<b>GIST</b>	<p>Protesters of a liquefied natural gas plant being built on Tacoma’s Tideflats gathered outside Puget Sound Energy’s headquarters in Bellevue on Monday and did a little building of their own.</p> <p>KOMO News reports that protesters built a small replica of a Native American longhouse directly outside the entrance to PSE’s headquarters on Monday morning.</p> <p>The longhouse was built without permits, protesters told KOMO, though they told KOMO they’ve applied for permits with the city of Bellevue.</p> <p>The demonstration was a dig at PSE, which was issued a notice of violation by the Puget Sound Clean Air Agency last April for “failure to obtain a notice of construction approval prior to construction, installation,</p>

establishment or modification of a source,” according to a letter the agency sent PSE.  
Never miss a local story.

"This is how it feels when your consent is taken from you — we're building without permission on PSE property, just as PSE is doing on our land," Puyallup Tribe member Dakota Case told KOMO. "But ours is a peaceful symbolic gesture, not a bullying, dangerous, and profit-taking one."

The Puyallup Tribal Council and individual members have said the tribe was not consulted about the project, which they say is being built on ancestral tidelands, and have argued that consultation is an important part of the Puyallup Land Claims Settlement of 1990. The land where the plant is being built is owned by the Port of Tacoma.

PSE spokesman Grant Ringel said the company supports the rights of the protesters to express their opinions. He said the protesters arrived about 8 a.m. and left about 10:30 a.m.

"The only issue we had with this protest was that it created a safety issue because it blocked people from getting into the building to do their jobs from the street entrance, and blocked people from exiting the building through that entrance," Ringel said.

Puyallup Tribal Council member James Rideout said Monday the tribe continues to be concerned about the plant's construction.

"The liquid natural gas plant that is currently being constructed on Tacoma's waterfront is dangerous, and construction should be stopped until proper permits have been completed," Rideout said. "We deserve to fully understand all risks associated with this project."

When completed, the facility would produce 250,000 gallons of LNG a day. A storage tank at the plant would hold 8 million gallons of LNG. Most of that would be sold to customers, including the shipping company TOTE Maritime. PSE also plans to use the tank's contents as a backup supply for high-demand gas days.

<b>HEADLINE</b>	<b>04/02 Israel: deal reached to settle migrants</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/israel-deal-reached-resettle-african-migrants-west-54172444?">http://abcnews.go.com/International/wireStory/israel-deal-reached-resettle-african-migrants-west-54172444?</a>
<b>GIST</b>	<p>Israel said Monday it has reached an agreement with the United Nations to scrap its contested plans to deport African asylum seekers and will resettle many of them in Western countries instead.</p> <p>Prime Minister Benjamin Netanyahu's office said the "unprecedented understandings" with the U.N. refugee agency would send more than 16,000 migrants to various Western countries that are willing to absorb them. It said the new deal would be implemented in three stages over five years, with many of those remaining in Israel integrated and granted official status.</p> <p>Netanyahu and his interior minister, Ariele Deri, announced the deal at a joint press conference.</p> <p>The deal lifts the threat of a forced expulsion to unnamed African destinations, widely believed to be Rwanda and Uganda, with whom Israel had reached a secret agreement. Israel had planned to begin the mass deportations on April 1.</p> <p>Netanyahu said the plan was canceled after it became clear that the "third country" could not handle the absorptions. Migrants who had earlier agreed to return to Africa had reported abuses and broken promises after arriving in Rwanda. In some cases, their travel papers were confiscated or they were quickly sent to Uganda.</p>

	<p>"From the moment in the past few weeks that it became clear that the third country as an option doesn't exist, we basically entered a trap where all of them would remain," he said. He described Monday's compromise as the best available option.</p> <p>Shlomo Mor-Yosef, a senior official at Israel's Interior Ministry, said migrants would be absorbed throughout the European Union, as well as in Canada and the United States.</p>

<b>HEADLINE</b>	<b>04/02 Seattle probes \$23M streetcar deficit</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/city-to-launch-investigation-into-seattle-streetcars-23-million-deficit">http://komonews.com/news/local/city-to-launch-investigation-into-seattle-streetcars-23-million-deficit</a>
<b>GIST</b>	<p>SEATTLE - Construction of the Seattle Streetcar extension has been put on a six moth hold by Mayor Jenny Durkan.</p> <p>Now comes details of an investigation into 'who knew what when' at Seattle's Department of Transportation regarding a \$23 million deficit in the project.</p> <p>The city's budget director, Ben Noble, said a third party consultant should be selected within the week to investigate how officials in the department could have seriously underestimated the capital costs of the 1.2 mile project - which will link up the South Lake Union Streetcar to the First Hill line, which terminates in Pioneer Square.</p> <p>The investigation will look into project performance assumptions as well as operating costs.</p> <p>Metro, the operator of the streetcar, has said the city underestimated operating costs of the entire line by almost 50 percent.</p> <p>"We want to make sure all the risks associated with this project are appropriately priced, at this point I don't have confidence that they are," SDOT interim Director Goran Sparrman told city council members on Monday.</p> <p>"Right now we are looking at a \$23 million deficit and clearly that's resources the project doesn't have," said Sparrman.</p> <p>The capital costs for the project are projected to be \$165,763.932. But, federal and local funds committed to the project are \$142,600,000 leaving the city \$23,163.932 short.</p> <p>Noble provided new estimates to the council that showed a six month delay in the project could cost the city nearly \$13 million, if the council and the mayor decided to restart it.</p> <p>"Whenever you are talking about misstatements or incorrect information, that's huge, let's stop the project and get to the bottom of it," said City Council President Bruce Harrell.</p> <p>When council members tried to ask Sparrman the 'who knew what when' type of questions, City Attorney Pete Holmes advised city officials not to answer in a public session, because of potential issues with contractors committed to the project.</p> <p>City Council President Bruce Harrell said he's fully committed to a transparent investigation.</p>

<b>HEADLINE</b>	<b>04/02 'State of county' address canceled</b>
-----------------	---

SOURCE	<a href="https://www.seattlepi.com/seattlenews/article/State-of-County-address-canceled-by-youth-12799794.php">https://www.seattlepi.com/seattlenews/article/State-of-County-address-canceled-by-youth-12799794.php</a>
GIST	<p>Opponents of the under-construction youth detention center in Seattle continued their efforts to shut the project down, forcing the cancellation of a major speech from King County Executive Dow Constantine on Monday.</p> <p>Constantine was set to give his "State of the County" address Monday at 11 a.m. at the Burien Library, but a group of protesters from European Dissent, which identifies itself as a "network of white anti-racist organizers," forced the cancellation of the speech.</p> <p>The speech will instead be distributed via video on the county's website, according to Constantine's office.</p> <p>A video posted to the European Dissent Facebook page showed protesters standing behind a lectern holding a sign reading "People's moratorium, stop the youth jail" as city and county officials milled around.</p> <p>In the video, activist Olivia Smith asked Seattle Mayor Jenny Durkan for comment on the "No Youth Jail" movement. Durkan talked about the need to provide social services to youth.</p> <p>"We have to make sure opportunity is present from the time they are born," Durkan said. "We've got to get good prenatal care. We've got to get good pre-K. We've got to make sure that there is a schools-to-opportunity pipeline. That is the No. 1 thing we have to do, and as mayor I'm going to work on ways to do that."</p> <p>When pressed to comment on the legal status of the Children and Family Justice Center, Durkan walked away.</p> <p>Smith then asked King County Councilmember Larry Gossett if it was unwise for the county to continue building the facility after a state Court of Appeals ruled that Proposition 1, the 2012 levy that provided funding for the \$210 million project, included imprecise language in the ballot title that jeopardized the county's ability to collect property taxes for the project.</p> <p>"No, because We've continued to build things that have been challenged before," Gossett said. "The most important thing is that the voters voted for it."</p> <p>Gossett declined to speculate on where funds for the detention center might come from if the state Supreme Court does not reverse the appellate court decision. King County petitioned the state's highest court to review the decision in December, but there's not yet been any indication whether it would take up the case.</p> <p>After settling down attendees (except for the demonstrators holding the banner) sat quietly for roughly 15 minutes until Constantine's Director of Communications Alex Fryer informed the crowd that "the state of the county was delivered and recorded earlier today" and would be available online later on Monday.</p> <p>Monday's demonstration was the latest in a series of recent actions from "youth jail" opponents.</p>

HEADLINE	<b>04/03 Mystery lingers in Calif. SUV crash</b>
SOURCE	<a href="https://www.cnn.com/2018/04/02/us/family-suv-pacific-coast-crash-what-we-know/index.html">https://www.cnn.com/2018/04/02/us/family-suv-pacific-coast-crash-what-we-know/index.html</a>
GIST	<p>(CNN)A family's SUV found upside down at the bottom of a cliff near a remote stretch of highway on the Northern California coast. Five bodies recovered, including three teens. Questions surrounding whether the vehicle was deliberately driven off the road.</p> <p>The deaths of Jennifer and Sarah Hart, both 38, and their children -- Markis, 19, and Jeremiah and Abigail,</p>

both 14 -- are indeed a mystery. The couple's other children -- Hannah, 16, Devonte, 15, and Sierra, 12 -- are still missing. Investigators aren't certain whether they were in the SUV when it tumbled into the sea.

Here is what we know about the Hart family, and the fatal crash last week:

### **The children**

The children were adopted in Texas in 2006 and 2009, according to Tiffani Butler, a spokeswoman for the Texas Department of Family and Protective Services.

Butler couldn't immediately say if both women or just one of them legally adopted the six children.

Siblings Abigail, Hannah and Markis were adopted first, in September 2006, in Colorado County, according to Butler. Sierra, Jeremiah and Devonte, also siblings, were adopted in February 2009 in Harris County. Out-of-state adoptions are not uncommon, according to Butler.

Devonte, who is black, earned national attention when a touching photo of him went viral in 2014.

In the photo, tears streamed down his face as he embraced a white police officer in the middle of a Portland, Oregon, demonstration over a grand jury's decision not to indict Ferguson police officer Darren Wilson in the fatal shooting of Michael Brown.

Devonte had been holding a sign offering "Free Hugs."

### **The fatal crash**

The SUV plunged 100 feet into the water from a flat, gravel-covered outcrop where travelers stop to admire the view, walk their dog and stretch their legs, according to Mendocino County Sheriff Tom Allman.

The bodies of Jennifer and Sarah Hart were found inside the overturned SUV on March 26, the Mendocino County Sheriff's Office said. Emergency responders recovered the bodies of Markis, Jeremiah and Abigail outside the SUV. Scattered belongings, including a purse, were found nearby.

Investigators found no skid marks or brake marks.

A passerby happened to notice the vehicle but nobody reported seeing the crash, so authorities don't know when or how it happened.

On Sunday, police said preliminary information suggested the SUV may have been intentionally driven off the edge of the cliff.

There is "every indication" that Hannah, Devonte and Sierra were riding in the SUV, too, but it's also possible they were left behind with friends, Allman said.

Authorities are still searching for the three children.

### **The Hart family**

Jennifer and Sarah Hart once lived in Minnesota, where Sarah Hart pleaded guilty to misdemeanor domestic assault involving one of the children in 2010, according to court records from Douglas County, Minnesota.

The child had told an elementary school teacher of pain in her stomach and back, which was discovered to be caused by bruises. Sarah Hart told police she had spanked the child over the edge of the bathtub because of the child's behavior. She was sentenced to community service and one year of probation.

About 10 months ago, the Harts moved into their home in Woodland in Washington state, said neighbor Bruce DeKalb. He said the family was "very private."

Another neighbor, Bill Groener, said the children were home-schooled and kept inside most of the time. Zippy Lomax, a friend of the couple, told CNN affiliate KOIN: "Jen and Sarah really were the kind of parents that I think the world desperately needs."

#### **Neighbor's suspicions**

DeKalb told HLN last week that Devonte and one of his sisters had said they were being mistreated. He recalled two disturbing encounters he had with the children.

"One of the girls came to the door at 1:30 in the morning and said that she needed help and the parents were not treating her properly, and (she) wanted us to protect her," DeKalb said. "We ended up getting her back to her parents ... and then I went over there the next morning and just checked on things, and everything seemed normal, and we let it go from there."

DeKalb said he and his wife also encountered Devonte, the one child he saw doing outside chores, such as taking the garbage bins to and from the street.

"About a week ago, he (Devonte) started coming over asking for food and saying that they were taking meals away from him due to punishment," DeKalb told HLN. "And it started out as one time a day and escalated up to three times a day, until a week went by and we decided that we needed to get professional help."

DeKalb said he called Child Protective Services on March 23, and they arrived just after Jennifer Hart came home from work. But she didn't answer the door.

Sarah Hart came home soon after, DeKalb said. By the next morning, the family and their vehicle were gone.

Child Protective Services tried to visit the family twice more -- on March 26 and March 27 -- but had no success, according to the Washington State Department of Social and Health Services. The agency was trying to get in touch after the "now deceased children were identified as potential victims of alleged abuse or neglect," according to a statement from the Washington State Department of Social and Health Services. The department said it had no history with the Hart family.

On March 29, Clark County, Washington, sheriff's deputies executed a search warrant at the family's Woodland home, looking for any evidence in the missing persons case, Sgt. Brent Waddell said then.

<b>HEADLINE</b>	<b>04/02 Medical pot reduces opioid abuse?</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/health/health-news/medical-marijuana-may-reduce-opioid-use-little-n862101">https://www.nbcnews.com/health/health-news/medical-marijuana-may-reduce-opioid-use-little-n862101</a>
<b>GIST</b>	<p>Making medical marijuana available might help reduce opioid prescriptions, researchers reported Monday.</p> <p>They found states that legalized the medical use of marijuana saw small reductions in opioid prescriptions for Medicare and Medicaid patients.</p> <p>Since opioid prescriptions are considered to be a major driver of the opioid abuse epidemic, the researchers said, medical marijuana laws could be a part of the solution.</p> <p>"State implementation of medical marijuana laws was associated with a 5.88 percent lower rate of opioid prescribing," wrote Hefei Wen of the University of Kentucky College of Public Health and Jason Hockenberry of the Emory University Rollins School of Public Health.</p> <p>"Marijuana is one of the potential non-opioid alternatives that can relieve pain at a relatively lower risk of addiction and virtually no risk of overdose," they wrote in one of two reports published in the Journal of</p>

the American Medical Association's JAMA Internal Medicine.

The researchers looked at the prescription records of people using Medicaid and also Medicare Part D – the prescription add-on plan for Medicare recipients.

In the Medicare study, Wen and colleagues found that states with medical marijuana laws had a more than 8 percent reduction in opioid prescriptions compared to states with no such laws.

“We found that overall opioid prescribing in Part D was lower when states permit access to medical cannabis,” they wrote.

“Prescriptions filled for all opioids decreased by 2.11 million daily doses per year from an average of 23.08 million daily doses per year when a state instituted any medical cannabis law,” they added.

“Prescriptions for all opioids decreased by 3.742 million daily doses per year when medical cannabis dispensaries opened.”

State and federal officials are looking for ways to reduce opioid deaths and to reduce the overuse of opioid prescriptions.

The National Center for Health Statistics says 63,600 people died of drug overdoses in 2016.

Opioids killed or helped kill 42,249 people in 2016, the Centers for Disease Control and Prevention says. Opioid overdose deaths were five times higher in 2016 than in 1999.

<b>HEADLINE</b>	<b>04/03 North Atlantic right whales face extinction</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/whales-fade-movement-spawned-hope-54194139">https://abcnews.go.com/Technology/wireStory/whales-fade-movement-spawned-hope-54194139</a>
<b>GIST</b>	<p>Regina Asmutis-Silvia, a biologist who has dedicated her career to saving right whales, is cleaning out a file cabinet from the early 1990s, and the documents inside tell a familiar story — the whales are dying from collisions with ships and entanglements in commercial fishing gear, and the species might not survive.</p> <p>Fast forward through a quarter-century of crawl-paced progress, and it's all happening again.</p> <p>"It's a little scary to think if we hadn't been working on this all these years, would they have been relegated to history instead of Cape Cod Bay?" said Asmutis-Silvia, of Plymouth, Massachusetts-based Whale and Dolphin Conservation. "We're standing on the cliff and going, 'It matters, they're still here, they're still something to fight for'."</p> <p>Despite eight decades of conservation efforts, North Atlantic right whales are facing a new crisis. The threat of extinction within a generation looms, and the movement to preserve the whales is trying to come up with new solutions.</p> <p>The whales are one of the rarest marine mammals in the world, numbering about 450. The 100,000-pound animals have been even closer to the brink of extinction before, and the effort to save them galvanized one of the most visible wildlife conservation movements in U.S. history.</p> <p>But the population's falling again because of poor reproduction coupled with high mortality from ship strikes and entanglement. Scientists, environmentalists, whale watch captains and animal lovers of all stripes are rallying to renew interest in saving right whales, but many admit to feeling close to defeated.</p> <p>Charles "Stormy" Mayo, director of the right whale ecology program at the Center for Coastal Studies in Provincetown, and other scientists have said the species could be extinct as soon as 2041. Mayo, a ninth</p>

generation resident of Cape Cod whose ancestors harpooned whales in the 18th and 19th centuries, now leads expeditions to find the animals and try to learn how to save them.

"There's a fair amount of sadness, dealing with these creatures. They are on the brink of extinction now, and their future is truly in doubt," he said. "I don't think any of us are discouraged, but many of us are fearful. I certainly am."

The decline of right whales dates back to the whaling era of centuries ago, when they were targeted as the "right" whale to hunt because they were slow and floated when killed. They were harvested for their oil and meat, and might have dwindled to double digits until international protections took hold in 1935.

Preserving the whales became an international cause, championed by environmentalists, scientists and the U.S. government, and their population grew to about 275 in 1990 and 500 around 2010. But then things changed.

Scientists are still trying to figure out why the whales have lost about 10 percent of their population in just eight years, but one hypothesis places blame on the warming of the Atlantic Ocean. The whales migrate from Georgia and Florida to New England and Canada every year, seeking food. They are aided by a complex system of protected areas, shipping regulations and commercial fishing restrictions that try to ensure safe passage as they gorge on copepods, crustaceans the size of a flea.

But as waters have warmed, the tiny organisms they need to survive appear to be moving, and the whales are following, sometimes putting themselves in harm's way, said Mark Baumgartner, a scientist with Woods Hole Oceanographic Institution. They also just aren't eating enough, he said.

"The whales are moving around a lot more and they are not finding food," he told fishermen at the Maine Fishermen's Forum in early March.

HEADLINE	<b>04/02 Illinois: synthetic pot deaths, arrests</b>
SOURCE	<a href="http://www.chicagotribune.com/news/ct-met-update-synthetic-outbreak-investigation-20180402-story.html">http://www.chicagotribune.com/news/ct-met-update-synthetic-outbreak-investigation-20180402-story.html</a>
GIST	<p>State health officials have now linked two deaths and dozens of illnesses to synthetic marijuana known as K2, while authorities on Monday said they found a large amount of synthetic pot laced with a toxic substance often used in rat poison being sold at a West Side convenience store.</p> <p>Fouad Masoud, owner of King Mini Mart at 1303 S. Kedzie Ave. in Lawndale, and two of his employees, Jamil Abdelrahman Jad Allah and Adil Khan Mohammed, could face 20 years in prison after an undercover officer bought K2 branded with names that included “Blue Giant,” “Crazy Monkey” and “Matrix” from the workers, according to a federal complaint.</p> <p>The investigation leading to the arrests began last week after Illinois State Police gave Chicago police information about someone who had experienced adverse side effects after using synthetic pot purchased at King Mini Mart. An undercover officer was sent into the store and bought synthetic pot.</p> <p>After the undercover buy, the CPD’s Vice Control License Section Unit conducted a search of the store with the two employees behind the counter, and officers found several packages of K2 on Jad Allah and 1,920 grams of the substance in a bucket behind the store.</p> <p>Tests on the synthetic pot seized from the mini mart determined it contained toxic brodifacoum, a poison used in rodent control, the complaint said. In the recent outbreak associated with synthetic pot, nine people tested positive for brodifacoum, officials said.</p> <p>Jad Allah, 44, of Justice, and Mohammed, 44, of Chicago, were arrested Sunday. That evening, an unnamed witness told Masoud about Jad Allah’s arrest, according to the complaint. Shortly after, police on a stake out at Masoud’s townhouse saw him leaving with a large grocery bag with \$280,000 inside, according to the complaint. Masoud, 48, also was arrested. Police searched his home and recovered 2,900 grams of suspected synthetic cannabis labeled “Purple Giant,” the complaint said.</p> <p>State and local health officials issued a warning last week about a new symptom of synthetic pot — excessive bleeding from the eyes and ears. Those symptoms are associated with brodifacoum.</p> <p>Over the weekend, the Illinois Department of Public Health announced that one person had died after using synthetic pot. On Monday, the state agency announced that a second person had died. Both victims were men in their 20s, the agency said.</p> <p>Of those sickened, nearly half were in the Peoria area, and more than 20 were in the Chicago area. Generally, those who became ill after using the drug were hospitalized for internal bleeding as well as blood coming from the ears, eyes and mouth.</p> <p>The Peoria County coroner’s office was still investigating the death of a 22-year-old man who died Thursday morning and was being counted by the state health department as one of the fatalities in the outbreak. The cause and manner of the man’s death were pending results from toxicology tests that could take 20 to 30 days to complete, said Jamie Harwood, the Peoria County coroner.</p> <p>The man reportedly had used K2 before he was hospitalized for severe internal bleeding, Harwood said.</p> <p>The second death that could be linked to the outbreak is being investigated by officials in west suburban Kane County. Other than the victim being a man in his 20s, information about the death was not immediately available.</p> <p>In total, 56 people have been hospitalized in Illinois since March 10, according to the state health department.</p>

	Of that total, 17 people have been hospitalized in Chicago and five others elsewhere in Cook County, according to the health department. At least 14 people have been hospitalized in Peoria County. In adjoining Tazewell County, 12 people have been hospitalized, state officials said.

<b>HEADLINE</b>	<b>04/02 E-DUI emphasis patrol in state 2 weeks</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/944520/e-dui-emphasis-patrol-in-effect-across-state-for-two-weeks/">http://mynorthwest.com/944520/e-dui-emphasis-patrol-in-effect-across-state-for-two-weeks/</a>
<b>GIST</b>	<p>Starting Monday, law enforcement agencies across Washington began watching more intently for drivers using electronics while driving.</p> <p>The Washington Traffic Safety Commission announced extra statewide patrols that will focus on distracted driving from April 2 to 14.</p> <p>Over 150 agencies will be participating in the crackdown, which will emphasize the state's new E-DUI law.</p> <p>If drivers are caught holding a cellphone, watching videos, using a tablet or holding any handheld electronic device, they will be subject to a \$136 ticket for the first offense. It also includes those stopped in traffic or at a stoplight.</p> <p>Drivers who receive a second E-DUI citation within five years will be fined \$234.</p> <p>Also it's important to note that information on all cellphone infractions will be made available to insurance companies, meaning premiums could increase for those who are caught breaking the law.</p> <p>The commission said cellphone use while driving increases the risk of crashing by three times.</p> <p>The law does allow for hands-free use of a device or operating a mounted device with just a single touch.</p> <p>Since the E-DUI law began in July of last year, there have been nearly 1,500 drivers ticketed each month in the state, the commission said.</p>

<b>HEADLINE</b>	<b>04/02 'Affluenza teen' released from jail</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/affluenza-teen-ethan-couch-expected-released-jail/story?id=54130494&amp;cid=clicksource_81_2_hero_headlines_bsq_hed">http://abcnews.go.com/US/affluenza-teen-ethan-couch-expected-released-jail/story?id=54130494&amp;cid=clicksource_81_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>Ethan Couch, the young Texas man at the center of the so-called affluenza case, was released from jail this morning.</p> <p>Couch, now 20, was sentenced to two years in Tarrant County jail after violating his probation conditions for a 2013 fatal drunk-driving accident that killed four people and injured several others.</p> <p>His case gained national attention when a psychologist involved in the case said then-16-year-old Couch was a product of "affluenza" -- a term he used to describe Couch's irresponsible lifestyle associated with his affluent upbringing. Couch had a blood-alcohol level three times the legal limit on the night of the crash.</p> <p>After leaving the Tarrant County jail this morning, Couch was sent to meet with probation officers in a separate building.</p> <p>"[Couch] will now serve the remaining six years of his period of community supervision under the terms and conditions imposed by the court," his lawyers, Scott Brown and Reagan Wynn, said in a statement to ABC News. "From the beginning, Ethan has admitted his conduct, accepted responsibility for his actions,</p>

and felt true remorse for the terrible consequences of those actions.

"Now, nearly five years after this horrific event, Ethan does not wish to draw attention to himself and requests privacy so he may focus on successfully completing his community supervision and going forward as a law-abiding citizen," the lawyers' statement said.

<b>HEADLINE</b>	<b>04/02 Growing concern South King Co. violence</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/04/02/government-leaders-community-work-to-stem-violence-in-south-king-county/">http://q13fox.com/2018/04/02/government-leaders-community-work-to-stem-violence-in-south-king-county/</a>
<b>GIST</b>	<p>BURIEN, Wash. – King County leaders are concerned with what appears to be a growing violence problem lurking in the southern portion of the county.</p> <p>The latest incident happened just five days ago as two teenage girls were killed in a shooting outside an apartment building.</p> <p>Elizabeth Juarez, 13, and Eveona Cortez, 19, were both shot and killed near the Alturas apartment complex on Wednesday night.</p> <p>Police say so far they have no suspects but believe it was gang-related.</p> <p>On Monday Q13 News heard for the very first time from high-level county officials about the violence - and what community members are doing to take back their streets.</p> <p>“This terrible tragedy with two teenage girls being gunned down in this community cannot go unanswered,” said King County Executive Dow Constantine.</p> <p>Elizabeth’s sister Mary says she was a young, amazing girl who got caught up with a street gang.</p> <p>“Her being affiliated and involved with all that made her feel like she needed to be tougher,” she said.</p> <p>Gang shootings have happened before in south King County and Constantine says the most difficult struggle is keeping young people out of that kind of life in the first place.</p> <p>“That is a pattern we have seen before and quite recently, where there is a shooting and one in retaliation and it goes on indefinitely,” he said. “That requires police officers to stop and it requires a functional criminal justice system to be able to keep people safe, keep them from harming others, the interventions are critical, figuring out how to get these kids out of that life and on track is critical.”</p> <p>“Everybody in the city is just appalled by this,” said Burien resident Rob Halpin. “We’re shocked and certainly scared, a number of us, and we feel terrible for the families involved.”</p> <p>Halpin and his online group Localists.org hopes to make a difference where they can.</p> <p>He says neighbors are now cataloging locations of possible graffiti, and they’re working on plans to help private property owners cover up tags in an effort to take back their neighborhoods.</p> <p>“A lot of the tags seems to have a common theme and we’d like to make sure whoever is making these tags knows our neighborhoods aren’t going to take it,” he said.</p> <p>Burien residents spoke out at a City Council meeting Monday night.</p>

<b>HEADLINE</b>	<b>04/02 Man charged setting fire to police car</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/crime/lets-both-burn-in-hell-man-accused-of-setting-fire-to-seattle-police-car-as-he-was-being-driven-to-jail/">https://www.seattletimes.com/seattle-news/crime/lets-both-burn-in-hell-man-accused-of-setting-fire-to-seattle-police-car-as-he-was-being-driven-to-jail/</a>
<b>GIST</b>	<p>Seattle police say a man who was being driven to jail set fire to the patrol car and yelled to the officer behind the wheel, "Let's both burn in hell!"</p> <p>Nickolas Osborne, a 24-year-old Seattle man, was charged last week with first-degree malicious mischief for allegedly causing extensive damage to the patrol car by using a lighter to ignite the headliner of the vehicle last month. Neither Osborne or the officer who was driving were injured.</p> <p>Osborne was arrested March 24 for allegedly harassing people at Lincoln Park in West Seattle and threatening them with a stick, according to charging papers.</p> <p>He was placed in the back seat of the patrol car, with his hands cuffed behind his back and the seat belt secured across his front, say the charges. About nine minutes into the ride to the King County Jail on northbound Interstate 5, "Osborne slipped his handcuffed hands to the front of his body, unbuckled his seat belt and began violently kicking the rear driver side window," charging papers say.</p> <p>The officer radioed ahead, asking for assistance from jail staff and requesting a backup officer meet him at the jail, the charges say.</p> <p>Osborne stopped kicking the window. The patrol car's interior camera captured him bending down and picking something up from the floor, which turned out to be a lighter, the charges say.</p> <p>He flicked the lighter on and tried to set the seat belt on fire, but when the belt failed to ignite, Osborne held the lighter up to the vehicle's headliner, according to the charges.</p> <p>"Within seconds the ceiling area caught fire and Osborne was heard yelling out, 'There we go! Let's both burn in hell!'" say the charges.</p> <p>The officer rolled down the rear windows to vent the smoke and flames. He then broadcast over his police radio that a fire had started in his vehicle and he pulled over on the James Street offramp, where other officers helped remove Osborne from the burning patrol car and then put out the flames, the charges say.</p> <p>A piece of burning insulation fell on Osborne's pant leg, but officers immediately extinguished the flames and he was unhurt, say charging papers.</p> <p>He was driven the rest of the way to the jail in an ambulance.</p> <p>In addition to the malicious mischief charge filed in Superior Court, Osborne has also been charged with misdemeanor harassment in Seattle Municipal Court, jail records show. He remains jailed in lieu of \$10,000 bail.</p>

<b>HEADLINE</b>	<b>04/02 Calif. upholds DNA collection w/arrest</b>
<b>SOURCE</b>	<a href="http://www.sandiegouniontribune.com/news/california/la-me-ln-dna-supreme-court-20180402-story.html">http://www.sandiegouniontribune.com/news/california/la-me-ln-dna-supreme-court-20180402-story.html</a>
<b>GIST</b>	<p>For years civil libertarians hoped to end California's practice of taking DNA from people arrested on suspicion of a felony and storing that genetic information in an offender database — regardless of whether the suspects were later acquitted or had their charges dropped.</p> <p>That fight for more protective rules in the government's DNA collection suffered a major setback Monday when the California Supreme Court let stand a provision of a 2004 voter initiative that said any adult arrested or charged with a felony must give up his or her DNA.</p>

On a 4-3 vote, the state's highest court refused to throw out that part of the Proposition 69, which has led to the storing of DNA profiles of tens of thousands of people arrested but never charged or convicted.

A majority of states collect DNA from arrestees, and the U.S. Supreme Court has approved the practice. Privacy advocates, though, argued that California's law was more invasive than rules in other places.

Justice Leandra R. Kruger, an appointee of Gov. Jerry Brown, wrote Monday's ruling, a victory for prosecutors. The court's three more conservative justices joined her.

Brown's two other judges on the state high court and a Democratic appointee on an appeals court dissented.

Kruger stressed the majority ruling was narrow and applied only to the facts of the case before the court. She said the DNA program for arrestees could still be challenged by someone else at a later date.

"We recognize that the DNA Act may raise additional constitutional questions that will require resolution in other cases," she wrote.

The more liberal justices wanted the court to use the opportunity to strike down a DNA program they said affects thousands of innocent people each year, and disproportionately African Americans.

Of the 200,000 to 300,000 people arrested in California annually on suspicion of a felony, about a third are either acquitted or never formally charged.

Yet the genetic profiles of the vast majority of them remain in a DNA offender database and can be combed by law enforcement to search for suspects in crimes.

"The fact that felony arrests of African Americans disproportionately result in no charges or dropped charges means that African Americans are disproportionately represented among the thousands of DNA profiles that the state has no legal basis for retaining," Justice Goodwin Liu wrote in one of Monday's dissents.

By allowing for the retention of DNA profiles of people not even charged with a crime, "it is not that far a step for the state to collect and retain DNA from law-abiding people in general," Liu wrote.

Monday's majority decision overturned a 2014 ruling by a San Francisco appeals court that found the DNA collection program for arrestees violated California's Constitution.

That ruling prompted state lawmakers to pass a bill, signed by Brown, to limit the arrestee DNA provisions in the event that the state Supreme Court also agreed they were unconstitutional.

Because Monday's ruling did not upend Proposition 69's requirements, the protections for innocent arrestees added in the new law will not now take effect.

Michael T. Risher, senior staff attorney for the American Civil Liberties Union Foundation of Northern California, called the decision disappointing.

"This maintains the status quo, at least for the time being," he said.

**HEADLINE** 04/03 South Africa miners killed in bus attack

**SOURCE** <https://www.reuters.com/article/us-safrica-union-violence/six-workers-at-south-african-platinum-mine-killed-in-bus-attack-idUSKCN1HA0Y5>

<b>GIST</b>	<p><b>JOHANNESBURG (Reuters)</b> - Six miners were killed when unknown attackers threw a petrol bomb at a bus transporting them to the Modikwa platinum mine in north east South Africa, the National Union of Mineworkers (NUM) said on Tuesday.</p> <p>The attack took place late on Monday night. Modikwa is operated by African Rainbow Minerals and Anglo American Platinum.</p> <p>“Six workers were burned beyond recognition and the other workers had to escape through windows. We also do not know what is the motive of the attack,” Phillip Mankge, the NUM’s North East Regional Secretary, said in a statement.</p> <p>Africa Rainbow Minerals and police could not immediately be reached for comment. Several workers were also injured, Mankge said in the statement.</p> <p>South Africa is the world’s top platinum producer and its platinum belt has been rocked by periodic bouts of violence and labor unrest in recent years with local communities demanding more jobs or more benefits from the industry.</p>

<b>HEADLINE</b>	<b>04/02 India: violence erupts w/caste order</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/world/violence-erupts-india-lowest-caste-protests-supreme-court-order-n862091">https://www.nbcnews.com/news/world/violence-erupts-india-lowest-caste-protests-supreme-court-order-n862091</a>
<b>GIST</b>	<p><b>NEW DELHI</b> — Unrest took hold of several parts of northern and central India on Monday as thousands of Dalits, members of Hinduism's lowest caste, protested an order from the country's top court that they say dilutes legal safeguards put in place for their marginalized community.</p> <p>Caste prejudice is endemic in Hindu-majority India, even though the constitution outlaws the practice and has made it a crime punishable by up to a year in prison.</p> <p>The law also states that anyone accused of a caste-related crime can face immediate arrest. However, last month the Supreme Court ruled that in order to prevent misuse of the law, government officers accused of flouting it can be arrested only after their supervisors sign off on an inquiry.</p> <p>Dalit groups say that the law is already poorly enforced, with abysmally low conviction rates, and that the top court's order dilutes it further. Several groups called for a nationwide protest on Monday demanding that the top court review its order.</p> <p>As protests spread across the states of Punjab, Haryana, Uttar Pradesh and Madhya Pradesh, India's law minister, Ravi Shankar Prasad, told reporters that the federal government would petition the court seeking a review.</p> <p>The Dalits are lowest in Hinduism's caste hierarchy and for centuries were marginalized and forced to perform only certain jobs considered menial by other castes. These included skinning dead animal carcasses and cleaning toilets. They were not allowed into temples or permitted to study religious texts.</p>

<b>HEADLINE</b>	<b>04/02 DEA crackdown nets arrests, licenses</b>
<b>SOURCE</b>	<a href="https://www.justice.gov/opa/pr/dea-surge-drug-diversion-investigations-leads-28-arrests-and-147-revoked-registrations">https://www.justice.gov/opa/pr/dea-surge-drug-diversion-investigations-leads-28-arrests-and-147-revoked-registrations</a>
<b>GIST</b>	<p>For 45 days in February and March, the U.S. Drug Enforcement Administration surged its enforcement and administrative resources to identify and investigate prescribers and pharmacies that dispensed disproportionately large amounts of drugs. The ultimate goal of the surge was remediating or removing</p>

those whose actions perpetuate the controlled prescription drug crisis in America, particularly opioid drugs.

During that period, the DEA surged the efforts of special agents, diversion investigators, and intelligence research specialists to analyze 80 million transaction reports from DEA-registered manufacturers and distributors, as well as reports submitted on suspicious orders and drug thefts and information shared by federal partners, such as the Department of Health and Human Services. This resulted in the development of 366 leads to DEA field offices, 188 of which (51 percent) resulted in active investigations by DEA's 22 field divisions.

The culmination of those investigations was 28 arrests, 54 other enforcement actions including search warrants and administrative inspection warrants, and 283 administrative actions of other types. These additional actions included scheduled inspections, letters of admonition, memoranda of agreement/understanding, surrenders for cause of DEA registrations, orders to show cause, and immediate suspension orders (the immediate revocation of registrations).

<b>HEADLINE</b>	<b>04/02 Fort Worth PD investigates arrest video</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/fort-worth-arrest-black-man-video/2018/04/02/id/852135/">https://www.newsmax.com/newsfront/fort-worth-arrest-black-man-video/2018/04/02/id/852135/</a>
<b>GIST</b>	<p>The Fort Worth Police Department is investigating a weekend arrest in which a white officer was caught on video kneeling on a black man's back and punching him while a black officer kneeed him.</p> <p>In the 50-second video of Saturday's arrest posted on Facebook by the Next Generation Action Network, which organizes demonstrations against police abuse, two Fort Worth police officers can be seen restraining Forrest Curry as he lies face-down in the street. A white officer kneels on Curry's back and repeatedly punches him as he cries, "Why the f--- are you punching me? Why?" A black officer next to Curry knees him repeatedly in his side.</p> <p>Police Chief Joel Fitzgerald said in a statement Sunday that the officers were responding to a call for backup from fire department personnel, who told the officers that Curry "appeared to be intoxicated and had attempted to assault them."</p> <p>It took three officers and one supervisor about five minutes to subdue Curry, Fitzgerald said.</p> <p>Curry, 35, was booked into Tarrant County Corrections Center on charges of resisting officers and evading arrest. Jail records showed that Curry was being held Monday on a \$2,250 bond.</p> <p>One of his attorneys, L. Chris Stewart of Atlanta, said Curry has a history of seizures and had one Saturday while walking that caused him to collapse in the street.</p> <p>When Fort Worth emergency medical staff arrived in response to a call for help, Curry came to and, disoriented, took off running.</p> <p>"It's just sad that in a medical emergency, (police) couldn't have been more patient or understanding," Stewart said.</p> <p>It is the latest in a string of confrontations that have raised questions about the Fort Worth Police Department's use of force policies.</p>

<b>GIST</b>	<p>Thai authorities say they have seized drugs worth about \$29 million and arrested 11 people in recent days as narcotics case surge in the country.</p> <p>The drugs included amphetamine pills, marijuana, ketamine and ice seized in 11 unconnected cases since March 25. The haul displayed Tuesday at the Narcotics Suppression Division outside Bangkok was spread along a row of tables about 15 meters long (49 feet).</p> <p>The total was estimated to be worth 890 million baht (\$29 million), with the largest single haul being 700 kilograms (1,500 pounds) of ice, or crystal methamphetamine recovered March 28.</p> <p>They also seized nearly 1,800,000 pills of yaba, which is a local caffeine-methamphetamine mix, 1,380 kilograms (3,000 pounds) of marijuana, and smaller quantities of cocaine, ecstasy pills, ketamine and other drugs combinations.</p> <p>Thai police have dealt with more than 1,000 drug cases since October, compared to about 450 in the previous one-year period.</p> <p>The most recent was Monday, when officers arrested a Thai woman returning from Ethiopia with 50 containers of cocaine concealed inside her body.</p> <p>The 11 recent arrests include a Malaysian and a Tanzanian.</p>

<b>HEADLINE</b>	<b>04/03 Corner of Spain battles drug smuggling</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/corner-spain-struggle-staunch-drug-smuggling-54196795?">http://abcnews.go.com/International/wireStory/corner-spain-struggle-staunch-drug-smuggling-54196795?</a>
<b>GIST</b>	<p>Faces hidden by masks and hoods, a group of 40 men emerge from the darkness of beach-front houses and step into the sand as a state-of-the-art speedboat approaches the shore. They frantically unload dozens of plastic-wrapped burlap bundles, each containing 30 kilograms (66 pounds) of Moroccan hashish.</p> <p>In little over two minutes, most of the cargo has filled two full-size SUVs. All seats but the drivers' have been removed. The lights are off and the windows have been darkened with black spray.</p> <p>Then, somebody yells: "Cut it! Cut it!"</p> <p>As fast as they came, the SUVs speed away and the smugglers find shelter in the narrow streets of the La Atunara fishing neighborhood. The boat vanishes into the night, still holding half of its cargo. When a patrol car arrives seconds later, all that remains is the sound of the waves.</p> <p>Another night, another chapter in the battle between Spanish authorities and the crime gangs who have turned this neglected town in the shadow of the Rock of Gibraltar into a key European entry point for Moroccan cannabis resin.</p> <p>"Right now, we are losing this battle," said Francisco Mena, leader of Nexos, a federation of local community action groups that offer rehab for drug addicts. "Trafficking can't be stopped with the human resources and material means that we have in place at the moment."</p> <p>He insisted the war could still be won. But such optimism flies in the face of the brazen drug operations witnessed by Associated Press journalists, and of the very words of drug chieftains who agreed to rare interviews.</p> <p>One of the area's most notorious "narcos" insisted that the illicit trade is here to stay.</p>

"Trafficking has always existed, and it always will. If not here, it will move elsewhere along the coast," said the gang leader, who like others spoke on condition that they not be named because they feared prosecution. "If drug trafficking didn't end in Colombia with death penalties and extraditions to the United States, nobody will end it here."

Half a dozen trafficking ring members and their leaders pointed to the 30 percent provincial jobless rate in the Cadiz province, the highest in the country, as a fuel for their criminal activity. They claimed that shipping drugs is a way of life in this forgotten corner, justifying it as a "necessary bad" that feeds hundreds of families directly, and thousands more indirectly.

"Many of us are fathers. We need to take food home," said another gangster who asked to be identified as Pepe. "If we couldn't provide for our children this way, another kind of violence would come."

Three dozen clans are believed to be working in Campo de Gibraltar, a county of 268,000 that cradles the Bay of Algeciras. On a clear day, the contours of the coast of Morocco, the world's top producer of hashish, are visible across a busy shipping waterway at the mouth of the Mediterranean, just 30 kilometers (less than 19 miles) away.

A new generation of bolder gangsters is challenging underfunded law enforcement agencies, as local families watch their teenagers lured into a life of easy money.

"The national government needs to do more, and not only when the media's attention is here," said Mena. "When the state disappears, what appears is impunity."

---

Criminals that in the past dropped their few hundred kilograms of cargo in the sea as soon as they came across a customs surveillance boat are now ready to defend their bigger, bulkier shipments.

The RIBs, or rigid-hulled inflatable boats known as "rubbers," are partially to blame. With three, four and even five 350-horsepower engines, they can ship an average cargo of 1 to 3 tons of hashish in over one hour from northern Moroccan shores. A trafficker told the AP he held the local record: 178 stashes, or 5.3 tons, in a single shipment.

Car chases at high-speeds and personal threats to judges, prosecutors and underpaid, short-handed officers have now become common.

On land and at sea, traffickers use shuttle vehicles — SUVs or rubbers without cargo whose function is to mislead authorities and, increasingly, ram patrol cars and boats.

So far, casualties have been higher on the traffickers' side. Two years ago, four traffickers died when a patrol vessel sailed over their rubber, prompting angry protests against the authorities.

According to police investigators and drug traffickers themselves, the uptick in violence is also related to inter-gang burglaries of drug cargo from beaches or from hundreds of "kindergartens" — storage spaces, often in local homes. These "vuelcos" are often the work of outsiders, the sources said, frequently gangs from Eastern Europe.

"The earlier generation had a respect for police uniform but there is now a new generation that has an absolute contempt for authority," says Juan Franco, the mayor of La Linea, "My worry is that these guys are armed and so far, they are not using them against civil guard or police agents, but that's the next step."

Fears that civilians could also be caught in the crossfire reached a height last month when a group of drug traffickers stormed the emergency ward in La Linea's public hospital. The assailants freed Samuel Crespo, a top aide and nephew to Los Castanitas, two brothers who run the town's most influential drug clans.

Police say there were at least 20 attackers, armed with sticks and knives. Witnesses have disputed the official account, saying a handful of unarmed youngsters took Crespo away with little resistance from their two custodians. The attacked policemen said using their guns inside the busy emergency ward would have escalated things.

The events hit a nerve in La Linea, a town of 63,000. "How can a handful of young criminals be so bold to act with such impunity in broad daylight?" asks Mena, the activist. "Why were there only two policemen guarding a prominent gangster? And why didn't they have any other means to stop the attackers?"

Outrage increased when news emerged that the fugitive was taken in a jet ski across the Strait of Gibraltar for treatment in a private clinic in northern Morocco. A police investigation led to the arrests of two of those involved in the attack, in addition to one person that was detained on the spot at the hospital.

Crespo himself is now back in Spain according to his aides' account. He remains at large.

A week after the attack, the country's Interior Minister descended on the town with an entourage of bodyguards and special police forces. Juan Ignacio Zoido's visit was timed to announce a police operation that led to the arrest of 16 people, members of a sophisticated gang that had installed radar to monitor patrol boats. Police found it under rooftop solar panels in a waterfront house. They also snatched 4 tons of hashish, 17 vehicles and four firearms.

Zoido promised crime squads and additional security measures for the county over coming months.

That same morning, a 90-minute drive away, men in hoods entered a guarded compound and stole a speedboat that had been confiscated and held in evidence, along with a truck to pull it.

---

The Cadiz province, which at its southernmost tip only 14 kilometers (8.6 miles) away from North Africa, already amounts for 40 percent of the drugs entering Spain, according to Interior Ministry figures.

Hashish is arriving on these beaches at the pace of seven to 20 loaded rubbers per day, according to calculations by police and traffickers. A Civil Guard operation last year dismantled a network that used dangerous night helicopter journeys to fly drugs into hideouts further inland.

The county is also a main entry point for cocaine, Europe's second most popular drug according to the region's Monitoring Center for Drugs and Drug Addictions. It makes its way concealed in containers and merchant ships docking in Algeciras, across the bay from La Linea.

Some of the smuggled drugs are consumed south of the Pyrenees, but most of it —up to 90 percent, by some police accounts— travels on land to France, Italy and the Netherlands, which plays a central role as a regional distribution hub, according to the United Nations Office on Drugs and Crime.

<b>HEADLINE</b>	<b>04/02 Pa. police: ammo, gun found after threat</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/ammunition-gun-found-student-threatened-shoot-school-police/story?">http://abcnews.go.com/US/ammunition-gun-found-student-threatened-shoot-school-police/story?</a>
<b>GIST</b>	<p>Over 1,600 rounds of ammunition and a semiautomatic firearm were found after a student was arrested for threatening to shoot up a Pennsylvania school, officials said Monday.</p> <p>An Tso Sun, an exchange student from Taiwan, was arrested last week and charged with terrorist threats with the intent to terrorize another, according to Upper Darby Police.</p> <p>Police Superintendent Michael Chitwood said Sun bought the parts for the firearm online and “put it together” himself.</p>

“It was a weapon capable of firing,” Chitwood said.

Among the recovered ammunition were 225 rounds of 12-gauge shotgun ammunition; 663 rounds of 9mm ammunition; 295 rounds of AR-15 ammunition; and 425 rounds of AK-47 ammunition, according to Chitwood.

On the day of his arrest, Sun’s host mother, who has not yet been identified, allegedly packed up the ammunition and the weapon, and gave them to another person, Chitwood said.

“She went back to the house and loads all the ammo and the gun into a black bag. She then takes that to another person at another location,” Chitwood said, “She didn’t give it to the police.”

Investigators recovered the objects last Thursday after receiving a tip. Chitwood did not say where they found them.

The host mother has not been charged.

Last week, Sun was arrested after he told a fellow student at Bonner Prendergast Catholic High School to “not come to school on May 1” because he “was going to shoot up the school,” according to Chitwood. That student told school officials, and police were notified.

Sun allegedly told the student he was “kidding.”

Prior to uncovering the ammunition and firearm, officials found a number of items in Sun’s bedroom including: a military-style ballistic vest; a high-powered crossbow with scope and light; arrows; 29 rounds of 9mm ammunition; a strangling device; a "military" ski mask; and ear protectors for firing.

“When you add it all together, it’s a major concern,” Chitwood said.

**TURKEY, RUSSIA, IRAN PLOT SYRIA'S FUTURE:** Russian President Vladimir Putin is in Turkey today for a two-day visit in which he'll meet not only with Turkish President Recep Tayyip Erdogan but also with Iranian President Hassan Rouhani.

Putin arrives in the driver's seat after Russia just arranged an evacuation of 1,100 Syrian rebels and their family members from a stronghold in the suburbs of Damascus, a move that will allow the government of Bashar Assad to consolidate control in the eastern Ghouta area of the Syrian capital.

The visit underscores the continental drift of Turkey, a NATO ally, toward Moscow and Tehran, both strategic adversaries of the U.S. Along with discussions about the future of Syria, Putin is scheduled to launch the first unit of Turkey's Akkuyu nuclear power station, which was funded by Russia. It also demonstrates how Putin has been able to sideline the U.S. in Syria

**SYRIA WINNING, U.S. LOSING:** Last month, U.S. Central Commander Gen. Joseph Votel told the Senate Armed Services Committee that the U.S. has been outmaneuvered in Syria by Putin. "Is it too strong a statement to say that, with Russia and Iran's help, Assad has won the civil war in Syria?" asked Sen. Lindsey Graham. "I do not think that is too strong of a statement," Votel replied.

The U.S. military has strict orders to stay out of the Syrian civil war and remain laser-focused on defeating the Islamic State. As Votel pointed out in previous congressional testimony, countering Iran or Russia is not one of the coalition's missions. "Moscow plays both arsonist and firefighter, fueling tensions among all parties in Syria ... then serving as an arbiter to resolve disputes, attempting to undermine and weaken each party's bargaining positions."

**FUMBLING ON THE 2-YARD LINE:** Turkey, Iran and Russia are discussing who will control what in Syria, as President Trump has very publicly expressed his frustration with the complex war zone and signaled his intent to leave "very soon" and "let the other people take care of it now."

A National Security Council meeting on Syria is set for today, but Trump's threat to cut and run is causing deep frustration that's bordering on anger among U.S. commanders, and undercutting the crucial alliance with the Kurds who have been vanquishing ISIS on the ground. That's according to an

NBC report, which is said to be based on private conversations with more than a half-dozen senior officials. "We're on the two-yard line. We could literally fall into the end zone. We're that close to total victory, to wiping out the ISIS caliphate in Syria," one U.S. special forces commander told NBC. "We're that close and now it's coming apart."

The biggest factor forestalling the final death blow for ISIS is Turkey's offensive into the Kurdish enclave of Afrin in northwest Syria that began in late January, a move that prompted the Kurdish elements of the U.S.-backed Syrian Democratic Forces to leave the ISIS fight and head home to fight the Turks.

**DELTA FORCE MISSION:** The U.S. and its coalition partners continue to do what they can to keep ISIS, which is down to about 3,000 fighters, from using the confusion to reconstitute. The U.S. military confirmed that Master Sgt. Jonathan Dunbar — identified by sources as a member of Army's elite Delta Force — was killed on a mission targeting an ISIS leader near Manbij.

"Coalition forces, in an advise, assist and accompany capacity with our partners, were conducting a mission to kill or capture a known ISIS member when they were struck by an improvised explosive device," said Col. Ryan Dillon, a spokesman for the U.S.-led anti-ISIS coalition.

The U.S. has since sent reinforcements to bolster the small number U.S. troops in Manbij, the Pentagon confirmed yesterday.

**PUTIN'S WHITE HOUSE INVITE:** Trump is considering hosting Putin at the White House later this year, but nothing has been scheduled yet. "As the President himself confirmed on March 20, hours after his last call with President Putin, the two had discussed a bilateral meeting in the 'not-too-distant future' at a number of potential venues, including the White House," spokesman Raj Shah said in a statement.

Meanwhile, escalating tensions between the U.S. and Russia and the political hurdles Trump faces at home are making it increasingly difficult for Trump to achieve his campaign goal of warmer relations between Washington and Moscow, writes Sarah Westwood.

Good Tuesday morning and welcome to Jamie McIntyre's Daily on Defense, compiled by Washington Examiner National Security Senior Writer Jamie McIntyre (@jamiejmcintyre), National Security Writer Travis J. **HAPPENING TODAY — VOTEL TALKS IRAQ, SYRIA:** The U.S. Institute of Peace holds a keynote panel discussion at 1:30 p.m. on the future of the fight against the Islamic State group in Iraq and Syria with Votel; Stephen Hadley, the principal foreign policy adviser to President George W. Bush; Brett McGurk, the special envoy for the Global Coalition to Defeat ISIS; and Ambassador Mark Green, the administrator for the U.S. Agency for International Development. The institute will also hold panels through the late morning with Iraqi and Kurdish officials as well as foreign policy experts.

**PENTAGON'S WALL FUNDING AUTHORITY CHALLENGED:** The Pentagon has "no legal authority" to fund Trump's proposed wall along the southern border with Mexico, two Democratic senators told Defense Secretary Jim Mattis on Monday. Sens. Jack Reed, the top Democrat on the Armed Services Committee, and Dick Durbin, the ranking member on the Senate Appropriations defense subcommittee, wrote a letter telling Mattis their conclusion and asked the secretary to respond with his own assessment. "We conclude that the Department of Defense has no legal authority, with or without a

reprogramming request, to use appropriated funds for the construction of a border wall,” they wrote.

Trump floated the idea in a tweet last month for the military to pay for the border wall, which is estimated to cost about \$25 billion, and the Pentagon confirmed last week that Mattis discussed it with the president. The senators said any funding shift would have to go to similar military purposes and any transfer would have to be for higher priority military requirements. Funding in 2006 and 2008 for the National Guard to assist the Department of Homeland Security on building roads and fences along the border required a presidential budget amendment request and a specific appropriation by Congress. That process “indicated that the Department of Defense had no inherent legal authority to use appropriations for those more limited purposes at the time the president made the request,” they told Mattis.

**EXPERTS DISPUTE MATTIS TRANSGENDER STUDY:** Two leading associations of psychiatrists and psychologists say the Pentagon is misrepresenting the effectiveness of treatment for transgender people in its new personnel policy proposal. Mattis’ 44-page review of existing research concluded that the scientific evidence is at best “unclear” for treatment of gender dysphoria, the condition of being unhappy in your current gender.

“That’s really not true and it’s certainly not true among the actual experts who treat these people,” said Dr. Jack Drescher, a psychiatrist and psychoanalyst who is a distinguished fellow at the American Psychiatric Association. “We shouldn’t assume just because somebody has a psychiatric diagnosis that they are not able to function and there is no reason to believe, based on what we know of people who have gotten treatment for their gender dysphoria, that they are any different. If people get treatment for their gender dysphoria, then they are doing fine.”

The association denounced the Pentagon plan as discriminatory last week. The American Psychological Association, which also called it discriminatory, said it was “alarmed by the administration’s misuse of psychological science” as a basis to bar transgender service. “It’s hard to see how they got to the conclusion they got to except by basically already prejudicially knowing the conclusion they wanted to reach and just spinning out a story to support and justify that conclusion,” said Clinton Anderson, the director of the Office on Sexual Orientation and Gender Diversity at the American Psychological Association.

**MATTIS REVIEW LEAVES OUT CONTEXT:** The panel put together by Mattis and its 44-page review acknowledge “serious differences of opinion on this issue, even among military professionals,” but at times downplay or omit context from a variety of recent transgender studies cited. See our examination of the cited research [here](#).

**SUPPORTERS LAUD A CONSISTENT, JUSTIFIED POLICY:** The proposed policy remains just a recommendation for now and is being blocked by four federal lawsuits. Tom Spoehr, director of the Center for National Defense at the Heritage Foundation, has called it a common-sense move that is “completely consistent” with other military recruitment policies. “In recruiting offices across the country, recruiters and doctors discriminate every day about who comes into the military,” said Spoehr, a retired Army lieutenant general. “There is all kinds of discrimination going on in recruiting, and it’s all lawful, and it’s all for an easily justifiable purpose.”

Mattis’ review of the existing research was a ray of hope that the military is going to discard the Obama-era open service policy and politicized views of transgender service, said Elaine Donnelly, founder and president of the Center for Military Readiness, a group that advocates for right-wing conservative policies. “The information about all the studies that discredit the transgender claims about their so-called medically necessary treatments, which really don’t cure underlying problems at all, that’s new and a welcome addition to the public debate,” said Donnelly, who has examined the study.

**THE QUIET WAR GRINDS ON:** U.S. Africa Command announced yesterday that five suspected terrorists were killed in Somalia over the weekend when a missile fired from a U.S. drone hit their vehicle. It’s the latest report from the front lines of a war that few Americans are paying attention to, but

where some 500 U.S. troops, including special operations commandos, are working with the Somali military to battle al-Shabaab, the al Qaeda affiliate.

Every couple of weeks, AFRICOM announces the deaths of a small number of al-Shabaab fighters. Last month, two were killed and three were wounded in a drone strike. In February, the U.S. announced it killed nine suspected terrorists in three separate strikes.

**FLAWED IRAN NUKE DEAL:** The Foundation for Defense of Democracies is out with a new analysis of one of the major flaws of the Iran nuclear deal that Trump is considering ripping up next month. Former Israeli acting national security adviser Brig. Gen. Jacob Nagel argues the current inspection regime is inadequate and should be strengthened by granting the International Atomic Energy Agency “anywhere, anytime” access to all Iranian civilian and military sites.

**MORE CERTAINTY ON NERVE AGENT ATTACK:** British authorities investigating the poisoning of former Russian spy Sergei Skripal on U.K. soil believe the sophistication of the chemical attack demonstrates that it was likely approved by the Kremlin, a source briefed on the investigation told CNN on Monday.

Those examining the scene said the placement of the nerve agent on Skripal’s door is proof of Russian government-level sophistication, and therefore it is assumed the attack was approved by the highest level of the Russian government.

**BUNKER MENTALITY:** A new book claims the White House has a massive secret bunker beneath its north lawn for doomsday scenarios, while staffers battle a more immediate menace — insects — with pressurized salt guns. The bunker, built during the Obama administration, was toured by members of Trump’s staff last year, author Ronald Kessler wrote in *The Trump White House: Changing the Rules of the Game*, which was released Monday.

Kessler, a former Washington Post reporter and author of several books on the Secret Service and national security, wrote that the facility is large enough to fit the White House workforce indefinitely. “At least five stories deep, the bunker, which was completed near the end of President Obama’s tenure, can house the staff of the entire West Wing indefinitely in the event of a weapons of mass destruction attack,” Kessler wrote. “After Trump became president, top staffers toured the bunker, whose existence is classified.”

HEADLINE	04/02 Q&A: US, SKorea war drills
SOURCE	<a href="https://apnews.com/0e5dcfc5661a48e590f8b42aa56b5022/Q&amp;A:-Things-to-know-about-US-South-Korea-war-drills">https://apnews.com/0e5dcfc5661a48e590f8b42aa56b5022/Q&amp;A:-Things-to-know-about-US-South-Korea-war-drills</a>
GIST	<p>SEOUL, South Korea (AP) — Another spring on the Korean Peninsula, another round of war games by the U.S. and South Korean militaries.</p> <p>This week's drills, however, will feature a new and unusually low-key approach, with the allies resisting bringing in their big guns, and the North, for the time being, avoiding its usual belligerent propaganda against exercises that it claims are an invasion rehearsal.</p> <p>The reason for this departure? There's interest in Washington and Seoul in nurturing a diplomatic outreach by North Korea's young leader, Kim Jong Un, after months of weapons tests and threats of nuclear war by the North.</p> <p>On Sunday, the first day of this year's drills, instead of vowing to destroy Seoul, Kim attended a concert in Pyongyang of visiting South Korean pop singers, clapping his hands and asking for more such performances.</p> <p>Some questions and answers about this year's drills, which come ahead of two separate historic summits between Kim and his South Korean and U.S. counterparts:</p> <p>—</p> <p>Q: Are the drills really more low-key than in past years?</p> <p>A: Yes, they are.</p> <p>This year's exercises were postponed because of the Pyeongchang Winter Olympics, where the Koreas worked out a series of rapprochement steps, including parading together behind a single flag during the opening ceremony and fielding a unified women's hockey team.</p>

Seoul and Washington both publicly say the training this time will be similar to previous years. But South Korean defense officials say there are no immediate plans to bring in U.S. aircraft carriers, powerful bombers or other strategic assets that have been deployed in and around the Korean Peninsula during past drills. The North loathes such American weapons.

The two sets of drills, one field-training and the other computer-simulated, typically run for two months, but this year's exercises are scheduled to last for just one month. The allies also have no immediate plans to publicize the training, according to Seoul's Defense Ministry.

—

Q: How will North Korea react to this year's drills?

A: North Korea's state media haven't said anything about the drills so far. Even if there is some criticism later, it will likely be milder than past warlike rhetoric, which often saw daily threats to launch nuclear strikes on Seoul and Washington or void the armistice that ended the 1950-53 Korean War.

Kim told visiting South Korean officials last month that he "understands" the drills will take place and expressed hope that they'll be modified once the situation on the peninsula stabilizes, according to the South Korean government.

While diplomacy holds, it's also unlikely that North Korea will test any weapons, as it has during past drills. Such tests could endanger the North's outreach and crush the current rapprochement.

South Korea's Defense Ministry said Monday that it hadn't detected any suspicious activities by the North Korean military.

—

Q: What's next after the drills?

A: Kim's planned meeting with South Korean President Moon Jae-in on April 27 comes around the time the U.S.-South Korean drills end.

The meeting will be the third-ever inter-Korean summit since the Koreas' 1945 division. It is crucial because it may offer insight about what nuclear disarmament steps Kim could offer, and what concessions the allies might be willing to provide.

It is unlikely that Kim will completely give up his nukes. Only last year he claimed to have functional nuclear missiles targeting the entire U.S. mainland, though foreign experts believe the North still hasn't perfected such missiles. Kim's dictator father and grandfather long aspired to have such power.

During Kim's visit to China last week, his first overseas trip since taking office in 2011, he indicated that he prefers step-by-step, not immediate, disarmament-for-aid deals with the United States and South Korea. This could spell trouble because some hard-line U.S. officials want the North to take immediate, complete disarmament steps so as not to repeat past negotiations in which the North was seen as winning badly needed aid while covertly continuing its bomb program.

Kim and President Donald Trump plan to meet in May, but the exact date and location of their meeting haven't been announced.

