p> <p>"Deterrence policy is unique to the government," said Razi Howe. Short of policies that deter any type of cyber malfeasance, organizations can't protect themselves. Not only is the US without deterrence policies, but panel members agreed there is no real comprehensive conversation about what the current administration is doing in its cybersecurity strategy.</p> <p>Daniel Ennis, head of threat intelligence, BlueVoyant, though, does have trust that the government is doing something. "There is a great deal of planning and activity that occurs that is not transparent to people in the public. I don't want folks to think that the government is not trying to deter," Ennis said.</p>

	Still, there is confusion about who is in charge, and the elimination of the cybersecurity coordinator position did little to clarify that confusion. Ennis did say that the "divisiveness downtown is not helping. Now we have to come together and collaborate. We need to enjoin to form a centralized management and engage the public in a way that they understand the threat."

<b>HEADLINE</b>	<b>05/17 UK: reported data security incidents spike</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/data-security-incidents-spike/">https://www.infosecurity-magazine.com/news/data-security-incidents-spike/</a>
<b>GIST</b>	<p>The number of data security incidents reported to the UK's Information Commissioner's Office (ICO) jumped 17% between the final three months of 2017 and the first quarter of 2018, according to new figures.</p> <p>In its last update before the EU GDPR takes effect, the privacy watchdog revealed a rise in incident reports from 815 to 957. Although cybersecurity-related incidents increased by 31% from the previous quarter, the first month-on-month increase since Q4 2016-17, human error dominated.</p> <p>In fact, over the 2017-18 financial year, 3325 reports were filed with the ICO, with the number one breach type "data emailed to incorrect recipient," (13%) followed closely behind by "data faxed to wrong recipient" (13%). Also high was "loss or theft of paperwork" (13%).</p> <p>The healthcare sector accounted for by far the largest volume of reports (37%), although this figure is likely to be a result of mandatory reporting rules. After health came "general business" (11%), education (11%) and local government (10%).</p> <p>Nominet CTO, Simon McCalla, argued that the rise in reported incidents may be the result of companies becoming more cautious ahead of the GDPR</p> <p>"Interestingly, there are far more incidents caused by human error than there are external cyber-threats, suggesting that a lot more work needs to be done on training employees," he added.</p>

<b>HEADLINE</b>	<b>05/17 DNS attack costs soar 105% in UK</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/dns-attack-costs-soar-105-in-uk/">https://www.infosecurity-magazine.com/news/dns-attack-costs-soar-105-in-uk/</a>
<b>GIST</b>	<p>UK businesses suffered the highest increase globally in costs associated with DNS attacks, with a fifth suffering the loss of sensitive data, according to the latest figures from EfficientIP.</p> <p>The DNS security firms polled 1000 senior technology and security decision makers around the globe from January to April 2018 to compile its 2018 Global DNS Threat Report.</p> <p>It revealed that 77% of organizations were hit by a DNS attack in 2018, with the average firm suffering seven attacks.</p> <p>DNS attacks come in various flavors, but usually involve denial of service, infecting DNS infrastructure with malware designed to take the user to malicious sites, or exfiltrating data via DNS tunneling techniques.</p> <p>EfficientIP found DNS-based malware and phishing (36%) were the most popular attacks, followed by DDoS (20%) and similar lock-up domain attacks (20%), and DNS tunneling (20%).</p> <p>The report clearly shows the potentially major impact DNS attacks can have on organizations: 40% of respondents claimed they suffered cloud outages, one-third (33%) were victims of data theft and 22% suffered lost business.</p>

	<p>In the UK, 20% lost sensitive data, 15% had IP stolen, and 21% lost customers, according to EfficientIP.</p> <p>The global average cost per DNS attack increased by 57% year-on-year, but in the UK the figure soared 105%, with firms paying nearly \$4m annually.</p> <p>An EfficientIP spokesman told Infosecurity that London's position as a financial center may have led to the surge in attack costs.</p>

<b>HEADLINE</b>	<b>05/17 Dept. Energy unveils cybersecurity plan</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/us-energy-department-unveils-multiyear-cybersecurity-plan">https://www.securityweek.com/us-energy-department-unveils-multiyear-cybersecurity-plan</a>
<b>GIST</b>	<p>The U.S. Department of Energy this week announced its strategy to reduce cyber risks in the energy sector and outlined its goals, objectives and activities for the next five years.</p> <p>With the energy sector increasingly targeted by threat actors, the Energy Department is concerned that attackers may be able to cause a large and prolonged energy disruption. In an effort to improve the cybersecurity and resilience of energy services, the agency has created the DOE Multiyear Plan for Energy Sector Cybersecurity, which is meant to provide a foundation for the recently launched Office of Cybersecurity, Energy Security, and Emergency Response (CESER). US Energy Department announces multiyear plan for cybersecurity in the energy sector</p> <p>The plan focuses on three main goals: strengthening cybersecurity preparedness, coordinating incident response and recovery, and accelerating research, development and demonstration (RD&amp;D) for resilient energy delivery systems (EDS).</p> <p>When it comes to strengthening preparedness, the DOE's objectives include enhancing information sharing and situational awareness capabilities, strengthening risk management capabilities, reducing supply chain vulnerabilities, and developing and improving information sharing tools. This last objective includes the development of a virtual crowdsourced malware forensic analysis platform.</p> <p>As for incident response and recovery, the Energy Department wants to establish a coordinated national incident response capability, conduct training for emergency responders and improve the incident reporting process, and conduct exercises.</p> <p>The DOE's third goal is to accelerate "game-changing RD&amp;D" of resilient EDS, including for detecting, preventing and mitigating cyber incidents. The organization also wants tools and technologies that can anticipate future attack scenarios, and the development of systems and components that are cybersecurity-aware and capable of automatically handling cyberattacks.</p> <p>"The DOE will be updating the Cybersecurity Capability Maturity Model (C2M2). The market has changed since it was published in February 2014," commented Michael Magrath, director of global regulations &amp; standards at VASCO Data Security. "We anticipate DOE will incorporate NIST's Digital Identity Guidelines (SP 800-63-3), refreshed in 2017 and advance risk-based, biometric adaptive authentication technologies to protect the nation's energy sector."</p>
<a href="#">Return to Top</a>	<p>Click on link to download PDF: DOE Multiyear Plan for Energy Sector Cybersecurity</p> <p><a href="https://www.energy.gov/sites/prod/files/2018/05/f51/DOE%20Multiyear%20Plan%20for%20Energy%20Sector%20Cybersecurity%20_0.pdf">https://www.energy.gov/sites/prod/files/2018/05/f51/DOE%20Multiyear%20Plan%20for%20Energy%20Sector%20Cybersecurity%20_0.pdf</a></p>

<b>HEADLINE</b>	<b>05/17 'Wicked' variant Mirai botnet emerges</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/wicked-variant-mirai-botnet-emerges">https://www.securityweek.com/wicked-variant-mirai-botnet-emerges</a>
<b>GIST</b>	A new variant of the Mirai Internet of Things (IoT) botnet has emerged, which features new exploits in its arsenal and distributing a new bot, Fortinet researchers warn.

Called Wicked, based on strings found in the code, the malware has added three new exploits compared to Mirai and appears to be the work of the same developer behind other Mirai variants.

The Mirai botnet was first spotted in the third quarter of 2016, when it fueled some of the largest distributed denial of service (DDoS) attacks at the time. The malware's source code was leaked online in October 2016, and numerous variants have been observed ever since: Masuta, Satori, Okiru, and others.

Similar to other botnets based on Mirai, the newly discovered Wicked iteration contains three main modules: Attack, Killer, and Scanner. Unlike Mirai, however, which used brute force to gain access to vulnerable IoT devices, Wicked uses known and available exploits, many of which are already old, the security researchers discovered.

Wicked would scan ports 8080, 8443, 80, and 81 by initiating a raw socket SYN connection to the target device. Upon establishing a connection, the malware attempts to exploit the device and upload a payload to it by writing the exploit strings to the socket.

The used exploit depends on the specific port that the connection was established to. On port 8080, the malware uses Netgear DGN1000 and DGN2200 v1 router exploits (also used by Reaper botnet), on port 81 it uses a CCTV-DVR Remote Code Execution exploit, on port 8443 a Netgear R7000 and R6400 Command Injection (CVE-2016-6277), and on port 80 an invoker shell in compromised web servers.

Wicked contains the string SoraLOADER, which initially suggested it might attempt to distribute the Sora botnet. Instead, the researchers discovered that the malware would actually connect to a malicious domain to download the Owari bot, a different Mirai variant.

Although the website was confirmed to have distributed Owari, the security researchers couldn't retrieve bot samples from the website directory. Furthermore, they discovered that the samples had been replaced by another malware family, the Omni bot.

<b>HEADLINE</b>	<b>05/17 Google: free DDoS protection services</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/google-offers-free-ddos-protection-services-in-the-name-of-free-democracy/article/766778/">https://www.scmagazine.com/google-offers-free-ddos-protection-services-in-the-name-of-free-democracy/article/766778/</a>
<b>GIST</b>	<p>Google has rolled out a free DDoS protection platform called Project Shield to protect news sites and free expression to defend the democratic process.</p> <p>The program is accepting applications from news organizations, election monitoring organizations, and individual journalists and some political organizations</p> <p>The service protects users from attackers using technology called a reverse proxy allows websites to route both legitimate and attack traffic through Google's infrastructure to ultimately filters harmful traffic by absorbing it through caching.</p> <p>Impact on individual site traffic can vary as website performance depends on several factors but Google said the service can be turned on or off as quickly as any other DNS change.</p> <p>“Some Project Shield users see better website performance because of Project Shield's caching features,” the company said in a blog describing the new service. Other users see slightly slower performance as traffic passes through Project Shield. ”</p> <p>The service may also affect how some videos display on a user's site however those served through YouTube won't be affected.</p>

Those concerned with privacy should know the program collects and stores user configuration settings and logs for traffic that is proxied through Project Shield but Google says said it only uses the site reader's IP address and other information to evaluate whether traffic is an attack and only retains aggregated metrics and details about specific attacks.

If a user deletes their site from the Project Shield dashboard, their information will also be deleted from Project Shield site configuration information and the project will no longer collect traffic data from the site.

User needs a google account to access the service and may not be notified in some attacks however will be alerted to larger-scale attack which any require active mitigation.

“Google's Project Shield should provide good protection,” Andrew Lloyd, President, Corero Network Security told SC Media. “What we tend to find is that shared cloud services are excellent for scrubbing the larger, prolonged DDoS attacks.

He added that irrespective of motivation, DDoS attacks are frequently the tool of choice for the cybercriminals looking to compromise a specific website and that the “DDoS for hire” market has made this criminal activity relatively straightforward, inexpensive and anonymous

Lloyd said it remains to be seen if Project Shield's protection can successfully detect and swiftly mitigate smaller attacks and that potential users should know that Google Shield is a “best efforts” free service without a service level agreement.

<b>HEADLINE</b>	<b>05/17 Get ready for 'WannaCry 2.0'</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/get-ready-for-wannacry-20-/d/d-id/1331834">http://www.darkreading.com/attacks-breaches/get-ready-for-wannacry-20-/d/d-id/1331834</a>
<b>GIST</b>	<p>They're still out there, pinging away for vulnerable Sever Message Block (SMB) services in order to find a way in. One year after the historic and massive WannaCry ransomware attack unleashed by nation-state hackers from North Korea, an unknown number of WannaCry-infected Windows machines in their zombie state around the globe continue to attack other devices.</p> <p>WannaCry marked the biggest ransomware attack ever, but it wasn't the first widespread worm infection, and experts say it won't be the last. Symantec blocked some 5.4 billion WannaCry attack attempts last year overall.</p> <p>Security experts say another worm-spreading mass attack akin to WannaCry is inevitable. It may not be a ransomware attack, but it likely will be another SMB-type worm that exploits the fact that so many organizations leave Windows machines unattended and with open ports to the Internet — and unpatched for the newest flaws.</p> <p>"It's just a matter of time," says Dan Wiley, head of incident response at Check Point, of the next WannaCry. "It will happen again, no question in my mind."</p> <p>A "WannaCry 2.0"-type attack could be more of a data-wiping campaign akin to NotPetya, which posed as a ransomware attack but in reality was destroying the data it locked down rather than locking it up for ransom. Or it could be a widespread cryptojacking campaign that could more easily net attackers more profit and a lower-profile, less-noticeable attack method than ransomware.</p> <p>Worms tend to wreak havoc quickly and loudly, so it depends on the attacker's intent. "If you want to be destructive," a worm is a quick way to spread pain, like the data-wiping NotPetya worm did, notes Chris Wysopal, CTO and co-founder of Veracode. He doesn't believe WannaCry was meant to spread as widely as it did because its high visibility led to its demise as a not-so-profitable ransomware attack.</p>

"If you don't go wormable, you're not going to get noticed for months," Wysopal says.

The thing about worms, though, is that they never really die. Security firms and researchers today still see remnants of the epic 2003 SQLSlammer worm attack, and even the mysterious Conficker worm from early 2009. "Any time you have one of these worms [out], they are never going to go away," says Craig Williams, senior threat researcher and global outreach manager for Cisco Talos.

Keeping the worm alive are older and forgotten machines that don't get the security patch. "You're always going to have some number of machines connected to the network that are going to be patched and they ping packets around for all time," Williams says.

WannaCry's abuse of the EternalBlue exploit basically let the cat out of the bag, and other worms continue to employ it, Williams says. The good news, though, is that WannaCry itself is at least declining in infections. "We're confident that it's decreasing, but we don't see it going away."

Large organizations for the most part have updated their Windows machines and revisited their SMB policies, but smaller and midsized companies in healthcare, education, and other industries most likely remain at risk. Check Point's incident response team sees four to five cases of ransomware attacks per week, mostly in the networks of small- to midsized organizations.

The next big worm attack is not likely to resemble a mass ransomware attack like WannaCry. While WannaCry was a relative financial failure for North Korea, it did wreak havoc and chaos. "I think it was a colossal fail," says Cisco's Williams. "I'm not sure if test code got out or somebody's science project for a future attack. It was poorly built and it didn't work very well," he says, pointing to WannaCry's gap in tracking ransom payments as well as cracks in the exploit.

Ransomware in the wake of WannaCry has become more targeted, while cryptojacking attacks have surged practically overnight. "It's more low-risk" and profitable for attackers, Williams says. "And we're absolutely going to continue to see that" trend, he says.

WannaCry 2.0 could be a stealthy cryptojacking campaign that only mines during off-hours when businesses are closed, for example.

Larry Cashdollar, senior engineer for Akamai's security response team, says he expects a worm attack to spread cryptojacking malware. "That's probably going to be the next phase of attacks. And there are other not-yet-disclosed vulnerabilities our nation or other nation-states know about" that could be exploited for them, he says.

But nation-states could opt for a NotPetya-like worm attack that destroys data altogether in a targeted attack meant to wreak chaos and confusion, experts say. "NotPetya was the type of worm we lose sleep over," Williams says. "It was written by a well-funded, organized attacker that absolutely understands everything about compromising machines."

The good news, according to Symantec director of security response Kevin Haley, is that the industry in general has better defenses for worms than it did a decade ago. "We were in a much better place to block this than we were 10 years ago," Haley says. "A patch was available and security vendors had protections, so there's reason for optimism" if something similar hits again.

"Hopefully, while we will see more of these [worm attacks], we will be better at this" on the defense side, he says.

**HEADLINE** 05/17 Cellphone tracking firm exposed millions

**SOURCE** <https://www.zdnet.com/article/cell-phone-tracking-firm-exposed-millions-of-americans-real-time->

	<a href="#">locations/</a>
GIST	<p>A company that collects the real-time location data on millions of cell phone customers across North America had a bug in its website that allowed anyone to see where a person is located -- without obtaining their consent.</p> <p>The company embroiled in a privacy row has "direct connections" to all major US wireless carriers, including AT&amp;T, Verizon, T-Mobile, and Sprint -- and Canadian cell networks, too.</p> <p>Earlier this week, we reported that four of the largest cell giants in the US are selling your real-time location data to a company that you've probably never heard about before.</p> <p>The company, LocationSmart, is a data aggregator and claims to have "direct connections" to cell carriers to obtain locations from nearby cell towers. The site had its own "try-before-you-buy" page that lets you test the accuracy of its data. The page required explicit consent from the user before their location data can be used by sending a one-time text message to the user. When we tried with a colleague, we tracked his phone to a city block of his actual location.</p> <p>But that website had a bug that allowed anyone to track someone's location silently without their permission.</p> <p>"Due to a very elementary bug in the website, you can just skip that consent part and go straight to the location," said Robert Xiao, a PhD student at the Human-Computer Interaction Institute at Carnegie Mellon University, in a phone call.</p> <p>"The implication of this is that LocationSmart never required consent in the first place," he said. "There seems to be no security oversight here."</p> <p>The "try" website was pulled offline after Xiao privately disclosed the bug to the company, with help from CERT, a public vulnerability database, also at Carnegie Mellon.</p> <p>Xiao said the bug may have exposed nearly every cell phone customer in the US and Canada, some 200 million customers.</p>

HEADLINE	<b>05/18 Botnet scans for Ethereum mining rigs</b>
SOURCE	<a href="https://www.bleepingcomputer.com/news/security/the-satori-botnet-is-mass-scanning-for-exposed-ethereum-mining-rigs/">https://www.bleepingcomputer.com/news/security/the-satori-botnet-is-mass-scanning-for-exposed-ethereum-mining-rigs/</a>
GIST	<p>The operators of the Satori botnet are mass-scanning the Internet for exposed Ethereum mining rigs, according to three sources in the infosec community who've observed the malicious behavior —SANS ISC, Qihoo 360 Netlab, and GreyNoise Intelligence.</p> <p>More precisely, crooks are scanning for devices with port 3333 exposed online, a port often used for remote management features by a large number of cryptocurrency-mining equipment.</p> <p>The scans started on May 11, according to researchers from Netlab, the first to observe them, and the ones who tied their activity to the Satori botnet.</p> <p>More details emerged a day later when GreyNoise analysts managed to demystify the scans and analyze the behavior on a compromised device.</p> <p>GreyNoise says crooks were actively looking for equipment running the Claymore mining software.</p> <p>"Once the attacker identifies a server running the Claymore software they push instructions to reconfigure the device to join the 'dwarfpool' mining pool and use the attacker's ETH wallet," GreyNoise says.</p>

	<p>GreyNoise also tied the scans to a group of IP addresses located in Mexico, on the networks two ISPs that just a few days earlier had thousands of GPON routers compromised and attacked by five different botnets.</p> <p>Based on the current evidence, Satori, one of the five botnets, was using the GPON routers to scan for Claymore miners, deploy an exploit, and hijack the devices to mine Ethereum and Decred cryptocurrencies for the Satori operators.</p> <p>Yesterday, Netlab researchers published a blog post confirming GreyNoise's initial discovery.</p>

<b>HEADLINE</b>	<b>05/17 WinstarNssmMiner strikes 500,000 3 days</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/winstarnssmminer-coinminer-campaign-makes-500-000-victims-in-three-days/">https://www.bleepingcomputer.com/news/security/winstarnssmminer-coinminer-campaign-makes-500-000-victims-in-three-days/</a>
<b>GIST</b>	<p>Security researchers from Qihoo 360 Total Security have detected a massive malware campaign spreading a new coinminer, and which appears to have made roughly 500,000 victims in three days alone.</p> <p>At the heart of this campaign is a new malware strain named WinstarNssmMiner, targeting Windows computers.</p> <p>Under the hood, WinstarNssmMiner is your typical cryptocurrency-mining malware these days, based on the open-source and legitimate Monero mining utility named XMRig.</p> <p>Qihoo 360 researchers did not say how WinstarNssmMiner spreads, but they said this coinminer is unique to other cryptocurrency-mining threats active on the market today.</p> <p>But WinstarNssmMiner also has another surprise in store for infected victims. If a user ever detects the hidden mining operations and tries to shut down the svchost.exe process associated with XMRig, the malware crashes the user's PC, which would then require a restart.</p> <p>The crash occurs because the malware sets the property of the svchost.exe process to a setting of "CriticalProcess," hence Windows shuts down the PC when the malicious process is terminated.</p> <p>According to Qihoo 360 researchers, the group behind this operation has managed to make 133 Monero with WinstarNssmMiner, which is around \$28,000.</p>

<b>HEADLINE</b>	<b>05/17 SEA hackers in pro-Assad scheme indicted</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/syrian-nationals-indicted-pro-assad-hacking-scheme-55244317?">https://abcnews.go.com/Technology/wireStory/syrian-nationals-indicted-pro-assad-hacking-scheme-55244317?</a>
<b>GIST</b>	<p>Two Syrian nationals were indicted Thursday in a computer hacking scheme that targeted the White House, Harvard University, U.S. Marine Corps and news media outlets, including The Associated Press.</p> <p>A federal grand jury returned an 11-count indictment charging Ahmad 'Umar Agha and Firas Dardar with conspiracy and aggravated identity theft.</p> <p>The indictment says the men were members of the Syrian Electronic Army, which hacked computers to spread propaganda supporting Syrian President Bashar al-Assad.</p> <p>In 2013, Syrian Electronic Army hackers allegedly sent a tweet from The Associated Press' Twitter account falsely claiming a bomb had exploded at the White House and injured President Barack Obama.</p>

	<p>The message caused the stock market to plummet briefly before it was determined to be a hoax.</p> <p>Both men were originally charged by criminal complaint in 2014 and are still at large and believed to be in Syria. A third man pleaded guilty in 2016 to having a limited role.</p> <p>The indictment comes as the five-year statute of limitations for some of their crimes is about to expire.</p> <p>According to the indictment, the men and their co-conspirators would send a phishing email purporting to be from a trusted source that contained a link to a website controlled by the hackers.</p> <p>Users who clicked on the link were asked for their usernames and passwords. If at least one person provided those, the hackers would then access the computer systems or accounts of the target's computer system. They could then redirect legitimate traffic, alter text or send messages using compromised social media and email accounts.</p> <p>The indictment says the hackers were able to alter the Harvard University website home page by adding an image of al-Assad. They also accessed a computer server used by The Washington Post and created a false post on its website. Other targets included Reuters, Human Rights Watch, National Public Radio and The Onion.</p>

<b>HEADLINE</b>	<b>05/18 Europe's new data privacy rules May 25<sup>th</sup></b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/changing-data-privacy-rules-55254384">https://abcnews.go.com/Technology/wireStory/changing-data-privacy-rules-55254384</a>
<b>GIST</b>	<p>Europe's new data and privacy rules take effect a week from Friday, clarifying individual rights to the personal data collected by companies around the world for targeted advertising and other purposes.</p> <p>Years in the making, the rules are prompting companies to rewrite their privacy policies and in some cases, apply the European Union's tougher standards even in the U.S. and other regions where privacy laws are weak. Although they take effect as Facebook faces an enormous privacy crisis, that timing is largely coincidental.</p> <p>Not much will change for you, at least right away; companies will keep on collecting and analyzing personal data from your phone, the apps you use and the sites you visit. The big difference is that now, the companies will have to justify why they're collecting and using that information.</p> <p>So now companies are flooding their users with notices that aim to better explain their practices and the privacy choices they offer. European Union regulators have new powers to go after companies that get too grabby or that don't tell you clearly what they're doing with your data.</p> <p>Here's a look at what the rules say and what they mean for consumers in the EU and elsewhere.</p> <p>_____</p> <p><b>THE BIG DEAL WITH MAY 25</b></p> <p>That's when the EU's General Data Protection Regulation takes effect. Instead of separate rules in separate nations across Europe, there's now a single set for the entire EU.</p> <p>The new rules apply to all users in the 28-nation EU, regardless of where the companies collecting, analyzing and using their data are located. So the rules will affect giants such as Facebook and Google and small U.S. businesses with just one European client alike.</p> <p>_____</p>

## WHAT DO THE NEW RULES SAY?

Companies have to use plain language to explain how they collect and use data. While companies generally aren't changing what they're doing, they are revising privacy policies to eliminate legalese. Google is embedding video (from its YouTube service, of course) to further explain the concepts.

GDPR spells out six specific ways that companies can justify the "processing," or use, of personal data. Some are obvious, such as to fulfill contractual obligations — for instance, when an insurer pays out a claim. For other uses, such as ad targeting, companies can seek your consent. Those that aren't sure they got consent properly are now going back to users.

There's also a somewhat vague category called "legitimate interests." It's a catch-all justification that companies can fall back on to keep using data, though the company must show that its needs outweigh potential impact on users' privacy, said David Martin, senior legal officer for the European consumer group BEUC.

Companies are also required to give EU users the ability to access and delete data and to object to data use under one of the claimed reasons. Firms have to clarify how long they retain data.

And the rules force companies that suffer data breaches to disclose them within 72 hours. By contrast, it took Yahoo more than two years to reveal a breach that ultimately involved three billion users .

---

## FOR COMPANIES OUTSIDE EUROPE

Facebook, Google and their ilk may be headquartered in Silicon Valley, but they have millions of users in Europe — and so have to comply with the new rules. Violators face fines of up to 20 million euros (\$24 million) or 4 percent of annual global revenue — whichever is greater. That's an incentive for companies to take these rules seriously.

---

## WHAT ABOUT USERS OUTSIDE THE EU?

Companies based in the EU have to offer these privacy protections to all their users, not just EU residents. Beyond that, the EU rules merely say they apply to "data subjects who are in the Union."

But it's an open question how the rules will affect visitors to Europe. Ailidh Callander of the London-based group Privacy International says many questions will be tested in courts and further rulemaking.

What's clear is that companies won't have to be as aggressive getting consent for data collection outside of Europe. (Absent regulation, companies typically assume consent unless a user says otherwise.) They can hold off seeking affirmative consent until you visit the EU, at which point you might confront a pop-up notice.

---

## A GLOBAL DOUBLE STANDARD

Some companies are extending at least some EU-style protections to all users. But they won't face legal repercussions or fines if they fail to follow through with users outside the EU.

So unless the U.S. and other countries adopt privacy rules similar to those in the EU— something that's not likely any time soon — many companies are likely to maintain double privacy standards.

Facebook CEO Mark Zuckerberg, for instance, promised "global settings and controls" for users during his U.S. congressional testimony in April, but was otherwise vague on the subject. When asked if U.S. users would have the same rights Europeans have to object to the use of data, Zuckerberg said, "I'm not sure how we're going to implement that yet."

But segmenting EU customers from the rest of the world isn't easy, especially for smaller companies without Facebook's or Google's technical prowess. "It might seem like a smart move, but in some cases, it's more work," said Larry Ponemon, founder of the privacy research firm Ponemon Institute.

<b>HEADLINE</b>	<b>05/17 Debate: bitcoin energy consumption</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/tech/tech-news/study-claims-bitcoin-uses-much-energy-ireland-not-so-fast-n875211">https://www.nbcnews.com/tech/tech-news/study-claims-bitcoin-uses-much-energy-ireland-not-so-fast-n875211</a>
<b>GIST</b>	<p>In the late 1990s, some experts were concerned that by 2010, half of the U.S. electrical grid would be dedicated to powering the internet, a claim that nearly caused a panic.</p> <p>That proved to be more than a little overblown, as researcher Jonathan Koomey and his team at the Berkeley Lab showed at the time. They then proved themselves correct again in an August 2011 study that concluded that data centers consumed less than 2 percent of the country's electricity.</p> <p>Koomey, a lecturer at Stanford, is now concerned that the same false alarm is ringing once again. This time, the shiny object is Bitcoin and the energy used to "mine" the digital currency.</p> <p>The latest spotlight on the conversation came from a study published Wednesday that was produced by Dutch researcher Alex de Vries, who concluded that the Bitcoin network consumes nearly as much electricity as the nation of Ireland.</p> <p>Koomey finds that assertion more than a little problematic.</p> <p>"For two decades, people have been eager to overestimate electricity use by computing," Koomey said. "My concern is that we simply don't have adequate data to come to the strong conclusions that he's coming to."</p> <p>De Vries estimates that the Bitcoin network consumes "at least 2.55 gigawatts of electricity currently, and potentially 7.67 gigawatts in the future."</p> <p>"Economic models tell us that Bitcoin's electricity consumption will gravitate toward the latter number," comparable with Austria, which consumes 8.2 gigawatts, de Vries writes. "A look at Bitcoin miner production estimates suggests that this number could already be reached in 2018."</p> <p>De Vries is not alone in warning about Bitcoin's appetite for gigawatts. The rise in popularity of Bitcoin and other cryptocurrencies has been met with growing concern about the energy usage required by the thousands of computing systems that power these virtual currencies.</p> <p>Producing each Bitcoin is called "mining," and it requires a fair amount of computer processing power to verify the transactions that create the coin as well as add them to the public ledger.</p> <p>Various studies have attempted to quantify the energy used in bitcoin mining with relatively different results. If there's two things all parties agree on, it's that Bitcoin mining is energy intensive, and that it's only expected to increase.</p> <p>But there are a few problems with de Vries' underlying assumptions, according to Koomey and other experts. They point to how de Vries calculates the value of the energy used in Bitcoin mining and the price paid for that energy.</p>

“The worry is that those are two numbers that are picked out of the air,” Koomey said. “There may be some basis for them, but it’s a very unreliable way to do these kinds of calculations, and nobody who does this for a living would do it like that. It’s odd that someone would.”

The other problem is that much of that mining doesn’t happen out in the open — in fact, cryptocurrency miners tend to value their privacy — which means that the energy consumption data necessary to come to any firm conclusions is far from readily available.

De Vries could not be reached for comment for this article, but he said in a news release that his work does require some less-than-rigorous math and stressed the need for more research.

“We’ve seen a lot of back-of-the-envelope calculations, but we need more scientific discussion on where this network is headed,” said de Vries, who works at the Experience Center of PricewaterhouseCoopers in Amsterdam and founded the blog Digiconomist. “Right now, the information available is pretty poor quality overall, so I’m hoping that people will use this paper as a foundation for more research.”

Christian Catalini, an assistant professor at MIT’s Sloan School of Management who researches cryptocurrencies and block chain technology, also said researchers need data directly from Bitcoin miners.

“The only people with good data on this are the miners, so you do need that data to understand the electricity consumption,” Catalini said. “The main challenge is that this gear is scattered across the globe and faces different prices.”

And it’s not as though the servers that the miners use are particularly easy to keep track of, either.

“The equipment they’re using is customized to their use,” Koomey noted. “This is not the standard servers that are being sold. These are machines that are assembled using other components. That makes it more difficult. It’s a custom design and those kind of servers are not tracked as well.”

Some experts are also troubled that the de Vries model concludes that the annual energy consumption of Bitcoin miners would exceed that of major data companies like Facebook and Amazon.

“This debate keeps popping up, but it would be great if someone did some data sharing with the miners and got some good estimates,” Catalini said.

To Koomey, Bitcoin enthusiasts and detractors need to be a little more patient and wait for better research to come out — particularly a study based on conclusive data.

“We should try to get the numbers right, but these things don’t happen super fast,” Koomey said with a laugh. “It takes money to do research and a lot of time.”

<b>HEADLINE</b>	<b>05/17 Crypto wealth plummets \$52B in week</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-05-18/crypto-wealth-sinks-52-billion-in-week-of-lambos-yachts-snoop">https://www.bloomberg.com/news/articles/2018-05-18/crypto-wealth-sinks-52-billion-in-week-of-lambos-yachts-snoop</a>
<b>GIST</b>	<p>So much for the Blockchain Week bounce.</p> <p>With thousands of cryptocurrency diehards swarming into Manhattan for this week’s Consensus 2018 conference, the prediction from Bitcoin bulls like Tom Lee of Fundstrat Global Advisors was that the hype-filled gathering would trigger a market rally.</p> <p>Alas, not even a trio of (rented) Lamborghinis, a 1,000-person yacht party and a performance by 46-year-old rapper Snoop Dogg could prevent the value of virtual currencies tracked by Coinmarketcap.com from</p>

sinking by \$52 billion since May 11. Bitcoin, the most popular of the bunch, dropped 5.2 percent this week to \$8,003.60 even as Arthur Hayes -- the crypto exchange executive who's firm rented the Lamborghinis -- predicted a surge to \$50,000 by year-end.

This week's slump is far from extreme by crypto standards, but the market's resistance to Blockchain Week's ballyhoo highlights one of the arguments often cited by virtual currency pessimists: that most potential buyers have already piled in after last year's epic surge.

While bulls point to a vast pool of pent-up demand from professional money managers, it's far from clear that regulations in the U.S. and elsewhere will evolve in ways that attract institutional investors. Many Wall Street pros have dismissed the market as a speculative bubble, while Warren Buffett likened Bitcoin to "rat poison squared."

For Sunny Lu, the chief executive officer of blockchain-based logistics company VeChain Tech and one of the conference speakers, this week's losses may have been the result of unmet expectations surrounding Consensus 2018.

"The quality of projects and speakers were not really as good as expected," Lu said. "I guess people just got disappointed."

<b>HEADLINE</b>	<b>05/17 UK: 'Prize Papers' to be posted online</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/thousands-undelivered-letters-heart-wrenching-stories-posted-online/story?id=55214973">https://abcnews.go.com/International/thousands-undelivered-letters-heart-wrenching-stories-posted-online/story?id=55214973</a>
<b>GIST</b>	<p>Thousands of letters from all over the world were never delivered between 1650 and 1815. Now hundreds of years later, the world will be able to read those undelivered letters.</p> <p>Britain was involved in a series of wars during that period, and when they captured enemy ships, they seized about 160,000 letters in mailbags that never made it to their intended recipients.</p> <p>The National Archives of the United Kingdom has partnered with the University of Oldenburg in Germany in a massive 20-year project to digitize the so-called Prize Papers and make them freely available.</p> <p>The project, funded by Gottingen Academy of Sciences and Humanities, launched this month. Archivists are preparing the records for digitization with plans to write brief descriptions about the letters and take multiple pictures for a free online research database.</p> <p>Dr. Amanda Bevan, head of Legal Records at the National Archives of the U.K., has been involved with the Prize Papers since 2013. She told ABC News' "Start Here" podcast that reading the letters is like "eavesdropping on people from the past," since people were writing to those they loved and missed back at home.</p> <p>"It's touching, you feel as though you actually are in touch with the people who wrote them at the time," she said.</p> <p>Because many of the letters were sent during wartime, she said archivists are uncovering "heart-wrenching" stories.</p> <p>"Especially the ones which say, 'I've written three letters, I haven't heard from you. Are you still alive?'" she said on "Start Here."</p> <p>One of the letters she mentioned was from a young Irishman who was writing to a cousin in Waterford about his adventures: "He's been settled on the island of Tenerife in the East Atlantic, and he's been trying to make his fortune, and everything has gone wrong."</p>

And it's not just paper in the mail.

"If you're incredibly lucky, like I was, you will pop some gold rings, [and] a thin gold necklace," Bevan said.

One letter from a slave trader to a girlfriend in Holland included a bracelet strung with glass beads, which were used as currency in African slave trade, from the coast of West Africa. It also had grains of sand from the Guinea coast that were used to blot ink.

"This is the sand that the person used to dry the ink and there it is spilling out on a bit of paper in London," Bevan said.

Americans eager to learn about letters from the American Revolution will have to wait. The project is still in its early days and about a quarter of the estimated 160,000 total letters are unorganized from poor storage over the years. Bevan said the period between the 1770s and early 1780s has one of the worst collections of random papers.

"You get letters from the 1770s mixed up with letters from the 1780s. You'll get French ones stored with Spanish ones ... it's clear that they're messed up. Now we just need the time and resources to sort them out."

Bevan believes the entire world could benefit from the information the Prize Papers provide "for the history of slavery, for the history of the development of the colonies, [and] for the history of consumerism."

"This is unmediated material, it's from the heart," she said. "And I think that's really unusual because these kinds of letters, had they been delivered, probably wouldn't survive any longer because they're written by just ordinary people."

## Terror Conditions

[Top of page](#)

<b>HEADLINE</b>	<b>05/17 Indonesia is ISIS new frontline</b>
<b>SOURCE</b>	<a href="http://www.atimes.com/article/indonesia-is-islamic-states-new-frontline/">http://www.atimes.com/article/indonesia-is-islamic-states-new-frontline/</a>
<b>GIST</b>	<p>For a long period during last week's 36-hour stand-off at Indonesia's paramilitary Police Mobile Brigade (Brimob) headquarters, scores of rioting militants were in charge of a massive cache of automatic weapons and thousands of rounds of ammunition.</p> <p>According to sources familiar with what transpired, the only reason the siege didn't turn into a pitched gun-battle with police was that the leaders of the uprising lost contact with three coordinators outside the prison, known only as Deden, Ronggo and Ilham.</p> <p>Who they were and what was planned remains unclear, but they were almost certainly members of Jamaah Ansharut Daulah (JAD), the Islamic State (ISIS) affiliate which engineered the uprising and was responsible for a subsequent wave of bombings in the port city of Surabaya that left 13 bombers and 12 civilians dead.</p> <p>National police chief Tito Karnavian said there was little doubt the events were connected, signaling the emergence of a cell-based organization that may be more dangerous than the Al Qaeda-linked Jemaah Islamiyah network that terrorized the country in the early 2000s.</p> <p>In the days since, Indonesian police lost one of their own in killing four sword-wielding men who attacked the Riau, Sumatra, provincial police headquarters in Pekanbaru on May 16, adding to two others shot</p>

earlier in one of a mounting series of raids across the country.

If any doubts were left after the last year's five-month siege of the southern Philippine city of Marawi, the recent events in Indonesia have demonstrated that while the ISIS caliphate may have been effectively destroyed, its reach and influence in Southeast Asia has not.

Instigated by Wawan Kurniawan, 42, a prominent JAD militant from Sumatra, the May 9-10 prison riot led to the savage murder of five Detachment 88 counterterrorism officers and seizure of the arms cache in an unsecured room adjoining the temporary detention center.

According to a police accounting seen by Asia Times, the cache included 59 automatic rifles, 29 pistols, 11,000 rounds of 7.62 mm and 10,000 rounds of 5.52 mm ammunition, and boxes of bullets for everything from .22 to .45 caliber pistols.

The militants were initially able to connect to social media, with the first news of the riot appearing on ISIS's Amaaq news agency and video from inside the jail later being uploaded to Instagram.

It took time for police to activate a signal scrambler, which explains the militants' subsequent breakdown in communications with the outside.

Like Kurniawan, only 40-50 of the 156 prisoners were considered hard-core extremists; many of the inmates on trial or awaiting trial in the three cell blocks were possible candidates for de-radicalization, but little effort had been made to screen them all.

JAD founder Aman Abdurrahman, who was being held in a more secure part of the same prison, is currently on trial for directing an attack in central Jakarta in early 2016 from the high-security Nusakambangan island prison off Java's south coast.

The stand-off finally ended after Abdurrahman was reportedly persuaded to record a surrender plea and police overwhelmed Kurniawan and nine other hold-outs in a hail of gunfire after cutting off power, food and water.

As violence and arrests continued in West and East Java and Sumatra, President Joko Widodo pledged to issue a presidential regulation if Parliament fails to pass an early revision to the 2003 Anti-Terrorism Law to give police greater powers of arrest and detention.

Police chief Karnavian has said he wants military intelligence to help in investigating JAD "down to its roots," as Widodo put it, but there is likely to be strong opposition to legislating an additional role for the armed forces in the counterterrorism effort.

Instead of Afghanistan war veterans who made up the core of Jemaah Islamiyah, JAD is a collection of home-grown jihadi groups, among them dependents who are clearly as dedicated to the ISIS cause as the militants themselves.

Proof of that is in the three families, including mothers and children, who carried out the suicide attacks on three Surabaya Christian churches and the city's police headquarters, and triggered the blasts that rocked a low-cost apartment block in the city's southern suburb of Sidoarjo.

Police reports that the six family members behind the church attacks were recent returnees from Syria turned out to be false. But there are still serious concerns whether enough is being done to monitor or rehabilitate the 500 Indonesians known to have come back so far.

Another 600 are still unaccounted for, but scores of fighters may have died in the final desperate days before the collapse of ISIS' caliphate and their dependents could still be in detention camps along the Turkish border.

	<p>JAD is expected to see the Surabaya attacks as a model for future operations against security forces, still their main target, and to continue its campaign of terror against Christian congregations and other ethnic and religious minorities.</p> <p>Instead of the bulkier pressure cooker device favored so far, the Surabaya attackers assembled scores of pipe-bombs, easier to conceal but packed with high-explosive TATP, or acetone peroxide, made from readily available retail products.</p> <p>The sustained level of violence has put police on edge with the Ramadan fasting period beginning today and ISIS well known for perversely convincing its followers that carrying out attacks during the Islamic holy month brings extra merit.</p>

<b>HEADLINE</b>	<b>05/18 Afghan officials: Taliban attacks kill 16</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/05/18/afghan-officials-say-taliban-attacks-kill-16-security-forces.html">http://www.foxnews.com/world/2018/05/18/afghan-officials-say-taliban-attacks-kill-16-security-forces.html</a>
<b>GIST</b>	<p>KABUL, Afghanistan – Afghan officials say Taliban fighters have attacked several security posts in three provinces, killing 16 security forces.</p> <p>Ramadan Ali Mooseni, deputy provincial police chief, said Friday the Taliban launched an attack the previous night in Ghazni province's remote Ajristan district, killing nine security forces and wounding seven others. The gun battle also left 25 Taliban fighters dead, he said.</p> <p>Elsewhere, Taliban insurgents attacked police security posts in the Maruf district of Kandahar province, killing five police and wounding six. Also, 12 Taliban were killed and 18 wounded, said Zia Durani, spokesman for the chief of police.</p> <p>Similar attacks Thursday night in southern Uruzgan province left two police dead, officials said.</p>

<b>HEADLINE</b>	<b>05/18 Indonesia nabs dozens terror suspects</b>
<b>SOURCE</b>	<a href="https://www.straitstimes.com/asia/se-asia/indonesia-nabs-dozens-of-terror-suspects">https://www.straitstimes.com/asia/se-asia/indonesia-nabs-dozens-of-terror-suspects</a>
<b>GIST</b>	<p>JAKARTA/SURABAYA • Indonesia's counter-terrorism squad Densus 88 has arrested terror suspects in East Java as well as Sumatra, including Medan and Riau, in the wake of deadly attacks this week.</p> <p>North Sumatra police chief Paulus Waterpauw confirmed on Wednesday the arrests, including one in Tanjung Balai city on Tuesday, during which one suspect was shot dead and another injured while resisting arrest, the Jakarta Post reported.</p> <p>Densus 88 personnel also arrested at least two other suspects in the provincial capital of Medan, the report said. They were identified as 28-year-old ojek or motorcycle taxi driver MYR, and 38-year-old milk seller SL. A suspect identified only as W reportedly fled.</p> <p>Meanwhile national police chief Tito Karnavian said yesterday a total of eight alleged militants in Riau province had been nabbed by the anti-terror squad, reported Xinhua news agency. Police seized a flag of the Islamic State in Iraq and Syria (ISIS) as well scores of weapons during the arrest.</p> <p>In East Java, a total of 23 alleged militants were captured, according to police officers cited by Xinhua.</p> <p>"We order the other alleged terrorists to surrender instead of being persistently hunted," said East Java's police chief, Inspector General Machfud Arifin. He added that four alleged terrorists were shot dead during the arrests.</p> <p>Entire families of suicide bombers carried out attacks on three churches and at least two police headquarters earlier this week.</p>

Around 30 people have been killed since Sunday in the attacks, including 13 of the suspected suicide bombers.

Police suspect the attacks were carried out by a cell of the ISIS-inspired Jemaah Ansharut Daulah, an umbrella organisation on a US State Department terrorist list that is reckoned to have drawn hundreds of Indonesian ISIS sympathisers.

<b>HEADLINE</b>	<b>05/17 Federal Air Marshal Service program</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/2018/05/17/tsa-air-marshall-training-terrorism-planes/601236002/">https://www.usatoday.com/story/news/2018/05/17/tsa-air-marshall-training-terrorism-planes/601236002/</a>
<b>GIST</b>	<p>ATLANTIC CITY, N.J. — The scenario: As a flight attendant asks passengers what they'd like to drink, a man sitting beside a window attempts to light an explosive in his shoe.</p> <p>When the flight attendant challenges him, another man sitting on the aisle leaps to his feet, yelling “get back” and threatening other passengers with a knife.</p> <p>A federal air marshal draws his pistol and shoots both men. Threat over.</p> <p>The training exercise illustrates the protection that air marshals — who fly armed and undercover — could provide in thwarting terrorists in the skies.</p> <p>“We are the last line of defense on board an aircraft,” Mike LaFrance, assistant supervisory air marshal in charge of the program’s training center near the Atlantic City airport, told USA TODAY. “If everything else fails, the air marshal is there to take down anything that may happen.”</p> <p>But now some lawmakers and critics in watchdog agencies are asking: Is the program that peaked at nearly \$1 billion a year — a program that has never caught a single terrorist on board a plane — really needed?</p> <p>The program has existed under a variety of names and agencies for 57 years, and it expanded significantly after the 9/11 hijackings. But air marshals can't be on every plane, and during those decades, they haven't faced a real terror threat during an actual flight.</p> <p>TSA Administrator David Pekoske called the program “a terrific organization” that performs a stressful job under difficult circumstances. The service is an important layer of security, he said, that begins when a passenger buys a ticket, a database search against no-fly lists and checkpoint screening at airports. And the prospect that an air marshal could be on a specific flight is a deterrent to would-be attackers by itself.</p> <p>"I think they do a very good job," Pekoske told USA TODAY. “Quite frankly, I’m very much comforted by the fact that they are on some flights — not all, based on the size — to provide that additional layer of security should the need arise.”</p> <p>Learning how — and when — to shoot Gary Decker, an air-marshall firearms instructor, sits in a replica airline seat waiting for action.</p> <p>The seats are arranged on the concrete floor of a TSA firing range as if aboard an airliner. Two aisles mimic a wide-body plane. Decker sits on the left side of the left aisle, allowing him to pursue a target — if necessary.</p> <p>A paper target swivels several rows ahead in first class, revealing a man in a gray jacket with a band of explosives at his waist. Decker quickly pulls a Sig Sauer P229 pistol from his holster and shoots a couple of rounds, hitting the target in the head. Spent shells spring from the gun.</p>

A pause. Another target turns to reveal a woman in a leather jacket holding a pistol. Decker briskly fires several more shots into her body. More shells rattle on the floor.

Then a new target breezes past the others. A man in a red T-shirt with a pistol moves from right to left. Pow, pow, pow.

“At 37,000 feet, we can’t call for backup,” Decker told USA TODAY after the exercise. “We’re in such a confined space, we can’t make mistakes.”

Air marshals score an average 284 points out of a 300-point test with 60 shots fired, which they say is the highest average in law enforcement.

But instructors said decisions about to shoot are just as important as aiming. Air marshals train to decide in fractions of a second whether the target is a threat. And then whether to aim for the head of a bomber or the body of a gunman.

“I’m gauging the threat and I’m gauging the environment — what’s going on around me before I get out of that seat,” Decker said. “Because there may be somebody behind me. There may be somebody to the right. I’m waiting to see what else might be happening.”

Time to end the program?

What is now called the Federal Air Marshal Service has transformed and grown significantly since it was created under President Kennedy after a string of hijackings in 1961. The first 18 Federal Aviation Administration safety inspectors who were deputized to thwart hijackers graduated in 1962.

In 1985, after the 17-day hijacking of TWA Flight 847, Congress increased the number of air marshals by the hundreds and expanded the program to international flights.

But in the ebb and flow of funding, the service had only 33 marshals on duty Sept. 11, 2001, when hijackers flew four planes into the World Trade Center, the Pentagon and field in Pennsylvania. The ranks were quickly expanded to an undisclosed number in the thousands.

Critics of the program highlight the costs, the lack of terrorist incidents — and argue that more air marshals are arrested than terrorists.

Rep. John Duncan, R-Tenn., would like to abolish the program that he said had about 4,000 air marshals in 2009 and averaged a total 4.2 arrests per year during the first seven years. He continues to slam the program as “the most needless, useless agency.”

Air marshals themselves were arrested 148 times from November 2002 to February 2012, according to a report by ProPublica based on TSA documents. Air marshals were also charged with more than 5,000 cases of misconduct during that period, including 1,200 cases of lost equipment and 950 missed flights, the report said.

Pekoske said he is confident there aren’t systemic problems with discipline.

“I think those problems are in the past for TSA,” Pekoske said. “It’s something that I’ve placed a good amount of emphasis on myself, to make sure that we have handled the problems that have occurred in the past and have a good path forward.”

The Department of Homeland Security’s inspector general released an unclassified summary of a report in October 2017 that called the air marshals’ contribution to aviation security “questionable.”

“We also identified a part of FAMS operations where, if discontinued, funds could be put to better use,” the summary said.

The service peaked with a \$966 million budget in 2012, according to the Government Accountability Office, and got \$779 million in the latest spending bill approved in March.

As a former vice commandant of the Coast Guard, Pecoske said he understood the difficulty putting a value on prevention. But he said changes in security before and during flights have reduced the need for air marshals, so spending has shifted.

Airlines hardened cockpit doors after the 9/11 attacks to prevent terrorists from getting to pilots. Some pilots volunteer to be trained to carry guns during flights under the Federal Flight Deck Officer program.

“From my perspective, I think we’ve done a good job in increasing our security profile overall in flight,” Pecoske said. “I do think that the air marshals provide an important layer of security.”

'No safe direction'

Air marshals make split-second decisions.

In December 2005, air marshals shot and killed Rigoberto Alpizar, 44, on a jet bridge at the Miami airport as he ran off an American Airlines flight. Flight attendants and security officials said Alpizar claimed to have a bomb and demonstrated bizarre behavior, but no explosives were found on him or in his bag. Air marshals had warned him repeatedly to "stop" and "get down" but were ignored.

Alpizar hadn't taken his entire Lithium prescription for bipolar disorder, according to a prosecutor's investigation of the incident. The 46-page report on the investigation ruled the shooting "legally justified" and said air marshals "demonstrated remarkable restraint."

Typical confrontations are more mundane. Air marshals, who try to avoid breaking cover, must decide when an unruly passenger becomes a big enough disturbance to warrant action. A sample of recent cases include:

- Sarah Beach was charged with assault after an air marshal restrained her on a Delta Air Lines flight April 19 from London to Salt Lake City, where she allegedly threw coffee on passengers, overturned a drink cart and ran up and down the plane’s aisles. Her case is pending.
- Alex Croft pleaded guilty to assault after an air marshal restrained him for attempting three times to open the emergency exit during a United Airlines flight Sept. 30 from Paris to Washington Dulles.
- Joanne Snow was found not guilty by reason of insanity after an air marshal charged her as a flight attendant with assault for allegedly slapping another flight attendant, shoving the air marshal, speaking irrationally and kicking the air marshal during a pair of American Airlines flights Nov. 23 and 25, 2015, between Charlotte and Frankfurt.

To prepare for the worst, air marshals receive 16 weeks of training divided between Artesia, N.M., and Atlantic City, N.J., and 20 days a year of recurrent training. Besides firing 5,000 shots during the initial training, courses include hand-to-hand combat, legal investigative techniques and professional ethics.

Training in the tight confines of an airline cabin illustrated one of the worst scenarios possible. One man flicks a lighter, trying to ignite an explosive. Another man wields a knife, threatening passengers while protecting the bomber. Shouting and smoke erupt between attackers and passengers.

In order to prevent an explosion, air marshals shoot the attackers accurately enough to avoid hitting passengers or flight attendants.

“There is no safe direction on board an aircraft. Windows, innocent people, partners, crew,” LaFrance said. “We feel that we are the tip of the spear when it comes to marksmanship and firearms training in the law enforcement world.”

<b>HEADLINE</b>	<b>05/18 US reacts to wanted terrorist in Pakistan</b>
<b>SOURCE</b>	<a href="https://www.financialexpress.com/india-news/us-reacts-says-concerned-about-hafiz-saeed-roaming-freely-in-pakistan/1172420/">https://www.financialexpress.com/india-news/us-reacts-says-concerned-about-hafiz-saeed-roaming-freely-in-pakistan/1172420/</a>
<b>GIST</b>	<p>The United States has again expressed its concern on the free movement of wanted terrorist Hafiz Saeed in Pakistan.</p> <p>“We are concerned about the mastermind behind the 2008 Mumbai attacks. And he’s a Lashkar-e-Taiba guy who was being held in Pakistan, and he was eventually let out on house arrest, and we have a reward out for. I believe it’s for his arrest, not information leading to his arrest, but his arrest. I don’t recall off the top of my head the award amount, but that person out in the open is a tremendous concern to the United States,” Heather Nauert, spokesperson of US State Department said.</p> <p>She was responding to a question on the recent remarks made by former Pakistan Prime Minister Nawaz Sharif on Pakistan’s role in the 2008 Mumbai attacks. Nawaz Sharif had said that militant organizations are active in the country. “Militant organizations are active. Call them non-state actors, should we allow them to cross the border and kill 150 people in Mumbai? Explain it to me. Why can’t we complete the trail?” he said.</p> <p>Hafiz Saeed was released from a 10-month-long house arrest by a Pakistani court in November 2017.</p> <p>While underlining the growing ties between India and the US, the State Department spokesperson also said that the US has a very strong relationship with Prime Minister Modi’s government. “We have strong people-to-people ties.”</p> <p>US has already declared Saeed’s political front, Milli Muslim League, and JUD as Foreign terrorist organizations.</p> <p>The 2008 Mumbai attacks were carried out by Pakistan based terrorist group, Lashkar-e-taiba. The attacks lasted for four days across Mumbai, India’s financial capital. Many foreign nationals were among those dead.</p>

<b>HEADLINE</b>	<b>05/17 US ratchets up pressure on Hezbollah</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/u-s-treasury-sanctions-a-top-hezbollah-financier-and-representative-to-iran-1526582699">https://www.wsj.com/articles/u-s-treasury-sanctions-a-top-hezbollah-financier-and-representative-to-iran-1526582699</a>
<b>GIST</b>	<p>WASHINGTON—The U.S. Treasury Department on Thursday ratcheted up the pressure on Iran-backed Hezbollah, imposing sanctions on one of the Lebanese militia's top financiers and its representative to Tehran, while also accusing the group's leader of being complicit in its world-wide illicit operations.</p> <p>The designation of Mohammad Ibrahim Bazzi as one of Hezbollah's top financiers and Abdallah Safi-Al-Din as the group's key financial representative to Tehran is part of a broader U.S. campaign to isolate Iran and sideline its regional proxies threatening U.S. interests and allies in the Middle East.</p> <p>Specifically, the U.S. Treasury tied the two men and associated companies to a drug-trafficking ring and ill-gotten oil-sale contracts to Gambia as part of multimillion-dollar funding channels for Hezbollah, a group designated by the U.S. as a terror organization.</p> <p>U.S. officials link the activities of the two directly to the head of Hezbollah, Hasan Nasrallah, who was blacklisted by the U.S. and several Gulf nations on Wednesday for his role as the supreme commander of the group's military and security operations around the world. The U.S. intelligence community's latest assessment of world-wide threats reported that Hezbollah has increased its global terror activity in recent years to a level not seen since the 1990s.</p> <p>Washington has been particularly concerned lately about the group's role in the Syrian civil war supporting President Bashar al-Assad alongside Russia and Iran and as a proxy for Tehran's Quds Force, the elite wing of Iran's Islamic Revolutionary Guard Corps sanctioned by the U.S., Europe and others.</p> <p>By targeting Mr. Nasrallah and other members of the group's governing body, the Shura Council, the U.S. and the Gulf countries "rejected the false distinction between a so-called 'Political Wing' and Hezbollah's global terrorist plotting," Treasury Secretary Steven Mnuchin said.</p> <p>The U.S. is in part trying to discredit the group as a political organization not only in its home country and the Middle East, but also in Europe, where some governments recognize its political activities as a separate, legitimate institution. The U.S. is urging European and other governments to designate all of Hezbollah a terrorist organization, not just its militia. U.S. sanctions levied over the last week that tied Iran's central bank to funneling cash to Hezbollah through the Quds Force are meant to erode Hezbollah's financial credibility.</p> <p>The U.S. contends Hezbollah's chief is aware of all of its financing operations, including those run by Mr. Safi-Al-Din, who is Mr. Nasrallah's cousin, and Mr. Bazzi, an associate of the group's leader. Mr. Safi-Al-</p>

	Din, Treasury said, has served as Hezbollah's key interlocutor to Iran on financial issues, including working to bolster political and economic ties between Gambia and Tehran and playing a role in an alleged money-laundering operation through the Lebanese Canadian Bank.

<b>HEADLINE</b>	<b>05/17 Remote ISIS branches grow; caliphate fades</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/faraway-isis-branches-grow-as-caliphate-fades-in-syria-and-iraq-1526558401">https://www.wsj.com/articles/faraway-isis-branches-grow-as-caliphate-fades-in-syria-and-iraq-1526558401</a>
<b>GIST</b>	<p>ISTANBUL—In its former heartland of Syria and Iraq, the once mighty Islamic State has turned, at least for now, into little more than a nuisance.</p> <p>But that's not the case for the self-declared caliphate's far-flung "provinces," from West Africa to Afghanistan to Southeast Asia.</p> <p>There, local insurgencies that adopted Islamic State's brand and ideology in its heyday in 2014-2015 keep up the fight, gaining new ground and perpetrating new massacres. Some are also attracting a new influx of foreign fighters.</p> <p>"For now, it is really in the peripheries that everything happens," said Prof. Mathieu Guidere, an expert on Islamic extremism at the University of Paris VIII. "The peripheral branches of Islamic State have become much more important and much more active than its original central organization."</p> <p>Last year, U.S.-backed campaigns by the Iraqi government and by predominantly Kurdish fighters managed to seize Islamic State's two main cities of Mosul and Raqqa, liberating a territory that once spanned a landmass the size of Great Britain.</p> <p>The only remaining areas controlled by Islamic State there are in the vicinity of al-Bukamal on Syria's border with Iraq and a handful of other small isolated pockets in Syria.</p> <p>While many of the thousands of foreign fighters who flocked to Syria and Iraq died on the battlefield or were captured, significant numbers have managed to return to their home countries—or, in some cases, moved to other battlefields.</p> <p>"ISIS has been defeated, or quasi-defeated, insofar as its characteristic of a quasi-state. What has not been defeated is its insurgency capacity or its capacity to inspire others to engage in terrorist attacks elsewhere," said Robert Malley, president of the International Crisis Group think tank, who served as President Barack Obama's coordinator of the campaign against Islamic State. "It's the hydra of different movements. They have shown a capacity to adapt and to change."</p> <p>Indeed, while Islamic State's ability to produce slick propaganda has been degraded by the loss of a physical "state," the extremist group still retains a robust online presence and successfully encourages so-called lone-wolf attacks.</p> <p>In one of these, a stabbing spree in central Paris, a young Frenchman of Chechen origin Saturday killed a passerby and injured four others after recording a cellphone video pledging allegiance to Islamic State. A series of much bloodier suicide attacks on Sunday, also claimed by Islamic State, targeted churches in Surabaya, Indonesia.</p> <p>"Although Islamic State's ideology has suffered, it still has a huge potential," said Rohan Gunaratna, head of the International Center for Political Violence and Terrorism Research at the Nanyang University in Singapore. "Islamic State has entered a phase of global expansion, very much the same way al Qaeda extended globally in late 2001."</p> <p>In Afghanistan, where a brutal Taliban insurgency has been trying to topple the Western-backed</p>

government in Kabul since the 2001 U.S. invasion, the rise of Islamic State brought a new level of carnage to the conflict.

The movement's regional affiliate, Islamic State-Khorasan, or ISIS-K, has unleashed particularly deadly attacks, deliberately targeting civilians and particularly seeking to massacre Shiites.

(While past Taliban attacks have also caused large civilian casualties, the Taliban—who portray themselves as Afghanistan's legitimate government and who want to be seen as such by the country's neighbors—insist that they only seek to target government and foreign-related targets. They usually shy away from taking responsibility when their bombings produce unexpectedly high numbers of civilian casualties.)

“Afghan traditions are against some tactics that ISIS used in Syria and Iraq. There is some genuine enmity between the Taliban and ISIS-K in some areas,” said Rahmatullah Nabil, who served until late 2015 as the head of Afghanistan's intelligence service, the National Directorate of Security.

Most Islamic State fighters in eastern Afghanistan are former Pakistani Taliban who had been pushed out of that country's tribal areas along the border, he said, while Islamic State units in northern Afghanistan include fighters from Uzbekistan and China's Xinjiang province.

Despite their enmity, the presence of Islamic State in the country also serves a useful purpose to the Afghan Taliban, Mr. Nabil added. “Sometimes the creation of a tense situation between the Taliban and ISIS-K along Afghanistan's northern border is more tactical,” he said. “The Taliban and their allies seek to persuade the central Asian countries, Iran or even Russia to provide support to the Taliban and to consider them as a force that will counter ISIS-K, which is a false scenario.”

In West Africa, meanwhile, a new area of operations for Islamic State has emerged in the Sahara, along the borders of Niger and Mali. There, a new affiliate, the “Islamic State in the Greater Sahara,” has absorbed members of several militant groups that operated there for years, including some that had been associated with al Qaeda.

The affiliate claimed, among others, the attack that killed four U.S. service members in Niger last October. The pace of attacks has become so high that France and its regional allies are creating a new military force, G5 Sahel, to counter the group. “It is the newest and the most active area for Islamic State,” said Prof. Guidere.

In Syria and Iraq, too, conditions are gathering for an Islamic State attempt to spring back, in a different form. In both nations, the forces that once fought against it have since turned on each other, with the campaign against the extremist group losing steam.

“One chapter of ISIS has finished and another is beginning,” said Hassan Hassan, a specialist on Islamic State at the Tahrir Institute for Middle East Policy in Washington. “Their resurgence is coming sooner than expected.”

<b>HEADLINE</b>	<b>05/17 Questions over possible fraud in Iraq vote</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/questions-mount-about-possible-fraud-in-iraq-vote-1526582313">https://www.wsj.com/articles/questions-mount-about-possible-fraud-in-iraq-vote-1526582313</a>
<b>GIST</b>	<p>BAGHDAD—The United Nations and Iraqi political leaders on Thursday called for investigating electoral-fraud complaints and sought manual recounts in some districts, as questions intensified about the legitimacy of the country's recent parliamentary vote.</p> <p>Overall, the recounts being sought aren't expected to affect the surprising election results from Saturday, when Shiite cleric Moqtada al-Sadr's coalition won the most seats. But the fraud claims have delayed the official tally of the vote and deepened Iraqis mistrust in the electoral process, which saw turnout fall to its</p>

lowest level since the country became a democracy fifteen years ago.

Less than 45% of voters participated in the election, a low number considered a factor in Mr. Sadr's victory because his largely poor, dedicated followers showed up when other politicians' bases stayed home. Mr. Sadr's militias had fought against the U.S. following the 2003 invasion and were accused of sectarian atrocities but he has forged a more mainstream path in recent years.

Lawmakers on Thursday called an emergency session of parliament on Saturday to discuss the allegations of fraud after parties from across the political spectrum raised doubts.

At the center of the controversy are electronic voting machines that were introduced for the first time this election in a bid to reduce fraud.

Iraq's election commission chief, Riyadh al-Badran, said late Wednesday that technical issues were partly to blame for the delay in announcing the results because some workers at polling stations didn't know how to use them properly.

But some political parties have accused their rivals of tampering with the devices.

Prime Minister Haider al-Abadi on Tuesday said the country's electoral commission should look into fraud complaints. On Thursday, his office said members of the electoral commission would be investigated for failing to contract with a company to inspect the electronic voting machines. The commission couldn't be reached for comment. MIRU Systems, a South Korea-based firm that made the machines, didn't immediately respond to a request for comment, but in a statement last year said it wouldn't comment on the machines because it had signed a non-disclosure agreement.

How the machines could have been tampered with isn't clear, but several candidates said results showed they received zero votes in the same polling stations where they had cast ballots for themselves. There were also accusations that votes cast by Iraqis abroad had been tampered with.

The issue is particularly sensitive in the ethnically mixed oil-rich northern city of Kirkuk, where Arab and Turkmen voters have accused Kurds of rigging the result. The Kurdish party that won the most votes denies the accusation.

The U.N. urged the Iraqi election commission to investigate all complaints, and called for a partial manual recount in selected locations, notably Kirkuk. "It is important that these are undertaken in full transparency, witnessed by stakeholders, to strengthen the confidence in the process," said Jan Kubis, special representative of the U.N. secretary-general for Iraq.

The election commission had said the results of the vote would be announced within 48 hours of the polls closing at 6 p.m. local time on Saturday, but official results still haven't been announced. The announcement of the official tally begins a weeklong countdown to the first session of parliament at which the largest bloc of seats is entitled to nominate the premier.

Having won the most seats, Mr. Sadr has an advantage in forming the largest bloc and has already spoken to multiple parties about forming an alliance including Mr. Abadi, who worked closely with the U.S. to defeat Islamic State and is trusted in Washington. Meanwhile, Iran's closest allies in Iraq are seeking to build an alternative bloc excluding Mr. Sadr, who has indicated he isn't willing to partner with them.

HEADLINE	05/17 Anti-American cleric power grows in Iraq
SOURCE	<a href="https://www.nytimes.com/2018/05/17/world/middleeast/pentagon-future-iraq-election-sadr.html">https://www.nytimes.com/2018/05/17/world/middleeast/pentagon-future-iraq-election-sadr.html</a>
GIST	WASHINGTON — Over the past four years, American military planning in Iraq has counted on working with Prime Minister Haider al-Abadi, a moderate Shiite Muslim who has managed to rebuild the country's

army, restore sovereignty and partner with both the United States and Iran to defeat the Islamic State.

But the results of the weekend's national elections in Iraq have torn the American assumptions asunder.

Huge gains in Parliament were made by a party led by the anti-American cleric Moktada al-Sadr, whose implacable opposition to the presence of United States troops in Iraq was a top reason Washington withdrew its combat forces in 2011.

Now, President Trump and the Pentagon must decide whether the United States can move ahead with plans to leave a residual force of about 4,500 American troops in Iraq after the war against the Islamic State.

The group, also known as ISIS, is largely gone from the areas of Iraq that it occupied as recently as last year. But military planners are all too aware of what happened after the American troops left in 2011, opening space for the Islamic State's rise as it was fueled by minority Sunnis who were alienated by the ruling Shiite government of Nuri Kamal al-Maliki, then the prime minister.

In 2014, the Islamic State rolled across Iraq, easily defeating the country's army and controlling much of its northern and western regions. Ensuring that history is not repeated is a top American priority, senior State Department and Pentagon officials said.

For the Trump administration, that means trying to find a way to a working relationship with Mr. Sadr. Administration officials sought this week to focus on positive aspects of the election.

"Not that long ago, ISIS had controlled large swaths of that country," said Heather Nauert, the State Department's spokeswoman. "And the fact that they were able to pull off elections that were relatively free of violence is certainly a pretty amazing feat and a testament to the Iraqi people."

Defense Secretary Jim Mattis told reporters that Trump administration officials "stand with the Iraqi people's decisions."

"It's a democratic process at a time when people, many people, doubted that Iraqis could take charge of themselves," Mr. Mattis said on Tuesday.

As a young man, Mr. Sadr led a Shiite militia that targeted American troops in Iraq. He fled to Iran to study in Qom, a revered Shiite religious center, before returning to Iraq in 2011 as a cleric and strident Iraqi nationalist. Mr. Sadr is not expected to hold elected office in Iraq; rather, his power comes from his pulpit.

Given Iran's outsize and yearslong influence in internal Iraqi politics, foreign policy experts said the Trump administration might have already made things more complicated for itself in Baghdad.

Mr. Trump's decision last week to withdraw from the Iranian nuclear accord has frozen relations between Washington and Tehran after a thaw that, among other issues, had helped facilitate an indirect partnering against the Islamic State in Iraq.

Iran now "has no motivation for a leader in Iraq who would be positive toward the United States," said Vali Nasr, the dean of the Johns Hopkins School of Advanced International Studies.

But Pentagon officials are betting that Iran also does not want to see a return of the Islamic State.

There is widespread agreement among Shiite political blocs, with whom Mr. Sadr would have to ally to form a government, to continue a program backed by international troops to train and equip Iraqi security forces. Trainers include American, Italian and Spanish advisers, with equipment paid for by the United States. And having NATO serve as the public representative for the American-led mission in Iraq could serve as a workaround for Mr. Sadr's sensitivities, officials say.

	<p>Should the Trump administration and a government loyal to Mr. Sadr align, it would not be the first time American troops have had to develop a working relationship with Iraqis who were once considered the enemy. The partnering of United States forces with Sunni insurgents known as Sahwa, or the Awakening, against Al Qaeda in Iraq was a defining turning point in the war more than a decade ago.</p> <p>But the Pentagon will have its own balancing act to perform back in Washington. Mr. Trump has already expressed his desire to bring American troops home soon from Syria; officials said the president has given the Defense Department six months to wrap up its mission there. Military officials had hoped that an American troop presence in Iraq could keep in contact with allied forces across the border in Syria.</p> <p>And what would Mr. Trump do if Mr. Sadr again demands an American troop withdrawal from Iraq?</p> <p>“The Pentagon is already on the clock to get out of Syria,” said Derek Chollet, a former senior Defense Department official in the Obama administration. “Who’s to say what happens in Iraq after?”</p>

<b>HEADLINE</b>	<b>05/18 France: ricin, explosives attack plot foiled</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/french-government-foiled-attack-brothers-held-55254467?">https://abcnews.go.com/International/wireStory/french-government-foiled-attack-brothers-held-55254467?</a>
<b>GIST</b>	<p>French authorities have thwarted a possible attack using ricin or explosives and arrested two brothers, the interior minister said Friday.</p> <p>Gerard Collomb told BFM television that authorities were tracking extremist activity on social networks and identified two young men "preparing to commit an attack with explosives or ricin."</p> <p>He said the young men were of Egyptian origin but didn't indicate their nationality or provide other details about where or when they were arrested. He said the men notably had tutorials on how to make poison using ricin.</p> <p>Collomb said the brothers had been communicating on encrypted messaging app Telegram.</p> <p>The anti-terrorism prosecutor's office and Collomb's office didn't immediately provide further details. His announcement comes as President Emmanuel Macron's government is under criticism for not preventing attacks like the one on Saturday, when an Islamic extremist stabbed five people in central Paris, killing one of them, and as France is still on edge after a string of other deadly attacks in recent years.</p> <p>The assailant in Saturday's attack, a 20-year-old Frenchman of Chechen origin, had been on a watch list for radicals, like several others who have attacked France in recent years.</p> <p>The assailant was killed by police, and a close friend of his was arrested and given preliminary terrorism charges Thursday night.</p>

<b>HEADLINE</b>	<b>05/17 Friend of Paris knife attacker charged</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/french-official-friend-attacker-faces-accomplice-charge-55236229?">https://abcnews.go.com/International/wireStory/french-official-friend-attacker-faces-accomplice-charge-55236229?</a>
<b>GIST</b>	<p>A close friend of the young man who carried out a deadly knife attack in Paris before being killed by police last weekend was handed preliminary charges Thursday as a leading suspect in the rampage.</p> <p>The Paris prosecutor's office said the friend, identified as Abdul Hakim A., is accused of association with terrorist criminals with plans to attack people. He was put in provisional detention pending further investigation.</p> <p>France's anti-terrorism prosecutor Francois Molins said in his first news conference since the Saturday night attack that two female friends of the men were arrested earlier in the day in the Paris region. He did not elaborate.</p> <p>Khamzat Azimov, who was born in the Russian republic of Chechnya, killed one person and wounded five others with a knife in the rampage through streets near the Paris Garnier Opera house. He was killed by police as he advanced on them, saying "Shoot! Shoot! Shoot!"</p> <p>Molins said Azimov's parents, who were detained shortly after the stabbing spree, recognized their son in a video declaring allegiance to the Islamic State group that was released a day later.</p> <p>In the posthumous video, released by Islamic State group's Amaq news agency, Azimov called on Muslims in Europe to "take action in the land of disbelievers" if they can't travel to the crumbling caliphate in Iraq and Syria, which has been pounded by coalition forces. He said French citizens should pressure their government "if you want it (attacks) to end."</p> <p>Azimov had French and Russian citizenship, Molins said. His friend Abdul Hakim A. also was from Chechnya.</p> <p>Azimov and Abdul Hakim A. - both 20 - were on a watch list for potential radicalization, Molins said. Abdul Hakim A. was placed on a second alert list in October for prevention of radicalization with a terrorist character.</p> <p>Azimov was placed on the list containing thousands of names because of his links to a young woman that Abdul Hakim A. married before she tried to go to Syria.</p> <p>The prosecutor said Abdul Hakim A., arrested a day after the attack in Strasbourg where Azimov had previously lived, denied contacting or seeing his friend for several months. The Azimov family had moved</p>

	<p>to the northern 18th district of Paris last July.</p> <p>Investigators detained Abdul Hakim A. because of his marriage to the young woman headed to Syria, Molins said.</p> <p>"Abdul Hakim A. came to Paris from Jan. 8-12, 2017, accompanied by Khamzat Azimov, in order to get a religious wedding with this young woman, the eve of her departure for Syria," the prosecutor said.</p> <p>Studying Abdul Hakim A.'s communications, Molins said investigators noted much activity on encrypted networks, including in the night after Azimov's rampage.</p> <p>IS sympathizers have killed more than 200 people in France in recent years - 130 of them in an coordinated attack on Paris revelers in 2015.</p> <p>The latest attack Saturday occurred less than two months after a murderous extremist rampage in the southern town of Carcassonne, a haunt for tourists. There, a Frenchman of Moroccan origin - also on a watch list - killed three people with a gun, two in a supermarket, including an officer who exchanged himself for a hostage.</p> <p>Azimov had been studying to become a nurse after failing to gain entrance to medical school, Molins said.</p>

<b>HEADLINE</b>	<b>05/17 Study: high uranium levels in water wells</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/991231/federal-study-finds-high-uranium-concentration-in-some-wells/">http://mynorthwest.com/991231/federal-study-finds-high-uranium-concentration-in-some-wells/</a>
<b>GIST</b>	<p>SPOKANE, Wash. (AP) — The federal government says some water wells in northeastern Washington have high uranium concentrations, sometimes as much as 40 times the level considered safe for drinking water.</p> <p>That's according to a new study from the U.S. Geological Survey, which sampled water from 13 wells and looked at historical data on uranium concentrations.</p> <p>The Spokesman-Review reports that half the wells sampled had levels of uranium above 30 micrograms per liter, the Environmental Protection Agency's standard for drinking water.</p>

	<p>The study found 60 percent of wells in the historical data had uranium concentrations above safe drinking water guidelines.</p> <p>The study looked at portions of Ferry, Stevens and Pend Oreille counties, most of Spokane County, and parts of Okanogan, Douglas, Grant, and Lincoln counties. About 125,000 there get their water from private wells.</p>

<b>HEADLINE</b>	<b>05/17 Sawant subject of 4 ethics complaints</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/sawant-subject-of-at-least-4-ethics-complaints">http://komonews.com/news/local/sawant-subject-of-at-least-4-ethics-complaints</a>
<b>GIST</b>	<p>SEATTLE -- Earlier this week the Seattle Ethics and Elections Commission received the first of at least four complaints from the public about Seattle City Councilwoman Kshama Sawant's alleged use of taxpayer-funded resources to promote a political agenda.</p> <p>Some of those complaints cite an exchange between Sawant and Councilmember Sally Bagshaw during a council briefing on May 14.</p> <p>"On multiple occasions, I've seen your staff using our copiers to print your signs," Bagshaw said during the briefing. "I just don't think it is right for us to be using city resources or the copy machines to promote something that not all of us agree to."</p> <p>But at that same briefing, Sawant defended her actions, saying "you can choose not to use your office for really fighting for the interests of working people and to build movements. I strongly believe that council resources should absolutely be used to build social movements and not for furthering the interests of the Chamber of Commerce."</p> <p>Sawant has not responded to a request to comment about the ethics complaints.</p> <p>But Wayne Barnett, chairman of the SEEC, says Sawant is not under investigation. He tells KOMO the complaints are so new that he hasn't even had a chance to conduct a preliminary review.</p> <p>In an email, Barnett says if a preliminary review finds reasonable cause to believe that a violation has occurred, the ethics commission then move on to what he calls "enforcement mode."</p> <p>Complicating the matter is that the SEEC staffer who would investigate the complaints is out of town until next Wednesday, potentially delaying any investigation.</p>

<b>HEADLINE</b>	<b>05/17 Publisher claims D.B. Cooper identified</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/05/17/db-cooper-identified-publisher-says-mystery-hijacker-was-ex-paratrooper-from-michigan.html">http://www.foxnews.com/us/2018/05/17/db-cooper-identified-publisher-says-mystery-hijacker-was-ex-paratrooper-from-michigan.html</a>
<b>GIST</b>	<p>More than 45 years after a mysterious plane hijacker made off with \$200,000 in ransom money, disappearing into the night sky, a publishing company believes it has finally identified the man who eluded authorities for so long.</p> <p>At a news conference on Thursday, Michigan publisher Principia Media said the hijacker, known as D.B. Cooper, was former military paratrooper and intelligence operative Walter R. Recca. The company said it worked with Recca's best friend, Carl Laurin, in compiling the evidence.</p> <p>While the publisher did not disclose whether Recca was still alive, an obituary online lists a man with the identical name who lived in Oscada, Mich., as having died in 2014 at the age of 80.</p>

"Evidence, including almost-daily discussions over a 14-year period and 3+ hours of audio recordings featuring the skyjacker, was compiled by Reca's best friend. It was then analyzed by a Certified Fraud Examiner and forensic linguist," the publisher said in a news release. "The audio recordings, created in 2008, include Reca discussing skyjacking details that were not known to the public prior to the FBI's information release in 2015."

The publishing company worked with Laurin for the memoir "D.B. Cooper & Me: A Criminal, A Spy, My Best Friend."

Vern Jones, CEO of Principia, talked about recordings that Laurin claimed were actual recordings of Reca speaking about the heist. Jones, a self-proclaimed skeptic at the start of the investigation, said that the evidence was "overwhelming."

"D.B. Cooper & Me: A Criminal, A Spy, My Best Friend", which claims Cooper was actually Walter "Walt" Reca from Michigan.

"We listened in Walter's own words. We heard him talk about his motivations for the hijacking. (He) talked about the jump itself, what happened in the plane. Where he landed. How he got home -- and most importantly, why he wasn't caught."

Jones played one of the audio clips that described how Reca supposedly snuck the ransom note on the plane.

"Now where did you carry your note?" Laurin can be heard asking. "The inside pockets of the suit," Reca replied. Laurin then asks what the note was about, to which Reca abruptly replies "I can't remember right there, this is a hijack and I've got explosives."

The rest of the audio clip describes the moments inside the plane when Reca was preparing to jump.

In addition to the tapes, Jones said they reviewed letters, official documents, photos and even a typed confession, all of which seem to corroborate Laurin's theory that "Walter Reca is the real D.B. Cooper."

Jones also seemed to hint that the discrepancies between Principia's investigation and the FBI's investigation might not have been accidental. "The hijacking," he said "was just the beginning of the story."

He detailed a supposed meeting between Reca and "two men in hard hats" two months after the heist where he was asked by these two unknown men if he was prepared to go to "prison." Reca was reportedly hired by them, though it is unclear if the two men Jones talked about were FBI agents.

Laurin himself spoke at the press conference and described Reca as a daredevil "who always wanted to be in the CIA."

"I always got the feeling that when he jumped with our team, the Michigan parachute team, it was a means of survival, not really for the thrill," Laurin said. "He was looking for something far beyond that."

After the skyjacking, Reca later became a high-level covert intelligence operative, according to the publishing company.

Reca possessed skills to survive jumping out of the plane because he was on the Michigan Parachute Team, according to the publisher. He attended the team reunion in 2000 and was pictured in a photo released by the publisher.

Despite the claims of the publishing company, the FBI has never ruled out the possibility that the hijacker was killed in the jump -- which took place during a rainstorm at night, over rough, wooded terrain. The

	<p>hijacker's clothing and footwear were also unsuitable for a rough landing.</p> <p>Many investigators have come forward with their theories for who the infamous hijacker may be. Earlier this year, the leader of the private investigative team who has spent years trying to crack the D.B. Cooper hijacking case claimed he believes the mysterious criminal was a CIA operative whose identity has been covered up by federal agents.</p> <p>Thomas Colbert, a documentary filmmaker who helped put together the 40-member team, said in January his team made the connection from work a code breaker uncovered in each of five letters allegedly sent by Cooper.</p> <p>Since last January, the FBI has released more than 3,000 documents to Colbert's team investigating the hijacking. The FBI said in court papers that it has more than 71,000 documents that may be responsive to Colbert's lawsuit.</p>

<b>HEADLINE</b>	<b>05/17 Ozone-destroying emissions on rise</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/05/16/world/ozone-emissions-cfc-intl/index.html">https://www.cnn.com/2018/05/16/world/ozone-emissions-cfc-intl/index.html</a>
<b>GIST</b>	<p>(CNN)Banned chemicals which can cause holes in the ozone layer are on the rise, according to a new report, and no one knows who the culprit is.</p> <p>The hunt is now on to find and stop the mysterious source of the emissions, which scientists believe are emanating from somewhere inside of east Asia.</p> <p>Chlorofluorocarbons, or CFCs, used to be common in refrigerators, aerosol cans and dry cleaning chemicals. But they were banned under the Montreal Protocol of 1987, after it was discovered they contributed to the creation of a giant hole in the ozone layer which forms over Antarctica each September.</p> <p>The ozone layer, a fragile shield of gas, protects animal and plant life on Earth from powerful UV rays.</p>

When the ozone layer is weakened, more UV rays can get through and affect humans, making them prone to skin cancer, cataracts and other diseases. There also may be consequences for plant life, including lower crop yields and disruptions in the ocean's food chain.

After concerted global action, the hole in the ozone layer was gradually beginning to mend, but scientists at the US National Oceanic and Atmospheric Administration (NOAA) have discovered a sharp rise in CFCs from an unknown source.

"We're raising a flag to the global community to say, 'This is what's going on, and it is taking us away from timely recovery of the ozone layer,'" NOAA scientist Stephen Montzka, the study's lead author, said in a statement.

"Further work is needed to figure out exactly why emissions of CFC-11 are increasing, and if something can be done about it soon," added Montzka.

The team said the emissions were most likely due to new, unreported production from an unidentified source in East Asia. It is the first time levels of one of the three most abundant, long-lived CFCs has increased for a sustained period since the late 1980s.

"In the end, we concluded that it's most likely that someone may be producing the CFC-11 that's escaping to the atmosphere," he said.

"We don't know why they might be doing that and if it is being made for some specific purpose, or inadvertently as a side product of some other chemical process."

<b>HEADLINE</b>	<b>05/17 NASA: Earth in major hydrologic change</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/nasa-reveals-major-changes-in-water-availability-worldwide/">https://www.cbsnews.com/news/nasa-reveals-major-changes-in-water-availability-worldwide/</a>
<b>GIST</b>	<p>Earth has experienced significant shifts in freshwater distribution across the globe thanks to climate change, water management and natural cycles, among other factors, according to a NASA study.</p> <p>"What we are witnessing is major hydrologic change," said Jay Famiglietti of NASA's Jet Propulsion Laboratory in Pasadena, California. "We see a distinctive pattern of the wetland areas of the world getting wetter -- those are the high latitudes and the tropics -- and the dry areas in between getting dryer. Embedded within the dry areas we see multiple hotspots resulting from groundwater depletion."</p> <p>Researchers tracked global freshwater trends in nearly three dozen regions worldwide using 14 years of data and imagery from the Gravity Recovery and Climate Experiment (GRACE) mission, which consists of two spacecrafts orbiting Earth. They analyzed the information alongside irrigation maps, precipitation data from the Global Precipitation Climatology Project, Landsat imagery from the NASA/U.S. Geological Survey and published reports of human activity related to agriculture, mining and reservoir operations, according to a news release.</p> <p>The findings of the first-of-its-kind study were published Wednesday in Nature, a scientific journal.</p> <p>"This is the first time that we've used observations from multiple satellites in a thorough assessment of how freshwater availability is changing, everywhere on Earth," Matt Rodell of NASA's Goddard Space Flight Center, said in the news release.</p> <p>"A key goal was to distinguish shifts in terrestrial water storage caused by natural variability -- wet periods and dry periods associated with El Niño and La Niña, for example -- from trends related to climate change or human impacts, like pumping groundwater out of an aquifer faster than it is replenished," he said.</p> <p>In some regions, like those with melting alpine glaciers and ice sheets, climate change is a clear driver of</p>

	<p>water loss, according to Famiglietti.</p> <p>Agricultural practices also have a big impact. Pumping groundwater for agriculture significantly contributed to freshwater depletion around the world during the period studied, which could explain a decline in freshwater that was observed in Saudi Arabia, for example.</p> <p>Levels of groundwater are also impacted by drought cycles and persistent rain, according to NASA.</p>

<b>HEADLINE</b>	<b>05/17 Rare US-France joint naval exercises</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/us-french-joint-naval-exercises-uss-george-hw-bush/">https://www.cbsnews.com/news/us-french-joint-naval-exercises-uss-george-hw-bush/</a>
<b>GIST</b>	<p>The U.S. Navy is nearing the end of a first-of-its-kind training mission.</p> <p>For more than a week, about 300 French Navy members have been living and training on an American aircraft carrier, the USS George H.W. Bush, off the East Coast. It marks the first time U.S. and French pilots, mechanics and sailors all lived side-by-side on a carrier, and CBS News correspondent Jan Crawford and her team were there to see how the mission all came together.</p> <p>We reached the USS George H.W. Bush like the Navy does – from the sky, going from 150 mph to a dead stop in less than two seconds on another busy day of flight operations.</p> <p>The mission? Joint training exercises with a key ally, France.</p> <p>Holding upwards of 5,000 people, the carrier has everything you'd need – cafeterias, a store, gyms, a post office and a chapel.</p> <p>Rear Adm. Stephen Evans commands the Bush and all the ship personnel in its carrier strike group.</p> <p>"Every day I'm in awe of this. I mean, you think about what goes into this. This is a city... a city with an airfield on top of it," Evans said. "The life blood that runs through it are these young men and women."</p> <p>For the French visitors, it's a chance to sharpen their skills with the best, while working on a runway moving through the ocean at more than 30 mph.</p> <p>"This experience is awesome, right?" French commander Stephane said. "It's a kind of brotherhood. ... We do the same job. We did many operations together."</p> <p>Everyone is performing key roles in the ships tower, with the air officer – or air boss – controlling the airspace. On the flight deck, the landing signal officers communicate with pilots as they come in for landing, touching down at the right moment, so a hook on the tail of the plane snags a wire across the flight deck.</p> <p>The engineering marvel is programmed below deck where the ship's hydraulic system slows the plane down. With takeoffs and landings happening at the same time day and night, it feels like organized chaos and keeping it all organized is the aircraft handling officer, Lt. Cmdr. Winston Cotterell. He used what he called a "ouiji board" to depict what is going on the flight deck.</p> <p>"There are computers that do this too," Crawford said.</p> <p>"This one doesn't freeze up. That one will freeze up from time to time, and sometime the electronic will go down and shut off, and I don't have time to mess with that," Cotterell said.</p> <p>Overseeing all these operations is the ship's Capt. Sean Bailey.</p>

"It's important from the perspective of demonstrating support for our allies. At the same time, it sends a signal to the world that we're strong partners, hand-in-hand," Bailey said.

The U.S. has 11 carriers more than any other nation. The French have only one, the Charles de Gaulle. That ship is undergoing extensive maintenance. While that's taking place, training exercises like this one help our allies stay prepared for anything in an increasingly chaotic world.

<b>HEADLINE</b>	<b>05/17 Pee in the pool? That's not all</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/health/health-news/hard-kill-germs-may-be-lurking-your-hotel-pool-cdc-n875101">https://www.nbcnews.com/health/health-news/hard-kill-germs-may-be-lurking-your-hotel-pool-cdc-n875101</a>
<b>GIST</b>	<p>A hard-to-kill germ called Cryptosporidium can resist the chlorine disinfectant in swimming pools and is a leading cause of outbreaks linked to pools, federal health officials said Thursday.</p> <p>Hotel swimming pools and hot tubs can be a major source of these outbreaks, the Centers for Disease control and Prevention said.</p> <p>A third of the disease outbreaks traced to pools between 2000 and 2014 started in hotel pools and hot tubs, CDC said.</p> <p>And many of those cases were caused by Cryptosporidium, a parasite that causes diarrhea, as well as the bacteria that cause Legionnaire's disease and a second bacteria called Pseudomonas.</p> <p>Cryptosporidium, or crypto for short, caused 58 percent of outbreaks in which a germ could be identified, and 89 percent of the illnesses, the CDC said.</p> <p>"Most germs are killed within minutes by the amount of chlorine that CDC recommends and that is required by state and local governments," said Michele Hlavsa, chief of the CDC's Healthy Swimming Program.</p> <p>"Crypto can survive for seven or more days. It takes a lot of chlorine, for a lot of time, to kill crypto."</p> <p>And even though crypto is spread by a diarrheal incident — and yes, that's what you think it is — it can be hard to see that happen in a pool full of kids.</p> <p>"Diarrhea caused by crypto can be pretty watery so it can be pretty stealthy," Hlavsa said.</p> <p>Parents shouldn't let kids go into pools if they've had diarrhea recently, and babies need even closer watching. If there is a diarrheal incident, the pool operator is supposed to clear the pool and flush it with extremely high levels of chlorine or bromine to kill the parasite.</p> <p>That evidently does not always happen.</p> <p>Hlavsa's team at CDC went through reports about 493 outbreaks of disease that could be linked to swimming pools between 2000 and 2014.</p> <p>They made a lot of people sick: more than 27,000 illnesses. Eight people died.</p> <p>More than half of the cases were caused by crypto, which infects people when they swallow contaminated pool water. Another 16 percent were caused by Legionella bacteria, which are usually inhaled in water spray.</p> <p>Pseudomonas caused 13 percent of illnesses, and also causes folliculitis or "hot tub rash" and otitis externa or "swimmers' ear".</p>

“Hotels were the leading setting, associated with 157 (32 percent) of the 493 outbreaks,” the CDC team reported.

Chlorine is very effective at killing germs if it’s kept at the right levels, and if the pH of the pool is kept at the proper level for the disinfectant to work.

In 2013, for example, the CDC said 20 percent of inspections of public hot tubs and spas showed they did not have enough disinfectant.

And bacteria can grow into mats called biofilms, which then resist the effects of chlorine and other disinfectants. These slimy biofilms typically have to be scrubbed off.

Hotel pools are probably not much different from any other public pool, Hlavsa said.

“We underestimate what it takes to properly operate a pool, whether it is a hotel pool or a water park pool,” she said.

A properly trained operator has to be on hand to make sure chlorine or bromine concentrations and pH levels are where they should be, and should be on the lookout for poop incidents — even the hard-to-see kind — so they can immediately clear and disinfect the pool.

#### WHY SHOWERING IS SO IMPORTANT

It also helps to enforce the rules about showering.

Proper showering can not only remove residual fecal matter that could get into a pool, but it takes away the oil, sweat and dirt that react with chlorine and make it less effective.

“It uses up the chlorine that would actually kill germs,” Hlavsa said.

“The problem with peeing in the pool and the problem with not showering before you go into the pool is that urine and sweat and dirt combine with chlorine in the water.”

Urine is not sterile, contrary to popular belief. “Pee can interact with chlorine,” Hlavsa said.

In fact, that’s what makes people’s eyes sting after swimming. It’s not the chlorine. It’s urine.

“It’s really, really, really important to shower and not to pee in the pool,” Hlavsa said.

<b>HEADLINE</b>	<b>05/17 Hot streak: 400 warmer than avg. months</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/world/2018/05/17/global-warming-april-400th-consecutive-warm-month/618484002/">https://www.usatoday.com/story/news/world/2018/05/17/global-warming-april-400th-consecutive-warm-month/618484002/</a>
<b>GIST</b>	<p>It was December 1984, and President Reagan had just been elected to his second term, Dynasty was the top show on TV and Madonna's Like a Virgin topped the musical charts.</p> <p>It was also the last time the Earth had a cooler-than-average month.</p> <p>Last month marked the planet's 400th consecutive month with above-average temperatures, federal scientists from the National Oceanic and Atmospheric Administration announced Thursday.</p> <p>The cause for the streak? Unquestionably, it's climate change, caused by humanity's burning of fossil fuels.</p>

"We live in and share a world that is unequivocally, appreciably and consequentially warmer than just a few decades ago, and our world continues to warm," said NOAA climate scientist Deke Arndt. "Speeding by a '400' sign only underscores that, but it does not prove anything new."

Climate scientists use the 20th-century average as a benchmark for global temperature measurements. That's because it's fixed in time, allowing for consistent "goal posts" when reviewing climate data. It's also a sufficiently long period to include several cycles of climate variability.

"The thing that really matters is that, by whatever metric, we've spent every month for several decades on the warm side of any reasonable baseline," Arndt said.

NOAA's analysis found last month was the 3rd-warmest April on record globally. The unusual heat was most noteworthy in Europe, which had its warmest April on record, and Australia, which had its second-warmest.

Portions of Asia also experienced some extreme heat: In southern Pakistan, the town of Nawabshah soared to a scalding 122.4 degrees on April 30, which may have been the warmest April temperature on record for the globe, according to Meteo France.

Argentina also had its warmest April since national records began there in 1961.

North America was the one part of the world that didn't get in on the heat parade. Last month, the average U.S. temperature was 48.9 degrees, 2.2 degrees below average, "making it the 13th-coldest April on record and the coldest since 1997," NOAA said.

For the year-to-date, the Earth is seeing its 5th-warmest start to the year.

A separate analysis of global temperature data from NASA also found last month was the third-warmest April on record.

Another milestone was reached in April, also related to the number "400": Carbon dioxide — the gas scientists say is most responsible for global warming — reached its highest level in recorded history at 410 parts per million.

This amount is highest in at least the past 800,000 years, according to the Scripps Institute of Oceanography.

HEADLINE	<b>05/17 Vancouver BC bust violent contract gang</b>
SOURCE	<a href="https://globalnews.ca/news/4215924/violent-lower-mainland-contract-gang-take-down/">https://globalnews.ca/news/4215924/violent-lower-mainland-contract-gang-take-down/</a>
GIST	<p>A “violent crime group” whose leader was 21 years old has been taken down by the Vancouver Police Department and the Combined Forces Special Enforcement Unit of B.C. (CFSEU-BC).</p> <p>Vancouver police say the gang, known as the Gill Group, was hired for “contract work.” Officials say they mostly targeted other gang members but were also hired by bigger gangs to commit crime.</p> <p>The investigation led to the seizure of four guns, seven arrests and the recommendation of 20 criminal charges. Some of the charges include conspiracy to commit murder, possession of a loaded restricted firearm, and extortion.</p> <p>Two of the people charged were 17 years old at the time of offences.</p>

“This violent crime group was comprised of several individuals including its leader, Taqdir Gill,” said Supt. Mike Porteous with the VPD. “We are committed to aggressively targeting people who pose the most risk to our communities, and we will continue to work relentlessly with other partner agencies, like CFSEU-BC.”

The gang is said to have been connected to serious crime and shootings across Metro Vancouver since last summer.

Seven arrests have been made and the following charges have been approved by Crown Counsel:

1. Taqdir Gill, 21 years old, has been charged with conspiracy to commit murder, conspiracy to commit arson, conspiracy to discharge a firearm, possession of a loaded restricted firearm, occupy a vehicle knowing a firearm is present, and extortion.
2. Hitkaran Johal, 19 years old, has been charged with conspiracy to commit murder and conspiracy to commit arson.
3. Simrat Lally, 20 years old, has been charged with conspiracy to discharge a firearm, conspiracy to commit arson, occupying a vehicle knowing a firearm is present, and two counts of possessing a firearm without a license/registration.
4. Walta Abay, 23 years old, has been charged with conspiracy to commit murder, possession of a loaded restricted firearm, and occupying a vehicle knowing a firearm is present.
5. Pawandeep Chopra, 20 years old, has been charged with possession of a loaded restricted firearm.
6. A youth, 17 years old at the time of offence, has been charged with conspiracy to discharge a firearm, possess a firearm without a license/registration, and occupy a vehicle knowing a firearm is present.
7. A youth, 17 years old at the time of offence, has been charged with conspiracy to commit arson.

Arrests were made last October. Only some of the members remain behind bars, including the group’s leader.

<b>HEADLINE</b>	<b>05/17 US: \$5M reward for El Chapo associate</b>
<b>SOURCE</b>	<a href="https://mexiconewsdaily.com/news/us-offers-us-5-million-reward-for-chapo-associate/">https://mexiconewsdaily.com/news/us-offers-us-5-million-reward-for-chapo-associate/</a>
<b>GIST</b>	<p>The United States has posted a US \$5-million reward for any information regarding the whereabouts of Adelmo Niebla Gómez, formerly a close collaborator of ex-Sinaloa Cartel boss Joaquín Guzmán Loera.</p> <p>According to U.S. investigators, Niebla, also known as El G3, is the leader of a faction within the Sinaloa Cartel and responsible for smuggling hundreds of thousands of kilograms of marijuana and thousands of kilograms of methamphetamine, cocaine and heroin into the country.</p> <p>Niebla’s operations are believed to run both ways across the border. U.S. authorities suspect him of transporting hundreds of millions of dollars in drug proceeds in the form of cash and the exportation of weapons from the United States into Mexico.</p> <p>“This \$5-million reward offer demonstrates the seriousness of U.S. intentions to track down this fugitive,” said the Department of State.</p> <p>Niebla was arrested in Mexico in 2012 but in early 2014 he and two accomplices drew on the cartel’s playbook and escaped from a prison in Culiacán, Sinaloa, through a 400-meter tunnel 10 meters underground.</p> <p>Investigations found that the tunnel led directly to the maximum security area inside the penitentiary.</p> <p>In Mexico, Niebla is accused of masterminding drug trafficking in an area that encompasses the northern states of Sonora, Baja California, Durango and Sinaloa.</p>

<b>HEADLINE</b>	<b>05/18 Malaysia: 72 suitcases w/cash seized</b>
<b>SOURCE</b>	<a href="http://time.com/5281927/malaysia-corruption-probe-najib-razak-cash/">http://time.com/5281927/malaysia-corruption-probe-najib-razak-cash/</a>
<b>GIST</b>	<p>(KUALA LUMPUR, Malaysia) — Malaysian police on Friday confiscated 284 designer handbags and 72 suitcases containing cash, jewelry and other valuables as part of a corruption and money-laundering investigation into former Prime Minister Najib Razak.</p> <p>Commercial crime chief Amar Singh said the valuables were seized in a search that began late Thursday at apartments linked to Najib at an upscale condominium in Kuala Lumpur.</p> <p>Singh said the seizure was part of investigations into a corruption scandal at the 1MDB state fund, which is also being probed by the U.S. and other countries.</p> <p>U.S. investigators say Najib’s associates stole and laundered \$4.5 billion from the fund, some of which landed in Najib’s bank account, and that \$23 million was used to buy a pink diamond necklace for his wife. Najib, whose coalition was ousted in a stunning election defeat last week, denies any wrongdoing.</p> <p>Television stations showed footage of police carting away orange boxes containing handbags as well as luggage of various sizes from the condominium.</p> <p>Singh said the seizure included Birkin Hermes bags, cash in various currencies, watches and a “big amount” of jewelry. Najib’s wife, Rosmah Mansor, is known in Malaysia for her love for Birkin bags, which luxury publications say cost from \$12,000 to more than \$200,000.</p> <p>Singh declined to say who the apartments belonged to but that the “search was conducted in relevance to our 1MDB investigations.”</p> <p>He said police also conducted simultaneous raids at several other locations including Najib’s family house, his former office as prime minister and an official residence. Documents related to 1MDB were seized from the office and police are still trying to crack open a safe in Najib’s house, he said.</p>

<b>HEADLINE</b>	<b>05/17 Massive backlog of rape kits</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/990407/rape-kits-washington-backlog/">http://mynorthwest.com/990407/rape-kits-washington-backlog/</a>
<b>GIST</b>	<p>Thousands of rape kits have gone untested in Washington state for years. While there has been some progress speeding up the tests, it’s still slow going.</p> <p>When someone reports a rape, they often end up at a hospital where a rape kit is used to collect evidence, including potential DNA of the attacker. Leah Griffin had to go through it after she was raped in Seattle in 2014.</p> <p>“That was a six-hour procedure and it’s six hours of invasion and embarrassment, and to then find out that my kit was not even tested as part of the investigation was infuriating,” she said. “To know that I had sat through something so incredibly probing and invasive and humiliating ... for nothing.”</p> <p>Backlog of rape kits</p> <p>Griffen is part of the legislative sexual assault task force formed by state Representative’s Gina McCabe and Tina Orwall. Orwall says they realized there was a problem with rape kits not being tested.</p> <p>“I had been touring evidence rooms and had seen these white boxes stacked to the ceiling and asked what</p>

they were and found out they were sexual assault kits and many were not tested. And we started passing legislation to address the issues,” Orwall said.

Orwall says that included 2015 legislation, making it mandatory for all police agencies to submit every rape kit for testing.

But just how many had gone untested wasn't clear. Captain Monica Alexander with the Washington State Patrol Crime Lab said they reached out to police agencies across the state to get an idea of how many kits were headed to the labs, and ended up with an estimate of about 6,000. That was a few years ago. But Alexander says that number didn't hold.

“As time went on there were other agencies that hadn't notified us that they had kits that said hey we also have kits,” Alexander said. “At this time we know it's more than 6,000 but we don't know how much more. We're estimating somewhere between 8000 and 10,000.”

A clearer picture is expected in about six months when a Sexual Assault Initiative Team out of the state attorney general's office completes a statewide inventory of backlogged rape kits.

#### Sexual Assault Initiative Team

The team was formed a few weeks ago with money from a \$3 million Justice Department grant — the attorney general's office awarded it last year.

Orwall says half of that money will be used for testing the backlog of rape kits, some of which are decades old.

“And, of course, each of those kits represents a survivor whose voice wasn't heard and didn't get justice of what happened, and potentially some very dangerous offenders still on the street,” Orwall said. “I bet they assumed they were tested and we let them down as a state.”

Legislative bills out of the sexual assault task force did not pass last session. They aimed to help pay for testing the backlogged rape kits. At the time, there was money in the budget for seven new scientists at the state crime lab to focus on the backlog.

But Captain Alexander at the lab says hiring new scientists — and keeping them — is also a challenge.

“The hard part is actually trying to get them in and keeping them because as we hire them, and we have some of the best training in the United States bar none ... but we don't have some of the best pay,” Alexander said. “You get them trained and everybody goes ‘Wow, what great people I can save money on. I just hire them, they're already trained, they know how to do DNA testing.’”

#### Three to five years

The state lab processes all the new rape kits and sends the old ones to one private lab. Alexander says that only shaves some of the processing time off, which she says is currently about six months for a priority case.

“When we outsource them we still have work to do, so when they come back our scientists basically have to verify the work from the lab,” Alexander said. “It might take a little less time but it's still work.”

Right now, Alexander estimates it could take 3-5 years to get through the backlog of test kits and new rape kits are taking around six months on priority rush, which still isn't always soon enough.

Tumwater Police arrested a man on suspicion of rape in January only to find out he was accused in another rape in July of last year. The results of the first rape kit were rushed and took about six months. The results came in one day before the man was accused of raping the second woman.

	<p>Orwall says hopes to improve on that turnaround time in the upcoming legislative session.</p> <p>“One of the things we’re looking at with our state lab is there’s a thing called a ‘high throughput lab’ which Ohio does,” Orwall said. “Which allows them to process about five times as many kits as you’re doing right now and we want to look at maybe proposing that next session.”</p> <p>Ohio had a backlog of 14,000 rape kits, but state leaders announced in February they had cleared the backlog with turnaround times averaging a couple of weeks rather than months, and in some rush cases as short as eight hours.</p> <p>Step in the right direction</p> <p>Griffen, who works with Orwall and McCabe on the legislative sexual assault task force, says clearing the backlog has to be a top priority for the Legislature.</p> <p>“Because of every year we don’t pass a bill and every year we don’t fund the testing of these backlogged rape kits is a year where we run up against more statutes of limitation,” Griffen said. “So, we could get to a point where we have not gotten these kits tested, you test them, find out there’s a serial rapist but now we can’t convict him because the statute of limitations has run up.”</p> <p>Captain Alexander at the state lab says they’ve been able to upload 247 cases into CODIS — the federal criminal DNA database – and of those, 71 have come back with hits.</p> <p>One important step in the right direction is a new statewide tracking system for rape kits. Washington will be the first state in the country to have the system when it is fully implemented, allowing hospitals and law enforcement and rape survivors to track their rape kits. A pilot is already up and running in around a dozen counties, it is expected to be implemented statewide in October.</p>

<b>HEADLINE</b>	<b>05/17 Everett police launch anti-gang efforts</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/05/17/everett-gang-related-offenses-down-60-as-city-puts-together-a-gang-unit/">http://q13fox.com/2018/05/17/everett-gang-related-offenses-down-60-as-city-puts-together-a-gang-unit/</a>
<b>GIST</b>	<p>EVERETT, Wash. – It’s no secret our area has a growing gang problem. We’re seeing it from Snohomish to King to Pierce counties. To stop the violent crimes, the Everett Police Department is working on putting together a gang unit.</p> <p>When you compare the first five months of this year compared to last year, gang-related offenses are down 60%, shootings city-wide are down 37%, and drive-by shootings are down 85%.</p> <p>But Everett’s Police Chief Dan Templeman says he’s bracing for the summer months when shootings and other crimes tend to spike. That's why the city needs a gang unit, he says.</p> <p>“His ability to look at a graffiti tag and quickly identify what gang that’s affiliated with and who might’ve done that takes quite a bit of time,” Templeman said of one dedicated gang detective in Everett.</p> <p>Now, the city is looking to get a full unit with five officers and one sergeant.</p> <p>“My focus is on public safety and gang violence. We’re seeing a real uptick and it's frightening, the age of the kids we’re seeing,” Everett Mayor Cassie Franklin said in January.</p> <p>The mayor’s directive in January kicked the police department’s anti-gang efforts into high gear.</p> <p>“Just because we don’t have a stand-alone gang unit doesn’t mean we haven’t been working on this issue,”</p>

	<p>Templeman said.</p> <p>For the past eight months, the department has been doing emphasis patrols on West Casino Road, which is an area plagued by gang violence.</p> <p>Deadly gang-related shootings allegedly committed by young teenagers against other teens. While the number of gang members seems to be growing, the number of police officers is flatlining due to retirements. And staffing concerns make it hard to have enough officers to put together a gang unit.</p> <p>“Staffing is an issue you have to look at. You have to look at equipment and outfitting. You have to look at budget and how that impacts the budget,” said Templeman.</p> <p>Once you get the right detectives, understanding gangs is a science in itself.</p> <p>“We would send them off to training on gangs, identification of gangs, graffiti, surveillance-type training,” said Templeman.</p> <p>By early August, the police chief plans to have at least a partial unit in place.</p> <p>“Maybe we start with two officers and a sergeant,” said Templeman.</p> <p>The chief says drive-by shootings and murders are just the symptoms.</p> <p>“Without treating the disease or the cause, this unit is just going to continue to respond and make arrests and respond and make arrests,” said Templeman.</p> <p>That’s why he says at least one member of the gang unit will solely focus on education and prevention.</p> <p>A gang unit isn’t the only priority of the Everett Police Department. They’re also putting extra resources toward the city’s opioid epidemic and homeless problems.</p>

<b>HEADLINE</b>	<b>05/18 Gunman arrested at Fla. Trump resort</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/05/18/gunman-arrested-at-trump-resort-in-florida-after-opening-fire-yelling-about-president.html">http://www.foxnews.com/us/2018/05/18/gunman-arrested-at-trump-resort-in-florida-after-opening-fire-yelling-about-president.html</a>
<b>GIST</b>	<p>A man who police say was “yelling and spewing some information about President Trump” was arrested early Friday after exchanging gunfire with officers in the lobby of a hotel at a sprawling golf resort that the president owns near Miami.</p> <p>Yellow caution tape was seen stretched across the main gate of the Trump National Doral Golf Club Friday morning following the overnight rampage, in which the shooter reportedly burst into the property for unknown reasons and draped an American flag over a lobby counter while spraying bullets.</p> <p>"He was yelling and spewing some information about President Trump and that's what we know so far," Miami-Dade Police Director Juan Perez said. "And he had an American flag that he did drape over the counter."</p> <p>The gunman – who has not yet been identified – eventually was “neutralized” in a shootout with police.</p> <p>The condition of the male suspect, who was taken into a local hospital after being brought into custody, is unknown. Perez also said a Doral officer received an unspecified injury.</p> <p>The Secret Service says it is on scene and helping in the investigation.</p>

<b>HEADLINE</b>	<b>05/17 Bandidos leaders convicted in shootout</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/05/17/us/texas-biker-gang-shootout-convictions/index.html">https://www.cnn.com/2018/05/17/us/texas-biker-gang-shootout-convictions/index.html</a>
<b>GIST</b>	<p>(CNN)Three years after the deadly biker gang shootout in the parking lot of a Twin Peaks restaurant in Waco, Texas, the top two leaders of the Bandidos motorcycle club were found guilty on 13 federal charges.</p> <p>Bandidos National President Jeffrey Pike, 62, and Vice President Xavier Portillo, 58, were convicted Thursday by a jury in San Antonio after a nearly three-month trial.</p> <p>Jurors convicted the leaders of the motorcycle organization of racketeering, drug trafficking, conspiracy to commit murder and extortion charges. The men face up to life in prison and will be sentenced later this year.</p> <p>Prosecutors have dismissed dozens of criminal cases against other bikers who were at the deadly Twin Peaks shootout in May 2015.</p> <p>McLennan District Attorney Abel Reyna decided hours after the shootout to round up all the bikers and charge them with the same criminal count of engaging in organized criminal activity. But that strategy now seems to be unraveling.</p> <p>Since February, the district attorney has dismissed criminal charges against 124 bikers. On May 9, a McLennan grand jury re-indicted 25 bikers who were at the shootout.</p> <p>Among the new indictments were three murder charges against Bandidos bikers, as well as charges of tampering with evidence and engaging in first- and second-degree riot.</p> <p>The federal investigation into the Bandidos leadership was not part of the Waco shootout investigation.</p>

	<p>The Federal Bureau of Investigation was already working with the Drug Enforcement Agency, building its case against the outlaw motorcycle gang.</p> <p>The Twin Peaks shootout was the violent ending to a boiling feud between the Bandidos and the Cossacks biker clubs. Cossacks bikers have told CNN that they came to the Twin Peaks to make peace. The Bandidos say the Cossacks showed up in massive numbers that morning to ambush them.</p> <p>Nine people were killed and dozens more injured and wounded on that Sunday morning. Investigators carried out an unprecedented roundup and charged 177 bikers.</p> <p>The handling of the Waco shootout cases has been highly controversial and described as "embarrassing" and a "frontal assault" on the biker's rights.</p>

<b>HEADLINE</b>	<b>05/17 DOJ ends 'administrative closure' cases</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-usa-immigration/u-s-ends-practice-that-gave-some-immigrants-reprieves-from-deportation-idUSKCN1IJ00N">https://www.reuters.com/article/us-usa-immigration/u-s-ends-practice-that-gave-some-immigrants-reprieves-from-deportation-idUSKCN1IJ00N</a>
<b>GIST</b>	<p>NEW YORK (Reuters) - U.S. Attorney General Jeff Sessions on Thursday barred immigration judges from a once-common practice of shelving deportation cases involving some immigrants with deep ties to the United States.</p> <p>The practice known as administrative closure allowed judges to clear low-priority cases off their dockets, effectively letting some immigrants remain indefinitely in the United States despite their lack of legal status.</p> <p>Under President Barack Obama there had been an effort to administratively close certain cases as a way of allowing judges to focus on higher-priority matters and reduce the immigration court backlog. More than 200,000 cases were closed during the last six years of his presidency.</p> <p>The closures were routinely used for people without criminal backgrounds who had lived for many years in the United States, often with U.S. citizen children or spouses. In many cases, the immigrants became eligible for work permits.</p> <p>The administration of President Donald Trump has taken a sharply different tack on immigration, declaring that all those in the country illegally, whether or not they pose a threat to public safety, are subject to deportation.</p> <p>Since immigration courts fall under the jurisdiction of the Department of Justice, the attorney general can issue opinions in immigration cases to establish legal precedent for judges across the country and the Board of Immigration Appeals.</p> <p>On Thursday, Sessions issued such an order in a case in which a judge had granted administrative closure for an unaccompanied minor from Guatemala.</p> <p>Before Sessions' ruling, the government or an immigrant could ask a judge to close a case. The attorney general ruled that judges "do not have the general authority to suspend indefinitely immigration proceedings by administrative closure." He said exceptions could be made in some cases, including when an immigrant has certain forms of legal status pending.</p> <p>Sessions had already quietly been instituting the policy even before this announcement. Reuters reported last June that government prosecutors were moving to put cases that had been previously closed back on the court calendar.</p> <p>Sessions acknowledged in the order, however, that recalendaring all cases that had been closed "would</p>

	likely overwhelm the immigration courts.”  Immigration attorneys and advocates quickly criticized Sessions’ decision. The ruling was intended “to reduce immigration judges to deportation machines,” said Chuck Roth of the National Immigrant Justice Center.