**HEADLINE** 04/01 UK cities facing 'punish a Muslim day'

SOURCE	<a href="https://www.thenational.ae/world/europe/punish-a-muslim-day-uk-cities-stand-together-in-the-face-of-islamophobic-threat-1.717770">https://www.thenational.ae/world/europe/punish-a-muslim-day-uk-cities-stand-together-in-the-face-of-islamophobic-threat-1.717770</a>
GIST	<p>Communities across the UK are bracing themselves for Punish a Muslim Day after letters were sent out calling for violence against Muslims on April 3.</p> <p>Last month, letters were circulated by post in major cities and on social media suggesting ways to hurt people and awarding points for certain “punishments”.</p> <p>The letters, which are being investigated by British counter-terrorism police, appear to be in response to ISIL-inspired attacks, four of which took place in the UK in 2017.</p> <p>“They have hurt you. They have made your loved ones suffer. They have caused you pain and heartache. What are you going to about it?” read one of the letters which was circulated online.</p> <p>The Saudi Embassy in London said it had been in contact with the British authorities about the contents of the letter and advised its citizens in the UK to exercise caution and vigilance.</p> <p>In the city of Leicester, where Muslims make up 20 per cent of the population, fears of attacks are high. Last week, Paul Moore, 21, was sentenced to a minimum of 20 years in prison for attempted murder after he attacked a woman and a 12-year-old girl wearing Islamic clothing.</p> <p>Leicestershire Police have said they will be ready to take action on April 3 if Muslims feel threatened.</p> <p>“We have operational plans in place should anything happen on what will hopefully be an ordinary day,” Chief Constable Simon Cole said last week.</p> <p>“It is particularly distasteful and unpleasant and I almost don’t want to talk about it in case of dignifying it and making it something it isn’t.”</p> <p>“We take hate crime seriously, and I hope the conviction and sentence of Paul Moore yesterday proves that.”</p> <p>In February, Darren Osborne, a 48-year-old, was sentenced to life imprisonment for attacking worshippers outside Finsbury Park Mosque in London last year. Osborne killed one man and injured 12 others after he drove a van into pedestrians outside the mosque who had attended nighttime prayers during Ramadan. A handwritten note was found in the van, which referred to Muslims as “feral” and lambasted London’s Muslim mayor, Sadiq Khan.</p> <p>Metropolitan Police said they were aware of concerns following the Punish a Muslim Day letters but that there was no credible information to suggest criminal activity would take place.</p> <p>However, the Met urged anyone with any information about hate crime to contact them immediately.</p> <p>The National Police Chiefs Association released a statement on Thursday about the letters, assuring the public that threats were being taken seriously and that it had taken measures to stop people becoming victims of crime.</p> <p>Meanwhile, community leaders across the country have called for unity in the face of the threat.</p> <p>In Nottingham, one of the cities where letters were circulated, 28 Muslim groups endorsed a statement asking citizens “to make a conscious effort to counter such hate by supporting the Muslim community on April 3”.</p> <p>“An attack on any part of our community is an attack on us all. Our vision like everyone else, is to live in a society that is compassionate, kind and committed to justice and peace,” the statement read.</p>

	<p>In Leicester, a community group has organised an event in defiance of Punish a Muslim Day.</p> <p>St Matthew's Big Local will be holding a day of celebration for Muslims and non-Muslims alike on April 3, with activities including story-telling, face painting and a walking bus march.</p> <p>St Matthew's wrote on Twitter: "We are bringing our community together on Tuesday as our diversity is our strength."</p>

<b>HEADLINE</b>	<b>04/01 Analysis: blacks left out high-paying jobs</b>
<b>SOURCE</b>	<a href="https://apnews.com/76ba3a042b454d0b8f5341f37490c6cc/AP-analysis:-Blacks-largely-left-out-among-high-paying-jobs">https://apnews.com/76ba3a042b454d0b8f5341f37490c6cc/AP-analysis:-Blacks-largely-left-out-among-high-paying-jobs</a>
<b>GIST</b>	<p>BOSTON (AP) — Jonathan Garland’s fascination with architecture started early: He spent much of his childhood designing Lego houses and gazing at Boston buildings on rides with his father away from their largely minority neighborhood.</p> <p>But when Garland looked around at his architectural college, he didn’t see many who looked like him — there were few black faces in classroom seats, and fewer teaching skills or giving lectures.</p> <p>“If you do something simple like Google ‘architects’ and you go to the images tab, you’re primarily going to see white males,” said Garland, 35, who’s worked at Boston and New York architectural firms. “That’s the image, that’s the brand, that’s the look of an architect.”</p> <p>And that’s not uncommon in other lucrative fields, 50 years after the Rev. Martin Luther King — a leader in the fight for equal-employment opportunities — was assassinated.</p> <p>An Associated Press analysis of government data has found that black workers are chronically underrepresented compared with whites in high-salary jobs in technology, business, life sciences, and architecture and engineering, among other areas. Instead, many black workers find jobs in low-wage, less-prestigious fields where they’re overrepresented, such as food service or preparation, building maintenance and office work, the AP analysis found.</p> <p>In one of his final speeches, King described the “Other America,” where unemployment and underemployment created a “fatigue of despair” for African-Americans. Despite economic progress for blacks in areas such as incomes and graduation rates, some experts say many African-Americans remain part of this “Other America” — with little hope of attaining top professional jobs, thanks to systemic yet subtle racism.</p> <p>The AP analysis found that a white worker had a far better chance than a black one of holding a job in the 11 categories with the highest median annual salaries, as listed by the Bureau of Labor Statistics. The ratio of white-to-black workers is about 10-to-1 in management, 8-to-1 in computers and mathematics, 12-to-1 in law, and 7-to-1 in education — compared with a ratio of 5.5 white workers for every black one in all jobs nationally. The top five high-paying fields have a median income range of \$65,000 to \$100,000, compared with \$36,000 for all occupations nationwide.</p> <p>In Boston — a hub for technology and innovation, and home to prestigious universities — white workers outnumber black ones by about 27-to-1 in computer- and mathematics-related professions, compared with the overall ratio of 9.5-to-1 for workers in the city. Overall, Boston’s ratio of white-to-black workers is wider than that of the nation in six of the top 10 high-income fields.</p> <p>Boston — where King had deep ties, earning his doctorate and meeting his wife — has a history of racial discord. Eight years after King’s assassination, at the height of turbulent school desegregation, a Pulitzer Prize-winning photograph from an anti-busing rally at City Hall showed a white man attacking a black</p>

bystander with an American flag.

The young victim was Theodore Landsmark. He's now 71, a lawyer, an architect and director of Northeastern University's Dukakis Center for Urban and Regional Policy.

The Rev. Martin Luther King Jr. addresses civil rights marchers on Boston Common on April 23, 1965.

He said "structural discrimination" is the overarching cause of disproportionate race representation in high-paying fields. Landsmark and others say gains are elusive for myriad reasons: Substandard schools in low-income neighborhoods. White-dominated office cliques. Boardrooms that prefer familiarity to diversity. Discriminatory hiring practices. Companies that claim a lack of qualified candidates but have no programs to train minority talent.

Some also say investors are more likely to support white startups. When Rica Elysee — a lifelong Boston resident who grew up in predominantly black neighborhoods — brought her idea of an online platform linking beauty professionals with customers for in-home appointments to investors, she was shunned, she said.

"They said I didn't belong in the program, that they couldn't identify with it because they weren't black," said Elysee, 32, who initially marketed BeautyLynk to black women like herself. "I remember crying pretty harshly. They couldn't relate to what I was doing."

Some even advised her to move out of Boston, which had a booming innovation economy but was "not encouraging minorities in the tech space," she said. Three years later, Elysee said BeautyLynk is slowly growing but still needs capital.

Most American metro areas are like Boston, with AP's analysis showing that racial disparities in employment are indifferent to geography and politics. California's Silicon Valley struggles to achieve diversity in computer fields. In Seattle, home to Amazon, whites outnumber blacks nearly 28-to-1 in computer- and math-related fields. Financial powerhouse New York has a 3-to-1 ratio of white-to-black workers in all occupations, but nearly 6-to-1 in business and finance. Hollywood shows inequality in entertainment, with almost nine whites for every black worker.

In Atlanta, King's hometown, the proportional representation of black-to-white workers is close to even in many fields. Many reasons are cited. Atlanta has historically black colleges and universities such as King's alma mater, Morehouse; the first black mayor, Maynard Jackson, pressed for policies helping black professionals after his 1973 election; and events like the 1996 Olympics opened doors for entrepreneurs of all races.

Atlanta is an exception. For nearly all of the past half-century, black unemployment nationally has hovered at about twice that of whites.

In Boston, Democratic Mayor Marty Walsh said in a recent speech that the city is addressing the issue and is committed to placing 20,000 low-income residents in "good-paying jobs" by 2022.

Landsmark said stronger role models may be a solution. As Boston Architectural College's president, he mentored Garland. They discussed race issues in the professional world — as when Garland, trying to land jobs in his neighborhood, realized many people who looked like him were unfamiliar with the very concept of architecture. He once had to explain to a homeowner who wanted his roof reframed: "I'm not a builder, I'm an architect."

Today, Garland speaks at high schools and works at the DREAM Collaborative, which focuses on projects in low-income neighborhoods.

"I know the barriers exist in other folks' minds, and I have to disprove that," he said. "I keep myself focused on the issues."

<b>HEADLINE</b>	<b>04/01 Fear: JUUL craze getting teens addicted</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/apr/1/juul-smoking-craze-sparks-teen-nicotine-addiction-/">https://www.washingtontimes.com/news/2018/apr/1/juul-smoking-craze-sparks-teen-nicotine-addiction-/</a>
<b>GIST</b>	<p>It's the latest smoking craze that has teenagers buzzing on social media — and public health officials warning of a new nicotine-addicted generation.</p> <p>“People JUUL at parties, JUUL when they're driving — it's a social thing. They're JUULing all the time,” said C., 17, who said some students at her high school use the popular electronic cigarette in class.</p> <p>Similar to vaping, JUUL is a brand-name e-cigarette that has outpaced its competition thanks to its sleek, discreet shape — many compare it to the size and look of a thumb drive — and its unique vaping formula of flavored nicotine and salt.</p> <p>Its battery can be recharged on a laptop within one hour, and its liquid-filled cartridges come in flavors — cool mint, creme brulee, fruit medley — that anti-smoking advocates say target teens.</p> <p>Juul's website, which asks users if they are 21 or older before allowing access, says the device is not for teens or anyone who has never smoked. It is intended only as an alternative for cigarette smokers who have had little success in quitting smoking, the company says.</p> <p>“The entire conception, premise, operations, mission of the company is to eliminate cigarettes and get adult smokers to switch to our vapor product,” said company spokeswoman Christine Castro.</p> <p>“It is not intended to be discreet. It was not designed to look like a flash drive,” Ms. Castro said. “It was designed specifically and intentionally to help smokers switch.”</p> <p>Still, on Twitter, Instagram and other online forums, young people have put up funny posts about using, losing or being addicted to their JUULs. Some post videos of themselves in classrooms or locker rooms using their JUULs and playing with the smoke.</p> <p>The problem has become widespread at their co-ed, religious school in New York, and administrators have listed it on announcements of banned substances, “no smoking, no drinking, no vaping,” said the two students, who asked not to be identified for fear of reprisals.</p> <p>“But vaping isn't JUULing,” C. said. “JUULing is more intense.”</p> <p>That intensity is the rush of nicotine into the system from the company's unique liquid formula. At 5 percent nicotine per volume, one JUUL cartridge, or pod, is the equivalent to a pack of cigarettes.</p> <p>“We're very concerned about JUUL because it has become such a popular product among young people very, very rapidly,” said Robin Koval, CEO of the Truth Initiative, a nonprofit youth anti-smoking organization.</p> <p>According to internal research by the Truth Initiative, a survey of teenagers found that a significant percentage using JUULs said they were “unaware or unsure that the product contains nicotine.”</p> <p>“We know that nicotine has effects on young people's cognitive development. If you become addicted to nicotine at a younger age, it makes you more susceptible to other addictions later on. It makes it harder to quit nicotine, whether that's from an e-cigarette-type product or combustible product,” Ms. Koval said.</p> <p>Among teenagers, anti-smoking campaigns and tighter restrictions on cigarette sales have helped curb cigarette use to a historic low of 4.2 percent among high school seniors in 2017, compared with a peak of</p>

	<p>24.6 percent in 1997, according to the National Institutes of Health’s Monitoring the Future Survey.</p> <p>Yet applause by health officials and advocates is tempered by a rise in vaping popularity. In its first survey of the subject, it found that nearly one-third of 12th-graders reported using some kind of vaping device. The majority said they vaped “just liquid,” followed by nicotine and marijuana.</p> <p>The JUUL company says on its website that it sells only to adults 21 and older, uses verification tools to prevent underage purchases and has a youth prevention section with an email contact to address concerns.</p> <p>“Kids should not use any nicotine product including ours and we’re working very hard to make headway on that,” said Ms. Castro.</p>

<b>HEADLINE</b>	<b>04/01 China: 128 US products w/steep tariffs</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/apr/1/china-announces-128-tariffs-us-meat-fruit-other-pr/">https://www.washingtontimes.com/news/2018/apr/1/china-announces-128-tariffs-us-meat-fruit-other-pr/</a>
<b>GIST</b>	<p>China slapped a heavy tariff Monday on U.S. meat, fruits, wine and other products, saying it was a retaliation against President Trump’s import tax on steel and aluminum.</p> <p>Beijing had warned the U.S. that the tariffs were coming after the Trump administration announced a regime of new tariffs, first on steel and aluminum and then on Chinese high-tech.</p> <p>China’s Ministry of Commerce said the U.S. had “seriously violated” the principles of non-discrimination under World Trade Organization rules. It said the U.S. also had damaged China’s interests.</p> <p>“China’s suspension of some of its obligations to the United States is its legitimate right as a member of the World Trade Organization,” the ministry said in a statement.</p> <p>Beijing, which has insisted it wants to avoid a trade war, also called for more negotiations to resolve disputes between the world’s two largest economies.</p> <p>The Trump administration had said to expect retaliation, but said that Beijing’s unfair trade practices and theft of intellectual property warranted tariffs and other strict measures.</p> <p>China’s new tariffs hit 128 U.S. products worth a total of \$3 billion in trade, including a 25 percent tax on frozen pork and scrap aluminum, and a 15 percent tax on food commodities such as nuts, fruit and wine.</p> <p>The retaliation also included a 15 percent increase in duties on rolled steel bars.</p> <p>The tit-for-tat tariffs smacked of the trade war the U.S. business leaders and investors feared when the Trump administration began enacting get-tough policies on Beijing.</p>

<b>HEADLINE</b>	<b>03/29 Regional park and rides high demand</b>
<b>SOURCE</b>	<a href="https://crosscut.com/2018/03/puget-sound-region-grows-park-and-rides-fill">https://crosscut.com/2018/03/puget-sound-region-grows-park-and-rides-fill</a>
<b>GIST</b>	<p>The Mountlake Terrace park and ride’s crowding reflects the challenges of meeting demand as the region continues to grow and more people look to transit for less stressful and more environmentally responsible commuting options. A 2009 rebuild nearly tripled the parking capacity at the park and ride, which is owned by Snohomish County’s Community Transit. But now, the garage is again bursting at the seams.</p> <p>All across the region, these free first-come, first-serve park-and-ride lots are in high demand. According to data collected by the Puget Sound Regional Council in 2017, almost a third of park-and-ride lots in the</p>

region have an occupancy rate of 90 percent or higher on weekdays. Sound Transit estimates more than half of the 37 park-and-ride lots the agency operates have more than a 90 percent occupancy rate, 12 of which are completely full most weekdays.

“Build more parking” is one of the most common requests Sound Transit receives as its light rail system expands into the sprawling suburbs, where culs-de-sac built for automobiles dominate the landscape.

“Many Sound Transit customers have few reasonably available alternatives for accessing Sound Transit services besides driving and parking a private vehicle,” Kimberly Reason, a spokesperson for Sound Transit, wrote in an email. “In some cases, lack of available parking ... will be a limiting factor for access to the transit system.”

But adding more free parking doesn’t come cheap. Rising property values and soaring construction costs have pushed the price for a future Kent park-and-ride lot at over \$100,000 per stall.

To some, that’s a pricey subsidy when it only benefits about a third of Sound Transit customers.

And others, including Seattle City Councilmember Rob Johnson, see parking lots as an unwise use of land adjacent to transit.

“As a [Sound Transit] board member, I spend a lot of time encouraging my fellow board members to think about the millions of dollars being spent in their neighborhoods to build structured parking garages and [to] think differently about how they might want that money to be spent on things like buses, bikes or housing,” Johnson said.

He said Seattle has a longstanding policy of discouraging park and rides in the city, “because we are of the belief we should be building more housing near our transit [instead of] parking lots.”

But his fellow board member, Redmond Mayor John Marchione, says that parking is needed in suburban cities because of insufficient bus service. “The further away you get from the center of the system, the more parking you need,” he said.

“In Redmond, we are focused on both bike and pedestrian access but we also have parking planned for our station that’s further east,” Marchione said. He said many people will drive in from Sammamish, Duvall or elsewhere to board light rail.

#### The first-mile/last-mile dilemma

Making that first connection from home to transit is one of the biggest hurdles potential riders must clear — an obstacle known to transportation planners as the first-mile/last-mile dilemma. Many suburban residents don’t live within walking or biking distance of a bus stop, and even if they did, many jurisdictions lack the adequate infrastructure to ensure those are safe travel options.

“The reason we have parking investments in our plans is because, through the community process, that’s what folks in those communities told us that they need to access and use our system,” said Matt Shelden, Sound Transit’s director of planning and innovation.

According to Sound Transit, about a third of riders across the agency’s system use the park-and-ride lots, of which the vast majority are solo drivers. The rest walk, bike, carpool, take a feeder bus or get dropped off.

The Sound Transit 3 plan — approved by voters in 2016 — adds some 10,000 new parking spaces, which is estimated to cost nearly \$700 million, or roughly \$69,000 per space to build. This will increase the number of park-and-ride spaces Sound Transit owns or leases by 64 percent, from 15,832 to nearly 26,000.

Transportation Choices Coalition (TCC), a transportation advocacy group that works to expand transit

options, agrees with Sound Transit that many suburban riders lack other options besides driving to access transit. But TCC doesn't see building more parking as the answer to the first-mile/last-mile dilemma.

Hester Serebrin, the policy director at TCC, in an email suggested there were better ways to spend money on transit, instead of earmarking it for parking. She said, for instance, "if officials focused development efforts on transit-oriented development — housing and employment centers around those now-suburban stations — all of a sudden more taxpayers in the Sound Transit district [will] have more access to transit, in more affordable and sustainable ways."

Sound Transit is wrestling with rising project costs that have delayed the opening of the Lynnwood Link Extension, an 8.5-mile expansion that will run from Northgate to Lynnwood, with two stops in Shoreline and one in Mountlake Terrace. One suggestion to keep the project on time and under budget is to first eliminate new parking from the plan.

But "if parking is not provided where it is really needed, it is going to have a dampening effect on ridership," Sound Transit's Shelden said. And that will mean more cars on I-5.

If parking is going to be expanded, TCC's Serebrin would rather Sound Transit lease existing parking rather than build new parking; build shared parking with other new development in the area; or build parking in a flexible way so it could be converted to other uses in the future. The advocacy group also wants transit agencies to begin charging a daily price for parking.

<b>HEADLINE</b>	<b>04/02 Easter snow brings cold start to April</b>
-----------------	---

<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/easter-snow-brings-cold-start-to-april/281-534086827">http://www.king5.com/article/news/local/easter-snow-brings-cold-start-to-april/281-534086827</a>
---------------	---

<b>GIST</b>	Easter brought with it some interesting weather. Definitely not the sunny and 60-degree weather we saw on Saturday. Sunday's wintry conditions will push into the first week of April.
-------------	--

The cold front that brought Sunday's rain and wind moved through bringing much cooler air and dropped overnight temps into the mid-to-upper 30s. A wet snowflake can't be ruled out Monday morning around 1,000 feet. Luckily, there isn't much moisture left so little to no accumulation is expected.

The next issue is in the mountains (central Cascades) where a Winter Weather Advisory is in effect until 5 a.m. Monday. The National Weather Service says snow accumulations up to three inches are expected Monday morning. Travel through the passes could be tricky, so check with WSDOT before heading out.

Although Monday will start out a bit cooler, with a few lingering showers, the sun returns by the afternoon. Tuesday looks nice with lots of sunshine and slightly warmer temps. Rainy, but warmer, weather is expected mid-to-late week.

<b>HEADLINE</b>	<b>04/02 Wild ride behind crown prince visit to US</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-04-02/a-wild-ride-behind-the-scenes-as-saudi-crown-prince-does-america">https://www.bloomberg.com/news/articles/2018-04-02/a-wild-ride-behind-the-scenes-as-saudi-crown-prince-does-america</a>
<b>GIST</b>	<p>The phone call came at 8 p.m. from the Saudi royal court: Come to The Plaza, immediately.</p> <p>We journalists rushed over to the Manhattan hotel, but it was almost three hours before anything happened. And when it did -- when Crown Prince Mohammed bin Salman and Masayoshi Son, Softbank's chief executive officer, wordlessly signed papers and declared that a "huge step in human history" had been taken -- we had no idea what they were talking about. As the prince left, Son stood still for several long seconds before taking questions.</p> <p>"What just happened?" I ventured.</p> <p>The public signing of a Saudi plan to build a \$200 billion solar facility was indeed historic. If successful, it will be the world's largest solar-energy installation by a factor of 100. But no one told us what was going on as we sat on the floor (no chairs). It was just another day -- or night -- in the chaotic life of the hundreds of officials, business figures and communications consultants who are trailing the heir to the Saudi throne around the world as he tries to drum up investment and boost his country's image. He's in the middle of a three-week U.S. visit. After Washington, Boston and New York, the delegation headed to the West Coast for meetings with Microsoft founder Bill Gates and the heads of Amazon, Apple, Google and Uber.</p> <p><b>Visa Rush</b></p> <p>The trip got off to a madcap start when the Saudis applied at the last minute for more than 500 U.S. visas, according to a person familiar with the matter. As organizers weighed whether to allow media access to a gala dinner in Washington, I was invited, dis-invited and then re-invited.</p> <p>At least three government entities, along with outside firms, are involved in coordinating press coverage of the visit but information has been scarce. Journalists gleaned the outline of the prince's schedule -- when he would travel to different cities, who would accompany him and whom he would meet -- through rumors and anonymous sources.</p> <p>Part of the tension appears to be over how much to publicize -- and how much change the Saudi public can handle. While in New York, Prince Mohammed met with U.S. Zionist leaders, including from the Conference of Presidents of Major American Jewish Organizations and the American Jewish Committee. But the participants were sworn to secrecy. Meanwhile, another meeting he held in New York, with religious figures including Roman Catholic clergy and two rabbis, was heralded by the Saudi embassy as inter-religious dialogue that "emphasized the common bond among all people, particularly people of faith."</p> <p>Asked about the unannounced meeting, one Saudi government representative didn't respond while a second referred back to the press release about the interfaith gathering without further comment.</p>

## Glazed Eyes

The prince is in a hurry to remake the once fiercely closed-off Islamic kingdom, diversifying its economy away from oil and loosening social restrictions even as he tightens his political grip over the authoritarian state. He's famous for working long hours and late nights, as the glazed eyes of the employees arranging his trip can attest. He'd barely finished official visits to Egypt and the U.K. when he jetted to Washington.

Some chaos is inevitable on a trip of such scale. But it's also a symptom of the growing pains Saudi Arabia is going through as its secretive government pledges more transparency -- crucial in the lead-up to the initial public offering of as much as 5 percent of state oil company Saudi Aramco. For a society that has long valued discretion, a road show promoting openness is a bit of an alien concept.

The Saudi government has undeniably opened up during the past few years, issuing a slew of visas for foreign journalists and appointing spokesmen where none existed. In New York, Prince Mohammed met with reporters and editors at the New York Times and the Wall Street Journal, albeit mostly off the record.

"We have committed to increasing the level of transparency and accountability," said Husameddin AlMadani, head of Saudi Arabia's National Center for Performance Management, a government agency that measures progress on the targets set by the prince. "It helps investors. It helps think tanks and researchers."

How that will play out is far from clear as officials lurch between traditional silence and promises of openness. The result is often a bizarre blend, a kind of twilight zone where something -- it's just not always clear what -- is being announced. That's what happened last week at the Plaza at midnight. As quickly as it started, the event was over. Reporters were left to meander past the closed bar and dishes of Saudi dates, observing a handful of delegates working into the morning hours.

<b>HEADLINE</b>	<b>04/01 Statues offensive Native Americans next?</b>
<b>SOURCE</b>	<a href="http://www.latimes.com/nation/la-na-native-american-stature-removal-20180401-story.html">http://www.latimes.com/nation/la-na-native-american-stature-removal-20180401-story.html</a>
<b>GIST</b>	<p>Over the decades, this quiet coastal hamlet has earned a reputation as one of the most liberal places in the nation. Arcata was the first U.S. city to ban the sale of genetically modified foods, the first to elect a majority Green Party city council and one of the first to tacitly allow marijuana farming before pot was legal.</p> <p>Now it's on the verge of another first.</p> <p>No other city has taken down a monument to a president for his misdeeds. But Arcata is poised to do just that. The target is an 8½-foot bronze likeness of William McKinley, who was president at the turn of the last century and stands accused of directing the slaughter of Native peoples in the U.S. and abroad.</p> <p>"Put a rope around its neck and pull it down," Chris Peters shouted at a recent rally held at the statue, which has adorned the central square for more than a century.</p> <p>Peters, who heads the Arcata-based Seventh Generation Fund for Indigenous People, called McKinley a proponent of "settler colonialism" that "savaged, raped and killed."</p> <p>A presidential statue would be the most significant casualty in an emerging movement to remove monuments honoring people who helped lead what Native groups describe as a centuries-long war against their very existence.</p> <p>The push follows the rapid fall of Confederate memorials across the South in a victory for activists who view them as celebrating slavery. In the nearly eight months since white supremacists marched in central Virginia to protest the removal of a Robert E. Lee statue, cities across the country have yanked dozens of Confederate monuments. Black politicians and activists have been among the strongest supporters of the</p>

removals.

This time, it's tribal activists taking charge, and it's the West and California in particular leading the way. The state is home to the largest Native American population in the country and more than 100 federally recognized tribes.

In February, San Francisco officials said they planned to remove a prominent downtown monument depicting a defeated Native American at the feet of a vaquero and a Spanish missionary. In March, the San Jose City Council booted a statue of Christopher Columbus from the lobby of City Hall.

Other states are joining the movement. The city of Kalamazoo, Mich., said last month it would take down a park monument of a Native American in a headdress kneeling before a westward-facing pioneer. In Alcalde, N.M., and El Paso, statues of the conquistador Juan de Oñate have become subjects of renewed debate.

In Baltimore, a city councilman has vowed to replace a smashed Columbus monument with something that better reflects "current-day values."

In Arcata, a city of about 17,000 about two hours south of the Oregon state line, a long-simmering debate over McKinley caught fire after Charlottesville. Area tribes and activists launched a petition campaign and descended on City Hall. The protesters said they couldn't watch Confederate monuments fall without thinking of their own statue.

By the winter, the plaza played host to regular protests. McKinley became a symbol of Arcata's sins against Natives and, by extension, other races too, forcing the city to confront some of its embarrassing history. In 1886, for example, Arcata passed a law calling for the "total expulsion of the Chinese."

McKinley also became a target for anger at President Trump, who has stoked racial tensions with his comments — including his continued insistence that there were "very fine people" among the white supremacists who rallied in Charlottesville.

One Arcata resident was so incensed over McKinley that he protested 26 days straight on the plaza. He held a sign that read, "This Christmas, give the gift of not supporting racism and murder. Remove the statue."

The debate culminated in February during a long and anger-filled City Council meeting, when dozens of residents packed City Hall to testify on both sides of the issue. In the end, the council voted 4 to 1 to get rid of the statue.

"Is there a difference between honoring McKinley and Robert E. Lee?" the mayor, Sofia Pereira, who was part the majority, said in a recent interview. "They both represent historical pain."

The land that is now Arcata was once inhabited by the Wiyot Tribe. Then in the 1850s the logging boom began — and pioneers seeking wealth began rapidly grabbing tribal lands. In 1860, settlers massacred dozens of Wiyots, whom tribe members still mourn today. Wiyot children were commonly abducted and forced into servitude.

McKinley, a Republican who was president from 1897 until his assassination in 1901, never set foot in the region. But after his death dozens of memorials to him popped up across the nation.

In Honolulu, there's McKinley High School. In Philadelphia, a McKinley statue stands in front of City Hall. Chicago has McKinley Park neighborhood, with a statue of the president at the entrance to its main park.

The highest mountain in North America, Alaska's Mt. Denali, was named Mt. McKinley until it was officially returned to his original name in 2015. Unlike other sites, the mountain got its name before

McKinley died.

Just north of Arcata is an unincorporated area called McKinleyville.

The McKinley statue has been in Arcata Plaza since 1906, when a local businessman commissioned and gifted it to the city to honor "the first modern president."

The city eventually grew into a haven for hippies from the Bay Area who sought a quieter life and cheaper land. Marijuana growers flocked to the area, as did activists who enrolled at Humboldt State University for its environmental and Native American studies programs.

But the statue remained as a vestige of a more conservative past. Locals embraced the president as a mascot, dressing him as a lumberjack, and placing bunny ears on his head for Easter. Pranksters have been known to put condoms on his outstretched fingers and stuff cheese in his ears.

Local tribes long resented the statue but remained silent on the matter, figuring there was little chance it would ever come down.

"The Native people here have avoided that square for years," said Ted Hernandez, chairman of the 620-member Wiyot Tribe, which is based on a reservation about 20 miles south of the city. "Why do we have this man standing in this square where they used to sell our children?"

Hernandez's tribe is one of more than a dozen whose members showed up in Arcata or sent letters of protest over the months against McKinley.

Bernadette Smith, who recently drove four hours north from the Manchester Band of Pomo Indians rancheria to protest the monument, described getting rid of the statue as "bigger than just a small victory for our community."

"What happened is going to inspire Natives across America," she said. Smith, 31, said the win in Arcata spurred her to launch a campaign to rename the Garcia River that divides her tribe's land back to its original name of P'da Hau.

The McKinley statue also has its supporters. Dozens showed up at City Hall in February to make their case before the vote. They came again in March when the City Council briefly floated the idea of opening up the statue debate to a citywide vote.

David LaRue, an Arcata resident for the last 22 years, started a Facebook group called "Let the people vote on our McKinley statue" and is now gathering signatures for ballot initiative to do just that.

He said that unlike Confederate leaders whose monuments are no longer widely accepted, McKinley fought for the Union in the Civil War. LaRue also pointed out that McKinley defied the norms of his time in appointing several African Americans to federal posts.

"Certainly by today's standards, he had different ways of looking at things," he said. "But looking at Abraham Lincoln by today's standards, you could also say he was a horrible racist."

The debate has also divided families.

Former Arcata Mayor Bob Ornelas, who has lived in the city since 1979, said tearing down McKinley would take away from the city's culture. He said he couldn't imagine the square, home to the Saturday farmers market and nearly every major city festival, without the McKinley statue there.

"I don't read much into it," said Ornelas, who is Mexican American. "It's not Robert E. Lee. If it was somebody who is known to fight their cousins for the right to have a slave, I would be offended. But during his time he got pushed around by a Congress that was hungry for ... expanding the American

empire."

He sees things differently than his wife, a councilwoman who was mayor last year when the push to remove the statue resurged.

"We are in a small northern part of Northern California where Native people are active in our lives daily," Susan Ornelas said. "It's not just a lost thought. McKinley didn't back Native Americans at all. He backed the Curtis Act, which took away Native rights on a lot of land. Natives were so misused in that era. He didn't really directly hurt them locally but he did through federal laws."

Susan Ornelas suggested allowing residents to vote on the statue's fate before taking back that proposal.

For now, the former president stands in Arcata with his days numbered. The city estimates it will take eight months before he's gone. California law requires a lengthy environmental review, a process that is expected to bring the total cost of removal to \$65,000. Anti-statue activists say they will raise the money.

A veterans hall seven blocks away has offered to house the president.

Other monuments protested by Native peoples are also getting private caretakers. The Columbus statue in San Jose was moved to the hall of the Italian American Heritage Foundation, where the group said it will be enclosed as protection from vandalism.

In San Francisco, the city has considered moving the "Early Days" statue to a museum, though a legal challenge has kept it up for the time being.

Another Columbus statue — the most widely seen in the world — appears to be staying put. It stands 76 feet high at the center of Columbus Circle in Manhattan.

After the Charlottesville violence, New York Mayor Bill de Blasio vowed to examine all "symbols of hate." While the city decided Columbus would stay, the mayor promised "new historical markers" near the monument to contextualize it as well as a new monument honoring "indigenous peoples."

Pereira, the Arcata mayor, said simply adding context to the McKinley monument would amount to too little, too late.

<b>HEADLINE</b>	<b>04/01 Tourists to Puerto Rico boost recovery</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/storyline/puerto-rico-crisis/puerto-rico-tourists-boost-recovery-though-some-still-remain-dark-n861866">https://www.nbcnews.com/storyline/puerto-rico-crisis/puerto-rico-tourists-boost-recovery-though-some-still-remain-dark-n861866</a>
<b>GIST</b>	<p>SAN JUAN, Puerto Rico — The music blared from the lobby at the San Juan Marriott Resort &amp; Stellaris Casino — which was finally packed with tourists and not just emergency workers.</p> <p>For months, this hotel and others on the island catered to FEMA contractors and National Guard members. It was among the few that didn't lose power in the aftermath of Hurricane Maria, when the hotel scrambled to maintain industrial backup generators as the island's economy ground to a halt.</p> <p>"I'm very happy that the island is open for business," said Jose Gonzalez-Espinosa, the Marriott's general manager.</p> <p>It is an island finding its rhythm again.</p> <p>More than six months after the Category 4 hurricane ravaged Puerto Rico, tourists are slowly returning and the U.S. territory's economic engine is sputtering to life.</p>

Outside the capital city, however, several mountain communities are still desperate for power, supplies and attention. Though some damaged resorts will still be closed for months, more than 85 percent of the island's hotels are back up and running. The industry is critical for the long-term recovery here.

Meanwhile, the Carnival cruise ship Fascination — which carries more than 2,000 passengers and departs from San Juan to tour the Caribbean — is sold out.

Tourism officials are hoping for almost 2 million cruise passengers over the next year — pumping a quarter billion dollars into the local economy.

In Old San Juan, business is booming again. Coffee shops are packed and reservations are hard to snag at Marmalade, a high-end restaurant where the roof collapsed during Maria.

"I think the best thing that people can do is come and not donate your money but let us serve you," said Peter Schintler, the executive chef.

Still, other parts of the island continue to struggle. In southeastern Puerto Rico, blue tarps and splintered power poles still litter neighborhoods in Yabucoa, where the monster hurricane first made landfall.

Six months after the storm, the town's mayor, Rafael Surillo, said that 70 percent of its residents were still without power. He told NBC News he was furious with the U.S. Army Corps of Engineers' recent decision to scale back resources.

Col. Jason Kirk said that relief effort has brought "unprecedented" logistical challenges.

<b>HEADLINE</b>	<b>04/01 Orange Co. fights Calif. sanctuary law</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/california-orange-county-sanctuary-law/2018/04/01/id/851916/">https://www.newsmax.com/newsfront/california-orange-county-sanctuary-law/2018/04/01/id/851916/</a>
<b>GIST</b>	<p>California and its Democratic-controlled Legislature have built a reputation for leading resistance against the Trump administration's immigration crackdown.</p> <p>But at the local level, there's a backlash brewing.</p> <p>On Tuesday, the Orange County Board of Supervisors voted to condemn the state's sanctuary law and join a U.S. Justice Department lawsuit that contends it's unconstitutional.</p>

The law, Senate Bill 54, limits police cooperation with federal immigration authorities. It's a capstone of the effort by Gov. Jerry Brown, legislators and mayors of the largest cities in the state to resist stepped-up efforts to deport people in the country illegally and to stop President Donald Trump from building a wall along the U.S. border with Mexico.

The Justice Department welcomed Orange County's decision and Trump blasted the state's law on Twitter.

"My Administration stands in solidarity with the brave citizens in Orange County defending their rights against California's illegal and unconstitutional Sanctuary policies," he posted Wednesday.

Orange County, home to 3.2 million people, including hundreds of thousands of immigrants, has seen its decades-long reputation as a conservative GOP base erode in recent years. Hillary Clinton won more votes than Trump in the county in the 2016 election.

But on Tuesday its all-Republican Board of Supervisors voted 4-0 to join the federal lawsuit filed earlier this month against SB 54 and two other pro-immigrant state laws.

Supervisor Michelle Steel, an immigrant from South Korea, told the crowd that fixing the country's immigration system will take time.

"Along the way, law enforcement should absolutely cooperate fully within the constraints of federal law," she said.

About a dozen people holding American flags and signs reading "Support Our Constitution" cheered the board's actions.

"We cannot have all the states with different immigration laws. It just doesn't make sense," Doris Matyasovich told the board. "Our constitutional republic depends on following the rule of law."

Immigrant advocates, however, felt the supervisors had taken a step back in the county where, according to the U.S. Census Bureau, nearly a third of the residents are immigrants.

"History tells us that we will win. So I will be able to look in my children's and grandchildren's eyes and tell them I was on the right side of history," Bethany Anderson of Fullerton told supervisors. "Will you be able to do that?"

State Sen. Kevin de Leon, a Los Angeles Democrat who wrote the state's law, called the decision a "pretty sad use of taxpayer resources."

"This kind of obsessive immigrant bashing is embarrassing to the county and its residents, and seems designed to court the approval of a racist President and his cronies," he said in a statement.

The move highlights longstanding divisions over immigration in California. For years, some local governments have sought to help federal immigration agents pick up inmates from their jails to prevent them from being released back into their communities, while others have tried to keep their distance to encourage immigrant residents to trust police enough to come forward to report crimes.

In Orange County, leaders of the small city of Los Alamitos recently voted for an ordinance to exempt itself from the state's law while leaders in the county seat of Santa Ana — a self-declared immigrant sanctuary — will consider filing an amicus brief to support California in federal court.

The county also moved this week to improve communication with federal immigration agents by publishing the release dates of inmates online. The Sheriff's Department used to screen inmates in the county's jails to help Immigration and Customs Enforcement agents identify those subject to deportation but had to stop when the state law passed.

<b>HEADLINE</b>	<b>04/02 China space lab burns up reentry</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/defunct-chinese-space-lab-forecast-enter-atlantic-54167092?cid=clicksource_79_2_hero_headlines_bsq_hed">https://abcnews.go.com/Technology/wireStory/defunct-chinese-space-lab-forecast-enter-atlantic-54167092?cid=clicksource_79_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>China's defunct Tiangong 1 space station mostly burned up on re-entry into the atmosphere Monday over the central South Pacific, Chinese space authorities said.</p> <p>The experimental space laboratory re-entered around 8:15 a.m. Beijing time, the China Manned Space Engineering Office said.</p> <p>Scientists monitoring the craft's disintegrating orbit had forecast the craft would mostly burn up and would pose only the slightest of risks to people. Analysis from the Beijing Aerospace Control Center showed it had mostly burned up.</p> <p>Brad Tucker, an astrophysicist at Australian National University, said that Tiangong 1's re-entry was "mostly successful" and that it would have been better if the space station had not been spinning toward Earth.</p> <p>"It could have been better, obviously, if it wasn't tumbling, but it landed in the Southern Pacific Ocean, and that's kind of where you hope it would land," Tucker said.</p> <p>"It's been tumbling and spinning for a while, which means that when it really starts to come down it's less predictable about what happens to it," Tucker said. He likened it to an airplane landing, saying it's more difficult to predict where a plane that is "shaking around and moving" will land than one that is smoothly descending.</p> <p>Launched in 2011, Tiangong 1 was China's first space station, serving as an experimental platform for bigger projects, such as the Tiangong 2 launched in September 2016 and a future permanent Chinese space station.</p>

<b>HEADLINE</b>	<b>04/01 Teachers to rally in Kentucky, Oklahoma</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/tens-thousands-teachers-planning-massive-rallies-classroom-walkouts/story?id=54161538&amp;cid=clicksource_81_2_hero_headlines_headlines_hed">http://abcnews.go.com/US/tens-thousands-teachers-planning-massive-rallies-classroom-walkouts/story?id=54161538&amp;cid=clicksource_81_2_hero_headlines_headlines_hed</a>

<b>GIST</b>	<p>Tens of thousands of public school teachers in Kentucky and Oklahoma plan to attend rallies on Monday at their state capitols in what they hope will be the latest display of muscle by the nation's educators demanding higher wages and better classroom resources.</p> <p>The double demonstrations come less than a month after West Virginia teachers went on a nine-day strike that ended with the governor there signing legislation giving them a 5 percent pay hike -- their first raise in four years.</p> <p>"What happened in West Virginia is inspiring for sure," Charles Main, spokesman for the Kentucky Education Association, told ABC News Sunday.</p> <p>The planned rallies also come on the heels of one on Wednesday in which 2,500 teachers in Arizona -- who are demanding a 20 percent raise -- demonstrated at the state's capitol in Phoenix. Gov. Doug Ducey didn't directly address the teachers' demands, but noted that the state already gave teachers a 4.3 percent raise from 2016 to 2017.</p> <p>On Monday, thousands of teachers and supporters in Kentucky are expected to descend on the state capitol in Frankfort to demand Gov. Matt Bevin veto a bill that overhauls their pension plan, which they say was forged by lawmakers in secret backroom deals.</p> <p>Meanwhile, thousands of Oklahoma teachers and advocates for better education are poised to stage a classroom walkout and converge on the state capitol in Oklahoma City to call on lawmakers, including Gov. Mary Fallin, to restore funding for education programs and supplies they say have been drastically slashed over the last decade.</p> <p>The Oklahoma protest comes after Fallin signed legislation Thursday granting teachers annual pay raises averaging \$6,100, the largest in state history. Oklahoma teachers had been making an average of \$45,276 a year, among the lowest wages for educators in the country, according to a 2017 report by the National Education Association.</p> <p>While teachers in Oklahoma say they appreciate the pay raise, they are upset that state lawmakers shortchanged their students by slating only \$50 million for education programs and supplies.</p> <p>Alicia Priest, president of the Oklahoma Education Association, said the union had asked that teachers' pay be raised by \$10,000 annually and that funding for education be boosted by \$200 million over the next three years.</p>

HEADLINE	<b>04/01 Army eyes more adviser brigades</b>
SOURCE	<a href="https://www.stripes.com/news/with-1st-sfab-deployed-army-looks-to-build-more-adviser-brigades-1.519734">https://www.stripes.com/news/with-1st-sfab-deployed-army-looks-to-build-more-adviser-brigades-1.519734</a>
GIST	<p>WASHINGTON — Building on what was merely a concept at the beginning of 2017, the Army hopes to boast five brigades of conventional soldiers hand-selected and specially trained to advise indigenous partner forces by the end of next year. Army officials say the service is seeking to quickly build its Security Force Assistance Brigades, units designed to shoulder the bulk of the Pentagon’s train, advise and assist missions throughout the world. That is why the Army is seeking funding to build three SFABs — it has begun assembling two — in fiscal year 2019, according to the service’s budget request sent last month to Congress.</p> <p>The Army’s goal is to build six SFABs, five in the active-duty Army and one in the National Guard. The service is considering building two division headquarters to manage the brigades, Army officials said. “My view right now is that with regard to irregular warfare, we’re going to be engaged in that indefinitely,” Army Secretary Mark Esper told Stars and Stripes in an interview last month. “There will always be a need to help build allied or partnered forces, so [the SFABs] can take on that mission. Which is far better than us doing it with our combat brigades’ soldiers.”</p> <p>The Army for decades has worked to train partner forces to fight. In recent wars in Iraq and Afghanistan, the Army has often pulled apart its traditional combat brigades to build small training-and-advising units for that mission. The problem, Esper said, is that has meant those brigades were not focused on their primary charge — training to fight.</p> <p>With the new SFAB units focused on the Army’s train, advise and assist responsibilities, it should free the service’s 58 brigade combat teams to concentrate on preparing for potential full-spectrum combat operations — the kind of fighting they would face in a near-peer war against an adversary such as Russia, China, North Korea or Iran, Esper said.</p> <p>The Army is still ironing out how the SFABs fit into the service’s model, including where it will station units.</p> <p>SFABs are unlikely to focus simply on advising partner forces in combat, Esper said. Instead they are likely to be used to help train allies across the globe, perhaps in areas like South Korea, Eastern Europe, Africa and South America.</p> <p>Much will be learned from the 1st Security Force Assistance Brigade’s current deployment to Afghanistan, he said. The Fort Benning, Ga., unit arrived there early this month, charged with advising Afghan troops close to the front lines in the 16-year fight against the Taliban.</p> <p>“Anytime you get to stand up a brand new organization is exciting,” said Army Col. Scott Jackson, the commander of 1st SFAB. “Anytime you get to stand up something built like this one is, is even more exciting. To say you’re breaking ground on something is phenomenal for everybody in this organization.”</p> <p>The unit that began taking shape last summer has already started passing on lessons learned to the 2nd Security Force Assistance Brigade, which the Army began building at Fort Bragg in North Carolina in January.</p> <p>The 1st SFAB will learn much more about the proper way to operate as it works in Afghanistan, Jackson said.</p> <p>The security force assistance brigades are the brainchild of Gen. Mark Milley, the Army’s chief of staff, who has long contended privately that the Army would need teams of soldiers to train partner forces outside of the special operations community.</p>

	<p>Milley, a Green Beret, has insisted that while similar to the traditional role of Special Forces, the SFAB concept does not infringe on their responsibilities.</p> <p>“In today’s world, we think the mission profile of train, advise, assist exceeds the capacity of Special Forces — who are running at a very, very high op tempo,” Milley told lawmakers March 15. “So, Special Forces is primarily now — not exclusively, but primarily — training and advising host nation special operations.”</p> <p>The SFABs, meanwhile, will focus on training partners’ conventional forces — those who conduct traditional ground operations.</p>

<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/World-News/2018/03/31/Nobel-laureate-Malala-visits-hometown-for-first-time-since-attack/6061522519949/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=2">https://www.upi.com/Top_News/World-News/2018/03/31/Nobel-laureate-Malala-visits-hometown-for-first-time-since-attack/6061522519949/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=2</a>
<b>GIST</b>	<p>March 31 (UPI) -- Nobel Peace Prize winner Malala Yousafzai was happy to return to her hometown, Mingora, Pakistan, Saturday, her first time back since a Taliban attack in 2012.</p> <p>Yousafzai, 20, visited her old school and home in Mingora, located in the Swat valley area of Pakistan.</p> <p>"My first visit to Swat valley after 5 and half years since the attack. I have felt so happy. I am proud of my land and culture, Yousafzai wrote in the school's guestbook, CNN reported.</p> <p>Yousafzai became the youngest person to receive the Nobel Prize at age 17 in 2014 for her work to advocate for girls' right to education. The last time she was home she suffered a bullet wound to her head from a Taliban gunman.</p> <p>Yousafzai still faces some critics of her advocacy work for girls' education in Pakistan.</p>

<b>HEADLINE</b>	<b>03/31 Mukilteo teens 'never again' at rally</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/mukilteo-teens-say-never-again-at-rally-to-end-gun-violence/281-533867186">http://www.king5.com/article/news/local/mukilteo-teens-say-never-again-at-rally-to-end-gun-violence/281-533867186</a>
<b>GIST</b>	<p>A week after thousands of people marched to push for an end to gun violence, a community gathers for their own event. The issue hits close to home in Mukilteo, where three teenagers were shot and killed at a party in 2016.</p> <p>The rally was called "Never Again: Mukilteo" and was organized by teens. They took center stage at the event, which included poems and music.</p> <p>"Kids are more invested in this issue now because of what we've experienced as a school with lockdowns, with friends we've lost," said Ketta Davis.</p> <p>Several took the stage to talk about how gun violence impacted their lives and the changes they want to see. Paul Kramer, the father of Will Kramer who was shot at that party in 2016, spoke to the group about his frustrations and hope.</p> <p>"When there's another shooting, the wounds get reactivated, retraumatized so to speak. It's sad that this continues," he said.</p> <p>Kramer said the teens' energy and enthusiasm for change give him hope they can reduce the likelihood that other families and communities will face the same tragedy.</p>

	<p>"It's sad that we haven't been able to do it, that's the job of the adults to make the changes when they need to take place, and we haven't gotten it done," said Kramer.</p> <p>The teens encouraged voter registration and said it's time to get rid of politicians who don't support their agenda. State Senator Marco Liias says he believes they will take on some of the issues in their next session.</p> <p>"The issue of assault weapons should they be legal at all? And if they are, what are the background checks and age restrictions? What about high capacity magazines? What about a waiting period?" he said.</p> <p>Students put painted hands on a bench they're working on as a memorial to Jake, Anna, and Jordan, who died in the shooting. They hope a more lasting memorial will be a change in the law that prevents families from dealing with this in the future.</p>

<b>HEADLINE</b>	<b>03/31 Russia hunting defectors in America?</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/russian-defectors-america-putin-russia-threat-skripal-868013">http://www.newsweek.com/russian-defectors-america-putin-russia-threat-skripal-868013</a>
<b>GIST</b>	<p>They get lonely. They miss their friends and family left behind in Russia. And so, despite the danger of exposing themselves to Kremlin retribution, Russian defectors hiding abroad make phone calls or send emails back to relatives in the motherland.</p> <p>And when they do, the Kremlin is listening.</p> <p>“It’s easy to find us, if they are really determined,” one defector in the U.S. tells Newsweek. Phone calls and emails make it easy for Russian eavesdroppers to locate them. A visit from a relative back home makes it even easier. Agents can just trail them to a defector’s doorstep.</p> <p>Some U.S. security sources say there has been an uptick in Russian activity here over the past two years. Suspected Russian agents have been spotted cruising the neighborhoods of some defectors protected by CIA security teams, they say. The FBI and CIA have been “bringing people out of retirement, people who worked against the Russians in the 1990s,” to cope with the the challenge, the defector said, speaking anonymously out of fears for his personal safety.</p> <p>The CIA declined to comment. The FBI did not respond to questions about Russian activity in America.</p> <p>The March 4 nerve-agent attack on Sergei Skripal, a former Russian spy for British intelligence, in a shopping mall in Salisbury, England has U.S. counterintelligence agencies on edge.</p> <p>“Everyone’s been on high alert since the Skripal poisoning,” Michelle Van Cleave, head of the National Counterintelligence Executive under President George W. Bush, tells Newsweek. On Thursday, another former Russian double agent in the U.K, Boris Karpichkov, reported that he’d been warned last month that Kremlin agents were coming for him, too. “Be careful, look around, something is probably going to happen,” an old comrade told him in mid-February, according to NBC News. “It’s very serious, and you are not alone.”</p> <p>Skripal and his daughter, Yulia, were assaulted with Novichok, a lethal chemical agent invented by Soviet-era biowarfare engineers in the 1980s. A policeman who came to their aid was also infected. Skripal remains in critical condition; his daughter, who had recently left Russia to visit her father in England, is “recovering rapidly,” authorities said.</p> <p>A similar attack is not unthinkable here, CIA veterans with long histories with Moscow tell Newsweek.</p> <p>“I’ve heard nothing along those lines, but it’s very plausible.,” former CIA analyst and Russia specialist Mark Stout says. “Even without the recent events I’d be concerned.” The Russians, he said, “largely got out of this business in the mid-1970s,” but with the rise of Vladimir Putin to power in the 1990s they got back into “tracking down and hunting defectors.”</p> <p>“I would certainly not rule out” an attempt on a defector’s life here, says Daniel Hoffman, a 30-year CIA veteran who spent five years on duty in Russia. “Putin has demonstrated there are no limits to the methods he would use to target Russia’s ‘main enemy’ and our allies.”</p> <p>“The Russians have always sought to locate Russian defectors in the U.S. and Britain, and attempt to lure them back to Russia if possible,” fellow CIA veteran and Russia hand John Sipher told Newsweek. Their message: “all is forgiven.” Few believe it. Only one defector is known publicly to have returned home and lived to tell about it: Vitaly Yurchenko, who in 1985 changed his mind, apologized to his CIA minder in a Georgetown pub, walked out the door and up the street to what was then the Soviet embassy. The Russians made propaganda hay out of his turnaround, probably to encourage other re-defections.</p>

The recent string of events suggests Russia has abandoned the carrot for the stick. “The attack on Skripal should be ringing alarm bells for all NATO member countries, including the United States, that something like that could happen here,” says Hoffman. “We can assume that there has been a recent step-up in activity” here, Sipher says, “given the events in the U.K.”

Led by British Prime Minister Theresa May, European leaders responded furiously to the Skripal attack, expelling scores of suspected Russian spies working under official diplomatic cover in their countries. President Donald Trump, as is his fashion, declined to join the Europeans in their harsh criticism of the Kremlin, but the administration booted 60 Russian diplomats from the U.S.—48 from its Washington, D.C. embassy and 12 from the Russian mission to the United Nations—and shuttered the Russian consulate in Seattle. Moscow responded in kind, expelling 58 U.S. diplomats and closing the American consulate in St. Petersburg.

Moscow rejected any responsibility for the attack on Skripal—and at least some spy veterans raised questions about it, too. The Russian defector who spoke with Newsweek called it an amateuristic job, “very unprofessional,” not only because it failed to kill its target but inevitably pointed a finger at the Kremlin. A top Russian assassin, he said, would have avoided a public attack and used a poison dust delivered via, say, a mailed letter that killed its victim “three days after” being inhaled, obscuring its source and the perpetrator. He also pointed Newsweek to a recent Russian documentary film alleging that quantities of Novichok, the nerve agent fingered in the Skripal attack, had been stolen from the Russian lab.

And why Skripal, the defector asked? The former GRU officer had been unmasked as a British mole years earlier and squeezed dry under interrogation before being released in a trade for 10 Russian spies arrested in the U.S. in 2010. “He had no more secrets with him,” the defector says. “He was no threat to Russia. There was no reason to punish him any more.” More likely, he says, some former GRU comrades whom Skripal betrayed to British intelligence were taking revenge, using “idiots” in the Russian mob to carry out the “amateuristic” hit.

The Russian ambassador to the U.S., Anatoly Antonov, said much the same. “He spent five years in Russian jail. So it was enough time for us to know everything that he knew,” the ambassador told NBC News. “Why we should make revenge?”

That’s easy, Hoffman says. “Putin wanted to whip up his electorate with anti-western rhetoric” before the March 18 elections. And he was assured of “an intense reaction” over Skripal from May, who was home secretary in 2006 when another defector, Alexander Litvinenko, was fatally poisoned by plutonium. The expulsions, Hoffman said, allowed Putin to “portray Russia as a besieged fortress, which only he could defend.”

The Kremlin has a long history of none-too-subtle assassinations, its critics point out. A Russian agent murdered former revolutionary Leon Trotsky with an ice pick to the head in Mexico in August 1940. Six months later, an outspoken Russian defector, Walter Krivitsky, was found in a pool of blood in his room in a Washington, D.C. hotel. The official investigation, unaware he was on a Soviet hit list, concluded he committed suicide.

Likewise last year in Washington, D.C. police officially concluded that Putin’s former media chief, Mikhail Lesin, died of blunt-force injuries to the head, neck, and torso from falls during a in November 2015 drinking binge. But “everyone thinks he was whacked and that Putin or the Kremlin were behind it,” an FBI agent recently told BuzzFeed. In February, the news site also surfaced evidence implicating Russia “in 14 suspicious deaths on British soil that the U.K. government had largely ignored.”

The Lesin affair, says former FBI intelligence analyst Aaron Arnold, “could be a good test to see if they could get away with it—a litmus test to see how far people would let them go.”

In January, Democrats on the Senate Foreign Relations Committee issued a report warning that the long, deadly arm of Russian intelligence might well reach into the United States and take somebody out. “The

trail of mysterious deaths, all of which happened to people who possessed information that the Kremlin did not want made public, should not be ignored by Western countries on the assumption that they are safe from these extreme measures,” it said.

Putin said as much after the FBI rounded up Anna Chapman and nine other deep-cover Russian “illegals” here in 2010. Whoever betrayed them would suffer: “It always ends badly for traitors,” he said. “As a rule, their end comes from drink or drugs, lying in the gutter. And for what?”

The defector Newsweek spoke with is fatalistic about his chances of living peacefully into old age here.

“I know it’s going to happen to me sooner or later,” he said on the phone as a baby cried in the background. “All I can do is renew my life insurance. If they send a professional, I’m done.”

<b>HEADLINE</b>	<b>03/31 Saudi crown prince quiet visit to Seattle</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/northwest/saudi-arabias-crown-prince-quietly-visits-boeing-in-everett/">http://www.heraldnet.com/northwest/saudi-arabias-crown-prince-quietly-visits-boeing-in-everett/</a>
<b>GIST</b>	<p>SEATTLE — The crown prince of Saudi Arabia was in town Friday and Saturday on a very secretive visit amid tight security.</p> <p>Crown Prince Mohammed bin Salman’s private VIP 747 jumbo jet, inbound from New York, landed at Paine Field in Everett just after 2 p.m. Friday for a tour of Boeing — his first West Coast stop on a three-week U.S. trip to refashion the image of Saudi Arabia in the eyes of Americans.</p> <p>After a tour of the widebody jet plant that built his airplane, the 32-year-old crown prince looked on as Boeing Chairman and Chief Executive Dennis Muilenburg signed a memorandum of agreement to set up a \$450 million joint venture in Saudi Arabia that will provide maintenance and repair support for the kingdom’s military aircraft.</p> <p>The crown prince’s final itinerary and plans in Seattle were not announced.</p> <p>In an advance draft itinerary obtained by The Seattle Times, meetings were also penciled in with Amazon and Microsoft executives, with Bill Gates and with former U.S. Defense Secretary Robert Gates, who lives in the state.</p> <p>However, Saturday morning meetings listed on the advance agenda with Washington state’s governor and Seattle’s mayor aren’t happening — both politely declined the Saudi meeting requests, on the grounds they are busy that morning.</p> <p>On Friday morning, the Fairmont Olympic Hotel in downtown Seattle, home for the day to a large Saudi royal court delegation, though not the crown prince himself, was surrounded by black Chevy Suburbans with government license plates and Seattle police vehicles.</p> <p>Inside the hotel entrance, visitors entered through an airport-style baggage-screening machine to find the lobby swarming with Saudi and American security personnel. A couple of bomb-sniffing dogs lounged on the thick carpet.</p> <p>The whereabouts of the crown prince himself, and even where his 747 would land, were not disclosed in advance.</p> <p>The crown prince, effectively the power behind the throne held by his father, is here to rebrand the image of the desert kingdom that’s best known for its vast oil wealth and adherence to a strict fundamentalist brand of Sunni Islam, and to discuss a diversification of its economy away from oil.</p> <p>The crown prince presents himself as a liberalizing modern, reforming and opening up the claustrophobic</p>

	<p>kingdom and in particular allowing more freedom to women.</p> <p>He just lifted a 35-year-long ban on cinemas and allowed Saudi women for the first time to attend mixed-gender public entertainments such as soccer games</p> <p>And in a plan dubbed Saudi Vision 2030, he has declared his intention to make Saudi Arabia “a global investment powerhouse.”</p> <p>That’s the reason for meeting with so many corporate leaders while in the U.S.</p> <p>Coinciding with his visit, multiple media accounts report that a 97-page glossy magazine promoting the crown prince has turned up on shelves in unlikely parts of the U.S., such as a Walmart in rural New Hampshire.</p> <p>Entirely free of ads, the advertorial-style magazine is published by American Media, the Florida-based tabloid publisher headed by President Donald Trump’s friend David Pecker.</p> <p>The agreement announced in Everett on Friday will form a joint venture between Boeing and state-owned Saudi Arabian Military Industries (SAMI) that will become the sole provider of maintenance support for the Saudi air force’s fleet of military jets.</p> <p>Boeing also agreed to transfer the technological know-how required to install weaponry on these aircraft as well as localize the supply chain for spare parts.</p> <p>The idea is to build up local expertise within Saudi Arabia, furthering the crown prince’s Vision 2030 plan. The agreement will create 6,000 jobs in Saudi Arabia, Boeing said.</p> <p>In a news release, H.E. Ahmed Al-Khateeb, chairman of SAMI, said the joint venture with Boeing will help build “a strong autonomous military-industries ecosystem in the Kingdom.”</p> <p>The joint venture was part of the package of U.S. defense deals touted last May during Trump’s state visit to Saudi Arabia. Boeing CEO Muilenburg accompanied the president on that trip.</p> <p>The crown prince’s planned meeting with Bill Gates is likely intended to add some philanthropic luster to his image. Last fall, Gates met with the crown prince in Riyadh, where the two announced a \$10 million initiative to empower young people.</p> <p>Some in Seattle are critical of the welcome that business interests have laid on for the crown prince and in particular of any military support offered for Saudi Arabia as it wages a bloody proxy war in Yemen against forces aligned with Iran.</p>

<b>HEADLINE</b>	<b>03/30 SEA international wait times getting worse</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/local/sea-tac-international-arrival-wait-times-are-getting-worse-but-relief-is-on-the-way/724529811">https://www.kiro7.com/news/local/sea-tac-international-arrival-wait-times-are-getting-worse-but-relief-is-on-the-way/724529811</a>
<b>GIST</b>	<p>At midday, almost every day, Sea-Tac Airport's passport control is jammed.</p> <p>Airline schedules mean many planes from overseas arrive at nearly the same time.</p> <p>"We are over capacity for that time of day," said Mark Wilkerson, Seattle Area port director for U.S. Customs and Border Protection.</p> <p>Luggage carousels for customs in the 43-year-old facility are so overcrowded, the airport pays workers just to move bags to make room.</p>

Miguel Vilar flew in from Paris, and had to wait in a crowded corridor before even reaching passport control.

The airport holds people in a hallway between the gate and passport control to manage congestion.

Last year, the airport said the average wait -- just in the hallway -- was 25 minutes.

So far this year, it's averaging 27 minutes.

"What can a person think about that after a 10-hour flight?" Vilar said. "I just want to take my luggage and go home."

Sometimes, passengers are held on arriving planes, either on the tarmac or the gate, if there's not enough space.

Port officials said Norwegian and Virgin Atlantic planes now don't even go to gates to offload passengers, and load them directly onto buses instead.

Wilkerson said he even if he had more agents, they wouldn't be able to move passengers any faster through Sea-Tac's cramped space.

"We're very hopeful for the future and leaving this 40-plus-year-old international facility behind," said Charles Goedken, terminal operations manager for Sea-Tac Airport.

The Port of Seattle says a new international arrivals facility costing nearly \$800 million will solve the problem by nearly doubling the number of international-capable gates and creating a 450,000-square-foot facility for Customs and Border Protection, compared to the 80,000 current square feet.

"A lot of the lines we see at Sea-Tac today will basically go away," Wilkerson said.

Customs and Border Protection is expected to offer biometric technology at the new facility to help move passengers through faster.

The new arrivals facility is under construction and expected to open late in 2019.

<b>HEADLINE</b>	<b>03/30 Squatter complaints on rise in Seattle</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/local/squatter-complaints-on-the-rise-in-seattle/724544347">https://www.kiro7.com/news/local/squatter-complaints-on-the-rise-in-seattle/724544347</a>
<b>GIST</b>	<p>More than 18 months after KIRO 7 first went along with a new Seattle task force focused on squatters and vacant property issues, numbers show that complaints are on the rise.</p> <p>According to the city's Department of Construction and Inspections, in 2015, there were 354 vacant building complaints. In 2016, the year the task force launched, there 419. In 2017, there were 439.</p> <p>Most recently, neighbors have complained about squatters who have taken up residence in the parking lot of a closed Sam's Club on Aurora Avenue. They said they've found garbage in the lot and also around the neighborhood.</p> <p>"Condom wrappers, condoms, needle caps, needles, broken glass pipes and things of that nature," neighbor Bliss Moore said. "It's not very cool. If they would just clean up their mess.... Then I wouldn't feel so hesitant about having them in the 'hood.'"</p> <p>"The city launched this new task force. Why is this problem getting worse?" KIRO 7 reporter Linzi</p>

Sheldon asked Faith Lumsden, the city code compliance director.

“Well, we are seeing a lot of people breaking into vacant buildings seeking shelter,” Lumsden said. She said the city is growing and so is redevelopment.

Addressing problem properties can be like playing Whack-a-Mole.

“We are doing better at keeping vacant buildings from becoming really, really horrible,” she said. “We see it, we fix it, it shifts to some other building.”

Squatting isn't just against the law.

When KIRO 7 went along with the city's task force in 2016, police and fire officials explained the houses can be dangerous for first responders: some squatters have even set booby traps.

But the task force has had successes. Examples include a problematic Wallingford site owned by developer Robert Hardy that had several fires. A neighbor sent KIRO 7 a photo on Friday showing a brand new structure going up.

And after squatters moved into a foreclosed house on MLK Jr. Way South in South Seattle, the city cleaned it up, boarded it up, and sent bills to the mortgage company.

Changes in the city code last fall, Lumsden said, have been “very, very helpful.” One allows speedier demolition of sites with two unauthorized entries and a memo from first responders about the dangers.

The other enables the city to bill the site's owner not just for securing the site with things like fencing and plywood, but also for cleaning up the outside. Garbage, Lumsden said, can be a signal to other squatters that a building is vacant.

“Now we can clean up the whole nuisance,” she said. “We don't have to just board it up but leave a yard filled with trash and overgrown weeds.”

Lumsden only has two inspectors and they are not full-time.

“Do you need more inspectors?” KIRO 7 reporter Linzi Sheldon asked.

“I always need more inspectors,” she said. “I'm pretty sure I'm not supposed to say that on television but yes, indeed, we need more inspectors. Of course we do.”

“When you see the numbers going up, is that frustrating?” Sheldon asked.

“Is it better reporting [of problems]? Is it ever going to stop? I don't think so,” Lumsden said. “I think we'll see this as long as Seattle keeps growing.”

She said the city is trying to work with developers and nonprofits to see if they can have tenants or caretakers in properties longer while permits are going through. This, she said, will reduce the time they are vacant and vulnerable to squatters.

Lumsden said the city is also considering increasing the minimum standards for securing a building—perhaps, she said, requiring owners to use sturdy plexiglass, which is very difficult for squatters to remove, as opposed to plywood.

She said anyone who currently owns a vacant home or building needs to understand the risks.

“People need to know that having a vacant property, especially a vacant house, is dangerous,” she said. “It's going to—sooner or later—invite someone to break in.”

<b>HEADLINE</b>	<b>03/30 Some Seattle recycling heads to landfills</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/some-seattle-recycling-heads-to-landfills-amid-new-rules-from-china/281-533718269">http://www.king5.com/article/news/local/some-seattle-recycling-heads-to-landfills-amid-new-rules-from-china/281-533718269</a>
<b>GIST</b>	<p>Some recycled material from Seattle is now ending up in landfills as a result of new recycling restrictions from China, The Seattle Times first reported Thursday.</p> <p>China only wants recyclables that are empty, clean and dry. So at the beginning of this year, China started cracking down. The Washington Refuse and Recycling Association says China banned the import of 24 varieties of solid waste and recyclables and imposed a new 0.5% contaminant limit.</p> <p>KING 5 reported in October that the new policy was coming and businesses, like The Recycling Depot, were bracing for the impact.</p> <p>Friday, we went back to The Recycling Depot, where manager Joe Salvatore said they were preparing to close the Rainer Avenue location.</p> <p>"We've been here for 38 years," said Salvatore. "Recycling has changed. We just can't make the profit that we need to stay open."</p> <p>Customers still arrive with truckloads of cardboard, but the cash isn't coming in like it use to.</p> <p>"I've got just two employees left. I've let everybody else go," said Salvatore.</p> <p>He says the closure, that's likely imminent, has a lot to do with China. The rules there are making it harder to run the business, according to Salvatore.</p> <p>"China is a big player in the world of recycling, and boy, when they make a move as dramatic as this one has been, it affects the entire world," he said.</p> <p>"In Washington, some communities are diverting recyclables to landfills to prevent public health and fire code issues," said Brad Lovaas, WRRRA Executive Director. "It's not safe to store large quantities of recyclables inside for fire code reasons and not feasible to store them outside due to our wet climate."</p> <p>Since China is the largest consumer of recyclables in the world, the ban has driven prices way down.</p> <p>"If I can't pay my customers a good amount of money to bring it in to me, then its not worth it for them to pick it up," said Salvatore. "We've been here a long time and people just depend on this place to bring their stuff. It is going to be a shame if we have to shut down."</p>

<b>HEADLINE</b>	<b>03/31 April: National Sex Assault Awareness</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/politics/onpolitics/2018/03/31/donald-trump-sexual-assault-awareness-prevention-month-april/475350002/">https://www.usatoday.com/story/news/politics/onpolitics/2018/03/31/donald-trump-sexual-assault-awareness-prevention-month-april/475350002/</a>
<b>GIST</b>	<p>President Trump, who faces sexual misconduct accusations from numerous women, on Friday declared April as National Sexual Assault Awareness and Prevention Month.</p> <p>"Sexual assault crimes remain tragically common in our society, and offenders too often evade accountability," Trump's presidential proclamation read.</p> <p>Since 2001, the U.S. has observed April as sexual assault awareness month, with some advocates holding</p>

	<p>events to mark the month since the 1990s, according to the National Sexual Violence Resource Center. Both former president Barack Obama and Trump previously used presidential proclamations to raise awareness for the issue in April.</p> <p>Since Trump last designated the month in April 2017, a national reckoning around sexual assault and harassment has occurred with the #MeToo movement. According to a USA TODAY survey, 94% of women in the entertainment industry say they experienced some form of sexual harassment or assault during their careers in Hollywood, where the movement first started.</p> <p>"We must respond to sexual assault by identifying and holding perpetrators accountable. Too often, however, the victims of assault remain silent," Trump's 2018 proclamation continued.</p>

<b>HEADLINE</b>	<b>03/31 CDC: flu season continuing decline</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Health_News/2018/03/31/CDC-Flu-season-continuing-its-decline/9291522503445/?utm_source=fp&amp;utm_campaign=ts_hn&amp;utm_medium=13">https://www.upi.com/Health_News/2018/03/31/CDC-Flu-season-continuing-its-decline/9291522503445/?utm_source=fp&amp;utm_campaign=ts_hn&amp;utm_medium=13</a>
<b>GIST</b>	<p>SATURDAY, March 31, 2018 -- Spring continues to take the bite out of this year's brutal flu season, new numbers show.</p> <p>For starters: yet another drop was seen in doctor visits, and less severe strains of influenza are becoming ever more dominant.</p> <p>But hospitalizations for the flu are still a problem, and there have been additional pediatric deaths, the latest federal numbers show.</p> <p>For the seventh week in a row, there was a decrease in the number of doctor visits for flu-like illness, the U.S. Centers for Disease Control and Prevention reported Friday.</p> <p>As of March 24, the CDC said, 2.5 percent of patient visits to doctors were for the flu, down from 2.7 percent of patient visits the week before.</p> <p>And, as health officials predicted, cases of less severe influenza B infections continue to be more common than cases of more severe influenza A infections.</p> <p>For the week ending March 24, influenza B infections accounted for 58 percent of cases, while influenza A infections accounted for 42 percent. For the entire season so far, influenza A strains have been responsible for 70 percent of all cases, the CDC report noted.</p>

<b>HEADLINE</b>	<b>03/30 UN peacekeeping mission Liberia ends</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/World-News/2018/03/30/UN-ends-peacekeeping-mission-in-Liberia-after-15-years/2831522436008/?utm_source=fp&amp;utm_campaign=ts_tn_int&amp;utm_medium=4">https://www.upi.com/Top_News/World-News/2018/03/30/UN-ends-peacekeeping-mission-in-Liberia-after-15-years/2831522436008/?utm_source=fp&amp;utm_campaign=ts_tn_int&amp;utm_medium=4</a>
<b>GIST</b>	<p>March 30 (UPI) -- U.N. Secretary-General António Guterres congratulated the government of Liberia for turning "the page on crisis and conflict" as the United Nations ended its mission in the west African nation Friday.</p> <p>U.N. peacekeepers departed Liberia after nearly 15 years in the wake of two deadly civil wars.</p> <p>"The secretary-general congratulates the people and government of Liberia for their determination to turn the page on crisis and conflict," a statement on behalf of Guterres said. "He commends the government's continued efforts to ensure sustained peace and sustainable development in Liberia."</p> <p>U.N. peacekeeping troops entered the country in October 2003 at the end of the second Liberian civil war</p>

	<p>between a rebel group in the north, one in the south and the government of former President Charles Taylor.</p> <p>The first Liberian civil war, from 1989 to 1997, left about 250,000 people dead and the second claimed nearly 300,000 lives. After the second war, conflict remained.</p> <p>"The secretary-general expresses his profound respect to the memory of the 202 peacekeepers who lost their lives in the service of peace during the nearly 15 years the mission was deployed in Liberia. He expresses his gratitude to all troop- and police-contributing countries," the U.N. statement said.</p> <p>Guterres said U.N. officials would remain in Liberia in order to support the government in reforms and establishing peace.</p>

<b>HEADLINE</b>	<b>03/31 Armed French officers spark Italy row</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/news/world-europe-43606225">http://www.bbc.com/news/world-europe-43606225</a>
<b>GIST</b>	<p>Armed French customs officers have provoked widespread anger by entering a migrant clinic over the border in Italy.</p> <p>Five officers forced one individual to undergo a urine test at the facility west of the city of Turin on Friday</p>

evening, Italian reports say.

The premises is located about 1km (0.6 miles) inside the Italian border.

Political figures in Italy, which has received over 600,000 migrants in the last four years, condemned the move.

The French ambassador, Christian Masset, was called into the Italian foreign ministry in Rome on Saturday to explain what had happened.

"French border agents entered - armed - the clinic run in Bardonecchia, forcing a migrant to a urine test and intimidating our doctor and the mediators and lawyers," the medical organisation which operates a clinic at the premises, Rainbow for Africa, said.

The organisation said the actions of the French officers "seriously interfered" with the work of non-governmental organisations (NGOs) in Italian institutions.

It added that the French border was becoming "increasingly militarised" and called for a change in France's strict policy in rejecting migrants.

However, the French government responded by saying they had asked for permission to enter the centre and were allowed in. They said a team of French customs officers on board a train travelling into Italy suspected a Nigerian train passenger with Italian residency of carrying drugs.

French customs officials were allowed to use the station at Bardonecchia under a bi-national agreement, it said.

Bardonecchia mayor Francesco Avato said he was "very upset" by the news, adding that the French officers "had no right" to go into the property.

Former Italian Prime Minister Enrico Letta said the incident was "yet another mistake on the issue of migrants".

<b>HEADLINE</b>	<b>03/30 Milwaukee responds lead level reports</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/milwaukee-parents-concerned-lead-levels-after-troubling-report/">https://www.cbsnews.com/news/milwaukee-parents-concerned-lead-levels-after-troubling-report/</a>
<b>GIST</b>	<p>Parents in Milwaukee say city leaders aren't doing enough to protect their kids from lead. While the national average for lead poisoning is about three percent, more than 11 percent of Milwaukee's children in 2016 suffered from it. Wisconsin health officials are reviewing Milwaukee's lead prevention program after several reports highlighted deficiencies in keeping lead away from kids.</p> <p>Milwaukee's mayor said lead from paint is the city's primary concern, since lead-based paint is in at least 100,000 homes. Some residents are also worried about lead pipes, even though the water is treated to keep the lead out, reports CBS News' Adriana Diaz. One of those residents is Aminah Al-Mujaahid, who painstakingly prepares water for her family, filtering it pitcher by pitcher.</p> <p>Last year her youngest son Shu'aib had a blood lead level of 11.4 – more than double what is considered lead poisoning. Lead can affect IQ, and Aminah and her husband Nazir believe it's stunted their five-year-old son's brain development.</p> <p>"In my assessment he's operating more on a three, three-and-a-half-year-old level," he said. "I'll say 'hey what's your name' or 'how old are you'....He'll look at you, he'll look at you like he's trying to decipher and figure it out."</p> <p>Milwaukee health officials say lead from paint poses the greatest risk to local families, but the Al-Mujaahid's believe it's in their water after recently learning they have lead service lines, which supply water to their home. The city says its water meets federal lead standards and it's treated to prevent lead from leaching from the pipes.</p> <p>Improperly treated water in Flint, Michigan, caused widespread lead contamination there three years ago. Up to 10 million homes nationwide still have lead service lines, even though Congress banned lead plumbing supplies more than 30 years ago. About 74,000 are in Milwaukee, where the city has a program to split the cost of replacing lead pipes with homeowners but so far only one percent has been done.</p> <p>"Any time they touch the water, it's alarming for me because I'm thinking about the exposure, their lives are important to us and....But it's difficult to see the city, not care," Aminah said.</p> <p>The Childhood Lead Poisoning Prevention Program doesn't have records of investigating about 100 addresses where kids blood lead levels reached 20 or higher. Health officials also don't know if 4,500 families received follow-up letters with children's lead test results.</p> <p>"Well, a big part of this we don't know the answer to," Milwaukee Mayor Tom Barrett said. "I was told by my staff, that we did not have the documentation that established with certainty that all the kids had received this letter. That was enough for me to say, well then we're gonna send out another reminder."</p> <p>Wisconsin congresswoman Gwen Moore wants the federal government to investigate and has raised concerns over the funding and effectiveness of Milwaukee's lead removal programs.</p> <p>"The problem is devastating," Moore said. "It's really important to have this independent audit done by the Centers for Disease Control."</p> <p>Mayor Barrett is not against the idea of an audit by the CDC.</p>

HEADLINE	<b>03/31 Israel: will respond if violence continues</b>
SOURCE	<a href="https://apnews.com/fcb59618f063452c9c701aab8538dbe1/Israel-says-it-will-expand-response-if-Gaza-clashes-go-on">https://apnews.com/fcb59618f063452c9c701aab8538dbe1/Israel-says-it-will-expand-response-if-Gaza-clashes-go-on</a>
GIST	<p>GAZA CITY, Gaza Strip (AP) — Israel will target militant groups inside Gaza if violence along the territory’s border with Israel drags on, the chief military spokesman warned on Saturday, a day after thousands of Palestinians staged protests near the border fence.</p> <p>The mass marches were largely led by Gaza’s ruling Hamas group and touted as the launch of a six-week-long protest campaign against a stifling decade-old blockade of the territory.</p> <p>Protests are to culminate in a large border march on May 15, the 70th anniversary of Israel founding. The date is mourned by Palestinians as their “nakba,” or catastrophe, when hundreds of thousands were uprooted in the 1948 Mideast war over Israel’s creation.</p> <p>Palestinian health officials said 15 Palestinians were killed by Israeli fire and more than 750 hit by live rounds, making Friday the bloodiest day in Gaza since the 2014 cross-border war between Israel and Hamas.</p> <p>It appears unlikely protests will continue at such a scale, with larger turnouts expected after Friday noon prayers, the highlight of the Muslim religious week.</p> <p>On Saturday, several dozen Palestinians approached the border fence in an area east of Gaza City, but stopped about 200 meters before the barrier.</p> <p>An Associated Press reporter saw two men who walked closer to the fence get shot in the legs by Israeli soldiers, in separate incidents about 15 minutes apart.</p> <p>Medics at the scene said both were shot by live rounds. In all, at least 10 Palestinians were wounded by live fire Saturday, health officials said.</p> <p>In Friday’s confrontations, large crowds had gathered near the fence, with smaller groups of protesters rushing forward, throwing stones and burning tires.</p> <p>Israeli troops responded with live fire and rubber-coated steel pellets, while drones dropped tear gas from above. Soldiers with rifles were perched on high earthen embankments overlooking the scene.</p> <p>Israel’s military initially claimed Friday that “thousands of Palestinians are rioting in six locations throughout the Gaza Strip, rolling burning tires and hurling stones.” Video released by the army did not back such a description.</p> <p>On Saturday, the chief army spokesman, Brig. Gen. Ronen Manelis, said that while thousands of Palestinians approached the border Friday, those engaged in stone-throwing were in the hundreds.</p> <p>Manelis denied soldiers used excessive force, saying those killed by Israeli troops were men between the ages of 18 and 30 who were involved in violence and belonged to militant factions.</p> <p>Protest organizers have said mass marches would continue until the day of the “nakba,” an anniversary with particular resonance in Gaza where the vast majority of 2 million residents are descendants of refugees. The day, May 15, will this year also coincide with the start of the Muslim holy month of Ramadan.</p> <p>Manelis reiterated Saturday that Israel “will not allow a massive breach of the fence into Israeli territory.”</p> <p>He said that Hamas and other Gaza militant groups are using protests as a cover for staging attacks. If violence continues, “we will not be able to continue limiting our activity to the fence area and will act</p>

	<p>against these terror organizations in other places too,” he said.</p> <p>The border protests were seen as a new attempt by Hamas to break the border blockade, imposed by Israel and Egypt after the Islamic militant group seized Gaza from forces loyal to its rival, Palestinian President Mahmoud Abbas, in 2007. The continued closure has made it increasingly difficult for Hamas to govern.</p> <p>The large turnout of marchers in the dangerous border zone also seemed to signal desperation among Gaza residents.</p> <p>Life in the coastal strip has deteriorated further in recent months, with rising unemployment, grinding poverty and daily blackouts that last for hours.</p> <p>The prospect of more protests and Palestinian casualties in coming weeks could also place Israel on the defensive.</p>

HEADLINE	<b>03/30 Teacher unrest keeps spreading</b>
SOURCE	<a href="http://nymag.com/daily/intelligencer/2018/03/red-state-teacher-unrest-just-keeps-spreading.html">http://nymag.com/daily/intelligencer/2018/03/red-state-teacher-unrest-just-keeps-spreading.html</a>
GIST	<p>Eight Kentucky school districts — including those in Louisville and Lexington — are closed today as teachers stay home to protest the GOP legislature’s destructive “reforms” of their pension system. Oklahoma teachers are planning to strike on Monday despite winning a \$6,100 pay raise. And Arizona teachers rallied at the state capital on Wednesday and are threatening to strike if their demands for major pay raises and restoration of education funding cuts are not met.</p> <p>As this wave of unrest among teachers spreads nationally, it’s clear it has been inspired by the nine-day strike that won West Virginia teachers (and other state employees) a pay raise earlier this month. But there’s something more fundamental going on than copycat protests. We’re seeing a teacher-led backlash against years, and even decades, of Republican efforts at the state level to cut taxes and starve public investments. This is very clear in Oklahoma, where a quick pay raise the legislature passed this week is deemed by teachers to have missed the larger point:</p> <p>“While this is major progress, this investment alone will not undo a decade of neglect. There is still work to do to get this legislature to invest more in our classrooms. And that work will continue Monday, when educators descend on the capitol,” Alicia Priest, president of the Oklahoma Education Association, said in a Facebook video Wednesday.</p> <p>The pay-raise bill signed by Governor Mary Fallin yesterday brought in \$447 million in new revenues from higher taxes on cigarettes and oil-production facilities. But the teachers are demanding \$3.3 billion “to restore millions of dollars in school funding that have been cut in the past decade,” as Vox reports.</p> <p>Similarly, in Arizona the teacher protests are not just about teacher pay, though they are among the lowest paid in the country. Their demands are much broader, as the Washington Post notes:</p> <p>Teachers, who organized a grassroots campaign on social media, are demanding a 20 percent raise and restoration of school funding to 2008 levels, before the Great Recession struck, according to the Arizona Republic. They are also asking state lawmakers to stop cutting taxes until Arizona’s per-student spending reaches the national average.</p> <p>Asking Republican legislators to “stop cutting taxes” is a demand many of its objects would consider outrageous, even unnatural. But this collision is a reminder that GOP claims that tax cuts at the state as well as the federal level would pay for themselves by generating sustained economic growth have once again proved faulty, with public education being the primary victim of chronic budget shortfalls.</p> <p>While Republican pols in Arizona and Oklahoma, like their counterparts in West Virginia, are backpedaling furiously and trying to prevent or resolve strikes, the conflict may go too deep for an easy resolution. In Arizona, for example, the Republican governor and legislature are engaged in a radical experiment in “portable” education funding giving parents unprecedented freedom to use public dollars for private schools (led, as it happens, by the GOP candidate in a congressional special election next month) that could pose an existential threat to public education in the state. In Kentucky, teacher grievances are mostly focused on the pursuit by Republican governor Matt Bevin and the GOP legislature of another big conservative cause: public pension “reform,” which in this case meant serious reductions in benefits and a complete revocation of teacher pension security. That the “reform” was whipped through the legislature suddenly after being attached to a sewer regulation bill did not improve its aroma.</p> <p>Perhaps the current wave of teacher protests and strikes will subside as the school year ends. But more likely, it will spill over into the election season this fall, when 36 governorships and most of the national state legislatures are up for grabs.</p>

<b>HEADLINE</b>	<b>03/30 Russia expels more foreign diplomats</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/30/europe/russia-diplomats-retaliation-intl/index.html">https://www.cnn.com/2018/03/30/europe/russia-diplomats-retaliation-intl/index.html</a>
<b>GIST</b>	<p>Moscow (CNN)Russia ordered the expulsion of diplomats from at least 23 countries Friday, as a reciprocal move after those countries expelled Russian diplomats in solidarity with the United Kingdom over the poisoning of a former Russian double agent.</p> <p>More than 20 countries announced this week that they would expel Russian diplomats in support of Britain, which blames Moscow for the March 4 nerve agent attack against Sergei Skripal and his daughter, Yulia Skripal, on British soil. Russia denies involvement.</p> <p>According to Russia's state-run Sputnik news outlet, Russia has now expelled the following: 13 Ukrainian, four Canadian, four Polish, four German, three Lithuanian, three Czech, three Moldovan, two Italian, two Dutch, two Spanish and two Danish diplomats.</p>

Also expelled are one Finn, one Latvian, one Swede, one Norwegian, one Romanian, one Croatian and one Irish diplomat, as well as an Estonian military attache.

Moscow reserved the right to respond to Belgium, Hungary, Montenegro and Georgia with regard to their actions over the Skripal case, Sputnik said.

The wave of expulsions comes a day after Russia announced that it would expel 60 US diplomats and close the US consulate in St. Petersburg in retaliation for a similar step by Washington, which said Monday it would be expelling 60 Russian diplomats and closing the Russian consulate in Seattle.

"This message from Moscow is not surprising," German Foreign Minister Heiko Maas said in response to the expulsion of German envoys. "We had not taken the decision to expel the Russian diplomats lightly. Our reaction in the case of Skripal was necessary and appropriate as a political signal."

Maas said the decision was made in solidarity with Britain and because Russia had "refused to give any clarification" on the matter. "Nevertheless, even in the current situation, we remain committed to dialogue with Russia and will work for European security and a constructive future for relations between our countries," he said.

Russia's state-run Tass news agency reported that Russia had also demanded that Britain reduce the number of staff in its Moscow embassy to match the number of Russian diplomats remaining in London.

UK Prime Minister Theresa May ordered the expulsion of 23 Russian diplomats on March 14, describing them as "undeclared intelligence officers." Russia in turn ordered 23 British diplomats to leave Moscow and closed the UK Consulate in St. Petersburg.

<b>HEADLINE</b>	<b>03/31 UN calls for inquiry into Gaza violence</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/31/middleeast/gaza-protests-un-intl/index.html">https://www.cnn.com/2018/03/31/middleeast/gaza-protests-un-intl/index.html</a>
<b>GIST</b>	<p>Gaza (CNN)UN Secretary-General Antonio Guterres has called for an independent inquiry into Friday's violence in Gaza that left at least 17 Palestinians dead and more than 1,400 injured.</p> <p>Guterres made his comments late Friday before an emergency UN Security Council meeting to address the</p>

issue. UN spokesman Farhan Haq relayed his statement to the media.

"This tragedy underlines the urgency of revitalizing the peace process aiming at creating the conditions for a return to meaningful negotiations for a peaceful solution that will allow Palestinians and Israelis to live side by side peacefully and in security," Guterres was reported as saying.

Funerals are being held Saturday for those killed when thousands of Palestinians marched to Gaza's border with Israel a day earlier.

The first in a series of protests planned through mid-May, Friday marked Land Day, when Palestinian land was confiscated by Israel in 1976.

The day quickly turned into the bloodiest day in Gaza since the 2014 war as Palestinian protesters and Israeli military clashed along the fence.

In northern Gaza, CNN witnessed at least two dozen people being taken away by ambulances in a half-hour span Friday as protests started across Gaza. CNN also saw a small number of protesters throwing rocks. People were injured by live rounds, rubber bullets and tear gas. The majority were young men -- one woman was among the injured.

A spokesman for the Palestinian Ministry of Health told CNN that doctors were already running out of essential emergency medicine and blood for transfusions due to the high number of injured.

In an article on its website, the United Nations reported that Tayé-Brook Zerihoun, the deputy UN political affairs chief, told Friday's Security Council meeting that around 30,000 people participated in and around the March at various locations in Gaza.

Soon after the demonstrations started, the UN report said, "The situation turned deadly in several spots." "Some of the casualties were reportedly the result of live ammunition used by Israeli security forces during the March. Other casualties followed armed clashes between Palestinians and Israeli security forces, including the shelling of a Hamas observation point," the United Nations said.

"Reports indicate that most of the demonstrators stayed well away from the border fence and were not violent," the United Nations reported Zerihoun as saying.

"However, there are also reports that some protesters engaged in stone-throwing and violent behavior; some reportedly carrying weapons," Zerihoun said.

He reportedly told the Security Council that Israeli security forces said that militants tried to get through the fence in attempt to plant explosives.

In a briefing Saturday, IDF spokesman Brig. Gen. Ronen Manelis said there had been three attempts at throwing projectiles, including live fire and Molotov cocktails at Israeli soldiers across the fence.

However, there appears to be a disparity in the number of Palestinians injured by live bullets. Manelis said only "a few scores were hit by live ammunition," while the Palestinian Ministry of Health in Gaza said 758 people were injured.

Manelis said the protests were organized by Hamas, the militant political group that controls Gaza, adding that if these continue IDF will "hit targets deep inside Gaza."

Manelis said that most killed in Gaza were known as "terror activists," known to Israel by name and affiliation. He did not elaborate further regarding identities of those killed.

Confrontations further escalated late Friday. Israeli fighter jets targeted three Hamas sites after an IDF position was shot at in northern Gaza, according to an IDF statement. Tank fire also targeted the three sites

	following an exchange of fire.

<b>HEADLINE</b>	<b>03/30 Pittsburgh public safety drones</b>
<b>SOURCE</b>	<a href="http://pittsburgh.cbslocal.com/2018/03/30/pittsburgh-public-safety-drones-surveillance-concerns/">http://pittsburgh.cbslocal.com/2018/03/30/pittsburgh-public-safety-drones-surveillance-concerns/</a>
<b>GIST</b>	<p>PITTSBURGH (KDKA) — Drones will be on duty in Pittsburgh this summer.</p> <p>The city’s Public Safety Department is getting two high-tech drones to assist police and firefighters.</p> <p>It’s state-of-the-art technology that can go where police, firefighters and paramedics can’t without the risk to life and limb.</p> <p>“It’s much safer and much cheaper to use technology than put a police officer or firefighter in jeopardy,” Pittsburgh Public Safety Director Wendell Hissrich said.</p> <p>The two public safety drones are set to arrive in the next two weeks and will become their eye in the sky at fires, search and rescue operations or active shooter situations. To that end, each is tricked out with three high-def, tilt-and-zoom cameras as well as thermal imaging — and that makes some people nervous.</p> <p>While the department says drones won’t be used as an investigation tool, the director of the American Civil Liberties Union in Pittsburgh, Vic Walczak, has concerns about their surveillance capabilities, especially by law enforcement.</p> <p>“They could be flying a drone outside here while we’re talking and they’re looking in the window,” Walczak said. “This is a significant expansion of the police department’s ability to invade people’s privacy.”</p> <p>“That’s not the intent here. The intent is for a public safety response, whether it’s a hazardous materials situation, a SWAT situation where we might have an active shooter or a fire situation,” Hissrich said. “It’s not used for surveillance.”</p>

<b>GIST</b>	<p>Stephon Clark, the unarmed black man who was fatally shot by police in his grandmother's backyard, was struck eight times -- including six bullets in the back, according to a private autopsy commissioned by the family.</p> <p>Civil Rights Attorney Benjamin Crump, who is representing Clark's family, released the independent autopsy report at a news conference Friday.</p> <p>Dr. Bennet Omalu, who was the first doctor to discover chronic traumatic encephalopathy (CTE), conducted the autopsy. Omalu, who brought awareness to the issue of concussions and brain trauma to the NFL, was depicted film "Concussion," in which Will Smith played him in the leading role.</p> <p>"He was shot in the back six times. The seventh gunshot wound was slightly to the side of his body but to the back of the side of his body," Omalu said during the news conference. "Each one of these bullets independently possessed a fatal capacity."</p> <p>Crump, meanwhile, said the family autopsy proved Clark wasn't running toward police.</p>

	"The narrative that had been put forth was that they had to open fire because he was charging at them," Crump told reporters. "Well, obviously, based on Dr. Omalu's findings in the family's autopsy, it suggests all the bullets were from behind."

<b>HEADLINE</b>	<b>03/30 Officer who shot Alton Sterling fired</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/police-officer-shot-alton-sterling-fired-baton-rouge/story?id=54134701">http://abcnews.go.com/US/police-officer-shot-alton-sterling-fired-baton-rouge/story?id=54134701</a>
<b>GIST</b>	<p>Officer Blane Salamoni, who shot Alton Sterling, has been fired from the police department, Baton Rouge Police Chief Murphy Paul announced Friday.</p> <p>Paul said he came to his decision "based on the actions of the officers" in the incident.</p> <p>"These actions were not minor deviations from policy, as they contributed to the outcome to the death of another human being," he said.</p> <p>Salamoni had been on administrative leave before the decision was made, Paul said. His last day as a Baton Rouge police officer was today.</p> <p>The other officer involved in the shooting -- Howie Lake II -- will be suspended without pay for three days, Paul said.</p> <p>The police department also released body camera and surveillance footage from the shooting.</p> <p>Body camera footage shows an officer approaching Sterling. The officer then instructs Sterling to put his hands on a car "right quick" before grabbing Sterling's wrist and forcing it onto a hood of a nearby sedan. Meanwhile, Sterling asks multiple times what he did.</p> <p>The camera captures the commotion that ensues, and a stun gun is heard going off in the background.</p> <p>Once Sterling is on the ground, someone yells that he "has a gun."</p> <p>In another body camera video -- from the second officer's perspective -- the officer says to Sterling, "Put your hands on the car or I'm a shoot you in your f----- head, you understand me?" as he pushes Sterling onto the hood of the car and points a gun at him.</p> <p>"Alright, hold up, hold up, man," Sterling says as he struggles under the officer's weight. "You're hurting my arm."</p> <p>One officer then instructs the other to Tase Sterling, and the same commotion follows.</p> <p>Cellphone video of the shooting had been released in the past. Video shows the fatal shooting of Alton Sterling during a confrontation with police officers outside the store in Baton Rouge, Louisiana.</p> <p>Sterling, a 37-year-old black man, was shot and killed on July 5, 2016, after being confronted by a pair of white police officers -- Salamoni and Lake -- outside Baton Rouge's Triple S Convenience Store. His death prompted protests across the country over police brutality.</p> <p>Paul said the Sterling family has the department's prayers and that he hopes the announcement brings "some closure" to them.</p> <p>Going forward, the department is going to ensure that officers get the "proper training" to ensure another "incident" does not occur.</p> <p>In a press conference Friday, Paul urged members of the community to adhere to commands by police</p>

	<p>officers.</p> <p>"Treat our police officers with the respect that their positions deserve, and I assure you that the men and women of the Baton Rouge Police Department will reciprocate that gesture," Paul said. "Please stop resisting. Stop running. When a police officer gives you directions, listen."</p> <p>Now that the decision regarding the officers' employment at the department has been made and the investigation concluded, healing can begin, Paul said, adding that the "cloud" of Sterling's death had been hanging over the community for "too long."</p> <p>"We're gonna allow our community to heal, and we're gonna allow our police officers to heal," he said.</p> <p>Louisiana Attorney General Jeff Landry announced Tuesday that the two officers involved in Sterling's shooting wouldn't face charges in the case.</p>

<b>HEADLINE</b>	<b>03/31 Deadly year for police?</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/2018-deadly-year-cops/story?id=53859585">http://abcnews.go.com/US/2018-deadly-year-cops/story?id=53859585</a>
<b>GIST</b>	<p><b>A troubling increase</b></p> <p>While officers die in traffic-related incidents more than any other situation, this year, the deaths of officers by guns has climbed to a "troubling" number.</p> <p>From Jan. 1 to March 30, 2017, 10 on-duty officers were shot dead. From Jan. 1 to March 30 of this year, 20 on-duty officers were shot dead.</p> <p>"I do worry about these firearm-related deaths," Steve Groeninger, senior director of communications and marketing at the National Law Enforcement Officers Memorial Fund, told ABC News. "It's troubling."</p> <p>"It's too soon to know if it's a trend," Groeninger added. "As [the second quarter] plays out and we receive data forms from departments who lost an officer this year, we'll be able to better assess and quantify."</p> <p>In 2017, 46 on-duty officers were killed by guns, according to the National Law Enforcement Officers Memorial Fund. The year before, it was 67, and in 2015, it was 43.</p> <p>If this year's pattern continues at its current rate, 2018 could see 80 on-duty police deaths from gun violence.</p> <p>Former FBI agent and ABC News contributor Steve Gomez called the increase from 2017 to 2018 "disturbing."</p> <p>"This is a trend that we are seeing with regard to people acting out, people not having self-control, especially when dealing with law enforcement officers. I think it's a symptom of both that lack of control and complying with law enforcement and we are now seeing more people who have [behavioral and mental problems] and they have access to firearms," Gomez said. "That's a deadly combination."</p> <p>"This has been the deadliest year for law enforcement in many, many years [so far]," said former Dallas police chief and ABC News contributor David Brown. While the trend appears to be on the rise this year, Brown said, he added that overall it hasn't reached the peaks of the 1970s, '80s and '90s.</p> <p>Officers in small towns are just at risk as officers in cities, Brown said. A police officer in urban Pomona, California, and an officer in rural Clinton, Missouri, were both shot dead this month.</p> <p>An especially a big fear now is police ambushes, which Brown said are increasing. The uptick has led to</p>

more officers being told to wait for cover and not quickly rush in as often when responding to crisis calls, he said.

"There's always a high degree of alert among law enforcement professionals," Groenginer said. "They never know what could be around the corner. They never know when they could be targeted just because they are in a uniform."

### **Police applications on the decline**

"One of the most concerning things is not a lot of people are wanting to be police officers" due to police criticism and heightened dangers, Brown said.

Gomez agreed. He said one official told him departments are "struggling to get qualified candidates to apply" and Gomez thinks it's partly because of what he calls the "Ferguson effect."

In 2014, a white police officer fatally shot an African-American teen in Ferguson, Missouri, sparking large-scale protests.

Gomez said Ferguson and similar police shootings have since "continued to impact the perception of law enforcement."

"Potential candidates entering into law enforcement feel that they don't have the support of the public and of government officials," Gomez said.

Jonathan Thompson, executive director of the National Sheriffs' Association (NSA), said that five years ago, there were 100 applicants for every vacancy. Today, that number is down to the low 60s, he said.

Last year, 34-year-old New York City police officer Miosotis Familia was gunned down while she was sitting in her marked police command vehicle, writing in her memo book.

One day after the shooting, the NYPD police commissioner reassured hundreds of recruits at their swearing-in ceremony that they had "absolutely" made the right career choice.

"The work of officer Miosotis Familia is not finished," NYPD Commissioner James O'Neill said, telling the recruits that it is their job as cops to finish it.

### **'The profession is on edge'**

What's likely contributing to the increase in deadly shootings is some officers are now hesitant to use force in dangerous situations because they feel they no longer have support from the public and the government, Gomez said.

"If you're hesitant in using force, especially deadly force, then you are putting yourself at a disadvantage in a dangerous situation," Gomez said.

According to The Washington Post's database cataloging fatal police-involved shootings, 264 people have been shot and killed by police so far this year. In 2017, 987 people were fatally shot by police, and as of last week, there have been four fewer shootings this year than at the same time last year.

Brown said he thinks there's a decrease in trust of the government and thus a decrease in trust of law enforcement as well.

"I sense a lot of anger" within officers around the country, Brown said.

Many officers feel they can only trust themselves and their partners, Brown said, "and that is not the sentiment you want for a public servant."

	<p>"I'm really concerned that the 'us against them' mentality will take over, which is not healthy for delivering the best police service."</p> <p>"The profession is on edge," he said, "and that is when you make mistakes and overreact."</p>

## Cyber Awareness

[Top of page](#)

<b>HEADLINE</b>	<b>03/30 Cyberattacks 'cash-strapped' local govt.</b>
<b>SOURCE</b>	<a href="https://www.denverpost.com/2018/03/30/cdot-cyberattack-local-government-preparation/">https://www.denverpost.com/2018/03/30/cdot-cyberattack-local-government-preparation/</a>
<b>GIST</b>	<p>ATLANTA — Atlanta police officers initially had to write reports by hand. Residents still can't pay water bills online. Municipal court dates are being reset. All are fallout from a ransomware attack last week that hobbled the city's invisible infrastructure.</p> <p>Another ransomware attack hit Baltimore's 911 dispatch system over the weekend, prompting a roughly 17-hour shutdown of automated emergency dispatching. The Colorado Department of Transportation suffered two attacks just over a month ago. And the North Carolina county that's home to Charlotte totally rebuilt its system after a December attack.</p> <p>For cash-strapped local governments, paying for robust protection against the invisible menace of a cyberattack can be a hard sell. But cyberattacks continue to proliferate, and experts say preparation and strong defensive measures are necessary to avoid the crippling effects.</p> <p>"As elected officials, it's often quite easy for us to focus on the things that people see because, at the end of the day, our residents are our customers," Atlanta Mayor Keisha Lance Bottoms said at a news conference Monday. "But we have to really make sure that we continue to focus on the things that people can't see, and digital infrastructure is very important."</p> <p>Although it's vital to make sure systems are up to date and have the latest patches, malware evolves so quickly that experts also stress the importance of comprehensive backups and a quick response when an attack does happen.</p> <p>"I don't think any security is flawless," said Craig McCullough, a vice president at security firm Commvault. "I always approach it from the standpoint of it's not a matter of if but when, and when it happens, are you prepared? Are you going to be able to get your data back?"</p> <p>Governments, public agencies and companies need to know what data they have and make sure it's backed up. Software and hardware can be replaced, but data is much more difficult, McCullough said.</p> <p>A quick response can help minimize the damage, said Dmitri Alperovitch, chief technology officer of security firm CrowdStrike. If a threat is detected immediately after it enters the network — for example, when someone clicks on a link in a phishing email or through a vulnerable server — it might be possible to stop before it spreads beyond the initially infected computer, he said.</p> <p>Atlanta officials won't say whether they'll pay the \$51,000 ransom, though Bottoms has said all options are on the table. Mike Cote, president of Secureworks, a security firm hired by Atlanta, has said they know who's behind the attack but aren't releasing that information.</p> <p>Cybersecurity experts say the attack is consistent with the SamSam group, which is known as a sophisticated attacker and negotiator, said Jake Williams, founder of security firm Rendition Infosec.</p> <p>Unlike other ransomware that might raise alarms upon infection, SamSam compromises machines without immediately locking up their files. That access is then used to spread through the network "before they</p>

press the encrypt button,” Williams said.

“They put you into an extreme pain point position where paying is actually an attractive option,” Williams said

He said he regularly tells clients they must make a business decision on whether to pay. He acknowledges that can be more difficult for governments, whose rules might block them from spending public funds on extortion.

Although Atlanta’s critical physical infrastructure — including the city’s airport, emergency response systems and water safety and treatment — were not directly affected, other departments are operating manually and some services have been suspended. Nuisances at first, issues caused by the outages could have compounded effects if they persist.

The mayor has been cautious, declining to give a timeline for when things might be up and running again after the cyberattack announced March 22. She has repeatedly said the investigation and recovery is “a marathon, not a sprint,” and her focus is on making sure the city’s network is safe moving forward.

But the road could be long.

The Colorado Department of Transportation was hit by a SamSam attack on Feb. 21 and again on March 1, and it was back to 80 percent functionality by Thursday said Deborah Blyth, the state’s chief information security officer. Luckily, they had strong backups so they didn’t even think about paying the ransom, she said.

In the weeks since the attack, they’ve implemented two-factor authentication for remote access and accelerated the implementation of other security measures that were already planned.

In Mecklenberg County, N.C., where Charlotte is located, it took a little more than 60 days for things to return to normal after a ransomware attack that began with a phishing email in December.

County officials didn’t pay the ransom after consulting with federal authorities and realizing their data was backed up so they didn’t need to pay to get it back, County manager Dena Diorio said. But the process was still tedious as they had to essentially rebuild the system.

The county has taken steps to prevent another attack, including making its email system more secure and limiting employees’ internet access. And they have more expensive plans — segmenting their data and moving to a cloud-based system — that will take about two years to implement, Diorio said.

Remembering the scary early days, Diorio had advice for her counterparts in Atlanta: “All I can say is: Don’t panic and stay focused.”

<b>HEADLINE</b>	<b>04/02 Email scams costing businesses billions</b>
<b>SOURCE</b>	<a href="https://www.wvnews.com/statejournal/law/email-scams-costing-medium--to-small-sized-businesses-billions/article_b0e63460-020e-572a-b144-bb6c2c276b1a.html">https://www.wvnews.com/statejournal/law/email-scams-costing-medium--to-small-sized-businesses-billions/article_b0e63460-020e-572a-b144-bb6c2c276b1a.html</a>
<b>GIST</b>	<p>FAIRMONT — Thieves looking for new ways to get their hands on your money are using emails to target small- to mid-sized companies.</p> <p>The FBI says since 2013, when it began tracking so-called “business email compromise” scams, “organized crime groups have targeted large and small companies and organizations in every U.S. state and more than 100 countries around the world — from nonprofits and well-known corporations to churches and school systems.”</p>

	<p>As of January 2017, the FBI said losses were in the \$3 billion range “and climbing.”</p> <p>Methods vary, but the so called, “cyber-thieves” typically identify and target employees who have access to company finances — then try to trick them into wiring money to bank accounts they think belong to trusted customers or business partners. The accounts, however, are controlled by the cyber-thieves.</p> <p>Eric Huber, vice president of International and Strategic Initiatives at the National White Collar Crime Center in Fairmont, said the cyber-criminals typically study their victims, figuring out who in an organization is responsible for paying vendors and even the tone of their electronic interactions with bosses.</p> <p>That person may they get an email appearing to be from the CEO telling them he or she is, for instance, boarding a plane and needs the unwitting employee to quickly and quietly wire money to some obscure destination in, say, Poland.</p> <p>He said the thieves are banking on the employee following orders — not asking questions, sending the money and keeping quiet about it long enough for them to get their hands on it.</p> <p>“It’s one of the big trends,” Huber said. “Bad guys used to spend a lot of time trying to hack into small- and medium-sized business computers to steal banking credentials, then use them to steal money from firms. They’ll still do that, but what they’ve discovered is that it’s easier just to ask for money. So, they’ll either do research for open source intelligence or compromise someone’s email, read it and then pretend to be the CEO or a senior executive.”</p> <p>He said the cyber-thieves will “see how (the organization) communicates, who sends wires...and craft it to look like the email came from inside the organization, or in some cases they’ll take over the email.”</p> <p>The thieves are banking on the employee following orders—not asking questions, sending the money as instructed and keeping quiet about it long enough for them to get their hands on it, he said.</p> <p>advertisement</p> <p>Huber said nowadays, employees need to take the time to verify the legitimacy of those kinds of requests before they hit the send button. He said medium-sized and smaller businesses tend to be targeted because they “don’t have as much money to throw at protecting infrastructure. They may not have anyone devoted to informational security or if they do, that person is probably overwhelmed.”</p> <p>“They don’t have the resources to protect themselves,” he adds. “That’s the reason they’re targeting small- and medium-sized businesses for this sort of compromise—it’s (less believable) that the CEO of a Fortune 500 company would say ‘send this wire,’ but with small- to medium-sized businesses, it’s believable.”</p>

<b>HEADLINE</b>	<b>04/01 Atlanta still locked-out of files</b>
<b>SOURCE</b>	<a href="https://gizmodo.com/the-city-of-atlanta-is-still-locked-out-files-over-a-we-1824242001">https://gizmodo.com/the-city-of-atlanta-is-still-locked-out-files-over-a-we-1824242001</a>
<b>GIST</b>	<p>City officials in Atlanta, Georgia are still trying to recover 10 days after a ransomware attack on municipal computer systems hit at least five out of 13 departments, knocking out some city services and forcing others to revert to paper records.</p> <p>Per Reuters, over a week has passed since the SamSam ransomware began spreading throughout city computer systems, with a \$51,000 ransom payment demanded by the hackers going unpaid. While the recovery began last week, large stretches of computer systems remain encrypted by the attackers. Three city council members were sharing a single old laptop over the weekend as they tried to reconstruct records, with councilman Howard Shook telling the news agency the situation was “extraordinarily frustrating.”</p>

According to the Reuters report, numerous local officials have found their file systems corrupted, with tags like “weapologize” and “imsorry” appended to document titles. Though the ransomware was not able to corrupt everything—just eight out of 18 computers in the auditors’ office were affected, for example—it sounds like much of the information may be unrecoverable:

*“Everything on my hard drive is gone,” City Auditor Amanda Noble said in her office housed in Atlanta City Hall’s ornate tower.*

*City officials have not disclosed the extent to which servers for backing up information on PCs were corrupted or what kind of information they think is unrecoverable without paying the ransom.*

*Atlanta police returned to taking written case notes and have lost access to some investigative databases, department spokesman Carlos Campos told Reuters. He declined to discuss the contents of the affected files.*

The SamSam ransomware is particularly advanced and “infiltrates by exploiting vulnerabilities or guessing weak passwords in a target’s public-facing systems,” then uses techniques like the Mimikatz password recovery tool to seize control of the rest of a network, according to Wired. That means attackers don’t need to launch social engineering attacks or trick users into running malware for it to spread, and SamSam can easily spread via “remote desktop protocols, Java-based web servers, File Transfer Protocol servers, and other public network components.”

The city was just beginning to implement some of the recommendations of a cybersecurity audit released in January that found “the large number of severe and critical vulnerabilities identified has existed for so long the organizations responsible have essentially become complacent and no longer take action,” per CBS. The audit said that “departments tasked with dealing with the thousands of vulnerabilities do not have enough time or tools to properly analyze and treat the systems,” leading to a “significant level of preventable risk exposure to the city.”

“Ransomware is dumb,” Parameter Security founder Dave Chronister told Wired. “Even a sophisticated version like this has to rely on automation to work. Ransomware relies on someone not implementing basic security tenets... Not to be harsh, but looking at this their security strategy must be pretty bad.”

The FBI and Department of Homeland Security are assisting Atlanta officials, but it’s not clear to what extent they can help. As Reuters noted, the FBI “typically discourages ransomware victims from paying up,” but former DHS official Mark Weatherford said that might have been one of the few options for Atlanta to avoid so much hassle.

<b>HEADLINE</b>	<b>04/01 Data breach Saks Fifth Ave, Lord &amp; Taylor</b>
<b>SOURCE</b>	<a href="https://apnews.com/f48940efeb834144adac1b7473d2c272/Data-breach-hits-Saks-Fifth-Avenue,-Lord-&amp;-Taylor-stores">https://apnews.com/f48940efeb834144adac1b7473d2c272/Data-breach-hits-Saks-Fifth-Avenue,-Lord-&amp;-Taylor-stores</a>
<b>GIST</b>	<p>A data breach at department store chains Saks Fifth Avenue, Saks Off Fifth and Lord &amp; Taylor has compromised the personal information of customers who shopped at the stores.</p> <p>The chains’ parent company, Canada-based Hudson’s Bay Co., announced the breach of its store payment systems on Sunday. The company said it was investigating and taking steps to contain the attack.</p> <p>The disclosure came after New York-based security firm Gemini Advisory LLC revealed on Sunday that a hacking group known as JokerStash or Fin7 began boasting on dark websites last week that it was putting up for sale up to 5 million stolen credit and debit cards. The hackers named their stash BIGBADABOOM-2. While the extent of its holdings remains unclear, about 125,000 records were immediately released for sale.</p>

	<p>The security firm confirmed with several banks that many of the compromised records came from Saks and Lord &amp; Taylor customers.</p> <p>Hudson's Bay said in a statement that it "deeply regrets any inconvenience or concern this may cause," but it hasn't said how many Saks or Lord &amp; Taylor stores or customers were affected. The company said there's no indication that the breach affected its online shopping websites or other brands, including the Home Outfitters chain or Hudson's Bay stores in Canada.</p> <p>The company said customers won't be liable for fraudulent charges. It plans to offer free credit monitoring and other identity protection services.</p> <p>There is evidence that the breach began about a year ago, said Dmitry Chorine, Gemini Advisory's co-founder and chief technology officer. He said the prolific hacking group has previously targeted major hotel and restaurant chains.</p>

<b>HEADLINE</b>	<b>03/30 Animal abuse site hacked; users exposed</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/animal-abuse-website-hacked-users-exposed/">https://www.hackread.com/animal-abuse-website-hacked-users-exposed/</a>
<b>GIST</b>	<p>An animal abuse website or otherwise called a "bestiality" platform (whose name will not be shared here) has been hacked and as a result, personal details of over 3,000 registered users have been leaked and exposed online.</p> <p>The hack was identified by Troy Hunt, founder of HaveIbeenpwned and according to him, personal details of 3,200 users have been exposed including email addresses, passwords stored as bcrypt hashes, date of birth and most importantly IP addresses.</p> <p>On the other hand, Hunt also provided a set of leaked data to Motherboard who has confirmed that the leaked data is linked to the animal abuse forum and noted that there are hundreds of private messages containing conversations between site users.</p> <p>"Regardless of what you're into in your personal time, this incident serves as a reminder that anything you do online may one day be leaked publicly," Hunt told Motherboard.</p>

	<p>Laws affecting animal abuse or zoophilic activities vary across different countries and other sub-national jurisdictions. However, as of February 10th, 2018, in the United States, 45 states, and 2 territories ban such activities with animals.</p> <p>It is unclear if the targeted site is operated from the United States or the leaked accounts belonged to the users in the States. Nevertheless, should authorities decide to look into the matter, tracking users could be an easy task since their IP addresses are part of the leaked data.</p> <p>Previously, the online hacktivist group Anonymous targeted animal abuse sites under the banner of operation #OpBEAST in which two websites were compromised and one was completely deleted by the hacktivist group.</p>

<b>HEADLINE</b>	<b>03/30 India power billing system ransomware</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/hackers-demand-ransom-indian-power-billing-records/">https://www.hackread.com/hackers-demand-ransom-indian-power-billing-records/</a>
<b>GIST</b>	<p>The AMR system (automatic meter reading system) of Uttar Haryana Bijli Vitran Nigam (UHBVN) (Haryana power utilities) in Panchkula, India became a victim of cyber-attack by unknown hackers last week.</p> <p>The New Indian Express (TNIE) reports that hackers stole billing data from UHBVN computer systems and are demanding 1 Crore Indian rupee (\$153,800) in Bitcoin from the state government for decrypting the files and restoring access to the AMR system.</p> <p>The case has already been filed in Sector 5 Police Station of Panchkula under several sections of the Indian Penal Code and the IT Act but TNIE hasn't named the sections in its report.</p> <p>UHBVN, one of the two power discoms in Haryana, monitors electricity billing of nine Haryana districts. The hack attack occurred on 21 March at exactly 17 minutes past midnight. Hackers uploaded a ransom message on the UHBVN head office computers.</p> <p>According to TNIE, On 22 March, when the computers were turned on, the ransom message got displayed on the screens narrating the demands of the hackers. Soon after the attack was identified, concerned officials, IT and cyber-security experts collectively conducted full system study and found that the database was encrypted.</p> <p>The attacked ARM system was installed, operated and managed by Tata Consultancy Services Ltd (TCS). It was installed in 2011 and since then the electricity billings of the 9 districts namely Ambala, Karnal, Kaithal, Kurukshetra, Panchkula, Panipat, Sonapat, Rohtak and Yamunanagar were managed by this system.</p>

<b>HEADLINE</b>	<b>03/30 College students turn to cryptomining</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/college-kids-turn-to-cryptomining/">https://www.infosecurity-magazine.com/news/college-kids-turn-to-cryptomining/</a>
<b>GIST</b>	<p>The higher-education landscape has become a fertile field for growing crypto-mining revenue. College students are crypto-mining from their dorm rooms, while outside actors are targeting their online activities for web-based attacks.</p> <p>According to Vectra's 2018 RSA Conference Edition of its Attacker Behavior Industry Report, higher education is a prime arena given that students are usually not protected by universities' open networks. These same students also do their own crypto-mining, because they get free electricity.</p> <p>"Students are more likely to perform crypto-mining personally as they don't pay for power, the primary</p>

cost of crypto-mining,” said Chris Morales, head of security analytics at Vectra. “Universities also have high-bandwidth capacity networks with a large volume of easy targets, especially as students are more likely to use untrusted sites (like illegal movies, music and software) hosting crypto-mining malware.”

The report, which analyzed traffic and collected metadata from more than 4.5 million devices and workloads from customer cloud, data-center and enterprise environments, found that 60% of cryptocurrency mining detections occurred in higher education, followed by entertainment and leisure (6%), financial services (3%), technology (3%) and healthcare (2%). Mining overall has surged with the rising price of cryptocurrencies like Bitcoin, Monero and Ethereum.

Colleges and universities aren’t just over-indexing in crypto-mining. The highest volume of attacker behaviors per industry were in higher education (3,715 detections per 10,000 devices) followed by engineering (2,918 detections per 10,000 devices).

“Students are exceedingly intelligent and very enterprising,” said Daniel Basile, executive director of the Security Operations Center (SOC) at Texas A&M University. “This is a time that many of them are working with new technologies, and it is not surprising that they utilizing their machines for cryptocurrency mining. However, there is also a large increase in websites that will crypto-jack your PC while you are on their website. This new trend of mining Bitcoin for revenue instead of ads can directly affect students. With the increase in online video streaming resources, this creates a large amount of cryptocurrency mining.”

<b>HEADLINE</b>	<b>03/29 ‘Fauxpersky’ malware via USB drives</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/fauxpersky-credential-stealer-spreads-usb-drives">https://www.securityweek.com/fauxpersky-credential-stealer-spreads-usb-drives</a>
<b>GIST</b>	<p>A recently discovered credential stealing malware is masquerading as Kaspersky Antivirus and spreading via infected USB drives, according to threat detection firm Cybereason.</p> <p>Dubbed Fauxpersky, the keylogger was written in AutoIT or AutoHotKey, which are simple tools to write small programs for various automation tasks on Windows. AHK can be used to write code to send keystrokes to other applications, and to create a ‘compiled’ exe with their code in it.</p> <p>On systems infected with Fauxpersky, the security researchers discovered four dropped files, each named similarly to Windows system files: Explorers.exe, Spoolsv.exe, Svchost.exe, and Taskhosts.exe.</p> <p>Once executed, the malware gathers a list of drives on the machine and starts replicating itself to them, which allows it to spread to any of the connected external drives.</p> <p>Furthermore, the keylogger renames the external drives to match its naming scheme. Specifically, the drive’s new name would include its original name, its size, and the string “(Secured by Kaspersky Internet Security 2017)”.The malware also creates an autorun.inf file to point to a batch script.</p> <p>“This malware is by no means advanced or even very stealthy. Its authors didn’t put any effort into changing even the most trivial things, such as the AHK icon that’s attached to the file. However, this malware is highly efficient at infecting USB drives and collecting data from the keylogger, exfiltrating it through Google Forms and depositing it in the attacker’s inbox,” Cybereason concludes.</p>

<b>HEADLINE</b>	<b>03/30 Arrests Italy, Romania in phishing scam</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/20-arrested-italy-and-romania-spear-phishing-scam">https://www.securityweek.com/20-arrested-italy-and-romania-spear-phishing-scam</a>
<b>GIST</b>	Authorities this week arrested 20 individuals in Italy and Romania for their role in a banking phishing scam that defrauded bank customers of €1 million (\$1.23 million).

The arrests were the result of a two-year long cybercrime investigation conducted by the Romanian National Police and the Italian National Police, with support from Europol, the Joint Cybercrime Action Taskforce (J-CAT), and Eurojust.

The arrests were made on March 28, following a series of coordinated raids. 9 of the individuals were arrested in Romania and 11 in Italy. The Romanian Police raided 3 houses, while the Italian authorities conducted 10 home and computer searches.

The hackers, Europol reveals, engaged in a banking fraud scheme that netted €1 million from hundreds of customers of 2 major banking institutions.

The group, mainly comprised of Italian nationals, sent spear phishing emails impersonating tax authorities to victims, in an attempt to harvest their online banking credentials.

Unlike common phishing scams, where millions of generic emails are sent to potential victims, spear phishing emails are highly personalized, featuring content that makes them appear as coming from a reputable source, such as the bank.

Since 2016, the investigators have been tracking the manner in which the arrested individuals have been using the stolen online banking credentials to log into their victims' accounts and transfer funds to the attacker-controlled accounts.

Next, they would withdraw the funds from Automated Teller Machines (ATMs) in Romania, using credit/debit cards linked to the criminal accounts.

The highly organized hackers pursued their criminal activities using encrypted chat applications. They also used intimidating and punitive methods towards affiliates and competitors to establish power, Europol says.

Furthermore, authorities suspect the group of money laundering, as well as drug and human trafficking, prostitution, and participation in a criminal organization.