<b>HEADLINE</b>	<b>05/17 Brazil: 251 arrests in child porn raids</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/International/wireStory/police-seize-child-porn-widespread-brazil-raids-55236025?">https://abcnews.go.com/International/wireStory/police-seize-child-porn-widespread-brazil-raids-55236025?</a>
<b>GIST</b>	<p>Brazilian police arrested more than 250 people Thursday as they executed hundreds of search and seizure warrants for child pornography in the largest operation of its kind in the Latin American country.</p> <p>Thousands of police fanned out in 24 states and the federal district to serve more than 500 warrants, the Ministry of Public Security said. During the searches, police detained people they said were in possession of or were sharing child pornography. By evening, 251 people had been taken into custody.</p> <p>Public Security Minister Raul Jungmann said the operation was the largest involving civil police in Brazil's history.</p> <p>"This is without a doubt one of the most reprehensible, one of the most intolerable crimes against our children and adolescents," he said at a news conference. "Because of this, within the law, we will be unrelenting in combatting it. We will not stop here."</p> <p>Investigators analyzed more than 1 million files in order to identify the targets of Thursday's operation, Jungmann said. Last year, American authorities shared with Brazilian investigators tools and methods for identifying such files online, according to Carlos Afonso Goncalves, the director of intelligence at the National Secretariat of Public Security.</p> <p>The targets of the investigation all had "considerable quantities" of electronic files containing images of child pornography in their possession, said Alessandro Barreto, coordinator of the cybercrimes lab at the secretariat. The smallest number of downloaded files was 150.</p>

<b>HEADLINE</b>	<b>05/17 Arrest in Calif. office bldg. explosion</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/US/man-arrested-allegedly-unregistered-destructive-device-amid-investigation/story?id=55230119">https://abcnews.go.com/US/man-arrested-allegedly-unregistered-destructive-device-amid-investigation/story?id=55230119</a>
<b>GIST</b>	<p>A Southern California man has been arrested on suspicion of having an unregistered destructive device amid the investigation into the explosion that killed his ex-girlfriend at the day spa she owned, according to the FBI and a criminal complaint.</p> <p>But Stephen Beal, 59, has not been charged in connection with the Tuesday explosion that killed his ex, 48-year-old Ildiko Krajnyak, who was also his business partner, and injured three people, federal authorities cautioned.</p> <p>Inside the Aliso Viejo, California, crime scene, agents said they found items consistent with an explosive device: a 9-volt battery, a cellphone, loose wires melted material that appeared to be duct tape, according to the criminal complaint against Beal.</p> <p>Injured victims saw Krajnyak pick up a box in a pile of mail and open it, after which it exploded, according to the complaint.</p>

During the investigation into the explosion, officials served a search warrant at Beal's Long Beach, California, home. Multiple explosive materials were found in Beal's home, including at least three containers of black powder, a 7-foot-tall rocket, rocket-making equipment, two containers of potassium perchlorate -- used as a precursor -- and two containers of red gum, which is used as fuel and binder in fireworks, according to the complaint.

Altogether, 130 pounds of explosives/precursor material were found in his home, more of which was discovered in the garage, the complaint states. Beal admitted to owning the items, claiming to be a model rocket hobbyist. But, he has allegedly not pursued that hobby since 2004, according to the court document.

Beal appeared to have rented space in the building with Krajnyak, according to the criminal complaint. The pair met in 2016 through an online dating service, according to the complaint. They began dating and then opened the spa together, the complaint states.

While Beal and Krajnyak only dated for a year and a half, they remained business partners, according to the complaint. Beal paid the rent -- \$1,500 per month -- and half of the spa's operating costs, the complaint states. Some months, Beal would have to loan Krajnyak money to cover all of the costs, and sometimes she would make enough to cover the costs, according to the complaint.

The spa was originally located in a different building and relocated to its current building a few months ago, the complaint states.

Their relationship allegedly became strained due to financial issues and disputes over the exclusivity of the relationship, the complaint states.

Articles and graphics have been placed within for educational and discussion purposes only, in compliance with 'Fair Use' criteria established in Section 107 of the Copyright Act of 1976. The principle of 'Fair Use' was established as law by Section 107 of The Copyright Act of 1976. 'Fair Use' legally eliminates the need to obtain permission or pay royalties for the use of previously copyrighted materials if the purposes of display include 'criticism, comment, news reporting, teaching, scholarship, and research.' Section 107 establishes four criteria for determining whether the use of a work in any particular case qualifies as a 'fair use'. A work used does not necessarily have to satisfy all four criteria to qualify as an instance of 'fair use'. Rather, 'fair use' is determined by the overall extent to which the cited work does or does not substantially satisfy the criteria in their totality. If you wish to use copyrighted material for purposes of your own that go beyond 'fair use,' you must obtain permission from the copyright owner.

<b>HEADLINE</b>	<b>04/26 Seattle's Fire Station 5 reopens</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/seattles-biggest-fireboat-is-back-at-its-dock-as-fire-station-5-reopens/">https://www.seattletimes.com/seattle-news/seattles-biggest-fireboat-is-back-at-its-dock-as-fire-station-5-reopens/</a>
<b>GIST</b>	<p>You may have caught a glimpse of Seattle's largest fireboat, the 108-foot Leschi, when it shoots its water cannons during spring and summer drills on Elliott Bay. Or you may have seen it during public events such as Opening Day of boating season, which is coming up May 5.</p> <p>To see it up close while it's docked, you can now find the Leschi at Fire Station 5 on the west end of Madison Street, right between Colman Dock and the legendary Ivar's Fish and Chips Restaurant — look for the outdoor walkway where people are having lunch and feeding the seagulls. The historic waterfront fire station closed for the seawall construction and seismic upgrades in 2014 and just reopened this week.</p>

<b>HEADLINE</b>	<b>04/26 Tourism still strong Mexico resort areas</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/04/27/travel/mexico-tourism-violence.html">https://www.nytimes.com/2018/04/27/travel/mexico-tourism-violence.html</a>
<b>GIST</b>	<p>Travel operators bill Cancún and the adjoining Riviera Maya on Mexico's Caribbean coast as carefree beach escapes with something for everyone from spring break partyers to families. But a wave of violence, linked to rival drug gangs, threatens travel in the region like a storm hovering on the horizon.</p> <p>The local news site Noticaribe reported 14 murders in Cancún over a 36-hour period in early April, continuing a pattern of violence reported last summer. Gun deaths have also occurred in Playa del Carmen, the biggest town on the Riviera Maya, about 40 miles south of Cancún.</p> <p>Travelers have not been targeted in these crimes, but a bomb that detonated in February on a ferry linking Playa del Carmen with the island of Cozumel, a popular cruise port, injured more than two dozen passengers, including tourists. It prompted the Department of State to issue a travel ban on the ferry route for government employees. Reuters later reported the bomb was a homemade device believed to be unrelated to terrorists or organized crime.</p> <p>Since then, Mexican authorities have strengthened security around the ferry as well as the ferries that run between Cancún and Isla Mujeres, including adding metal detectors and bomb-sniffing dogs. The American government subsequently dropped its ban on ferry travel.</p> <p>The State Department's advisory level remains at the second of four cautionary categories, indicating travelers should "exercise increased caution." It is the same threat level of Antarctica, Denmark, Italy and Britain. Its report, updated on March 16, on the state of Quintana Roo, home to Cancún and the Riviera Maya, notes the uptick in homicides but does not restrict travel for U.S. government employees.</p> <p>"While most of these homicides appeared to be targeted, criminal organization assassinations, turf battles between criminal groups have resulted in violent crime in areas frequented by U.S. citizens. Shooting incidents injuring or killing bystanders have occurred," the advisory stated.</p> <p>Tourism authorities have responded by stepping up security. The Mexican navy patrols the beaches, federal police monitor the highways and the army is in charge of entry points into the region's cities. Dario Flota Ocampo, the director of the Quintana Room Tourism Board, said that 3,000 new surveillance cameras are being installed in the Cancún and Playa del Carmen areas.</p> <p>"Tourism is the main industry for the state of Quintana Roo, which is why our main concern is to provide</p>

	<p>security and ensure travelers have great experience because we want them to come back,” Mr. Flota Ocampo said.</p> <p>Some 16.9 million visitors came to the state in 2017, an increase of 5.3 percent over the year prior, according to the state tourism board. Over 52 percent of those arrivals were repeat visitors.</p> <p>Told to exercise caution, Americans have continued to travel to the Yucatán.</p> <p>Whether it was the very cold winter endured in the northern United States, or the number of deals coming from the rapidly growing destination (some 14,000 hotel rooms are currently in development), tourism has shown resiliency.</p> <p>In the first quarter of 2018, hotel occupancy in Cancún stayed level with 2017 figures at a healthy 77 percent, even though the room inventory grew this year by 3 percent this year, according to STR, Inc., a travel research company that tracks hotel data.</p> <p>Travel agencies report strong interest in the region. AAA Travel predicted that Cancún would be its most popular international destination for family travelers this year.</p> <p>The deal site Travelzoo currently has packages at a luxury resort in Playa del Carmen at \$529 for three nights for two people, just over half off. The site’s senior editor, Gabe Saglie, said hotel promotions have “created some amazing value south of the border, enough to get many travelers, while cognizant of security concerns and undoubtedly traveling with heightened self-awareness and vigilance, to pounce.”</p> <p>Bookings are up 12 percent to Mexico over this time last year at the luxury-focused travel agency Ovation Vacations in New York, even though advisers are fielding more inquiries regarding safety.</p> <p>“There’s a lot of hesitancy, but there’s resiliency,” said Jack Ezon, the owner of the agency.</p>
<p><a href="#">Return to Top</a></p>	

<p><b>HEADLINE</b></p>	<p><b>04/26 Seattle disaster drill ‘Power Out, No Bars’</b></p>
<p><b>SOURCE</b></p>	<p><a href="http://westseattleblog.com/2018/04/saturday-citywide-disaster-drill-including-three-west-seattle-hubs-and-you-can-help/">http://westseattleblog.com/2018/04/saturday-citywide-disaster-drill-including-three-west-seattle-hubs-and-you-can-help/</a></p>
<p><b>GIST</b></p>	<p>From Pigeon Point to High Point to Fauntleroy, three local Emergency Communication Hubs will be participating in a drill this Saturday morning, 8:30-noon – to prepare for something everyone hopes will never happen. And you can help! We’ve mentioned it a few times before, and here’s the official announcement:</p> <p>Imagine there is a major power blackout covering Seattle and the metro area. There is no cellular phone service. No one knows the cause of the outage or knows when power and cell service may be restored. Emergency generators at hospitals and other essential service providers can only last as long as there is fuel. How would the region communicate?</p> <p>This is the scenario behind the “Power Out, No Bars” exercise that Seattle ham radio operators and designated emergency Hub volunteers throughout the City will be testing. The Seattle Auxiliary Communications Service (ACS), a volunteer organization operating under the auspices of the Seattle Office of Emergency Management, and the Seattle Emergency Communication Hubs, a grass-roots, neighborhood network of community members, will jointly conduct the citywide communications exercise.</p> <p>The drill simulates the day after an unexplained failure of grid power and cellular service, with no updates on when either would be restored. Because the Hubs are the major residential and business resources for neighborhoods, situational awareness, resource coordination, and communications between the Hubs, ACS, and the city’s Emergency Operations Center (EOC) are critical.</p>

The key goals of the exercise are:

\*Activate several neighborhood Communication Hubs and Seattle ACS, emphasizing reliable, efficient, accurate message management and documentation. Exercise participants will use voice as well as data communications via radio, throughout the city.

\*Demonstrate, practice, and assess the ability to communicate up and down the various levels of the response structure, based on the Incident Command System (ICS), which spells out a hierarchical, yet flexible, means of managing emergency situations.

\*Build strong working relationships among Emergency Communication Hub members and ACS members, through team problem solving and practice.

Exercise Scenario

In an event such as the one this exercise portrays, the neighborhood Hubs would mobilize to assist with the immediate needs of residents, especially those who may need emergency services. The ACS would also have activated shortly after the scope of the outage was known, with sector sites around the city providing situation reports and helping coordinate emergency and logistical responses.

“In a citywide or regional event, people will need to go to neighborhood gathering places to find access to information and start matching resources and skills to what is needed” said Cindi Barker of West Seattle, one of Seattle’s Hub Captains.

“Power Out, No Bars is the latest in a series of emergency exercises that have helped our membership continually hone their skills and upgrade, deploy, and test their equipment,” said Mark Sheppard, founder and director of ACS. “This is critical to improving our ability to be more effective and be better prepared to face a real emergency or natural disaster.

Here are the West Seattle hubs participating:

- \*Pigeon Point Hub, 20th Ave SW & SW Genesee St
- \*High Point Hub at Neighborhood House, 6400 Sylvan Way SW
- \*Fauntleroy United Church of Christ Hub, 9140 California Ave SW

<b>HEADLINE</b>	<b>04/26 DHS ends protected status for Nepal</b>
<b>SOURCE</b>	<a href="https://apnews.com/789fb21af4554eebb78613df17c9e1f5/US-to-end-special-protections-for-9,000-Nepalese-immigrants">https://apnews.com/789fb21af4554eebb78613df17c9e1f5/US-to-end-special-protections-for-9,000-Nepalese-immigrants</a>
<b>GIST</b>	<p>WASHINGTON (AP) — The Trump administration will end special protections for an estimated 9,000 Nepalese immigrants living in the United States, giving them until June 24, 2019, to leave or find another way to stay in the country, the Department of Homeland Security said Thursday.</p> <p>They were granted that status during the Obama administration after an April 2015 earthquake killed more than 8,000 people in Nepal, and it was extended for 18 months in October 2016.</p> <p>But DHS said that after a review of conditions in the country, Secretary Kirstjen Nielsen concluded the protections were no longer warranted.</p> <p>The “disruption of living conditions in Nepal from the April 2015 earthquake and subsequent aftershocks that served as the basis for its TPS designation have decreased to a degree that they should no longer be regarded as substantial,” DHS said.</p>

	<p>The U.S. created Temporary Protected Status in 1990 to provide a safe haven for citizens of countries affected by war and natural disasters such as earthquakes, floods and hurricanes. The status currently shields several hundred thousand people from 10 countries. It generally includes authorization to work.</p> <p>The decision on Nepal probably will be felt most acutely in New York and the Dallas-Fort Worth area, which had the largest Nepalese immigrant communities in the United States in 2015 with 9,000 each, according to the Pew Research Center. Washington, San Francisco, Baltimore, Pittsburgh and Columbus, Ohio, also have large communities.</p> <p>The decision on Nepal was met with anger from immigration activist, including Amanda Baran of the Immigrant Legal Resource Center.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>04/27 Feds: lost track of immigrant children</b>
<b>SOURCE</b>	<a href="https://apnews.com/a92409ad458742ad952fede5596c36a3/Federal-agency-says-it-lost-track-of-1,475-migrant-children">https://apnews.com/a92409ad458742ad952fede5596c36a3/Federal-agency-says-it-lost-track-of-1,475-migrant-children</a>
<b>GIST</b>	<p>Federal officials lost track of nearly 1,500 migrant children last year after a government agency placed the minors in the homes of adult sponsors in communities across the country, according to testimony before a Senate subcommittee Thursday.</p> <p>The Health and Human Services Department has a limited budget to track the welfare of vulnerable unaccompanied minors, and realized that 1,475 children could not be found after making follow-up calls to check on their safety, an agency official said.</p> <p>Federal officials came under fire two years ago after rolling back child protection policies meant for minors fleeing violence in Central America. In a follow-up hearing on Thursday, senators said that the agencies had failed to take full responsibility for their care and had delayed crucial reforms needed to keep them from falling into the hands of human traffickers.</p> <p>“You are the worst foster parents in the world. You don’t even know where they are,” said Democratic Sen. Heidi Heitkamp of North Dakota. “We are failing. I don’t think there is any doubt about it. And when we fail kids that makes me angry.”</p> <p>Since the dramatic surge of border crossings in 2013, the federal government has placed more than 180,000 unaccompanied minors with parents or other adult sponsors who are expected to care for the children and help them attend school while they seek legal status in immigration court.</p> <p>An AP investigation found in 2016 that more than two dozen unaccompanied children had been sent to homes where they were sexually assaulted, starved or forced to work for little or no pay. At the time, many adult sponsors didn’t undergo thorough background checks, government officials rarely visited homes and in some cases had no idea that sponsors had taken in several unrelated children, a possible sign of human trafficking.</p> <p>Since then, the Health and Human Services Department has boosted outreach to at-risk children deemed to need extra protection, and last year offered post-placement services to about one-third of unaccompanied minors, according to the Senate Permanent Subcommittee on Investigations.</p> <p>But advocates say it is hard to know how many minors may be in dangerous conditions, in part because some disappear before social workers can follow up with them and never show up in court.</p> <p>From October to December 2017, HHS called 7,635 children the agency had placed with sponsors, and found 6,075 of the children were still living with their sponsors, 28 had run away, five had been deported and 52 were living with someone else. The rest were missing, said Steven Wagner, acting assistant secretary at HHS.</p>

	<p>Republican Sen. Rob Portman gave HHS and the Department of Homeland Security until Monday to deliver a time frame for improving monitoring.</p> <p>“These kids, regardless of their immigration status, deserve to be treated properly, not abused or trafficked,” said Portman, who chairs the subcommittee. “This is all about accountability.”</p> <p>Portman began investigating after a case in his home state of Ohio, where eight Guatemalan teens were placed with human traffickers and forced to work on egg farms under threats of death. Six people have been convicted and sentenced to federal prison for their participation in the trafficking scheme that began in 2013.</p>

<b>HEADLINE</b>	<b>04/27 Authorities: Wisconsin refinery fire out</b>
<b>SOURCE</b>	<a href="https://apnews.com/e1b82b241c0400da4d3091ffd71ac63/Authorities:-Wisconsin-refinery-fire-out,-evacuation-remains">https://apnews.com/e1b82b241c0400da4d3091ffd71ac63/Authorities:-Wisconsin-refinery-fire-out,-evacuation-remains</a>
<b>GIST</b>	<p>Authorities have not allowed residents back in their homes after crews extinguished a smoky blaze at a northwestern Wisconsin refinery where an explosion injured at least 11 people and forced most of the city of Superior to evacuate.</p> <p>Douglas County officials said Thursday evening the fire at the Husky Energy oil refinery was out and that residents could return home but wait at least two hours before doing so. But late Thursday, Superior police gave another update, saying the evacuation order would remain and be re-evaluated throughout the night.</p> <p>Authorities said a tank of crude oil or asphalt exploded about 10 a.m. Thursday at the refinery in Superior, a city of about 27,000 that shares a Lake Superior shipping port with nearby Duluth, Minnesota. That prompted them to order the evacuation of a 3-mile (5-kilometer) radius around the refinery, as well as a 10-mile (16-kilometer) corridor south of it where the smoke was heading.</p> <p>It was unclear how many people evacuated, but Mayor Jim Paine said most of the city was being evacuated. The refinery is in an industrial area, but there’s a residential neighborhood within a mile to the northeast. The corridor downwind to the south of the refinery is sparsely populated. Schools in Superior and nearby Maple, Wisconsin, canceled classes Friday as a precaution.</p>

<b>HEADLINE</b>	<b>04/27 Arizona, Colorado teachers 2<sup>nd</sup> day rally</b>
<b>SOURCE</b>	<a href="https://apnews.com/fc6c9b239ba341c8905bce5ed71b16b1/Arizona,-Colorado-teachers-rally,-schools-close-for-2nd-day">https://apnews.com/fc6c9b239ba341c8905bce5ed71b16b1/Arizona,-Colorado-teachers-rally,-schools-close-for-2nd-day</a>
<b>GIST</b>	<p>PHOENIX (AP) — Arizona and Colorado teachers plan to don red shirts and descend upon their respective Capitols for a second day in a growing educator uprising.</p> <p>Educators in both states want more classroom resources and have received offers either for increased school funding or pay, but they say the money isn’t guaranteed and the efforts don’t go far enough. The walkouts are the latest in demonstrations that spread from West Virginia, Oklahoma and Kentucky.</p> <p>On the first day of the historic statewide walkout, around 50,000 educators and their supporters marched Thursday through downtown Phoenix in nearly 100-degree (38-Celsius) heat and swarmed the Capitol grounds.</p> <p>In much cooler Colorado, several thousand educators rallied around the Capitol, with many using personal time to attend two days of protests expected to draw as many as 10,000 demonstrators.</p>

	<p>Lawmakers in Colorado have agreed to give schools their largest budget increase since the Great Recession. But teachers say Colorado has a long way to go to recover lost ground because of strict tax and spending limits.</p> <p>Arizona's Republican governor, Doug Ducey, has proposed 20 percent raises by 2020 and said he has no plans to meet with striking teachers or address other demands.</p> <p>More than 840,000 students were out of school as a result of Thursday's walkouts, according to figures from The Arizona Republic.</p> <p>Most of Arizona's public schools will be closed the rest of the week, and about half of all Colorado students will see their schools shuttered over the two days as teachers take up the Arizona movement's #RedforEd mantle. In Oklahoma and West Virginia, teacher strikes stretched beyond the one-week mark.</p> <p>Organizers say they haven't decided how long their walkout will last.</p>

<b>HEADLINE</b>	<b>04/26 Across Europe, Jewish safety fears grow</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/best-countries/articles/2018-04-26/safety-concerns-grow-for-jews-across-europe">https://www.usnews.com/news/best-countries/articles/2018-04-26/safety-concerns-grow-for-jews-across-europe</a>
<b>GIST</b>	<p>Late in March, Mireille Knoll, an 85-year-old Jewish grandmother and Holocaust survivor, was found dead – stabbed to death with her body partially burned – in her Paris apartment. Two men in their 20s were placed under formal investigation on charges of murder motivated by anti-Semitism. French interior minister Gérard Collomb told Parliament that one of the alleged killers told the other, "She's a Jew. She must have money."</p> <p>French authorities are still investigating the circumstances of the case, but Jewish advocacy groups across the world have situated the murder in the broader context of rising anti-Semitism in France, and across Europe.</p> <p>For Dr. Moshe Kantor, president of the European Jewish Congress, the slaying is "a sad symbol of what we are returning to." In January, in a speech at the European Parliament, Kantor warned that Europe is no longer safe against anti-Semitism because the last generation of Holocaust survivors and witnesses is dwindling. Knoll's death, he said, is another sign.</p> <p>"There have been far too many of these murders and attempted murders of Jews in France to call them sporadic," Kantor wrote in an email. "This murder should not just appall us, it should serve as a final wake-up call that more must be done not just to protect Jewish communities and institutions, but also all individuals at risk."</p> <p>Lethal violence against Jewish people is certainly not an everyday occurrence, but the brutal murder of a woman who had already experienced the horrors of mass genocide has been particularly painful to the international Jewish community. It follows other shocking anti-Semitic incidents in France, such as the 2012 killing of three Jewish children and a teacher at a Jewish school in Toulouse by an Islamic fundamentalist, and the 2015 murder of four people at a Jewish supermarket, linked to the Charlie Hebdo killings.</p> <p>More recently, a Syrian man turned himself in to German police last week after admitting to using a belt to beat an Israeli man wearing a yarmulke in Berlin. The incident sparked protests this week and – in a nation sensitive to its relations with its Jewish community – has drawn the condemnation of Chancellor Angela Merkel.</p> <p>Knoll's death resonates deeply across France because the country is home to the largest population of Jews in Europe and to the fourth largest such population in the world by country, according to 2015 data from</p>

the independent Pew Research Center. It also is part of a broader trend of growing anti-Semitism and Islamophobia that a European Union report noted more than two years ago.

There is rising concern about the safety of Jewish people and communities in Europe, as the number of violent attacks aimed at Jews in many countries has risen in recent years. Jewish leaders are speculating on the reasons why this may be occurring now. Some, such as Kantor, argue that 73 years after the end of World War II, Europe is no longer inoculated against anti-Semitism. Others blame the rise of populist, nationalist political parties, while still others point to radicalized Muslims, who, according to recent data from the University of Oslo, are most often the perpetrators.

Knoll's murder follows another attack in April 2017, when Sarah Halimi, a 65-year old Orthodox Jewish physician and kindergarten teacher in Paris, was beaten in her apartment and then thrown out a window. Both women had lived alone and had previously complained of anti-Semitic threats, according to Noémie Halioua, a French journalist with the Jewish weekly newspaper *Actualité Juive* and the author of a new book on the Halimi case.

While racially motivated hate crimes have decreased in France overall, there has been an uptick in anti-Semitic violence in the past year, from 77 incidents in 2016 to 97 in 2017, according to a report released by the Kantor Center for the Study of Contemporary European Jewry at Tel Aviv University in early April. The authors of the study cautioned that the information could not be verified by their criteria.

Is Anti-Semitism Waning in Europe?

The report also found that physical violence against Jewish people around the world dropped by 9 percent from 2016 to 2017, but anti-Semitic sentiment, hate-speech, threats and cyberattacks have become mainstream throughout Europe, they asserted, leading to a "corrosion of Jewish life."

Kantor says anti-Semitic violence has become "an almost daily occurrence in parts of Europe and apparently, Jews no longer feel that they can rely on the preventive actions of the law enforcement authorities to protect them even in their own homes."

The report concludes that the rise of anti-Semitism can be attributed to "the constant rise of the extreme right, a heated anti-Zionist discourse in the left, accompanied by harsh anti-Semitic expressions, and radical Islamism."

The Anti-Defamation League, an American Jewish nongovernmental organization, counts Knoll's death as the 11th anti-Semitic murder in France in the past 12 years. The group estimates that assaults on Jews that take place twice a week on average in France, creating a sense of insecurity for the entire Jewish community.

Sharon Nazarian, its senior vice president of International Affairs, has spent the past several months traveling to European capitals such as Paris, Berlin, Stockholm, Brussels, Budapest and Rome, speaking with Jewish community leaders and government officials.

"What I'm hearing from them is a real nervousness, a feeling insecurity, a lack of safety, both physically and also for their Jewish way of life," said Nazarian in a telephone interview. "It's really unprecedented going back to World War II. A lot of warning bells are going off and red flags are going up and we're very, very concerned."

She says "a loss of a sense of shame that did exist for decades after the war" about anti-Semitic attitudes has contributed to the shift, along with the rise of nativist right-wing politicians, anti-Zionist left wing activists, and scapegoating of Jews for other global problems.

Violent incidents, the Kantor Center report finds, have decreased because of better security and intelligence in protecting Jewish communities. But the report stresses that "it is overshadowed by the many verbal and visual expressions, some on the verge of violence, such as direct threats, harassments, insults, calls to attack Jews and even kill them en masse."

Alvin Rosenfeld, director of the Institute for the Study of Contemporary Antisemitism at Indiana University and an author of many books on the Holocaust and the perspectives of it, argues that anti-Semitism has never truly left Europe.

"The view that knowledge of the Holocaust would somehow be prophylactic, and it would guard against the return of anti-Semitism, seems now to be naive, and I admit that I myself subscribed to that view," he says. "It just isn't the case that Holocaust memory guards against the repeat of Jew hatred."

He agrees that the rise of anti-Semitic sentiment stems from a multiplicity of forces. "We're living at a time in which neo-nationalism, neo-nativism, populism, autocracy and theocratic extremisms are all coming to the fore, in some cases with a great rush," he said. "Anti-Semitism, together with hatred against other types of people, flourishes in such a climate."

<b>HEADLINE</b>	<b>04/26 Officials: MS-13 'gaming' immigration</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/apr/26/ms-13-gang-members-claim-theyre-underage-gain-acce/">https://www.washingtontimes.com/news/2018/apr/26/ms-13-gang-members-claim-theyre-underage-gain-acce/</a>
<b>GIST</b>	<p>MS-13 is paying smugglers to coach gang members on how to game the U.S. immigration system, teaching underage members to claim UAC status — and telling those over 18 to lie and claim they are underage — to try to gain quick, easy access to the U.S., government officials said Thursday.</p> <p>Rep. Peter T. King, a New York Republican, said his district is such a hotbed of MS-13 activity that authorities are “right now digging for bodies within a mile of my house.” He said some families are forced to facilitate gang members’ arrivals and are pressured by gangs to become sponsors and claim the children when they arrive.</p> <p>Homeland Security Secretary Kirstjen Nielsen confirmed the pipeline.</p> <p>“They recruit young children, they train them how to be smuggled across our border, how to then join up with gang members in the United States,” she told Congress.</p> <p>The government this week detailed such a case from this month in Arizona, where Border Patrol agents nabbed an 18-year-old from El Salvador. He first claimed to be underage to try to claim UAC status. Under questioning, he acknowledged he was an adult and was part of MS-13 — though he insisted he was trying to leave the gang.</p> <p>Unaccompanied alien children — those who arrive at the U.S. border without their parents — are among the trickiest populations of illegal immigrants.</p> <p>They began to surge toward the U.S. in 2012 and crested in 2014, overwhelming an Obama administration that was ill-equipped to handle them. In addition to gangs, some UAC were turned over to criminals, who forced them into labor or otherwise abused them.</p> <p>More than five years into the crisis, the UAC numbers are once again rising — and the administration is still struggling to get a grip on matters, as officials made clear in hearings Thursday on both sides of the Capitol.</p> <p>While Ms. Nielsen begged House lawmakers to close the loopholes that she said invite UAC and others to test U.S. immigration policy, Homeland Security and Health and Human Services officials were being grilled by senators about why the government is unable to keep track of the children once they are in the U.S.</p> <p>Steven Wagner, an acting assistant secretary at HHS, said of 7,635 UAC that the department tried to check</p>

in with last year after their first 30 days with their sponsors, they found 28 had run away and 52 had ditched their sponsors to move in with others.

More striking, though, were the 1,475 UAC whom the department “was unable to determine with certainty the whereabouts of” just 30 days after they had been placed in those homes.

“You are the worst foster parents in the world. You don’t even know where they are,” said Sen. Heidi Heitkamp, North Dakota Democrat.

Losing track of UAC matters, both for the children’s well-being and for the ability of the government to push them through the immigration system, getting them a hearing and deciding if they should be deported or granted permanent status.

Nearly 60 percent of all UAC don’t show up for their hearings. Children who don’t show up for their hearings are essentially free and clear. Neither HHS nor Homeland Security said they pursue UAC who skip out on their hearings.

Indeed, the latest numbers show that just 3.5 percent of UAC who came to the U.S. during the surge are deported, Ms. Nielsen said.

Government officials pointed fingers at each other, and lawmakers said they were getting fed up after Homeland Security and Health and Human Services couldn’t tell the Senate’s chief investigative panel when they will complete a months-overdue joint cooperation plan.

Part of the problem is that the legal framework for UAC is disjointed at best.

Children from Mexico can be deported quickly, but those from noncontiguous countries must be processed by Homeland Security and then turned over to HHS, which holds them in government-run dorms until sponsors can be found.

Sen. Rob Portman, an Ohio Republican and chairman of the Senate investigative panel, said HHS has a signed agreement with each UAC sponsor, who agrees to make sure the children show up for their hearings.

But he said HHS doesn’t even know when they skip the hearings.

“We have no mechanism for enforcing the agreement if they fail to show up,” Mr. Wagner confirmed.

“Obviously a red flag when a child fails to show up for a hearing. I think we’ve identified this morning so many parts of the system that simply aren’t working for the children or for our immigration system,” Mr. Portman said.

The amount of information the government didn’t know at the Senate hearing was stunning.

Mr. Wagner couldn’t say how often his department alerts local police about potential dangers they should be aware of in some homes, nor could he say how often fraudulent documents are used.

He couldn’t detail the criteria that foster parents are required to meet to accept children and couldn’t even say how many of the sponsors the UAC are being delivered to aren’t U.S. citizens.

<b>HEADLINE</b>	<b>04/26 Norovirus closes Tacoma restaurant</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/entertainment/restaurants/tnt-diner/article209939349.html">http://www.thenewstribune.com/entertainment/restaurants/tnt-diner/article209939349.html</a>
<b>GIST</b>	Another suspected norovirus outbreak has sickened diners in Tacoma. The outbreak is connected to

	<p>Foley's on the Green, the restaurant and sports bar at the Meadow Park Golf Course in Tacoma at 7108 Lakewood Drive W.</p> <p>Eight reports have been made for suspected norovirus.</p> <p>The Tacoma-Pierce County Health Department closed Foley's on Thursday for at least 24 hours or until the restaurant is thoroughly cleaned and sanitized.</p> <p>Jason Follen, owner of the restaurant, said he and his employees were at work Thursday doing just that. They're also searching for a potential cause for the outbreak.</p> <p>He said he's called some of the food-service companies that supply his restaurant to see if outside contamination is possibly to blame.</p> <p>"I have good employees, and I'm confident that this is just an isolated bad luck incident and we're just shocked," said Follen.</p> <p>The health department also is investigating what might have caused the outbreak.</p> <p>"We're in the middle of the investigation now," said Health Department spokeswoman Edie Jeffers. She said reports came in April 23, 24, and 26.</p>

<b>HEADLINE</b>	<b>04/27 Koreas leaders in diplomatic dance</b>
<b>SOURCE</b>	<p><a href="https://www.nytimes.com/2018/04/27/world/asia/north-korea-south-border.html?hp&amp;action=click&amp;pgtype=Homepage&amp;clickSource=story-heading&amp;module=b-lede-package-region&amp;region=top-news&amp;WT.nav=top-news">https://www.nytimes.com/2018/04/27/world/asia/north-korea-south-border.html?hp&amp;action=click&amp;pgtype=Homepage&amp;clickSource=story-heading&amp;module=b-lede-package-region&amp;region=top-news&amp;WT.nav=top-news</a></p>
<b>GIST</b>	<p>HONG KONG — A carefully choreographed diplomatic dance at the Korean border added a surprise extra step on Friday, instantly turning a moment destined for the history books into a viral meme for the social-media era.</p> <p>The surprise moment in which Kim Jong-un, the North Korean leader, encouraged President Moon Jae-in of South Korea to step over the border to the North's side became one of several images that displayed both countries' understanding of the propaganda value of political theater.</p> <p>After a year in which tensions between the two countries reached an acrimonious pitch not seen in decades, the two leaders were careful to publicly signal a new era of rapprochement.</p> <p>Smiling broadly at each other, the men took their time shaking hands as Mr. Kim stepped gingerly over the concrete slab that marks the border between the two countries, becoming the first North Korean leader to set foot in the South.</p> <p>Knowing that photos and video of their meeting would be broadcast around the world, even their clothing — veritable costumes — was chosen to project a message. For Mr. Moon, a dark business suit was paired with a light blue tie that echoed the hue used in the Korean Unification Flag, which the countries use when competing together as single team at international sporting events.</p> <p>Mr. Kim wore an austere black Mao-style suit, a message to his citizens that despite being in enemy territory he was still committed to the ideals — and dress — of his grandfather Kim Il-sung, North Korea's founder, who ordered the 1950 invasion of the South that started the Korean War.</p> <p>Once on the South side of the Demilitarized Zone, the stretch of land that makes up the border and in which the summit meeting took place, Mr. Kim inspected a military honor guard. Though the DMZ is heavily fortified and security was tightened for the visit, the honor guard's soldiers carried spears and</p>

swords, instead of rifles. They were dressed in 19th-century costumes, worn at a time when Korea was a unified empire.

Even the décor inside Peace House, the building in which the meeting took place, was chosen for its political optics. In the run-up to the talks, workers hung paintings of Mount Kumgang, which straddles the border and is an important symbol to Koreans in both countries.

The table and chairs inside the meeting room were also carefully designed with a pattern evoking two bridges coming together.

At the table was Mr. Kim's sister, Kim Yo-jong, the only woman in the delegation. Ms. Kim's stature has risen since she represented the North's government at this year's Winter Olympics in Pyeongchang, South Korea. That visit was widely seen as an opening gambit toward a détente, and Ms. Kim was widely credited with softening her country's image.

At Peace House, Mr. Kim signed a guest book, leaving a message guaranteed to be photographed, tweeted and deconstructed by political analysts.

"A new history starts now," he wrote. "An age of peace, from the starting point of history."

<b>HEADLINE</b>	<b>04/26 'Breathtaking potential implications' lawsuit</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/967315/washington-native-american-tribes-salmon-case/">http://mynorthwest.com/967315/washington-native-american-tribes-salmon-case/</a>
<b>GIST</b>	<p>Former Washington state Attorney General Rob McKenna says it's the most important case Washingtonians have never heard about, yet its results could dramatically change how government works in the Pacific Northwest.</p> <p>"It really is breathtaking in its potential implications," McKenna told KIRO Radio's Dave Ross.</p> <p>The issue surrounds the influence Native American tribes have on local and state governments. While the case itself centers on culverts that affect salmon runs, McKenna argues there is legal engineering going on that could place the tribes in a position to co-govern much of the state.</p> <p>"It's not because most tribal members depend on fish to make their living; some do, but most don't," he said. "It's because it's a way to restore sovereign control over lands they used to own. I appreciate that objective. I understand why they are pursuing it. But it's not what the treaties were about. And it's not something that the State of Washington or its local governments can accept."</p> <p>The right to salmon</p> <p>The legal relationship between Washington state, the United States government, and the Northwest's Native American tribes dates back to the mid-1800s when a series of treaties were signed. Those treaties essentially detailed who had a right to what — which lands were exchanged and where tribes could fish. In short, tribes were granted the right to always fish where they traditionally had. That notion was upheld in the 1970s Boldt decision.</p> <p>But a lingering treaty issue has led to the United States Supreme Court.</p> <p>"The treaties grant the tribes a right, in perpetuity, to access their traditional fishing grounds," McKenna said. "The two questions that have been litigated over the last 40-plus years have to do with how much of the fish they are entitled to. In the Boldt decision, it was decided they are entitled to half. Then, in this case, that went to the Supreme Court, the question is what happens when there are fewer fish to catch because of something the state has done. In this case, building culverts under state highways, and on park land, and lands owned by the State of Washington."</p>

Such culverts can choke off streams that salmon use to spawn, threatening the number of fish that the tribes historically relied upon.

When McKenna was attorney general, he repeatedly offered to settle the culvert case issue. Many culverts under natural resources and state parks have already been replaced. And the Washington State Department of Transportation has been systematically replacing them. McKenna said he offered a fixed schedule to replace all remaining culverts. But those offers were consistently turned down. McKenna says this is because there is a larger plan in the works.

Native American tribes and treaties

McKenna says that Washington state tribes want to establish that their treaty rights to fish give them a role and a right to any decision that affects the fish population. Such authority could touch many governing decisions from water rights and permits, to land use policy, etc.

“It was very telling when the tribes filed their brief through the United States government in the Supreme Court that they shifted from the traditional standard in this case – what would be the right amount of fish to ensure the tribes a ‘moderate living’ – which are the words that have been used for decades,” McKenna said. “They’ve shifted to this idea of a ‘substantial degradation of the fish supply,’ which is a new standard that we haven’t seen before.”

“And it really goes to what I’m saying; they want to go to a guaranteed supply of fish, and therefore, a say in anything that affects the number of fish,” he said. “There is a lot of agreement that culverts should be replaced. There is not an agreement that tribes are co-sovereign with state and local government over any decision that can affect the number of fish.”

McKenna argues that, on one hand, it’s true that the tribes were not signing up for treaties under which the state could block every salmon-bearing stream with a road or a highway. But at the same time, the government of the day was not agreeing to give tribes a co-sovereign role in the management of lands and waters.

“No one thought there would ever be a question about the amount of fish (back then),” McKenna said. “There was so many salmon and natural resources, people thought they were inexhaustible. Of course, they were proved to be wrong.”

Other leaders in the region have argued that the Supreme Court should side with the tribes, such as King County Executive Dow Constantine.

HEADLINE	<b>04/26 Toronto hospital 'calm, in organized chaos'</b>
SOURCE	<a href="http://www.cbc.ca/news/health/sunnybrook-hospital-trauma-nurses-doctors-1.4635124">http://www.cbc.ca/news/health/sunnybrook-hospital-trauma-nurses-doctors-1.4635124</a>
GIST	<p>Miranda Lamb's day was already busy; the trauma nurse at Toronto's Sunnybrook Health Sciences Centre was dealing with a unit that was overcapacity, all of its beds full.</p> <p>But when a colleague with emergency medical services approached her with news that "something big had happened on the street," Lamb knew what had to be done.</p> <p>The hospital, which is Canada's largest trauma centre, was in "Code Orange" — an emergency code that notifies staff of a mass casualty event.</p> <p>"We try to keep it very calm," Lamb said. "It's a calm, organized chaos. Everybody just goes into their role; everybody steps up."</p> <p>By mid-afternoon Monday, Sunnybrook had received 10 victims from Toronto's deadly van attack, which had played out in minutes along a two-kilometre stretch of nearby Yonge Street, less than 10 kilometres away from the hospital's main campus.</p> <p>Two people were pronounced dead on arrival, five remain in critical condition, and three are listed in serious condition.</p> <p>The tragedy marked the country's second big catastrophe this month, leaving 10 dead and another 14 injured. Two weeks earlier, a bus taking the Humboldt Broncos junior hockey team to a playoff game in Saskatchewan collided with a transport truck, killing 16.</p> <p>As Canadians increasingly worry about an overburdened health-care system, with crowded hospitals and overstretched staff, hospitals of all sizes are showing they still have a remarkable ability to respond to unexpected disasters with impressive efficiency.</p> <p>"What we do is transform chaos into calm," said Dr. Alan Drummond, with the Canadian Association of Emergency Physicians.</p> <p>He said that the way first responders, nurses and doctors were able to leap into action in both a large urban centre, like Toronto, and a rural setting, like in Saskatchewan, speaks highly of the level of professionalism in the pan-Canadian emergency experience.</p> <p>"This is what they're trained to do, this is what they live to do," said Drummond, who is also an ER doctor at the Perth and Smiths Falls District Hospital in eastern Ontario.</p> <p>Training for such mass casualty events is always ongoing at Sunnybrook, says the hospital's surgeon-in-chief Dr. Avery Nathens.</p> <p>"Every drill that we have has made us a little bit better at responding. There's always opportunity for improvement, [but] what we've learned from the past year through the drills was helpful for what came across to Sunnybrook."</p> <p>The hospital has been running mock Code Oranges for "several months" to prepare for events such as this, Lamb said.</p> <p>"How to manage them, how to go in action. But in addition to that, the trauma teams here are trained in taking care of critically ill patients in the initial stages of trauma — in what we call the critical hour," she said.</p> <p>Sunnybrook nursing staff learn how to deal with trauma patients through a mandatory trauma nursing course. And all staff go through something called a "tabletop exercise," meant to bring together teams from across the hospital to run through a mass casualty scenario.</p>

Unlike a mock Code Orange, this exercise doesn't involve simulated patients; rather it's discussion-based, with teams talking through in detail how they'd respond.

After tragedies of Monday's magnitude, staff are debriefed — an exercise that encourages everyone to openly assess their teams and the hospital's performance to see what, if any, lessons can be learned.

Trauma nurse Cristina Choy called the experience, including the number of victims and the extent of their injuries, "unimaginable."

"I think it is very important to debrief after any situation, especially what happened [Monday]," she said. "I think debriefing helps us [with] what went well, what didn't — but also to get things off our chest as nurses.

"A lot of the times we just bottle things up and that's not good."

Nathens said he knows that staff will be affected by a tragedy like this. "And there will be a lot of debriefing to understand how we can better support our own staff and how we can do this next time, should it ever happen again."

After a pause, he adds: "And it likely will."

As for Drummond, he said he has nothing but praise for Canada's health-care workers, especially those who responded to the tragedies in Saskatchewan and Toronto.

"Both of these experiences have shown that Canadians should have confidence in their emergency-care system and should be proud of the people that work there."

<b>SOURCE</b>	<a href="https://www.phe.gov/ASPRBlog/Lists/Posts/Post.aspx?List=f59454e5-a08d-4a13-9abe-0d31ef99f1af&amp;ID=308&amp;Web=e1195e40-c916-4c28-aa5a-de2eda4302e4">https://www.phe.gov/ASPRBlog/Lists/Posts/Post.aspx?List=f59454e5-a08d-4a13-9abe-0d31ef99f1af&amp;ID=308&amp;Web=e1195e40-c916-4c28-aa5a-de2eda4302e4</a>

## GIST

On October 1, 2017, during the Route 91 Harvest Music Festival on the Las Vegas Strip, a gunman opened fired from the 32nd floor of a nearby hotel on the crowd of concertgoers. He fired more than 1,100 rounds leaving 59 dead and 527 injured.

Recently, ASPR staff spoke with responding agencies from the Las Vegas shooting to help identify lessons learned that can help other communities, specifically members of the nation's 476 [health care coalitions](#), prepare for, respond to, and recover from these traumatic, no-notice incidents. Here are some of those lessons:

***Lesson One: Prepare for Non-triaged Patients.*** EMS transported fewer than 20% of the victims from the Las Vegas shooting; most were self-transported or transported to healthcare facilities. Healthcare facilities must be ready to provide triage services at or outside the hospital to quickly identify where patients should be treated, and they should collaborate with EMS and other healthcare facilities throughout the region, as part of a health care coalition, to transfer patients based on acuity and available resources. This is especially important for trauma centers that may receive many “walking wounded” patients and hospitals that do not provide trauma services that may initially receive critically injured patients. EMS and other community partners should consider developing a re-distribution plan to move casualties between hospitals.

***Lesson Two: Identify and Conduct Drills Using Personnel Notification Tools.*** Immediately after hearing about the shooting, many healthcare providers arrived at their respective hospitals to help. Make sure your facility has a plan and a tool or messaging solution in place to rapidly notify staff who should come to the hospital and when, based on the needs of the injured and the need for providing round-the-clock care, potentially for days to come. Be aware that no-notice incidents often overwhelm landline and cellular networks.

***Lesson Three: Anticipate Challenges in Intake and Throughput.*** Immediately following the shooting, one hospital received more than 215 patients. Treating that number of patients with limited staff and resources presents inherent challenges. A disaster plan should address which areas of your facility are appropriate for use as expanded emergency department space; how best to group arriving patients, such as by the type and severity of injuries; moving non-incident patients to other areas of the hospital; modifying surgery schedules; and discharging or transferring non-emergent patients.

***Lesson Four: Expand Traditional Healthcare Roles to Address Patient Surge.*** Healthcare facilities should consider having specialty providers and other personnel assume non-traditional roles to help address patient surge. For example, consider using anesthesiologists to manage secondary triage and using pediatric providers to care for ambulatory victims. Take advantage of EMS providers who may be at your facility and willing to assist. Also, consider dedicating certain personnel—respiratory therapist, pharmacist, hospitalists, and intensivist—to only manage the patients coming in from the incident.

***Lesson Five: Coordinate Communications with Area Hospitals. Be Ready to Shelter Patients in Place.*** Community triage systems may be challenged in the immediate aftermath of a no-notice incident. All healthcare facilities in the area should prepare to treat what you can, coordinate patient transfers with other healthcare facilities, and shelter patients in place. Trauma centers may need to prioritize transfers due to the lack of EMS or trauma center resources. Traffic restrictions and misinformation resulting from the event may delay or prevent the timely transfer of patients.

***Lesson Six: Review Your Existing Mass Fatality Plan.*** Determine if your existing mass fatality plan is adequate for a mortuary surge. Consider other areas of your facility where you can expand your mortuary space. Since the coroner or medical examiner may need to visit multiple hospitals after a mass casualty event, prepare for delays in the identification and notification processes. Remember: A no-notice incident resulting from an active shooting situation is also a crime. Collect evidentiary materials from patients and their clothing as per local standards.

***Lesson Seven. Incorporate Family Notification in Planning Efforts.*** Expect loved ones to show up looking for patients, even if those patients are not being cared for by your facility. Designate a location

away from treatment spaces where loved ones can wait and establish a process to provide regular updates even if there is no new information to give. Provide patient status information on a case-by-case basis in a room separate from the waiting location. Ensure social workers, clergy, and case managers are available to provide mental health support.

**Lesson Eight. Plan for Intense Media Interest.** The media will want access to your hospital, your staff, and patients and their families. Pre-identify a media staging area, away from where patients are entering/exiting the hospital. Have public affairs staff available to help coordinate media interviews utilizing hospital spokespersons. Provide regular updates even if there is nothing new to report. Know the story you want to tell, coordinate with other hospitals and responding organizations, and be consistent in messaging.

“Mass casualty emergencies require a coordinated response involving the entire healthcare community,” said Melissa Harvey, director of ASPR’s Division of National Healthcare Preparedness Programs. Ms. Harvey oversees ASPR’s [Hospital Preparedness Program](#) (HPP), the only source of federal funding for health care system readiness.

<b>HEADLINE</b>	<b>04/26 Homebuyers looking outside Seattle</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/buyers-look-north-and-south-of-seattle-as-average-home-price-soars-to-nearly-800000">http://komonews.com/news/local/buyers-look-north-and-south-of-seattle-as-average-home-price-soars-to-nearly-800000</a>
<b>GIST</b>	<p>SEATTLE - For Melissa Anderson cruising real estate web sites has become an obsession.</p> <p>Newly married and a native of the Pacific Northwest, the 28-year-old who works in medical sales said she and her husband are ready to grow their family, or at least add another dog, and they need more space.</p> <p>“Owning a house is a dream for me,” Anderson said.</p> <p>But on Thursday, Zillow released the latest round of bad news for Seattle’s already tough housing market – inventory is down and prices are up.</p> <p>Zillow said more than 41 percent of homes for sale in Seattle are priced higher than \$870,000. Inventory of homes for sale is down and the median home values rose 14.8 percent, according to Zillow.</p> <p>“For Seattle you’re seeing the higher end of the market and the lower end of the market are appreciating right around 15 percent annually, which that in itself is crazy,” said Svenja Gudell, Zillow Chief Economist.</p> <p>Seattle, according to Zillow, is the third fastest appreciating housing market and third fastest appreciating rental market in the country.</p> <p>West Seattle Realtor Natalie English isn’t surprised by the statistics.</p> <p>“I would say an average of over 20 percent over list price is kind of what I’m seeing. If a house is listed, say, 925 it’s probably going to go for at least a million,” said English, who is a broker for Windermere.</p> <p>Standing in the living room of a sunny home in West Seattle’s North Admiral neighborhood Thursday, English said she was surprised she hadn’t made a sale on it yet. English said the home, listed for just under \$1.2 million, has sat on the market six days - she expects it will sell soon.</p> <p>“I would say six says is my average days on the market before we get multiple offers,” English said.</p> <p>While Zillow said inventory is down 16.1 percent over the past year, English said she’s having her busiest year in her 16 years working in real estate. She said there are plenty of luxury home buyers and they move</p>

	<p>fast.</p> <p>But for people who can't afford a home over a million dollars, English said she has seen lots of growth in home sales in Sammamish, Duvall and further outside the city limits.</p> <p>"They're having to stretch out a little bit," English said. "You're either going north of Seattle or south of Seattle where the prices are somewhat affordable."</p> <p>After seeing house prices skyrocket in her beloved Queen Anne neighborhood, Anderson said she has expanded her search as far out as Kitsap County.</p>

<b>HEADLINE</b>	<b>04/26 DOL: 100+ salons w/violations</b>
<b>SOURCE</b>	<a href="http://www.khq.com/story/38051899/100-salons-in-washington-have-license-sanitation-or-safety-violations">http://www.khq.com/story/38051899/100-salons-in-washington-have-license-sanitation-or-safety-violations</a>
<b>GIST</b>	<p>KHQ.COM - More than 100 salons in Washington state either failed safety or sanitation inspections, or had license violations in the last year from the Washington State Department of Licensing. If you think these salons are required to post these violations publicly, think again.</p> <p>Unlike restaurants, there's no letter grade at the door that can tell you if the services inside have been deemed safe or violation free. Violators receive a fine from the state and then continue running the business as usual. To find out if your salon, or any other business place has received a violation you can visit the Washington State DOL website.</p> <p>The DOL posts all violations on their website under the "professions" section for numerous professions. Salon violations can be found under the "cosmetologists" section.</p>
<p><a href="#">Return to Top</a></p>	<p><i>Click on link to view DOL listing of salons with violations:</i></p> <p><a href="http://www.dol.wa.gov/business/disciplinary/disciplinarycosme.html">http://www.dol.wa.gov/business/disciplinary/disciplinarycosme.html</a></p>

<b>HEADLINE</b>	<b>04/26 Homeless camp Green Lake to move</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/04/26/unsanctioned-encampment-accused-of-terrorizing-green-lake-residents-is-moving-out-looking-to-settle-elsewhere/">http://q13fox.com/2018/04/26/unsanctioned-encampment-accused-of-terrorizing-green-lake-residents-is-moving-out-looking-to-settle-elsewhere/</a>
<b>GIST</b>	<p>SEATTLE -- Several neighbors who say a homeless encampment has taken over their Green Lake neighborhood met for the first time on Thursday.</p> <p>"When I am home alone, I don't feel that safe," Betsy Peto said.</p> <p>Residents say when the tents moved in overnight a stone's throw away, they didn't know what to think. Now they are just mad.</p> <p>Neighbors have vented on social media and with each other, but many stayed silent, fearing retaliation. Now many are fed up and willing to talk about it.</p> <p>"Bowel movement on her driveway last week and then a needle on her driveway the other day," Phil Cochran said of a neighbor's home.</p> <p>Residents along 5th and 58th say they are dealing with theft, needles, defecation and now aggressive behavior from some of the campers.</p> <p>"Verbally abusing, walking past calling my wife human trash and garbage for no reason whatsoever," Mike Liddell said.</p> <p>That is just the beginning, residents say. A couple of times they've seen people at the camp throwing</p>

things over the wall next to the encampment, they say. Over that wall is I-5 and dozens of what appears to be stolen bicycles now left abandoned in a wooded area next to I-5.

“They basically have a bicycle store house going; yes, it’s shocking. I had no idea and that they operate so openly,” Liddell said.

Liddell and his neighbors say they have repeatedly reached out to Seattle city leaders for nearly two months.

“We haven’t had any useful info from them so far, all we understand is that council has told the police to back off,” Liddell said.

“I am not trying to criminalize the homeless; I am against people breaking the law,” Peto said.

Shortly after interviews with neighbors, Q13 News saw city crews posting eviction notices around the encampment site.

The Neighborhood Action Coalition, the group that helped move the campers to Green Lake, is against the eviction.

But Matt Lang, a member of the group, acknowledged to Q13 News that things have gotten unruly.

“It’s caused a lot of tension in that neighborhood, not best for anyone for that camp to remain,” Lang said.

Lang says he will help move the camp somewhere else this Sunday but a location has yet to be determined.

<b>HEADLINE</b>	<b>04/27 Experts: US unprepared for biothreats</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/subject-matter-areas/pandemic-biohazard/country-a-lot-more-ragile-than-we-realize/">https://www.hstoday.us/subject-matter-areas/pandemic-biohazard/country-a-lot-more-ragile-than-we-realize/</a>
<b>GIST</b>	<p>The nation is critically underprepared to confront transnational biological threats ranging from DIY bioterror agents to natural pathogens that outpace current pharmaceuticals and overwhelm medical facilities, the Blue Ribbon Study Panel on Biodefense heard at a Wednesday event at the Hudson Institute.</p> <p>James Lawler, a retired Navy commander whose experience includes serving as director for medical preparedness policy on the National Security Council and director for biodefense policy on the White House’s Homeland Security Council, warned that the country is “woefully unprepared for these biological threats” in an increasingly interdependent world.</p> <p>“Events halfway around the world have rapid effects,” he said, and the nation suffers from a “lack of threat awareness and poor situational awareness as it comes to biological threats.”</p> <p>Problems include “excruciatingly slow and moribund” programs that rely too much on “backwards engineering” of the last big threat along with insufficient staffing and not enough human intelligence on biological programs, as well as a “lack of situational awareness in day-to-day health activities.”</p> <p>Lawler stressed that there are “still significant problems connecting the clinical world with the public health world,” while the ability “to be able to understand those events in real time is critical to being able to defend ourselves in rapidly evolving events.”</p> <p>As genetic engineering continues to evolve, he warned, the threat will “exponentially” increase with “significant potential for malevolent use.”</p>

“Innovation is going to be the key to moving us ahead,” he said, with a need “to think beyond the linear approach we’re using now.”

“If you’re the kind of person who lies awake at night thinking about problems, this is one of the problems you should be thinking about... we’re now in the era of the iPhone 10 and we’re still using a flip phone.”

Kenneth Luongo, president and founder of the Partnership for Global Security, echoed that the U.S. “remains woefully underprepared” for a biological attack or a “new intensity level” of pathogens. He cited Rhode Island hospitals being overwhelmed by flu patients this past winter to the point of having to transfer overflow patients, “and this is an infectious disease that we prepare for every year.”

Better modeling is needed to map the potential spread of disease, he said. Synthetic biology presents new challenges from a risk perspective as new biological systems can be used for malicious purposes, he warned.

Because of the natural lack of transparency about biological programs from authoritarian regimes, it “falls to the intelligence community to determine what’s happening” in research programs with “serious questions” like Russia — where Luongo has “no doubt” there’s an active biological program with weapons potential.

Even though the lack of a biological attack has lowered the priority of addressing biological threats, Luongo warned “that’s a mistake.”

Ridge’s co-chairman on the Blue Ribbon Study Panel, former Sen. Joe Lieberman (I-Conn.), said later in the conference that while he’s worried about a bioterror attack the impact of an infectious disease pandemic could be worse as “the potential for devastation is great.”

Former USAID Director Andrew Natsios, director of the Scowcroft Institute of International Affairs, told the panel that the country is “a lot more fragile than we realize” when it comes to emergency response, and the ebola crisis demonstrated the need for several central points at which decisions can be made rapidly. “Time is of the essence — the longer the delay, the more people could die,” he said.

Natsios warned of the consequences of a lack of U.S. leadership in the international system. “We are sort of like Jimmy Stewart — we are going to see what the world looks like without that honorable man in the movie,” he said, referencing “It’s a Wonderful Life.”

With deficits in drug development, he suggested expanding upon the Gavi Vaccine Alliance model in which pharmaceutical companies are promised that if they mass produce, the products will be marketed through NGOs and the UN.

“Do not reinvent the federal organization wheel,” he suggested, while emphasizing the need for coordination. “Do not try, in cases of international aid programs, try to transplant what works well in a Western country to a developing country.”

And, Natsios recommended, “do not confuse emergency response with other biomanagement issues” – coordinating before the emergency and, once the event takes place, decentralizing to the lowest levels “or we won’t get there in time.”

HEADLINE	<b>04/24 Banner year for Seattle, King Co. tourism</b>
SOURCE	<a href="https://www.seattletimes.com/business/economy/a-banner-year-for-tourism-in-seattle-and-king-county/">https://www.seattletimes.com/business/economy/a-banner-year-for-tourism-in-seattle-and-king-county/</a>
GIST	Cruise season began last week with the arrival of Norwegian Cruise Line’s Norwegian Sun.

The Port of Seattle projects more than 1.1 million cruise passengers this year, ahead of last year's record. Alaska is the largest destination for cruise ships. Seattle will be the largest cruise port on the West Coast for the second year in a row.

Cruise passengers make up an important part of the tourism economy here, spending money in town before and after their voyages. But they're far from the only drivers.

Nearly 40 million visitors came to the city and county last year, according to a recent report from Visit Seattle, the 1,000-member nonprofit tourism marketing organization. That's up 2.6 percent from the previous year and marks the eighth straight year setting a record. Overnight visitors grew by 3.9 percent to nearly 21 million.

Tourism Economics and Longwoods International estimate that visitors pumped \$7.4 billion into the regional economy. Travel and tourism jobs were up 27 percent to more than 76,000 (about 5.6 percent of all employment in King County).

Tom Norwalk, president of Visit Seattle, told me the region also "had incredible growth from international business. And this is despite being underserved by international (air) carriers. We've been adding (flights) but there is more we can be doing."

International visitors tend to spend more and stay longer than their domestic counterparts. To encourage growth in tourism from overseas, Visit Seattle has marketing reps in Asia, Europe and Australia.

The organization benchmarks the tourism sector here against 14 other U.S. cities, getting weekly updates.

With long summer days, numerous attractions and the gateway to the Northwest's scenic beauty, Seattle is a natural destination for tourists. Leisure demand was once seasonal, but now we're attracting visitors year-round.

Business travel is an important element, too, both corporate and conventions.

Norwalk is hoping a deal can be completed for expansion of the Washington State Convention Center.

"We're outperforming other destinations for how we utilize the convention center" he said. "But we need the second building... There's incredible demand for Seattle as a meeting destination. Groups sign contracts for years out."

<b>HEADLINE</b>	<b>04/27 US, Israel heat up rhetoric on Iran</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/04/27/politics/us-israel-iran-dangers/index.html">https://www.cnn.com/2018/04/27/politics/us-israel-iran-dangers/index.html</a>
<b>GIST</b>	<p>Washington (CNN)US and Israeli officials issued tough warnings about Iran's activities in Syria and beyond on Thursday, in the lead-up to President Donald Trump's May 12 decision on whether to stay in the Iran nuclear deal.</p> <p>The steady drumbeat appeared to reinforce signals Trump has been sending about his intent to leave the deal. And in the absence of any clear sign the White House has a "day after" plan, there are deepening concerns in some quarters that White House policy toward Tehran may be shifting from denuclearization to regime change.</p> <p>"I think we are not moving toward a new agreement," said Clement Therme, a Bahrain-based research fellow for Iran at the International Institute for Strategic Studies. "I think we are moving toward a regime change policy in the US."</p> <p>US and Israeli officials laid out a litany of examples of malign Iranian behavior on Thursday. Some laid</p>

the ground for potential Israeli action against Iran within Syria. Others warned the conflict could spread from there.

Speaking to lawmakers, Defense Secretary James Mattis said that Iran is bringing in increased amounts of weaponry to Syria, and suggested that Iran intends to attack Israel. Mattis said Iran's proxy activities in Syria are driving a significant risk of escalated conflict that could engulf the region.

Privately, US military officials are warning of the potential for more direct confrontation between Iran and Israel that could spiral out of control.

"The potential for escalation has grown," one defense official told CNN's Barbara Starr. The Pentagon is publicly trying to emphasize that any military moves by Iran "would take us where we don't want to go," the official said. "There is serious concern this could escalate."

In New York, Nikki Haley, the US ambassador to the UN, told the Security Council that Iran is the patron and protector of groups that use human shields, "part of Iran's overarching efforts to destabilize the region."

Danny Danon, Israel's ambassador to the UN, reminded the Security Council that the threats posed by Hezbollah, Hamas and Syria's Assad regime have one common source. "The Iranian regime is the dangerous thread that ties these threats together," he said, before he went on to denounce the Joint Comprehensive Plan of Action, as the nuclear deal is formally known.

<b>HEADLINE</b>	<b>04/27 Koreas agree: end war, denuclearize</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-04-27/two-koreas-agree-to-end-war-this-year-pursue-denuclearization">https://www.bloomberg.com/news/articles/2018-04-27/two-koreas-agree-to-end-war-this-year-pursue-denuclearization</a>
<b>GIST</b>	<p>North Korean leader Kim Jong Un and South Korean President Moon Jae-in agreed Friday to finally end a seven-decade war this year, and pursue the "complete denuclearization" of the Korean Peninsula.</p> <p>The two leaders embraced after signing the deal during a historic meeting on their shared border, the first time a North Korean leader has set foot on the southern side. They announced plans to formally declare a resolution to the war and replace 1953 armistice that ended open hostilities into a peace treaty by year's end.</p> <p>"We have agreed to share a firm determination to open a new era in which all Korean people enjoy prosperity and happiness on a peaceful land without wars," Kim said, in his first remarks in front of the global press since taking power in 2011.</p> <p>The two sides "confirmed the common goal of realizing, through complete denuclearization, a nuclear-free Korean Peninsula."</p> <p>"South and North Korea agreed to actively seek the support and cooperation of the international community for the denuclearization of the Korean Peninsula," according to the statement. It didn't elaborate on what that would entail.</p> <p>"The commitment to 'complete denuclearization' is ambiguous, and subject to different interpretations," said Youngshik Bong, a researcher at Yonsei University's Institute for North Korean Studies in Seoul. "It can be interpreted as North Korea getting rid of all warheads, or North Korean demands on the U.S. military in South Korea."</p> <p>The agreement follows a rapid thaw of tensions on the peninsula after a flurry of North Korean missile tests and a hydrogen bomb detonation last year. Kim plans to meet U.S. President Donald Trump soon, which would be the first summit between a North Korean leader and a sitting American president.</p>

HEADLINE	<b>04/26 Army accepts recruits w/behavior issues</b>
SOURCE	<a href="https://www.usatoday.com/story/news/politics/2018/04/26/army-issues-waivers-1-000-recruits-history-bipolar-depression-self-mutilation/554917002/">https://www.usatoday.com/story/news/politics/2018/04/26/army-issues-waivers-1-000-recruits-history-bipolar-depression-self-mutilation/554917002/</a>
GIST	<p>WASHINGTON — The Army issued waivers over 13 months to more than 1,000 recruits who had been diagnosed and treated for mood disorders and 95 more for self-mutilation, according to data obtained by USA TODAY.</p> <p>The acceptance of new soldiers with a history of serious behavioral health issues, some of which can be lifelong challenges, came as the Army struggled to meet its recruiting goals. The time period ran from Oct. 1, 2016, through Oct. 31, 2017.</p> <p>Last week, Army Secretary Mark Esper indicated that the Army issues waivers only for mental health issues that have been resolved or upon further review were misdiagnosed. There were no waivers issued for a history of drug overdoses or suicide attempts.</p> <p>“As the stigma of seeking therapy or counseling becomes less of an issue than when I grew up, you’ll see probably more cause for waivers,” Esper said. “But again, the waiver is only for an historical condition that we look at and assess. We do not allow anybody in who is undergoing therapy, who is a cutter or was a cutter, identified clearly as a cutter or is using drugs. They are not allowed into the service. And I will not accept them. Quality trumps quantity every single day of the week.”</p> <p>Mood disorders include conditions such as bipolar disorder and severe depression. Self-mutilation can indicate deep psychological problems.</p> <p>“Bipolar in most cases is a lifelong challenge,” said Elspeth Cameron Ritchie, a psychiatrist who retired from the Army as a colonel in 2010 and is an expert on waivers for military service. “It is more of a challenge when you’re younger and is not something you can simply be clear of. You’re often on medication for life.”</p> <p>A history of severe depression raises the risk of suicide, a problem the military sought to minimize in part by eliminating waivers for many behavioral health issues in 2009, Ritchie said.</p> <p>Last fall, USA TODAY reported on Army documents that showed the service tried to ease the waiver process for recruits with a history of self-mutilation, bipolar disorder and depression. The Army encountered challenging recruiting goals, including adding more than 76,000 soldiers this year. In 2017, it accepted more recruits who had fared poorly on aptitude tests, and it increased the number of waivers for marijuana use.</p> <p>Sen. John McCain criticized the service for accepting recruits who mutilated themselves.</p> <p>Figures obtained through a Freedom of Information Act request show that from Oct. 1, 2016, through Oct. 31, 2017, the active-duty Army issued waivers to 738 recruits with a history of mood disorders and 49 more with a history of self-mutilation. The Army Reserve and National Guard accepted the rest of the recruits with behavioral health issues.</p> <p>Soldiers with bipolar disorder often require medication such as lithium, Ritchie said. That medication must be monitored carefully, a task that may be impossible in austere combat environments far from laboratories.</p> <p>Manic episodes of bipolar disorder can be triggered by sleep deprivation, a common occurrence in the military, she said. She recalled treating an Army major who scrawled graffiti on walls during a “classic bipolar episode” while deployed to South Korea.</p>

	<p>“When you’re manic, your judgment isn’t good,” Ritchie said. “You shouldn’t be driving a tank when you’re manic. You shouldn’t have a rifle if you’re manic.”</p> <p>Accepting recruits with a history of behavioral health issues is risky — for the Army and the soldier, Ritchie said.</p> <p>“It is concerning,” she said. “It can be very problematic. And we may be setting them up to fail.”</p> <p>The Army is about 1,000 recruits behind its goal of recruits for this year.</p>

<b>HEADLINE</b>	<b>04/26 More children being diagnosed autism</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Health/children-diagnosed-autism-spectrum-disorder-recent-years/story?id=54762329&amp;cid=clicksource_26_2_hero_headlines_bsq_hed">http://abcnews.go.com/Health/children-diagnosed-autism-spectrum-disorder-recent-years/story?id=54762329&amp;cid=clicksource_26_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>More children are being diagnosed with autism spectrum disorder, according to new data from the Centers for Disease Control and Prevention (CDC). Their new numbers now show that autism affects one in 59 children, an increase from previously reported one in 68 children.</p> <p>Dr. Walter Zahorodny, a pediatrician and autism researcher, is “stunned by the speed of increase.”</p> <p>This data was collected in 2014 through the Autism and Developmental Disabilities Monitoring (ADDM) Network, an organization described by the study's authors as “an active surveillance system that provides estimates of the prevalence of autism spectrum disorder (ASD) among children aged 8 years.”</p> <p>In this study, the ADDM Network first identified over 10,000 children with symptoms of ASD in 11 states. A team of researchers and experts in the field then reviewed their medical and school records since birth, confirming an autism diagnosis in 5,473 children. This extremely thorough approach limited confusion and ensured accurate and consistent diagnoses and results. Part of the difficulty in autism research is that there isn’t a medical “test” that determines if a child falls on the autism disorder spectrum - it’s an evaluation based on observation, so reliable numbers have been historically difficult to guarantee.</p> <p>The overall prevalence of autism was 16.8 per 1,000 children, or 1.68 percent, according to the study. This number varied between different states. The state with the lowest rate was Arkansas at 13.1 per 1,000 children. The state with highest rate was New Jersey at 29.3 in 1,000 children. There’s no reason given for regional variation.</p> <p>Zahorodny, the lead researcher at the New Jersey site, states “3 percent is a real landmark, given that we started at 1 percent autism prevalence 14 years ago.”</p> <p>These rates of autism are significantly higher than those in the last study from ADDM, which looked at a similar number of young children in 2012. This new study looked at exactly the same six locations that participated in 2012, and in these sites, the 2014 autism rates were 20 percent higher than they were in 2012.</p> <p>Historically, the rate of autism in white children is 20-30 percent greater than black children and 50-70 percent greater than Hispanic children. In agreement with that previous data, autism was more common in white children, although there was a significant increase in the diagnosis in black and Hispanic children, with the prevalence in white children only 7 percent greater than in black children and 22 percent greater than in Hispanic children. In agreement with past studies, autism was about four times more common in boys.</p> <p>One outlier: There was virtually no difference in autism rates between white, black, and Hispanic children in New Jersey. The authors argue that perhaps New Jersey’s overall higher autism prevalence is related to</p>

the more inclusive diagnosis of minority children, and therefore might be the most accurate rate in the study.

This study is not intended to be representative of the entire country. There are clear limitations, primarily because the data originated from only 11 collection sites. In addition, there were discrepancies in the amount and type of medical and educational data that was recorded from state to state. The data in this study is only as accurate as the information that was documented by physicians, counselors, and schools.

Why are more children than ever diagnosed with autism spectrum disorder?

The short answer: We don't know.

The cause of autism is still unknown. There are associations between autism and prematurity, advanced parental age, and genetics -- however no evidence of causation, according to the American Academy of Pediatrics (AAP). There's also a lot of discussion about potential environmental causes, yet again, there's no science to support these claims (the claim that vaccines cause autism has been disproven by the AAP time and time again).

To be diagnosed on the spectrum, a child must have three key characteristics: delayed language development, abnormal, repetitive behaviors, and difficulty socializing. Children with autism can have stereotypical behaviors such as rocking, spinning, hand-flapping, and toe-walking. They can also have difficulty making eye contact or playing with other children.

It's important to know that there are many children that are NOT on the spectrum who may display these behaviors. The diagnosis of autism is made by looking at a child's development, language, and behavior as a whole. If you have concerns about your child, you should speak with a pediatrician.

As the name implies, there's a wide range in severity. While many children are able to do well in school and make friends with minimal assistance, others may need significant speech and behavioral therapy to function.

Which brings us to the treatment of autism: Therapy, therapy, and more therapy.

There's no cure for autism, but certain types of therapies have been proven to improve a child's ability to function in the real world.

One of the most alarming findings in this new study is the widespread delayed diagnosis of autism. The median age of diagnosis was 52 months, just over 4 years. Children with autism should be diagnosed by 3 years old and receive appropriate therapies by 4 years old, according to Department of Health and Human Services Healthy People 2020 goals.

We are diagnosing most children too late, according to these numbers.

"We need to have strong concerted efforts toward universal autism screening," Zahorodny said in response to this data. The AAP states that all children should be screened for autism by their primary care provider at 18 months and again at 24 months.

Is autism really becoming more common?

It's unclear if this rise in autism is due to an increase in diagnosis or an increase in the actual prevalence of autism. Some scientists argue that physicians are doing a better job at diagnosing autism, particularly in minority populations, and that's why the autism numbers are up.

Thomas Frazier, the chief science officer at Autism Speaks, feels "there is a meaningful increase."

Both Frazier and Zahorodny agree that while the increase in diagnosis is contributing to the prevalence, it

	cannot be the only cause. It seems the increase in autism is significant enough that many psychologists and pediatricians worry we're missing a piece of this puzzle.

<b>HEADLINE</b>	<b>04/27 China, India leaders meet amid tensions</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/china-india-leaders-meet-amid-border-tensions-54771127?">http://abcnews.go.com/International/wireStory/china-india-leaders-meet-amid-border-tensions-54771127?</a>
<b>GIST</b>	<p>The leaders of India and China met at a lakeside resort in central China on Friday amid tensions along their contested border and a rivalry for influence among their smaller neighbors that could determine dominance in Asia.</p> <p>Chinese President Xi Jinping greeted Indian Prime Minister Narendra Modi on Friday at the provincial museum in the city of Wuhan at the start of two days of talks between the heads of the world's two most populous nations.</p> <p>Indian media outlets, quoting unidentified top officials, reported the leaders would begin their interactions with one-on-one talks, followed by further discussions and a dinner lakeside at the resort that had been a favorite of former Chinese leader Mao Zedong.</p> <p>They will continue talks on Saturday with a lakeside walk, boat ride and lunch together.</p> <p>The countries fought a border war in 1962 and last year engaged in a 10-week standoff in the neighboring state of Bhutan. New Delhi has also been alarmed by China's moves to build strategic and economic ties with Indian Ocean nations including Sri Lanka, the Maldives and India's longtime rival Pakistan.</p> <p>China for its part resents India's hosting of exiled Tibetan spiritual leader, the Dalai Lama, and its control of territory Beijing says belongs to it.</p> <p>China claims some 90,000 square kilometers (35,000 square miles) of territory in India's northeast, while India says China occupies 38,000 square kilometers (15,000 square miles) of its territory on the Aksai Chin Plateau in the western Himalayas. Officials have met at least 20 times to discuss the competing border claims without making significant progress.</p> <p>Following the most protracted standoff in years, India last year agreed to pull back troops from the disputed Doklam Plateau high in the Himalayas, where Chinese troops had started constructing a road.</p> <p>Despite such differences, Modi hopes China can help drive Indian economic growth ahead of national elections next year. However, his administration has been reluctant to engage with Beijing's "Belt and Road" initiative linking its economies to those of Asia, the Middle East, Africa and Europe through massive loans and investments.</p> <p>Modi will be traveling to China again in June for a summit of the eight-member Shanghai Cooperation Organization dominated by Beijing and Moscow.</p> <p>Along with China, Russia and India, that group includes the Central Asian states of Kazakhstan, Kyrgyzstan, Tajikistan, Uzbekistan as well as Pakistan.</p>

<b>HEADLINE</b>	<b>04/27 India security operation targets Maoists</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/indian-security-forces-kill-maoist-rebels-54773854?">http://abcnews.go.com/International/wireStory/indian-security-forces-kill-maoist-rebels-54773854?</a>
<b>GIST</b>	Indian police say at least seven Maoist rebels have been killed in the second major operation by security forces against their strongholds in a week.

	<p>Police officer Mohit Garg says security forces attacked the rebels on Friday after learning they were meeting in a forest hide-out in Bijapur district in Chhattisgarh state.</p> <p>He said seven rebels were killed in an exchange of gunfire. There were no immediate reports of casualties among the security forces.</p> <p>Last week, at least 37 Maoist rebels were killed in gunbattles between government forces and insurgents in Gadchiroli in western Maharashtra state.</p> <p>The Maoist rebels, who claim inspiration from Chinese revolutionary leader Mao Zedong, have been fighting India's government for more than four decades, demanding land and jobs for tenant farmers and the poor.</p>

<b>HEADLINE</b>	<b>04/26 Parkland deputies 'no confidence' w/sheriff</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/florida-deputies-confidence-sheriff-presided-parkland-shooting-union/story?">http://abcnews.go.com/US/florida-deputies-confidence-sheriff-presided-parkland-shooting-union/story?</a>
<b>GIST</b>	<p>More than 500 deputies in Florida have voted that they no longer have confidence in the sheriff who presided over the Valentine's Day shooting at Marjory Stoneman Douglas High School that killed 17 students and staff.</p> <p>Jeff Bell, president of the Broward Sheriff's Office Deputies Association, said Thursday that out of 628 votes, 534 Broward County deputies cast a ballot to say they "no longer have confidence" in Sheriff Scott Israel. Ninety-four people voted for Israel, Bell said.</p> <p>The union called for the vote over sheriff's office's response to the Parkland shooting as well as Israel's response to the criticism of him in the wake of the shooting, ABC Fort Lauderdale affiliate WLPG reported.</p> <p>"These members have displayed great courage to come forward and vote under the threat of retaliation," Bell said.</p> <p>The association represents about 1,300 deputies and sergeants who "put their lives on the line every day," according to its president.</p> <p>Bell said it is now time for the sheriff to start listening to both members of his office as well as the leaders of Broward County.</p> <p>The association president took issue over Israel's leadership, policies and his handling of the budget. He also accused Israel of "taking care" of his family and friends by hiring them as "command staff at top levels" and attempting to "skirt the laws that are in place within the state of Florida."</p> <p>"He fails to listen to the people," Bell said.</p> <p>After the results of the vote were announced, Israel released a statement saying that he "will not be distracted" by the union vote.</p> <p>"I am accountable to the citizens of Broward County," Israel said. "My job is to continue to do the job I was elected to do, which is to ensure the safety of Broward County's 1.9 million residents."</p> <p>In his statement, Israel repeated a sentiment he expressed while to reporters shortly before the results of the vote were announced, which is that the vote was "designed to extort a 6.5 percent pay raise from this agency."</p>

	<p>Bell responded to Israel's comments by calling the sheriff a "complete liar."</p> <p>"This has never been about a contract," Bell said. "This has been about his longstanding policies."</p>

<b>GIST</b>	<p>North Korean leader Kim Jong Un has crossed the line dividing the demilitarized zone to meet with South Korean President Moon Jae-in in what's being described as a historic summit.</p> <p>Kim made that first step, a great leap for the Korean Peninsula. The two posed for photos facing the North, then facing the South. Just about when Moon ushered Kim to walk toward the red carpet, Kim made a gesture offering Moon to take a step back across the demarcation line, to his side of the border. Whether pre-planned or not, the two smiled and took that step holding hands.</p> <p>Escorted by traditional music, Moon and Kim walked together to the "Peace House," a three-story building where the official summit will take place.</p> <p>Inside the "Peace House," Kim signed the guest book, writing in it for more than a minute. The two leaders then went into a reception room for a private conversation.</p> <p>It's the first time since 2007 leaders of the two countries have met and is part of a recent thawing of relations as South Korea and the United States have focused on diplomacy in their efforts to dismantle North Korea's nuclear program.</p> <p>The summit has been in the works for some time, with the stage being set by two previous meetings between high-level officials from the North and South, as well as the North's participation in the Winter Olympics in Pyeongchang, South Korea, earlier this year. The two nations marched under one flag.</p>

<b>HEADLINE</b>	<b>04/26 Mass. school district pays ransomware</b>
<b>SOURCE</b>	<a href="http://www.telegram.com/news/20180426/leominster-pays-10k-in-bitcoin-ransom-to-undo-cyberattack-on-schools">http://www.telegram.com/news/20180426/leominster-pays-10k-in-bitcoin-ransom-to-undo-cyberattack-on-schools</a>
<b>GIST</b>	<p>LEOMINSTER – The city paid \$10,000 in bitcoin last week to cyber extortionists who infiltrated the school district's computer systems over the April school break, according to city officials, affecting every school in the district.</p> <p>Mayor Dean J. Mazzarella called those who carried out the cyberattack "smart" and said they knew what they were doing when they gained control of the school district's computer network.</p> <p>Mr. Mazzarella said he was called by the district's superintendent, Paula Deacon, the Saturday of school vacation within 24 hours of the attack to notify him.</p> <p>The Federal Bureau of Investigation was notified, he said.</p> <p>"They (the FBI) are tracking it from here," Mr. Mazzarella said Thursday evening.</p> <p>Ms. Deacon did not immediately respond to a request for a comment.</p>

	<p>“They were on top of their game,” Mr. Mazzarella said. “They are using the best and highest technology. They were just looking for an opening and the system was hacked somehow or another.”</p> <p>He said the \$10,000 for the digital currency will come out of the city’s general fund and he does not believe the incident is covered under the city’s insurance.</p> <p>Interim Police Chief Michael Goldman said with ransomware attacks, hackers encrypt data and the only way to unlock it is with a password or by starting with a clean backup.</p> <p>“There is nothing the police department can do,” Mr. Goldman said. “It is highly sophisticated, mostly coming from out of the country, usually Europe, and almost impossible to trace.”</p>

<b>HEADLINE</b>	<b>04/27 State-sponsored hacks on Australia rise</b>
<b>SOURCE</b>	<a href="https://www.theaustralian.com.au/national-affairs/national-security/statesponsored-cyber-attacks-on-the-rise-against-australia/news-story/1d34cc1921d15cd4f0563f7267f087b3">https://www.theaustralian.com.au/national-affairs/national-security/statesponsored-cyber-attacks-on-the-rise-against-australia/news-story/1d34cc1921d15cd4f0563f7267f087b3</a>
<b>GIST</b>	<p>State-sponsored cyber attacks targeting Australia have increased, with recent efforts allegedly carried out by Russia, Iran and North Korea making headlines either intentionally or due to poor execution, a leading cyber security expert says.</p> <p>Fergus Hanson, head of the International Cyber Policy Centre at the Australian Strategic Policy Institute, said those three countries, along with China, were the most common “threat actors” conducting cyber attacks around the world.</p> <p>“Each one has very specific motives, so if you take NotPetya (ransomware that locks a computer until a ransom is paid) ... the Russians targeted that through a Ukrainian accounting firm and it was probably meant to go after Ukrainian companies,” Mr Hanson said. “But because it was so poorly executed it ended up spreading from the accounting company, globally.”</p> <p>But he said the “WannaCry” attack, that infected more than 300,000 computers and for which North Korea has been blamed, was more about demonstrating the hackers’ abilities rather than purely raising money.</p> <p>“That was notionally a ransomware attack, but probably not specifically designed to be a money-making scheme. It was probably another capability that they were demonstrating,” he said.</p> <p>On Wednesday computer security company McAfee released a report alleging North Korea’s hacking unit had “implanted” malware into the systems of unnamed organisations in Australia and elsewhere as part of an ongoing data-theft campaign.</p> <p>That operation, dubbed “GhostSecret” began last month, originating in the Turkish financial sector before spreading to targets largely in the Asia-Pacific region.</p> <p>The federal government yesterday declined to comment on the McAfee report.</p>

<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/asia_pacific/a-muslim-and-a-hindu-thought-they-could-be-a-couple-then-came-the-love-jihad-hit-list/2018/04/26/257010be-2d1b-11e8-8dc9-3b51e028b845_story.html?utm_term=.f4ae12622e42">https://www.washingtonpost.com/world/asia_pacific/a-muslim-and-a-hindu-thought-they-could-be-a-couple-then-came-the-love-jihad-hit-list/2018/04/26/257010be-2d1b-11e8-8dc9-3b51e028b845_story.html?utm_term=.f4ae12622e42</a>
<b>GIST</b>	KOLKATA, India — The 21-year-old Hindu college student was having a quiet breakfast with her mother when her phone pinged with a terrifying message. Her name was on a hit list.

She and her Muslim boyfriend had been targeted publicly on Facebook along with about 100 interfaith couples — each of them Muslim men and their Hindu girlfriends. She immediately called her boyfriend to warn him.

The Facebook post included instructions: “This is a list of girls who have become victims of love jihad. We urge all Hindu lions to find and hunt down all the men mentioned here.” At least two followers heeded the call.

The phrase “love jihad” is meant to inflame dark fears that Muslim men who woo Hindu women might be trying to convert them to Islam — a prejudice that the Hindu right has tried to stoke for nearly a decade.

But use of the term has spread on social media with the rise of the Hindu nationalist party of Prime Minister Narendra Modi, at a time when religious hatred is growing on Facebook in India, its largest market.

Facebook is facing rampant criticism that hate speech spread on the platform has fueled ethnic and religious violence in Asia, in places such as Burma and Sri Lanka.

During his appearances before Congress April 10-11, Facebook chief executive Mark Zuckerberg said the company was “working” on a way to remove hate speech within 24 hours of its appearance and adding dozens of new Burmese-language content monitors.

“It’s clear now we didn’t do enough” to prevent the platform from being “used for harm,” Zuckerberg said in his statement.

But the company has said little about its prevention efforts in India, its largest market of more than 240 million users.

The list of Hindu-Muslim couples was posted by Satish Mylavarapu, a mild-looking sales and marketing manager in Bangalore who propagates militant Hinduism to thousands of followers in Facebook groups and elsewhere.

“It’s a matter of Muslims taking over our blood and taking over our wombs — the wombs that would give Hindu children,” he said.

Highly motivated Hindu extremist “volunteers” across India assembled the list by meticulously plotting the locations of mosques and girls schools and colleges around the country and combing young women’s profiles for photos or posts that would link them with Muslim men.

Meanwhile, conservative Hindu groups supporting Modi’s powerful Bharatiya Janata Party began pushing into areas in India’s east and south traditionally dominated by other languages and regional parties, including the couple’s home state of West Bengal.

In recent weeks, West Bengal has been roiled by riots between Hindus and Muslims that followed sword-waving devotees marching in honor of Lord Ram — a Hindu deity who is not normally worshiped in the region. At least four people died.

Civil society groups have charged that Facebook has not acted quickly enough in such instances to curb the hate speech that inflamed tensions throughout Asia, including Muslim-Buddhist riots in Sri Lanka and Burma’s exodus of more than 850,000 Rohingya Muslims into Bangladesh. Facebook was dubbed the “beast” in that crisis by a United Nations monitor.

In India, a March study by the Observer Research Foundation, a think tank based in New Delhi, showed that religion is increasingly used as a basis of hate speech on Facebook, a jump of 19 to 30 percent between 2016 and 2017.

“I don’t think Facebook has a clue how to monitor hate speech,” said Maya Mirchandani, a senior fellow who co-wrote the study. She said that more proactive text monitoring systems are not in place, including among its rapidly growing non-English speaking audiences.

“Maintaining a safe community for people to connect and share on Facebook is absolutely critical to us,” a Facebook spokesman said in a statement. “We have policies that prohibit hate speech and credible threats of harm, and we will remove this content when we’re made aware of it.”

<b>HEADLINE</b>	<b>04/26 Sounds of DDoS in NetFlow logs</b>
-----------------	---

SOURCE	<a href="https://www.infosecurity-magazine.com/news/cadence-in-chaos-sounds-of-ddos-in/">https://www.infosecurity-magazine.com/news/cadence-in-chaos-sounds-of-ddos-in/</a>
GIST	<p>For those who appreciate the healing power of music, new research could prove to be a magical security tool. By correlating traffic types from NetFlow logs with sounds of instruments, researchers at Imperva were able to translate changes in network traffic into song.</p> <p>Inspired by a TED Talk called "Can We Create New Senses for Humans?" presented by Dr. David Eagleman, adjunct professor in the Department of Psychiatry &amp; Behavioral Sciences at Stanford University, Imperva's team wondered whether tapping into the sense of sound could change the way they interpret network traffic.</p> <p>"Auditory perception, we learned, has a lot of advantages oversight, especially in terms of processing spatial, temporal and volumetric information. The ability to register the most delicate differences in frequency resolution and amplitude opens up a Pandora's Box worth of possibilities in data perception," Imperva wrote in a blog post.</p> <p>Turns out that sonification is an effective monitoring tool, so they set to work to figure out how to make the internet sing. In order to collect NetFlow data, they created a Python 3 script, then processed the data into Open Source Control messages which were then converted into sound using a Ruby-based algorithmic synthesizer.</p> <p>Assigning different instrumental sounds to the varied traffic types created a melody that revealed the ebb and flow of the traffic levels and also revealed shifts in pitch and volume.</p> <p>A significant shift in traffic would be the harbinger of a DDoS attack. So as not to rely solely on shifts in volume as an alert, the team decided to add an additional mechanism that would really sound an alarm bell and activate a mitigation service. Their choice? The sound of a tomato being squeezed.</p>

HEADLINE	<b>04/26 For sale: next-generation phishing kit</b>
SOURCE	<a href="https://www.scmagazine.com/simple-but-not-cheap-phishing-kit-found-for-sale-on-dark-web/article/761520/">https://www.scmagazine.com/simple-but-not-cheap-phishing-kit-found-for-sale-on-dark-web/article/761520/</a>
GIST	<p>Cybercriminals are nothing if not attuned to finding new customers for their wares, as Check Point and CyberInt found when they came across a next-generation phishing kit for sale on the Dark Web geared toward the neophyte, but discerning, hacker.</p> <p>A joint investigative venture by Check Point and CyberInt found [A]pache Next Generation Advanced Phishing Kit on the Dark Web, which the companies described as a fifth-generation level kit. The kit is not necessarily inexpensive retailing for between \$100 and \$300, compared to the \$20 or \$50 most kits sell for, but for the price [A]pache delivers what the researchers called one of the most advanced phishing kits yet spotted.</p> <p>“With [A]pache's next-generation phishing kit, however, threat actors are provided with a full suite of tools to carry out their attack. These include an entire back-office interface with which they can create convincing fake retail product pages and manage their campaign,” the report stated. This includes having their own versions of sites including, Walmart, Americanas, Ponto Frio, Casas Bahia, Submarino, Shoptime and Extra.</p> <p>At this point, the product is developed primarily for use in the Brazilian market, but the fact that some American brands are also included means it could be used in the U.S. too.</p> <p>The kits then lay out the step by step process the users need to follow to get their phishing scam up and running.</p> <p>After choosing a retailer to emulate the customer are shown how to register a domain name to be used, a</p>

payment option for the victims is picked. Next the malicious actor inserts legitimate product URLs from the site being replicated to help make the fake site appear real. This includes setting prices for the products and the kit sellers suggest making the prices competitive with what is available in the real world to add an extra layer of authenticity.

“Care needs to be taken here though as reducing prices too low though would raise suspicions with captivated ‘customers’. Finally, the kit owner has to learn how to view the victim’s stolen information,” the report states.

<b>HEADLINE</b>	<b>04/26 Hackers love healthcare</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/endpoint/why-hackers-love-healthcare/a/d-id/1331537">http://www.darkreading.com/endpoint/why-hackers-love-healthcare/a/d-id/1331537</a>
<b>GIST</b>	<p>Much like the rest of the world, healthcare organizations are shifting work to cloud services in order to improve accessibility and patient care. However, the migration of these workloads and moving valuable information such as PHI (personal health information) and PII (personally identifiable information) to the cloud has also led to cybercriminals taking a particular interest in the industry.</p> <p>The number of ransomware and other malware attacks is rising incredibly fast in the healthcare industry, putting human lives as well as critical data at risk. From 2011 through 2014, the sector — including hospitals, labs, pharmacies, drug companies and outpatient clinics — experienced the highest number of data breaches of all industries. What makes these organizations such a popular target?</p> <p><b>1. Highly Valuable Data</b></p> <p>One of the key aspects making healthcare organizations a top target is the value of their data. Commonly, a single stolen credit card number yields an average \$2,000 profit and quickly becomes worthless. Healthcare data, however, such as PHI or PII, is extremely valuable on the black market.</p> <p>A single PHI file, for example, can yield a profit of up to \$20,000. This is mainly because it can take weeks or months for a healthcare data breach to be discovered, enabling cybercriminals to extract much more valuable data. Moreover, because healthcare data can contain dates of birth and Social Security numbers, it is much more difficult or even impossible to change, so thieves can take advantage of it for a longer period of time.</p> <p><b>2. Lack of IT Investment and Training</b></p> <p>Another reason the healthcare industry is popular among cybercriminals is its systematic underinvestment in IT security. Most healthcare organizations spend just 3% of their IT budgets on security, while the SANS Institute — the largest provider of cybersecurity training and certifications — recommends spending at least 10%.</p> <p>For most healthcare organizations, security is often an afterthought. They don't provide regular cybersecurity training for their employees, which could help reduce insider threats. For example, 18% of healthcare employees say they're willing to sell their login credentials for between \$500 and \$1,000. And about one-quarter of healthcare employees know someone in their organization who has engaged in this practice.</p> <p>To address employee-related cyber vulnerabilities, it's important to note that while training is essential, it won't magically protect patients' digital data. Although some hospitals struggle to deploy the most basic IT security measures, such as intrusion detection and the ability to wipe lost or stolen devices, it is imperative that basic cyber hygiene practices are coupled with ongoing training to both protect well-intended employees and mitigate future data loss from those seeking to profit.</p> <p><b>3. Highly Connected Systems</b></p> <p>Having shifted workloads to the cloud, healthcare organizations have highly connected systems that run the risk of being deeply affected even if the attack takes place on smaller, partial systems. In other words,</p>

	<p>a cyberattack in one place could bring down the entire system. In May 2017, the WannaCry ransomware attack forced multiple hospitals across the United Kingdom to turn away ambulances transporting patients and cancel surgeries that were within minutes of starting. Even basic processes like admitting patients and printing wrist bands were compromised.</p> <p>The impact of WannaCry illustrates how important it is for healthcare organizations to be able to function and provide patient care during a cyberattack. After all, lives are at risk, meaning there's a general urgency to get back to business as soon as possible. For attackers, this urgency makes it extra tempting to target healthcare organizations, because they assume it will make them more likely to pay the ransom to reverse the infection.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>04/26 New phishing attack uses online quiz</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/vulnerabilities---threats/new-phishing-attack-targets-550m-email-users-worldwide/d/d-id/1331654">http://www.darkreading.com/vulnerabilities---threats/new-phishing-attack-targets-550m-email-users-worldwide/d/d-id/1331654</a>
<b>GIST</b>	<p>A new phishing campaign was discovered sending more than 550 million emails within the first quarter of 2018, according to data from Vade Secure. The threat was discovered in early January and has primarily hit users in the US, UK, France, Germany, and the Netherlands.</p> <p>Victims receive emails disguised to come from popular brands and services in their home country. Attackers try to steal their banking information by offering coupons or discounts in exchange for their participation in an online quiz or contest.</p> <p>Experts believe a serious criminal organization is behind this campaign, which doesn't use pirated websites as many phishing attacks do. This one appears to use leased and legitimate IP addresses, servers, and domain names, which would drive infrastructure costs up to tens of thousands of dollars. They also use tools to shorten URLs and conceal the ultimate destination.</p> <p>These sophisticated techniques caused the threat to bypass many existing email security tools, researchers report.</p>

<b>HEADLINE</b>	<b>04/26 Phishing campaign delivers new malware</b>
<b>SOURCE</b>	<a href="https://www.zdnet.com/article/ransomware-warning-this-phishing-campaign-delivers-new-malware-variants/">https://www.zdnet.com/article/ransomware-warning-this-phishing-campaign-delivers-new-malware-variants/</a>
<b>GIST</b>	<p>A new spam campaign designed to infect victims with GandCrab ransomware has surged over the past few days, as the criminals behind the scheme look to infect as many victims as possible.</p> <p>GandCrab first emerged in January and those behind it have regularly updated the ransomware and altered their attack techniques in order to maximise profit from the file-encrypting malware.</p> <p>Analysis by researchers at security company Fortinet found that three new samples of GandCrab 2.1 are being distributed as the payload in a single mass spam campaign.</p> <p>"This means that newly created samples are being pushed simultaneously, possibly with different configurations, or simply in an attempt to evade specific file signatures," said researchers.</p> <p>Phishing emails feature common subjects about about payments, tickets, invoices and orders and contain a Javascript attachment which when executed, downloads GandCrab from a malicious URL.</p> <p>Tens of thousands of GandCrab spam emails are being distributed each day, with mail servers hosted in the US by far the most common target, accounting for three quarters of deliveries. When it comes to</p>

	<p>successful infections, the US currently accounts for the fourth largest percentage of victims, behind Peru, Chile and India.</p> <p>Those infected with GandCrab are directed to a site which can only be accessed by the Tor browser, where they can "purchase" a private key to decrypt the files.</p> <p>A ransom note demands a payment of \$400 - which previous GandCrab attacks have demanded be paid in Dash cryptocurrency, which is faster to process and more difficult for the authorities to track than Bitcoin. The figure is doubled if the victim doesn't pay within a certain amount of time.</p>

<b>HEADLINE</b>	<b>04/26 Dutch police shutter Anon-IB</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/police-shut-down-anon-ib-an-infamous-revenge-porn-forum/">https://www.bleepingcomputer.com/news/security/police-shut-down-anon-ib-an-infamous-revenge-porn-forum/</a>
<b>GIST</b>	<p>Dutch police announced today that they had seized the servers of Anon-IB, a notorious online portal where users would share pictures of revenge porn and child pornography.</p> <p>The website became famous after it hosted pictures from the Celebgate (Fapping) scandal, nude photos of US female marines, photos of underage girls from US high-schools, and was the go-to place where angry boyfriends or girlfriends would go to upload nude photos of their ex-partners — a practice known as revenge porn.</p> <p>Anon-IB is also famous for its "collectors" — users who keep private nude photo collections, which they trade with each other like baseball or Pokemon cards.</p> <p>Anon-IB servers were located in the Netherlands</p> <p>Besides shutting down the site, Dutch police also announced the arrest of three suspects — a 28-year-old from the city of Heerlen, a 31-year-old from Culemborg, and a 35-year-old from Groningen. They are also currently investigating two other suspects, a 19-year-old from Terneuzen, and a 26-year-old from Geleen.</p> <p>These five are regular users who uploaded pictures on the site, not Anon-IB administrators. Police arrested the three after seizing Anon-IB servers located in the Netherlands. They tracked down the five because the suspects failed to hide their IP addresses.</p> <p>Police told Dutch TV station RTL Nieuws that some of the suspects they are investigating would meet women on the street, get their names, and then try to guess their passwords by for their online accounts, hoping to discover nude images or videos. The suspects said they combined names, birthdays, and other common strings when trying to guess a victim's account password.</p> <p>Besides storing nude photos, the forum also hosted tutorials on hacking online accounts. Entire threads would teach readers how to obtain publicly leaked data, extract the passwords from public breaches, and use the passwords to hack into people's online accounts to search for nude photos.</p> <p>RTL Nieuws journalists also found topics where Anon-IB users would talk about extorting hacked victims, either for cryptocurrency or for more nude photos to add to their collections.</p> <p>Dutch police to notify all affected victims</p> <p>Dutch police say they already notified some of the women who had their data leaked on the site and plan to contact further victims if they manage to identify more persons in the coming months.</p> <p>Police said that many of the women's whose data was uploaded on the site were unaware they'd been hacked.</p>

<b>HEADLINE</b>	<b>04/26 New 'interesting' C# ransomware emerges</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/new-c-ransomware-compiles-itself-at-runtime/">https://www.bleepingcomputer.com/news/security/new-c-ransomware-compiles-itself-at-runtime/</a>
<b>GIST</b>	<p>A new in-development ransomware was discovered that has an interesting characteristic. Instead of the distributed executable performing the ransomware functionality, the executables compiles an embedded encrypted C# program at runtime and launches it directly into memory.</p> <p>Discovered by MalwareHunterTeam, this ransomware contains an encrypted string that is embedded into the dropper... This string is then decrypted using an included decryption key. Now that the source code for the ransomware executable has been decrypted, the decrypted code is sent to another function that compiles it using the CSharpCodeProvider class and launches it directly into memory.</p> <p>This method is probably being used to prevent the dropper from being detected by security software as any malicious behavior is hidden inside the encrypted string.</p> <p>As for the ransomware itself, other than it saving the decryption key and IV to a file on the desktop, it is fully functional. Therefore, it wouldn't be surprising to see the ransomware being distributed at some point.</p>

<b>HEADLINE</b>	<b>04/26 MongoDB server exposes Bezop users</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/exposed-mongodb-server-exposes-details-of-cryptocurrency-users/">https://www.bleepingcomputer.com/news/security/exposed-mongodb-server-exposes-details-of-cryptocurrency-users/</a>
<b>GIST</b>	<p>Security researchers have stumbled across a MongoDB database containing the personal details of over 25,000 users who invested in or received Bezop (BEZ) cryptocurrency.</p> <p>According to cybersecurity firm Kromtech, the database contained information such as full names, home addresses, email addresses, encrypted passwords, wallet information, and scanned passports, driver's licenses, or IDs.</p> <p>The database stored information related to a "bounty programme" that the Bezop team ran at the start of the year, during which it handed out Bezop tokens to users who promoted the currency on their social media accounts.</p> <p>A Bezop spokesperson admitted to the breach, claiming the database was inadvertently exposed online while the dev team dealt with a DDoS attack on January 8.</p> <p>A spokesperson told Bleeping Computer today that no user funds were stolen following this exposure.</p> <p>Database is now secured</p> <p>The Bezop spokesperson said the database contained details on around 6,500 ICO investors, while the rest was for users who participated in the public bounty program and received Bezop tokens in return.</p> <p>The data appears to have remained exposed online until March 30, when Kromtech researchers spotted the MongoDB database on a Google Cloud server. The database was without an authentication system in place, allowing anyone connecting to it access to the stored information.</p> <p>Kromtech researcher Bob Diachenko told Bleeping Computer today that the database was taken down within hours after he tweeted the Bezop team.</p>

	<p>"That database has since been closed and secured," the Bezop team said this week, also claiming it notified users of the incident already. "Investor identity cards were also not stored on the database rather a URL link to them. This is also offline now."</p> <p>Diachenko confirmed that an authentication system now protects the database he found at the end of March, albeit there is no way of telling if anyone except the Kromtech team discovered the same database.</p>

<b>HEADLINE</b>	<b>04/26 NKorea elites ditching Facebook</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/technology/north-koreas-elites-are-ditching-facebook-for-chinese-social-networks/">https://www.bleepingcomputer.com/news/technology/north-koreas-elites-are-ditching-facebook-for-chinese-social-networks/</a>
<b>GIST</b>	<p>Following the publication of a report in July 2017, North Korea's elites, some of the country's few citizens allowed on the Internet, have greatly altered their online behavior, and are now obfuscating their browsing activity, and have ditched US websites like Facebook or Instagram for alternative Chinese social networks.</p> <p>The company at the base of these findings is US threat intelligence firm Recorded Future. The company's engineers have been passively tracking and analyzing Internet traffic from North Koreans inside and outside the country's borders since April 2017.</p> <p>They published an initial report last summer, highlighting how the very few North Koreans that were allowed to surf the world wide web were no different than any other user.</p> <p>The report showed that North Koreans liked to spend most of their time streaming videos, playing games, interacting on social networks, or watching porn.</p> <p>North Koreans are now Tor and VPN fans</p> <p>But the report appears to have made it into the North Korean government's hands as well, because, between December 2017 and March 2018, the same researchers spotted a major shift in online behavior.</p> <p>The biggest change was that the amount of obfuscated traffic has grown from 1 percent in July 2017 to nearly 13 percent in March this year. Obfuscated traffic is web activity hidden behind encrypted HTTPS connections, under Tor clients, or VPN, VPS, or other tunneling protocols (known as PPTPs).</p> <p>Popular web obfuscation protocols in North Korea</p> <p>There was a clear indication that those very few North Koreans allowed to surf the Internet were clearly told to hide their activity whenever possible.</p> <p>North Koreans ditch Facebook</p> <p>Furthermore, authorities appear to have also instructed users to stop hanging around on US social networks. Nowadays, North Koreans are avid users of Alibaba, Tencent, and Baidu.</p> <p>"In July, our data demonstrated that North Korean leadership heavily consumed Western social media, especially Facebook, Google, and Instagram," says Recorded Future analyst Priscilla Moriuchi. "In fact, Facebook was by far the most popular service, with more than double the daily actual usage than any of its Chinese-language counterparts."</p> <p>Nowadays, things have dramatically changed, so much so that Facebook and Instagram activity had diminished so much, it wasn't even visible on a Recorded Future chart.</p>

HEADLINE	<b>04/27 World largest spam botnet gets update</b>
SOURCE	<a href="https://www.bleepingcomputer.com/news/security/worlds-largest-spam-botnet-finds-a-new-way-to-avoid-detection-for-now/">https://www.bleepingcomputer.com/news/security/worlds-largest-spam-botnet-finds-a-new-way-to-avoid-detection-for-now/</a>
GIST	<p>Necurs, the world's largest spam botnet, with millions of infected computers under its control, has updated its arsenal and is currently utilizing a new technique to infect victims.</p> <p>This new technique consists of sending an email to a potential victim containing an archive file, which unzips to a file with the extension of .URL. This is a typical Windows shortcut file that opens a web page directly into a browser, instead of a location on disk.</p> <p>The final destination of this link is a remote script file that downloads and automatically executes a final payload.</p> <p>Necurs dropping Quant Loader via .URL shortcut files</p> <p>For this particular spam run, Necurs had been infecting victims with Quant Loader, a run-of-the-mill and nothing-special malware family that is intended only to gain boot persistence and download another strain of more potent malware down the road.</p> <p>While this technique is most likely not new entirely, as crooks have abused .URL files in the past, it is new for Necurs. What makes this technique stand out is the simplified infection chain, which now relies only on delivering a zipped .URL shortcut file.</p> <p>For the past six years, since Necurs has been around, the botnet's operators have rarely used such a simple spam technique and have always relied on complicated infection chains.</p> <p>We've seen stuff like one-time or double-zipped archives delivering WSF files, JS files, Visual Basic scripts, and all sorts of Office file formats, either boobytrapped with macros or leveraging exploits to infect victims.</p> <p>New technique evades email malware scanners</p> <p>The purpose of this much simpler routine is to avoid malware scanners that analyze emails, looking for malicious links or boobytrapped attachments. Such solutions work on preset rules, many of which have been set up by security researchers based on previously observed malicious patterns.</p> <p>The deployment of a simple .URL file is not a game-breaker, as security researchers only need to update existing detection rules with a new one, but this will give the Necurs botnet time to breathe and infect victims easier in the following weeks, as email malware scanners will receive updated detection rules.</p> <p>At that point, just like we've seen Necurs in the past years, botnet operators will just make a small tweak to the infection chain —like putting the .URL file inside a double-zipped file instead of a one-time zipped file— and this whole cat and mouse game will start anew.</p> <p>How users can protect themselves</p> <p>What users need to know —or remember, if they're old enough to have seen this trick before— is that .URL files work like typical Windows shortcut file, such as .LNK, and hence, can use custom icons.</p> <p>Trend Micro, the cyber-security firm who spotted this recent Necurs .URL-based malspam campaign, warns that crooks are using the standard folder icon to hide .URL files.</p> <p>This makes it somewhat easy to trick users into thinking the email file attachment they just unzipped has created a folder that they need to enter and view the actual file. Unfortunately, this is what crooks want because trying to access this faux folder will launch the infection chain.</p>

<b>HEADLINE</b>	<b>04/26 Crypto crime wave is here</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/the-crypto-crime-wave-is-here-1524753366">https://www.wsj.com/articles/the-crypto-crime-wave-is-here-1524753366</a>
<b>GIST</b>	<p>On a Saturday afternoon in November, Louis Meza made plans to meet a friend and fellow cryptocurrency enthusiast for drinks at Ruby Tuesday in New York City’s Times Square. “We’re going to have a great time,” Meza said in a text. “And by the way, I’m putting you in an Uber car at the end of the night.”</p> <p>A former salesman at the food-delivery service Grubhub, Meza is described by friends as gregarious and courteous—a 35-year-old poker buff with an entrepreneurial streak and an appetite for risk. The two men had known each other for about 15 years. They met for drinks and, around 7:40 p.m., Meza’s friend said he was heading to the subway. Meza insisted on an Uber and ushered his friend—listed in court documents as “the victim”—into a gray minivan waiting outside.</p> <p>According to the Manhattan district attorney’s office, a gunman hiding in the back seat of the van popped up and demanded the victim’s wallet, keys, cellphone and a USB drive, which contained ether, a type of cryptocurrency. The victim handed over everything but the drive, which wasn’t on his person; the gunman pulled a hood over the victim’s head. “Where is your 24-word passphrase?” he demanded again and again.</p> <p>After two hours, the victim managed to escape. He found himself in Harlem, where, according to prosecutors, he called 911 from a deli. The victim had made a “very small investment” in cryptocurrency as early as 2010 that had since mushroomed to \$1.8 million. He kept the ether on a USB drive in his apartment, along with a piece of paper containing the passphrase required to access it. By the time he got home, both the drive and the passphrase were gone.</p> <p>An indictment unsealed in December accuses Meza of robbery, kidnapping and other crimes. Meza pleaded not guilty. But according to prosecutors, security-camera video shows Meza unlocking the victim’s apartment with keys and emerging about a minute later with a small white box, which, according to the victim, held his ether. The day after the theft, Meza transferred \$1.8 million in ether to an online account in his own name. “We see the \$1.8 million get deposited into that account on the morning of November 5, and then we see it being moved all over the place,” Assistant District Attorney James Vinocur told the judge in the case.</p> <p>Vinocur told the judge that prosecutors had been able to seize only about \$600,000 of the money. “\$1.2 million is still outstanding, and we don’t know where it is,” he said. “That is the nature of cryptocurrency, that we can see the address it was sent to. It doesn’t mean much to us. It’s just a string of numbers and letters.”</p> <p>And what seemed like an open-and-shut robbery case is proving much more complicated.</p> <p>The Meza case is part of a recent spike in cryptocurrency crime, prompted by the soaring values of digital currencies like bitcoin. Chainalysis Inc., a firm that analyzes cryptocurrency transactions, says reported thefts of bitcoin worldwide increased from \$3 million in 2013 to \$89 million last year.</p> <p>For many criminals, cryptocurrency is less cumbersome than cash. Hackers hold computer systems hostage and demand instant, anonymous payment in bitcoin. Drug dealers sell in dark corners of the internet, obscuring their names and locations. Narcotics traffickers move and launder their profits with clicks of a mouse. “The cases have exploded,” says Gabriel Bewley, a special agent in the virtual-currency initiative at the Drug Enforcement Administration.</p> <p>Blockchain Intelligence Group Inc., which makes software that tracks cryptocurrency use, estimates illegal activity accounts for about 20% of the transactions of five major cryptocurrencies—bitcoin, Monero, Zcash, ether and litecoin—or about \$600 million each day. Researchers working at the University of Sydney used artificial intelligence to identify cryptocurrency transactions consistent with criminal behavior and estimated \$72 billion of illegal activity last year using bitcoin alone.</p>

What exactly is cryptocurrency?

In the wake of the 2008 financial crisis, bitcoin's anonymous creator published a white paper under the pseudonym Satoshi Nakamoto. "Bitcoin: A Peer-to-Peer Electronic Cash System" described the major impetus behind the digital currency: Eliminate the need for third-party financial institutions like banks and brokerages. "A purely peer-to-peer version of electronic cash," Nakamoto wrote, "would allow online payments to be sent directly from one party to another."

Every bitcoin transaction would be recorded on an encrypted public ledger now known as the blockchain, preventing someone from spending the same bitcoin twice or counterfeiting the currency. And because the blockchain is stored on a decentralized network of computers, the records of these transactions would be theoretically impossible for hackers to corrupt. But removing banks from the equation poses a problem for law enforcement, which relies on financial institutions to provide records needed to secure convictions.

Bitcoin is one of about 1,500 cryptocurrencies, all of which exist in a legal and regulatory gray area. The Internal Revenue Service treats cryptocurrency like property—not like a currency or a security but like an asset. The Securities and Exchange Commission, meanwhile, has said that initial coin offerings, or sales of new cryptocurrencies, should be subject to securities laws to protect investors from fraud. In the court system, the definition is similarly ambiguous.

A federal judge in Brooklyn is expected to rule on one issue in the coming months. The case involves a Brooklyn businessman named Maksim Zaslavskiy who, in July and September, launched initial coin offerings for two new cryptocurrencies: REcoin, purportedly backed by real estate, and Diamond Reserve Coin, supposedly backed by diamonds. Federal prosecutors charged Zaslavskiy with fraud, arguing that he sold unregistered securities. Zaslavskiy's lawyers have asked the judge to dismiss the charges, arguing that cryptocurrencies aren't securities and therefore aren't subject to securities laws. "Virtual currencies such as the ones at issue here present regulatory challenges for securities laws that were written in the 1930s—decades before the invention of the computer," the lawyers, Mildred Whalen and Len Kamdang, wrote in February. Zaslavskiy's case is pending.

In 2014, Florida state prosecutors charged website designer Michell Espinoza with money laundering after he sold bitcoin to an undercover detective who said he would use the currency to buy stolen credit-card numbers. Espinoza, prosecutors argued, was acting as an unlicensed money-services business and facilitating illegal activity. The judge disagreed. "This Court isn't an expert in economics," she wrote. "However, it is very clear, even to someone with limited knowledge in the area, that bitcoin has a long way to go before it is the equivalent of money." Prosecutors have appealed the ruling.

This legal uncertainty, combined with cryptocurrencies' volatility, is complicating the prosecution of Louis Meza. The Manhattan district attorney's office asked to sell the seized ether because prosecutors feared its value would decrease, says Moshe Horn, Meza's lawyer.

"They wanted to turn it into cash so they couldn't be blamed," Horn says. "Then the question becomes, do they have a right to?"

The district attorney's office ultimately decided not to sell it. The answer to his lawyer's question is still unclear.

Digital currency's criminal history

Criminal activity has plagued digital currency since its inception. "Remember E-gold?" says Serrin Turner, a cybersecurity lawyer in New York. E-gold was the name of both a digital-currency service and a currency that was purportedly backed by actual gold. Its founder designed it as a payment system that would allow for the easy, anonymous transfer of funds. This made it popular with criminals, according to federal prosecutors, who claimed E-gold facilitated child exploitation, investment scams and other criminal activities. In 2008, E-gold's directors pleaded guilty to money-laundering charges. The service subsequently closed, but similar payment systems quickly took its place.

"This notion has been around for a long time," Turner says. "Digital currency has greased the wheels of

the cybercriminal ecosystem.”