<b>HEADLINE</b>	<b>03/30 Malware attacks leverage Office docs</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/malware-attacks-leveraging-ms-word-documents-grew-by-33-in-q4/article/754927/">https://www.scmagazine.com/malware-attacks-leveraging-ms-word-documents-grew-by-33-in-q4/article/754927/</a>
<b>GIST</b>	<p>Amidst a major rise in zero-day malware attacks in Q4 2017, researchers have observed how hackers are increasingly using Microsoft Office documents as carriers to deliver malicious payloads in enterprise systems while using phishing techniques to trick employees into downloading and opening malicious attachments in emails.</p> <p>The latest Internet Security Report released by WatchGuard Technologies has revealed how hackers are increasingly exploiting issues within the Microsoft Office standard to execute code and to inject powerful malware into enterprise systems.</p> <p>In fact, 'macro-less malware' attacks or Dynamic Data Exchange (DDE) attacks featured in the firm's list of top-ten malware attack types for the firm time and also grew by 33 percent compared to the previous quarter. Two other hacking techniques that leveraged Microsoft Office weaknesses also featured in the list for the first time.</p> <p>Commenting on the report's findings, Andy Norton, director of threat intelligence at Lastline, told SC Magazine UK that it is quite difficult nowadays for employees to detect if a Microsoft Word document is malicious or not as cyber-criminals are using new techniques to weaponise such documents.</p>

	<p>"The attacks abuse features in MS Office documents such DDE or Scriptlets. The ruse is often "this document is protected, enable editing to view content". So, in a percentage of cases, the user enables editing and in doing so starts the infection chain.</p> <p>Corey Nachreiner, chief technology officer at WatchGuard Technologies, said that the report has reiterated how cyber-criminals are continuing to leverage sophisticated, evasive attacks and resourceful malware delivery schemes to steal valuable data.</p> <p>"Although these criminal tactics may vary over time, we can be certain that this broad trend will persist, so the risks have never been greater for small and midsize organisations with less IT and security resources," he said.</p>

<b>HEADLINE</b>	<b>04/01 Fin7 behind sale 5M credit bank cards</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/jokerstash-fin7-syndicate-posts-sale-of-5m-credit-bank-cards-likely-stolen-from-saks-lord-taylor/article/755180/">https://www.scmagazine.com/jokerstash-fin7-syndicate-posts-sale-of-5m-credit-bank-cards-likely-stolen-from-saks-lord-taylor/article/755180/</a>
<b>GIST</b>	<p>The five million stolen credit and debit cards offered for sale starting March 28 by a JokerStash hacking syndicate known as Fin7 likely came from records stolen from Saks Fifth Avenue and Lord &amp; Taylor customers between 2017 until their release last month.</p> <p>“Based on the analysis of the available data, the entire network of Lord &amp; Taylor and 83 Saks Fifth Avenue locations have been compromised” and the majority of cards were “obtained from New York and New Jersey locations,” according to a Gemini advisory, which said around 125,000 records were for sale with the remainder of the cache, advertised on the dark web as BIGBADABOOM-2, expected to roll out in the coming months.</p> <p>Gemini expressed “a high level of confidence” that the stolen cards came that victims of the attack are Saks Fifth Avenue, its discount outlet Saks Fifth Avenue OFF 5TH, and Lord &amp; Taylor Stores, all operated by Hudson's Bay Company (HBC), a Canadian firm.</p> <p>Fin7 has successfully hacked hotel chains like Trump Hotels and Omni Hotels &amp; Resorts, as well as retailers like Whole Foods, Jason's Deli and Chipotle. The group last year also launched spearphishing campaigns targeting Securities and Exchange Commission (SEC) filings using a fileless attack framework.</p> <p>“This incident shows once again merchants still need to protect themselves against POS system infiltration attacks targeting cardholder data. A multi-layer security strategy is necessary,” including segmenting POS networks and upping monitoring and threat detection capabilities, said Mark Cline, vice president at Netsurion. “If nothing else, dwell time of such an attack would be reduced to hours or days. After all, the report is that this attack has persisted for almost a year, just as we have seen in previous massive card breaches.”</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>03/30 Accused Russian hacker extradited to US</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/accused-linkedin-dropbox-hacker-appears-in-us-court-after-diplomatic-battle/d/d-id/1331413">http://www.darkreading.com/attacks-breaches/accused-linkedin-dropbox-hacker-appears-in-us-court-after-diplomatic-battle/d/d-id/1331413</a>
<b>GIST</b>	<p>Yevgeniy Nikulin, the Russian hacker accused of being responsible for breaching DropBox and the 2012 LinkedIn attack that saw 117 million passwords stolen, has been extradited to the US in a process that has implications for the larger relationship between the US and Russia.</p> <p>Detained in the Czech Republic since October 2016, Nikulin had requested asylum there after warrants for his arrest were issued by both Russia and the US. The Czech government denied his bid for asylum and turned him over the US where he appeared in a federal courtroom on Friday morning.</p>

	<p>During his initial court appearance in San Francisco, Nikulin's attorney told the judge that his client has severe medical issues that require immediate attention. A medical evaluation has been ordered by the court.</p> <p>Russia's government has expressed its displeasure with the decision to turn him over to the US, saying that the Czech government reached its conclusion without considering all the available facts.</p> <p>According to a report on CNN, the Czech minister of justice made the decision after considering the seriousness of the charges leveled by the US and Russia and the two countries' intensity of desire to extradite and prosecute Nikulin.</p>

<b>HEADLINE</b>	<b>03/31 Software bug massive telephony outage</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/software/software-bug-behind-biggest-telephony-outage-in-us-history/">https://www.bleepingcomputer.com/news/software/software-bug-behind-biggest-telephony-outage-in-us-history/</a>
<b>GIST</b>	<p>A software bug in a telecom provider's phone number blacklisting system caused the largest telephony outage in US history, according to a report released by the US Federal Communications Commission (FCC) at the start of the month.</p> <p>The telco is Level 3, now part of CenturyLink, and the outage took place on October 4, 2016.</p> <p>Software sees empty field as wildcard selector</p> <p>According to the FCC's investigation, the outage began after a Level 3 employee entered phone numbers suspected of malicious activity in the company's network management software.</p> <p>The employee wanted to block incoming phone calls from these numbers and had entered each number in fields provided by the software's GUI.</p> <p>The problem arose when the Level 3 technician left a field empty, without entering a number. Unbeknownst to the employee, the buggy software didn't ignore the empty field, like most software does, but instead viewed the empty space as a "wildcard" character.</p> <p>As soon as the technician submitted his input, Level 3's network began blocking all telephone calls.</p> <p>Level 3 telephony network goes down for 84 minutes</p> <p>The event had massive repercussions, affecting the entire US. For 84 minutes between 10:06 and 11:30 AM Eastern Daylight Time (EDT), Level 3's network blocked all calls, a massive number of 111 million calls, 109 million of which were VoIP-based.</p> <p>Approximately 29.4 million VoIP users and around 2.3 million wireless users were affected.</p> <p>FCC said the event had "nationwide impact" and called it "the largest [outage] reported in the Federal Communications Commission's Network Outage Reporting System (NORS)" history.</p> <p>Calls to 911 were also blocked, but due to the emergency system's redundancy, only 15 of 117 calls failed to connect to a public safety answering point (PSAP).</p> <p>The outage could have been more prolonged if Level 3 didn't have systems in place that alerted operators of abnormal activity. FCC says Level 3 became aware of the incident four minutes after it started.</p> <p>FCC blames software supplier</p>

	<p>"The technician was unaware of the consequences of leaving a field in the network management software blank," the FCC concluded in its report, absolving the employee and company of guilt. "Level 3 personnel had not previously observed or experienced this behavior in their network management software. According to Level 3, this was the first time that anti-fraud operations in network equipment caused an outage."</p> <p>The FCC report also mentions that Level 3 used "vendor-supplied network management software," but did not name the supplier.</p>

<b>HEADLINE</b>	<b>04/02 Subaru deploys facial recognition</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/technology/subaru-deploys-facial-recognition-to-detect-driver-fatigue/">https://www.bleepingcomputer.com/news/technology/subaru-deploys-facial-recognition-to-detect-driver-fatigue/</a>
<b>GIST</b>	<p>Subaru has become the first car maker to deploy facial recognition inside a vehicle for the purpose of detecting driver fatigue.</p> <p>The feature, named DriverFocus, is part of the EyeSight Driver Assist Technology that will come with the fifth generation of Subaru Forester SUVs, which debuted last week at the New York International Auto Show.</p> <p>"DriverFocus is a driver monitoring system that uses facial recognition software to identify signs of driver fatigue or driver distraction," Subaru said in a press release. "DriverFocus works with Subaru's award-winning EyeSight Driver Assist Technology to reduce the chance of an accident."</p> <p>EyeSight is a powerful technology, supporting features like pre-collision braking, adaptive cruise control, lane sway warnings, and lane-keep assist.</p> <p>This means that if DriverFocus detects that the driver dozing off or moving his gaze away from the road for too much time, it automatically enables EyeSight Driver Assist to stop the vehicle.</p> <p>Facial recognition will not be used to start cars</p> <p>DriverFocus is the first fatigue detection system deployed in a consumer car. Scientists have been working on fatigue detection systems for many years, but only at a theoretical level.</p> <p>For example, scientists from the Indian Institute of Technology proposed last year a system that reads the position of a driver's eyes and mouth to detect common signs of fatigue, such as yawning, head nodding, frequent blinking, and more.</p> <p>Their system relied on a video camera installed in the car. Currently, Subaru hasn't revealed how exactly DriverFocus works but said the system wasn't designed to authenticate drivers and start a car's engine.</p> <p>Nonetheless, the system can distinguish between up to five drivers and remember presets for seat position, climate, multifunction display, and more.</p>

<b>HEADLINE</b>	<b>03/30 AutoHotKey for building malware</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/autohotkey-malware-is-now-a-thing/">https://www.bleepingcomputer.com/news/security/autohotkey-malware-is-now-a-thing/</a>
<b>GIST</b>	AutoHotKey has now become one of the most trendy technologies for building malware, according to several reports put out by cyber-security firms and insights Bleeping Computer received from malware experts.

AutoHotKey, or AHK, is an open-source scripting language developed for the Microsoft Windows operating system back in 2003.

AHK was born when its creator tried and failed to add support for keyboard shortcuts (hotkeys) in AutoIt, a similar Windows scripting language.

The failed attempt to improve the older AutoIt language spurred the AHK creator to put together a new scripting engine that later became AutoHotKey and, which, over the next several years developed into a behemoth on the Windows scripting landscape.

Besides original support for remapping keyboard shortcuts, AutoHotKey is now a powerful system that can now interact with the local filesystem, monitor or close programs, set up scheduled tasks, but also automate repetitive operations inside third-party software.

Furthermore, the AHK scripting language uses a simple syntax that even non-technical users can understand.

Because of these features, over the years, AutoHotKey became the prime technology used for the creation of aimbots and other game cheating tools. But in recent months, the language has also started catching on with some malware developers, as well.

A first report highlighting the rising number of AHK-based malware came from the security research team at Ixia, who found AHK malware samples distributing cryptocurrency miners and a clipboard hijacker towards the end of February.

Ixia's findings were doubled this month when another cyber-security firm, Cybereason, published a similar report on another AHK-based malware strain the company discovered and named Fauxpersky because it tried to imitate a Kaspersky antivirus.

But these aren't the only malware strains researchers spotted, and the list of AHK malware is getting larger by the day.

"We are still finding fresh and new samples, both in their content and their structure," Gabriel Cirlig, a security researcher at Ixia told Bleeping Computer in a private conversation.

"Every day we find the same clibankers/droppers/keyloggers that only have minor changes done to their code as well as samples that even employ complex obfuscation techniques and file structure," Cirlig said. "Even as we speak the list is growing faster and faster."

And these malware families are evolving in terms of complexity. For example, Cybereason researchers Amit Serper and Chris Black described Fauxpersky as a very simplistic and unconvincing threat.

"This malware is by no means advanced or even very stealthy," Serper and Black wrote in their report. "Its authors didn't put any effort into changing even the most trivial things, such as the AHK icon that's attached to the file."

But Cirlig says newer malware strains discovered in recent days are far more advanced, showing that crooks are slowly learning how to utilize AHK for more and more complex tasks.

"The latest that we found, and we're still analyzing, is the first one to use five different obfuscation functions that intertwine each other," Cirlig said.

The trend is clear, and that's that malware authors are increasingly looking at AHK when it comes to choosing the language for their next malware.

HEADLINE	<b>03/27 Claim: Atlanta compromised in April 2017</b>
SOURCE	<a href="https://www.renditioninfosec.com/2018/03/atlanta-government-was-compromised-in-april-2017-well-before-last-weeks-ransomware-attack/">https://www.renditioninfosec.com/2018/03/atlanta-government-was-compromised-in-april-2017-well-before-last-weeks-ransomware-attack/</a>
GIST	<p>Last Thursday, the City Of Atlanta suffered outages from a ransomware attack. During the press conference (<a href="#">recorded here</a>), city officials indicated that they were invested in cyber security. They noted that they were working with state and federal law enforcement to resolve the incident and had even been in contact with the Secret Service. Officials noted that this type of attack (and outage) were happening to many organizations. Officials attempted to convey that despite adopting cyber security best practices, the City of Atlanta was victimized. This prompts the question “<b>Was the City of Atlanta following cyber security best practices?</b>”</p> <p>Though little is known about the internals of the city’s cyber security posture, we quickly learned that the city had exposed remote desktop protocol (RDP) to the Internet with no multi-factor authentication*. This is extremely important because if attackers get a valid username and password combination, they can directly access your information systems if no multi-factor authentication is in place.</p> <p>*Full disclosure: We’re a little biased on the need for multi-factor authentication, Rendition Infosec installs and monitors multi-factor authentication solutions, <a href="#">click here</a> to learn more.</p> <p><b>Cybersecurity Hygiene</b></p> <p>Leaving RDP open to the Internet is bad, but leaving SMB (windows file sharing, or Server Message Block) open to the Internet is <b>much</b> worse. Most readers probably remember the WannaCry ransomware campaign that shut down services at the UK’s National Health Service and elsewhere in May 2017. These attacks were powered by the leaked NSA (allegedly) exploit EternalBlue. In June, the same leaked exploit was used with the NotPetya attacks to target Ukrainian businesses (though impacts were felt worldwide). The EternalBlue exploit targets the SMB service on unpatched computers.</p> <p>Twitter user “<a href="#">Huy</a>” noted that after the announcement of the ransomware attack that a number of computers apparently owned by the City of Atlanta had <a href="#">SMB exposed to the Internet</a>. This is obviously a departure from best practices. However, it should be noted that just because SMB or RDP is exposed to the Internet, this doesn’t necessarily mean that these machines were compromised by attackers. It is indicative of a poor overall cybersecurity posture.</p> <p>When EternalBlue was released into the wild in April 2017, Rendition Infosec realized that this exploit was going to be a big deal. The vulnerability (MS17-010) was patched in March, 2017. But we know that many organizations don’t patch for 30-60 days or more. Further, those who are exposing services like SMB to the Internet are already displaying substandard cybersecurity hygiene, making it less likely that they’ll be patching in anything approaching a timely manner.</p> <p>To understand patterns of exploitation, Rendition began scanning for machines that were exposing SMB to the Internet. For each machine we discovered that was exposing this service, we sent a special “ping” command to communicate with the DoublePulsar malware that is temporarily installed when a computer is compromised with the EternalBlue exploit. When the DoublePulsar malware is present, the ping command returns a special response. Using this response, we can conclusively determine which machines have been compromised. With DoublePulsar running on a compromised machine, any attacker can upload malware to the machine and execute it with system privileges (no further exploitation or authentication is required).</p> <p>Because of ethical and legal concerns, Rendition did not attempt to interact any further with machines that were discovered to be running DoublePulsar. However, we can say that those machines were compromised for some reason by some third party. In most incident response cases we’ve worked at Rendition involving EternalBlue and DoublePulsar, these tools are just used to install end-stage malware (such as ransomware) on the compromised machines.</p> <p>It’s also important to note that the DoublePulsar malware disappears when a machine is rebooted. This</p>

means that our scan data is very likely incomplete. Any positive scan results should be considered an absolute indication of compromise. However, the absence of scan results does not necessarily indicate that no compromise occurred (it just means we didn't see it). A more thorough investigation (typically referred to as [threat hunting](#)) should be conducted if you have any suspicion of compromise.

Rendition performed a number of scans in late April and the first few days of May. Of course we notified our clients of any of their IP's and hostnames discovered in the scan data. However, the magnitude of the scan data prohibited reaching out to everyone compromised. Our largest scan indicated that more than 148k machines were compromised – the raw number of results simply precluded us from contacting each victim individually. We were discussing with legal counsel how to best communicate vulnerability data when WannaCry hit in mid May 2017. After WannaCry, we decided to shelve the idea of reaching out to victims, figuring most had also been hit with WannaCry (and we're not ambulance chasers). However, given the events in Atlanta, we're now seeing that this data is relevant even now and we're dusting off our data set.

### **The City of Atlanta Had Five Systems Compromised in April 2017**

Our scan data indicates that the City Of Atlanta had the following five systems fully compromised in April 2017:

65.82.136.163 atlantaga.gov  
 65.82.136.220 webmail10.atlantaga.gov  
 65.82.136.164 atlantaga.gov  
 65.82.136.35 atlantaga.gov  
 65.82.136.79 ditweb.atlantaga.gov

Note that DNS names were resolved at the time of scans and rely on correct DNS PTR records to be supplied by atlantaga.gov's DNS server. Of these systems, the webmail10.atlantaga.gov server is probably the most concerning since an attacker could conceivably download all email (given the superuser privileges obtained with EternalBlue).

This scan data conclusively shows that the City of Atlanta was not patching its Internet facing hosts more than a month after \*critical\* patches were released by Microsoft. Microsoft released patches on March 14, 2017. Our scan data shows these hosts being vulnerable (and compromised by unknown attackers) on dates spanning from April 23, 2017 to May 1, 2017. After doing some searching for statements from the City or Atlanta, we can't find any indication that they were aware of this compromise at all. We reached out to let them know that they were previously compromised before this was posted publicly.

It's further worth noting that our scan data only includes machines that had SMB exposed to the Internet. We know that public facing machines tend to receive patches (especially those labeled as critical with publicly available exploits) before the rest of the network. There are an unknown number of machines in the City of Atlanta's internal network that were likely also unpatched at the time we performed our scans. In our experience, it is generally safe to infer overall cyber security hygiene from a representative sample like what we have.

Even if we don't infer overall hygiene, the fact remains that the City of Atlanta couldn't be bothered to patch at least five Internet facing servers for more than a month in April 2017 – even when there was a publicly available exploit.

<b>HEADLINE</b>	<b>03/31 Atlanta struggles to recover cyberattack</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-usa-cyber-atlanta/with-paper-and-phones-atlanta-struggles-to-recover-from-cyber-attack-idUSKBN1H70R0">https://www.reuters.com/article/us-usa-cyber-atlanta/with-paper-and-phones-atlanta-struggles-to-recover-from-cyber-attack-idUSKBN1H70R0</a>
<b>GIST</b>	ATLANTA (Reuters) - Atlanta's top officials holed up in their offices on Saturday as they worked to restore critical systems knocked out by a nine-day-old cyber attack that plunged the Southeastern U.S. metropolis into technological chaos and forced some city workers to revert to paper.

On an Easter and Passover holiday weekend, city officials labored in preparation for the workweek to come.

Police and other public servants have spent the past week trying to piece together their digital work lives, recreating audit spreadsheets and conducting business on mobile phones in response to one of the most devastating “ransomware” virus attacks to hit an American city.

Three city council staffers have been sharing a single clunky personal laptop brought in after cyber extortionists attacked Atlanta’s computer network with a virus that scrambled data and still prevents access to critical systems.

“It’s extraordinarily frustrating,” said Councilman Howard Shook, whose office lost 16 years of digital records.

One compromised city computer seen by Reuters showed multiple corrupted documents with “weapologize” and “imsorry” added to file names.

Ransomware attacks have surged in recent years as cyber extortionists moved from attacking individual computers to large organizations, including businesses, healthcare organizations and government agencies. Previous high-profile attacks have shut down factories, prompted hospitals to turn away patients and forced local emergency dispatch systems to move to manual operations.

Ransomware typically corrupts data and does not steal it. The city of Atlanta has said it does not believe private residents’ information is in the hands of hackers, but they do not know for sure.

City officials have declined to discuss the extent of damage beyond disclosed outages that have shut down some services at municipal offices, including courts and the water department.

Nearly 6 million people live in the Atlanta metropolitan area. The Georgia city itself is home to more than 450,000 people, according to the latest data from the U.S. Census Bureau.

City officials told Reuters that police files and financial documents were rendered inaccessible by unknown hackers who demanded \$51,000 worth of bitcoin to provide digital keys to unlock scrambled files.

“Everything on my hard drive is gone,” City Auditor Amanda Noble said in her office housed in Atlanta City Hall’s ornate tower.

City officials have not disclosed the extent to which servers for backing up information on PCs were corrupted or what kind of information they think is unrecoverable without paying the ransom.

Noble discovered the disarray on March 22 when she turned on her computer to discover that files could not be opened after being encrypted by a powerful computer virus known as SamSam that renamed them with gibberish.

“I said, ‘This is wrong,’” she recalled.

City officials then quickly entered her office and told her to shut down the computer before warning the rest of the building.

Noble is working on a personal laptop and using her smartphone to search for details of current projects mentioned in emails stored on that device.

Not all computers were compromised. Ten of 18 machines in the auditing office were not affected, Noble said.

## OLD-SCHOOL ANALOG

Atlanta police returned to taking written case notes and have lost access to some investigative databases, department spokesman Carlos Campos told Reuters. He declined to discuss the contents of the affected files.

“Our data management teams are working diligently to restore normal operations and functionalities to these systems and hope to be back online in the very near future,” he said. By the weekend, he added, officers were returning to digital police reports.

Meanwhile, some city employees complained they have been left in the dark, unsure when it is safe to turn on their computers.

“We don’t know anything,” said one frustrated employee as she left for a lunch break on Friday.

The Federal Bureau of Investigation, which is helping Atlanta respond, typically discourages ransomware victims from paying up.

FBI officials could not immediately be reached for comment. A Department of Homeland Security spokesman confirmed the agency is helping Atlanta respond to the attack, but declined to comment further.

Hackers typically walk away when ransoms are not paid, said Mark Weatherford, a former senior DHS cyber official.

Weatherford, who previously served as California’s chief information security officer, said the situation might have been resolved with little pain if the city had quickly made that payment.

“The longer it goes, the worse it gets,” he said. “This could turn out to be really bad if they never get their data back.”

<b>HEADLINE</b>	<b>03/31 Judge dismisses Pulse shooting lawsuit</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/31/us/pulse-nightclub-lawsuit/index.html">https://www.cnn.com/2018/03/31/us/pulse-nightclub-lawsuit/index.html</a>
<b>GIST</b>	<p>(CNN)A Michigan judge on Friday dismissed a lawsuit by more than a dozen families of the Pulse nightclub shooting victims against social media companies.</p> <p>The lawsuit, filed in December 2016, accused Facebook, Twitter and YouTube (owned by Google) of knowing that ISIS recruited members online and doing nothing to stop it. Because the Pulse gunman, Omar Mateen, was able to view extremist propaganda on these social sites, the lawsuit said they were civilly liable. The complaint demanded a trial by jury.</p> <p>"Without ... Twitter, Facebook, and Google (YouTube), the explosive growth of (Islamic State in Iraq and Syria) over the last few years into the most feared terrorist group in the world would not have been possible," the complaint reads.</p> <p>CNN has reached out to Facebook, Twitter and Google, but has not received a response.</p> <p>The judge said there was no evidence that anything Mateen viewed online directly led to the June 2016 attack at Pulse nightclub in Orlando.</p> <p>The attorney for the families, Keith Altman, said his clients will appeal.</p>

	<p>"We are not surprised that the law is unsettled in the terms of holding social media companies accountable. We will absolutely appeal," Altman said. "We feel the judge didn't see the case in the right way and will continue to fight. We have just as much resolve as we did before."</p> <p>The dismissal of the lawsuit came the same day a jury acquitted Mateen's wife, Noor Salman. The Pulse victims' families did not have comment on Salman's acquittal, Altman said.</p>

<b>HEADLINE</b>	<b>03/31 Under Armour: MyFitnessPal data breach</b>
<b>SOURCE</b>	<a href="http://time.com/5222015/how-to-change-myfitnesspal-password/?xid=homepage">http://time.com/5222015/how-to-change-myfitnesspal-password/?xid=homepage</a>
<b>GIST</b>	<p>Under Armour notified users of its MyFitnessPal app of a security breach affecting 150 million users on Thursday.</p> <p>Under Armour learned on March 25 that "an unauthorized party acquired data associated with MyFitnessPal user accounts in late February 2018," the company said in a release. Four days later, Under Armour contacted MyFitnessPal users through email and the app's messaging system. The company is requiring users to change their passwords and recommended they do so as soon as possible.</p> <p>Users' usernames, email addresses and passwords were affected, but Under Armour says no payment information was affected by the data breach because it is collected and processed separately.</p>

<b>HEADLINE</b>	<b>03/31 How to minimize tracking online</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/how-youre-tracked-online-facebook-google-amazon-uber-what-you-can-do-about-it/">https://www.cbsnews.com/news/how-youre-tracked-online-facebook-google-amazon-uber-what-you-can-do-about-it/</a>
<b>GIST</b>	<p><b>NEW YORK</b> -- Though Facebook gets the attention because of a recent <a href="#">data privacy scandal</a>, the social network is far from alone in collecting massive amounts of data on you to help marketers sell you stuff. Google, for one, also does <a href="#">extensive tracking</a> to power its advertising engines.</p> <p>Web developer Dylan Curran posted <a href="#">a thread on Twitter</a> last weekend that quickly went viral. He tweeted, "Want to freak yourself out? I'm gonna show just how much of your information the likes of Facebook and Google store about you without you even realizing it."</p> <p>In his series of tweets and an <a href="#">opinion piece in The Guardian</a>, Curran -- who told CBSN he "was basically a nobody before this exploded" -- outlined the information Google stores on users, ranging from users' location to app usage to their YouTube history. He similarly highlighted Facebook's collection of personal information, saying the social media giant "has reams and reams of data on you, too."</p> <p>And many other websites and apps run ads sold by Facebook and Google and exchange data with them. Beyond that, plenty of services including Uber and Amazon keep detailed histories on you.</p> <p>Here are some of the ways to block or minimize such tracking -- but they come with trade-offs.</p> <p><b>Tracking IDs</b></p> <p>Websites have long used unique IDs in "cookies" -- data files stored in your browser -- to know it's you when you return a week later. Cookies also let advertising networks run by the likes of Facebook and Google connect you as you visit multiple websites. Phones and tablets have a device advertising ID that apps can use to track you.</p> <ul style="list-style-type: none"> <li>• Combating this: You can reset the cookie ID by clearing cookies periodically. Most browsers also have a private mode to limit tracking through cookies, though it's not foolproof. Companies can still link you if you've signed in, for instance. As for the device ID, you can reset that or tell</li> </ul>

advertisers not to target ads through the phone's settings. Many browsers also let you install add-ons that block ad trackers. Notable add-ons include Ghostery or the Electronic Frontier Foundation's Privacy Badger.

- The trade-offs: You'll still get ads, just not targeted ones. And clearing cookies makes your browser forget who you are, so you'll have to sign back into any site that was saving your login. Tracker blockers can sometimes prevent websites from displaying or working properly.

### Location Services

Many apps need your location to work. Mapping apps, for instance, can't tell you when to turn without knowing where you are. Video services typically have rights only in certain countries and need to verify your location. But location can be used for much more. Google, for instance, keeps a fairly detailed account of your whereabouts through a feature called Timeline.

- Combating this: You can turn off location services in the phone's settings, though for apps to work properly, it's better to turn them off for specific services that don't really need them. As for Timeline, you can pause or delete location history in Google settings.
- The trade-offs: Some apps won't work without your location. Others, such as weather apps, will require you enter your location manually. And you might miss out on recommendations such as better commuting routes via apps like Waze.

### Signing In

Signing into an online account gives services a sure-fire way of tracking you. Facebook won't work at all without an account; Google merely works better with one. And you'll generally need an account with any service that charges you, although sometimes you can sign in with your Facebook or Google ID instead.

- Combating this: Resist creating an account or signing whenever you can -- such as when you're merely browsing rather than buying. Avoid using Facebook or Google IDs whenever possible, as those companies could then track you. You can also use a different email address for each account to frustrate efforts to connect you across services, although it can be a major pain.
- The trade-offs: Some services require signing in, and creating accounts on each service means more passwords to remember (though you might consider using a password manager). Whatever you do, don't reuse the same passwords across service; that makes them easy to hack.

### IP Address

The Internet Protocol address lists where your phone or computer lives on the internet; it's how you get messages and load websites. But IP addresses can also help companies remember who you are and link the various devices you use, since most homes use a single IP address for the whole network. Databases can also map IP addresses to physical locations.

- Combating this: You can mask your IP address by using a secure intermediary. VPN services, common in corporate settings, will route your traffic through a separate IP address; a secure web browser called Tor automatically sends traffic through multiple third parties. You still need to avoid signing in.
- The trade-offs: Tor can slow down performance, particularly with high-data tasks such as video. And with VPNs, you need to trust the VPN operator, whether that's your boss or a private service.

HEADLINE	03/30 US to tie visas w/social media accounts
SOURCE	<a href="https://www.yahoo.com/news/us-visa-seekers-disclose-social-media-153100492.html">https://www.yahoo.com/news/us-visa-seekers-disclose-social-media-153100492.html</a>
GIST	Washington (AFP) - Travelers to the United States will soon have to submit their social media identities,

	<p>previous telephone numbers and email addresses, a measure that could touch 10 million people per year.</p> <p>According to a State Department plan published Friday, visa seekers -- whether visitors or would-be immigrants -- will be presented with a list of social media platforms.</p> <p>Applicants will be required to identify which they use and provide "any identifiers used by applicants for those platforms during the five years preceding the date of application."</p> <p>"Other questions seek five years of previously used telephone numbers, email addresses, and international travel," the notice, published in the Federal Register, revealed.</p> <p>When these new rules were first suggested last year as part of what US President Donald Trump has called "extreme vetting" of would-be visitors, civil liberties groups sounded the alarm about privacy.</p> <p>But officials say they could identify potential extremists, such as one of the attackers in the December 2015 San Bernadino shooting -- who got a visa despite allegedly advocating "jihad" on social media.</p> <p>The measures apply both to the DS-260 "Immigrant Visa and Alien Registration Form" and the DS-160 "Application for Nonimmigrant Visa."</p> <p>In the last fiscal year, 559,536 people applied for US immigrant visas and 9,681,913 for various forms of visitor visa. Friday's announced measures will not touch diplomatic or official travelers.</p>

<b>HEADLINE</b>	<b>04/01 Somalia: Al-Shabaab attack kills dozens</b>
<b>SOURCE</b>	<a href="https://www.theguardian.com/world/2018/apr/01/al-shabaab-attack-kills-ugandan-soldiers-in-somalia">https://www.theguardian.com/world/2018/apr/01/al-shabaab-attack-kills-ugandan-soldiers-in-somalia</a>
<b>GIST</b>	<p>Dozens of Ugandan soldiers are thought to have been killed when Islamist extremists attacked their base on Sunday in the latest of a series of bloody strikes against peacekeepers in Somalia.</p> <p>Local officials told the Guardian that as many as 46 Ugandan troops, part of the 22,000-strong regional force in Somalia, died in the attack by the al-Qaida affiliated al-Shabaab movement in the town of Bulamarer, 80 miles south-west of the capital, Mogadishu, at around 9am local time.</p> <p>Ugandan officials have said only four soldiers were killed in the attack, which was repulsed with heavy casualties among the extremists.</p> <p>Such attacks are designed to hasten the departure of Amisom, the military and policing coalition under the authority of the African Union, which has been fighting al-Shabaab for more than a decade.</p> <p>Al-Shabaab, which once controlled much of Somalia, wants to topple the western-backed government in Mogadishu.</p>

<b>HEADLINE</b>	<b>04/01 US-based ISIS plotter sentenced 20yrs</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/news/uk-wales-43613255">http://www.bbc.com/news/uk-wales-43613255</a>
<b>GIST</b>	<p>A businessman who accepted payments from Cardiff firms to fund a terrorist attack in the US has been sentenced to 20 years in prison.</p> <p>Mohammed Elshinawy, 33, admitted accepting overseas payments to plan and help carry out a so-called</p>

	<p>Islamic State attack, at a court in Maryland.</p> <p>FBI documents revealed Pontypridd businessman Siful Sujjan financed IS plots across the Atlantic. He died in a US-led air strike near Raqqa in December 2015.</p> <p>Bangladesh-born Sujjan, 31, left Wales in July 2014 for Syria, where he became a computer hacker for IS. Following his death, a Pentagon spokesman was quoted as saying "ISIL [another name for IS] has lost a key link between networks".</p> <p>Sujan allegedly used some of his south Wales companies to send military-grade surveillance equipment to Spain and to an address in Turkey close to the Syrian border, and to transfer funding to an IS supporter in the US.</p> <p>FBI documents revealing the links were released following a court case in Baltimore, Maryland, in August 2017.</p> <p>Elshinawy, 33, previously pleaded guilty to accepting payments from overseas to plan and help carry out a terrorist attack in the US, as well as three other terrorism-related charges.</p> <p>Information published on the Maryland Attorney's website on 30 March, states that between February and December 2015, he conspired with others to provide material and resources to IS, including personnel, communication and financial services.</p> <p>The attorney's office said Elshinawy described himself as a "soldier, committed to making violent jihad" and he received £6,207 (US\$8,700) from a UK-based company, believed to belong to Sujjan, to fund a terrorist attack.</p> <p>He was sentenced to 20 years in prison followed by 15 years of supervised release.</p>

<b>HEADLINE</b>	<b>04/01 Taliban have gone high-tech</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/04/01/world/asia/taliban-night-vision.html?hp&amp;action=click&amp;pgtype=Homepage&amp;clickSource=story-heading&amp;module=first-column-region&amp;region=top-news&amp;WT.nav=top-news">https://www.nytimes.com/2018/04/01/world/asia/taliban-night-vision.html?hp&amp;action=click&amp;pgtype=Homepage&amp;clickSource=story-heading&amp;module=first-column-region&amp;region=top-news&amp;WT.nav=top-news</a>
<b>GIST</b>	<p>WASHINGTON — Once described as an ill-equipped band of insurgents, the Taliban are increasingly attacking security forces across Afghanistan using night-vision goggles and lasers that United States military officials said were either stolen from Afghan and international troops or bought on the black market.</p> <p>The devices allow the Taliban to maneuver on forces under the cover of darkness as they track the whirling blades of coalition helicopters, the infrared lasers on American rifles, or even the bedtime movements of local police officers.</p> <p>With this new battlefield visibility, the Taliban more than doubled nighttime attacks from 2014 to 2017, according to one United States military official who described internal Pentagon data on the condition of</p>

anonymity. The number of Afghans who were wounded or killed during nighttime attacks during that period nearly tripled.

That has forced American commanders to rethink the limited access they give Afghan security forces to the night-vision devices. Commanders now worry that denying the expensive equipment to those forces puts them at a technological disadvantage, with potentially lethal consequences.

For years, American commanders have been reluctant to give night-vision equipment to rank-and-file Afghan soldiers and police officers out of concern of widespread corruption among those forces. The devices — headsets and infrared lasers — are usually given only to elite Afghan commandos and police special mission units, according to American military officials.

As some of this equipment falls into Taliban hands, the militants are joining a larger trend, said David W. Barno, a retired lieutenant general who led the war effort in Afghanistan from 2003 to 2005. Advanced equipment, such as drones and precision weapons, is being seized by other extremist groups in other global conflict zones, he said.

“It’s going to be a problem,” Mr. Barno said, “and it’s going to change how we operate.”

With the spread of the devices, infantry units on patrols have been told not to use certain marking devices that can be seen only by night-vision equipment. Helicopter crews have been made distinctly aware that their aircraft are no longer cloaked by darkness.

In one case last November, Taliban fighters wearing night-vision goggles attacked a police outpost in Farah Province, in western Afghanistan. By the time the predawn assault was over, eight Afghan officers lay dead in their beds, Haji Abdul Rahman Aka, the elder of the province’s Pule Regi area, said at the time. Only one Afghan officer survived.

The frequency and ferocity of the nighttime Taliban attacks are linked to attempts by Afghan forces, based in small checkpoints across the country, to hold territory that has been wrested away from the militants.

Previously unreported documents, obtained by The New York Times, underline concerns about the Taliban’s growing sophistication on the battlefield after 16 years of war — and American commanders’ efforts to stunt it.

The documents show that the American military has begun to send older models of night-vision hardware to regular Afghan Army units. Those headsets cost an estimated \$3,000 each, officials said.

One of the first batches of night-vision equipment for conventional units in southern Afghanistan, part of a monthslong pilot program, was sent to the embattled 215th Corps in Helmand Province in the spring of 2016.

Only 161 of the 210 devices were returned, according to the military documents obtained by The Times, and the equipment was not effectively used, in part because the forces were not properly trained to use it.

Afghan troops said the missing devices were reported as “battle losses,” but could not support that claim with any proof or records to explain where or when they were left behind, according to the documents.

At the time, the commander of the 215th Corps was Maj. Gen. M. Moein Faqir. He was later arrested on sweeping corruption charges that included misuse of food money meant for his troops.

Last year, and with better results, night-vision equipment was sent to the 205th Corps, located around Kandahar, the military documents showed.

Five devices were lost between July and December, when the program ended, according to the documents. Over the summer and fall, the Afghan National Army suffered 15 percent fewer casualties around

Kandahar than it had during the same period in 2016.

The documents credited the night-vision equipment for the marked reduction, concluding that the devices are “becoming an integral part of base defense plans.” The American military is now planning to equip the unit with roughly 2,500 night-vision goggles as part of what the documents described as a concept for a “permanent program.”

Despite those measured successes, it remains unclear if the American military will give the devices to the rest of the Afghan Army.

The American military headquarters in Kabul has said it equips only Special Operations units in the Afghan Army and police forces with night-vision technology.

Capt. Tom Gresback, a spokesman for United States forces in Afghanistan, declined to comment on the plans to distribute the devices to the Afghan National Army, as outlined in the military documents. He said American commanders would provide Afghan national defense and security forces “with the resources necessary to promote security throughout Afghanistan.”

But some American advisers closer to the ground fight are already trying to get the technology for their Afghan counterparts, according to a United States official. He said that would require a decision made through the leadership in Kabul and the Pentagon to allow American commanders to distribute the devices to even more Afghan security forces.

With the night-vision devices, Taliban fighters have been able to approach Afghan bases nearly undetected before attacking.

Initially, such ambushes were attributed to Taliban forces known as “Red Units” located in Afghanistan’s southern provinces. But over the last year, the night-vision devices have frequently turned up in the country’s north and east, according to two American military officials, signaling a widespread distribution into other groups of Taliban fighters.

Those officials said the Taliban were using both tightly controlled American-made devices and gear that is widely available for purchase. In some cases, American officials said, the equipment was left on the battlefield by United States or Afghan troops, including those who were killed in action.

In others, Afghan soldiers are believed to have sold the devices to the extremists.

That was disputed by Gen. Dawlat Waziri, who until recently served as spokesman for the Afghan Ministry of Defense. He said all night-vision equipment provided to Afghan troops by the American military had been “accounted for.”

“No case of night vision sold by our soldiers to the Taliban has been reported,” General Waziri said.

Zabihullah Mujahid, a spokesman for the Taliban, said fighters obtained night-vision devices after attacking Afghan bases or capturing members of the Afghan security forces.

Rank-and-file Afghan police officers are particularly under threat by increasing numbers of deadly nighttime attacks, said one of the American military officials. Those units are spread farther into sparsely populated areas across Afghanistan than are army soldiers.

Officers with the Afghan National Police, especially in the south, have been making desperate requests for the equipment for months, the official said. The police are part of the Ministry of Interior, which is suspected of rampant corruption.

In Helmand Province, Marine Corps advisers are helping a request by the 505th Zone of the Afghan National Police to receive night-vision devices, Col. C.J. Douglas, the head of the Marines’ police

	advising component there, said in an email.
	It is unclear if the Afghan police unit will get them.

<b>HEADLINE</b>	<b>04/01 Syria: rebels leaving last-held town</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/small-number-rebels-start-leave-syrias-douma-54158154?">http://abcnews.go.com/International/wireStory/small-number-rebels-start-leave-syrias-douma-54158154?</a>
<b>GIST</b>	<p>A rebel faction trapped by government forces outside the Syrian capital agreed to evacuate to northern Syria on Sunday as reports swirled of a larger agreement that would have the government retake full control of the eastern Ghouta region after seven years of revolt.</p> <p>Fighters from the Faylaq al-Rahman group left Douma on buses sent by the Syrian government to the rebel-held province of Idlib, SANA state news agency reported. Some 1,300 fighters, activists, and civilians signed up to leave the town, according to the Britain-based Syrian Observatory for Human Rights monitoring group.</p> <p>It was the first organized evacuation of fighters from Douma, one of the earliest centers of the anti-government demonstrations that swept through the country in 2011. Security forces responded by putting the town and other suburbs around Damascus under siege, bombing hospitals and residential areas, and blocking the entry of food and medical relief.</p> <p>Douma is a stronghold of the powerful Army of Islam rebel group. The town is one of the last around the capital to hold out against the government.</p> <p>Later Sunday, a media outlet linked to the Syrian military reported that the Army of Islam also agreed to leave to north Syria, effectively transferring control of Douma to Damascus.</p> <p>The deal would mark the end of a weeks-long push by the government to consolidate its control of the eastern Ghouta region just outside the capital.</p> <p>Fighters from the Army of Islam would evacuate to Jarablus, a town in the northern Aleppo province that is shared between rebel and Turkish control. Turkey, with support from rebels, is running its own military operations against a U.S.-backed Kurdish party that controls territory along the frontier.</p> <p>A local council for Douma would be formed with the approval of the central government, said the government-linked Central Military Media outlet.</p>

<b>HEADLINE</b>	<b>04/01 Syria: final evacuation deal reached</b>
<b>SOURCE</b>	<a href="https://www.afp.com/en/news/205/final-evacuation-deal-reached-syrias-ghouta-doc-13j2kl2">https://www.afp.com/en/news/205/final-evacuation-deal-reached-syrias-ghouta-doc-13j2kl2</a>
<b>GIST</b>	<p>A final deal has been reached for fighters and civilians to leave the last opposition-held pocket of Eastern Ghouta, a monitor said Sunday, paving the way for Syria's regime to retake the onetime rebel enclave near Damascus.</p> <p>The deal brokered by regime ally Russia would see fighters with the Jaish al-Islam rebel faction leave Ghouta's main town of Douma for opposition-held territory in northern Syria, the Syrian Observatory for Human Rights said.</p> <p>There was no immediate confirmation from the rebels, but pro-regime newspaper Al-Watan quoted "diplomatic sources" as saying the agreement would see fighters give up heavy weapons and leave Douma for northern Syria.</p>

	<p>The retaking of Eastern Ghouta would mark a major milestone in President Bashar al-Assad's efforts to regain control of territory seized by rebel factions during Syria's seven-year civil war.</p> <p>Backed by Russia, Assad's forces have scored a series of victories over rebel forces in recent years, often through campaigns of siege, aerial bombardment and ground offensives that have drawn widespread international condemnation.</p> <p>The Observatory, a Britain-based monitoring group, said Sunday's deal provides for Jaish al-Islam fighters and their families, as well as civilians who want, to be evacuated to rebel-held areas in the northern province of Aleppo.</p> <p>It will also see Russian military police enter the town and government institutions return to the area, the monitor said.</p> <p>Regime forces had already retaken more than 95 percent of Eastern Ghouta in a six-week air and ground blitz that forced tens of thousands from their homes.</p>

<b>HEADLINE</b>	<b>03/31 Syria army declares victory</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/state-tv-towns-syrias-ghouta-cleared-rebels-54144500">http://abcnews.go.com/International/wireStory/state-tv-towns-syrias-ghouta-cleared-rebels-54144500</a>
<b>GIST</b>	<p>The Syrian army declared victory in eastern Ghouta Saturday after opposition fighters evacuated from most of the area near the capital except for the town of Douma where negotiations are still underway for rebels there to leave or face an all-out government offensive.</p> <p>The government has given rebels in Douma — the area's largest town and stronghold of the powerful Army of Islam rebel group — an ultimatum to agree on leaving by late Saturday. Some pro-government new websites reported that the army is massing troops around Douma, adding that the ultimatum may be extended until Sunday.</p> <p>The army statement came shortly after another group of opposition fighters and their relatives left southern and western parts of eastern Ghouta Saturday afternoon, bringing President Bashar Assad's forces a step closer to eliminating threats from insurgents groups nearby.</p> <p>State TV said 38 buses left the towns of Zamalka, Ein Tarma, Arbeen and Jobar taking more than 1,700 rebels and civilians to the northwestern rebel-held province of Idlib. The channel said troops entered the towns and raised the national flag in Arbeen's main square.</p> <p>"The importance of this victory lies in restoring security and stability to the city of Damascus and its surrounding areas after the suffering of its civilians from the crimes of terrorists over several years," said the army statement, read on TV by Brig. Gen. Ali Mayhoub.</p>

<b>HEADLINE</b>	<b>03/31 Volatile: US, Turkey on opposing sides</b>
<b>SOURCE</b>	<a href="https://www.stripes.com/news/middle-east/at-volatile-syrian-front-line-us-turkey-on-opposing-sides-1.519784">https://www.stripes.com/news/middle-east/at-volatile-syrian-front-line-us-turkey-on-opposing-sides-1.519784</a>
<b>GIST</b>	<p>HALAWANJI, Syria -- Perched on a green hilltop, Kurdish and Arab fighters face a tense front line separating them from Turkish-backed forces in this part of northern Syria. Behind them, American troops drive up and down the roads. Their aim: Make their presence known to prevent bursts of gunfire from spiraling into a battle.</p> <p>Down the hill and across a stream are the rival forces: Syrian opposition fighters. They have taken positions on a crossroads in the village of Halawanji and on rooftops with views up to the hill. Beyond them, on another hill, Turkish troops have a base, ready to back up their allies if needed.</p> <p>This front line threatens to ignite at any time, with the militaries of two NATO members on opposing sides. The crowded terrain has become more combustible as Turkey ever more loudly threatens to push through these lines to attack the nearby Kurdish-Arab town of Manbij and other Kurdish-run towns further east. The presence of the Americans is a main obstacle preventing them from doing so.</p> <p>Further hiking tensions, a roadside bomb in Manbij late Thursday killed two coalition personnel, an American and a Briton. Kurdish officials accuse Turkey and its allies of carrying out acts of violence in the town to sow instability, including several recent smaller bombings, protests and an attempted assassination attempt on a Kurdish official - although there is also the possibility Islamic State group militants are behind the violence.</p> <p>Manbij is highly strategic: the main town on westernmost edge of the stretch of Syrian territory held by the U.S.-backed Syrian Kurds, running along the border with Turkey. Mixed Kurdish-Arab Syrian forces liberated Manbij from the rule of the Islamic State group in 2016 with help from the U.S.-led coalition. But Kurdish control of the town infuriated Turkey, which views the main U.S. Kurdish ally, the YPG militia, as "terrorists" linked to Kurdish insurgents on its own soil.</p> <p>U.S. troops first deployed in the area about 16 months ago, after Turkish-backed Syrian forces advanced on areas near Manbij, in a race for control of territories as IS militants collapsed. The deployment prevented repeated clashes between the two rival forces.</p> <p>The U.S.-backed Syrian fighters at Halwanji say their Turkish-backed rivals downhill increasingly open fire on them, trying to provoke a fight and create a pretext for an incursion. One commander said it happens as often as three times a week. Another said the "provocations" increased after Turkish troops and their allies successfully captured another town further west, Afrin, from the YPG. The commanders say their forces do not respond to the fire.</p> <p>On Thursday, one commander, Abu Ali Nejm, said U.S. troops have increased their presence "in a noticeable way" in the area in recent days to prevent an eruption of violence, following the capture of Afrin, Turkey's threats and a recent build-up of Turkish troops and their allies.</p> <p>"They have become part of the front line to reassure the people in Manbij and the military forces and to raise morale," said Abu Ali, who uses his nom de guerre and is a leading member of the Manbij Military</p>

Council, the joint Kurdish-Arab body leading the U.S.-allied forces here.

U.S. Col. Ryan Dillon, of the U.S.-led coalition, said there were no new U.S. bases in the area. "Our patrols move around. They are not static," he said. "The purpose of our forces is to prevent the reemergence of (IS militants)" and prevent "any type of incursion from any other group in the area."

Turkey and the United States have held talks aimed at defusing the standoff, with a round set for Friday in Washington. But a solution remains unclear: Turkey says the YPG power across northern Syria is a threat, and President Recep Tayyip Erdogan has vowed to roll back the Kurdish fighters, starting from Manbij all the way to the Iraqi border. On Friday, Erdogan angrily lashed out at French President Emmanuel Macron for meeting with Kurdish officials and offering to mediate. Erdogan said he would not negotiate with "terrorists" and brusquely said Macron was "over his head."

Meanwhile, at Halwanji, Abu Ali said the Turkish-backed fighters fired on his forces Thursday, using heavy machine guns and small arms. His troops did not respond, in accordance with orders, and instead reported the incident to U.S. troops nearby, he said.

"We inform, and they come to the front and see for themselves. They have their own contacts or coordination with the Turkish forces, something they don't have to tell us about," he said, adding that when the rival side sees the Americans they don't fire.

A team of Associated Press reporters arrived to the scene soon after the incident. A convoy of U.S. troops was seen on the road. All was quiet and all sides returned to their positions. But as the AP team drove away, new shooting rang out in the distance.

<b>HEADLINE</b>	<b>03/31 Military seeks Afghanistan progress</b>
<b>SOURCE</b>	<a href="https://www.stripes.com/news/middle-east/in-afghanistan-us-military-sprints-to-prove-it-can-reverse-insurgent-tide-1.519789">https://www.stripes.com/news/middle-east/in-afghanistan-us-military-sprints-to-prove-it-can-reverse-insurgent-tide-1.519789</a>
<b>GIST</b>	<p>BAGRAM AIR BASE, Afghanistan - The U.S. military is racing to demonstrate it is making progress in Afghanistan during a critical period that will test President Donald Trump's strategy and, potentially, political support for the war.</p> <p>Military leaders say the arrival of new troops and aircraft, along with a renewed mission to advise local operations more closely, will help reverse a Taliban resurgence that has exposed the fragility of the long American project in Afghanistan.</p> <p>"This is not another year of the same thing we've been doing for 17 years," Gen. Joseph Dunford Jr., chairman of the Joint Chiefs of Staff, said during a tour of military facilities across Afghanistan last week. "This is a fundamentally different approach."</p> <p>With an increased U.S. force of about 15,000, focused largely on efforts to ensure Afghan troops can launch offensives against the Taliban, Dunford said that "the right people at the right level with the right training" are in place ahead of the 2018 fighting season, a sentiment repeated by other commanders.</p> <p>Yet looming over the battlefield push are questions about how long support can be sustained, given skepticism in Europe about an open-ended military effort and ambivalence from Trump about involvement in foreign wars.</p> <p>The stepped-up campaign comes as the architect of Trump's Afghanistan strategy, national security adviser H.R. McMaster, prepares to exit the White House. His successor, John Bolton, may be a less ardent proponent of a muscular U.S. campaign.</p> <p>Ronald ENeumann, who served as U.S. ambassador to Afghanistan under President George W. Bush, said</p>

the questions swirling in Western capitals were impossible for U.S. commanders to ignore. "That's what's driving the sense of speed" in large part, he said. "They don't know how much firmness we have in our own project."

In a sign of the renewed Pentagon focus on Afghanistan, Dunford's tour was one of several high-level visits in recent weeks, including stops by Defense Secretary Jim Mattis and Gen. Joseph Votel, who heads U.S. Central Command.

Over four days, generals and advisers traveling with Dunford fanned out across the country to gather information on the readiness of Afghan forces and their foreign advisers.

Officials said Afghan forces are demonstrating an improved ability to employ their own air power - with newly trained pilots, combat-ready helicopters and small-scale drones - and are coordinating maneuvers with the army, police and elite commandos.

If sustained, it would be a major change from the period following the end of U.S. combat operations in 2014, when once-secure districts fell to the Taliban and Afghan forces made desperate appeals for American air power, then limited by a smaller U.S. force and a narrower mission. The message from Washington during those years was, in some officials' rueful characterization, "Don't lose."

Now, with a re-energized air campaign and new advisory units placed with Afghan army battalions, U.S. officials are trying to build confidence among local units.

As an example of the kind of momentum Pentagon leaders hope will break the cycle of dependence on foreign forces, U.S. advisers described a recent operation to clear Taliban forces from a district of Laghman province, to the east of Kabul.

Aided by intelligence gathered by Afghanistan's spy agency, local commandos conducted raids in narrow valleys abutting the Alingar River that officials said the Taliban used to launch attacks on Afghan checkpoints and lob rockets or artillery at nearby bases. Then Afghan police and army troops from the 201st Corps pushed into the area, backed by U.S. and Afghan aircraft.

When the operation was over, the provincial governor arrived in the area in an attempt to cement government control.

But the Taliban has a stronger grip in southern strongholds, vast parts of which remain no-go zones for security forces.

In an echo of previous years, U.S. Marines in Helmand province are advising the Afghan army's 215th Corps as it seeks to clear roads around towns and cities that are hotbeds for insurgent activity.

While U.S. advisers report growing autonomy among Afghan units, they acknowledge that many areas will remain outside government's grip for the foreseeable future.

Operations in the south are "now based on what the Afghan army wants to do, where do they really think they need to have security," said Lt. Col. Ryan Benson, a Marine adviser at Camp Shorab. "They know what they can hold, and they know what's less important."

A key aspect of the strategy centers on the newly formed Security Force Assistance Brigade, which will advise battalion-level units and, sometimes, accompany them into the field. Pentagon leaders say the Obama administration's decision to end the practice of embedding advisers with lower-level Afghan army units, part of its plan to extricate the United States from the war, set the stage for the Taliban comeback after 2014.

Dunford said the Afghan government is gradually gaining ground, expanding its control of populated areas from 64 percent late last year to close to 70 percent today. The government hopes to add 10 percent more

this year, he said.

Whether Afghanistan can hold parliamentary elections without major violence will help Pentagon officials gauge the strategy's success in coming months, as will the number of Afghan military casualties. While the Afghan government does not disclose exact figures, U.S. officials say combat losses remain in the thousands each year.

Officials also hope to see a payoff from changes initiated by Afghan President Ashraf Ghani, including a plan to retire thousands of politically connected senior officers. Until recently, U.S. officials like to say, the average age of corps commanders exceeded Afghanistan's life expectancy by a decade.

Some experts remain skeptical the new approach can succeed where President Barack Obama's 2010-2011 surge, with far more troops, could not.

The Afghan forces would have to become "so capable and lethal" that they could defeat the Taliban in battles with little help, said retired Lt. Gen. David Barno, who commanded U.S. and NATO forces in Afghanistan from 2003 to 2005. "I am not optimistic we are going to see that happen anytime soon."

Gen. John Nicholson Jr., commander of international forces in Afghanistan, said the strategy includes pressing Pakistan to shut down Taliban safe havens and squeezing the Taliban diplomatically after a recent peace initiative put forward by Ghani.

In more emphatic terms than ever before, military leaders are calling for a negotiated end to the war. The new urgency reflects an awareness of the Taliban's ability to regenerate and an acknowledgment that the United States and NATO are unlikely to provide high levels of resources indefinitely.

"The No. 1 metric is how are we doing toward reconciliation," Nicholson told reporters during Dunford's visit.

While there have been episodic efforts to foster peace talks since 2001, the prospect of negotiations with a group responsible for killing thousands of Americans has been met with resistance at the Pentagon in the past.

Now, in a twist, the new push for peace lacks equal high-level support outside the military. In January, Trump rejected talking to the Taliban after a bloody suicide attack. The State Department, which has led reconciliation efforts in the past, has not appointed a senior official to work on that subject and recently laid off the few staff members involved.

Military leaders are also seeking to get more lower-level fighters to lay down their arms. Such efforts have taken place previously without recruiting a critical mass of fighters.

David Sedney, a top Pentagon official for Afghanistan during the Obama administration and now a senior fellow at the Center for Strategic and International Studies, said important Taliban figures in Pakistan continue to believe that military victory is possible.

"However, among Taliban fighters in Afghanistan, the growing disillusionment with those Pakistan-based leaders is fueling a rising interest in peace," he said. "It is too soon to say whether this will result in peace talks this year, but the possibility exists where it did not a year ago."

Adding urgency to the complicated U.S. mission is the unpredictability of a commander in chief who acknowledged as he unveiled his plan to redouble the Afghanistan effort that his original instinct had been withdrawal.

"I share the American people's frustration . . . over a foreign policy that has spent too much time, energy, money and, most importantly, lives," Trump said last year.

	<p>It's not yet clear how Trump's ambivalence will be affected by the arrival of Bolton, who has voiced distrust in nation-building overseas and appears more focused on North Korea and Iran than Afghanistan.</p> <p>Andrew Wilder, an Afghanistan scholar at the U.S. Institute for Peace, said that signaling continuity in U.S. plans would be crucial. "With the new leadership, it's important to be messaging that the strategy remains in place and the U.S. is committed to it, or its biggest advantage, which is that it's not time-based, is lost," he said.</p> <p>Reassuring European nations is equally important. While several NATO nations recently announced increased troop levels, there are signs of growing resistance.</p> <p>Ian Lesser, vice president of the German Marshall Fund, a think tank, said NATO leaders were increasingly focused on threats from a resurgent Russia and terrorism groups on Europe's eastern and southern borders. Adding to that, low public support for Afghanistan means that "the political pressure is definitely on," he said.</p> <p>"The fact that allies were able to make modest new investments reflects the fact that they didn't want to get off on the wrong foot with the United States," Lesser said. But he added, "For different reasons all around the alliance, people are going to have an increasingly hard time justifying this as an open-ended commitment."</p>

<b>HEADLINE</b>	<b>03/31 Syria: most eastern enclave regained</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-mideast-crisis-syria-ghouta/syrian-army-command-says-it-has-regained-most-of-eastern-ghouta-idUSKBN1H70IX">https://www.reuters.com/article/us-mideast-crisis-syria-ghouta/syrian-army-command-says-it-has-regained-most-of-eastern-ghouta-idUSKBN1H70IX</a>
<b>GIST</b>	<p>AMMAN (Reuters) - The Syrian army command said on Saturday it had regained most of the towns and villages in eastern Ghouta and was pressing its military operations in the last rebel bastion of Douma.</p> <p>In a televised statement, the Syrian army spokesman said the weeks-long military campaign had now brought security to the Syrian capital Damascus and also secured its main links to other parts of the country, stretching north and all the way to the Iraqi border to the east.</p> <p>The army command said military operations were continuing in the outskirts of the city of Douma, controlled by the Jaish al-Islam rebel group, the last patch of eastern Ghouta still held by insurgents.</p> <p>Douma's fall would seal the rebels' worst defeat since 2016, driving them from their last big stronghold near the capital, and would also carry potent symbolism. The town was the main center of street protests in the Damascus suburbs against President Bashar al-Assad's rule that ignited the conflict seven years ago.</p> <p>The army said hundreds of rebels had been killed in the ferocious offensive. The opposition says a relentless air campaign was waged in which where the army used napalm, chlorine and incendiary bombs to demoralize rebels by targeting civilian areas.</p> <p>The rebels say the indiscriminate bombing forced them to capitulate and agree to surrender deals that force them either to make peace or leave to rebel held areas after weeks of bombing and sieges that prevented food from reaching the enclaves.</p> <p>The Syrian army has repeatedly said regaining control over rebel-held suburbs would stop rocket attacks on the capital.</p>

<b>HEADLINE</b>	<b>03/31 Jury foreman on shooter's wife acquittal</b>
-----------------	---

SOURCE	<a href="http://www.foxnews.com/us/2018/03/31/jury-convicted-noor-salman-knew-pulse-nightclub-attack-but-had-no-option-but-to-acquit-foreman-says.html">http://www.foxnews.com/us/2018/03/31/jury-convicted-noor-salman-knew-pulse-nightclub-attack-but-had-no-option-but-to-acquit-foreman-says.html</a>
GIST	<p>The jury foreman in the concluded trial of Noor Salman -- widow of Pulse nightclub gunman Omar Mateen -- said jurors were "convinced" she knew of the attack beforehand, but had "no option but to return a verdict of not guilty."</p> <p>In a statement provided to the Orlando Sentinel, the juror -- who requested to remain anonymous -- said "a verdict of not guilty did NOT mean that we thought Noor Salman was unaware of what Omar Mateen was planning to do," rather that the jury was "not tasked with deciding if she was aware of a potential attack."</p> <p>"On the contrary we were convinced she did know," the statement continued. "She may not have known what day, or what location, but she knew."</p> <p>Mateen killed 49 people and wounded 58 others at the Pulse nightclub in Orlando, Fla., on June 12, 2016, before he was killed by police.</p> <p>Salman avoided a potential life sentence Friday after she was found not guilty on charges of obstruction and aiding and abetting by attempting to provide material support to a terrorist organization -- a controversial decision that left survivors frustrated and angry.</p> <p>Such negative reactions to the verdict prompted the jury foremen to issue the statement to the newspaper.</p> <p>"I felt compelled to at least clarify several misconceptions," expressing "sympathy to family and friends of the victims of this senseless tragedy," the foreman said.</p> <p>"I understand the desire to hold someone accountable for this heinous act of violence. Omar Mateen is dead. He cannot be punished," the statement read. "It is only logical the world would look next to Noor Salman."</p> <p>The juror also acknowledged "there were several significant inconsistencies with the written summaries of her statements," as the FBI did not record its interviews with Salaman following the attack, according to the paper.</p> <p>However, the statement credited both the prosecution and defense for "an excellent job presenting their case."</p> <p>"The bottom line is that, based on the letter of the law, and the detailed instructions provided by the court, we were presented with no option but to return a verdict of not guilty," the statement read.</p> <p>Salman did not testify in her defense.</p>

HEADLINE	<b>03/31 US freezes \$200M Syria recovery funds</b>
SOURCE	<a href="https://www.cbsnews.com/news/president-donald-trump-freezes-200-million-in-funds-earmarked-for-syria-recovery/">https://www.cbsnews.com/news/president-donald-trump-freezes-200-million-in-funds-earmarked-for-syria-recovery/</a>
GIST	<p>President Trump's administration has frozen \$200 million earmarked for Syria recovery efforts, CBS News' Margaret Brennan and Kylie Atwood confirmed. The development comes after Mr. Trump said this week the U.S. will be pulling out of Syria "very soon."</p> <p>Atwood reports the decision was relayed to the State Department Friday in a call that White House chief of staff John Kelly made to Deputy Secretary of State John Sullivan. There is some recovery funding that will continue for the next few weeks, but all future money is on hold.</p> <p>The money -- to have been spent by the State Department for infrastructure projects like power, water and</p>

roads -- had been announced by fired Secretary of State Rex Tillerson at an aid conference last month in Kuwait.

The State Department has been asked to provide the White House with more information on the Syria recovery funding, Atwood reports -- such as specific projects to be laid out. Mr. Trump wants other countries to step up to the plate, and do and pay more. The freeze does not impact Department of Defense operations.

Brennan reports the president has it in his mind that he wants to get out of Syria, but also told Turkish President Recep Tayyip Erdogan on Friday that the U.S. is not done fighting the Islamic State of Iraq and Syria (ISIS). In short, Brennan reports, the president's remarks -- and this freeze -- contradict policy that had been in place under Tillerson.

Meanwhile, U.S. Central Command and the State Department are scheduled to host an event Tuesday about rebuilding Syria and Iraq after ISIS. Secretary of Defense James Mattis, Brennan reports, has been consistent that the military needs to gradually, and not suddenly, hand matters off to diplomats. Mr. Trump's pivot also makes the fate of Syrian president Bashar al Assad unclear.

Mr. Trump described his intent to get out of Syria in a speech to union workers Thursday in Ohio -- a speech that was billed as an infrastructure plan pitch.

"Things are changing, folks," Mr. Trump told the crowd. "But now is the time to rebuild our country, to take care of our people, and to fight for our great American workers for a change. ... We'll be coming out of Syria, like, very soon. Let the other people take care of it now. Very soon. Very soon, we're coming out. We're going to have 100 percent of the caliphate, as they call it -- sometimes referred to as 'land.' We're taking it all back quickly. Quickly. But we're going to be coming out of there real soon. We're going to get back to our country, where we belong, where we want to be."