Before joining the firm Latham & Watkins, Turner was a prosecutor in the U.S. attorney’s office in Manhattan, where he prosecuted E-gold successor Liberty Reserve, a Costa Rica-based digital-currency business that enabled anonymous payments. In 2016, Liberty Reserve founder Arthur Budovsky admitted to laundering more than \$250 million in criminal proceeds and was sentenced to 20 years in prison.

Crime involving digital currencies has skyrocketed in lockstep with their valuations. From bitcoin stickups to global money laundering, tech-savvy criminals are becoming increasingly anonymous. And law enforcement is scrambling to keep up.

Turner’s best-known case, the one that put bitcoin on the map, was the prosecution of the founder of Silk Road, the first large-scale “darknet” market to use cryptocurrency. Darknet markets exist on the so-called Dark Web, a section of the internet accessible only with software designed to make users anonymous. Silk Road was an online marketplace that accepted only bitcoin as payment, allowing its vendors and customers to conceal their locations and identities. From 2011 to 2013, more than 100,000 Silk Road users bought and sold over \$200 million in drugs and illegal goods, ranging from weapons to forged driver’s licenses, according to prosecutors.

Authorities closed Silk Road in October 2013. Silk Road 2.0 appeared the next month and remained active for about a year before authorities shut it down. Other illicit marketplaces emerged to take its place. The July 2017 takedown of the darknet market AlphaBay involved the cooperation of law-enforcement agencies in more than seven countries. According to the Federal Bureau of Investigation, the site had twice as many users as Silk Road, and from 2015 to 2017, transactions totaled more than \$1 billion in bitcoin and other digital currencies.

Headline-grabbing arrests and seizures have done little to slow the flow of money to darknet markets. Last year, \$660 million in bitcoin was sent to darknet marketplaces, up from \$57 million in 2012, according to Chainalysis.

“It’s kind of like Whac-A-Mole,” says Greg Cipolaro, the chief executive of Digital Asset Research, a cryptocurrency-analysis firm. “Every time they close one down, another one opens.”

One of the largest darknet marketplaces operating today is Dream Market, where, on a recent afternoon, Turkish heroin was advertised as “topquality!” and “Vanilla Kush weed” as “100% organic.” There were weapons for sale—tasers, butterfly knives, a “wallet ninja multi-tool”—along with Nike tracksuits and “lifetime” porn-account subscriptions. A vendor named Bizzey advertised “5x XTC 220mg Donald Trump,” for 0.004038 bitcoin, or \$31.68. A photo showed orange tablets resembling children’s multivitamins in the shape of Donald Trump’s head. Bizzey had 4.94 stars and 36 reviews. “Amazing speed and stealth,” read a five-star review. “Even got a freebie. would recommend!”

In December, officers led Louis Meza into a Manhattan courtroom, where a clerk informed him that he had been charged with grand larceny, kidnapping, robbery and other crimes. The clerk asked Meza how he would like to plead.

“Not guilty,” Meza said.

During the hearing, Vinocur, the assistant district attorney, said the prosecution’s case was strong, citing the security-camera video and statements Meza made to police.

According to Meza’s lawyer, the case will be uncommonly difficult for the prosecutors. “The burden of proof is on the prosecution to show where the cryptocurrency is, how did it get there and who put it there,” Horn says. “It’s not like walking into a bank vault and saying, ‘There’s the cash.’ ”

The missing ether underscores a larger issue facing law enforcement: the difficulty—and occasionally the impossibility—of investigating and prosecuting crimes involving cryptocurrency. “Prosecutors are always

about following the money,” says Scott Christie, a white-collar criminal-defense lawyer at McCarter & English, who previously headed the computer-hacking division at the U.S. attorney’s office in New Jersey. “If you can’t follow the money, you can’t prove your case.”

A number of firms have developed software designed to follow the flow of cryptocurrency transactions. In a financial-technology co-working space in Manhattan, Kim Grauer, a senior economist at Chainalysis, opens a software program called Reactor. “When you go into Reactor, you’re going into the world of bitcoin,” Grauer says. Reactor and other so-called blockchain-analysis programs visually depict the trail of cryptocurrency transactions, allowing law enforcement to see the movement of funds in a way that would be impossible with cash. But these programs have their limits. Many transactions are associated only with anonymous addresses, represented by the “string of numbers and letters” that confounded prosecutors in the Meza case.

To identify an individual associated with one of these addresses, Grauer says, an investigator would look for an “off ramp,” the point where cryptocurrency is converted into fiat, or government-backed, currency. This is typically done through exchanges, websites that let users trade cryptocurrencies and convert them to traditional currency.

Exchanges are the part of the cryptocurrency ecosystem most accessible to law enforcement. If a criminal uses an exchange that collects its customers’ personal information, prosecutors can attach a name to a transaction—provided the exchange cooperates with authorities. But tech-savvy criminals are increasingly opening accounts with fake names at overseas exchanges that don’t comply with U.S. laws.

In June, Kathryn Rodriguez, a former assistant U.S. attorney at the Justice Department in Washington, testified about cryptocurrency in front of a U.S. House of Representatives committee. Rodriguez said subpoenas are ineffective when exchanges don’t require names or identifying documents to open an account. “Even though investigators can follow the funds by analyzing the blockchain, they may not be able to connect those funds to a culprit in the real world,” she said. “We have received ‘Mickey Mouse’ who resides at ‘123 Main Street’ in subpoena returns.”

Noncompliant exchanges are just one of the tools criminals use to evade authorities. “What we’re seeing crooks do now is use a mixer or a tumbler,” says Tom Flattery, a deputy district attorney in the high-tech unit of Santa Clara County’s district attorney’s office. “It’s a service that will mix transactions with several others, moving through multiple accounts and multiple countries. There’s no way for law enforcement to track it.”

One cryptocurrency mixer, Bitcoin Blender, claims to make transactions “100% anonymous.” According to the company’s website, “Bitcoin Blender completely removes any connection you have with the coins you buy or sell, meaning nobody can use Blockchain Analysis to track you down.” Unsurprisingly, Bitcoin Blender could not be reached for comment.

Criminals seeking additional protection have abandoned bitcoin in favor of currencies that offer additional privacy protections. Monero, a currency its website calls “secure” and “untraceable,” uses technology that hides the sender, receiver and amount of transactions. Although recent research has pointed to possible security flaws, a Monero spokesman has said developers have made improvements designed to increase privacy.

Mixers and identity-shielding currencies point to a future where criminals’ financial transactions could be impossible to trace. Large narcotics traffickers and money launderers are hiring increasingly sophisticated technicians to move cryptocurrencies as discreetly as possible, says Jean Walsh, chief of the investigations division at the Bronx district attorney’s office, a trend she expects to continue until cryptocurrency is adequately regulated. “The amount of effort to evade being traced and tracked, both on computers and on electronic transactions—it’s something they spend 24 hours a day concentrating on,” Walsh says. “Once the criminals continue to improve their technology, our fear is that they will be anonymous.”

HEADLINE	<b>04/26 Study: non-malware attacks on the rise</b>
SOURCE	<a href="http://www.infosecisland.com/blogview/25059-Non-Malware-Attacks-What-They-Are-and-How-to-Protect-Against-Them.html">http://www.infosecisland.com/blogview/25059-Non-Malware-Attacks-What-They-Are-and-How-to-Protect-Against-Them.html</a>
GIST	<p>Non-malware attacks are on the rise. According to a <a href="#">study by the Ponemon Institute</a>, 29 percent of the attacks organizations faced in 2017 were fileless. And in 2018, this number may increase up to 35 percent. So, what are non-malware attacks, how do they differ from traditional threats, why are they so dangerous, and what can you do to prevent them?</p> <p><b>Non-malware attacks: what are they?</b>  Non-malware or <a href="#">fileless attack</a> is a type of cyber attack in which the malicious code has no body in the file system. In contrast to the attacks carried out with the help of traditional malicious software, non-malware attacks don't require installing any software on a victim's machine. Basically, hackers have found a way to turn Windows against itself and carry out fileless attacks using built-in Windows tools.</p> <p>The idea behind non-malware attacks is pretty simple: instead of dropping custom tools that could be flagged as malware, hackers use the tools that already exist on a device, take over a legitimate system process and run the malicious code in its memory space. This approach is also called "<a href="#">living off the land</a>."</p> <p>This is how a non-malware attack usually happens:</p> <ul style="list-style-type: none"> <li>• A user opens an infected email or visits an infected website</li> <li>• An exploit kit scans the computer for vulnerabilities and uses them for inserting malicious code into one of Windows system administration tools</li> <li>• Fileless malware runs its payload in an available DLL and starts the attack in the memory, hiding within a legitimate Windows process</li> </ul> <p>Fileless malware can be downloaded from an infected website or email, introduced as malicious code from an infected application, or even distributed within a zero-day vulnerability.</p> <p><b>Why are non-malware attacks so dangerous?</b>  One of the main challenges posed by fileless malware is that it doesn't use a traditional malware and, therefore, doesn't have any signatures that an anti-malware software could use to detect it. Thus, detecting fileless attacks is extremely challenging.</p> <p>To understand better why they pose so much danger, let's take a look at some of the most recent examples of fileless attacks.</p> <p>One of the first examples of fileless malware were <b>Terminate-Stay-Resident (TSR)</b> viruses. TSR viruses had a body from which they started, but once the malicious code was loaded to the memory, the executable file could be deleted.</p> <p>Malware that uses vulnerabilities in such scripts as JavaScript or PowerShell is also considered to be fileless. Even the much-talked-of ransomware attacks <a href="#">WannaCry</a> and <a href="#">NotPetya</a> used fileless techniques as a part of their kill chains.</p> <p>Another example of a non-malware attack is the <a href="#">UIWIX threat</a>. Just like WannaCry and Petya, UIWIX uses the EternalBlue exploit. It doesn't drop any files on the disk but instead enables the installation of the DoublePulsar backdoor that lives in the kernel's memory.</p> <p><b>How do non-malware attacks work?</b>  Since non-malware attacks use default Windows tools, they manage to hide their malicious activity behind the legitimate Windows processes. As a result, they become nearly undetectable for most anti-malware products.</p> <p><b>Main non-malware attack targets</b>  The hackers need to obtain as many resources as possible while keeping their malicious activity</p>

undetected. This is why the majority of fileless attacks focuses on one of the two targets:

- Windows Management Instrumentation (WMI)
- PowerShell

Depending on their targets, fileless attacks may either run in RAM or exploit vulnerabilities in software scripts.

The attackers chose WMI and PowerShell for several reasons. First, both these tools are built into every modern version of Windows OS, making it easier for the hackers to spread their malicious code. Secondly, turning off any of these tools is not a good idea, since it'll significantly limit what network administrators can do. Some experts, however, suggest disabling WMI and PowerShell anyway as a preventive measure against fileless attacks.

#### 4 common types of non-malware attacks

There are many types and variations of fileless malware. Below, we listed the four most common ones:

**Fileless persistence methods** — the malicious code continues to run even after the system reboot. For instance, malicious scripts may be stored in the Windows Registry and re-start the infection after a reboot.

**Memory-only threats** — the attack executes its payload in the memory by exploiting vulnerabilities in Windows services. After a reboot, the infection disappears.

**Dual-use tools** — the existing Windows system tools are used for malicious purposes.

**Non-Portable Executable (PE) file attacks** — a type of dual-use tool attack that uses legitimate Windows tools and applications as well as such scripts as PowerShell, CScript or WScript.

#### Non-malware attack techniques

In order to perform a non-malware attack, hackers use different techniques. Here are the four most frequently used ones:

**WMI persistence** — WMI repository is used for storing malicious scripts that can be periodically invoked via WMI bindings.

**Script-based techniques** — hackers may use script files for embedding encoded shellcodes or binaries without creating any files on the disk. These scripts can be decrypted on the fly and executed via .NET objects.

**Memory exploits** — fileless malware may be run remotely using memory exploits on a victim's machine.

**Reflective DLL injection** — malicious DLLs are loaded into a process's memory manually, without the need to save these DLLs on the disk. The malicious DLL can be either embedded in infected macros or scripts, or hosted on a remote machine and delivered through a staged network channel.

<b>HEADLINE</b>	<b>04/26 Malware of mass destruction next WMD?</b>
<b>SOURCE</b>	<a href="https://www.welivesecurity.com/2018/04/26/malware-mass-disruption-rsa2018/">https://www.welivesecurity.com/2018/04/26/malware-mass-disruption-rsa2018/</a>
<b>GIST</b>	<p>One might wonder why one of the final mainstage presentations at RSA 2018 had “Weapons of Mass Destruction” (WMDs) in its title? When ESET Global Security Evangelist Tony Anscombe finished with his presentation, however, no one was asking that question; instead what emerged was a better understanding of how the evolution of malware has led us to the digital weaponry of today and tomorrow.</p> <p>The central question of Anscombe's presentation was: Can malware be used as a weapon of mass destruction? He contends that it can and notes that we are at a tipping point where malware evolution has led us to the latest development in cyberweapons; this is what Anscombe coins “Malware of Mass Disruption.” He defines this as the following:</p>

- Any malware that targets infrastructure and thus could damage or disable services and could potentially cause death or serious bodily injury
- Any malware designed to inhibit first responders or emergency response from providing lifesaving treatment
- Any malware that targets health care or medical devices and could potentially cause death or serious bodily injury
- Any software that is intended to damage or disable medical systems or devices

### Malware of Mass Disruption

Over the years, we have had some close calls that give a glimpse into the effect digital weapons can have. In 2017, the United Kingdom’s National Health Service (NHS) was a major victim of the WannaCryptor (aka WannaCry, WCrypt) attack [ESET detects this as Win32/Filecoder.WannaCryptor.C, or less formally as “WannaCryptor.C” — Ed.].

According to a government report, at least 6,912 NHS appointments were canceled, with estimates that the total may be as high as 19,000. These numbers only reflect NHS hospital appointments – the impact on local physician visits is unknown. Within this number are 139 urgent referrals of patients who potentially have cancer.

It would not be unreasonable to consider a malware attack a ‘weapon’ when it does in fact affect the urgent health care of patients. If the WMD definition and title were adjusted to become Malware of Mass Disruption, then the WannaCryptor attacks would certainly be categorized this way.

Perhaps one of the most notorious attacks to cause disruption to society on a large scale was the 2015 malware known as BlackEnergy, which caused power outages in Ukraine, impacting 225,000 customers for up to six hours. The malicious actors responsible attacked three regional electric power distribution companies with synchronized and coordinated attacks within 30 minutes of each other and impacted multiple central and regional facilities.

And that was only the beginning. In 2016, a new attack, later attributed to malware dubbed Industroyer, deprived the capital city of Ukraine, Kiev, of power for approximately one hour. This attack differed significantly from BlackEnergy as it targeted Industrial Control Systems (ICS). By exploiting weaknesses in the software of the ICS devices, the attackers were able to control electricity substation switches and circuit breakers directly, ultimately controlling the delivery of power.

The critical infrastructure of a city might just be the crown jewel to a nation-state actor. Attacking the power infrastructure of a city, country or even a building has the potential to cause huge disruption, and, depending on the circumstances, endanger life. Imagine if an intensive care unit of a hospital lost power; the outcome could be fatal. While this is a hypothetical scenario, it may not be far from reality – if a cybercriminal can switch off the power to a city, they probably have the ability to switch off the supply to a building and, with the right resources, change the way any backup systems may operate.

“Using the word ‘weapon’ in association with malware may be a step too far for some people,” noted Anscombe. But he points out an important malware history lesson, bringing attention to the first major attack against infrastructure, dubbed Stuxnet. “This showed, really for the first time, that a nation state could actually attack the infrastructure of another nation state by using malware as the tool or weapon,” he said.

Since prominent infrastructure attacks like Stuxnet, various examples point to a conclusion that malware has the potential to “be a weapon in the arsenal of any government or organization that wants to inflict damage or disruption on another person, organization or country – or the world as a whole,” he pointed out.

From notorious attacks like WannaCryptor, to aggressive blackouts caused by BlackEnergy and Industroyer, to attacks that potentially affect election outcomes, the reality exists that the bad actors

	creating and utilizing malware are disrupting our sense of safety, security and democracy. “I will leave you to decide whether to call these weapons,” he concluded.

<b>HEADLINE</b>	<b>04/26 Report: China seizes 600 bitcoin miners</b>
<b>SOURCE</b>	<a href="https://www.theregister.co.uk/2018/04/26/china_600_computers_seized/">https://www.theregister.co.uk/2018/04/26/china_600_computers_seized/</a>
<b>GIST</b>	<p>Chinese media is reporting the seizure of 600 Bitcoin miners in the northern municipality of Tianjin, on the grounds of electricity theft.</p> <p>Coin mining is a popular activity in China, but like so many places, those operating big mining rigs find the rivers of gold dammed by high electricity prices. The Digiconomist Bitcoin Energy Consumption Index currently tags Bitcoin's total draw at nearly 63 Terawatt-hours, and reckons each transaction as costing 908 kWh.</p> <p>What better way to cut costs than to bypass billing entirely? That's what Xinhua and other agencies say happened in Tianjin: six people have been arrested because they allegedly bypassed the power meter in a junction box to get free power for their miners.</p> <p>The Xinhua report said the electricity company noticed a 28 per cent increase in line loss (implying an increased load current) on a circuit, and notified authorities.</p> <p>The report claimed the power thieves were trying to evade monthly bills of “hundreds of thousands of yuan” per month (100,000 yuan is currently around US\$15,800).</p> <p>Meanwhile, prosecutors in Wuhan City's Hanyang District Procuratorate are about to commence a prosecution against two miners who used the same trick to steal electricity, before their arrest in 2017.</p> <p>China's prosecutor says the two, identified as Chen and Li, set up their rig in a house slated for demolition in March 2017, and used 49,100 yuan worth of power before they were cuffed</p>

<b>HEADLINE</b>	<b>04/26 Insider breach costs over \$8.7M</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/insider-breach-costs-rise-to-87m/">https://www.infosecurity-magazine.com/news/insider-breach-costs-rise-to-87m/</a>
<b>GIST</b>	<p>The cost of an insider-related breach has escalated to over \$8.7m, according to the latest research from the Ponemon Institute.</p> <p>The analyst was commissioned by ObserveIT to poll 700 IT and security practitioners around the world in order to compile the 2018 Cost of Insider Threats study.</p> <p>While the cost of an insider security incident stood at nearly \$8.8m, the average global cost of a regular breach according to IBM is \$3.6m, less than half.</p> <p>The average insider threat also takes on average more than two months to contain, according to the report.</p> <p>Most respondents (64%) said negligent employees accounted for the majority of incidents, followed by malicious insiders (23%).</p> <p>All types of insider threat activity are increasing. Since 2016, the average number of incidents involving malicious insiders has soared by 53%, while employee/contractor negligence has increased by 26%. The average number of credential theft incidents has more than doubled over the past two years, increasing by 170%.</p>

	<p>That's fuelling an increase in imposter attacks – the most expensive type of insider incident at an average of \$648,846. This is followed by malicious insider incidents (\$607,745) and contractor negligence (\$283,281).</p> <p>“Insider threats continue to threaten organizations across the globe, ultimately resulting in loss of mission critical data, downtime and lost productivity, and even reputational damage,” said ObserveIT CEO, Mike McKee.</p> <p>“Understanding the growing costs and time associated with preventing and managing insider threats, organizations need to invest in a holistic cybersecurity solution to assist with real-time detection, deterrence, education and prevention.”</p> <p>The latest Verizon DBIR found that insiders were to blame for a quarter (28%) of all breaches analyzed and that user error was a factor in 17% of breaches.</p> <p>A separate report from Gemalto released recently also highlighted the dangers of negligent insiders.</p> <p>Although accidental loss was the cause of just 18% of data breaches, it accounted for 76% of the total 2.6bn records compromised over the previous year, the security vendor claimed.</p>

<b>HEADLINE</b>	<b>04/25 Majority online banking systems w/flaws</b>
<b>SOURCE</b>	<a href="https://www.scmagazineuk.com/two-thirds-of-online-banking-systems-in-2017-contained-high-risk-vulnerabilities/article/760956/">https://www.scmagazineuk.com/two-thirds-of-online-banking-systems-in-2017-contained-high-risk-vulnerabilities/article/760956/</a>
<b>GIST</b>	<p>Over the years, governments and cyber security experts have repeatedly urged businesses and critical industries to strengthen their cyber-defences to keep up with emerging threats and to ensure the security of enterprise and customer data.</p> <p>While cyber-criminals have spared no industry in their quest for financial gain or to destabilise economies, online banking systems were, and still are, prime targets for such entities as any security flaw can be exploited to impact hundreds of thousands of people and to gain access to millions, if not billions, of pounds.</p> <p>In 2015, a time when banks were swiftly adopting new digital technologies, introducing online banking services and shutting down brick-and-mortar branches with a vengeance, little heed was paid to how weak those newly-introduced online systems were vis-a-vis the capabilities of motivated cyber-criminals.</p> <p>According to Positive Technologies, 90 percent of online banking systems were found to contain high-risk critical vulnerabilities in 2015. This number had, in fact, increased remarkably from 78 percent of such systems in 2013-14, implying that the adoption of digital tools also made banks more vulnerable to threats such as SQL injections, unauthorised access to arbitrary user operations, and rounding attacks.</p> <p>At the same time, online banking apps, which customers were asked to download to seamlessly access banking services and products, were equally vulnerable to online threats. In 2015, 75 percent of banking apps on Android contained high-risk vulnerabilities compared to 33 percent of iOS apps.</p> <p>Positive Technologies' report indicates that UK banks have taken measures to plug security holes in their online banking systems and apps and as a result, such systems are not as vulnerable to external threats as they were a couple of years ago.</p> <p>For instance, compared to 90 percent in 2015, 56 percent of banking systems were found to contain high-risk vulnerabilities in 2017 and on an average, each web application contained 1.3 high-severity vulnerabilities compared to 4.2 in 2015. Despite such improvements, each e-banking system analysed in 2017 contained, on average, seven vulnerabilities, up from six in 2016, implying that banks focussed more</p>

in plugging the critical ones before shifting their focus to medium or low-risk flaws.

The report revealed that not a single banking system could demonstrate the absence of low-risk, medium-risk or high-risk vulnerabilities, that almost half (45 percent) of such systems contained medium-risk vulnerabilities and only a third of online banking systems were free of critical vulnerabilities in 2017.

A break-up of vulnerabilities impacting the security of online banking systems revealed that 75 percent of these systems contained cross-site scripting flaws, 69 percent had insufficient protection from data interception, 63 percent had insufficient authorisation (high-risk), 50 percent were vulnerable to sensitive data disclosure, and 31 percent were vulnerable to software version disclosure. Other vulnerabilities included insufficient protection from brute-force attacks and insufficient process validation.

Considering only high-severity vulnerabilities in 2017, 63 percent of banking systems suffered from insufficient authorisation compared to 57 percent in 2016, 25 percent had two-factor authentication flaws compared to 71 percent in 2016, 19 percent had insufficient process validation compared to 14 percent in 2016, and 13 percent were vulnerable to arbitrary code execution compared to 14 percent in 2016.

A look at the security of web applications run by UK banks revealed a worrisome picture. 94 percent of them were vulnerable to unauthorised access to client personal information and confidential banking data, 75 percent were vulnerable to access to sensitive information and configuration data, 50 percent were vulnerable to fraudulent transactions and theft of funds, and 31 percent were vulnerable to DDoS attacks on user accounts.

The overall security of mobile banking apps wasn't much different to that of online systems, with 29 percent of all vulnerabilities being critical ones, 56 percent medium-risk and the rest of them being low-risk ones. In all, almost half (48 percent) of mobile banking apps had at least one critical vulnerability.

<b>HEADLINE</b>	<b>04/25 Thailand seizes 'Hidden Cobra' servers</b>
<b>SOURCE</b>	<a href="https://www.bankinfosecurity.com/thailand-seizes-hidden-cobra-command-and-control-servers-a-10903">https://www.bankinfosecurity.com/thailand-seizes-hidden-cobra-command-and-control-servers-a-10903</a>
<b>GIST</b>	<p>The Thai government says it has seized servers used by a group that's been tied to cyber espionage attacks, while preserving the servers for review by law enforcement agencies.</p> <p>Thailand's Computer Emergency Response Team, ThaiCERT, announced the takedown on Wednesday, saying it's working with law enforcement authorities as well as information security firm McAfee as part of an investigation into what the security firm has dubbed Operation GhostSecret.</p> <p>McAfee says the operation, which remains active, gives attackers advanced tools for conducting network reconnaissance, stealing information as well as deleting data.</p> <p>"The campaign is extremely complicated, leveraging a number of implants to steal information from infected systems and is intricately designed to evade detection and deceive forensic investigators," Raj Samani, McAfee's chief scientist, says in a blog post. "The implants vary considerably and although they share some functionality and code, they are categorized as different families."</p> <p>Malware families that have been used by the group of attackers include a new type of attack code called Proxysvc. Researchers have also found variants of Destover, which was used in the Sony Pictures Entertainment attack in 2014, as well as Bankshot, which was recently used to target the Turkish financial sector as well as financial services firms in other countries.</p> <p>McAfee says with "high confidence" that based on all the available clues, the APT group known as Hidden Cobra is behind the GhostSecret campaign.</p>

	Attackers also expanded from targeting the financial sector to infecting organizations in additional sectors, including critical infrastructure, enterprise and healthcare.

<b>HEADLINE</b>	<b>04/26 Report: tech supply chain vulnerable</b>
<b>SOURCE</b>	<a href="http://www.homelandsecuritynewswire.com/dr20180426-federal-it-communications-technology-supply-chain-vulnerable-to-chinese-sabotage-espionage">http://www.homelandsecuritynewswire.com/dr20180426-federal-it-communications-technology-supply-chain-vulnerable-to-chinese-sabotage-espionage</a>
<b>GIST</b>	<p>The U.S.-China Economic and Security Review Commission released a report entitled Supply Chain Vulnerabilities from China in U.S. Federal Information and Communications Technology, prepared for the Commission by Interos Solutions, Inc. The report examines vulnerabilities in the U.S. government information and communications technology (ICT) supply chains posed by China, and makes recommendations for supply chain risk management.</p> <p>The report issues a warning about the extent to which China has penetrated the technology supply chain, and calls on the U.S. government and industry to develop a comprehensive strategy for securing their technology and products from foreign sabotage and espionage.</p> <p>“China did not emerge as a key node on the global ICT supply chain by chance,” the report says. “The Chinese government considers the ICT sector a ‘strategic sector’ in which it has invested significant state capital and influence on behalf of state-owned ICT enterprises.”</p> <p>At the same time, Beijing has moved to prevent other countries from using similar strategies to crack the Chinese market, accelerating indigenous production of IT and communications parts and requiring outside businesses to turn over their source code store data on Chinese servers and allow the government to conduct security audits on their products before gaining access to the Chinese market.</p> <p>Furthermore, the report argues that the U.S. government lacks an overall strategy to anticipate future developments in supply chain, identify potential threats and mitigate threats. The overall push for IT modernization means the government will increasingly rely on a web of complex supply chain operations that eventually originate with commercial suppliers in China. Laws like the Federal IT Acquisition Management Act and the Modernizing Government Technology Act put pressure on agencies to modernize through commercial-off-the-shelf products that are more likely to originate from China.</p> <p><b>Key findings:</b></p> <ul style="list-style-type: none"> <li>• Effective supply chain risk management is the ability to anticipate future developments in supply chains, identify potential threats to supply chains, develop threat profiles, and mitigate or address future threats to the supply chain. Federal government laws and policies do not currently address supply chain risk management comprehensively.</li> <li>• Chinese government’s policies prioritize domestic production, extract intellectual property and technology from multinational companies in exchange for market access, use Chinese companies to further state goals, and target U.S. federal networks and the networks of federal contractors. These policies have heightened risks to the U.S. ICT supply chain, and to U.S. national and economic security.</li> <li>• Cyberattacks on supply chains will become easier—and more prevalent—as developing technologies such as fifth generation (5G) mobile network technology and the Internet of Things (IoT) exponentially increase avenues for attack.</li> <li>• ICT products have increasingly complex, globalized, and dynamic supply chains, many of which include commercial suppliers that source from China at multiple points within a single supply chain. For example, an average of 51 percent of shipments to seven leading federal ICT providers originate in China (see Exhibit 1).</li> </ul>

- It is unlikely that political or economic shifts will push global ICT manufacturers to dramatically reduce their operations in China or their partnerships with Chinese firms. A national strategy is needed for supply chain risk management of U.S. ICT, and it must include supporting policies so that U.S. security posture is forward-leaning, rather than reactive and based on incident response.
- To minimize risks, the federal government should: centralize the leadership of federal ICT supply chain risk management efforts, link federal funding to supply chain risk management, promote supply chain transparency, and craft forward-looking policies.

<b>HEADLINE</b>	<b>04/27 Bitcoin frenzy settles down</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-crypto-currencies/bitcoin-frenzy-settles-down-as-big-players-muscle-into-market-idUSKBN1HY0W7">https://www.reuters.com/article/us-crypto-currencies/bitcoin-frenzy-settles-down-as-big-players-muscle-into-market-idUSKBN1HY0W7</a>
<b>GIST</b>	<p>LONDON/NEW YORK/SINGAPORE (Reuters) - After bouncing up, falling down and keeping investors on the edges of their seats, bitcoin may be maturing into a period of relatively boring stability, experts say.</p> <p>A worldwide wave of regulation has led to a collapse in trading volumes. Cryptocurrency advertisements are disappearing from top internet pages, and bitcoin no longer dominates Google searches.</p> <p>As investors try to figure out what bitcoin wants to be when it grows up, the best-known cryptocurrency is going through somewhat of an existential crisis.</p> <p>“It needs a new narrative,” said Nicholas Colas, New York-based founder of investment research firm DataTrek. “There is every chance that if there is some sort of institutional involvement, there could be a move higher.”</p> <p>Bitcoin rallied 25 percent in April after crashing 70 percent from a high near \$20,000 late last year.</p> <p>The cryptocurrency landscape has indeed changed. Mom-and-pop investors who drove bitcoin’s skyrocket rise in 2017 have been pushed aside by government bans on trading, and replaced by cryptocurrency funds, wealthy individuals and established financial firms.</p> <p>The bigger players can make bigger moves, but their trades are often obscured by screens on over-the-counter (OTC) brokerages and matching platforms.</p> <p>They are also less likely to chase sudden swings in bitcoin’s value, being more interested in the potential of unproven but promising blockchain technology.</p> <p>Average daily traded volumes across cryptocurrency exchanges fell to \$9.1 billion in March and to \$7.4 billion in the first half of April, compared with almost \$17 billion in December, according to data compiled by crypto analysis website CryptoCompare.</p> <p>Several exchanges saw their daily trading volumes drop by more than half between December and March, including Bitfinex, Poloniex, Coinbase and Bitstamp, the data shows.</p> <p>Cryptocurrencies’ biggest-ever trading day was Dec. 22, when volumes topped \$30 billion, according to CryptoCompare.</p> <p>On April 8, volume sagged to \$4.6 billion, the weakest day since last October, according to the data.</p> <p>The theory that bigger institutions will make bitcoin markets less volatile and more liquid has grown as new OTC exchanges spring up, carrying names such as Circle, Octagon Strategy, Cumberland and Kraken.</p>

	<p>Digital exchange Gemini’s new block trading product allows high-volume trades that will be invisible to other traders until the orders are filled.</p> <p>Cumberland, one of the biggest block traders, has counterparties in more than 35 countries and quotes two-way prices in about 35 crypto assets.</p> <p>Gatecoin, a Hong Kong-based crypto exchange, saw retail volumes plunge from peaks of \$100 million a day last September, said Aurelien Menant, its founder and chief executive.</p> <p>But, he said, as institutional players enter the market, OTC trades hidden from view have pushed up overall volumes in a way that doesn’t show up in data. Gatecoin also operates an OTC platform.</p> <p>Few institutions have gone public about their plans to trade cryptocurrencies, and many asset managers say they still aren’t sure the digital currency is more than a fad.</p> <p>But a Thomson Reuters survey this week found one in five financial institutions is considering trading cryptocurrencies in the next 12 months. Of those, 70 percent said they planned to start trading in the next three to six months.</p> <p>In the meantime, the price of bitcoin may be stabilizing, at least on paper. The futures market BTCc1 shows bitcoin staying nearly flat - between \$8,900 and \$9,050 - until September.</p>

## Terror Conditions

[Top of page](#)

<b>HEADLINE</b>	<b>04/26 Italy detains asylum seeker in terror plot</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/asylum-seeker-instructed-drive-vehicle-crowd-italians/story?id=54746665">http://abcnews.go.com/International/asylum-seeker-instructed-drive-vehicle-crowd-italians/story?id=54746665</a>
<b>GIST</b>	<p>Italian security forces have detained an asylum seeker from Gambia and accused him of planning a terror attack with a vehicle.</p> <p>Alagie Touray, 21, was arrested outside the Licola mosque in southern Italy last Friday. He is a member of ISIS, Italian authorities said.</p> <p>Touray was picked up at the request of the Naples public prosecutor after a joint investigation by the Carabinieri and State Police who had received a tip from Spanish intelligence. Touray’s arrest was announced today at a news conference in Naples.</p> <p>During questioning, authorities said, the Gambian admitted to having received a request via the messaging app Telegram where he was told to “crash a vehicle into a crowd,” Naples prosecutor Giovanni Melillo, said at the news conference.</p> <p>Touray admitted having received instructions to commit a terror attack but, according to Prosecutor Melillo, the Gambian said he had no intention of carrying out the attack.</p> <p>The examination of his Telegram uncovered other alarming messages, including those where he asked people "to pray for him" and that "he was on a mission," authorities said.</p> <p>Touray also recorded a pledge of allegiance to the leader of the Islamic State (ISIS), police said, provided a transcript and image from the message where Touray said, "I swear allegiance to the Caliph of Muslims Abu Bakr Al Quaraishi Al Baghdadi, and to listen to him and obey him in difficult and easy times, on this 2nd day of Rajab and Allah is witness to what I say,"</p> <p>The Gambian arrived in Sicily by boat with 800 other migrants in March 2017 before requesting political</p>

	asylum, which was still under review, authorities said.
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>04/27 Confronting terrorism online</b>
<b>SOURCE</b>	<a href="https://lawfareblog.com/whose-responsibility-it-confront-terrorism-online">https://lawfareblog.com/whose-responsibility-it-confront-terrorism-online</a>
<b>GIST</b>	<p>This week, Facebook and YouTube announced new data on removal of terrorist content on their platforms. Facebook also released its internal document clarifying what content stays online and what is deleted. YouTube, under Google’s broader efforts, also stated that it is getting “faster” at takedowns with an increased number of human reviewers vetting questionable content. Some of those in counterterrorism policy circles and Capitol Hill are fervent advocates of technology behemoths stepping up enforcement of their terms of service and will likely praise these new releases. Ultimately, however, the responses detailed by Facebook and YouTube are another iteration of a decade-long strategy, as the government continues to delegate online counter-terrorism responsibilities to private industry.</p> <p>As a former congressional staffer, a member of the intelligence policy community, and now an academic researcher, my career has traced the growth of terrorist use of the internet. During my time as a staffer, I wrote letters on behalf of the chairman of the Senate Committee on Homeland Security and Governmental Affairs calling for technology companies to remove terrorist videos from their servers, and I examined how terrorist groups like al-Qaeda and al-Shabaab have adeptly used social media to radicalize and recruit Americans to their cause. As a researcher, I’ve studied the online environment as well—but I’ve become concerned that this singular focus on the internet ignores the importance of peer-to-peer terrorist recruitment.</p> <p>Over the past decade, foreign terrorists command and capability in the digital sphere has drastically evolved. But our responses to this have not adapted with the same efficiency.</p> <p>The government's ability to adapt to this changing environment is sharply limited by its outsourcing of the responsibility to prevent and confront terrorists’ use of the internet to private companies. To figure out how best to respond to evolving threats, it is useful to reflect on how the relationship between governments and private tech companies evolved and how this process of delegation came to be.</p> <p>Historical Overview</p> <p>In 2007, a bipartisan group of senators and members of the House became increasingly concerned with terrorist use of online platforms. At the time, the most striking example was a series of YouTube videos depicting the so-called “Baghdad Sniper.” These videos, usually set to music and spliced into quick clips, showed an Iraqi insurgent attacking U.S. soldiers in Iraq. The videos raised questions for congressional staffers—chiefly, “Is an American company comfortable with grotesque videos of U.S. military officers being killed on its platform?” The answer, after an influx of public letters, was a resounding “no.” As a result, YouTube announced updates to its community standards to address videos with violent imagery. Shortly thereafter, YouTube also implemented a “terrorist flag” feature which allowed users to identify extremist content for review and ultimately removal. This was one of the first instances in which private companies took initiative to police their own sites after being subject to public pressure.</p> <p>At the same time, debates surrounding the efficacy of content removal continued within counterterrorism communities. One side posited that companies should remove terrorist propaganda from mainstream websites due to the material’s perceived ability to radicalize its viewers. The other side argued that the risk of radicalization from accessing content was low and that allowing it to remain online would aid law enforcement and intelligence agencies. To a large extent, these arguments remain defining characteristics of contemporary debates within the government regarding the nexus of technology and terrorism.</p> <p>In the midst of this schism, one side of the debate tried to tip the scales in their favor. A surreal and entirely off-the-books meeting between a high-ranking intelligence official and a congressional colleague of mine occurred at a D.C. park. The colleague, who had been advocating for content removal, was facing</p>

pressure from his executive branch counterparts on the operational side. While sitting on a park bench, the intelligence official made clear that parts of law enforcement and intelligence communities preferred such material to stay online. In their view, it acted as a useful honey trap to track terrorists—and taking down online content could endanger both operations and lives.

While the meeting may have caused a temporary pause, it ultimately did not guide Capitol Hill's view on confronting terrorist content online. As terrorism receded into the background noise of larger news stories and public pressure ebbed, efforts by both Congress and technology companies came almost to a standstill. Government approaches were essentially limited to awareness training, which focused on demonstrating to primarily Muslim-American communities around the country how groups like al-Qaeda use the internet to target young people, so that parents could protect their children. The awareness trainings, while important, were too sporadic to be the silver bullet.

With the rise of the Islamic State, the issue of terrorists' use of the internet quickly forced its way back onto the political agenda. For policymakers, advocating content removal is a relatively easy ask with little blowback; it allows them to look tough on terrorism while requiring little concrete follow-through on the government's part. In January 2016, high-ranking intelligence officials traveled to Silicon Valley to encourage the major technology companies to do more to police problematic content on their platforms. The White House later brought together advertising marketers from Madison Avenue, technology experts from Silicon Valley, and producers from Hollywood to tackle the question of how to respond to onslaught of Islamic State propaganda. Like many things developed within the cocoon of the National Security Council at that time, there was little interagency buy-in, and this initiative eventually failed to produce tangible results from a lack of sustained coordination.

In the U.S. and abroad, pressure on the technology companies mounted as the Islamic State remained a critical threat in the eyes of many Western countries and their constituents. Out of a mixture of a sense of responsibility and public pressure, likely combined with a desire to prevent hasty regulation by Capitol Hill, some technology companies responded with show of force. The companies colloquially known as the "Big Four"—Microsoft, YouTube, Twitter, and Facebook—announced the formation of the Global Internet Forum to Counter Terrorism. In partnership, these companies developed a "hashing" database to share information to flag and moderate extremist materials. YouTube and Facebook greatly increased the number of human reviewers for terrorist content, while Twitter, the platform of choice amongst jihadists in 2015, also took concerted steps to make its platform less hospitable to violent extremists. With the precedent set by Twitter's biannual transparency reports, major tech providers, including Facebook and YouTube, now provide regular updates on their progress and methods of combating violent extremism in regular press releases.

### Going Forward

Responses driven by industry, largely at the behest of the U.S. government, have certainly demonstrated some significant successes. Major social media providers continue to remove terrorist content from their websites at a much faster rate than before. However, this approach may not be nimble enough to respond to current developments in how terrorists utilize the internet.

While the Islamic State still uses mainstream sites like Twitter to push its propaganda, it has largely shifted to niche platforms in response to content removal. Many of these platforms, such as justpaste.it, lack the personnel and budget to remove extremist content. Some have no interest whatsoever in addressing terrorist use of their platforms: As many of these companies are based outside of the United States, the Damocles sword of possible regulation does not hang over their head.

Public pressure also has less power when free expression at all costs is embedded in the culture of these companies. Currently, the most active platform for distributing Islamic State propaganda is the messaging application Telegram, whose CEO, Pavel Durov, has been ardent in his company's founding principles: "I think that privacy, ultimately, and our right for privacy is more important than our fear of bad things happening, like terrorism." As demonstrated by the Russian government's recent, botched attempt to ban the use of Telegram, Telegram's resistance to calls for censorship only builds their reputation among their

users.

There are persistent questions that come with allowing industry to set their own standards. For years, Americans have faced the question of whether they are comfortable with the standards that large technology companies and social media providers use for content removal. But with the online terrorism environment rapidly changing, the question is now whether those standards can transfer to newer and smaller companies, or companies with different political interests and outlooks.

What's more, newer companies will likely not have the same level of sophistication in understanding the threat as do larger companies such as Facebook, which employ hundreds of counterterrorism analysts. How will these companies handle content that walks the fine line between advocating violence and providing the mood-music of extremism? At the moment, a Salafist imam from Michigan, Musa Jibril, is the second-most-cited radical preacher by Islamic State followers online. He trails only Anwar al-Awlaki in his prominence—but Jibril's online sermons never cross the line of calling for overt violence. Should his material stay online? Should that assessment change if he is discovered to have influenced, even if indirectly, attacks in the West—and if it does, will that mean that are our content standards are being set by of the news of the day?

These are critically important questions to answer if the U.S. government continues to address the future online dynamics of terrorism through ad-hoc delegation of counterterrorism responsibilities to tech giants. As a result of this approach, companies like Twitter, Facebook, and Google have ample leeway to determine their standards for content removal. But the U.S. government should not assume that other social media providers with different interests will earnestly adopt these standards, especially if they lack the wherewithal or interest to do so. As terrorist groups adapt to the changing landscape of the online space, it is worth asking whether U.S. government policies that depend on overwhelming initiative from the tech sector will be able to adequately respond—and whether the government's ceding responsibility to the private sector is the right way forward.

<b>HEADLINE</b>	<b>04/27 ISIS propaganda websites targeted</b>
<b>SOURCE</b>	<a href="https://www.huffingtonpost.co.uk/entry/islamic-state-europol-amaq-shutdown_uk_5ae2e84ee4b04aa23f21f616">https://www.huffingtonpost.co.uk/entry/islamic-state-europol-amaq-shutdown_uk_5ae2e84ee4b04aa23f21f616</a>
<b>GIST</b>	<p>Some of the Islamic State's most prominent propaganda websites have been hit by a coordinated cyber strike by European countries, in an attempt to curb the terror group's online influence.</p> <p>The "simultaneous multinational takedown" of Isis-branded media outlets on Wednesday and Thursday targeted the Amaq News Agency, al-Bayan radio, Halumu and Nashir news.</p> <p>Rob Wainwright, executive director of Europol, the EU's law enforcement agency, said the "groundbreaking" operation had involved the UK, US and France along with five other countries.</p> <p>"We have punched a big hole in the capability of Isis to spread propaganda online and radicalise young people in Europe," he said.</p> <p>The attack aimed to disrupt the technical resilience of the terrorist online infrastructure, Wainwright added. The seized data is expected to help authorities identify the administrators behind Isis media outlets and "potentially radicalised individuals on European soil and beyond".</p> <p>Since 2015, Europol said the site had launched its own software and developed "highly resilient online infrastructure hosting".</p> <p>As of December 2017, the entire range of Isis propaganda was available in at least nine different languages, as well as on a wide range of online services, such as mailed newsletters and add-on extensions for the most common browsers, Europol said.</p>

	<p>The crackdown began in 2015 after Europol informed all EU Member States about the rise of the Amaq News Agency and its capabilities.</p> <p>In August 2016, EU Member States and non-EU countries took down Amaq’s mobile application and web infrastructure, but this led the “propagandists to build a more complex and secure infrastructure to prevent further disruption from law enforcement”.</p> <p>In June 2017, a second strike, targeted part of the news agency’s web assets and infrastructure. Servers seized during that operation, Europol said, led to the identification of radicalised individuals in more than 100 countries worldwide.</p> <p>Europol Commissioner Dimitris Avramopoulos said the latest operation showed “our global strength and our unwavering resolve to fight against terrorist content online”.</p> <p>He added that IS was now “no longer just losing territory on the ground – but also online. We will not stop until their propaganda is entirely eradicated from the Internet.”</p>

HEADLINE	<b>04/26 Arrested woman had USB w/police info</b>
SOURCE	<a href="https://www.buzzfeed.com/mitchprothero/french-police-fear-isis-militants-have-their-names-and?utm_term=.tp4R0A2Ow#.myoAzqOMB">https://www.buzzfeed.com/mitchprothero/french-police-fear-isis-militants-have-their-names-and?utm_term=.tp4R0A2Ow#.myoAzqOMB</a>
GIST	<p>French police investigating a woman for suspected ties to ISIS have made a chilling discovery, according to French police officials and prosecutors: The arrested woman had a USB drive that contained the personal details of thousands of French police officials.</p> <p>That's raised fears that a similar data breach may have helped an ISIS militant carry out the notorious June 2016 murder of a French police commander and his domestic partner, a civilian police employee.</p> <p>The USB was discovered last October during raids on apartments and properties linked to the 25-year-old woman, who's been identified publicly only as Mina B. She now stands accused of being in direct contact with an ISIS-directed group in the Belgian city of Verviers that was raided in January 2015. Two extremists were killed in that raid.</p> <p>Phone intercepts linked Mina B. to the Verviers group, and police launched an investigation that culminated April 9 with charges that Mina B. had helped a friend leave France to join ISIS in Syria and Iraq. At that time, police also announced that they had discovered the USB drive in her apartment.</p> <p>The USB drive, according to French investigators, had been partially erased. Reconstruction of some of the drive's contents, however, recovered at least one personnel database, from 2008, that included a raft of details about police officers, including home addresses and vehicle information. Specialists are still trying to reconstruct the USB's full contents.</p> <p>"This is a disaster," said one French police officer who works undercover on counterterrorism operations and cannot be identified.</p> <p>The officer pointed out that while the restored database dates to 2008, "that's only 10 years and many of the officers are still in service."</p> <p>He added, "The information contains all the information one needs to stalk and murder hundreds of police officers in their homes, which as you know has already happened."</p> <p>The officer was referring to the June 13, 2016, double murder of Jean-Baptiste Salvaing, a police commander in the Paris suburb of Les Mureaux, and his girlfriend, Jessica Schneider, 36, who was an administrative assistant in the police station at Mantes-la-Jolie, another Paris suburb. The accused killer was Larossi Abballa, who stabbed Salvaing several times outside the victims' home, before slitting Schneider's throat inside the home. He then streamed a statement supporting ISIS before French police shot him dead.</p> <p>Details for Salvaing and Schneider were not part of the recovered data, according to prosecutors, but Mina B. has been indicted with six others in the Salvaing case as investigators try to determine if Abballa received any assistance or information from her.</p> <p>Investigators also have determined that a major in the French police, Maryline Bereaud, was at least partially responsible for the data breach. They say that Mina B. was friends with Bereaud's daughter and that Mina B. had been a guest in Bereaud's home for several months in 2016. Bereaud, who was the chief of police in Yvelines, another Paris suburb, has been arrested and charged in relation to the leak.</p> <p>French news reports have quoted a police union official anonymously as saying that Bereaud had allowed Mina B. to stay in her home as a favor to her daughter.</p> <p>"It was a young girl who had been thrown out by her family, she sheltered her for a while at the request of her daughter. But she never saw signs of radicalization at home," said the union spokesperson.</p>

	<p>Investigators have determined that Bereaud and her daughter had no previous contact with Abballa but that Mina B. was part of his radicalized circle.</p> <p>“The coincidence that the suspect with the USB drive knew Abballa is a difficult one for police to accept,” said the French police officer. “To have a list of police officers' home addresses and be in contact with a terrorist who murdered two police at their home, and we haven't been able to determine how he found their address? It's a big thing to tell me this isn't related.”</p> <p>French police and internal security services face massive security concerns from terrorism with thousands of potential militants flagged for surveillance as part of the nation's “S List,” which collects internal threats to the French state.</p>

<b>HEADLINE</b>	<b>04/26 US stepping up operations against ISIS</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/apr/26/james-mattis-sees-re-energized-syria-mission-again/">https://www.washingtontimes.com/news/2018/apr/26/james-mattis-sees-re-energized-syria-mission-again/</a>
<b>GIST</b>	<p>The U.S. is stepping up military operations against Islamic State remnants in Syria, along with other extremist organizations fighting to fill the vacuum in the wake of Islamic State's defeat in the country, Pentagon chief James Mattis told Congress Thursday.</p> <p>The escalation, outlined in testimony to the Senate Armed Services Committee Thursday, comes after a raging internal debate in the U.S. government after President Trump expressed a desire to withdraw U.S. forces from Syria with the Islamic State terror group in his words nearly defeated.</p> <p>But Mr. Mattis and U.S. military commanders pushed back, warning a U.S. withdrawal could allow Islamic State to regroup, while leaving the Syrian government and its Russian and Iranian allies a free hand to re-establish control of the country.</p> <p>“Right now ... we are not withdrawing” from Syria, Mr. Mattis told lawmakers. “... You will see a re-energized effort against the Middle Euphrates River Valley in the days ahead” against Islamic State, as well as other remaining pockets of territory still held by the terror group.</p> <p>France has agreed to send a contingent of special forces to reinforce the mission against Islamic State in Iraq, said Mr. Mattis. The deployment comes on the heels of French President Emmanuel Macron's first official visit to Washington earlier this week.</p> <p>Asked if local allies working with U.S. forces against Islamic State could handle the mission, “I am confident that we would probably regret it.”</p>

<b>HEADLINE</b>	<b>04/26 Study: more 9/11 cancer burden cases</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/apr/26/cancer-burden-among-911-firefighters-and-first-res/">https://www.washingtontimes.com/news/2018/apr/26/cancer-burden-among-911-firefighters-and-first-res/</a>
<b>GIST</b>	<p>More cancer cases than previously thought are expected among firefighters and rescue workers who responded in the aftermath of the Sept. 11, 2001, terrorist attacks on the World Trade Center, according to research published Thursday in the Journal of the American Medical Association.</p> <p>The latest study, conducted by the World Trade Center Health Program, accompanied research on improving early detection of multiple myeloma, a blood cancer and one of the top 15 certified cancers found among those exposed to the toxic atmosphere at ground zero in lower Manhattan.</p> <p>“In 2011 we, meaning our research team here, were the first to show that the cancer rates might be</p>

elevated in the WTC exposed population,” FDNY World Trade Center Health Program researcher Dr. Rachel Zeig-Owens told The Washington Times.

The WTCHP was established that year with the passage of the James Zadroga 9/11 Health and Compensation Act, named in honor of the New York City police officer who died of an aggressive respiratory disease that was later confirmed to have developed from breathing the air at ground zero in the aftermath of the terror attacks.

The program provides complete medical coverage for first responders and survivors for conditions developed as a result of being exposed to toxic elements from the terror attacks in New York City, Pennsylvania and the Pentagon.

Today, 69,612 responders and 14,308 survivors are registered with the program.

As of December, there are 6,866 responders and 1,433 survivors who are diagnosed with cancer. At least 304 responders and 30 survivors have died from cancer, according to WTCHP statistics.

The latest research by Dr. Zeig-Owens and colleagues estimates that new cancer diagnosis will increase at a higher rate than previously thought, with 2,960 new cancer cases between 2012 and 2031. Medical costs are expected to be over \$235 million for first-year treatment.

Previous estimates had 246 less cases.

“We project that the FDNY-WTCHP cohort will experience a greater cancer burden than would be expected from a demographically similar population,” the authors wrote. “This underscores the importance of cancer prevention efforts and routine screening in WTC-exposed rescue and recovery workers.”

The three cancers expected to increase among this population include prostate, thyroid and melanoma cancers and few lung, colorectal and kidney cancers, the study read.

“What it really does is show the continued need for cancer screening and that the risk may be elevated for years to come due to these exposures,” Dr. Zeig-Owens said. “What also is helpful for the WTC health program is to know that it needs to plan and anticipate for the elevated costs of treatment as the years go on.”

The program is working on multiple studies examining various cancers, their risk and early detection. The latest, also published Thursday in JAMA, focuses on multiple myeloma, a cancer of the blood, specifically affecting plasma cells, integral to the functioning of the immune system.

Dr. C. Ola Landgren, chief of the myeloma service at Memorial Sloan Kettering Cancer Center, said he and others were motivated to study this same population after years of seeing several newly diagnosed patients at younger ages and with more aggressive forms of the disease than normal.

“That prompted us to reach out to the FDNY to make a collaborative study,” Dr. Landgren told The Times, “to address these observations. That’s really what prompted us from the clinical side to reach out.”

<b>HEADLINE</b>	<b>04/26 Challenge: tracking terror financing</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/new-financial-transaction-methods-pose-challenge-in-terror-fight-officials-say-1524740047">https://www.wsj.com/articles/new-financial-transaction-methods-pose-challenge-in-terror-fight-officials-say-1524740047</a>
<b>GIST</b>	PARIS—President Emmanuel Macron called ministers from over 70 countries to Paris on Thursday in an effort to coordinate a crackdown on new terror-financing methods that French officials say pose a growing threat to global security.

Justice and finance ministers gathered at the Organization for Economic Cooperation and Development in Paris to look for ways to gather and share intelligence on how terrorist organizations like Islamic State and al Qaeda collect, move and store the finances that sustain them.

“It is the lifeblood of the war. It is essential to look at this very seriously and pre-empt the changes taking place,” Paris prosecutor François Molins, who handles terror investigations in France, said on French radio Thursday.

Governments face an increasingly complex challenge tracking terror finance because of the changing technology of transactions. France will push delegates at the conference to look for ways to better identify users of prepaid cards and electronic wallets and strengthen regulation of crowdfunding websites that are increasingly used by terror groups.

There are also “high risks” associated with the transfers by mobile telephone because it is hard to identify recipients of funds, French officials said.

France says the large sums of money in circulation could spark a resurgence of terrorist organizations despite the military collapse of Islamic State in Syria and Iraq. Islamic State is estimated to have had revenues of around €1 billion a year between 2014 and 2017, and is now seeking ways to amass small international donations, French officials say.

“The successes in Syria and Iraq might make us think we are confronted with a declining threat, but the reality is very different,” an advisor to Mr. Macron said.

“It feels like we are in a sprint because there is a sophistication of instruments,” the advisor said.

The closed-door conference, dubbed “No Money for Terror,” began Wednesday with talks between some 450 terror finance experts and intelligence officials, and will conclude later Thursday with a public speech from Mr. Macron.

Mr. Macron, who returned earlier from a three-day U.S. state visit, is pushing for a more multilateral approach. French officials hope delegates will sign up to a joint declaration that could be submitted to international organizations including the United Nations.

“I am optimistic that the discussions over the coming days will mobilize new efforts in the fight against terrorism,” said U.S. Treasury Secretary Steven Mnuchin, who is attending the event.

International Monetary Fund chief Christine Lagarde and head of the World Bank President Jim Yong Kim are also attending.

Delegates will also examine how tracking transactions can be used to gather intelligence and anticipate possible attacks. Paris prosecutors working with financial investigators to track transactions in recent years have identified 416 donors on French soil and 320 recipients in Turkey and Libya, helping them identify jihadists who traveled to Iraq and Syria or those who are now looking to return to France.

Most middle eastern countries are represented at the conference, with the notable exception of Iran. Iran is on the blacklist of the Financial Action Task Force, an intergovernmental group of 37 that combats money laundering and terror financing. French organizers also refused to invite Iran amid tensions between Tehran and Arab states.

04/26 Afghan official: Taliban killed 7 soldiers

SOURCE

<http://abcnews.go.com/International/wireStory/afghan-official-deputy-governor-killed-taliban-54744467?>

<b>GIST</b>	<p>A Taliban attack on an Afghan army security post in the country's northern Kunduz province has killed at least seven soldiers, a defense spokesman said Thursday.</p> <p>Mohammad Radmanish, the deputy spokesman for the Ministry of Defense, said the attack took place on Wednesday night in the remote Dashti Archi district in Kunduz.</p> <p>A gunbattle lasted several hours and along with the seven killed, one soldier was wounded, Radmanish said. He added that 15 Taliban fighters were also killed and 13 were wounded.</p> <p>However, a local hospital chief, Rahimbakesh Danish Karimi, gave a higher casualty toll for the military, saying bodies of 13 soldiers and nine wounded in the attack were brought to his hospital in Thakhar province, which is the closest medical facility to the attack site.</p> <p>The conflicting casualty reports could not immediately be reconciled as is common in the aftermath of such attacks. No militant group has claimed responsibility for the attack but the officials blamed the Taliban.</p>

<b>HEADLINE</b>	<b>04/26 New US 24-hr precipitation record set?</b>
<b>SOURCE</b>	<a href="https://www.wunderground.com/cat6/new-us-24-hour-precipitation-record-4969-kauai-hi-april-15">https://www.wunderground.com/cat6/new-us-24-hour-precipitation-record-4969-kauai-hi-april-15</a>
<b>GIST</b>	<p>The National Weather Service in Hawaii reported on Wednesday that preliminary data from a rain gauge on the north shore of Kauai at Waipa, one mile west of Hanalei, received 49.69" of rainfall over the 24-hour period ending at 12:45 pm April 15. If verified, this would break the all-time U.S. 24-hour rainfall record of 43.00" in Alvin, Texas set on July 25 – 26, 1979, during Tropical Storm Claudette. The record-setting rains on Kauai were due to an upper-level low located to its west on April 14 - 15, combined with a surge of rich low-level moisture. This set-up brought radar-estimated rainfall rates of 2 – 4" per hour to the north shore of the island.</p> <p>The National Weather Service office in Honolulu noted that the rain gauge where this new data was downloaded from "is operated by the Waipa Foundation which is a non-profit organization. Data from the gauge are not telemetered for real-time display and are used for watershed modeling and monitoring studies." In the coming months, data from this gauge will be reviewed by the National Climatic Extremes Committee to determine whether this instrument is reliable enough to accept as a new U.S. record.</p>

<b>HEADLINE</b>	<b>04/27 Cars in Europe calling police accidentally</b>
<b>SOURCE</b>	<a href="https://www.forbes.com/sites/davekeating/2018/04/27/cars-in-europe-are-accidentally-calling-the-">https://www.forbes.com/sites/davekeating/2018/04/27/cars-in-europe-are-accidentally-calling-the-</a>

	<a href="#">police/#60a763c74baf</a>
GIST	<p>It's been less than a month since European Union legislation took effect requiring all new cars to have the eCall system, which automatically calls emergency services in the event of an accident. But already, emergency operators are identifying teething problems.</p> <p>The eCall system automatically calls 112, the European equivalent of America's 911, after a collision. That number is automatically redirected to local emergency services across the EU.</p> <p>It's a complicated endeavour, particularly because it requires coordination and standardisation between the EU's 28 member states. This week emergency service professionals from across the continent gathered in Ljubljana, Slovenia for the annual conference of the European Emergency Number Association to discuss how the implementation is going so far. One consistent theme emerged: operators are getting too many false e-calls, which is proving a distraction from their work.</p> <p>Though the system has only been required for a month, it's been around for some time. It was first developed in 2001 as part of a German youth science competition. The EU chose it from several competing technologies to be the basis of the legislation, first put forward in 2013. Some European countries have rolled out eCall early. Slovenia introduced it in December 2015, and Italy deployed a pilot program in selected regions in May 2017. Sweden adopted eCall in October last year.</p> <p>Spain has also been an early adopter. Iratxe Gomez Susaeta, an emergency management expert who has been consulting with operators during the roll-out, said at the conference that false calls have been a problem so far.</p> <p>"There have been false eCalls during repairs or checkups, or people unintentionally pressing the SOS button – particularly children," she said.</p> <p>The system is meant to kick in only in the event of a serious accident, calling 112 and wirelessly deploying airbags and impact sensor information. It then uses Galileo, the EU's equivalent of America's GPS satellite system, to send information about the vehicle's location to emergency services. A microphone and speaker in the car enables to occupant to communicate with dispatchers.</p> <p>But the alert can be triggered while the car is being repaired or dismantled. If the mechanic doesn't hear the emergency service personnel trying to contact the car, first responders may be deployed to the location, wasting precious resources and time.</p> <p>Gomez Susaeta said so far these false calls and tests of the system have represented most of its use in some places. "We're off to a very slow start. Some haven't even received any real eCalls yet. It's been less than a month, and some have only received test calls or false eCalls. They're also getting lots of test calls in a live environment, which is creating a lot of confusion"</p> <p>Luca Bergonzi, a sales executive with the Beta 80 group in Italy, which is advising emergency services on the roll-out, agreed that false calls have been a problem so far.</p> <p>"End-of-life or vehicle inspection can trigger false eCalls, or automatic alarms used for security services," he said. "Companies are looking at a workaround. Public safety answering points should develop procedures to screen false calls."</p> <p>The idea that eCall could make it harder, not easier, for emergency dispatchers to do their work has been raised as a concern for some time. But Bergonzi stressed that these teething problems are manageable.</p>

HEADLINE	<b>04/27 Iconic pen made by blind for military</b>
SOURCE	<a href="https://apnews.com/d170f66d783c47689296b1eb5201043f/Iconic-pen-used-by-military,-made-by-">https://apnews.com/d170f66d783c47689296b1eb5201043f/Iconic-pen-used-by-military,-made-by-</a>

	<a href="#">blind-people-turns-50</a>
GIST	<p>GREENSBORO, N.C. (AP) — Clifford Alexander scoops a handful of black ballpoint pens, drops them into a small box and shakes it with a blackjack dealer’s nonchalance. He slides in the next handful to make an exact dozen, and sends the box down the assembly line.</p> <p>Alexander, who is blind, performs the quick act again, box after box.</p> <p>Anyone who’s served in the military, worked for the federal government or addressed a package at the post office is familiar with the handiwork. But they might not have realized that all the ubiquitous SKILCRAFT U.S. Government pens were made by the visually impaired. The pens turn 50 this month.</p> <p>The pen’s history traces back to April 20, 1968, when it was introduced to government buyers, said the National Industries for the Blind. The nonprofit organization was tapped to supply pens after another manufacturer made 13 million defective ballpoints in 1967.</p> <p>The pens have stringent requirements — 16 pages worth. The pens must be able to write a continuous line 1 mile (1.6 kilometers) long and keep the ink flowing despite extreme temperatures — from 40 degrees below zero to 160 degrees (4 to 71 degrees Celsius).</p> <p>For five decades, the task of making those pens has been entrusted to blind workers.</p> <p>“It may take us longer to learn it, but once we learn those jobs we do those jobs very well,” said Alexander, who supervises about 30 Greensboro pen workers. “And we turn out a top quality garment or writing instrument.”</p> <p>The pen is well-known among military and government families after finding its way into purses and backpacks for years. It’s also been used by the military as improvised devices to plug holes in pipes on boats or perform emergency medical procedures.</p> <p>The pens are sold to the federal government through a program started in 1938 to create jobs for people with disabilities. In 2016, the AbilityOne program sold \$3.3 billion in goods and services, with more than half coming from military orders.</p> <p>Alexander said his 47 years at the North Carolina plant has helped him to buy a home and educate his children. The plant employs about 140 visually impaired people to make products ranging from Army combat jackets to clipboards.</p> <p>In the pen’s heyday, the government bought about 70 million per year. Now the Greensboro plant and a second in Milwaukee combine to produce about 8 million of the flagship retractable ballpoints annually, with parts supplied by a third site in Missouri. All three employ visually impaired workers.</p> <p>Lynn Larsen, who’s worked at Greensboro Industries of the Blind for 40 years, said the job helped her support her family after her father died. More recently, it was a source of pride when her nephew deployed to Afghanistan with the Army.</p> <p>“He would tell the other soldiers that his aunt Lynn made that pen, and they thought it was real cool,” she said.</p> <p>The Greensboro workers earn well above minimum wage and can reach around \$24 per hour, said Richard Oliver, the site’s director of community outreach and government relations.</p> <p>The benefits go beyond the pay, said Oliver, who is legally blind himself: “We didn’t get the opportunity to serve in the military ... so this is our way to serve.”</p> <p>“It gives our people a really big sense of pride,” he said.</p>

<b>HEADLINE</b>	<b>04/26 Seattle ties high-record temp for day</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/968070/record-temperatures-possible/">http://mynorthwest.com/968070/record-temperatures-possible/</a>
<b>GIST</b>	<p>Seattle tied its record high temperature of 82 degrees for April 26 Thursday and Bellingham hit a new record.</p> <p>Bellingham reached 75 degrees at 4:16 p.m. The previous record high for Bellingham — 74 degrees — was set in 1987.</p> <p>In the past 73 years at Sea-Tac, there have been only 17 days in the month of April where temperatures have reached 80 degrees or higher (including Thursday), according to the National Weather Service.</p> <p>The record high for April 26 in Seattle is 82 degrees, initially set back in 1947.</p> <p>At 1:30 p.m., it was 76 in Everett and 79 in Tacoma. Olympia reached 80 degrees.</p> <p>But brace yourself. A dramatic drop in temperature is expected Friday as winds shift and come in off the ocean.</p> <p>“That’s going to end up dropping temperatures in Seattle almost 15 degrees cooler than what we’re expecting for [Thursday],” Reedy said.</p> <p>Showers return Friday evening and stick around off and on throughout the weekend.</p>

<b>HEADLINE</b>	<b>04/26 Russia chided for ‘obscene masquerade’</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/russia-syria-opcw-staged-videos-witnesses-chemical-weapons-douma-france-uk/">https://www.cbsnews.com/news/russia-syria-opcw-staged-videos-witnesses-chemical-weapons-douma-france-uk/</a>
<b>GIST</b>	<p>THE HAGUE, Netherlands -- Britain and France denounced on Thursday as a stunt and an "obscene masquerade" a move by Russia to produce Syrian witnesses who Moscow says were filmed in "staged videos" in the aftermath of a reported chemical weapons attack. Russian officials brought the purported witnesses for a briefing Thursday at The Hague headquarters of the Organization for the Prohibition of Chemical Weapons.</p> <p>The development is seen as an effort by Russia to discredit widespread reports of an April 7 suspected chemical weapon attack in the town of Douma near the Syrian capital, Damascus, which killed more than 40 people. The West has blamed the attack on President Bashar Assad's government. Syria and Russia deny the claims.</p> <p>"This obscene masquerade does not come as a surprise from the Syrian government, which has massacred and gassed its own people for the last seven years," said France's ambassador to the Netherlands, Philippe Lalliot.</p> <p>Britain's ambassador, Peter Wilson, said he and other Western allies would not attend the briefing.</p> <p>On Wednesday, OPCW inspectors made a second visit to the town of Douma, collecting samples from a new location that will be sent to designated labs for analysis. The suspected poison gas attack has sparked an ongoing clash of narratives between the West and the governments of Syria and its key ally, Russia. Damascus and Moscow insist there was no chemical weapons attack.</p> <p>Opposition activists and first responders who witnessed the attack in Douma, which was under rebel control at the time, say it was carried out by government forces. Many of the victims suffocated in an underground shelter where they were hiding from government airstrikes, the activists said.</p>

	Following the suspected chemical attack, the United States, France and Britain launched joint punitive airstrikes targeting suspected Syrian chemical weapons facilities on April 14.

<b>HEADLINE</b>	<b>04/26 Rwanda official: mass graves discovered</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/04/26/mass-graves-believed-to-contain-more-than-2000-bodies-discovered-in-rwanda.html">http://www.foxnews.com/world/2018/04/26/mass-graves-believed-to-contain-more-than-2000-bodies-discovered-in-rwanda.html</a>
<b>GIST</b>	<p>KIGALI, Rwanda – Mass graves that authorities say could contain more than 2,000 bodies have been discovered in Rwanda nearly a quarter-century after the country's genocide, and further graves are being sought nearby.</p> <p>The new discovery is being called the most significant in a long time in this East African nation that is still recovering from the 1994 killings of more than 800,000 people.</p> <p>Some Rwandans are shocked and dismayed that residents of the community outside the capital, Kigali, where the mass graves were found kept quiet about them for so many years.</p> <p>"Those who participated in the killing of our relatives don't want to tell us where they buried them. How can you reconcile with such people?" asked a tearful France Mukantagzwa. She told The Associated Press she lost her father and other relatives in the genocide and believes their bodies are in the newly found graves.</p> <p>The discovery of the graves in Gasabo district came just days after Rwanda marked 24 years since the mass killings of ethnic Tutsi and moderate ethnic Hutus.</p> <p>"It is very disturbing that every now and then mass graves are discovered of which the now-free perpetrators never bothered to reveal to bereaved families so that they can get closure," the daily newspaper The New Times said in an editorial this week.</p> <p>"Definitely some very cruel people still live in our midst," it added.</p> <p>Between 2,000 and 3,000 people are thought to be buried in the graves based on the number of area residents who went missing during the genocide, Rashid Rwigamba, an official with the genocide survivors' organization Ibuka, told AP.</p>

<b>HEADLINE</b>	<b>04/27 Surging ranks of super-commuters</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/the-surging-ranks-of-super-commuters/">https://www.cbsnews.com/news/the-surging-ranks-of-super-commuters/</a>
<b>GIST</b>	<p>Coast to coast, Americans commute to work. But one group of commuters stands out from the rest -- and it's getting a larger: super-commuters. These are the people who spend 90 minutes or longer traveling to work, whose numbers surged nearly 30 percent between 2005 to 2016, to 4 million, according to an analysis of U.S. Census data released this week by online rental marketplace Apartment List.</p> <p>Apartment List found the share of super-commuters among the total commuter population rose in 39 states and three-quarters of the largest U.S. metropolitan areas. Eight of the 10 metropolitan areas with the largest share of super-commuters are in the regions surrounding San Francisco, Los Angeles and New York, which have among the country's the highest costs of living</p> <p>"I wasn't surprised that it was high in the San Francisco Bay area or New York or in L.A. because you do hear those stories a lot. But I was surprised it was so common in so many places, especially in places that aren't that large and don't have that bad of traffic like Las Vegas or Cleveland," said Sydney Bennett, senior research associate at Apartment List. "It's a commentary both on the lack of affordable housing and</p>

the fact that many cities have very little public transportation."

Commutes are getting longer for workers overall. According to Apartment List, the share of commuters traveling 24 minutes or less to work daily fell to 55 percent in 2016 from 59 percent in 2005. The share of commuters traveling 25 minutes or more climbed from 41 percent to 45 percent during that same time.

Many super-commuters get to work through a combination of driving and public transportation. Often, they take one or more buses or trains. According to Bennett, super-commuters in regions with robust public transportation systems such as New York, San Francisco and Boston depend more on those networks than those with shorter commutes.

The mean age for a super-commuter is 43.4 years old, well above 38.4 average age for regular commuters, according to Apartment List.

"The reason super-commuters likely skew a bit older is that those looking for more space (for example, a single-family home versus an apartment with three roommates) while on a tight budget may need to live further from downtown job centers," Bennett said.

The super-commuter problem is being exacerbated, she added, because much of the new housing being built is on the periphery of cities that lack robust public transit as opposed to closer suburbs. Many units in downtown areas are geared toward the luxury market, squeezing out low-income residents.

"For these displaced residents, improved transit provides easier access to job centers and offers improved social mobility," the report says.

In the time since the Census data was released, Bennett argues that the circumstances affecting super-commuters haven't changed much. "Anecdotally," she said, "we're hearing that it's either the same or worse in the last year-and-a-half."

<b>HEADLINE</b>	<b>04/25 Arctic ice record amount of plastic</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/world/2018/04/25/arctic-ice-choked-record-amount-microplastic-cigarette-butts-packing-material/549115002/">https://www.usatoday.com/story/news/world/2018/04/25/arctic-ice-choked-record-amount-microplastic-cigarette-butts-packing-material/549115002/</a>
<b>GIST</b>	<p>If you are wondering what happens to all those cigarette butts flicked on sidewalks and plastic packing peanuts blowing down the street, researchers have found an alarming amount of particles from them deep in the ice of the Arctic Ocean.</p> <p>The record amount of microplastic appears to be courtesy of the Great Pacific Garbage Patch and increased fishing and shipping in the Arctic, researchers at the Alfred Wegener Institute of the Helmholtz Center for Polar and Marine Research report.</p> <p>The study raises concerns about the impact on human and sea life.</p> <p>Ice samples from five regions across the Arctic Ocean contained up to 12,000 of the tiny particles per liter of sea ice, researchers say. More than half the particles trapped in the ice were less than 1/500th of an inch wide — less than one-tenth the thickness of a credit card.</p> <p>“They could easily be ingested by arctic microorganisms,” said biologist and report author Ilka Peeken. “No one can say for certain how harmful these tiny plastic particles are for marine life, or ultimately also for human beings.”</p> <p>Microplastic refers to plastic particles, fibers, pellets and other fragments with a length, width or diameter ranging from microscopic to two-tenths of an inch.</p>

The types of plastic showed a "unique footprint" in the ice allowing the researchers to trace them back to possible sources. Some can be traced to the Great Pacific Garbage Patch, a collection of plastic, floating trash halfway between Hawaii and California, that has grown to more than 600,000 square miles, the report says.

Researchers determined that ice floes contain particularly high concentrations of polyethylene, used primarily in packaging material.

"We assume that these fragments represent remains of the so-called Great Pacific Garbage Patch and are pushed along the Bering Strait and into the Arctic Ocean by the Pacific inflow," the study says.

A high percentage of paint and nylon particles pointed to the intensified shipping and fishing activities in some parts of the Arctic, the study says.

The researcher team gathered the ice samples during three expeditions in 2014 and 2015. The study was released in the journal Nature Communications.

<b>HEADLINE</b>	<b>04/26 JFK documents: Oswald's KGB handler</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/lee-harvey-oswald-kgb-handler-jfk-assassination/2018/04/26/id/856981/">https://www.newsmax.com/newsfront/lee-harvey-oswald-kgb-handler-jfk-assassination/2018/04/26/id/856981/</a>
<b>GIST</b>	<p>One of the 19,045 CIA and FBI documents on President John F. Kennedy's Nov. 22, 1963, assassination released Thursday revealed the "KGB handler" of gunman Lee Harvey Oswald.</p> <p>According to McClatchy, the documents fill in some blanks about a Soviet Embassy official in Mexico City who met with Oswald weeks before the assassination.</p> <p>Over the decades, Oswald's meetings in Mexico City with the Cuban and Soviet embassies, purportedly to get a visa to Cuba in hopes of returning to the Soviet Union, have gradually been revealed, McClatchy reported.</p> <p>But the Thursday release revealed one of the Soviets he had contact with was Valeriy Vladimirovich Kostikov.</p> <p>McClatchy reported the CIA confirmed to the original assassination investigators that Kostikov was likely part of the Department 13 assassination unit of the Soviet spy agency, the KGB.</p> <p>It is now known Oswald had phone conversations while in Mexico with Kostikov — and among the further-released documents Thursday were references to Kostikov being "Oswald's KGB handler."</p> <p>It is found in a May 1982 memo from what appears to be an unidentified foreign intelligence agency or U.S. asset in the Middle East asking longtime CIA Soviet Division leader David Blee about Kostikov.</p> <p>The questioner notes the Soviets were behind increased harassment of foreign embassies in Beirut – less than a year before a truck bomb leveled the U.S. embassy there, killing 241 U.S. marines and military personnel.</p> <p>"The reason for our interest in KOSTIKOV will be obvious," writes the official to Blee.</p> <p>That document was one of more than 15,000 that Thursday were left with some form of partial redaction.</p> <p>Another document released Thursday revealed a memo dated Sept. 30, 1963, revealing FBI field agent James Hosty Jr. had sent word back to headquarters on the activities of Oswald.</p>

The document makes clear Hosty did tell FBI bosses Oswald was violent and had been living and working as a maintenance man in New Orleans before moving to Dallas in the spring of 1963. And it confirms Oswald was under surveillance at the time of the assassination.

The agencies have until Oct. 26, 2021, to fully lift the veil of secrecy on the documents about the assassination – almost 58 years after the events in Dallas.

<b>HEADLINE</b>	<b>04/26 Dark chocolate gives brain a boost?</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/GMA/Wellness/dark-chocolate-give-brain-boost-studies-suggest/story?">http://abcnews.go.com/GMA/Wellness/dark-chocolate-give-brain-boost-studies-suggest/story?</a>
<b>GIST</b>	<p>Here's a reason not to feel so guilty about indulging in your afternoon chocolate fix.</p> <p>Dark chocolate may be giving your brain, immune system and eyes a real boost. This week, researchers brought out three new studies singing the praises of this delectable treat.</p> <p>Scientists in one study allowed lucky volunteers to eat one dark chocolate bar, about 1.5 ounces, and then studied their brain waves with a machine called an E.E.G. Researchers found an increase in gamma waves 30 minutes after eating the chocolate.</p> <p>"Gamma frequency is associated with neurosynchronization, in other words neuroplasticity.... It is the highest level of cognitive processing," Dr. Lee Burk, the principal investigator of this study, explained. Neuroplasticity describes the brain's ability to efficiently connect thoughts and ideas.</p> <p>Scientists believe that gamma waves are a sign that your nerve cells are firing on all cylinders. They are able to talk to each other in a manner that leads to optimum learning and memory formation.</p> <p>Immunity booster</p> <p>In another study, Burk looked at how dark chocolate affects the immune system. Again, participants ate a dark chocolate bar, and scientists studied their blood work for the following week. They found an increase in anti-inflammatory markers as well as an increase in T cells, infection-fighting cells. These findings are overall "great for immunity," according to Burk.</p> <p>It's important to know that both of these studies were very small, with only 10 blessed participants. Not to mention, these results were presented at a scientific meeting, not published in a journal, which means they were not highly scrutinized, or "peer-reviewed," before they were revealed.</p> <p>A dark chocolate vision boost</p> <p>But another study was published in JAMA Ophthalmology, a journal produced by the American Medical Association. In two different tests, they gave 30 participants two chocolate bars, both dark and milk chocolate, and conducted vision tests about two hours later. After eating dark chocolate, the participants had small improvements in their vision.</p> <p>The most significant: improvement in contrast sensitivity, meaning your ability to tell the difference between objects in a low light or high-glare setting. In real life, contrast sensitivity comes into play when driving at night, for example.</p> <p>It is unclear why dark chocolate affects vision; however, the authors think it has to do with the blood vessels in the eye. Cacao, the main ingredient in dark chocolate, has been shown to positively affect blood pressure and blood vessel function. This new research suggests that dark chocolate allows for more blood flow to back of the eye, therefore improving vision.</p> <p>But make sure it's really dark -- 70 percent cacao</p>

	<p>Before you gorge yourself on brownies and hot fudge sundaes in the name of science, all of these studies are very specific to dark chocolate.</p> <p>Researchers used dark chocolate with 70 percent cacao, a recipe reserved for the darkest of dark chocolate. This usually means the chocolate tastes more bitter than sweet because only 30 percent of the candy bar is sugar and milk.</p> <p>"It's really not a candy," Burk said of the chocolate used in his study. "It's the sugar that's a candy, not the cacao."</p>

<b>HEADLINE</b>	<b>04/26 Virginia top court curtails police ALPR use</b>
<b>SOURCE</b>	<a href="http://www.nbc29.com/story/38054562/va-supreme-court-delivers-blow-to-police-use-of-license-plate-reader-technology">http://www.nbc29.com/story/38054562/va-supreme-court-delivers-blow-to-police-use-of-license-plate-reader-technology</a>
<b>GIST</b>	RICHMOND, Va. — The Virginia Supreme Court has delivered a blow to the police's use of Automated

License Plate Readers (ALPRs) to surveil citizens and track drivers' movements. The Rutherford Institute filed an amicus brief in *Neal v. Fairfax County Police Department* challenging the police practice of collecting and storing ALPR data as a violation of Virginia law that prohibits the government from amassing personal information about individuals, including their driving habits and location.

In reversing a lower court ruling that allowed state law enforcement agencies to extend the government's web of surveillance on Americans by tracking them as they drive their cars, the Court held that the use of ALPRs involves the collection of personal information prohibited by Virginia's Government Data Collection and Dissemination Practices Act.

Mounted next to traffic lights or on police cars, ALPRs, which photograph up to 3,600 license tag numbers per minute, take a picture of every passing license tag number and store the tag number and the date, time, and location of the picture in a searchable database. The data is then shared with law enforcement, fusion centers and private companies and used to track the movements of persons in their cars.

The Virginia Supreme Court's opinion in *Neal v. Fairfax County* is available at [www.rutherford.org](http://www.rutherford.org).

"We're on the losing end of a technological revolution that has already taken hostage our computers, our phones, our finances, our entertainment, our shopping, our appliances, and now, it's focused its sights on our cars," said constitutional attorney John W. Whitehead, president of The Rutherford Institute and author of *Battlefield America: The War on the American People*. "By subjecting Americans to surveillance without their knowledge or compliance and then storing the data for later use, the government has erected the ultimate suspect society. In such an environment, there is no such thing as 'innocent until proven guilty.'"

Since 2010, the Fairfax County Police Department (FCPD) has used ALPRs to record the time, place, and driving direction of thousands of drivers who use Fairfax County roads daily. License plate readers capture up to 3,600 images of license tag numbers per minute and convert the images to a computer format that can be searched by tag number. This information, stored in a police database for a year, allows the police to determine the driving habits of persons as well as where they have been.

In 2014, Fairfax County resident Harrison Neal filed a complaint against FCPD asserting its collection and storage of license plate data violates Virginia's Government Data Collection and Dissemination Practices Act (Data Act), a law enacted because of the fear that advanced technologies would be used by the government to collect and analyze massive amounts of personal information about citizens, thereby invading their privacy and liberty.

The lawsuit cited a 2013 opinion by Virginia Attorney General Ken Cuccinelli that ALPR data is "personal information" that the Data Act forbids the government from collecting and storing except in connection with an active criminal investigation. Despite this opinion, FCPD continued its practice of collecting and storing ALPR data in order to track the movements of vehicles and drivers.

In November 2016, a Fairfax County Circuit Court judge ruled that license plate reader data was not "personal information" under the Data Act because license tag numbers identify a car and not a person. The Virginia Supreme Court reversed that decision, ruling the data was personal information, and remanded the case for a determination of whether the ALPR record-keeping process allows a link to be made between the license plate number and the vehicle owner.

HEADLINE	<b>04/27 Privacy fears over 'genetic informants'</b>
SOURCE	<a href="https://www.apnews.com/de2a1166d5664125858cb7b5eed209a5/Use-of-DNA-in-serial-killer-probe-sparks-privacy-concerns">https://www.apnews.com/de2a1166d5664125858cb7b5eed209a5/Use-of-DNA-in-serial-killer-probe-sparks-privacy-concerns</a>
GIST	SACRAMENTO, Calif. (AP) — Investigators who used a genealogical website to find the ex-policeman they believe is a shadowy serial killer and rapist who terrified California decades ago call the technique

ground-breaking.

But others say it raises troubling legal and privacy concerns for the millions of people who submit their DNA to such sites to discover their heritage.

There aren't strong privacy laws to keep police from trolling ancestry site databases, said Steve Mercer, the chief attorney for the forensic division of the Maryland Office of the Public Defender.

"People who submit DNA for ancestors testing are unwittingly becoming genetic informants on their innocent family," Mercer said, adding that they "have fewer privacy protections than convicted offenders whose DNA is contained in regulated databanks."

Joseph James DeAngelo, 72, was arrested Tuesday after investigators matched crime-scene DNA with genetic material stored by a distant relative on an online site. From there, they narrowed it down to the Sacramento-area grandfather using DNA obtained from material he'd discarded, Sacramento County District Attorney Anne Marie Schubert said.

Authorities declined to name the online site. However, two of the largest, Ancestry.com and 23andMe, said Thursday that they weren't involved in the case.

DNA potentially may have played an earlier role in the case. It was just coming into use as a criminal investigative tool in 1986 when the predator variously known as the East Area Rapist and the Golden State Killer apparently ended his decade-long wave of attacks.

DeAngelo, a former police officer, probably would have known about the new method, experts said.

"He knew police techniques," said John Jay College of Criminal Justice professor Louis Schlesinger. "He was smart."

No one who knew DeAngelo over the decades connected him with the string of at least a dozen murders, 50 rapes and dozens of burglaries from 1976 to 1986 throughout the state.

<b>HEADLINE</b>	<b>04/26 Texas church shooter promised judge</b>
<b>SOURCE</b>	<a href="http://time.com/5256917/sunderland-springs-texas-shooter-devin-kelley/">http://time.com/5256917/sunderland-springs-texas-shooter-devin-kelley/</a>
<b>GIST</b>	<p>(AUSTIN, Texas) — The gunman in a mass shooting at a Texas church last year told a military judge in 2012 he "would never allow myself to hurt someone" again while admitting to abusing his stepson and a long struggle with anger, according to Air Force records obtained by The Associated Press on Thursday.</p> <p>The documents and transcripts offer a rare look at Devin Patrick Kelley speaking at length and in his own words, as few examples have previously surfaced in the six months since he opened fire during a Sunday service in tiny Sutherland Springs, Texas.</p> <p>Kelley killed more than two dozen people in November 2017 in the worst mass shooting in Texas history. He died of an apparent self-inflicted gunshot wound after he was shot and chased by two men who heard the gunfire at the church.</p> <p>"I don't think adults change. I don't think people change," Kelley said during his court-martial at Holloman Air Force Base in New Mexico, according to a transcript. He was convicted of assaulting family members and ultimately given a bad conduct discharge.</p> <p>"I believe in miracles. I believe in angels and I believe in demons, but I think for most people, they're going to be who they are and live their lives out, but based on the choices they make, if they're a wife beater, they're gonna probably beat their next wife. If they're a child beater, they'll probably beat their</p>

own child.”

The AP obtained hundreds of pages surrounding Kelley’s court martial through a Freedom of Information Act request.

Kelley admitted to pushing his stepson while the toddler crawled on the floor and slapping him across the face when he wouldn’t stop crying. He cracked the child’s skull and broke his clavicle. His ex-wife wrote an affidavit that described in graphic detail how Kelley repeatedly hit her, choked her and twice pointed a gun at her.

She wrote that when she suggested they get a divorce during a drive, Kelley lost control of their car while grabbing her hair, causing them to strike a guard rail.

“Sir, this is the worst thing I’ve done in my life and I will never allow myself to hurt someone like this again,” Kelley said.

Five years later, Kelley went aisle to aisle at the First Baptist Church in Sutherland Springs looking for victims. Witnesses said he shot crying babies at point-blank range and the dead ranged in age from 18 months to 77 years old. Authorities put the official death toll at 26 because one of the 25 people killed was pregnant.

Investigators have said the attack appeared to stem from a domestic dispute Kelley was having with his mother-in-law, a member of the church who wasn’t present that day.

Air Force prosecutors had pushed for a stiffer sentence than the 12 months confinement and bad conduct discharge that Kelley received from the military jury. They wanted four years of prison time so that he might get his anger under control, according to the trial transcript.

“Who’s next?” said Capt. Brett Johnson, the assistant trial counsel. “What are we going to do to ensure that this does not happen again? That the next time he lashes out in anger to strike a child, to choke a woman, let him think back to the four (years) he sat in confinement, then maybe he will think again.”

The records show Kelley struggled to comply with the exacting standards of military service. A May 2012 evaluation rated his performance as an airman first class “average” and noted that he’d received letters of reprimand for insubordination to a superior enlisted service member and an assault on a family member. Kelley did not meet the requirements for conduct, character and military bearing, according to the evaluation.

After a confrontation with a civilian colleague over work duties, Kelley described being “scared and holding back tears” when the person yelled and tried to intimidate him, according to his summary of the incident, which is among the documents released. The civilian wanted to settle the dispute immediately in front of a staff sergeant, but Kelley said he needed time to get control of his emotions.

During the court-martial, Kelley submitted pictures of him in Boy Scouts, handling pets on his family ranch and rock-climbing with his family. He described being bullied on the football team in high school, hiding “behind alcohol and self-denial” and considering suicide before reconnecting with God.

“It will take a lifetime of living up to the promises I’ve made to myself, God and here to prove I have changed,” Kelley wrote in an affidavit. “I know I can be better, I just need a chance to prove it.”

HEADLINE	<b>04/26 Everett mayor, PD chief eye gang violence</b>
SOURCE	<a href="http://mynorthwest.com/968301/everett-mayor-police-chief-tackling-gang-violence-head-on/">http://mynorthwest.com/968301/everett-mayor-police-chief-tackling-gang-violence-head-on/</a>
GIST	Everett’s new mayor announced a new plan to tackle youth gang violence after a significant increase last

year.

Police Chief Dan Templeman says they've noticed a steady increase in gang and gun violence for a couple of years, everything from graffiti and tagging to drive-by shootings.

But it got really bad in 2017 with an increase in shootings overall and a 75 percent jump in gang-related crimes in the first 10 months of the year, most committed by people under 21.

In October 2017, 14-year-old Mariner High School Freshman David Sandoval was shot and killed by a 13-year-old boy over the color of his shoes.

"Anytime you have 13-year-olds that are armed with weapons and guns and they're using them to commit crimes, I mean that's as a police chief, it's completely unacceptable," said Chief Templeman. "In my mind, we needed to do something."

Templeman met with Sandoval's dad, and others living in the area as well as community groups around the Casino Road area and south Everett where many of the shootings and gang issues were happening.

"And it really brought to light the situation out there and the conditions and some of the fear that the community was feeling last year," said Templeman. "And so it allowed me to really take a look at our organization and how we were deploying our resources and make some adjustments in how we were deploying our police officer resources."

He was hearing from people in these communities who were afraid to let their kids walk to school, play outside of their homes, or go to the store.

Late last year, Templeman started directing extra patrols in the areas where guns, gangs, and youth violence had been a problem. And in recent months, the chief dedicated a sergeant and four officers to work with gangs and engaging with communities.

In January, newly-elected Mayor Cassie Franklin made addressing the issue of gun and gang violence involving young people a priority, issuing a directive for a more wide-ranging plan that includes several initiatives.

"They really represent a holistic approach to this and it's not just focusing on enforcement and it's not just focusing on prevention and intervention or public education," said Templeman. "It really looked at this issue from a big picture perspective ... not treating the symptoms of the problem, but really trying to treat the disease and get at that."

He says it's a similar approach to efforts being used to fight the opioid crisis.

Among the new initiatives is the creation of a Gang Response Community Advisory Group. The group was formed earlier this year and has met several times. Among the members, Sandoval's dad, police, community groups and community members, including students who have had to deal with gangs.

Templeman says in the weeks ahead they'll be taking more steps on the prevention front.

"Enforcement is important and we are right still examining and evaluating organizationally the feasibility and the likelihood of standing up our own Gang Response Unit in the city of Everett that would be dedicated — a group of officers," said Templeman. "It would also include a prevention and education component as well so not just enforcement, but a team of enforcement officers that can go out and work in the communities in the areas that are being hit."

Templeman says those prevention and intervention tools are an essential tool, especially when many kids getting involved in gangs have parents or siblings who are already involved or have little parental supervision.

The Firearms Safety Program will offer free gun locks and partner with local gun shops to provide information about the dangers of not safely storing guns when they sell a gun.

“We see firearms stolen a lot in the city of Everett,” said Templeman. “We see firearms stolen out of vehicles. They’re beneath the driver seat, they are in a backpacks, they’re under a blanket in the back seat. We see firearms stolen in burglaries at people’s homes where the firearm is sitting on the night stand. Our big concern about that is that those firearms end up in the hands of the wrong people. They end up in the hands of criminals. They end up in the hands of children.”

Templeman says the goal is to have the Gang Response Unit and Firearms Safety program up and running sometime in June 2018.

In the meantime, things are looking up for the first part of this year with gang crimes down 59 percent in the first three months of 2018 compared to the same time in 2017.

Templeman said, “Our shootings are down 37 percent in the city of Everett, our drive-by shootings are down 87 percent in the first quarter compared to last year. So trending in the right direction.”

The chief is cautiously optimistic, but warns gang activity usually increases in the summer months.

<b>HEADLINE</b>	<b>04/26 Violent rivals rush into FARC void</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/investigates/special-report/colombia-peace/">https://www.reuters.com/investigates/special-report/colombia-peace/</a>
<b>GIST</b>	<p>Despite government efforts to bring order to Colombia, police and military forces are now struggling against various armed groups vying for land and illegal activities once controlled by the Revolutionary Armed Forces of Colombia, or FARC.</p> <p>Still a powerful criminal enterprise when it agreed to demobilize, the FARC left behind lucrative dealings in the drug trade, extortion and illegal mining. Stepping in to supplant them are splinter FARC factions, enterprising new gangs and veteran rebel rivals like the National Liberation Army, or ELN. Reuters accompanied soldiers, police, guerrillas and townspeople to understand the difficulties still confronting Colombia.</p> <p>When President Juan Manuel Santos and leaders of the Revolutionary Armed Forces of Colombia shook hands to end a half-century war, residents of towns like Tumaco were supposed to be relieved.</p> <p>Nineteen months later, people in this gritty port on the Pacific are anything but.</p> <p>True, most FARC militants, as foreseen by the peace accord, demobilized here and across Colombia, a country the size of France and Spain combined. For decades, rugged terrain and an oft-absent government had enabled the rebels to become the de-facto authority in many areas.</p> <p>But Santos, saddled with a sluggish economy at the end of his second term, has struggled to ensure order of the sort the rebels, albeit murderous, once imposed across parts of the Andean nation.</p> <p>Despite widespread acclaim for the agreement, including a Nobel Prize for Santos, peace remains elusive in this country of 50 million people, still the world’s largest producer of cocaine.</p> <p>With the FARC disarmed, other militants, criminal gangs and paramilitary groups are jostling into the breach. They are hoisting flags, enlisting members and exacting levies and loyalty in former FARC strongholds. They are also seizing the FARC’s most lucrative rackets – from the drug trade, to extortion, to illegal mining.</p>

“It’s like a devil’s cauldron where all manner of criminal ingredients are being boiled,” said Juan Camilo Restrepo, until recently the government’s chief negotiator in ongoing peace talks with the National Liberation Army, or ELN, now Colombia’s biggest guerrilla group. “They all want their hands on the business and territorial spoils left by the FARC.”

Over the past nine months, Reuters traveled to Tumaco and six other sites in Colombia to understand the advance of armed and criminal groups. Disrupters include splinter FARC factions, enterprising new gangs and veteran rebel rivals, like the ELN, who have used the agreement to reposition.

Among the most violent corners of Colombia is Tumaco, in the southwest, where a network of rivers provides a crucial Pacific outlet for sprawling coca plantations nearby.

Here, new guerrilla corps vie with criminal gangs for the routes. Earlier this month, a small force of former FARC fighters killed an Ecuadorian journalist, photographer and their driver because the neighboring country spurned the guerrillas’ demands that it release imprisoned comrades who had ventured across the border.

East of Tumaco, ELN rebels seized turf where the FARC relinquished an illegal gold mine. In the northwestern state of Chocó, the ELN is recruiting and expanding control of jungle there.

To win support for the deal, Santos promised to flood areas of FARC control with troops and investment.

As much as \$3 billion of annual government spending over the next 15 years is supposed to improve health, education, infrastructure and agriculture in war-torn regions. A cornerstone of the plan is a crop substitution effort for farmers who rely on income from coca.

But a weakened economy makes financing difficult.

Along with tighter budgets, red tape delays the start of roads, aqueducts, schools, power lines and clinics promised to millions living without infrastructure. The crop substitution program in 2017 reached just 30 percent of its goal and is angering farmers who say the government is leaving their fields bare. The anger boiled over near Tumaco in October, when seven farmers died in a firefight with police and soldiers who pulled up their coca bushes.

The ascendant threats are dividing Colombians just before they vote on a Santos successor in May. Instead of an asset, the faltering peace is disconcerting an electorate also frustrated by tepid growth, weak public services and still-gaping inequality.

The government said it is doing all it can.

It already deployed 80,000 police and soldiers. In January, it launched its biggest deployment in two decades, sending 9,000 troops to Nariño, the troubled state home to Tumaco and other flashpoints along the Pacific coast and Ecuadorian border.

It isn’t enough.

Groups such as the new and little-known United Guerillas of the Pacific are establishing strongholds. “This is happening all across Colombia,” said Joan, the leader of an eight-person squad of heavily-armed guerrillas on patrol late last year in jungle south of Tumaco.

Led by former FARC fighters who rejected the peace, the group is already coercing local families for support. It is not associated with the rebels who killed the Ecuadorians earlier this month, according to government officials.

Luis Carlos Villegas, Colombia’s defense minister, told Reuters the problems with other gangs, guerrillas and criminals aren’t new or worsening. Rather, he argued, they stand out in the void left by the FARC.

“Are there micro-trafficking problems? Are there organized crime problems? Are there problems of gangs that are trying to move into FARC territories?” Villegas asked. “Yes.”

“But are they growing?” he continued. “No, they are more visible because there is no longer a conflict.”

As many as 70 armed and criminal groups operate across Colombia, according to Ariel Ávila, a researcher at Fundación Paz y Reconciliación, a security think tank in Bogotá, the capital. That amounts to about 5,000 guerrillas, gang members, paramilitary fighters and other criminals, including FARC dissidents who renounced the peace.

In a briefing in late March, General Alberto José Mejía, Colombia’s top military commander, said as many as 1200 FARC dissidents are still active, one fifth the rebel force when peace was agreed. While a far cry from the 17,000 rebels at the FARC’s peak in the late 1990s, the figure is four times the number the government had previously recognized.

Some dissidents have set up splinter factions, like the Pacific guerrillas, who are already “taxing” local traffickers and extorting grocery stores and other small businesses. Police believe extortion fuels as much as 20 percent of the income for some groups.

Other dissidents joined gangs with little ideology beyond crime.

The FARC originated in the 1960s, a leftist insurgency against the government and an entrenched elite who even today control most of Colombia’s resources. Initially inspired by communism, the FARC diversified into kidnapping, extortion, the drug trade and other crimes as Cold War credos faded.

For those who now seek to supplant them, there are many opportunities for ill-gotten gains. The resulting turf wars and violence perpetuates one problem, the displacement of noncombatants from homes and entire communities, that totalled more than 67,000 people last year, according to Colombia’s government.

Around Tumaco, where wood and tin shacks rise on stilts above meandering estuaries, the scramble for control spawned bloodshed. Many of its 200,000 residents, most of African and indigenous descent, miss the days before the agreement.

Back then, the FARC controlled local drug routes. Despite frequent clashes with government troops, the rebels ensured that most poor residents and non-combatants were left alone. Today anyone is vulnerable.

Nationwide, murders have declined in recent years. In Tumaco, and other former FARC bastions, homicides are soaring.

At least 211 people were killed in Tumaco last year, according to police, compared with 147 in 2016. That gives Tumaco a homicide rate of about 102 murders per 100,000 people – roughly four times the national rate.

For townspeople in Tumaco, poverty can make life outside the law attractive. City hall calculates unemployment at 70 percent. Few legitimate jobs exist beyond seasonal work on shrimp boats, other fishing and farming of cacao, rice and palm.

The easiest money, then, is cocaine – be it coca cultivation or any of the chemical or logistical activities to export it. Across Colombia, such activities generate about \$13 billion annually, according to government estimates, equal to more than 4 percent of the country’s legitimate economy.

In Tumaco’s muddy slums, youth idle on street corners, drinking beer and listening to reggaeton music. Some are awaiting recruitment by local gangs for one lucrative activity – running cocaine in high-speed boats to Central America.

Gangs own or rent the boats, with outboard motors powerful enough to carry as much as three tons to dropoff points in Panama, Costa Rica or beyond. For each voyage, they pay roughly 100 million pesos, or about \$35,000, to each runner in a crew of three or four.

Sometimes, the voyages are multi-party enterprises, with small businesses and others investing. Even those meant to thwart the trade, including sailors at checkpoints, sometimes get a cut in exchange for turning a blind eye, locals and police said.

Bribes are a constant challenge, particularly because drug profits allow criminals to pay more than the state.

“They use their abundant capital to corrupt institutions,” said Orlando Romero, the admiral in charge of operations on the Pacific. The Navy, he added, arrested 12 sailors over the past three years for collaborating with drug runners.

The voyages from Tumaco are hardly new. But the rush to participate has accelerated.

“They come to church for blessing before they go,” said Daniel Zarantonello, an Italian priest in Tumaco. “It’s out of control.”

Farmers are also growing more coca.

The region around Tumaco is now Colombia’s biggest source of the leaf.

Some 23,000 hectares, over three times the area of Manhattan, are planted there, according to the U.S. Drug Enforcement Administration. Cultivation nationwide reached 188,000 hectares in 2016, over twice the area three years earlier.

The increase has various causes, including Colombia’s 2015 decision, for health and environmental reasons, to stop aerial dusting of pesticide on coca plantations. The FARC also sought to maximize cocaine revenues before demobilizing.

The result: Cocaine production capacity reached 910 metric tons in 2016, the highest in over a decade, according to DEA figures.

In Peña de los Santos, a hamlet four hours south of Tumaco by boat on the Rosario River, farmers grow coca and make it into paste. For a spell after the peace agreement, buyers no longer came. Many in the Afro-Colombian community had to scrounge for fruit and fish.

For many farmers, little incentive exists to grow crops the government hopes can blossom through substitution.

A hectare of coca, a fast-growing plant that can be harvested in three months, can reap 44 million pesos a year, about \$15,000, according to national police in the area. A hectare of cacao, the slow-growing source of chocolate, generates a tenth as much.

<b>HEADLINE</b>	<b>04/26 Inmate bought mail bomb off dark web</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/US/2018/04/26/SC-inmate-bought-mail-bomb-off-dark-web-to-kill-ex-wife/9091524711151/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=5">https://www.upi.com/Top_News/US/2018/04/26/SC-inmate-bought-mail-bomb-off-dark-web-to-kill-ex-wife/9091524711151/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=5</a>
<b>GIST</b>	April 25 (UPI) -- A South Carolina prisoner was convicted this week of using the dark web to sell drugs and obtain a mail bomb to be sent to his ex-wife.  Michael Young Jr., 32, was already serving a 50-year sentence for attempting to kill his ex-wife and

murdering her father back in 2007 when he got a hold of a contraband cell phone he used to access the dark web and carry out his crimes.

Prosecutors said he used the phone to purchase marijuana via a supplier in California that was sent to a residence in South Carolina, where Young's co-conspirator, Vance Volious Jr., would pick it up and re-distribute it. Several other people have also been implicated in the drug conspiracy, including 14 South Carolina Corrections Department officers who were indicted Wednesday.

But Young didn't stop with the drug dealing. He also wanted to finish kill the woman he attempted to kill more than a decade earlier.

"Let me ask you this...could u possibly booby trap a box? So that as soon its opened...boom? Just curious," Young wrote to a seller on the dark web's Alpha Bay Market.

The seller said it could be done and Young sent cryptocurrency to pay for the "box."

"Young used Bitcoin to pay for the mail bomb to be sent to a conspirator's residence," prosecutors said. "He also had re-shipment labels addressed to his ex-wife to be sent to Volious' house in Columbia. Co-conspirator Tyrell Fears -- who previously pleaded guilty -- obtained the labels from Volious, armed the mail bomb and delivered the inert explosives package to the Post Office in [Irmo, S.C.] on June 6, 2017."

The mail bomb might have been delivered if a U.S. Postal Inspector didn't intercept the package. The next day, Young, Volious and Fears were indicted.

Young and Volious were both convicted of conspiracy, transport of an explosive with the intent to kill, mailing a non-mailable explosive with the intent to kill, and carrying an explosive during the commission of another felony.

<b>HEADLINE</b>	<b>04/25 Vehicle rental agencies safety concerns</b>
<b>SOURCE</b>	<a href="https://www.theglobeandmail.com/canada/article-vehicle-rental-agencies-struggle-with-screenings-as-security-concerns/">https://www.theglobeandmail.com/canada/article-vehicle-rental-agencies-struggle-with-screenings-as-security-concerns/</a>
<b>GIST</b>	Monday's deadly rental van rampage in Toronto shows how quickly a vehicle can be turned into a weapon, but rental agencies are finding few clear options to prevent their property from involvement in such violent acts.

The urgency to find solutions is increasing, however.

The attack in Toronto that left at least 10 people dead and several injured is only the latest of a spate of vehicle attacks — including one in Edmonton last September — that have security experts grappling with solutions.

Efforts are further along in Europe, which has seen a rash of vehicle attacks across the continent. In the U.K., vehicle rental companies were asked to conduct tougher background checks following two separate van attacks in London last June.

But rental agencies are still limited in how well they can screen customers, said Toby Poston, director of communications at the British Vehicle Rental and Leasing Association.

“Members aren’t experts at profiling customers,” said Poston.

“People don’t come into rental branches wearing camo gear and stab vests and with that sort of glint in their eye. Quite often, these people just present themselves like any normal person.”

The British association is, however, looking to better co-ordinate with law and security officials to make it easier to share data. Poston said rental agencies wouldn’t have access to terror watchlists or the like, but could potentially feed information to authorities for better monitoring.

Member companies are also looking to potentially institute other record searches like credit and criminal background checks, but even then there is no clear way to determine that a vehicle shouldn’t be rented, said Poston.

“You have to remember that a criminal record is not always reason enough to not rent someone a vehicle. And you have to be careful from a discrimination point of view.”

The accused in the Toronto van attack, Alek Minassian, did not even raise any red flags during a brief stint in the Canadian Armed Forces last year, a military source told The Canadian Press.

Toronto police said he rented the van from a Ryder rental location north of the city. The company said Tuesday it was fully co-operating with authorities, but declined to comment on its current security policies.

The Associated Canadian Car Rental Operators said government officials have yet to reach out to try to co-ordinate data sharing.

But any such efforts would be complicated, said vice president of government relations Craig Hirota.

“It’s challenging, how do you use that information so that it doesn’t infringe on existing rights of the individual and rights to privacy?”

The RCMP’s National Critical Infrastructure Team has been in contact with industry and sends out relevant information, Hirota added.

“We are in the loop with local and federal law enforcement when there are bulletins.”

He said the rental industry has long been concerned with fraudulent and criminal activity with rentals, but there are limited options for screenings.

“Vehicle rental agencies have been concerned with people doing bad things with rental cars since the inception of the industry. Obviously if there was a way to tell a renter was going to do something prohibited with your vehicle, we’d love to have that.”

The U.K. rental association is looking to security models elsewhere, including the New York Police Department's Operation Nexus program that facilitates reporting of suspicious business encounters.

It is also considering the establishment of a national accreditation scheme that could include training and formalizing policies such as no cash rentals. Companies also generally require business accounts for customers wanting to rent larger trucks, said Poston.

Elsewhere in Europe, Italy has implemented a real-time notification scheme with rental operators and a similar one is being developed in Belgium. Sweden is looking to introduce geofence technology that could connect with a vehicle's on-board computer and limit its speed to a safe level.

The ease of carrying out such attacks, and the difficulties in detecting them are part of the reason for their rise, said Jeremy Littlewood, an assistant professor at Carleton University's Norman Paterson School of International Affairs.

"It's easy to replicate if someone gets that into their head," said Littlewood.

Littlewood also questioned the effectiveness of background checks. He pointed out that Alek Minassian, now charged with 10 counts of first-degree murder for Monday's attack, was not known to police.

"So far, police authorities are saying this person was not known to us. And so even if we had a database, our individual in this case is not going to show up from the police side."

Even when perpetrators are known it is still difficult to stop an attack, said Littlewood, noting that Martin Couture-Rouleau was reported to be under RCMP surveillance when in 2014 he used a vehicle in Saint-Jean-sur-Richelieu, Que., to hit two members of the Canadian Armed Forces, leaving one dead.

Prevention has instead focused on more cement barriers, and heavy trucks at intersections for major events, but there's no way to fully prevent this sort of attack entirely, said Littlewood.

"We have to recognize the limits of what can be done here, and the reality is we have to accept there are going to be some risks, and we can never entirely make ourselves into a zero-risk world."

<b>HEADLINE</b>	<b>04/26 Ferry terminals: cut in line, get a fine</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/cut-in-line-get-a-fine-at-state-ferry-terminals">http://komonews.com/news/local/cut-in-line-get-a-fine-at-state-ferry-terminals</a>
<b>GIST</b>	<p>EDMONDS, Wash. - Ferry riders beware - as new warnings are out about the crackdown on cutting in line to board a boat.</p> <p>It takes an eagle-eye to catch all the line cutters, and whether it is by accident or on purpose, people keep finding ways to bypass the toll booths and other drivers.</p> <p>"When you deal with the public you're going to find all these people who try to find loopholes in the system," said Rory Rodriguez, a terminal attendant in Edmonds for the Washington State Ferries.</p> <p>Peer pressure keeps most passengers honest. However, even drivers who sneak in a shortcut don't always do it intentionally.</p> <p>"People are guided by GPS, and GPS doesn't always pick up where the back is at and where a queue or a line for the ferry starts or ends," said Washington State Patrol Trooper Kevin Fortino.</p> <p>The number of line cutting reports have seen a spike. In 2017, a total of 2,866 complaints came in. That's well above the 1,600 from 2016.</p>

	<p>And it could get worse now that it's near the peak season.</p> <p>“As we get into the summer months, that's kind of the Super Bowl for line cutting,” said Ian Sterling, spokesperson for the Washington State Ferries.</p> <p>Line cutting can bring a \$136 fine, but whether that’s issued is up to the trooper’s discretion.</p>

<b>HEADLINE</b>	<b>04/26 FBI campaign: sex assault on planes</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/local/fbi-launches-campaign-about-sexual-assault-on-aircraft/739308620">https://www.kiro7.com/news/local/fbi-launches-campaign-about-sexual-assault-on-aircraft/739308620</a>
<b>GIST</b>	<p>SEATAC, Wash. - The FBI on Thursday launched a new campaign about sexual assault on aircraft, reminding passengers it is a federal crime and urging victims to come forward.</p> <p>Special Agent Bruce Reynolds said even, if an assault happened years ago, FBI agents want to hear from passengers.</p> <p>"I believe it's an underreported crime. A lot of times people are reluctant to come forward," Reynolds said.</p> <p>The FBI said the number of reports of sexual assaults on airplanes has risen from 38 in fiscal year 2014 to 63 in the fiscal year that ended in 2017.</p> <p>The FBI's new public message urges passengers to take precautions, such as booking children traveling alone in aisle seats so flight attendants can easily see if they're safe, keeping armrests down and asking to be reseated if your gut tells you someone's behavior is suspicious.</p> <p>Reynolds also suggests passengers "not be in a situation where you consume too much alcohol, or maybe on long flights, overnight flights, where you take sleeping pills."</p> <p>Delta Air Lines declined comment on Dvaladze's lawsuit but said in a statement that Delta crews are "trained to respond to a number of onboard passenger disruptions."</p>

	<p>Alaska Airlines also recently started new training for its crews.</p> <p>Sen. Patty Murray, D-Washington, sponsored a bill requiring that onboard sexual misconduct be reported to a law enforcement agency.</p>

<b>HEADLINE</b>	<b>04/26 State working thru rape kit backlog</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/04/26/washington-working-through-rape-kit-backlog-but-has-several-thousand-to-go/">http://q13fox.com/2018/04/26/washington-working-through-rape-kit-backlog-but-has-several-thousand-to-go/</a>
<b>GIST</b>	<p>FEDERAL WAY, Wash. -- Authorities say DNA evidence led to the arrest of the so-called Golden State Killer this week, who is believed to have raped 51 women over several years.</p> <p>But what about DNA that is in the hands of investigators right now, just waiting to be processed? The state of Washington has a huge backlog of untested rape kits that hold evidence that could point to the attackers.</p>

It's something law enforcement is working to solve. Q13 News reporter Simone Del Rosario questioned Capt. Monica Alexander of Washington State Patrol about the process.

Q: How did this backlog happen in the first place?

A: People were not submitting kits once upon a time, if they didn't have a suspect, there were different reasons why kits were not submitted. And then when the law was passed that every kit had to be tested, that's when we realized there's a lot of kits out there and there's a lot more kits than there are people to process those kits.

Q: What are we looking at backlog wise? How many kits do we think are out there?

A: We're looking at anywhere between 7,000 and maybe as high as 10,000 kits now.

Q: What's been the result of testing some of these kits? What have we found out?

A: We've had 121 matches since they've been uploaded into CODIS and we've had 345 uploaded into CODIS. What that tells us is that's good information we can pass back to law enforcement agencies that submit those kits and now they can start trying to put that together with the case work that they're doing.

Q: So what's going to take priority: Is it the new rape test kit that comes in or some of the backlog?

A: You can state that there's a rush and we have to evaluate that on a case-by-case basis, so that's the responsibility of laboratory managers to prioritize those cases depending on what the law enforcement agency shares with us.

Q: When would we be able to erase this backlog and address just the kits coming in?

A: With what we have right now it would take probably two and a half to five years to clear out all the backlog. When you put the new cases on top of that, I really don't have an answer for that because we never know day by day how many cases we're going to get in.

Q: For a victim, what does this do for peace of mind?

A: When the police go out and arrest them and they're prosecuted for their crime, it changes people's lives. It absolutely changes these people's lives. And I think we keep that in our mind and it's frustrating when we have this DNA but we just don't have enough people to process it or a large enough lab to process it, but I believe very strongly with the way that technology is moving so quickly forward, this isn't going to be a problem for long.

<b>HEADLINE</b>	<b>04/26 Latin America amidst murder crisis</b>
<b>SOURCE</b>	<a href="https://www.theguardian.com/world/2018/apr/26/latin-america-murder-crisis-violence-homicide-report">https://www.theguardian.com/world/2018/apr/26/latin-america-murder-crisis-violence-homicide-report</a>
<b>GIST</b>	<p>Latin America has suffered more than 2.5m murders since the start of this century and is facing an acute public security crisis that demands urgent and innovative solutions, a new report warns.</p> <p>“The sheer dimensions of homicidal violence are breathtaking,” says the report by the Igarapé Institute, a Brazil-based thinktank focused on security and development issues.</p> <p>The publication, released on Thursday, paints a bleak portrait of what it calls the world’s most homicidal continent.</p> <p>Latin America suffers 33% of the world’s homicides despite having only 8% of its population. One-quarter of all global homicides are concentrated in four countries – Brazil, Colombia, Mexico and Venezuela – all of which are gearing up for presidential elections in which security is a dominant theme.</p> <p>“The overall trend right now in Latin America is one of increasing homicides and deteriorating security,” said Robert Muggah, one of the report’s authors.</p> <p>“Latin America is a large area and there are lots of variations. But as a region – including Mexico down to Central America and South America – the rate of homicide is set to continue increasing up until 2030. The only other places we are seeing similar kinds of increases are in parts of southern and central Africa and some war zones.”</p> <p>The report lays bare how young Latin Americans are disproportionately affected, with nearly half of all homicide victims aged 15–29. It also denounces the “astonishingly” large role of guns.</p> <p>Muggah said: “In addition to having these exceedingly high, epidemic levels of homicide, the vast majority of these homicides are committed with firearms. Over 75% of homicides are gun-related.” The global average is about 40%.</p>

<b>HEADLINE</b>	<b>04/26 Charges dropped: teen ‘planned’ shooting</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/charges-dropped-against-jack-sawyer-teen-accused-of-threatening-school-shooting-in-vermont/">https://www.cbsnews.com/news/charges-dropped-against-jack-sawyer-teen-accused-of-threatening-school-shooting-in-vermont/</a>
<b>GIST</b>	<p>The thin line between planning a school massacre and attempting it has a teenage suspect on the verge of walking free in Vermont. Now, the community is on edge.</p> <p>At Fair Haven Union High School, attendance has been down as much as 25 percent in the last two months.</p> <p>"He threatened to kill a lot of people in our school," said one student at the school.</p> <p>Jack Sawyer, a former student, carefully detailed his plan to shoot up the school in a journal entitled "The</p>

journal of an active shooter." It listed who he wanted to kill, like the school resource officer, saying, "I'm intending to just blow his (expletive) head off before he can even draw his gun or think about what's happening."

The plot was foiled when Angela McDevitt, a 17-year-old acquaintance of Sawyer's from upstate New York, was texting with him on the day of the Parkland, Florida, shooting. McDevitt thought a mutual friend of theirs might have been a student at Marjory Stoneman Douglas High School.

"I went to Jack, and I was like, 'Hey, this girl who we both know, school just got shot up,'" she said.

In response, she said he told her, "That's fantastic. I 100 percent support it. What school was it?"

McDevitt told the police officer at her school, who quickly called the Vermont State Police. Prosecutors charged Sawyer with attempted murder and aggravated assault. But they weren't expecting a 112-year-old law to get in the way.

In Vermont, "planning" isn't "attempting." So last week, hard as it may be to believe, prosecutors were forced to drop the felony charges against Sawyer, after the Supreme Court ruled there was "no attempt," since the act had not been committed.

"When you look at it, telling the detectives you're just delaying by law enforcement interactions," said Bill Humphries, the Fair Haven police chief. "I understand their ruling, I don't agree with it, but I mean those are the kind of laws we have to live with right now."

If Sawyer can make the reduced bail, he must seek mental health help, but he will get out of jail. That leaves principal Jason Rasco dealing with panicked students and anxious faculty.

No school in America lives without fear these days, but the threat at Fair Haven Union High seems a little more real.

<b>HEADLINE</b>	<b>04/26 Rape kit backlog blamed in assault</b>
<b>SOURCE</b>	<a href="https://www.king5.com/article/news/local/rape-kit-backlog-blamed-in-second-assault-in-tumwater/281-546341443">https://www.king5.com/article/news/local/rape-kit-backlog-blamed-in-second-assault-in-tumwater/281-546341443</a>
<b>GIST</b>	<p>A sexual assault case in Tumwater provides a glaring example of how Washington state's rape kit backlog is still having serious and devastating consequences.</p> <p>Tumwater police have linked suspect Logan Humphrey, 35, to two violent sexual assaults that occurred within six months of each other, but it took police months to obtain DNA evidence that could have potentially put the suspect behind bars before the second crime occurred.</p> <p>Detectives first opened the case in July 2017 when a woman was threatened at knife-point and raped in a wooded area near Tyee Drive, according to the police report.</p> <p>Tumwater police Lt. Jen Kolb said, "it caused us great concern that he had the capability of doing it again."</p> <p>A sexual assault kit containing critical DNA evidence was taken immediately after the crime, but Tumwater police say they didn't receive the results until January 23, 2018, around six months later, finally allowing them to arrest the suspect on January 25.</p> <p>However, DNA evidence links that same suspect to another Tumwater sexual assault that occurred on January 22, the day before the first case's DNA results were relayed to police.</p>

“You hear something this horrific and it worries me how many sexual assault offenders have we left on the streets?” said Washington state Representative Tina Orwall, D-Des Moines, one of the lead lawmakers fighting to fix the state’s rape kit backlog.

While progress has been made since she began working on the issue several years ago, she says this case highlights the problem is far from being solved.

“It's heart-wrenching to think somebody suffered when maybe we could have gotten this dangerous person off the streets so they couldn't have harmed anyone else, and I worry every day when I think about the 10,000 kits we haven't finished testing, or the new ones in the lab,” said Orwall. “It speaks to needing to have urgency to have every kit tested.”

In a statement Thursday night, a spokesman with Washington State Patrol said the department believes it’s vital to test every sexual assault kit sent to the state crime lab but noted that due to the large volume of DNA cases, scientists have to prioritize cases.

The July rape in Tumwater was granted priority status, according to WSP. Lab techs required additional evidence to process the case resulting in it being assigned to a scientist a month later on August 30, 2017, according to a spokesman. However, it still took several months to complete the case and receive a “Combined DNA Index System” or CODIS hit. WSP confirms the forensic scientist on the case called Tumwater PD on January 23; a final report was issued January 30.

“There are a multitude of factors which play a role in the amount of time it takes to complete a DNA case. These factors include the complexity of the case, whether or not the DNA has a CODIS hit and the technical review required of each case,” said spokesman Kyle Moore.

In addition to sexual assault cases, the State Crime Lab also processes homicides and other violent crimes. In 2017, the median DNA case took around 198 days, or more than six months to complete, according to Moore.

<b>HEADLINE</b>	<b>04/26 DNA from genealogy site aided capture</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/wireStory/accused-serial-rapist-killer-undetected-working-cop-54741076?cid=clicksource_81_2_hero_headlines_headlines_hed">http://abcnews.go.com/US/wireStory/accused-serial-rapist-killer-undetected-working-cop-54741076?cid=clicksource_81_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>More than three decades after his trail went cold, one of California's most prolific and elusive serial killers was caught when investigators matched crime-scene DNA with genetic material stored by a relative on an online genealogical site, prosecutors said Thursday.</p> <p>Authorities have said the DNA tied former police officer Joseph James DeAngelo, 72, to most of the 12 killings he is accused of committing between 1976 and 1986 as part of the Golden State Killer case.</p> <p>Investigators also allege DeAngelo raped more than 50 women during that period.</p> <p>Authorities declined to name the DNA site used to track the DNA.</p> <p>Companies such as Ancestry.com and 23andMe charge customers to use their DNA to produce genetic profiles that determine ethnicity and can identify long-lost relatives, among other services. Both companies said Thursday they weren't involved in the case against DeAngelo.</p> <p>Sacramento County District Attorney Anne Marie Schubert said investigators surreptitiously obtained his DNA last week from discarded material that ended up matching DNA at crime scenes.</p> <p>Police received thousands of tips over the years, but DeAngelo's name had not been on the radar of law enforcement before last week, Schubert said.</p>

In other developments Thursday, police in Visalia said DeAngelo is a suspect in the 1975 killing of community college teacher Claude Snelling in the farming community about 40 miles (64 kilometers) south of Fresno.

If the link is confirmed, it would boost the number of victims to 13 in the serial killing case.

DeAngelo worked as a police officer in nearby Exeter from 1973 to 1976, and police in the region believe he also is the Visalia Ransacker, responsible for the death of Snelling, who was fatally shot while stopping someone from kidnapping his 16-year-old daughter, and about 100 burglaries.

Visalia police Chief Jason Salazar said Snelling's death and the region's burglaries weren't part of the tally of crimes authorities released Wednesday in the serial killing case because investigators lacked DNA evidence on those crimes.

Salazar said fingerprints and shoe tracks will be eyed for matches to DeAngelo. Detectives are also looking to see if any items taken during the Visalia burglaries are uncovered during the investigation.

In addition, DeAngelo matches the description of Snelling's killer, Salazar said, and the attacker used sophisticated pry tools to gain entrance to locked homes, just as authorities say DeAngelo did in other crimes.

The culprit also wore a ski mask and eluded capture because of an apparent deep-knowledge of police work.

"He always had a good escape route," Salazar said.

<b>HEADLINE</b>	<b>04/26 Suspected serial killer 'shocked by arrest'</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/suspected-golden-state-killer-shocked-arrest-told-police/story?id=54746113">http://abcnews.go.com/US/suspected-golden-state-killer-shocked-arrest-told-police/story?id=54746113</a>
<b>GIST</b>	The suspected "Golden State Killer" who was arrested this week for killing and raping dozens of California residents decades ago, seemed shocked to find police outside his home, according to Sacramento County Sheriff's Department official Paul Belli.

Joseph James DeAngelo, a 72-year-old former police officer, was taken into custody on Tuesday at his home in Citrus Heights in Sacramento County, the same county where his alleged crime spree began in 1976. The crimes continued across the state until 1986.

DeAngelo lived at the home with family but was home alone when he was arrested, Belli told ABC News.

DeAngelo told police he had a roast in the oven, and officers said they could take care of it, Belli said.

He was placed under arrest without incident.

DeAngelo is believed to have committed 12 murders, at least 50 rapes and multiple home burglaries in the 1970s and 1980s.

His alleged "reign of terror" spanned from the Sacramento area in Northern California down to Orange County in Southern California, Orange County District Attorney Tony Rackauckas said Wednesday.

DeAngelo served in the Navy in the 1960s. An Auburn Journal article from 1967 said DeAngelo was a sailor aboard the USS Canberra.

DeAngelo was a police officer in Exeter, California, from 1973 to 1976, officials said.

In 1976 he served as a police officer in the city of Auburn until he was fired in 1979 for allegedly stealing a hammer and a can of dog repellent, The Associated Press reported, citing Auburn Journal articles from the time.

DeAngelo then spent 27 years working for Save Mart Supermarkets at a distribution center in Roseville, near Sacramento, said Victoria Castro, a public affairs manager for Save Mart. He retired last year.

"None of his actions in the workplace would have lead us to suspect any connection to crimes being attributed to him," Castro said in a statement. "We are working with the Sacramento County District Attorney's Office on their investigation."

<b>HEADLINE</b>	<b>04/26 Bill Cosby found guilty on all charges</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/bill-cosby-found-guilty-charges/story?id=54746891&amp;cid=clicksource_81_2_hero_headlines_headlines_hed">http://abcnews.go.com/US/bill-cosby-found-guilty-charges/story?id=54746891&amp;cid=clicksource_81_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>It was a long, uphill battle, years in the making, but prosecutors in Montgomery County, Pennsylvania, finally won the conviction on felony sexual assault charges of the man once revered as "America's Dad."</p> <p>At the age of 80, Bill Cosby was convicted today on three felony counts of aggravated indecent assault stemming from drugging and molesting a woman in his suburban Philadelphia home 14 years ago.</p> <p>As the verdict was read just before 2 p.m. in the Montgomery County Courthouse in Norristown, Pennsylvania, Cosby leaned his head down, took a deep breath and appeared to close his eyes.</p> <p>Cosby's main accuser, Andrea Constand, and two other women who say Cosby also drugged and sexually assaulted them were in the courtroom and burst into tears as the verdict was announced.</p> <p>"I feel like my faith in humanity has been restored," one of the women, Lili Bernard, said after hearing the verdict. "I stand here in the spirit of Martin Luther King, who said that the arc of the moral universe is long but today it has bent towards justice.</p> <p>"Today, this jury has shown what the #MeTo movement is saying, that women are worthy of being</p>

	<p>believed," she said. "And I thank the jury, I thank the prosecution."</p> <p>The conviction came about 11 months after a mistrial was declared in Cosby's first trial when a jury failed to reach a verdict.</p> <p>The jury of seven men and five women began deliberating Wednesday and spent a little over 12 hours going over evidence presented to them over the last two weeks before rendering their unanimous decision.</p> <p>Judge O'Neill ordered Cosby to surrender his passport but ruled he can remain free on \$1 million bail until his sentencing sometime in the next 60 to 90 days. He faces up to 30 years in prison.</p>

HEADLINE	<b>04/20 Tampa Bay opens regional fusion center</b>
SOURCE	<a href="http://www.fox13news.com/news/local-news/florida-law-enforcers-open-information-sharing-center-in-tampa">http://www.fox13news.com/news/local-news/florida-law-enforcers-open-information-sharing-center-in-tampa</a>
GIST	<p>AMPA (FOX 13) - Law enforcement agencies in the Bay Area are taking information-sharing to a new level.</p> <p>The region's first Fusion Center has opened its doors inside the Hillsborough County Sheriff's District 2 Office, off North Falkenburg Road in Tampa.</p> <p>It's being called the Tampa Bay Regional Intelligence Center (TBRIC).</p> <p>Through the center, nearly 50 agencies share federal and local intelligence on crime trends and examine terrorism cases with possible links nearby.</p> <p>Fusion centers were created in the wake of the September 11 attacks. Federal authorities began to realize much of the information that could have prevented the attacks was available to those who could have stopped them, but the information wasn't being properly dispersed.</p> <p>The solution was to create centers across the country where multiple law enforcement agencies work collaboratively under one roof.</p> <p>"The Tampa Bay Regional Intelligence Center allows us to identify those organized crime trends that don't really stop at those borders. They extend north up to Sumter County, south to Hillsborough, west to Pinellas and east of Polk," said Sgt. Joe Maurer, Director of the TBRIC.</p> <p>The center currently has 24 analysts who monitor bulletins and reports from each local agency.</p> <p>Hillsborough County Sheriff Chad Chronister announced the center's first success on Monday when two men were charged with running Florida's biggest stolen cigarette ring.</p> <p>Operation Up in Smoke stretched across 15 counties and 10 judicial circuits, according to Chronister.</p> <p>The center is where authorities first noticed a trend in robberies and burglaries of large quantities of cigarettes across their cities and counties. They began to compare surveillance images and tips in order to catch the culprits.</p>

	<p>The Department of Homeland Security operates in a secure room at the center, allowing local agencies to have access to classified information.</p> <p>Maurer said working in close quarters allows them to quickly find a Florida connection to any national crimes, or terrorism-related acts, such as the attack in New York City last November on Halloween.</p> <p>Accused terrorist and former Tampa resident, Sayfullo Saipov, 29, drove a rental truck down a bike path in Manhattan. The attack claimed eight lives.</p> <p>"That had a nexus here to Tampa," explained Maurer. "We would have known about that a lot sooner than we normally would have, and we would have been able to assist the [Joint Terrorism Task Force], the FBI and the Bureau."</p> <p>The Fusion Center opened its doors four months ago. It will also be used to assess threats at major events, like the Florida State Fair, where hundreds of thousands of people are in one place at a time.</p>

<b>GIST</b>	<p>MOSCOW — Russians wanting a glimpse of the American Dream now have to wait. Or not go at all.</p> <p>Escalating tensions between Moscow and Washington are putting a damper on Russians' vacation plans, catching ordinary people in a diplomatic crossfire that has distinct Cold War overtones. A year ago, obtaining a U.S. tourist visa could take less than a week. Now, it comes with an eight-month delay.</p> <p>"I am waiting for a miracle to happen. Maybe tomorrow Russia and the United States will decide they are friends, all staff will come back to the embassy, and I'll get my visa," said Mohamed Torky, executive chef at a Holiday Inn in northern Moscow.</p> <p>Torky had planned a July vacation to the United States, to see fabled Las Vegas and eat steaks in Texas. He even thought of fulfilling his childhood dream of driving a Ford Mustang on American highways. But instead, he'll be vacationing in nearby Georgia, or Egypt. The 32-year-old is furious. "Putin doesn't suffer, Trump doesn't suffer, but people like me suffer," he said, referring to the Russian and American presidents.</p> <p>Since last month's expulsion of 60 U.S. diplomats, and the closure of the U.S. consulate in St. Petersburg, part of the latest tit-for-tat in the standoff between Moscow and the West, the next available visa appointment at the U.S. Embassy in Moscow is in 250 days' time. The diplomats were kicked out after Britain and its allies expelled a total of more than 150 Russians from embassies for the poisoning of former double agent Sergei Skripal, which Moscow denies. Last week, Russia's foreign minister, Sergei Lavrov, described relations with the West as worse than during the days of the Cold War.</p> <p>The visa debacle led Moscow and Washington to trade fresh barbs last week. The Kremlin accused the United States of denying visa appointments to crew members of Aeroflot, Russia's flagship carrier and the only airline with direct flights to the United States. A State Department official dismissed the claims as "unhelpful and simply false."</p> <p>Two dancers from Moscow's famed Bolshoi Theater, including a prima ballerina, had their visas rejected at the last minute, before a scheduled performance in New York. The Russian Foreign Ministry put the blame squarely on the United States on Saturday, for "trying to put up a visa wall," making "our citizens' visits to the U.S. virtually impossible. . . . Such things did not happen even during the Cold War."</p>

	<p>U.S. Citizen and Immigration Services, which oversees performer visas, said it does not comment on specific cases, citing privacy concerns.</p> <p>Avoiding the daunting 250-day wait, hundreds of Russians have been flooding neighboring former Soviet countries such as Latvia in recent weeks, hoping to take advantage of U.S. embassies in countries not sparring with Washington. A cottage industry of “wine and visa” tours has sprung up in the Caucasus, where visa-seekers can wait out the processing time by sipping their way through Georgian vineyards.</p> <p>But not all Russians have the time, or can afford, an additional holiday in a nearby country in their quest to get an American visa, and the actual numbers of Russians visiting the United States have plummeted.</p> <p>“Now the outflow of tourists is much lower. It’s practically none,” said Maya Lomidze, spokeswoman for Russia’s Association of Tour Operators. For Torky and others who have applied for a visa but given up on the wait, the \$160 processing fee will not be refunded.</p> <p>Foreign travel, which was off-limits during the Soviet era, is relished by ordinary Russians, after decades of pent-up desire. Millions visit the beaches of Thailand and Mediterranean Europe each year. But the number of Russian tourists to the United States has never been high. According to official figures, the vast majority of the 240,000 Russians who visited last year were on business or study trips. For many, the United States feels elusive, and the thought of visiting the country conjures up Hollywood-inspired fantasies.</p>

<b>HEADLINE</b>	<b>04/22 G7 concerns: Russia, Iran at forefront</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/national-security/russia-iran-at-forefront-of-concerns-as-diplomats-from-leading-democracies-meet/2018/04/22/48828aa1-473b-4246-9696-1a8f9fc996fb_story.html?utm_term=.35ec90768396">https://www.washingtonpost.com/world/national-security/russia-iran-at-forefront-of-concerns-as-diplomats-from-leading-democracies-meet/2018/04/22/48828aa1-473b-4246-9696-1a8f9fc996fb_story.html?utm_term=.35ec90768396</a>
<b>GIST</b>	<p>TORONTO — Diplomats from the world’s seven leading democracies met here Sunday to discuss ways to counter Russia in Syria and Ukraine and Iran in the Middle East.</p> <p>At the forefront of the two-day meeting of foreign ministers from the Group of Seven, or G-7, are mutual concerns over Russia. In a sign of the steep deterioration of relations between the United States and Russia, U.S. officials spoke about the Kremlin’s behavior in terms often used for a U.S. arch adversary, Iran.</p> <p>“There was a G-7 unity on opposing Russia’s malign behavior,” said a senior State Department official, speaking on the condition of anonymity to describe the private talks. The official said there would still be dialogue with Russia “while we hold them accountable for their malign activities and their efforts to destabilize nations.”</p> <p>A few years ago, Russia was the group’s eighth member. It was suspended from the exclusive club after it annexed Crimea from Ukraine in 2014. The G-7 now comprises Britain, Canada, France, Germany, Italy, Japan and the United States.</p> <p>Russia’s activities in Ukraine and elsewhere since then have served as a reminder of the G-7’s original purpose. The group was formed in 1975 to stand up for the values of open democracies and liberty. Now, with the West and Russia in their most confrontational period since the end of the Cold War, the G-7 has united to push back against its former member.</p> <p>The G-7 condemned the use of what it suspects was a Russian nerve agent against a former Russian spy and his daughter in Britain. And it issued a strong statement of support for the allied airstrikes in Syria, where Russian support has turned the tide of civil war in favor of President Bashar al-Assad.</p> <p>Toronto marks the first high-level talks between the United States, France and Britain since the three</p>

nations conducted airstrikes on Syria on April 13 to retaliate for the suspected use of chemical weapons by the Syrian military.

French President Emmanuel Macron, who will arrive in Washington Monday on a state visit, said Sunday that the United States and its allies have a continuing role to play in Syria for some time. “The day we will finish this war against ISIS, if we leave, definitely and totally, even from a political point of view, we will leave the floor to the Iranian regime, Bashar al-Assad and his guys, and they will prepare the new war,” he said on Fox News. “They will fuel the new terrorists.”

The diplomats met under the cloud of crises and intransigent problems around the world. The menu of hotspots was so full that they ended up postponing a meeting that acting secretary of state John Sullivan was to have with his counterparts from France, Britain and Germany to discuss European efforts to craft a supplemental agreement to the 2015 Iran nuclear deal, formally known as the Joint Comprehensive Plan of Action (JCPOA). President Trump has threatened to walk away from the accord on May 12 if his objections are not addressed, including “sunset” clauses in the deal that phase out restrictions on Iran over time.

With three weeks to go, it was unclear whether enough progress can be made to win his approval.

“It’s too early to tell,” the State Department official said.

Before Sullivan and British Foreign Secretary Boris Johnson held a closed-door meeting, Johnson was overheard saying, “One of the things we are concerned about now is the JCPOA and where that is headed.”

The diplomats also devoted time to discussing the expected summit between Trump and North Korean leader Kim Jong Un. North Korea has told South Korea that it is willing to discuss ending its nuclear weapons program, but the United States remains skeptical.

<b>HEADLINE</b>	<b>04/22 Cars still on road w/‘ticking time bomb’</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/local/trafficandcommuting/why-are-tens-of-thousands-of-americans-still-driving-around-with-explosive-devices-in-their-cars/2018/04/22/78b844d8-343e-11e8-8abc-22a366b72f2d_story.html?utm_term=.1d25a8c17243">https://www.washingtonpost.com/local/trafficandcommuting/why-are-tens-of-thousands-of-americans-still-driving-around-with-explosive-devices-in-their-cars/2018/04/22/78b844d8-343e-11e8-8abc-22a366b72f2d_story.html?utm_term=.1d25a8c17243</a>
<b>GIST</b>	<p>Alexander Brangman finds comfort in remembering how long his daughter lived — 26 years, 11 months, 9 hours and 15 minutes — rather than the horrible and needless way she died.</p> <p>Jewel Brangman, an academic all-American in high school, about to pursue a PhD at Stanford, had no need to know much about the rental car she drove north toward Los Angeles on a sunny September Sunday almost four years ago.</p> <p>Then came a relatively minor crash — she rear-ended a minivan — and her air bag exploded with a spray of razor-sharp metal shards that severed her carotid artery.</p> <p>Ten years after the biggest safety recall in U.S. history began, Honda says there are more than 60,000 vehicles on the nation’s roads equipped with what experts have called a “ticking time bomb” — defective air bags like the one that killed Brangman. The air bags, which sit about a foot from a driver’s chest, have a 50-50 chance of exploding in a fender bender.</p> <p>They are the most deadly air bags remaining in the recall involving more than 37 million vehicles built by 19 automakers. At least 22 people worldwide have been killed and hundreds more permanently disfigured when the air bags that deployed to protect them instead exploded and sprayed shrapnel.</p> <p>The worst among the bad bags are known as Alphas, driver-side air bags installed in Hondas that have up</p>

to a 50 percent chance they will explode on impact. The 62,307 people still driving with them, many in older-model cars that may have changed hands several times, either have ignored the recall warnings or never received them, Honda said.

With the number of deaths and disfigurements continuing to climb — the last fatality was in January — automakers and federal regulators have rewritten the rule book in their outreach efforts, including deploying teams to knock on doors of Honda owners who have not responded to recall notices.

“We’re good at repairing vehicles,” said Rick Schostek, executive vice president of Honda North America, “but finding and convincing customers of older model vehicles to complete recalls, now that has proved a difficult challenge.”

The massive recall of air bag inflaters made by Takata — which allegedly suppressed tests revealing the flaw and where three key executives are under federal indictment — is well known to Congress and millions of Americans who have been touched by it. But tens of thousands of drivers most at risk remain oblivious to the efforts of automakers and the National Highway Traffic Safety Administration.

“Our last hearing on the ongoing Takata fiasco is just further evidence that NHTSA is just rudderless,” said Sen. Bill Nelson (Fla.), ranking Democrat on the Committee on Commerce, Science and Transportation. “The latest data the committee has received from the automakers shows that individual automaker recall completion rates are all over the place — and millions are still waiting for replacement air bags.”

NHTSA has been without an administrator in the 15 months since Donald Trump entered the White House. The president recently proposed elevating acting director Heidi King to lead the agency. King, whose nomination will require Senate confirmation, told the Commerce Committee last month that car companies have “made progress” on the Takata recall.

“But the progress is uneven,” she said. “Overall completion rates are not where we want them to be.”

Takata air-bag inflaters degrade over time as they are exposed to humidity and repeated wide fluctuation in the daily temperature. That a car may change hands three or four times during a 10-year period has made the recall more difficult, with notices from the car dealer or automaker discarded by people who sold the vehicle years earlier.

<b>HEADLINE</b>	<b>04/22 Last survivor of 19<sup>th</sup> century dies</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/world/2018/04/21/worlds-oldest-person-dies-southern-japan-117-years-old/539747002/">https://www.usatoday.com/story/news/world/2018/04/21/worlds-oldest-person-dies-southern-japan-117-years-old/539747002/</a>
<b>GIST</b>	<p>The century of Lincoln, Darwin and Van Gogh has quietly passed into history with the death of the world's oldest known person and last survivor of the 19th century.</p> <p>Nabi Tajima, 117, died in a hospital Saturday in Kikai, Kagoshima Prefecture, Japan's Kyodo News reported. Tajima had been mostly bedridden at a nursing home in recent years. She was hospitalized about a month ago, family members told the news service.</p> <p>"She passed away as if falling asleep. As she had been a hard worker, I want to tell her 'rest well,' " Tajima's 65-year-old grandson Hiroyuki said.</p> <p>Tajima was born Aug. 4, 1900. The new oldest person is another Japanese woman, Chiyo Miyako, according to the U.S.-based Gerontology Research Group. Miyako, 116, was born on May 2, 1901.</p>

HEADLINE	<b>04/19 Watered-down care in Washington state</b>
SOURCE	<a href="https://www.usnews.com/news/healthiest-communities/articles/2018-04-19/in-washington-island-county-residents-lack-access-to-health-care">https://www.usnews.com/news/healthiest-communities/articles/2018-04-19/in-washington-island-county-residents-lack-access-to-health-care</a>
GIST	<p><b>SEATTLE – MARCIA STATZ</b>, a school nurse on an island that sits in a portal to the Pacific Ocean, has seen firsthand how geographic challenges and a lack of provider options can affect families' access to medical help.</p> <p>Due to state-mandated screening and vaccination requirements, Statz can spend much of her day tracking down students on <a href="#">Washington</a> state's Whidbey Island who haven't had shots or need hearing and vision exams to stay enrolled. But the work often leads to frustration for both her and the students' families, she says, since clinics on the island only accept limited types of insurance and wait times for new-patient appointments are long.</p> <p>"Access to care comes up as a huge barrier," Statz says one morning, in between paperwork and helping students in the South Whidbey School District. "The people may have insurance, but they may have to go to (Seattle's) <a href="#">King County</a> to get their care, which isn't going to work because they probably don't have the gas money to get there."</p> <p>Though each student's problems vary case by case, they reflect a larger issue at hand: The health care needs of Whidbey Island residents and those of nearby island communities can often surpass the options for medical help near their homes or work. <a href="#">Island County</a>, of which Whidbey is a part, is among Washington's worst when it comes to its ratio of people to primary care physicians, <a href="#">data analyses</a> by both U.S. News and the County Health Rankings &amp; Roadmaps project show.</p> <p>In fact, while Island County ranked among the top <a href="#">500 Healthiest Communities</a> in the country and <a href="#">first among communities</a> similar to it in the U.S. News analysis – a project that scored thousands of communities across the U.S. in areas tied to residents' health and quality of life, such as housing, public safety and local economy – it fared relatively poorly in the category of health care access due to its limited availability of doctors and hospital beds. The county came in below the state and national medians on both metrics.</p> <p>The majority of Island County's estimated 83,000 residents – up from some 78,500 in 2010 – live across two primary islands, Whidbey and Camano, which lie north of Seattle and Puget Sound in the Salish Sea. The county includes smaller islands as well, and Whidbey – the largest and most populated – is most easily accessible via a ferry ride from Seattle's metro area.</p> <p>However, a full trip via car and ferry from Whidbey Island to the city of Seattle, <a href="#">which is home to two of the nation's top-ranked hospitals for specialty care</a> – <a href="#">Harborview Medical Center</a> and the <a href="#">University of Washington Medical Center</a> – takes at least an hour.</p> <p>The geographic and transportation barriers can be particularly troublesome "for people who are identified as the vulnerable population," says Kellie Tormey, a member of the Island County Community Health Advisory Board who is helping push for changes to the county's health care system to improve residents' access. "In urgent situations, there may not be a lot of options for them to get to a health care provider or a health care site."</p> <p>One apparent symptom of that shortfall: A number of patients with Medicaid have relied on the county's one emergency room at the <a href="#">WhidbeyHealth Medical Center</a> for non-urgent matters, at a rate higher than in other parts of Washington, Tormey says.</p> <p>Those ER visits are "not only an expensive way to get that type of care, but (it) creates a gap in the patient's ability to get a continuity of health care," Tormey says.</p> <p>Shifts in Island County's population are also playing a role in the access issue, as aging members of Generation X and baby boomers – along with their accompanying health problems – are taking up more of</p>

the pie. People over the age of 55 are projected to account for 44 percent of the county's total population by 2040, says Cheryn Weiser, executive director of Island Senior Resources, a nonprofit serving seniors and adults with disabilities in the county.

"Access to Medicaid and Medicare and coordinated care between different providers is very important," Weiser says. "I don't think we're fully there in Island County."

In a survey completed in 2016, county residents reported they often faced barriers to getting help for behavioral, mental or physical health problems, Tormey says. Nearly one-third of residents with lower incomes said finding health care was one of their biggest daily challenges.

Armed with that survey data, Tormey is co-leading a team of professionals from a variety of backgrounds, including paramedicine and public health, in pushing a [plan](#) to improve residents' knowledge about health care and expand health services on the islands over the next several years. The work involves studying models elsewhere and seeking opportunities for outside money.

Among their first steps for improving access, the group wants to establish a centralized place – physically and online – where residents can find information on services and providers in the county.

Leaders of that project right now are figuring out funding and staffing, with hopes of having such tools fully in place by 2020, Tormey says.

"Does an individual on Island County know what resources are available to them? Do they know how to access them? Is the information readily available?" says Laura Luginbill, the assessment and healthy communities director for Island County's public health department. "We've heard loud and clear, 'No, it's not.'"

<b>HEADLINE</b>	<b>04/23 Scrambling to find school bus drivers</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/news/scrambling-to-put-school-bus-drivers-behind-the-wheel/">http://www.heraldnet.com/news/scrambling-to-put-school-bus-drivers-behind-the-wheel/</a>
<b>GIST</b>	<p>EDMONDS — Even in hard times, many school districts go looking for bus drivers.</p> <p>It can become that much harder when the economy is humming.</p> <p>Consider some numbers from the Edmonds School District, which transports 7,000 students a day along 140 routes, which typically include a collection of runs for high school, middle school and elementary school students.</p> <p>At last count, the district had 156 regular and substitute drivers. A dozen are out on long-term leave. That leaves 144 drivers for 140 routes with little wiggle room if anyone calls in sick or has family emergencies.</p> <p>That often means drivers must combine routes to pick up the slack and sometimes run late.</p> <p>“Drivers are under a lot of pressure,” said Ben Mount, the district’s transportation director. “As we add more to their routes, it’s harder to do what we have scheduled.”</p> <p>Late arrivals can have ripple effects, both in terms of the instructional day and for families.</p> <p>The bottom line is Edmonds could use 20 more drivers for a job Mount describes as challenging as it is rewarding.</p> <p>What’s happening in the Edmonds district is commonplace across the county.</p> <p>Large signs seeking more drivers are posted prominently at schools in Marysville and other districts.</p>

“This shortage appears to be getting more impactful with each school year,” said Kristin Foley, a Snohomish School District spokeswoman.

“We are just surviving covering daily routes and a few field trips in house every day,” said Lisa Youngblood Hall, a spokeswoman for the Northshore School District. “Some field trips are outsourced to charter companies.”

In the Mukilteo School District, finding enough bus drivers is a constant challenge.

“We have been fortunate in being able to maintain a good substitute pool, but we now do training almost constantly and on demand when we have qualified candidates rather than waiting to conduct training classes two or three times a year, as we used to do in the past,” district spokesman Andy Muntz said.

Edmonds, too, offers more frequent training to get drivers on the road sooner than before.

Federal law also has changed over the years, adding the need for more school bus drivers. A prong of the McKinney Vento Act provides homeless students with transportation to school even if they move outside the school district. The goal is to counteract the educational disruption caused by mobility.

The result is more students are being driven longer distances to get to school. About one in every 25 students attending Washington public schools is homeless or is living in a hotel, in a car, or with friends, according to the Office of the Superintendent of Public Instruction. In 2016-17, a total of 40,934 Washington students were counted as homeless.

“We have four drivers and buses that are dedicated strictly to transporting McKinney Vento students to schools out of district or transporting them from out-of-district schools to our district,” said Gary Sabol, a spokesman for the Arlington School District.

In the Edmonds district, the out-of-district routes take drivers as far away as Burien, Highline and Granite Falls. The numbers of long-distance commuters has increased by about 20 percent over the past year to around 600.

<b>HEADLINE</b>	<b>04/22 Sudan secret police stifles migration</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/04/22/world/africa/migration-european-union-sudan.html?hp&amp;action=click&amp;pgtype=Homepage&amp;clickSource=story-heading&amp;module=second-column-region&amp;region=top-news&amp;WT.nav=top-news">https://www.nytimes.com/2018/04/22/world/africa/migration-european-union-sudan.html?hp&amp;action=click&amp;pgtype=Homepage&amp;clickSource=story-heading&amp;module=second-column-region&amp;region=top-news&amp;WT.nav=top-news</a>
<b>GIST</b>	<p>ABU JAMAL, Sudan — At Sudan’s eastern border, Lt. Samih Omar led two patrol cars slowly over the rutted desert, past a cow’s carcass, before halting on the unmarked 2,000-mile route that thousands of East Africans follow each year in trying to reach the Mediterranean, and then onward to Europe.</p> <p>His patrols along this border with Eritrea are helping Sudan crack down on one of the busiest passages on the European migration trail. Yet Lieutenant Omar is no simple border agent. He works for Sudan’s feared secret police, whose leaders are accused of war crimes — and, more recently, whose officers have been accused of torturing migrants.</p> <p>Indirectly, he is also working for the interests of the European Union.</p> <p>“Sometimes,” Lieutenant Omar said, “I feel this is Europe’s southern border.”</p> <p>Three years ago, when a historic tide of migrants poured into Europe, many leaders there reacted with open arms and high-minded idealism. But with the migration crisis having fueled angry populism and political upheaval across the Continent, the European Union is quietly getting its hands dirty, stanching the</p>

human flow, in part, by outsourcing border management to countries with dubious human rights records.

In practical terms, the approach is working: The number of migrants arriving in Europe has more than halved since 2016. But many migration advocates say the moral cost is high.

To shut off the sea route to Greece, the European Union is paying billions of euros to a Turkish government that is dismantling its democracy. In Libya, Italy is accused of bribing some of the same militiamen who have long profited from the European smuggling trade — many of whom are also accused of war crimes.

In Sudan, crossed by migrants trying to reach Libya, the relationship is more opaque but rooted in mutual need: The Europeans want closed borders and the Sudanese want to end years of isolation from the West. Europe continues to enforce an arms embargo against Sudan, and many Sudanese leaders are international pariahs, accused of committing war crimes during a civil war in Darfur, a region in western Sudan.

But the relationship is unmistakably deepening. A recent dialogue, named the Khartoum Process (in honor of Sudan's capital) has become a platform for at least 20 international migration conferences between European Union officials and their counterparts from several African countries, including Sudan. The European Union has also agreed that Khartoum will act as a nerve center for countersmuggling collaboration.

While no European money has been given directly to any Sudanese government body, the bloc has funneled 106 million euros — or about \$131 million — into the country through independent charities and aid agencies, mainly for food, health and sanitation programs for migrants, and for training programs for local officials.

“While we engage on some areas for the sake of the Sudanese people, we still have a sanction regime in place,” said Catherine Ray, a spokeswoman for the European Union, referring to an embargo on arms and related material.

“We are not encouraging Sudan to curb migration, but to manage migration in a safe and dignified way,” Ms. Ray added.

Ahmed Salim, the director of one of the nongovernmental groups that receives European funding, said the bloc was motivated by both self-interest and a desire to improve the situation in Sudan.

“They don't want migrants to cross the Mediterranean to Europe,” said Mr. Salim, who heads the European and African Center for Research, Training and Development.

But, he said, the money his organization receives means better services for asylum seekers in Sudan. “You have to admit that the European countries want to do something to protect migrants here,” he said.

Critics argue the evolving relationship means that European leaders are implicitly reliant on — and complicit in the reputational rehabilitation of — a Sudanese security apparatus whose leaders have been accused by the United Nations of committing war crimes in Darfur.

“There is no direct money exchanging hands,” said Suliman Baldo, the author of a research paper about Europe's migration partnership with Sudan. “But the E.U. basically legitimizes an abusive force.”

On the border near Abu Jamal, Lieutenant Omar and several members of his patrol are from the wing of the Sudanese security forces headed by Salah Abdallah Gosh, one of several Sudanese officials accused of orchestrating attacks on civilians in Darfur.

Elsewhere, the border is protected by the Rapid Support Forces, a division of the Sudanese military that was formed from the janjaweed militias who led attacks on civilians in the Darfur conflict. The focus of the group, known as R.S.F., is not counter-smuggling — but roughly a quarter of the people-smugglers

caught in January and February this year on the Eritrean border were apprehended by the R.S.F., Lieutenant Omar said.

European officials have direct contact only with the Sudanese immigration police, and not with the R.S.F., or the security forces that Lieutenant Omar works for, known as N.I.S.S. But their operations are not that far removed.

The planned countertrafficking coordination center in Khartoum — staffed jointly by police officers from Sudan and several European countries, including Britain, France and Italy — will partly rely on information sourced by N.I.S.S., according to the head of the immigration police department, Gen. Awad Elneil Dhia. The regular police also get occasional support from the R.S.F. on countertrafficking operations in border areas, General Dhia said.

“They have their presence there and they can help,” General Dhia said. “The police is not everywhere, and we cannot cover everywhere.”

Yet the Sudanese police are operating in one unexpected place: Europe.

In a bid to deter future migrants, at least three European countries — Belgium, France and Italy — have allowed in Sudanese police officers to hasten the deportation of Sudanese asylum seekers, General Dhia said.

Nominally, their official role is simply to identify their citizens. But the officers have been allowed to interrogate some deportation candidates without being monitored by European officials with the language skills to understand what was being said.

<b>HEADLINE</b>	<b>04/22 China left out in NKorea-US talks</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/04/22/world/asia/china-north-korea-nuclear-talks.html?hp&amp;action=click&amp;pgtype=Homepage&amp;clickSource=story-heading&amp;module=first-column-region&amp;region=top-news&amp;WT.nav=top-news">https://www.nytimes.com/2018/04/22/world/asia/china-north-korea-nuclear-talks.html?hp&amp;action=click&amp;pgtype=Homepage&amp;clickSource=story-heading&amp;module=first-column-region&amp;region=top-news&amp;WT.nav=top-news</a>
<b>GIST</b>	<p>BEIJING — As the North Korean leader, Kim Jong-un, prepares for his meetings with the presidents of South Korea and the United States, China has found itself in an unaccustomed place: watching from the sidelines.</p> <p>Worse, many Chinese analysts say, North Korea could pursue a grand bargain designed not only to bring the isolated nation closer to its two former Korean War foes, but also diminish its reliance on China for trade and security.</p> <p>Such an outcome — a reversal of 70 years of history — remains a long shot, amid doubts about whether the North would agree to relinquish its arsenal of nuclear weapons. Still, China finds itself removed from the center of the rapidly unfolding diplomacy, and unusually wary about Mr. Kim’s objectives in reaching out to his nation’s two bitterest enemies.</p> <p>Mr. Kim’s meeting with the South Korean president, Moon Jae-in, is set for Friday, and a meeting with President Trump — the first ever between leaders of the two nations — is expected to follow in May or early June. In a sign of just how much is suddenly on the table, South Korea recently confirmed that it was in talks with the North and with the United States about signing a treaty to end the Korean War, which halted in 1953, but never formally ended.</p> <p>With events moving so quickly, and Beijing finding itself largely left on the outside, analysts said China and its leader, Xi Jinping, must at least consider what they called worst-case contingencies.</p> <p>“The loss of prestige is a big problem for China and Xi, who wants everyone else to view China as an</p>

essential actor of international relations, especially in the Northeast Asian context,” said Zhang Baohui, a professor of international relations at Lingnan University in Hong Kong. “Now, suddenly, China is no longer relevant.”

Since the 1950-53 Korean War, when China fought on the side of the North against the United States and its ally in the South, the alliances have been immovable. The North has provided a convenient buffer for China against having American troops on its border; the South serves as a base in the region for the American military.

In negotiations over the denuclearization of the North, Beijing has to worry whether all that could suddenly be in play, Chinese analysts said.

“If a grand deal can be struck between Kim and Trump, in the form of denuclearization in exchange for normalization of bilateral relations, then Northeast Asia may see a major realignment,” Mr. Zhang said. “China does not run Kim’s foreign policy and they know that.”

The possible new alignment on the Korean Peninsula that most concerns Beijing is a loose unification between North and South Korea with American troops remaining in the South.

As part of its conciliatory moves before the meetings, the North has dropped its demand for the departure of the 28,000 United States troops stationed in the South as a condition for denuclearization.

“A unified, democratic Korea aligned with the U.S. will be dangerous to the Communist regime in China, though not necessarily the Chinese nation,” said Xia Yafeng, a North Korea expert at Long Island University.

<b>HEADLINE</b>	<b>04/22 Erosion of public sector employment</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/04/22/business/economy/public-employees.html?hp&amp;action=click&amp;pgtype=Homepage&amp;clickSource=story-heading&amp;module=first-column-region&amp;region=top-news&amp;WT.nav=top-news">https://www.nytimes.com/2018/04/22/business/economy/public-employees.html?hp&amp;action=click&amp;pgtype=Homepage&amp;clickSource=story-heading&amp;module=first-column-region&amp;region=top-news&amp;WT.nav=top-news</a>
<b>GIST</b>	<p>OKLAHOMA CITY — The anxiety and seething anger that followed the disappearance of middle-income jobs in factory towns has helped reshape the American political map and topple longstanding policies on tariffs and immigration.</p> <p>But globalization and automation aren’t the only forces responsible for the loss of those reliable paychecks. So is the steady erosion of the public sector.</p> <p>For generations of Americans, working for a state or local government — as a teacher, firefighter, bus driver or nurse — provided a comfortable nook in the middle class. No less than automobile assembly lines and steel plants, the public sector ensured that even workers without a college education could afford a home, a minivan, movie nights and a family vacation.</p> <p>In recent years, though, the ranks of state and local employees have languished even as the populations they serve have grown. They now account for the smallest share of the American civilian work force since 1967.</p> <p>The 19.5 million workers who remain are finding themselves financially downgraded. Teachers who have been protesting low wages and sparse resources in Oklahoma, West Virginia and Kentucky — and those in Arizona who say they plan to walk out on Thursday — are just one thread in that larger skein.</p> <p>“I was surprised to realize along the way I was no longer middle class,” said Teresa Moore, who has spent 30 years investigating complaints of abused or neglected children, veterans and seniors in Oklahoma.</p>

She raised two daughters in Alex, a rural dot southwest of the capital, on her salary. But when she applied for a mortgage nine years ago, the loan officer casually described her as “low income.”

At 57, Ms. Moore now earns just over \$43,000, which she supplements with a part-time job as a computer technician.

The private sector has been more welcoming. During 97 consecutive months of job growth, it created 18.6 million positions, a 17 percent increase.

But that impressive streak comes with an asterisk. Many of the jobs created — most in service industries — lack stability and security. They pay little more than the minimum wage and lack predictable hours, insurance, sick days or parental leave.

The result is that the foundation of the middle class continues to be gnawed away even as help-wanted ads multiply.

Reducing state and local payrolls, of course, is a goal that has champions and detractors. Anti-tax crusaders, concerned about cost and overreach, have longed for a smaller government that delivers only the most limited services. Public-sector defenders worry that shortages of restaurant inspectors, rat exterminators, mental health counselors and the like will hurt neighborhoods. Pothole-studded roads and unreliable garbage pickup don't entice businesses, either.

Yet whether one views a diminished public sector as vital to economic growth or a threat to health and safety, it is undeniable that it has led to a significant decline in middle-class employment opportunities.

“It's a tough time to be working in government,” said Neil Reichenberg, executive director of the International Public Management Association for Human Resources. Once there were several attractions to public employment in addition to the mission of making a difference in your community, he added, but incentives like good health insurance and retirement benefits have disappeared. “There's been a lot of cutbacks that have made government a less competitive employer,” he said.

From the late 1950s through 1980, the United States added 350,000 new state and local workers a year. The rate slowed in the mid-1980s through the early 2000s, but payrolls still grew annually by 300,000 workers.

Government hiring failed to bounce back after the recession in both Republican- and Democratic-led states, and states continued to shed workers through 2013. The recovery's slow pace held down revenues at the same time as baby boomers began retiring and generous pension and benefit commitments made in fatter years came due.

“They couldn't pay their obligations,” said Edwin Benton, a political scientist at the University of South Florida and the managing editor of an academic journal, *State and Local Government Review*. “The epidemic has grown to almost every city and state.”

“We're in uncharted waters,” he added.

In the past 12 months, local and state payrolls grew by 31,000, a fraction of the historical rate. There are now fewer such workers per capita than there were three decades ago.

Nonetheless, those combined payrolls dwarf those of the federal government, which employs about 2.8 million civilians, including postal workers. That number has shrunk slightly in recent years.

Short of money, many states have also privatized services like managing public water systems, road repair, emergency services or prisons, transferring jobs from the public sector to private companies that have reduced salaries and benefits to increase their profits.

	<p>The government employment pinch especially hurts in small and rural counties, where President Trump and other Republicans are popular. These areas tend to lack the number and diversity of private employers found in larger cities, and are therefore more dependent on government jobs.</p> <p>n Houston, pinched by a property tax cap, the police chief has said his department is short 1,500 to 2,000 officers. In North Carolina, a federal report blamed a 25 percent job vacancy rate at a state prison in Elizabeth City for four deaths that occurred during a breakout attempt.</p> <p>Back in Oklahoma, state prisons are at 153 percent capacity, while the corrections department has lost a tenth of its staff since 2009. “Our folks are only armed with their self-defense training, a can of pepper spray, and a wing and a prayer that someone will come and help them if they get in trouble,” Joe Allbaugh, the director of the corrections department, has said publicly.</p> <p>Since 2009, staffing at the state mental health department in Oklahoma is down more than 20 percent, and at the Office of Juvenile Affairs by nearly a quarter. The state Office of Fire Marshal once employed 30 workers, but now has 18.</p> <p>A report on 2017 state compensation in Oklahoma found that average salaries were 27 percent lower than for comparable jobs in the private sector.</p> <p>Many government workers take a second job to make ends meet.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>04/20 America’s nuclear headache: old plutonium</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-usa-nukes-plutonium-specialreport/americas-nuclear-headache-old-plutonium-with-nowhere-to-go-idUSKBN1HR1KC">https://www.reuters.com/article/us-usa-nukes-plutonium-specialreport/americas-nuclear-headache-old-plutonium-with-nowhere-to-go-idUSKBN1HR1KC</a>
<b>GIST</b>	<p>AMARILLO, Texas (Reuters) - In a sprawling plant near Amarillo, Texas, rows of workers perform by hand one of the most dangerous jobs in American industry. Contract workers at the U.S. Department of Energy’s Pantex facility gingerly remove the plutonium cores from retired nuclear warheads.</p> <p>Although many safety rules are in place, a slip of the hand could mean disaster.</p> <p>In Energy Department facilities around the country, there are 54 metric tons of surplus plutonium. Pantex, the plant near Amarillo, holds so much plutonium that it has exceeded the 20,000 cores, called “pits,” regulations allow it to hold in its temporary storage facility. There are enough cores there to cause thousands of megatons of nuclear explosions. More are added each day.</p> <p>The delicate, potentially deadly dismantling of nuclear warheads at Pantex, while little noticed, has grown increasingly urgent to keep the United States from exceeding a limit of 1,550 warheads permitted under a 2010 treaty with Russia. The United States wants to dismantle older warheads so that it can substitute some of them with newer, more lethal weapons. Russia, too, is building new, dangerous weapons.</p> <p>The United States has a vast amount of deadly plutonium, which terrorists would love to get their hands on. Under another agreement, Washington and Moscow each are required to render unusable for weapons 34 metric tons of plutonium. The purpose is twofold: keep the material out of the hands of bad guys, and eliminate the possibility of the two countries themselves using it again for weapons. An Energy Department website says the two countries combined have 68 metric tons designated for destruction - enough to make 17,000 nuclear weapons. But the United States has no permanent plan for what to do with its share.</p> <p>Plutonium must be made permanently inaccessible because it has a radioactive half-life of 24,000 years.</p> <p>“A MUCH MORE DANGEROUS SITUATION”</p> <p>Edwin Lyman, a physicist at the Union of Concerned Scientists, a science advocacy group based in</p>

Washington, says solving the problem of plutonium storage is urgent. In an increasingly unstable world, with terrorism, heightened international tensions and non-nuclear countries coveting the bomb, he says, the risk is that this metal of mass annihilation will be used again. William Potter, director of the James Martin Center for Nonproliferation Studies at the Middlebury Institute of International Studies, told Reuters: "We are in a much more dangerous situation today than we were in the Cold War."

Washington has not even begun to take the steps needed to acquire additional space for burying plutonium more than 2,000 feet below ground - the depth considered safe. Much of America's plutonium currently is stored in a building at the Savannah River Site in South Carolina - like Pantex, an Energy Department site. Savannah River used to house a reactor. Local opponents of the storage, such as Tom Clements, director of SRS Watch, contend the facility was never built for holding plutonium and say there is a risk of leakage and accidents in which large amounts of radioactivity are released.

The Energy Department has a small experimental storage site underground in New Mexico. The department controls the radioactive materials - plutonium, uranium and tritium - used in America's nuclear weapons and in the reactors of nuclear-powered aircraft carriers and submarines. In a Senate hearing in June 2017, Energy Secretary Rick Perry said the Energy Department has been in talks with New Mexico officials to enlarge the site. Environmental groups there have strongly opposed expansion.

Under an agreement with Russia, the United States was to convert 34 metric tons of plutonium into fuel for civilian reactors that generate electricity. The fuel is known as MOX, for "mixed oxide fuel." Plutonium and uranium are converted into chemical compounds called oxides, and mixed together in fuel rods for civilian nuclear power plants. The two metals are converted into oxides because these can't cause nuclear explosions. But the U.S. effort has run into severe delays and cost overruns.

The alternative method is known as dilute-and-dispose. It involves blending plutonium with an inert material and storing it in casks. The casks, however, are projected to last only 50 years before beginning to leak, and so would need to be buried permanently deep underground.

#### THE MOX MESS

President Donald Trump has sided with the Energy Department in wanting to kill the MOX project because of the extreme cost overruns and delays. The Energy Department, beginning in the Obama administration, favored closing down the MOX project for the same reason, but Congress overruled it. The federal budget adopted in February, however, specifies a means for ending the project, if a study shows that dilute-and-dispose would be at least 50 percent cheaper than making MOX.

The National Nuclear Security Administration, the part of the Energy Department that oversees the nuclear sites and materials, favors switching to the dilute-and-dispose method. In recent testimony before a House of Representatives subcommittee, Lisa Gordon-Hagerty, the new NNSA administrator, said that method would "cost billions less" than completing the MOX plant.

Plutonium is a versatile nuclear bomb material. Terrorists would need only 11 kilograms or less to make a bomb, Lyman says.

Its ordinarily limited radioactivity makes plutonium safe for terrorists or other thieves to transport with little risk of radiation injury. It goes undetected by most sensors. It radiates alpha particles, relatively large on an atomic scale, which means the thin glass of a test tube, the leather of a briefcase, or even air or skin stop them. The danger from handling small amounts is inhaling plutonium dust. In that case, the dust spreads from the lungs throughout the body, causing multiple kinds of cancer.

The federal government now has no solution in sight to dispose of the plutonium permanently. Its one effort to make it unusable for bombs has turned into what the White House and Energy Department say is a costly failure. The MOX project, at the Energy Department's Savannah River Site in South Carolina, has been kept on life support by Congress thanks to the influence of South Carolina Senator Lindsey Graham and other lawmakers. The MOX plant employs about 2,000 people in Graham's state.

Graham and other Congressional backers say MOX is the best way to keep plutonium out of the hands of terrorists. They note too that the pact with Russia requires the United States to use MOX as the method for disposal.

A spokeswoman for Graham declined to comment on his behalf but sent a link to a YouTube video of a Senate hearing in March. In the hearing, Graham, referring to steps already taken to limit work on the MOX plant, said: “What I think we’ve done is ended the biggest non-proliferation program in the world, and I’m going to try and fix that.”

Today’s plutonium glut mainly is a legacy of the Cold War. The quantities now seem surreal. By 1967 the U.S. nuclear arsenal reached its apex, with 37,000 warheads. The Soviet Union’s peak came in the 1970s, with approximately 45,000. These were enough to destroy life on Earth thousands of times over.

#### A RADIOACTIVE PEACE DIVIDEND

Amid the terror and aggressiveness then of government and military leaders on both sides, little or no thought was given what to do with the warheads should the risk of mass annihilation ebb.

Daniel Ellsberg, best known for leaking in 1971 the Pentagon Papers about the Vietnam war, in the early 1960s was an adviser to the Air Force and White House on nuclear policy. He recently published a book detailing and criticizing the nuclear policy debates and decisions of that era. In a phone interview, he said disposal of weapons was never considered at the time.

“I don’t think one person gave one moment of thought to that,” Ellsberg said. “No one thought that the Cold War would end.”

Treaties that dramatically reduced U.S. and Russian nuclear arsenals were signed soon after the Soviet Union fell. It was then that the magnitude of the problem – disposing of the surplus plutonium – dawned on the two countries.

Scientists proffered ideas, nearly all involving making the plutonium forbiddingly dangerous for malefactors to transport and burying it deep underground.

Instead, under a 2000 treaty, the United States agreed to transform the 34 metric tons of plutonium into MOX, unusable for bombs. Russia agreed to destroy the same quantity using a special type of reactor. But the United States had never before built a MOX plant. No U.S. civilian reactor had ever used MOX as fuel.

This misplaced optimism led to one of the costliest snafus ever in U.S. government construction. Work began in 2007 to build a MOX plant that was to be operational by November 2016. The Energy Department now estimates that, if allowed to proceed, it will not be finished until 2048. In 2007 the Energy Department said the total cost would be \$4.8 billion. Now it estimates the cost at more than \$17 billion.

Building of the plant began when detailed designs were between 20 percent and 40 percent complete. But once initial construction finished, the contractor, under instructions from the Energy Department, breezed ahead without architectural plans.

Reports from the Union of Concerned Scientists said rooms were built for laboratories and offices where none were needed. Ventilation ducts and electrical wiring were in the wrong places. Plumbing was a maze of misplaced pipes. The contractor later had to rip out much of its work and start over.

The contractor is a consortium of companies, CB&I Areva MOX Services. It includes CB&I (formerly Chicago Bridge and Iron), based in the Netherlands, and Areva, which specializes in nuclear-related and alternative power projects, majority owned by the French government.

#### GIVING IT AWAY

	<p>In an e-mailed statement to Reuters, the consortium said it expects to finish the facility. It said “the project is over 70 percent physically complete.”</p> <p>But Gordon-Hagerty, the National Nuclear Security Administration’s new chief, testified in March before a House Appropriations Subcommittee that it is “nowhere near” 50% complete. Government Accountability Office reports (here and here) criticized the Energy Department for awarding a “cost plus” contract, which guarantees a profit regardless of how much work is done.</p> <p>In an emailed response to questions for this article, Lindsey Geisler, a spokesperson for the NNSA, said that in 2011, after the contract had been awarded, “NNSA recognized the need to institute project management reforms.” She said the NNSA established a new office to better oversee contracting and acquisition, and that practices have improved significantly.</p> <p>Echoing other critics, Frank von Hippel, a Princeton University professor who researches nuclear arms control and policymaking, said weak oversight continues. “The problem at DOE is that the quality of managers, with some exceptions, is quite low,” he said. “Contractors just milk them for money.”</p> <p>An Energy Department panel reported in 2016 that there is no US market for MOX. To use MOX fuel rods, civilian power plants would have to modify their reactors, requiring lengthy relicensing by the Nuclear Regulatory Commission. The report said the best the Energy Department could hope for was to give the stuff away.</p>

<b>HEADLINE</b>	<b>04/20 North, South Korea leaders hotline</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/04/20/historic-hotline-links-south-north-korean-leaders-ahead-rare-summit.html">http://www.foxnews.com/world/2018/04/20/historic-hotline-links-south-north-korean-leaders-ahead-rare-summit.html</a>
<b>GIST</b>	<p>North and South Korea opened the first-ever telephone hotline between their leaders Friday ahead of a rare summit next week focusing on de-escalating the nuclear standoff.</p> <p>South Korea’s presidential office said the first test call on the hotline went to Pyongyang’s State Affairs Commission, the country’s supreme decision-making institution chaired by Kim Jong Un. The call was successful.</p> <p>“The historic direct telephone line between the leaders of the South and North was connected a short while ago,” South Korean presidential official Youn Kun Young said in a news briefing.</p> <p>“The test call went on for 4 minutes and 19 seconds starting at 3:41 p.m. with (officials from) both sides speaking to each other ... The connection was smooth and the voice quality was very good. It was like calling next door,” he said.</p> <p>Meeting between two Koreas slated for April ahead of Trump-Kim summit. Greg Palkot has the latest developments.</p> <p>Officials say the hotline, reminiscent of the Moscow-Washington hotline during the Cold War, will help to facilitate dialogue and reduce misunderstanding during times of escalation.</p> <p>The direct line between the two leaders came months after a border hotline was opened in January, nearly two years after radio silence from the communist regime.</p> <p>The leaders of both Koreas are expected to have a first-ever phone conversation sometime before their meeting next Friday at the border truce village of Panmunjom.</p>

<b>HEADLINE</b>	<b>04/20 Hundreds school walkouts for gun reform</b>
-----------------	--

SOURCE	<a href="https://www.nbcnews.com/news/us-news/hundreds-school-walkouts-planned-friday-n867726">https://www.nbcnews.com/news/us-news/hundreds-school-walkouts-planned-friday-n867726</a>
GIST	<p>Students from hundreds of schools across the country began a wave of walkouts Friday morning in a unified voice for tougher gun laws.</p> <p>The protests come on the 19th anniversary of the shooting at Columbine High School, which left 13 people dead in Littleton, Colorado, energized the gun-control debate and became a haunting symbol of gun violence in schools.</p> <p>The students — many not even born when Columbine occurred — represent more than 2,600 schools that were holding moments of silence in honor of the victims as well as the 17 people killed during the Feb. 14 shooting at a high school in Parkland, Florida. The deaths prompted national protests demanding change.</p> <p>On Capitol Hill, students from the Washington area marched while chanting, "Congress do your job!" and "Not one more!" to put pressure on lawmakers who have stalled in enacting gun-safety measures.</p> <p>In Atlanta, students from the area were marching to the state Capitol. "I'm angry," said Ann Philip, a high school sophomore, "but I'm motivated."</p> <p>Fred Guttenberg, whose 14-year-old daughter, Jaime, died during the Parkland massacre, praised the students for walking out, and said all they want is common-sense gun reform that includes background checks and a ban on assault weapons.</p> <p>"The reason they're rising up is they want to be able to go out in public and not live in fear," Guttenberg told MSNBC.</p> <p>The grieving father gained attention in the days after the Parkland shooting by telling Sen. Marco Rubio, R-Fla., that his and President Donald Trump's words following the massacre were "pathetically weak."</p> <p>Yet even as students on Friday headed to rallies at their statehouses or planned to stay at their schools to discuss gun violence, other communities weren't immune from the scourge: Police in Ocala, Florida, reported that one student shot another in the ankle at a local high school. Forest High School was put on lockdown and the injured student was taken to the hospital for treatment.</p> <p>Police said the suspected shooter was also a student at the school.</p> <p>"We have to stop this," Parkland shooting survivor and activist David Hogg said in a video post on Twitter after learning about the shooting in Ocala. "We're not going to be able to stop this unless we make our voice heard ... not as Democrats or Republicans, but as Americans."</p> <p>Citywide protests were expected to attract thousands in New York City and Austin, Texas. Police in Richmond, Virginia, say at least 10,000 could gather at the state Capitol.</p> <p>Former Democratic Congresswoman Gabrielle Giffords, who was injured by a gunman in a mass shooting in Tucson, Arizona, in 2011, tweeted her support for the walkouts and rebuked politicians for claiming "never again" after Columbine but "after nearly two decades of inaction, it's clear they've failed in their basic duty to keep our kids safe."</p> <p>Last month, tens of thousands of students left class to protest gun violence in what historians called the largest youth protest movement since at least the Vietnam War. Days later, hundreds of thousands of teens and their backers rallied across the U.S. calling for tougher laws on guns and ammunition.</p> <p>Plans for Friday's walkout began only hours after the Parkland shooting, when a Connecticut teen started an online petition calling for protests on the anniversary of Columbine. Sophomore Lane Murdock then gathered a few other students at Ridgefield High School to orchestrate the national protest.</p> <p>They also have received help from Indivisible, a left-leaning nonprofit based in Washington that helps</p>

boost grassroots activism. The group says it was formed after the 2016 election to oppose the policies promoted by Trump.

"We're walking out to remember every single young person who has been killed by American gun violence," Murdock said in a statement Thursday. "We're walking out to talk about the real problems our country is facing, and the solutions that our leaders are too scared to dream up."

Administrators at many schools tacitly allowed the walkouts in March, opting not to punish participants. But some now say the leniency has expired.

Even so, students at many New York schools were rallying at the city's Washington Square Park.

And some schools in Houston and elsewhere will give students time to share their views but have warned them not to leave campus or return to class late. Some others are holding alternative events after school. Many have simply said students are expected to stay in class throughout the day.

Students in the Washington area are planning to march from the White House to the Capitol, where they will rally and deliver letters to Congress calling for greater gun control.

In Littleton, some survivors of the Columbine shooting planned to join with Parkland survivors for a vigil and rally Thursday evening. But there will be no walkout at Columbine, which has long canceled classes on the anniversary of the shooting. Instead, students will be called to participate in a day of service.

Principal Scott Christy said in a letter to other schools in his district that April "has long been a time to respectfully remember our loss, and also support efforts to make our communities a better place."

HEADLINE	<b>04/20 German neo-Nazis mass for Hitler festival</b>
SOURCE	<a href="https://www.yahoo.com/news/german-neo-nazis-mass-festival-hitlers-birthday-092322294.html">https://www.yahoo.com/news/german-neo-nazis-mass-festival-hitlers-birthday-092322294.html</a>
GIST	<p>Ostritz (Germany) (AFP) - Hundreds of neo-Nazis were massing Friday on Adolf Hitler's birthday for a two-day festival in a remote eastern German town where citizens and anti-fascist groups staged spirited counter-protests.</p> <p>Many of the mostly male right-wing extremists wore T-shirts with slogans such as "Keepers of the Race", "White is my favourite colour" and "Adolf was the best" while the event was guarded by a group called "Aryan Brotherhood".</p> <p>Hundreds of armoured police ringed the site of the "Schild und Schwert" (Shield and Sword, or SS) festival near the Polish and Czech borders that was expected to also attract eastern European extremists.</p>

Police were backed by water cannon and armoured vehicles, mounted patrols and boats patrolling the Neisse border river, on the western banks of which the shaven-headed and often heavily tattooed attendees were pitching their tents or parking camper-vans.

Organisers argue that the "Reconquista Europa" festival -- featuring far-right music, speeches, martial arts, a tattoo convention and merchandise stalls -- is a political event, granting it legal protection under the German constitution.

They said they expected about 1,000 participants.

The event comes as Germany, after a mass influx of asylum seekers since 2015, is witnessing a revival of far-right and ultra-nationalist groups and has seen the anti-immigration Alternative for Germany (AfD) enter parliament.

Hundreds of people also flocked to two counter-demonstrations held well away from the far-right festival in separate parts of Ostritz, a town of 2,300 people, in a remote region of the ex-communist eastern state of Saxony.

Saxony state premier Michael Kretschmer said he was proud that citizens, churches, parties and unions organised opposition. He spoke at a "Peace Festival" with choir music, food stalls, an Arabic cafe and signs praising diversity and multiculturalism.

"The fight against right-wing extremism must come from the middle of society," he said.

"I'm very happy that local authorities and police have found ways to make things difficult for the concert, so hopefully they won't come back here again.

"We don't want these people here."

While neo-Nazis have long staged underground concerts for recruiting and fund-raising, a major two-day music festival with a tent city and tickets selling at up to 45 euros (\$55) is seen as an escalation of an emboldened far-right movement.

The Shield and Sword lineup features bands linked to the far-right and hooligan scene as well as a "fight night" event Saturday called "Kampf der Nibelungen", a reference from Germanic and Norse mythology, featuring boxing, kickboxing and mixed martial arts.

"To live is to fight," declares the event website. "At all times it was fighters who defended their clan, their tribe, their homeland."

Visitors were prohibited from bringing glass bottles, flag staffs and certain breeds of dogs.

A 75-year-old pensioner living near the festival site, who asked not to be named for fear of reprisals, told AFP: "It is a shame that the government cannot ban this, given all the pain that Hitler brought to Germany."

<b>HEADLINE</b>	<b>04/21 Claim: best suburbs for retirement</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/money/personalfinance/retirement/2018/04/21/retirement-destinations-best-us-suburbs/527955002/">https://www.usatoday.com/story/money/personalfinance/retirement/2018/04/21/retirement-destinations-best-us-suburbs/527955002/</a>
<b>GIST</b>	You may not want to retire in a large city with a big population. And the good news is there are some quality suburbs from which to choose.

Digital marketing company ConsumerTrack recently ranked the top suburbs for retirees based on cost of living, median home prices and property tax rates, among other criteria.

Many of the towns that landed on the top 10 are based in Southern states across the country.

"They offer both cheap costs of living and social conditions that are conducive to retirees," said Andrew DePietro, content strategist, research and data analyst at ConsumerTrack.

Here's where you may want to settle down in your golden years.

**10. Olympia Fields, Illinois**

Mean household income: \$116,779  
Median home listing price: \$185,000  
Property tax (based on median home price): \$4,249

**9. Bermuda Run, North Carolina**

Mean household income: \$108,558  
Median home listing price: \$167,450  
Property tax: \$1,666

**8. Dennis, Massachusetts**

Mean household income: \$97,988  
Median home listing price: \$362,400  
Property tax: \$2,634

**7. Plantation, Florida**

Mean household income: \$79,797  
Median home listing price: \$329,250  
Property tax: \$4,122

**6. Pecan Plantation, Texas**

Mean household income: \$97,902  
Median home listing price: \$279,900  
Property tax: \$2,733

**5. Sun City, Arizona**

Mean household income: \$46,040  
Median home listing price: \$169,900  
Property tax: \$1,356

**4. Fairfield Harbour, North Carolina**

Mean household income: \$65,903  
Median home listing price: \$189,900  
Property tax: \$1,343

**3. Sunset Beach, North Carolina**

Mean household income: \$70,992  
Median home listing price: \$324,900  
Property tax: \$1,348

**2. Green Valley, Arizona**

Mean household income: \$59,317  
Median home listing price: \$198,990  
Property tax: \$1,800

**1. Timber Pines, Florida**

	Mean household income: \$56,974 Median home listing price: \$159,900 Property tax: \$1,590

<b>HEADLINE</b>	<b>04/20 Supervolcano under Yellowstone Park</b>
<b>SOURCE</b>	<a href="https://www.mercurynews.com/2018/04/20/the-supervolcano-under-yellowstone-should-make-you-worried/">https://www.mercurynews.com/2018/04/20/the-supervolcano-under-yellowstone-should-make-you-worried/</a>
<b>GIST</b>	<p>Yellowstone National Park sits squarely over a giant, active volcano. This requires attention.</p> <p>Yellowstone has been a national park since 1872, but it was only in the 1960s that scientists realized the scale of the volcano – it’s 44 miles across – and not until the 1980s did they grasp that this thing is fully alive and still threatens to erupt catastrophically. Yellowstone is capable of eruptions thousands of times more violent than the Mount St. Helens eruption of 1980. The northern Rockies would be buried in multiple feet of ash. Ash would rain on almost everyone in the United States. It’d be a bad day. Thus geologists are eager to understand what, exactly, is happening below all those volcano-fueled hot springs and geysers.</p> <p>Obviously they’d like to know if and when Yellowstone will blow again, and with what level of explosiveness. A major eruption would be a low-probability, high-consequence event, a proverbial Black Swan, something that could have societal and planetary effects. The problem for scientists is that these big “supervolcano” eruptions rarely happen, and the most important action is out of sight, many miles below the surface, involving chaotic forces, complex chemistry and enigmatic geological features.</p> <p>One new study has offered insight on Yellowstone’s hidden architecture. It modeled the way magma rises from deep in the Earth’s interior and creates two large chambers of partially melted rock beneath the surface of the national park.</p> <p>These two magma chambers are stacked, and separated by a layer (called a “sill,” like a window sill) of non-melted rock. The magma rising from the Earth’s mantle flows easily and doesn’t hold much gas. It cools and solidifies as it collides with relatively cold crust, forming the sill, the top of which is about 6 miles below the surface.</p> <p>On top of the sill is the upper magma chamber, with thick, sticky magma that holds a great deal of gas – which makes the magma in the upper chamber explosive. It’s like an unopened can of soda pop that’s been shaken. Open the can at your peril.</p> <p>The new study, published in Geophysical Research Letters, explains how this two-tiered, geochemically diverse architecture might have come about over the course of time.</p> <p>“Someday we might have a model snapshot saying this is what the system looks like when there’s enough melt for there to be a large eruption,” lead author Dylan Colón, an Earth Sciences doctoral candidate at the University of Oregon, told The Washington Post.</p> <p>The study won praise from Michael Poland, scientist-in-charge at the U.S. Geological Survey’s Yellowstone Volcano Observatory: “What’s neat about their model is they can go back in time with it and see how it might have influenced eruption rates many millions of years ago.”</p> <p>The new study bolsters earlier research on the dual magma chambers. It used sensors arrayed around Yellowstone to record the speed at which seismic waves from small earthquakes pass through the subsurface rock. Such waves move more slowly through hot and/or partially melted rock formations. That data gave scientists the equivalent of an MRI showing the two magma chambers.</p> <p>“Supervolcano,” we should note, is not a technical term. The experts refer to Yellowstone as a “caldera” or</p>

a “caldera-forming volcano.” Some volcanoes form conical mountains. A caldera is a volcano that creates a vast crater. These are mountain-swallowing events. Visitors to Yellowstone are given a map showing the outline of the most recent caldera, and if they go to the right vantage point it’s possible to see that the heart of the park is remarkably free of mountains. They were either blown away or fell into the big hole.

The Yellowstone region has seen three big eruptions, the first one 2.1 million years ago, the most recent 630,000 years ago. Contrary to Internet rumor-mongering, as well as conspiracy theories about government coverups, there’s no sign that a fourth cataclysmic event is about to happen.

It’s possible, in fact, that Yellowstone is getting a bit old and tired. It may be ready for a long nap rather than a major eruption.

Ilya Bindeman, a University of Oregon geochemist and co-author of the new paper, said that Yellowstone may be “approaching the end of its evolution” because so much of the material in the upper magma chamber is recycled and remelted after previous eruptions.

As Poland said: “How many times do you want to reheat your leftovers? At some point you’re going to say I’m not going to reheat his. You’ve microwaved it six times and it’s no longer food.”

Intellectual humility is called for here: No one can say with great confidence how much magma it takes to trigger a caldera-forming eruption. Moreover, relatively small eruptions creating lava flows can happen within the Yellowstone system. The most recent was 70,000 years ago. The experts say one of these smaller eruptions is much more likely than a giant explosion. Speculation that Yellowstone is “due” to erupt catastrophically implies that the volcano behaves predictably, like a machine. Geologists know otherwise.

Yellowstone, it should be noted, isn’t the only caldera in the United States. One of the others that’s worth keeping an eye on – and the U.S. Geological Survey does just that – is the Long Valley caldera in California, near the popular ski resort of Mammoth Mountain, just east of Yosemite National Park. It erupted 700,000 years ago. A major eruption is extremely unlikely, but it could produce smaller eruptions that would be highly disruptive and dangerous, said Margaret Mangan, scientist-in-charge at the USGS California Volcano Observatory.

Mangan said there are seven volcanic regions in California with zones of molten rock beneath the surface. A volcanic eruption in California is roughly as likely as a magnitude 6 or greater earthquake on the San Andreas Fault, she said.

But Californians don’t worry about volcanoes. They worry about earthquakes, tsunamis and wildfires, she said. She has tried to raise public awareness of volcano hazards but says that it is hard to get much attention.

“The awareness level and preparedness level is quite low in this state,” she said. “We prepare for those large earthquake events, and we need to prepare for volcanic eruptions.”

<b>HEADLINE</b>	<b>04/21 Iran warns US on leaving nuclear deal</b>
<b>SOURCE</b>	<a href="https://www.yahoo.com/news/iran-expected-unexpected-reactions-u-leaves-deal-rouhani-062752094.html">https://www.yahoo.com/news/iran-expected-unexpected-reactions-u-leaves-deal-rouhani-062752094.html</a>
<b>GIST</b>	DUBAI (Reuters) - Iranian President Hassan Rouhani said on Saturday Iran's atomic agency was ready with "expected and unexpected" reactions if the United States pulls out of a multinational nuclear deal, as U.S. President Donald Trump has threatened to do.  "Our atomic energy organization is fully prepared ... for actions that they expect and actions they do not expect," Rouhani said, without elaborating in a speech carried by state television, referring to a possible

	<p>decision by Trump to leave the accord next month.</p> <p>The deal reached between Iran, the United States and five other world powers put curbs on Iran's nuclear program in exchange for sanctions relief.</p> <p>Trump has called the agreement one of the worst deals ever negotiated. In January he sent an ultimatum to Britain, France and Germany, saying they must agree to fix what the United States sees as the deal's flaws or he would refuse to extend the critical U.S. sanctions relief that it entails.</p> <p>U.S. disarmament ambassador Robert Wood said on Thursday Washington had been having "intense" discussions with European allies ahead of the May 12 deadline, when U.S. sanctions against Iran will resume unless Trump issues new waivers to suspend them.</p> <p>Iran has said it will stick to the accord as long as the other parties respect it, but will "shred" the deal if Washington pulls out.</p> <p>"Iran has several options if the United States leaves the nuclear deal. Tehran's reaction to America's withdrawal of the deal will be unpleasant," Iranian state TV quoted Iranian Foreign Minister Mohammad Javad Zarif as saying in New York.</p>

<b>HEADLINE</b>	<b>04/20 China trash ban global wakeup call</b>
<b>SOURCE</b>	<a href="http://money.cnn.com/2018/04/20/news/china-trash-recycling-environment/index.html">http://money.cnn.com/2018/04/20/news/china-trash-recycling-environment/index.html</a>
<b>GIST</b>	China's trash import ban is giving the global recycling industry an enormous headache. The flip side: the world has finally been forced to rethink its approach to waste.

Beijing has last year banned the imports of 24 varieties of solid waste, including types of plastic and unsorted paper. On Friday, it extended the ban to dozens more types of recyclable materials, including steel waste, used auto parts and old ships.

The ban has terrible consequences for some places. A town in Australia has been sending recyclable waste to a landfill because it can no longer afford to recycle it.

In the UK, hoards of low-grade plastic have been hanging around in storage, eventually heading for incineration.

The US Institute of Scrap Recycling Industries warned the ban is disrupting global supply chains and may lead manufacturers to use new materials rather than recycled ones.

But experts say the ban has been a massive wake-up call for countries like the United Kingdom, United States, Australia, Japan and others who relied on China to buy and handle their trash from them.

The Institute of Scrap Recycling Industries said 31% of America's scrap commodity exports was sent to China in 2017. In the UK, almost all of recycled plastic used to be sent to China and Hong Kong for processing.

With China shutting its door on foreign garbage, several countries, including the UK have started talking about imposing taxes on some plastic items to make people use fewer materials.

Others, like Australia, have invested tens of millions of dollars to help local councils with the waste crisis.

Simon Ellin, the chief executive of the Recycling Association in the United Kingdom, said the ban is prompting more investment into recycling technologies.

That's because China and other countries, including European countries, will still buy high-quality scrap material that can be recycled into new items. It's just the low-grade, more polluting stuff China doesn't want.

Other countries, including India, Indonesia, Vietnam, Germany and the Netherlands, have stepped in to buy some of UK's trash, although at lower prices -- and not all of it.

"Some low-grade materials, plastic especially, that are collected at curbside in the UK have proved more difficult to move, because there isn't a market to move all of this material," he said, adding these materials are currently stuck in storage facilities, while some might be burned, rather than recycled.

He said that knowing the country would no longer be able to ship poor-quality recycling materials to China, its biggest buyer, meant the UK recycling industry had to start changing. Others will follow.

"It is inevitable that in the future, other countries will follow China, looking into bringing similar quality standards, so the quality of our material has to be better," he said.

"Slowing the [recycling] process down allows us to produce better-quality materials. Companies are adopting higher standards and much more stringent processes. There is more investment in technology," he added.

In Ellin's mind, the ban is a good thing, that will eventually force the entire supply chain to change, from the initial design of the product, to local waste collection authorities, to the companies that sort and recycle trash.

<b>HEADLINE</b>	<b>04/21 Swaziland is now Kingdom of eSwatini</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/04/20/africa/swaziland-eswatini-africa-monarchy-intl/index.html">https://www.cnn.com/2018/04/20/africa/swaziland-eswatini-africa-monarchy-intl/index.html</a>
<b>GIST</b>	<p>(CNN)The king of Swaziland, Africa's last absolute monarch, has changed the name of his country to the "Kingdom of eSwatini" to mark the 50th anniversary of independence -- and to avoid confusion with Switzerland.</p> <p>King Mswati III announced the move during a golden jubilee ceremony celebrating freedom from British colonial rule. He said the country's new name was used by Swaziland before it was colonized.</p> <p>Speaking to a large crowd in a stadium in the city of Manzini, 40 km (25 miles) from the capital Mbabane, the king said: "African countries on getting independence reverted to their ancient names before they were colonized. So from now on the country will be officially be known as the Kingdom of eSwatini," the AFP news agency reported.</p> <p>The name "Swaziland", the King said, had caused confusion. "Whenever we go abroad, people refer to us as Switzerland," he added.</p> <p>In recent years, the ruler has referred several times to the "Kingdom of eSwatini", which means "land of the Swazis" in the local language.</p> <p>He used it an address to the UN General Assembly in 2017 and at the state opening of the country's parliament this year.</p> <p>The name change was greeted with mixed emotions, with some saying the country had more pressing issues, such as poverty and health care.</p> <p>The southern African nation, a Commonwealth member, suffers from severe poverty and has the world's highest HIV/AIDS rate. Most of the king's 1.4 million subjects work as agricultural laborers.</p> <p>"When read a particular way, it does sound a bit like a start up," tweeted Usman Ali, who said he was born in Swaziland. "I'm all for going back to pre-colonial names though. Where it lies on the priority list is the issue."</p> <p>"Swaziland or Eswatini, we're still hungry," tweeted Notsile Nkambule.</p>

<b>HEADLINE</b>	<b>04/21 Hamas member killed in Malaysia</b>
<b>SOURCE</b>	<a href="https://www.thedailybeast.com/hamas-member-killed-in-malaysia?ref=home">https://www.thedailybeast.com/hamas-member-killed-in-malaysia?ref=home</a>
<b>GIST</b>	<p>Hamas on Saturday said one of its members was assassinated in Malaysia, just a day after an Israeli official warned of using targeted killings against the militant group.</p> <p>Fadi al-Batash, described by Hamas as a researcher in "the field of energy," was said to have been killed while on his way to a Kuala Lumpur mosque. Kuala Lumpur police confirmed the killing of a 35-year-old Palestinian man but did not identify him as a member of Hamas.</p> <p>On Friday, Israel's intelligence minister, Yisrael Katz, reportedly warned Hamas rulers that any threats against Israeli commanders would be met with targeted killings. Israeli authorities have blamed the militant group for weeks of unrest at the Gaza border, with Israeli Defense Minister Avigdor Lieberman on Saturday accusing the group of using demonstrators as human shields.</p> <p>Four Palestinians were killed by Israeli troops on Friday, including a 15-year-old boy. The death toll of Palestinians now stands at 32 in less than a month, though Lieberman said the "only culprits" in the latest killings are Hamas members.</p>

HEADLINE	<b>04/20 Immigrant children separation at border</b>
SOURCE	<a href="https://www.nytimes.com/2018/04/20/us/immigrant-children-separation-ice.html">https://www.nytimes.com/2018/04/20/us/immigrant-children-separation-ice.html</a>
GIST	<p>For months, members of Congress have been demanding answers about how many families are being separated as they are processed at stations along the southwest border, in part because the Trump administration has in the past said it was considering taking children from their parents as a way to deter migrants from coming here.</p> <p>Officials have repeatedly declined to provide data on how many families have been separated, but suggested that the number was relatively low.</p> <p>But new data reviewed by The New York Times shows that more than 700 children have been taken from adults claiming to be their parents since October, including more than 100 children under the age of 4.</p> <p>The data was prepared by the Office of Refugee Resettlement, a division of the Department of Health and Human Services that takes custody of children who have been removed from migrant parents. Senior officials at the Department of Homeland Security, which processes migrants at the border, initially denied that the numbers were so high. But after they were confirmed to The Times by three federal officials who work closely with these cases, a spokesman for the health and human services department on Friday acknowledged in a statement that there were “approximately 700.”</p> <p>Homeland security officials said the agency does not separate families at the border for deterrence purposes. “As required by law, D.H.S. must protect the best interests of minor children crossing our borders, and occasionally this results in separating children from an adult they are traveling with if we cannot ascertain the parental relationship, or if we think the child is otherwise in danger,” a spokesman for the agency said in a statement.</p> <p>But Trump administration officials have suggested publicly in the past that they were, indeed, considering a deterrence policy. Last year, John F. Kelly, President Trump’s chief of staff, floated the idea while he was serving as homeland security secretary.</p> <p>If approved, the plan would have closed detention facilities that are designed to house families and replaced them with separate shelters for adults and children. The White House supported the move and convened a group of officials from several federal agencies to consider its merits. But the Department of Homeland Security has said the policy was never adopted.</p> <p>Children removed from their families are taken to shelters run by nongovernmental organizations. There, workers seek to identify a relative or guardian in the United States who can take over the child’s care. But if no such adult is available, the children can languish in custody indefinitely. Operators of these facilities say they are often unable to locate the parents of separated children because the children arrive without proper records.</p> <p>Once a child has entered the shelter system, there is no firm process to determine whether they have been separated from someone who was legitimately their parent, or for reuniting parents and children who had been mistakenly separated, said a Border Patrol official, who was not authorized to discuss the agency’s policies publicly.</p> <p>“The idea of punishing parents who are trying to save their children’s lives, and punishing children for being brought to safety by their parents by separating them, is fundamentally cruel and un-American,” said Michelle Brané, director of the Migrant Rights and Justice program at the Women’s Refugee Commission, an advocacy group that conducts interviews and monitoring at immigration detention centers, including those that house children. “It really to me is just a horrific ‘Sophie’s Choice’ for a mom.”</p> <p>Protecting children at the border is complicated because there have, indeed, been instances of fraud. Tens of thousands of migrants arrive there every year, and those with children in tow are often released into the</p>

United States more quickly than adults who come alone, because of restrictions on the amount of time that minors can be held in custody. Some migrants have admitted they brought their children not only to remove them from danger in such places as Central America and Africa, but because they believed it would cause the authorities to release them from custody sooner.

Others have admitted to posing falsely with children who are not their own, and Border Patrol officials say that such instances of fraud are increasing.

As the debate carries on, pressure from the White House to enact a separation policy has continued. In conversations this month with Kirstjen Nielsen, the homeland security secretary, Mr. Trump has repeatedly expressed frustration that the agency has not been aggressive enough in policing the border, according to a person at the White House who is familiar with the discussions.

Officials presented Mr. Trump with a list of proposals, including the plan to routinely separate immigrant adults from their children. The president urged Ms. Nielsen to move forward with the policies, the person said.

But even groups that support stricter immigration policies have stopped short of endorsing a family separation policy. Jessica M. Vaughan, the director of policy studies for the Center for Immigration Studies, one such group, said that family separation should only be used as a “last resort.”

However, she said that some migrants were using children as “human shields” in order to get out of immigration custody faster.

“It makes no sense at all for the government to just accept these attempts at fraud,” Ms. Vaughan said. “If it appears that the child is being used in this way, it is in the best interest of the child to be kept separately from the parent, for the parent to be prosecuted, because it’s a crime and it’s one that has to be deterred and prosecuted.”

<b>HEADLINE</b>	<b>04/19 Darfur violence stirs new alarm</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/best-countries/articles/2018-04-19/darfur-violence-stirs-alarm-as-us-seeks-improved-rights-record-in-sudan">https://www.usnews.com/news/best-countries/articles/2018-04-19/darfur-violence-stirs-alarm-as-us-seeks-improved-rights-record-in-sudan</a>
<b>GIST</b>	<p>International attempts to end the brutal violence in Sudan appear less likely more than a year after the U.S. lifted sanctions on the East African nation, following new reports of government violence against the general public that has triggered alarm from the top levels of the United Nations and human rights organizations.</p> <p>Despite these concerns, engagement is proceeding to normalize American relations with Sudan, which remains on the U.S. list of countries supporting terrorism.</p> <p>Earlier this week, the U.N. secretary-general said that while security has improved in Darfur – a region in western Sudan the size of France – sexual assaults and other acts of violence remain common.</p> <p>"While the rate of [newly displaced people] was lower in 2017 than in previous years, and humanitarian access had improved, sexual violence remained prevalent, owing to a volatile security environment awash with small arms and light weapons, criminality and sporadic clashes," António Guterres told the U.N. Security Council on Monday.</p> <p>The U.S. and other Western governments increasingly are working with Sudan's government led by President Omar al-Bashir, who is sought by the International Criminal Court, or ICC, for alleged acts of genocide and war crimes committed in Darfur.</p> <p>The U.S. has since the 1990s imposed economic sanctions on Sudan for its support of terrorists. But over</p>

time U.S. thinking of the sanctions' effectiveness has changed. Meanwhile, Western governments have increasingly eased into seeking al-Bashir's help to battle extremism in East Africa and to help reverse the flow of refugees streaming northward with the hope of reaching Europe.

U.S. negotiators will next focus on improving human rights and religious freedom in the East African country, according to the Sudan Tribune.

Sudan's current government came to power by an Islamist-backed military coup in 1989, waging a jihadi war on South Sudan, which became its own country in 2011. The ICC has issued an arrest warrant for al-Bashir, whom it accuses of being "criminally responsible, as an indirect co-perpetrator" for alleged acts of genocide and war crimes committed in Darfur. An insurgency erupted in Darfur in 2003 against Sudan's government in Khartoum for political and economic marginalization.

International rights observers say the social climate in Sudan remains oppressive.

"There has been no fundamental change. The government still stands at the ready to fight rebels or suspected rebels and civilians they believe support them, often purely on the basis of their location and ethnicity," says Jehanne Henry of the African team at Human Rights Watch. "We continue to see very high levels of sexual violence especially against displaced women and girls, often by security forces who operate with total impunity. Darfur continues to be a lawless, violent place where government forces can do what they want."

The five tracks the U.S. monitored included counter-terrorism cooperation; addressing the threat of the Lord's Resistance Army – a rebel group and Christian cult operating in northern Uganda, South Sudan, Congo and Central Africa Republic; ending interference in South Sudan; improving humanitarian access; and ending hostilities in two areas, including Darfur.

Last October, President Donald Trump ended all U.S. economic sanctions. Sudan remains on the U.S. list of countries supporting terrorism, a designation that imposes sanctions. Other countries on the list include Iran, North Korea and Syria.

Human rights organizations, however, say they still track incidents of sexual assault and other violence in Darfur, and say the Sudanese government attacked civilians in March and April. Those attacks killed 23 people and displaced 15,000. Twelve villages were set on fire in the Jebel Marra area in Darfur, according to a report from the African Center for Justice and Peace Studies.

"For many months we saw a reduction of government attacks on civilians, but as recent clashes and attacks on civilians in Jebel Mara shows, that's only temporary and only at the whim of the government," Henry of Human Rights Watch says.

Negotiations to restore normal relations between the U.S. and Sudan should have been started in January this year – a year after Obama partially lifted sanctions in the first phase. Those talks were set to consider removing Sudan from the U.S. government's list of states supporting terrorism.

<b>HEADLINE</b>	<b>04/21 NKorea suspends nuke tests, launches</b>
<b>SOURCE</b>	<a href="http://time.com/5249087/north-korea-suspend-missile-testing-close-nuclear-site/">http://time.com/5249087/north-korea-suspend-missile-testing-close-nuclear-site/</a>
<b>GIST</b>	(SEOUL, South Korea) — North Korea announced that it will suspend nuclear tests and intercontinental ballistic missile launches ahead of its summits with Seoul and Washington, but stopped short of suggesting it has any intention of giving up its hard-won nuclear arsenal.  The announcement, which sets the table for further negotiations when the summits begin, was made by leader Kim Jong Un at a meeting of the North Korean ruling party's Central Committee on Friday. It was reported by the North's state-run media early Saturday.

Kim justified the suspension to his party by saying the situation around North Korea has been rapidly changing “in favor of the Korean revolution” since he announced last year that his country had completed its nuclear forces.

He said North Korea has reached the level where it no longer needs underground testing or test-launching of ICBMs, and added that it would close its nuclear testing facility at Punggye-ri, which was already believed to have been rendered unusable due to tunnel collapses after the North’s test of its most powerful bomb to date last year.

The announcement is Kim’s opening gambit to set the tone for summit talks with South Korean President Moon Jae-in, set for next Friday, and U.S. President Donald Trump, expected in late May or early June.

Trump almost immediately responded with a tweet, saying, “This is very good news for North Korea and the World” and “big progress!” He added that he’s looking forward to his summit with Kim.

South Korea’s presidential office also welcomed North Korea’s announcement as “meaningful progress” toward the denuclearization of the Korean Peninsula. Presidential official Yoon Young-chan said in a statement that the North’s decision brightens the prospects for successful talks between Seoul, Pyongyang and Washington.

Japanese Prime Minister Shinzo Abe offered a more guarded reaction.

“What is crucial here ... is how this development is going to lead to the complete, verifiable and irreversible dismantlement of nuclear arms, weapons of mass destruction and missiles,” he said. “And I will keep a close eye on that.”

<b>HEADLINE</b>	<b>04/20 State Dept. annual human rights review</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/apr/20/trump-admin-hits-russia-china-iran-north-korea-ann/">https://www.washingtontimes.com/news/2018/apr/20/trump-admin-hits-russia-china-iran-north-korea-ann/</a>
<b>GIST</b>	<p>The State Department hit “China, Russia, Iran and North Korea” for violating the rights of their own citizens “on a daily basis” Friday, as U.S. diplomats released their annual worldwide human rights review, chronicling political executions, media oppression and other tyrannical activities in a range of nations.</p> <p>While the review, known as the “Country Reports on Human Rights Practices,” also cited abuses in several countries considered to be close economic and military partners of Washington, it stressed that the United States seeks “to lead other nations by example” in promoting the rule of law and the fair treatment of people everywhere.</p> <p>“States that restrict freedoms of expression and peaceful assembly; that allow and commit violence against members of religious, ethnic, and other minority groups; or that undermine the fundamental dignity of persons are morally reprehensible and undermine our interests,” acting Secretary of State John J. Sullivan wrote in an introductions to this year’s review.</p> <p>“Our foreign policy reflects who we are and promotes freedom as a matter of principle,” wrote Mr. Sullivan, who’s headed the State Department since early April following President Trump’s firing of former Secretary of State Rex W. Tillerson.</p> <p>“The United States,” Mr. Sullivan wrote, “will continue to support those around the world struggling for human dignity and liberty.”</p> <p>Friday’s review was the 42nd produced by the State Department. The document, posted on the department’s website, is a country-by-country assessment of nearly every nation of the world — the U.S.</p>

itself being a notable exception.

This year's assessments hit the usual suspects.

It cited a long list of "significant" human rights abuses by the Chinese government, from "arbitrary or unlawful deprivation of life and executions without due process" to "forced disappearances" of citizens by Beijing and the use by authorities of "unofficial holding facilities known as 'black jails.'"

Similar activities were described in Iran, where authorities were also criticized for maintaining "severe restrictions on freedom of expression," including the "suppression of virtually all expression deemed critical of the regime."

While examples were cited in a host others nations — from North Korea to Venezuela, Zimbabwe and beyond — the review also documented abuses in several nations considered to be U.S. allies, such as Saudi Arabia and Turkey.

It lamented the Saudi government's use of "torture" on prisoners and "execution for other than the most serious offenses and without requisite due process." It also noted Riyadh's detention in late 2017 of some 200 government officials, businesspersons and royal family members.

While the detentions were ostensibly tied to a major government corruption probe, the review cited media reports that "members of the security forces coerced with relative impunity at least some of the detainees to the point of requiring medical care."

In Turkey, the review criticized the "torture of detainees in official custody" and cited other abuses, including Ankara's use of state of emergency powers to engage in the "arbitrary arrest and detention" of "tens of thousands, including members of parliament and two Turkish-national employees of the U.S. Mission to Turkey, for alleged ties to terrorist groups or peaceful legitimate speech."

While the review provided an exhaustive accounting of religious and political persecution in several other nations, it also went beneath the surface to explore unusual and specific areas of human rights strain in some nations, particularly Russia.

Beatings by 'close relatives'

It noted Russian President Putin's recent signing of legislation to make "beatings by 'close relatives' an administrative rather than criminal offense for first-time offenders" in Russia, "provided the beating does not cause serious harm requiring hospital treatment."

The report suggested the law may increase instances in which no one gets held accountable for violence against women in Russia, where "approximately 12,000 women [are killed] annually from domestic violence."

While the review cannot force the U.S. government to cut ties or military aid to rights abusers or to impose sanctions upon them, it is generally regarded as a prime source for tracking human rights abuses by governments around the world and often sparks harsh responses from its named targets.

This year's document, meanwhile, was published against a backdrop in which the Trump administration itself has faced sharp criticism from some independent human rights organizations.

The New York-based group Human Rights Watch asserted in January that President Trump's first year in office was "marked by a sharp regression in government efforts to protect and promote a range of human rights."

"The Trump administration made policy changes that have harmed refugees and immigrants, undermined police accountability for abuse, and rolled back women's rights, including access to important health

services,” Human Rights Watch said.

The State Department’s annual review does not assess the human-rights situation inside the United States. But on releasing the review Friday, U.S. officials acknowledged the sticky politics that may face the Trump administration when it comes to maintaining, and even growing, ties with other nations cited for abuses.

“Does [it] mean the president should never speak to these people?” said Ambassador Michael Kozak, the senior official in the State Department’s Bureau of Democracy, Human Rights, and Labor.

“Usually part of your policy is engaging with the people your trying to change at some level,” Mr. Kozak told reporters at State Department headquarters.

He also spoke frankly on abusive practices in several specific nations.

When asked about references in this year’s review to political and media oppression in Nicaragua, for instance, Mr. Kozak said outright that “Nicaragua is going the wrong direction on many fronts” and asserted that recent elections in the Central American nation “were a sham.”

When asked about Saudi Arabia’s announcement last year that it will begin allowing women the right to drive automobiles, Mr. Kozak described the development as “a baby step in the right direction.”

With regard to positive human rights examples in general, he added that he’s “always encouraged when you see things break out of a static holding pattern.”

<b>HEADLINE</b>	<b>04/20 Judge: deadly force measure on ballot</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/960321/judge-rejects-lawmakers-change-to-deadly-force-measure/">http://mynorthwest.com/960321/judge-rejects-lawmakers-change-to-deadly-force-measure/</a>
<b>GIST</b>	<p>OLYMPIA, Wash. (AP) — A Thurston County judge has rejected the way Washington lawmakers voted to make it easier to prosecute police for negligent shootings.</p> <p>Lawmakers in March approved the measure, which was intended to end years of wrangling over a previous state law that made it nearly impossible to hold officers criminally liable.</p> <p>But the way lawmakers changed the law was dubious. They were faced with an initiative signed by nearly 360,000 voters. Under the state Constitution, the Legislature must pass such initiatives as written or send them to the ballot.</p> <p>In this case, lawmakers passed the initiative — Initiative 940 — as well as a law to amend it with changes that were supported by both police groups and activists.</p> <p>The maneuver prompted a lawsuit by frequent initiative sponsor Tim Eyman. The Seattle Times reports that Superior Court Judge Christine Schaller agreed Friday the Legislature’s actions were unconstitutional. She ordered I-940 be put on the November ballot.</p>

<b>HEADLINE</b>	<b>04/20 National Teacher of the Year</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/960100/teacher-of-the-year-mandy-manning/">http://mynorthwest.com/960100/teacher-of-the-year-mandy-manning/</a>
<b>GIST</b>	<p>When you speak with Spokane teacher Mandy Manning, her enthusiasm is contagious, and one really does get the sense that she finds teaching to be its own reward. But the awards are official too, as she’s been named the 2018 National Teacher of the Year for her work at Ferris High School.</p> <p>“Every family has value, because every parent loves their kids, so there’s going to be something beautiful</p>

in every family,” Manning told Morning News with Dave Ross last September, shortly after being named Washington’s Teacher of the Year. “I think it’s my responsibility as the classroom teacher to find the beauty in every single family.”

She’s far more than a teacher with a cool name. An educator for 17 years, Manning has taught English and math at the Ferris Newcomer Center since 2011, where immigrant and refugee students often enter their first American classroom. Her students come from all over the world, and there are usually 12 to 14 different languages in class at a time. Despite the challenges, her impact reverberates throughout the students’ lives.

“I think when I came to her class I only knew how to say, ‘Hi,’” one student told CBS This Morning. “I always wanted to be a doctor,” said another, “and she inspired me. She convinced me to do it.”

Though she has almost as many awards as students, Manning never imagined becoming a teacher. Her journey toward it began in Armenia as a Peace Corps volunteer. Over the years she went to Texas, New York, and Japan. She moved to Spokane’s Newcomer Center in 2011.

Teacher of the year Mandy Manning

For Manning, developing a relationship with parents and understanding where her students are coming from is essential.

“Even as teachers we get nervous to talk to parents, because we’re unsure of what that relationship is going to look like,” she said. “Then we do it and it’s this magical moment where we realize that we’re in it together.”

In addition to helping immigrants and refugees adapt to the American education system, Manning took a lead role in improving her school’s discipline plan. Since its activation, tardiness, unexcused absences, and suspensions were significantly reduced. Her discipline models are currently in use by other schools across the district.

As National Teacher of the Year, Manning will serve as an advocate for more than three million teachers and 50 million public school students, going to over 150 speaking events in the U.S. and internationally. It will enable her to spread her ongoing message for students of kindness and fearlessness.

“It took me years to get to this approach,” Manning said. “You love your child because they are a part of you, and I love your child because, just like you, I want the very, very best for them.”

<b>HEADLINE</b>	<b>04/20 Seattle eyes business tax on large firms</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/960039/progressive-business-tax-seattle/">http://mynorthwest.com/960039/progressive-business-tax-seattle/</a>
<b>GIST</b>	<p>After months of deliberation and committee meetings, Seattle officials have developed legislation to impose a progressive business tax on the city’s largest companies.</p> <p>“The answer to our homelessness crisis is not as simple as being austere and shuffling existing budget priorities,” said Councilmember Lorena González. “There is no question that additional resources are needed to fund housing and services that are working. This new revenue is targeted towards building deeply affordable housing and funding services that allow a person to become healthy, stable and independent.”</p> <p>The council’s progressive business tax legislation exempts non-profits and aims to avoid taxing small and medium businesses. The legislation will be introduced on April 23, then go through council committees. It could be voted on as early as May 14. Along with the legislation, the council will submit a resolution that guides spending for the tax.</p>

“Seattle’s small businesses, about 97 percent of all businesses in the city, will not be taxed by this proposal,” said Seattle Councilmember Mike O’Brien. “Just the opposite, this proposal does much of what many small businesses want to see in responding to the crisis – create more safe and appropriate places for people to go.”

O’Brien argues that the progressive tax will “jumpstart” the region’s approach to solving the homeless crisis, which the city has failed to keep pace with.

#### Seattle’s progressive business tax

If passed the head tax could be implemented as soon as 2019. The proposal is really two separate taxes, implemented one after the other. The council proposes to shift to a payroll tax on Jan. 1, 2021 after three years of collecting the head tax. The payroll tax was preferred by business representatives at an April 18 council committee meeting.

- About 500 businesses will be subject to the tax, which is about 3 percent of the city’s companies. It will apply to companies making more than \$20 million annually in gross receipts.
- Businesses will be taxed \$0.26042 per hour, per employee working in Seattle, or \$500 per employee / year.
- When the city shifts to a payroll tax in 2021, it will charge 0.7 percent of all payroll related to work performed in Seattle by those same large companies. The proposal argues that this will tax higher salaries more than smaller ones.
- Both taxes are aimed to raise \$75 million annually.

#### What will it fund?

According to the city council, 29,000 households in Seattle earn less than 50 percent of the area’s median income and are paying more than 50 percent of their income on rent. The area needs more than 140,000 affordable units, with only about 15,000 offered or are currently being built.

“In 2017, our city-funded programs exited 3,400 people from homelessness into permanent housing,” González said. “Yet, we continue to see people living and sleeping in public spaces. The causes for homelessness are varied but the result is the same: unsheltered people are unable to find their way into affordable housing because it does not exist at the needed scale.”

Of the \$75 million in annual revenue from the progressive business tax:

- 75 percent (about \$57 million) will fund the construction of 1,780 “deeply affordable housing units” over the next five years.
- Affordable housing will be targeted at residents earning 30 percent of the area’s median income.
- 20 percent will fund emergency shelter and other services such as building tiny homes, expanding hygiene services, expanding criminal justice diversion programs, services for people living in cars, and adding 362 shelter beds.

<b>HEADLINE</b>	<b>04/20 Protests, arrests at Seattle youth jail site</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/960252/seattle-police-arrest-clergy/">http://mynorthwest.com/960252/seattle-police-arrest-clergy/</a>
<b>GIST</b>	<p>SEATTLE – Clergy members and others who chained themselves to steel beams at the construction site for a new youth jail in Seattle were arrested Friday morning.</p> <p>The protesters gathered at the site near 14th and Alder at about 8 a.m.</p> <p>They’re demanding that King County Executive Dow Constantine halt construction.</p>

	<p>Supporters of the movement gathered on the sidewalk where an altar, banners, and candles were placed.</p> <p>“Those of us here today share a moral vision for the county to shift away from building infrastructure that creates misery and trauma, and toward spending on basic human needs like housing and healthcare,” stated Dean Spade, member of the No New Youth Jail Coalition.</p> <p>KIRO 7 Reporter Rob Munoz was at the scene as protesters encouraged each other to call Constantine’s office to complain that having workers at the site while protesters were there constituted Occupational Safety Hazard Administration violations for unsafe workplace practices.</p> <p>When officials came to the site to investigate, they determined the protesters were creating a dangerous work site environment. That led to Seattle police officers ordering the group to disperse. When the group refused to leave, arrests were made.</p> <p>Last month, supporters of the campaign closed an intersection Fourth Avenue and James Street in front Constantine’s office. Five of them were locked together, with their arms inside metal tubes.</p> <p>They then marched through downtown Seattle. Traffic officials were forced to close streets, which clogged I-5 and I-90.</p> <p>The county says a new youth jail is desperately needed because the current facility is deteriorating.</p> <p>But activists say the current jail is only 25 years old and that a county analysis of the facility said it was “generally in good condition.”</p> <p>They say the construction is an “unnecessary, harmful, and undeniably racist jail building project,” reasoning that youth jails disproportionately affect black children.</p> <p>The group offers no alternative to a youth detention center. It only says it wants to “change the conversation about youth imprisonment” and wants the county to adopt a goal of zero detention young people.</p>

<b>HEADLINE</b>	<b>04/23 Puget Sound spring finally sprung</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/groovy-70-temps-for-puget-sound-this-week/281-543591205">http://www.king5.com/article/news/local/groovy-70-temps-for-puget-sound-this-week/281-543591205</a>
<b>GIST</b>	<p>Spring has finally sprung!</p> <p>Temperatures will start to warm near or above normal in the coming days, and the sun will make a return. In fact, we are about to see the driest stretch of the month yet and the warmest temps since September!</p> <p>We've already seen improvements since Saturday, but the weather will just keep getting better. And by "better," I mean ample sunshine and temps in the 70s! Keep in mind, 60 degrees is where we should be this time of year.</p> <p>We'll be close to 70 degrees on Monday, and those temps will linger. Looks like the ridge stays over us well into the work week and allows for us to dry out and warm up quite a bit. We could even see some areas in the mid-to-upper 70s midweek!</p>

<b>HEADLINE</b>	<b>04/22 State economy ranked highest in nation</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/washingtons-economy-ranked-highest-in-nation-geekwire/281-544503452">http://www.king5.com/article/news/local/washingtons-economy-ranked-highest-in-nation-geekwire/281-544503452</a>

GIST	<p>Washington state's technology industry isn't always considered in the same league as California's. But a 2017 study getting renewed attention this week suggests that Washington is actually punching well above its weight.</p> <p>Credit reporting site WalletHub compared all 50 states and the District of Columbia across 27 metrics for economic health and opportunity in the report. The study resurfaced this week when Visual Capitalist, a digital media brand, compiled the data in the infographic below.</p> <p>Washington ranked No. 1, driven by factors like strong gross domestic product growth, exports per capita, and percentage of high-tech jobs.</p>

HEADLINE	<b>04/23 Security risk phones sold at US bases</b>
SOURCE	<a href="https://www.stripes.com/news/chinese-smartphones-cited-by-intelligence-as-security-risk-sold-on-us-bases-1.523519">https://www.stripes.com/news/chinese-smartphones-cited-by-intelligence-as-security-risk-sold-on-us-bases-1.523519</a>
GIST	<p>KAISERSLAUTERN, Germany — Chinese-made smartphones that the heads of U.S. intelligence have urged Americans not to buy are being sold to servicemembers across Germany at on-base exchange facilities, despite concerns of data theft and espionage.</p> <p>The Huawei phones, which are being sold by TKS, an Army and Air Force Exchange Service concessionary and subsidiary of Vodaphone, could be used to gather sensitive information, according to U.S. intelligence agencies. They are banned for official government use in most cases.</p> <p>The Defense Department asked whether Huawei mobile phones were being sold at exchange facilities but has not offered any other direction, said AAFES senior spokesman Chris Ward.</p> <p>“We responded ‘yes’ and have had no other inquiries,” Ward said in an email response. “Should there be an official determination made by law enforcement officials that these phones present a security risk, the Exchange will instruct its vendors to remove impacted products from their assortment.”</p> <p>Officials at Ramstein Air Base, where Europe's largest exchange and a TKS concessionary operate, said they are aware that the phones are being sold on base.</p> <p>Although officials did not address Huawei specifically, they said that servicemembers should adhere to operational security standards when they post anything online, take pictures or configure their location settings.</p> <p>“Servicemembers need to pay attention,” said Lt Col. Joel Harper, 86th Airlift Wing spokesman. “Regardless of where the device is purchased, on base or off base, servicemembers should practice good (operational security).”</p> <p>In February, the director of national intelligence, along with the heads of the CIA, FBI, National Security Agency, Defense Intelligence Agency and the National Geospatial-Intelligence Agency testified before a Senate committee that Americans should not use Huawei products because of the security risks they pose.</p> <p>The concern about Huawei first focused on routers, switches and other high-bandwidth commercial products but later expanded to consumer mobile phones.</p> <p>FBI Director Christopher Wray testified that Huawei products provide the Chinese government with the ability to maliciously modify or steal information and to conduct undetected espionage.</p> <p>“We're deeply concerned about the risks of allowing any company or entity that is beholden to foreign governments that don't share our values to gain positions of power inside our telecommunications networks,” Wray said.</p>

	Huawei is a private company started by a former People's Liberation Army officer.

<b>HEADLINE</b>	<b>04/22 Oil is fast approaching \$70</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/oil-is-fast-approaching-70-is-the-economy-ready-for-it-1524394800">https://www.wsj.com/articles/oil-is-fast-approaching-70-is-the-economy-ready-for-it-1524394800</a>
<b>GIST</b>	<p>Oil prices are headed toward \$70 a barrel, a weight on the U.S. economy that is bearable for now but could pose trouble if prices keep climbing.</p> <p>The last time U.S. oil prices were at \$70, in 2014, they were in the middle of a steep collapse. Many investors believed then that prices would soon stabilize, or even recover. Instead, they continued to plunge, eventually hitting a bottom in 2016 at \$26. That tumble caused acute pain for oil producers, whose troubles rippled out into stocks, bonds and the broader economy.</p> <p>This year's rally is a sign of how much has changed in a few years. Global growth has picked up, while U.S. unemployment has fallen. A gambit by the world's largest oil producers to cut production has been succeeding in eliminating a massive glut, with help from soaring demand.</p> <p>Oil prices have climbed more than 60% since last summer's lows, and U.S. producers are exporting more crude than ever.</p> <p>For now, some investors say oil prices are lodged in a range that could benefit the U.S. economy by bolstering the recovering energy industry without curtailing demand.</p> <p>Yet even with the economy chugging along, rising oil prices dredge up fresh concerns. If crude continues to move higher, it could begin to stifle economic growth. Higher consumer prices for gasoline and other energy products act like a tax, while pushing inflation higher and increasing pressure on the Federal Reserve to raise interest rates more aggressively.</p> <p>That, in turn, could slow growth and weigh on the stock market, which has already been knocked around by trade tensions, rising bond yields and recent bouts of volatility. Inflation concerns pushed the yield on the 10-year Treasury note to the highest since 2014 on Friday, while major U.S. stock indexes closed lower, wiping out much of the recent gains after a string of upbeat earnings.</p> <p>"Nothing can suck cash flow out of the economy faster than rising oil prices," said Joseph LaVorgna, chief economist for the Americas at Natixis .</p> <p>When oil prices fell below \$40 a barrel, financial distress from the energy sector started to spread, said Jason Thomas, director of research at the Carlyle Group .</p> <p>But if oil prices continue rising, they could boost inflation expectations, which would raise bond yields and the cost of financing.</p>

<b>HEADLINE</b>	<b>04/22 Canada moving oil a truck at a time</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-canada-crude-trucks-insight/facing-shipping-constraints-canada-moving-oil-one-truckload-at-a-time-idUSKBN1HU0F4">https://www.reuters.com/article/us-canada-crude-trucks-insight/facing-shipping-constraints-canada-moving-oil-one-truckload-at-a-time-idUSKBN1HU0F4</a>
<b>GIST</b>	<p>WINNIPEG, Manitoba/VANCOUVER (Reuters) - At an Alberta oil loading terminal, a convoy of big rigs are gearing up to haul Canadian crude oil hundreds of miles through bone dry fields across the U.S. border into Montana, where the oil will be transferred to pipelines and rail cars headed south and west.</p> <p>Trucks loaded with crude are an increasingly common sight at the border. Production has risen in the</p>

world's fifth largest producer but full pipelines and a rail car shortage have made it difficult for drillers to ship oil out of Canada.

Some oil producers are feeling the pressure from customers. Alberta-based Gear Energy Ltd (GXE.TO) pumps about 7,500 barrels of oil equivalent per day, and recently had an Asian customer walk away from an agreement to buy crude after failing to secure a way to ship oil to the West Coast.

"We've never had more inbound calls looking for heavy oil," said Gear Chief Executive Officer Ingram Gillmore. "And we have never had more challenges actually getting it to them. It is very frustrating."

Production in Canada rose 8 percent in the last year to a record 4.2 million barrels per day (bpd) and is forecast to keep rising. Over the next five years, OPEC production is expected to only grow modestly, leaving the bulk of forecasted global supply increases to the United States and Canada.

But Canada's oil industry faces significant challenges, not the least of which are high production costs, remote oil fields and, perhaps most pressing, the shipping bottlenecks. So significant are the problems that a number of oil majors have withdrawn from Canada.

No easy solution is on the horizon. Plans for new export pipelines are running into opposition from environmentalists, Aboriginal groups and rival provinces. Most recently, Kinder Morgan Canada (KML.TO) hit the brakes on its Trans Mountain expansion, and TransCanada Corp (TRP.TO) has not yet fully committed to its Keystone XL project.