<b>HEADLINE</b>	<b>03/30 Syria bomb kills US, UK troops</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/syrian-official-roadside-bomb-explodes-tense-manbij-town-54117901?">http://abcnews.go.com/International/wireStory/syrian-official-roadside-bomb-explodes-tense-manbij-town-54117901?</a>
<b>GIST</b>	<p>A roadside bomb in northern Syria killed two coalition personnel, an American and a Briton, and wounded five others in a rare attack since the U.S.-led coalition sent troops into the war-torn country, the U.S. and British militaries and a U.S. defense official said Friday.</p> <p>The military did not say where the attack took place or give the nationalities of the other casualties but it came hours after a local Syrian official said that a roadside bomb exploded in the tense, mixed Arab-Kurdish town of Manbij that is not far from the border with Turkey.</p> <p>Manbij is under threat of a Turkish military operation. Ankara says Syrian Kurdish militiamen it views as "terrorists" and an extension of Kurdish insurgents inside Turkey are in control of the town.</p> <p>The U.S. military statement said the attack happened Thursday night and that the wounded were being evacuated for further medical treatment. The statement said details were being withheld pending further investigation.</p> <p>A Department of Defense official in Washington said one of the two killed was an American service member and the other was of another nationality.</p> <p>No other information about the deceased American was immediately available. The official spoke on condition of anonymity because details had not yet been publicly released.</p> <p>A U.K. defense ministry spokesman said the British armed forces member was killed during an operation</p>

	<p>against the Islamic State group. The spokesman added that an improvised explosive device killed the service member who was embedded with U.S. forces on Thursday.</p> <p>No details on the casualty's service branch, unit or gender were immediately provided.</p> <p>The U.S. military member killed was the fourth American who has died in Syria since the U.S. began attacking Islamic State militants there in September 2014, according to the Pentagon's Defense Casualty Analysis System.</p>

<b>HEADLINE</b>	<b>03/30 UK ISIS members: beheadings 'mistake'</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/notorious-members-revoking-uk-citizenship-unfair-54126797">http://abcnews.go.com/International/wireStory/notorious-members-revoking-uk-citizenship-unfair-54126797</a>
<b>GIST</b>	<p>Two British militants believed to have been part of an Islamic State group cell notorious for beheading hostages in Syria were unapologetic in their first interview since their capture, denouncing the U.S. and Britain as "hypocrites" who will not give them a fair trial.</p> <p>The men, along with two other British jihadis, allegedly made up the IS cell nicknamed "The Beatles" by surviving captives because of their English accents.</p> <p>The nickname belied the cell's brutality. In 2014 and 2015, it held more than 20 Western hostages in Syria and tortured many of them. It beheaded seven American, British and Japanese journalists and aid workers and a group of Syrian soldiers, boasting of the butchery in videos released to the world.</p> <p>Speaking to The Associated Press at a Kurdish security center, the two men, El Shafee Elsheikh and Alexandra Amon Kotey, repeatedly refused to address allegations they were part of the cell — clearly having a future trial in mind. They complained that they could "disappear" after Britain reportedly revoked their citizenship.</p> <p>They were captured in January in eastern Syria by the Kurdish-led, U.S.-backed Syrian Democratic Forces amid the collapse of IS. Their detention has set off a debate in the U.S. and Europe over how to prosecute their citizens who joined IS — as the Kurds pressure the West to take them back to relieve overcrowding in prisons.</p> <p>The two said the killings of the captives were a mistake — but for tactical reasons.</p> <p>Many in IS "would have disagreed" with the killings "on the grounds that there is probably more benefit in them being political prisoners," Kotey said.</p> <p>"I didn't see any benefit (in killing them). It was something that was regrettable." He also blamed Western governments for failing to negotiate, noting that some hostages were released for ransoms.</p> <p>Elsheikh said the killings were a "mistake" and might not have been justified. But, he said, they were in retaliation for killings of civilians by the U.S.-led coalition fighting IS. He said the militants shouldn't have initially threatened to kill the hostages because then they had to go ahead with it or else "your credibility may go."</p> <p>The beheadings, often carried out on camera, horrified the world soon after IS took over much of Iraq and Syria in 2014. The group also committed widescale atrocities including massacring thousands of Iraqi troops and civilians and taking sex slaves.</p> <p>The leader of the cell, Mohammed Emwazi, was dubbed "Jihadi John" in the British media after he appeared, masked, in the videos, sometimes performing the butchery. He was killed in a U.S.-led coalition drone strike in 2015 in the Syrian city of Raqqa, the de facto IS capital. Another member, Aine Lesley</p>

Davis, was arrested in Turkey and convicted there in 2017, sentenced to seven years in prison.

Elsheikh, whose family came to Britain from Sudan when he was a child, was a mechanic from White City in west London.

He traveled to Syria in 2012, initially joining al-Qaida's branch before moving on to IS, according to the U.S. State Department's listing of the two men for terrorism sanctions. It said he "earned a reputation for waterboarding, mock executions and crucifixions while serving as an (IS) jailer."

Kotey, who is of Ghanaian and Greek-Cypriot descent and converted to Islam in his 20s, is from London's Paddington neighborhood.

Serving in the IS cell as a guard, he "likely engaged in the group's executions and exceptionally cruel torture methods," the State Department said. It also said he was an IS recruiter who brought other Britons into the group.

Elsheikh and Kotey spoke to the AP at a Kurdish security building in the town of Kobani, where they were brought, initially in handcuffs and face covers that were removed. They appeared to speak openly with no signs of duress and were friendly with SDF security who came in and out of the room.

They were both initially confrontational but over the interview became more conversational. Kotey often cracked jokes — when asked whether IS leader Abu Bakr al-Baghdadi was alive, he joked that some people thought Elvis never died and Tupac Shakur is still alive. Elsheikh was straightlaced and reserved, referring more often to Islamic texts.

They were unrepentant about belonging to IS — though they said they did not agree with everything it did. Kotey said he did not think suicide bombings were permissible in Islam. Elsheikh said IS's killing of a captured Jordanian pilot by burning him alive in a cage was "atrocious."

But they seemed dismissive of the idea that IS was egregious in brutality.

"I am not here to justify or shun every act IS did," Elsheikh said, arguing that nationals of a country can't be held responsible for crimes by the state.

The U.S. has been pressing for the home countries of foreign jihadis in Iraq and Syria to take their nationals for trial. Britain's defense secretary has said they should not be allowed back into the country. Former captives of the cell and families of its victims have called on Elsheikh and Kotey to be given a fair trial, whether in the United States or Britain, arguing that locking them away in a facility like Guantanamo Bay would only fuel further radicalism.

Kurdish officials complain they are being left to deal with the IS legacy, including overburdened prisons full of militants, including foreign fighters whose home countries don't want to take them back.

Elsheikh and Kotey are held in an undisclosed location. Kotey said he shares a cell with 70 others, all but four of them Syrians, and that they are sleeping like "sardines, literally head to toe, head to toe." Despite the overcrowding, he said, they get fresh air, play games and have classes.

Kotey said the U.S. and Britain were not upholding their own laws of due process. "Where are they now or are they just applicable when they suit you?" he said. "It just looks very hypocritical, double standards."

The two denounced as "illegal" the British government's reported decision in February to strip them of citizenship. The decision was widely reported in British media, though officials have not confirmed or denied it, citing privacy rules.

The revocation exposes them to "rendition and torture," Elsheikh said.

HEADLINE	<b>04/01 Military families w/deportation issues</b>
SOURCE	<a href="https://www.militarytimes.com/news/your-military/2018/04/01/as-many-as-11800-military-families-face-deportation-issues-group-says/">https://www.militarytimes.com/news/your-military/2018/04/01/as-many-as-11800-military-families-face-deportation-issues-group-says/</a>
GIST	<p>As many as 11,800 currently serving in the U.S. military are dealing with a spouse or family member who is facing deportation, a national immigration advocacy group announced Friday.</p> <p>No previous estimate, official or unofficial, has been available on just how many of the 1 million married military members currently on active duty, National Guard or Reserve status may be dealing with the stress of having a spouse, dependent or parent deported.</p> <p>It's also not a number that can be easily checked, or verified, because neither DoD, the Department of Homeland Security nor U.S. Immigration and Customs Enforcement tracks military status in immigration proceedings.</p> <p>American Families United, a non-profit immigration advocacy group, calculated the estimate using 2011 U.S. Census statistics, which found that 6.3 percent of the 129 million married Americans are married to foreign-born spouses. The Pew Research Center found that one in four of those foreign-born spouses are in the country illegally. About 75 percent of that population comes from countries like Mexico, where if they entered illegally, they have a harder time obtaining legal status, as opposed to a person from Europe who might have overstayed a visa, said American Families United President Randall Emery.</p> <p>"So we derived the total of military (active and reserves) married to people with inadmissibility-type immigration issues by taking the total (1 million), multiplying by the national percentage of foreign-born (6.3 percent, so 63,000 current U.S. military are married to immigrants), and then the 25 percent of the total which have problems with immigration law: 15,750. Of that, Pew's data indicates 75 percent are from sources characterized by entry without inspection and similar issues, that would be about 11,800," Emery said.</p> <p>While it may not be exact, AFU generated the military estimate to "create awareness and get some of these legislators who say they support the military to actually act on it" and recognize that this is a bigger military problem than previously thought, said Nancy Kuznetsov, the group's military liaison.</p> <p>While the active duty members themselves are protected — because in order to enlist a service member has to show proof that they are in the country legally — their undocumented spouses are not.</p> <p>An earlier "parole in place" program that was previously championed by Vice President Mike Pence to give relief to military families is no longer being utilized due to stricter enforcement of deportation proceedings under Trump.</p> <p>That's meant more military families calling the group for assistance, Emery said.</p> <p>"Recently, we've seen an increase in cases of both active-duty personnel and veterans who have been failed by immigration law," Emery said. "These estimates give us perspective on the problem."</p> <p>When asked, neither DoD, DHS nor ICE could say how many military families are facing deportation proceedings, because it's not data they track or report,</p> <p>While an ICE official said the agency "respects the service and sacrifice of those in military service, and is very deliberate in its review of cases involving U.S. military veterans," the agency does not track military status in its removal statistics, the official said.</p> <p>ICE referred queries on how many military families were facing removal proceedings to the Department of Justice's Executive Office for Immigration Review.</p>

	But that court “does not track military status among respondents or their spouses,” when prosecuting immigration cases, said spokesman Devin O’Malley, so there’s no way to know how many military family members were among those persons removed last year.

<b>HEADLINE</b>	<b>03/29 San Diego unique approach to homeless</b>
<b>SOURCE</b>	<a href="https://www.theguardian.com/us-news/2018/mar/29/san-diego-homelessness-big-tents">https://www.theguardian.com/us-news/2018/mar/29/san-diego-homelessness-big-tents</a>
<b>GIST</b>	<p>Bob McElroy strode through the busy entrance of the vast, gleaming-white tent, greeting people right and left. The prominent homeless services provider calls the new structure, located on the outskirts of downtown San Diego, “the Rolls-Royce of tents”.</p> <p>It is double-insulated and has wifi. And it is the sunny seaside destination’s millionaire-funded attempt to get a grip on an emergency that sees thousands of homeless people sleep on its streets every night.</p> <p>The industrial-sized tent holds 324 people in neatly spaced, numbered bunks. People can bring their pets, and 70 dogs also live in the shelter. It offers a bed and services – from healthcare to employment assistance to showers and laundry – while people wait for a place of their own. In appearance, it evokes a military installation or a refugee camp.</p>

“You come in here with nothing and they provide everything,” said Sylvia Saliman, 58.

Saliman sat on her top bunk with Daisy, her American blue nose pitbull, who was napping after a long walk. Saliman said she had been homeless for 16 months and in the shelter for two. She said she’d lost everything except her dog. Thanks to the tent, “I’m doing great right now,” she said.

Cities throughout the western and southern US, such as San Diego, face a dilemma: they are grappling with visible, intransigent street homelessness, and the supply of affordable housing is meager and increasing only slowly. This tent, along with two others built by the city, fills the gap – it is known as a “bridge” shelter.

Officials from California cities large and small, including Los Angeles, San Francisco, Fresno and Oxnard, have come to tour the structures. The Fresno city council member Steve Brandau brought a group to San Diego in February and said a huge tent could be the solution for his city’s shortage of about 150 beds. “We like the San Diego structure,” he said, “the feel of it, the types of services provided.”

It is not the first time San Diego has housed people in large tents. For nearly three decades, two such structures, one for veterans and one for adults, went up during winter months. But that program was scrapped in 2015.

“In the communities where they’re solving homelessness, they’re not doing it with tents,” the then city council member Todd Gloria told the San Diego Union-Tribune.

A spike in homelessness, especially downtown, and, last year, a deadly outbreak of hepatitis A that killed 20 people and had the city washing its sidewalks in bleach, forced city leaders to reconsider. Two wealthy San Diego businessmen, Dan Shea, a restaurateur, and Peter Seidler, managing partner of the San Diego Padres baseball team, told Mayor Kevin Faulconer they would put up \$1.5m for new tents if the city would fund the operations for at least two years.

Shea and Seidler say they represented a larger San Diego business community frustrated by a lack of action on the part of elected officials. It will take years to build the necessary housing, Shea said in an interview with KPBS radio. “Do we just leave those people on the street for five years, seven years, 10 years waiting for housing to be built?”

Beds are prioritized for people with mental or physical disabilities who qualify for housing subsidies. They are also available for people who just need a few months of respite to get back on their feet. Everyone in the shelter is paired with a housing “navigator” whose job is to find appropriate housing as quickly as possible. Altogether, the three tents have almost 700 beds.

“Without this, can you imagine how hard it is to find a client on the streets?” said Amy Gonyeau, chief operating officer for Alpha Project, the service provider that runs the tent for adults. “Now we know where they are – well, at least 700 of them.”

The goal is for providers to move about two-thirds of shelter residents into permanent housing within four months, yet early data shows meeting this goal might prove challenging. During its first four months of operation, 44 people from the largest tent, with its capacity of more than 300, moved into permanent housing. Another 15 exited to other programs or moved in with family or friends.

HEADLINE	<b>04/01 Claim: World Cup drone attack plot</b>
SOURCE	<a href="https://www.mirror.co.uk/sport/football/news/isis-planning-terror-attacks-using-12285487">https://www.mirror.co.uk/sport/football/news/isis-planning-terror-attacks-using-12285487</a>
GIST	ISIS terrorists are preparing for attacks at the World Cup in Russia using drones, it has been claimed.  Sick propaganda has been shared a number of times implying the terror group will target the tournament

due to take place in June.

Now chilling images have been shared on the messaging app Telegram which reportedly show preparations for attacks.

They show drones being armed with grenades, missiles and mortars that can be dropped on targets.

Weaponised drones are already being used by ISIS fighters in Syria and Iraq.

They are the cheap kind normally used by filmmakers and hobbyists, but with deadly bombs attached.

It comes after ISIS supporters previously spread images of a terrorist brandishing a sub machine gun and a bomb, with the Volgograd Arena in Southern Russia in the background.

England are set to play one of their World Cup matches at the stadium.

The words 'Wait for Us' are underneath the sinister figure.

The stadium will host Gareth Southgate's side when they face Tunisia on June 18.

Although Volgograd is not an area which the Home Office advises football fans not to visit, it has urged supporters travelling to watch the tournament to see travel advice before travelling.

The image, shared throughout pro-ISIS channels on the encrypted messaging application Telegram, featured an excerpt of a Quranic verse manipulated by the ISIS followers to urge fellow jihadis to take every opportunity to conduct deadly attacks in the U.S. and Russia.

<b>HEADLINE</b>	<b>04/02 Police probe if SUV crash 'intentional'</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/04/02/us/family-suv-pacific-coast-crash/index.html">https://www.cnn.com/2018/04/02/us/family-suv-pacific-coast-crash/index.html</a>
<b>GIST</b>	<p>(CNN)A family's SUV found at the bottom of a California cliff last week may have been deliberately driven off the road, police told media Sunday.</p> <p>The bodies of Jennifer and Sarah Hart, both 38, were discovered inside their overturned SUV near a remote stretch of Highway 1 in Northern California last Monday. Emergency responders found the bodies of three of their six children -- Markis, 19, and Jeremiah and Abigail, both 14 -- outside the car.</p> <p>Their other children -- Hannah, 16, Devonte, 15, and Sierra, 12 -- are missing. Nobody reported seeing the crash, so authorities don't know exactly when or how it happened and it is unclear whether the three missing children were in the SUV when it fell 100 feet into the sea.</p> <p>Police said that preliminary information suggested the car may have been intentionally driven straight off the edge of the cliff.</p> <p>Data from the vehicle's air bag module and software indicated that the car had stopped at the pull out and then accelerated off the road, said Greg Baarts, acting assistant chief of the California Highway Patrol's Northern Division.</p> <p>"At this point in our investigation, that is the direction we are going," Baarts said.</p> <p>Preliminary data from the car suggested that there had been approximately 70 feet of continuous acceleration from the last moment the brakes were applied before the SUV went over and hit the ocean floor, Baarts said.</p> <p>There was also no evidence to suggest the car had been driving at an angle when it left the road, he said. Baarts stressed that investigators were still verifying the information, but that authorities believed that a felony had been committed.</p>

<b>HEADLINE</b>	<b>04/02 What happens for lying on census?</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/politics/white-house/are-you-citizen-here-s-what-happens-if-you-lie-n861841">https://www.nbcnews.com/politics/white-house/are-you-citizen-here-s-what-happens-if-you-lie-n861841</a>
<b>GIST</b>	<p>Article I, Section 2, of the Constitution requires the enumeration of people in the U.S. every 10 years for the purpose of apportioning congressional representatives.</p> <p>The "Census Clause" also requires that representatives be apportioned among the states "according to their respective Numbers." Section 2 of the 14th Amendment further provides that House representatives "shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State." The Census Act of 1790 provides for the enumeration of the "inhabitants of the United States."</p> <p>Federal law requires that the secretary of commerce take a census of "population" — not citizens — and the same law authorizes the secretary to "obtain such other census information as necessary."</p>

The Constitution says "persons" — not "citizens" or "green card holders." That's why the Trump administration's move to include a citizenship question on the census is meeting such intense opposition; there are concerns that it will deter participation and lead to an inaccurate population count.

Federal law provides that anyone who refuses to answer or willfully neglects to answer any of the questions in connection with any census or survey shall be fined a maximum of \$100, or a maximum of \$500 if the person gives false information.

In theory, noncitizens should not fear answering census questions. Surveys are mailed to addresses, rather than to specific individuals. Not including individual names on the address label is meant to protect the confidentiality of the participating households.

Additionally, federal law provides immunity for persons who give answers to census questions. Information furnished cannot be "used to the detriment of the persons to whom such information relates." Census reports may not be admitted as evidence or used in any action or proceeding, without consent.

These laws are designed to deter someone from refusing to answer questions on the census claiming a Fifth Amendment privilege against self-incrimination.

Practically speaking, though, anyone who is concerned about their legal status may not want to volunteer this to the same federal government that could deport them. It's hardly a sentiment limited only to noncitizens. In past enumerations, some Republican leaders have all but encouraged open defiance of the law.

Then-Sen. Trent Lott, a Mississippi Republican, once advised constituents to fill out "the basic census information" but added that if they felt "their privacy is being invaded by those (additional) questions, they (could) choose not to answer those questions."

And George W. Bush, then a candidate for president, said he "(understood) why people don't want to give over that information to the government."

Prosecutions for failure to participate in the census are rare; most significant court cases dealing with these crimes date back to the 1970s.

The perceived risk of answering remains greater than the virtually nonexistent risk of not answering because the Justice Department is not likely to start prosecuting offenders for refusing to answer.

Attorney General Jeff Sessions has indicated that illegal immigration will be a priority for the DOJ under his command, but going after noncitizens who refuse to answer census questions, motivated by fear of being removed from the country, would contradict the overall message the census is trying to send: It is here to count you, not to hurt you. Plus, courts have indicated in the past that purposeful discrimination by census authorities can give rise to a defense of selective prosecution.

Ultimately, the refusal to answer census questions is a federal crime, but not really.

Some categories of federal criminal statutes are heavily enforced. Drug crimes and immigration crimes make up over 50 percent of the federal prosecution caseload.

Then there are those federal crimes that are technically crimes, but not really. For example, it's a federal crime for a peanut dealer to refuse to tell the government how many peanuts he has. It's also a federal crime to mail a package of dead bees without writing "DEAD BEES" on every side of the box, using black letters at least an inch tall.

There are a lot of federal crimes. Not all of them are enforced. Refusing to answer the census or lying on it will likely remain in that second category — a crime, but not really.

<b>HEADLINE</b>	<b>04/01 UK uses doctors' info to find migrants</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Health/wireStory/medical-ethics-uk-data-doctors-find-migrants-54157725">http://abcnews.go.com/Health/wireStory/medical-ethics-uk-data-doctors-find-migrants-54157725</a>
<b>GIST</b>	<p>To track down people in Britain who may have broken immigration rules, the government is turning to a new and controversial source of information: doctors.</p> <p>Doctors who work with refugees and asylum-seekers have described the move as a major breach of medical ethics, saying it isn't up to physicians to enforce immigration rules.</p> <p>In letters recently made public, politicians sparred with immigration officials over a data-sharing agreement quietly signed in 2016 that gives the government access to personal information collected by the country's family doctors. Medical details are excluded.</p> <p>A parliamentary health committee condemned the situation as "unacceptable," calling for the agreement to be suspended.</p> <p>But Britain's immigration department has dismissed those concerns, arguing that such data sharing allows the U.K. to remove people "who might pose a danger to the public."</p> <p>Medical workers back the health committee's viewpoint.</p> <p>"We understand the government has a job to do, but going into health records to get patient information is not OK," said Lucy Jones, director of programs at Doctors of the World U.K. "The idea that any patient information is being shared with a government body immediately breaks their trust in a doctor-patient relationship."</p> <p>Several leading medical organizations, including the Royal College of General Practitioners, Public Health England and the General Medical Council, have all slammed the data-sharing deal, saying it could worsen the health of vulnerable people and drive disease outbreaks underground, hurting health care for all.</p> <p>Dr. Kitty Worthing, a London-based doctor with the group Docs Not Cops, said "the cornerstone of the doctor-patient relationship is confidentiality and this data-sharing is a direct breach of that." She said when she's advised people that their personal information could be shared with immigration officials "their reaction is always fear."</p> <p>Elsewhere in Europe, many countries have a strict firewall that stops information gathered by health services from being disclosed to other government agencies. Germany's data protection office said regulations prohibit any blanket sharing of such information. In France, no data obtained by doctors is shared with the Interior Ministry.</p> <p>Some health experts said it was critical that some types of health care are available to everyone in the U.K., regardless of their immigration status.</p> <p>"With HIV treatment, it makes much more sense to treat everybody with HIV, because treatment lowers the level of virus in your blood so you can't pass it on," said Kat Smithson of the National AIDS Trust. "If people are not diagnosed because they're not accessing health care, they're not aware they're living with HIV, which means they're far more likely to pass it on to somebody else."</p> <p>The British government, however, says protecting its borders outweighs those concerns.</p>

**HEADLINE** **04/01 SUV cliff plunge: 'felony committed'****SOURCE** <http://www.foxnews.com/us/2018/04/01/death-plunge-vehicles-speedometer-pinned-at-90-mph->

	<a href="#">authorities-say.html</a>
GIST	<p>The speedometer of a Washington state family's SUV was "pinned" at 90 mph when the vehicle was found Monday afternoon, crushed along the rocks of a Northern California shoreline, court documents say.</p> <p>Authorities included the information in an affidavit for a search warrant for the home of Jennifer and Sarah Hart, adoptive parents of six children -- all of whom are believed to have perished when the vehicle plunged off the Pacific Coast Highway, Fox 12 Oregon reported.</p> <p>The two women and three of the children were found dead at the crash site Monday, but it was unclear how much time had elapsed between the accident and the discovery.</p> <p>Three other children are missing and may have been carried out to sea, authorities have said.</p> <p>The family had been living in Oregon until last year when they moved to Woodland, Wash.</p> <p>Meanwhile, law enforcement officers believe "a felony has been committed" in the case, the court documents say.</p> <p>The exact nature of the suspected felony was not known, but according to the documents, "Based upon the California Highway Patrol investigation, it is their belief 'a felony has been committed,'" Fox 12 Oregon reported.</p> <p>However, authorities maintain there's no evidence to suggest the crash was intentional, the Oregonian reported.</p> <p>The court documents indicate that CHP investigators found no "acceleration marks, tire friction marks or braking furrow marks" at the scene, and there was no evidence the car collided with the embankment as it "traversed towards the tidal zone below," Fox 12 reported.</p> <p>According to the Oregonian, friends' depictions and social media posts of the Hart family are at odds with police records.</p> <p>According to accounts of the family's neighbors in Washington state, one child had shown up at a neighbor's doorstep alleging abuse while another had asked neighbors for food because it was supposedly being withheld as punishment.</p> <p>Another child reportedly told police that Sarah Hart had hit her repeatedly with a closed fist and put her in a cold bath. According to the Oregonian, Hart pleaded guilty to the abuse in April 2011 and was sentenced to a year of probation. In another July 2013 incident, authorities responded to a call at the family's residence.</p> <p>Days before the fatal crash, the Washington State Department of Social and Health Services opened a case into the family because the children had been identified as "potential victims of alleged abuse or neglect," the Oregonian reported. The agency had attempted to contact the family but they had reportedly left home that day.</p>

HEADLINE	<b>03/30 Doubts w/Hanford plant reopening 2022</b>
SOURCE	<a href="http://www.king5.com/article/news/local/doubts-raised-that-massive-hanford-plant-could-open-by-2022/281-533730951">http://www.king5.com/article/news/local/doubts-raised-that-massive-hanford-plant-could-open-by-2022/281-533730951</a>
GIST	<p>The U.S. Department of Energy has doubts that a massive nuclear waste treatment plant at the Hanford Nuclear Reservation can open by a 2022 deadline.</p> <p>But the agency has not notified the state of Washington that legal deadlines for the project are at risk.</p>

	<p>Instead, the Tri-City Herald reports the agency has directed contractor Bechtel National to improve its performance.</p> <p>Bechtel is building the \$17 billion plant intended to turn liquid nuclear wastes into glass-like logs for burial. The project has been plagued by safety and design issues.</p> <p>Hanford is located near Richland and for decades made plutonium for nuclear weapons. The site contains a huge volume of radioactive wastes.</p> <p>Bechtel's contract requires it to start treating radioactive waste by 2022. Construction on the plant started in 2002.</p>

<b>HEADLINE</b>	<b>03/30 Cancer experts, studies: coffee is safe</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/health/2018/03/30/cancer-experts-say-coffee-is-safe-despite-californias-new-warning-label-requirement.html">http://www.foxnews.com/health/2018/03/30/cancer-experts-say-coffee-is-safe-despite-californias-new-warning-label-requirement.html</a>
<b>GIST</b>	<p>A California court judge's ruling ordering coffee companies to put cancer warning labels on their products is not changing the minds of scientists and health professionals who say there is no credible evidence to warrant the dramatic move.</p> <p>Some say that despite any well-meaning intention that may have prompted the ruling by Superior Court Judge Elihu Berle on Wednesday, it could end up unnecessarily confusing and even frightening people.</p> <p>Many studies tying a chemical, acrylamide – which is formed when coffee beans are roasted – to cancer were conducted using animals who were given quantities much larger than a human would consume, J. Leonard Lichtenfeld, the deputy chief medical officer for the American Cancer Society, told Fox News.</p> <p>“The substance is present in many of our foods, not just coffee,” said Lichtenfeld, who has worked in oncology for decades. “There was a minor scare about it being in French fries, and foods that are cooked in higher temperatures. Demonstrating a direct cause to cancer is very difficult. You always have to put a [suspected] risk into perspective.”</p> <p>“I’m going to come right back and say we have other areas we need to put more attention to,” he said. “Smoking and obesity are some of those [risky] areas.”</p> <p>A judge recently ruled that coffee sellers in California must post warnings that coffee may pose a cancer risk. But coffee is not the only item the state has imposed restrictions on. Proposition 65 requires businesses to provide a warning about exposures to hundreds of harmful chemicals in our food.</p> <p>The Council for Education and Research on Toxics, a nonprofit group, sued Starbucks and about 90 other companies, including grocery stores and retail shops, under a state law that requires warnings on a wide range of chemicals that can cause cancer. One of those chemicals is acrylamide, present in coffee.</p> <p>The Metzger Law Group, which filed the suit, says on its website: "Acrylamide is an industrial carcinogen which, in recent years, has unfortunately been recognized as a substantial constituent of many foods we eat."</p> <p>"In 2002, Swedish researchers published an important study showing that potatoes and certain other foods heated at high temperatures contain very high levels of acrylamide," it added. "The highest levels of the carcinogen were found in french fries and potato chips, but high levels of acrylamide have also been found in cereals, breads, and coffee."</p> <p>The coffee industry had claimed the chemical was present at harmless levels and should be exempt from</p>

	<p>the law because it results naturally from the cooking process necessary to make the beans flavorful.</p> <p>The ruling came despite eased concerns in recent years about the possible dangers of coffee, with some studies finding health benefits.</p> <p>In 2016, the International Agency for Research on Cancer — the cancer agency of the World Health Organization — moved coffee off its “possible carcinogen” list.</p> <p>Studies indicate coffee is unlikely to cause breast, prostate or pancreatic cancer, and it seems to lower the risks for liver and uterine cancers, the agency said. Evidence is inadequate to determine its effect on dozens of other cancer types.</p> <p>Kathryn M. Wilson, a cancer epidemiologist at Harvard University who has studied the impact of acrylamide on human, told the newspaper: "I think the evidence that acrylamide makes a difference for human cancer risk is pretty weak...It's a lot more helpful to look at coffee as a food."</p> <p>She noted, for instance, that coffee is a source of antioxidants, and has been shown in credible studies to have significant benefits, such as reducing the likelihood of liver cancer and Type 2 diabetes.</p> <p>Critics of the lawsuit and, now, ruling, say it feeds further into California’s penchant for regulations over what they say are trivial and even questionable issues.</p>

<b>HEADLINE</b>	<b>03/30 Illinois officials warn synthetic pot users</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/health/health-news/illinois-reports-rash-severe-bleeding-among-synthetic-pot-users-n861596">https://www.nbcnews.com/health/health-news/illinois-reports-rash-severe-bleeding-among-synthetic-pot-users-n861596</a>
<b>GIST</b>	Illinois public health officials are warning users of synthetic pot about the ultimate buzz kill — a rash of cases of severe bleeding that are believed to be linked to contaminated drugs.

As of Friday, 32 cases have been reported across the state since the outbreak began on March 7, half of which were in the Chicago metropolitan area, according to the Illinois Department of Public Health.

The agency warns that authorities have not traced the source of the contamination, and affected users have reported obtaining their synthetic cannabinoids from friends, dealers and even convenience stores.

"Synthetic cannabinoids have become popular because users often believe that it's legal and safe, but that's just not the case," department spokeswoman Melaney Arnold told NBC News. The narcotics are often marketed as K2 or Spice.

"They're certainly not safe, and in many cases they're actually banned."

Arnold said symptoms of the outbreak have included severe bloody noses, coughing up blood, bleeding gums and blood in urine.

While the synthetic drugs are dubbed "cannabinoids" because they affect the same brain cell receptors as marijuana, they are actually potentially made up of hundreds of chemicals — many of which can be toxic.

In three of the patients tested, traces of brodifacoum, a chemical used in rat poison, have been found, said Arnold.

"This bleeding is not expected, at least in such a significant population so quickly," Dr. Melissa Millewich, an emergency room physician at Advocate Good Samaritan Hospital in Downers Grove, Illinois, told The Chicago Tribune.

But she added that users of synthetic pot have been treated at the hospital in previous cases for kidney failure and psychosis.

"People don't realize how dangerous this is," said Millewich.

The Department of Public Health is urging any users in the state experiencing abnormal bleeding to seek medical treatment immediately and to avoid using any synthetic cannabinoids bought in the last month.

<b>HEADLINE</b>	<b>03/30 Undersea cables target for sabotage?</b>
<b>SOURCE</b>	<a href="https://apnews.com/c2e7621bda224e2db2f8c654c9203a09/Could-enemies-sabotage-undersea-cables-linking-the-world">https://apnews.com/c2e7621bda224e2db2f8c654c9203a09/Could-enemies-sabotage-undersea-cables-linking-the-world</a>
<b>GIST</b>	<p>WASHINGTON (AP) — Russian ships are skulking around underwater communications cables, causing the U.S. and its allies to worry the Kremlin might be taking information warfare to new depths.</p> <p>Is Moscow interested in cutting or tapping the cables? Does it want the West to worry it might? Is there a more innocent explanation? Unsurprisingly, Russia isn't saying.</p> <p>But whatever Moscow's intentions, U.S. and Western officials are increasingly troubled by their rival's interest in the 400 fiber-optic cables that carry most of world's calls, emails and texts, as well as \$10 trillion worth of daily financial transactions.</p> <p>"We've seen activity in the Russian navy, and particularly undersea in their submarine activity, that we haven't seen since the '80s," Gen. Curtis Scaparrotti, commander of the U.S. European Command, told Congress this month.</p> <p>Without undersea cables, a bank in Asian countries couldn't send money to Saudi Arabia to pay for oil. U.S. military leaders would struggle to communicate with troops fighting extremists in Afghanistan and</p>

the Middle East. A student in Europe wouldn't be able to Skype his parents in the United States.

All this information is transmitted along tiny glass fibers encased in undersea cables that, in some cases, are little bigger than a garden hose. All told, there are 620,000 miles of fiber-optic cable running under the sea, enough to loop around the earth nearly 25 times.

Most lines are owned by private telecommunications companies, including giants like Google and Microsoft. Their locations are easily identified on public maps, with swirling lines that look like spaghetti. While cutting one cable might have limited impact, severing several simultaneously or at choke points could cause a major outage.

The Russians "are doing their homework and, in the event of a crisis or conflict with them, they might do rotten things to us," said Michael Kofman, a Russian military expert at nonprofit research group CNA Corp.

It's not Moscow's warfighting ships and submarines that are making NATO and U.S. officials uneasy. It's Russia's Main Directorate of Deep Sea Research, whose specialized surface ships, submarines, underwater drones and mini subs conduct reconnaissance, underwater salvage and other work.

One ship run by the directorate is the Yantar. It's a modest, 354-foot oceanographic vessel that holds a crew of about 60. It most recently was off South America's coast helping Argentina search for a lost submarine.

Parlamentskaya Gazeta, the Russian parliament's publication, last October said the Yantar has equipment "designed for deep-sea tracking" and "connecting to top-secret communication cables." The publication said that in September 2015, the Yantar was near Kings Bay, Georgia, home to a U.S. submarine base, "collecting information about the equipment on American submarines, including underwater sensors and the unified (U.S. military) information network." Rossiya, a Russian state TV network, has said the Yantar can not only connect to top-secret cables, but could cut them and "jam underwater sensors with a special system."

Russia's Defense Ministry did not respond to a request for comment.

There is no hard evidence that the ship is engaged in nefarious activity, said Steffan Watkins, an information technology security consultant in Canada tracking the ship. But he wonders what the ship is doing when it's stopped over critical cables or when its Automatic Identification System tracking transponder isn't on.

Of the Yantar's crew, he said: "I don't think these are the actual guys who are doing any sabotage. I think they're laying the groundwork for future operations."

Members of Congress are wondering, too.

The Yantar's movements have previously raised eyebrows.

On Oct. 18, 2016, a Syrian telecom company ordered emergency maintenance to repair a cable in the Mediterranean that provides internet connectivity to several countries, including Syria, Libya and Lebanon. The Yantar arrived in the area the day before the four-day maintenance began. It left two days before the maintenance ended. It's unknown what work it did while there.

Watkins described another episode on Nov. 5, 2016, when a submarine cable linking Persian Gulf nations experienced outages in Iran. Hours later, the Yantar left Oman and headed to an area about 60 miles west of the Iranian port city of Bushehr, where the cable runs ashore. Connectivity was restored just hours before the Yantar arrived on Nov. 9. The boat stayed stationary over the site for several more days.

Despite the relatively few publicly known incidents of sabotage, most outages are due to accidents.

Two hundred or so cable-related outages take place each year. Most occur when ship anchors snap cables or commercial fishing equipment snags the lines. Others break during tsunamis, earthquakes and other natural disasters.

But even accidental cuts can harm U.S. military operations.

In 2008 in Iraq, unmanned U.S. surveillance flights nearly screeched to a halt one day at Balad Air Base not because of enemy mortar attacks or dusty winds. An anchor had snagged a cable hundreds of miles away from the base, situated in the “Sunni Triangle” northwest of Baghdad.

The severed cable had linked controllers based in the United States with unmanned aircraft flying intelligence, surveillance and reconnaissance missions for coalition forces in the skies over Iraq, explained Ret. Air Force Col. Dave Lujan of Hampton, Virginia.

“Say you’re operating a remote-controlled car and all of a sudden you can’t control it,” said Lujan, who was deputy commander of the 332nd Expeditionary Operations Group at the base when the little-publicized outage lasted for two to three days. “That’s a big impact,” he said, describing how U.S. pilots had to fly the missions instead.

<b>HEADLINE</b>	<b>03/30 Study: plastic swallowed w/every meal</b>
<b>SOURCE</b>	<a href="http://www.dailymail.co.uk/news/article-5563435/How-swallow-114-pieces-plastic-meal.html">http://www.dailymail.co.uk/news/article-5563435/How-swallow-114-pieces-plastic-meal.html</a>
<b>GIST</b>	<p>We could be swallowing more than 100 tiny plastic particles with every main meal, a shocking study reveals.</p> <p>The plastic, which can come from soft furnishings and synthetic fabrics, gets into household dust which falls on plates and is consumed.</p> <p>UK scientists made the discovery after putting Petri dishes containing sticky dust traps on the table next to dinner plates in three homes at meal times.</p> <p>Up to 14 pieces of plastic were found in the Petri dishes at the end of a 20-minute meal – the equivalent of 114 plastic fibres falling on the average dinner plate given their much larger size.</p> <p>The scientists, from Heriot-Watt University in Edinburgh, concluded that the average person swallows up to 68,415 potentially dangerous plastic fibres a year simply through sitting down to eat.</p> <p>The study confirms the alarming spread of plastic in the air which was recently uncovered by the Daily Mail.</p> <p>An investigation by this newspaper, which has run a longstanding Turn The Tide on Plastic campaign, revealed earlier this month that fillets of fresh fish from open counters at major supermarkets contain up to 139 pieces of plastic for every 240g.</p> <p>The particles were too large to have passed from the gut into the flesh of the fish so the University of Portsmouth scientists who oversaw our investigation believe the plastics came from airborne contamination.</p> <p>Experts warn that ingesting plastic particles can damage lungs, poison kidneys and interfere with hormones.</p> <p>It had previously been thought the risk to human health was largely from eating fish polluted by plastic waste in the oceans. But the Edinburgh scientists set out to compare plastic fibres found in mussels with</p>

	<p>the amount in the average household meal.</p> <p>They found fewer than two microplastics in each mussel, which could be linked to the marine environment, and conclude that the average person can expect to consume 100 plastic particles a year through eating the shellfish.</p> <p>But they will ingest anything from 13,731 to 68,415 fibres in a year during meals because of household dust.</p> <p>Dr Ted Henry, senior author of the study and professor of environmental toxicology at Heriot-Watt University, said: ‘These results may be surprising to some people who may expect the plastic fibres in seafood to be higher than those in household dust.</p> <p>‘We do not know where these fibres come from, but it is likely to be inside the home and the wider environment.’</p> <p>The plastic fibres found in the home-cooked meals did not come from the food or the cooking environment, but household dust, the authors believe.</p>

<b>HEADLINE</b>	<b>03/30 Dalai Lama caught in middle India, China</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/30/asia/india-tibet-china-dalai-lama-intl/index.html">https://www.cnn.com/2018/03/30/asia/india-tibet-china-dalai-lama-intl/index.html</a>
<b>GIST</b>	<p>New Delhi (CNN)Is India distancing itself from the Tibetan exile community six decades after the Dalai Lama fled to the country?</p> <p>That's the question many are asking after celebrations to mark the 60th anniversary of the spiritual leader's arrival in India have been moved or canceled, as Beijing and New Delhi seek to reboot ties in the wake of a tense year in bilateral relations.</p> <p>From March 31, Tibetans in India are holding a year-long "Thank You India" event as a prelude to celebrating the Dalai Lama's time in the country and to show gratitude to the Indian government and its people for their support of Tibetan refugees.</p> <p>But what should have been a moment of joy has been overshadowed by a flurry of speculation about the future of the exiled Tibetan community -- and especially the freedom they have enjoyed in India since the late 1950s.</p> <p>"It looks like the Government of India is changing its policy," said Claude Apri, an India-based expert on Tibet and author of several books on Tibetan issues.</p> <p>After an unsuccessful revolt against the Chinese occupation of Tibet, the 14th Dalai Lama, Tibet's spiritual leader, fled the capital Lhasa in secret.</p> <p>He crossed into India on March 31, 1959 and has made India his home ever since.</p> <p>A living god-like figure for millions of Buddhists, India officially calls him "the most esteemed and honored guest of India." China accuses of him of being a "a wolf in monk's robes," engaged in "anti-China separatist activities under the cloak of religion with the aim of breaking Tibet away from China."</p> <p>In early March, news emerged that the Indian Foreign Secretary penned a classified advisory asking senior leaders and government officials to refrain from attending events planned by exiled Tibetans in India. The note reportedly said the events, in March and April, came at a "very sensitive time in the context of India's relations with China."</p>

A week later, the Tibetan Central Administration -- the government in exile -- decided to move a major cultural event that was originally planned to be held in the Indian capital New Delhi with a speech by the Dalai Lama, to Dharamsala, where the exiled community is based.

A Dalai Lama-led inter-faith prayer ceremony was also scrapped, the Tibetan Central Administration said, as was the Seventh World Parliamentarians Convention on Tibet that was meant to be held on April 26-28 in Delhi.

The Tibetan Parliament-in-exile, the organizers of the convention, declined to give a reason for the cancellation of the high-profile event.

Sonam Dagpo, a spokesman for the Tibetan Central Administration said that there has been no direct communication from the Indian authorities and that the plans were changed out of respect to the Indian government's position.

"Once we (heard about the note), we decided to shift the venue," he said. "There are no ill feelings. If you weigh what the Indian government has done for us, that is far more than this."

The Indian foreign ministry issued a statement this month saying there is no change in India's position, and that "His Holiness is accorded all freedom to carry out his religious activities in India."

Recent statements from Beijing and Delhi show the two governments are seeking to mend ties after a turbulent year in bilateral relations.

Last year, troops from both countries were involved in a months-long border standoff in Doklam, up in the Himalayas near Bhutan.

India boycotted China's flagship summit in Beijing last May on its Belt and Road Initiative, an ambitious global trade plan. The Dalai Lama's visit in April to the northeastern Indian state of Arunachal Pradesh -- a territory that China claims as its own -- also sparked diplomatic tensions between Beijing and New Delhi.

At a press conference last month, Chinese Foreign Minister Wang Yi said the two countries leaders "have developed a strategic vision for the future of our relations: the Chinese 'dragon' and the Indian 'elephant' must not fight each other, but dance with each other."

India's Foreign Secretary Vijay Gokhale visited Beijing in February, where he said both sides noted the need to "address differences on the basis of mutual respect and sensitivity to each other's concerns, interests and aspirations."

Manoj Joshi, a fellow at the Observer Research Foundation, said India is keen to keep ties balanced, especially with China growing closer to rival Pakistan.

Tibetans may be the big losers if India and China do mend things up, said Tshering Chonzom Bhutia, associate fellow at the Institute of Chinese Studies in New Delhi.

"If policymakers in India continue to be guided by the perception that serving up the Tibet issue on the diplomatic plate to China is the most efficient way to improve India-China relations, then we can anticipate more restrictions on Tibetan activities in India," she said.

Against the backdrop of China's rising dominance in India's neighboring countries, Tibet is a minor issue for Delhi, said Tsering Shakya, a Tibet scholar and research chair at the University of British Columbia in Canada.

"India is sensing Tibet's appeal in the West is declining," Shakya said, freeing Delhi to play to Beijing's feelings on the issue.

	<p>Adding to all this uncertainty is the confusion of what happens after the Dalai Lama dies.</p> <p>In 2011, in a move to democratize the system of government, the Dalai Lama gave up his political and administrative powers and chose to remain as just a spiritual leader, but he is still far and away the community's most influential figure.</p> <p>The 82-year-old recently decided to cut down on his travels citing age and exhaustion. It remains unclear who will be the next Dalai Lama, how that person will be picked, or whether there will be another Dalai Lama.</p>

<b>HEADLINE</b>	<b>03/30 Judge: coffee requires cancer warning</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Health/wireStory/california-judge-rules-coffee-requires-cancer-warning-54117433?cid=clicksource_26_2_hero_headlines_headlines_hed">http://abcnews.go.com/Health/wireStory/california-judge-rules-coffee-requires-cancer-warning-54117433?cid=clicksource_26_2_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>Scientists haven't rendered a verdict on whether coffee is good or bad for you but a California judge has. He says coffee sellers in the state should have to post cancer warnings.</p> <p>The culprit is a chemical produced in the bean roasting process that is a known carcinogen and has been at the heart of an eight-year legal struggle between a tiny nonprofit group and Big Coffee.</p> <p>The Council for Education and Research on Toxics wanted the coffee industry to remove acrylamide from its processing — like potato chip makers did when it sued them years ago — or disclose the danger in ominous warning signs or labels. The industry, led by Starbucks Corp., said the level of the chemical in coffee isn't harmful and any risks are outweighed by benefits.</p> <p>Los Angeles Superior Court Judge Elihu Berle said Wednesday that the coffee makers hadn't presented the proper grounds at trial to prevail.</p> <p>"While plaintiff offered evidence that consumption of coffee increases the risk of harm to the fetus, to infants, to children and to adults, defendants' medical and epidemiology experts testified that they had no opinion on causation," Berle wrote in his proposed ruling. "Defendants failed to satisfy their burden of proving ... that consumption of coffee confers a benefit to human health."</p> <p>The suit was brought against Starbucks and 90 companies under a controversial law passed by California voters in 1986 that has been credited with culling cancer-causing chemicals from myriad products and also criticized for leading to quick settlement shakedowns.</p>

<b>HEADLINE</b>	<b>04/01 Police stepping up E-DUI patrols</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/04/01/put-down-that-phone-police-stepping-up-e-dui-patrols-in-april/">http://q13fox.com/2018/04/01/put-down-that-phone-police-stepping-up-e-dui-patrols-in-april/</a>
<b>GIST</b>	<p>OLYMPIA, Wash. — Tempted to grab your cellphone while behind the wheel? Don't!</p> <p>Beginning Monday, over 150 extra law enforcement agencies will be looking for distracted drivers. The statewide initiative goes through April 14, according to the Washington Traffic Safety Commission.</p> <p>Under the "Driving Under the Influence of Electronics" (E-DUI) law, drivers may not hold cell phones or watch videos while they are driving, stopped in traffic, or at a stop light. This includes tablets, laptops, games, or any hand-held electronic devices. The law restricts hands-free use to a single touch.</p> <p>"Our goal is to raise public awareness about the dangers of distracted driving," said Erika Mascorro,</p>

	<p>program manager for Washington Traffic Safety Commission. “Research shows that drivers are three times more likely to crash when talking on the phone, and 23 times more likely to crash when entering information into their phone.”</p> <p>A statewide survey of Washington drivers found that 96 percent agree that using a cell phone while driving is dangerous, 88 percent said they don’t check social media while driving and most said they do not read incoming texts. Only one percent felt comfortable being a passenger in a car with a driver who was texting.</p> <p>Nearly 1,500 drivers have been ticketed each month since Washington’s new E-DUI law began in July 2017. The first E-DUI ticket will cost drivers \$136. If the driver incurs a second ticket within five years, the fine increases to \$234.</p>

<b>HEADLINE</b>	<b>04/01 Austin PD bomb squad grueling toll</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/nation-world/austin-bombings-put-police-squad-under-emotional-strain/">https://www.seattletimes.com/nation-world/austin-bombings-put-police-squad-under-emotional-strain/</a>
<b>GIST</b>	<p>AUSTIN, Texas (AP) — After a 16-hour workday investigating the Austin bombings, police Lt. Courtney Renfro arrived home to find Amazon packages on his doorstep.</p> <p>Renfro paused, even though he had ordered the packages himself.</p> <p>Members of the Austin police bomb squad investigated a series of explosions that killed two people and injured several others over a three-week period. They also dealt with the grueling toll of chasing thousands of reports of suspicious packages, and trying to locate a suspected bomber who turned out to have no criminal history.</p> <p>Renfro told the Austin American-Statesman that the series of attacks left him “in utter shock that this was happening in our city.”</p> <p>“I have always told the guys to be prepared, but something told me it’s never going to happen in little Austin,” he said.</p>

As the bombings were occurring, bomb technicians responded to more calls during one key week than they had the entire year before. One day, Renfro said he found a fellow officer, Cpl. Jesse Carrillo, sleeping on the floor of his office.

“They were sleeping in their cars, sleeping in their offices, getting an hour here or there,” Renfro said.

Every explosion generated many more calls to police about suspicious packages or offering leads on the bomber.

“When a blast would happen, we would all have to respond,” Carrillo said. “Just as things would slow down, there would be another explosion.”

Beginning on March 2, police say 23-year-old Mark Anthony Conditt planted bombs in different parts of Austin, killing two people and severely wounding four others.

Authorities say he began by placing explosives in packages left overnight on doorsteps, killing 39-year-old Anthony Stephan House and 17-year-old musician Draylen Mason. He then rigged an explosive to a tripwire along a public trail, injuring two young men who crossed it. Finally, he sent two parcels with bombs via FedEx, one of which exploded and injured a worker at a distribution center near San Antonio.

Investigators say Conditt used one of his own devices to blow himself up as authorities approached his SUV before dawn on March 21.

<b>HEADLINE</b>	<b>04/01 Anatomy bomb investigation: ATF lab</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/04/01/us/atf-bomb-lab-beltsville.html">https://www.nytimes.com/2018/04/01/us/atf-bomb-lab-beltsville.html</a>
<b>GIST</b>	<p>BELTSVILLE, Md. — About an hour outside Washington, tucked in a cinder-block building run by the Bureau of Alcohol, Tobacco, Firearms and Explosives, orderly piles of charred and twisted matter are spread across a secure laboratory.</p> <p>Inside is evidence from Austin, Tex., where Mark Conditt, 23, terrorized the city for three weeks in March by setting off a half- dozen homemade explosives before blowing himself up.</p> <p>The collections in the Maryland lab look more suited to a landfill than to a secure government facility. Though law enforcement officials would not discuss specifics or allow photographs of evidence, each jumble would be tested and prodded, with technicians hoping to unlock insight into Mr. Conditt and the small but active group of people like him: America’s domestic bombers.</p> <p>Evidence from hundreds of domestic bombing cases passes through A.T.F. labs every year. A few, like the one in Austin, attract widespread attention. The majority prompt no headlines: husbands trying to kill wives with amateur car bombs, rival motorcycle gangs lobbing improvised explosive devices, a mischievous student who accidentally blows up a mailbox.</p> <p>“Each explosive investigation is going to be different,” said Matt Farr, section chief of the DNA analysis division at the laboratory here. “It’s very scene- and device-specific.”</p> <p>Few domestic bombings are the same. Deconstructing them requires a combination of logistical skill — physically analyzing explosives and their components — and creative psychology, involving analysis of the motivation and patterns of the bombers. And the digital age has made it increasingly easy to experiment with amateur devices.</p> <p>“There’s a lot of information available on the internet now,” said Doug Klapec, the chief of the arson and explosive division in Beltsville. “People used to have to go to the library and check out ‘Anarchist</p>

Cookbook.””

In the post-9/11 era, the notion of bombings has become almost inextricably linked to Islamic extremist terrorism, which the F.B.I. investigates. But the majority of bombings in the United States bear no nexus to Islamic terrorism. The evidence in those cases is sent to Beltsville, or one of its two sister labs, in Atlanta and Walnut Creek, Calif.

Since 1886, the A.T.F.’s laboratory division has been spread across those three places. Its modest staff includes chemists, forensic biologists and scientists who analyze evidence each year from thousands of fires, explosions and other crimes. In 2017, A.T.F. labs helped close 314 explosives cases.

“I don’t know that there’s a better bomb lab in the country,” Brad A. Galvan, a former A.T.F. agent who ran the bureau’s explosives unit in San Diego until 2017, said of Beltsville.

To go from a blast site to Beltsville or a similar facility, a deactivated bomb — or parts of it — is transported to one of the A.T.F. labs. Stored at the facilities in bunkers, the samples can be road maps to suspects.

“We’re going to dissect that device down to its lowest common denominator,” Mr. Galvan said. “Anything that’s used and recovered, we’re going to try and identify. It’s very manpower-intensive.”

Each piece, down to the type of tape used to hold a bomb together, helps build a profile of the suspect. Shrapnel types, a certain kind of PVC piping, spit on the back of a stamp — any could lead to the right security footage or hardware store.

“Sometimes these areas are remote enough that you’ve only got one Lowe’s or one Home Depot in the whole area,” Mr. Klapac said.

In one instance, Mr. Klapac said, investigators found a suspect through DNA that his girlfriend had left on the cork of a wine bottle. The bottle had been filled with gasoline and put into a gift basket, which detonated when handled.

“It’s only limited by your imagination and the size of the container you want to put it into,” Mr. Galvan said of improvised bombs.

Pipe bombs remain the typical case, Mr. Klapac said. Most bombings use what is called a low explosive, something like black powder, instead of a high explosive like dynamite. Most are one-offs aimed at specific targets, not serial bombings.

The macabre mentality of multiple bombings can be gripping, Mr. Klapac said.

“Most serial bombers take their time,” he said. “There’s a lot of psychological components.”

Crucial to catching a bomber like Mr. Conditt is finding a pattern.

“As you do more and more things in a bomb, you create more and more of a signature,” Mr. Klapac said.

The A.T.F. maintains a database known as the Bomb Arson Tracking System, or BATS, where every detail of every domestic bomb in the United States is supposed to be logged. It can help investigators connect cases committed by the same person, even years apart.

Historically given limited resources, the A.T.F. has at times struggled to keep up with the volume of requests that enter its lab system.

“We have so much work that we have to turn some cases away,” Mr. Klapac said.

Current and former agents and officials at the agency lament its political handicaps — as the broker of the country’s gun regulations, it has been hamstrung by the powerful gun lobby — and the A.T.F.’s tendency to work in the shadow of bigger agencies like the F.B.I., which has its own bomb division.

A memorandum of understanding between the two agencies, brokered by the Justice Department, helps guide jurisdiction of bombing investigations. But those guidelines have pitfalls.

“The biggest time we butt heads is when you have domestic terrorism. What really is that?” said Mr. Klapac, noting the debate that emerged about whether Mr. Conditt should be considered a domestic terrorist. “Is everything domestic terrorism?”

Law enforcement officials have said Mr. Conditt should not be labeled a terrorist because he did not appear to be motivated by hate.

But for the city terrorized by him, Mr. Conditt’s actions qualify. “There is no mistaking the fear these attacks inflicted on an entire city,” the editorial board of The Austin American-Statesman wrote the morning after he killed himself. “That makes this terrorism.”

<b>HEADLINE</b>	<b>03/29 French police arrest driver aiming car</b>
-----------------	---

<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/france-car-attack-soldiers-varces-allieres-et-risset-barracks-isere-manhunt/">https://www.cbsnews.com/news/france-car-attack-soldiers-varces-allieres-et-risset-barracks-isere-manhunt/</a>
---------------	---

<b>GIST</b>	PARIS -- A man shouted death threats from his car window at several groups of French soldiers out for a Thursday morning jog in the French Alps, then tried to run two of them over, a military spokesman said. Col. Benoit Brulot, a French Army spokesman, said the driver circled the military barracks in Varcès-Allières-et-Risset, in the southeastern Isère region, shouting at groups of soldiers. He returned later and tried to hit the two soldiers with his car before making a quick getaway.
-------------	--

The National Police said in a brief statement on Twitter that an individual had been arrested in connection with the incident in the city of Grenoble, not far from Varcès-Allières-et-Risset. The police said they were not treating the incident as terrorism yet, but the motivation remained unclear.

Brulot said that none of the soldiers, from the 27th Mountain Infantry Brigade, was injured.

Security sources told French news agency AFP that the suspect shouted threats at the soldiers in both French and Arabic before returning to take aim at them with his car. AFP said the man was driving a car with false license plates when he drove at the soldiers.

Authorities were on high alert as the incident occurred one week after an Islamic extremist shot at police returning from a jog in southern France, before taking hostages in a supermarket in an attack that claimed four lives.

Brulot said several of the soldiers were questioned Thursday morning by gendarmes in nearby Grenoble.

	The motives for the attempted attack were unclear.

<b>HEADLINE</b>	<b>03/29 Parkland shooter brother gets probation</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/alleged-parkland-shooters-brother-gets-probation-for-trespassing-at-marjory-stoneman-douglas/">https://www.cbsnews.com/news/alleged-parkland-shooters-brother-gets-probation-for-trespassing-at-marjory-stoneman-douglas/</a>
<b>GIST</b>	<p>FORT LAUDERDALE, Fla. — The brother of the suspected Florida high school gunman pleaded no contest Thursday to trespassing on the campus where the deadly rampage occurred and was sentenced to time served and six months of probation.</p> <p>Circuit Judge Melinda Kirsch Brown also ordered Zachary Cruz, 18, to enroll in therapy, wear an ankle bracelet and said he cannot possess firearms or ammunition. The judge also said Zachary Cruz must be tested to make sure he isn't consuming drugs or alcohol and must stay at least 1 mile from Marjory Stoneman Douglas High School during probation. He can never visit the school again and must not contact any victims or their families.</p> <p>He was arrested March 19 after police found him skateboarding at Stoneman Douglas after school, 33 days after his 19-year-old brother, Nikolas Cruz, killed 17 students and staff members and wounded 17 others during a Valentine's Day shooting. Broward sheriff's deputies say Zachary Cruz had told him not to come on campus, but his attorney, Joseph Kimok, denied that.</p> <p>Zachary Cruz had spent the last 10 days in custody on \$500,000 bond ordered by a different judge. The typical bond in Broward County for trespassing, a second-degree misdemeanor, is \$25.</p> <p>But this was not a typical trespassing case. Cruz, shackled at the wrists and ankles and wearing a tan prison jumpsuit, was led into court by six deputies Thursday as numerous reporters and TV cameras looked on.</p> <p>Prosecutor Sarahnell Murphy announced a plea deal had been reached, the conditions were read and the judge asked if he understood. He softly replied, "Yes, ma'am." After the judge accepted his plea and pronounced sentence, Kimok read an apology from Cruz, saying he was sorry if he scared anyone by visiting the school.</p> <p>After the hearing, Kimok called Zachary Cruz's 10-day detention on \$500,000 bond on a trespassing charge "immoral and unconstitutional." He said there is no doubt that was done simply because of who his brother is. He said no one else would have been arrested.</p>

<b>HEADLINE</b>	<b>03/29 When govt. lies about you in court</b>
<b>SOURCE</b>	<a href="http://www.weeklystandard.com/the-firestarter-what-happens-when-the-government-lies-about-you-in-court/article/2012095">http://www.weeklystandard.com/the-firestarter-what-happens-when-the-government-lies-about-you-in-court/article/2012095</a>
<b>GIST</b>	<p>Is there a hole in our justice system where corruption is allowed to fester? Yes.</p> <p>Sixty years ago, John Leo Brady was tried for murder in a Maryland court. Brady never denied helping to plan a robbery with his accomplice, Donald Boblit, but insisted that Boblit had pulled the trigger when the scheme went awry. Brady's lawyer argued that his client should therefore be sentenced to life in prison, not death. The jury disagreed and voted to execute him. It was only after Boblit himself was convicted and sentenced to death that Brady's lawyer learned that the prosecutor had intentionally kept hidden Boblit's admission to the crime.</p> <p>Ruling on Brady's appeal, the Maryland Court of Appeals agreed that the suppression of exculpatory evidence was a 14th Amendment due-process violation, and remanded the case to the trial court on the</p>

question of punishment. In 1963, the Supreme Court affirmed in *Brady v. Maryland* that exculpatory evidence withheld from the defense by the prosecution violates constitutional protections. Ever since then "Brady violations" have resulted in sanctions against prosecutors and police, as well as overturned criminal convictions.

But what happens when the government withholds exculpatory evidence during the prosecution of a civil lawsuit against an individual or company? Nothing, apparently.

With Brady deemed to apply only to criminal cases, no specific case law punishes a government lawyer for failing to disclose evidence that would've been helpful to a civil defendant. If there were, then last year the 9th Circuit Court of Appeals might not have denied a motion by Sierra Pacific Industries, a California forest products company, to set aside a consequential settlement it had made in 2012 with the U.S. Department of Justice. For that matter, if there had been a civil equivalent of Brady, there probably wouldn't have been a settlement in the first place.

\* \* \*

In 2009, the Justice Department's Eastern District of California filed a lawsuit against Sierra Pacific Industries (and some minor defendants) for damages stemming from a 2007 forest fire in California's Sierra Nevadas. The fire burned about 65,000 acres of forest, most of them national lands. The suit was based on an origin-and-cause report filed by Joshua White, an investigator from the California Department of Forestry and Fire Protection (Cal Fire), that claimed a tractor operated by SPI's logging subcontractor had struck a rock, generating a spark that ignited some forest duff and then turned into a conflagration.

California filed a separate suit against SPI but signed a joint prosecution agreement with DOJ, allowing the two government agencies to prepare cooperatively. The only substantial difference between the two suits was the amount they sought in damages. The state of California wanted about \$10 million. The feds wanted nearly a \$1 billion. Which seemed excessive, since the total value of the land was about \$25 million and the costs of fighting the fire were less than \$10 million. The outsized damages were just the first sign that something was very wrong with the government's case.

Sierra Pacific Industries sounds like a big, faceless corporation, but in reality it's a family-owned company, founded more than six decades ago as a tiny sawmill by Archie Aldis "Red" Emerson, who'd survived a truly Dickensian childhood by outworking everyone around him. Now one of the country's most successful lumber suppliers, SPI fought back as if its future was at stake. Because it was.

Over the course of nearly three years of discovery, Emerson's lawyers in Sacramento deposed witnesses and produced evidence that comprehensively dismantled the investigator's report. They found that White and his counterpart from the United States Forest Service had failed to follow established investigative protocols, fabricated inculpatory evidence, hid exculpatory evidence, invented both a false theory of the fire and a false ignition point for the fire, lied under oath, and intentionally disregarded the possible involvement of a young man named Ryan Bauer, who started volunteering unsolicited alibis and statements which turned out to be contradicted by facts and subsequent statements.

Whether or not Bauer had had anything to do with the fire, the circumstantial evidence of his involvement appeared so compelling that SPI's lead attorney, William Warne, planned to put him on the stand as a dramatic symbol of the government's flawed investigation. That Cal Fire's White had deliberately ignored Bauer would underscore for the jury how poorly he had done his job—unless, that is, his job had been to target a deep-pocketed company instead of someone the state would be on the hook for incarcerating. (There was also a known arsonist in the area at the time of the fire. White ignored him, too.)

But just before trial, Assistant United States Attorney Kelli Taylor filed motions warranting to the court that there was not a "shred of physical evidence" to suggest another party might have been liable, and asked the court to preclude SPI from turning the trial into an "arson witch hunt." Judge Kimberly Mueller assented. SPI would not, she ruled, be allowed "to argue that someone else started the fire."

Now Red Emmerson faced a stark choice. Where victory once seemed certain, the odds had fallen to about 50-50—not good enough to risk possibly losing his company. Reluctantly, he and his sons George and Mark, who now ran SPI, agreed in July 2012 to transfer 22,500 acres of California forest owned by SPI to the United States Forest Service, and pay \$50 million. The DOJ valued the settlement at \$122.5 million and celebrated it as the "largest ever received by the United States for damages caused by a wildfire."

Emmerson explained that what made the decision to settle somewhat easier was knowing he would still get his day in court, as long as the California judge didn't issue a similar ruling.

Warne and his team were prepping for that trial when he got a call from Ryan Bauer's father, Edwin, who "wanted to gloat," Warne says, "about the settlement." Then Bauer mentioned "the bribe."

"What are you talking about?" Warne asked.

In late spring of 2012, officials from the Justice Department went to serve a subpoena on Bauer's father, Edwin. During the encounter, Edwin claimed that Warne had approached the Bauers' attorney and offered them money in exchange for Ryan Bauer admitting to starting the fire. Edwin claimed that his attorney had presented this offer to the Bauers and that the Bauers had refused it.

The DOJ investigators immediately contacted the Bauers' lawyer—but he denied that any such thing had happened, and proved it to their satisfaction. This lawyer later told Warne he'd naturally assumed Warne had been informed about the Bauers' allegation. But he hadn't been. No one from DOJ ever mentioned it to the defense, or the court.