Frustrated and fearful of missing out on the rebound in prices, drillers are increasingly relying on trucks to move oil to the market. Crude exports from Canada by road nearly tripled from 2015 to 2017, and continued to rise in the first two months of 2018, according to StatsCan data provided to Reuters.

However, a truck can only carry 200 barrels of oil, compared with 60,000 barrels in one unit train, or nearly 600,000 per day on the Keystone Pipeline - the equivalent of 3,000 trucks. Each one of those trucks needs a driver and enough fuel to carry crude over long distances. Moving crude by truck is at least 10 times more expensive on a mile-for-mile basis compared with rail or pipeline.

"We have demand for 50,000 bpd and we can move about a fifth of that," said Jarrett Zielinski, chief executive of Torq Energy Logistics, an Alberta company that owns rail loading facilities and 275 trucks.

#### TRUCKIN'

Rising opposition to pipelines is hitting Alberta, the landlocked province where most Canadian oil is produced.

The fight over the Trans Mountain expansion, which would nearly triple the capacity of the 1,150-kilometre (715 mile) line from Alberta to a British Columbia port, has engulfed two provinces and the government of Prime Minister Justin Trudeau.

British Columbia is opposed to the project, which prompted Kinder Morgan to suspend work on the line. Alberta's premier threatened to cut fuel deliveries to its neighboring province in retaliation.

As for trains, during certain months, rail operators face political pressure to prioritize movement of agricultural products. Rail operators want long-term deals from shippers, but oil companies prefer to have the flexibility to shift to pipelines if space becomes available.

Exports by road rose from just over 17,000 barrels per month in 2015 to more than 51,000 in 2017, according to data Statistics Canada provided to Reuters. In the first two months of 2018, road exports surged to an average of 180,000 a month.

By contrast, rail exports averaged 4 million barrels a month in 2017.

	<p>Using trucks allows producers to reach northern U.S. rail loading sites, where there is more capacity and rates are cheaper, Zielinski said.</p> <p>Monthly demand fluctuates based on the discount for western Canadian crude versus the U.S. benchmark. When the discount is above \$20, oil producers will pay to haul crude up to five hours, more than twice as far as usually makes economic sense, Zielinski said.</p> <p>However, the trucking industry's capacity to move more crude is limited by a severe driver shortage in Western Canada, said Andrew Barnes, director of compliance and regulatory affairs at Alberta Motor Transportation Association.</p> <p>This is not unique to Canada. Booming production in west Texas has strained pipeline capacity, increasing reliance on trucks to deliver to injection points. But ongoing pipeline construction in Texas should alleviate the glut in the next year, while Canada's future is less clear.</p> <p>The uptick in truck transport also raises safety questions. There were 205 road accidents involving crude tanker trucks in Canada from 2010 through 2016, which killed 10 people, according to Transport Canada data. There were nine accidents involving crude trains, though one was the Lac Megantic, Quebec disaster in 2013, where a train hauling 72-crude cars derailed and exploded, killing 47.</p>

<b>HEADLINE</b>	<b>04/22 Fighting pollution: say 'no' to straws</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/better/science/fighting-pollution-avoiding-plastic-straws-ncna856296">https://www.nbcnews.com/better/science/fighting-pollution-avoiding-plastic-straws-ncna856296</a>
<b>GIST</b>	<p>Environmental groups have targeted disposable drinking straws — that are not recyclable or compostable — for extinction. The ultimate goal: Prevent non-degradable plastic straws from polluting our beaches, waterways and oceans.</p> <p>With so many other pollution problems, why straws?</p> <p>“Straws are an easy thing for everybody to get started on when approaching the enormous issue of plastic pollution,” said Diana Lofflin, founder of StrawFree.org, an environmental group based in southern California.</p> <p>Lofflin said she realized something had to be done after seeing the video of a Costa Rican team removing a straw from a turtle's nose.</p> <p>“We're seeing more plastic in our waterways and one of the most common items we find is straws,” she said. “In fact, it's one of the top 10 items that are picked up at beach cleanups. It's estimated that by the year 2050, there will be more plastic in the oceans than fish.”</p> <p><b>A GROWING MOVEMENT</b></p> <p>Lawmakers in Los Angeles, Davis, Malibu and San Luis Obispo, Calif.; Miami Beach and Fort Myers Beach, Fla.; and Seattle, have passed ordinances that limit or prohibit restaurants from using plastic straws.</p> <p>A ban on plastic straws for commercial use took effect in Fort Myers Beach in February. The town's environmental specialists, who patrol the beaches, report seeing fewer straws in the sand, and most of the ones they do find are biodegradable, Town Manager Roger Hernstadt told NBC News BETTER.</p> <p>The ordinance does create penalties: \$100 for a first offense, \$500 for three or more citations within a year, but Hernstadt hopes education and warnings will be all that's needed.</p> <p>“I think all the folks here understand that an attractive beach is important for them being able to draw customers, and this effort is part of making it desirable for people to come here,” he said.</p>

Malibu already bans the commercial use of plastic shopping bags and polystyrene food containers. A new city ordinance takes effect in June that adds plastic straws, stirrers and cutlery to the list.

“I think this was driven by the fact that these plastic items don't biodegrade,” said Malibu Mayor Rick Mullen. “They may break down in size, but the actual plastic stays in the ecosystem and people are getting conscious about that all over the world.”

Most restaurant owners support the ban, Mayor Mullen said, although some worry it will drive up their cost of doing business.

“Most people here in Malibu are not fanatical environmentalists by any stretch of the imagination,” but it’s part of the city’s mission to “preserve the natural beauty and take care of the environment as much as possible,” Mullen said. “We realize that the little things we do have a big effect on the natural world.”

The plastics industry acknowledges that waste management and marine debris are serious issues that require a real and lasting solution. But it would like to see the focus be on proper disposal and greater recycling, rather than banning certain products.

“People should have the option to use products that fit their lifestyle, but it’s everyone’s responsibility to make sure these items are disposed of in a way that maximizes their value and ensures that they don’t end up where they shouldn’t,” said Ashley Stoney, director of communications for the Plastics Industry Association, in an email.

This summer, Seattle will ban the commercial use of plastic straws, plastic stir sticks and plastic utensils. Starting July 1, any business that serves food or beverages will need to provide compostable alternatives.

“It's great to have things diverted from garbage into the compost stream, which is what we're pushing with this,” said Becca Fong with Seattle Public Utilities. “It’s also a really good way to raise consumer awareness, to get people to think about prevention: Do they really need that straw or all of those utensils if they’re getting food to go and taking it home to eat?”

Single use plastics are pervasive in our everyday life — it's everywhere and very little of it is recyclable. We have this unnecessary waste product becoming fish food.

Single use plastics are pervasive in our everyday life — it's everywhere and very little of it is recyclable. We have this unnecessary waste product becoming fish food.

Several hundred retailers made the switch in November as part of the “Strawless in Seattle” campaign, organized by Dune Ives, executive director of The Lonely Whale Foundation.

“Single use plastics are pervasive in our everyday life — it's everywhere and very little of it is recyclable. We have this unnecessary waste product becoming fish food,” Ives said. “We wanted to wake people up and make them feel really powerful, that something they did would make a difference.”

As part of its commitment to sustainable products, Seattle’s Safeco Field, home of the Mariners, does not use plastic straws, stir sticks or utensils. The ballpark won Major League Baseball’s the 2017 “Green Glove Award” for its recycling efforts. Only four percent of the waste generated there goes to the landfill, the rest is recycled or composted.

“It was a fairly invisible kind of a change for us and it didn't affect us operationally,” said Rebecca Hale, director of public information for the Mariners. “I don't think that a lot of people even realize that the straws and the knives and the forks and all of that are going into the compost stream.”

**HEADLINE** 04/22 Nicaragua cancels social security change

**SOURCE** <https://www.nbcnews.com/news/world/dozens-killed-nicaragua-after-unrest-over-social-security->

	<a href="#">reform-n868216</a>
<b>GIST</b>	<p>MANAGUA, Nicaragua — Nicaraguan President Daniel Ortega repealed changes to the country's social security system Sunday night that triggered riots that led to the deaths of at least 26 people since Wednesday.</p> <p>The overhaul had sought to shore up Nicaragua's troubled social security system with a combination of reduced benefits and increased taxes. Human rights groups say at least 26 people have been killed in several days of clashes. Dozens of shops in Managua, the capital, have been looted.</p> <p>"The incidents of violence that have happened are regrettable," Ortega said in a televised message Sunday night, adding: "We cannot allow chaos, crime and looting. We cannot allow this."</p> <p>The Roman Catholic Conference of Bishops in Nicaragua condemned repression against protesters and urged the government to listen to them and drop the social security changes. "A unilateral decision always brings with it social instability. Rectifying decisions is a sign of humanity, listening is the path of reason, seeking peace at all cost is wisdom," the conference said in a statement.</p> <p>Heather Nauert, a spokeswoman for the U.S. State Department, said: "The United States government regrets the loss of life and injuries suffered in Nicaragua during protests by its citizens. We condemn the violence and the excessive force used by police and others against civilians who are exercising their constitutional right to freedom of expression and assembly."</p>

<b>HEADLINE</b>	<b>04/19 Behind Palantir's search for everything</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/features/2018-palantir-peter-thiel/">https://www.bloomberg.com/features/2018-palantir-peter-thiel/</a>
<b>GIST</b>	<p>High above the Hudson River in downtown Jersey City, a former U.S. Secret Service agent named Peter Cavicchia III ran special ops for JPMorgan Chase &amp; Co. His insider threat group—most large financial institutions have one—used computer algorithms to monitor the bank's employees, ostensibly to protect against perfidious traders and other miscreants.</p> <p>Aided by as many as 120 "forward-deployed engineers" from the data mining company Palantir Technologies Inc., which JPMorgan engaged in 2009, Cavicchia's group vacuumed up emails and browser histories, GPS locations from company-issued smartphones, printer and download activity, and transcripts of digitally recorded phone conversations. Palantir's software aggregated, searched, sorted, and analyzed these records, surfacing keywords and patterns of behavior that Cavicchia's team had flagged for potential abuse of corporate assets. Palantir's algorithm, for example, alerted the insider threat team when an employee started badging into work later than usual, a sign of potential disgruntlement. That would trigger further scrutiny and possibly physical surveillance after hours by bank security personnel.</p> <p>Over time, however, Cavicchia himself went rogue. Former JPMorgan colleagues describe the environment as Wall Street meets Apocalypse Now, with Cavicchia as Colonel Kurtz, ensconced upriver in his office suite eight floors above the rest of the bank's security team. People in the department were shocked that no one from the bank or Palantir set any real limits. They darkly joked that Cavicchia was listening to their calls, reading their emails, watching them come and go. Some planted fake information in their communications to see if Cavicchia would mention it at meetings, which he did.</p> <p>It all ended when the bank's senior executives learned that they, too, were being watched, and what began as a promising marriage of masters of big data and global finance descended into a spying scandal. The misadventure, which has never been reported, also marked an ominous turn for Palantir, one of the most richly valued startups in Silicon Valley. An intelligence platform designed for the global War on Terror was weaponized against ordinary Americans at home.</p> <p>Founded in 2004 by Peter Thiel and some fellow PayPal alumni, Palantir cut its teeth working for the Pentagon and the CIA in Afghanistan and Iraq. The company's engineers and products don't do any</p>

spying themselves; they're more like a spy's brain, collecting and analyzing information that's fed in from the hands, eyes, nose, and ears. The software combs through disparate data sources—financial documents, airline reservations, cellphone records, social media postings—and searches for connections that human analysts might miss. It then presents the linkages in colorful, easy-to-interpret graphics that look like spider webs. U.S. spies and special forces loved it immediately; they deployed Palantir to synthesize and sort the blizzard of battlefield intelligence. It helped planners avoid roadside bombs, track insurgents for assassination, even hunt down Osama bin Laden. The military success led to federal contracts on the civilian side. The U.S. Department of Health and Human Services uses Palantir to detect Medicare fraud. The FBI uses it in criminal probes. The Department of Homeland Security deploys it to screen air travelers and keep tabs on immigrants.

Police and sheriff's departments in New York, New Orleans, Chicago, and Los Angeles have also used it, frequently ensnaring in the digital dragnet people who aren't suspected of committing any crime. People and objects pop up on the Palantir screen inside boxes connected to other boxes by radiating lines labeled with the relationship: "Colleague of," "Lives with," "Operator of [cell number]," "Owner of [vehicle]," "Sibling of," even "Lover of." If the authorities have a picture, the rest is easy. Tapping databases of driver's license and ID photos, law enforcement agencies can now identify more than half the population of U.S. adults.

JPMorgan was effectively Palantir's R&D lab and test bed for a foray into the financial sector, via a product called Metropolis. The two companies made an odd couple. Palantir's software engineers showed up at the bank on skateboards. Neckties and haircuts were too much to ask, but JPMorgan drew the line at T-shirts. The programmers had to agree to wear shirts with collars, tucked in when possible.

As Metropolis was installed and refined, JPMorgan made an equity investment in Palantir and inducted the company into its Hall of Innovation, while its executives raved about Palantir in the press. The software turned "data landfills into gold mines," Guy Chiarello, who was then JPMorgan's chief information officer, told Bloomberg Businessweek in 2011.

Cavicchia was in charge of forensic investigations at the bank. Through Palantir, he gained administrative access to a full range of corporate security databases that had previously required separate authorizations and a specific business justification to use. He had unprecedented access to everything, all at once, all the time, on one analytic platform. He was a one-man National Security Agency, surrounded by the Palantir engineers, each one costing the bank as much as \$3,000 a day.

Senior investigators stumbled onto the full extent of the spying by accident. In May 2013 the bank's leadership ordered an internal probe into who had leaked a document to the New York Times about a federal investigation of JPMorgan for possibly manipulating U.S. electricity markets. Evidence indicated the leaker could have been Frank Bisignano, who'd recently resigned as JPMorgan's co-chief operating officer to become CEO of First Data Corp., the big payments processor. Cavicchia had used Metropolis to gain access to emails about the leak investigation—some written by top executives—and the bank believed he shared the contents of those emails and other communications with Bisignano after Bisignano had left the bank. (Inside JPMorgan, Bisignano was considered Cavicchia's patron—a senior executive who protected and promoted him.)

JPMorgan officials debated whether to file a suspicious activity report with federal regulators about the internal security breach, as required by law whenever banks suspect regulatory violations. They decided not to—a controversial decision internally, according to multiple sources with the bank. Cavicchia negotiated a severance agreement and was forced to resign. He joined Bisignano at First Data, where he's now a senior vice president. Chiarello also went to First Data, as president. After their departures, JPMorgan drastically curtailed its Palantir use, in part because "it never lived up to its promised potential," says one JPMorgan executive who insisted on anonymity to discuss the decision.

The bank, First Data, and Bisignano, Chiarello, and Cavicchia didn't respond to separately emailed questions for this article. Palantir, in a statement responding to questions about how JPMorgan and others have used its software, declined to answer specific questions. "We are aware that powerful technology can

be abused and we spend a lot of time and energy making sure our products are used for the forces of good,” the statement said.

Much depends on how the company chooses to define good. In March a former computer engineer for Cambridge Analytica, the political consulting firm that worked for Donald Trump’s 2016 presidential campaign, testified in the British Parliament that a Palantir employee had helped Cambridge Analytica use the personal data of up to 87 million Facebook users to develop psychographic profiles of individual voters. Palantir said it has a strict policy against working on political issues, including campaigns, and showed Bloomberg emails in which it turned down Cambridge’s request to work with Palantir on multiple occasions. The employee, Palantir said, worked with Cambridge Analytica on his own time. Still, there was no mistaking the implications of the incident: All human relations are a matter of record, ready to be revealed by a clever algorithm. Everyone is a spidergram now.

Thiel, who turned 50 in October, long reveled as the libertarian black sheep in left-leaning Silicon Valley. He contributed \$1.25 million to Trump’s presidential victory, spoke at the Republican convention, and has dined with Trump at the White House. But Thiel has told friends he’s had enough of the Bay Area’s “monocultural” liberalism. He’s ditching his longtime base in San Francisco and moving his personal investment firms this year to Los Angeles, where he plans to establish his next project, a conservative media empire.

As Thiel’s wealth has grown, he’s gotten more strident. In a 2009 essay for the Cato Institute, he railed against taxes, government, women, poor people, and society’s acquiescence to the inevitability of death. (Thiel doesn’t accept death as inexorable.) He wrote that he’d reached some radical conclusions: “Most importantly, I no longer believe that freedom and democracy are compatible.” The 1920s was the last time one could feel “genuinely optimistic” about American democracy, he said; since then, “the vast increase in welfare beneficiaries and the extension of the franchise to women—two constituencies that are notoriously tough for libertarians—have rendered the notion of ‘capitalist democracy’ into an oxymoron.”

Thiel went into tech after missing a prized Supreme Court clerkship following his graduation from Stanford Law School. He co-founded PayPal and then parlayed his winnings from its 2002 sale to eBay Inc. into a career in venture investing. He made an early bet on Facebook Inc. (where he’s still on the board), which accounts for most of his \$3.3 billion fortune, as estimated by Bloomberg, and launched his career as a backer of big ideas—things like private space travel (through an investment in SpaceX), hotel alternatives (Airbnb), and floating island nations (the Seasteading Institute).

He started Palantir—named after the omniscient crystal balls in J.R.R. Tolkien’s Lord of the Rings trilogy—three years after the attacks of Sept. 11, 2001. The CIA’s investment arm, In-Q-Tel, was a seed investor. For the role of chief executive officer, he chose an old law school friend and self-described neo-Marxist, Alex Karp. Thiel told Bloomberg in 2011 that civil libertarians ought to embrace Palantir, because data mining is less repressive than the “crazy abuses and draconian policies” proposed after Sept. 11. The best way to prevent another catastrophic attack without becoming a police state, he argued, was to give the government the best surveillance tools possible, while building in safeguards against their abuse.

Legend has it that Stephen Cohen, one of Thiel’s co-founders, programmed the initial prototype for Palantir’s software in two weeks. It took years, however, to coax customers away from the longtime leader in the intelligence analytics market, a software company called I2 Inc.

In one adventure missing from the glowing accounts of Palantir’s early rise, I2 accused Palantir of misappropriating its intellectual property through a Florida shell company registered to the family of a Palantir executive. A company claiming to be a private eye firm had been licensing I2 software and development tools and spiriting them to Palantir for more than four years. I2 said the cutout was registered to the family of Shyam Sankar, Palantir’s director of business development.

I2 sued Palantir in federal court, alleging fraud, conspiracy, and copyright infringement. In its legal response, Palantir argued it had the right to appropriate I2’s code for the greater good. “What’s at stake here is the ability of critical national security, defense and intelligence agencies to access their own data

and use it interoperably in whichever platform they choose in order to most effectively protect the citizenry,” Palantir said in its motion to dismiss I2’s suit.

The motion was denied. Palantir agreed to pay I2 about \$10 million to settle the suit. I2 was sold to IBM in 2011.

Sankar, Palantir employee No. 13 and now one of the company’s top executives, also showed up in another Palantir scandal: the company’s 2010 proposal for the U.S. Chamber of Commerce to run a secret sabotage campaign against the group’s liberal opponents. Hacked emails released by the group Anonymous indicated that Palantir and two other defense contractors pitched outside lawyers for the organization on a plan to snoop on the families of progressive activists, create fake identities to infiltrate left-leaning groups, scrape social media with bots, and plant false information with liberal groups to subsequently discredit them.

After the emails emerged in the press, Palantir offered an explanation similar to the one it provided in March for its U.K.-based employee’s assistance to Cambridge Analytica: It was the work of a single rogue employee. The company never explained Sankar’s involvement. Karp issued a public apology and said he and Palantir were deeply committed to progressive causes. Palantir set up an advisory panel on privacy and civil liberties, headed by a former CIA attorney, and beefed up an engineering group it calls the Privacy and Civil Liberties Team. The company now has about 10 PCL engineers on call to help vet clients’ requests for access to data troves and pitch in with pertinent thoughts about law, morality, and machines.

During its 14 years in startup mode, Palantir has cultivated a mystique as a haven for brilliant engineers who want to solve big problems such as terrorism and human trafficking, unfettered by pedestrian concerns such as making money. Palantir executives boast of not employing a single salesperson, relying instead on word-of-mouth referrals.

The company’s early data mining dazzled venture investors, who valued it at \$20 billion in 2015. But Palantir has never reported a profit. It operates less like a conventional software company than like a consultancy, deploying roughly half its 2,000 engineers to client sites. That works at well-funded government spy agencies seeking specialized applications but has produced mixed results with corporate clients. Palantir’s high installation and maintenance costs repelled customers such as Hershey Co., which trumpeted a Palantir partnership in 2015 only to walk away two years later. Coca-Cola, Nasdaq, American Express, and Home Depot have also dumped Palantir.

Karp recognized the high-touch model was problematic early in the company’s push into the corporate market, but solutions have been elusive. “We didn’t want to be a services company. We wanted to do something that was cost-efficient,” he confessed at a European conference in 2010, in one of several unguarded comments captured in videos posted online. “Of course, what we didn’t recognize was that this would be much, much harder than we realized.”

Palantir’s newest product, Foundry, aims to finally break through the profitability barrier with more automation and less need for on-site engineers. Airbus SE, the big European plane maker, uses Foundry to crunch airline data about specific onboard components to track usage and maintenance and anticipate repair problems. Merck KGaA, the pharmaceutical giant, has a long-term Palantir contract to use Foundry in drug development and supply chain management.

Deeper adoption of Foundry in the commercial market is crucial to Palantir’s hopes of a big payday. Some investors are weary and have already written down their Palantir stakes. Morgan Stanley now values the company at \$6 billion. Fred Alger Management Inc., which has owned stock since at least 2006, revalued Palantir in December at about \$10 billion, according to Bloomberg Holdings. One frustrated investor, Marc Abramowitz, recently won a court order for Palantir to show him its books, as part of a lawsuit he filed alleging the company sabotaged his attempt to find a buyer for the Palantir shares he has owned for more than a decade.

As shown in the privacy breaches at Facebook and Cambridge Analytica—with Thiel and Palantir linked to both sides of the equation—the pressure to monetize data at tech companies is ceaseless. Facebook didn't grow from a website connecting college kids into a purveyor of user profiles and predilections worth \$478 billion by walling off personal data. Palantir says its Privacy and Civil Liberties Team watches out for inappropriate data demands, but it consists of just 10 people in a company of 2,000 engineers. No one said no to JPMorgan, or to whomever at Palantir volunteered to help Cambridge Analytica—or to another organization keenly interested in state-of-the-art data science, the Los Angeles Police Department.

Palantir began work with the LAPD in 2009. The impetus was federal funding. After several Sept. 11 postmortems called for more intelligence sharing at all levels of law enforcement, money started flowing to Palantir to help build data integration systems for so-called fusion centers, starting in L.A. There are now more than 1,300 trained Palantir users at more than a half-dozen law enforcement agencies in Southern California, including local police and sheriff's departments and the Bureau of Alcohol, Tobacco, Firearms and Explosives.

The LAPD uses Palantir's Gotham product for Operation Laser, a program to identify and deter people likely to commit crimes. Information from rap sheets, parole reports, police interviews, and other sources is fed into the system to generate a list of people the department defines as chronic offenders, says Craig Uchida, whose consulting firm, Justice & Security Strategies Inc., designed the Laser system. The list is distributed to patrolmen, with orders to monitor and stop the pre-crime suspects as often as possible, using excuses such as jaywalking or fix-it tickets. At each contact, officers fill out a field interview card with names, addresses, vehicles, physical descriptions, any neighborhood intelligence the person offers, and the officer's own observations on the subject.

The cards are digitized in the Palantir system, adding to a constantly expanding surveillance database that's fully accessible without a warrant. Tomorrow's data points are automatically linked to today's, with the goal of generating investigative leads. Say a chronic offender is tagged as a passenger in a car that's pulled over for a broken taillight. Two years later, that same car is spotted by an automatic license plate reader near a crime scene 200 miles across the state. As soon as the plate hits the system, Palantir alerts the officer who made the original stop that a car once linked to the chronic offender was spotted near a crime scene.

The platform is supplemented with what sociologist Sarah Brayne calls the secondary surveillance network: the web of who is related to, friends with, or sleeping with whom. One woman in the system, for example, who wasn't suspected of committing any crime, was identified as having multiple boyfriends within the same network of associates, says Brayne, who spent two and a half years embedded with the LAPD while researching her dissertation on big-data policing at Princeton University and who's now an associate professor at the University of Texas at Austin. "Anybody who logs into the system can see all these intimate ties," she says. To widen the scope of possible connections, she adds, the LAPD has also explored purchasing private data, including social media, foreclosure, and toll road information, camera feeds from hospitals, parking lots, and universities, and delivery information from Papa John's International Inc. and Pizza Hut LLC.

The LAPD declined to comment for this story. Palantir sent Bloomberg a statement about its work with law enforcement: "Our [forward-deployed engineers] and [privacy and civil liberties] engineers work with the law enforcement customers (including LAPD) to ensure that the implementation of our software and integration of their source systems with the software is consistent with the Department's legal and policy obligations, as well as privacy and civil liberties considerations that may not currently be legislated but are on the horizon. We as a company determine the types of engagements and general applications of our software with respect to those overarching considerations. Police Agencies have internal responsibility for ensuring that their information systems are used in a manner consistent with their policies and procedures."

Operation Laser has made L.A. cops more surgical—and, according to community activists, unrelenting. Once targets are enmeshed in a spidergram, they're stuck.

Manuel Rios, 22, lives in the back of his grandmother's house at the top of a hill in East L.A., in the heart of the city's gang area. Tall with a fair complexion and light hair, he struggled in high school with depression and a learning disability and dropped out to work at a supermarket.

He grew up surrounded by friends who joined Eastside 18, the local affiliate of the 18th Street gang, one of the largest criminal syndicates in Southern California. Rios says he was never "jumped in"—initiated into 18. He spent years addicted to crystal meth and was once arrested for possession of a handgun and sentenced to probation. But except for a stint in county jail for a burglary arrest inside a city rec center, he's avoided further trouble and says he kicked his meth habit last year.

In 2016, Rios was sitting in a parked car with an Eastside 18 friend when a police car pulled up. His buddy ran, pursued by the cops, but Rios stayed put. "Why should I run? I'm not a gang member," he says over steak and eggs at the IHOP near his home. The police returned and handcuffed him. One of them took his picture with a cellphone. "Welcome to the gang database!" the officer said.

Since then he's been stopped more than a dozen times, he says, and told that if he doesn't like it he should move. He has nowhere to go. His girlfriend just had a baby girl, and he wants to be around for them. "They say you're in the system, you can't lie to us," he says. "I tell them, 'How can I be in the hood if I haven't got jumped in? Can't you guys tell people who bang and who don't?' They go by their facts, not the real facts."

The police, on autopilot with Palantir, are driving Rios toward his gang friends, not away from them, worries Mariella Saba, a neighbor and community organizer who helped him get off meth. When whole communities like East L.A. are algorithmically scraped for pre-crime suspects, data is destiny, says Saba. "These are systemic processes. When people are constantly harassed in a gang context, it pushes them to join. They internalize being told they're bad."

In Chicago, at least two immigrants have been detained for deportation by Immigration and Customs Enforcement officers based on erroneous information in gang databases, according to a pair of federal lawsuits. Chicago is a sanctuary city, so it isn't clear how ICE found out about the purported gang affiliations. But Palantir is a likely link. The company provided an "intelligence management solution" for the Cook County Sheriff's Office to integrate information from at least 14 different databases, including gang lists compiled by state and local police departments, according to county records. Palantir also has a \$41 million data mining contract with ICE to build the agency's "investigative case management" system.

One of the detained men, Wilmer Catalan-Ramirez, a 31-year-old body shop mechanic, was seriously injured when six ICE agents burst into his family's home last March without a warrant. He'd been listed in the local gang database twice—in rival gangs. Catalan-Ramirez spent the next nine months in federal detention, until the city of Chicago admitted both listings were wrong and agreed to petition the feds to let him stay in the U.S. ICE released him in January, pending a new visa application. "These cases are perfect examples of how databases filled with unverified information that is often false can destroy people's lives," says his attorney, Vanessa del Valle of Northwestern University's MacArthur Justice Center.

For all of Palantir's professed concern for individuals' privacy, the single most important safeguard against abuse is the one it's trying desperately to reduce through automation: human judgment.

As Palantir tries to court corporate customers as a more conventional software company, fewer forward-deployed engineers will mean fewer human decisions. Sensitive questions, such as how deeply to pry into people's lives, will be answered increasingly by artificial intelligence and machine-learning algorithms. The small team of Privacy and Civil Liberties engineers could find themselves even less influential, as the urge for omnipotence among clients overwhelms any self-imposed restraints.

Computers don't ask moral questions; people do, says John Grant, one of Palantir's top PCL engineers and a forceful advocate for mandatory ethics education for engineers. "At a company like ours with millions of lines of code, every tiny decision could have huge implications," Grant told a privacy conference in Berkeley last year.

	JPMorgan's experience remains instructive. "The world changed when it became clear everyone could be targeted using Palantir," says a former JPMorgan cyber expert who worked with Cavicchia at one point on the insider threat team. "Nefarious ideas became trivial to implement; everyone's a suspect, so we monitored everything. It was a pretty terrible feeling."

<b>HEADLINE</b>	<b>04/22 Denuclearization successes around world</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/denuclearization-successes-world-54653956?">http://abcnews.go.com/International/wireStory/denuclearization-successes-world-54653956?</a>
<b>GIST</b>	<p>Will North Korea give up the bomb?</p> <p>The answer may start becoming clear when South Korean President Moon Jae-in meets North Korean leader Kim Jong Un on Friday.</p> <p>While North Korea declared this past weekend it would stop nuclear and intercontinental ballistic missile tests and shut down its nuclear test site, it did not indicate it will give up its nuclear arsenal or halt its production of missiles. Moon and later President Donald Trump are still likely to find it very difficult to persuade Kim to dismantle his entire arsenal, which includes purported thermonuclear weapons and developmental ICBMs.</p> <p>But other countries that developed or tried to develop nuclear weapons have agreed to abandon them in exchange for sanctions relief and compensation. None of these cases are directly applicable to North Korea, which advanced further and with greater zeal than any of the others.</p> <p>A look at the past cases as Washington and its allies map out a denuclearization strategy for Pyongyang and the challenges North Korea poses:</p>

---

## LIBYA

Shortly before he became Trump's national security adviser, John Bolton told Radio Free Asia that nuclear negotiations with North Korea should be similar to past discussions with Libya, which dismantled its rudimentary nuclear program in the 2000s.

Western nations lifted punitive measures and removed Libya's name from the U.S. state sponsors of terrorism after former Libyan leader Moammar Gadhafi fulfilled his promise to turn over his nuclear materials, weapon components and bomb designs obtained from the black market.

"We should insist that if this meeting is going to take place, it will be similar to discussions we had with Libya 13 or 14 years ago — how to pack up their nuclear weapons program and take it to Oak Ridge, Tennessee, which is where the Libyan nuclear program (is)," Bolton said. "If it's anything other than a conversation about how to do that, then I think it shows it's just camouflage for North Korea to continue working toward its long-sought objective of deliverable nuclear weapons."

But some analysts say bringing up Libya would risk derailing any progress in negotiations with the North. Kim Jong Un took power weeks after Gadhafi's gruesome death at the hands of rebel forces amid a popular uprising in October 2011. The North has frequently used Gadhafi's death to justify its own nuclear development in the face of perceived U.S. threats.

"The Saddam Hussein regime in Iraq and the Gadhafi regime in Libya could not escape the fate of destruction after being deprived of their foundations for nuclear development and giving up nuclear programs of their own accord, yielding to the pressure of the U.S. and the West keen on their regime changes," the North's Korean Central News Agency said after the country's fourth nuclear test in January 2016.

---

## IRAN

Some experts see Iran's case as the best available scenario for denuclearizing North Korea. Under a 2015 deal struck with six foreign powers — the United States, Britain, Russia, France, Germany and China — Iran agreed to curb its nuclear program, long suspected of being aimed at developing weapons, in return for billions of dollars in sanctions relief.

Accepting a 10-year restriction on uranium enrichment, Iran shut down thousands of centrifuges and exported almost its entire stockpile of bomb-making material. It disabled a heavy water plant seen as potentially capable of producing plutonium usable in weapons. The country also approved a stringent monitoring regime that allows International Atomic Energy Agency inspectors to access any site suspected of nuclear weapons-related activities, including military facilities.

Aside from economic benefits, the deal allowed Teheran to save face by granting it the right to continue its atomic program for peaceful purposes, which some see as a potential selling point for Pyongyang.

Skeptics say North Korea's weapons program is too advanced to realistically expect a similar cut to near zero. While it was obvious that oil-rich Iran would gain significantly from the removal of sanctions alone, Kim, who guides a broken economy that lacks real industry, may demand bigger rewards for restraining his nuclear program.

---

## UKRAINE AND OTHERS

	<p>Ukraine, Kazakhstan and Belarus inherited thousands of nuclear weapons after the Soviet Union collapsed in 1991, but were persuaded by the United States to transfer the devices to Russia in return for economic support and security guarantees.</p> <p>Analysts say the countries didn't have clear security reasons to keep the weapons and that memories of the Chernobyl disaster also influenced Ukraine's decision to abandon the nukes.</p> <p>South Africa, which has large uranium reserves, had built about a half-dozen nuclear warheads but voluntarily gave them up and dismantled its weapons program after the end of apartheid starting in 1991.</p>

<b>HEADLINE</b>	<b>04/23 SKorea halts propaganda broadcasts</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/skorea-halts-propaganda-broadcasts-summit-north-54653856?cid=clicksource_76_2_hero_headlines_headlines_hed">http://abcnews.go.com/International/wireStory/skorea-halts-propaganda-broadcasts-summit-north-54653856?cid=clicksource_76_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>South Korea halted anti-Pyongyang propaganda broadcasts across the rivals' tense border on Monday days before their leaders are to sit down for talks expected to focus on the North's nuclear program, Seoul officials said.</p> <p>Seoul had blasted propaganda messages and K-pop songs from border loudspeakers since the North's fourth nuclear test in early 2016. Pyongyang quickly matched Seoul's campaign with its own border broadcasts and launches of balloons carrying anti-South leaflets across the border.</p> <p>South Korea, however, turned off its broadcasts to try to ease military tensions and establish an environment for peaceful talks, Seoul's Defense Ministry said in a statement.</p> <p>It said Seoul hopes its action would lead to both sides stopping mutual slander and propaganda activities. Yonhap news agency reported unspecified North Korean broadcasts were sporadically heard in the South on Monday morning. South Korean defense officials said they couldn't immediately confirm the status of the North's broadcasts.</p> <p>The move came amid a recent thaw of animosities, with North Korean leader Kim Jong Un trying to reach out to Seoul and Washington in recent months after conducting his country's sixth and most powerful nuclear test and three long-range missile test-launches last year.</p>

	Kim and South Korean President Moon Jae-in are to meet at a border village on Friday in the rivals' third- ever summit talks. Kim is to hold separate summit talks with President Donald Trump in May or early June in what would be the first North Korea-U.S. summit talks.

<b>HEADLINE</b>	<b>04/20 Seattle: no electric scooters yet</b>
<b>SOURCE</b>	<a href="https://www.seattlepi.com/local/transportation/article/Report-No-electric-scooters-coming-to-Seattle-12852661.php">https://www.seattlepi.com/local/transportation/article/Report-No-electric-scooters-coming-to-Seattle-12852661.php</a>
<b>GIST</b>	<p>Seattle isn't quite ready for shareable electric scooters, at least that's the official line from the city.</p> <p>While a saga seems to be ongoing in San Francisco, the city of Seattle has told the various companies launching shareable electric scooters that they can't hit the mean streets of the Emerald City just yet — they'll need to come up with a permit plan first, according to a Seattle Times report.</p> <p>Seattle's Department of Transportation is already busy trying to come up with a permanent program for the dock-less bike shares scattered around the city, and the department plans to get that in place before it starts considering a permit program for electric scooters, SDOT spokeswoman Karen Westing told the Times.</p> <p>LimeBike and Spin, which both operate bike-shares in Seattle, and a third company called Bird, recently launched the dock-less scooters in San Francisco. They started running the scooters in the city before any permit program was established, triggering hefty backlash from city officials (police have been confiscating them and ordering riders off city sidewalks in what's becoming a pitched battle there).</p> <p>The biggest issues in San Francisco are that the two-wheelers are being operated on the sidewalks and without permission from the city. Apparently, Seattle is aiming to avoid a similar scenario.</p>

<b>HEADLINE</b>	<b>04/21 Private airport terminal in Everett?</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/north-sound-news/everett-getting-rare-private-us-airport-terminal/736071539">https://www.kiro7.com/news/north-sound-news/everett-getting-rare-private-us-airport-terminal/736071539</a>
<b>GIST</b>	<p>EVERETT, Wash. - It's not uncommon to see brand new commercial jets flying in and out of Paine Field, just north of Seattle, defying rain and low visibility that define the region. That's because the airport with two runways has for decades served as home to Boeing assembly lines, rolling out models such as the 777 for test flights over the Pacific Ocean.</p> <p>Now an entrepreneur is getting a chance to build the airport's first passenger terminal, betting travelers in Seattle's rapidly-expanding suburbs will use it for short-haul trips instead of fighting traffic and long lines at SeaTac International, one of the country's busiest hubs.</p> <p>Brett Smith's company is investing about \$40 million to build the terminal. In the process, he wants to increase U.S. acceptance of a global trend: Putting commercial airport terminals in the hands of private companies instead of the government.</p> <p>Smith is the founder and chief executive officer of Propeller Investments LLC., which secured a 50-year agreement with Snohomish County three years ago through a local subsidiary to build and operate the terminal in Everett, Washington. Operations are due to start in the fall, with announcements already made from Alaska Airlines, Southwest Airlines and United Airlines for up to 24 flights per day.</p> <p>The deal stands out for U.S. airports because it's structured as a public-private partnership, a model that divides the responsibilities of owning and operating public assets between governments and the private sector. It's also notable because Propeller has no experience in building or operating airport terminals.</p>

The project contrasts with about 500 commercial airports across the U.S., where local governments own and operate most of the facilities. Those airports have relied on decades of federal funding and passenger fees to help finance infrastructure improvements. But traditional funding sources have remained flat since the turn of the century, failing to keep up with increased air travel demand.

Airport privatization proponents point to efficiencies and variety of passenger amenities like stores and restaurants found in major European hubs such as London's Heathrow and Frankfurt Airport, both of which are run by companies and rated among the 10 best airports in 2018 by Skytrax, an independent agency that ranks airports and airlines based on traveler reviews. No U.S. airports made the list this year.

"Public-private partnerships in the airport realm were almost unheard of 18 months ago. Now barely a day goes by where I don't get a call asking about them," said Peter Kirsch, a Denver-based partner at Kaplan Kirsch Rockwell, the law firm that represented Snohomish County during its negotiations with Propeller. The firm also represented Propeller during its talks with the airlines. "It's the future of airport development."

Only a handful of U.S. airports have adopted any form of privatization. Southwest Airlines financed and built a five-gate terminal at Houston's Hobby Airport that opened in 2015. Denver signed an agreement last year to allow a group of companies led by Madrid-based Ferrovial, the company that built and operates two terminals at Heathrow, to renovate Jeppesen Terminal at Denver International Airport and operate concessions.

Almost half of airports in the European Union are either "fully" or "partially" private, according to a study by Airports Council International, an advocacy group made up of airport operators. It estimates U.S. airports will need to implement \$100 billion of infrastructure works by 2021 to accommodate passenger and cargo volume growth.

"There's an old adage that says 'necessity is the mother of invention,'" said Patti Clark, who used to manage Valdosta Regional Airport in Valdosta, Georgia, and now teaches airport sustainability and environmental management at Embry Riddle Aeronautical University in Daytona Beach, Fla. "What we have is an aging infrastructure of airports in the U.S. Partnerships with the private sector help improve facilities and competitiveness."

But those projects carry the risks of being dependent on the airlines, which are already grappling with thin profit margins. Airlines reducing or cancelling their operations in a particular terminal can leave "gaping holes" in operator revenues, she said.

Paine Field handles about 300 flights per day. In 2015, the Snohomish County Council voted to lease 10.5 acres (4.2 hectares), or less than 1 percent of the airport's total area, to Propeller for 30 years and give the company two additional 10-year extension options.

It marks the first test for Smith, who tried to secure deals to establish commercial operations in Georgia's Gwinnett and Paulding Counties. He was unsuccessful due to opposition from the communities and Delta Airlines, which dominates traffic at nearby Hartsfield-Jackson Airport in Atlanta.

"To me this is an honor, so it has to go well," said Smith, who relocated to Seattle from New York to oversee construction. "We have to be able to show that with privatization you get a really good product."

Propeller sold \$50 million of bonds in February to finance the project, paying investors about double the interest rate they would earn on similar U.S. Treasuries, according to data compiled by The Associated Press. The company doesn't have a credit rating.

"We're trying to really grow the job base here in Snohomish County, and having that direct access for businesses, I think it'll be a boon," County Executive Dave Somers said.

<b>HEADLINE</b>	<b>04/20 California pot market off to slow start</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/business/business-news/growing-weed-california-marijuana-market-slow-start-n867871">https://www.nbcnews.com/business/business-news/growing-weed-california-marijuana-market-slow-start-n867871</a>
<b>GIST</b>	<p>So far, it's been quite a year for weed: California's foray into legal recreational use began in January, former House speaker John Boehner said his views on the drug had "evolved" and joined the board of cannabis company Acreage Holdings, and New York Senator Chuck Schumer announced on Friday (yes, on 4/20, for those keeping track of these details) a plan to try and decriminalize marijuana at the federal level.</p> <p>But like the crop itself, cultivating a mature market takes an investment of time and resources. California's legalization of recreational marijuana hasn't been without growing pains, with industry experts saying a clunky rollout, local resistance and burdensome tax and regulatory requirements are keeping the industry from hitting its stride.</p> <p>"The launch of the California market has been a total mess, and not entirely unexpected," said Troy Dayton, CEO and co-founder of cannabis market research firm Arcview Group. "This is the most complex, onerous and far-reaching regulatory scheme that's ever been tried. Every time you add a level of complexity, you add a level of uncertainty," he said.</p> <p>According to research firm BDS Analytics, 2018 sales at dispensaries licensed to sell for recreational use in California were \$339 million through February, a figure below the state's expectations. Greg Shoenfeld, vice president of operations at BDS Analytics, said initial projections could have been overly optimistic. "Whenever there's a proposal to move to a legalized market, the best case scenarios are laid out in terms of revenue expectation, but typically, implementation moves a bit slower," he said.</p> <p>Experts suggest that much of the industry is still operating underground. "We estimate that 85 to 90 percent of the industry that existed last year is not licensed," said Chris Beals, president and general counsel for Weedmaps.</p> <p>Although some faulted the state for its pace of issuing licenses, Beals said the bottleneck was happening at the municipal level. "The biggest problem has been that there's been a complete failure of local governments to issue licenses," he said, adding that 85 percent of cities and counties in the state have bans on recreational marijuana retailers.</p> <p>The thinking goes that, without legal storefronts from which to purchase their cannabis products, people will continue to rely on the black market.</p> <p>"If you take the location of adult-use licenses and do mapping over it, you get this incredibly small part of the state that has geographic coverage," Beals said. "In a nutshell, I think that's the problem in California."</p> <p>Even if they live near a dispensary licensed to sell to recreational users, regular marijuana users who are brand-loyal to a specific grower or strain might not find their product of choice in stock.</p> <p>Taxes are also a hurdle in that they raise prices all along the supply chain, making it tough for retailers to turn a profit and end up giving customers an incentive to seek out cheaper, illegal alternatives.</p> <p>"What the official estimates failed to address is local governments are layering taxes onto each level of the local supply chains," Beals said. On top of state sales tax, excise tax and other levies, some dispensaries could be facing effective tax rates of nearly 80 percent, he said. "I think it's really bordering on the crisis level."</p> <p>Chris Walsh, vice president of editorial and strategic development at Marijuana Business Daily, also</p>

pointed to Colorado as an example both of early stumbles and an ultimately successful transition. "It took the recreational market a while to mature and it took people a while to get used to the concept of it," he said. "It took a while to take root and for people to understand how everything was going to work."

Rosalie Liccardo Pacula, director of the BING Center for Health Economics and co-director of the Drug Policy Research Center at RAND Corporation, argued that four months into the opening of the recreational market was too soon to draw conclusions about its long-term viability.

"This is very much a dynamic situation, and it is just far too early to make decisive comments on performance," she said. "Much of the relevant data on which to evaluate this is not even in."

HEADLINE	<b>04/21 Iran: open to prisoner swap, if--</b>
SOURCE	<a href="https://www.cbsnews.com/news/iran-open-to-prisoner-swap-if-us-has-change-of-attitude-says-foreign-minister/">https://www.cbsnews.com/news/iran-open-to-prisoner-swap-if-us-has-change-of-attitude-says-foreign-minister/</a>
GIST	<p>In an interview with "Face the Nation" moderator Margaret Brennan, Iran's top diplomat denounced American attempts to secure the release of U.S. citizens being held in Tehran. Mohammad Javad Zarif, Iranian Foreign Minister, said American "demands" are hampering "genuine dialogue."</p> <p>"The United States needs to approach this from a position of dealing with another sovereign government," said Zarif, "And if that approach led to change, then the United States would see a difference."</p> <p>Five Americans are known to have been detained by Iranian authorities, including the controversial arrest of Baquer Namazi, who is suspected to be in failing health. Some argue the regime's detention of American-Iranian dual nationals is little more than an attempt by hard-liners to create leverage.</p> <p>Asked about the conditions of the imprisoned Americans, Zarif insisted that their health requirements were being "taken care of."</p> <p>"Our judiciary is an independent organ," Zarif told Brennan, "just what you would say about your courts, and we cannot have an impact on the decisions of our judiciary. But we have been trying to use our influence from a humanitarian perspective. First of all, in order to make sure their health requirements are taken care of as well as to see whether a humanitarian agreement can be reached."</p> <p>Some family members of the detained have pleaded for the Trump administration to engage the Iranian government directly in securing their release. In 2016, Iran released four Americans in a swap for seven Iranians held in the United States. At the time, many Republicans condemned the exchange negotiated by the Obama administration.</p> <p>After a fiery speech by President Trump at the United Nations, where he condemned Iran as a "murderous regime" that needed to free Americans "unjustly detained," the Iranians declined an offered conversation between the president and Iranian President Hassan Rouhani.</p> <p>"You do not engage in negotiations by exercising disrespect for a country, for its people, for its government, by openly making claims including this illusion about regime change. Then you do not leave much room for a genuine dialogue," said Zarif.</p> <p>Pressed by Brennan on whether the Iranians were open to an exchange, like the Obama-era swap, Zarif offered an opening.</p> <p>"It is a possibility, certainly from a humanitarian perspective, but it requires a change in attitude," said Zarif.</p>

<b>HEADLINE</b>	<b>04/22 Israel raid nabs 15 Hamas operatives</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/israel-15-hamas-operatives-arrested-west-bank-raid-54642130?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/israel-15-hamas-operatives-arrested-west-bank-raid-54642130?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>The Israeli military says it has arrested 15 Hamas operatives in an overnight West Bank raid.</p> <p>The military says Sunday those captured are suspected of collaborating with a well-known Hamas operative from Gaza to spread its activities to the West Bank, which is governed by the rival Fatah movement. The raid comes after Hamas accused Israel of assassinating one of its men in Malaysia and amid a wave of mass protests along the Gaza border that have turned violent.</p> <p>In three weeks of protests, Israeli troops have killed 32 Palestinians and wounded some 1,600. Hamas says the protests are against a decade-long blockade of the isolated strip. Israel says it is defending its sovereign border and only targeting instigators. It says Hamas uses the protests as cover for attacks.</p>

## Cyber Awareness

[Top of page](#)

<b>HEADLINE</b>	<b>04/23 'Orangeworm' cyberspies target healthcare</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/orangeworm-cyberspies-target-healthcare-sector-us-europe-asia">https://www.securityweek.com/orangeworm-cyberspies-target-healthcare-sector-us-europe-asia</a>
<b>GIST</b>	<p>A threat group tracked by Symantec as Orangeworm has been targeting healthcare organizations in the United States, Europe and Asia, but the attacks do not appear to be the work of a nation state.</p> <p>A report published on Monday by the security firm revealed that Orangeworm was first identified in January 2015. The group has focused on organizations in the healthcare sector, which accounts for nearly 40% of targets, but it has also launched attacks on other industries that are somehow related to healthcare, including IT (15%), manufacturing (15%), logistics (8%), and agriculture (8%).</p> <p>Specifically, victims in other sectors include medical device manufacturers, IT firms that provide services to clinics, and logistics companies that deliver healthcare products. Researchers say companies outside the healthcare industry have been targeted in supply chain attacks with the ultimate goal of gaining access to the systems of the intended entity.</p> <p>The highest percentage of victims has been spotted in the United States (17%), but Orangeworm has also targeted organizations in Saudi Arabia, India, Philippines, Hungary, United Kingdom, Turkey, Germany, Poland, Hong Kong, Sweden, Canada, France, and several other countries around the world.</p> <p>“While Orangeworm has impacted only a small set of victims in 2016 and 2017 according to Symantec telemetry, we have seen infections in multiple countries due to the nature of the victims operating large international corporations,” Symantec said in its report.</p> <p>Once they gain access to the targeted organization’s systems, the hackers deploy a custom backdoor tracked by Symantec as Trojan.Kwampirs. The malware allows attackers to remotely access the compromised machine.</p> <p>The malware first collects information about the computer to determine if it may be of interest or if it’s a device belonging to a researcher. If the victim is of interest, the backdoor is “aggressively” copied to other systems with open network shares.</p> <p>Symantec points out that Kwampirs has been found on machines hosting software used for high-tech imaging devices, such as MRI and X-Ray machines. The malware was also spotted on devices used to assist patients in completing consent forms. However, experts say the exact motives of Orangeworm are unclear.</p>

The list of commands sent by the attackers to the malware include instructions for collecting system and network data, and obtaining information on running processes, system services, network shares, account policies, and local and domain admin accounts.

Symantec says it does not have any information that could help determine the threat group's origins, but the company believes Orangeworm is likely conducting corporate espionage and there is no evidence that the operation is backed by a nation state.

<b>HEADLINE</b>	<b>04/23 Chinese hackers targeted Japan</b>
<b>SOURCE</b>	<a href="http://fortune.com/2018/04/23/china-japan-north-korea-cyberspies-secrets/">http://fortune.com/2018/04/23/china-japan-north-korea-cyberspies-secrets/</a>
<b>GIST</b>	<p>Chinese hackers have targeted Japanese defense companies, possibly to get information on Tokyo's policy toward resolving the North Korean nuclear impasse, according to cybersecurity firm FireEye Inc.</p> <p>The attacks are suspected to come from a group known as APT10, a China-based espionage group that FireEye has been tracking since 2009. One of the lures used in a "spear-phishing" email attack was a defense lecture given by former head of UNESCO, Koichiro Matsuura. Two attacks took place between September and October 2017.</p> <p>"Lure content related to the defense industry suggests that a possible motive behind the intrusion attempt is gaining insider information on policy prescription to resolve the North Korean nuclear issue," said Bryce Boland, chief technology officer for the Asia-Pacific region at FireEye.</p> <p>China's Ministry of Foreign Affairs didn't respond to a faxed request for comment Friday. After a similar FireEye report involving U.S. targets last month, ministry spokesman Lu Kang said that China opposed all kinds of cyber attacks.</p> <p>The suspected attacks coincided with a dramatic escalation in tensions over North Korea's nuclear weapons program as Kim Jong Un tested a hydrogen bomb and U.S. President Donald Trump threatened to "totally destroy" the country. The U.S. and Japan have been coordinating their diplomatic and military pressure campaigns against the country, and neighboring China is anxious to avoid a clash on its border.</p> <p>Tensions have eased since the two Koreas started talking ahead of the Winter Olympics and Winter Olympics and Trump granted an unprecedented meeting with the North Korean leader. Earlier this month, the foreign ministers of China and Japan agreed to work closely to push the regime to surrender its nuclear weapons program, although Japanese officials continue to express skepticism about Kim's willingness to make a deal.</p> <p>The latest cyberattacks mirror other recent hacks with geopolitical overtones investigated by FireEye. Among the most recent, a wave of incursions on mainly U.S. engineering and defense companies linked to the South China Sea, where China's claims for more than 80% of the water clash with five other nations. In 2016, the website of Taiwan's Democratic Progressive Party was attacked months after the party won elections, securing its leader Tsai Ing-wen the presidency.</p> <p>"We believe APT10 is primarily tasked with collecting critical information in response to shifts in regional geopolitics and frequently targets organizations with long research and development cycles," Boland said, citing firms in construction and engineering, aerospace and military, telecommunications and high-tech industries.</p> <p>In an unusual development, the hackers inserted lines of text in the malware associated with the Japanese attacks mocking the security researchers. Such gems included, "I'm here waiting for u," "POWERED BY APT632185,NORTH KOREA," and "According to the analysis report, Some Japanese analysts have always been portrayed as a bit of joke."</p>

<b>HEADLINE</b>	<b>04/23 Most dangerous attack techniques</b>
<b>SOURCE</b>	<a href="https://www.helpnetsecurity.com/2018/04/23/dangerous-attack-techniques/">https://www.helpnetsecurity.com/2018/04/23/dangerous-attack-techniques/</a>
<b>GIST</b>	<p>Experts from SANS presented the five most dangerous new cyber attack techniques in their annual <a href="#">RSA Conference 2018</a> keynote session in San Francisco, and shared their views on how they work, how they can be stopped or at least slowed, and how businesses and consumers can prepare.</p> <p>The five threats outlined are:</p> <ol style="list-style-type: none"> <li>1. Repositories and cloud storage data leakage</li> <li>2. Big Data analytics, de-anonymization, and correlation</li> <li>3. Attackers monetize compromised systems using crypto coin miners</li> <li>4. Recognition of hardware flaws</li> <li>5. More malware and attacks disrupting ICS and utilities instead of seeking profit.</li> </ol> <p><b>Repositories and cloud storage data leakage</b> Ed Skoudis, lead for the SANS Penetration Testing Curriculum, talked about the <a href="#">data leakage</a> threats facing us from the increased use of repositories and <a href="#">cloud storage</a>: “Software today is built in a very different way than it was 10 or even 5 years ago, with vast online code repositories for collaboration and cloud data storage hosting mission-critical applications. However, attackers are increasingly targeting these kinds of repositories and cloud storage infrastructures, looking for passwords, crypto keys, access tokens, and terabytes of sensitive data.”</p> <p>He continued: “Defenders need to focus on data inventories, appointing a data curator for their organization and educating system architects and developers about how to secure data assets in the cloud. Additionally, the big cloud companies have each launched an AI service to help classify and defend data in their infrastructures. And finally, a variety of free tools are available that can help prevent and detect leakage of secrets through code repositories.”</p> <p><b>Big Data analytics, de-anonymization, and correlation</b> Skoudis went on to talk about the threat of Big Data Analytics and how attackers are using data from several sources to de-anonymise users: “In the past, we battled attackers who were trying to get access to our machines to steal data for criminal use. Now the battle is shifting from hacking machines to hacking data — gathering data from disparate sources and fusing it together to de-anonymise users, find business weaknesses and opportunities, or otherwise undermine an organisation’s mission. We still need to prevent attackers from gaining shell on targets to steal data. However, defenders also need to start analysing risks associated with how their seemingly innocuous data can be combined with data from other sources to introduce business risk, all while carefully considering the privacy implications of their data and its potential to tarnish a brand or invite regulatory scrutiny.”</p> <p><b>Attackers monetize compromised systems using crypto coin miners</b> Johannes Ullrich, is Dean of Research, SANS Institute and Director of SANS Internet Storm Center. He has been looking at the increasing use of <a href="#">crypto coin miners</a> by cyber criminals: “Last year, we talked about how ransomware was used to sell data back to its owner and crypto-currencies were the tool of choice to pay the ransom. More recently, we have found that attackers are no longer bothering with data. Due to the flood of stolen data offered for sale, the value of most commonly stolen data like credit card numbers of PII has dropped significantly. Attackers are instead installing crypto coin miners. These attacks are more stealthy and less likely to be discovered and attackers can earn tens of thousands of dollars a month from crypto coin miners. Defenders therefore need to learn to detect these coin miners and to identify the vulnerabilities that have been exploited in order to install them.”</p> <p><b>Recognition of hardware flaws</b> Ullrich then went on to say that software developers often assume that hardware is flawless and that this is a dangerous assumption. He explains why and what needs to be done:</p>

“Hardware is no less complex than software and mistakes have been made in developing hardware just as they are made by software developers. Patching hardware is a lot more difficult and often not possible without replacing entire systems or suffering significant performance penalties. Developers therefore need to learn to create software without relying on hardware to mitigate any security issues. Similar to the way in which software uses encryption on untrusted networks, software needs to authenticate and encrypt data within the system. Some emerging homomorphic encryption algorithms may allow developers to operate on encrypted data without having to decrypt it first.”

#### **More malware and attacks disrupting ICS and utilities instead of seeking profit**

Finally, Head of R&D, SANS Institute, James Lyne, discussed the growing trend in malware and attacks that aren't profit centred as we have largely seen in the past, but instead are focused on disrupting Industrial Control Systems (ICS) and utilities:

“Day to day the grand majority of malicious code has undeniably been focused on fraud and profit. Yet, with the relentless deployment of technology in our societies, the opportunity for political or even military influence only grows. And rare publicly visible attacks like Triton/TriSYS show the capability and intent of those who seek to compromise some of the highest risk components of industrial environments, i.e. the safety systems which have historically prevented critical security and safety meltdowns.”

He continued: “ICS systems are relatively immature and easy to exploit in comparison to the mainstream computing world. Many ICS systems lack the mitigations of modern operating systems and applications. The reliance on obscurity or isolation (both increasingly untrue) do not position them well to withstand a heightened focus on them, and we need to address this as an industry. More worrying is that attackers have demonstrated they have the inclination and resources to diversify their attacks, targeting the sensors that are used to provide data to the industrial controllers themselves. The next few years are likely to see some painful lessons being learned as this attack domain grows, since the mitigations are inconsistent and quite embryonic.”

<b>HEADLINE</b>	<b>04/22 Anonymous Asia Twitter accounts surge</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/surge-anonymous-asia-twitter-accounts-sparks-bot-fears">https://www.securityweek.com/surge-anonymous-asia-twitter-accounts-sparks-bot-fears</a>
<b>GIST</b>	<p>Hong Kong - It has been jokingly referred to as "Botmageddon". But a surge in new, anonymous Twitter accounts across swathes of Southeast and East Asia has deepened fears the region is in the throes of US-style mass social media manipulation.</p> <p>Maya Gilliss-Chapman, a Cambodian tech entrepreneur currently working in Silicon Valley, noticed something odd was happening in early April.</p> <p>Her Twitter account @MayaGC was being swamped by a daily deluge of follows from new users.</p> <p>"I acquired well over 1,000 new followers since the beginning of March. So, that's approximately a 227 percent increase in just a month," she told AFP.</p> <p>While many might delight in such a popularity spike, Gilliss-Chapman, who has previously worked for tech companies to root out spam, was immediately suspicious.</p> <p>The vast majority of these new accounts contained no identifying photograph and had barely tweeted since their creation.</p> <p>But they all seemed to be following prominent Twitter users in Cambodia including journalists, business figures, academics and celebrities.</p> <p>She did some digging and published her findings online, detailing how the vast majority of accounts were recently created in batches by unknown operators who worked hard to hide their real identities.</p>

She wasn't alone.

Soon prominent Twitter users in Thailand, Vietnam, Myanmar, Taiwan, Hong Kong and Sri Lanka noticed the same phenomenon -- a surge in follows from anonymous, recently created accounts, adopting local sounding names but barely engaging on the platform, as if lying in wait for someone's command.

With elections due in Cambodia, Malaysia, Thailand and Indonesia in the next two years, many hit by the Twitter follow surge in Asia are asking whether the Silicon Valley tech giants are doing enough to stop fake accounts before they are given their marching orders.

So far Twitter has found nothing untoward.

A spokesperson for the company said engineers were "looking into the accounts in question and will take action against any account found to be in violation of the Twitter Rules".

A source with knowledge of the probe said they believe the accounts are "new, organic users" who were likely being suggested prominent Twitter users across Asia to follow when they sign up. "It's something we're keeping an eye on, but for now, it looks like a pretty standard sign-up/onboarding issue," the source told AFP.

But many experts have been left unconvinced by such explanations.

"Are there really this many new, genuine users joining Twitter, all with the same crude hallmarks of fake accounts?" Raymond Serrato, an expert at Democracy Reporting International who has been monitoring the suspicious accounts, told AFP.

The issue of fake users is hugely sensitive for Twitter because a crackdown could severely dent its roughly 330 million audience -- the company's main selling point.

In a 2014 report to the US Securities and Exchange Commission, Twitter estimated some 5-8.5 percent of users were bots.

But Emilio Ferrara, a research professor at the University of Southern California, published research last year suggesting it could be double that: 9-15 percent.

Last week Pew Research Center released a report analysing 1.2 million English language tweets which contained links to popular websites. Two-thirds of the tweets came from suspected bot accounts.

Twitter Audit Report, a third party company that scans people's followers using software to estimate how many are fake, suggests as many as 16 million of Donald Trump's 51 million followers are not real people.

Jennifer Grygiel, an expert on social media at Syracuse University, New York, said the US presidential election has provided a blueprint for others to copy.

"Bad actors around the world have really followed the potential of social media to influence the political process," she told AFP.

Twitter, she said, is a minnow compared to Facebook's more than two billion users. But it can still be influential because many prominent opinion formers such as journalists, politicians and academics have a major presence on the platform.

"If you can get information within this population, then you've scored," she said.

<b>HEADLINE</b>	<b>04/23 Google discloses Windows zero-day</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/google-discloses-windows-lockdown-policy-zero-day">https://www.securityweek.com/google-discloses-windows-lockdown-policy-zero-day</a>
<b>GIST</b>	<p>A Windows 10 vulnerability that could bypass Windows Lockdown Policy and result in arbitrary code execution remains unpatched 90 days after Microsoft has been informed on the bug's existence.</p> <p>On systems with User Mode Code Integrity (UMCI) enabled, a .NET bug can be exploited to bypass the Windows Lockdown Policy check for COM Class instantiation, security researcher James Forshaw of Google's Project Zero team.</p> <p>The issue was reproduced on Windows 10S, but is said to impact all Windows 10 versions with UMCI enabled.</p> <p>The vulnerability, the security researcher explains, resides in the manner in which the WLDP COM Class lockdown policy behaves when a .NET COM object is instantiated.</p> <p>The policy contains a hardcoded list of 8 to 50 COM objects which enlightened scripting engines can instantiate. Thus, even if one would be able to register an existing DLL under one of the allowed COM CLSIDs, a good implementation should check the CLSID passed to DllGetObject against said internal list, and prevent attacks.</p> <p>What the security researcher discovered was that, when a .NET COM object is instantiated, the CLSID passed to DllGetClassObject is only used to look up the registration information in HKCR, the CLSID is thrown away, and the .NET object created.</p> <p>Because of that, an attacker can add registry keys, including to HKCU, to load an arbitrary COM visible class under one of the allowed CLSIDs.</p> <p>"This has a direct impact on the class policy as it allows an attacker to add registry keys (including to HKCU) that would load an arbitrary COM visible class under one of the allowed CLSIDs. As .NET then doesn't care about whether the .NET Type has that specific GUID you can use this to bootstrap arbitrary code execution," the researcher notes.</p> <p>The flaw was reported to Microsoft on January 19, when the company acknowledged the flaw. As per Project Zero's policy, vendors are given 90 days to patch flaws before they are made public, and Microsoft didn't meet the deadline for this issue.</p> <p>The bug, however, isn't critical, this being one of the main reasons details on it were publicly released.</p> <p>"This issue was not fixed in April patch Tuesday therefore it's going over deadline. This issue only affects systems with Device Guard enabled (such as Windows 10S) and only serves as a way of getting persistent code execution on such a machine. It's not an issue which can be exploited remotely, nor is it a privilege escalation," the security researcher explains.</p> <p>To abuse the flaw, an attacker would require foothold on the impacted machine to install the needed registry entries. A remote code execution flaw in the operating system could be abused for that.</p> <p>Considering that there are known Device Guard bypasses in the .NET framework that haven't been fixed and continue to be usable, the security vulnerability is less serious than it would have been if all known avenues for bypass were fixed, Forshaw concludes.</p>

<b>HEADLINE</b>	<b>04/23 Australia breach reports not complete</b>
<b>SOURCE</b>	<a href="https://www.zdnet.com/article/reported-breaches-not-painting-complete-picture-of-australian-security-landscape/">https://www.zdnet.com/article/reported-breaches-not-painting-complete-picture-of-australian-security-landscape/</a>

## GIST

The Office of the Australian Information Commissioner (OAIC) reported earlier this month it had received 63 notifications since Australia's Notifiable Data Breaches (NDB) scheme came into effect on February 22, 2018.

While 63 breach notifications may appear quite high for the period spanning just shy of six weeks, Charles Carmakal, vice president at FireEye's Mandiant, said the number is likely to be even higher.

"In general, any time a data breach disclosure law comes into effect, there are a lot of organisations that actually do experience a breach, but they're still trying to figure out if the law applies to them and whether or not they're dealing with a reportable incident," he told ZDNet.

From a vendor perspective, Carmakal said individuals seek clarity around what the threshold is when it comes to believing data was taken from an environment.

"In other countries around the world, there's sometimes this perception that unless you can actually prove definitively that data actually left the environment, people may not disclose that there was a breach," Carmakal continued. "Those organisations just simply don't have the monitoring and the logging tools in place to definitively prove that something left the environment, despite all the other indicators saying it probably did leave."

Although speaking with ZDNet while visiting Australia for the Australian Cyber Security Centre conference in Canberra, Carmakal previously headed up the local security consulting business of PwC, and considers himself well-placed to discuss the state of Australia's cybersecurity.

"When I lived here, most Aussies perceived cyber to be more of a US problem; they felt they were relatively protected. Part of that belief was quite frankly the lack of awareness of data breaches that actually occurred in the country ... when people don't hear about breaches every single day, there's this belief that it's more of a US problem," Carmakal said.

"When you think about the value of the data Australians have, if you think about the amount of money that's in this country, there's no reason why organisations here wouldn't be a ripe target."

While the scale might be smaller in Australia than it is in the US, the country's natural resources, financial institutions, and healthcare providers have always been a prime target for both offline and online crime.

The majority of reported breaches to the OAIC stemmed from the health sector, with health service providers accounting for 15 breaches. The health and medical sector also bore the brunt of the WannaCry and Petya ransomware campaigns of 2017.

"In general, what I find is healthcare organisations -- providers, insurance firms, life sciences, pharmaceutical companies -- depending on which sector of healthcare you're looking at, I think you'll find a different level of security in general," Carmakal said.

"In general, I find that healthcare providers tend to have some of, when compared to other sectors, they tend to have relatively weaker security controls in place than other industries, for example financial services or defence. And the reason for that is that it's a unique environment where physicians -- most physicians don't want passwords to begin with."

He said when thinking about all of the security controls required to fully secure an organisation, it can be a nuisance to a number of people in the healthcare sector.

"I find that healthcare providers have struggled with implementing strong security controls that other industries have become accustomed to," he added. "I think the controls are looser with healthcare providers and I think also the data is incredibly interesting too."

According to Carmakal, greater understanding of the data breach disclosure laws and better understanding

	<p>what an organisation's obligations are will result in more breaches being reported. However, the threat landscape is expected to become more destructive in parallel.</p> <p>"We've seen some incredibly sophisticated and incredibly destructive attacks in the past year that we've never seen before, and unfortunately we do believe that's probably going to continue," he said.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>04/21 WiFi names legally protected?</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/legal/are-wifi-network-names-protected-by-the-first-amendment/">https://www.bleepingcomputer.com/news/legal/are-wifi-network-names-protected-by-the-first-amendment/</a>
<b>GIST</b>	<p>Michigan police were called at a Planet Fitness gym earlier this month to investigate a bomb threat that ended up being only a prank after a naughty user named his WiFi network "Remote Detonator."</p> <p>The gym patron spotted the suspicious WiFi network name and called the police, following the gym's normal procedures. The gym re-opened the same day, three hours later, after bomb-sniffing dogs swept the building without finding any explosive devices.</p> <p>"Everything is perfectly legal from a police standpoint," Saginaw Township Police Chief Donald Pussehl told a local paper.</p> <p>"There was no crime or threat. No call saying there was a bomb," the chief said, revealing there would be no legal repercussions on the prankster, as the WiFi name falls under what is considered "protected speech" under the First Amendment.</p> <p>WiFi network names and the First Amendment</p> <p>But we at Bleeping Computer wanted to confirm the Saginaw Township Police Chief's statement and discover if WiFi network names do really fall under the First Amendment. So we asked one of the leading law firms specialized in free speech cases, the Walters Law Group, the firm behind the FirstAmendment.com website.</p> <p>"All speech that is intended to convey a message is presumed to be protected by the First Amendment," a spokesperson for the Walters Law Group told Bleeping Computer earlier this week via email.</p> <p>"This can get complicated with identifiers like telephone numbers, addresses, or domain names, which typically do not enjoy First Amendment protection," the spokesperson said. "But there are exceptions."</p> <p>"A domain name could be both convey a message and identify a location at the same time. The same goes for a WiFi network name," he said. "While typically used to identify a network, the chosen name could be used to convey a message of humor, politics, or even danger."</p> <p>There are limitations to WiFi network names</p> <p>"While I am aware of no case that specifically addresses WiFi network names, I believe that each situation would turn on the facts, to determine whether the First Amendment applied," the spokesperson told us regarding cases where pranksters take WiFi network naming a little bit too far.</p> <p>Situations like these happened in the past. For example, in 2016, a passenger on a Qantas flight had named his WiFi hotspot "Mobile Detonation Device," which grounded a flight for hours before it was cleared to take off.</p> <p>In 2017, a Turkish Airlines airplane made an emergency landing at a Sudan airport after a passenger discovered a WiFi network created by another passenger named "Bomb on board."</p>

	<p>Individuals can create personal WiFi networks on devices such as laptops and mobile phones, and name them what they want. Authorities weren't able to identify any of the pranksters behind the 2016 and 2017 incidents.</p> <p>But pranks like these, in places like airplanes and airports, can lead to legal consequences, despite being just jokes.</p> <p>"Even if constitutional protection was afforded, there are limits imposed on speech which constitutes a true threat, or incites imminent lawless action," the Walters Law Group spokesperson said. "But the simple naming of a WiFi network would not likely rise to the level of a threat or incitement."</p> <p>So, all in all, the First Amendment does apply to WiFi network names. You can use them to convey a message, as long as you don't use them for threats.</p>

<b>HEADLINE</b>	<b>04/20 FTC audit cleared Facebook</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/tech/audit-clears-facebook-despite-cambridge-analytica-leaks">http://komonews.com/news/tech/audit-clears-facebook-despite-cambridge-analytica-leaks</a>
<b>GIST</b>	<p>NEW YORK (AP) — An audit of Facebook's privacy practices for the Federal Trade Commission found no problems even though the company knew at the time that a data-mining firm improperly obtained private data from millions of users — raising questions about the usefulness of such audits.</p> <p>Facebook agreed to outside audits every two years as part of a 2011 settlement with the FTC over its privacy practices. It is not clear from the report whether the company informed PricewaterhouseCoopers, which performed the audit, of the Cambridge Analytica data grab that would put Facebook in the crosshairs of Congress.</p> <p>The heavily redacted audit by PricewaterhouseCoopers is available on the FTC's website. It covers February 12, 2015 to February 11, 2017.</p> <p>PwC declined to comment, but Facebook said Friday that keeping data secure is a priority.</p> <p>"We remain strongly committed to protecting people's information, said Rob Sherman, Facebook's deputy chief privacy officer, in a statement. "We appreciate the opportunity to answer questions the FTC may have."</p> <p>The fact that PwC found no issues raised red flags for privacy advocates.</p> <p>"The FTC failed to protect the public," said Jeffrey Chester, executive director of the nonprofit digital rights group Center for Digital Democracy. "Instead of conducting its own review to enforce one of its most important decisions—the consent decree—it looked the other way, which allowed Facebook to engage in serious misconduct."</p> <p>Chester said the audit shows that the "FTC cannot be relied on to really protect consumers."</p> <p>The 2011 consent decree bound Facebook to a 20-year privacy commitment. Any violations of that pact could cost the company a ton of money. In his congressional testimony last week, Facebook CEO Mark Zuckerberg appeared uninformed about key details of the agreement, saying he did not remember if it carried a financial penalty.</p> <p>Any violations of the 2011 agreement could subject Facebook to fines of \$41,484 per violation per user per day. To put that in context, Facebook could theoretically owe \$8 billion for one single day violation affecting all of its American users, or about half of the profit that the company booked for all of last year.</p> <p>The agreement requires that Facebook users give "affirmative express consent" any time that data they</p>

haven't made public is shared with a third party. Cambridge Analytica accessed information from so many users (the firm puts the number at 30 million, although Facebook has said 87 million) because it was able to access the data of people's friends, and not just people who explicitly permitted access when they took a personality quiz. While Facebook did have controls in place that allowed people to restrict such access, they are found buried in the site's settings and are difficult to find.

Sen. Catherine Cortez Masto, a Democrat from Nevada, said during last week's hearing that in her view, "these requirements were not met," because user consent shouldn't have been buried in privacy settings.

PwC disagreed.

"In our opinion, Facebook's privacy controls were operating with sufficient effectiveness to provide reasonable assurance to protect the privacy of covered information and that the controls have so operated throughout the Reporting Period, in all material respects for the two years ended February 11, 2017," the report states.

Facebook is also under a separate investigation by the FTC because of the Cambridge Analytica scandal. The agency is looking at whether Facebook has engaged in "unfair acts" that cause "substantial injury" to consumers.

<b>HEADLINE</b>	<b>04/20 Hackers exploit human vulnerabilities</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/why-human-vulnerabilities-are-more-dangerous-than-software-flaws/">https://www.cbsnews.com/news/why-human-vulnerabilities-are-more-dangerous-than-software-flaws/</a>
<b>GIST</b>	<p>Cybersecurity firms and analysts have been sounding the alarm on vulnerabilities in most web-based systems, pointing to loopholes and lapses in security. But a recent report from <a href="#">Proofpoint</a>, a cybersecurity firm, said most cyberattacks are designed to take advantage of human error instead of flaws in hardware or software.</p> <p><a href="#">In their 2018 Human Factor Report</a>, Proofpoint analyzed cyberattacks throughout 2017, looking into attempted attacks on nearly 6,000 organizations across the world. They found that almost every industry suffered from a growth in the number of attacks, ranging from phishing to ransomware and cloud application breaches.</p> <p>"Email remains the top attack vector...Attackers are adept at exploiting our natural curiosity, desire to be helpful, love of a good bargain, and even our time constraints to persuade us to click," the report said.</p> <p>Some 50 percent of all <a href="#">clicks on malicious emails</a> occurred within an hour of it showing up in the victim's inbox. And 30 percent happened within 10 minutes of receiving the email. Hackers, either working on their own, with a group, or with a state-sponsored entity, attempted to take advantage of human trust in most cases. Nearly 55 percent of social media attacks that impersonated customer-support accounts were aimed at financial institutions.</p> <p>"Many of these attacks rely on social engineering," the report noted. "Others simply take advantage of inclinations for immediate gratification, improved status, or even the reward of 'getting something for nothing.'"</p> <p>The report continued: "But as the old adage goes, there is no such thing as a free lunch. The hidden costs of a bargain in social media channels can often be credential loss to <a href="#">phishing</a>, coin mining through browser hijacking, and malware infections."</p> <p>Surprisingly, <a href="#">phishing emails</a> purporting to be from Dropbox were far and away the most common lure hackers used, followed by fake DocuSign emails, which had a higher rate of success, the report said. Of all malicious emails searched in the survey, <a href="#">ransomware</a> and banking Trojans accounted for more than 82</p>

percent.

The study had a number of interesting observations and tidbits concerning when and how hackers attempt to infiltrate our lives. Europe and Japan had higher-than-usual proportions of banking Trojans, at 36 percent and 37 percent respectively, while the rest of the world suffered mostly from ransomware.

Proofpoint said education, consulting, and entertainment firms suffered from the largest number of email fraud attacks, with each organization averaging about 250 attacks.

Crimeware was specifically used when attacking the tech and [healthcare industries](#), and the manufacturing industry was repeatedly hit with phishing attempts along with the construction industry.

"As the threat landscape continues to evolve, new tools and approaches are emerging regularly. But one thing remains constant: the human factor," the report said. "More than ever, cyber criminals rely on people to download and install malware or send funds and information on their behalf."

Last year, there were massive spikes in hacking attempts related to cryptocurrency, with instances of "cryptojacking" rising and falling with the price of [Bitcoin](#). Cloud computing also could not keep users safe, with every major tech companies' cloud service suffering from an attack, the report said.

"Attackers are opportunistic and adaptable. They take advantage of new options, vectors, and tools to increase their chances of success," the report noted. "These opportunistic attacks extend to social media channels and cloud-based tools as well. Fraudsters and other attackers capitalize on major events and trends and leverage legitimate services to trick defenders and victims."

Proofpoint also named multiple groups that experts know are behind many of the attacks that were done last year, including the North Korea-backed Lazarus Group, Fin7, and the Cobalt Group. Many of those organized into groups were going after government, defense contractors, and financial institutions, but some had begun to attack individuals as well.

Kevin Epstein, vice president of Threat Operations for Proofpoint, [told Computing Magazine](#) that organizations had to focus on stopping attacks before they could even reach people's' inboxes or networks. "Reducing initial exposure minimizes the chances that an organisation will experience a confidential data breach, business disruption, or direct financial loss," Epstein said said.

<b>HEADLINE</b>	<b>04/20 Russian Twitter trolls spring into action</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/russian-twitter-trolls-action/">https://www.infosecurity-magazine.com/news/russian-twitter-trolls-action/</a>
<b>GIST</b>	<p>Russian Twitter trolls have been sent into action again, this time looking to spread disinformation following the Salisbury nerve agent attack, according to government sources.</p> <p>A Whitehall analysis purports to have measured a 4000% increase in tweets from Russia-based accounts, many of them automated bots, since the attack over six weeks ago.</p> <p>One identified bot account, @partisangirl, is said to have reached 61 million users with 2300 posts over a 12-day period from April 7.</p> <p>The research reportedly reveals that many of these accounts also commented on the alleged Syrian chemical attack by President Bashar, which some are disputing despite government claims to the contrary.</p> <p>Another account, @ian5678, was banned by Twitter before being unblocked recently. Reports suggest it sent 100 posts a day reaching 23 million users. A prolific account with 33,000 followers, it contains largely pro-Kremlin conspiracy theory and anti-West rhetoric masquerading but purports to be that of a truth-seeking stock market trader.</p> <p>Prime Minister, Theresa May, <a href="#">is said</a> to have briefed Five Eyes partners and Commonwealth leaders Malcolm Turnbull, Jacinda Ardern and Justin Trudeau on the Russian campaign earlier this week.</p> <p>“Russia is using cyber as part of a wider effort to undermine the international system,” she said in a reported statement. “This disinformation campaign is not just aimed at social media and the UK — it is intended to undermine the actual institutions and processes of the rules-based system, such as the Organisation for the Prevention of Chemical Weapons. We must do all we can at every turn to challenge this.”</p> <p>Back in February 2017, Russian defence minister, Sergey Shoigu, <a href="#">admitted for the first time</a> the importance to the Kremlin of state propaganda efforts, claiming a specialized unit had been established in the military.</p> <p>“The information operations forces have been established, that are expected to be a far more effective tool than all we used before for counter-propaganda purposes,” he’s reported to have told the lower house. “Propaganda should be smart, competent and effective.”</p>

<b>HEADLINE</b>	<b>04/20 FDA: new medical device security plan</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/fda-reveals-new-plans-medical-device-security">https://www.securityweek.com/fda-reveals-new-plans-medical-device-security</a>
<b>GIST</b>	<p>The U.S. Food and Drug Administration (FDA) this week announced its medical device safety action plan, which includes seeking additional funding and authorities that would help it improve cybersecurity in the healthcare industry.</p> <p>The <a href="#">FDA’s plan</a> focuses on five key areas and medical device cybersecurity is one of them. As part of its efforts to keep up with emerging threats and vulnerabilities, the agency wants the authority to require</p>

medical device manufacturers to include updating and patching capabilities into the design of their products.

The organization also wants vendors to create a “Software Bill of Materials,” which should help medical device customers and users determine which systems may be impacted by vulnerabilities.

“The additional authorities we seek are to further strengthen medical device security by directly addressing challenges healthcare delivery organizations and providers have encountered as a result of cyber campaigns and attacks such as WannaCry,” an FDA spokesperson told *SecurityWeek*.

The agency would require that “new devices entering the market have a demonstrated capability of patchability and updatability built into the design architecture of the device, and that a patch management process and plan is provided by the manufacturer for premarket review,” the spokesperson said.

As for the [Software Bill of Materials](#), the measure is inspired by one of the recommendations made recently by the Health Care Industry Cybersecurity Task Force. A bill of materials would be issued for each piece of medical technology to describe its components and the risks associated with those components, which can help users understand the impact of certain threats and vulnerabilities.

The FDA also plans on updating its premarket [guidance for medical device cybersecurity](#) to better protect against moderate risks, which it has described as ransomware and other attacks that could disrupt clinical operations and delay patient care, and major risks, such as the remote exploitation of a vulnerability that can be used in a “multi-patient, catastrophic attack.”

The agency’s plans also include requiring companies to adopt policies and procedures for coordinated disclosure of vulnerabilities.

Finally, the FDA says it’s exploring the development of a CyberMed Safety (Expert) Analysis Board (CYMSAB), which it has described as a “public-private partnership that would complement existing device vulnerability coordination and response mechanisms and serve as a resource for device makers and FDA.”

The CYMSAB’s tasks would include assessing vulnerabilities and assisting with coordinated disclosure, evaluating risks and proposed mitigations, and adjudicating disputes. One interesting role of this entity would be to send experts to investigate compromised devices at the request of a manufacturer or the FDA.

<b>HEADLINE</b>	<b>04/20 ‘SquirtDanger’ Swiss Army Knife malware</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/the-malwares-suspected-author-is-a-well-known-russian-cybercriminal-who-has-been-active-on-global-underground-marketplaces-for-years/article/760188/">https://www.scmagazine.com/the-malwares-suspected-author-is-a-well-known-russian-cybercriminal-who-has-been-active-on-global-underground-marketplaces-for-years/article/760188/</a>
<b>GIST</b>	<p>Palo Alto's Unit 42 researchers identified a new botnet malware family described as “Swiss Army Knife Malware” that was designed by a veteran threat actor and is capable of taking screenshots and draining cryptocurrency wallets.</p> <p>Dubbed “SquirtDanger,” the malware family likely was created by a Russian hacker using the handle “TheBottle” and delivered via illicit software downloads also known as “WareZ,” according to an April 17 blog post.</p> <p>The malware is also capable of stealing passwords, deleting malware, sending files, clearing browser cookies, listing processes, kill processes, getting directory information, downloading files, as well as uploading, deleting and executing files.</p> <p>“Once run on the system, it will persist via a scheduled task that is set to run every minute,” researchers said in the post. “SquirtDanger uses raw TCP connections to a remote command and control (C2) server</p>

	for network communications”  The malware's suspected author is a well-known Russian cybercriminal who has been active on global underground marketplaces for years. So far, researchers have spotted 1,277 unique SquirtDanger samples used across multiple campaigns.

<b>HEADLINE</b>	<b>04/20 New spyware targeted Palestinians</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/new-desert-scorpion-spyware-found-in-malicious-chat-app-aimed-at-palestinians/article/760198/">https://www.scmagazine.com/new-desert-scorpion-spyware-found-in-malicious-chat-app-aimed-at-palestinians/article/760198/</a>
<b>GIST</b>	<p>A malicious chat app that was advertised on Facebook and sold in the Google Play store was discovered to execute a previously undiscovered spyware program linked to APT-C-23, an advanced persistent threat group allegedly with ties to Hamas.</p> <p>Michael Flossman, head of threat intelligence at mobile security company Lookout, stated in remarks at the RSA 2018 conference on Friday that the mobile attack specifically targeted Palestinian individuals of interest.</p> <p>According to a blog post from Lookout published a few days earlier, the app was advertised on Facebook as a free Android messaging service called Dardesh, but in reality acted in essence as a downloader for the final payload, a fresh-faced surveillance program named Desert Scorpion.</p> <p>The spyware carries a host of capabilities, including file and data exfiltration (even for docs found in external storage); sending and retrieving SMS messages; tracking the device location; recording video and audio; uninstalling apps; placing calls; retrieving contacts, uninstalling apps, determining if a device is rooted, and more. If running on a Huawei device it will also attempt to add itself to the protected list of apps able to run with the screen turned off, reports Lookout further reported.</p> <p>Google reportedly removed the offending app from its online store promptly after Lookout's private disclosure.</p> <p>Lookout researchers theorize that APT-C-23, aka Two-Tailed Scorpion, is behind Desert Scorpion because the Facebook profile it used to promote the malicious Dardesh app (and link to Google Play) was previously used to post Google Drive links leading to FrozenCell, another spyware family attributed to the same threat group. Moreover, the command-and-control infrastructure used by both malware reside in similar IP blocks, the blog post notes.</p> <p>Earlier this month, ClearSky Cyber Security also acknowledged the Dardesh campaign via Twitter.</p> <p>Despite referencing the Desert Scorpion campaign, Flossman also spent most of his RSA presentation profiling a different threat group -- Dark Caracal, which researchers strongly believe is affiliated the Lebanese General Directorate of General Security (GDGS).</p> <p>However, the threat groups in behave similarly in certain respects, in that they both heavily rely on mobile phishing campaigns to infected their intended victims. "Same sort of attack vectors, same sort of capabilities, and a lack of [use of] exploits as well," said Flossman, who co-presented with Eva Galperin, director of cybersecurity at the Electronic Frontier Foundation.</p> <p>Flossman noted that mobile phishing operations are an alluring strategy for threat groups like these because they don't require much sophistication and offer numerous vectors for malicious communications outside of email, including via text and apps.</p>

<b>HEADLINE</b>	<b>04/20 Cybercrime economy \$1.5 trillion a year</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/vulnerabilities---threats/cybercrime-economy-generates-\$15-trillion-a-year/d/d-id/1331613">http://www.darkreading.com/vulnerabilities---threats/cybercrime-economy-generates-\$15-trillion-a-year/d/d-id/1331613</a>
<b>GIST</b>	<p>RSA CONFERENCE 2018 – San Francisco – If cybercrime was a country, it would have the 13th highest GDP in the world. Attackers generate \$1.5 trillion in annual profit, which is about equal to the GDP of Russia, according to a new study on the interconnected economy of cybercrime.</p> <p>"Into the Web of Profit," among the first studies to explore the intricacies of revenue and profit in the world of cybercrime, was conducted by Dr. Michael McGuire, senior lecturer in Criminology at England's University of Surrey. Over nine months of study, he learned how the "economy" of cybercrime sustains itself and overlaps with the legitimate economy.</p> <p>This wasn't the original intent behind the Bromium-sponsored study, which began with the idea of learning where cybercriminals spend their money. "It turned into a huge piece of research, which looks at the whole of how money flows around the cybercrime system," says McGuire. The report pieces together conversations with global organizations, security workers who have infiltrated the Dark Web, international police forces, and of course, the criminals themselves.</p> <p>His study indicates a rise in "platform criminality" similar to the platform capitalism model in which data is the commodity, used by organizations including Amazon and Facebook. This platform turns malware into a product, simplifies purchase of illicit tools and services, and enables broader criminal activities including drug production, human trafficking, and terrorism.</p> <p>More than 620 new synthetic drug types have appeared on the market since 2005, McGuire says. Many are created in China or India, purchased online, and sent to Europe in bulk. Evidence shows groups earning</p>

revenue from cybercrime are also involved in drug production, he found. The takedown of Dark Web online market Alphabay led to the discovery of listings for illegal drugs, toxic chemicals, malware, and stolen and fraudulent data.

The \$1.5 trillion that cybercriminals generate each year includes \$860 billion in illicit online markets, \$500B in theft of trade secrets and intellectual property, \$160B in data trading, \$1.6B in crimeware-as-a-service, and \$1B in ransomware. Evidence indicates cybercrime often generates more revenue than legitimate companies: large multi-national operations can earn more than \$1B; smaller ones typically make between \$30k-\$50K.

It's time to move behind the idea that cybercrime is like a business. "It's much, much more than that," he says. "It's like an economy which mirrors the legitimate economy. Increasingly, what we're seeing is the legitimate economy feeding off the cybercrime economy."

#### Blurring the Legal Lines

The interdependence between the legitimate and illegitimate economies is driving the "web of profit" fueling cybercrime, McGuire says. Criminal organizations take data and competitive advantages from real companies and luse them to accomplish their goals. Part of the problem is, many of these legitimate organizations don't know their role in furthering cybercrime.

Companies like Facebook and Uber are rich with data, making them a prime target for attackers seeking user information and intellectual property. They give hackers a platform to sell illicit goods and services, and set up fake shops to launder money or connect buyers and sellers. This makes massive companies facilitators in a criminally driven economy.

The owners of cybercrime platforms are the biggest earners, McGuire found. Each hacker might only make \$30K per year; however, managers can earn up to \$2M per job with as few as 50 stolen credit cards. They aren't committing crime but they are selling it, and their criminal platforms have evolved to offer services, descriptions, and technical support for their buyers.

McGuire shares some of the numbers behind these earnings. A zero-day Adobe exploit, for example, can sell for up to \$30K while a zero-day iOS exploit costs \$250K. Malware exploit kits cost about \$200-600 per exploit; a blackhole exploit kit costs \$700 to lease for a month or \$1,500 for a full year. Custom spyware costs \$200, an SMS-spoofing service runs \$20 per month, and a "hacker for hire" will charge about \$200 for a minor hack.

Much of the money is reinvested in new criminal ventures. Criminals put about 20% of their revenues into additional crime, indicating up to \$300B is used to drive illegal activity.

<b>HEADLINE</b>	<b>04/20 APT group exploits IE browser zero-day</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/internet-explorer-zero-day-exploited-in-the-wild-by-apt-group/">https://www.bleepingcomputer.com/news/security/internet-explorer-zero-day-exploited-in-the-wild-by-apt-group/</a>
<b>GIST</b>	<p>An advanced persistent threat (APT), a term sometimes used to describe nation-state-backed cyber-espionage units, is using a zero-day vulnerability in the Internet Explorer kernel code to infect victims with malware.</p> <p>Security researchers from Chinese antivirus maker Qihoo 360 Core have reported the issue to Microsoft this week, Bleeping Computer has learned from a member of the Qihoo 360 team.</p> <p>The zero-day has been deployed in live attacks, as part of Office documents sent to selected targets.</p> <p>The Qihoo 360 Core team said the zero-day uses a so-called "double kill" vulnerability that affects the</p>

	<p>latest versions of Internet Explorer and any other applications that use the IE kernel.</p> <p>"After the target opens the document, all exploit code and malicious payloads are loaded from a remote server," researchers wrote today in a blog post on the Weibo micro-blogging platform.</p> <p>Researchers said the attack involves the use of a public UAC bypass, reflective DLL loading, fileless execution, and steganography.</p> <p>The Qihoo 360 Core team has not revealed the exact exploitation chain, apart from an image shared on Weibo.</p> <p>In typical Microsoft fashion, the company has not confirmed or denied Qihoo 360 Core's findings. The company has sent over the following canned statement.</p> <p><i>Windows has a customer commitment to investigate reported security issues, and proactively update impacted devices as soon as possible. We recommend customers use Windows 10 and the Microsoft Edge browser for the best protection. Our standard policy is to provide remediation via our current Update Tuesday schedule.</i></p> <p>The Qihoo 360 Core team has not answered a request for comment for more details on the APT group prior to this article's publication.</p>

<b>HEADLINE</b>	<b>04/20 Twitter bans Kaspersky from advertising</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/business/twitter-bans-kaspersky-from-advertising-on-the-platform-citing-dhs-ban/">https://www.bleepingcomputer.com/news/business/twitter-bans-kaspersky-from-advertising-on-the-platform-citing-dhs-ban/</a>
<b>GIST</b>	<p>Twitter has banned Kaspersky Lab from advertising on its platform citing the company's alleged ties with Russian intelligence agencies.</p> <p>The ban was enforced in January, this year, according to an open letter published by Kaspersky today. Twitter has confirmed the ban in a statement to Bleeping Computer earlier today.</p> <p>"Twitter made the policy decision to off-board advertising from all accounts owned by Kaspersky Lab," a Twitter spokesperson said in a statement identical to the one received by Kaspersky Lab in January.</p> <p>"This decision is based on our determination that Kaspersky Lab operates using a business model that inherently conflicts with acceptable Twitter Ads business practices. Kaspersky Lab may remain an organic user on our platform, in accordance with the Twitter Rules," the spokesperson said.</p> <p>When asked what this actually meant, the spokesperson directed this reporter to a Department of Homeland Security directive published last year, which the DHS issued to ban the use of any Kaspersky products on the Department of Defense computers.</p> <p>Twitter pointed us to a particular paragraph that lays out allegations of secret ties between the Russian antivirus vendor and Russian intelligence agencies.</p> <p>The Department is concerned about the ties between certain Kaspersky officials and Russian intelligence and other government agencies, and requirements under Russian law that allow Russian intelligence agencies to request or compel assistance from Kaspersky and to intercept communications transiting Russian networks. The risk that the Russian government, whether acting on its own or in collaboration with Kaspersky, could capitalize on access provided by Kaspersky products to compromise federal information and information systems directly implicates U.S. national security.</p> <p>Kaspersky Lab and its CEO have vehemently denied the accusations, and have filed a lawsuit in December 2017 to dismiss the DHS ban.</p>

	But the lawsuit, even if successful, may be just too late. The accusations of working with Russian intelligence have done a lot of harm to the company's reputation, in the US and abroad.

<b>HEADLINE</b>	<b>04/21 Court blocks 'revenge porn' law</b>
<b>SOURCE</b>	<a href="https://www.dallasnews.com/news/texas/2018/04/21/appeals-court-strikes-texas-revenge-porn-law">https://www.dallasnews.com/news/texas/2018/04/21/appeals-court-strikes-texas-revenge-porn-law</a>
<b>GIST</b>	<p>Is distributing intimate photos of current or previous sexual partners without their consent protected by the First Amendment? A state appeals court says yes.</p> <p>Now it will be up to the state attorney general's office to defend the state's "revenge porn" law, which was passed in 2015 and punishes those who post intimate images from previous or current relationships online.</p> <p>The Tyler-based 12th Court of Appeals said the law is unconstitutional because it's too broad and infringes on free speech, The Texas Tribune reported.</p> <p>In his findings in the case, Chief Justice James Worthen said the First Amendment usually prohibits "content-based" restrictions.</p> <p>The court also said that the law was vague and infringed on the rights of third parties who might unwittingly share intimate images, according to the Associated Press.</p> <p>In its ruling, the court ordered charges to be dropped against Jordan Bartlett Jones, who challenged the law as unconstitutional while awaiting trial for sharing a naked photograph of a woman without her consent.</p> <p>The ruling applies only to about a dozen northeast Texas counties that fall under the jurisdiction of the 12th Court of Appeals, but other courts would likely consider its reasoning, the Tribune reported.</p> <p>The law originated from complaints from women who said they felt violated and abused when their exes posted naked or sexual images online without their consent. One woman, Hollie Toups of Nederland, found dozens of photos of herself online and organized a class action suit against the website where they appeared.</p> <p>The state law as currently written labels revenge porn a misdemeanor that carries possible jail time of as much as a year as well as a \$4,000 fine.</p> <p>If the state appeals, the case could wind up in front of the state Supreme Court.</p>

## Terror Conditions

[Top of page](#)

<b>HEADLINE</b>	<b>04/19 New terror group pops up in Syria</b>
<b>SOURCE</b>	<a href="http://www.businessinsider.com/syria-terrorist-group-hayat-tahrir-al-sham-2018-4">http://www.businessinsider.com/syria-terrorist-group-hayat-tahrir-al-sham-2018-4</a>
<b>GIST</b>	<p>With up to 90% of its territory lost, ISIS appears effectively defeated as a conventional foe. But while the black flag of ISIS is being lowered, another may soon take its place — the white flag of Hay'at Tahrir al-Sham.</p> <p>A new report in the Wall Street Journal details HTS' rise as it consolidates power in northwest Syria. Led by a former Al-Qaeda militant, HTS is mostly based in Syria's Idlib Governorate and has taken advantage of the US-led coalition's focus on ISIS in the East, as well as the Syrian government and Russia's focus on other parts of the country.</p> <p>HTS came into existence roughly a year ago, when Jabhat Fath al Sham, previously known as the Al Nusrah Front and Al-Qaeda's branch in Syria until its re-branding in July of 2016, announced a merger with four other islamist groups operating in Syria.</p> <p>Combined with the other groups, HTS — or the Assembly for Liberation of the Levant — was created.</p> <p>The reason for its existence, according to its propaganda, is "to unite our banners and to preserve the fruits and the jihad" of the revolution against Syrian dictator Bashar al-Assad, so that it can "be the seed of unifying the capacities and strength of this revolution."</p> <p>The group's leader, Abu Mohammad al-Julani, has said that he wants his followers to engage in "a war of ideas, a war of minds, a war of wills, a war of perseverance," according to the Wall Street Journal, and that he will conquer Damascus — Syria's capital — and implement Sharia law.</p> <p>The group announced in February that it had defeated the remnants of ISIS militants in Idlib, and a month later said that they had taken control of up to 25 villages in Aleppo and Idlib provinces.</p> <p>It has created a religious police force in its territory, similar to ISIS' Hisbah. They enforce Sharia law, control services like electricity and water, and collect taxes from citizens.</p> <p>The group has also been fighting forces from the Syrian government in Homs, Hama, and Aleppo. But while the terror group continues to grow and solidify its control, the Syrian government and US-led coalition have their attention elsewhere.</p> <p>"The area seems to be out of focus for Western powers," Hassan Hassan, an analyst with the Tahrir Institute for Middle East Policy, told the Wall Street Journal. "The jihadis are having a honeymoon there."</p>

<b>HEADLINE</b>	<b>04/23 Developing complex coord. attack plans</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/subject-matter-areas/terrorism-study/practical-tool-developing-complex-coordinated-attack-plans/">https://www.hstoday.us/subject-matter-areas/terrorism-study/practical-tool-developing-complex-coordinated-attack-plans/</a>
<b>GIST</b>	<p>A key challenge for Complex Coordinated Terrorist Attack preparedness is that CCTAs are difficult to understand. Some CCTAs include bombings, sieges, or manhunts, while others include firearms, vehicles-as-weapons, or hostage situations. Even defining "CCTA" has been a huge challenge — <a href="#">my last article</a> identified a robust, consensus definition of CCTA that is highly useful as an analytical foundation for designing CCTA plans, training and exercises, but is also complicated and highly technical.</p>

This article proposes a new CCTA Component Checklist (CC) as a more practical, “quick and dirty” framework for public safety professionals to use as a complement to the technical definition. When filled in, the CCTA CC simplifies the chaotic nature of individual CCTAs by breaking them down into key elements with which public safety professionals are already familiar.

Public safety professionals can use the CCTA CC’s straightforward framework as a starting point in identifying CCTA capability gaps and developing CCTA plans to address those gaps. In particular, the CCTA CC:

### **1. Facilitates comparisons of lessons learned between CCTAs with similar components**

Breaking down CCTAs into their component parts allows for easy follow-up comparisons between different events that have key elements in common. For example, by comparing Boston’s CCTA CC with Paris’s CCTA CC, it’s easy to observe that the attacks both involved firearms, explosives, a manhunt, 3 or more locations, 16 or more injuries, and sequential timing.

With six distinct consistencies, Boston and Paris clearly faced many similar challenges in managing their attacks. Did one or both identify a best practice or lesson learned that other jurisdictions could include in their plans to manage a similar scenario? By asking comparable questions, emergency planners can collect key information about potential capability gaps and apply their findings while developing CCTA plans.

### **2. Aids forward-thinking CCTA preparedness**

Public safety professionals can adopt a proactive approach to CCTA preparedness simply by examining the CCTA CC and considering whether any high-value gaps – such as chemical, biological, radiological, and nuclear (CBRN) concerns – exist. Before the vehicle-as-weapon attack in Nice (2016), only a uniquely forward-thinking analyst would have included “vehicle-as-weapon” in the CCTA CC. The success of the attack in Nice, as well as similar attacks in Germany and the United Kingdom, demonstrate that CCTA tactics are evolving. Our ways of understanding CCTAs must evolve accordingly.

### **3. Helps decision-makers to prioritize**

Resource management is a key challenge during a CCTA. Comprehensive CCTA plans must reflect that decision-makers may be forced to make difficult choices about how to deploy limited resources to save lives and property as effectively as possible. Since the CCTA CC clearly lays out the different key challenges that decision-makers may need to balance during a CCTA, leaders can use the CCTA CC as a basis to reflect in a calm environment and develop prioritization plans that they can refer to during a chaotic CCTA.

### **4. Helps identify public safety partners that should be involved in CCTA planning**

The CCTA CC is, at its core, simply a list of elements that a CCTA could include. It follows that a comprehensive CCTA plan must consider how to effectively respond to and recover from each component in the checklist. By considering how to manage a CCTA that includes any element from the CCTA CC, emergency planners will be sure to engage all key partners in the planning process.

The CCTA is a valuable, customizable tool for simplifying CCTAs, but it is not perfect. It can reasonably be accused of not accounting for key differences in bombings, sieges, car chases, and other elements in the CCTA CC. Moreover, the lines between different options can sometimes be unclear, particularly in the “Location” and “Timing” columns, and the checklist is not particularly useful for distinguishing between what is a CCTA and what is not. Though legitimate criticisms, the built-in ambiguity is also an asset, allowing public safety professionals the flexibility to interpret and apply the CCTA CC as they see fit, and customize it if they wish. Overall, the CCTA’s value far exceeds its drawbacks, and is a highly useful tool for identifying CCTA capability gaps and developing CCTA plans.

**HEADLINE** 04/21 Armenia: terror attack thwarted

SOURCE	<a href="https://news.am/eng/news/447554.html">https://news.am/eng/news/447554.html</a>
GIST	<p>YEREVAN. – The National Security Service of Armen reported about preventing a terrorist attack.</p> <p>The National Security Service of Armenia has recently received information about the destabilizing activity of special services of foreign states and other organizations, unlawful activities of individuals, and the spread of radical opinions, the statement posted by the intelligence service reads.</p> <p>The Service was alerted about a criminal gang set up by A.B. and Sh. M. who earlier had contacts to Jirayr Sefilyan and Sasna Tsrer group. The gang planned to install explosive devices in public places, including at Liberty Square and Dalma Mall, under bridges, 100-150 meters far from residential buildings, in order to cause death or bodily injuries of law enforcers and other officials. Their actions were aimed at creating an atmosphere of fear and inserting pressure on the public administration bodies to make them fulfill their demands, the statement says.</p> <p>According to the National Security Service, A.B and Sh. M. manufactured and tested an explosive device, and tried to recruit other persons, promising them and their families a shelter in case of threat as well as financial assistance.</p> <p>A group of investigators conducted 19 searches in the apartments and vehicles and discovered powder filters, detonators, materials for improvised explosive devices. A.B. and Sh.M and other four suspects were detained.</p>

HEADLINE	<b>04/22 How strong is ISIS in Afghanistan?</b>
SOURCE	<a href="https://www.usnews.com/news/world/articles/2018-04-22/q-a-how-strong-is-the-islamic-state-group-in-afghanistan">https://www.usnews.com/news/world/articles/2018-04-22/q-a-how-strong-is-the-islamic-state-group-in-afghanistan</a>
GIST	<p>ISLAMABAD (AP) — An upstart Islamic State affiliate that first appeared in Afghanistan in 2014 is becoming increasingly deadly and their attacks on the country's minority Shiites have grown bolder. In Sunday's devastating bombing, a suicide bomber walked up to a crowd outside a voter registration office and blew himself up killing 57 people.</p> <p>Most of the dead were ethnic Hazaras, who are Shiites Muslims. Another 119 people were wounded, many of them seriously.</p> <p>It was the latest in a series of attacks by IS against the country's minority Shiites. Following last year's attack on the Iraq Embassy in Kabul, the extremist group issued a warning to Shiites that they were coming for them. Since then, they have carried out a number of horrific assaults targeting their places of worship in Kabul and Herat in western Afghanistan.</p> <p>Like their counterparts in Syria and Iraq, insurgents belonging to Afghanistan's Islamic State group are radical Sunni Muslims who revile Shiites as apostates and believe that the entire Muslim world should be ruled by a single caliphate. In Afghanistan, it is known as the Islamic State in Khorazan province, the ancient name of an area that included parts of Iran, Afghanistan and Central Asia.</p> <p><b>HOW STRONG IS THE ISLAMIC STATE IN AFGHANISTAN, AND WHO IS ACTIVE IN IT?</b></p> <p>When the Islamic State group first appeared in Afghanistan its ranks were mostly culled from among the most ferocious of Pakistani Taliban from Pakistan's Bajaur tribal region, driven out by a military offensive, as well as from among disgruntled Taliban, who were frustrated with a leadership reigning in its violence and considering negotiations to end fighting.</p> <p>At its outset, the Islamic State was mostly confined to eastern Afghanistan's Nangarhar province, but in recent years it has gained ground in the north and northeast of Afghanistan. Their ranks quickly swelled with Uzbek fighters, mostly from Central Asia's Islamic Movement of Uzbekistan, many of whom were</p>

driven out of Pakistan's South Waziristan tribal region by a military offensive. Analysts say the movement brutality's was unmatched and, as outsiders to Afghanistan, the Uzbek fighters show no compunction about carrying out mass killings. IS, with the aid of Uzbeks, has made inroads into northern Afghanistan where Afghan Uzbeks mostly live. There have been several reports of open recruitment by IMU members. The size of IS in Afghanistan is unknown, but estimates generally run between 3,000 and 5,000 fighters.

#### WHAT DO THEY WANT?

The IS in Khorazan province shares the Syrian and Iraqi IS goal of establishing a caliphate that governs the entire Muslim world. Their only stated goal for Afghanistan, however, is to rid it of Shiite Muslims, who make up roughly 15 per cent of the country's 35 million people. The overwhelming majority are Sunni Muslims, who historically have lived in peace with their Shiite brethren. Shiites have stepped up security around their places of worship but Afghanistan's security forces seem confounded on how to prevent the relentless attacks.

#### DO THEY HAVE SIGNIFICANT SUPPORT IN THE POPULATION?

There is little support among Afghans for a movement whose sole goal is killing Shiite Muslims. While Afghanistan is a conservative Muslim country that has been alternately ruled by radical religious groups \_\_ first anti-Soviet mujahedeen groups and later the Taliban \_\_ there is practically no support for rule by caliphate. Afghanistan's rulers, even the radical religious ones, have been nationalists, ready to go to war to protect their sovereignty.

#### WHAT IS THEIR RELATIONSHIP TO THE TALIBAN?

IS and Taliban are battlefield adversaries which has prompted countries like Russia to confer with the Taliban, who they see as a bulwark against a formidable IS on its southern border. While loosely constructed, the Taliban since the death of its supreme leader Mullah Mohammed Omar several years ago are mostly comprised of ethnic Pashtuns and Arab-speaking nationals with ties to al-Qaida. They have condemned IS and the two groups have fought each other in eastern Nangarhar province where both seek full control, and where U.S. and Afghan security forces have been carrying out offensives against IS hideouts.

<b>HEADLINE</b>	<b>04/23 US builds drone base in Niger</b>
<b>SOURCE</b>	<a href="http://www.starherald.com/news/nation_world/us-builds-drone-base-in-niger-crossroads-of-extremism-fight/article_ab65768f-88d5-5ff1-8634-152c9bd9ba3d.html">http://www.starherald.com/news/nation_world/us-builds-drone-base-in-niger-crossroads-of-extremism-fight/article_ab65768f-88d5-5ff1-8634-152c9bd9ba3d.html</a>
<b>GIST</b>	<p>AGADEZ, Niger (AP) — On the scorching edge of the Sahara Desert, the U.S. Air Force is building a base for armed drones, the newest front in America's battle against the growing extremist threat in Africa's vast Sahel region.</p> <p>Three hangars and the first layers of a runway command a sandy, barren field. Niger Air Base 201 is expected to be functional early next year. The base, a few miles outside Agadez and built at the request of Niger's government, will eventually house fighter jets and MQ-9 drones transferred from the capital Niamey. The drones, with surveillance and added striking capabilities, will have a range enabling them to reach a number of West and North African countries.</p> <p>Few knew of the American military's presence in this desperately poor, remote West African country until October, when an ambush by Islamic State group-linked extremists killed four U.S. soldiers and five Nigeriens.</p> <p>The \$110 million project is the largest troop labor construction project in U.S. history, according to Air Force officials. It will cost \$15 million annually to operate.</p>

Citing security reasons, no official will say how many drones will be housed at the base or whether more U.S. personnel will be brought to the region. Already the U.S. military presence here is the second largest in Africa behind the sole permanent U.S. base on the continent, in the tiny Horn of Africa nation of Djibouti.

The drones at the base are expected to target several different al-Qaida and Islamic State group-affiliated fighters in countries throughout the Sahel, a sprawling region just south of the Sahara, including the area around Lake Chad, where the Nigeria's Boko Haram insurgency has spread.

As the U.S. puts drones at the forefront of the fight against extremists, some worry that civilians will be mistaken for fighters.

"We are afraid of falling back into the same situation as in Afghanistan, with many mistakes made by American soldiers who did not always know the difference between a wedding ceremony and a training of terrorist groups," said Amadou Roufai, a Nigerien administration official.

Civic leader Nouhou Mahamadou also expressed concerns.

"The presence of foreign bases in general and American in particular is a serious surrender of our sovereignty and a serious attack on the morale of the Nigerien military," he said.

The number of U.S. military personnel in Niger has risen over the past few years from 100 to 800, the second largest concentration in Africa after the 4,000 in Camp Lemonnier in Djibouti. About 500 personnel are working on the new air and drone base and the base camp is marked with an American and Nigerien flag.

<b>HEADLINE</b>	<b>04/22 Syria military pummels Damascus suburbs</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/syrian-military-pummels-held-districts-damascus-54642580?">http://abcnews.go.com/International/wireStory/syrian-military-pummels-held-districts-damascus-54642580?</a>
<b>GIST</b>	<p>Syrian government forces used warplanes, helicopters and artillery on Sunday to pound districts of the capital held by the Islamic State group, in a bid to enforce an evacuation deal reached with the militants earlier in the week.</p> <p>Two Palestinian refugees, a father and a son, were killed during the fighting at the Yarmouk refugee camp in Damascus, according to the United Nation's Palestinian refugee agency, which added that thousands of homes have been destroyed in four days of fighting.</p> <p>Hundreds of IS militants hold parts of the Yarmouk camp and nearby area of Hajar al-Aswad in southern Damascus. They agreed to give up their last pocket there on Friday but have yet to begin surrendering to government forces and relocating to IS-held areas elsewhere in the country.</p>

State-run al-Ikhbariya TV showed thick gray smoke billowing from the Hajar al-Aswad neighborhood on Sunday, and government warplanes streaking overhead amid heavy bombardment of the area.

Residents of Damascus reported hearing loud booms throughout the night and Sunday morning.

UNRWA spokesman Chris Gunnes said that since the start of fighting four days ago, most of the six thousand civilians in Yarmouk camp have been forcibly displaced to the neighboring area of Yalda.

Gunnes said added that the camp's last functioning hospital, Palestine Hospital, is now completely unable to operate and called on all sides to allow for the safe evacuation of civilians wishing to leave the area.

President Bashar Assad has escalated his military campaign to retake all remaining enclaves in the capital and surrounding areas. The IS-held areas in southern Damascus are the last holdouts, after rebels evacuated the eastern Ghouta suburbs following a fierce government offensive and an alleged poison gas attack in the town of Douma.

Meanwhile, rebels have begun evacuating three towns in the eastern Qalamoun region in the Damascus countryside.

Al-Ikhbariya TV said that 35 buses left the towns of Ruhaiba, Jayroud, and al-Nasriya on Saturday carrying hundreds of rebels and their families to opposition-held territory in northern Syria.

The station said the evacuations would continue for three days.

<b>HEADLINE</b>	<b>04/22 ISIS suicide bomber kills 57 in Kabul</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/suicide-bomber-strikes-afghan-capital-killed-54642129?">http://abcnews.go.com/International/wireStory/suicide-bomber-strikes-afghan-capital-killed-54642129?</a>
<b>GIST</b>	<p>An Islamic State suicide bomber attacked a voter registration center in Afghanistan's capital on Sunday, killing 57 people and wounding more than 100 others, officials said.</p> <p>Public Health Ministry spokesman Wahid Majro said that among 57 people killed, 22 were women and eight were children. He said 119 people were wounded, among them 17 children and 52 women, and "the tolls could still rise."</p> <p>The bomber targeted civilians who were registering for national identification cards, Kabul police chief Gen. Daud Amin said.</p> <p>The large explosion echoed across the city, shattering windows miles from the attack site and damaging nearby vehicles. Police blocked all roads to the blast site, with only ambulances allowed in. TV stations broadcast live footage of hundreds of distraught locals gathered at hospitals seeking word about loved ones.</p> <p>The Islamic State group claimed responsibility for the attack in a statement carried by its Aamaq news agency, saying it had targeted Shiite "apostates."</p> <p>The attack comes almost a month after an IS suicide bomber carried out an attack near a Shiite shrine in Kabul that targeted attendees celebrating the Persian new year. That attack killed 31 people and wounded 65 others.</p> <p>In a statement issued by the president's office condemned Sunday's attack and quoted President Ashraf Ghani as saying such "terrorist attacks" won't prevent people from participating in upcoming parliamentary elections.</p>

	Afghanistan will hold parliamentary elections in October and voter registration started a week ago.

<b>HEADLINE</b>	<b>04/21 Russia conducts anti-ISIS raids</b>
<b>SOURCE</b>	<a href="https://www.rt.com/news/424772-isis-terrorist-killed-russia/">https://www.rt.com/news/424772-isis-terrorist-killed-russia/</a>
<b>GIST</b>	<p>Russia's Federal Security Service (FSB) has killed an ISIS terrorist who plotted an attack on its local HQ and an administrative building in Stavropol. Agents recovered a firearm, IED components, and an ISIS flag from the scene.</p> <p>The FSB operatives attempted to arrest the suspected terrorist in the southern Russian region of Stavropol on Saturday. The perpetrator, however, resisted and engaged in a firefight with law enforcement, receiving a fatal wound, the FSB press service said.</p> <p>The terrorist plotted an attack on a local office of the FSB and a Stavropol government building, "using firearms and improvised explosive devices (IEDs)."</p> <p>The agents recovered a sawed-off 16-gauge shotgun, a large knife, IED components, and an Islamic State flag (IS, formerly ISIS). A written pledge of allegiance to IS and plans regarding the government and FSB HQ buildings were also found at the scene.</p> <p>The FSB did not provide any details on the terrorist's identity, stating only that an investigation was underway.</p> <p>In a separate development, a large-scale counter-terrorism operation was staged in the town of Derbent, in the Russian republic of Dagestan. A group of militants was reportedly blocked by FSB and police operatives in a residential building, while other reports suggested that another militant group was intercepted while travelling across Derbent in a car. Nine militants were killed during the operation, Russia's Anti-terrorism committee confirmed. One special operative was slightly wounded during the gun battle as well.</p> <p>The counter-terrorism operations came only a few days after another major terrorist cell was busted by the FSB in Rostov Region. Three IS-linked terrorists, who plotted gun and bomb attacks, were captured. The leader of the cell, however, blew himself up with a homemade bomb when law enforcement tried to detain him.</p>

<b>HEADLINE</b>	<b>04/23 US needs more paramedics</b>
<b>SOURCE</b>	<a href="https://www.weeklystandard.com/mark-hemingway/the-us-needs-more-paramedics-israel-might-have-the-answer">https://www.weeklystandard.com/mark-hemingway/the-us-needs-more-paramedics-israel-might-have-the-answer</a>
<b>GIST</b>	<p>The police response to the Parkland, Fla., school shooting has been much criticized for being cowardly and negligent. But one aspect of the poor response deserves more attention, because it points the way toward saving lives in the future: Police didn't just fail to enter the building quickly and engage the shooter, they also prevented paramedics from going in and retrieving the wounded.</p> <p>"Everything I was trained on mass casualty events says they did the wrong thing," a paramedic on the scene told Brian Entin, a reporter for Miami's WSVN. "You don't wait for the scene to be cleared. You go in immediately armed. Retrieve the victims. You can't leave the victims laying there." Paramedics on the scene were willing to risk their lives to go in, but "the response every time was law enforcement did not clear the scene and would not allow medical personnel in."</p> <p>The paramedic, who remained anonymous for fear of reprisal, is correct about the importance of quick treatment of the wounded. And this may be one area where improvement is readily achievable and uncontroversial. Ensuring that many more people, particularly those working at large institutions such as schools, receive comprehensive emergency medical training has much to recommend it. Sometimes first responders either can't come in or don't get there in time.</p> <p>For Gavriel Friedson, the importance of more emergency medical training in schools is not a theoretical concern. He first received emergency medical training and began volunteering as a teenager. And his training quickly proved useful: "When I was 15 years old, I delivered my math teacher's baby," he tells The Weekly Standard. "One of the best things that ever happened in my life was being able to start volunteering at such a young age. It's life changing, and you get an amazing satisfaction from what it's like to really help."</p> <p>Friedson grew up in Israel, where responding to emergencies is a more urgent matter of public safety than in the United States. (Amid the grief and horror over terror attacks and mass shootings, it's worth noting that violent crime has declined by almost 50 percent since it's apex in 1991.) Accordingly, Israel has an emergency response system that is in many ways a model to aspire to. And a significant part of that system depends on volunteers and private organizations.</p> <p>Friedson began by volunteering with United Hatzalah—hatzalah means rescue in Hebrew—which</p>

provides medical training and supplies to over 4,000 volunteers across Israel. When emergencies are reported to the authorities, United Hatzalah is also made aware of the location and notifies nearby volunteers through its own communication network, often by text message. Volunteers are not obligated to respond but almost always do. United Hatzalah claims an impressive average response time of under three minutes; in some cities, the average response time is under 90 seconds.

The organization has made some pioneering innovations. The fast response times are often attributed to the “ambucycles” it supplies to volunteers. They are essentially motor scooters packed with a complete trauma kit and advanced medical devices such as defibrillators, blood sugar monitors, and oxygen tanks. The scooters can bypass traffic jams, go around debris, ride on sidewalks, and otherwise avoid impediments that would stop an ambulance.

Friedson, a former IDF medic who is now the deputy director of international operations for United Hatzalah, stresses that becoming a volunteer requires no special prerequisites and that training can be given to almost anyone physically capable. He recalls one incident where he was playing basketball and got a call that a 7-year-old girl had been hit by a bus. He hopped on his ambucycle and was the third volunteer on the scene.

The first was “a real estate lawyer and he literally was about to sign some sort of housing closure, and he hopped on the back of his motorcycle to respond to this emergency,” Friedson recalls. “He was coming in a suit and tie from his law firm.” The second was a butcher, and “he was coming in his apron and his boots and he stunk like fish. It doesn’t matter what you’re doing. You could be a lawyer, you can be working at the market, it could be a student ... that’s the whole point of it. It’s grassroots community.”

While Friedson’s evangelism for United Hatzalah is based on his life experiences, it’s also his job. He now lives in the United States, where United Hatzalah was on the ground with volunteer medics in Florida and Houston after last year’s hurricanes. The experience was eye-opening about the need for improvement in America’s response to major emergencies.

“None of us were sure what we were going to do in a country like America, but especially in Florida, in the Keys, we ended up doing a lot,” says Friedson. “We found several missing persons before FEMA and the Red Cross even arrived, which was a huge awakening to the reality that even the best of the best needs a little bit more of a support system.”

The data also support the notion America’s emergency response systems are becoming more strained. In the decade between 2014 and 2024, job growth for EMTs in the United States is projected to be 24 percent. And it remains an exceptionally difficult job, where the median salary is around \$32,000 a year.

Obviously, one way to alleviate the strain on professional first responders is to give emergency medical training to thousands of volunteers in all walks of American life. United Hatzalah has an American affiliate, United Rescue, that is in its infancy and currently working to import United Hatzalah’s model of training and deploying volunteers in a pilot program in Jersey City.

However, there’s a very long way to go before United Rescue would make the same impact here as United Hatzalah in Israel. In terms of relative population, 4,000 volunteer responders in Israel would be the equivalent of adding 160,000 volunteers in America. Not helping matters, Friedson says, is quite a bit of union opposition from professional first responders to the idea of an army of volunteers.

Still, it’s hard to imagine Americans objecting to the thought of 100,000 new ambucycles patrolling the streets. And unlike, say, the debate over gun rights, emergency medical training is hardly controversial: Voluntarism speaks to America’s Tocquevillean traditions, and such programs can even start in schools.

In fact, there already appears to be a broad consensus that training teenagers for emergency response is a good idea. The Federal Emergency Management Agency has a initiative called Teen CERT (Community Emergency Response Team) that’s aimed at teaching basic first aid, along with procedures for responding to specific disasters, e.g. how to turn off gas lines after an earthquake. And there are numerous state and

local programs across the country aimed at EMT training for high schoolers, some of which are quite impressive. Notably, the commonwealth of Virginia has a detailed curriculum for High School Based Emergency Medical Technician (EMT) Educational Programs, and the small ambulance service in the hedge-fund hamlet of Darien, Connecticut is actually run entirely by local teenagers and was the subject of a recent documentary, High School 911. But so far, this is a largely patchwork effort--several calls to federal agencies and national emergency medical organizations reveals no one has a good handle on how many kids are getting EMT or emergency training and to what end. There's a strong case to be made that training staff and students needs to be a foundational part of American education.

“When I was in college, I got there and I asked the dean of the school about the medical staff at the university and he said, ‘what medical staff? There is none,’” Friedson says. “I told him, ‘I have an ambucycle, I’m a first responder.’ The dean of the school gave me his parking spot, and I started taking my cycle to school every single day and created the first response team on campus. And then two years later the dean was so inspired, he went off and did the [emergency medical] course and now he’s a first responder.”

For Friedson, the Parkland shooting is both a call to improve procedures for security and safety at American schools and a reminder that, while ordinary citizens ranging from football coaches to JROTC students proved heroic that tragic day at Stoneman Douglas High School, we can give people the tools to do even more when they need to rise to the occasion. “If you can have medical personnel on staff, that would be great. But that’s expensive,” he says. “But you can also train seniors in high school. Get them to do an EMT course, and have a few EMTs on campus.”

<b>HEADLINE</b>	<b>04/20 World longest bong takes shape in Seattle</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/04/20/24-foot-bongzilla-the-worlds-largest-bong-takes-shape-in-seattle/">http://q13fox.com/2018/04/20/24-foot-bongzilla-the-worlds-largest-bong-takes-shape-in-seattle/</a>
<b>GIST</b>	<p>SEATTLE -- Dozens of artists from around the West Coast gathered Friday in a rented studio. They huddled around scorching hot ovens of glass.</p> <p>Joints were passed; Pink Floyd rattled the speakers. There was one collective goal:</p> <p>To build the world's biggest bong.</p>

And they say Seattle has lost its roots.

"Essentially this is the Freedom Bong," head glass blower Charles Lowrie told Q13 News. "This is the time of life we arriving to collective consciousness."

Friday was the first of a three-day event led by Jerome Baker Designs. It's the culmination of a collaborative effort to build a 24-foot bong, nicknamed #Bongzilla. The glass bong will weigh thousands of pounds, and will be on display at Cannabition, a cannabis museum planned for Las Vegas.

But before it's put together, the glass must be blown. No small feat for the artists, even with their decades of experience in blowing bongs.

"We're dipping up a good 45 to 50 pounds of hot glass out of this furnace," Lowrie says. "The furnace holds about a thousand pounds."

Anything this big in glass needs to be done in stages. Each day through Sunday, artists will be dipping and molding, all toward the final construction. The bong is expected to be finished in a month or two.

"This thing will be over two stories high," Lowrie said. "(Each blow) is just one of the components to that masterpiece."

The bong was dreamed up as a way to "create works of art that bring relevance to the functional art glass world," a spokesperson for Jerome Baker Designs said. They chose Seattle as the place to construct the bong because of Washington's marijuana laws. Of course, the informal marijuana holiday of April 20 played a roll.

"We feel the timing is perfect" a spokesperson said.

<b>HEADLINE</b>	<b>04/19 San Juan Co. tale of sex, deception</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/crime/the-professor-the-cop-and-the-student-a-tale-of-sex-and-deception-in-san-juan-county/">https://www.seattletimes.com/seattle-news/crime/the-professor-the-cop-and-the-student-a-tale-of-sex-and-deception-in-san-juan-county/</a>
<b>GIST</b>	<p>FRIDAY HARBOR — A tall man with an imposing head of wavy blond hair, a wide smile and a French accent, Gerald Grellet-Tinner was a sort of rock star among paleontologists.</p> <p>A one-time scuba trainer for the French Foreign Legion, Grellet-Tinner was a published post-Ph.D.-level researcher credited with discovering how a species of dinosaur incubated eggs in volcanic vents, and a gem expert who had worked with the Department of Homeland Security on terrorist money-laundering issues in the wake of 9/11. He conducted research for the University of Chicago and taught at UCLA before moving to Orcas Island in 2014.</p> <p>That was before the then-60-year-old decided to teach science at Orcas Island High School in 2015 while caring for his ailing son. And before he met his student lab assistant, 19-year-old Antonia (not her real name), and before his life was taken apart when he was accused of having sex with her. It is a crime in Washington state for a teacher to have sex with any student younger than 21.</p> <p>Grellet-Tinner was arrested, jailed, convicted by a jury of two felonies and almost sent to prison as a sex offender before a judge threw the case out, citing a miscarriage of justice.</p> <p>The reason? While Grellet-Tinner sat in jail, facing possible prison, the San Juan County sheriff's detective who was trying to put him there was sexually involved with Antonia himself, according to investigators.</p>

The ordeal of sex and deception — which includes allegations of witness tampering, bribery and threats — has doused any spark of justice for anyone involved: Grellet-Tinner, Antonia or the community. Nobody involved was left unscathed, including the detective.

Grellet-Tinner's life has been left in tatters. He lost custody of his son — whose fragile health was the reason he moved to Orcas Island — and his reputation was sullied, maybe ruined. He was fired from his teaching job and is, he says, unemployable and on food stamps.

Grellet-Tinner denies he ever touched the young woman. He has filed a \$10 million claim against San Juan County, its prosecutor and the Sheriff's Office alleging a variety of civil-rights violations, including wrongful arrest and wrongful prosecution.

"This all fell like a ton of bricks on my head," Grellet-Tinner said in an interview.

No criminal charges were filed against the detective, Stephen Parker, although investigators believe he committed perjury and probably witness tampering. The San Juan County Sheriff's Office found he had committed significant misconduct following two investigations, and has sought to have his law-enforcement credentials revoked.

Parker, who has denied wrongdoing, resigned from the San Juan County Sheriff's Office and moved about as far away from Friday Harbor as possible in the continental United States — Fort Myers, Florida.

He also denies having sex with Antonia and says he's talking to a lawyer about suing the county sheriff and prosecutor for slander.

A multiagency investigation overseen by Skagit County concluded Parker, a 46-year-old veteran lawman from Montana, and Antonia, a single mother and undocumented immigrant, had carried on a secret relationship for months. The investigation concluded they met for sex at least five times while Grellet-Tinner sat in the San Juan County Jail.

Attempts to contact Antonia were not successful. The Seattle Times generally does not identify alleged victims of abuse.

Nick Power, Grellet-Tinner's civil-rights attorney, believes Antonia traded sex with the detective in exchange for obtaining a crime victim's visa so she and her family could stay in the U.S. legally. Prosecutors confirmed they had sought a so-called "U Visa" for Antonia.

Antonia was 19 years old when Grellet-Tinner allegedly had two consensual sexual encounters with her at his house on Orcas Island, according to the charges.

Based on Parker's investigation, which included DNA evidence provided by the student and her tearful testimony, Grellet-Tinner was convicted after a three-week trial in June 2016. He was facing 17 months in prison when Antonia told a victim advocate in the San Juan County Prosecutor's Office that she'd been secretly seeing the detective, Parker, for months.

When Parker found out, he approached the victim advocate, Christine Miller, two days later outside her office. Parker denied the relationship and said Antonia was upset because he had stopped paying attention to her after the trial.

"You know," an angry Parker told Miller, "she seduces people and she set (Grellet-Tinner) up." Parker called Antonia "hypersexual," Miller would later recount in an interview with detectives.

The student recanted that story within days — under pressure from the detective, according to her later statements — and an initial investigation by a Skagit County sheriff's deputy concluded the allegations were "not sustained" since both the student and Parker denied anything had happened between them. Parker went so far as to sign a denial under threat of perjury.

However, the Skagit County sheriff's deputy, Lori Sigman, had doubts. Her report to the San Juan County prosecutor's and sheriff's offices concluded with a section titled "Curious Things," including the fact that Parker and Antonia seemed to be particularly aware of the other's activities. Sigman found it "astonishing" that Parker and the student had exchanged 69 emails.

San Juan County Sheriff Ron Krebs now says he wishes he'd opened a wider investigation at that point.

Later, Sigman would join a more thorough investigation conducted by a multiagency team of Skagit County detectives, which would find that Parker and the student "used aliases and alternative means of communications" to stay in touch. Moreover, they exchanged more than 137 telephone calls on Parker's county-issued phone.

Sigman completed her initial investigation — the one with the "Curious Things" section — on Aug. 23, 2016, just two days before Grellet-Tinner's initial sentencing date, according to records.

However, San Juan County Prosecutor Randall Gaylord didn't provide the report to the court and Grellet-Tinner's criminal defense attorney, Robert Butler, until Sept. 14, two days before the revised sentencing date.

"The state is clinging to an unfair conviction, based almost entirely on a witness they know is a liar," said Butler, referring to the student.

San Juan County Superior Court Judge Donald Eaton agreed, and granted Grellet-Tinner a new trial based on Parker's statement that Antonia "seduces people" and "set Tinner up." In the interim, Grellet-Tinner was released from jail.

Three days after the judge ordered a new trial, the state appealed.

The following day, Gaylord, Sigman and another prosecutor met with Antonia, who changed her story again. Over the next four hours, she detailed a relationship with the detective that began days after Grellet-Tinner's arrest and involved at least five sexual encounters, including trysts at the Sheriff's Office, at an Orcas Island resort and in the back seat of Parker's patrol car.

She had recanted the first time, she told them, because Parker had found out about her conversation with the victim advocate through his boss, Sheriff Krebs.

Investigative documents showed Parker called the student a dozen times that day. She told the investigators that Parker told her she had to "fix it," and offered money to help with bills, but she took the offer to be attempts to pay her hush money.

San Juan County Undersheriff Brent Johnson told Sheriff Krebs he thought those calls "looked like a crime," according to an interview he gave to detectives.

Parker was placed on administrative leave with pay on Sept. 26, 2016, and would never return to work.

However, the prosecution of Grellet-Tinner — now minus its investigator and with a tainted key witness — would drag out seven more months — a delay Grellet-Tinner's attorneys said was nothing more than punishment for a crime prosecutors could not prove.

In March, the judge concluded the violations to Grellet-Tinner's rights were insurmountable and he dismissed the case as a "miscarriage of justice."

Gaylord, the San Juan County prosecutor, asked his counterpart in Skagit County, Richard Weyrich, to look at possible charges against Parker.

“We considered a few criminal charges,” Weyrich wrote in a letter dated Dec. 23, 2017. “We first looked at a sex crime” based on evidence “that a few portions of the sexual encounters were not completely consensual ... We also looked at witness tampering.”

The investigation raised disturbing questions about whether all of their sexual encounters were consensual, considering Parker’s status and position of authority.

But Weyrich concluded none of the charges could be proved beyond a reasonable doubt. He said his office did not look at perhaps the easiest charge to prove: perjury, since Parker signed a sworn statement saying he had not had a relationship with the student. Weyrich said Gaylord, the San Juan County prosecutor, should have at least reviewed that charge and believes it should have been filed.

Gaylord said his office had a conflict — the reason Weyrich was called in the first place — and could not review any of the case against Parker. Gaylord said several people in his office, including himself, were interviewed during the investigation and were potential witnesses, precluding him from being involved.

“This is disappointing news,” Gaylord said earlier this month of the decision not to charge Parker with perjury. “If there was a crime Parker could have been charged with, he should have been charged with it.”

Parker, reached by phone in the Gulf of Mexico where he is working on an oil rig, said he was targeted by Gaylord and the sheriff.

“I did not have sex with (the student),” he said in an interview. “Did I get too close to their family? There were six people in a one-bedroom apartment. I tried to help.”

He reiterated his claim that he believes Antonia “trapped” Grellet-Tinner and then retaliated against Parker after he stopped paying attention to her after the trial.

Power, Grellet-Tinner’s civil-rights attorney, also believes his client was trapped by Antonia — with Parker’s help.

He says that during Grellet-Tinner’s prosecution, Parker and Gaylord, the prosecutor, were helping Antonia obtain a special “U Visa” from the Department of Homeland Security. The visa is intended to allow undocumented crime victims and their immediate families to stay in the country legally if they’re willing to assist in the investigation or prosecution of a crime.

“Basically [Antonia] slept with Parker in exchange for a U Visa,” Power said. “And the two of them manufactured these allegations against Grellet-Tinner so she was eligible.”

Parker denied that was what happened.

Gaylord said he signed the paperwork for the visa but does not know if it ever was issued.

“I don’t think anybody feels good about any part of what happened here,” Gaylord said.

Grellet-Tinner, meantime, continues to live on Orcas Island in the home he bought in 2012 near Eastsound. People whisper, he said. One woman called him a pedophile while he was waiting in line at the store. He’s involved in a custody battle over his son, attempting to undo the damage done.

“But that’s the problem,” he said. “You can’t.”

GIST	<p>April 20 (UPI) -- Japan's Mount Io has erupted for the first time in 250 years, prompting the country's meteorologists to warn residents and passing aircraft to stay farther away from the volcano than normal.</p> <p>The volcano spewed ash and rock about 980 feet into the sky Thursday, sending debris more than 1 1/2 miles outward from the crater, the Japanese Meteorological Agency. There were no reports of damage or injuries.</p> <p>The last time Mount Io erupted was in 1768.</p> <p>The eruption subsided Friday, but Meteorological Agency official Makoto Saito told The Japan Times "there is a possibility the volcano will become more active."</p> <p>The Meteorological Agency expanded the no-go zone from the volcano's crater to the entire mountain after Thursday's eruption. Officials also raised the warning level for Mount Io from 2 to 3 on a 5-point scale.</p> <p>Mount Io is 4,258 feet high and is situated on the island of Kyushu, part of the Mount Kirishima group of volcanos in Miyazaki and Kagoshima prefectures.</p>

HEADLINE	<b>04/21 Hidden horrors of India's elephants</b>
SOURCE	<a href="https://www.independent.co.uk/news/long-reads/indian-temple-captive-elephants-kerala-chained-beaten-whipped-died-modi-a8313696.html">https://www.independent.co.uk/news/long-reads/indian-temple-captive-elephants-kerala-chained-beaten-whipped-died-modi-a8313696.html</a>
GIST	<p>When Audrey Gaffney first read about Raju, an elephant kept in chains with spikes embedded in his ankles, she couldn't stop the tears pouring down her face. "In fact, I cried again and again: I found over the next few days I just couldn't get this story out of my head, I couldn't stop thinking about Raju," she recalls.</p> <p>"I couldn't believe the cruelty of my race."</p> <p>The young elephant had been snatched from his family, she explains – his mother either would have been killed or spent weeks searching and crying for him – and he was beaten into submission. Raju then spent the next 50 years forced by his handler to beg in the street, starved, frightened and suffering infected wounds to his flesh. By the time of his rescue, he had resorted to eating plastic and paper.</p> <p>Going on to discover that Raju was just one of thousands of elephants treated this way in India, Ms Gaffney, a single mother from Liverpool, was spurred into becoming an activist for the first time. In the four years since, she says, her life has changed beyond recognition as she dropped her wariness of social media and teamed up with other volunteers working to raise awareness of the horrors to which the temple elephants of India are subjected.</p> <p>Taken from their families in the wild, shackled, beaten, whipped and exploited like slaves, these elephants – ironically India's icons – are painted and dressed in colourful decorations, to be paraded in regular festivals and processions organised by religious temples.</p> <p>They are the world's forgotten elephant victims of mankind. While the world has focused on the threat of extinction to Africa's elephants caused by the ivory poaching crisis and the cruelty of tourist elephant rides in Thailand and Cambodia, the plight of their captive counterparts in India has remained largely hidden from public gaze.</p> <p>Photographs and videos posted online have shown how, away from the glitz of the festivals, these sensitive, intelligent and naturally sociable creatures are tied to the spot by ropes or chains that eat into their skin and inflict agonising injuries to their legs; they are hit with metal rods or bullhooks – sharp tools</p>

– and “trained” with punishments to hold their heads high.

When the six-month festival season begins in December, they are forced to walk for miles in searing heat on hot, stinging tar roads and ridden into processions noisy with crowds and fireworks – terrifying for a creature whose home is the forest. While still shackled in chains they are made to run races or carry people, and are subjected to “painful and unnatural” “head-lifting” competitions.

Some elephants are carted from one festival to another – in some cases hundreds of miles – and despite suffering sometimes infected wounds from the chains, are ridden in searing temperatures by people who apparently see no harm in what they do.

The southern coastal state of Kerala has the highest number of festival elephants, about 500 out of 3,500-4,000 across the country. Action for Elephants UK (AfE) brands Kerala “ground zero for elephant torture”, and has called their illegal treatment “the worst case of animal cruelty in the world”. The plight of the 150 captive elephants in neighbouring Tamil Nadu is feared to be just as bad.

Malnourished and deprived of medical care, captive individuals of the endangered species rarely survive this “unrelenting neglect and torture” for a natural lifespan. The mortality rate in Kerala is shocking: 58 have died in 27 months, and already in 2018, 12 have succumbed, according to KSE. In seven years, the death toll is 350. “There could be no more damning proof of the hellish conditions and treatment meted out to these elephants,” says Maria Mossman, founder of AfE.

For all the abuse, injuries and mental torment, it’s not the pain or infections that usually kills them early, it’s “intestinal impactions”: a blocked colon caused by being fed the wrong diet and insufficient quantities of water. The condition means they die “a miserable and painful” early death.

Campaigners have had enough. Gathering outside the Indian High Commission in London, they staged a protest to draw the attention of the New Delhi government and the world at large to the animals’ plight. Wearing large elephant masks and waving placards, they came from a variety of backgrounds; some had travelled hundreds of miles to be there.

What unites these women – and yes, the campaigners are nearly all women – is a shared abhorrence of the “abuse and torture”. They adamantly deny attempting to interfere with religious culture.

“Temple elephants are not part of any tradition,” explains Ms Mossman.

“Their use in temples and festivals is not part of Indian culture, nor do Hindu scriptures anywhere say that elephants should be used in temple rituals. On the contrary, the barbaric treatment of these elephants goes completely against the core beliefs of Hinduism”

In fact, the cruelty behind Kerala’s rituals is thought to have begun about a century ago as India’s nouveaux riches started to buy elephants to flaunt their wealth. Denise Dresner, a co-organiser of AfE, recalls the heart-wrenching moment that opened her eyes to the scale of the problem: “In 2013 I saw a video by Peta of Sunder the temple elephant being beaten. This was something I’d never witnessed before.

“An elephant was on its side on the ground, struggling to get up. His feet were shackled and he was being beaten violently by several men, over and over again. He kept struggling, unable to get away from the blows raining down on him. I learned later he had been kept in a dark shed and beaten incessantly for seven years.

“That moment of seeing him being beaten and tortured was seared into my brain and heart. It’s an image that will never leave me, one that shows the extremes of human violence and brutality towards other living beings. The unspeakable cruelty perpetrated on these majestic, sentient and highly intelligent creatures must end.”

Seeing the photos and hearing the accounts is harrowing. But Ms Mossman says it’s vital if their welfare is

to improve. “The world needs to know how handlers use banned weapons and restrain them with heavy shackles, often tightened so severely that they cut through the flesh, causing raw bleeding wounds that are seldom treated. “They are often forced to stand in the same position 24/7, in their own urine and excrement, suffering from foot rot. They are beaten and tortured time and again.”

Some mahouts think nothing of whipping an elephant to make it bend to his will, such as climbing into a truck. But the abuse doesn't end there.

Most of Kerala's captive elephants are bulls. When they enter their annual musth – mating season – their testosterone levels and energy surge, so the mahouts tighten their shackles further until the creatures are unable to move. In addition, food and water are restricted to weaken them.

But then comes the cruellest torture yet. Several men, often drunken, beat the chained elephant for up to 72 hours relentlessly. The practice is based on a superstitious belief that the elephants may have forgotten their commands during their musth, and is designed to break the elephant's spirit, “reminding him that his masters are in control”.

All bull elephants in Kerala undergo this horror every year.

These practices are banned by the Prevention of Cruelty to Animals Act 1960 and the Wildlife Protection Act 1972, but campaigners point out that the laws are routinely ignored.

Elephants are paraded with no ownership papers or parade certificates, or with fake fitness certificates, breaking the Wildlife Protection Act 1972, which says they cannot be exploited for profit, AfE says. Recent laws banning the use of disabled, sick or pregnant elephants in festivals are also ignored.

“India has very good laws but they are ignored daily and the abusers go unpunished,” says Ms Mossman. “Not only are elephants intelligent and sentient beings, they are an endangered species. It is the duty not only of India to enforce the laws to protect them, but of the world to hear their cries of suffering and respond to end the brutality against them.”

She and KSE agree that making profits and keeping the status quo are at the root of the problem. “These sentient animals are seen only as commodities, earning huge sums of money for their owners and the temples,” says Ms Mossman. “Exploited under the veneer of culture and religion, they are big business. Everyone, from the chief minister downwards, has a stake.”

The 3,000 temples that rent out elephants to festival organisers are run by four devaswom (socio-religious trusts), appointed by the state government, and each temple earns many millions of rupees from festivals.

Any elephant that makes it beyond 60 is purposely neglected and abused – treated as a disposable item – so the owners can make hefty insurance claims, according to AfE.

Sangita Iyer, who was born and raised in Kerala and made an award-winning 2016 film, *Gods in Shackles*, revealing what goes on behind the scenes at the festivals, is convinced greed is to blame.

“Elephants are allowed to die so the owners can receive the payouts. There's a whole insurance industry surrounding this, in which the owners and brokers make the most profit.”

According to India's Wildlife Rescue and Rehabilitation Centre, which in 2014 petitioned the Supreme Court of India to order better conditions for the animals, another factor is young men showing off.

“Today's mahouts are in it for the glamour and the thrill. Unlike the mahouts of the old, who learnt the ways of handling the elephants over time, these guys know only oppression and violence,” one rescuer says.

Nor does Ms Iyer particularly blame festival-goers. “Most people are unaware of the crushing burden these elephants carry, in the literal sense, on their backs, and in their hearts and souls. Most people don't

realise the brutality that these sentient beings undergo to entertain them. They are so hypnotised by the majestic, ornate elephants and lost in their own selfish world that they don't even look at the raw bleeding ankles."

However bad the suffering of the individuals, the abuse has wider repercussions. KSE warns it could even lead to the extinction of Indian elephants.

Taking young elephants from the wild has a serious impact on wild elephant populations in India and elsewhere, activists fear. People's lives, too, are being put at risk. Some elephants, driven frantic by their suffering, break free and run amok. Behind media reports of people being killed by a rampaging elephant there almost always lies a story of a brutalised animal.

There have also been 300 incidents of elephants running amok in the first three months of this year. Earlier this month there were unconfirmed reports of elephants running amok at festivals in Ernakulam and Kollam districts. Unofficial counts puts it at 20 incidents in one week.

Action for Elephants is warning prime minister Narendra Modi these rituals are not just harming the country's most iconic wildlife, but also India's multi-million-pound tourism industry and reputation. "We hope tourists and visitors to India will make ethical choices and will shun all forms of elephant tourism that use elephants in any unnatural way, whether in festivals or for trekking or rides or any other purpose," a statement by the group says.

The London demonstration coincided with a visit to London by Mr Modi for the Heads of Commonwealth meeting, who received a letter from activists, pleading for him to enforce its widely flouted anti-cruelty laws. It says: "While we urge you to consider immediate measures to enforce the laws and stop the cruel abuse of these elephants, the end goal is to see the use of elephants in temples phased out altogether.

"In this day and age, when we have gained so much knowledge about the intelligence, emotional capacity, and social bonds of these majestic creatures, and when we know how endangered they are, we believe that all countries have a duty to protect them, treat them humanely, and give them sanctuary."

India is positioned to take a global lead in ethical wildlife tourism, the letter says. Signatories include primatologist Jane Goodall, TV star Michael Palin, author Jilly Cooper, TV presenter Anneka Svenska and radio presenter Nicky Campbell, as well as MP Zac Goldsmith.

Filmmaker Ms Iyer believes educating the public is the only way to achieve change. "Ignorance and arrogance make for a bad potion, and unless and until we are able to create attitude shifts in the public eye, there's little hope for these sentient beings.

"There is no point in fighting the owners or brokers. Enlightening the people is the only way to stop the audience from participating in festivals that use live elephants, and reduce demand for such cultural festivals. When the demand dies down, the elephants will be ultimately phased out."

The Indian High Commission in London did not respond to a request by The Independent to comment and refused to send anybody to open the door when visited in person.

There are some glimmers of hope, however. Occasionally, news of progress made by welfare workers on the ground emerges, and an elephant rescue can become a stand-out memory for followers. The film that startled Ms Gaffney was called Raju the Elephant Cried on the Day he was Released from Chains. His rescue made headlines.

Ms Dresner says she followed each step in a protracted legal case to free Sunder with her heart in her throat. "Finally, when he was freed, the joy was overwhelming. Like so many others, I then followed his progress in his new home at Bannerghatta Biological Park, crying (happily) with every bit of good news: his healing leg, his first swim in the pond, his making new friends, his putting weight on his skeletal frame."

Fellow demonstrator Joanne Smith agrees. “The terrible delays with the court case were so hard to take but the day Sunder was given his freedom was thrilling,” she recalls. “It proved to me that we can make a difference with hard work and determination.”

In the past two years, three temples have done away with renting elephants for festivals. One used mechanical stand-in; another used an 8ft dummy made of plaster of Paris and bamboo. Organisers say they may even offer the model to neighbouring temples for their own festivals, allowing the idea to catch on.

The London protest and letter also have the support of Absolutely Fabulous star Joanna Lumley, whose message was: “One of the most influential Indians of all time, Mahatma Gandhi, said: ‘The greatness of a nation and its moral progress can be judged by the way its animals are treated.’

“India! Listen to his words and implement them. The world supports your laws against cruelties to temple elephants, but only you can ensure that they are enforced.”

And that, say campaigners, really would be worth a celebration.

<b>HEADLINE</b>	<b>04/20 Chemical weapons coverup suspected</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/chemical-weapons-coverup-suspected-in-syria-as-inspectors-remain-blocked/2018/04/20/1ca0f164-440a-11e8-b2dc-b0a403e4720a_story.html?noredirect=on&amp;utm_term=.66664b1e5b8f">https://www.washingtonpost.com/world/chemical-weapons-coverup-suspected-in-syria-as-inspectors-remain-blocked/2018/04/20/1ca0f164-440a-11e8-b2dc-b0a403e4720a_story.html?noredirect=on&amp;utm_term=.66664b1e5b8f</a>
<b>GIST</b>	<p>BEIRUT — In the two weeks since the Syrian city of Douma was struck by a suspected chemical weapons attack, the area has had many visitors.</p> <p>First, it was Russian military police, fanning out across the area after five years of rebel control. Next came the Syrian army, and then journalists traipsed through, examining the alleged blast sites and interviewing survivors.</p> <p>But one thing was missing: the weapons inspectors who arrived in Syria last week to establish what really happened in Douma.</p> <p>Six days later, they are still demanding full and secure access to the site, a delay that has sharpened suspicions among local residents and Western governments that Syrian and Russian authorities are using each day that passes for a coverup.</p> <p>People present in Douma said Syrian and Russian military officials have blocked off and repeatedly entered the sites and medical facilities that the international Organization for the Prohibition of Chemical Weapons (OPCW) is expected to comb for evidence.</p> <p>On Thursday, the United States said it had credible information to suggest that Syria and Russia were working to delay the OPCW mission to Douma as their forces removed evidence that a chemical attack had taken place.</p> <p>“Russian officials have worked with the Syrian regime, we believe, to sanitize the locations of the suspected attacks and remove incriminating evidence of chemical weapons use,” said Heather Nauert, spokeswoman for the State Department.</p> <p>The United States joined France and Britain in launching military action last week against sites linked to Syrian President Bashar al-Assad’s chemical weapons program, following the deaths of at least 43 people in the Douma attack.</p> <p>Witnesses described a smell of chlorine in the air, and video footage from the site of the deadliest strike</p>

showed men, women and children who appeared to have died foaming at the mouth, a symptom that could indicate exposure to a nerve agent.

Assad's government denies using chemical weapons, and Russia has offered competing explanations for the chaotic scenes of April 7, first denying that an attack took place, then saying it had been staged by rebels.

"In these international investigations, you find a whole bunch of stakeholders who have significant power but might not want the truth to come out, or they may want their version of the truth to come out," said Jerry Smith, a risk consultant who participated in earlier OPCW missions to Syria.

As inspectors continue to demand access to Douma, the likelihood that they will be able to detect chemical traces is diminishing by the day, according to experts.

Alastair W.M. Hay, a toxicologist and professor at the University of Leeds, said that chlorine was likely to have vanished from the site and that any traces found in the biomedical samples of victims were likely to be inconclusive because chlorine appears naturally in the body.

Remnants of a nerve agent also would be increasingly difficult to find, he said, although they could be detectable in the samples of living victims or exhumed bodies.

"It could also still be stuck in the walls or on nearby rocks, as long as there was no attempt to try and remove them," he said.

Residents say they worry that Syrian authorities and their Russian allies are whitewashing the history of April 7.

"They asked us not to talk about anything. There was a direct warning," said a man who said his sister died in the attack and who spoke on the condition of anonymity out of fear for his safety. "Evidence has been erased. There is no evidence."

Days after the Syrian government reestablished its hold on the area, doctors appeared on state media outlets denying the attack had taken place.

In interviews with The Washington Post, residents confirmed that the doctors were present in medical facilities on the night of the alleged chemical attacks. The residents noted that these doctors were later questioned by security officials, and several people, who indicated that those exchanges were described to them, said the doctors were pressured into publicly denying that an attack occurred.

Several residents said the doctors initially were treated well, even being offered a meal with a Syrian security official before they were told to deny the attack on camera.

Then the pressure increased. Ghanem Tayara, director of the Union of Medical Care and Relief Organizations, a group that operated in the area, said the doctors were interrogated one by one and efforts were made to ensure they had not hidden any biomedical samples.

"Their houses have been raided by police and regime forces who have checked carefully to make sure no one has hidden any samples. Their phones have been checked for any messages suggesting that there was a chemical attack, and even their families have been interrogated," he said.

HEADLINE	<b>04/20 Inmate promised to kill self; did so in jail</b>
SOURCE	<a href="https://crosscut.com/2018/04/suicide-jail-did-photographer-michael-clinard-have-die">https://crosscut.com/2018/04/suicide-jail-did-photographer-michael-clinard-have-die</a>
GIST	It was clear that Michael Clinard was in a bad way long before that fatal day last July in the King County

Jail. It was clear even before a Bothell municipal court judge remanded him into custody for repeatedly violating a domestic violence protection order and he made a grim vow.

“I won’t live that long,” Clinard shouted at the judge, according to a prosecutor’s court filing. “I don’t intend to live past another two weeks. You just signed my death warrant, bitch!” He then head-butted the guard who tried to escort him out of the courtroom and tried to grab the guard’s taser, adding an assault charge to his rap sheet.

Clinard, a photographer who was once a rising star on the local and national magazine scenes, made good on his threat in all but one particular. Three, not two, weeks later, fellow inmates told the deck officer overseeing the county jail’s eighth floor that Clinard was lying motionless on the floor of his unlocked cell. According to a Seattle Police Department investigation of the incident, the officer initially thought the inmates “were joking with him” and did not check on Clinard for six minutes. (However, that officer’s written statement and the King County Department of Adult and Juvenile Corrections’ own investigation stated that the officer responded in just one minute.)

Officers, medical staff and EMTs scrambled to save Clinard. They found a strip of cloth torn from a bedsheet around his neck; his face was swollen and purple, and blood pooled around him, apparently as a result of striking his head as he fell. They cut the cloth away, inserted an air tube, performed extended CPR, applied a defibrillator and gave him two epinephrine shots before finally giving up. Investigators declared his death a suicide.

Suicide is an occasional — good statistics on frequency are lacking — tragedy at the jail; psychological distress is an everyday fact of life. The King County Jail has long been described as the state’s “second-largest mental hospital” after Western State Hospital in Lakewood — except that the jail is hardly staffed or equipped to operate as a hospital. Its psychiatric unit, which serves both the Regional Justice Center in Kent and the downtown jail, has just 141 beds. King County Corrections recently identified 269 inmates (out of a total of 1,945 at the two facilities) suffering from serious mental illness. A county study several years ago found that a much larger share, about a quarter to a third, were receiving psychiatric care such as supervised medication.

This burden reflects a chronic shortfall in state resources for the mentally ill, even the resources to conduct something as basic as evaluations to determine whether arrested suspects are competent to stand trial. “More and more people with mental illness are in jail because of lack of community services,” says Kim Molsof, an attorney with the watchdog organization Disability Rights Washington.

According to the National Alliance on Mental Illness, people experience mental-health crises “are more likely to encounter police than get medical help,” and two million are booked into jails each year. Here in Washington, as in other states, jails wind up coping with government and society’s failures to meet the needs of the mentally ill: the failure to fund community health services after patients were cleared out of state hospitals in the 1960s and ’70s; the failure to provide housing for the needy; even Washington state’s failure to provide timely competency assessments to determine whether defendants are competent to stand trial and provide the treatment needed to stabilize them and restore competency.

A 2012 state law set a target of seven days (later increased to 14) for the state — in practice, Western State Hospital — to perform competency evaluations and take in inmates needing treatment. But a persistent backlog of these “psychiatric boarders” languishes in jailhouse limbo, sometimes waiting longer, the deputy director of the Public Defender Association told the Seattle Times, than they would spend in jail if they had been tried and sentenced. In 2014, the public defenders sued the state Department of Social and Health Services, charging that this psychiatric boarding violated detainees’ rights to due process and exacerbated their mental problems. In 2015 a federal judge agreed and began fining the state for failing to comply, racking up total penalties of \$50 million. Disability Rights Washington has taken over the suit, now established as a class action and commonly known as the Trueblood case. It has become the mental-health equivalent of the McCleary decision on state education funding.

This year, Disability Rights Washington and partner groups worked out a plan to help counties establish

diversion programs to bypass that logjam and provide mentally ill inmates other treatment. Thirteen programs are due to start up around the state this summer. Meanwhile, the logjam continues. Last month, at Crosscut's request, King County crunched the numbers and found that 34 inmate patients had been waiting up to 186 days at the King County Jail for beds to open at Western State so they could receive restorative treatment.

Inmate suicide is something the county works strenuously to prevent. Starting at intake, Jail Health Services, a division of the King County Department of Health that provides mental health services and other health care in the jail, maintains a multi-tiered series of screenings, evaluations and assignment protocols intended to sift out inmates at risk and funnel them to the right care and oversight. Corrections and medical staff alike are supposed to be trained in suicide prevention. Somehow, Michael Clinard slipped through the screens.

The process, spelled out in a suite of Jail Health Services policies, procedures and forms, starts even before inmates are booked into the jail. When police deliver a new inmate, corrections officers perform a brief "deferral screening." If they find any of 26 listed physical conditions — from bleeding and shakes to diabetes and pregnancy — or observe "severely agitated/irrational behavior," they are directed to call in a registered nurse, who will decide whether to "defer" the inmate to a hospital. They also ask whether the inmate is "suicidal now" or has attempted suicide in the past 12 months, and whether the transport officers heard any suicide talk on the way down.

The deferral screening form filled out for Clinard shows that when Bothell police officers delivered him to the downtown jail on June 12, they passed along word of his outburst to the judge just an hour or so earlier. An intake officer noted this with minimizing detachment — "Suicidal statements were made in court today" — but also noted that Clinard was not suicidal now and had not tried to kill himself in the past year.

Even that minimal note should have raised a red flag, say experts familiar with jail mental-health screening and treatment procedures. Any indication of suicidal intent is supposed to be enough to send inmates to a psychiatric unit, where they will be monitored every 15 minutes or less — constantly, if they're deemed at acute risk — and receive close evaluation and treatment. Often merely unburdening themselves in that evaluation lifts the cloud and dissipates suicidal intentions, says one expert who asked not to be named.

"The protocol is that anyone who says they are suicidal or engages in self-harm behavior will be placed on suicide watch," says Nancy Whitney, mental health director at the South Correctional Entity (SCORE), a privately operated 600-bed jail near Seatac that serves several local municipalities. The exception, says Whitney, is inmates who are "detoxing and just miserable" and moan that they wish they were dead; they get detox treatment instead. Even when medical staff suspect inmates are faking suicidal intent to get meds, they put them on suicide watch, she adds. "You don't want them to escalate by harming themselves. You don't want them to take a dive off the stairs to get opiates."

Likewise at the King County Jail, says Disability Rights Washington attorney Molsof: "I think the jail errs on the side of caution. Even when an inmate makes a comment and then says, 'I take it back,' they tend to put them on close watch." Still, she notes, "no system is perfect."

Following booking, Clinard would have undergone a more extensive screening by an intake nurse, who would have reviewed his deferral screening and medical records and checked for other risk factors, such as suicidal ideation and recent psychiatric treatment. That screening's exact findings are shielded by health-privacy law, pending consent to their release by next of kin. But it clearly did not identify him as a suicide risk.

King County Health officials say they cannot comment on Clinard's case because of that law. But their spokesman James Apa did provide this general statement: "Our jail health care providers and support staff are saddened anytime someone loses their life while in our care. We constantly work to provide a high standard of care for people in the jail facing a wide variety of physical and behavioral health needs, including those suffering from mental distress.

	<p>“We have strong protocols for suicide prevention and continually train to them, both for Jail Health and Department of Adult and Juvenile Detention staff.”</p> <p>Despite those protocols, Clinard’s violent, vehement vow to take his own life fell off the radar. He was placed in the jail’s general population rather than in its seventh-floor psych unit.</p> <p>And so he brooded and bided his time. And then he did just what he said he was going to do.</p>

<b>HEADLINE</b>	<b>04/20 Worker gets 50yrs for fajita theft</b>
<b>SOURCE</b>	<a href="http://www.brownsvilleherald.com/news/local/former-county-employee-sentenced-to-years-for-fajita-theft/article_f5502fd0-4512-11e8-82b2-1b06c0be097c.html">http://www.brownsvilleherald.com/news/local/former-county-employee-sentenced-to-years-for-fajita-theft/article_f5502fd0-4512-11e8-82b2-1b06c0be097c.html</a>
<b>GIST</b>	<p>A former Cameron County juvenile detention center employee said he started out stealing small amounts of fajitas bought with county funds, but his scheme soon ballooned, spinning out of control.</p> <p>“I feel horrible. I wish I could take this back. It was selfish,” 53-year-old Gilberto Escamilla said during his sentencing hearing Friday morning. “It started small and got bigger and out of control. It got to a point where I couldn’t control it anymore.”</p> <p>Escamilla pleaded guilty Friday to theft by a public servant in front of visiting State District Judge J. Manuel Bañales, who sentenced the man to 50 years in prison. The judge dismissed an additional theft charge after the sentencing.</p> <p>Members of the Cameron County District Attorney’s Office Special Investigations Unit arrested Escamilla last year after a driver from Labatt Food Service in Harlingen called the detention center’s kitchen to let employees know their 800-pound delivery of fajitas arrived. Minor inmates at the DarrelB.HesterJuvenileDetentionCenter are not served fajitas.</p> <p>The total value of the fajitas, which were stolen during a nine-year period, was \$1,251,578. That figure does not include the brisket, pork chops, sausage and various types of chicken Escamilla also admitted to stealing, court testimony revealed.</p> <p>Cameron County Assistant District Attorney Peter Gilman asked Bañales to sentence Escamilla to five decades in prison because of the amount of county money stolen, because Escamilla was a public servant and to send a message, while Escamilla’s attorneys asked Bañales to consider probation or at most five years in prison, adding that the man should be given a chance to repay the stolen taxpayer funds.</p>

<b>HEADLINE</b>	<b>04/22 Report: woman fined for Delta apple</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/2018/04/22/woman-fined-delta-apple/540655002/">https://www.usatoday.com/story/news/2018/04/22/woman-fined-delta-apple/540655002/</a>
<b>GIST</b>	<p>A woman who saved the in-flight apple she got on a Delta Air Lines flight says she was fined \$500 after passing through U.S. Customs and Border Patrol with the fruit in her bag.</p> <p>Crystal Tadlock was traveling from Paris back to the U.S. when toward the end of her flight, a Delta flight attendant passed out apples, she told KDVR, a local FOX affiliate in Colorado. She said she wasn't hungry and decided to save the snack for the last leg of her trip back to Denver.</p> <p>She was randomly stopped going through Customs, she said, and an agent found the piece of fruit, which was inside a plastic bag with Delta's logo on it.</p> <p>"He had asked me if my trip to France was expensive and I said, 'yeah.' I didn't really get why he was</p>

asking that question, and then he said 'It's about to get a lot more expensive after I charge you \$500,'" Tadlock told KDVR.

The KDVR report didn't specify where the Customs search occurred or what date it happened.

She asked if she could just throw the apple out or eat it but said the agent handed her a \$500 fine. Tadlock said she's frustrated about the ticket and that Delta did not warn passengers about not taking the food off the plane.

"It's really unfortunate someone has to go through that and be treated like a criminal over a piece of fruit," she told KDVR.

When contacted by USA TODAY, a Delta spokesperson would not comment specifically on the incident but said the company encourage its customers "to adhere to Customs and Border Protection policies and requirements."

U.S. Customs said in a statement that the agency does not discuss details of specific inspections but "all agriculture items must be declared" and penalties can be as high as \$1,000.

HEADLINE	04/21 Canada hid warnings of ISIS returnees
SOURCE	<a href="http://dailycaller.com/2018/04/21/trudeau-government-hid-warnings-isis/">http://dailycaller.com/2018/04/21/trudeau-government-hid-warnings-isis/</a>
GIST	<p>The Trudeau government removed all references to ISIS fighters returning to Canada and posing a potential chemical weapons threat from a government report, despite warnings from its own public safety department.</p> <p>According to documents obtained by Global News through an Access to Information request, the Liberal government redacted the final version of a Public Safety Canada report on the potential domestic terrorism threats of returning ISIS members.</p> <p>The sanitized result was the 2017 "Public Report on the Terrorist Threat to Canada."</p> <p>Instead, Prime Minister Justin Trudeau has insisted the ISIS fighters can be rehabilitated and returned to Canadian society. At one town hall meeting, he compared them to the post-Second World War immigrants arriving from Italy.</p> <p>But Public Safety Canada was less sanguine, stating that ISIS was known for its use of chlorine and mustard gas in Syria</p> <p>"While the threat of a chemical attack in Canada is considered remote, there continues to be a potential risk of extremist travelers returning to Canada, having gained knowledge of the use of crude chemical weapons," Public Safety Canada wrote.</p> <p>The original public safety report is replete with margin notations from the Privy Council Office — a tightly-knit group of government insiders — that seek to minimize the danger that returning ISIS members pose to Canadian society</p> <p>One note suggests the information on chemical weapons is "speculative" and says ISIS was "more proficient" in high explosives.</p> <p>The federal government has admitted that 100 Islamic extremists departed Canada to fight for ISIS directly. Another 60 are said to have joined related Islamic extremist terrorist groups.</p> <p>Although the public safety document acknowledges that "robust domestic controls" alleviate concerns</p>

	<p>over a chemical weapons attack in Canada, it also suggests that ISIS has demonstrated a profound ability to improvise when planning terrorist actions.</p> <p>“...Daesh’s [ISIS] known use of commercially available toxic industrial chemicals in attacks is indicative of the group’s ability to use any means available,” the documents read.</p>

<b>HEADLINE</b>	<b>04/21 Alarm: Great Barrier Reef dying</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/world/scope-great-barrier-reef-s-massive-coral-bleaching-alarms-scientists-n867521">https://www.nbcnews.com/news/world/scope-great-barrier-reef-s-massive-coral-bleaching-alarms-scientists-n867521</a>
<b>GIST</b>	<p>Australia's Great Barrier Reef is heralded for its biodiversity: The colorful clusters of coral and wisps of islands stretch 1,400 miles, home to white and orange clown fish, the blacktip shark, humpback whales and hundreds of other species.</p> <p>But those clear blue-green waters are also changing faster than previously thought, according to a new study in the journal Nature, worrying scientists who say the survival of the Great Barrier Reef and other ecosystems like it is crucial for the planet.</p> <p>"There's huge trouble in paradise," said Craig Downs, a biologist who studies dying coral in Hawaii.</p> <p>At the Great Barrier Reef — considered one of the Earth's largest living structures — about half of the coral died in 2016 and 2017 because of record extreme heat, a result of climate change driven by greenhouse gas emissions, the researchers found.</p> <p>Historically, coral deaths were at a smaller 5 percent to 10 percent.</p> <p>Other research has estimated that 90 percent of the world's corals could be dead as soon as 2050.</p> <p>Australia's weather bureau said 2017 was the country's third-hottest year on record, and the scorching temperatures came despite the lack of an El Niño system that normally brings warmer weather.</p> <p>Scientists are concerned that the colonies of coral that make up the Great Barrier Reef have been damaged to a point where they won't bounce back. If corals remain in too-warm water they turn white — a process known as bleaching — and can potentially die.</p> <p>"It's quite challenging to witness the severity of this bleaching — it's the worst we've ever seen," Terry Hughes, director of a government-funded center for coral reef studies at James Cook University in Australia and the lead author of the study, told Nature.</p> <p>He said that while some types of coral died, others survived — indicating the make up of the reef is</p>

	<p>undergoing a remarkable transformation.</p> <p>"Losing a lot of corals has a broader ecological impact: species that eat the corals lose their food source; fish that would hide in the corals become more susceptible to predation from sharks," Hughes added.</p> <p>There's more at stake for humans as well when reefs — whether they're in Australia, Hawaii, the Caribbean or another tropical destination — are on the brink of being wiped out.</p> <p>Loss of coral reef ecosystems should be a major concern to people, even if they live a long way from them, said Nick Graham, a marine ecologist at Lancaster University in England.</p> <p>"Coral reefs house over a quarter of all marine biodiversity, so anyone who cares about biodiversity and extinction needs to worry about the future of coral reefs," he said. "They also provide food and livelihoods to hundreds of millions of people, so anyone who cares about food security and migration needs to care about the future of coral reefs."</p>

<b>HEADLINE</b>	<b>04/21 Saudis down 'toy drone' near palaces</b>
<b>SOURCE</b>	<a href="https://www.yahoo.com/news/saudi-forces-shoot-down-toy-drone-over-riyadh-214154640.html">https://www.yahoo.com/news/saudi-forces-shoot-down-toy-drone-over-riyadh-214154640.html</a>
<b>GIST</b>	<p>Riyadh (AFP) - Saudi forces on Saturday shot down an unidentified toy drone that hovered over a Riyadh neighbourhood home to royal palaces, state media said, prompting a security alarm in the capital.</p> <p>"At 1950 (1650 GMT) a security checkpoint in Khuzama neighbourhood of Riyadh spotted a recreational remote-controlled drone," the Saudi Press Agency reported.</p> <p>"Security personnel at the checkpoint dealt with it according to their orders and instructions in this regard," SPA added, implying that the drone had been shot down.</p> <p>The statement followed unconfirmed videos on social media that appeared to show heavy volleys of gunfire in that neighbourhood, triggering speculation of a possible coup attempt.</p> <p>But the government ruled out any major security breach, adding that an investigation had been launched into the incident.</p> <p>Government officials did not immediately respond to requests for comment on the whereabouts of the Saudi king and crown prince during the incident.</p> <p>Security around the palaces appears to have tightened in recent months as powerful Crown Prince Mohammed bin Salman oversees landmark social and economic reforms to prepare for a post-oil era, despite the risk of riling religious hardliners.</p> <p>The 32-year-old prince has also overseen a major military shake-up and a royal purge as he consolidates power to a degree well beyond that wielded by previous rulers.</p>

<b>HEADLINE</b>	<b>04/21 San Diego could face driest year ever</b>
<b>SOURCE</b>	<a href="http://www.sandiegouniontribune.com/weather/sd-me-dry-year-20180410-story.html">http://www.sandiegouniontribune.com/weather/sd-me-dry-year-20180410-story.html</a>
<b>GIST</b>	<p>San Diego has been exceptionally dry this year. Storm after storm has avoided or barely brushed the region.</p> <p>Will this go down as the driest year in city history?</p> <p>It's a real possibility, although a bit of a longshot. The city has been this dry so late in the season only one</p>

other time since 1850, when rainfall records began in town.

The odds of breaking the dryness record are long, because there are still more than five months left in the season. But stranger things have happened.

Given the current rain-robbing, storm-deflecting weather pattern that stretches back 10 months and the city's rainfall history, this could be the year when the longshot comes in.

The vast majority of the years, by this time, San Diego has already blown way past 3.33 inches of rain, the total in 2001-02, the record dry year. Average rainfall through April 30 is 9.95 inches; average for the entire rainfall year, which ends Sept. 30, is 10.34 inches.

This year, the season total after Thursday's brief morning shower is just 3.19 inches. Only 2001-02, with 3.02 inches at the end of April, was drier.

To break the dryness record, the city would have to get no more than 0.13 of an inch of rain between now and the end of September.

Could it happen? There's precedent. Seven times the rainfall total during that stretch was that low or even lower.

Three times the city has gone at least 164 days, starting in April and continuing the entire summer, without any rain at all. The city's longest dry spell, 182 days, began on April 17, 2004, and it didn't end until Oct. 16 that year.

The forecast

The Climate Prediction Center, which makes long-range forecasts, sees no tilt toward either dry nor wet for Southern California as the summer approaches. But San Diego's averages during the summer months are virtually zero, said Mike Halpert, the center's deputy director.

Under El Niño conditions, when the waters in the equatorial Pacific turn abnormally warm, the chances of San Diego getting summer rain from the remnants of a tropical storm off the west coast of Mexico increase. But the prediction center doesn't expect El Niño to emerge over the summer, Halpert said.

For the shorter term, through the next 10 days or so, no storms are on the horizon.

Annual dry run

San Diego is on the cusp of its annual, long dry stretch, which often starts in late spring and lasts until early fall. April is the transition month. Storms from the north usually still arrive, but they are generally less frequent and weaker.

Until last Thursday, San Diego had recorded no rain at all in April. Thursday's total was just 0.01 of an inch.

The dry pattern emerged last year. San Diego had its driest June-through-December period on record. January and early March brought some rain, but both were drier than normal.

In late March, it went back to extremely dry, at least locally.

San Diego was initially forecast to be on the southern fringe of strong storm systems hitting California, but eventually the city missed out on even the fringe. A couple of "atmospheric rivers," long plumes of moisture a couple of hundred miles wide and more than a thousand miles long, drenched areas to the north but left San Diego alone.

“With the last couple of atmospheric rivers, the long-range forecasts looked promising,” National Weather Service forecaster Mark Moede said. “But with each succeeding forecast model run, the rivers shifted farther north.

“We had been hyping it (the last atmospheric river) days in advance, and it ended up being a non-event.”

What caused those plumes of moisture to stay far from San Diego is the question.

In the normal weather pattern, a ridge of high pressure in the eastern Pacific, roughly west of the southern tip of Baja California, waxes and wanes as storms drop down from the north Pacific and move east across the continent.

This year, it appears that subtropical high amplified, Moede said, and that could have helped repel the storms from Southern California.

The last two weeks, a series of storms, weaker than the ones that soaked California in March, continued to deliver more rain and mountain snow in Northern California. Again, San Diego remained on the outside looking in.

Making it through April with very little rain is key to breaking the record. After April, which averages 0.78 of an inch in San Diego, the monthly rainfall averages drop way off. And those small averages are inflated by the rare, wet month.

About a third of the years, May has recorded 0.04 of an inch or less. In June, about three-fourths of years had 0.04 or less. Most of the city’s Julys, Augusts and Septembers have recorded no rain at all.

September can catch early winter storms, but only one September in the last 13 years recorded more than a tenth of inch of rain.

The Climate Prediction Center’s Halpert said it’s not too hard to break daily records for temperature or rainfall, but topping a record for an entire year is difficult. Even with the current dry trends and past long dry stretches, the odds are long that San Diego’s will break the dryness record this year.

<b>HEADLINE</b>	<b>04/20 Florida deputies shot, killed in restaurant</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/deputies-shot-through-restaurant-window-sheriff-blames-hate-n867746">https://www.nbcnews.com/news/us-news/deputies-shot-through-restaurant-window-sheriff-blames-hate-n867746</a>
<b>GIST</b>	<p>The official story about how two Florida sheriff’s deputies were gunned down in a Chinese restaurant shifted slightly Friday when a deputy standing in for Gilchrist County Sheriff Bobby Schultz announced that they were shot inside the eatery — not through the window as officials had first reported.</p>

"We know now that the assailant went inside the building and assaulted and killed them," said Lt. Scott Tummond, who works for the Levy County Sheriff's Office.

Tummond, who said he had a "work history" with one of the slain men, Sgt. Noel Ramirez of the Gilchrist County Sheriff's Office, also confirmed that the suspected shooter, 59-year-old John Hubert Highnote, killed himself after fatally shooting the deputies.

"We have no information right now that our officers were able to return fire," Tummond said. "No officers engaged with the assailant."

The Levy and Gilchrist departments patrol two neighboring counties just west of Gainesville, Florida. Tummond addressed reporters in front of the Ace China restaurant in the town of Trenton, where Ramirez and Deputy Taylor Lindsey were killed Thursday afternoon.

The front windows of the restaurant did not appear to be blown out.

When asked why he was presiding over the news conference, an emotional Tummond said Schultz was grieving with his family. He said they still don't have a motive.

"Gilchrist has no idea what drove this man to this cowardly act," Tummond said. "I don't believe the Gilchrist County Sheriff's Office has any history with this gentleman."

Other than being cited for making an improper turn in 2012, Highnote has nothing on his record in Gilchrist County.

But Highnote was arrested back in 1978 by police in Pinellas County, Florida, on a charge of carrying a concealed weapon, a case that was eventually dismissed, records show. He was also arrested for domestic violence in 1993 and for criminal mischief in 1994.

<b>HEADLINE</b>	<b>04/21 India: death penalty for child rapists</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/world/2018/04/21/india-approves-death-penalty-child-rapists/538932002/">https://www.usatoday.com/story/news/world/2018/04/21/india-approves-death-penalty-child-rapists/538932002/</a>
<b>GIST</b>	<p>The Indian government approved a new measure on Saturday that will prescribe capital punishment for anyone convicted of raping children under the age of 12. The move came after Prime Minister Narendra Modi called an emergency Cabinet meeting in the wake of a series of cases that sparked outrage and protest across the country.</p> <p>The recent rape and murder of and an 8-year-old girl in Jammu-Kashmir state brought the matter of sexual violence against minors back into the national spotlight as locals accused the ruling Hindu nationalist party of siding with the perpetrator, as the victim was Muslim.</p> <p>A similar incident occurred around the same time, when a girl was allegedly raped by a ruling party lawmaker in Uttar Pradesh state.</p> <p>Nine suspects, including a politician and four police officials have been arrested in connection with the two cases.</p> <p>Modi has been accused of failing to act quickly enough after the girls were attacked.</p> <p>Strict new laws New Delhi is trying once again to crack down on rampant violence against girls and women, having already passed strict new laws in 2013. At that time, lawmakers were responding to the gang rape and</p>

	<p>murder of a young woman on a bus in the capital that led to a global outcry.</p> <p>The new laws included doubling the prison sentence for rape to 2 years and criminalizing voyeurism and stalking.</p> <p>Lawyer Abha Singh welcomed Saturday's measure, and said it would probably help deter men from attacking girls or women. However, she urged the government to do something about the notoriously backed-up Indian justice system, which currently has 30 million pending cases.</p> <p>"The conviction rate in rape cases in India was only 28%, implying that 72 out of 100 suspects are going unpunished," she was quoted by the Associated Press as saying.</p>

<b>HEADLINE</b>	<b>04/20 Gunmen shoot up Cancun tourist zone</b>
<b>SOURCE</b>	<a href="https://nypost.com/2018/04/20/water-scooter-gunmen-shoot-up-beach-in-cancuns-tourist-zone/">https://nypost.com/2018/04/20/water-scooter-gunmen-shoot-up-beach-in-cancuns-tourist-zone/</a>
<b>GIST</b>	<p>CANCUN, Mexico — Gunmen on water scooters shot at a roving vendor on a beach in Cancun's glittering hotel zone Thursday, an incident believed to be unprecedented for the Caribbean city. Nobody was wounded.</p> <p>According to a police report, the afternoon shooting happened in front of a hotel in the heart of Cancun's resort-studded strip.</p> <p>The vendor ran for safety inside a restaurant and was not hurt. Tourist police cordoned off the area and recovered four bullets but were not able to locate the intended target.</p> <p>Cancun — especially its tourist areas — has largely been spared the worst of the cartel-fueled violence afflicting many other parts of Mexico.</p> <p>But there have been a number of eye-catching incidents of late as gangs fight for control of local drug dealing, and the city has registered 130 murders so far this year.</p> <p>Also Thursday, police reported that three people were slain outside a bar located away from the hotel zone.</p> <p>Cancun police have no record of any prior attack involving personal watercraft in the city, though assailants have been known to use the vehicles in Acapulco, on the other side of the country. In 2016, a gunman killed a sarong vendor on the beach there and then fled on a water scooter.</p> <p>Earlier this week, a man was killed on Acapulco's Caletilla beach in a shooting that authorities attributed to a dispute over local drug sales, just the latest in a string of violent incidents in the city's coastal tourist zones.</p>

<b>HEADLINE</b>	<b>04/20 Ex-Mexico governor extradited to US</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/mexico-governor-extradited-us-face-drug-charges-54621689?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/mexico-governor-extradited-us-face-drug-charges-54621689?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>The former governor of the Mexican border state of Tamaulipas has been extradited from Italy to the United States to face charges of racketeering, drug smuggling, money laundering and bank fraud, federal officials announced Friday.</p> <p>Italy extradited Tomas Yarrington Ruvalcaba after detaining him on April 8 on the warrant from the United States.</p> <p>From 1999 to February 2005, Ruvalcaba was governor of Tamaulipas, which is one of Mexico's most violent states and borders Texas to the north and the Gulf of Mexico to the east.</p> <p>Prosecutors say Yarrington, 61, received millions of dollars in bribes since 1998 from the Gulf Cartel and in return allowed traffickers to bring large amounts of cocaine into the U.S. The payments started when he was a candidate for governor of Tamaulipas and continued after the end of his tenure in December 2004, according to the indictment.</p> <p>The indictment also alleges that from 2007 to 2009, Yarrington became involved in drug trafficking.</p> <p>Prosecutors also allege that Yarrington collected bribes from commercial operations and was involved in the acquisition of valuable assets in the U.S., such as bank accounts and residences. The indictment says that toward the end of his stint as governor, Yarrington acquired stolen public funds that were later used to buy a private jet.</p> <p>Another man who was indicted with Yarrington — Fernando Cano Martinez, also 61, who remains a fugitive — is accused of paying bribes to Yarrington in exchange for public works contracts for his construction firm. One way he would pay bribes is by purchasing real estate for Yarrington using front names.</p> <p>U.S. authorities have won civil forfeiture claims on a fully furnished beachfront apartment in South Padre Island, Texas, as well as a private plane, a \$2 million house in McAllen and cash in a Bermuda account. Proceeds from seizures routinely go to law enforcement agencies involved in the cases.</p>

<b>HEADLINE</b>	<b>04/21 Armenia: 70 arrests in massive protests</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/armenia-protests-70-arrested-including-suspected-bombers-54630894">http://abcnews.go.com/International/wireStory/armenia-protests-70-arrested-including-suspected-bombers-54630894</a>
<b>GIST</b>	<p>Armenian authorities say more than 70 people have been arrested, including two people suspected of building bombs, as large protests against the new government enter their second week in the capital.</p>

Thousands of demonstrators on Saturday closed off streets in Yerevan during a march pressing demands for the prime minister to resign. Former President Serzh Sargsyan was named premier this week as Armenia transitioned to a new system of government that reduces the presidency's power and bolsters the prime minister role. Opponents say the shift effectively makes Sargsyan Armenia's leader for life.

The national security service said two people with opposition connections were arrested for preparing bombings in public places. Police, meanwhile, said at least 70 demonstrators were detained.

<b>HEADLINE</b>	<b>04/21 Arrest in Fla. high school shooting</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/injured-florida-high-school-shooting-suspect-custody-officials/story?id=54608040">http://abcnews.go.com/US/injured-florida-high-school-shooting-suspect-custody-officials/story?id=54608040</a>
<b>GIST</b>	<p>A suspect was taken into custody Friday following a shooting at a high school in central Florida, authorities said.</p> <p>Gunshots broke out Friday morning at Forest High School in Ocala, some 38 miles south of Gainesville.</p> <p>Within minutes, a school resource officer on campus found a 17-year-old student who had sustained non-life-threatening injuries. The officer also located the suspected shooter, identified as a 19-year-old male who is not a student at the school, according to Marion County Sheriff Billy Woods.</p> <p>The suspect was taken into custody without incident, and the wounded student was transported to a local hospital for treatment, the sheriff told reporters at a news conference Friday afternoon.</p> <p>Woods said the shooting appeared to be intentional, but it's unclear whether the suspect was targeting anyone in particular.</p> <p>Sky Bouche, the suspected shooter, is being cooperative and talking with investigators, the Marion County Woods said in a later press conference Friday afternoon.</p> <p>Bouche faces eight charges, including terrorism, aggravated assault with a firearm, culpable negligence, carrying a concealed firearm, possession of a firearm on school property, possession of short-barreled shotgun, interference in a school function and armed trespassing on school property.</p> <p>The arrest affidavit shows Bouche was allegedly using a 17.5-inch barreled shotgun and the report indicates police suspect he was under the influence of drugs, but not alcohol. Bouche is listed as a resident of Crystal River, Florida, which is about 40 miles southwest of Ocala.</p> <p>Bouche arrived on campus with the shotgun hidden in a guitar case and put on a tactical vest and gloves in a bathroom before the shooting, according to the Marion County Sheriff's Office. He also allegedly told police after his arrest that he had originally planned on carrying out some type of shooting on April 13 -- Friday the 13th -- but "chose to target a school because he thought it would gather more media attention."</p> <p>As Bouche was escorted out of the Marion County Sheriff's Office Operations Center, he was hounded by questions from reporters.</p> <p>When one reporter asked if Bouche was "trying to shoot someone," he shook his head.</p> <p>"I shot through the door," he said. "I didn't see anyone."</p>

<b>HEADLINE</b>	<b>04/20 Global plant smuggling scheme bust</b>
-----------------	---

SOURCE	<a href="https://www.mercurynews.com/2018/04/20/busting-plant-smugglers-along-californias-coast/">https://www.mercurynews.com/2018/04/20/busting-plant-smugglers-along-californias-coast/</a>
GIST	<p>California’s wildlife detectives have cracked an international plant heist, sleuthing from the most curious clues — spilled dirt from mailed packages, stuffed backpacks left on ocean bluffs, a suspicious van filled with big boxes, and holes in the sand.</p> <p>It’s the Golden State’s first-ever undercover plant investigation — and a tale of amazing obsession, where vigilant authorities, passionate plant lovers and an irked postal customer discovered that foreign thieves are slipping into California’s wild landscapes, fueling a budding black market in the lucrative exotic plant industry.</p> <p>The suspects, Korean and Chinese nationals, face criminal charges.</p> <p>And the kidnapped plants — small, squat and cherished succulents called <i>Dudleya farinosa</i> — once again are back in American soil. This week, volunteers returned more than 2,000 plants to their wild and windswept Northern California coastal cliffs. Hundreds more will stay in pots, tended by other volunteers, until autumn replanting.</p> <p>“These plants belong to California. They’re ours,” said an undercover agent with the state’s Department of Fish and Wildlife, the lead agency in a team that also includes the U.S. Postal Service, federal, state and East Bay parks services, California Native Plant Society, UC Santa Cruz, and local citizens.</p> <p>“But it’s overwhelming,” worried the agent, who asked to remain anonymous. “How many more are we missing?”</p> <p>The state’s wardens have nabbed suspects in three separate thefts along the Humboldt and Mendocino coast. There’s been one conviction; the other two cases are still pending.</p> <p>But they fear that many more plants have vanished, still unnoticed. A thriving black market in Asia means the California native plant is vulnerable wherever it grows, they say, from Oregon to the Mexican border. One variety, found in Santa Clara County, is endangered; local naturalists won’t disclose its locations, to protect it.</p> <p>Investigators suspect that organized smuggling rings, based in Asia, where the stolen plants fetch up to \$50 a pop, are behind the crimes. An ascending Chinese middle class, whose millions can now afford decorative plant arrangements, is fueling demand.</p> <p>At first glance, the plants — also called “bluff lettuce” or “powdery liveforever” — seem hardly worth the effort.</p> <p>These blue-green blobs, with rosettes of fleshy leaves tipped in vermilion, have an oddly alien appearance. They lack the easy glamour of California’s other commonly poached species, such as abalone, sturgeon, salmon, crab, bear, antelope and elk.</p> <p>But they burst into beauty when they bloom, erecting a tall stem and a candelabra-like cluster of yellow flowers.</p> <p>With legions of devotees and even their own Facebook page, <i>Dudleya</i> have long been admired for their tenacity. Named after William Russell Dudley — the first head of Stanford’s botany department — the plant is adapted for California’s most foggy, windy and forsaken spots. It is slow growing and long-lived.</p> <p>“People call them ‘charismatic,’ ” said <i>Dudleya</i> expert Stephen McCabe, emeritus director of research at UC Santa Cruz Arboretum who helped identify the purloined plants for state wildlife law enforcement officials.</p> <p>“Sometimes you’ll see one hanging on by a little piece of root in a crack in the rock, and you think: ‘The next wind will take it,’ ” he said. “Then they’re still there the next year.”</p>

The Dudleya community first became alarmed in 2017 when news broke of a 55-foot-long tractor-trailer rig in Baja California stuffed with 4,746 specimens of a particularly rare species, stripped from the only island where they're found.

Then clandestine poachers came to California.

The investigation was launched after an anonymous phone call in December to Patrick Freeling, a CDFW game warden known for his diligence.

The caller, frustrated at being stuck in a long line while trying to mail a package last December in Mendocino's tiny post office, was suspicious.

A man in line ahead of her was shipping 60 packages to China. "What are you shipping?" she asked, as the line grew, snaking out the door. "The man put his finger up to his lip and said, 'Shhhh, something very valuable,' " said Freeling. "Where did you get them?" she asked. The man pointed toward the ocean.

Alerted by Freeling, U.S. Customs and Border Protection X-rayed the packages — and discovered Dudleya.

The second tip also came in by phone. Rushing to the cliffs near Point Arena, Freeling recognized the suspect from the post office's video surveillance. The man carried 50 Dudleya in his backpack.

Uh oh, thought Freeling. "This is going to be the new thing," he warned other coastal wardens.

The next tip was a suspicious minivan parked on Highway 1 along the Mendocino coast, loaded with boxes. Suspecting its driver was an abalone poacher, Freeling crawled through the dense underbrush toward two large backpacks, left on the bluffs. Poking them, he felt something else: Dudleya.

The suspects spoke no English and carried Korean passports. Back at their van — rented at San Francisco International Airport and headed to Los Angeles — Freeling found 850 more plants and 1,450 smaller "rosettes."

"It is my belief that they were picking plants, filling boxes, filling the van and shipping them as they moved south down the coast," said Freeling. "They had numerous contacts for succulent dealers in California and abroad."

Savvy U.S. Customs and U.S. Postal Service workers were behind the most recent bust on April 4. One opened a box from Humboldt County — labeled "spokes" — and reported the plants to CDFW. Another noticed dirt falling out of boxes. Yet another, passionate about succulents since childhood, found and shared the sender's address. Surveillance began.

Wildlife officers pulled over the suspects' van, rented at the Las Vegas airport, then made arrests and seized 1,334 plants — all on their way to being shipped overseas.

Then, armed with a search warrant, they raided the suspects' cabin among the redwoods at the cheap and threadbare Ocean Grove Lodge in Trinidad. Authorities found another 1,000 Dudleya there.

"I walked into the room and saw a tarp on the ground, with tons of plants on it," said the CDFW undercover investigator. "There's this anxious feeling. You're thinking, 'How bad is this?'"

Three men — Taehun Kim, 52, and Taeyun Kim, 46, both of Korea, and Liu Fengxia, 37, of China — were booked into Humboldt County Jail. They'll be arraigned on May 16.

The theft and illegal trade of individual plants is a longstanding problem: Bay Area homeowners sometimes wake to find divots where there once were succulents, and the federal government

	<p>electronically tags thousands of cacti in Saguaro National Park. But the audacity of the recent thefts is unprecedented.</p> <p>The investigations will continue, as new tips arrive, said Patrick Foy of CDFW.</p> <p>“Once it hit our radar screen, and we looked more for it, we discovered that it’s bigger than we thought,” he said.</p> <p>Eventually, the thieves will be sent back to Asia. But — this time — the Dudleya are staying in California.</p>

<b>HEADLINE</b>	<b>04/19 Sex-offender registries under scrutiny</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/apr/19/sex-offender-registry-attacked-violating-constitut/">https://www.washingtontimes.com/news/2018/apr/19/sex-offender-registry-attacked-violating-constitut/</a>
<b>GIST</b>	<p>Colorado’s sex offender registry still hangs in limbo seven months after a judge said it violated the constitutional rights of former offenders, subjecting them to an extended punishment and public shaming.</p> <p>U.S. District Judge Richard P. Matsch’s ruling is the latest to reject states that are reaching for more stringent controls on sex offenders even after they have served their sentences.</p> <p>Criminal justice reformers say it’s about time the courts strike back. The lifelong punishments that sexual offenders face beyond the courtroom and prison conflict with the country’s tradition of rehabilitation and second chances, they say.</p> <p>But with federal appeals courts now involved in scrutinizing laws in Colorado, Alabama and Michigan, state attorneys general say they are worried that their legislatures’ work to keep communities safe may be undermined.</p> <p>“For the national database to work, the states and federal data need to be knitted together, and for one state to be exempted from the registry puts citizens of all states in danger,” Michael Hunter, Oklahoma’s attorney general, told The Washington Times.</p> <p>He filed a brief defending Colorado’s sex offender registry at the 10th U.S. Circuit Court of Appeals. Kansas, Utah, New Mexico and Wyoming, which are also part of the 10th Circuit, signed on with Oklahoma.</p> <p>Mr. Hunter said one 8-year-old girl wouldn’t be alive today if it weren’t for his state’s requirements for sex offenders.</p> <p>Oklahoma requires a sex offender’s driver’s license to be designated with a mark. In 2014, that mark led to the apprehension of a sex offender who had kidnapped and raped the girl.</p> <p>The offender was caught because a store clerk noticed his driver’s license designation when he went to purchase crayons and coloring books. She noted that an Amber Alert had been issued, ultimately leading to his arrest.</p> <p>“This little girl in Oklahoma wouldn’t be alive right now if it weren’t for the fact that we have driver’s license designation in the state,” Mr. Hunter said.</p> <p>In their legal brief, the states argue that the sex offender registries are needed because convicted sex offenders are more likely to commit sex crimes than any other group of people. They say sex offenders’ recidivism rates are 40 percent to 52 percent.</p> <p>Catherine Carpenter, a professor at Southwestern Law School and an advocate for former offenders,</p>

disputes the numbers.

“This myth starts to develop that they [relapse] at a very high rate. ... It gave state legislatures this green light,” she said.

Ms. Carpenter said state legislatures have been piling on requirements for former sex offenders since 2003, when the Supreme Court upheld Alaska’s online sex offender registry.

The requirements went from registering with state officials to restrictive housing and curfews on nights like Halloween, when children are out trick-or-treating.

Colorado’s law specifically deems that sexual offenders don’t have the same privacy rights as other released convicts. The state posts lengthy descriptions and photographs of those on its registry.

David Millard, the man challenging Colorado’s law after a 1999 guilty plea for sexual assault on a minor, said in the court case that his job at a supermarket is in constant jeopardy because the company, which he had to tell about his past, has said he can continue working as long as his conviction doesn’t become known.

He was transferred from one store to another after a customer discovered his record. He also struggled to find housing. He was ousted from one apartment after a local news report on sex offenders identified him.

He eventually bought a home and is subject to periodic visits by police. When he is not home at the time of the check-in, police post brightly colored “registered sex offender” tags on his door, Judge Matsch wrote. His neighbors, who used to be friendly, have started avoiding him and making pointed remarks, the judge said.

He ruled that the state’s registry law amounted to ongoing punishment for behavior beyond the normal prison sentences prescribed by law, with no consideration for an offender’s risk.

He cataloged other abuses, such as a teacher who was in danger of losing her job at a Catholic school after a parent saw her husband’s name on the registry. In that case, the archdiocese questioned whether she was wrong to remain married to her husband, the judge said.

One of the other plaintiffs in the Colorado case, Eugene Knight, convicted of attempted sexual assault on a child when he was 18, is barred from bringing his children into their school and must turn them over to a school employee on the sidewalk outside.

States’ differing rules can snare some convicts.

Michael McGuire served time in Colorado for raping his girlfriend in 1985. He went on to have a career as a hairstylist and jazz musician in the District of Columbia. In 2010, he and his wife moved to Alabama to care for his elderly mother.

When he arrived in Montgomery, Alabama, he was required to register as a sex offender under what a judge called the “most comprehensive, debilitating sex-offender scheme in the land.”

His wife lives in a house she rents from a family member, but sex offenders are prohibited in the area. One expert said during the case that 80 percent of Montgomery is out of bounds for those on the registry.

Unable to find a place, Mr. McGuire ended up homeless. He listed his residence in the sex offender registry as under a bridge. He has to check in personally each week with the Montgomery police and sheriff’s departments and must get approval from both departments before traveling outside the jurisdiction.

Judge W. Keith Watkins upheld most of Alabama’s law, saying the legislature had valid reasons for its

restrictions. But he struck down the duplication for weekly check-ins and travel permits, saying it was overkill.

The case was sent to the 11th U.S. Circuit Court of Appeals.

The 6th U.S. Circuit Court of Appeals recently dealt a blow to Michigan's sex offender registry.

The court ruled last year that Michigan couldn't apply its sex offender registration law to those convicted before the state created its registry requirement.

The appeals court ruled that even people convicted of nonsexual offenses were ending up on the registry, forced into "years, if not a lifetime, of existence on the margins, not only of society but often, as the record in this case makes painfully evident, from their own families."

The U.S. Supreme Court in October declined to take the case, and reform advocates said the state would have to rewrite its law. The state legislature is considering the matter, but no legislation has been introduced.

"We have begun to see positive incremental change in the last few years," said Ms. Carpenter. "I think this last year has been a leap because of these federal court cases."

Derek Logue, a former offender living in Ohio who runs the website OnceFallen.com, said the court victories have been slow in coming for those who are affected by the laws every day.

"We are living under laws that nobody else in America has to live under — not a murderer, not a terrorist, not an illegal immigrant, nobody else society hates or fears, just us," he said.

<b>HEADLINE</b>	<b>04/22 Ex-Liberian warlord sentenced 30yrs</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/US/2018/04/22/Ex-Liberian-warlord-living-in-Pa-sentenced-to-30-years-for-immigration-fraud/579152442285/?utm_source=fp&amp;utm_campaign=ts tn us&amp;utm_medium=2">https://www.upi.com/Top_News/US/2018/04/22/Ex-Liberian-warlord-living-in-Pa-sentenced-to-30-years-for-immigration-fraud/579152442285/?utm_source=fp&amp;utm_campaign=ts tn us&amp;utm_medium=2</a>
<b>GIST</b>	<p>April 22 (UPI) -- A former Liberian warlord who had been living in Pennsylvania for two decades was sentenced to 30 years in prison for lying to immigration officials about his brutal past.</p> <p>Mohammed Jabbateh, 51, had been running a international shipping business while living in a Philadelphia suburb since the 1990s. But before he claimed refugee asylum in the United States in December 1998, Jabbateh was known in Liberia as "Jungle Jabbah," a commander of armed groups during that country's first civil war between 1989 and 1996.</p> <p>During that time, Jabbateh ordered civilians to be murdered, raped, tortured and enslaved. During his trial last year, victims told their stories, including a woman who was forced into sex slavery at 13. Another woman said Jabbateh and his men murdered her husband and then forced her to cook her dead spouse's heart and serve it to them.</p> <p>"This defendant committed acts of such violence and depravity that they are almost beyond belief," said U.S. Attorney William M. McSwain in a statement. "This man is responsible for atrocities that will ripple for generations in Liberia. He thought he could hide here but thanks to the determination and creativity of our prosecutors and investigators, he couldn't. This prosecution was our only option under the law and his sentence achieves at least some measure of justice for his victims."</p> <p>Jabbateh was convicted in October on two counts of fraud in immigration documents and two counts of perjury, for which federal sentencing guidelines recommend 15 to 21 months. But U.S. District Judge Paul S. Diamond said such a sentence would be "unreasonable but outrageously offensive" for Jabbateh, who he said made a mockery of the United States' asylum system.</p>

<b>HEADLINE</b>	<b>04/22 USA Gymnastics sex abuse scandal</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/silent-no-more-inside-usa-gymnastics-sex-abuse-scandal-n868221">https://www.nbcnews.com/news/us-news/silent-no-more-inside-usa-gymnastics-sex-abuse-scandal-n868221</a>
<b>GIST</b>	<p>USA Gymnastics tried to silence top athletes after they reported being molested by team doctor Larry Nassar and as they pushed to meet with law enforcement officials, the gymnasts and their family members told NBC News.</p> <p>Claims that the sports federation stressed discretion above all else are bolstered by text messages, emails and other materials reviewed by NBC News during a months-long investigation for a special edition of Dateline that aired Sunday.</p> <p>In July 2015, after Olympian Aly Raisman met with a consultant USA Gymnastics hired to interview possible victims, she said she reached out to Steve Penny, the chief executive of the sports federation, because she wanted another meeting to share more information about Nassar's abuse.</p> <p>"There are very few people in the loop on this. Very, very few," Penny texted Raisman, explaining that he was planning on speaking with the consultant the next day. "Most important is to address the issue with privacy and confidentiality in mind. I will be working through next steps as soon as I get the game plan in order."</p> <p>Raisman said that when she heard from the consultant, Fran Sepler, it didn't seem like she was interested in hearing more details.</p> <p>"I appreciate your interest and concern in this matter," Sepler texted her. "I and the Association are taking the proper steps, but please remember that there are risks in sharing information at this point. There is a</p>

process in place and staying clear of the process will protect you and others."

To Raisman and others, the message was clear: USA Gymnastics and Penny wanted to control the situation and keep gymnasts quiet about Nassar, who had been relieved of his team duties but was still seeing patients at Michigan State University.

"We kept following up with Steve Penny," Raisman said. "And he would just say, you know, 'I'm handling it. ... Please be quiet. Remember, the most important thing is to keep this quiet.'"

A representative for Penny — who resigned from USA Gymnastics under fire last year — told NBC News in a statement that he "did not intend to discourage any athlete from speaking with any law enforcement agency."

"Any comment regarding confidentiality or not speaking about the matter in the general public was intended to protect the privacy of those involved, particularly the athletes, and protect the integrity of the FBI investigation," the statement said.

"There was no attempted cover-up," it added. "The FBI was contacted twice."

Sepler, who has experience dealing with children who have been sexually abused, told NBC News that USA Gymnastics never informed her that Raisman wanted to meet with her again. She said she was told Raisman wanted to contact other gymnasts about the matter on her own.

"Had I been made aware of Aly's phone call or apprised in any other way that Aly wanted to share more information, I would have jumped on a plane immediately to re-interview her," Sepler said. "But that never happened because I wasn't aware that Aly had more she wanted to say."

The revelation that USA Gymnastics, which sparked outrage for including a non-disclosure clause in a settlement with Maroney, also wanted Raisman to promise confidentiality as part of any agreement, according to Raisman and her family.

Nassar is serving up to 175 years in prison after pleading guilty to abusing 10 of the more than 265 former patients who say they were molested. But questions continue to swirl about how he could have preyed on so many.

In a statement, USA Gymnastics said it "supports and is fully cooperating with the various investigations that may shine light on how abuse of the proportion attributed to Nassar would have gone undetected for so long."

Some gymnasts say part of the answer lies at the Karolyi ranch, which Bela and Martha purchased in 1983 after they defected from Romania and imported their rigorous and highly successful training system to the United States.

Nestled in a forest an hour from Houston, the ranch began hosting national training camps for elite gymnasts nearly two decades ago. Every four to six weeks, Olympic hopefuls spent several grueling days at the compound without their parents.

Some former Olympians told NBC News that the high-pressure atmosphere is what helped them to succeed, but others said it took an emotional toll.

"Me and the girls used to call it torture camp," Maroney said.

In recent months, gymnasts have come forward with complaints about the ranch and the Karolyis: the accommodations were substandard; the food was terrible; they were berated and body-shamed.

Maroney said Martha Karolyi screamed at her — "She just said horrible things to me" — when she was

late to a meeting.

Because Martha Karolyi, as USA Gymnastics' training coordinator, had a major role in deciding which athletes would get on the national team, some girls said they worried that complaining about conditions would affect their standing.

Nassar took advantage of the stressful climate, befriendng the girls with gifts, food and words of encouragement — classic grooming techniques, experts say. The gymnasts say he relied on their fears and dreams to ensure they didn't tell anyone how he was penetrating them with ungloved fingers.

"You have to find out who are the best ones, who are the ones who are able to stand the pressure," Martha said. "I don't see any other way ... to prepare gymnasts who are successful."

The couple, both 75, denied allegations made by gymnasts in lawsuits and interviews that they cursed at gymnasts, restricted their food intake and made them train or compete while injured.

Two lawsuits include references to physical abuse, and accusations about mistreatment of gymnasts when the Karolyis were in Romania decades ago have surfaced in recent months.

Martha said she has never hit a gymnast. Bela told NBC News that while he may have slapped or spanked a gymnast in Romania, he never raised a hand to an American — and in dozens of interviews, no one said they ever saw the Karolyis harm a U.S. athlete.

"I never touched anybody. I never pushed anybody," Bela said. "And if anybody comes up with that one, that's a dirty lie."

The Karolyis also said that while they owned the ranch, USA Gymnastics leased the property and operated the training camps. They noted that USA Gymnastics officials attended the national team camps and that elite gymnasts were required to bring a personal coach.

Bela said he didn't like Nassar from the moment he met him, likening him to "a snake." But he and Martha insisted they had no idea the doctor was molesting girls.

Nassar reported to USA Gymnastics, not the Karolyis, and they said it wasn't their job to ensure he avoided being alone with minors.

"I don't feel responsible," Martha said. "But I feel extremely hurt that this thing happened and it happened everywhere, but it happened here, also."

And it happened over and over and over again.

Maroney, part of the gold-medal Fierce Five squad, says Nassar molested her hundreds of times during ranch visits and at competitions around the world.

She didn't process it as abuse until a particularly vicious incident in a Tokyo hotel room before the 2011 world championships.

The next day, in a car on the way back to the hotel from training, she said, she loudly blurted out what had happened in earshot of USA Gymnastics coach John Geddert, who didn't react.

"I just said, 'Last night, it was like Larry was fingering me,'" she said. Geddert didn't respond to requests for comment, and USA Gymnastics said it never heard about the incident.

The 2011 episode is important to unraveling the question of when Nassar could have been stopped, because it happened four years before USA Gymnastics said it first learned of accusations against Nassar.

That was mid-June 2015, when national team member Maggie Nichols' personal coach overheard Nichols and Raisman talking about Nassar and alerted Nichols' mother and a USA Gymnastics executive.

USA Gymnastics said in a statement that the information it got from the coach "did not allege abuse." But Nichols' mom, Gina, a nurse, said that when Steve Penny called her soon after, it was clear they were discussing molestation.

Penny, she said, told her: "We'll have to look into this, but this is very private. This is very personal. And you cannot tell anybody."

"I said, 'This is a child, and we need to call the police and child protection service,'" Nichols said. Penny's response? "USA Gymnastics will take care of that," he said, according to Nichols.

But Penny didn't call the police. Instead, he said, on the advice of legal counsel, he hired Sepler, who met with Nichols, Raisman and Maroney over the course of two weeks in the summer of 2015.

"She came to my house, and I met with her alone," Raisman said.

"I said: 'You know, he does touch me. And I know he touches some of my teammates inappropriately. But he tells us that it will heal certain parts of our body, so that we think that it's OK.'

"And I said: 'Also, you know, he does give us gifts. And he's really nice to us. So we don't think that he does it on purpose.'"

After speaking to Sepler and talking to her mother, Raisman said, something clicked. She realized what Nassar had been doing was "really bad" and that she wasn't the only victim. That's when she asked USA Gymnastics to put her back in touch with Sepler.

Sepler said she wasn't hired by USA Gymnastics to conduct a full, independent investigation, but to determine whether there was reason to believe sexual abuse had occurred.

"I did not intend to silence Aly or anyone else, and I was never told to do so," she said.

Sepler's involvement ended after she interviewed Maroney in July 2015 and immediately recommended that USA Gymnastics bring in law enforcement. Penny called the FBI's office in Indianapolis, where the sports federation is headquartered.

That, the gymnasts say, is when things got really frustrating.

Maroney's, Raisman's and Nichols' families say that they were eager to meet with FBI agents and that they expected that Nassar, who was no longer attending USA Gymnastics events, would be swiftly arrested.

Instead, they said, they were met with months of delays and warnings from Penny.

"He said ... he was told by all the law enforcement and FBI and the investigation that this is the way the investigation works, that we have to keep it quiet so we don't ruin the investigation," Gina Nichols said.

Maroney said Penny also told her to "be careful" not to disrupt the FBI's work. "Me and my mom are both terrified to say anything because we didn't want to ruin the case," she said.

The Karolyis say Penny told them the same thing.

"He was saying, we're not talking about this, you're not talking with nobody about this. We're taking care of it," Martha Karolyi told NBC News.

Maroney, who lives in California, was asked to go to Indianapolis for a formal interview. But, she said,

she was too sick to travel, suffering from panic attacks and depression. She spoke to the FBI by phone in the late summer.

Penny tried to arrange a meeting between Raisman and the FBI in Indianapolis during the busy August weekend of national championships. It didn't happen, and later that month Raisman's mother was still pressing Penny to have the FBI call her.

In September, Raisman said, Penny told her family that USA Gymnastics had turned everything over to the FBI and wasn't getting updates from the bureau.

But there was news from Nassar: He announced on Facebook that he had retired from USA Gymnastics so he could concentrate on his work at Michigan State University, where he went on treating girls in the sports medicine clinic.

USA Gymnastics said it didn't alert MSU about the allegations because the FBI asked it not to do anything that could interfere with the investigation. "USA Gymnastics denies any allegation that it had wide-ranging knowledge of abuse by Nassar or that it concealed or ignored his abuse," it said.

The statement from Penny's lawyer said he and others at USA Gymnastics "provided the FBI with whatever information it requested."

"Mr. Penny's intent was to allow the law enforcement investigation to proceed and to cooperate fully with them, which he did," it said.

Citing an internal review, the FBI declined to answer a single question from NBC News about what it did or did not do, including what exactly agents told USA Gymnastics.

Penny told NBC News that the Indianapolis FBI office transferred the case to the Detroit office. After that, "there was little to no contact with USA Gymnastics," he said. After he contacted the FBI's Los Angeles bureau in the spring of 2016, the wheels began to move again, he said.

It wasn't until June 2016 that Gina Nichols got a call from an agent in Los Angeles who asked to visit Maggie. She was stunned when he told her she could talk to anyone about Nassar, that it was "no secret."

"Really?" Nichols said, her lips quivering with anger. "I have been told for a whole year by Steve Penny and USA Gymnastics that we couldn't talk about this and had to keep it quiet."

The agent flew to Minnesota to interview Maggie, who is now the top college gymnast in the country, right after the 2016 Olympic trials.

The FBI contacted Raisman after the Rio games.

Aly Raisman speaks at the sentencing hearing for Larry Nassar on Jan. 19. Brendan McDermid / Reuters  
"I said, 'Why did you wait so long?' and they said, 'Oh, we wanted to wait until the Olympics were over,'" she said.

She met the FBI at the Olympic Training Center in Colorado in September 2016. She said she felt intimidated when she saw Penny, who flew in that morning, at the center. Penny said that his presence was coincidental and that he didn't know the timing of Raisman's meeting.

Even after the FBI had completed the gymnast interviews — more than a year after the first report — Nassar still hadn't been arrested.

But by then, FBI agents weren't the only ones looking into Nassar. After The Indianapolis Star published its investigation of sexual abuse in the gymnastics world, a former patient of Nassar's contacted the newspaper and reported her experience to Michigan State police.

MSU police launched their own probe and began taking more and more complaints. Nassar was suspended by the college and then arrested on sexual abuse and child pornography charges. In the year since Maroney, Raisman and Nichols spoke to Sepler, he had molested at least 46 more patients, the athletes' lawyer said.

"It eats at me every single day," Gina Nichols said.

Maroney's eyes filled with tears when she spoke about victims who came after her.

"That's what hurts me the most," she said.

And even after Nassar was exposed as one of the nation's most prolific child predators, USA Gymnastics sought to stop gymnasts from talking about him.

In December 2016, the organization reached a settlement with Maroney that included a non-disclosure clause, which USA Gymnastics has since said it won't enforce. Raisman said last year USA Gymnastics offered her the same.

"Obviously, I said no," she said. "From the very beginning, I knew that I wanted to talk about this."

In recent months, Raisman has become one of the loudest voices calling for institutions to be held accountable. She was part of the "army of women" who testified at a sentencing hearing for Nassar, who is serving up to 175 years after pleading guilty in three courtrooms.

And now the Karolyis have spoken out, too. At the ranch filled with mementos of their moments of glory — no longer an Olympic training site — they reflected on the damage done to the athletes and to their legacy.

"I feel angry, very angry," Martha said.

Her husband grew emotional as he assessed the damage caused by Nassar.

"This miserable man," he said, "destroyed everything."

**HEADLINE** 04/22 Fla. man sentenced 330yrs for child porn

**SOURCE** <http://abcnews.go.com/International/wireStory/man-sex-trips-330-years-child-porn-54647622?>

**GIST** A Florida man has been sentenced to 330 years in prison on child pornography charges after authorities say he took sex tourism trips to the Philippines and made and posted videos of sexual encounters he had with young children.

Authorities say David Lynch's victims were as young as 6 years old and that he posted videos online dating back to 2005.

The Venice man was arrested in 2016 attempting to board a flight to the Philippines.

Prosecutors say at least one of the trips was arranged by the mother of one of the young victims. They say Lynch also has two young children living in the Philippines.

Lynch was convicted late last year and sentenced this week. The Fort Myers News-Press reports that besides the lengthy sentence, the judge ordered Lynch to forfeit his bayfront home.

<b>HEADLINE</b>	<b>04/22 Man wrestled gun from mass shooter</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/News/man-wrestled-gun-shooter-die-work/story?id=54650267">http://abcnews.go.com/US/News/man-wrestled-gun-shooter-die-work/story?id=54650267</a>
<b>GIST</b>	<p>After being praised as a hero by the mayor of Nashville, James Shaw Jr. said he was just trying to save his own life when he wrestled an assault rifle from a gunman who fatally shot four people at a Waffle House in Tennessee.</p> <p>"On my Instagram and Facebook, everybody's calling me a hero, but I want people to know that I did that completely out of a selfish act," Shaw said during a news conference today. "I was completely doing it just to save myself. Me doing that ... I did save other people, but I don't want people to think that I was the Terminator or Superman or anybody like that. I figured if I was going to die, he was gonna have to work for it."</p> <p>The 29-year-old Shaw, the father of a 4-year-old girl, was grazed by a bullet in the rampage at the Waffle House near Nashville, a restaurant he went to with a friend early Sunday after going to a club in the area. He also burned his right after grabbing the scalding hot barrel of the assault rifle.</p> <p>Shaw, an AT&amp;T worker who grew up in Nashville, said the shooting erupted at 3:23 a.m. shortly after he and a friend took a seat. At first, he thought the gunshots were plates breaking in the kitchen.</p> <p>"Then the second one happened, then the third one happened. I think that's when the glass busted and broke through," Shaw said.</p> <p>Police said the suspected gunman, Travis Reinking, 29, arrived at the Waffle House in a pickup truck. He was only wearing a green jacket and nothing else when he opened fire outside the restaurant with an AR-15 assault rifle.</p> <p>The gunman killed two people outside the restaurant, including a Waffle House cook who had gone out for a cigarette break. The gunman then fired through the window before entering the restaurant to continue his massacre.</p> <p>"I saw the Waffle House employees scatter. And then I looked back and I saw a person lying on the ground right at the entrance of the door," Shaw said.</p> <p>He said he went to an area near the restroom and hid behind a swivel door that had no lock.</p> <p>He said a shot came through the door and grazed his elbow.</p>

	<p>"It was at that time I kind of made up my mind ... that if it was gonna come down to it, he was going to have to work to kill me," Shaw said.</p> <p>"So at the time that he was either reloading, or the gun jammed or whatever happened, is when I ran through the swivel door," he said. "I hit him with the swivel door and then the gun was kind of jammed up and it was pushed down. So we were scuffling and I managed to get one hand on the gun and then I grabbed it from him and I threw it over the countertop."</p> <p>He said the gunman was standing at the entrance to the restaurant.</p> <p>"I was trying to get out the door and I think he was pretty much in the entrance way," he said. "So I just took him out with me, out of the entrance and all the way outside."</p> <p>He said the man then fled.</p> <p>"I knew I had it in me," said Shaw, who went to church after being released from the hospital. "But I haven't had any specific combat training."</p> <p>Asked how he got the courage to confront the gunman, Shaw said, "If I didn't put my life at risk, I'm probably not here."</p> <p>Nashville Mayor David Briley called Shaw "Nashville's newest hero."</p>

<b>HEADLINE</b>	<b>04/22 Nashville mass shooting suspect</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/waffle-house-mass-shooting-suspect/story?id=54649864&amp;cid=clicksource_81_2_hero_headlines_headlines_hed">http://abcnews.go.com/US/waffle-house-mass-shooting-suspect/story?id=54649864&amp;cid=clicksource_81_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>He tried to meet the president by hopping a barrier at the White House and was convinced that Taylor Swift was stalking him.</p> <p>Both incidents landed Travis Reinking on the radar of authorities ranging from local Illinois cops to Secret Service agents.</p> <p>The latter helped authorities strip Reinking of his guns last year.</p> <p>Yet, a half-naked Reinking -- armed with one of the seized rifles -- allegedly targeted a Waffle House near Nashville during the pre-dawn hours on Sunday and shot four people to death. Four others were wounded by either bullets or shattered glass.</p> <p>Authorities believe he would have killed or wounded more had a 29-year-old patron at the restaurant not tackled him and stopped the attack. While Reinking was attempting to reload, James Shaw, Jr., standing by the bathroom area of the restaurant, confronted him and wrested control of Reinking's gun and "tossed it over the counter," according to police.</p> <p>Reinking, 29, a construction worker from Morton, Illinois, allegedly committed the bloodshed and then apparently ran home for some pants. He remained on the lam as of Sunday evening, as Metropolitan Nashville Police officers and dogs hunt him down.</p> <p>Police said Reinking drove up to the Waffle House in a gold Chevrolet Silverado pickup about 3:30 a.m.</p> <p>He lingered inside the cab for "three to four minutes" before he allegedly exited, clad in only a green jacket without pants or a shirt, armed with an AR-15 rifle.</p> <p>According to police, Reinking shot up the Waffle House and killed Waffle House employee Taurean</p>

Sanderlin, 29, and customer Joe Perez, 20, while they were standing outside.

Then, police said, Reinking entered the eatery and "continued shooting."

Akilah Sasilva, 23, and a 21-year-old unidentified woman were both shot inside the Waffle House. Sasilva died after she was taken to a local hospital.

Two others managed to survive gunshot wounds, police said.

After Shaw stopped the attack, Reinking, now unarmed, fled on foot, shedding the jacket as well.

Police confirmed more ammo was found inside the jacket.

Police believe the now completely naked suspect stopped by an apartment complex nearby to retrieve a pair of black trousers but remains shirtless, witnesses alerted police.

As authorities attempt to reel Reinking into custody, a profile of Reinking began to form.

According to police, Reinking worked in construction locally in Nashville. He was fired from his job three weeks ago but was hired by a new employer Monday. He failed to show up for work the following day, however, police said.

Before Sunday, trouble had been brewing for Reinking for years.

On the evening of May 27, 2016, Tazewell County Sheriff's deputies and emergency personnel descended on a CVS Pharmacy parking lot where Reinking was allegedly suicidal and convinced that pop singer Taylor Swift was stalking and harassing him. He also believed the cops and his parents were in on it.

In the incident report, Reinking claimed Swift "hacked his Netflix account and told him to meet her at the Dairy Queen in Morton."

While at the Dairy Queen, Reinking told deputies Swift "was across the street yelling at him before she took off running," according to the report.

Reinking gave chase up the side of a building, the report states, "in an attempt to get her to stop harassing him."

Reinking's relatives were on hand to talk the young man from doing harm to himself and he ultimately was taken to a hospital to be mentally evaluated.

On June 16, 2017, Reinking was accused of driving up to a local pool in Tremont Park where police state in a report that he flashed an AR-15 rifle, but then quickly stored it in his car trunk.

But, the report notes, Reinking allegedly took off a "pink woman's dress" to barge into a pool uninvited. When he was ordered out by lifeguards, he allegedly yelled at them and "showed his genitals saying he was a man," the report revealed.

Nobody from the pool decided to press criminal trespassing charges, authorities said.

But the incident compelled Tazewell deputies to inquire about the weapon in the car trunk. When they did, they discovered he had a firearm's license, police said.

When the deputies spoke with Reinking's father, he admitted he "took three rifles and a handgun away and locked them up when [Reinking] was having problems," according to the incident report made after the pool incident.

Reinking had left the state for nine months, his father told deputies, according to the report.

The weapons were allegedly stored by Reinking's sister "for safekeeping," the report states.

The report adds that deputies warned Reinking's father that when his son returns home "he might want to lock the guns back up until he gets mental help, which [his father] stated he would."

A month later on July 7, 2017, Reinking was arrested by the United States Secret Service for attempting to breach a barrier at the White House in a desperate hope to get a meeting with President Trump.

Reinking allegedly demanded to "get into the White House and speak with POTUS," according to a report on the incident, which doesn't include his name.

He was informed on ways to take an official tour but refused and repeated his demands, according to the report. He then took off his tie, balled it into his fist and attempted to walk past security barriers, the report said.

"Do what you need to do," he allegedly told the agents, according to the report. "Arrest me if you have to."

Agents quickly took Reinking into custody and charged him with "unlawful entry," the report adds.

In a statement by the Secret Service, Reinking was "charged with unlawful entry after crossing an exterior security barrier near the White House Complex."

Last August, Reinking was concerned that up to 30 people were "tapping into his computer and phone," according to a Tazewell County Sheriff's report, all following his attempts to send letters to Swift.

Weeks later on Aug. 24, 2017, Tazewell deputies retrieved Reinking's guns, including one Kimber 9mm pistol, a Bushmaster AR-15, CZ USA .22 caliber rifle, and a Remington 710 with miscellaneous ammunition, according to a report filed.

Reinking's firearms license was also revoked, according to the report.

The weapons landed back in Reinking's father's possession.

The father admitted to authorities Sunday that he gave the guns back to his son, according to the police statement.

One of the weapons, an AR-15, was allegedly used in the Waffle House slayings, police said.

<b>HEADLINE</b>	<b>04/22 Waffle House shooting Nashville: 4 killed</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/dead-injured-shooting-waffle-house-nashville/story?">http://abcnews.go.com/US/dead-injured-shooting-waffle-house-nashville/story?</a>
<b>GIST</b>	<p>Four people were killed and two others critically injured when a man naked from the waist down and wielding an AR-15 assault-style rifle opened fire at a Waffle House in Tennessee early Sunday, police said.</p> <p>The suspected gunman was identified as Travis Reinking, 29, from Morton, Illinois. He was arrested in July for allegedly breaching a barrier at the White House and demanding a meeting with President Donald Trump, officials said.</p> <p>Reinking had also threatened to commit suicide in May 2016 in a parking lot in Illinois and at the time his family told authorities he was having "delusions" involving Taylor Swift. He believed the singer was stalking him and harassing him, according to police records obtained by ABC News.</p>

	<p>Early Sunday, Reinking ran from the scene after a patron at the restaurant wrestled the rifle away from him, police said. Police on Sunday evening were using dogs and a helicopter to search a wooded area near the restaurant where the gunman was last seen.</p> <p>"He's murdered four times with no apparent reason, no apparent motive. So we're very concerned," said Chief Steve Anderson of the Metropolitan Nashville Police.</p> <p>Anderson said a pistol belonging to Reinking had not be recovered and he should be considered armed and dangerous.</p>

HEADLINE	<b>04/16 US envoy fears: chem. site tampered</b>
SOURCE	<a href="https://www.reuters.com/article/us-mideast-crisis-syria-chemicalweapons/russia-may-have-tampered-with-chemical-attack-site-u-s-envoy-says-idUSKBN1HN126?il=0">https://www.reuters.com/article/us-mideast-crisis-syria-chemicalweapons/russia-may-have-tampered-with-chemical-attack-site-u-s-envoy-says-idUSKBN1HN126?il=0</a>
GIST	<p>THE HAGUE (Reuters) - Russia may have tampered with the site of an alleged chemical weapons attack in Syria's Douma, the U.S. envoy to the global watchdog said on Monday, urging the body to condemn the continuing use of banned chemical weapons.</p> <p>The comments came during a closed-door meeting at the Organisation for the Prohibition of Chemical Weapons, convened after an April 7 attack in the town of Douma, outside the Syrian capital, in which dozens of people were allegedly killed with poison gas.</p> <p>"It is long overdue that this council condemns the Syrian government for its reign of chemical terror and demands international accountability for those responsible for these heinous acts," U.S. Ambassador Kenneth Ward said in comments obtained by Reuters.</p> <p>"It is our understanding the Russians may have visited the attack site. It is our concern that they may have tampered with it with the intent of thwarting the efforts of the OPCW Fact-Finding Mission to conduct an effective investigation."</p>

HEADLINE	<b>04/14 End of credit card receipt signatures</b>
SOURCE	<a href="https://www.nytimes.com/2018/04/14/business/credit-card-signature.html?action=click&amp;module=In%20Other%20News&amp;pgtype=Homepage&amp;action=click&amp;module=Latest&amp;pgtype=Homepage">https://www.nytimes.com/2018/04/14/business/credit-card-signature.html?action=click&amp;module=In%20Other%20News&amp;pgtype=Homepage&amp;action=click&amp;module=Latest&amp;pgtype=Homepage</a>
GIST	<p>The next time you sign a credit card receipt, savor it.</p> <p>While it may take time for the news to filter down to retailers, Visa, American Express, Discover and Mastercard have said that as of this month, they will no longer require customers to sign their names when paying with a credit card.</p> <p>The signature has had a good run. It's not dead, but it is dying.</p> <p>American culture has preferred credit to debit, and so signing has stuck around longer. But new credit cards have converted to chip cards that are harder to counterfeit.</p>

	<p>“Signatures are becoming more irrelevant,” said Harshita Rawat, an analyst at Bernstein Research. “The final nail in the coffin was the chip card.”</p> <p>If you want to pay with your phone, many use fingerprint scanners to authorize transactions, and Apple’s got facial recognition on its iPhone X while Samsung uses iris scanning on the Galaxy S8. Visa has also rolled out prototype rings, pins and even sunglasses that you can scan instead of using a card.</p> <p>Several of the largest retailers, including Walmart and Target, have moved to drop the signature requirement. Home Depot had already waived the requirement for purchases under \$50, and plans to do the same for larger purchasers, but hasn’t set a date yet. Stephanie Cunha, a spokeswoman for CVS, said “We are evaluating our options but have no specific changes to announce at this time.”</p>

<b>HEADLINE</b>	<b>04/15 US plans new sanctions on Russia</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/04/15/us/politics/trump-russia-sanctions-syria.html?action=click&amp;module=Top%20Stories&amp;pgtype=Homepage">https://www.nytimes.com/2018/04/15/us/politics/trump-russia-sanctions-syria.html?action=click&amp;module=Top%20Stories&amp;pgtype=Homepage</a>
<b>GIST</b>	<p>WASHINGTON — The Trump administration plans to impose new sanctions against Russia on Monday to punish it for enabling the Syrian government’s use of chemical weapons in its civil war, the latest in a series of actions by both sides underscoring the deterioration in relations between Moscow and the West.</p> <p>The sanctions, coming shortly after American-led airstrikes against facilities linked to Syria’s chemical weapons, are meant to signal that the United States holds responsible not just the government of President Bashar al-Assad but also his patrons in Russia and Iran. President Trump has vowed that Syria’s allies will pay a “big price” for facilitating the suspected use of poison gas.</p> <p>But it remained unclear how far Mr. Trump would go in trying to shape events in Syria, which has been racked by civil war for seven years. President Emmanuel Macron of France, who along with Prime Minister Theresa May of Britain joined in the strike on Syrian targets, said on Sunday night that he had persuaded Mr. Trump to keep a small American ground force in Syria despite the president’s public declaration that he wanted to get out.</p> <p>“We convinced him it was necessary to stay,” Mr. Macron said in a televised interview with French journalists. “I assure you, we have convinced him that it is necessary to stay for the long term.”</p> <p>American officials, however, disputed that, saying that Mr. Macron misinterpreted the conversation. About 2,000 American troops are in Syria to fight the Islamic State, or ISIS, not to play a role in the civil war. In public comments before the chemical attack that prompted him to launch airstrikes, Mr. Trump said he wanted to pull them out right away. Advisers urged him to hold off, and he gave them five to six months to complete a withdrawal.</p> <p>“The U.S. mission has not changed — the president has been clear that he wants U.S. forces to come home as quickly as possible,” Sarah Huckabee Sanders, the White House press secretary, said in a statement Sunday night. “We are determined to completely crush ISIS and create the conditions that will prevent its return. In addition, we expect our regional allies and partners to take greater responsibility both militarily and financially for securing the region.”</p> <p>The new American sanctions were announced on Sunday by Nikki R. Haley, the ambassador to the United Nations and the administration’s leading public voice excoriating Russia in recent days. “They will go directly to any sort of companies that were dealing with equipment related to Assad and chemical weapons use,” she said on “Face the Nation” on CBS. “And so I think everyone is going to feel it at this point. I think everyone knows that we sent a strong message, and our hope is that they listen to it.”</p>

<b>HEADLINE</b>	<b>04/15 Summer fire rules in effect</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/04/15/summer-fire-rules-kick-off-today-in-washington/">http://q13fox.com/2018/04/15/summer-fire-rules-kick-off-today-in-washington/</a>
<b>GIST</b>	<p>It may not feel warm outside yet, but Washington's "summer fire rules" are now in effect.</p> <p>"Whether fire season is delayed or not, Washington's forests always face the threat of wildfire," said Commissioner of Public Lands Hilary Franz. "We're preparing now to be ready for fire season before the weather heats up, and I encourage all our neighbors to do the same."</p> <p>The state's summer fire rules are in effect until October 15. The rules apply to the 13 million acres of private and state forestlands protected by the Washington Department of Natural Resources.</p> <p>These regulations affect loggers, firewood cutters, land clearers, road builders, heavy equipment operators, off-road motorcyclists, and others. During fire season, people using motorized equipment in the woods must have approved spark arresters and follow fire safety precautions. In addition, those working in the woods must have fire prevention and extinguishing equipment in good working order at the job site and workers trained in proper use.</p>

	<p>The rules are intended to prevent forest fires and to extinguish small fires before they spread to the forested lands. These rules restrict cigarette smoking in forested areas to roads, gravel pits, or other clearings and prohibit lighting fireworks on forestland.</p> <p>According to experts, Washington's forests always face the threat of wildfire. So even though we have above average snowpack, the risk of wildfire can change quickly during the springtime.</p> <p>"As soon as the weather conditions warm up and the humidity begins to drop, the ground conditions become much more of a tinderbox very very quickly and certainly as the summer goes on," Kyle Ohashi of Puget Sound Regional Fire told Q13 News.</p> <p>Property owners can reduce fire risk to their homes and lands by keeping dead vegetation off roofs and away from buildings. The Firewise program explains how to use these techniques and offers incentives to communities who follow Firewise principles.</p> <p>Last year, more than 32,800 acres of DNR-protected lands were consumed by 815 wildfires. Out of 815 wildfires, 90 percent were human-caused.</p>

<b>HEADLINE</b>	<b>04/16 Russia reinforcements head to Syria</b>
<b>SOURCE</b>	<a href="http://www.dailymail.co.uk/news/article-5618609/Russian-ships-laden-tanks-seen-Bosphorus-en-route-Tartus-Syria-led-air-strikes.html">http://www.dailymail.co.uk/news/article-5618609/Russian-ships-laden-tanks-seen-Bosphorus-en-route-Tartus-Syria-led-air-strikes.html</a>
<b>GIST</b>	<p>Two Russian warships laden with military vehicles have been spotted en route to Syria after Friday's US-led airstrikes obliterated three suspected chemical weapons sites.</p> <p>An Alligator-landing ship was pictured cruising down The Bosphorus on Sunday as the world awaits Vladimir Putin's response to this week's co-ordinated military action against Syria.</p>

The vessel was spotted on its way to the Russian naval base at Tartus on the north Syrian coast.