Warne was shocked but not surprised. After all, AUSA Taylor hadn't dropped the suit even after seeing it was based on a dishonest investigation. Now she had withheld knowledge of a false accusation made by a percipient witness, too.

The disclosure would have contradicted Taylor's assertion that there was not a "shred" of evidence pointing to anyone else, and presumably would have inclined Judge Mueller to allow the defense to put Bauer on the stand. In which case, the federal trial would have proceeded. And given what soon happened in California, the verdict can be reasonably supposed.

Scheduled for July 2013, the California trial never took place. After reading hundreds of pages of motions, Superior Court Judge Leslie Nichols dismissed the lawsuit, calling it "corrupt and tainted," and ordered Cal Fire to pay the defendants \$32 million (the largest discovery sanction ever ordered by a judge against a government agency) for its "egregious and reprehensible conduct."

While the state ruling didn't affect the federal suit, Judge Nichols's finding of pervasive misconduct confirmed the defendants' belief that the prosecutors had perpetrated a "fraud on the court," for which there was ample precedent to set aside the settlement.

Warne filed a motion with the district court, which dismissed it, then appealed to the 9th Circuit, which ruled "the district court correctly concluded that Brady does not generally apply in civil proceedings . . . the government did not have a specific duty to disclose the false bribe information, beyond its standard discovery obligations."

Of course, those standard discovery obligations had also applied to Brady's prosecutor in 1958, and yet the Supreme Court decided 7-2 that such obligations would be honored more diligently if the prosecution faced sanctions for failing to abide by an inscription carved into the walls of the Department of Justice, as quoted by Justice William O. Douglas in his Brady opinion: "The United States wins its point whenever justice is done its citizens in the courts."

By that reasoning, it is nothing less than an injustice that "courts" doesn't refer also to civil courts.

HEADLINE	<b>03/31 ICE arrests farmworkers sparking fears</b>
SOURCE	<a href="http://www.latimes.com/local/lanow/la-me-farmworkers-ice-20180316-htmlstory.html">http://www.latimes.com/local/lanow/la-me-farmworkers-ice-20180316-htmlstory.html</a>
GIST	<p>Jesus Aceves was driving three of his fellow farmworkers to the tomato fields in the early-morning darkness when he saw lights flash behind him.</p> <p>ICE agents pulled him over and asked for his license, registration and insurance and, most forebodingly, whether the men were in the United States legally.</p> <p>Aceves and his passengers were taken to an immigrant detention facility. But none of them had been the target of Immigration and Customs Enforcement.</p> <p>Three of the men had no criminal records. The most serious blots on the 44-year-old Aceves' record were several convictions — the most recent in 2012 — for driving without a license.</p> <p>That morning, an ICE spokesman said, agents went to a Kern County residence where they thought an immigration target lived. One of the men who got into Aceves' car matched that person's description, he said. The ICE agents followed.</p> <p>The arrests were part of a larger sweep in California's agricultural heartland that has sent fear through the Central Valley, where for generations, immigrants here — both legally and illegally — have picked crops. In some fields, almost all of the foreign workers are in the country without legal status.</p> <p>While many immigrants have been on edge since President Trump vowed a crackdown on illegal immigration, the recent sweeps have been particularly concerning because they included the arrests of people not specifically targeted by ICE.</p> <p>The concern extends to farmers, who fear more sweeps will drive away labor at a time when some are struggling to get enough workers to pick the crops.</p> <p>Manuel Cunha Jr., president of Nisei Farmers League, which represents agricultural employers and their workers throughout the state, said farmers are worried about losing trusted workers. He said the increasingly tense relationship between the Trump administration and California, which declared itself a "sanctuary state," has upped the anxiety.</p> <p>"They're not going to be replaced by American workers," Cunha said. "Don't punish the businesses. We're not the ones that came up with the sanctuary state."</p> <p>In the February sweep across the Central Valley, 232 people were arrested. Of those, 180 were either convicted criminals, had been issued a final order of removal or had been previously removed from the U.S. and returned illegally.</p> <p>The United Farm Workers of America identified at least 26 farmworkers arrested in Kern, Tulare and Madera counties, most of them stopped before dawn on their way to work.</p> <p>ICE Director Thomas Homan has said that immigrants who have entered the U.S. illegally "should be afraid."</p> <p>He warned that California's so-called sanctuary policies, which limit the cooperation between local and federal law enforcement, give the agency no choice but to make arrests in neighborhoods and at work sites. That leads to the arrests of other immigrants in the country illegally who are not intended targets, he said.</p> <p>"This is a prime example of how sanctuary policies, which have pushed ICE out of jails, force our officers to conduct more enforcement in the community — which poses increased risks for law enforcement and the public," Homan said in a statement to The Times. "It also increases the likelihood that ICE will</p>

encounter other illegal aliens who previously weren't on our radar. It is nonsensical to demand that ICE solely focus on criminals, while simultaneously preventing ICE from arresting criminal aliens inside the secure confines of local jails.”

Win Eaton, an attorney in Bakersfield, is representing some of the detained farmworkers in immigration court.

“It’s just terrible that these people are going to be used as pawns,” he said.

Dozens of workers have fled since immigration agents began checking employee records at San Joaquin Valley farms. ICE said 77 businesses — in the jurisdiction that includes Northern California, Hawaii, Guam and Saipan — were served with employment authorization audit notices in January.

Farmers have struggled in recent years with labor shortages. A summer 2017 survey by the California Farm Bureau Federation showed that 55% of responding farmers experienced shortages, with problems most acute among those whose crops require intensive hand labor, such as tree fruits and grapes.

Phil Martin, professor emeritus of agricultural and resource economics at UC Davis, said while that’s true, it would take a huge, targeted immigration operation to really put a dent in the agricultural industry. That’s because production requires so many workers and the industry is using more and more people from a temporary guestworker program.

<b>HEADLINE</b>	<b>04/01 London murder rate overtakes NYC</b>
<b>SOURCE</b>	<a href="http://www.dailymail.co.uk/news/article-5566689/London-murder-rate-overtakes-New-York-time-including-11-killings-just-16-days.html">http://www.dailymail.co.uk/news/article-5566689/London-murder-rate-overtakes-New-York-time-including-11-killings-just-16-days.html</a>
<b>GIST</b>	<p>London's murder rate has overtaken New York City's for the first time ever as the twelfth person has been killed in just 19 days.</p> <p>February marked the first month in history books that London had more murders than the American city with a total of 15 homicides. Out of the 15 killed, nine were aged 30 or younger.</p> <p>In March, there were 22 murders, which is likely to match if not beat out New York's numbers.</p> <p>The murder epidemic continued on Sunday when a man in his twenties was fatally stabbed after leaving a bar in Wandsworth, marking the 12th person to be murdered in London in 19 days.</p> <p>According to a report by the Sunday Times, New York City's murder statistics have decreased by 87 per cent since the 1990s.</p> <p>Meanwhile, London's rate has grown by nearly 40 per cent in just three years, not including deaths caused by terrorist attacks.</p> <p>Although New York last year had nearly double the number of murders than London, experts are concerned the gap is steadily closing.</p> <p>Officials are concerned about the uptick in fatal stabbings, fearing there is a dangerous surge in knife crime.</p> <p>Last year there was a total of 80 fatal stabbings in the capital - the most in almost a decade. And official figures show that 2017 was the worst year for knife deaths among young people since at least 2002.</p> <p>Forty-six people aged 25 or under were stabbed to death in London, up by 21 compared with the previous year, according to police figures.</p>

	<p>The victim's death comes as London's murder rates have overtaken New York City 's numbers for the first time ever.</p> <p>The man's death on Sunday marks the 12th murder in London in 19 days.</p>

<b>HEADLINE</b>	<b>04/01 Virginia: university bomb threat arrest</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/marymount-university-evacuated-after-bomb-threat-student-in-custody-2018-03-31/">https://www.cbsnews.com/news/marymount-university-evacuated-after-bomb-threat-student-in-custody-2018-03-31/</a>
<b>GIST</b>	<p>The campus at Marymount University in Arlington, Virginia, has reopened after authorities investigated a bomb threat made on social media. One student was taken into custody Sunday, and police said there was no evidence that a bomb was on campus.</p> <p>The university was evacuated Sunday morning, with those on campus asked to go across the street. The university was on Easter break during the incident.</p> <p>Canine units with the Arlington County Police Department swept the campus as a precaution, but it was later reopened and the community was cleared to return.</p> <p>"We want to express our sincere appreciation to the law enforcement officers who responded promptly to protect the safety of our campus community," Eric Hols, the university's director of campus safety, said in a statement. "We will continue to cooperate fully as their investigation continues."</p> <p>The Arlington County Police Department reminded the community that while it was April Fool's Day, threats of violence are not a joke.</p>

<b>HEADLINE</b>	<b>04/01 Mexico: prison riot fire kills 7</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/police-die-quell-prison-riot-mexico-54160759?">http://abcnews.go.com/International/wireStory/police-die-quell-prison-riot-mexico-54160759?</a>
<b>GIST</b>	<p>Six police officers died Sunday from smoke inhalation after prisoners started a fire while resisting an effort to transfer dangerous inmates out of a prison in Mexico's Gulf coast state of Veracruz, authorities said.</p> <p>Veracruz Gov. Miguel Angel Yunes said a seventh person died but it was unclear if he was an inmate or prison guard.</p> <p>Yunes said four "highly dangerous" inmates had been helping run criminal networks in the area around the La Toma prison in the town of Amatlan de los Reyes, so officials had decided to transfer them to a maximum-security federal prison.</p> <p>Yunes did not name the criminal gang involved, but the area was long dominated by Zetas cartel.</p> <p>When local police, in support of state police, went into the prison to get the four inmates for transfer, they were apparently ambushed by prisoners, who blocked their escape and lit a fire that suffocated six officers, the governor said.</p> <p>"The six police officers were attacked and were enclosed in an area with no exit. The inmates started a fire, and with the smoke, they caused the asphyxiation and death of the six police officers," Yunes said.</p> <p>The seventh dead man was not wearing a uniform, and could have been an inmate or guard, Yunes said. His body was being examined.</p> <p>Seven inmates were injured, two seriously, and 15 police officers were hospitalized, one with serious injuries, authorities said.</p>

<b>HEADLINE</b>	<b>03/30 Group: transgender killed; 7<sup>th</sup> this year</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/03/30/us/transgender-woman-killed-baton-rouge.html">https://www.nytimes.com/2018/03/30/us/transgender-woman-killed-baton-rouge.html</a>
<b>GIST</b>	<p>A young black transgender woman was shot dead in a Louisiana motel this week, becoming at least the seventh transgender woman known to have been killed in the United States this year, rights advocates said.</p> <p>The woman, Amia Tyrae, 28, was killed Monday at about 1:15 a.m. at a motel on Airline Highway, according to the Baton Rouge Police Department.</p> <p>Dr. William Clark, the East Baton Rouge Parish coroner, ruled Ms. Tyrae's death a homicide, caused by a gunshot wound to the chest.</p> <p>The Police Department said Friday night that Dedrick Butler, 22, of Denham Springs, La., had been</p>

arrested in the killing. He was charged with second-degree murder, possession of a firearm by a convicted felon, and possession of a firearm with an obliterated serial number.

Between 25 to 28 transgender people were reported killed in the United States last year, the highest number in at least a decade, according to a report by the Human Rights Campaign and the Trans People of Color Coalition. The violence disproportionately affects transgender women of color.

The killing of Ms. Tyrae came less than a month after the shooting death of another transgender woman, Phylcia Mitchell, 46, outside her apartment in Cleveland on Feb. 23. Transgender women were also killed in New Mexico, Florida, New York, Massachusetts and California this year, according to data compiled by Glaad.

<b>HEADLINE</b>	<b>04/01 UCF police chief: prevented disaster</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/31/us/florida-chinese-student-guns-deported/index.html">https://www.cnn.com/2018/03/31/us/florida-chinese-student-guns-deported/index.html</a>
<b>GIST</b>	<p>(CNN)A Chinese college student who made no threats but had alarmed a roommate and a friend with his behavior and bought two semiautomatic rifles will be deported for an unrelated visa issue, University of Central Florida police said Thursday.</p> <p>Police at the Orlando school said they were first alerted by a campus official in late January that Wenliang Sun, 26, was a "student of concern," UCF police Chief Richard Beary said.</p> <p>Campus police received information that Sun had altered his appearance and his behavior was changing, the chief said. They contacted the Bureau of Alcohol, Tobacco, Firearms and Explosives and were told Sun owned an AR-15-style rifle and ammunition.</p> <p>"We know that in today's world that a person in distress who owns a high-powered firearm, we just cannot ignore that," Beary said. "We have a duty and an obligation to make sure our people are safe."</p> <p>There was "red flag after red flag," that something bad would happen, he added.</p> <p>Those red flags, the chief said, included Sun being uncommunicative with others and not leaving his room, dying his hair blond, paying for a fast expensive car with cash, and referring to one of his guns as a "sniper rifle."</p> <p>Beary said Sun also went to a gun range to practice with his rifle and also wouldn't return calls from authorities when they tried to notify him his immigration status was subject to change.</p> <p>But the chief acknowledged there were no comments in interviews or in reviews of his electronic devices that Sun was planning to harm anyone.</p> <p>"That's the interesting thing in this case, there were no specific threats. Reiterating that, there were no threats," Beary said.</p> <p>The chief said the red flags looked at separately might not mean much but when all of them were considered collectively they were concerning.</p> <p>"I think there was a disaster about to happen and we stopped it," the chief said.</p> <p>Sun is at a US Immigration and Customs Enforcement holding facility in Macclenny, Florida, according to ICE.</p> <p>"Under normal circumstances, it probably would not have moved that quickly," an official with Homeland Security said. "He probably would've been placed on notice, and we would have issued him a notice to</p>

	appear, indicating that he would need to go before an immigration judge in order to deal with his status, or lack thereof."
	The official said he didn't know when Sun would be deported.

<b>HEADLINE</b>	<b>03/31 Monroe police raid pawn shop</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/news/nw-gold-buyers-pawn-shop-raided-by-police/">http://www.heraldnet.com/news/nw-gold-buyers-pawn-shop-raided-by-police/</a>
<b>GIST</b>	<p>MONROE — On a billiards table in the center of the pawn shop's back room, police pulled up a white sheet to reveal enough probiotics, Claritin and pregnancy tests to stock a pharmacy aisle.</p> <p>Cardboard boxes full of pills, from Allegra to Zyrtec, lined the walls of the store. Many still had QFC tags.</p> <p>Monroe police believe the owner of NW Gold Buyers knew he'd been fencing thousands of dollars in shoplifted goods online over the past two years.</p> <p>On Friday morning, a half-dozen officers raided the business in a strip mall on Highway 99, the climax of a two-year investigation that led officers from the owner's defunct pawn shop in Monroe to his new storefront near Lynnwood.</p> <p>Police dumped a mound of Flonase bottles onto the floor in a back room, sifting through them for signs that they were obviously stolen.</p> <p>"Whoa!" an officer said. "The fair market value is \$2,500 for that box."</p> <p>At first they expected to be in the store all day, making an exhaustive inventory. Once they saw the scope of the task, they decided to bring all of the merchandise back to the police station, to add it up later. They picked things off shelves, off the pool table and out of the moving boxes.</p> <p>Online ads say NW Gold Buyers will pay "top dollar" for jewelry, coins, watches and silver. Search warrant papers say the owner was, in reality, often offering 12 to 20 percent of retail value for razors, medications and other items that could be concealed and stolen en mass from legitimate stores. Customers showed up to sell, not to buy. The merchandise was kept behind a locked door. The business had a core of about 20 people who would sell goods, officer Nathan Erdmann said.</p> <p>"It was all a front," Erdmann said. "At the other one, he actually had stuff for sale up front, but that wasn't what this business was about."</p> <p>The case began because of a missing vacuum cleaner. Theft prevention workers at a hardware store reported the possible theft in January 2016, and relayed that a new pawn shop in Monroe might be taking stolen goods. Erdmann studied security video from the vacuum case. He recognized the suspect as an often-homeless heroin user. He checked an online database and noticed "odd transactions that were not typical of items that would be purchased by a pawn shop," according to the search warrant affidavit.</p> <p>Rogaine, Nicorette, teeth-whitening kits, electric toothbrushes as well as memory supplements, allergy medication, routers and electric razors were standard fare. Other local businesses reported a spike in thefts of health and beauty products.</p> <p>Hints that a large-scale investigation was under way can be found in 2-year-old arrest reports. One Monroe man, then 29, admitted in 2016 to stealing electric razors to pawn so he could buy heroin. He'd made 59 transactions for more than \$7,600 at One Stop Pawn Shop over three months. He told officers he typically received 30 percent the product's worth, indicating his theft total during that time was about \$22,000.</p> <p>Police worked closely with local businesses, enlisted undercover officers from other agencies, interviewed</p>

theft suspects and used confidential informants during the course of the investigation. Thieves told police they were making a beeline to the One Stop Pawn Shop.

Police believe the goods were sold online, on Amazon or eBay.

One Stop Pawn was closing in the fall of 2016, when Erdmann paid the owner a visit. Near the end of the chat, Erdmann shared his suspicions.

“I told him that the stores in Monroe were cleaned out of many of the items that he was buying because there was so much theft,” he wrote, in the affidavit for the search warrant that was served Friday. “I told him that if he was not already closing down his business I would be coming after him and find some way to charge him, because no reasonable person could look at the things he was buying and not know (they were) stolen ... I asked if that made sense, and he acknowledged that it did.”

Even after the business was shuttered, Erdmann kept a watchful eye. He learned that the suspect would meet at night in and around Lynnwood with people wanting to sell bags of stolen goods.

A confidential informant reported being given specific lists of items to steal, including Prevagen, Viviscal, Crest 3D Luxe and Alli, an over-the-counter weight loss pill.

In February 2017, the new business was registered in a triangular strip mall on Highway 99, between Everett and Lynnwood.

Video surveillance showed people waiting in parking lots late at night for the pawn shop owner to drive up in a Mercedes to conduct business.

One confidential informant told police the owner was getting nervous, inquiring about any possible connection to Monroe and saying he’d heard there might be a rat.

Police noticed an extremely high volume of traffic into the store by a small number of people. One man made 85 sales since October 2017. A woman had more than 90 transactions during the same period. In the online database, almost all of the transactions were listed as gift cards.

The suspect “has a common practice of entering transactions as the purchase of a gift card or multiple gift cards, when it is obvious that a large amount of unknown items is actually brought in,” Erdmann wrote. “Additionally, the frequency with which the same people routinely visit the store, taking bags and bags of items in on an almost daily basis, and sometimes twice in a day, would lead any reasonable person to question whether the items were legitimately obtained.”

Police believe the store had taken in about \$428,000 in revenue.

Outside the store, officers handcuffed the owner, 22, and booked him into the Snohomish County Jail for investigation of attempted trafficking in stolen property.

<b>HEADLINE</b>	<b>03/29 Bellevue: teen arrested in mosque fire</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/941490/bellevue-police-arrest-teen-in-fire-at-vacant-mosque/">http://mynorthwest.com/941490/bellevue-police-arrest-teen-in-fire-at-vacant-mosque/</a>
<b>GIST</b>	<p>BELLEVUE, Wash. (AP) — Bellevue police say they’ve arrested a teenager they suspect of having started a fire at a vacant mosque.</p> <p>The Islamic Center of Eastside was closed after having been previously damaged in a January 2017 arson. It was burned again on March 21, and police said traffic camera footage showed a group of five people running from the building moments before the fire.</p>

	<p>The Bellevue Police Department said in a news release Thursday that school resource officers recognized them. Investigators located them on Tuesday and brought them in for questioning. One of the five, an 18-year-old, was identified as the primary suspect and booked into the King County Jail for investigation of first-degree arson.</p> <p>Investigators say there is no indication the fire was a hate crime or bias-related.</p>

<b>HEADLINE</b>	<b>03/30 Arrests in casino loansharking probe</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/two-arrested-in-loansharking-money-laundering-probe-at-tuwkila-casino">http://komonews.com/news/local/two-arrested-in-loansharking-money-laundering-probe-at-tuwkila-casino</a>
<b>GIST</b>	<p>TUKWILA, Wash. -- The Washington State Gambling commission says an employee of the Macau Casino in Tukwila made high-interest loans of cash and chips to 100 customers and fellow employees for at least \$300,000.</p> <p>The same casino worker also laundered \$1.5 million through the casino, the Gambling Commission said. The amount is 10 times the worker's reported annual income, the commission said. The source of the money is under investigation.</p> <p>As a result of the investigation, the worker, a 45-year-old woman, and her 27-year-old boyfriend were arrested earlier this month and booked into jail.</p> <p>The gambling commission also suspended the license of the general manager of the casino. The manager, a 48-year-old man from Federal Way, knew about the money laundering and loansharking but didn't report the activity, the Gambling Commission says.</p> <p>Complaints had come to the Gambling Commission and Tukwila Police Department in the last two years about loansharking and money laundering at the casino.</p> <p>The investigation showed the employee was loaning cash and chips, then charging what the commission called "exorbitant interest rates." In some case, the interest rates were 10 times the maximum amount state law allows.</p> <p>The worker targeted people who had gambling problems. Many made minimum wage and had a hard time covering the monthly or weekly interest of 10 to 15 percent on the loans, the Gambling Commission said.</p> <p>The worker and her boyfriend and others "utilized fear tactics and threatened violence in order to collect on debts."</p> <p>Search warrants at the woman's home turned up a luxury vehicle, jewelry, big-screen TVs, high-end handbags and numerous smartphones, tablets and gaming platforms in the original packaging, the Gambling Commission said.</p> <p>Agents also seized more than \$45,000 in cash.</p>

<b>HEADLINE</b>	<b>03/30 Arrest in Seattle home invasion</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/arrest-in-seattle-home-invasion-that-left-elderly-woman-shot-2-still-at-large/281-533717000">http://www.king5.com/article/news/local/arrest-in-seattle-home-invasion-that-left-elderly-woman-shot-2-still-at-large/281-533717000</a>
<b>GIST</b>	Seattle police have arrested one suspect wanted in connection with a home invasion robbery and the shooting of an elderly woman earlier this month. Two additional suspects are still on the loose.

	<p>Police arrested the 23-year-old man Friday afternoon, according to an SPD Blotter post.</p> <p>Detectives spotted the suspect at a gas station near the 500 block of S Dearborn Street.</p> <p>On March 6, an elderly couple on Renton Avenue S. had just arrived home from the store when police say two suspects walked up and asked for directions.</p> <p>The woman was shot. She was also pistol-whipped in the head by the suspects. The two teenage suspects ran off with the woman's purse with \$60 inside.</p> <p>A neighbor's surveillance camera captured a grainy photo of a red Kia Spectra.</p> <p>A few days later, a patrol officer found the Kia parked in a parking lot on the 9400 block of Rainier Avenue South. Another surveillance camera captured footage of the suspects climbing into a late model, silver Toyota Corolla Hybrid.</p> <p>One suspect is described as a light-skinned black male in his late teens, 6 feet tall, wearing a white jacket and white pants and armed with a black handgun. A second suspect is described as a light-skinned black teen, 5 feet 6 inches tall, skinny, wearing a blue jacket and dark pants. He had a mustache at the time of the attack. (It's not yet known which suspect was arrested.)</p> <p>Seattle police believe a third suspect was driving the getaway car.</p>

<b>HEADLINE</b>	<b>03/31 'Palm Sunday Massacre' gunman freed</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/03/31/palm-sunday-massacre-gunman-who-killed-10-people-in-1984-discreetly-released-from-prison.html">http://www.foxnews.com/us/2018/03/31/palm-sunday-massacre-gunman-who-killed-10-people-in-1984-discreetly-released-from-prison.html</a>
<b>GIST</b>	<p>The gunman behind the 1984 "Palm Sunday Massacre" that left 10 people dead and was considered one of New York City's largest mass shootings in decades was quietly released from prison in January.</p> <p>Christopher Thomas, 68, was released from Shawangunk Correctional Facility on Jan. 5 and is believed to be residing in Queens, NY, the New York Post reported. He was released after serving about two-thirds of his 50-year maximum sentence, good behavior and fulfilling other criteria, a New York State Department of Corrections spokesperson said.</p> <p>"The parole board did not let him out," the spokesperson said. "He had five appearances before the parole board and was denied every time. He doesn't need board approval because he served two-thirds."</p> <p>Thomas was convicted of manslaughter and sentenced to 25 to 50 years in 1985, following the massacre. He was able to avoid a murder rap because it was determined his heavy cocaine usage "contributed to his actions," the New York Post reported.</p> <p>A sole motive for the slaying was never determined.</p> <p>On Palm Sunday in 1984, Thomas shot and killed 10 people in an apartment in Brooklyn. Thomas was embroiled in a dispute with the apartment owner, convicted drug dealer Enrique Bermudez. The victims of the slaying were Bermudez's pregnant wife, another adult woman, and eight children.</p> <p>One person survived the shooting, a toddler named Christina Rivera who was adopted by a police officer who was at the scene of the slayings, The New York Times reported.</p> <p>Ray Kelly, the former commissioner of the New York Police Department [NYPD] said Thomas' "heinous crime warranted the maximum penalty."</p>

	Retired NYPD Lt. Herbert Hohmann told the New York Post that Thomas does not deserve to be free. “He doesn’t deserve to be on the street. He killed poor, innocent children,” Hohmann said.

<b>HEADLINE</b>	<b>03/29 Probing allegations Syrian war crimes</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/world/investigators-quietly-probe-allegations-syrian-war-crimes-n858641">https://www.nbcnews.com/news/world/investigators-quietly-probe-allegations-syrian-war-crimes-n858641</a>
<b>GIST</b>	<p>In a drab office building in a European capital amid the sound of humming document scanners, a team of human rights lawyers is hard at work processing thousands of documents that they say link the Syrian government to war crimes.</p> <p>The papers point to an unmistakable conclusion, according to those leading the effort: The government of Syria's President Bashar al-Assad has violated the international rules of war through attacks on civilians, torture, rape, and the use of chemical weapons, among other crimes.</p> <p>“We have stronger evidence than we had for any past conflicts, any past tribunals, any past international justice efforts,” said Chris Engels, deputy director of the Commission for International Justice and Accountability, which has been documenting human rights abuses by Syrian officials since the start of the civil war in 2011.</p> <p>According to CIJA adviser Stephen Rapp, the Syrian government meticulously documented its treatment of thousands of detainees — a product of its large bureaucracy. As a result, thousands of leaked photos mean prosecutors have far stronger evidence of war crimes than what existed to convict the Nazis at Nuremberg, said Rapp, the former U.S. ambassador-at-large for war crimes issues under President Barack Obama.</p> <p>The documents amassed so far form a “paper trail of war crimes” noteworthy for their specificity, according to Engels, who requested NBC News not reveal the location of the group's office out of concern for investigators’ safety and the security of the evidence. The documents are stored in a vault.</p> <p>The group's 140-person staff is made up of lawyers, investigators, and translators. That includes more than 40 "document hunters" in Syria whose mission is to extract material produced by the regime, authorizing the detention, torture, and execution of people for suspected anti-government activity.</p> <p>Documents identify who in the regime signed off on what, who was targeted, and why. In some cases where the documents indicate that a prisoner admitted to participating in anti-regime activity, CIJA tracked down the accused, who later said their confessions were extracted through torture.</p> <p>The organization was founded by Bill Wiley, a Canadian former war crimes investigator, as news reports began surfacing of widespread abuses by the Assad regime in 2011. It receives funding from Western countries, including the British and Canadian governments, to carry out its work.</p> <p>Added to the trove of documents is vital visual evidence: roughly 50,000 photos shot between the start of the war in 2011 and 2013, cataloging more than 6,700 victims of torture by pro-regime forces. They were taken by a forensic photographer known by the pseudonym Caesar who worked for the Syrian military and smuggled them out of the country on hard drives in 2013.</p> <p>Assad has disputed the veracity of the photos, but Human Rights Watch called the images authentic. The New York-based group confirmed the identity of 27 victims in the photos through interview with relatives, while former prisoners and defectors have corroborated the widespread torture in government prisons. In a separate analysis, the FBI confirmed a portion of the photo trove as authentic. So did a U.N. report.</p> <p>Caesar’s photos show emaciated corpses, many stripped naked, arrayed on the ground — some with</p>

gouged-out eyes, bloodied genitals, and severed fingers. Many show signs of bruises, burn marks, and gashes covering discolored skin.

Other investigators and activists have also collected testimony, images and videos documenting atrocities committed by all sides during Syria's war, a U.N. quasi-prosecutorial body has said. The team announced Monday that it is preparing case files and has engaged with war crimes investigative units of different countries including in Europe, whose courts can exercise universal jurisdiction to prosecute.

CIJA's goal is to prove government officials' individual criminal culpability, from the highest echelons in Damascus down to the provincial level. The Syrian government's formalized command-and-control structure, as well as its careful record-keeping, make that work easier.

The Syrian government is "process driven," Engels said. Directives — even those authorizing torture — were documented "to make sure that everyone does what they're supposed to be doing."

CIJA's work is logistically difficult and comes with significant risks. Over the course of the war, where rebels seized regime territory, CIJA's document hunters entered abandoned government facilities and extracted material — USBs, computer hard drives, reams of paper — that might contain evidence of war crimes.

Next they had to safely store the material, and when possible, smuggle it through checkpoints and out of Syria. Engels says no one directly employed by CIJA was ever killed in the process, but people who worked closely with the team were.

Once the documents are ferried out of Syria, the rest of the CIJA team sifts through them to build cases for future criminal prosecutions.

Despite what CIJA and other investigators consider to be clear and overwhelming evidence of war crimes by Assad's government, the regime remains more firmly entrenched than at any other point in the war due in large part to the support of Russia, Iran and Iran-backed Lebanese militia Hezbollah.

Now a concern among human rights lawyers pursuing a case against Assad's government is that victims of the regime will never see officials held to account.

<b>HEADLINE</b>	<b>03/31 Violence threatens Mexico tourism</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/world/2018/03/31/mexico-tourist-fears-violence-cancun-los-cabos/471115002/">https://www.usatoday.com/story/news/world/2018/03/31/mexico-tourist-fears-violence-cancun-los-cabos/471115002/</a>
<b>GIST</b>	<p>PLAYA DEL CARMEN, Mexico — Tourists taking the ferry from this tourist town to the island of Cozumel now walk down a wharf lined with police, heavily armed soldiers and bomb-sniffing dogs.</p> <p>Those safeguards came after a Feb. 21 explosion ripped through one of the ferries, injuring 24 people, including five Americans. Explosives were later found on another ferry owned by the same company.</p> <p>"It's something that makes you feel safer," Roberto Cintrón, president of the Cancún hotel owners' association, said about the soldiers and security after a recent ferry ride to Cozumel. "It's the complete opposite situation of the insecurity many people think of."</p> <p>Numerous reports about crime and tourist tragedies have made recent headlines as the violence plaguing this country erupts in cities popular with foreign visitors.</p> <p>Incidents causing concern in Cancún and outlying Quintana Roo state range from bars allegedly serving adulterated liquor to unsuspecting tourists to police targeting visitors in rental cars for bribes.</p>

A vacationing Iowa family of four was found dead March 23 in a condo in Tulum on the Caribbean coast. Authorities suspect the cause was a gas leak from a faulty water heater

Violence in resort cities such as Cancún, Playa del Carmen (in Quintana Roo state) and Los Cabos resembles the rest of the country, but it threatens Mexico's lucrative tourism industry.

"The common thread in Los Cabos and Quintana Roo is the public security system had been totally dismantled," said Francisco Rivas, director of the National Citizen Observatory, which monitors security issues in Mexico. "There were prosecutor's offices that didn't investigate and police that couldn't prevent or react to crime."

Analysts offer a variety of explanations for the rising crime across Mexico, from drug cartels to the U.S. opioid crisis prompting cartels to switch from growing marijuana to producing heroin.

Mexico had the most murders on record in 2017, with 29,158 homicides. The homicide rate in the first two months of 2018 was already up 21% over the same period last year.

The U.S. State Department in January issued a strict travel advisory for five Mexican states, including Guerrero, home to Acapulco and Ixtapa. The "do not travel to" advisory put the states of Sinaloa, Colima, Michoacán, Guerrero and Tamaulipas (on the Texas border) on the same level as war-torn countries like Syria.

Mexico's Tourism Secretariat said the advisory was based on crime statistics and atrocities "not related to incidents that directly affected foreign visitors."

The secretariat noted the list did not include Mexico's five biggest tourist destinations: Cancún, the Mayan Riviera, Los Cabos, Puerto Vallarta-Riviera Nayarit and Mexico City.

The U.S. government closed its consular agency here in Playa del Carmen in early March, citing a security threat after the ferry explosion, but service has since resumed. Mexican authorities said the explosion was unrelated to organized crime.

Cintrón, the hotelier, said violence strikes overwhelmingly in areas not visited by tourists. Hotel occupancy hovers at 83%, roughly the same as the same time last year, he said.

"This is not happening in tourist areas," Cintrón said. "There have been cases, we can't deny that" in the tourist areas, he added, "But it's something very targeted" and not putting tourists at risk.

Mexico welcomed nearly 40 million foreign visitors in 2017, and tourism accounts for 8% of the country's GDP. Tourist hotspots also attract millions of Mexicans seeking jobs.

"There's lots of work here ..... and it pays better," said Fabiola López, a waitress who moved to Playa del Carmen from Chiapas, Mexico's poorest state. "I was able to buy a house."

Tourists often ask about security, said Israel Uribe, a concierge in Playa del Carmen. After a shootout on the tourist strip here in early 2017, his bosses instructed him, "Don't say anything" when asked about security.

Some in this region support the U.S. tourist advisory, saying that's the only way the Mexican government will take security issues seriously.

"This is something that will open our government's eyes, that the threat here is real," said Daniel Villaseñor Pérez, a lawyer and community activist in Cancún.

<b>HEADLINE</b>	<b>03/30 China: gangs smuggled \$80M via drones</b>
<b>SOURCE</b>	<a href="http://money.cnn.com/2018/03/30/technology/drone-iphones-smugglers-china/index.html">http://money.cnn.com/2018/03/30/technology/drone-iphones-smugglers-china/index.html</a>
<b>GIST</b>	<p>Smugglers in China are going high-tech.</p> <p>Chinese authorities busted a criminal ring that allegedly used drones to smuggle almost \$80 million worth of Apple (AAPL) iPhones and other smartphones, according to state media.</p> <p>Chinese customs officials told state media the suspects illegally transported up to 15,000 devices per night across the border from Hong Kong to the neighboring city of Shenzhen.</p> <p>Authorities said the gang used drones to suspend two, 200 meter-long cables between buildings on either side of the border. Bags carrying smartphones were attached to the cables and then pulled over to Shenzhen.</p> <p>Customs officers said it was the first case they had encountered where drones were used to smuggle goods, according to state media. The bust was made in February as part of a joint operation between authorities in the two cities.</p>

<b>HEADLINE</b>	<b>03/30 Maryland: 6 suspected MS-13 indicted</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/federal-jury-indicts-alleged-ms-13-members-maryland-54127115">http://abcnews.go.com/International/wireStory/federal-jury-indicts-alleged-ms-13-members-maryland-54127115</a>
<b>GIST</b>	<p>A federal grand jury in Maryland has indicted six alleged members of a violent street gang that's been a prime Trump administration target.</p> <p>Six defendants — ranging in age from 19 to 22 — were charged in a nine-count indictment unsealed this week. The alleged members of MS-13, a gang with deep Central American ties, are charged with murder, conspiracy and racketeering.</p> <p>The men, all living in Annapolis, were detained on federal or state criminal charges and their initial court appearances have not yet taken place, according to prosecutors. Their immigration status was not immediately clear.</p> <p>The latest indictments come roughly two weeks after a MS-13 member from another Maryland community was convicted in a federal racketeering conspiracy. Raul Ernesto Landaverde Giron of Silver Spring, just outside of Washington D.C., was found guilty of murder in aid of racketeering and faces a mandatory sentence of life in prison.</p> <p>Following that conviction, U.S. Attorney General Jeff Sessions said Maryland has "suffered terribly" because of the "uniquely barbaric" gang's criminal activities.</p> <p>In charges announced Thursday, Juan Carlos Sandoval Rodriguez, 20, is accused of luring a victim to a park in Annapolis, where he and other alleged MS-13 members and associates murdered him. Prosecutors believe the March 2016 killing was motivated by a desire to enhance or maintain rank within the gang or gain status as a member.</p> <p>In October 2016, four defendants allegedly attempted to murder two others in Annapolis, largely by stabbing the victims repeatedly.</p> <p>Last year, Sessions designated MS-13 as a "priority" for the Department of Justice's Organized Crime Drug Enforcement Task Force. That designation directs prosecutors to pursue all legal avenues to target the gang and lets local police agencies tap into federal money to help pay for gang-related investigations.</p> <p>MS-13, or the Mara Salvatrucha, is believed by federal prosecutors to have thousands of members</p>

	nationwide, primarily immigrants from Central America. It emerged in the 1980s from a stronghold in Los Angeles. But its true rise began after members were deported back to El Salvador in the 1990s.

<b>HEADLINE</b>	<b>03/30 Calif. gov. pardons men facing deportation</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/california-governor-pardons-men-facing-deportation-54136644">http://abcnews.go.com/International/wireStory/california-governor-pardons-men-facing-deportation-54136644</a>
<b>GIST</b>	<p>California Gov. Jerry Brown on Friday pardoned five ex-convicts facing deportation, including two whose families fled the Khmer Rouge regime in Cambodia four decades ago.</p> <p>The pardons don't automatically stop deportation proceedings, but eliminate the state convictions federal authorities based their deportation decisions on. That gives the men's lawyers strong legal arguments before immigration judges to try to prevent the deportations.</p> <p>"The pardon does provide enormous benefit to immigrants facing deportation," said Anoop Prasad, an immigration staff attorney at Asian Law Caucus.</p> <p>Brown's intervention for the men — among 56 pardoned — marked the Democratic governor's third consecutive pardon round in which he intervened on behalf of immigrants who were deported or faced deportation because of criminal convictions. Brown has accused the administration of President Donald Trump of "basically going to war" with California over immigration policy.</p> <p>Brown last year signed sanctuary legislation limiting state and local cooperation with federal enforcement of immigration laws. U.S. Attorney General Jeff Sessions responded with a Department of Justice lawsuit seeking to invalidate three state laws protecting residents living in the country without documentation.</p> <p>Those pardoned Friday included Sokha Chhan and Phann Pheach, both of whom face deportation to Cambodia, a country ruled in the 1970s by the genocidal Khmer Rouge. Chhan was convicted of two counts of misdemeanor domestic violence in 2002 and served 364 days in jail.</p> <p>Pheach was convicted of possessing drugs and obstructing a police officer in 2005 and served six months in jail. His wife said he is in federal custody.</p> <p>Also pardoned was Daniel Maher, who was convicted in 1995 of kidnapping, robbery and being a felon in possession of a firearm and served five years in prison. Maher is facing deportation to China.</p> <p>Chhan, Pheach and Maher hold permanent U.S. residency but had exhausted all legal avenues to fight deportation, making Brown's pardons for them their last hope to stay in the U.S., Prasad said.</p> <p>"This is a life-changing, enormous event," he said.</p> <p>Also pardoned while facing deportation were Daniel Mena and Francisco Acevedo Alaniz, but their home countries were not immediately known. Mena was convicted in 2003 of possessing illegal drugs. Alaniz served five months in prison for a 1997 auto theft conviction.</p> <p>Brown on Friday also commuted the sentences of 14 others convicted of crimes.</p> <p>The governor is a former Jesuit seminarian and traditionally issues pardons close to major Christian holidays. Easter falls on Sunday.</p> <p>California's longest-serving governor has now issued 1,519 pardons, including 404 during his first two terms as governor from 1975 to 1983.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>03/30 Kentucky: cop killer suspect dead</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/kentucky-police-officer-gunned-suspected-cop-impersonator/story?id=54122297">http://abcnews.go.com/US/kentucky-police-officer-gunned-suspected-cop-impersonator/story?id=54122297</a>
<b>GIST</b>	<p>An off-duty police officer in a close-knit Kentucky community was gunned down on March 29 by a man who allegedly was pretending to be a cop.</p> <p>Here is what we know about the shooting, the manhunt and the slain officer.</p> <p>At about 5:10 p.m. Thursday, Hopkinsville police officer Phillip Meacham was off-duty and in his personal car but responding to a "potential criminal situation" when he was pulled over by a man pretending to be a police officer, according to police and the mayor of Hopkinsville.</p> <p>"Shortly after that" Meacham was shot, the Hopkinsville police said.</p> <p>The suspected gunman, 34-year-old James DeCoursey of Hopkinsville, fled on foot and stole a pickup truck, the Kentucky State Police said.</p> <p>Meacham, a married father of two, died at a hospital, authorities said.</p> <p>In the middle of the night, authorities zeroed in on the stolen truck in a restaurant parking lot in Clarksville, Tennessee, a city just across the border from Kentucky that's about 30 miles south of Hopkinsville.</p> <p>At about the same time, a call came in to police from a hotel across the street, reporting that a man who looked like the suspect was there asking for a cigarette, the Tennessee Bureau of Investigation said.</p> <p>Authorities were headed toward the hotel when two Montgomery County Sheriff's deputies and a U.S. Marshal came across DeCoursey walking across the street back toward the restaurant, the TBI said.</p> <p>It appeared DeCoursey "ignored repeated commands and the situation escalated," resulting in the officers firing at DeCoursey and killing him, the TBI said.</p> <p>No law enforcement officers were injured in that shooting, the TBI said.</p>

<b>HEADLINE</b>	<b>03/31 Escaped ICE detainee caught in Chicago</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/prisoner-escaped-ice-custody-jfk-airport-captured-chicago/story?id=54143321">http://abcnews.go.com/US/prisoner-escaped-ice-custody-jfk-airport-captured-chicago/story?id=54143321</a>
<b>GIST</b>	<p>The prisoner who escaped from immigration officials at John F. Kennedy International Airport earlier this week was captured halfway across the country on Friday.</p> <p>An Immigration and Customs Enforcement official confirmed Mohamadou Lamine Mbacke was taken into custody in Chicago Friday afternoon. Chicago ABC station WLS reported Mbacke was found while at a Starbucks at about 1:30 p.m.</p> <p>Mbacke, 31, was spotted by undercover officers at the coffee shop, according to a witness.</p> <p>"All of a sudden see seven cops kind of running from the outside into the inside, and they kinda huddled around him. There wasn't any fuss or anything, it was just they all exchanged words with him, they got the handcuffs, and they left in like a group huddle," Zimbo Gessert, a Starbucks employee, told WLS.</p> <p>Mbacke was being deported to his native Senegal on Tuesday night when he bailed from Terminal 4 at JFK Airport at about 8:30 p.m. According to ICE, surveillance footage showed Mbacke hailing a cab and</p>

	<p>driving off.</p> <p>The prisoner was with officials at JFK while waiting for a connecting flight from Detroit to Dakar. New York ABC station WABC, citing sources, said the officials had turned to get him food when he took off.</p> <p>It is not clear how he got to Chicago.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>03/31 Texas: woman gets 5yrs for illegal vote</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/texas-woman-sentenced-years-prison-illegally-voting-2016/story?">http://abcnews.go.com/US/texas-woman-sentenced-years-prison-illegally-voting-2016/story?</a>
<b>GIST</b>	<p>A trip to her local polling place may have earned a Texas woman five years behind bars.</p> <p>Crystal Mason was sentenced to five years in prison this week after she voted in the 2016 election while on parole, according to Dallas ABC affiliate WFAA. Mason was on parole after serving time for a federal tax crime, her lawyer said.</p> <p>"She had a good faith belief she could vote legally and she did so," Mason's attorney Warrent St. John told WFAA.</p> <p>The 43-year-old Mason says she had no idea she was committing a crime. Mason voted in Tarrant County, just west of Dallas.</p> <p>"She testified this week in court that she was never told by the federal judge she couldn't vote," St. John said. "She was never told by halfway house folks she couldn't vote."</p> <p>Mason did not want to speak when reached by WFAA, but she told The Dallas Morning News she "didn't even want to vote."</p> <p>Texas law states it is illegal for a felon to vote while serving their sentence, including while on parole.</p> <p>"Our society is built on personal responsibility," Tarrant County District Attorney Sharen Wilson said in a statement given to WFAA. "There were multiple safeguards in place to keep Crystal Mason from breaking the law, but she still made that choice."</p> <p>Mason has already appealed the conviction, WFAA reported.</p>

HEADLINE	<b>03/28 Audit: Portland police still w/gang list</b>
SOURCE	<a href="https://www.seattletimes.com/nation-world/audit-finds-portland-police-maintain-list-of-gang-members/">https://www.seattletimes.com/nation-world/audit-finds-portland-police-maintain-list-of-gang-members/</a>
GIST	<p>PORTLAND, Ore. (AP) — Portland police still maintain an informal list of active gang members despite discontinuing a formal gang designation practice following criticism from community advocates last year, according to a city audit.</p> <p>Portland auditors were examining the operations of the police bureau’s Gang Enforcement Team when they discovered that it has kept the list since 2015, The Oregonian/OregonLive reported Wednesday.</p> <p>The list that’s posted on the bureau’s intranet is not supervised and does not include a method for notifying subjects on it, auditors said. The list contains information of about 30 people, including their names, addresses, gang affiliations and details on their probation or supervision.</p> <p>The list is used to provide investigators with potential leads, ultimately aiming to prevent victimization and violence, said Sgt. Pete Simpson, a bureau spokesman.</p> <p>“The purpose is to identify people who have demonstrated that they are at risk for being involved in gang-related violence, based on recent involvement in such incidents,” Simpson said.</p> <p>The bureau ended a gang designation system last fall after about two decades of operation. Under that system, officers were required to record evidence that people met criteria to be on the list. Police also had to notify people on the list and provide an opportunity for them to appeal the designation.</p> <p>City Auditor Mary Hull Caballero said police need supervision over the active list, noting the 1994 ruling by a federal judge that prohibited Portland police from designating gang members without due process.</p> <p>Police Chief Danielle Outlaw said guidelines for the list will be drafted by July. The guidelines are expected to cover how police identify people for the list and how its information is used.</p> <p>“As a police agency, we remain committed to transparency and are willing to always pursue enhancements that benefit the bureau’s efforts in ensuring public safety in our service of the Portland community,” Outlaw said in a statement.</p>

HEADLINE	<b>03/28 Activists urge no settlement w/police claim</b>
SOURCE	<a href="https://www.thestranger.com/slog/2018/03/28/25968058/activists-urge-city-not-to-settle-police-officers-defamation-claim-against-kshama-sawant">https://www.thestranger.com/slog/2018/03/28/25968058/activists-urge-city-not-to-settle-police-officers-defamation-claim-against-kshama-sawant</a>

GIST	<p>The two Seattle police officers who fatally shot Che Taylor and later sued City Council Member Kshama Sawant for defamation withdrew their lawsuit in January.</p> <p>But officers Michael Spaulding and Scott Miller are still asking for damages over remarks Sawant made to win in 2016, alleging the council member defamed them when she called Taylor’s death a “brutal murder” involving “racial profiling.” Neither officer was charged for the shooting after a fact-finding inquest found they both feared for their lives before Taylor’s death.</p> <p>Last month, the officers filed a claim with the City of Seattle for an unspecified amount of damages over the same allegations. And this time, they want to settle the case out of court. Attorney Daniel Brown sent a letter to Council President Bruce Harrell on February 2 requesting mediation of the claims, rather than a court case, “in the hopes of resolving what would otherwise be a very public and costly dispute.” The city has until April 2 to respond to the claim, after which the officers would have the option of pursuing another lawsuit. Brown did not respond to a request for comment.</p> <p>Activists gathered at the steps of City Hall today to pressure officials not to pay the officers damages for their defamation claim. Andre Taylor, the brother of Che Taylor, said settling would set a dangerous precedent.</p> <p>“We cannot afford for Seattle to cave into the demands of officers’ hurt feelings,” Taylor said. “They weren’t injured. No one physically harmed them. My brother was physically harmed and killed.”</p> <p>Emerson Johnson, an organizer leading the effort known as the Kshama Sawant Solidarity Campaign, pointed out that the officers’ original lawsuit stated that they “do not want one red cent of public money.”</p> <p>Other community activists who spoke in support of Sawant included former mayoral candidate Nikkita Oliver, the Democratic Socialist of America’s Shaun Scott, and Jenn Kaplan, Seattle chapter president of the National Lawyers Guild. Sawant also spoke during the rally, but did not address the case, citing her lawyer’s advice.</p> <p>Free speech lawyers told Stranger reporter Heidi Groover in August that neither case stood a good chance of prevailing.</p> <p>Before the two officers dropped their lawsuit earlier this year, the City of Seattle agreed to represent Sawant over her comments about the Che Taylor shooting. That’s in addition to representing Sawant in a separate defamation case stemming from her calling the landlord Carl Haglund a “slumlord.” Lawyers for the city estimated that it may spend more than \$300,000 defending Sawant in the two cases.</p> <p>A spokesperson for the office of Finance and Administrative Services, which oversees claims against the city, did not immediately respond to request for comment.</p>

HEADLINE	<b>03/28 ACE Walla Walla deploy Puerto Rico</b>
SOURCE	<a href="http://www.union-bulletin.com/local_columnists/etcetera/corps-of-engineers-deploys-aid-to-puerto-rico/article_06687ece-32aa-11e8-8d0a-2b6c36c33ecc.html">http://www.union-bulletin.com/local_columnists/etcetera/corps-of-engineers-deploys-aid-to-puerto-rico/article_06687ece-32aa-11e8-8d0a-2b6c36c33ecc.html</a>
GIST	<p>Humanitarian work continues in Puerto Rico, where 19 U.S. Army Corps of Engineers Walla Walla District employees deployed this past week to support Federal Emergency Management Agency’s hurricane-recovery efforts.</p> <p>Hurricane Maria ravaged Dominica and Puerto Rico between Sept. 16-Oct. 2, doing an estimated \$91.6 billion in damage, according to 60 sources for an article on Wikipedia.</p> <p>The work after 183 days on March 22 includes 99.9 percent completed temporary blue roof installs on 59,469 eligible structures; 96 percent temporary emergency power with 2,057 tasks complete out of 2,149</p>

total sites; 96 percent completed debris management for 21 out of 55 municipalities completed and 3.75 million cubic yards out of 3.9 million cubic yards assigned.

Most customers in the island's regions are seeing 93.4 percent restoration to their power as the grid is repaired, except for Caguas, which stood at 73 percent customers with power.

Fifteen of the Walla Walla District Corps volunteers deployed with its temporary emergency power response team to support FEMA's nonfederal generator operations and maintenance mission. Four volunteered to provide support to FEMA's power grid restoration mission.

District emergency management officials added that a safety and occupational health specialist deployed to support FEMA's California wildfire recovery mission in Sonoma County in the wake of the October fires; and two engineers with expertise in cost estimation are providing reach-back support to FEMA missions from their offices in the District Headquarters in Walla Walla.

The volunteers come from duty locations around the District, including Walla Walla Headquarters; Ice Harbor Lock and Dam near Burbank; McNary Lock and Dam near Umatilla; Little Goose Lock and Dam near Starbuck; Lower Monumental Lock and Dam near Kahlotus; Dworshak Dam and Reservoir near Ahsahka, Idaho; and Lucky Peak Dam and Lake near Boise.

While deployed, volunteers are serving in such roles as contract specialist, area officer and mission liaison, and safety and quality assurance specialists, mission managers, electrical engineers and electricians.

In addition to having the technical knowledge and skills needed for a specific deployment position, employee-volunteers must have their supervisor's permission to deploy, meet FEMA and Corps training requirements and complete a medical screening to be approved to go.

<b>HEADLINE</b>	<b>03/29 State studying preparedness priorities</b>
<b>SOURCE</b>	<a href="http://www.spokesman.com/stories/2018/mar/29/state-studying-priorities-to-prepare-for-killer-qu/">http://www.spokesman.com/stories/2018/mar/29/state-studying-priorities-to-prepare-for-killer-qu/</a>
<b>GIST</b>	<p>Washington will spend about \$1.4 million in the next 15 months to start determining the top priorities for protecting institutions and buildings against a major earthquake or tsunami.</p> <p>They are looming catastrophes the state can anticipate, but not predict.</p> <p>Or as Gov. Jay Inslee put it Wednesday during a meeting of state and local officials, it's something you know is going to happen sometime: "It's like the Mariners winning the World Series. You just don't know what year it's going to be."</p> <p>Historically, the Cascadia Subduction Zone of the Pacific Coast has had a catastrophic quake every 200 to 600 years, and the last one was 318 years ago.</p> <p>"That puts us right in the middle of the window," said Robert Ezelle, director of the state Emergency Management Division.</p> <p>The state's entire Pacific Coast, which has about 200,000 people during the tourist season, is a tsunami zone, he said. It also has schools on the lowlands that aren't built with shelters to be above the waves, and would be difficult to evacuate to higher ground.</p> <p>A Cascadia quake of 9.0 magnitude, and the following tsunami, would likely do the most damage. It's estimated at \$49 billion in Washington alone, Ezelle said, with recovery taking years.</p> <p>But other geologic faults on both sides of the state have the potential for significant destruction, particularly for buildings that aren't built to current standards. Those faults pose a significant risk too,</p>

Ezelle said. Over the next 50 years, there's an 80 percent chance of a destructive quake in one of those faults, compared with a 10 to 20 percent probability of a Cascadia Subduction Zone quake.

Among the buildings most at risk would be unreinforced masonry buildings, or URMs, where ceilings and floors can collapse and the exteriors could fall on pedestrians or into the street, blocking traffic. An estimated 185,000 buildings could be vulnerable, including many historic buildings throughout the state that haven't been updated.

Again, schools are a problem.

The state has 200 school buildings within a mile of a geologic fault, said Corina Forson, chief hazard geologist for the Department of Natural Resources. It has 214 in high to moderate liquefaction zones, where the ground can "liquefy" in the tremors of a major quake.

The money from the capital budget is going to fix those problems. Retrofitting a single school can cost millions of dollars, said Alicia Henderson, superintendent of the Aberdeen School District. Her district has several schools in the tsunami zone.

The \$1.4 million will be spent to understand the scope of the problem and set priorities for where the state can best spend money in the future to prepare for quakes that will come sometime.

HEADLINE	03/29 Japan opens talks w/NKorea
SOURCE	<a href="https://www.wsj.com/articles/japan-opens-talks-with-north-korea-1522304420">https://www.wsj.com/articles/japan-opens-talks-with-north-korea-1522304420</a>
GIST	<p>TOKYO—Japan said it has begun talks with North Korea through its embassy in Beijing, a sign that Tokyo doesn't want to be left on the sidelines in the recent flurry of diplomacy.</p> <p>North Korean leader Kim Jong Un visited Beijing this week for talks with Chinese President Xi Jinping. Mr. Kim is also set to meet South Korean President Moon Jae-in in April, followed by a planned summit with President Donald Trump.</p> <p>On Thursday, Prime Minister Shinzo Abe's top aide, Chief Cabinet Secretary Yoshihide Suga, said that Tokyo-Pyongyang talks have begun through the two countries' embassies in Beijing as well as through "various means." He declined to give details.</p> <p>That followed a phone call March 16 in which Mr. Abe told Mr. Moon that Tokyo wanted to talk to North Korea.</p> <p>Mr. Suga disclosed the talks when asked about a report in Japan's Asahi newspaper that North Korea's ruling party told party cadres a summit meeting between Messrs. Kim and Abe might take place in early June in Pyongyang. The Asahi said the association of North Korean residents in Japan, known as Chongryon, was serving as an intermediary for the Japan-North Korea talks, a role it has often played in the past.</p> <p>A Chongryon spokesman said the story was "not worth commenting on."</p> <p>Asked about a possible summit between North Korea and Japan, China Foreign Ministry spokesman Lu Kang didn't respond directly but said Beijing hopes that such interactions will proceed smoothly and bolster regional peace and stability.</p> <p>Japan shares the concerns of its main ally, the U.S., about North Korea's development of missiles and nuclear weapons. Tokyo also wants to raise with Pyongyang the issue of Japanese abducted by North Korea in the 1970s and 1980s.</p>

	Speaking in Parliament on Wednesday, Mr. Abe acknowledged in response to a question that Japan could be left behind in the diplomatic rush and that the abductee issue—which he called “the most important item for Japan”—could get ignored. To prevent that, he said he would convey Japan’s views at an April meeting in Washington with Mr. Trump.

<b>HEADLINE</b>	<b>03/29 NBA game w/heavy police presence</b>
<b>SOURCE</b>	<a href="https://apnews.com/d4e5e3b79b414bd68fefdb27c8f2289d/The-Latest:-Police-will-protect-NBA-game-from-protesters">https://apnews.com/d4e5e3b79b414bd68fefdb27c8f2289d/The-Latest:-Police-will-protect-NBA-game-from-protesters</a>
<b>GIST</b>	<p>SACRAMENTO, Calif. (AP) — The Latest on the fatal shooting of an unarmed man in Sacramento, California (all times local):</p> <p>8:10 p.m.</p> <p>The Sacramento Kings say there will be a heavy police presence to keep protesters from blocking fans from entering the team’s arena for a third time.</p> <p>Demonstrators upset by the fatal shooting of an unarmed black man by police in California’s capital earlier this month twice prevented thousands of fans from entering Golden 1 Center. Team members and owners supported the protest at another game, with members donning warm-up T-shirts honoring 22-year-old Stephon Clark.</p> <p>His funeral is Thursday at a Sacramento church.</p> <p>The team warned Wednesday night that they and Sacramento police are committed to avoiding another disruption for fans at Thursday night’s game with the Indiana Pacers.</p> <p>That will include a significant police presence around the arena, with security and ticket checks at the outskirts of the team’s property.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>03/29 More armed security officers in schools</b>
<b>SOURCE</b>	<a href="https://apnews.com/8609138b5c2a43588658c58ea83af887/Study:-Armed-security-officers-are-on-the-rise-in-US-schools">https://apnews.com/8609138b5c2a43588658c58ea83af887/Study:-Armed-security-officers-are-on-the-rise-in-US-schools</a>
<b>GIST</b>	<p>WASHINGTON (AP) — Armed security officers are becoming more prevalent at America’s schools, according to a federal study released Thursday amid a heated debate over whether teachers and other school officials should carry guns.</p> <p>Armed officers were present at least once a week in 43 percent of all public schools during the 2015-16 school year, compared with 31 percent of schools a decade before, according to data from a survey conducted by the National Center for Education Statistics.</p> <p>Last month’s mass shooting at a Florida high school put renewed focus on the role of armed school security guards, after a video showed that a sheriff’s deputy at the school approached but did not enter the building where the attack was taking place.</p> <p>The study came out a day after Education Secretary Betsy DeVos kicked off a federal school safety panel. DeVos has said that schools should have the option to arm teachers. She’s being criticized by teachers’ unions for not including educators, students and experts in the panel, which consists only of her and three other Cabinet secretaries.</p> <p>The percentage of schools with a security guard, a school resource officer or other sworn law enforcement</p>

officer on campus at least once a week has gone up from 42 percent in 2005-06 to 57 percent a decade later. While security at schools of all grade levels increased, the shift is clearer among elementary schools, where the share with security staff has gone from 26 percent to 45 percent in the same time period.

“There has been an increase in security staff in school over the last 10 years and it’s more pronounced at the primary school level,” said Lauren Musu-Gillette, lead author of the report.

Experts, however, are divided on whether putting such officers on school campuses will make the schools safer or frighten children and lead to more arrests.

School resource officers are sworn law enforcement personnel who have been trained to work in schools. Their duties include controlling outside traffic, patrolling the school, maintaining discipline, identifying problems and mentoring at-risk students, teaching law-related classes and serving as liaisons between schools and police. The school security study released Thursday includes school resource officers, other sworn law enforcement and additional security staff.

Ronald Stephens, executive director of the National School Safety Council, agrees, saying that trained officers carrying weapons can help prevent a shooting inside the school and deter a possible shooter from entering.

“It sends the signal that the school is being watched and that the care and supervision of children is an important priority,” Stephens said.

Others have questions.

A 2013 congressional report found that the available research “draws conflicting conclusions about whether SRO programs are effective at reducing school violence.”

<b>HEADLINE</b>	<b>03/29 Neighbors reported family before crash</b>
<b>SOURCE</b>	<a href="https://apnews.com/cbb50639639b41a29cf6a07bd81c056b/The-Latest:-6-kids-believed-to-be-in-SUV-that-went-off-cliff?utm_campaign=SocialFlow&amp;utm_source=Twitter&amp;utm_medium=APWestRegion">https://apnews.com/cbb50639639b41a29cf6a07bd81c056b/The-Latest:-6-kids-believed-to-be-in-SUV-that-went-off-cliff?utm_campaign=SocialFlow&amp;utm_source=Twitter&amp;utm_medium=APWestRegion</a>
<b>GIST</b>	<p>MENDOCINO, Calif. (AP) — The Latest on a family who died when their SUV plunged off a cliff in California (all times local):</p> <p>5:35 p.m.</p> <p>A Washington state couple who lived next door to a family whose SUV plunged off a California cliff say they called authorities because they were concerned that one of the children was going hungry.</p> <p>Bruce and Dana DeKalb said Wednesday that they called child welfare officials Friday after becoming concerned that one of the children, Devonte Hart, had been coming to their house too often in the past week asking for food.</p> <p>Devonte gained widespread attention when he was photographed hugging a white officer during a 2014 protest over a fatal police shooting of a black man.</p> <p>Property records show married couple Jennifer and Sarah Hart and their children bought the two-story home in Woodland, Washington, on two acres with a fenced pasture in May 2017.</p> <p>The DeKalbs recounted a night three months after the family moved in when one of the girls rang their doorbell at 1:30 a.m.</p>

Bruce DeKalb says she “was at our door in a blanket saying we needed to protect her. She said that they were abusing her.”

---

5 p.m.

Authorities in Northern California say they believe all six children from a family were in a vehicle that plunged off a coastal cliff.

Mendocino County Sheriff Tom Allmon told reporters Wednesday that only three bodies of the children have been recovered. Their parents also died Monday.

He says specialized crash investigators are studying the scene for clues, but it’s very curious because there were no skid or brake marks. But Allmon says there’s no reason to believe the crash was a deliberate act.

The sheriff appealed for the public’s help in retracing where the family had been in recent days.

Allmon says a passer-by called 911 about the crash, but investigators don’t know exactly when the SUV plunged into the ocean. He says “an entire family vanished and perished during this tragedy.”

---

3:50 p.m.

One of three children who is missing after their siblings and parents were killed when their SUV plunged off a California cliff had gained fame when a picture of him hugging a white police officer during a protest went viral.

Fifteen-year-old Devonte Hart, who is black, was photographed during a 2014 protest in Portland, Oregon, over a grand jury’s decision not to indict a police officer in the shooting of a black man in Missouri.