On its fourth deployment of Russian military equipment to the war-torn country the ship was seen laden with tanks, trucks, ambulances and an IED radar.

A yellow RoRo Alexandr Tkachenko was also pictured heading for Tartus carrying high-speed patrol boats, a temporary bridge structure and several trucks. The images were posted on social media by Bosphorus-based naval observer Yörük Işık.

They come in wake of Friday's US-led campaign against Bashar al-Assad's regime and a chemical weapons attack that brutally murdered 75 civilians.

The blue Project 117 LST Orsk 148 ship was carrying Soviet BTR-80 tanks, Ramaz trucks and a Pelena-1 bomb radar, used to detect IEDs.

A second yellow cargo vessel was equipped with a BMK-T boat used for building temporary bridges and an array of other military hardware.

The Russian warships approaching Syria come after the United States outlined new economic sanctions in response to Moscow's continued support of Assad's regime in Syria.

Nikki Haley, US Ambassador to the United Nations, said measures to be imposed on Monday will send a message to Russia after it blocked six UN attempts to investigate its use of chemical weapons.

Meanwhile French President Emmanuel Macron today insisted the allied forces had not 'declared war' on Syria.

He told a French TV station: 'We have not declared war on the regime of Bashar al-Assad.' During the two-hour interview he also claimed he had 'convinced' Trump to maintain a military presence in Syria after the US leader threatened to pull out of the country entirely.

It emerged that Trump called Mr Macron twice before he shared his intention to strike Syria in a Twitter post. But he failed to call UK Prime Minister Theresa May in the early stages of the operation, giving the French leader the opportunity to claim France is America's leading ally in Europe.

<b>HEADLINE</b>	<b>04/16 Oklahoma wildfires force evacuations</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/04/13/us/oklahoma-wildfires/index.html">https://www.cnn.com/2018/04/13/us/oklahoma-wildfires/index.html</a>
<b>GIST</b>	<p>(CNN)Wildfires have killed one person and forced the evacuation of four towns in Oklahoma, authorities said.</p> <p>The state chief medical examiner's office reported a 61-year-old man died Thursday in Roger Mills County as a result of injuries sustained in a fire that began southeast of Leedey, the Oklahoma Department of Emergency Management said.</p> <p>A 54-year-old hunter reported missing in the large Dewey County fire was found alive, Oklahoma Forestry Services Fire Chief Scott Huff said. The man was flown to an area hospital Friday, but his condition was unknown.</p> <p>Officials said the man was one of three hunters who got caught in the wildfire. The two others were found Thursday.</p> <p>About 1,000 people evacuated Vici, more than 100 miles northwest of Oklahoma City, Dewey County Sheriff Clay Sander said.</p>

Evacuations were also ordered in the Dewey County towns of Seiling, Taloga and Putnam, said Michelle Finch-Walker, spokeswoman for Oklahoma Forestry Services.

The Rhea Fire in Dewey County has burned an estimated 138,000 acres and is 0% contained, she said.

Around midday Friday, the National Weather Service issued an advisory saying that fire was approaching the Iochem iodine plant east of Vici. Sander told CNN about 30 residents were asked to evacuate immediately as the wildfire closed in on the chemical plant.

Some 450 people were evacuated in adjacent Woodward County. The estimated size of that fire was changed from 115,000 to 59,000 acres because of more accurate mapping, Finch-Walker said. There are two other major fires in the state.

The blazes have consumed 200,000 acres, Gov. Mary Fallin said in announcing a state of emergency for 52 counties because of wildfire and drought conditions.

"I'm asking all Oklahomans to be vigilant and careful, and to do their part to prevent fires," Fallin said in a statement. "Anything that can be done to minimize fires will help to keep both our firefighters and the public safe."

'The fire is rapidly spreading'

State officials said dry conditions and strong winds have combined to create potential fire dangers.

"These fires are going to continue to be quite explosive under these conditions, with that kind of wind pushing it, and all the dry fuels that are available," Finch-Walker told CNN. "The fire is rapidly spreading and growing and we will continue to see extreme fire behavior until we can get through this event."

"We've got historic conditions as far as fire. We haven't seen these kinds of conditions in a decade," said Matt Lehenbauer, emergency management director for Woodward County.

"We've had half an inch of rain in six months," Lehenbauer said.

<b>HEADLINE</b>	<b>04/16 US, Russia enter new era of animosity</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-04-16/syria-strikes-lock-u-s-and-russia-into-a-new-era-of-animosity">https://www.bloomberg.com/news/articles/2018-04-16/syria-strikes-lock-u-s-and-russia-into-a-new-era-of-animosity</a>
<b>GIST</b>	<p>A few weeks ago, Donald Trump invited Vladimir Putin to meet -- maybe even at the White House. After U.S.-led missile strikes in Syria, the two nations' officials can't get into the same room without insulting each other.</p> <p>Speaking at an emergency session of the United Nations Security Council Saturday, hours after the U.S., France and the U.K. launched missiles intended to take out Syria's chemical weapons capability, American Ambassador Nikki Haley called on Russia -- the main backer of the Syrian regime -- "to take a hard look at the company it keeps." Her Russian counterpart Vassily Nebenzia retorted that the U.S. and its allies were engaged in the "diplomacy of myth-making."</p> <p>The strikes against the regime of Russia's ally Bashar al-Assad put an exclamation point on how swiftly ties between the former Cold War foes have deteriorated in recent weeks, with President Trump even overcoming his past unwillingness to criticize President Putin by name.</p> <p>Now, the U.S.-Russia relationship, already under severe strain over issues from Russian meddling in the 2016 American presidential campaign to its role in Syria and Ukraine, may be irretrievably broken for the</p>

foreseeable future. There may be too much bad blood, too much suspicion and too much anger on both sides to turn the animosity around.

“I don’t see things getting better,” said Boris Zilberman, deputy director of congressional relations at the Foundation for Defense of Democracies and a Russia expert. “We’re at a very low point and clearly the administration’s position on Russia has hardened.”

The result has been an unprecedented wave of retaliations and tit-for-tat actions. After the U.K. blamed Russia for the poisoning of a former spy in Britain, more than 150 Russian diplomats were expelled by the U.K. and allies including the U.S. The Trump administration followed with new sanctions on Russian oligarchs including billionaire aluminum magnate Oleg Deripaska. His company lost half its value in a day after the sanctions were announced.

Haley raised the prospect of still more sanctions on Russia, saying Sunday on CBS’s “Face the Nation” that a fresh round of penalties would “go directly to any sorts of companies that were dealing with equipment” related to Assad and his chemical weapons.

While for now no significant new U.S. sanctions seem likely --limiting Russian market losses after last week’s sharp declines -- in Moscow, lawmakers are starting Monday to discuss a draft law with counter-measures against the U.S..

“What kind of cooperation can there be? Where?” asked Fyodor Lukyanov, head of Russia’s Council on Foreign and Defense Policy, who advises the Kremlin. Russia gets “new sanctions and threats every week,” he said. “Americans believe that you can humiliate and put pressure everywhere and at the same time offer cooperation where they need it. This does not happen.”

The two countries routinely accuse each other of fabricating events, as they did during the Cold War.

The U.S. says Russia is blocking investigators from the scene of the chemical attack that prompted the latest airstrikes. Russia has argued both that the attack in the Syrian city of Douma never happened or that it was orchestrated by the U.S. and its allies to provoke a military response.

“Americans need to understand that the wars of the future will look more like this: Russia is investing significant resources to create propaganda and disinformation,” said Senator Ben Sasse, a Nebraska Republican, after Russia claimed that almost all the missiles fired into Syria were shot down -- an assertion the U.S. denied. “Our enemies will work to create confusion and distrust among Americans here at home.”

What limited cooperation there was between the two countries has ground to a halt. A November agreement between the two sides to press all parties in Syria toward negotiations known as the Geneva process has stalled and they have abandoned plans for more “de-escalation zones” to ease the violence. Instead, Russia is attempting to create such zones with Turkey and Iran.

From the White House, there is still hope that Russia will change its posture, and Trump’s informal invitation for an eventual meeting with Putin hasn’t been rescinded.

“After his last call with President Putin on March 20, the president confirmed that the two had discussed a bilateral meeting at a number of potential venues, including the White House,” Robert Palladino, a spokesman for the National Security Council, said in a statement Sunday night. “The desire for a meeting still stands, as the president believes a better relationship with Russia is in our mutual interest. That said, the president has been consistent and tough on Russia.”

**HEADLINE** 04/15 Russia: chaos if West strikes Syria again

**SOURCE** <https://www.newsmax.com/newsfront/putin-syria-global-chaos/2018/04/15/id/854589/>

## GIST

Russian President Vladimir Putin warned on Sunday that further Western attacks on Syria would bring chaos to world affairs, while signs emerged that Moscow and Washington want to pull back from the worst crisis in their relations for years.

Putin made his remarks in a telephone conversation with Iranian counterpart Hassan Rouhani after the United States, France and Britain launched missile strikes on Syria on Saturday over a suspected poison gas attack.

A Kremlin statement said Putin and Rouhani agreed that the Western strikes had damaged the chances of achieving a political resolution in the multi-sided, seven-year conflict that has killed at least half a million people.

"Vladimir Putin, in particular, stressed that if such actions committed in violation of the U.N. Charter continue, then it will inevitably lead to chaos in international relations," a Kremlin statement said.

The attacks struck at the heart of Syria's chemical weapons programme, Washington said, in retaliation for a suspected poison gas attack a week ago. All three participants insisted the strikes were not aimed at toppling President Bashar al-Assad or intervening in the conflict.

The bombings, hailed by U.S. President Donald Trump as a success but denounced by Damascus and its allies as an act of aggression, marked the biggest intervention by Western countries against Assad and ally Russia, whose foreign minister Sergei Lavrov called them "unacceptable and lawless".

Putin's comments were published shortly after Russian Deputy Foreign Minister Sergei Ryabkov struck a more conciliatory note by saying Moscow would make every effort to improve political relations with the West.

When asked whether Russia was prepared to work with the proposals of Western countries at the United Nations, Ryabkov told TASS news agency: "Now the political situation is extremely tense, the atmosphere is extremely electrified, so I will not make any predictions.

"We will work calmly, methodically and professionally, using all opportunities to remove the situation from its current extremely dangerous political peak."

Russian Foreign Ministry official Vladimir Ermakov said Washington would want to maintain a dialogue with Moscow about strategic stability after the raids, Russian media reported.

In an indication that the West, too, would prefer to lower tensions, the United States and Britain both reiterated that their military action on Saturday was not aimed at Assad, Putin's ally, only at his use of chemical weapons.

Speaking to the BBC, Britain's Foreign Secretary (Minister) Boris Johnson said that Western powers had no plans for further missile strikes, though they would assess their options if Damascus used chemical weapons again.

"This is not about regime change ... This is not about trying to turn the tide of the conflict in Syria," he told the BBC, adding that Russia was the only country able to pressure Assad to negotiate an end to the conflict.

Asked about U.S.-Russia relations, U.S. ambassador to the United Nations Nikki Haley said ties were "very strained" but that the United States still hoped for a better relationship.

Haley said that the United States would not pull its troops out of Syria until its goals were accomplished. Speaking on Fox News Sunday, Haley listed three aims for the United States: ensuring that chemical weapons are not used in any way that poses a risk to U.S. interests, that Islamic State is defeated and that there is a good vantage point to watch what Iran is doing.

	Trump has made clear he wants to withdraw the roughly 2,000 U.S. troops involved in the anti-Islamic State campaign in Syria. But he appeared to contradict that message when he said on Saturday that Western allies were prepared to "sustain" the military response if Assad does not stop using prohibited chemical weapons.

<b>HEADLINE</b>	<b>04/15 Opposition to sanctuary spreads in Calif.</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/us-california-sanctuary-backlash/2018/04/15/id/854625/">https://www.newsmax.com/newsfront/us-california-sanctuary-backlash/2018/04/15/id/854625/</a>
<b>GIST</b>	<p>More local governments in California are resisting the state's efforts to resist the Trump administration's immigration crackdown, and political experts see politics at play as Republicans try to fire up voters in a state where the GOP has grown weak.</p> <p>Since the Jeff Sessions-led Department of Justice sued California last month over its so-called "sanctuary state" law limiting police collaboration with immigration agents, at least a dozen local governments have voted to either join or support the lawsuit or for resolutions opposing the state's position. Those include the Board of Supervisors in Orange County, which has more than three million people.</p> <p>More action is coming this week, with leaders in the Orange County city of Los Alamitos scheduled to vote Monday on a proposal for a local law to exempt the community of 12,000 from the state law. On Tuesday, the San Diego County Board of Supervisors is meeting to consider joining the Trump administration lawsuit.</p> <p>Immigration has been a hot topic across the country since President Donald Trump campaigned in 2016 on promises of tougher enforcement and a wall on the U.S.-Mexico border. It has been a lightning rod issue in California far longer.</p> <p>The state passed a measure backed by Republican Gov. Pete Wilson in the 1990s to deny public healthcare and education to immigrants in the country illegally. It was later overturned but left a lingering resentment among the state's growing Hispanic population.</p> <p>In recent years, California Republicans have taken a less strident approach to immigration in a state where one in four people are foreign-born. But the Trump administration lawsuit has energized many in a party that has been rendered nearly irrelevant at the state level, where Democrats control every key office.</p> <p>"When the attorney general of the United States decides to take a firm position against it, I think that gave a signal to a lot of us that, 'Hey, California is on the wrong side of this thing,'" said Fred Whitaker, chairman of the Republican Party in Orange County. He also is a councilman in the city of Orange who proposed a local resolution on the issue that passed last week.</p> <p>Raphael Sonenshein, executive director of the Pat Brown Institute for Public Affairs at California State University, Los Angeles, said it's not surprising Republicans are galvanizing over immigration.</p> <p>"Politics is very much about emotions, especially in midterms," he said. "I think it was only a matter of time when people went back to the issue that actually hits the nerve in the Republican base these days more than any other."</p> <p>Under Democratic leadership, California has enacted a series of laws in recent years aimed at helping immigrants, including issuing driver's licenses regardless of legal status and assisting with tuition at state universities. After Trump was elected, lawmakers passed the measure to limit police collaboration with federal immigration agents.</p> <p>Immigrant and civil rights advocates applauded the measure, known as SB54, as a way to encourage immigrants to report crime to police without fearing deportation. Critics said it would make it too hard for</p>

	<p>federal agents to find and deport ex-convicts who are a danger to communities.</p> <p>Most of the local governments siding with the Trump administration are in Orange County, an area once considered a GOP stronghold but that voted for Hillary Clinton in the 2016 presidential election. But it's starting to spread.</p> <p>Escondido in neighboring San Diego County has voted to support the federal lawsuit and last week the small city of Ripon in the state's Central Valley did the same.</p> <p>In many cases, meetings on the issue have drawn boisterous crowds. Anti-illegal immigration activists have traveled from city to city to attend, heightening tensions with those who want their communities to support immigrant-friendly policies or stay out of the fray.</p> <p>In response to the controversy, some local governments have taken the opposite approach. Leaders in Santa Ana, an Orange County city home to about 330,000 residents, voted to support California in the lawsuit.</p>

<b>HEADLINE</b>	<b>04/16 Syrians Damascus rally support military</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/latest-large-rally-damascus-supporting-assads-army-54494618?">http://abcnews.go.com/International/wireStory/latest-large-rally-damascus-supporting-assads-army-54494618?</a>
<b>GIST</b>	<p>Hundreds of Syrians gathered on Monday in a landmark square in Syria's capital, Damascus, rallying in support of their armed forces, which they say succeeded in confronting the unprecedented joint airstrikes by the West over the weekend.</p> <p>State TV broadcast the rally live from the central Omayyad Square. Protesters waved Syrian flags at the demonstration, dubbed a "salute to the achievements of the Arab Syrian Army," set off fireworks and unleashed celebratory gunfire.</p> <p>Shouts of "Allah, Syria, and only Bashar," a reference to Syrian President Bashar Assad, rang out.</p> <p>The joint airstrikes by the United States, Britain and France bombed sites that the three countries said were linked to Syria's chemical weapons program. The airstrikes were triggered by an alleged chemical attack in the town of Douma, just outside of Damascus.</p> <p>Syrian activists said more than 40 people were killed, but Syria and Russia deny the attack. Russia accused Britain of staging the attack.</p> <p>Saturday's airstrikes came shortly after a fact-finding mission from the Organization of the Prohibition of Chemical Weapons arrived in Syria to investigate the attack. The mission is still expected to make it to Douma, where government security agencies and Russian military police have deployed after the town fell under government control, raising complaints from the Syrian opposition that evidence of chemical weapons' use might no longer be found.</p> <p>The OPCW is holding an emergency meeting Monday in the Hague to discuss the suspected chemical attack in Douma.</p> <p>The strikes have ratcheted up international tension, as the U.S. and Russia exchanged threats of retaliation. U.S. Ambassador to the United Nations Nikki Haley has indicated new economic sanctions will be announced Monday against Russia for enabling Assad's government to continue using chemical weapons.</p> <p>Russian President Vladimir Putin said the military strikes violated the U.N. Charter and that if they continue, "it will inevitably entail chaos in international relations," according to a Kremlin statement on Sunday.</p>

<b>HEADLINE</b>	<b>04/15 Protestors rally to shutdown Starbucks</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/protesters-rally-philadelphia-starbucks-black-men-handcuffed-arrested/story?">http://abcnews.go.com/US/protesters-rally-philadelphia-starbucks-black-men-handcuffed-arrested/story?</a>
<b>GIST</b>	<p>Protestors rallied Sunday at the downtown Philadelphia Starbucks where two black men were led out in handcuffs by police and accused of trespassing to decry the actions of the coffee company and the cops.</p> <p>Armed with bullhorns and signs, a small group of protestors gathered outside the Starbucks on Spruce Street and demanded action in the wake of Thursday's arrests. They directed their rage at Starbucks, the police department and the workers who called the cops in the first place.</p> <p>"We want the manager fired from this establishment for racially profiling black people," a man boomed from the bullhorn. "We want the police officers in the arrest fired as well."</p> <p>The protester with the bullhorn said the activists were "not going anywhere" and vowed, "We're going to show you what a shutdown means."</p> <p>The arrests of the men -- who have not been identified, but have retained an attorney -- was captured on video and tweeted by Melissa DePino, a 50-year-old mother of two who told ABC News she's vowed to not shop at Starbucks again.</p> <p>It's since been viewed more than 9 million times as of Sunday afternoon.</p> <p>"It was humiliating for those guys," Depino told ABC News. "They were completely minding their own business."</p> <p>Both men were later freed and the charges they were facing -- trespassing and disturbance -- were dropped Thursday night.</p> <p>This happened while paperwork was being drawn up. District Attorney Larry Krasner also refused to prosecute once Starbucks asked to not press charges, according to a video testimonial released by Philadelphia Police Commissioner Richard Ross Jr. on Saturday.</p> <p>Attempting to deflect blame away from his department, the commissioner assured the public that he has reviewed the facts and defended the cops, saying they "did absolutely nothing wrong."</p> <p>"I can tell you candidly these officers did a service they were called to do," he said.</p>

<b>HEADLINE</b>	<b>04/15 Spring blizzard pounds Midwest</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/04/15/spring-blizzard-pounds-midwest-flights-canceled-deaths-reported.html">http://www.foxnews.com/us/2018/04/15/spring-blizzard-pounds-midwest-flights-canceled-deaths-reported.html</a>
<b>GIST</b>	<p>Amid a spring blizzard in the Midwest that prompted hundreds of flights to be canceled Saturday, one runway has reopened at Minneapolis-St. Paul International Airport, officials said Sunday.</p> <p>A total of 469 flights had been canceled at the Minnesota airport alone, airport spokesman Patrick Hogan said. All of Saturday's incoming and outgoing flights were canceled because of heavy snowfall and low visibility.</p> <p>The snow was coming down too fast for plows to keep the runways clear or for crews to keep the planes deiced, airport officials said.</p>

Hogan said crews were working to get other runways open.

St. Paul also declared a snow emergency, as blizzard warnings continued into Sunday, the Minneapolis Star Tribune reported.

“This system will rank up there as one of the most significant winter storms in some time,” read a Weather Service report early Saturday. It declared the storm “historic,” shortly after, the Star Tribune reported.

“This is certainly one of the more powerful [storms] in recent memory,” Jacob Beitlich, a Weather Service meteorologist, said, according to the paper. “Any time you close a Twin Cities airport, it’s gotta be usually a pretty bad snowstorm.”

Blizzard conditions have closed the airport for two days in Sioux Falls, South Dakota’s largest city.

The snowfall, part of a storm system stretching from the Gulf Coast to the Great Lakes, brought snow, tornadoes, rain and hail.

At least three weather-related deaths occurred in Wisconsin, Nebraska and Louisiana.

By Saturday night, Minneapolis was buried under more than 13 inches of snow.

It marked the first time a blizzard has descended on the metro area of the Twin Cities since 2005, the Star Tribune said, citing the National Weather Service.

Hundreds of crashes and spinouts were reported across the state, according to the Star Tribune. One fatality occurred Saturday when a vehicle struck a pedestrian in Medina, but it was unclear whether it was weather-related.

The weather is expected to persist through Sunday in Minnesota, Wisconsin and Michigan before moving into New York state and New England.

<b>HEADLINE</b>	<b>04/15 US, Jordan joint military exercise</b>
-----------------	---

<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/simulated-chemical-incident-part-jordan-us-military-drill-54479293?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/simulated-chemical-incident-part-jordan-us-military-drill-54479293?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
---------------	---

<b>GIST</b>	The United States and Jordan have launched a 12-day military exercise with scenarios ranging from border security to counter-terrorism and for the first time a simulated chemical incident.
-------------	--

The Eager Lion drill started Sunday, a day after the U.S., France and Britain launched missiles at Syrian military targets in response to an alleged chemical weapons attack near Damascus a week ago.

Maj. Gen. Jon Mott, the director of Exercises and Training at the U.S. Central Command, told reporters that a mobile laboratory team will respond to a simulated chemical incident.

He said that it's a "threat all too real, as we've seen recently in Syria."

More than 7,000 troops, including 3,500 U.S. service members, are participating in the annual drill, the U.S. military's largest and most complex in the region.

<b>HEADLINE</b>	<b>04/15 Jefferson Co. to offer CERT training</b>
-----------------	---

SOURCE	<a href="https://www.peninsuladailynews.com/news/jefferson-county-to-offer-community-emergency-response-team-training/">https://www.peninsuladailynews.com/news/jefferson-county-to-offer-community-emergency-response-team-training/</a>
GIST	<p>PORT TOWNSEND — Jefferson County is about to start a Community Emergency Response Team training program.</p> <p>Community Emergency Response Team (CERT) training has been provided in neighboring Clallam County but not in Jefferson County, until now.</p> <p>The Jefferson County Department of Emergency Management, all county fire districts and the Neighborhood Preparedness (NPREP) action group through Local 20/20 are collaborating on the program, said Lynn Sterbenz, director of Jefferson County Department of Emergency Management.</p> <p>The CERT program educates volunteers about disaster preparedness for possible hazards and trains them in such basic disaster response skills as fire safety, light search and rescue, team organization and disaster medical operations.</p> <p>A program manager course will be offered May 21-22, while a three-day train-the-trainer course is planned May 23-25. Both are offered free, with training materials provided, but prerequisites and pre-registration are required.</p> <p>Interested participants must complete and return a registration form by May 16. Registration will be on a first-come, first-served basis. Class size is limited to 30 students with minimum being 15.</p> <p>Qualified volunteers are sought for both courses, Sterbenz said.</p> <p>The first step for the Jefferson County program is to build a cadre of volunteer CERT instructors, Sterbenz said.</p> <p>The county now has seven qualified CERT instructors, as opposed to more than 25 in Clallam County.</p> <p>“We know there are highly qualified retired people in Jefferson County, some of whom are likely CERT trained already who might be interested in joining our instructor pool,” Sterbenz said.</p> <p>Program managers will assist in the ongoing logistical aspects of coordinating the CERT program. The course will prepare participants to work with the Department of Emergency Management, fire districts and NPREP.</p> <p>The prerequisites for both courses are the same: Participants must have completed the CERT basic training course (any location is acceptable) or completed the online course IS-317: Introduction to CERT, which can be found at <a href="https://training.fema.gov/is/courseoverview.aspx?code=IS-317">https://training.fema.gov/is/courseoverview.aspx?code=IS-317</a>.</p> <p>It also is necessary to have a referral from a CERT-sponsoring agency, such as the Department of Emergency Management, city or county government, fire districts, schools, hospitals, or a community-based organization such as NPREP.</p> <p>The registration form is available on the State of Washington, Emergency Management Division’s Training and Exercise calendar. Visit <a href="https://mil.wa.gov/training-and-exercise">https://mil.wa.gov/training-and-exercise</a> and click on the In-State Training Calendar.</p> <p>CERT offers a consistent, nationwide approach to volunteer training and organization that professional responders can rely on during disaster situations, which allows them to focus on more complex tasks, Sterbenz said.</p> <p>“Through CERT, the capabilities to prepare for, respond to and recover from disasters is built and enhanced,” she said in a news release.</p>

	<p>The CERT program was designed as a grassroots initiative and is structured so that the local and state program managers have the flexibility to form their programs in the way that best suits their communities, Sterbenz said.</p> <p>There are more than 2,700 local CERT programs nationwide, with more than 600,000 individuals trained since CERT became a national program.</p>

<b>HEADLINE</b>	<b>04/15 Britain: no new attacks planned for now</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/world/articles/2018-04-15/no-new-attacks-planned-against-syria-for-now-says-britain">https://www.usnews.com/news/world/articles/2018-04-15/no-new-attacks-planned-against-syria-for-now-says-britain</a>
<b>GIST</b>	<p>LONDON (Reuters) - There are no plans as yet to repeat missile strikes on Syria, but Britain will consider further action if President Bashar al-Assad again uses chemical weapons against his people, foreign minister Boris Johnson said on Sunday.</p> <p>In a show of support for Prime Minister Theresa May's decision to join the United States and France in attacking chemical weapons facilities in Syria on Saturday, her one-time political rival Johnson said it was the right thing to do.</p> <p>But the prime minister may not find such backing when she faces parliament on Monday, where some lawmakers are angry that May took military action without their approval - a process that has increasingly become a tradition in Britain.</p> <p>Speaking to the BBC, Johnson said what he described as the successful strikes on three sites in Syria were a message from the world that enough was enough, but acknowledged he could not say whether Assad still had chemical weapons.</p> <p>"There is no proposal on the table at the moment for further attacks because so far, thank heavens, the Assad regime have not been so foolish as to launch another chemical weapons attack," he told the Andrew Marr show.</p> <p>"If and when such a thing were to happen then clearly, with allies, we would study what the options were."</p>

<b>HEADLINE</b>	<b>04/14 Best age to claim Social Security?</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/money/personalfinance/retirement/2018/04/14/9-different-ages-for-claiming-social-security-and-what-they-mean-to-you/33696453/">https://www.usatoday.com/story/money/personalfinance/retirement/2018/04/14/9-different-ages-for-claiming-social-security-and-what-they-mean-to-you/33696453/</a>
<b>GIST</b>	<p>Social Security serves as a key source of income for millions of retired seniors, and as an eligible worker, you get an eight-year window to start taking benefits. Here are the various ages at which you might claim Social Security, and their impact on your benefits.</p> <p><b>Age 62</b> Age 62 is the earliest point at which you can file for Social Security, and it's also the most popular age for seniors to claim benefits. The advantage of filing at 62 is that you get your money sooner. The downside, however, is that you'll face the greatest reduction in benefits by going this route.</p> <p>If you're entitled to a full monthly benefit of \$1,500 at age 67, for example, then filing at 62 will knock each payment you collect down to \$1,050. That said, if you're unemployed come 62 or need the money for another reason, you're better off taking benefits than resorting to credit card debt.</p> <p><b>Age 63</b> Filing for Social Security at 63 still means taking benefits early and having them significantly reduced.</p>

Still, if you're desperate for cash, it often pays to take that hit, which won't be quite as bad as it would if you were to file at 62. Using our example above, a \$1,500 benefit at age 67 would be whittled down to \$1,125 at 63 -- not ideal, but better than collecting just \$1,050.

#### **Age 64**

Claiming Social Security at age 64 will also result in a sizable reduction in your full monthly benefit. But it won't be as drastic as filing at an earlier age. In the case of a \$1,500 benefit at 67, you'd only lose about 20% by filing at 64, thereby resulting in a \$1,200 monthly payment.

#### **Age 65**

Once you turn 65, you're eligible for coverage under Medicare. As such, some people get confused and assume that 65 is the age at which they're able to collect their Social Security benefits in full. Not so. Still, if you retire at 65 once Medicare kicks in and decide to file for benefits simultaneously, you won't face such an extreme reduction. Following the above example, a \$1,500 monthly benefit at 67 would only be reduced to \$1,300 at 65.

#### **Age 66**

Age 66 is a significant one from a Social Security standpoint because it's when workers born between 1943 and 1954 reach full retirement age and are thereby eligible to collect their monthly benefits without a reduction. Your full retirement age is a function of your year of birth, as follows:

<b>YEAR OF BIRTH</b>	<b>FULL RETIREMENT AGE</b>
1943-1954	66
1955	66 and 2 months
1956	66 and 4 months
1957	66 and 6 months
1958	66 and 8 months
1959	66 and 10 months
1960	67

*Data source: Social Security Administration.*

Therefore, if you were born after 1954 but before 1960, your full retirement age is 66 and a certain number of months. If you were born in 1960 or later and have a full retirement age of 67, filing for Social Security at 66 will reduce your benefits by about 6.67%. That means a full monthly benefit of \$1,500 would go down to just \$1,400 if you were to take them a year earlier.

#### **Age 67**

If you were born in 1960 or later, this is perhaps the age you've been waiting for, since it's when you get to take your monthly benefits in full. In our example, age 67 is when you'd get that \$1,500 we keep talking about. That said, you don't have to file for Social Security at full retirement age. You can hold off and grow your benefits for a higher monthly payout.

#### **Age 68**

Though 68 is hardly a common age for taking Social Security, it's a strategic one nonetheless. That's because for each year you delay your benefits past full retirement age up until age 70, you get an 8% boost in payments, which, in our ongoing example, would take a full monthly benefit of \$1,500 at 67 up to \$1,620 at 68. That increase then remains in effect for the rest of your life. Of course, not everyone wants or can afford to hold off on benefits all the way until 70, but waiting until 68 is a decent compromise --

you get a modest boost without having to wait too long.

### Age 69

Age 69 is a good time to take your benefits if you don't need them sooner. Doing so will boost our aforementioned \$1,500 benefit to \$1,740, thus guaranteeing a higher payout for as long as you collect Social Security.

### Age 70

The credits you accrue for delaying benefits past full retirement age stop accumulating once you reach 70. Therefore, it's considered the latest age to file for Social Security. Granted, you don't have to sign up for benefits at that time, but there's really no financial incentive not to. If you're dealing with a full retirement age of 67, filing at 70 means boosting your benefits by 24%, which would turn a \$1,500 monthly payment into \$1,860 -- for life.

Which of the above ages is the right one for you to take benefits? It depends on a host of circumstances, from your savings level to your employment status to the state of your health. The key is to understand the pros and cons of filing at various ages so you land on the one that works best for you.

<b>HEADLINE</b>	<b>04/14 France: Syria used chemicals in attack</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/World-News/2018/04/14/France-issues-report-with-evidence-Assad-used-chemicals-in-attack/8611523742681/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=1">https://www.upi.com/Top_News/World-News/2018/04/14/France-issues-report-with-evidence-Assad-used-chemicals-in-attack/8611523742681/?utm_source=fp&amp;utm_campaign=ls&amp;utm_medium=1</a>
<b>GIST</b>	<p>April 14 (UPI) -- In the aftermath of the early morning attacks on Syria, France declassified a report with details they say prove that a chemical attack in Syria last week was carried out by the regime of President Bashar Assad.</p> <p>The seven-page report, released by the Foreign Ministry on Saturday, said chemicals used in attacks on the Damascus suburb of Douma April 7 left victims with skin and cornea burns, suffocation and other breathing difficulties and extreme salivation and secretions from the mouth and nose, all markers</p>

	<p>consistent with the effects of chlorine gas.</p> <p>The report also states other strikes using chemical weapons have been carried out by the Syrian government since April 4, 2017, when a chemical attack in Syria's northern Idlib province left more than 80 civilians dead.</p> <p>French President Emmanuel Macron had been under pressure to back his claim that France has "proof" of Assad's role in the chemical attack in Douma.</p> <p>France joined the United States and Great Britain early Saturday in firing 105 missiles at three sites in a "proportional" attack, destroying "fundamental components" of Syria's chemical weapons infrastructure including a research center in greater Damascus, a chemical weapons storage facility and another storage facility and command center, both in Homs.</p> <p>France's conclusions were supported U.S. officials who determined that chlorine and sarin, a highly toxic nerve agent, were used on the civilians in the April 7 attack.</p>

<b>HEADLINE</b>	<b>04/15 Gun rights rallies at state capitols</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/politics/2018/04/15/gun-rights-supporters-hold-rallies-at-state-capitols-across-us.html">http://www.foxnews.com/politics/2018/04/15/gun-rights-supporters-hold-rallies-at-state-capitols-across-us.html</a>

<p><b>GIST</b></p>	<p>Gun rights advocates rallied at state capitols across the country on Saturday to make their voices heard amid recent efforts to impose stricter gun-control laws that they fear undermine their Second Amendment rights.</p> <p>Peaceful protesters numbering in the hundreds gathered outside statehouses from Maine to Wyoming to hear speakers warn that any restrictions on gun ownership or use could eventually lead to bans for law-abiding gun owners.</p> <p>“Gun owners have been portrayed in a negative way and it is our hope that this peaceable rally will show that we are safe, law-abiding individuals that happen to take our constitutional rights very seriously,” Dave Gulya, an organizer for the Maine event that attracted about 800 people, told the Bangor Daily News.</p> <p>The National Constitutional Coalition of Patriotic Americans sponsored the 45 planned rallies across the U.S. in support of the right to bear arms, according to the paper.</p> <p>"If you have a building and you take a brick out every so often, after a while you're not going to have a building," said Westley Williams, who joined about 100 people outside the state Supreme Court building in Cheyenne, Wyo.</p> <p>An estimated 160 Second Amendment supporters rallied in Atlanta, with some carrying firearms, flags and signs saying “Don’t Tread on Me” as they listened to speakers talk about gun rights.</p> <p>Protesters in Vermont took to the steps of the Statehouse in Montpelier, where days earlier they felt Gov. Phil Scott “betrayed” them when he signed three major gun control measures.</p> <p>“Three days ago, on these steps, we were betrayed,” Joe Nagle told the Burlington Free Press. "We were promised no new gun laws."</p> <p>The paper reported that the National Rifle Association criticized Scott, a Republican, and called on gun owners to abandon the governor, who changed his stance in February after an alleged school shooting plot shook the state.</p> <p>Saturday's protests came less than three weeks after hundreds of thousands marched in Washington, New York and elsewhere to demand tougher gun laws after the Feb. 14 school shooting in Parkland, Fla., that killed 17. Organizers of those protests demanded a ban on assault weapons and high-capacity magazines, and called for universal background checks on potential gun owners.</p> <p>Pro-gun protesters also showed up in Boston; Indianapolis; Albany, N.Y.; Austin, Texas; Des Moines, Iowa; and other cities.</p>

<p><b>HEADLINE</b></p>	<p><b>04/14 Experts: strikes won't stop Syria Assad</b></p>
<p><b>SOURCE</b></p>	<p><a href="https://www.nbcnews.com/news/world/trump-s-u-s-led-airstrike-syria-won-t-stop-n866046">https://www.nbcnews.com/news/world/trump-s-u-s-led-airstrike-syria-won-t-stop-n866046</a></p>
<p><b>GIST</b></p>	<p>The Pentagon boasted Saturday that its coordinated show of military force obliterated key chemical weapons facilities in Syria and set back the country's chemical weapons capabilities "for years."</p> <p>But military and Middle East experts say the predawn onslaught — touted by the Defense Department as "precise, overwhelming and effective" — appears to have been little more than an empty gesture and likely did not do much to alter Syrian President Bashar al-Assad's military calculus.</p> <p>Gen. Douglas Lute, the former U.S. ambassador to NATO, said that Assad's threshold for pain is very high because "he's in a fight for his life" to maintain control of his country, which has been mired in a seven-year civil war.</p>

The airstrikes, which targeted three facilities involved in research or storage of chemical weapons in western Syria, won't disable him from taking further action — whether chemical or conventional, Lute said.

"I think he's feeling reasonably good right now," Lute said of Assad. "Some of his facilities were struck, but it doesn't really challenge his hold on the country."

But experts said it's unclear how long of an impact the strike would have on Assad's weapon capabilities and whether it would dissuade him, as intended, from using chemical weapons in the future. Syria has repeatedly denied using chemical weapons against its people.

They also said the so-called red line that the Trump administration is drawing, meant as a marker for reprisals, could be problematic.

"People will see [the reasoning for the strike] and say, 'Does that mean that Bashar al-Assad has the green light to use conventional munitions against defenseless civilians?'" said former Ambassador Lincoln Bloomfield, who served in the past three Republican administrations, most recently as the assistant secretary of state for political-military affairs under President George W. Bush.

Assad, meanwhile, appeared unruffled Saturday as he strolled into the presidential palace in Damascus, briefcase in hand and mere miles from where some of the missiles struck chemical weapons depots hours earlier, according to a video released on Twitter by the Syrian regime.

While the attack may have destroyed the facilities where Syria combines its chemical agents, the strike likely will only cripple the country's ability to deploy certain agents, such as sarin gas, experts told NBC News.

Sarin was not the only agent used in the alleged chemical attack last week on the rebel stronghold of Douma, east of Damascus, senior Trump administration officials said Saturday.

Defense Secretary James Mattis told reporters Friday that chlorine gas was also used. Experts say that it's a common industrial chemical that is not difficult to produce and can be added to a barrel bomb or improvised artillery rocket.

It's unlikely Syria's ability to produce or find the chemical were inhibited by the airstrikes in any way, said Justin Bronk, a research fellow at the Royal United Services Institute in London.

The widespread use of chlorine for commercial purposes means that it is not included in the Chemical Weapons Convention that came into effect in 1997, a point readily cited by the Russian and Syrian governments. But the use of it as a gas in war or as an attachment to an explosive does constitute a war crime, experts said, and it's a simple weapon that has roots that go as far back as World War I.

That's why some experts don't think the strategic strike on chemical weapons facilities in Syria will have a long-term effect on the Assad regime, including its military operations.

"I don't think [their chemical weapons] capability will have been affected significantly at all," Bronk said. "And the delivery mechanism that is the Syrian Air Force — we have not seen much in terms of bases being hit as opposed to chemical facilities. The aircraft were mostly evacuated so they would have remained untouched."

HEADLINE	<b>04/14 Closer look at targets hit in Syria</b>
SOURCE	<a href="https://www.cbsnews.com/news/syrian-airstrikes-hit-chemical-weapons-facilities-2018-04-14/">https://www.cbsnews.com/news/syrian-airstrikes-hit-chemical-weapons-facilities-2018-04-14/</a>
GIST	<p>The U.S., together with the U.K. and France, targeted three sites in Syria overnight in response to the Syrian regime's alleged use of chemical weapons on civilians last weekend. The Pentagon said a total of 105 weapons were launched in the operation.</p> <p>"This is going to set the Syrian chemical weapons program back for years," Lt. Gen. Kenneth McKenzie, a director of the Joint Chiefs of Staff, said Saturday morning.</p> <p>Chief Pentagon spokeswoman Dana White described the target choices as "very methodical" and called it a "deliberate decision" to go after chemical weapons facilities.</p> <p>"The strikes went at the very heart of the enterprise to the research, to develop, to storage. So we are very confident that we have significantly crippled Assad's ability to produce these weapons," White said.</p> <p><b>Barzeh research and development center, Damascus</b> The Pentagon said 76 missiles were aimed at the research center located northeast of central Damascus. McKenzie said 57 of the missiles were Tomahawk missiles, adding that the strikes "successfully destroyed" three buildings in the city.</p> <p>The research center was used for development, production and testing of chemical and biological warfare technology, Chairman of the Joint Chiefs Gen. Joseph Dunford said at a news conference Friday.</p> <p>Britain's Ministry of Defense said the facility was a former missile base where the Syrian regime keeps "chemical weapon precursors stockpiled in breach of Syria's obligations under the Chemical Weapons Convention." It said the facility is located "some distance from any known concentrations of civilian habitation, reducing yet further any such risk."</p> <p>Images from The Associated showed the damage to the facility that was essentially reduced to rubble.</p> <p>CBS News correspondent Seth Doane visited the site Saturday where the complex once stood. He spoke with a scientist only identified as Sayed who said his office -- and life's work -- were inside the building.</p> <p>Sayed said he'd worked there for 38 years and cried when he saw the complex in ruins. He said it's "totally incorrect" that chemical weapons were being developed there. "The Organization for the Prohibition of Chemical Weapons (OPCW) visited here and didn't report anything wrong with this place," he said.</p> <p><b>Him Shinshar chemical weapons storage site, west of Homs</b> The facility is located 15 miles west of Homs and was the primary location of Syrian serin and precursor production equipment, Dunford said.</p>

Twenty-two weapons were aimed at the site, including naval cruise missiles and scout teams, McKenzie said Saturday.

### **Second chemical weapons storage site, west of Homs**

Seven missiles targeted the bunker, which was successfully hit, Gen. McKenzie said Saturday. He said the missiles were delivered from British, French and U.S. from the Mediterranean, and each strike hit around 4 a.m. in Syria.

"This strike aimed to deliver a clear and unambiguous message to the Syrian regime that their use of chemical weapons against innocent civilians is inexcusable and to deter any future use of chemical weapons," McKenzie said Saturday.

He said initial indications showed the strikes accomplished the Pentagon's "military objections without material interference from Syria."

<b>HEADLINE</b>	<b>04/14 Warship ruse, new stealth missiles</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-04-14/warship-ruse-and-new-stealth-missiles-how-they-attacked-syria">https://www.bloomberg.com/news/articles/2018-04-14/warship-ruse-and-new-stealth-missiles-how-they-attacked-syria</a>
<b>GIST</b>	<p>President Donald Trump's outrage over another apparent chemical weapons attack by Syrian President Bashar al-Assad was clear. And for the second time in his presidency, the U.S. commander-in-chief demanded retaliation.</p> <p>As images of sick or dying children flooded global media all week, the U.S. guided-missile destroyer USS Winston Churchill churned toward the Mediterranean to join a flotilla of allied warships, including another U.S. destroyer, the USS Donald Cook.</p> <p>It was a ruse.</p> <p>While both vessels carry as many as 90 Tomahawk missiles -- the main weapon used in the Friday evening strike on Syria -- neither ship in the end fired a shot. Instead, according to a person familiar with White House war planning, they were part of a plan to distract Russia and its Syrian ally from an assault Assad's government could do little to defend itself against.</p> <p>It worked. Pentagon officials on Saturday said they faced little resistance to their targeted attack on what they said were three Syrian chemical weapons facilities. Most of the Syrian countermeasures, including defensive ballistic missiles, were fired after U.S. and allied weapons hit their targets, Lieutenant General Kenneth McKenzie told reporters on Saturday.</p> <p>"No Syrian weapon had any effect on anything we did," McKenzie said. He described the joint U.S., French and U.K. strike as "precise, overwhelming and effective."</p> <p>Brazen as it was perceived to be, the Assad regime's decision to again use chemical weapons on own people didn't by itself spur the U.S. to act. The Trump administration was also motivated by how closely the attack followed the use of a nerve agent to poison a Russian ex-spy and his daughter in England in March, an action the U.K. government and its allies blamed on Russia.</p> <p>The English incident added to concerns held by Trump, his top aides, and leaders in the U.K. and France that not responding might encourage proliferation of chemical weapons, according to two administration officials who spoke on condition of anonymity to discuss the deliberations.</p> <p>As the strategy of how to respond took shape, Trump appeared to telegraph his intentions to the world with a tweet on April 11: "Russia vows to shoot down any and all missiles fired at Syria. Get ready Russia,</p>

because they will be coming, nice and new and ‘smart!’”

Analysts suggested Assad’s regime would respond to Trump’s threats by protectively moving weapons and personnel away from likely targets. An already difficult battle plan -- which required hitting Assad without provoking Russian reprisals or injecting the U.S. further into Syria’s seven-year civil war -- was getting harder.

In the White House, Trump met with military officials and made several calls to his French and British counterparts, President Emmanuel Macron and Prime Minister Theresa May, with the goal of following through on a threat to impose a “big price” on Syria -- a vow made in an earlier tweet, on April 8.

During a meeting with the National Security Council and top military leaders early in the week, Trump had been presented five large target options -- called sets -- for potential strikes, according to the person familiar with the plans. The president largely listened as Pentagon chief Jim Mattis, Joint Chiefs Chairman Marine Corps General Joe Dunford and other military leaders did most of the talking. New National Security Adviser John Bolton -- who started work on April 9 -- and Vice President Mike Pence were also on hand.

The president asked Bolton and the military leaders to justify each potential target, and was particularly focused on limiting the risk of escalation by Russia. There was unanimity among Trump’s top national security staff about conducting strikes but debate about how hard to hit the Syrians, the person said.

Trump, who just a week earlier said he wanted to pull U.S. troops out of Syria “very soon,” didn’t want to become drawn into the civil war there and instead focused the military response on deterring the use of chemical weapons, according to the official.

With the allies on board and the USS Winston Churchill arriving in the Mediterranean region, the attack was nearly under way.

As the president addressed the nation at 9 p.m. Washington time, on Friday, a barrage of 105 U.S., U.K. and French missiles converged on Syria. They came from the Red Sea, the Arabian Gulf and the Mediterranean, homing in from three directions to overwhelm whatever missile defenses Assad’s regime might deploy. Russia’s more advanced air defense system didn’t engage the allied weapons.

According to the Pentagon, the allied weaponry included 19 new “Extended-Range” stealthy Joint Air-to-Surface Standoff Attack Munitions launched by two B-1B bombers based out of Al Udeid Air Base, Qatar, and six Tomahawk cruise missiles launched from the Virginia-class USS John Warner submarine. The bomber-launched missiles, built by Lockheed Martin Corp., had never been used in combat.

The cruiser USS Monterey fired 30 Tomahawks and the destroyer USS Laboon fired seven Tomahawks from the Red Sea. The destroyer USS Higgins fired 23 Tomahawks from the North Arabian Gulf, according to McKenzie.

The weapons also included French SCALP-EG cruise missiles and British Storm Shadow standoff missiles launched by Tornado and Typhoon jets. Nine SCALP missiles were fired at what the Pentagon said was a chemical weapons storage complex at Hims-Shinshar, along with two SCALPS, nine Tomahawks and eight Storm Shadows.

<b>HEADLINE</b>	<b>04/15 Caravan migrants on freight train to US</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/04/14/americas/central-america-migrant-caravan-train/index.html">https://www.cnn.com/2018/04/14/americas/central-america-migrant-caravan-train/index.html</a>
<b>GIST</b>	Tultitlán, Mexico (CNN)A stampede of Central American migrants rushed to the tracks Saturday when the first whistle of the train rang out.

After a few days in Mexico City, it was time to continue their journey north to the US border. About 500 migrants traveling in a caravan climbed onto the freight train just outside the Mexican city of Tultitlán.

They were about 1,500 miles south of the US-Mexico border as they started heading northwest to the city of Celaya.

As the train slowed down, migrants scrambled around the train cars to find a way to climb aboard, throwing small bags of belongings onto the train and hastily helping one another.

Police and guards watched from a few feet away. Some took photos. None took action to stop the migrants as they climbed the train.

As migrants set makeshift tents with blankets to protect them from the dusty wind and scorching sun, people from the ground and a bridge above waved. Some tossed water and snacks. As the train pulled forward, one migrant yelled out, "Gracias Mexico!" ("Thank you Mexico!")

More than 1,100 people set on the journey across Mexico on March 25, but they have dispersed into smaller groups as they headed north, organizers said.

The government of Mexico has granted many of the migrants temporary permission to stay in the country. Most of the migrants agree Mexico has been a welcoming place. Police have escorted the caravan at times and stopped traffic to help the convoys stay together. Churches and shelters have opened their doors, providing food and a safe place to sleep. Some of the migrants have decided to stay in Mexico.

The migrants, most from Honduras, say they are fleeing violence and poverty. Honduras and El Salvador are among the countries with the highest homicide rates in the world.

<b>HEADLINE</b>	<b>04/14 US confident Syria used chlorine, sarin</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/04/14/politics/us-chlorine-sarin-syria/index.html">https://www.cnn.com/2018/04/14/politics/us-chlorine-sarin-syria/index.html</a>
<b>GIST</b>	<p>(CNN)Senior US officials expressed confidence Saturday that both chlorine and sarin gas were used in Syria's alleged chemical weapons attack on the Damascus enclave of Douma last week -- a conclusion that went a step further than Vice President Mike Pence did in his remarks earlier Saturday.</p> <p>"While the available information is much greater on the chlorine use, we do have significant information that also points to sarin use," a senior administration official said on a call with reporters, citing reports from media, nongovernmental organizations and other open sources.</p> <p>"They do point to miosis -- constricted pupils -- convulsions and disruptions to central nervous systems. Those symptoms don't come from chlorine. They come from nerve agents. ... It's a much more efficient weapon, unfortunately, the way the regime has been using it, and it's resulted in higher deaths, it resulted in terrible pictures."</p> <p>The comments come a day after the United States launched targeted airstrikes against suspected chemical weapons facilities in Syria in coordination with the British and French.</p> <p>Earlier Saturday, Pence held off from expressing a final judgment about whether sarin gas was deployed in the chemical weapons attack.</p> <p>"Chlorine and possibly nerve agents were used," Pence said during his address at the Summit of the Americas in Peru.</p> <p>Another administration official laid out evidence on Saturday for the United States' conclusion that Syrian President Bashar al-Assad's government was behind the chemical weapons attack; that included</p>

eyewitness accounts of Syrian government helicopters circling the site of the attack on April 7 and high-resolution photos that "clearly" documented asphyxiation and foaming at the mouth.

"Assad has established himself as a user of chemical weapons" from past attacks, the official added.

Another official said, "We have incontrovertible evidence from the photos" that chemical weapons were used and it was "clear to the international community."

The administration maintains that it "exhausted every avenue in the international community" for diplomacy and sanctions before launching the missile strike, and that the President and allies felt the appropriate response was military action.

US officials said they hope the strike will serve to deter Syria's government from using chemical weapons in the future.

"If this step does not succeed, we will be prepared to act again," an official said on the call, echoing what other top administration officials emphasized on Saturday. Whether or not that happens is up to Syria and also Russia, the officials said.

<b>HEADLINE</b>	<b>04/15 Israel: Hamas tunnel network destroyed</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/israel-destroys-hamas-tunnel-network-gaza-54478033?">http://abcnews.go.com/International/wireStory/israel-destroys-hamas-tunnel-network-gaza-54478033?</a>
<b>GIST</b>	<p>The Israeli military said Sunday it has destroyed a Gaza attack tunnel built by Hamas militants that penetrated Israeli territory.</p> <p>Lt. Col. Jonathan Conricus, a military spokesman, said the new Hamas tunnel was connected to a network dug in the northern Gaza Strip and entered Israel near the Israeli community of Nahal Oz. It's the fifth such Hamas tunnel Israel has destroyed in as many months.</p> <p>Conricus said the tunnel was adjacent to the site of recent mass protests, which Israel says Hamas is using as a cover for attacks.</p> <p>Conricus said Hamas began building the tunnel following the 2014 war. Israel has placed a high priority on halting the tunnel threat since Hamas infiltrated Israel during the war. Although they did not manage to reach civilian areas, the infiltrations caught Israel off guard, with one attack killing five soldiers, and terrified the local population.</p> <p>In two weeks of protests, 28 Palestinians have been killed and more than 1,500 wounded by Israeli fire. The marches have been organized by Gaza's militant Hamas rulers, but large turnouts on two preceding Fridays were also driven by Gaza's dire living conditions and desperation among the territory's 2 million residents, who have been enduring a crippling border closure by Israel and Egypt since 2007.</p> <p>Defense Minister Avigdor Lieberman said this was the longest and deepest tunnel Israel has discovered thus far.</p> <p>"It's a tunnel that cost millions of dollars to dig, money that instead of going to ease the hardship of Gaza's residents has sunk in the sand," he said. "Residents of Gaza: Hamas is burning your money on tunnels to nowhere."</p> <p>Hamas had no immediate comment.</p>

<b>HEADLINE</b>	<b>04/15 France urges Russia join peace push</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/france-urges-russia-join-peace-push-syria-strike-54478584?">http://abcnews.go.com/International/wireStory/france-urges-russia-join-peace-push-syria-strike-54478584?</a>
<b>GIST</b>	<p>France is urging Russia to join a push for a political solution in Syria after joint U.S., French and British attacks on Syrian chemical weapons sites.</p> <p>French Foreign Minister Jean-Yves Le Drian said in an interview published Sunday in the Journal du Dimanche newspaper that "we should join our efforts to promote a political process in Syria that would allow a way out of the crisis."</p> <p>France has continued to talk regularly with Russia even as East-West tensions have grown. French President Emmanuel Macron spoke with Russian President Vladimir Putin on Friday, hours before the Western missile strikes.</p> <p>Western countries blamed Syria's government for a chemical attack on a rebel-held area earlier this month that killed more than 40 people. The Syrian government and its ally Russia denied the allegations.</p>
<a href="#">Return to Top</a>	

HEADLINE	<b>04/14 Security Council rejects Russia outcry</b>
SOURCE	<a href="http://abcnews.go.com/International/us-locked-loaded-syria-chemical-weapons-nikki-haley/story?id=54466163&amp;cid=clicksource_4380645_1_hero_headlines_bsq_hed">http://abcnews.go.com/International/us-locked-loaded-syria-chemical-weapons-nikki-haley/story?id=54466163&amp;cid=clicksource_4380645_1_hero_headlines_bsq_hed</a>
GIST	<p>The U.S. announced that overnight airstrikes succeeded in dealing a severe blow against the Syrian government's capacity to use chemical weapons.</p> <p>But U.N. Ambassador Nikki Haley also warned Saturday that the U.S. is "locked and loaded" in case Syrian President Bashar al-Assad uses chemical weapons again.</p> <p>"Last night, we successfully hit the heart of Syria's chemical weapons enterprise, and because of these actions, we are confident that we have crippled Syria's chemical weapons program," Haley said at an emergency meeting of the U.N. Security Council. "I spoke to the president this morning and he said that if the Syrian regime uses this poisonous gas again, the United States is locked and loaded."</p> <p>She added, "When our president draws a red line, our president enforces the red line."</p> <p>The Security Council meanwhile rejected a Russian resolution calling for condemnation of the "aggression" by the U.S. and its allies against Syria. Only two other countries, China and Bolivia, joined Russia in supporting the resolution. Eight countries voted against it, and three abstained. A resolution needs at least nine "yes" votes to pass.</p> <p>Anatoly Antonov, Russia's ambassador to the United States, tweeted that the strike would have repercussions. "We warned that such actions will not be left without consequences."</p>

HEADLINE	<b>04/13 Report: Seattle w/most regressive taxes</b>
SOURCE	<a href="http://mynorthwest.com/953315/seattle-regressive-taxes/">http://mynorthwest.com/953315/seattle-regressive-taxes/</a>
GIST	<p>Washington state's tax system has been called the most unfair to the poor in the nation. Now, Seattle is ranked as having the most regressive taxes in the state.</p> <p>According to a report from the Economic Opportunity Institute, a Seattle household making \$25,000 per year pays 17 percent of its income in state and local taxes. Meanwhile, a household earning \$250,000 pays just 4.4 percent.</p> <p>"Even if public expenditures are relatively progressive in nature, city projects are increasingly being built on the backs of those who can least afford to pay for them," the report from the Institute states.</p> <p>Seattle, the Institute criticizes, likes to imagine itself as a progressive beacon. But of the major cities in Washington, it's Spokane that has the least regressive taxes. A household earning \$25,000 has 10.4 percent of its income taxed</p> <p>Of course, King County voters tend to approve higher taxes to fund schools and projects more than outside cities.</p> <p>But Seattle is trapped within the state's already regressive tax system.</p> <p>"Every major statewide tax in Washington is regressive," according to the report.</p>

HEADLINE	<b>04/13 Probe: SPD cops violated force policy</b>
SOURCE	<a href="https://www.seattletimes.com/seattle-news/two-seattle-officers-violated-force-policies-in-eastlake-">https://www.seattletimes.com/seattle-news/two-seattle-officers-violated-force-policies-in-eastlake-</a>

	<a href="#"><u>shooting-internal-probe-finds/</u></a>
GIST	<p>Two Seattle police officers violated policies when they fired a barrage of gunshots that injured the driver and passenger of a stolen car fleeing an Eastlake alley in October, the department's internal-investigation unit has found.</p> <p>The Office of Police Accountability (OPA) recommended that allegations regarding excessive use of force, use of deadly force on a fleeing person and firing weapons at a moving vehicle be sustained, said Andrew Myerberg, OPA's civilian director.</p> <p>Myerberg said the officers' chain of command agreed with the findings, which were jointly submitted to Interim Police Chief Carmen Best for a final decision and any potential disciplinary action.</p> <p>Neither officer was named by the OPA, but the department has previously identified them as Officer Kenneth Martin and Officer Tabitha Sexton. They will be given the opportunity to meet with the chief before a decision is reached. Hearings have been set for May.</p> <p>In Martin's case, the OPA recommended that an additional allegation of failure to de-escalate the situation also be sustained.</p> <p>No details on the findings were released. The Seattle Times has filed a public-disclosure request for the OPA's written findings and analysis. Kevin Stuckey, president of the Seattle Police Officers' Guild, could not be reached for comment.</p> <p>On Oct. 8, Martin and Sexton fired dozens of rounds at a fleeing Subaru in an alley west of the 2200 block of Yale Avenue East. Video footage captured by officers' body cameras and dashboard cameras was released by the department's public-affairs office two days after the incident.</p> <p>Police had responded to a call reporting two people using drugs and possibly handling a gun inside a car.</p> <p>The video shows officers moving toward a car as an officer asks "is that them right there?" Officers then yell for one of the individuals to get on the ground, but the person ran toward the car.</p> <p>The video then shows four officers running toward the car, with one of them — identified as Martin — standing in front of the car and moving out of the way as the driver leaves a parking stall and heads north through the alley.</p> <p>Martin and Sexton initially opened fire as the car pulled out. The driver briefly stopped the car twice as the officers opened fire again with numerous gunshots. The driver then turned the vehicle right and drove off.</p> <p>The driver and passenger were not seriously hurt and were arrested later in Everett.</p> <p>In charging documents filed against both occupants of the car, a Seattle police detective wrote that as officers approached the car on foot, they shouted commands that the suspects ignored.</p> <p>Martin was standing in front the car, and patrol-car video showed the driver accelerated forward and struck Martin as he was trying to get out of the way, according to the detective.</p> <p>"To stop the imminent threat, officers fired their firearms," the detective wrote.</p> <p>One issue to arise in the incident was whether the officers had justification to fire the second volley of shots, when the car appeared to be driving away.</p> <p>According to the Police Department's manual, officers shouldn't fire at a moving vehicle "unless a person in the vehicle is immediately threatening the officer or another person with deadly force by means other than the vehicle." The manual states that the moving vehicle itself shall not "presumptively constitute a threat that justifies" deadly force.</p>

Officers also should move out of the path of a vehicle unless the person is immediately threatening the officer or another person.

King County prosecutors conducted a preliminary review of the incident, but tentatively declined to bring criminal charges against Martin and Sexton. Prosecutors, who will make a final determination later, returned the case to the Police Department for further investigation.

Myerberg said the OPA didn't reach a conclusion on whether the two officers committed violations of law, leaving that decision to prosecutors.

Prosecutors charged a man and his mother in connection with the stolen car after their fingerprints were found on the Subaru Impreza, according to court documents. The car had been found abandoned in North King County.

Joshua Brooks, 21, the driver, pleaded guilty April 5 to possession of a stolen vehicle and is awaiting sentencing. His mother, Wendy Lee, 46, who pleaded guilty to taking a motor vehicle without permission, was sentenced in December to 49 days of time served in the King County Jail.

Before they were booked into jail, Brooks and Lee were both treated at Harborview Medical Center for injuries suffered in the shooting. Brooks had two gunshot wounds to his lower back, and Lee's lower back and legs were peppered with tiny pieces of shrapnel, according to court documents.

<b>HEADLINE</b>	<b>04/13 Everett, KCSO plan new gang units</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/04/13/gang-units-what-are-they-and-do-we-need-them/">http://q13fox.com/2018/04/13/gang-units-what-are-they-and-do-we-need-them/</a>
<b>GIST</b>	<p>EVERETT, Wash. – From Snohomish to Pierce counties, we've seen an increase in gang violence.</p> <p>Just months after Everett elected a new mayor, police say a 13-year-old with gang affiliation shot and killed a 14-year-old.</p> <p>"My focus is on public safety and gang violence. We're seeing a real uptick and it's frightening, the age of the kids we're seeing," said Everett Mayor Cassie Franklin.</p> <p>To combat that, the Everett Police Department is now working on putting together a new gang unit.</p> <p>There's talk of the same thing in King County after 13-year-old Elizabeth Juarez and 19-year-old Eveona Cortez were shot and killed in Burien in late March.</p> <p>"Talking to the sheriff {Mitzi Johanknecht} today, she would like to get a gang unit, maybe not just in King County maybe not just in Burien, but getting all the agencies involved," said county sheriff's Sgt. Ryan Abbott.</p> <p>Jonathan Wender is a 20-year police veteran and the CEO and president of Polis Soutlions, a consulting firm that helps train police departments across the nation in partnership with the Department of Justice. He says now is the time to bring back gang units that were disbanded across the Puget Sound.</p> <p>"We have an uptick in gang activity now and we want to reallocate those resources to address that issue," said Wender.</p> <p>He says gang unit members play a vital role in stopping gun violence. But he says it means either adding more funding to hire more officers or shifting some current officers and deputies to the newly formed gang unit.</p>

	<p>“It means they’re good investigators, they have unimpeachable honesty, they’ve got credibility, they can be firm, and they can be fair,” said Wender.</p> <p>Wender says gang units are more than just about learning gang signs, or knowing who wears which color, or if this is graffiti or tagging.</p> <p>“It’s really not a secret who those folks are. The challenge is that you can build up a relationship with them, that you can deal with crimes when they occur but most importantly prevent the crimes from occurring in the first place,” said Wender.</p> <p>The emotions from a vigil in Burien for the two slain teenagers show the damage gangs can do in a community, but Wender says a gang unit isn’t the only solution.</p> <p>“It’s not an either-or proposition. Do we need more case workers? Do we need more drug and alcohol treatment, better mental health care? Absolutely,” said Wender.</p> <p>In about a month, Everett police say they’ll have the groundwork laid for the new gang unit. It’ll be just in time for the normal uptick in gun and gang violence we normally see across the area during the warmer, summer months.</p>

<b>HEADLINE</b>	<b>04/13 Seattle: standard min. wage for disabled</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/local/seattle-becomes-first-in-country-to-require-standard-minimum-wage-for-disabled/731855072">https://www.kiro7.com/news/local/seattle-becomes-first-in-country-to-require-standard-minimum-wage-for-disabled/731855072</a>
<b>GIST</b>	<p>SEATTLE - Seattle Mayor Durkan today signed legislation banning the allowance of sub-minimum wages for people with disabilities.</p> <p>For KIRO 7 News at 5, Essex Porter was at Seattle City Hall today, where the bill was signed to promote integration and equal treatment for people with disabilities.</p> <p>The bill, authored by Councilmember Teresa Mosqueda, made Seattle the first city in the U.S. to require standard minimum wage for disabled people.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>04/13 DOJ demands Seattle documents</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/local/doj-demands-seattle-give-documents-related-to-compliance-with-immigration-authorities/731916316">https://www.kiro7.com/news/local/doj-demands-seattle-give-documents-related-to-compliance-with-immigration-authorities/731916316</a>
<b>GIST</b>	<p>The U.S. Department of Justice on Thursday, April 12, sent letters to the city of Seattle and the state of Vermont demanding they produce documents that show whether each jurisdiction is “unlawfully restricting information sharing by its law enforcement officers with federal immigration authorities.”</p> <p>An excerpt from the DOJ announcement is below:</p> <p>"The Department of Justice previously contacted these jurisdictions and raised concerns about laws, policies, or practices that may violate 8 U.S.C. § 1373, a federal statute that promotes information sharing related to immigration enforcement and with which compliance is a condition of FY2016 and FY2017 Byrne JAG awards.</p> <p>"The letters also state that failure to respond, respond completely, or respond in a timely manner will be subject to a Department of Justice subpoena."</p> <p><b>What’s happening Friday?</b></p>

The federal government is demanding documentation proving that local law enforcement has been compliant with a law that requires cooperation with federal agencies, including ICE. It's telling Seattle to hand over documents to that end or they will be subpoenaed anyway. If Seattle is found to be uncompliant, it could face federal funding cuts.

### **What federal funding?**

Byrne Grants. The letter says: "These materials are critical to our ongoing review. Should the Department determine your jurisdiction is out of compliance with section 1373, the Department may, as detailed in your award documents, seek return of your FY 2016 grant funds, require additional conditions for receipt of any FY 2017 Byrne JAG funding for which you have applied, and/or deem you ineligible for FY 2017 Byrne JAG funds."

### **What's a Byrne Grant?**

The Edward Byrne Memorial Justice Assistance Grants Program (Byrne JAG) is the cornerstone federal crime-fighting program, enabling communities to target resources to their most pressing local needs.

### **How has it helped the state of Washington?**

Law enforcement agencies in Western Washington get nearly \$8 million in federal grant funding for a range of projects designed to enhance community safety and improve crime fighting technologies, announced U.S. Attorney Annette L. Hayes.

King County called this kind of action bullying last July.

**NEW FEDERAL REQUIREMENT:** Certify compliance with Section 1373, a federal statute applicable to state and local governments that generally bars restrictions on communications between state and local agencies and officials at the Department of Homeland Security

**CURRENT KING COUNTY POLICY:** King County has always been in compliance with U.S. Code Section 1373. As it relates to immigration enforcement, King County does not ask people for their immigration status and does not collect immigration information

<b>HEADLINE</b>	<b>04/14 Putin sits back as US strikes Syria</b>
<b>SOURCE</b>	<a href="https://www.stripes.com/news/europe/putin-sits-back-as-us-allies-strike-syria-1.522046">https://www.stripes.com/news/europe/putin-sits-back-as-us-allies-strike-syria-1.522046</a>
<b>GIST</b>	<p>MOSCOW — Facing a stark choice between engaging the United States, Britain and France in combat or passively watching them strike his ally, President Vladimir Putin has opted for the peaceful route. That cautious response may dent the Russian leader's tough-man image but it won't undermine his gains in Syria or erode his authority at home.</p> <p>The Kremlin had warned Washington that Russia would fend off any strike that jeopardized its servicemen in Syria, and the West respected the red line by giving advance notice of Saturday's attack, just as it did a year ago when it struck a Syrian air base. Russia had sat idle back then, but this time, it had threatened to retaliate.</p> <p>Such a clash could have quickly spun out of control — an extremely dangerous scenario that was widely compared to the 1962 Cuban missile crisis, when the world narrowly escaped a nuclear conflict.</p> <p>"With our allies, we ensured that the Russians were warned ahead of time," said French Defense Minister Florence Parly. The U.S.-led strike was a response to a purported chemical attack on civilians in the Syrian town of Douma on April 7. Russia said its experts found no trace of chemical agents.</p>

A senior French official noted that President Emmanuel Macron did not tell Putin about the strikes when they spoke on the phone Friday, but "certain de-confliction mechanisms" had already been triggered by that point, and "both knew that a new phase was going to begin quickly."

Putin condemned Saturday's strikes as an "act of aggression" that will worsen the humanitarian catastrophe in Syria and have a "destructive influence on the entire system of international relations." He criticized Washington and its allies for attacking without waiting for inspectors from the international chemical weapons watchdog group to visit Douma, just outside Damascus.

The Russian military said its air defenses at two bases in Syria tracked the incoming missiles but didn't engage them.

Russian social media buzzed Saturday with angry nationalist comments blasting Putin for failing to protect his ally. But state TV focused on criticizing the West for acting on the basis of what Moscow called a faked chemical attack.

The Kremlin's tight control over the media will help Putin avoid any significant damage to his carefully nurtured image of a strong leader.

In fact, his cautious stance could boost his popularity further amid fears of war that swept Russia. In recent days, state media have been offering tips on how to behave in a nuclear conflict and what supplies to take to bomb shelters.

Most Russians will now heave a sigh of relief and feel grateful to Putin for pulling back from the brink. State TV channels compared what they described as U.S. President Donald Trump's reckless action with the responsible, statesmanlike stance taken by Putin.

Fyodor Lukyanov, head of the Council for Foreign and Defense Policies, an association of top Russian foreign policy and security experts, said on state TV that Moscow's warning to strike back "clearly hasn't come unnoticed by the Pentagon, and the strike was quite careful."

The Kremlin will also use the crisis to advance its narrative of an aggressive West that plunges the world into chaos and disregards international law. Russian officials and lawmakers compared it to the 2003 invasion of Iraq that was launched on claims that Baghdad was developing suspected nuclear weapons — allegations that proved to be false.

Commentators on state TV argued that Trump and British Prime Minister Theresa May launched the attack to distract attention from their political problems at home.

For now, Putin has limited his response to calling an urgent meeting of the U.N. Security Council.

No military measures were immediately announced, but in a clear warning to the U.S. and its allies, Col. Gen. Sergei Rudskoi of the Russian military's General Staff said Moscow could boost Syria's Soviet-era air defense assets with batteries of state-of-the-art S-300 missiles. He noted that Moscow so far has heeded Western requests not to provide the missiles to Damascus, but said it may now reconsider.

Rudskoi added that Moscow could also supply long-range missiles to unidentified other countries, a possible reference to Iran that has taken deliveries of S-300s in the past.

The statement clearly was aimed at discouraging the West from more attacks on Syria that could endanger Assad's gains on the battlefield, where Russian support has helped him secure control of most strategic areas.

<b>HEADLINE</b>	<b>04/13 Arizona to require 'travel ID' for TSA</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/travel/2018/04/13/arizona-residents-will-soon-need-travel-id-to-board-planes.html">http://www.foxnews.com/travel/2018/04/13/arizona-residents-will-soon-need-travel-id-to-board-planes.html</a>
<b>GIST</b>	<p>The Arizona Department of Transportation has announced that state residents will require a new form of identification to pass through Transportation Security Administration screeners in the near future.</p> <p>As of Oct. 1, 2020, Grand Canyon state residents traveling out of Phoenix Sky Harbor International, Phoenix Mesa-Gateway, Flagstaff, Tucson International and Yuma International airports will need to carry "Voluntary Travel IDs" or be grounded, AZ Family is reporting.</p> <p>The new ID will also be requisite to access restricted federal buildings and military bases, as standard credentials will no longer suffice.</p> <p>Minors under age 18 will not be required to have the new ID if they are traveling with an adult who does.</p> <p>According to AZ Central, driver's licenses are not compliant with the REAL ID Act passed by Congress in 2005, which amped up identification requirements for air travelers in the wake of 9/11. To compensate, the Arizona Legislature passed a law that said a license or card holder must voluntarily take steps to secure a Voluntary Travel ID.</p> <p>"Now is a great time to get a Voluntary Travel ID because the federal deadline gets closer every day," Motor Vehicle Division (MVD) Director Eric Jorgensen told AZ Family.</p> <p>"MVD is making this process simple. Customers can go to ServiceArizona.com and make an office appointment. The website provides information about what documents customers should bring with them to meet the REAL ID requirements for the Voluntary Travel ID."</p> <p>The Voluntary Travel ID's cost \$25 and are valid for eight years, according to the Arizona Department of Transportation. The new ID sets itself apart from the standard state driver's license with a gold star in the top right corner.</p>

	<p>While the new measures may seem intense, Arizona is not alone in increasing travel security.</p> <p>In correlation with the 2005 REAL ID Act, as of Jan. 22, 2018, residents of Kentucky, Maine, Minnesota, Missouri, Montana, Oklahoma, Pennsylvania, South Carolina and Washington were supposed to be required to have their passports to fly anywhere, although the federal government has granted extensions.</p>

<b>HEADLINE</b>	<b>04/13 Death involves 911 system w/issues</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/kyle-plushs-death-is-latest-incident-involving-911-system-riddled-with-issues/">https://www.cbsnews.com/news/kyle-plushs-death-is-latest-incident-involving-911-system-riddled-with-issues/</a>
<b>GIST</b>	<p>A teenager trapped in a minivan made desperate pleas to 9-1-1 for help, but responders didn't get there in time. It happened in Cincinnati -- focusing new attention on the city's troubled emergency response system.</p> <p>Kyle Plush, 16, had to use voice commands to call 911. He was trapped in the back of his minivan, while his phone was in the front.</p> <p>"I'm stuck in my van outside the Seven Hills [unintelligible] parking lot," Plush said.</p> <p>"The Seven Hills what parking lot?" the dispatcher asked.</p> <p>"Send help, I am going to die here," Plush said.</p> <p>Police said Plush was reaching for his tennis gear in the back when the third row of the 2004 Honda</p>

	<p>Odyssey collapsed, pinning him upside down and crushing his chest.</p> <p>Twelve minutes after he called, police were at the scene but couldn't locate him. While they were there, Plush called 911 again and gave specifics on his car -- and his last wishes.</p> <p>"I probably do not have much time left, so tell my mom that I love her if I die," Plush said. "I'm stuck in my gold Honda Odyssey. This is not a joke, this is not a joke, I am stuck in my gold Honda Odyssey van."</p> <p>The 911 operator, who has been put on leave, didn't relay the make or model to police, and police officers gave up after 11 minutes. She claims she couldn't hear Plush and her computer froze.</p> <p>Critics say it is the latest incident in a 911 system riddled with issues. Cincinnati's mayor John Cranley said Friday the problems of management, supervision and technology have plagued the 911 center for years.</p> <p>"Time's up for waiting for our 9-1-1 system to fix itself," said Councilman Chris Seelbach. "We have to take urgent action immediately to have a system in place that ensures that you can call three numbers and within minutes police and fire officers will be on the scene."</p> <p>Six hours after the first 911 call, Plush's father discovered his son in car. Internal police records show that the 911 operator who was put on leave, received an "unacceptable" rating for her performance.</p>

<b>HEADLINE</b>	<b>04/14 Pentagon: successfully hit every target</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/strikes-on-syria-pentagon-briefing-today-2018-04-14-live-stream-updates/">https://www.cbsnews.com/news/strikes-on-syria-pentagon-briefing-today-2018-04-14-live-stream-updates/</a>
<b>GIST</b>	<p>WASHINGTON -- Pentagon spokesperson Dana White said Saturday the U.S. and its allies "successfully hit every target" in airstrikes in Syria overnight. The U.S., U.K. and France and U.K. launched the strikes</p>

Friday night Eastern Time in response to the Syrian regime's alleged use of chemical weapons last weekend. In total, the U.S. used 105 weapons against three targets.

"I can assure you we took every measure and precaution to strike only what we targeted and — and we successfully hit every target," White told reporters Saturday.

White said the U.S. believes it has "significantly crippled" Syrian President Bashar Assad's ability to carry out a chemical weapons attack. White said the mission in Syria remains defeating the Islamic State of Iraq and Syria (ISIS), but the U.S. will not stand by while Assad attacks "innocent Syrian people."

Later Saturday morning, the U.N. Security Council was meeting at Moscow's request.

Lt. Gen. Kenneth McKenzie, the director of the Joint Staff at the Pentagon, told reporters Saturday the initial assessment is that the Defense Department accomplished its goals "without material interference" from Syrian defenses. The attempts from Syrian defenses were imprecise, in contrast to the U.S. mission, he said.

"We are confident that all of our missiles reached their targets," McKenzie emphasized, reiterating what White said.

McKenzie said, "As of right now, we are not aware of any civilian casualties," although they cannot be certain, given the defense launched by the Syrians.

Secretary of Defense James Mattis emphasized that the targets were infrastructure related to the Syrian regime's chemical weapons program, and that there are no plans at this time for further strikes.

But the president, in his address to the nation from the White House, declared that the U.S. is prepared to continue military intervention until Assad stops the use of chemical weapons.

<b>HEADLINE</b>	<b>04/14 Syrians in Damascus show defiance</b>
-----------------	--

<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/syrians-gather-capital-defiance-airstrikes-54464277?">http://abcnews.go.com/International/wireStory/syrians-gather-capital-defiance-airstrikes-54464277?</a>
<b>GIST</b>	<p>Hundreds of Syrians gathered at landmark squares in the Syrian capital Saturday, honking their car horns, flashing victory signs and waving Syrian flags in scenes of defiance that followed unprecedented joint airstrikes by the United States, France and Britain.</p> <p>A few hours earlier, before sunrise, loud explosions jolted Damascus and the sky turned orange as Syrian air defense units fired surface-to-air missiles in response to three waves of military strikes meant to punish President Bashar Assad for his alleged use of chemical weapons.</p> <p>Associated Press reporters saw smoke rising from east Damascus and what appeared to be a flame lighting up the sky. From a distance, U.S. missiles hitting suburbs of the capital sounded like thunder. Shortly after the one-hour attack ended, vehicles with loudspeakers roamed the streets of Damascus blaring nationalist songs.</p> <p>"Good souls will not be humiliated," Syria's presidency tweeted after the airstrikes began.</p> <p>Immediately after the attack, hundreds of residents gathered in Damascus' landmark Omayyad square, celebrating what they said was the army's success in shooting down or derailing some of the missiles. Many waved Syrian, Russian and Iranian flags. Some clapped their hands and danced, others drove in convoys, honking their horns in defiance.</p> <p>"We are not scared of America's missiles. We humiliated their missiles," said Mahmoud Ibrahim, half his body hanging outside his car window, waving a Syrian flag. The crowd then moved toward the nearby Damascus University where pro-government fighters danced, waving their automatic rifles over their heads.</p> <p>The seemingly limited strikes with no apparent future strategy for how to deal with the wider civil war was a cause for celebration by Assad supporters but criticized by the Syrian opposition.</p> <p>Mohammad Alloush, spokesman for the Army of Islam rebel group, called the airstrikes a "farce" in a Twitter posting. Nasr al-Hariri, a senior opposition leader, said Syrians need a strategy that leads to a political solution to "save it from the brutality of the Syrian regime."</p> <p>A Syrian military statement said in all, 110 missiles were fired by the U.S., Britain and France and that most of them were shot down or derailed. Russia's military said Syrian air defense units downed 71 out of 103 cruise missiles launched by the U.S. and its allies.</p> <p>Syrian TV called the attacks a "blatant violation of international law and shows contempt for international legitimacy."</p> <p>U.S. Defense Secretary James Mattis said there were no reports of U.S. losses during the initial airstrikes.</p>

<b>HEADLINE</b>	<b>04/14 Europe leaders back strikes on Syria</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/european-leaders-back-syria-strikes-warn-escalation-54466093?">http://abcnews.go.com/International/wireStory/european-leaders-back-syria-strikes-warn-escalation-54466093?</a>
<b>GIST</b>	<p>Many European leaders voiced support and understanding Saturday for the U.S.-led air strikes against Syria, but warned against allowing the seven-year conflict to escalate.</p> <p>_____</p> <p>"It has always been Bulgaria's position that no cause justifies the killing of innocent people, including children; that the use of chemical weapons is a war crime and the strike on Syrian targets was a response to a war crime." Bulgarian government statement. Bulgaria currently holds the rotating EU presidency.</p> <p>_____</p>

"Strikes by US, France and UK make it clear that Syrian regime together with Russia & Iran cannot continue this human tragedy, at least not without cost. The EU will stand with our allies on the side of justice." - Tweet by European Council President Donald Tusk.

---

"What has occurred in Syria in recent days goes far beyond the constant violation of cease fires. The response to these atrocities is legitimate and proportionate." - Spanish Prime Minister Mariano Rajoy.

---

"This was a limited and targeted action to strike the capacity of building or diffusing chemical arms. It cannot and should not be the start of an escalation." - Italian Premier Paolo Gentiloni.

---

"The strike against the Syrian regime that uses chemical weapons to attack the civilian population was inevitable." - Acting Czech Prime Minister Andrej Babis.

---

"We support the fact that our U.S., UK and French allies took on responsibility in this way as permanent members of the U.N. Security Council. The military strike was necessary and appropriate in order to preserve the effectiveness of the international ban on the use of chemical weapons and to warn the Syrian regime against further violations." - German Chancellor Angela Merkel.

---

"The international community has the responsibility to identify and hold accountable those responsible of any attack with chemical weapons. This was not the first time that the Syrian regime has used chemical weapons against civilians but it must be the last." - European Union Commission President Jean-Claude Juncker.

---

"The strike against the Syrian regime that uses chemical weapons to attack the civilian population was inevitable." - Acting Czech Prime Minister Andrej Babis.

---

"Belgium strongly condemns all use of chemical weapons which are a blatant violation of international law. Belgium therefore understands the military action in Syria of our American, French and British partners who have targeted identified production facilities." - Belgian government statement.

<b>HEADLINE</b>	<b>04/14 Military, chemical weapon sites targeted</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/us-strike-syria-targets-military-chemical-weapons-sites/story?id=54435901">http://abcnews.go.com/International/us-strike-syria-targets-military-chemical-weapons-sites/story?id=54435901</a>
<b>GIST</b>	<p>President Donald Trump said Friday he had ordered "precision strikes" against Syria's chemical weapons capability in conjunction with the France and the United Kingdom.</p> <p>Included in the targets was a scientific research center in the greater Damascus area, described by the Chairman of the Joint Chiefs of Staff Gen. Joseph Dunford as a center for research, development, production and testing of chemical weapons.</p> <p>Two other sites were near the city of Homs: the site of Syria's primary sarin production facility and a chemical weapons storage facility that included an important command post.</p> <p>He said that while the coalition forces had many potential targets from which to choose, the three sites</p>

	<p>were chosen for their significance to Syria's chemical weapons program and well as their location and layout, in an attempt to minimize risk to innocent civilians.</p> <p>Perhaps heeding the possibility of U.S. military action, Russian news agency Interfax reported on Wednesday that Russia's Navy will conduct military exercises off the coast of Syria on Wednesday.</p> <p>According to Syria state TV 110 rockets were launched in the attack by the U.S., U.K. and France around 3:55 a.m. Syrian time.</p>

<b>HEADLINE</b>	<b>04/14 Russia warns US of 'consequences'</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/russia-responds-us-attack-syria-actions-left-consequences/story?id=54464208&amp;cid=clicksource_4380645_1_takeover_2_column_vod_headlines">http://abcnews.go.com/International/russia-responds-us-attack-syria-actions-left-consequences/story?id=54464208&amp;cid=clicksource_4380645_1_takeover_2_column_vod_headlines</a>
<b>GIST</b>	<p>Russia, the Syrian regime's top ally, reacted strongly to the air strikes launched by the United States and its allies on Damascus and Homs early Saturday, warning of "consequences."</p> <p>The U.S., U.K. and France launched a series of strikes on three locations identified as critical to Syria's production of chemical weapons, including a scientific research center in Damascus, and a production facility and storage facility in Homs, according to U.S. Chairman of the Joint Chiefs of Staff Gen. Joseph Dunford.</p> <p>The Russian embassy in U.S. wasted no time in reacting to the strikes late Friday in the U.S., with Ambassador Anatoly Antonov saying on Twitter, "The worst apprehensions have come true. Our warnings have been left unheard."</p> <p>"A pre-designed scenario is being implemented," the statement continued. "Again, we are being threatened. We warned that such actions will not be left without consequences."</p> <p>Russia has long been an ally of Syrian President Bashar al-Assad. Syria serves as an important access point to the Mediterranean Sea for Russian ships and a hub for Russia in the Middle East. They have also supplied Assad with the military resources necessary to fight back against the rebels who nearly overthrew him in 2011.</p> <p>President Donald Trump criticized Russia in his address to the country following the launch of missiles on Friday night.</p> <p>"In 2013, President [Vladimir] Putin and his government promised the world that they would guarantee the elimination of Syria's chemical weapons," Trump said. "Assad's recent attack, and today's response, are the direct result of Russia's failure to keep that promise."</p> <p>Putin responded to Saturday's attack by calling the strikes "an act of aggression against a sovereign state that is at the forefront of the fight against terrorism."</p> <p>"The current escalation of the situation around Syria has a devastating impact on the whole system of international relations," Putin said. "History will put everything in its place, and it has already laid heavy responsibility on Washington for bloody reprisals against Yugoslavia, Iraq and Libya."</p> <p>Putin also called for an emergency meeting U.N. Security Council.</p>

<b>HEADLINE</b>	<b>04/14 US, allies strike Syria</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/trump-orders-strike-syria-response-chemical-attack/story?id=54459378">http://abcnews.go.com/International/trump-orders-strike-syria-response-chemical-attack/story?id=54459378</a>

<b>GIST</b>	<p>President Donald Trump ordered a strike on Syria Friday in response to last weekend's chemical weapons attack.</p> <p>Addressing the nation Friday evening, Trump said the strike was a joint operation with France and the United Kingdom.</p> <p>"A short time ago, I ordered the United States Armed Forces to launch precision strikes on targets associated with the chemical weapons capabilities of Syrian dictator Bashar al-Assad," Trump said.</p> <p>Trump said that the "massacre" last weekend in Syria "was a significant escalation in a pattern of chemical weapons use by that very terrible regime."</p> <p>"The evil and the despicable attack left mothers and fathers, infants and children thrashing in pain and gasping for air. These are not the actions of a man," Trump said, referring to Assad. "They are crimes of a monster instead."</p> <p>In a later briefing, Defense Secretary James Mattis said the strike demonstrates the international resolve to prevent the use of chemical weapons, saying he is "confident the Syrian regime conducted a chemical attack on innocent people in the last week."</p> <p>"Clearly the Assad regime did not get the message last year," Mattis said, adding that this time the U.S. struck harder.</p> <p>"We have gone to great lengths to avoid civilian and foreign casualties," he said. "... I believe that we sent a very strong message."</p> <p>Chairman of the Joint Chiefs of Staff Gen. Joseph Dunford said the strike specifically hit three targets associated with the production and storage of chemical weapons: a scientific research center; a storage center for sarin and its precursor components; and a chemical weapons storage facility and command post.</p> <p>"Important infrastructure was destroyed," said Dunford.</p>

## Cyber Awareness

[Top of page](#)

<b>HEADLINE</b>	<b>04/16 Changing cyber threat landscape</b>
<b>SOURCE</b>	<a href="https://cybersecurity.cioreview.com/news/the-changing-cyber-threat-landscape-nid-26065-cid-145.html">https://cybersecurity.cioreview.com/news/the-changing-cyber-threat-landscape-nid-26065-cid-145.html</a>
<b>GIST</b>	<p>Over the course of 2017, the number of global cyber attacks continued growing at a rapid pace which also resulted in the reshaping of the cybersecurity arena. With the adoption of various technology, traditional threats such as generic Trojans, ransomware, and spambots received facelifts with military-grade coding and tactics. Threats including GoldenEye and WannaCry gave numerous organizations tears and forced many to down their shutters.</p> <p>The effectiveness of these kinds of sophisticated threats can be analyzed by using lateral movement vectors that augment zero-day exploits such as EternalBlue and EternalRomance, allowing malware to 'hop' from one network to another across the globe. These targeted attacks are reshaping corporate and government digital security initiatives, while simultaneously causing fallout in the consumer space.</p> <p>The past year witnessed the rapid rise of commoditization of cybercrime, with Ransomware-as-a-Service and Malware-as-a-Service becoming easily and widely available on the dark web. Furthermore, the year also witnessed the growth of advanced services, like FUD (fully undetected), which enable attackers to upload malware to an analysis service for a fee. The past year also witnessed a new generation of IoT-based attacks known as Reaper. Analysis revealed that the attack codes were armed with exploits spanning</p>

	a variety of IoT vendors, including Linksys, NetGear, GoAhead, and Avtech. The growth of cyber attacks is simply an example of the sorts of the ongoing development of security exploits.

<b>HEADLINE</b>	<b>04/16 National Guard mission: cyber defense</b>
<b>SOURCE</b>	<a href="https://federalnewsradio.com/cyber-exposure/2018/04/national-guard-preparing-to-defend-cyberspace-for-states/">https://federalnewsradio.com/cyber-exposure/2018/04/national-guard-preparing-to-defend-cyberspace-for-states/</a>
<b>GIST</b>	<p>National Guard units are ramping up their defensive cyber capabilities across the board, and in the not-too-distant future will be able to quickly respond to cyber attacks in their home states and territories, much as they do today for natural disasters.</p> <p>“The Air National Guard (ANG) has 15 Cyber Operations Squadrons that provide Cyber Protection Teams (CPTs) and National Mission Teams (NMTs) in support of DoD cyber missions,” said Sgt. 1st Class W. Michael Houk, a spokesman for the National Guard Bureau. “In addition, the Army National Guard (ARNG) Cyber Brigade is building a full cyber brigade with five battalions consisting of 11 CPTs, five cybersecurity companies and five cyber warfare companies.”</p> <p>The guard also is actively working on cyber missions across the country.</p> <p>“ARNG personnel are currently mobilized as part of Task Force Echo under the control of Army Cyber in support of U.S Cyber Command to engineer, operate and maintain critical network infrastructure,” Houk said. “The ANG continually provides two CPTs and continually fills portions of a NMT in support of U.S. Cyber Command.”</p> <p>While guard cyber units already contribute to military missions around the globe, the National Guard’s recent efforts are a result of a 2016 Government Accountability Office study that underscored the importance of the guard’s readiness against cyber threats. At the time, many guard units had some limited cyber capabilities, but they were mostly assigned to local duties, such as protecting the online assets of the unit.</p> <p>Despite early success, the guard acknowledged that quite a few challenges remain in this new area. One is the long-standing fact that most guard personnel are part-time, something that was less of a concern when performing more traditional missions.</p> <p>“We have in our ranks people with cyber expertise gained through civilian experience,” said John Goheen, the director of communications for the National Guard Association of the United States. “The military could really use these people full time, but the salaries they command as civilians makes that challenging.”</p> <p>And it’s not just the guard that is experiencing, or will soon experience, the same situation.</p> <p>“The active military will likely run into the same problem moving forward,” Goheen said. “They train bright, young people — and then lose them to private industry. We have a place for them in the guard, but again, they will only be part-time. The military needs to find ways to tap this resource.”</p> <p>Another hurdle is one the National Guard has always experienced — that of running a branch of the national military within the jurisdictions of each individual state.</p> <p>“The nature of the National Guard enables our personnel to work with state and local authorities on critical infrastructure,” Goheen said. “In fact, a lot of guard cyber exercise involves assisting with defending power plants and water systems.”</p> <p>In an actual incident, such as an attack on a power plant through its cyber infrastructure, a state government could activate the guard, and called upon it to stop it, officials said. After it halted the main attack, a guard cyber unit could remain behind to protect the infrastructure while the critical infrastructure</p>

<p><a href="#">Return to Top</a></p>	<p>owner constructed the new cyber defenses.</p> <p>The scope and capabilities of any given state-level mission would be up to the governor of that state, not unlike traditional guard missions.</p> <p>“National Guard forces would likely respond to a cyber incident in the same manner as other domestic emergencies such as hurricanes or floods,” Houk said. “A governor may activate National Guard personnel in state-funded, State Active Duty in accordance with state and local laws and DoD policy.”</p> <p>Additionally, under the United States Code Title 32, a state governor, with approval from the secretary of Defense or the president, may activate guardsmen for homeland defense activities, or to provide support for civil authorities.</p> <p>National Guard leaders expressed confidence that the guard would soon be responding to cyber incidents on a regular basis, just like they do for floods, snowstorms and missions to maintain the peace in extraordinary circumstances. Now, maintaining the peace extends to cyberspace.</p>

<b>HEADLINE</b>	<b>04/13 India bitcoin exchange suffers setback</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/someone-stole-3-million-in-bitcoin-from-coinsecure-bitcoin-exchange/">https://www.hackread.com/someone-stole-3-million-in-bitcoin-from-coinsecure-bitcoin-exchange/</a>
<b>GIST</b>	<p>In a security notice, the Indian Bitcoin exchange Coinsecure has revealed that it has suffered a setback after 438 BTC which is over \$3 million (\$3,542,957) according to current Bitcoin price were stolen from its offline Bitcoin wallets</p> <p>The company maintains that it has never been hacked or compromised and the incident took place when its CSO Dr. Amitabh Saxena was extracting BTG (Bitcoin Gold) to distribute to its customers. Saxena, on the other hand, claims that funds were lost in the process during the extraction of the private keys.</p> <p>The company has launched a complaint with the Cyber Cell in Delhi and is also conducting an investigation with the help of cybersecurity experts. However, a look at the police complaint points to an inside job as the company’s director Mohit Kalra stated in the complaint that:</p> <p>“As the private keys are kept with Dr. Amitabh Saxena, we feel that he is making a false story to divert our attention and he might have a role to play in this entire incident. The incident reported by Dr. Amitabh Saxena does not seem convincing to us. Dr. Amitabh Saxena also has an Indian Passport and he might fly out of the country soon, therefore, his passport should be seized as he cannot fly out of the country”</p> <p>Ningning Niumai, founder of Greymeter, a social network for college students and young professionals tweeted that Dr. Amitabh Saxena was appointed almost 6 months ago by the company, therefore, handing over private keys of Coinsecure is very suspicious.</p> <p>“Dr. Amitabh Saxena appointed barely 6 months ago has the private key to Coinsecure’s wallet?!! Is he a Scapegoat?!! Very suspicious and convenient blame game after the recent RBI ruling on Bitcoin,” said Niumai.</p> <p>It is noteworthy that Coinsecure incident has occurred days after the Reserve Bank of India (RBI) barred banks and financial institutions from dealing in cryptocurrencies from April 6th, 2018.</p>

<b>HEADLINE</b>	<b>04/13 FTC: 2016 Uber hack impacted 25M</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/25-million-us-individuals-impacted-2016-uber-hack">https://www.securityweek.com/25-million-us-individuals-impacted-2016-uber-hack</a>
<b>GIST</b>	The 2016 data breach that Uber made public in November 2017 impacted over 25 million riders and drivers in the United States, the Federal Trade Commission (FTC) reveals.

	<p>The hack, which the ride-sharing company kept silent about for a year, impacted more than 57 million users globally. Hackers managed to access data stored on an Amazon Web Services (AWS) account and steal names, email addresses and mobile phone numbers of customers around the world.</p> <p>In February this year, Uber chief information security officer said that two individuals living in Canada and Florida were responsible for the massive data breach.</p> <p>In an attempt to cover up the hack, Uber paid the attackers \$100,000 through its third-party “bug bounty” program, which was designed to reward those who responsibly disclose vulnerabilities, rather than those who maliciously exploit them.</p> <p>The company came under scrutiny after the hack was made public in November 2017, and even became the target of a US criminal investigation. The data breach was revealed only three months after Uber agreed to implement new data protection measures in a settlement with the FTC over a 2014 incident.</p> <p>Now, the Commission says the ride-sharing company has agreed to expand the proposed settlement and that it will be subject to additional requirements. Under the new settlement, Uber could be subject to civil penalties if it doesn't notify the FTC of future breaches in due time.</p>

<b>HEADLINE</b>	<b>04/13 Hoaxes, scams w/school violence fears</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/email-hoaxes-and-phishing-scams-prey-off-of-school-violence-fears/article/758240/">https://www.scmagazine.com/email-hoaxes-and-phishing-scams-prey-off-of-school-violence-fears/article/758240/</a>
<b>GIST</b>	<p>A Swiss hacking group has reportedly claimed credit for using a hijacked email domain to bombard schools around the U.S. with fake threats of violence. And in related news, security awareness training provider KnowBe4 issued a warning on Thursday about a credentials phishing campaign that also preys on school shooting fears by impersonating a campus security alert.</p> <p>According to multiple news outlets, a group called the Apophis Squad sent disturbing hoax emails to school district superintendents in at least 46 states last Sunday and Monday, triggering an increased police presence and in some cases class cancellations. The emails featured the subject line "Student help!" and purported to be authored by a bullied student who threatened to show up at school "with 3 bombs, and a .22 handgun."</p> <p>The adversaries reportedly used the email address apophissquad@zonix.us, after hijacking the domain of Zonix, a Dallas-based online online gaming company that provides Minecraft servers.</p> <p>"Over the past few hours we were directly contacted by a group that threatened to send a bomb hoax spoofing our email domain in an attempt to directly smear and harm Zonix," states a series of tweets posted on Zonix's official Twitter account on Apr. 9. "We began to realize the threat was credible when we began hearing responses from school superintendents pertaining to this situation. We are aware that some schools might have been affected by this and we apologize for any inconvenience or panic that could have happened because of this situation.</p> <p>Apophis Squad's account on Twitter, meanwhile, has been suspended. But a journalist with the Union-Democrat in Sonora, Calif. reportedly made contact with one of the hackers, who said the attack's motive was to taunt law enforcement, adding "We got nothing better to do." The hacker also stated future plans to leak information originating from a U.S. Army database.</p> <p>Reportedly, the same perpetrators previously sent similar threats to UK-based schools in March 2018, using the domain of Zonix competitor VeltPvP.</p> <p>Meanwhile, an unnamed community college in Florida was recently targeted in phishing campaign</p>

	<p>spoofing its campus-wide security alerts, according to a KnowBe4 founder and CEO Stu Sjouwerman, who warns in a company blog post that this scheme could easily spread to additional educational institutions as well as companies and organizations that have established active shooter protocols.</p> <p>The email arrives with a subject line such as "IT DESK: Security Alert Reported on Campus," "IT DESK: Campus Emergency Scare" or "IT DESK: Security Concern on Campus Earlier," and instructs recipients to click a link to a memo containing proper instructions. However, the link leads to a credentials phishing page that imitates the Microsoft log-in process, which many campuses computers require.</p> <p>"What makes this particular attack so infuriating," remarks Sjouwerman, is that it exploits current concerns over active shooters on education campuses, a sensitive issue that could likely generate panicked, reflexive clicks from recipients who are already on edge over the recent shooting at Marjory Stoneman Douglas High School, also in Florida."</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>04/13 Federal agency data under siege</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/federal-agency-data-under-siege/a/d-id/1331467">http://www.darkreading.com/attacks-breaches/federal-agency-data-under-siege/a/d-id/1331467</a>
<b>GIST</b>	<p>The US government continues to grapple with the same cybersecurity challenges faced by most organizations, but it has a different set of hurdles to overcome than its private-sector counterparts. As a result, federal agencies are experiencing more data breaches than other industry sectors. Despite skyrocketing IT security spending, successful attacks are escalating across the board. Federal agencies in particular are weathering a perfect storm around data that puts agency secrets — and the personal data of over 330 million American citizens — at risk.</p> <p>According to Thales' 2018 Data Threat Report—Federal Government Edition, 57% of federal respondents reported data breaches, a threefold increase over the 18% recorded back in 2016. As many as 12% experienced multiple breaches in 2017 and in previous years.</p> <p>Many agencies are in a difficult position. Federal agencies must protect sensitive data and both thwart bad guys hunting for citizens' private data and nation-state hackers with their own agendas — in addition to grappling with perennial underfunding, understaffing, and antiquated systems that commercial enterprises tossed into the dumpster years ago. At the same time, they need to make government more accessible and transparent via digital transformation, which inevitably exposes them to more cyber threats.</p> <p>But these factors don't completely explain the growing numbers of breaches at federal agencies.</p> <p><b>Catching Up with the Private Sector</b></p> <p>Despite these troubles, agency IT security professionals are trying to stay positive, partly because spending is sharply increasing this year. "Like most other sectors, data security spending plans in the US federal sector are up compared to last year — way up," says Garrett Bekker, 451 Research's principal analyst for information security, as highlighted in the Thales report. "Perhaps more importantly, for the first time, the US federal government ranks the highest of any US vertical in terms of spending increase plans — more than nine out of 10 (93%) plan to increase security spending in 2018."</p> <p>In fact, a staggering 73% of federal agencies say their IT security spending will be much higher in 2018, according to the report. This comes after several years of IT security spending well below that of commercial enterprises.</p> <p>"The bad news is that reports by US federal respondents of successful breaches last year (57%) are far ahead of the global average (36%), and also the global federal sector (26%). Further, 70% of US federal respondents say their agencies were breached at some point in the past," says Bekker.</p>

<b>HEADLINE</b>	<b>04/16 Windows servers targeted to cryptomine</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/windows-servers-targeted-for-cryptocurrency-mining-via-iis-flaw/">https://www.bleepingcomputer.com/news/security/windows-servers-targeted-for-cryptocurrency-mining-via-iis-flaw/</a>
<b>GIST</b>	<p>Hackers are leveraging an IIS 6.0 vulnerability to take over Windows servers and install a malware strain that mines the Electroneum cryptocurrency.</p> <p>Attacks aren't widespread, as they target a quite old IIS version, but they are happening at scale.</p> <p>Hackers using former IIS 6.0 zero-day</p> <p>Hackers are using CVE-2017-7269 to take over servers. This is a vulnerability discovered by two Chinese researchers in March 2017 that affects IIS' WebDAV service. At the time it was discovered last year, the flaw was a zero-day, being under heavy exploitation for almost nine months, since June 2016.</p> <p>Microsoft initially said it was not planning to fix the flaw because IIS 6.0 was end-of-life, and so were the operating systems that shipped with IIS 6.0 by default —Windows XP and Windows Server 2003.</p> <p>But the vulnerability shared some common traits with the EXPLODINGCAN NSA exploit leaked in April 2017 by the Shadow Brokers, and it eventually received a fix in mid-June 2017.</p> <p>Since then, it's been used by at least one threat actor to deploy Monero miners on Windows servers still running the old IIS 6.0 version.</p> <p>Now, F5 Labs says it found another hacker group using the same exploit, but deploying an Electroneum miner instead of Monero.</p> <p>According to experts, the threat actor uses CVE-2017-7269 to deliver an ASCII shellcode which contains a Return-Oriented Programming (ROP) exploit chain that installs a reverse shell on vulnerable hosts.</p>

	<p>Attackers then use the reverse shell to download the miner and start the mining process. The infection process is masked by the use of the Squiblydoo technique and by disguising the miner as the legitimate lsass.exe (Local Security Authority Subsystem Service) process.</p> <p>F5 experts said the Electroneum address they found in attacks stored only \$99, suggesting they either caught the campaign at its beginning, or crooks are rotating address IDs to avoid researchers from tracking their entire operation.</p>

<b>HEADLINE</b>	<b>04/16 Russia blocks Telegram messenger</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-russia-telegram-blocking/russia-starts-blocking-telegram-messenger-regulator-idUSKBN1HN13J">https://www.reuters.com/article/us-russia-telegram-blocking/russia-starts-blocking-telegram-messenger-regulator-idUSKBN1HN13J</a>
<b>GIST</b>	<p>MOSCOW (Reuters) - Russia's state telecommunications regulator said on Monday it had begun blocking access to messenger service Telegram after the service's owner refused to comply with an order to give Russian state security access to users' secret messages.</p> <p>The watchdog, Roskomnadzor, said in a statement on its website that it had sent telecoms operators a notification about blocking access to Telegram inside Russia</p> <p>The service, set up by a Russian entrepreneur, has more than 200 million global users and is ranked as the world's ninth most popular mobile messaging app.</p> <p>Interfax news agency quoted an official at the watchdog as saying it would take several hours to complete the operation to block access. In Moscow, the Telegram app was still functioning as normal early on Monday afternoon.</p> <p>Roskomnadzor was implementing a decision handed down on Friday by a Russian court that Telegram should be blocked because it was in violation of Russian regulations.</p> <p>Telegram had refused a request by Russia's Federal Security Service (FSB) to give them access to users' encrypted messages.</p>

<b>HEADLINE</b>	<b>04/16 'Digital resurrections' bring back dead?</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/mach/science/will-digital-resurrections-let-us-bring-back-dead-ncna865806">https://www.nbcnews.com/mach/science/will-digital-resurrections-let-us-bring-back-dead-ncna865806</a>
<b>GIST</b>	<p>Humans have always looked for tangible ways to remember departed loved ones. We save letters and emails they wrote us. We look fondly at photos of them. We watch and rewatch old videos just to see their faces and hear them talk.</p> <p>But the rise of digital technologies may soon give us even more compelling ways to remember lost friends and family. These include apps that let us text with digital representations of the dead — we'd type a message and then get some sort of comforting reply — and maybe even systems that let us speak with and possibly touch realistic avatars of the ones we miss most.</p> <p>Maybe that sounds creepy, but some experts believe we'll find comfort in continuing our interactions with people whose biological existences have come to an end.</p> <p>"Many people visit the headstone of a loved one to help come to terms with their passing, and have a one-sided conversation where they think about the memory of them," says Bruce Duncan, managing director of Terasem Movement Foundation, a Bristol, Vermont-based nonprofit that promotes digital resurrections.</p> <p>"Being able to have a two-way conversation with a digital version of them, where you can be reminded of</p>

their mannerisms or behavioral patterns in an interactive way, could become a natural part of the grieving process.”

Several companies, including Luka, a San Francisco-based startup, and research organizations including the MIT Media Lab, are working on digital resurrection technology.

It goes without saying that the digital version of a person is no match for the living, breathing human being. But scientists are experimenting with algorithms that can take a person's emails and text messages and use them to generate text messages that are at least evocative of a specific person. The messages can use emojis like the dead person once did. And with data pulled from the internet, the texts can even include back-and-forths about topical things like weather and current events.

In coming years, Duncan believes, there may be browser plug-ins capable of capturing an entire life's worth of social media posts, emails, photos, and other digital data and using everything to approximate an individual's personality, complete with values and opinions.

Digital resurrection technology is unlikely to stop with chatbots. Duncan and other experts foresee a time when we'll be able to interact with lost loved ones not just via texts but in virtual reality.

“You'd be able to put on your virtual reality glasses and headset, and experience typical everyday situations with that person, like sitting at the breakfast table or taking a walk in a nearby park,” says Charlotte Runius, CEO of Fenix Begravning, a Stockholm, Sweden-based funeral planning agency that is working with AI experts to develop these technologies. “Hearing their voice and seeing them would allow you to actually feel like you're next to the person again, and you can talk to them and get replies in a much more realistic way.”

By wearing a bodysuit and gloves studded with sensors and actuators, it might even be possible to interact physically with a realistic-looking avatar of a deceased person. The technology could monitor a living person's movements, voice, and facial expressions and then later use them to direct an avatar to respond appropriately — perhaps by offering advice or giving a comforting hug.

In the distant future, one can imagine that it would be possible to create a robotic avatar of a beloved one — a bit like the scenario depicted in a popular episode of the Netflix series "Black Mirror," in which a grieving widow's late partner is resurrected in robotic form with help from his texts, photos, and emails.

The only snag with these scenarios is that much of the data used to resurrect someone would have to be collected while he or she was still alive — for instance, by having him or her speak a thousand or so words and be recorded on video.

#### EMOTIONAL COMFORT — OR PAIN?

What would it be like to interact with someone who's been brought back in digital form? Some experts say it could aid the grieving process. Others worry that interacting with a virtual representation of a person who is no longer alive would only intensify feelings of sadness and loss.

Studies have shown that bereaved people can experience grief hallucinations, and there are concerns that interacting with avatars might raise the risk.

Duncan believes that, at least for most people, the experience will be akin to watching home movies and enjoying the memories that they trigger.

“Enjoying talking to past loved ones via digital media may eventually become the future version of looking through photographs of past events... It's hard to predict the future, but just as we've adjusted to using Skype and cell phones I think we'll consider it valuable to continue some connection with a person we care about.”

HEADLINE	<b>04/15 Pushing back Russia disinformation</b>
SOURCE	<a href="https://www.nbcnews.com/politics/donald-trump/one-tiny-corner-u-s-government-pushes-back-against-russian-n866021">https://www.nbcnews.com/politics/donald-trump/one-tiny-corner-u-s-government-pushes-back-against-russian-n866021</a>
GIST	<p>WASHINGTON — When reports began to emerge last month that Russian mercenaries had attacked a U.S. base in Syria, Russia issued a flat denial, and the U.S. was silent.</p> <p>Then, leaked recordings surfaced on the internet.</p> <p>"We've had our asses f--- kicked. So one squadron f--- lost 200 people ...the Yankees knew for sure that the Russians were coming."</p> <p>The tapes seemed to show Russian guns-for-hire acknowledging a crushing defeat in the Feb. 8 incident. It was an embarrassment for the Kremlin, which was forced to admit that Russian citizens had been killed by the U.S. military — something an American general later confirmed to NBC News.</p> <p>With their election interference and ongoing manipulation of social media platforms like Twitter, the Russians have been regularly outfoxing America in the information realm, U.S. intelligence officials acknowledge. Who turned the tables this time?</p> <p>Not the White House, the State Department or the CIA. The recordings were published by a U.S.-government-funded web site called Polygraph.info, whose reporter says she got them from a source close to the Kremlin.</p> <p>Polygraph is a relatively new fact-checking arm of an obscure, diminutive media effort by the U.S. to highlight Russian misdeeds and counter Russian propaganda.</p> <p>It's an anomaly in the Trump administration — perhaps the only part of the U.S. government whose job is to regularly punch back against what experts say is a stream of Russian disinformation aimed at America and the West.</p> <p>"At the end of the day, the Russians are engaging in information warfare — they're telling lies," said John Lansing, a former television executive who oversees the effort. "And we're confronting them toe-to-toe with fact-based, truthful, professional journalism."</p> <p>Russia's proficiency at information war has been on display in the wake of the U.S.-led military strike Friday night in Syria. Russia called the strikes illegal and said the chemical weapons attacks that prompted them were staged. To get that message out, there was a 2000 percent spike in activity in the hours since the strike by fake Russian propaganda accounts on social media, a Pentagon spokeswoman said Saturday. A web site that tracks a slice of those accounts, Hamilton 68, found that they were pumping out the Russian government narrative in English.</p> <p><b>THEY'RE "EATING OUR LUNCH"</b></p> <p>The U.S. is ill-equipped to respond. Polygraph, part of the tiny corner of the government that's trying, has a staff of five that doesn't usually work on the weekends.</p> <p>"We focus mostly on Russia right now because there is a large flow of disinformation that's coming from Russia," said Jim Fry, a former Dallas television reporter who runs Polygraph from Washington.</p> <p>Polygraph is a joint venture of the Voice of America and Radio Liberty, which are funded by — but independent of — the U.S. government. They fall under the umbrella of the Broadcasting Board of Governors, whose mission is to promote freedom and democracy and "tell America's story" around the world. But they are walled off, editorially, from the administration in power.</p> <p>"The law protects us from interference by U.S. government officials," said Tom Kent, who spent 44 years at The Associated Press before becoming president of Radio Liberty and Radio Free Europe. "They can't</p>

tell us what to broadcast."

During the Cold War, the VOA and Radio Liberty sought to counter communist propaganda and funnel information to the news-starved citizenry behind the Iron Curtain.

Those muscles — and budgets — have long since atrophied. But in recent years, there have been growing calls for a new twist on that old mission.

When Lansing became CEO of the Broadcasting Board of Governors in 2015, he said he was confronted on Capitol Hill and throughout the government with a single question:

"Why are the Russians eating our lunch in terms of information warfare?"

People were talking mainly about RT, the former Russia Today, which spends hundreds of millions of dollars a year on an English language broadcast and web platform that regularly skewers American and the West. The U.S. government has labeled RT a propaganda operation.

The State Department came under criticism earlier this year when news reports highlighted its failure to spend \$120 million that had been allocated to push back on Russian propaganda abroad.

Lost in that conversation was the fact that one month into the Trump Administration, Lansing and his team launched Current Time America, a 24-hour Russian-language broadcasting and web platform. The budget was \$20 million — around one-tenth the size of RT's budget, Lansing says. But one year later, Current Time America is available on TV screens in 30 countries, and officials counted 400 million view views on social media last year.

Still, U.S. information efforts are minuscule compared to the Russian campaign. While Current Time America is available in Russia, the Russian government makes it difficult to find — keeping it off cable systems and requiring special tuning for satellite reception.

The broadcasting board's total budget this year is about \$660 million dollars, about a third of what was spent in 1991, adjusted for inflation.

"I think we should be investing more," Lansing said.

The Russian government labels the entire U.S.-funded journalism operation "propaganda" that is "part of a broader, wide-reaching American system of pressure on our country."

Irina van Dusen, who heads the effort as chief of Voice of America's Russian-language programming, knows what propaganda looks like. She grew up in the Soviet Union, listening to the VOA on an illegal short wave radio for scraps of accurate reporting.

She got her journalism degree in Moscow, but decided that if she wanted to practice real journalism, she would have to move to the West.

During the Cold War, she says, the VOA was trying to break through jamming and censorship. Now there has been a proliferation of Russian TV and web channels that put out a cacophony of news, nearly all of it favorable to Vladimir Putin. The task in 2018 is trying to break through a fog of disinformation.

The prevailing view in Russia, she said, is that "There is no truth. There is only different versions, different narratives... We stand by the fact that there is truth. And there are facts."

From a TV studio near not far from where special counsel Robert Mueller comes to work each day, Current Time America covers Washington, offering live broadcasts of Congressional hearings with simultaneous translations.

"People can listen, see how it's done, how policies are made, what questions asked, what facts are being brought up," she said.

The channel also covers Russia, to "provide Russian speaking audiences with a true portrait of the society, you know? As opposed to state-run Russian television that — interprets everything that is done in the world...as some kind of a United States manipulation and United States meddling in world affairs."

Polygraph.info, and its Russian-language counterpart, Factograph — try to be slightly edgier than a traditional news operation.

"What our reporters do every day is they begin the day looking at Russian media," said Fry. "Looking at what's coming out of Russia. And then we decide whether there's something to fact check. Usually, almost every day, there's more to fact check than we could possibly do with our staff."

The site is modeled after other media fact check efforts, including Politifact and factcheck.org. It highlights a claim, say, by Putin or another Russian official, and brands it for veracity, with labels like "Partially True," "False" or "Misleading."

In March, the site fact-checked a Putin documentary that alleged the Russian leader had always believed that the Ukrainian territory of Crimea was part of Russia. It highlighted remarks by Putin in 2008 in which he said something very different: "Crimea is absolutely not a disputed territory." Six years later, Putin seized Crimea from Ukraine, to international condemnation.

Polygraph also challenged Russia's denial that the nerve agent used to poison a former spy in the UK was made only in Russia, and its assertion that no chemical attack took place in Syria.

Polygraph reporters are not afraid to endorse criticism of the U.S. when it's accurate. When Russian foreign minister Sergei Lavrov criticized a list of Russian oligarchs that the Treasury Department admitted it cribbed from Forbes magazine, Polygraph labeled his comments, "Partially True."

In January, reporters examined a fur coat shown off on Facebook by Russia's foreign ministry spokeswoman. She said it was a fake, bought at a fair in Russia. Polygraph found that the fair didn't sell any coat — and that the coat may have been a fur from an endangered ocelot.

Polygraph's traffic numbers are usually in the low thousands, but that video got 37,000 views, Fry said.

The audio recordings of the Russian mercenaries were a huge coup, even if the site did not seem to get much credit for the scoop. Fry said a Polygraph journalist in Europe, who did not want to be identified, obtained the tapes from a Kremlin source. He acknowledged that he could not rule out U.S. intelligence involvement in distributing the tapes, but that would also be true if the audio had been obtained by a mainstream journalism organization, he said.

The recordings describe an incident in which a number of Russian mercenaries led a group of pro-Assad fighters in an attack on a U.S. base beginning Feb. 7. The mercenaries were from the Wagner Group, it's been widely reported — co-owned by Russian oligarch Yevgeniy Prigozhin, who is close to Vladimir Putin. Prigozhin is also one of the defendants in the indictment brought by Mueller against Russians accused of illegal election activity.

It was the largest ever attack on U.S. troops in Syria, and it was perhaps the first time in many decades that Russian and American troops fought in open combat. Russian mercenaries were among the hundreds who died as the Americans strafed, bombed and shelled the assault force, Army Brig. Gen. Jonathan Braga told NBC's Richard Engel.

The tapes, Fry said, depicted "people who worked for this Russian paramilitary company who were involved in this attack...It showed they knew they were (counterattacked) by Americans. And it showed that there were people who were killed."

	<p>Interestingly enough, he added, "within days of our story, the Russian government started admitting there had been involvement of the private military company, the Russian company, in that attack."</p> <p>Sometimes it's obvious that Russians are more nimble than the Americans at the information game.</p> <p>On Friday, when the Russian defense ministry accused Britain of faking the chemical attack in Syria, RT was leading its web site with an article highlighting the allegations — making no mention of denunciations from the United Nations and U.S. and British officials.</p> <p>Polygraph, meanwhile, was leading with a story fact-checking a statement from Russian state media that Hitler had become more popular than Harry Potter in Latvia. It made no mention of the bogus Russian allegation against Britain.</p> <p>"We didn't get to that today," Fry said, reached by phone. "I wish I could respond as quickly as what they put out."</p>

<b>HEADLINE</b>	<b>04/14 Europol busts bitcoin laundering ring</b>
<b>SOURCE</b>	<a href="https://interestingengineering.com/europol-busts-bitcoin-drug-money-laundering-ring">https://interestingengineering.com/europol-busts-bitcoin-drug-money-laundering-ring</a>
<b>GIST</b>	<p>In what may now seem like an almost prophetic event, the European Union Agency for Law Enforcement Cooperation (Europol) expressed concerns last February that billions in illegal proceeds were hidden in Europe in crypto-cash. Now, Europol in cooperation with global law enforcement agencies has arrested 11 people involved in a cryptocurrency drug trafficking ring that laundered over €8 million.</p> <p>The operation, named Tulipan Blanca, saw Spain's Guardia Civil, Finnish law enforcement authorities and the US Department of Homeland Security come together to investigate 137 individuals. "As a result of the operation, the Spanish Guardia Civil carried out eight searches and seized several computers, devices, and the equipment used to commit the crimes, such as money bags or money counting machines," Europol said in a statement.</p> <p>The statement explained that drug traffickers contacted the criminal ring to launder money obtained from their illicit activities. The ring proceeded to split the money into small cash amounts deposited into 174 bank accounts.</p> <p>From there, the criminals used credit cards linked to the fraudulent bank accounts to withdraw the illegal proceeds from Columbia. However, realizing that these transactions could be tracked, the criminal group then turned to cryptocurrencies.</p> <p>To cover their tracks, the ring used an unnamed Finnish cryptocurrency exchange to turn their cash into bitcoins and then subsequently further converted the bitcoins into Colombian pesos.</p> <p>"With cryptocurrencies increasingly used to finance and carry out criminal activities, Europol will continue to coordinate across EU Member States and beyond, to effectively respond to this rising threat," Europol's statement said.</p>

<b>HEADLINE</b>	<b>04/14 Targeting tax pros w/fraud returns</b>
<b>SOURCE</b>	<a href="https://www.cnbc.com/2018/04/14/cybercriminals-now-targeting-tax-pros-to-cash-in-on-fraudulent-returns.html">https://www.cnbc.com/2018/04/14/cybercriminals-now-targeting-tax-pros-to-cash-in-on-fraudulent-returns.html</a>
<b>GIST</b>	The deadline to file your taxes is rapidly approaching, but cyber criminals have already been hard at work trying to cash in with fraudulent tax returns.

This tax season, experts say instead of targeting individual tax payers, scam artists are targeting tax professionals.

"One of the challenges that we're seeing this year is that as tax professionals and the I.R.S. have become more and more sophisticated, so too have the adversaries," said Caleb Barlow, IBM Security's vice president of threat intelligence.

Tax fraud is big business for cyber criminals. Last year Internet crimes netted the perpetrators \$445 billion, with tax fraud as a primary focus, according to IBM Security, which monitors cyber crimes.

"We had about 75 tax professionals report that they had been victims of some sort of a tax payer breach. So that unfortunately is a 60 percent increase for the same period of time last year," said Cecilia Barreda, an I.R.S. spokeswoman.

The I.R.S. can recognize if a computer of an individual is filing too many tax returns, and will stop them for likely being fraudulent. But the agency expects tax professionals to file dozens, if not hundreds of tax returns on behalf of their clients.

"If they [cybercriminals] can compromise a tax professional, they get access to two key things. One is the private information of that tax professional's clients that can be used to file tax returns on their behalf," Barlow said.

"And in addition to that, they can use the IP address and the computer of the tax professional to actually do the filing with the I.R.S.," he added.

Here is how the scam works: Cyber criminals target tax professionals with what is known as phishing — spam email that seems legitimate, but contains links or attachments laden with malware.

"The minute that you click on that link, well, then you're owned by the adversary. And what this often means is that they can take control of that system that's normally used by that tax professional," Barlow said.

Once a tax professional's computer is compromised, an attacker can steal the numbers and log-in information they use to file.

"It's an I.P. address we seen before, it's a signature of a computer we seen before. We know it's a tax professional, so they are going be submitting lots of returns," said Barlow.

This year's tax season may be the perfect storm. With a new tax code coming in this year, there has been extra confusion.

"This is kind of a perfect storm where you have a lot of misinformation, a dearth of information, and these new techniques that are being widely used by these criminals looking for compromised computers belonging to tax prep professionals," said Roman Sannikov, the director of European research and analysis for Flashpoint, a cybersecurity company.

He added that "they can use to not only steal information, but also to file these returns in a much more successful way."

**HEADLINE** 04/15 Guarding rail against evolving threats

**SOURCE** <http://www.railjournal.com/index.php/technology/cybersecurity-guarding-rail-against-evolving-threats.html>

## GIST

As the railway seeks to harness the benefits of digitalisation and the Internet of Things, the links between information technology and operational technology become ever-more intertwined. However, these trends are completely redefining the railway security environment as systems become vulnerable to new types of threats. Keith Barrow assesses how the industry is responding to the cybersecurity challenge.

ON May 13 2017, passengers at mainline stations in Germany glanced up at the information screens and saw something unusual. Obscuring the lists of departures and arrivals, a ransomware notice demands a \$US 300 payment in Bitcoin.

The WannaCry virus had infected 450 German Rail (DB) computers, bringing down passenger information systems, ticket machines, and CCTV networks.

This was a very public demonstration of rail's vulnerability to cyberattack, and while the target in this case was the company's business systems, the attack also highlighted the need to secure operational systems against hackers.

Until recently, Industrial Automated Control Systems (IACS) were considered relatively well-insulated against external influence with a high degree of immunity to security threats and attacks. However, the threat landscape has altered significantly in recent years with the proliferation of digital technologies and the increasing interconnectivity between the business and operational functions of companies.

Research by IBM shows cyberattacks on ICAS increased by more than 600% between 2012 and 2014, while according to Dell's 2015 cybersecurity report, attacks on supervisory control and data acquisition (Scada) systems surged from 91,676 in January 2012 to 675,186 in January 2014.

Mr François Hausman, mainline cybersecurity manager for Alstom and leader of Shift<sup>2</sup>Rail's cybersecurity work package, told delegates at Railtech's recent Intelligent Rail Summit in Vienna that the characteristics of railway networks make them a potential cyberattack target. These include:

- distributed architecture - electronic components spread along a section of line or a train
- long lifecycles for equipment
- high level of certification for safety-related systems
- diversity of supply chain and technology, and
- small-medium volume production of components.

Mr Domenico Raguseo, technical sales manager, Europe, for IBM says systems are vulnerable to hackers when there is a high degree of integration between IT and operational technology (OT).

"The railway industry is very secure from a cybersecurity point-of-view - hackers would have a lot of difficulty getting into your systems," he says. "With high standards and tonnes of security control, a hacker needs to invest a lot of time if he wants to create a problem for you. Unfortunately, the good news stops here. The safety-first philosophy of rail - that the train stops to protect the lives of the passengers - is good for hackers, because they don't want to kill people, they want to get money. So it would be fantastic for a hacker to stop a train."

As senior managers seek ever more data on the day-to-day performance of the railway, business and operational systems are increasingly interconnected, and wherever there are interfaces, there are potential points of attack.

Mr Lovan Pushparatnam, head of tramway systems and telecoms with Systra, says any cybersecurity strategy must consider people as well as technology. "The best results are achieved when cybersecurity is treated as part of an overall security policy addressing technical aspects and operational procedures, with continuous assessment and measurement," he says. "It's not about protection, it's about process and preparation, monitoring both your assets and your organisation."

Testing the vulnerability of railway systems to cyberattack is a particular challenge because of the difficulty of simulating attacks under realistic operating conditions. "When we model attack patterns, we

need to understand how it is possible to attack,” Raguseo says. “It’s not easy to do penetration testing in a real environment, so you need to create a test environment. Developing a test environment is complicated for IT - I’d say it’s impossible for a complex environment like rail.”

The European Union (EU) Directive on security of network and information systems (NIS Directive) came into force in August 2016, and is intended to boost the overall level of cybersecurity in member states. The NIS Directive is due to be transposed into the legal systems of the member states by next month and specifically identifies train operators and railway infrastructure managers as entities that could be considered “operators of essential services.” Businesses in this category will be required to implement risk management practices, taking “appropriate and proportional technical and organisational measures to manage the risks posed to the security of networks and information systems which they use in their operations.” Significant cyber attacks must be reported to a “competent national NIS authority.”

All of this leaves railway industry stakeholders with the challenge of securing assets which can have a lifespan of several decades against a threat that is constantly evolving. System architecture is therefore a crucial consideration in safeguarding next-generation rail technologies against attack.

<b>HEADLINE</b>	<b>04/15 Experts warn: Russia cyber warfare</b>
<b>SOURCE</b>	<a href="https://www.standard.co.uk/news/world/syria-news-latest-russia-could-launch-cyber-warfare-within-days-after-us-led-military-action-expert-a3814226.html">https://www.standard.co.uk/news/world/syria-news-latest-russia-could-launch-cyber-warfare-within-days-after-us-led-military-action-expert-a3814226.html</a>
<b>GIST</b>	<p>Russia could “launch cyber warfare within weeks” in retaliation to US-led airstrikes on Syria bringing down City firms, the UK transport network and the NHS, experts have warned.</p> <p>Theresa May hailed “targeted and limited” action on key sites of Syria’s chemical weapons regime “a success” while Donald Trump branded the offensive “perfectly executed”.</p> <p>But Russia warned of “consequences” following the strike which has left the Prime Minister facing questions over why the decision was not put to a parliamentary vote.</p> <p>Now experts have said the action in retaliation to a suspected chemical attack in Douma a week ago could lead to “cyber warfare”.</p> <p>"I suspect Russia will choose not to respond in military terms. But cyber warfare is highly likely," he says.</p> <p>"It will be an attack on national infrastructure, not just upsetting city firms, but getting inside the transport system, or the health system, or air traffic control. It could affect everyone."</p> <p>Mark Almond, director of the Crisis Research Institute, Oxford agreed that the strikes would spark retaliation and said Britain was most vulnerable to a counter-attack.</p> <p>Despite admitting that the "immediate risk of a wider war" has been avoided for now, he warned that sources of potential conflict are still very much active on the ground in Syria.</p> <p>He wrote in the Sunday Telegraph: "Bad relations could easily encourage a reckless Russian freebooter, prompted and paid by Iran, to try his luck getting revenge on the pockets of US and British forces operating in eastern Syria.</p> <p>"Britain is more exposed to potential revenge attacks, despite only four Tornados taking part in the strikes, because they flew from Akrotiri in Cyprus - so close to Syria and to Lebanon."</p>

<b>HEADLINE</b>	<b>04/15 ‘Operation Parliament’ targets Mideast</b>
-----------------	---

SOURCE	<a href="https://www.forbesmiddleeast.com/en/new-cyberattack-operation-parliament-targets-governments-military-and-intelligence-organizations/">https://www.forbesmiddleeast.com/en/new-cyberattack-operation-parliament-targets-governments-military-and-intelligence-organizations/</a>
GIST	<p>A new potentially geopolitically-motivated cyberattack dubbed Operation Parliament has been targeting governmental departments and large private entities across the Middle East, according to global cybersecurity company Kaspersky Lab.</p> <p>Operation Parliament has so far affected an unknown number of organizations in over 27 countries, mostly in the Middle East and North Africa, including Egypt, Iran, Iraq, Jordan, Kuwait, Lebanon, Morocco, Oman, Palestine, Qatar, Saudi Arabia and the U.A.E. Financial impact of the attack has not been disclosed.</p> <p>In a campaign believed to have been active since 2017, the cybercriminals targeted selected victims through malware disguised as legitimate email attachments. Upon opening the attachments victims unwittingly gave the criminals access to their systems, enabling them to remotely gain control over their devices and mine data, as well as activate tools such as webcams. It is believed that the attackers had previously gained access to large databases of contacts for sensitive organisations and targeted non-trained staff.</p> <p>The criminal group “hid in plain sight” accordingly to Kaspersky Lab. The malware was first discovered during an operation to uncover a phishing scam targeting political figures. At first it appeared to be the work of another group already known to officials. However, under further inspection the encrypted malware was found to be very different to any previous attacks.</p> <p>Victims are known to include parliaments, senates, top state offices and officials, political science scholars, military and intelligence agencies, ministries, media outlets, research centres, election commissions, Olympic organizations and large trading companies. Over 130 individual users have been identified as victims so far. Efforts are now underway by law enforcers to find the group behind the attacks and prevent any further damage.</p> <p>“Operation Parliament is another symptom of the continuously developing tensions in the Middle East and North Africa. We are witnessing higher sophistication and smarter techniques used by attackers and it doesn’t look like they will stop or slow down anytime soon” said Mohamad Amin Hasbini, Senior Security Researcher, Global Research &amp; Analysis Team at Kaspersky Lab.</p>

<b>HEADLINE</b>	<b>04/13 Yahoo, AOL read, share users' emails</b>
<b>SOURCE</b>	<a href="https://www.cnet.com/news/yahoo-aol-oath-privacy-policy-verizon-emails-messages/">https://www.cnet.com/news/yahoo-aol-oath-privacy-policy-verizon-emails-messages/</a>
<b>GIST</b>	<p>Oath, the media division of Verizon that runs both AOL and Yahoo, is finally unifying the privacy policy of its two giant legacy Internet brands. That means an updated set of privacy terms and policies for hundreds of millions of users. And in an online world where privacy expectations have been radically reshaped in light of Facebook's Cambridge Analytica mess, it's more important than ever to read the fine print on those splash screens.</p> <p>When we logged in to a Yahoo Mail account Friday, we were greeted with the privacy policy you see below (Jason Kint had pointed to the policy earlier on Twitter). In it, Oath notes that it has the right to read your emails, instant messages, posts, photos and even look at your message attachments. And it might share that data with parent company Verizon, too.</p> <p>To be clear, Yahoo's previous privacy policy had already stated that Yahoo "analyzes and stores all communications content, including email content," so the company has previously disclosed that it's been able to scan the contents of your emails, at least. (AOL's legacy privacy policy doesn't say anything like that.)</p> <p>When you dig further into Oath's policy about what it might do with your words, photos, and attachments, the company clarifies that it's utilizing automated systems that help the company with security, research and providing targeted ads -- and that those automated systems should strip out personally identifying information before letting any humans look at your data. But there are no explicit guarantees on that.</p> <p>Notably, Google used to scan its Gmail messages for better ad targeting, though it stopped the practice in June of 2017.</p>

	<p>In other words, emails related to your banking and financial transactions appear to be equally in the crosshairs of Oath's ad targeting engine.</p> <p>There appears to be another big change for Yahoo users, too: Oath's previous mutual arbitration clause and class-action waiver has been updated and extended across the company's services to include Yahoo as well. What it means is if you don't like what the company does with your data, you'll have a hard time suing.</p>

<b>HEADLINE</b>	<b>04/14 Google loses 'right to be forgotten' case</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/google-loses-right-to-be-forgotten-legal-case-europe/">https://www.cbsnews.com/news/google-loses-right-to-be-forgotten-legal-case-europe/</a>
<b>GIST</b>	<p>A U.K. court has ruled in favor an unnamed businessman who wanted Google to remove search results of his past conviction history in a landmark "right to be forgotten" case. The search engine had previously refused to delete results about his conviction, BBC News reports.</p> <p>Ten years ago, the businessman was convicted of conspiring to intercept communications. He spent six months in jail. He argued that his conviction was no longer relevant to the public.</p> <p>Google said in a statement Friday it would respect the judge's decision. "We work hard to comply with the right to be forgotten," it said, "but we take great care not to remove search results that are in the public interest."</p> <p>However, Justice Mark Warby rejected a separate claim by a businessman who had committed a more serious crime. More than 10 years ago, the second man was convicted of conspiring to account falsely. He spent four years in jail.</p> <p>Warby said the winning businessman had shown remorse, while the other man continued to "mislead the public."</p> <p>In 2014, the European Court of Justice set legal precedent for the "right to be forgotten" after a Spanish man asked Google to remove results about his financial history. Google said it has removed 800,000 pages from its results over similar requests, but companies can decline to remove information if they believe they are in the public interest.</p>

## Terror Conditions

[Top of page](#)

<b>HEADLINE</b>	<b>04/15 Using social media inspire potential terror</b>
<b>SOURCE</b>	<a href="https://theconversation.com/since-boston-bombing-terrorists-are-using-new-social-media-to-inspire-potential-attackers-94944">https://theconversation.com/since-boston-bombing-terrorists-are-using-new-social-media-to-inspire-potential-attackers-94944</a>
<b>GIST</b>	<p>Five years ago, a deadly attack during the Boston Marathon made America's nightmare come true: the radicalized boy next door.</p> <p>The research my colleagues and I conduct at Georgia State University tracks how terrorist organizations expose people – mostly young men – to radical messages and extreme violence on social media. The goal: changing their worldview and eventually guiding them to act.</p> <p>The Boston Marathon bombing marked the beginning of a new trend that is almost impossible to prevent. Before, individuals would receive guidance and training from terrorist organizations in person. Now, these same groups simply inspire individuals to carry out attacks on their own, for which the group can claim credit if they are successful. We call that "self-radicalizing."</p>

### Radicalization of the boy next door

It remains puzzling to many how Dzhokhar Tsarnaev, a 19-year-old stoner who listened to Jay-Z and watched “The Walking Dead,” could – with his older brother, Tamerlan – killed and injured so many innocent civilians. Authorities at least knew more about Dzhokhar because he was taken alive. His brother died during a police chase.

Courtroom sketch of Boston Marathon bomber Dzhokhar Tsarnaev. Jane Flavell Collins via AP  
Dzhokhar did not fit the profile experts have identified as typical of self-radicalized terrorists – either jihadi (a Muslim Holy warrior) or extreme right-wing versions. They were unlike many terrorists who gravitate to extremist ideologies.

According to researchers Alice Marwick and Becca Lewis, people who are radicalized “may have a hard time finding like-minded friends in their day-to-day lives, or connecting with romantic partners.”

Dzhokhar was described by Rolling Stone magazine, for example, as attractive, popular and a student athlete. He was also flunking courses and lost his financial aid at University of Massachusetts-Dartmouth in the semester leading up to the attack. But that hardly explains why he went on to plan the deaths of potentially hundreds of runners and spectators.

Eventually, prosecutors found copies of Inspire magazine on Dzhokhar’s laptop. The magazine is an English-language online publication that was published by al-Qaida in the Arabian Peninsula. They also found videos of sermons by Anwar al-Awlaki, the American-born firebrand jihadi cleric who was killed in 2011 in Yemen by two U.S. drones. Awlaki’s videos are still circulating on social media years after his death.

The evidence and Dzhokhar’s testimony suggest that the brothers were inspired by propaganda. Both Awlaki’s sermons and Inspire magazine advocate and provide specific “how-to” instructions on mass casualty attacks. Dzhokhar and his brother learned how to make the pressure-cooker bombs from one of the most well-known articles published by the magazine: “How to Build a Bomb in the Kitchen of Your Mom.”

For example, the text explains: “Can I make an effective bomb that causes damage to the enemy from ingredients available in any kitchen in the world? The answer is yes. But before how, we ask why? It is because Allah says ... every Muslim is required to defend his religion and his nation.”

In the five years since the Boston bombing, the number of social media platforms disseminating terrorist propaganda has increased tenfold. And thus, so has the scale and scope of possible future attacks.

### Shift to encrypted platforms

As technology evolves, new online platforms provide avenues for terrorist organizations to share information. Platforms have gone from an open interface model, in which anyone can observe what is occurring, to closed and encrypted platforms in which privacy and security settings are protected. These platforms are not readily accessible nor can they be viewed without already being a member of the chat room or channel. When used by terrorist groups, encrypted platforms are harder to police and monitor.

Telegram is an encrypted application developed by Pavel Durov, the inventor of Russia’s Facebook equivalent, VKontakte. Telegram has all but replaced Twitter and Facebook for jihadi communication. Open platforms like Twitter and Facebook have increasingly policed jihadi content, shut down their sites, and taken down their content within minutes of it being posted.

Social media allows terrorist groups to foster a virtual community and a sense of belonging. Research on radicalization suggests that their methods involve taking advantage of individuals’ feelings of loneliness and alienation. However, this doesn’t explain why well-adjusted, well-integrated individuals who appear to have assimilated into Western society – like the Tsarnaevs – gravitate to violent extremist ideologies.

	<p>Research I've done with colleagues on social media demonstrates that terrorist organizations also deliberately foster a type of addiction to the platform and to its content.</p> <p>They do this by creating a schedule of positive reinforcement that modifies behavior, like gambling or playing slot machines. The result changes every time such that one cannot anticipate the outcome and continues to engage in behavior in hopes of a reward the next time around. Not knowing whether you are on the verge of a big win sustains the individual to continue the behavior (in some cases, gambling), whereas not knowing what type of reward the terrorist platform will offer equally sustains user engagement.</p> <p>This keeps the individual tethered to his or her computer, making certain rewards more valuable, limiting how much time you have to join a group or access material, making access exclusive, and varying content to prevent boredom.</p> <p>Through this process, it is possible that ordinarily well-adjusted individuals can be persuaded to channel everyday feelings of frustration, disappointment or anger into acts of extreme violence.</p> <p>As the Islamic state further recedes and loses even more territory, it is adapting to exist almost entirely digitally. Those who fight terrorism need to understand the difference between individuals who are inspired and those who are directly encouraged to engage in violence. Likewise, terrorism researchers need to understand the role of social media in capturing the imagination of young men and instigating them to perpetrate violence.</p>

<b>HEADLINE</b>	<b>04/15 ISIS member families on rise in Anbar</b>
<b>SOURCE</b>	<a href="https://www.iraqinews.com/iraq-war/number-of-islamic-state-members-families-on-the-rise-in-anbar-as-displaced-people-return-back-home/">https://www.iraqinews.com/iraq-war/number-of-islamic-state-members-families-on-the-rise-in-anbar-as-displaced-people-return-back-home/</a>
<b>GIST</b>	<p>Anbar (IraqiNews.com) The number of families of Islamic State members has been growing as hundreds of displaced families returned to their regions, a security source from Anbar police said on Sunday.</p> <p>Speaking to Almaalomah website on Sunday, the source said “number of IS families in Hit city and surrounding regions reached 150 families, which indicate terrorist operations that could target security troops and civilians, given that those families provide the militants with information about security personnel in order to target them.”</p> <p>“The presence of those families in Hit threaten safety and stability of the region. Displacing them could be hard due to pressures by rights groups,” the source added.</p> <p>Thousands of IS militants as well as Iraqi civilians were killed since the government campaign, backed by paramilitary troops and the coalition, was launched in October 2016 to fight the militant group.</p> <p>In December, Abadi announced full liberation of Iraqi lands, declaring end of war against IS members. However, Islamic State continues to launch sporadic attacks across Iraq against troops. Security reports indicate that the militant group still poses threat against stability in the country.</p> <p>As many as 3,298 civilians were killed and 4,781 others were wounded in 2017, excluding Anbar civilian casualty figures for November and December, which are not available, UNAMI said in a report in December.</p>

<b>HEADLINE</b>	<b>04/16 Extremists hamper polio eradication</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Health/wireStory/nigerias-boko-haram-extremists-hamper-polio-eradication-54494701?">http://abcnews.go.com/Health/wireStory/nigerias-boko-haram-extremists-hamper-polio-eradication-54494701?</a>
<b>GIST</b>	<p>Islamic extremists made Imana Alhaji Gana's village in northeastern Nigeria too dangerous for health workers to vaccinate against polio. Now that she and her family have fled to a displacement camp, those workers want to catch her children in time.</p> <p>Here in the camps housing thousands of families seeking safety from the extremists, health teams are going from tent to tent, inoculating youngsters against the disease that withers limbs and disables children for life.</p> <p>At first, Gana is afraid to let the outreach workers vaccinate her baby. Eventually they persuade her that the three-week-old child is not too young for immunization, which can take place as early as the day of birth.</p> <p>The complicated fight against polio is yet another way the Nigeria-based extremist group Boko Haram has disrupted life in the northeast, leaving children vulnerable to an entirely preventable disease.</p> <p>"When such children come to the camps or host communities they become a threat to other children," said Almai Some, the field coordinator in Borno state for the vaccination campaign run by Rotary.</p> <p>Some of the families arriving are from areas where polio vaccinators have not been able to visit for as long as six years.</p> <p>Boko Haram's insurgency began in Maiduguri, Borno state's capital, but its reach has expanded beyond Nigeria's borders to neighboring Niger, Chad and Cameroon. Its violence has proved to be a major setback to the international campaign against polio.</p>

	<p>Nigeria is one of just three countries where polio is endemic and has not been eliminated, along with Pakistan and Afghanistan. The final phase to wipe out polio is "proving to be extraordinarily difficult" because "the poliovirus is surviving despite all the good work and in the face of everything that is being thrown at it," said a WHO-appointed monitoring group at the end of last year.</p> <p>In Nigeria, there is little or no surveillance data in Borno state, and "unless there is a breakthrough to reach those areas in Borno, the entire polio (eradication) program is at risk," said the monitoring group. Nigeria had other outbreaks last year including cholera, hepatitis, monkeypox, Lassa and yellow fevers, showing the challenges to the country's health care system. Globally the campaign to eradicate polio has been faced with outbreaks last year in non-endemic countries like Congo and Syria.</p> <p>Now the WHO says it will be spending \$127 million toward eradicating polio in Nigeria between 2018 and 2019. Rotary's program is helping that effort by targeting some 2.1 million children in 24 accessible local governments. But there are still three areas in Borno state that are not included because of ongoing instability: Kala-Balge, Marte and Abadam. For those unreachable areas, the vaccinators train Nigerian soldiers in how to administer the vaccines.</p> <p>In a few cases, villagers have reported being threatened by Boko Haram fighters to avoid the polio vaccine. And in 2013 a number of vaccinators were attacked and killed by the extremists, leading some of their colleagues to disguise their vaccine carriers or hide them under their hijabs.</p>

<b>HEADLINE</b>	<b>04/15 Turkey: US pastor faces terror trial</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/us-pastor-trial-alleged-terror-ties-spying-turkey-54478886?cid=clicksource_76_2_hero_headlines_bsq_hed">http://abcnews.go.com/International/wireStory/us-pastor-trial-alleged-terror-ties-spying-turkey-54478886?cid=clicksource_76_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>An American pastor imprisoned in Turkey is going on trial for alleged terror ties and spying in a case that has increased tensions between Washington and Ankara.</p> <p>Andrew Craig Brunson, a 50-year-old evangelical pastor from North Carolina, is facing up to 35 years in prison on charges of "committing crimes on behalf of terror groups without being a member" and "espionage." The trial begins Monday in western Izmir province.</p> <p>Brunson was arrested in December 2016 for alleged links to both an outlawed Kurdish insurgent group and the network of the U.S.-based Muslim cleric who Turkey blames for a masterminding a failed military coup that year. The cleric, Fethullah Gulen, denies the claim.</p> <p>Brunson, who has lived in Turkey for 23 years, has denied all allegations, saying that he solely worked as a pastor.</p> <p>The Turkish government has clearly linked Brunson's case with its determination to force the U.S. to extradite Gulen — and some see the pastor as a diplomatic pawn.</p> <p>The American Center for Law and Justice, a conservative Christian group in the U.S., has called Brunson a "hostage of the Turkish government." A petition has garnered more than half a million signatures, claiming that the case was putting Christianity on trial.</p> <p>Brunson's lawyer, Ismail Cem Halavurt, told The Associated Press on Sunday he expects the pastor's acquittal, arguing that the "weak" indictment lacked sufficient evidence to make the case hold up in court.</p> <p>American officials have repeatedly requested that Brunson be released — President Donald Trump himself asked Turkish President Recep Tayyip Erdogan to have his government "expeditiously" return the pastor to the U.S.</p>

	But Erdogan fired back at Washington, demanding that the U.S. first return Gulen.

<b>HEADLINE</b>	<b>04/15 Afghan, Pakistan forces border clash</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/afghan-pakistani-forces-clash-disputed-border-54478030?">http://abcnews.go.com/International/wireStory/afghan-pakistani-forces-clash-disputed-border-54478030?</a>
<b>GIST</b>	<p>An Afghan official says Pakistani forces have crossed into eastern Afghanistan and clashed with Afghan troops.</p> <p>Col. Abdul Hanan, the acting provincial police chief in the eastern Khost province, says the fighting broke out early Sunday and is still underway. He was not immediately able to confirm reports of casualties.</p>

	<p>The two countries are separated by the 2,400-kilometer (1,500-mile) Durand Line, which was drawn by British rulers in 1896. Kabul does not recognize it as an international border and has objected to new fortifications being built by Pakistan.</p> <p>The two U.S. allies routinely accuse each other of failing to crack down on militants who operate along the porous border.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>04/15 Militants attack Afghan checkpoint; 11 dead</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/insurgents-attack-checkpoint-afghanistan-kill-police-54477896?">http://abcnews.go.com/International/wireStory/insurgents-attack-checkpoint-afghanistan-kill-police-54477896?</a>
<b>GIST</b>	<p>At least 11 Afghan paramilitary forces were killed when the Taliban attacked their checkpoint, an official said Sunday.</p> <p>Zabi Amani, a spokesman for the governor of the northern Sari Pul province, said two other forces were wounded in the attack late Saturday. He said three insurgents were killed, including a local commander, and four others were wounded.</p> <p>Those targeted were members of the Local Uprising Forces, militias supported by the government.</p> <p>No one immediately claimed the attack, but Amani blamed the Taliban, who are active in the area.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>04/13 Austrian convicted for terror attack plans</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/04/13/austrian-man-convicted-for-plans-for-attacks-in-germany.html">http://www.foxnews.com/world/2018/04/13/austrian-man-convicted-for-plans-for-attacks-in-germany.html</a>
<b>GIST</b>	<p>VIENNA – An Austrian court has convicted a 19-year-old of involvement in plans for two Islamic extremist attacks in Germany, one of which was supposed to be carried out by a 12-year-old boy.</p> <p>The Austria Press Agency reported that the defendant was convicted Friday in Vienna of attempted incitement to murder as a terrorist crime. He was given a nine-year sentence.</p> <p>The Austrian of Albanian descent was accused of trying to incite a 12-year-old to attack a Christmas market in Ludwigshafen in 2016, and plotting an attack on the United States' Ramstein Air Base along with a 16-year-old girl.</p> <p>Defense lawyer Wolfgang Blaschitz said he is considering appealing.</p> <p>The defendant testified he became a supporter of the Islamic State group following a previous jail term for robbery. He denied ordering any attacks.</p>

<b>HEADLINE</b>	<b>04/14 Boko Haram abductions, killings</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/boko-haram-abducted-1000-children-killed-2000-teachers/story?">http://abcnews.go.com/International/boko-haram-abducted-1000-children-killed-2000-teachers/story?</a>
<b>GIST</b>	<p>Boko Haram has abducted more than 1,000 children in northeast Nigeria since 2013, the United Nations' children's agency announced Friday.</p> <p>The number of children kidnapped by the Nigerian terrorist group includes 276 girls snatched from a boarding school in the northeast town of Chibok on the night of April 14, 2014, four years ago today.</p>

Some of the Chibok schoolgirls managed to escape, while others were later rescued or freed following negotiations. But four years on from that fateful night, more than 100 of them have yet to be returned to their families, according to UNICEF.

"The four-year anniversary of the Chibok abduction reminds us that children in northeastern Nigeria continue to come under attack at a shocking scale," Mohamed Malick Fall, UNICEF representative in Nigeria, said in a statement Friday. "They are consistently targeted and exposed to brutal violence in their homes, schools and public places."

Since Boko Haram launched its insurgency in the northeast region nine years ago, at least 2,295 teachers have been killed and over 1,400 schools have been destroyed. Most of these schools haven't been able to reopen due to extensive damage or ongoing insecurity in the area, according to UNICEF.

Most recently, suspected Boko Haram fighters abducted 110 students from an girls' boarding school in the northeast town of Dapchi in the middle of the night on Feb. 19. More than a month later, 104 of the schoolgirls were freed by their captors following "back-channel efforts and with the help of some friends of the country," according to Segun Adeyemi, spokesman for Nigeria's Ministry of Information and Culture.

The relentless onslaughts show not even children and schools are spared from Boko Haram's wrath -- rather, they are the targets.

The Nigerian jihadist group's uprising was fueled largely through the group's systematic campaign of abducting children and forcing thousands of girls and boys into their ranks, according to a report issued in April 2017 by the United Nations Children's Fund (UNICEF).

<b>HEADLINE</b>	<b>04/14 Egypt: suicide bombers Sinai kill 8</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/egypt-troops-killed-15-wounded-sinai-clashes-54465542?">http://abcnews.go.com/International/wireStory/egypt-troops-killed-15-wounded-sinai-clashes-54465542?</a>
<b>GIST</b>	<p>Militants wearing explosive belts blew themselves up as they tried to infiltrate a military base in Egypt's central Sinai, killing eight soldiers and wounding 15 others, the military said on Saturday.</p> <p>The clashes at dawn left 14 militants dead. They were armed with rifles and RPGs, the armed forces said in a statement. The attack comes two months after the launch of a massive operation against militants in Sinai as well as parts of Egypt's Nile Delta and Western Desert, along the porous border with Libya.</p> <p>There was no immediate claim of responsibility for the attack which bore the hallmarks of the extremist Islamic State group, whose local affiliate is spearheading an Islamic insurgency in Egypt's Sinai Peninsula.</p> <p>Egypt has for years been struggling to contain the Islamic insurgency in the turbulent Sinai region. It has carried out military operations there that, it says, have killed hundreds of militants.</p> <p>It has also built a buffer zone along the border with Gaza to curb the flow of militants and weapons through a vast tunnel network. The insurgency, however, has shown no signs of abating.</p>

<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/government/ftc-warranty-void-if-removed-stickers-are-">https://www.bleepingcomputer.com/news/government/ftc-warranty-void-if-removed-stickers-are-</a>

	<a href="#">illegal/</a>
GIST	<p>The US Federal Trade Commission (FTC) sent letters this week to six major companies containing warnings that using "warranty void if removed" or similarly worded stickers on their products is illegal.</p> <p>The FTC said the six companies sell automobiles, cellular devices, and video gaming systems, all industry verticals where such practices are rampant.</p> <p>But besides the use of anti-tampering "warranty void if removed" stickers, the letters also warn companies against forcing customers into using replacement parts or repair services provided by certain companies for users to keep their warranties intact.</p> <p>In other words, the FTC has officially shown its support for the Right To Repair movement that's been becoming popular in the US and Europe.</p> <p>"Provisions that tie warranty coverage to the use of particular products or services harm both consumers who pay more for them as well as the small businesses who offer competing products and services," said Thomas B. Pahl, Acting Director of the FTC's Bureau of Consumer Protection.</p> <p>Limiting repair options illegal under 1975 US law</p> <p>The FTC says that such practices are illegal under the Magnuson-Moss Warranty Act, a law that governs consumer product warranties, and which states that no company can put restrictions on the way users choose to repair their products.</p> <p>The law says that companies can't force users to use only certain types of (astronomically-priced) replacement parts, take produces for repair jobs only at certain repair shops, or can't plaster anti-tampering stickers on products to prevent users from repairing their own products.</p> <p>Over the past two decades, companies in the US have been ignoring this law and have been locking down products and repair practices, using "warranty voiding" as punishment for those users who make modifications to products or dare to find cheaper or faster ways of repairing products.</p> <p>The FTC says this is illegal. The Commission plans to review the six companies it sent letters to after 30 days and see if they have dropped their current practices, threatening legal action if they did not.</p>

HEADLINE	<b>04/15 Fake gov. letters surface in Clark Co.</b>
SOURCE	<a href="https://www.seattletimes.com/seattle-news/politics/fake-inslee-letter-posted-on-doors-around-clark-county/">https://www.seattletimes.com/seattle-news/politics/fake-inslee-letter-posted-on-doors-around-clark-county/</a>
GIST	<p>VANCOUVER — On Thursday morning, Gary Berreth stepped outside his house and found an unexpected letter attached to his front door.</p> <p>The letter featured the Washington state seal and claimed to be from the Office of the Governor. It warned of "an adjustment in property taxes" due to the shutdown of an oil terminal and an agreement with BNSF Railway to prohibit the shipping of oil, lumber and coal by rail through Vancouver.</p> <p>At the end of the letter was a carefully scrawled signature: "Jay Inslee," Washington's Democratic governor. Copied on the letter were Clark County Assessor Peter Van Nortwick and Treasurer Doug Lasher.</p> <p>"I instantly knew that there is no way the government does business like this," said Berreth, who said he saw the same letter attached to other doors throughout his Green Meadows neighborhood.</p> <p>Berreth was correct in assuming the letter was a hoax.</p>

In an era of growing concerns of fake news spreading online, these apparent dirty tricksters have taken up a more old-fashioned approach to spreading misinformation.

Simon Vila, spokesman for Inslee, confirmed that neither the governor nor his staff were out posting notes to residents' doors.

"This is definitely not from our office," he said.

Vila said the governor's office suspects that whoever is behind the fake notes is also behind a series of strange letters directed to supporters of U.S. Sen. Patty Murray, D-Washington. These letters were typically signed by "Titania," a character from the play, "A Midsummer Night's Dream."

Vila noted that the fonts of both letters are similar.

The letter's reference to "shutting down the oil terminal" is a likely reference to Inslee's decision earlier this year to reject a proposed crude-by-rail terminal at the Port of Vancouver.

The letter's claim that BNSF, which operates a large network of railways, has entered an agreement to end the shipment of oil, lumber and coal by rail through Vancouver is also highly questionable.

Courtney Wallace, director of public affairs for BNSF, said in an email that as "a common carrier, we are obligated by federal law to move all regulated goods."

"I'm just surprised someone took the time to write something like this up," said Van Nortwick, a Republican. He took to Facebook to debunk the letter, although pointed out that not all of it was fake news.

"It's very rare that someone gets my name spelled right," he said

<b>HEADLINE</b>	<b>04/15 Newest threat to Calif. redwoods: pot</b>
<b>SOURCE</b>	<a href="https://www.sfgate.com/news/article/The-newest-threat-to-California-s-redwoods-isn-t-12835952.php">https://www.sfgate.com/news/article/The-newest-threat-to-California-s-redwoods-isn-t-12835952.php</a>
<b>GIST</b>	<p>A new industry is thriving in California. It is green in terms of the money being made and the crop itself. Yet it is anything but that when it comes to the environment, posing horrendous ecological threats to the region's redwood forests.</p> <p>Lindgren Lumber and Humboldt Flakeboard are the newest additions to the Medical Marijuana Innovation Zone, an area in Arcata, California, zoned specifically for marijuana cultivation and processing. As businesses like Humboldt Harvest Wellness and Talking Tree Farms apply for the necessary permits to process cannabis in the former mill complex, it is evident that the cannabis business may restore the economy of redwood country.</p> <p>But this new industry might also undermine the environmental activism that has long fought to preserve the redwoods as a natural resource.</p> <p>Not long ago, activists thought they had won this fight. And they had - until now. They successfully dislodged corporate logging, but the old timber mills are being used to churn out marijuana. Marijuana cultivation subjects North Coast forests to a barrage of environmental assaults: soil erosion, heavy pesticide use, stream diversion, irresponsible grading and land clearing, all of which threaten to lay waste to the redwoods.</p> <p>As marijuana businesses repurpose Arcata's remaining lumber mills, a renewed ecological peril haunts</p>

Humboldt County. Just like timber companies in decades past, marijuana interests are positioning themselves to shape regulations that protect the industry, not the environment. Americans only have to look back a few decades to the activism that saved the redwoods to understand just how high the stakes are.

Precipitating the "timber wars," that activism began when logging companies expanded operations during the post-World War II housing boom. Timber yields exploded between 1940 and 1970, and increased demand led logging companies to clear-cut large swaths of North Coast redwood forest. This practice had broad ramifications. Leveling a patch of forest compromised entire watersheds by eroding soil and increasing siltation in streams, which left forests vulnerable to flooding, landslides and myriad other environmental problems.

Efforts at redwood preservation proved ineffective when protected groves were surrounded by denuded land. Consequently, environmental advocates intensified their push to create an expansive national park in Northern California that would protect the redwoods from the damage caused by clear-cutting.

By 1968, the Redwood National Park Act established a federal park that protected 58,000 acres of forest. Preservationists had originally proposed acquiring 90,000 acres to ensure the ecological stability of the region, but fierce resistance from timber companies forced a compromise. Yet because environmental impacts were not confined by man-drawn property lines, this compromise meant clear-cuts on nearby private property ended up threatening protected redwood stands anyway.

Activists requested the National Park Service exercise its discretionary power to create a buffer zone around sensitive groves. Three separate studies confirmed the grave ecological hazards presented by nearby logging operations.

NPS, though, was new to the area, and hoped to avoid making waves as it worked to integrate itself into the community. As a result, jobs and the local economy trumped ecological health. NPS took an approach that empowered private interests, adopting a utilitarian cost-benefit analysis that overrode preservationist policy.

Increased harvests led to new logging roads, clear-cut sites, stream diversion and, perhaps most shocking, aerial spraying of Agent Orange, a herbicide known to contain carcinogens. Roads and clear-cuts interrupted the ecosystem and directly threatened wildlife habitat. Road-building itself led to erosion and presented dangers for aquatic life. The use of Agent Orange compounded these problems not only by poisoning habitats, but also by destroying the roots and undergrowth that stabilized the forest floor.

Nevertheless, passing legislation to protect additional old growth proved difficult because of the political might of corporations like Maxxam, a multinational conglomerate that muscled its way into Humboldt's timber industry during the redwood wars. Activists spent years fighting to save remaining old-growth redwood stands. Finally, the Clinton administration brokered a deal to preserve sensitive groves.

But the victory was short-lived. Although the timber industry fell, a robust pot industry soon sprouted in its place. This was not the same pot industry once concentrated in small, personal gardens and largely associated with hippies, back-to-the-landers and other counterculture migrants. The growing popularity of pot, along with increasing legalization, has turned marijuana cultivation into big business. And despite its reputation as a liberal bastion, California left regulation to local authorities.

The result is a tangled web of lenient laws. Despite the liberalization of marijuana laws in the state, semi-legal and illegal cultivation persists. Marijuana's illegality elsewhere continues to fuel a robust black market. Intending to sell on this market, pot farmers interested in a cash crop have little incentive to seek permits or comply with regulations. In any case, the odd dichotomy under which marijuana is legal in California, but illegal under federal law, makes it hard to enforce regulations as local officials find themselves at odds with federal agencies.

At best, pot farmers loosely adhere to regulations while they operate in a legal gray area. At worst, inconsistent enforcement encourages illegal cultivation - which poses serious environmental consequences as these grow sites often contain banned pesticides and other toxic contaminants.

And that creates real environmental hazards. According to Rep. Jared Huffman, a Democrat, authorities have removed 8,188 pounds of fertilizer, 104 pounds of rodenticide, 560 gallons of insecticide, 50 gallons of garbage and miles of irrigation line from illegal grow sites on the North Coast.

Perhaps the most detrimental contaminant making its way into the forests is carbofuran, a toxic pesticide banned in the United States. These pesticides leach into streams and other waterways, increasing their deadly reach. Chemical runoff from grow sites poisons swimming holes and has the potential to seep into city water supplies, which is alarming because carbofuran is lethal to humans in small doses. Ecologists have also determined that chemicals are endangering wildlife such as the Pacific fisher and the northern spotted owl.

In addition to the impact from toxins, the water usage demanded by marijuana cultivation does serious ecological harm. A marijuana plant requires around 22.7 liters of water a day. Unregulated cultivation can easily deplete surface water sources as farmers divert streams and springs.

Water isn't the only resource that pot devours. The plants require lots of sun, which encourages farmers to clear grow sites of trees and plants that might compete with cannabis for light. Satellite imaging has revealed the alarming rate at which these clearings are breaking up otherwise continuous forest. And grow sites require access, which means additional land is cleared and improperly graded as rogue farmers build roads.

All of these changes in the land accrue: Forest and other habitat is fragmented, streams are buried, diverted or polluted, and wildlife dies.

These trends are disturbing. California produces 60 to 70 percent of the marijuana consumed in the United States, which means the state is shouldering most of the environmental cost. As one study of the North Coast indicates, the danger from marijuana cultivation is particularly concerning because the "region is a recognized biodiversity hotspot." The redwoods constitute an ecosystem that is unique and rare - and now marijuana cultivation even poses a threat to Redwood National Park.

<b>HEADLINE</b>	<b>04/15 China sends warning to Taiwan, US</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/04/15/asia/taiwan-us-china-xi-jinping-drills-intl/index.html">https://www.cnn.com/2018/04/15/asia/taiwan-us-china-xi-jinping-drills-intl/index.html</a>
<b>GIST</b>	<p>(CNN)Chinese President Xi Jinping has sent a clear message of Beijing's disapproval over growing ties between the United States and Taiwan by ordering live-fire drills in the Taiwan Strait.</p> <p>The drills, to be held this coming Wednesday, will mark the first time the Chinese Navy has held drills with live ammunition in the strait since September 2015, in the lead-up to the self-ruled island's presidential election.</p> <p>Prior to those elections, relations between the two were at a high point after Xi met with then-President Ma Ying-jeou, the first such meeting in history between leaders of the two governments.</p> <p>But since then, tensions between China and the island it views as a breakaway province have become strained under Ma's successor, President Tsai Ing-wen.</p> <p>The new Trump administration has sought closer ties to President Tsai's government, angering Beijing by signing two deals in the past month to tighten ties with the island, including a travel act which will allow more official visits between the US and Taipei.</p>

"(China) wants to highlight that the Chinese navy is ever ready and secondly, it is a signal to the government in Taipei you better not go further," Collin Koh, research fellow at the S. Rajaratnam School of International Studies' Maritime Security Program, told CNN.

The planned live-fire exercises follow a massive show of force by the PLA Navy on April 10 and 11, which conducted the country's largest military drills ever in the South China Sea.

Chinese President Xi personally reviewed the troops himself from the deck of the Chinese destroyer Changsha on Thursday, speaking to the troops about the need for the navy to become "world-class."

Responding to the news of the upcoming live-fire drills, the Taiwanese Defense Military said in a statement the drills were taking place in a routine military zone and reiterated their national army could protect the country from any threat.

"Our people please rest assured," the statement said.

<b>HEADLINE</b>	<b>04/15 FDA pulls concentrated caffeine</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/health/health-news/fda-acts-pull-concentrated-caffeine-market-n865716">https://www.nbcnews.com/health/health-news/fda-acts-pull-concentrated-caffeine-market-n865716</a>
<b>GIST</b>	<p>Bulk caffeine products may have killed at least two people and they don't belong on the market, the Food and Drug Administration said Friday.</p> <p>The FDA declared concentrated, bulk caffeine products illegal and said it would act to get them off the shelves.</p> <p>"These products present a significant public health threat because of the high risk that they will be erroneously used at excessive, potentially dangerous doses," the FDA said in a statement.</p> <p>"Highly concentrated and pure caffeine, often sold in bulk packages, have been linked to at least two deaths in otherwise healthy individuals."</p> <p>The FDA has been warning about powdered caffeine since 2014, when an Ohio teenager died after using it. It's also specifically asked sellers to stop providing it directly to consumers.</p> <p>"Despite multiple actions against these products in the past, we've seen a continued trend of products containing highly concentrated or pure caffeine being marketed directly to consumers as dietary supplements and sold in bulk quantities, with up to thousands of recommended servings per container," FDA Commissioner Dr. Scott Gottlieb said in a statement.</p> <p>"We know these products are sometimes being used in potentially dangerous ways. For example, teenagers, for a perceived energy kick, sometimes mix dangerously high amounts of super-concentrated caffeine into workout cocktails."</p> <p>It would be easy to get a dangerous dose, the FDA said.</p> <p>"A half cup of a highly concentrated liquid caffeine can contain approximately 2,000 mg of caffeine and just a single teaspoon of a powdered pure caffeine product can contain approximately 3,200 mg of caffeine. This is equivalent to about 20 to 28 cups of coffee, a potentially toxic dose of caffeine," the agency said.</p> <p>"Regardless of whether the product contains a warning label, such products present a significant and unreasonable risk of illness or injury to the consumer," the FDA added.</p> <p>Too much caffeine can cause fatal heartbeat irregularities.</p>

The FDA's action does not include energy drinks or energy products that contain caffeine, or supplements. "Moreover, this guidance does not affect other types of products that might also contain caffeine, such as prescription or over-the-counter drugs or conventional foods, like traditionally caffeinated beverages," it said.

But the bulk products can easily confuse people, who may accidentally overdose on them.

<b>HEADLINE</b>	<b>04/14 MBTA rail safety system off track</b>
<b>SOURCE</b>	<a href="http://www.bostonglobe.com/metro/2018/04/14/who-driving-your-commuter-train-likely-someone-with-wreck-record/sLRyEIPMFvZqDoe6Je8YFI/story.html">http://www.bostonglobe.com/metro/2018/04/14/who-driving-your-commuter-train-likely-someone-with-wreck-record/sLRyEIPMFvZqDoe6Je8YFI/story.html</a>
<b>GIST</b>	<p>Dean Walker's license has been suspended 39 times for everything from driving to endanger to refusing a breathalyzer test. He's been caught speeding 16 times and convicted of drunken driving twice.</p> <p>To fellow motorists, he's a hazard.</p> <p>To the Registry of Motor Vehicles, he's a chronic offender. But to Keolis, the MBTA's commuter rail operator, Walker is something else entirely — an engineer.</p> <p>Despite his appalling driving history, Walker is entrusted with operating six-car trains, at speeds averaging 60 miles per hour, carrying hundreds of commuters to and from the city.</p> <p>Robert Ronquillo III, son of the chief justice of the Boston Municipal Court, was also penalized multiple times for safety violations on the job.</p> <p>And he has plenty of company among his peers. About 110 commuter rail engineers, more than half of them, have driving records that experts described as poor considering the sensitive line of work they're in — at least three infractions such as speeding, causing accidents, and failing to stop.</p> <p>Nearly 50 engineers have had their driver's licenses suspended — 44 of them more than once, according to Registry of Motor Vehicle records reviewed by the Globe.</p> <p>The engineers' supervisors don't set much of an example, either. Manager of engineer training Shawn Monahan, who teaches aspiring engineers what they need to know before they can operate a train, has received 11 speeding tickets and caused two accidents.</p> <p>Keolis's head engineer, Mark Neverett, has 13 speeding tickets, eight accidents, and an operating under the influence on his driving record, though he's had no recorded offenses since 2010.</p> <p>The records obtained by the Globe, which span decades, raise serious concerns about safety on the commuter rail, experts say. Train operators aren't required to have a driver's license, and driving a 144-ton locomotive on fixed tracks is a very different discipline than driving a car. But a history of recklessness on the roads makes it much more likely someone will be reckless on the rails, they say.</p> <p>"Someone who is known to have engaged in multiple incidents of risky and illegal behavior with an automobile should not be permitted to operate a train," said David Hughes, the former chief engineer and acting CEO of Amtrak. "Locomotive engineers aren't allowed mistakes on the job."</p> <p>Many of the engineers with poor driving records have, records show, also faced discipline on the railway — ranging from counseling to suspension — for such on-the-job infractions as running a stop signal, failing drug tests, or causing derailments.</p>

But perhaps the harshest penalty was reserved for the Keolis executive who sounded the alarm about the number of engineers with dismal driving records.

Robert T. McCarthy, the vice president of safety, was dismissed after he warned the company about the potential risks in employing engineers with problematic personal driving histories, according to documents obtained by the Globe.

McCarthy left Keolis last fall, just a year and a half after the company heralded his arrival from the Southern California Regional Rail Authority, where he served as deputy chief operating officer.

Before leaving, McCarthy sent an audit to Keolis's general manager raising a host of safety concerns, including the engineers' driving records. He concluded: "If there were a catastrophic incident, Keolis would be scrutinized and would not fare well in a [federal] investigation."

Keolis, which has operated the commuter rail system for the MBTA since July 2014, said Friday that "nothing is more important" than safety.

Spokesman Tory Mazzola said the company has invested \$15 million into improving safety systems, including a new training simulator and safety technology for engineers. Mazzola noted that its engineer supervisors are "valuable, hard-working employees with excellent work records" and their personal driving records have "absolutely no bearing" on their job performance.

Keolis said it inherited most of its workforce from the Massachusetts Bay Commuter Railroad Company, which ran the system from 2003 to mid-2014, and Amtrak, which ran the system before then. Keolis promised in its bid for the contract to review the qualifications of its workforce. Mazzola said Keolis relied on the employee certification and background checks performed by the prior rail system operators.

Keolis and MBCR officials both have said that commuter rail management is hamstrung by federal rules that allow a railroad to look at an engineer's driving record only for the three-year period prior to certifying him or her as fit for the job. Also, the railroad cannot consider speeding violations, only drunken driving convictions and related license suspensions. And even enforcing that standard is hard; the Brotherhood of Locomotive Engineers and Trainmen union fights the company whenever it seeks to impose discipline on one of its members, they said.

Keolis officials have faced questions about the company's engineers since the Globe reported in February that engineer Roberto Ronquillo III had 10 license suspensions and multiple stops for drunken driving on his record. At the time, Keolis and MBCR officials suggested Ronquillo, the son of a Boston judge, was an anomaly whose driving record was somehow missed during the vetting process.

Newly obtained internal documents suggest otherwise. Commuter rail officials pulled his driving record in 2011 when he was training to be an engineer. MBCR required Ronquillo to undergo enhanced drug and alcohol testing as a condition of getting the new job.

But the broader Globe review found that Ronquillo's alarming driving record barely stands out among commuter rail engineers, who earn around \$100,000 a year.

Among them: Veteran engineer Richard Russell who chalked up 13 speeding tickets, got into three accidents, and had his license suspended 14 times.

And Alcino Fernandes, who ran up 16 speeding tickets, caused 11 accidents, and received four citations for passing a school bus, records show. He is not currently operating a train, according to Keolis officials, and is awaiting a disciplinary hearing. Officials would not provide details.

Fernandes, the only engineer who responded to a Globe request for comment, said that most of his violations were "well over 10 or 20 years ago." However, records show he was caught speeding in 2010 and committed a "state highway violation" in 2015.

“All that stuff took place long before I started with the railroad,” said Fernandes, 51. “I was a young kid when all that ridiculous stuff happened.”

As a group, the system’s engineers racked up a staggering number of violations, including more than 200 license suspensions, according to the Massachusetts Registry of Motor Vehicles. Besides motor vehicle infractions, drivers can lose their license for failing to pay fees or fines.

Eighty-five engineers received more than two speeding tickets. Six have been declared habitual traffic offenders. And more than 85 percent of the engineers have at least one driving infraction.

Hughes, who led national rail operator Amtrak, said locomotive engineers, like other transportation professionals, should have pristine driving records.

“In the trucking industry, you can’t drive a truck if you don’t have a clean record,” said Hughes. “Same with taxi industry. To have 80 percent of your engineers with an operating infraction is appalling. . . . I would imagine you might find 10 percent, maybe.”

In the Massachusetts’ commuter rail system, the opposite is true — fewer than 10 percent had no driving citations and no incidents of discipline.

“Yes, those are by far, the worst engineer records I’ve ever seen in decades of railroading,” said another expert, who asked to remain anonymous because he works for another railroad and fears retaliation.

Inside Keolis, executives had been warned about the problems in their corps of engineers.

In the preliminary safety audit submitted to the Keolis general manager, David Scorey, in November, McCarthy, then the executive in charge of safety, pointed out that motor vehicle regulators had identified many of the company’s engineers as “habitual offenders” because of repeated speeding violations on their personal driving records.

Even so, McCarthy wrote, the company has not decertified — that is, declared unfit for service — any engineers for speeding on the rails during the history of the Keolis contract.

“This is highly suspicious given the propensity of our employees to speed [on the job],” he wrote.

Excessive speed has been the cause of several fatal railroad accidents across the country, including a 2013 crash in the Bronx that killed four and injured 61 and a crash in Philadelphia in 2015 that killed eight and injured more than 200.

About 100,000 people ride Keolis’s commuter rail system each day, completely in the dark about the driving history of the engineer behind the controls.

“I can’t talk now, I’m too shocked,” commuter Mary Connaughton said after hearing a description of some of the engineers’ driving records.

“What’s it going to take, a train wreck for Keolis and the T to get ahead of this and put public safety first?” asked Connaughton — a former Massachusetts Turnpike Authority board member — when she later called back.

While Keolis and MBCR have reported few major incidents, records show at least 80 engineers have committed serious infractions while on the job — safety violations that include failing alcohol or drug tests, running stop signals, and causing derailments, records show.

While the company insists that safety is its top priority, the Federal Railroad Administration and the MBTA itself have raised concerns about its compliance with federal safety rules and the terms of its

contract with the T.

The FRA, which regulates railroads, has fined Keolis some \$350,000 for violations that include leaving trains unsecured, operating moving trains with a door or doors open, and failing to conduct all engineer performance testing required under federal law, records show.

Joe Pesaturo, spokesman for the Massachusetts Bay Transportation Authority, said the agency “steadfastly holds” the commuter rail contractor accountable for providing safe and reliable service.

“Because safety is of paramount importance, the MBTA closely monitors the contract under which Keolis manages a qualified workforce that is in full compliance with all Federal Railroad Administration regulations,” Pesaturo said in a statement. “The commuter rail operator has demonstrated its strong commitment to safety through significant investments in equipment, training, and personnel.”

Some suspect that Keolis may feel financial pressure to keep engineers on the job even when they have problems at work.

Under its operators agreement with the MBTA, the company is penalized when a train is late or canceled. If an engineer is removed from service, the on-time performance may suffer.

A longtime issue

Experts say the problems with the commuter rail and its workforce go way back — before Keolis took over the \$2.7 billion contract in 2014.

Upon taking over the rail operation, Keolis, a French company, had just a few months to decide whom to retain from its inherited workforce, officials from both companies said.

And once hired or retained, employees are rarely, if ever, terminated — regardless of their personal history or work record.

Experts say that if a railroad wanted to impose order and discipline, it could refuse to promote an employee with a poor driving record, or could subject such a driver to increased testing. In extreme cases, the railroad could fire the employee for conduct unbecoming an employee under a clause in the company’s contract with the MBTA.

Governor Charlie Baker has repeatedly expressed dissatisfaction with Keolis’s performance, and transportation officials have said they will not automatically extend the company’s contract when it expires in June 2022.

David Gunn, the former chief executive of Amtrak, which once operated the Massachusetts commuter rail system, said the large number of engineers with bad driving records points to a deep problem.

“You really need to change the culture of the place,” said Gunn, who also ran transit agencies in New York, Washington, D.C., Philadelphia, and Toronto. Of all the places he worked, Gunn said, “the T was the most challenging in terms of controlling the workforce. Not that they were all bad people, but the structure and the union and political meddling in management decision-making was the absolute worst at the T.”

HEADLINE	<b>04/14 Oregon state pension: \$76K per month</b>
SOURCE	<a href="https://www.nytimes.com/2018/04/14/business/pension-finance-oregon.html">https://www.nytimes.com/2018/04/14/business/pension-finance-oregon.html</a>
GIST	A public university president in Oregon gives new meaning to the idea of a pensioner.

Joseph Robertson, an eye surgeon who retired as head of the Oregon Health & Science University last fall, receives the state's largest government pension.

It is \$76,111.

Per month.

That is considerably more than the average Oregon family earns in a year.

Oregon — like many other states and cities, including New Jersey, Kentucky and Connecticut — is caught in a fiscal squeeze of its own making. Its economy is growing, but the cost of its state-run pension system is growing faster. More government workers are retiring, including more than 2,000, like Dr. Robertson, who get pensions exceeding \$100,000 a year.

The state is not the most profligate pension payer in America, but its spiraling costs are notable in part because Oregon enjoys a reputation for fiscal discipline. Its experience shows how faulty financial decisions by states can eventually swamp local communities.

Oregon's costs are inflated by the way in which it calculates pension benefits for public employees. Some of the pensions include income that employees earned on the side. Other retirees benefit from long-ago stock market rallies that inflated the current value of their payouts.

For example, the pension for Mike Bellotti, the University of Oregon's head football coach from 1995 to 2008, includes not just his salary but also money from licensing deals and endorsements that the Ducks' athletic program generated. Mr. Bellotti's pension is more than \$46,000 a month.

The bill is borne by taxpayers. Oregon's Public Employees Retirement System has told cities, counties, school districts and other local entities to contribute more to keep the system afloat. They can neither negotiate nor raise local taxes fast enough to keep up. As a result, pensions are crowding out other spending. Essential services are slashed.

"You get to the point where you can no longer do more with less — you just have to do less with less," said Nathan Cherpeski, the manager of Klamath Falls, a city of about 21,000 in south-central Oregon.

Klamath Falls's most recent biennial bill from the pension system, known as PERS, was \$600,000 more than the one before. PERS has warned that the bills will keep rising. Mr. Cherpeski has had to cut back on repairing streets and bridges.

Even as the American economy is humming, many states and cities are still hurting from the 2008 financial meltdown. The crash hammered their pension funds and tax revenues, but didn't reduce the amounts they owe retirees.

It wasn't until 2016 that average state tax collections returned to pre-2008 levels. In the meantime, states and cities have had to rebuild pension funds to cover the rising numbers of retirees drawing benefits. That has left less money for the police, school sports programs and everything else. Local residents might not know why, but they are paying more taxes and getting scantier services in return.

Costs are rising even in places that previously acted to defuse the problem. Colorado trimmed pensions in 2010, but a new \$32 billion shortfall means more pension cuts and tax increases are likely. Detroit sliced its pension obligations in bankruptcy and persuaded philanthropists to chip in, but it is not clear that the city has an affordable plan.

In San Francisco, the school board wants voters to approve a \$298 "parcel tax" on real estate, ostensibly to raise \$50 million to pay teachers a living wage.

"That's a worthy objective, but it's not the real reason," said David Crane, a former trustee of the

California teachers' pension system. He said the school district's retirement costs had grown by \$50 million over the last five years, devouring resources that would have gone to teachers.

Oregon is a blue state, but in its restive red hinterlands, tax increases are politically off limits and financial distress has been severe since 1994, when logging was curtailed to save an endangered owl. Lately, things have been getting even worse.

When a man was reported yelling and firing his gun on the property of a school in rural Josephine County, it took two hours for a sheriff's deputy to arrive, said Kate Dwyer, chairwoman of the board for the Three Rivers School District.

The county has cut sheriff patrols, closed its mental health department and kept its jail at less than half capacity because of a lack of guards.

Dave Valenzuela, the Three Rivers school superintendent, traces the latest woes directly to PERS. The system is run at the state level, but it is bankrolled in large part by obligatory contributions from local governments.

This year, Three Rivers was poised to receive its first increase in state education funding in years, a reflection of growing enrollment. But Oregon raised by more than 50 percent the amount that Three Rivers had to contribute to PERS. So Mr. Valenzuela had to lop five days off the school year, ask each school to cut its budget by 10 percent and lay off the district librarian and English specialist.

PERS sets the pension bill for each entity — local government, university system and the like — based on the pay and demographics of its workers. Just about everyone's bills are getting bigger.

That includes the state, by far the system's biggest contributor.

Oregon now has fewer police officers than in 1970, is losing foster-care workers at an alarming rate and has allowed earthquake and tsunami preparations to lapse. A 2016 survey turned up "a large number of bridges with critical and near-critical conditions" because of "longstanding inadequate funding."

Even prosperous communities are being pinched. The Beaverton School District, outside Portland, had to get rid of 75 teachers last year when its mandatory pension contribution rose by \$14 million. That was after shedding 340 teachers in 2012.

"I have town hall meetings, and the parents are just confounded by this," said Mark Hass, a Democratic state senator from Beaverton.

#### A Golden Touch

Oregon's unusual method for calculating pensions tends to generate lavish payouts.

For decades, PERS calculated pensions two different ways, and retirees could choose whichever produced the bigger numbers.

The first way was similar to what most states do, basing pensions on each worker's final salary and years of service. But Oregon's lawmakers included a golden touch, redefining "salary" to include remuneration from any source.

That was how Mr. Bellotti, the former football coach, came to be the state's third-highest-paid pensioner, at roughly \$559,000 a year.

Mike Bellotti in 2007, when he was the University of Oregon's head football coach. After retiring as the university's athletic director in 2010, he started drawing the biggest government pension in the state. Since then, two other retirees have surpassed him. Credit Chris Pietsch/The Register-Guard, via Associated Press

When he retired in 2010 as the university's athletic director, the standard pension formula was applied to his salary, plus a share of the outside licensing fees and product endorsements the football program brings in. (His pension details, along with those of other retirees in the system, were first obtained in 2011 from PERS by two newspapers, The Oregonian and The Statesman Journal.)

Mr. Bellotti said he never asked for a supersize pension. In 1995, he said, the university started to include a percentage of all endorsement and licensing fees in coaches' salaries.

"It was basically to augment the university's ability to pay a competitive salary to its coaching staff," he said.

When Mr. Bellotti retired, he was partway through a five-year, \$1.9 million-a-year contract, which he said was still below the league average of about \$3 million.

PERS made up for it with a big pension. "It was pay later as opposed to paying now," he said.

Dr. Robertson, the former Oregon Health & Science University president, said he had retired and started drawing his pension last fall, after learning he had multiple sclerosis. He said he agreed to stay on through the end of the academic year, without pay, "for the sake of continuity."

A spokeswoman for the medical center said Dr. Robertson's pension was based on his salary, incentive payments, clinical pay and unused sick or vacation time.

Oregon's second way of calculating pensions dates back to 1946: For decades, every public worker got a simulated tracking account. It was credited with 6 percent of each paycheck, then left to compound at a predetermined rate.

In the early years, a low rate was used because the pension system invested in bonds that didn't yield much.

But in the 1970s, lawmakers started nudging the rate up, eventually to 8 percent. Then, the system's trustees decided 8 percent should be a guaranteed minimum. In years when markets produced higher returns, the accounts compounded at those rates, after money-management fees. During the 1990s bull market, accounts compounded by up to 21 percent a year.

When workers retired, their employers were required to "match" the account balances, doubling them. Then PERS would base the pensions on the total.

'Planet Tiffany'

Randall Pozdena, an economist who supervised the pension system's investments in the 1990s, gave speeches warning that the situation was unsustainable.

"The only way you're going to get out of this is if the state is hit by a golden asteroid from Planet Tiffany," he recalled saying.

But efforts to change the system, including a 1994 ballot initiative, were blocked by the State Supreme Court, which ruled that accruals could not be reduced during any public worker's career.

So, when lawmakers required government retirees to pay Oregon's 9 percent income tax, as everybody else did, they also increased pensions by 9.89 percent, giving retirees extra money to pay the tax with.

"It's an affront to everybody who pays taxes," said Bruce Dennis, a retired carpenter from outside Portland who earned a \$54,000-a-year pension by swinging a hammer for 45 years. No one gives him extra money to cover his taxes.

Students at Evergreen and other schools in the Three Rivers district, which covers a thinly populated area larger than Rhode Island, spend hours on buses every day. The district has asked Oregon officials to help cover its transportation costs, so far in vain. Credit Leah Nash for The New York Times

“At every step of the way, they’ve made decisions that went against the interests of the public,” he said.

Starting in 2003, the tracking accounts were phased out. But workers who already had the accounts were allowed to keep them. New hires got a more modest retirement plan.

“The cost of this pension system is not caused by the people we are hiring today,” said Steven Rodeman, executive director of the Public Employees Retirement System. “This is a legacy problem from the 1980s and 1990s.”

For workers with the tracking accounts, PERS dialed back the annual returns to 8 percent, then to 7.5 percent in 2016. That is still more than what PERS’s investments have generated over the last decade. And so the pension fund’s financial hole continues to deepen.

Across Oregon, local officials have been told to brace for 15 to 20 more years of rising pension bills. That’s when the current generation of retirees will start dying out.

“All we can do is wait,” said Jay Meredith, finance director of Grants Pass, the seat of Josephine County.

In the meantime, mounting pension costs mean that a generation of schoolchildren is growing up in the area with no theater program, no orchestra, no wood shop and minimal sports, chorus and art.

That’s if they can get to school.

A county road recently washed out, stranding 300 people. Ms. Dwyer, of the Three Rivers School District, reported the problem to a public-works official.

She recalled his response: “I have trucks, but I can’t put gas in them to come to you and dig it out.”

<b>HEADLINE</b>	<b>04/13 Concern: pyrosomes on Oregon coast</b>
<b>SOURCE</b>	<a href="http://www.kptv.com/story/37955183/unusual-phenomenon-of-pyrosomes-on-oregon-coast-concerns-researchers?autostart=true">http://www.kptv.com/story/37955183/unusual-phenomenon-of-pyrosomes-on-oregon-coast-concerns-researchers?autostart=true</a>
<b>GIST</b>	<p>PORTLAND, OR (KPTV) - Strange sea creatures continue to be found in the water on the Oregon coast.</p> <p>Last year, researchers said they were surprised to see pyrosomes washing up in Oregon, as they are mostly found in temperate or tropical climates.</p> <p>Now, researchers are surprised they are still here.</p> <p>Laurie Weitkamp with the National Oceanic and Atmospheric Administration said her team was studying salmon last month, but pyrosomes were pulled up in the fish nets.</p> <p>She said there were “buckets and buckets” of them.</p> <p>While she isn’t sure if salmon are eating them, workers did find a rockfish that had eaten a pyrosome.</p> <p>Scientists are still working to understand how they fit into the food system of the sea. The pyrosomes also weighing down fishermen’s nets and can cause other issues.</p>

	“Once they got here, we were kind of expecting them to go away, and nobody really knows why they are here or what is keeping them here,” Weitkamp said.

<b>HEADLINE</b>	<b>04/13 Homeless tent blocks school entry</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/953514/tent-whitman-middle-school/">http://mynorthwest.com/953514/tent-whitman-middle-school/</a>
<b>GIST</b>	<p>KIRO 7’s Gary Horcher first reported that a tent belonging to a homeless person has been sitting on the grounds of Ballard’s Whitman Middle School since Tuesday. Little has been done about it.</p> <p>Whitman Middle School parent Erika Nagy told KIRO Radio’s Dori Monson that the tent sits inside a doorway of the school “literally on school property,” along with drug paraphernalia and other debris.</p> <p>“If there was a fire in the building, if school was happening today, the kids would not be able to get out of that doorway due to this tent,” she said.</p> <p>Whitman Middle School</p> <p>The tent’s occupier left the scene before the Seattle Police Department showed up on Friday, but Nagy said that she has no doubt the person will return. Whitman is currently on spring break, but classes will resume on Monday.</p> <p>According to Nagy, this is not the first time something like this has happened in Ballard. She blames city leadership for letting the homeless problem get out of control to the extent of a tent being set up on the property of a school.</p> <p>“Common sense has absolutely flown out the window,” she said.</p> <p>Nagy said that during a Wednesday evening public meeting with Seattle City Councilmember Mike O’Brien, who represents the Ballard area, O’Brien stressed that more money needed to be spent on the issue. Nagy, however, pointed out that Seattle is already spending more money per homeless person than any other city in the nation.</p> <p>“We are throwing hundreds of millions, almost a billion dollars, at this problem, and it has only gotten worse,” she said. “There is absolutely no accountability with any of our representatives ... Mike O’Brien is absolutely not representing Ballard residents whatsoever.”</p> <p>Elsewhere in Ballard</p> <p>The coming Whittier Heights tiny house encampment is a prime example of the city’s lack of consideration for its residents, Nagy said. The encampment, which allows drug and alcohol consumption, will bring drug use and prostitution within blocks of three Ballard schools, she argued.</p> <p>“For LIHI (the Low-Income Housing Institute) and SHARE (the Seattle Housing and Resource Effort), this is a cash cow,” Nagy said. “There’s no incentive for them to make it better, because the money goes away.”</p> <p>The tiny house encampment is being forced on the Whittier Heights neighborhood “with absolutely no community input whatsoever,” Nagy said.</p> <p>“How is this getting any better, and why is the only solution that Mike O’Brien can put forward more money?” she asked.</p>

<b>HEADLINE</b>	<b>04/13 'Hidden' radioactive objects around us</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/future/story/20180405-why-people-collect-radioactive-objects">http://www.bbc.com/future/story/20180405-why-people-collect-radioactive-objects</a>
<b>GIST</b>	<p>It began with an online video. Andrew Walker had watched as a collector of radioactive objects showed off the items he had procured over the years, such as antiques containing uranium. Walker thought that looking for such pieces 'in the wild' might make an interesting and unusual hobby – so he bought himself a Geiger counter.</p> <p>He quickly realised, as scientists will tell you, that radioactivity is everywhere. The first elevated reading he got was in the parking area at a Mexican fast-food restaurant in Idaho. "I noticed that when we pulled in there, my Geiger counter was going off," he recalls. Something nearby was flinging out the tiny subatomic particles that make up radiation in slightly higher quantities than might be expected – and though he</p>

couldn't figure out what it was, Walker was suddenly aware of this otherwise invisible activity.

After that, he began looking for other intriguing examples.

His pursuit of radioactive objects is still a hobby. By day, Walker is a cinema projectionist and a filmmaker, not a scientist. But he enjoys sharing some of his finds on Twitter and Instagram, where he can discuss them with others who are similarly curious.

Radioactivity is something we live with constantly – it's always there in relatively small amounts. Around the world, naturally occurring, higher-than-average levels of radioactivity are found in various types of beaches and soils, among other places. Meanwhile, most concrete is radioactive, though levels obviously vary. In the US, it is possible to get your home tested for radon gas – which is produced slowly over time by radioactive construction materials. Even the human body is slightly radioactive because we contain elements like potassium-40, which decay.

Walker lives in Bozeman, Montana. He later discovered a curious historical fact: slag containing small amounts of uranium and radium was used in the past for concrete used in construction in his neighbouring state of Idaho. He wonders whether this led to his readings outside the Mexican restaurant.

Walker likes to plan trips to local areas where he thinks he might find interesting material. If he does, he then documents his discoveries. There are plenty of old uranium mines (and now deserted uranium mining towns) in the US and Walker has visited some of these on his travels.

He also began frequenting antique malls. "At every antique shop I have ever gone to so far, I have always been able to find something radioactive," he says.

These items include "Vaseline" glassware, which contains uranium and is a striking yellow-green in colour. But he's also found orange-red plates and bowls that were coloured with a uranium-based dye and which often produce even stronger readings. The US government guidelines advise against using such crockery for food or drink, though the health risk of simply owning these items is negligible.

Then there are watch and clock faces with glow-in-the-dark paint that contains radium. Such objects are relatively safe as long as they are not taken apart, but the women who made them in factories would often hold their paint brushes using their lips. This caused them to ingest small amounts of the radium paint. As a result, many developed serious illnesses including bone cancer in their jaws.

This is why Walker tries not to put himself at any unnecessary risk. Regarding his mildly radioactive crockery, he says, "If they weren't radioactive I'd probably have them out, but they're tucked away."

Still, his new hobby has intrigued friends and family. "They ask why am I going to these places and exploring this stuff," he explains with a laugh. "It's something I'm interested in; it's just fascinating."

He's even found a few local landmarks, including public buildings like train stations, where the tiles produce slightly elevated levels of radioactivity – again, presumably a result of having been made with particular dyes or glazes.

What is radiation?

Radiation is essentially energy. The radiation detected by Geiger counters concerns energy released by decaying atoms – atoms that are constantly expelling a barrage of tiny particles. Some of this radiation can dislodge electrons from other atoms to create charged particles – this is known as 'ionising radiation'. Three key forms of ionising radiation, from largest to smallest, are:

Alpha – A bundle of two protons and two neutrons

Beta – An electron, or positron, which is like a positively charged electron

Gamma – Tiny photons, which at different wavelengths also make up visible light

Radioactive elements that decay producing these forms of radiation include uranium and radium. Alpha particles can be stopped with a sheet of paper, or the outer layer of human skin. But gamma rays can penetrate much further and are often only blocked by very dense materials such as lead.

Geiger counters are easy to make – so much so, in fact, that some hobbyists assemble their own and experiment with finding sources of radioactivity with which to test them. Walker himself bought one for \$1,300 (£930), a RadEye meter that detects alpha, beta and gamma radiation (see box, “What is radiation?”).

Radiochemist Nick Evans at Nottingham Trent University points out that radioactivity can be measured in a variety of different ways. One approach is to observe the rate of nuclei decaying over time; the international unit used for this is the Becquerel. But people may be more familiar with measurements in Sieverts (or indeed Microsieverts or Millisieverts).

This is the effective dose of the radiation and the unit Walker uses. However, Evans says that the standard way of taking these readings is actually to hold the Geiger counter one metre away from the source so that objects’ radioactivity can be compared accurately.

### High energy

The fascinating thing about Walker’s expeditions is the ease with which he has found so many examples. Evans says this is partly a legacy of industries that treated radioactivity as a potential marketing ploy in the decades following its discovery in the late 19th Century. It was quickly capitalised on as a potential selling point for weird and wonderful new products.

“It was very, very different to anything else,” says Evans. “It was sort of mystical and people obviously wanted to try all sorts of things with it, play with it, if you like.”

Some of the things manufacturers came up with are mind-boggling today. Take radioactive suppositories, for example, a ‘treatment’ with no actual grounding in medical science. Surely there are safer ways to restore “your normal manly vigour”.

But that wasn’t the only health-related product seeking to help patients to a dose of decaying atoms. There was also radioactive toothpaste and even condoms.

“I’ve no idea what the thinking behind those was,” says Evans of the latter. “I have a tin of them – not that I use them, I hasten to add.”

The notion that increased doses of radioactivity could somehow be good for you is still with us today. There is a spa in the Austrian Alps called Bad Gastein where people can visit the humid tunnels of a former gold mine and sweat away their ailments – while breathing radon gas.

Many scientists have long bemoaned the public’s instinctive distrust of anything to do with radiation. Anxiety associated with it is exaggerated, argue some. Indeed, dangers like pollution don’t spark the same sense of trepidation and yet pollution kills millions of people every year. One study found that, in stark contrast, only 190 people died between 1980 and 2013 as a direct result of overexposure.

Walker says that many fears increasingly seem “irrational” to him thanks to his explorations. On the other hand, of course, his treks and antique shop visits really just show off how ubiquitous radioactivity really is.

SOURCE	<a href="https://www.nytimes.com/2018/04/13/science/virosphere-evolution.html">https://www.nytimes.com/2018/04/13/science/virosphere-evolution.html</a>
GIST	<p>High in the Sierra Nevada mountains of Spain, an international team of researchers set out four buckets to gather a shower of viruses falling from the sky.</p> <p>Scientists have surmised there is a stream of viruses circling the planet, above the planet’s weather systems but below the level of airline travel. Very little is known about this realm, and that’s why the number of deposited viruses stunned the team in Spain. Each day, they calculated, some 800 million viruses cascade onto every square meter of the planet.</p> <p>Most of the globe-trotting viruses are swept into the air by sea spray, and lesser numbers arrive in dust storms.</p> <p>“Unimpeded by friction with the surface of the Earth, you can travel great distances, and so intercontinental travel is quite easy” for viruses, said Curtis Suttle, a marine virologist at the University of British Columbia. “It wouldn’t be unusual to find things swept up in Africa being deposited in North America.”</p> <p>The study by Dr. Suttle and his colleagues, published earlier this year in the International Society of Microbial Ecology Journal, was the first to count the number of viruses falling onto the planet. The research, though, is not designed to study influenza or other illnesses, but to get a better sense of the “virosphere,” the world of viruses on the planet.</p> <p>Generally it’s assumed these viruses originate on the planet and are swept upward, but some researchers theorize that viruses actually may originate in the atmosphere. (There is a small group of researchers who believe viruses may even have come here from outer space, an idea known as panspermia.)</p> <p>Whatever the case, viruses are the most abundant entities on the planet by far. While Dr. Suttle’s team found hundreds of millions of viruses in a square meter, they counted tens of millions of bacteria in the same space.</p> <p>Mostly thought of as infectious agents, viruses are much more than that. It’s hard to overstate the central role that viruses play in the world: They’re essential to everything from our immune system to our gut microbiome, to the ecosystems on land and sea, to climate regulation and the evolution of all species. Viruses contain a vast diverse array of unknown genes — and spread them to other species.</p> <p>Last year, three experts called for a new initiative to better understand viral ecology, especially as the planet changes. “Viruses modulate the function and evolution of all living things,” wrote Matthew B. Sullivan of Ohio State, Joshua Weitz of Georgia Tech, and Steven W. Wilhelm of the University of Tennessee.</p> <p>“But to what extent remains a mystery.”</p>

<b>HEADLINE</b>	<b>04/15 US helping Mexico fight opium</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/the_americas/us-has-been-quietly-helping-mexico-with-new-high-tech-ways-to-fight-opium/2018/04/15/dc18eda0-26d5-11e8-a227-fd2b009466bc_story.html?utm_term=.c04a2468faf5">https://www.washingtonpost.com/world/the_americas/us-has-been-quietly-helping-mexico-with-new-high-tech-ways-to-fight-opium/2018/04/15/dc18eda0-26d5-11e8-a227-fd2b009466bc_story.html?utm_term=.c04a2468faf5</a>
<b>GIST</b>	<p>MEXICO CITY — In the past few opiate-soaked years, U.S. officials say, nearly all the heroin coursing through American cities has come from one place: Mexico.</p> <p>U.S. authorities have expressed alarm at what they call an explosion of opium poppy in their southern neighbor. Echoing a federal drug agency assessment, President Trump has declared that “an astonishing 90 percent of the heroin in America comes from south of the border” and cited that as one reason to build a giant border wall.</p> <p>Yet Mexican and U.S. officials have struggled in recent years to answer some basic questions about Mexico’s illegal poppy crop: How much is actually being grown? How much of it is the Mexican government destroying? And how much is being turned into heroin?</p> <p>Now the Trump administration is intensifying its efforts to help Mexico get a more detailed picture of its poppy problem. It has begun to supply Mexican authorities with drones and geolocation technology and is funding studies to pinpoint how much poppy is being planted and how much heroin is produced from it.</p> <p>The new initiatives emerged from several high-level meetings between Mexican and U.S. officials last year, as well as a trip in July by then-Homeland Security Secretary John F. Kelly, who flew to see poppy fields in Guerrero state with Mexican military leaders, according to Mexican and U.S. officials.</p> <p>Trump’s harsh rhetoric about Mexico on illegal immigration, trade and the wall could jeopardize that kind of security cooperation. On April 9, President Enrique Peña Nieto’s office said he had instructed cabinet secretaries to review their bilateral programs with the United States, following a tense week in which Trump criticized Mexico about a caravan of migrants heading toward the U.S. border.</p> <p>But on certain issues, such as poppy, the two sides have already quietly made progress. With Trump as president, “we thought that there would have been a chilling of relations,” said Juan Carlos Silva, chief of the anti-drug division of Mexico’s federal police. “On the contrary, we have grown closer.”</p> <p>The Drug Enforcement Administration said in a report last year that Mexico supplies 93 percent of all heroin consumed in the United States, up from half of it in 2012 — even though it lags far behind Afghanistan and Burma as an opium poppy producer, according to U.N. figures.</p> <p>The DEA also reported that production more than tripled in Mexico between 2013 and 2016, to 79,000 acres, in part because of “reduced poppy eradication.”</p> <p>But there is no consensus on those estimates, particularly the production numbers.</p>

	<p>Mexican military officials deny that poppy production has tripled and say they have increased eradication efforts, deploying more than 20,000 soldiers on ground or aerial missions.</p> <p>The troops destroyed about 71,000 acres last year and are on pace this year to surpass that, the officials said.</p> <p>A decade ago, Mexico eradicated 27,000 acres, according to the United Nations.</p>

<b>HEADLINE</b>	<b>04/15 FBI: \$20M for 'El Chapo' cartel partner</b>
<b>SOURCE</b>	<a href="https://www.inquisitr.com/4867880/the-fbi-offers-20-million-award-for-the-capture-of-el-chapo-guzmans-partner/">https://www.inquisitr.com/4867880/the-fbi-offers-20-million-award-for-the-capture-of-el-chapo-guzmans-partner/</a>
<b>GIST</b>	<p>The FBI has announced a \$20 million bounty for the capture of a fugitive drug lord, Rafael Caro Quintero, who is also believed to be one of Joaquin "El Chapo" Guzman's partners within the Sinaloa Cartel, as reported by Time. Currently believed to be in his 50s, he's credited as one of the godfathers of the Mexican drug trade. Quintero was initially imprisoned in 1985 but was released on a technicality on August 9, 2013.</p> <p>He had, by that time, spent 28 years in jail. Quintero got his break when a judge ruled that he had been improperly tried in a federal courtroom instead of a state court. Orders for his re-arrest were issued a few days later, but the drug lord had already gone into hiding. His release led to tensions between the Mexican and American governments due to his alleged involvement in the killing of U.S. Drug Enforcement agent, Enrique Camarena Salazar, writer John Clay Walker, and pilot Alfredo Zavala Avelar in 1985.</p> <p>The kingpin fled to Costa Rica after the killings but was soon after apprehended and extradited to Mexico, where he was handed a 40-year sentence for the murders. His cartel, the Guadalajara Cartel, disintegrated after his incarceration, with its members being incorporated into the Juárez Cartel, El Chapo's Sinaloa Cartel, and the Tijuana Cartel.</p> <p>News of renewed interest for his recapture comes in the wake of a new investigative report published by the Huffington Post illustrating the current life of the fallen drug lord. According to the report, he lives in hiding, changing his location every day. He and his henchmen are reportedly always on the lookout for drones and Mexican authorities. Residing in a mountainous region in Mexico, a place known for the growing, harvesting, and processing of drugs, he lives in perpetual fear of apprehension and reportedly suffers from a diseased prostate, but refuses to seek treatment as a result.</p>

<b>HEADLINE</b>	<b>04/15 Arrest in gas station hostage situation</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/955070/suspect-arrested-hostage-kirkland/">http://mynorthwest.com/955070/suspect-arrested-hostage-kirkland/</a>
<b>GIST</b>	<p>Police responded to a hostage situation at a 76 gas station at 11848 Northeast 85th Street in Kirkland on Sunday afternoon.</p> <p>Bellevue police confirmed to KIRO 7 that a suspect came into the gas station threatened a employee. The suspect allegedly told the employee he had a bomb, and to lock the doors, according to police.</p> <p>The 76 gas station is about five blocks north of Lake Washington High School and about three blocks north of Kirkland Cemetery.</p> <p>Officers on scene were able to convince the suspect to give himself up outside of the store. The suspect was arrested once outside the store and had “no device on his person” when arrested, according to police.</p> <p>Police say the clerk inside the gas station “left the store and was unharmed but shaken from the incident.”</p> <p>The suspect is described as a male in his early 20s. Police say the suspects motives are unknown at this point.</p>

<b>SOURCE</b>	<a href="http://komonews.com/news/local/police-investigate-another-indecent-exposure-case-near-wwu">http://komonews.com/news/local/police-investigate-another-indecent-exposure-case-near-wwu</a>
<b>GIST</b>	<p>BELLINGHAM, Wash. -- Bellingham Police are busy investigating a series of indecent exposure cases.</p> <p>More than one week after an incident at the City's southeast side comes another lewd conduct case Sunday morning.</p> <p>Western Washington University senior Sydney Miller and many others got an alert from the school early Sunday to be on the lookout for a suspicious man who reportedly exposed himself outside the window of a home.</p> <p>The incident happened about 2 a.m. Sunday on North Garden Street near campus.</p> <p>"I had to read it a couple of times. I was like, wait, that's my street. That's literally my block...kind of creepy to get that," Miller said.</p> <p>Miller isn't surprised because it's been happening so often in Bellingham. Police say there have been two dozen or more similar cases of lewd conduct and voyeurism on campus and surrounding neighborhoods since last summer.</p> <p>Police suspect there are several different people connected to the many lewd acts reported.</p> <p>In Sunday's case, officers are looking for a thin, 25-year-old man, about 6 feet tall. He was wearing a dark hoodie and jeans.</p>

<b>HEADLINE</b>	<b>04/14 Quebec mosque shooter's motivation</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/04/14/americas/quebec-shooter-motive/index.html">https://www.cnn.com/2018/04/14/americas/quebec-shooter-motive/index.html</a>
<b>GIST</b>	(CNN)A man who killed six worshippers at a Quebec City mosque told an investigator he carried out the

January 2017 attack after seeing reports the Canadian government would welcome more refugees into the country, according to CNN partner CBC.

A video of Alexandre Bissonnette's interrogation was played in court Friday during the third day of his sentencing hearing, CBC reported. Bissonnette pleaded guilty to six counts of first-degree murder and six counts of attempted murder in March.

In the interrogation video, Bissonnette said he was watching TV reports about the Canadian government's policy of welcoming refugees.

"The Canadian government was, you know, going to take in more refugees, you know, those who couldn't go to the United States would end up here," Bissonnette told Quebec City police Sgt. Steve Girard during an interrogation. "I just lost it."

Bissonnette told Girard he wanted to save people from terrorist attacks, according to CBC, and that "maybe, thanks to what I did, there will be hundreds of people saved." He said he had been obsessing for months over the idea that his parents or twin brother would be victims of a terrorist attack after a string of such attacks in Europe.

"I had to do something, it was torturing me inside."

On January 29, Bissonnette entered the Quebec Islamic Cultural Center and fired indiscriminately into a crowd of men, women and children, according to witnesses.

When it was all over, Bissonnette had killed six Muslim worshippers -- Mamadou Tanou Barry, 42; Abdelkrim Hassane, 41; Khaled Belkacemi, 60; Aboubaker Thabti, 44; Azzeddine Soufiane, 57; and Ibrahima Barry, 39.

<b>HEADLINE</b>	<b>04/14 Teen asked for directions; gets shot at</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/04/14/us/michigan-man-shoots-at-teen-asking-for-directions/index.html">https://www.cnn.com/2018/04/14/us/michigan-man-shoots-at-teen-asking-for-directions/index.html</a>
<b>GIST</b>	<p>(CNN)A Michigan man is out on bail after police said he fired a shotgun at a teenager who had stopped at his house to ask directions.</p> <p>Jeffery Craig Zeigler, 53, was charged Friday with assault with intent to murder and possession of a firearm in the commission of a felony.</p> <p>During Zeigler's arraignment, Judge Julie Nicholson entered a plea of not guilty for him.</p> <p>The teen's mother told CNN affiliate WDIV she thought there was a racial component to the case. The teen is black and the man is white.</p> <p>"It definitely was a hate crime," she said.</p> <p>Brennan Walker, 14, said he was walking alone to school Thursday after he missed the bus. As he trekked the 4 miles to Rochester High School in Rochester Hills, he got lost and knocked on the doors of several houses, he said.</p> <p>The teen said he went up to one home and knocked on the door a few times. A woman came to the door, yelling at him, he told WDIV.</p> <p>"I was trying to explain to that I wanted to get directions to go to my school," he said. The man eventually came out with a shotgun and fired one shot at the teen who was running away.</p>

	<p>The teen said he fled when he saw the man with the shotgun. The teen was not wounded.</p> <p>Deputies responded to a call of a male trying to break into a house, the sheriff's department said in a news release. Both the boy and Zeigler were taken to a police station and questioned. Zeigler was arrested. A prosecutor said at Zeigler's arraignment that there was a surveillance video from the house that caused her to doubt Zeigler's recollection of the incident. His story was not borne out by the video, she said.</p> <p>Zeigler was released Friday from Oakland County Jail on a \$50,000 bond. A judge also ordered the man to stay more than 10 miles from the teenager, which means he will likely have to live elsewhere until trial.</p> <p>He was also ordered to turn over all his firearms and wear a GPS monitor.</p> <p>Zeigler told the judge that there is "a lot more to the story than what's being told."</p>

<b>HEADLINE</b>	<b>04/15 PD chief defends arrests in Starbucks</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/04/14/us/philadelphia-police-starbucks-arrests/index.html">https://www.cnn.com/2018/04/14/us/philadelphia-police-starbucks-arrests/index.html</a>
<b>GIST</b>	<p>(CNN)Philadelphia Police Commissioner Richard Ross is defending the actions of officers seen in a viral video arresting two men at a Starbucks.</p> <p>The video, which has racked up millions of views since it was posted to Twitter on Thursday, shows Philadelphia police officers arresting two African-American men inside a Starbucks location.</p> <p>Melissa DePino, who posted the video, wrote, "The police were called because these men hadn't ordered anything. They were waiting for a friend to show up, who did as they were taken out in handcuffs for doing nothing."</p> <p>In the video a man is seen telling an officer that he was meeting the two men there and asking what they did to warrant police being called.</p> <p>Others off screen are heard saying, "They didn't do anything."</p> <p>Ross said Saturday his officers "did absolutely nothing wrong."</p> <p>Ross recorded a statement on Facebook Live in which he explains that Starbucks employees called 911 to report a trespassing complaint.</p> <p>The employees told officers the two men wanted to use the restroom but were told the facilities are only for paying customers. The Starbucks employees then asked the men to leave, but they refused, Ross says. Officers responded and asked the men three times to "politely to leave the location because they were being asked to leave by employees because they were trespassing." When the men again refused to leave, they were arrested "without incident," Ross says.</p> <p>The men were taken to a police station and released when it became clear Starbucks didn't want to press charges.</p> <p>"They did a service that they were called to do," Ross says of the officers. "And if you think about it logically, that if a business calls and they say that someone is here that I no longer wish to be in my business, (officers) now have a legal obligation to carry out their duties. And they did just that."</p> <p>Ross, who is black, references his own experiences while making his case, saying, "As an African-American male, I am very aware of implicit bias."</p> <p>"We are committed to fair and unbiased policing and anything less than that will not be tolerated in this</p>

	department." In statement posted on Twitter, Starbucks apologized "to the two individuals and our customers."

<b>HEADLINE</b>	<b>04/14 Parkland accounts: chaos, confusion</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/newly-released-accounts-parkland-shooting-relate-chaos-confusion/story?id=54470790">http://abcnews.go.com/US/newly-released-accounts-parkland-shooting-relate-chaos-confusion/story?id=54470790</a>
<b>GIST</b>	<p>New documents released Friday paint the clearest picture to date of the chaos and confusion officers experienced in the early moments of the Feb. 14 school shooting in Parkland, Florida.</p> <p>The incident report includes 11 officers' accounts of their responses in the first few minutes after School Resource Officer Scott Peterson screamed "Shots fired!" over the radio.</p> <p>Despite being the first to report the gunfire, Peterson was accused of failing to enter the school building after hearing those initial shots. He claimed to have thought they were coming from outside the building.</p> <p>In February, President Trump said that the officer "did a poor job," adding that he either "didn't react properly" or was a "coward." Peterson was suspended by the sheriff's office in the weeks following the shooting. He resigned soon after amid public scorn.</p> <p>In one account released by the Broward County Sheriff's Office, an officer said he headed towards a nearby Walmart following a dispatch that suggested the shooter was moving in a "westward" direction. Shortly after arriving, he learned the suspect was possibly already in custody.</p> <p>"I then stayed at my new location ... where I prevented any non-law enforcement traffic from entering the area of the school and assisted in directing traffic," the officer said.</p> <p>Armed with an AR-15 style rifle, 19-year-old Nikolas Cruz shot and killed 17 people at Marjorie Stoneman Douglas High School, prosecutors say. Seventeen others were injured.</p> <p>As the situation developed, another officer said, he did not inform his fellow officers that he would be responding to the scene due to "heavy radio transmissions" following the first mention of an active shooter. Instead, he arrived at the school and entered the building, possibly contributing to some of the uncertainty regarding the number of officers in the school and where they had entered the building.</p> <p>"I attempted to enter building 12 from the west but was confronted by several law enforcement officers who had entered from the east end of the building," said one officer. "To mitigate a crossfire situation, I exited the building and continued to hold cover to the south while the other deputies and officers worked to clear the building and treat the injured."</p> <p>Two officers both reported having accidentally switched off their body cameras in their rush to confront a suspect. They turned them back on later when they realized what had happened. One of them said that had happened several times.</p> <p>"It should be noted that my BWC (body camera) was activated but was turned off accidentally by the on and off button being hit by possibly the rifle sling. Upon noticing it was off I immediately turned it back on," the officer said.</p> <p>"This occurred more than once," he added.</p> <p>Earlier reports of the shooting also indicate confusion about which building the shootings were occurring in and where the assault rifle was left in its aftermath.</p>

HEADLINE	<b>04/13 Supremacist died w/ISIS-type bombs</b>
SOURCE	<a href="https://www.thedailybeast.com/suspected-white-supremacist-died-building-isis-style-bombs?ref=home">https://www.thedailybeast.com/suspected-white-supremacist-died-building-isis-style-bombs?ref=home</a>
GIST	<p>Benjamin Morrow was found dead with white supremacist literature and the ingredients for a notorious bomb known as the “Mother of Satan.”</p> <p>Morrow, 28, died in an explosion in the kitchen of his Beaver Dam, Wisconsin, apartment on March 5. His home was filled with bomb-making substances so volatile that firefighters chose to destroy the 16-unit apartment block in a controlled blaze, rather than let Morrow’s neighbors continue to live in the building.</p> <p>A search warrant unsealed last week revealed that Morrow kept white supremacist literature in his home. Investigators’ application for a second warrant suggests that Morrow had plans, announcing that he was clearing out a rented storage locker just hours before his death.</p> <p>Kevin Heimerl of the Wisconsin Department of Justice called Morrow’s apartment a “homemade explosives laboratory.” When they responded to reports of an explosion at the home, investigators passed “a one gallon metal container of acetone,” an investigator told a judge in a newly unsealed warrant application.</p> <p>Acetone is an explosive substance and ingredient in the “Mother of Satan”: a volatile bomb used by terrorists in ISIS attacks in Manchester, England, and Paris, France, in recent years.</p> <p>Also sitting in plain sight where two white cardboard boxes stamped with the words “mix it, shake it, shoot it,” and three more packages labeled “sonic boom,” Heimerl testified, adding that he suspected the boxes contained materials that would explode when combined. Investigators also found pipes and pipe caps in the apartment.</p> <p>When they entered the kitchen, investigators found Morrow dead in front of a still-lit stove. An “overpressure blast” had destroyed much of the room, blowing out the doors and windows and burying Morrow under the collapsed ceiling. Containers with more chemicals were spilling out an open refrigerator door.</p> <p>The scene was so volatile that authorities barred the rest of the apartment building’s residents from re-entering their homes, and burned the entire building to the ground in a 1,600-degree controlled blaze overseen by 100 firefighters. Residents left their valuables inside. One of Morrow’s neighbors told the Wisconsin State Journal he planned on digging through the rubble to find a dead relative’s World War II dog tags, which had been left inside to burn.</p> <p>At the time of the fire, the contents of Morrow’s apartment remained a mystery. But an unsealed warrant describes Morrow as building a terrifying arsenal.</p> <p>In addition to more bomb-making materials, Morrow also had a collection of guns and accessories including a rifle scope, masks, vests, a ballistic helmet, and thousands of rounds of ammunition.</p> <p>Morrow also had “white supremacist material” in his bedroom, the warrant said.</p> <p>Beaver Dam police said the white supremacist literature didn’t necessarily mean Morrow was a white supremacist.</p> <p>“It does cause me some concern but I want to make very clear just because Mr. Morrow was in the possession of this material, does not categorize in any particular light,” Lt. Terrence Gebhardt told CBS 58. “He could have been an individual that was doing research.”</p> <p>But state investigators suggested the opposite. In an application for a search warrant, Heimerl raised the</p>

possibility that Morrow had worked with or been inspired by others, pointing to the white supremacist literature when a judge asked about “propaganda that raises concern for this kind of collaborative work.”

The investigator who swept Morrow’s room described the literature as relating to white supremacist groups that “will involve multiple members” in potentially violent activities. He did not specify which groups were named in the literature.

Members of Morrow’s church community have pushed back on the idea that Morrow built the bombs in his bedroom and kitchen, for which investigators found handwritten instructions.

“I’d love to defend Ben because he has been described as a bomb maker and he’s not a bomb maker,” Rev. Jerry Marsden, the pastor who conducted Morrow’s funeral told the Associated Press. “He wasn’t a recluse as some have said he is. He was far from that.”

In an obituary, Morrow’s family described him as a religious man, who grew up homeschooled and later studied pre-pharmacy, math, and chemistry at Pensacola Christian College in Florida. The search warrant revealed Morrow had a Bible among his white supremacist literature and bomb-making material.

When he wasn’t building bombs, he worked as a quality control technician at Richelieu Foods, according to his LinkedIn profile. His coworkers told investigators Morrow sometimes came to work with an unpleasant smell on his clothes.

“Some of those co-workers reported that it was common for Benjamin Morrow to arrive for work and he had an odor emitting from his person that co-worker’s described as smelling like moth balls,” Heimerl told a judge in an application for a second warrant. “Those co-workers further stated that they had made comments to Benjamin Morrow about the fact that they could smell moth balls on him.”

Mothballs are made of flammable chemicals, which may explain the smell.

The second warrant application reveals that police were interested in the contents of a storage unit Morrow rented. On the morning of the fatal explosion, Morrow visited the storage company “and notified the business that he would be moving his personal property out of the storage unit by the end of March,” Heimerl told the judge in the warrant application, speculating that Morrow might have rented the storage unit to keep strong-smelling chemicals from his home.

The second warrant, the findings of which are not public, also extend to Morrow’s computers, flash drives, and phone. The records could reveal where Morrow received the white supremacist literature—and whether he was acting alone.

“I am aware that a person could work solely to connect this type of manufacturing homemade explosives themselves,” Heimerl said. “But I am also equally aware that individuals oftentimes communicate, inspire and engage with other persons to manufacture homemade explosives.”

<b>HEADLINE</b>	<b>04/13 Deadly war on drugs in Philippines</b>
<b>SOURCE</b>	<a href="https://www.thedailybeast.com/inside-the-deadly-war-on-drugs-in-the-philippineswhere-murder-is-a-meme?ref=home">https://www.thedailybeast.com/inside-the-deadly-war-on-drugs-in-the-philippineswhere-murder-is-a-meme?ref=home</a>
<b>GIST</b>	<p>NEW YORK—Philippine journalist Patricia Evangelista does not think a single story she has written has saved anyone’s life, but yet she keeps writing. Her stories about the Philippines’ deadly war on drugs for the online-news network Rappler chronicle murder in cold blood, often carried out in front of families with young children by vigilantes acting out the wishes of the state under Philippine President Rodrigo Duterte.</p> <p>Rappler has been stripped of its official credentials and investigated for bogus crimes, including tax evasion and cyber libel. Evangelista has personally received death and rape threats for reporting the truth</p>

and for trying to humanize the victims.

She described her disturbing work to John Avlon, editor-in-chief of The Daily Beast, at the ninth annual Women in the World summit in New York on Friday morning against a backdrop of photos of dead bodies and blood-stained sidewalks. “Duterte is sensitive to criticism, so those of us who cover stories are told we are not patriots, that we are fake news,” she said.

No one knows exactly how many people have died in Duterte’s war on drugs. The state officially lists the number at around 4,000 people who were killed by police acting in “self defense.” Human Rights Watch estimates that closer to 12,000 people have been murdered in cold blood by police and vigilantes.

Duterte, who enjoys a high approval rating, won his office by promising to kill 100,000 criminals who are pushers and drug users alike. He makes no differentiation between pushers, addicts, and casual users—and those who are killed are often never arrested, and certainly never brought to trial.

Those who do the killing aren’t always police, sometimes they are men working under curious impunity who are never brought to justice, either. There are around 16,000 “killings under investigation” by Philippine authorities, but Evangelista says there is no transparency about those cases.

The killings are often carried out in broad daylight in the slum areas of Manila. The victims are often on a watch list created by the government, which is suspected of paying the vigilantes for each person killed. Evangelista has reported on men who have been shot bound and gagged with packing tape wrapped around their heads. The killers generally leave a note with the body stating that the victim was an addict or pusher. Evangelista recalled one instance in which the killer had drawn a smiley face on the victim’s corpse. Other bodies have been found with hashtag-laden signs that parody internet memes.

Evangelista says that, in reality, the Philippines has half the global average of per capita drug abuse. But when the country’s anti-drug czar reported this statistic, he was fired. What disturbs Evangelista most is that many of the killings target those living in extreme poverty, who are often the primary breadwinners for their families. When those victims die, the future of whole families dies with them.

She recalled a story about a family of six that lived in a cinder block house in a shantytown in the poor suburbs of Manila. The mother, nine-months pregnant, was home with the children one day when the police came looking for the patriarch of the house. He wasn’t home, so police arrested the pregnant woman and took her away instead. When the father returned, the family urged him to leave, too, or he might be killed. He came back early one morning to prepare a surprise birthday breakfast for one of the children. Police, staking out the house, charged in and told the children to get out. They pushed the father’s head down on the sofa, and the second eldest child, Christine, then 12 years old, jumped on her father’s back to try to protect him. Police pulled her away and shot him in the back of the head several times. One of the children later found a bullet in the cushions of the sofa. When Evangelista talked to the traumatized daughter some months later, she said her father’s death was her fault. “If I had hugged him harder, he would still be alive,” she told her.

The family now lives with an elderly grandmother who doesn’t have the financial means to support them. The mother gave birth, but remains in jail, meaning there is one more mouth to feed. It was never clear whether the father had been a user, a dealer, or neither. The official police report identified the father as a “scavenger” and said he was shot because the police were acting “in self defense.” There were no reports of police injuries, and no one official ever talked to Christine, the only witness.

Duterte has been condemned by the international community—which has called his deadly policy a crime against humanity—but Evangelista says the president’s response has always been to ask, “Frankly, are they human?”

Evangelista says the hardest part about telling stories about this bloody war on drugs is the risks those who talk about it face. “The risks for the people who tell their stories are enormous,” she said. “They could be dead the next day. Or their fathers or sons could be dead.”

She is also concerned that journalists are increasingly afraid to expose the truth. She has little optimism things will ever get better. "I'm not sure about hope," she said. "But I believe in journalism. If we tell the stories, we keep them human. They are people. He may have been a user, he may not have been, but he was a human."

<b>HEADLINE</b>	<b>04/13 Judge: Lakewood cops killing trial delay</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/news/local/crime/article208855809.html">http://www.thenewstribune.com/news/local/crime/article208855809.html</a>
<b>GIST</b>	<p>The alleged getaway driver of a man who gunned down four Lakewood police officers in 2009 made an unsuccessful bid for a new attorney Friday.</p> <p>Dorcus Dewayne Allen is awaiting retrial in Pierce County Superior Court, which won't happen until the Washington State Supreme Court finishes reviewing his case.</p> <p>"What I gather is that you're unhappy with the delay," Superior Court Judge Stanley Rumbaugh told Allen on Friday, after reading his motion for a new attorney.</p> <p>That can't be helped, the judge explained, because the Supreme Court's decision determines what charges prosecutors can bring.</p> <p>Division II of the Washington State Court of Appeals said last year that prosecutors couldn't retry Allen for aggravated first-degree murder, which would mean an automatic sentence of life without parole.</p> <p>Prosecutors appealed the decision to the Supreme Court, which accepted the case earlier this year.</p> <p>If the high court upholds the decision, Allen's retrial will be for first-degree murder. If it doesn't, trial for aggravated murder and a possible automatic life sentence would be back on the table.</p> <p>"I'm ready to go, but I just need to know what the charges are," Rumbaugh said.</p> <p>Allen, who turns 47 on Saturday (April 14) and also goes by the first name Darcus, told the court he doesn't believe his "due process issues" are being addressed "while we're in this standstill."</p> <p>He argued that defense attorney Mary K. High seems to be "totally unaware," when it comes to specifics about his Sixth Amendment rights.</p> <p>Rumbaugh said he didn't see anything deficient about High's work on the case, and he pointed out that the work of Allen's defense counsel on his appeal is the reason he's back in court at all.</p> <p>"I'm going to deny your motion," the judge said.</p> <p>High told the court she understood Allen's frustration.</p> <p>"I have endeavored to represent Mr. Allen to the best of my ability," she said. "... As Mr. Allen knows, I have been very committed to this case."</p> <p>And she'll continue to do so, she said.</p> <p>Allen, who has pleaded not guilty, is suspected of driving Maurice Clemmons to the Parkland coffee shop where Clemmons killed the four officers in November 2009, and then driving him away.</p> <p>Clemmons fatally shot police Sgt. Mark Renninger and officers Tina Griswold, Gregory Richards and Ronald Owens.</p>