Authorities say two women and three children were killed Monday when their SUV fell 100 feet from a cliff along Pacific Coast Highway in Mendocino County.

At the Portland rally Hart stood crying out of sadness over the events in Ferguson. He was holding a “Free Hugs” sign.

A Portland policeman saw his sign and asked if he could have a hug. The photo showed an emotional Devante embracing the officer.

---

3:20 p.m.

A woman who died when her family plunged off a Northern California cliff in an SUV pleaded guilty to a domestic assault charge in Minnesota in 2011.

Online court records say Sarah Hart’s plea in Douglas County, Minnesota, also led to the dismissal of a charge of malicious punishment of a child. No other details were immediately available.

The California Highway Patrol says she and another woman died along with their three children when their vehicle went off a cliff Monday. Their three other children are missing, and searchers are scouring the region.

—  
2 p.m.

Authorities say they're searching for three children who are unaccounted for after their siblings and parents plunged off a Northern California cliff.

The California Highway Patrol said Wednesday that 19-year-old Markis Hart, 14-year-old Jeremiah Hart and 14-year-old Abigail Hart died along with their parents, Jennifer and Sarah Hart.

Their SUV plunged 100 feet from the Pacific Coast Highway onto rocks in the ocean Monday.

Highway patrol says the couple's three other children haven't been found and searchers are scouring the region. They're using boats, aircraft and unmanned drones to look for 16-year-old Hannah Hart, 15-year-old Devonte Hart and 12-year-old Sierra Hart.

The family lived in Woodland, Washington, a suburb of Portland, Oregon.

California authorities say the family appeared to be on a short road trip because many belongings remained in the home along with chickens and a pet.

—  
1:40 p.m.

Authorities say child welfare officials in Washington state had recently visited the home of two women who died along with three children when their vehicle plunged off a cliff in Northern California.

The California Highway Patrol identified the adult victims Wednesday as Jennifer Hart and Sarah Hart, both 39. The agency says their SUV was driving Monday on the Pacific Coast Highway when it pulled into a dirt turnout and continued driving off the cliff.

Clark County sheriff's Sgt. Brent Waddell told The Associated Press that the family lived in Woodland, Washington, and recently had a visit from Child Protective Services.

He says the sheriff's office later entered the house and found no obvious signs of trouble or violence.

<b>HEADLINE</b>	<b>03/28 Diabetes: most expensive health condition</b>
<b>SOURCE</b>	<a href="https://health.usnews.com/health-care/for-better/articles/2018-03-28/diabetes-our-nations-most-expensive-health-condition">https://health.usnews.com/health-care/for-better/articles/2018-03-28/diabetes-our-nations-most-expensive-health-condition</a>
<b>GIST</b>	<p>The statistics are staggering: 1 in 11 Americans has diabetes; nearly 1 in every 2 adults has diabetes or prediabetes; and more than 300 million work days are lost to the economy due to diabetes. Diabetes is a disease that requires rigorous self-management and additional health care services and tools, and its heavy economic burden threatens the American economy.</p> <p>As detailed in the American Diabetes Association's new "Economic Costs of Diabetes in the U.S. in 2017" report, 1 in every 4 health care dollars spent in 2017 (24 percent) was for the care of people with diabetes, and 1 of every 7 health care dollars (14 percent) can be attributed directly to care for diabetes. In 2017, \$327 billion was spent on diagnosed diabetes. During our March 22 audience with Sens. Susan Collins and Jeanne Shaheen to release the report, it was clear the report's results sound the alarm bell once again about the devastating fiscal impact of diabetes on our nation: \$237 billion in direct medical costs and \$90 billion in reduced productivity; plus, diabetes resulted in 277,000 premature deaths.</p>

According to a 2016 report in the Journal of the American Medical Association, at \$327 billion annually, diabetes exceeds the costs of the other top five health care costs: cardiovascular diseases (\$231 billion); other noncommunicable diseases (\$192 billion); mental and substance abuse disorders (\$188 billion); musculoskeletal diseases (\$184 billion); and injuries (\$168 billion).

In 2017, America spent \$327 billion on both direct and indirect expenses for diagnosed diabetes. These costs are passed to each one of us, regardless of whether or not we have diabetes. Each of us contributes to covering these costs in the form of higher health insurance premiums, additional taxes, reduced earnings and reduced standard of living.

Since the 1990s, research advances resulting in reduced morbidity and mortality are impressive, and we have significantly improved the care and outcomes for people with diabetes – the vast majority of whom are living longer, healthier lives with diabetes. However, our research advances are tempered by the fact that the overall global burden of the disease is projected to increase by 48 percent by 2045. In the U.S., another individual is newly diagnosed with diabetes every 21 seconds (4,110 people today). And diabetes is the seventh leading cause of death in America, killing more people than AIDS and breast cancer combined.

We must heed the warnings of the scientific evidence before us – diabetes is our nation's most expensive health condition. We must take action to reduce both the incidence and prevalence of diabetes, thereby reducing its costs.

<b>HEADLINE</b>	<b>03/28 America is on the move again</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/best-states/articles/2018-03-28/america-is-on-the-move-again-and-this-is-where-theyre-going">https://www.usnews.com/news/best-states/articles/2018-03-28/america-is-on-the-move-again-and-this-is-where-theyre-going</a>
<b>GIST</b>	<p>No, Texas. Everyone doesn't want to move there, despite population trends showing that six of the 10 fastest-growing counties in the country are in the Lone Star State. Same goes for you, Arizona. Sure, you're growing, but not at the rate you were prior to the Great Recession. And California? You're only getting bigger at a faster rate than the national average because of immigration. You're actually losing more residents than you're gaining from migration from other states.</p> <p>U.S. Census numbers released recently show a shift in America's population to the Sunbelt, with states such as Texas, Utah, Florida, Colorado and Nevada showing double-digit growth in population from July 2010 to July 2017, with Southern and Western states such as Arizona, California, Georgia and the Carolinas growing at a rate faster than the 5.3 percent national average. But a closer look at the numbers indicates that the trends are more nuanced than a simple shift from the post-industrial Northeast and Midwest to warmer climes, demographers say.</p> <p>True, "the biggest-gaining metro areas are in the Sunbelt. But in many of these areas, the gains this year are not as big as they were in last year's (Census report)," says William Frey, a demographer with the Brookings Institution. "A lot of these places did not do very well during the recession" and are just picking up now, he says.</p> <p>People move for myriad reasons, experts note. The job market is a key driver, with people (especially more mobile younger workers) gravitating to places where they can find work. Housing costs both attract and repel would-be residents. And retirement has older people looking at places to spend their golden years – often in sunnier states, but in recreation-friendly areas like Bozeman, Montana (one of the fastest-growing micropolitan (smaller metro) areas in the country, from July 2016-17) or parts of outdoorsy New England.</p> <p>What's affecting all of those categories now, population analysts say, is the end of the Great Recession. Young people, burdened with student debt and unable to find jobs tended to stay put during the economic</p>

downturn (perhaps very local, as in their parents' basements). But now they are able to move for job opportunities, notes Kenneth Johnson, senior demographer at the Carsey School of Public Policy and professor of sociology at the University of New Hampshire. Retirees were also economically hamstrung, their 401(k)s suffering and with little ability to get a part-time job to supplement their retirement incomes.

The booming economy and strong housing market has released that pent-up demand, Johnson says. The current trends "reflect the start of a return to the migration patterns that were common before the Great Recession. The flow to the South had been fairly noticeable prior to the recession, and slowed down" during it, he explains.

"That kind of frozen-up migration that wasn't happening during the recession is making people, especially millennials, much more footloose than they were before," Frey says. "They may be spreading out a bit to other parts of the country more than they were before."

The result? For the one-year period ending July 2017, six Texas counties (Harris, Tarrant, Bexar, Dallas, Denton and Collin) were among the top-10 population gainers in numeric terms, according to the Census bureau. Maricopa County, Arizona, Clark County, Nevada, and Riverside County, California, took the first three spots, while King County, Washington, came in fourth. In terms of percentage growth, Texas dominates again, with three counties Comal (second), Hays (fourth) and Kendall (fifth) making the top 10. Counties in Virginia, Florida, Georgia and Utah made up the rest of the leaders in percentage growth.

Longer-term, trends indicate a move to the South and West as well. Statewide, Texas grew by 12.1 percent from 2008-17, while during that period Nevada expanded by 10.9 percent; Utah, by 11.8 percent; Colorado, by 11.1 percent; Arizona, by 9.5 percent, North Carolina, by 7.3 percent and South Carolina, by 8.4 percent.

Meanwhile, states like New York, Ohio, Pennsylvania and Michigan are growing more slowly than the 5.3 percent U.S. average (Illinois has actually lost population in absolute terms), part of a long-term trend reflecting the decline of the old industrial and manufacturing economies that long dominated the Northeast-Midwest region.

But it's not accurate to conclude that the population is flocking to the Sunbelt, experts say. Arizona, for example, is getting more populous (Maricopa County, where Phoenix is located, added the biggest number of resident from July 2016-July 2017, and Phoenix last year overtook Philadelphia as the nation's fifth-largest city). But growth in the state has not rebounded to the levels it was in the 1990s and early 2000s, says Tom Rex, associate director of the Center for Competitiveness and Prosperity Research at Arizona State University and an expert on Arizona demographics.

"What we are seeing here in the Phoenix area is a fair number of people moving here of retirement age, but not as many as you'd expect given the huge number of potential" retirees, Rex says. Meanwhile, the region is not attracting as many young people, since there aren't as many new jobs as there once was, he adds. Rex attributes that to the state's poor record on education (U.S. News' Best States ranking put Arizona at 43rd place in education), which leaves businesses with a less-prepared workforce.

#### The Coming Keystone of the South

Other states in the region, too, are not growing as much as they did pre-recession and are adding residents for different reasons. The nation's most populous state, California, continues to grow at a better-than-average rate (5.9 percent from 2008-17) despite its high housing costs. But it's because of new people from other nations, says Texas State Demographer Lloyd Potter. California is losing more residents than it is gaining from domestic migration, and is only growing because of immigration, Potter says.

And Texas? Chalk it up to big families. About half of Texas's growth comes from the fact that births well outnumbered deaths during that period, Potter says. "Texas is a pretty young state, in terms of our age structure, and we're also a minority-majority state," meaning bigger families, Potter explains. "And so the result is, we have a pretty healthy natural increase" in the population.

Both Hispanics and African-Americans in the United States have higher birth rates than white Americans, according to the Pew Research Center. "When you look at Texas and see how much we're growing, it's not as simple as everyone moving here from other states," Potter says.

Still, the population shifts will mean more than bragging rights for the Sunbelt if the trends continue. The 2020 Census will decide how many congressional districts – as well as electoral votes, in the presidential election – each state will receive. And that, demographers note, is where the Sunbelt can flex its most powerful muscle.

<b>HEADLINE</b>	<b>03/28 Clark family wants action, not sympathy</b>
<b>SOURCE</b>	<a href="http://time.com/5218459/stephon-clark-sacramento-shooting-family-funeral/?xid=homepage">http://time.com/5218459/stephon-clark-sacramento-shooting-family-funeral/?xid=homepage</a>
<b>GIST</b>	<p>(SACRAMENTO, Calif.) — A blinding national spotlight is shining on the family of Stephon Clark, the 22-year-old unarmed black man killed by Sacramento police last week.</p> <p>“You don’t know what it’s like until you experience it,” Clark’s uncle, Curtis Gordon, told The Associated Press in an interview Tuesday. “You can see it on TV, it’s totally OK to deal with those realities when it’s just through a television and they’re not in your home. It’s different now.”</p> <p>Television cameras and national media were there Monday for a news conference where Gordon supported Clark’s grandmother, who sobbed uncontrollably as she recounted the shooting and asked why something significantly less lethal than a barrage of 20 bullets could not have been used by police.</p> <p>They were there Tuesday morning when the city’s first black police chief pleaded for calm after more than a week of unrest and later in the day when Clark’s brother and supporters disrupted a City Council meeting and then demonstrators for a second time blocked thousands of NBA fans from entering the arena for the hometown Kings game.</p> <p>They will be there Wednesday for Clark’s wake and on Thursday when the Rev. Al Sharpton plans to give the eulogy at Clark’s funeral.</p> <p>For all the angst and raw emotions, grieving and weary family members are skeptical that any substantive change will result before the next young black man dies from police gunfire and siphons away the national media and banner headlines.</p> <p>“So we appreciate the conversation, but conversation without implementation of some true reformation means nothing,” Gordon said. “It brought us to this moment, but what about tomorrow? What about next week?”</p> <p>“You know, sadly, I have no confidence in America and the fact that I will probably hear another story sometime this year of an innocent life lost over excessive police force. It’s so common, you’re numb to it.”</p> <p>Clark was killed March 18 when two Sacramento police officers responding to a report of someone breaking car windows fatally shot him in his grandparents’ backyard. Police say they believe Clark was the suspect and he ran when a police helicopter responded, then did not obey officers’ orders.</p> <p>Police say they thought Clark was holding a gun when he moved toward them, but he was found only with a cellphone.</p> <p>The California attorney general’s office on Tuesday joined the investigation, a move Sacramento Police Chief Daniel Hahn said he hopes will bring “faith and transparency” to a case that he said has sparked “extremely high emotions, anger and hurt in our city.”</p> <p>Attorney General Xavier Becerra’s office will provide oversight of the investigation and conduct a review</p>

of the police department's policies and use-of-force training. The decision of whether to bring criminal charges against the officers involved remains with District Attorney Anne Marie Schubert, although Becerra said his office could also bring charges.

Clark's family is skeptical that the investigation will provide appropriate results, Gordon said.

"It's all talk at this point," he said. "Show me."

African-Americans have been dealing with implicit and explicit bias for centuries, Gordon said. Many factors play a role but he said one necessity is for police forces to do a better job weeding out those who should not be officers.

<b>HEADLINE</b>	<b>03/28 Calif. officials: can share info w/DHS</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/28/california-sanctuary-law-exception-police-can-shar/">https://www.washingtontimes.com/news/2018/mar/28/california-sanctuary-law-exception-police-can-shar/</a>
<b>GIST</b>	<p>California officials issued new guidance Wednesday making clear state and local police can — and should — share information about illegal immigrants with the federal Homeland Security Department, in what amounts to a major exception to the state's new sanctuary laws.</p> <p>Police and sheriff's departments are still banned from asking about someone's immigration status and cannot hold illegal immigrants at the request of U.S. Immigration and Customs Enforcement. But in instances where they do have information on legal status they are required to share it, as required by federal law, the new guidance says.</p> <p>"This provision does not prohibit inquiries into an individual's immigration status to immigration authorities, or exchanging immigration status information with any other federal, state, or local government entity," Kevin Gardner, the chief of the state Department of Justice's law enforcement division, wrote in two new memos.</p> <p>The new guidance also seems to give Orange County the go-ahead for its new policy, where the sheriff is now posting the release dates of all of its jail inmates online. Since the information is publicly available, Orange County can also flag it for ICE, analysts said.</p> <p>And the guidance says state and local cops can respond to calls for assistance from federal immigration officials, as long as there's some state law that's also being policed at the time.</p> <p>That new caveat could help smooth out some early problems that have arisen with local police refusing to respond to drunken drivers or highway chases the Border Patrol has called in.</p> <p>"In these limited circumstances, a California law enforcement officer may assist any law enforcement official, even if those officials are engaged in immigration enforcement, but only when the California law enforcement officer is enforcing state law," Mr. Gardner wrote — though he warned that shouldn't be used as a loophole to enforce broader immigration laws.</p> <p>Beyond those exceptions, the guidance does rule out much of the cooperation that used to exist between federal immigration authorities and state and local cops.</p> <p>California deputies and officers cannot participate in joint task forces that involve immigration enforcement — which could end some anti-gang efforts — nor can they take part in the 287(g) program that would deputize them to help identify and oust illegal immigrants.</p> <p>State Sen. Kevin de Leon, who was a driving force behind the sanctuary law, known as SB54, said the new guidance should deflate some of the arguments against the policy.</p>

<b>HEADLINE</b>	<b>03/28 Judge tosses Seattle landlord law</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/940813/seattle-landlord-law-fails-court/">http://mynorthwest.com/940813/seattle-landlord-law-fails-court/</a>
<b>GIST</b>	<p>A controversial City of Seattle ordinance that required landlords to rent to the first qualified applicant was overturned in King County Superior Court Wednesday.</p> <p>Judge Suzanne Parisien ruled that the measure amounted to an “uncompensated taking” by government because it eliminated a property owner’s discretion to choose a renter.</p> <p>The judge, in granting the plaintiffs’ request for summary judgement, noted that while the city council-approved ordinance had a worthwhile goal of thwarting renter-discrimination, it didn’t “directly and materially advance the city’s interest in preventing discrimination because it precludes the use of landlord discretion.”</p> <p>Pacific Legal Foundation attorney Ethan Blevins, who represented a group of landlords opposing the rule, hailed the ruling as a victory for small landlords.</p> <p>“Today’s ruling is a major victory for property rights and our clients, who can once again make basic judgment calls over who will live on their property,” he said. “A landlord isn’t just a convenience store where customers come and go within minutes. They have long-term relationships with their tenants, and they deserve the chance to decide who those tenants will be.”</p> <p>“The court’s ruling today is a major relief for Seattle’s small landlords who just want to protect their investment and decide who they are comfortable renting to,” Blevins said.</p> <p>John Schochet, spokesman for Seattle City Attorney Pete Holmes, said the city is “disappointed” in the ruling and that it will decide whether or not to appeal in coming days.</p>

<b>HEADLINE</b>	<b>03/28 Low funding school quake assessments</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/940602/school-earthquake-assessment-funding/">http://mynorthwest.com/940602/school-earthquake-assessment-funding/</a>
<b>GIST</b>	<p>The chance of a Nisqually-size earthquake striking the Pacific Northwest is around 86 percent in the next 50 years.</p> <p>There’s a 10-20 percent chance Cascadia event that will cause an earthquake of magnitude 8.7 or higher in next 50 years.</p> <p>On Wednesday, March 28, Gov. Inslee was told by experts that 72 percent of Washington’s K-12 public schools are at “high or very high seismic risk.” About 200 are within 1 mile of an active fault.</p> <p>The good news is the Legislature recently approved \$1.2 million to assess school building safety.</p> <p>But Inslee wanted to know when the assessment is complete, will the state know what are the most vulnerable school buildings?</p> <p>The answer is no.</p> <p>“We will be in a position to start doing that,” Inslee was told. “We really need to look at a larger sample size in order to make that and have a really educated estimate for the whole entire state. We’ll be closer to making that estimate, but with only 220 school buildings of over 4,000 school buildings, we really can’t say for certain what that means for the entire state. So I think we’re going to need another few years before we make a meaningful extrapolation.”</p>

<p><a href="#">Return to Top</a></p>	<p>The state will need \$10 million to \$15 million just to complete the preliminary assessment of school buildings. That work won't be complete for 10 to 20 years at the rate it's currently funded, according to information presented to the governor.</p> <p>A comprehensive assessment of all public school buildings would cost \$50 million to \$75 million. At the current funding rate, that work wouldn't be complete for at least 100 years.</p> <p>Of course, the more funding the faster the work.</p> <p>However, locally funded projects are happening. Seattle, for example, has done a comprehensive engineering assessment of more than 100 school buildings. The cost to retrofit them ranges from \$4,500 to more than \$7 million.</p> <p>Unfortunately, not all areas are as wealthy as Seattle.</p> <p>Earlier this week, a new study was released that found a magnitude 9.0 earthquake could cause up to a 60-foot wave that would hit several coastal communities and even flow into Aberdeen.</p> <p>There are 37 school campuses within tsunami zones, according to state officials. For school districts such as Aberdeen, the need for additional funding for capital projects is real, but not an easy ask.</p> <p>Earthquake expert Lucy Jones was in Seattle last week to discuss Los Angeles' Resilience by Design program. She told GeekWire that California's San Andreas Fault has a worse worst-case scenario going for it than a Cascadia quake in Washington. However, the Cascadia threat is likely underestimated, even with all the hype around it.</p> <p>At least in the next decade the state will know what schools it should have reinforced for the "Big One."</p>

<b>HEADLINE</b>	<b>03/29 Australia passes critical infrastructure bill</b>
<b>SOURCE</b>	<a href="http://www.zdnet.com/article/government-passes-critical-infrastructure-national-security-bill/">http://www.zdnet.com/article/government-passes-critical-infrastructure-national-security-bill/</a>
<b>GIST</b>	<p>Australia's Parliament has passed the Security of Critical Infrastructure Bill in what the government called a bid to protect the electricity, gas, ports, and water sectors from "foreign involvement" that could lead to espionage, sabotage, and coercion, and giving ministers the power to direct companies to conduct risk mitigation actions.</p> <p>The legislation [PDF] was designed for the purpose of increasing the federal government's capacity to manage national security risks arising as a result of offshore and overseas involvement and control over infrastructure.</p> <p>According to a statement by Minister for Home Affairs Peter Dutton, while foreign involvement has "an important and beneficial role in supporting our national economic growth", it opens up Australia's infrastructure to more risk.</p> <p>"This legislation establishes a register of Australia's highest-risk critical infrastructure assets, including information on asset ownership, access, and control," Dutton said on Thursday.</p> <p>"It introduces a ministerial directions power that allows the government to take action where a risk cannot otherwise be mitigated which will significantly enhance the Critical Infrastructure Centre's capacity to assess and manage complex risks."</p> <p>The latter power will be used to "seek information and issue directions to owners and operators of critical assets in the high-risk sectors when a there is a risk that is prejudicial to security that cannot otherwise be</p>

	<p>mitigated", the revised explanatory memorandum [PDF] explains.</p> <p>Under s32(2), the Australian Security Intelligence Organisation (ASIO) can provide advice to the minister in the form of a security assessment, with the minister then able to "direct critical infrastructure owners or operators to do or not do a certain thing to mitigate a risk that has been identified as prejudicial to security".</p> <p>Such directions would be based on addressing any security risks set out by the ASIO's adverse security assessment.</p> <p>However, s32(3)(c) provides that the minister not give directions unless "an adverse security assessment in respect of the entity has been given to the minister for the purposes of this section".</p> <p>"The 'last resort' directions power could be used to direct asset owners and operators to undertake or refrain from certain actions," Finance Minister Mathias Cormann said during the Bill's second reading speech.</p> <p>"Importantly, this power is limited to instances where: There is a risk identified which is prejudicial to security; through collaboration, the owner or operator does not or cannot implement mitigations to address the risk; and there are no existing regulatory frameworks that can be used to enforce mitigations."</p>

<b>HEADLINE</b>	<b>03/28 Judge dismisses travel ban challenge</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/28/judge-dismisses-class-action-challenge-travel-ban/">https://www.washingtontimes.com/news/2018/mar/28/judge-dismisses-class-action-challenge-travel-ban/</a>
<b>GIST</b>	<p>A federal judge in Washington who had been a thorn in the side of the Trump administration reversed course Tuesday and ruled she could not force the State Department to grant visa lottery approvals to would-be immigrants from Iran and Yemen.</p> <p>The complicated case doesn't directly challenge President Trump's travel ban, but it does deliver a rare lower-court legal victory on one aspect of the ban, which has restricted visits and immigration from a number of majority-Muslim nations.</p> <p>Judge Tanya Chutkan ruled that the government had managed to run out the clock on would-be immigrants from Yemen and Iran, and there is no longer anything she can do to preserve their pathway to immigration.</p> <p>"There is no longer any meaningful relief this court can provide. Therefore, it must dismiss this case as moot," she wrote.</p> <p>The case had been at the nexus of two controversial policies: Mr. Trump's travel ban and the diversity visa lottery, which doles out immigration passes based on chance.</p> <p>The plaintiffs — citizens of Iran and Yemen — managed to win the lottery in fiscal year 2017, meaning their names were picked out of millions of people who entered for some of the 50,000 slots.</p> <p>But before they had a chance to finish the process Mr. Trump imposed his travel ban, which in its original form denied entry to people from Iran, Iraq, Libya, Somalia, Syria, Sudan and Yemen.</p> <p>The lottery winners argued their spots should be preserved so they could claim them once the ban expired or was ruled illegal. And for a time, Judge Chutkan sided with them, ordering the government to hold open spots.</p> <p>But after Mr. Trump released a third — and current — version of the travel ban, the Supreme Court</p>

	<p>dismissed challenges against the previous versions without ruling on the legality.</p> <p>Judge Chutkan said that without a final ruling of illegality from the justices, and with the new fiscal year 2018 already begun, she no longer had the power anymore to order the State Department to admit people who'd won in the 2017 lottery.</p> <p>"Given the Supreme Court's decision to moot the challenges to the Executive Order and its decision not to rule on the legality of the Executive Order, events have "outrun the controversy," she wrote.</p>

<b>HEADLINE</b>	<b>03/29 Aging Seattle based cutter faces repairs</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/aging-seattle-based-coast-guard-cutter-getting-much-needed-repairs">http://komonews.com/news/local/aging-seattle-based-coast-guard-cutter-getting-much-needed-repairs</a>
<b>GIST</b>	<p>SEATTLE - Our country's only heavy ice breaker has made its way back home to Seattle for yearly maintenance.</p> <p>But these days, it spends far more time being worked on, than at sea.</p> <p>While the mighty hull of the Polar Star is still able to cut through up to 20 feet of ice -- crews said the insides are showing their 45 years.</p> <p>"It's extremely hard to keep the aging ship active," said Commanding Officer Michael Davanzo.</p> <p>He said while they were able to fulfill their resupply mission of the McMurdo Research Station in Antarctica, and clear a path for other ships, it almost didn't happen.</p> <p>"So this year, we were in the middle of cutting the ice channel and two of our shaft seals leaked and we had flooding in our engine room," said Davanzo.</p> <p>Davanzo said the vibrations are taking their toll on the ship. He said breaking ice is like driving on a rumble strip.</p> <p>"If you could just imaging doing that 24 hours a day for a 30-day period at a time," Davanzo said.</p> <p>Lt. Spencer Ross' job is to fix everything that rattles loose.</p> <p>But that's easier said than done, with parts that haven't been made for decades.</p> <p>"Switches, resisters, voltage traps, all designed in the 60s and 70s when the ship was build," said Ross. "If one component goes bad in the switchboard, there's no 'Control F' function to figure out where this component is and what it is."</p> <p>They even had to purchase one fuse from the last remaining source: Ebay.</p> <p>The Polar Star is the last remaining heavy ice breaker in the Coast Guard's fleet.</p> <p>Its sister ship was in even worse shape and is now just used for parts.</p> <p>Davanzo said a new ship is critical, and not just for science.</p> <p>"But we're also down there for national sovereignty, a presence in the Pacific, and we do search and rescue and law enforcement as well," he said.</p> <p>The Polar Star is now going to dry dock.</p>

"It's like a scavenger hunt looking for any cracked brackets and degraded piping so we can try to fix it before it happens," said Ross.

There, it will be worked on every day between now and the end of November, so it will be able to try and make the voyage again next year.

Just days ago, KOMO News talked with Washington Democratic Sen. Maria Cantwell, who said they were able to include funding for a new ship in this year's budget.

But it will still take several years to complete.

"That is what we think we need at a minimum. We think we probably need more, because the arctic is going to become a very big path for lots of activity," said Cantwell.

The Coast Guard does have other smaller ice breakers, but they can't do the same work as the Polar Star.

<b>HEADLINE</b>	<b>03/28 State testing pay-by-mile program</b>
<b>SOURCE</b>	<a href="https://www.kiro7.com/news/local/state-kicks-off-test-of-pay-by-mile-program/723311460">https://www.kiro7.com/news/local/state-kicks-off-test-of-pay-by-mile-program/723311460</a>
<b>GIST</b>	<p>The state formally kicked off a yearlong test of a road-usage charge, which might someday replace the gas tax as a way to pay for roads.</p> <p>KIRO 7 producer Katelin Wangberg signed up to join the pilot project, and is one of 2,000 drivers now reporting their mileage.</p> <p>Wangberg chose a device that plugs into her car.</p> <p>"It's a little thing, you plug it in and you forget about it and it tracks everything," Wangberg said. Using GPS, it records everywhere she drives.</p> <p>"I'll be honest, I didn't really care" about the tracking, Wangberg said.</p> <p>People more concerned about privacy can choose a reporting method without GPS and log odometer readings in person or by smart phone.</p> <p>On Tuesday, state officials kicked off the pilot program testing a possible replacement for the gas tax, which is becoming less reliable for funding roads as cars grow more efficient.</p> <p>"It is time for a change, we actually have a flattening of the gas tax revenue," said State Rep. Judy Clibborn (D-Mercer Island).</p> <p>A road usage charge has skeptics, like State Rep. Ed Orcutt (R-Kalama), who is from a rural area where people need to drive long distances.</p> <p>"I'm concerned about this approach, I'm concerned about the impact on my constituents," he said. Katelin Wangberg has a small, fuel-efficient car.</p> <p>For the first 462 miles of the test, the app she's using calculated a road-usage charge of about two cents a mile would have cost her \$11.03, compared to the \$7.74 she's now paying in gas taxes.</p> <p>"I did not expect that I would be paying more for the road tax than I would be paying for the gas tax," Wangberg said.</p> <p>Consultants running the test program say the average car in Washington gets 22 miles per gallon, and that</p>

	<p>drivers who get better mileage would pay more under a road-usage charge.</p> <p>After the test, a report will go to lawmakers in 2020, who will decide whether to actually implement a pay-by-mile system.</p>

<b>HEADLINE</b>	<b>03/28 Study: 72% schools high risk from quakes</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/disaster/72-percent-of-schools-at-high-risk-from-quakes-in-washington/281-532980773">http://www.king5.com/article/news/local/disaster/72-percent-of-schools-at-high-risk-from-quakes-in-washington/281-532980773</a>
<b>GIST</b>	<p>An estimated 72 percent of schools are rated at 'high' or 'very high' risk from earthquakes so governor Jay Inslee sat down with his resilience cabinet on Wednesday to tackle the issue.</p> <p>Geologists say they're vulnerable because of their proximity to the state's network of earthquake faults. Those faults range from the massive Cascadia Subduction Zone, which runs for hundreds of miles off the Washington, Oregon, Northern California and British Columbia, Canada coast lines and expected to unleash a tsunami on the scale of the one that hit northeastern Japan in 2011. Then there is the Seattle Fault which runs across Bainbridge island, past the southern edge of downtown Seattle to the Cascades. The South Whidbey Island Fault, and newer fault discoveries in the eastern half of the state.</p> <p>This past legislative session saw \$1.2 million passed to begin assessing the ability of school buildings to stand up to earthquakes. In an Update on Washington State School Seismic Safety Awareness, the authors say the state's 1,1 million students study in some 9,000 permanent and portable school buildings. Of those schools, only 232 have been built since 2004, when building codes for quakes were upgraded. Some 37 school campuses housing some 9,000 students are located in tsunami inundation zones.</p> <p>That initial \$1.2 million is designed to assess about 220 of the most vulnerable buildings. But at that funding level it could take a century or more to do a full assessment for all school buildings in the state.</p> <p>While control of schools is primarily at the local level, the state's Office of the Superintendent of Public Instruction says it has obtained \$748,419 in FEMA grant money along with another \$300,000 state match, to create an earthquake mitigation program for schools that face natural hazards.</p>

<b>HEADLINE</b>	<b>03/29 China warns US on trade 'Pandora Box'</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-china-usa-trade/china-warns-u-s-not-to-open-pandoras-box-unleash-trade-ills-on-world-idUSKBN1H504C">https://www.reuters.com/article/us-china-usa-trade/china-warns-u-s-not-to-open-pandoras-box-unleash-trade-ills-on-world-idUSKBN1H504C</a>
<b>GIST</b>	<p>BEIJING (Reuters) - China warned the United States on Thursday not to open Pandora’s Box and spark a flurry of protectionist practices across the globe, even as Beijing pointed to U.S. goods that it could target in a deepening Sino-U.S. trade dispute.</p> <p>China could target a broad range of U.S. businesses from agriculture to aircraft, autos, semiconductors and even services if the trade conflict escalates, the official China Daily newspaper said in an editorial on Thursday.</p> <p>President Donald Trump’s move last week to slap up to \$60 billion in tariffs on some Chinese imports has since provoked a warning from Beijing that it could retaliate with duties of up to \$3 billion of U.S. imports.</p> <p>China’s biggest U.S. imports are aircraft and related equipment, soybeans and autos, with the total bill about \$40 billion last year.</p> <p>“The malicious practices of the United States are like opening Pandora’s Box, and there is a danger of triggering a chain reaction that will spread the virus of trade protectionism across the globe,” a commerce ministry spokesman said.</p> <p>The official line from China continues to be stern even as Beijing says it is all for dialogue and negotiations. The feedback from U.S. and Chinese officials on the nature and extent of trade talks remains mixed, media reports show.</p> <p>The Financial Times reported only on Monday that China had offered to buy more U.S. micro-chips and move more quickly to finalize rules allowing foreign firms to take majority stakes in Chinese securities firms, citing people briefed on the negotiations.</p> <p>Chinese customs data shows the U.S. accounted for just \$2.6 billion, or 1 percent, of China’s total semiconductor imports last year by value, with suppliers in South Korea, Taiwan and Japan commanding a bigger share.</p> <p>But a source in the U.S. semiconductor industry said U.S. companies have slightly more than 50 percent of China’s market for chips, though export data doesn’t reflect that because much of the product is sent off-shore for low value added processing.</p> <p>The source said the U.S. semiconductor industry had not asked the Trump administration to urge China to buy more U.S. chips and had been told by senior U.S. officials that the U.S. government had not made such a request to Beijing.</p>

	<p>“We don’t need China to buy more chips,” the source said, adding that U.S. industry was concerned about being targeted by Chinese non-tariff barriers.</p> <p>“It’s more about (Chinese) subsidies, IP protection, and cyber rules,” the source said, referring to concerns over Chinese retaliation.</p> <p>China has long said it would like to import more U.S. high-tech goods, including high-end chips, but has been stymied by U.S. export controls set on national security grounds.</p> <p>China’s commerce ministry said on Thursday the U.S. approach to trade could trigger a domino effect and U.S. trade protectionism will only hurt U.S. consumers.</p> <p>While China hopes the U.S. will resolve trade conflicts with China through dialogue, it will take all possible steps to protect its interests, ministry spokesman Gao Feng told a regular briefing in Beijing.</p> <p>“Negotiations must be equal, and China will not accept any consultation under unilateral coercion,” Gao said.</p>

<b>HEADLINE</b>	<b>03/28 Embattled VA secretary fired; replaced</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/politics/white-house/trump-replaces-embattled-va-secretary-personal-physician-n859496">https://www.nbcnews.com/politics/white-house/trump-replaces-embattled-va-secretary-personal-physician-n859496</a>
<b>GIST</b>	<p>WASHINGTON — President Donald Trump ousted Secretary of Veterans Affairs David Shulkin Wednesday, announcing his intent to nominate the White House physician, Admiral Ronny Jackson, to fill the post and ending weeks of speculation about when the embattled cabinet official would leave the administration.</p> <p>Trump tweeted a confirmation of the news, which was first reported by Reuters. In a statement, the president described Jackson as "highly trained and qualified and as a service member himself." Trump also thanked Shulkin for his service and the "many great things we did together at Veterans Affairs."</p> <p>Jackson has been a White House physician to both presidents Trump and Barack Obama. Undersecretary of Defense for Personnel and Readiness Robert Wilkie will serve as interim secretary until Jackson is confirmed by the Senate, Trump said in a follow-up tweet.</p> <p>Shulkin's departure comes amid a spate of other high level administration exits over the past month — including the secretary of state, national security adviser, top economic adviser, and communications director.</p> <p>Shulkin, who served as undersecretary in charge of the veterans’ health system during the Obama administration, clashed with Trump political appointees who surrounded him at the VA. Some of the tension arose from a central policy dispute: The Trump appointees, both within the VA and at the White House, want to see the VA transition to subsidizing private health care for veterans, while Shulkin resisted those efforts.</p>

<b>HEADLINE</b>	<b>03/29 Experts opine NKorea Kim visit China</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/world/kim-jong-un-met-china-s-president-xi-what-does-n860731">https://www.nbcnews.com/news/world/kim-jong-un-met-china-s-president-xi-what-does-n860731</a>
<b>GIST</b>	<p>Kim Jong Un’s long, slow train journey from Pyongyang to Beijing was an attempt for the dictator and his host to gain leverage ahead of the North Korean leader’s summit with President Donald Trump, according to experts.</p>

Kim's trip to meet with the country's oldest and only real ally has been shrouded in mystery. Little is known about what was discussed between the two leaders other than an official statement published through China's state-run media.

His departure from China also came one day before the date for the first inter-Korean summit in 11 years was announced. Kim will meet with South Korean President Moon Jae-in on April 27, officials confirmed Thursday.

"It seems China was not comfortable with the idea of Kim meeting with Moon and Trump before having ever met with Xi," said Paul Haenle, who served as China affairs director for the National Security Council under George W. Bush and Barack Obama.

From a North Korean perspective, it may also have made sense to shore up their sometimes fractious relationship with Beijing ahead of any U.S. meeting, Haenle added.

"Kim may have felt he had secured some leverage against Xi having independently secured summits with Trump and Moon," said Haenle, who is now director of the Carnegie-Tsinghua Center for Global Policy in Beijing. "He'll now feel more confident knowing where things stand with Beijing heading into those same meetings."

Kim's visit comes just weeks after China's rubber-stamp parliament voted to abolish term limits, effectively allowing President Xi Jinping to rule the superpower indefinitely. It also comes amid heightened tensions between Beijing and Washington over trade, with Trump announcing new tariffs on imported steel and aluminium from China earlier this month.

Cristina Varriale, a research analyst specializing in proliferation and nuclear policy at the London-based Royal United Services Institute, told NBC News this week's visit could help ensure China plays a much more active role in any denuclearization agreement.

"With the recent engagement between North and South Korea and the South Koreans going to the U.S. it started to look very much like a tri-lateral initiative between those three countries," she said. "By pulling China back into it, North Korea are balancing it out again and having their patron back on their side as part of this process."

<b>HEADLINE</b>	<b>03/28 Sacramento mobilizes to make #LastOne</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/sacramento-determined-stephon-clark-s-death-not-bevain-n861016">https://www.nbcnews.com/news/us-news/sacramento-determined-stephon-clark-s-death-not-bevain-n861016</a>
<b>GIST</b>	<p>SACRAMENTO — They didn't know Stephon Clark, but they came anyway Wednesday from all around this capital city, and parts beyond. They came because they said the 22-year-old could have been their brother, or son or grandson and they wanted to try to make sure that the way he died — unarmed and innocent, as far as they could tell — will never happen again.</p> <p>While Clark's girlfriend and two young sons watched over his body for hours at BOSS Church on the south side of town, strangers shared a grief they said belongs not only to their city but to all of America.</p> <p>On their way in and out of the wake, the mourners raised tough questions: about other tactics the police might have tried, about warnings they said did not come, about another recent deadly police shooting of another unarmed black man in their city and about why some of the country's mass murderers come away from police encounters better than Clark did.</p> <p>"I'm so tired, so tired. I just don't want to see this no more," said Cynthia Brown, who recently retired after 32 years as an executive assistant in the state Franchise Tax Board. Brown said she never knew Clark</p>

but came to the vigil to tell anyone who would listen that things had to change.

She had vented on Facebook the night before and invented a hashtag — #StephonClarkLastOne. "Please let him be the last one," Brown told a reporter. "He has to be the last one."

Joining Clark outside the church not far from the the Gardens neighborhood where Clark died on March 18 were many others who felt the same way and who realized that made them not so different than the teens from Parkland, Florida, who have made it a crusade to make the mass killing at Marjorie Stoneman Douglas high school a true turning point.

"Everything has an ending. This has to be an ending," said Rahim Wasi, "60-something," who is an employment training instructor for the state of California.

Many of them wondered why the police couldn't have used a taser, or a beanbag gun, or simply backed off and surrounded the yard where they found him. Didn't they have a helicopter looking down? Was there truly a danger, if all police were looking for was a car burglar?

"I mean, you can taze him, or get around him or throw a net on him. Something," said Wasi. "But instead you shoot him. The training is to shoot him. Why not just disable him?"

"There has to be a better way," Wasi said.

Police shooting of unarmed black men have been a cause celebre nationally for years, most famously in Ferguson, Missouri, after the 2014 police shooting of Michael Brown. People in Sacramento's poor, minority neighborhoods recall an even more recent deadly confrontation. In July, 2016, police shot and killed a 51-year-old black man with a history of mental disabilities.

Joseph Mann was taken down by 14 bullets, including those fired by an officer who had once been stripped of his weapon because of alcohol and domestic abuse allegations, the Sacramento Bee reported. The two officers involved in the shooting left the police force late last year, though they were not prosecuted.

Cynthia Brown said she strains for what to tell her own grandsons, 23, 15 and 10 years old. Perhaps they should always have their phones in a pouch, never having them in hand, where they might be mistaken for a gun. Or maybe they should throw themselves to the ground, their hands outstretched, any time the police stop them.

"They are perceiving all our young men as one type of person — thuggish, gun-toting, disrespectful," said Brown. "And every black kid is not a thug. They are not gun-toting. A lot of our black children have love, respect and compassion."

<b>HEADLINE</b>	<b>03/28 Report: VA missed background checks</b>
<b>SOURCE</b>	<a href="https://www.militarytimes.com/veterans/2018/03/28/report-va-missed-background-checks-for-thousands-of-employees/">https://www.militarytimes.com/veterans/2018/03/28/report-va-missed-background-checks-for-thousands-of-employees/</a>
<b>GIST</b>	<p>WASHINGTON — Veterans Affairs officials employed more than 6,000 workers — many with access to patients and sensitive personal information — without performing proper background checks, according to a new inspector general investigation released this week.</p> <p>The news comes just months after the watchdog found that department leaders consistently failed to report potentially dangerous medical providers to outside health systems, a problem which raised patient safety issues not just for veterans but for the public as a whole.</p> <p>The new report from the inspector general found that mandatory background checks, mandated under</p>

	<p>federal rules within 14 days of employment, were not handled properly in about 6 percent of new VA hires over a five-year period.</p> <p>In one case, a registered nurse at an Ohio VA facility worked for 1,452 days before a proper background investigation was begun.</p> <p>“VA lacks assurance that the (Veterans Health Administration) workforce is properly vetted and appropriate for providing health care to the nation’s veterans,” the report stated. “In addition, initiating background investigations in a timely manner is critical to mitigate the risk to VHA and ensure that unsuitable staff may be removed during the probationary employment period.”</p> <p>Investigators blamed the problem on a lack of oversight and mismanagement at the department’s Operations, Security, and Preparedness office, noting that “the absence of adequate oversight controls by OSP and VHA permitted these delinquencies to remain undetected for many years.”</p> <p>Department leaders said they are already working on fixes for the problem.</p> <p>OSP officials in a statement to the inspector general said they have a target of reducing delinquent background checks to under 2,500 by this October, and a full review of current processes by September.</p> <p>But investigators warned that more needs to be done to provide full confidence that VA employees are properly vetted to provide care and handle veterans’ personal medical information.</p>

<b>HEADLINE</b>	<b>03/28 NAACP sues census citizenship question</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/politics/naACP-lawsuit-trump-administration-2020-census/2018/03/28/id/851363/">https://www.newsmax.com/politics/naACP-lawsuit-trump-administration-2020-census/2018/03/28/id/851363/</a>
<b>GIST</b>	<p>The NAACP on Wednesday sued the Trump administration over concerns the 2020 census will not accurately count African-Americans and other people of color, resulting in less federal funding for minority communities, The Hill reports.</p> <p>The lawsuit, filed in conjunction with Prince George's County in Maryland, comes the same week Commerce Secretary Wilbur Ross announced that the 2020 census will include a question about citizenship status in order to "provide census block level citizenship voting age population data that are not currently available from government survey data." The citizenship question was asked on most decennial census forms until 1950, and has been asked on the yearly American Community Survey form.</p> <p>"The census must not serve as a mechanism for diluting the political power of African-American communities and depriving them of their fair share of federal resources for an entire decade," said Derrick Johnson, the NAACP president and CEO. "We are prepared to fight against any plan that effectively turns the census into another form of voter suppression and economic disempowerment in our communities."</p> <p>California Attorney General Xavier Becerra and New York Attorney General Eric Schneiderman also filed lawsuits challenging the inclusion of the citizenship question.</p> <p>"When the Census Bureau undercounts my community, we lose political power, and fewer of our federal tax dollars end up coming home to fix our roads, run our schools, and fund our federal programs," said Brian Ross, president of the NAACP's Prince George's County Branch and a plaintiff in the case. "We felt these effects in the aftermath of the 2010 census, and all signs indicate that the 2020 Census will be even worse."</p>

<b>HEADLINE</b>	<b>03/28 Russian spies in the Northwest</b>
-----------------	---

SOURCE	<a href="http://www.thenewtribune.com/news/state/article207177809.html#storylink=latest_side">http://www.thenewtribune.com/news/state/article207177809.html#storylink=latest_side</a>
GIST	<p>Wanted — FBI recruits for a career in surveillance. Must be comfortable tailing subjects by foot, vehicle or on public transportation, use electronic equipment, and work nights and weekends as necessary.</p> <p>The online job post at fbijobs.gov gives a glimpse into the shadowy world of espionage that continues to unfold between the United States and Russia. The Trump administration cited the risk of such clandestine activities in its decision Monday to close the Russian Consulate in Seattle.</p> <p>The Cold War spy craft that was the stuff of John le Carré thrillers may have taken a back seat in the popular imagination in the age of post-9/11 terrorism, but for FBI agents trying to identify Russian consular staff who are using their positions as cover for intelligence gathering, the work never stopped, and it may have intensified amid growing tensions between Moscow and the West.</p> <p>“It’s no secret that consulates serve as a potential platform for covert activities,” said Charles Mandigo, a former special agent in charge of the FBI Seattle office, “just as consulate personnel and embassy staff provide the country with the opportunity to insert a spy onto U.S. soil.”</p> <p>Seattle has everything to attract espionage interests from Russia, or any number of other countries, he said.</p> <p>“Think about it. There’s Boeing, which runs all kinds of black operations,” said Mandigo, referring to the giant defense contractor’s secret work with the Pentagon. “There’s the University of Washington, which gets all kinds of government contracts. There’s Microsoft. There’s proximity from a military point of view, particularly Bangor.”</p> <p>Naval Base Kitsap, near Bremerton, includes the submarine base at Bangor, home to the West Coast fleet of Trident submarines, part of America’s triad of land-, air- and sea-based nuclear arsenal. It’s estimated that within the past decade, up to a quarter of the country’s nearly 10,000 nuclear weapons have been stored there.</p> <p>David Major, a former FBI agent involved in counterintelligence, estimates that a third of a Russian Consulate’s staff may be involved in intelligence work. Major is president of CI Centre, which is involved in counterintelligence training and education.</p> <p>Tracking when Russian officials come and go from work, when they retire for the night, and who their friends are can be labor-intensive work.</p> <p>“It can take a long time to identify somebody,” Major said. “You want to know everything you can about this person to paint a picture of them.”</p> <p>A senior Trump administration official did not cite any specific incident of Seattle-based espionage linked to this week’s orders but said the actions, which included the expulsion of dozens of Russian diplomats, were part of a broader effort to “degrade” the Russian capability to spy.</p> <p>The closure of the Seattle consulate — which leaves only three remaining in the country, none on the West Coast — is part of a broader response in the West to allegations that the Kremlin was involved in the nerve-agent poisoning of a former Russian spy and his daughter in Salisbury, England.</p> <p>“There will be a response”</p> <p>The closure and expulsions were condemned by Russian government officials, who are expected to announce retaliatory measures. They say that diplomatic staff being expelled have worked in space, science, trade, culture and other areas.</p> <p>“Truth will always prevail. We shall not be provoked into an emotional outburst. But there will be a response,” declared the Russian ambassador, Anatoly Antonov, in a statement posed on the embassy website.</p>

The decision to close the consulate has also received pushback from some Americans. They point out that the U.S. and Russia both use diplomatic installations for intelligence gathering, and that in this era of frosty relations, it is important to keep consulates, and lines of communications, open.

“We regret that the interests of U.S. businesses and private citizens are being jeopardized in a political ‘tit-for-tat’ exchange between the governments,” wrote Derek Norberg, president of the Washington-based Council for U.S.-Russia Relations, in a letter to State Department officials after last year’s announcement of the closing of the Russian Consulate in San Francisco. He is drafting a similar letter of protest about the closing of the Seattle consulate.

### Spying subs

Russian espionage interest in Washington state stretches back for decades — long before the 1992 opening of the Seattle consulate.

In 1987, even amid the glasnost thaw, the Seattle Post-Intelligencer broke a story that Soviet submarines — using intelligence garnered from the spy ring formed by John Walker — had penetrated the Strait of Juan de Fuca through the 1980s. Walker served many years in the U.S. Navy, and the leaked information helped Russians slip past U.S. anti-sub defenses.

A decade later, in 1998, Jack Daly, then a Navy lieutenant and intelligence officer, was dispatched on a Canadian helicopter to take surveillance photographs of a Russian cargo ship in the Strait of Juan de Fuca that was suspected of spying on the Trident submarines. He says the ship fired a laser that singed his retinas. He sued in U.S. District Court over the laser attack and his injury, but in 2002, a jury rejected his claim.

As Russian President Boris Yeltsin took power in the 1990s, there was lots of talk of democracy in Russia, and many U.S. officials thought espionage would ebb. “We wanted our peace dividend, and didn’t want to worry about this anymore,” said Major, who added that the spying did not end and the FBI fought to continue support for counterintelligence as the new consulate opened in Seattle in 1992.

Ayn Dietrich-Williams, FBI spokeswoman in Seattle, declined to comment on FBI surveillance operations in the Puget Sound region. She said the FBI does not disclose the numbers of employees at the Seattle field office because it fluctuates.

Mandigo, who served 29 years in the FBI until his retirement in 2003, said the bureau has remained fiercely protective of its role in counterespionage, as there aren’t other law-enforcement agencies assigned to the task. He said the Seattle “active” counterintelligence division survived the shifting priorities within the bureau in the wake of the Sept. 11, 2001, terrorist attacks.

Mandigo’s leadership of the Seattle FBI office included nominal oversight of agents, technicians and others assigned to foreign counterintelligence. But Mandigo explained that he had very little to do with these operations because they were supervised and directed out of FBI headquarters in Washington, D.C., or from New York.

In addition to keeping track of Russians, some of this FBI work also involved debriefing Americans who traveled to Russia.

One Washington businessman with work that takes him to Russia said he repeatedly has been approached by FBI officials who want to understand what he does. They don’t ask him to conduct espionage but want him to report any criminal activity he sees, said the businessman, who requested anonymity due to the sensitivity of those contacts.

FBI agents also may be involved in sting operations that target Americans trying to sell secrets.

In 2017, Gregory Allen Justice, a 49-year-old Boeing engineer from Culver City, Calif., pleaded guilty in U.S. District Court in California to charges of attempted economic espionage. He tried to sell documents to an undercover agent he believed to be a Russian intelligence officer in a case developed out of the FBI office in Los Angeles.

<b>HEADLINE</b>	<b>03/29 China space lab hurtling toward Earth</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/chinas-defunct-space-lab-hurling-earth-entry-54088824">https://abcnews.go.com/Technology/wireStory/chinas-defunct-space-lab-hurling-earth-entry-54088824</a>
<b>GIST</b>	<p>China's defunct and reportedly out-of-control Tiangong 1 space station is expected to re-enter Earth's atmosphere sometime this weekend. It poses only a slight risk to people and property on the ground, since most of the bus-size, 8.5-ton vehicle is expected to burn up on re-entry, although space agencies don't know exactly when or where that will happen.</p> <p>Below are some questions and answers about the station, its re-entry and the past and future of China's ambitious space program.</p> <p>_____</p> <p><b>WHAT WILL HAPPEN AND HOW GREAT IS THE DANGER?</b></p> <p>The European Space Agency predicts the station will re-enter the atmosphere between Saturday morning and Sunday afternoon — an estimate it calls "highly variable," likely because the ever-changing shape of the upper atmosphere affects the speed of objects falling into it.</p> <p>The Chinese space agency's latest estimate puts re-entry between Saturday and Wednesday.</p> <p>Western space experts say they believe China has lost control of the station. China's chief space laboratory designer Zhu Zongpeng has denied Tiangong was out of control, but hasn't provided specifics on what, if anything, China is doing to guide the craft's re-entry.</p> <p>Based on Tiangong 1's orbit, it will come to earth somewhere between 42.7 degrees of latitude north and 42.7 degrees south, or roughly somewhere over most of the United States, China, Africa, Southern Europe, Australia and South America. Out of range are Russia, Canada and northern Europe.</p> <p>Based on its size, only about 10 percent of the spacecraft will likely survive being burned up on re-entry, mainly its heavier components such as its engines. The chances of anyone person on earth being hit by debris is considered less than one in a trillion.</p> <p>_____</p> <p><b>HOW COMMON IS MAN-MADE SPACE DEBRIS?</b></p> <p>Debris from satellites, space launches and the International Space Station enters the atmosphere every few months, but only one person is known to have been hit by any of it: American woman Lottie Williams, who was struck but not injured by a falling piece of a U.S. Delta II rocket while exercising in an Oklahoma park in 1997.</p> <p>Most famously, America's 77-ton Skylab crashed through the atmosphere in 1979, spreading pieces of wreckage near the southwestern Australia city of Perth, which fined the U.S. \$400 for littering.</p> <p>The breakup on re-entry of the Columbia space shuttle in 2003 killed all seven astronauts and sent more than 80,000 pieces of debris raining down on a large swath of the southern United States. No one on the ground was injured.</p>

In 2011, NASA's Upper Atmosphere Research Satellite was considered to pose a slight risk to the public when it came down to earth 20 years after its launching. Debris from the 6-ton satellite ended up falling into the Pacific Ocean, causing no damage.

China's own space program raised major concerns after it used a missile to destroy an out-of-service Chinese satellite in 2007, creating a large and potentially dangerous cloud of debris.

---

#### WHAT IS TIANGONG 1 AND WHAT WAS IT USED FOR?

Launched in 2011, Tiangong 1 was China's first space station, serving as an experimental platform for bigger projects such as the Tiangong 2 launched in September 2016 and a future permanent Chinese space station.

The station, whose name translates as "Heavenly Palace," played host to two crewed missions that included China's first female astronauts and served as a test platform for perfecting docking procedures and other operations. Its last crew departed in 2013 and contact with it was cut in 2016. Since then it has been orbiting gradually closer and closer to Earth on its own while being monitored.

The station had two modules, one for its solar panels and engines, and one for a pair of astronauts to live in and conduct experiments. A third astronaut slept in the Shenzhou spaceships that docked with the station, which also contained facilities for personal hygiene and food preparation.

---

#### HOW ADVANCED IS CHINA'S SPACE PROGRAM?

Since China conducted its first crewed mission in 2003 — becoming only the third country after Russia and the U.S. to do so — it has taken on increasingly ambitious projects, including staging a spacewalk and landing its Jade Rabbit rover on the moon.

China now operates the Tiangong 2 precursor space station facility, while the permanent station's 20-ton core module is due to be launched this year. The completed 60-ton station is set to come into full service in 2022 and operate for at least a decade.

China was excluded from the 420-ton International Space Station mainly due to U.S. legislation barring such cooperation and concerns over the Chinese space program's strong military connections. China's space program remains highly secretive and some experts have complained that a lack of information about Tiangong 1's design has made it harder to predict what might happen upon its re-entry.

A mission to land another rover on Mars and bring back samples is set to launch in 2020. China also plans to become the first country to soft-land a probe on the far side of the moon.

<b>HEADLINE</b>	<b>03/29 Anger over deadly Venezuela jail riot, fire</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/angry-families-demand-facts-deadly-venezuela-jail-riot-54087923">http://abcnews.go.com/International/wireStory/angry-families-demand-facts-deadly-venezuela-jail-riot-54087923</a>
<b>GIST</b>	<p>Distraught families are clamoring for information about detained relatives following a fire that Venezuela's chief prosecutor says killed 68 people when it swept through the cells of the state police station.</p> <p>Angry relatives fought with police outside the facility Wednesday after being unable to get any information on casualties from Wednesday's fire, which townspeople said erupted after a disturbance</p>

involving detainees. Officers used tear gas to disperse the crowd, and local officials would confirm only that there were fatalities.

Late Wednesday, Attorney General Tarek William Saab said on his official Twitter account that 68 people were dead and nearly all of them were prisoners. He said the dead included two women who were staying overnight at the station, but he didn't provide any further details.

Saab said four prosecutors had been named to determine what happened at the state police headquarters in Valencia, a town in Carabobo state about 100 miles (160 kilometers) west of Caracas.

It was one of the worst jail disasters in Venezuela, where human rights groups complain about poor conditions in prisons and jails. A fire at a prison in the western state of Zulia killed more than 100 inmates in 1994.

A Window to Freedom, a nonprofit group that monitors conditions at Venezuela's jails and prisons, said preliminary but unconfirmed information indicated the riot began when an armed detainee shot an officer in the leg. Shortly after that a fire broke out, with flames growing quickly as the blaze spread to mattresses in the cells, it said. Rescuers apparently had to break a hole through a wall to free some of the prisoners inside.

Photos shared by the group showed prisoners being taken out on stretchers, their limbs frozen in awkward positions as skin peeled off.

Carlos Nieto Palma, director of A Window to Freedom, said officials should be held accountable for failing to address the poor conditions in police station jails. The group said overcrowding has become common throughout Venezuela, with detainees being kept long past customary brief holding periods before being let go or sent to larger jails to await trial.

"It's grave and alarming," Nieto Palma said. "What happened today in Carabobo is a sign of that."

<b>HEADLINE</b>	<b>03/29 Seoul: Koreas summit April 27<sup>th</sup></b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/rival-koreas-begin-high-level-talks-meant-set-54085645?cid=clicksource_76_2_hero_headlines_bsq_hed">http://abcnews.go.com/International/wireStory/rival-koreas-begin-high-level-talks-meant-set-54085645?cid=clicksource_76_2_hero_headlines_bsq_hed</a>
<b>GIST</b>	<p>North Korean leader Kim Jong Un will meet South Korean President Moon Jae-in at a border village on April 27, the South announced Thursday after the nations agreed on a rare summit that could prove significant in global efforts to resolve a decades-long standoff over the North's nuclear program.</p> <p>The announcement was made after officials met at the border village of Panmunjom. The Koreas plan to hold another preparatory meeting on April 4 to discuss protocol, security and media coverage issues, according to a joint statement released by the countries.</p> <p>The leaders of the two Koreas have held talks only twice since the 1950-53 Korean War, in 2000 and 2007, under previous liberal governments in Seoul. The Korean Peninsula was divided in 1945 into a U.S.-dominated south and Soviet-backed north, three years before the Koreas each became sovereign nations.</p> <p>Seoul's Unification Minister Cho Myoung-gyon, one of the three South Korean participants in Thursday's talks, told reporters beforehand that setting up discussions between the leaders on ways to rid the North of its nuclear weapons would be a critical point.</p> <p>Cho after the meeting told South Korean reporters there was a "sufficient exchange of opinions" on the agendas of the summit, but didn't provide a clear answer on whether the discussions included the nuclear issue.</p>

	<p>"Both sides agreed to prepare for (the summit) in a way that would allow sincere and heartfelt discussions (between the leaders). If there's a need, we decided to continue discussions on the summit agendas through follow-up high level meetings in April," Cho said.</p> <p>"Both sides will continue working level discussions (on the agendas) while focusing on the issues surrounding the denuclearization of the Korean Peninsula, the stabilization of peace and the development relations between the South and North."</p> <p>When asked whether such issues would shape the discussions between Kim and Moon, Cho said "yes."</p> <p>The North's three delegates were led by Ri Son Gwon, chairman of a state agency that deals with inter-Korean affairs. The countries earlier this month reached an agreement for a summit on the southern side of the border village. Thursday's meeting was held to determine the date and other issues.</p> <p>Ri after the meeting hailed the agreement over the summit he said provides "immense expectations and new hope for the entire nation that desires for peace on the Korean Peninsula." He called for officials from both countries to do their best to "perfectly secure the historic meeting between the leaders."</p>

<b>HEADLINE</b>	<b>03/28 Fed orders Puerto Rico pension cuts</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/03/28/board-orders-pension-cuts-studies-puerto-rico-wage-increase.html">http://www.foxnews.com/world/2018/03/28/board-orders-pension-cuts-studies-puerto-rico-wage-increase.html</a>
<b>GIST</b>	<p>SAN JUAN, Puerto Rico – A federal control board overseeing Puerto Rico's finances is demanding cuts to the island's crumbling public pension system and says it will consider raising the minimum wage if certain conditions are met.</p> <p>The demands were outlined in various letters sent Wednesday to Gov. Ricardo Rossello. He has repeatedly rejected imposing a 10 percent cut to pensions of more than \$1,000 a month and is seeking to increase the minimum wage from \$7.25 an hour to \$8.25 by 2021.</p> <p>The board also stated that mandatory vacation and sick leave should be immediately reduced to 14 days a year, and that a Christmas bonus should be made voluntary by 2019 as part of a proposed labor reform that Puerto Ricans have widely rejected.</p>

<b>HEADLINE</b>	<b>03/28 US limits UN peacekeeping costs to 25%</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/03/28/us-wont-pay-over-25-percent-un-peacekeeping-anymore.html">http://www.foxnews.com/world/2018/03/28/us-wont-pay-over-25-percent-un-peacekeeping-anymore.html</a>
<b>GIST</b>	<p>UNITED NATIONS – The United States is saying it will no longer shoulder more than a quarter of the multibillion-dollar costs of the United Nations' peacekeeping operations.</p> <p>U.S. Ambassador Nikki Haley said so Wednesday at a Security Council debate on peacekeeping reform.</p> <p>The U.S. is the biggest contributor to the U.N.'s 15 peacekeeping missions worldwide. Washington is paying about 28.5 percent of this year's \$7.3 billion peacekeeping budget.</p> <p>President Donald Trump's administration has complained before that the budget and the U.S. share are too high. At Washington's urging, the current budget is \$570 million below last year's.</p> <p>Haley said the U.S. will work to make sure cuts in its portion are done "in a fair and sensible manner that protects UN peacekeeping."</p>

	The General Assembly sets the budget and respective contributions by vote.

<b>HEADLINE</b>	<b>03/28 Pressure builds on Russia w/expulsions</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/kremlin-vows-respond-diplomatic-expulsions-54063237?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/kremlin-vows-respond-diplomatic-expulsions-54063237?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Pressure increased Wednesday on Moscow over the poisoning of a former Russian double agent in Britain as more Russian diplomats were being expelled or recalled. Russia says it will respond to the moves, but a senior diplomat said there is no hurry to retaliate.</p> <p>Russia denies Britain's accusation that it was behind the March 4 nerve agent attack on Sergei Skripal and his daughter in the city of Salisbury. Both remain in critical condition.</p> <p>Skripal was imprisoned in Russia before being sent to Britain in a 2010 spy swap.</p> <p>More than 20 nations have announced the expulsion of more than 150 Russian diplomats in the dispute, including 60 by the United States. Britain expelled 23 and Russia retaliated with the same number, but it has not responded to the other moves.</p> <p>Montenegro on Wednesday announced it would expel a Russian diplomat. Slovakia and Malta said they would recall their ambassadors from Russia.</p> <p>Russia's Deputy Foreign Minister Sergei Ryabkov said Moscow is in "no rush" to retaliate.</p> <p>He told the RIA Novosti state news agency that Russia is "thoughtfully and thoroughly" considering its response. Separately, he was quoted by the Interfax news agency as saying the expulsions were directed by London and Washington, adding that other nations succumbed to their pressure. He added that "all options are on the table" regarding Russia's response.</p> <p>President Vladimir Putin's spokesman, Dmitry Peskov, told reporters that Russia's response would come soon and that it will be "timely and will suit the interests of Russia."</p>

<b>HEADLINE</b>	<b>03/28 Ecuador cuts Assange embassy internet</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/ecuador-cutting-off-wikileaks-founders-communications-54072450?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/ecuador-cutting-off-wikileaks-founders-communications-54072450?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Ecuador's government said Wednesday it has cut off WikiLeaks founder Julian Assange's internet connection at the nation's London embassy after his recent activity on social media decrying the arrest of a Catalan separatist politician.</p> <p>In a statement, officials said Assange's recent posts "put at risk" the good relations Ecuador maintains with nations throughout Europe and had decided as of Tuesday to suspend his internet access "in order to prevent any potential harm."</p> <p>Assange has since gone silent on social media.</p> <p>Ecuador granted Assange asylum in the South American nation's London embassy in 2012, where he has remained cooped up ever since. Ecuador has repeatedly tried to find a solution that would allow Assange to leave without the threat of arrest, but with no success. He remains wanted in Britain for jumping bail and also fears a possible U.S. extradition request based on his leaking of classified State Department documents.</p>

	<p>Relations between Assange and his host nation have often grown prickly.</p> <p>Ecuador suspended his internet access in 2016 after a WikiLeaks dump targeting Hillary Clinton's presidential campaign. And while former President Rafael Correa hailed Assange's work, the South American country's current head of state has called him a hacker and warned him not to meddle in politics.</p> <p>As part of an agreement allowing him to stay at Ecuador's embassy, Assange is forbidden from sending any messages that would interfere with the country's diplomatic relations other nations.</p> <p>"He violated that agreement," said Maria Fernanda Espinosa, Ecuador's minister of foreign affairs.</p> <p>She added that Ecuador's government would be sending of a group of diplomats to meet with Assange's legal team in London next week while also continuing a dialogue with British officials on how to resolve "an inherited problem."</p>

<b>HEADLINE</b>	<b>03/28 Hawaii: state targeted in phishing attacks</b>
<b>SOURCE</b>	<a href="http://www.hawaiinewsnow.com/story/37824382/state-agencies-victim-of-cyber-attacks-over-the-weekend">http://www.hawaiinewsnow.com/story/37824382/state-agencies-victim-of-cyber-attacks-over-the-weekend</a>
<b>GIST</b>	<p>HONOLULU (HawaiiNewsNow) - So-called "phishing attacks" targeted state computers over the holiday weekend, officials confirm.</p> <p>The attacks came just days after a major international sweep of Iranians who sought to hack into Hawaii state computers.</p> <p>The first phishing attack happened Saturday when an employee from the Department of Agriculture clicked on a corrupted link.</p> <p>A warning from the state's IT office was sent out to workers reminding them not to open links without investigating first.</p> <p>But then on Monday, a state holiday, an employee with the state Department of Human Services did it, too.</p> <p>The state's chief IT security officer, Vincent Hoang, said both times alarms went off immediately and they were able to limit the damage to just the affected employees' inboxes. Hoang said they believe the two cases are connected and the emails come from the same source.</p> <p>However, Hoang doesn't know if they are connected to a sweeping federal indictment last week of nine Iranians.</p> <p>"The timing is very coincidental and quite honestly, I don't know if we'd be able to answer one way or the other," he said.</p> <p>Hawaii was listed as a target of the Iranian group that went after state and university systems all over the world.</p> <p>Former Honolulu Police Department cyber crimes expert Chris Duque said if this past weekend's incidents are not part of that group, it could be copycats who saw Hawaii as easily compromised.</p> <p>"They'll try and test the waters," he said.</p> <p>Cyber crimes are difficult to trace since most of the emails originate overseas.</p> <p>Hoang said the state's security in place helps defend against millions of individual attacks every year, but every once in awhile one will get through.</p> <p>He admits that two in one weekend is alarming, though, and said the state depends on employees to be the last line of defense.</p>

	<p>"We can throw a lot of technology at it but at the end of the day, the best defense is relying on our users by educating them," he said.</p> <p>Hoang added that the state conducts mock cyber attacks sending out fake links to see how many state workers click on them. He said they have had positive results with only a relatively small group falling for the test scam.</p> <p>He added the two attacks did not penetrate the state's internal system so no resident information was compromised.</p>

<b>HEADLINE</b>	<b>03/29 NKorea suspected in bitcoin heist</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/north-korea-is-suspected-in-bitcoin-heist-1522303177">https://www.wsj.com/articles/north-korea-is-suspected-in-bitcoin-heist-1522303177</a>
<b>GIST</b>	<p>SEOUL—Investigators in South Korea are looking into North Korea’s possible involvement in a heist from a bitcoin exchange that collapsed here on Tuesday, according to people familiar with the situation, as the sanctions-choked regime develops new ways to raise money.</p> <p>The investigation into the hack of Seoul-based exchange Youbit, led by South Korean law enforcement and a state cybersecurity agency, is still in its infancy and a review of the malware code could take weeks, the people said.</p> <p>But the people said there were telltale signs and historical evidence that North Korea was behind the Youbit attack. North Korean hackers in April targeted the same cryptocurrency exchange, operating under a different name, several of the people said. Yapiian, the company that operates Youbit, suspended trading and filed for bankruptcy after Tuesday’s hack.</p> <p>The bitcoin heist follows similar suspected Pyongyang-directed offensives against other South Korean cryptocurrency exchanges—and an increasing number of attempts to steal from individual investors.</p> <p>On Tuesday, the White House said North Korea directed this year’s WannaCry ransomware attack, which locked digital files and demanded bitcoin payment for their release.</p> <p>South Korean police and the Korea Internet &amp; Security Agency said they had begun an investigation into the Youbit hack but were still determining the scope of the situation.</p> <p>A North Korean cyber army of 7,000 hackers around the world has shifted tactics over the past two years to become more motivated by financial gain, pilfering from banks and, more recently, focusing on cryptocurrencies, according to cybersecurity researchers. North Korea has denied involvement in the hacking incidents.</p> <p>Bitcoin is a virtual currency, but very few people use it to actually pay for things because of transaction fees and its rising value. WSJ's Thomas Di Fonzo takes to the streets of New York to try to spend bitcoin at brick-and-mortar establishments.</p> <p>North Korean leader Kim Jong Un has a critical need for funds as his regime advances its nuclear-weapons program in the face of tightened economic sanctions.</p> <p>“North Korea is an ideal country to use hacking and financial tools like bitcoin,” said Troy Stangarone, a senior director at the Korea Economic Institute in Washington. “They’re experimenting with ways to earn back lost money from sanctions.”</p> <p>The bitcoin craze has created a unique opportunity, as a rush of new investors bet on a market they had barely heard of until recently, said Ryan Kalember, a senior vice president at Proofpoint Inc., a cybersecurity firm that published a recent report detailing Pyongyang’s bitcoin campaigns.</p>

“Much of the cryptocurrency system is highly vulnerable,” Mr. Kalember said. “Because this world is moving so fast and now it’s so lucrative, it’s really exactly what a cybercriminal” is looking for.

Pyongyang’s cyberwarfare capabilities first drew global attention for the hack of Sony Pictures Entertainment in 2014, when the regime’s cyber goals were more focused on obtaining military information, destabilizing networks or intimidating opponents.

North Korea has turned in recent years to increasingly sophisticated financial warfare.

North Korea was blamed for last year’s cybertheft of \$81 million from Bangladesh’s central bank, followed by a \$60 million theft this year from a Taiwanese bank. Cybersecurity researchers say North Korea was involved in other attacks in Mexico, Poland, India and the U.K.

The hackers have executed scams such as planting viruses into South Korean ATMs or point-of-sale devices to steal personal information, according to researchers. South Korean government groups and agencies withstand 1.5 million daily North Korean hacking attempts, law-enforcement and intelligence officials said.

Pyongyang’s bitcoin interest has taken root more recently. North Korea targeted three cryptocurrency exchanges in South Korea between April and October, people familiar with that investigation said. That includes an April attack on a predecessor to Youbit, then known as Yapizon.

Steve Lim, chief strategy officer at the Coinone exchange, doesn’t think the Youbit incident alone will dramatically curb bitcoin interest. “People will shrug it off in a few months’ time, as long as there aren’t any more of these kinds of incidents,” he said.

Yapian said the security breach caused it to lose 17% of its total assets, but didn’t specify the financial value of the losses. The value of the heist is difficult to determine as exchanges aren’t required to provide information about their operations beyond registering their business when they first open.

On Dec. 1, Youbit purchased a one-year cyberinsurance policy from DB Insurance Co., a South Korean firm, with damage coverage up to about \$2.8 million.

A spokesman at DB Insurance said Youbit hasn’t filed a claim. Youbit has up to three years to do so.

<b>HEADLINE</b>	<b>03/29 Claim: most FTSE 100 firms fail to share</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/ftse-100-firms-fail-to-share/">https://www.infosecurity-magazine.com/news/ftse-100-firms-fail-to-share/</a>
<b>GIST</b>	<p>Most FTSE 100 companies are not being transparent with their board or the wider public about security strategy, according to new Deloitte research.</p> <p>The global consultancy analyzed reporting practices on cyber-risk covering all FTSE 100 annual reports in the year ending 30 September 2017.</p> <p>It found that just 21% disclosed that they provide cybersecurity updates to the board on a regular, monthly to bi-annual, basis. Even fewer (20%) disclosed details of specific cyber-risk testing, such as ethical hacking, designed to find vulnerabilities in their IT systems.</p> <p>The research revealed that FTSE 100 firms are either under-investing in cybersecurity or failing to be transparent about their efforts, which could be a missed opportunity to reassure investors and customers they understand the online threat.</p> <p>Organizations must focus their efforts on analyzing the business for any weaknesses which could be</p>

	<p>exposing them to hackers, argued Pete Banham, cyber-resilience expert at Mimecast.</p> <p>“It has never been more imperative for businesses to implement a cyber resilience strategy,” he added. “This should include strong methods of protection, combined with a reliable archive and recovery strategy for data that will ensure uninterrupted access and use of vital systems like email in the event of a breach.”</p> <p>The opacity in reporting highlighted by Deloitte will need to change when the GDPR lands in May, according to the firm’s head of cyber risk services, Phill Everson.</p> <p>“As we see GDPR regulations introduced from May 25 this year this becomes even more important as they require regulators to be notified within 72 hours of a breach,” he explained. “In preparation, companies will be looking at their processes for delivering security updates to the right people in a timely manner. However, with just two months to go to GDPR, our analysis shows there is still some work to do.”</p>

<b>HEADLINE</b>	<b>03/29 Dismal state cybersecurity in aviation</b>
<b>SOURCE</b>	<a href="http://www.computerweekly.com/news/252437816/Most-airports-not-protected-from-cyber-threats">http://www.computerweekly.com/news/252437816/Most-airports-not-protected-from-cyber-threats</a>
<b>GIST</b>	<p>The chairman of the Israel Airports Authority paints a dismal picture of the state of cyber security in aviation, and offers advice on what can be done to avert the next disaster.</p> <p>The heightened focus on airport security started well over 40 years ago after Israeli forces had freed hostages from a hijacked aircraft in a major attack, according to Eliezer Marum, chairman of the Israel Airports Authority.</p> <p>Today, the airport is equipped with sophisticated physical security systems and intelligent security units to fend off growing threats that have also become increasingly cyber in nature.</p> <p>“We must assume that the threat is imminent,” Marum said at CyberTech Asia 2018 in Singapore, noting that there are sophisticated, trained terrorists who are plotting attacks against airports, including interconnected airport IT systems, to hit the news headlines.</p> <p>Adding to the challenge is the reality that unlike military systems, IT systems at airports cannot be isolated from the internet as passengers and airport employees depend on them to facilitate travel and airport operations, said Marum, a retired vice admiral and former commander of the Israeli Navy.</p> <p>As more airport operators such as Singapore’s Changi Airport Group start to offer fully automated passenger experiences, Marum said the impact of a cyber attack will be even more severe, to the extent of paralysing entire terminals.</p> <p>Despite the risks, Marum said most aviation regulations only address physical security, not cyber security. “There’s almost nothing on cyber, apart from some guidelines here and there,” he said. “If I paralyse your screening systems to allow bad things to pass, your airport will be exposed to big physical security threats.”</p> <p>Speaking from his experience and without revealing loopholes in airport IT systems for security reasons, Marum said most of the world’s airports are vulnerable to cyber attacks. “They have many physical security people, but they’re not protected in cyber,” he said.</p> <p>To address this, Marum said the Israel Airports Authority is considering establishing and leading a cyber association of airport operators to draft new security standards for airports.</p> <p>Meanwhile, Marum offered some advice on securing aviation systems. He said airports must recognise potential threats, integrate physical and cyber security, as well as adopt security measures like a hurdle</p>

race – that is, to place more obstacles in the way of threat actors who are more likely to give up after repeated failures to compromise a system.

International cooperation is also key, so that threat intelligence can be shared between airport operators and intelligence agencies to avert the next major terrorist attack, which Marum said is likely to be bigger than the 9-11 attack on the US. “You will not see the enemy, who will be sitting somewhere in an air-conditioned room ready to attack and surprise you,” he warned.

According to a recent survey, nearly 70% of cyber security leaders in the Asia-Pacific region believe a major attack affecting critical infrastructure across multiple countries will happen in the next two years.

However, the respondents were not confident of their ability to deal with looming threats. More than half of them said the lack of funds and security staff had hampered their ability to fight threats.

<b>HEADLINE</b>	<b>03/28 FBI tackles ‘going dark’ dilemma</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/28/fbi-revamping-plan-tackling-going-dark-encryption-/">https://www.washingtontimes.com/news/2018/mar/28/fbi-revamping-plan-tackling-going-dark-encryption-/</a>
<b>GIST</b>	<p>The FBI plans to create a new unit within the bureau’s Operational Technology Division (OTD) aimed at better addressing the worsening “Going Dark” dilemma that’s hindered criminal investigators’ ability to access digital evidence stored on encrypted devices.</p> <p>An internal FBI audit involving the 2015 terrorist attack in San Bernardino, California, found that federal investigators are revamping the way they pursue access data off encrypted devices including smartphones and computers, according to a Justice Department Office of the Inspector General’s report released Tuesday.</p> <p>“During the course of our inquiry, we were informed that the FBI intends to add a new section in OTD to consolidate resources to address the ‘Going Dark’ problem and improve coordination between the units that work on computer and mobile devices,” the report states.</p> <p>“We believe that such efforts to improve communication and coordination are worthwhile, and should help to avoid some of the disconnects we found occurred in this very important and high profile investigation,” the report said.</p> <p>While authorities have wrestled for years with accessing data off encrypted devices, the issue took center stage following the December 2015 attack in San Bernardino when federal investigators found themselves unable to glean evidence from an Apple iPhone belonging to slain suspect Syed Farook. The FBI sued Apple in federal court in hopes of compelling the company’s complete assistance, but relented after receiving the assistance of a third-party security firm.</p> <p>The inspector general “found that inadequate communication and coordination within OTD caused a delay in engaging all relevant OTD personnel in the search for a technical solution to the Farook iPhone problem, as well as the outside party that ultimately developed the method that unlocked the phone, issues that we learned the FBI has since taken steps to address,” the report said.</p> <p>Based in Quantico, Virginia, the OTD “develops and deploys technology-based solutions to enable and enhance the FBI’s intelligence, national security and law enforcement operations,” according to the FBI’s website.</p> <p>“Counter-encryption” is a primary function of the OTD’s digital forensics team, according to the website.</p> <p>The FBI pointed to its response to the inspector general report when asked Wednesday for further details about the new OTD division.</p>

	<p>“FBI/OTD has realigned mission areas for several Units in preparation for a larger reorganization,” the agency said.</p> <p>Federal investigations have increasingly been stymied in recent years by strong, hard-to-crack encryption used to protect data on devices like iPhone and Google Android phones, among others.</p> <p>The FBI was unable to access data from 7,775 digital devices during fiscal 2017, constituting more than half of the total devices lawfully seized by federal investigators during that span, FBI Director Christopher Wray said in January.</p> <p>“While the FBI and law enforcement happen to be on the front lines of this problem, this is an urgent public safety issue for all of us,” Mr. Wray said. “Because as horrifying as 7,800 in one year sounds, it’s going to be a lot worse in just a couple of years if we don’t find a responsible solution.”</p> <p>A 2017 report published by the Manhattan District Attorney’s Office found that the number of locked smartphones lawfully seized by local prosecutors surged nearly tenfold in recent years, from 78 in 2014 to 702 in the first 10 months of 2017, including 466 locked Apple iPhones and 236 locked devices running Google’s Android operating system.</p>

<b>HEADLINE</b>	<b>03/28 iPhone camera app flaw goes phishing</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/iphone-camera-app-flaw-takes-users-to-phishing-sites/">https://www.hackread.com/iphone-camera-app-flaw-takes-users-to-phishing-sites/</a>
<b>GIST</b>	<p>Last week it was reported that there were a bunch of malware-infected QR reader apps on Play Store which was downloaded half a million time. Now, Infosec’s security researcher Roman Mueller has identified a flaw in the way iOS camera application manages QR codes; the flaw leads to redirecting users to malicious destinations.</p> <p>The vulnerability is present in the app’s automatic QR code scanning function. It results in displaying a URL that can lead the unsuspecting user to unauthentic and even infected websites.</p> <p>Mueller proved his findings with an example where the QR code scanned by the iPhone’s camera app displayed a link that redirected to Facebook.com through Safari browser but the user was redirected to Mueller’s own website (<a href="https://infosec.rm-it.de/">https://infosec.rm-it.de/</a>).</p> <p>It must be noted that with iOS 11, Apple Inc. introduced the brand new feature of a built-in camera app. The app allowed users to scan QR codes and access links or other types of content. Through this new feature, users of iPhone were no longer required to install a third-party app for scanning of QR codes.</p> <p>Mueller stated that it only took few minutes’ time to identify a way to construct a QR code that displays a harmless looking domain in the notification but actually leads the user to a completely different and somewhat unsecure destination in Safari browser. He further asserted that this is a grave vulnerability as it opens a plethora of opportunities for cybercrooks; they can lead users to phishing sites or link containing malicious exploit.</p> <p>Apple was notified about the vulnerability by Mueller on December 23, 2017, but the company hasn’t yet fixed it. Considering the time elapsed since the date of notifying Apple, Mueller thought it was the right time to publicly disclose the flaw.</p>

<b>HEADLINE</b>	<b>03/28 Legal depts. struggle w/GDPR role</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/legal-departments-struggle-with/">https://www.infosecurity-magazine.com/news/legal-departments-struggle-with/</a>

<p><b>GIST</b></p>	<p>The General Data Protection Regulation (GDPR) is set to take effect on May 25, and research suggests that while businesses are busy scrambling to fill data protection officer (DPO) vacancies, other areas of the organization, especially the legal department, could be taken by surprise.</p> <p>According to accounting and advisory firm BDO, about half (48%) of legal team respondents in a recent survey claim GDPR is not applicable to their organization. Given that any US or foreign company that deals with EU citizens' personal data – the definitions of which are not entirely clear – will be subject to the GDPR's stringent requirements, that perception is likely not in line with reality.</p> <p>“It behooves every organization – whether they touch EU personal data or not – to regularly review how information is used and managed to maximize its value and minimize risk,” said Karen Schuler, BDO National Information Governance practice leader. “GDPR is just the catalyst for a higher standard of data privacy and protection to which every company should aspire.”</p> <p>This confusion comes as digital assets increasingly become corporate counsels' purview: Among respondents whose organizations have a defined information governance program, 42% of those programs are led by legal, surpassed only by the CIO (47%).</p> <p>At the same time, legal officers' cyber-responsibilities continue to expand: 73% of respondents believe their boards are more involved in cybersecurity than they were 12 months ago. About a third (34%) of the counsel surveyed say their organizations will increase cyber-investment by 10% or more in the next 12 months.</p> <p>The survey also uncovered that, to keep pace with mounting digital risks, almost half (46%) of senior counsel plan to increase their investment in information governance in the next 12 months.</p> <p>“Ultimately, today's corporate counsel must take a holistic view of their organization's digital risk profile – assessing risk based on data flows, cross-functional interdependencies and global operations – and play a proactive, rather than reactive, role in risk-based strategic planning,” said Stephanie Giammarco, partner and BDO Technology &amp; Business Transformation Services practice leader.</p>

<p><b>HEADLINE</b></p>	<p><b>03/28 Big business of bad bots</b></p>
<p><b>SOURCE</b></p>	<p><a href="https://www.securityweek.com/big-business-bad-bots">https://www.securityweek.com/big-business-bad-bots</a></p>
<p><b>GIST</b></p>	<p>Bad bots are big news largely because of the FBI investigation into Russia's involvement in the 2016 presidential election. But bad bots are a bigger problem than automated tweeting: 42.2% of all website traffic comes from bots; and 21.8% of it is down to bad bots.</p> <p>Distil Networks' 2018 Bad Bot Report, based on an analysis of hundreds of billions of bad bot requests, shows that bad bot traffic increased by 9.5% in 2017. Bad bots differ from good bots, whose traffic also increased by 8.8% to 20.4%. It means that only -- on average -- 57.8% of visiting traffic comes from a genuine human being interested in the website content.</p> <p>Good bots are those that all websites require. They include the search engine page indexing bots from Google and Bing, and they bring humans to the site. Bad bots, however, are secretive and nefarious. They come from outright criminals and commercial competitors; and their purpose is to detract and/or steal from the website.</p> <p>Distil highlights eight different bad bot functions: price scraping, content scraping, account takeover, account creation, credit card fraud, denial of service, gift card balance checking, and denial of inventory. They fall into three primary categories: competitive, organized criminal, and nuisance.</p> <p>Price scraping and content scraping are generally competitor attacks. Price scraping allows competitors to maintain price levels slightly lower to score more highly in search engine rankings. Content scraping is</p>

simply the theft of proprietary content to augment another site's own content.

Account takeover bots are automated attempts at illegal log-ins. They can deliver brute-force attacks cycling through the most popular passwords to see if one of them works, or they can use the process known as credential stuffing.

Distil reports a 300% increase in credential stuffing bad bots in the weeks following a new major credential theft. This involves the automatic application of stolen passwords on different websites. "Here," notes the report, "bot operators make two assumptions. The first is that people reuse their credentials on many websites. The second is that newly stolen credentials are more likely to still be active. This is why businesses should anticipate bad bots running those credentials against their website after every breach."

Account creation bad bots simply generate vast numbers of new accounts -- for example, on Twitter -- to spam out messages or amplify propaganda.

Credit card fraud bots test out credit card numbers, trying to identify missing information -- such as the expiry date and the CVV.

The denial of service bad bot can be either competitive or nuisance. It can be used to reduce the performance of a competitor, or to disrupt the service of a small website either because of a grudge, or simply because it is possible. It can be effected either from a small number of attacking IP addresses, or from a larger number of rotating addresses. Automated defenses often fail because the number of accesses from each IP address is below the warning threshold before it moves to other addresses, while manual whack-a-mole IP blocking simply cannot keep up.

Gift card balance checking bots are used to steal money from gift card accounts that contain a balance.

'Denial of inventory' is a relatively new competitor attack prompted by the growth of ecommerce. In this attack, bots place stock items in online shopping baskets, taking them out stock lists. If the item is no longer available, then visiting human buyers will go elsewhere to make the purchase.

Bad bots are a difficult problem. Many website owners are not aware of them, while common defenses have little effect. Geo-blocking, for example, is only somewhat effective. Many sites block all Russian traffic. While this will inevitably include some bad bot traffic, it may also exclude some genuine human traffic. Russia is, however, the most blocked country.

In reality, the greatest source of bad bot traffic is the U.S. (although the operators may be elsewhere). According to Distil, 45.2% of all bad bot traffic originates in the United States (China is second, but way down with just 10.5%). This is because nobody, anywhere in the world, is likely to block all traffic coming from the U.S.

"This year bots took over public conversation, as the FBI continues its investigation into Russia's involvement in the 2016 U.S. presidential election and new legislation made way for stricter regulations," said Tiffany Olson Jones, CEO of Distil Networks. "Yet, as awareness grows, bot traffic and sophistication continue to escalate at an alarming rate. Despite bad bot awareness being at an all-time high, this year's Bad Bot Report illustrates that no industry is immune to automated threats and constant vigilance is required in order to thwart attacks of this kind."

<b>HEADLINE</b>	<b>03/29 Flaw exposes Drupal websites to attack</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/drupalgeddon-critical-flaw-exposes-million-drupal-websites-attacks">https://www.securityweek.com/drupalgeddon-critical-flaw-exposes-million-drupal-websites-attacks</a>
<b>GIST</b>	All versions of the Drupal content management system are affected by a highly critical vulnerability that can be easily exploited to take complete control of affected websites in what may turn out to be Drupalgeddon 2.0.

While analyzing the security of Drupal, Jasper Mattsson discovered a serious remote code execution flaw that impacts versions 6, 7 and 8. This represents more than one million websites that can be hacked by a remote and unauthenticated attacker.

The security hole, tracked as CVE-2018-7600 and assigned a risk score of 21/25, can be exploited simply by accessing a page on the targeted Drupal website. Once exploited, it gives the attacker full control over a site, including access to non-public data and the possibility to delete or modify system data, Drupal developers warned.

The vulnerability has been patched with the release of Drupal 7.58, 8.5.1, 8.3.9 and 8.4.6. While Drupal 6 has reached end of life and it's not supported since February 2016, a fix has still been developed due to the severity of the flaw and the high risk of exploitation.

Besides updating their installations to the latest version, users can protect their websites against attacks by making some changes to the site's configuration. However, the required changes are "drastic."

"There are several solutions, but they are all based on the idea of not serving the vulnerable Drupal pages to visitors. Temporarily replacing your Drupal site with a static HTML page is an effective mitigation. For staging or development sites you could disable the site or turn on a 'Basic Auth' password to prevent access to the site," Drupal developers said.

Cloudflare also announced that it has pushed out a rule to its Web Application Firewall (WAF) to block potential attacks.

While no technical details have been made public, Drupal believes that exploits targeting the vulnerability will be created within hours or days, which is why it alerted users of the flaw and an upcoming patch one week in advance. This appears to have been a good strategy, but many websites may still remain vulnerable for extended periods of time.

<b>HEADLINE</b>	<b>03/28 Destructive, false flag attacks to escalate</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/destructive-and-false-flag-cyberattacks-to-escalate/d/d-id/1331390">http://www.darkreading.com/attacks-breaches/destructive-and-false-flag-cyberattacks-to-escalate/d/d-id/1331390</a>
<b>GIST</b>	Olympic Destroyer. NotPetya. Bad Rabbit. OilRig. These disruptive and in most cases destructive

cyberattacks were just the beginning.

Geopolitical tensions typically map with an uptick in nation-state cyberattacks, and security experts are gearing up for more aggressive and damaging attacks to ensue against the US and its allies in the near-term, including crafted false flag operations that follow the strategy of the recent Olympic Destroyer attack on the 2018 Winter Olympics network.

As US political discord escalates with Russia, Iran, North Korea, and even China, there will be expected cyberattack responses, but those attacks may not all entail the traditional, stealthy cyber espionage. Experts say the Trump administration's recent sanctions and deportation of Russian diplomats residing in the US will likely precipitate more aggressive responses in the form of Russian hacking operations. And some of those could be crafted to appear as the handiwork of other nation-state actors.

A shift in Russia's M.O. against the US infamously began in 2016 with the hacks of the Democratic National Committee (DNC), Democratic Congressional Campaign Committee (DCCC), and Hillary Clinton campaign manager John Podesta's email account, all of which were punctuated with data dumps via WikiLeaks, DC Leaks, and Guccifer 2.0.

US companies Merck and Federal Express were believed to be collateral damage from the NotPetya attack Russia forged last year against Ukrainian targets, posing as a ransomware attack but instead wiping data from hard drives at infected sites. But such attacks may well become more direct in the near future, experts believe.

Security experts worry that Russia will continue to ratchet up more aggressive cyberattacks against the US - likely posing as other nations and attack groups for plausible deniability - especially given the success of recent destructive attack campaigns like NotPetya. Not to mention the successful chaos caused by Russia's election-meddling operation during the 2016 US presidential election.

That doesn't mean Russia or any other nation-state could or would cause a massive power grid outage in the US, however. Instead, US financial services and transportation networks could be next in line for disruption via nation-state actors, experts say.

Vikram Thakur, senior manager on Symantec's security response team, says Olympic Destroyer scratched the surface for cloak-and-dagger attacks. "We think the future is going to get even more complicated with actors relying more and more on false flags, in some cases, throwing another group [under] the bus from an attribution standpoint."

"To say the waters are muddied would be such an understatement," he says. Not only are some nations teaming up outside of cyber, but others are happy to pilfer from one another's cyber domains as well: "We're aware of groups happy to steal others' information and sit on their command and control server. We're aware of false flag operations."

But Tom Kellermann, chief cybersecurity officer at Carbon Black, expects more nefarious activity out of Russia, and possibly from Iran and North Korea, against the US. He expects some regimes to team up in the long term to target the US and other Western allies/NATO in cyberspace. For example, the nomination of CIA director Mike Pompeo - who has criticized the Iran nuclear deal - as the new US Secretary of State to replace Rex Tillerson, could spark online retaliation from Iran, he says.

"You're going to see a dramatic escalation of Iranian cyberattacks against US infrastructure" that follow White House and State Department rhetoric, he says. Iran already has dramatically improved its cyberattack capabilities, he says, and he believes it's learning from Russia's tactics. "They're all using the same playbook" now, he says, with similar "kill chain" methods in their attacks and payloads.

Kellermann says he believes Russia is providing North Korea and Iran with the technologies and tactics to advance their attacks. It may not be direct coordination, but there's some element of technology transfer from Russia to those nations, he maintains.

The Iranian OilRig attackers, for instance, have advanced in their ability to mask lateral movement within a targeted organization, he notes, and they have adopted methods similar to Russia's Fancy Bear group, including an AppLocker bypass exploit, indirect code execution, and the increasingly popular file-less malware method where legitimate system tools are used against victims rather than custom malware.

This move away from custom malware to so-called file-less malware also complicates attribution and helps embolden false-flag operations. "[Custom malware] was one of the primary methods for identifying certain groups in the past. Without that, it becomes difficult to determine who the perpetrator might be," Symantec's Thakur says.

That doesn't mean attribution is dead. "It's becoming a lot more challenging. But in the end they are still humans and even if they write scripts in PowerShell or JavaScript or PHP, at the end of the day they will reuse code and are lazy. That helps us" identify them, he says.

North Korea's Hidden Cobra, believed to be behind the sophisticated attacks bank members of the SWIFT network, also is maturing fast. "The M.O. they use against the financial sector reminds me of the M.O. of Russian cybercriminals," says Kellermann. Their custom Trojan development aside, they employed similar communications methods, including a custom binary protocol to beacon back to the C2 servers over TCP port 8080, 8088, and their use of SSL, he says, as well as when they overwrote the ServiceDLL in the Windows registry.

Thakur says his team at Symantec hasn't seen much cooperation among different nations to date. Multiple hacking teams from a particular nation, such as Iran, will work in tandem in an attack campaign, splitting up different stages of the attack. "I don't think different countries are going to collaborate on malware or on different active campaigns. Most are very nationalistic, or have ambitions for intellectual property" theft, he says.

One high-profile exception, of course, was Stuxnet. Although neither the US nor Israeli governments ever took credit for the hack that sabotaged uranium centrifuges in Iran, experts who studied the attacks pointed to fingerprints from both nations' intelligence agencies.

CrowdStrike vice president of intelligence Adam Meyers says he hasn't seen much overlap of nation-state groups working together, but points to nations such as Iran modeling some of their techniques after Russian ones. Take Iran's initial dabbling with destructive attacks via the Shamoon campaign, which hit a couple of targets.

"It was a shot across the bow," Meyers says. But starting in 2016, Iran waged a series of destructive cyberattacks targeting the Saudi government and infrastructure and business, he notes. "That was for maximum impact and psychological impact on the people of Saudi Arabia," he says. "It's what Russia has been doing against Ukraine for seven years."

Meyers believes the issue is more about Iran's cyberweapon capability improving and maturing – likely inspired by Russia's.

Symantec's Thakur says the likelihood of the number of destructive cyberattacks against the US and others increasing in the coming months is "more realistic" now than ever. "It's more about the motivation by threat actors working on behalf of certain countries that will reach the threshold where they would more often cause destruction to someone's network," he says. "There are a lot of factions. It's fair to assume some might get more reckless."

But that doesn't mean widespread critical infrastructure damage. "That doomsday scenario isn't fair. It's extremely unlikely we would face a situation of a widescale blackout across the country," Thakur says. "If anything, there are small pockets of the country that don't have the redundancy or rollover, who might be at elevated risk of cyberattacks and some kinetic" threat, he says.

	<p>Even with the recent confirmation by the federal government that Russia's DragonFly hacking team is well embedded in US power companies and other industrial networks, there's a silver lining, he says. "Today our infrastructure in the US is in a much better place than a year ago" security-wise, he says.</p> <p>In the runup to a possible meeting between Kim Jong-Un and Donald Trump, meantime, North Korean hacking teams will likely escalate their attacks. "They want to get intel around the US strategy," notes CrowdStrike's Meyers. "And leading up to those meetings, there is increasing pressure on the US government and POTUS to maintain a hard line on sanctions against North Korea ... So [North Korea] may step up their criminal operations," especially on the lucrative cryptocurrency mining attacks, he says.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>03/28 Android cryptojacker can brick phones</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/mobile/new-android-cryptojacker-can-brick-phones/d/d-id/1331398">http://www.darkreading.com/mobile/new-android-cryptojacker-can-brick-phones/d/d-id/1331398</a>
<b>GIST</b>	<p>A little CPU power can go a long way in a criminal application. That was the lesson of the Mirai botnet and now also a lesson being applied by a new cryptojacker mining Monero user the power of the Android phone.</p> <p>Researchers at Trend Micro recently discovered ANDROIDOS_HIDDENMINER, a piece of malware that embeds itself in an Android device, obfuscates its presence, and proceeds to use the device CPU to mine Monero, a cryptocurrency that has gained favor with criminals because of its anonymous, untraceable nature.</p> <p>Researchers have seen an increase in cryptojacking in 2018 as cybercriminals turn to malware that seems more reliable than ransomware and less likely to draw the immediate attention of law enforcement. Cryptojackers have begun using delivery mechanisms like EternalBlue to plant themselves on systems, indicating that the same sort of criminal organizations that were banking on ransomware have now turned to the less aggressive cryptojackers for revenue.</p> <p>Like other cryptojackers, ANDROIDOS_HIDDENMINER is far from benign. The demands that cryptocurrency mining places on a CPU are so great that the CPU can overheat causing the device to lock, fail, and be permanently damaged. Similar malware such as Laopi has been known to cause heat-related battery swelling to the point that the phone case actually bubbled and buckled, according to one report.</p> <p>ANDROIDOS_HIDDENMINER is currently being delivered through a fake Google Play update app. So far, it has been available to users in China and India, though the Trend Micro researchers note that there's no technical reason that the malware couldn't enter other markets, and that they fully expect to see spread to other geographies in the future.</p>

<b>HEADLINE</b>	<b>03/28 Boeing deals w/suspected ransomware</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/boeing-is-dealing-with-a-suspected-wannacry-ransomware-outbreak/">https://www.bleepingcomputer.com/news/security/boeing-is-dealing-with-a-suspected-wannacry-ransomware-outbreak/</a>
<b>GIST</b>	<p>In a baffling turn of events, computers at Boeing have allegedly been infected with the WannaCry Ransomware. According to the Seattle Times, a memo was sent out by a Boeing employee that states that systems have been affected and that their were concerns the ransomware would "spread to airplane software".</p> <p>The Seattle Times reports that this memo was sent out by Mike VanderWel, chief engineer at Boeing Commercial Airplane production engineering, that states:</p> <p>"It is metastasizing rapidly out of North Charleston and I just heard 777 (automated spar assembly tools) may have gone down," VanderWel wrote, adding that he's concerned the virus will hit equipment used in functional tests of airplanes ready to roll out and potentially "spread to airplane software."</p> <p>While WannaCry is still spotted occasionally trying to spread, for the most part this ransomware was effectively stopped by security researcher Marcus "MalwareTech" Hutchins registered a domain that acted as a kill switch for the ransomware component.</p> <p>That is why it is so baffling that almost a year later, with all the patches that were released, almost all AV software detecting it, and all the media attention that WannaCry generated that Boeing would become infected with this ransomware in 2018.</p> <p>At this time, the ransomware has not been 100% confirmed as WannaCry and it could very well be an imitation as we have seen those released in the past. If anyone works for Boeing and can share a screenshot or a sample, it could be readily confirmed if this was the original Wannacry.</p>

<b>HEADLINE</b>	<b>03/28 Facebook hit w/class-action lawsuit</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/28/facebook-users-sue-over-feature-collected-call-and/">https://www.washingtontimes.com/news/2018/mar/28/facebook-users-sue-over-feature-collected-call-and/</a>
<b>GIST</b>	<p>Facebook was sued in federal court Tuesday for quietly scraping the call and text data of account holders who used its Android smartphone apps, adding fresh litigation to the embattled social network's growing list of legal woes.</p> <p>Brought on behalf of Facebook users Anthony Williams, Tyoka Brumfield and Wendy Burnett, the 22-page class action complaint filed in San Francisco federal court alleges the world's largest social network</p>

	<p>violated consumer protection and privacy laws by siphoning phone data from Android users who ran older versions of its Messenger and Lite apps.</p> <p>The apps scraped “years worth of call and text data, including whether each call was ‘Incoming,’ ‘Outgoing’ or ‘Missed,’ the date and time of each call, the number dialed, the individual called and the duration of each call,” attorney L. Timothy Fisher wrote in the complaint.</p> <p>“These data are then sent to Facebook and incorporated into the company’s trove of User Data, which in turn are monetized for advertising purposes,” the lawsuit alleges.</p> <p>“In all reasonable probability,” Mr. Fisher wrote, plaintiffs “would not have installed or used the Facebook Messenger app, or would have used it on materially different terms, had [they] known the truth about the app’s practice of scraping call and text logs.”</p> <p>The lawsuit seeks class action status on behalf of all affected Facebook users and requests unspecified compensatory, statutory and punitive damages.</p>

<b>HEADLINE</b>	<b>03/28 Siemens warns of critical vulnerabilities</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/critical-flaws-found-siemens-telecontrol-building-automation-products">https://www.securityweek.com/critical-flaws-found-siemens-telecontrol-building-automation-products</a>
<b>GIST</b>	<p>Siemens informed customers this week that critical vulnerabilities have been found in some of its telecontrol and building automation products, and revealed that some SIMATIC systems are affected by a high severity flaw.</p> <p>One advisory published by the company describes several critical and high severity flaws affecting Siveillance and Desigo building automation products. The security holes exist due to the use of a vulnerable version of a Gemalto license management system (LMS).</p> <p>The bugs affect Gemalto Sentinel LDK and they can be exploited for remote code execution and denial-of-service (DoS) attacks.</p> <p>The vulnerabilities were discovered by researchers at Kaspersky Lab and disclosed in January. The security firm warned at the time that millions of industrial and corporate systems may be exposed to remote attacks due to their use of the vulnerable Gemalto product.</p>

Siemens warned at the time that more than a dozen versions of the SIMATIC WinCC Add-On were affected. The company has now informed customers that some of its building automation products are impacted as well, including Siveillance Identity and SiteIQ Analytics, and Desigo XWP, CC, ABT, Configuration Manager, and Annual Shading.

The German industrial giant has advised customers to update the LMS to version 2.1 SP4 (2.1.681) or newer in order to address the vulnerabilities.

A separate advisory published by Siemens this week informs customers of a critical vulnerability affecting TIM 1531 IRC, a communication module launched by the company nearly a year ago. The module connects remote stations based on SIMATIC controllers to a telecontrol control center through the Sinaut ST7 protocol.

“A remote attacker with network access to port 80/tcp or port 443/tcp could perform administrative operations on the device without prior authentication. Successful exploitation could allow to cause a denial-of-service, or read and manipulate data as well as configuration settings of the affected device,” Siemens explained.

The company said there had been no evidence of exploitation when it published its advisory on Tuesday.

A third advisory published by Siemens this week describes a high severity flaw discovered by external researchers in SIMATIC PCS 7, SIMATIC WinCC, SIMATIC WinCC Runtime Professional, and SIMATIC NET PC products.

The vulnerability allows an attacker to cause a DoS condition on the impacted products by sending specially crafted messages to their RPC service. Patches or mitigations have been made available by Siemens for each of the affected systems.

<b>HEADLINE</b>	<b>03/28 NY medical practice exposes records</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/unsecured-ny-medical-practice-server-exposes-42000-records/article/754284/">https://www.scmagazine.com/unsecured-ny-medical-practice-server-exposes-42000-records/article/754284/</a>
<b>GIST</b>	<p>A Long Island, N.Y., medical practice left an exposed port normally used for remote synchronization open exposing at least 42,000 medical records.</p> <p>UpGuard Director of Cyber Risk Research Chris Vickery found that port 873, normally used for remote synchronization and moving data between devices, on a server belong to the medical practice of Cohen Bergman Klepper Romano Mds PC open and configured for global access allowing anyone who knew the server's IP address to find the data. A secure server would only allow access from select IP addresses, UpGuard wrote.</p> <p>The flaw allowed the patient names, Social Security numbers, ethnicity, insurance information, dates of birth, phone numbers and insurance information of the Huntington, N.Y. practice to be exposed. In addition, physician's personal information to include Social Security numbers and more than three million of the doctor's notes on their patients along with emails were also left unprotected, UpGuard said.</p> <p>The unsecured server was found on January 25, 2018 and secured on March 19.</p> <p>“Beyond the obvious sensitivity of any exposure of an individual's medical background, the leak of patient - and doctor - Social Security numbers, in association with personal details like home address, insurance information, and date of birth, provide ample ammunition for fraudsters. Armed with the contact information for patients, and the knowledge of which doctor's office they go to, malicious actors could also socially engineer exposed individuals, posing as a representative of the physicians to further extract</p>

	sensitive information,” UpGuard reported.

<b>HEADLINE</b>	<b>03/28 Lizard Squad member sentenced 3mo.</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/lizard-squad-member-zachary-buchta-receives-three-month-sentence/article/754287/">https://www.scmagazine.com/lizard-squad-member-zachary-buchta-receives-three-month-sentence/article/754287/</a>
<b>GIST</b>	<p>One of the founders of the notorious hacking group Lizard Squad and PoodleCorp was sentenced to three months in prison after having plead guilty to one count of conspiracy to commit damage to a protected computer.</p> <p>Zachary Buchta, 20, pleaded guilty in December in the Northern District Court for the District of Illinois to the charge and also agreed to pay a \$350,000 fine. The charge carried a potential sentence of 10 years in prison, but the amount of time to be served was reduced due to Buchta's willingness to work with prosecutors, according to court documents.</p> <p>Lizard Squad was best known for knocking the gaming sites Xbox Live and PlayStation Network offline on Christmas Day in 2014 with DoS attacks and then hacking Taylor Swift's social media accounts the following year. The group also stole payment card information and sold their hacking services.</p> <p>Buchta's most visible role with the group, which was comprised of an international group of men several of whom have been arrested in their countries, was to applaud Lizard Squad's activity and troll law enforcement as they tried to bring down the gang.</p> <p>His online handle was @fbiarelosers and he promoted these illegal activities through a variety of Twitter accounts, including “@pein,” “@fbiarelosers,” “@xotehpoodle,” and “@PoodleCorp,” the sentencing document stated.</p> <p>“By tweeting messages such as “Arrest us” and “You can't arrest a lizard” (and using the moniker “@fbiarelosers”), defendant encouraged others to believe such computer crimes could be committed with impunity,” the court document stated.</p>

<b>HEADLINE</b>	<b>03/28 Hajime botnet makes a comeback</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/hajime-botnet-makes-a-comeback-with-massive-scan-for-mikrotik-routers/">https://www.bleepingcomputer.com/news/security/hajime-botnet-makes-a-comeback-with-massive-scan-for-mikrotik-routers/</a>
<b>GIST</b>	<p>If you've been following the infosec Twitter community for the last few days, you couldn't ignore the constant talk about the massive scans currently taking place online, carried out by a Hajime IoT botnet looking to mass-infect unpatched MikroTik devices.</p> <p>All of the hoopla started on Sunday, March 25, when suspicious scans for port 8291 popped up out of the blue on everyone's honeypots.</p> <p>The scans only continued in the following days, showing no sign of abating, and attracting attention from security researchers from all over the globe.</p> <p>The attention was warranted as the scans weren't something small, and continued at an intensive rate. The first to spot the scans were researchers from Qihoo 360's Netlab team, who said today this Hajime botnet performed over 860,000 scans in the last three days, albeit they couldn't tell how many of these scans were also successful infections.</p> <p>The exploit attackers were trying to use was a vulnerability known as "Chimay Red," a bug that affects MikroTik RouterOS firmware 6.38.4 and earlier, and allows attackers to execute code and take over the</p>

	<p>device.</p> <p>This is the same flaw that was included in the WikiLeaks "Vault 7" leak of alleged CIA hacking tools, and the same flaw that some jokesters used during the past year to deface MikroTik routers by changing hostnames of vulnerable devices to all sorts of expressions that included the word "hacked."</p> <p>But this time around, attackers didn't joke around and they installed the Hajime bot, a strain of IoT malware known primarily for building giant botnets, with the last one reaching over 300,000 devices in the spring of 2017.</p> <p>It is worth mentioning that in the past, the Hajime IoT botnet was never used for massive DDoS attacks, and its existence was a mystery for many researchers, as the botnet only gathered infected devices but almost never did anything with them (except scan for other vulnerable devices).</p>

<b>HEADLINE</b>	<b>03/28 Some VPN providers leak customers' data</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/many-vpn-providers-leak-customers-ip-address-via-webrtc-bug/">https://www.bleepingcomputer.com/news/security/many-vpn-providers-leak-customers-ip-address-via-webrtc-bug/</a>
<b>GIST</b>	<p>Around 20% of today's top VPN solutions are leaking the customer's IP address via a WebRTC bug known since January 2015, and which apparently some VPN providers have never heard of.</p> <p>The discovery belongs to Paolo Stagno, a security researcher who goes by the pseudonym of VoidSec, and who recently audited 83 VPN apps on this old WebRTC IP leak.</p> <p>Stagno says he found that 17 VPN clients were leaking the user's IP address while surfing the web via a browser.</p> <p>The researcher published his results in a Google Docs spreadsheet. The audit list is incomplete because Stagno didn't have the financial resources to test all commercial VPN clients.</p> <p>The researcher is now asking the community to test their own VPN clients and send him the results. For this, he set up a demo web page that users must access in their browser with their VPN client enabled. The code running on this page is also available on GitHub, if users want to test the leak locally, without exposing their IP on somebody else's server.</p> <p>Stagno's code is based on the WebRTC bug discovered in January 2015 by security researcher Daniel Roesler. Back then, Roesler found that WebRTC STUN servers, which intermediate WebRTC connections, will keep records of the user's public IP address, along with his private IP address, if the client is behind-NAT network, proxy, or VPN client.</p> <p>The problem was that STUN servers would disclose this information to websites that had already negotiated an WebRTC connection with a user's browser.</p> <p>Since then, many advertisers and law enforcement agencies have used this WebRTC-related bug to acquire a site's visitor's IP address.</p>

<b>HEADLINE</b>	<b>03/28 World Backup Day: saving your data</b>
<b>SOURCE</b>	<a href="https://www.welivesecurity.com/2018/03/28/world-backup-day-saving-day-saving-data/">https://www.welivesecurity.com/2018/03/28/world-backup-day-saving-day-saving-data/</a>
<b>GIST</b>	World Backup Day, celebrated annually on March 31, is a timely reminder of the importance of taking effective measures that can make all the difference when a data loss incident strikes. It is also a good time to pause and reflect on the rising tide of threats that organizations, notably those operating in critical

industries, face in cyberspace.

It is a safe bet to say that Hippocrates didn't expect the wisdom of the oath named after him to extend nicely to cybersecurity one day. And yet, thousands of years later, many security practitioners will probably swear by one of the dicta contained in modern versions of the physicians' pledge, namely that "prevention is preferable to cure".

Nevertheless, as threats are constantly evolving and become more pervasive, incident response and recovery are increasingly jostling for the attention of organizations' cyber-defenders. Indeed, the threat landscape gives a sense that security ills are sometimes well-nigh unavoidable. Given our reliance on technology, having a plan for how to respond when the chips are down has never been more important.

In information security, best practices in preparations for a possible emergency include implementing a robust plan for data backup and recovery. World Backup Day, celebrated since 2011, helps raise awareness of the fact that a data loss event can cost people and organizations dearly. The causes of such incidents clearly run the gamut and include a hardware or system failure, a human error, a malicious insider, and a cyberattack.

To be sure, there is also the possibility of a physical disaster. However, compared to, say, fire or flood, cyber-incidents – especially of a malicious bent – pose a range of specific challenges for both detection and recovery. To begin with, it may not even be immediately obvious that something is amiss. Also, the actual extent of the damage or the timing of the intrusion may not be immediately apparent. The risk of a contagion spreading to other systems is yet another of a number of challenges that cybersecurity incidents bring.

Whatever the cause of the incident, an organization needs to restore the lifeblood of its operations – its mission-critical data – in order to begin a recovery. The journey to restoring the organization's vital functions begins with a pre-purchased ticket, which in this case is a robust backup of its data.

Indeed, reconstituting lost or corrupted data, especially business-critical data, can be a matter of survival for any business. In critical infrastructure, the stakes are particularly high. For services that are essential for the functioning of entire societies, even short-term disruptions can have particularly dire ramifications.

<b>HEADLINE</b>	<b>03/28 Electronic medical records carry risks</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Health_News/2018/03/28/Electronic-medical-records-carry-some-risks-study-says/8981522261254/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=6">https://www.upi.com/Health_News/2018/03/28/Electronic-medical-records-carry-some-risks-study-says/8981522261254/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=6</a>
<b>GIST</b>	<p>WEDNESDAY, March 28, 2018 -- Advances in medical technology sometimes come with drawbacks, and in the case of electronic health records, a new study suggests these systems occasionally put patients at risk.</p> <p>"There's no question that electronic health records have clear benefits for clinicians and patients, and can improve the care process," said senior author Raj Ratwani. He is director of the MedStar Health National Center for Human Factors in Healthcare in Washington, D.C.</p> <p>"However, nearly all health care systems have adopted an [electronic health record system] and this technology has introduced some new risks to patient safety, as our study has shown," Ratwani said in a MedStar news release.</p> <p>The analysis of more than 1.7 million reports from the Pennsylvania Patient Safety Authority and another mid-Atlantic health system found 557 cases of possible patient harm in which problems using electronic record systems were a factor.</p> <p>"Our view is that even one patient harm event that stems from electronic health record usability issues is</p>

	<p>unacceptable," Ratwani said.</p> <p>Trouble spots include data entry, alerts and interoperability, or the ability of computer systems or software to exchange and make use of information. The usability issues affected placement of prescription orders and medication administration.</p> <p>Examples of the problems cited include:</p> <ul style="list-style-type: none"> <li>• <b>Order placement:</b> A doctor put a medication order in the system while a surgery patient was in recovery, then left the hospital. Though the orders looked complete, they were not activated.</li> <li>• <b>Alerts:</b> Even though a patient's drug allergy was listed in the record, the system failed to issue an alert about the allergy.</li> </ul> <p>"These are solvable issues, and we are committed to improving electronic health record usability and patient safety," Ratwani said.</p> <p>The study was published March 27 in the Journal of the American Medical Association.</p>

<b>HEADLINE</b>	<b>03/28 Reddit unplugs bitcoin payments</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/reddit-unplugs-bitcoin-payments/">https://www.cbsnews.com/news/reddit-unplugs-bitcoin-payments/</a>
<b>GIST</b>	<p>Reddit, one of bitcoin's first adopters, is no longer accepting payments in the digital currency.</p> <p>A favored hangout for fans of cryptocurrencies, the social media platform in recent days disengaged the option to use bitcoin to purchase a premium membership due to snags in the system and because of a decision by Coinbase, a digital-assets exchange, to discontinue its merchant product in favor of a new platform.</p> <p>Reddit users began commenting on Friday that the only payment options for the membership program were limited to credit cards and PayPal, without the previous choice of bitcoin.</p> <p>Asked for confirmation, Reddit spokesperson Leigh Ann Benicewicz in an email directed CBS MoneyWatch to a comment from a Reddit administrator addressing the change.</p> <p>"Yup that's right. The upcoming Coinbase change, combined with some bugs around the Bitcoin payment option that were affecting purchases for certain users, led us to remove Bitcoin as a payment option," wrote a Reddit board administrator with the user name emoney04.</p> <p>"We're going to take a look at demand and watch the progression of Coinbase Commerce before making a decision on whether to reenable," the Reddit administrator also wrote.</p> <p>Coinbase plans to release a service, called Coinbase Commerce, for merchants to take bitcoin, bitcoin cash, ethereum and litecoin payments and deposit them in their own digital wallet, the San Francisco company said in a blog post last month.</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>03/28 Tweet on Facebook, Google data goes viral</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/web-developer-dylan-curran-thread-on-info-that-facebook-and-google-store-goes-viral/">https://www.cbsnews.com/news/web-developer-dylan-curran-thread-on-info-that-facebook-and-google-store-goes-viral/</a>
<b>GIST</b>	<p>Web developer Dylan Curran posted <a href="#">a thread on Twitter</a> over the weekend that quickly went viral. He tweeted, "Want to freak yourself out? I'm gonna show just how much of your information the likes of Facebook and Google store about you without you even realizing it."</p>

In his series of tweets and an [opinion piece in The Guardian](#), Curran, who told CBSN on Wednesday that he "was basically a nobody before this exploded," outlined the information Google stores on users, ranging from users' location to app usage to their YouTube history.

He similarly highlighted Facebook's collection of personal information, saying the social media giant "has reams and reams of data on you, too."

"This includes every message you've ever sent or been sent, every file you've ever sent or been sent, all the contacts in your phone, and all the audio messages you've ever sent or been sent," he wrote in The Guardian.

Speaking on CBSN Wednesday from Ireland, he noted "there are settings to opt out of [Facebook and Google's] data collection," but "not a lot of people have realized that's there."

He also said that consumers have given up so much data voluntarily that "for the current generation and maybe all generations, so millennials and up, the damage is a little bit done." Facebook and Google "have enough information on us to create an advertising profile for the rest of our lives, and it's enough information that can be used against us, for the rest of our lives."

"I'm not saying that they will, just that that information does exist," he added.

Curran said Google had the equivalent of about 3 million Word documents worth of information stored about him, including every Google search he had made since 2009. He said Facebook stored another roughly 400,000 documents worth of information.

The first tweet in his thread has been retweeted more than 146,000 times since Saturday. It has received more than 228,000 likes.

Ex-NSA contractor Edward Snowden called it "an exquisite breakdown using real-life examples of how @Facebook and @Google exploited your trust to quietly create a decade-long dossier of your most private activities."

The interest in Curran's thread comes amid a slew of questions -- and heightened concerns -- about data privacy following revelations [about Cambridge Analytica](#), the consulting firm accused of harvesting data on as many as 50 million unwitting Facebook users through a personality quiz app. Facebook has apologized for the incident and [announced changes](#) to its privacy policy.

Curran said the response and attention he's received in the wake of his tweets have made him think "that there's something going on on a larger scale with the population, where people just don't understand what these products are doing and the potential damage that can happen in the future from just freely using them."

A Google spokesperson said in a statement to CBS News that "in order to make the privacy choices that are right for them, it's essential that people can understand and control their Google data. Over the years, we've developed tools like [My Account](#) expressly for this purpose, and we'd encourage everyone to review it regularly."

Facebook users can also review information about their data and contacts via Facebook's help section, [here](#) and [here](#).

HEADLINE	<b>03/29 India govt. sends notice to Facebook</b>
SOURCE	<a href="https://abcnews.go.com/Technology/wireStory/india-sends-notice-facebook-alleged-data-breach-54088576?cid=clicksource_79_4_article%20roll_articleroll_hed">https://abcnews.go.com/Technology/wireStory/india-sends-notice-facebook-alleged-data-breach-54088576?cid=clicksource_79_4_article%20roll_articleroll_hed</a>
GIST	<p>India's government has sent a notice to Facebook asking whether the personal data of Indian voters and users has been compromised by U.K.-based Cambridge Analytica or any other downstream entity.</p> <p>A similar notice was dispatched to Cambridge Analytica last week following media reports that it had misused data to profile Indians and influence their elections. The government set a Saturday deadline for Cambridge Analytica and April 7 for Facebook to respond to its inquiry.</p> <p>Facebook is facing unprecedented scrutiny following reports that the data mining firm used ill-gotten data from tens of millions of its users to try to influence elections.</p> <p>India's Ministry of Electronics and Information Technology said in a statement late Wednesday that Facebook has its largest footprint in India in terms of its user base and sought to know "what proactive measures it is taking to ensure the safety, security and privacy of such large user data and to prevent its misuse by any third party."</p> <p>The governing Bharatiya Janata Party and the main opposition Congress Party have accused each other of utilizing the services of the British company, but denied any link with it. Cambridge Analytica's allegedly unauthorized harvesting of Facebook data and a series of leaks linked to India's biometric database has refocused public attention on digital privacy in the country.</p> <p>Digital law experts say Indian regulations offered particularly weak safeguards against data breach.</p> <p>The Indian government's notice to Facebook sought to know "whether Facebook or its related or downstream agencies utilizing Facebook's data have previously been engaged by any entities to manipulate the Indian electoral process."</p> <p>"If any such downstream entity misused data from Facebook, what is the protection available to the data subject?" it asked.</p>

HEADLINE	<b>03/29 Westminster attack: efficient investigation</b>
SOURCE	<a href="https://www.independent.co.uk/news/uk/crime/westminster-attack-khalid-masood-jihadi-manifesto-report-details-message-whatsapp-a8278616.html">https://www.independent.co.uk/news/uk/crime/westminster-attack-khalid-masood-jihadi-manifesto-report-details-message-whatsapp-a8278616.html</a>
GIST	<p>Details of a jihadi manifesto sent by the Westminster attacker on WhatsApp minutes before launching the atrocity have been revealed in a report that probed why police arrested a dozen potential suspects and then set them free.</p> <p>Khalid Masood placed a photo of himself on the front page of the document, which was entitled “Jihad” and included extracts from the Quran and other Islamic sources that he claimed to support violence.</p> <p>A report by the Independent Reviewer of Legislation detailed how police traced the contacts who received Masood’s final message to launch a wave of arrests across the country, starting in Birmingham.</p> <p>Max Hill QC said investigators initially believed Masood had sent the document to “specific individuals who may be of interest, but it quickly transpired to the police that a large number of individuals received this message and it wasn’t targeted at specific associates”.</p> <p>The Independent understands that the document did not include a pledge of allegiance to Isis, which claimed responsibility for the Westminster attack in a statement describing Masood as a “soldier of the Islamic State”.</p> <p>Intelligence investigations found he had researched Isis online, alongside methods of attack using knives and vehicles favoured by its followers, but the discovery raises the prospect that the terrorist group issued its claim opportunistically and without proof of his support.</p> <p>Masood had been known to security services since 2004, over his links with al-Qaeda supporters and Anjem Choudary’s banned Islamist network, but was not under active investigation at the time of the attack.</p> <p>A review by Mr Hill’s predecessor found that neither MI5 nor the police had any reason to anticipate the attack, concluding that Masood was “a long way from the top of anyone’s grid”.</p> <p>The 52-year-old Muslim convert was shot dead after killing five pedestrians on Westminster Bridge with his car and stabbing PC Keith Palmer to death outside Parliament.</p> <p>The rampage on 22 March 2017 lasted just 82 seconds but left 29 other victims injured, becoming the first terror attack claimed by Isis in the UK.</p> <p>A report into the ensuing police investigation said counter-terror officers launched a “fast-moving” probe that initially relied on just the items found in the crashed hire car.</p> <p>Masood’s phone was locked but notifications showed the content of recent messages, while financial information revealed that he had stayed at a hotel in Brighton on the previous night.</p> <p>The premises were searched, as was a hostel in Birmingham and the homes of friends and relatives in the city and London.</p> <p>Police arrested 12 people in total – eight men and four women aged between 20 and 58 – but all were later released without charge.</p>

The sweep contributed to a record number of terror arrests recorded in the UK last year, when the Westminster attack was the first of five atrocities to strike London and Manchester.

Mr Hill found “no major fault” with the investigation but made four recommendations for police to improve practices.

“I considered very hard the fact that 12 people were arrested and detained but none were charged, but I reached the conclusion that this was an efficient investigation, and a reasoned and proportionate use of the relevant terrorism legislation,” he told The Independent.

Those arrested in the wake of the attack included Masood’s ex-wife, who had two young children with the attacker.

In a statement released through police, she said she was “saddened and shocked” by his attack, condemning his actions.

Notifications on the terrorist’s phone showed she had tried to call him on the day of the attack, when she contacted police identifying him as the attacker.

“She stated in interview that she received a text message from Masood with a pdf named ‘Jihad’,” the report said.

“When she saw the incident on Twitter she was worried he might be involved and tried several times to get a hold of him.”

The woman cooperated fully with police and passed on details of Masood’s other associates.

Among them was a 58-year-old man who had also tried to call the attacker and was due to travel abroad with him “imminently”, sparking suspicion that he was complicit in the attack.

He was “initially not forthcoming as to the full extent of his relationship with Masood”, claiming he had only met him weeks before and complained about his arrest and the impact on his children.

One of Masood’s relatives, a 27-year-old man, was also arrested after he refused to hand police his phone because he needed it for work.

Officers uncovered messages the man sent to Masood two hours after the attack reading: “I will take care of her inshallah [God willing]. Ameen. Please give us a call when possible”, and then minutes later: “May Allah grant you peace and honour Ameen.”

Later the same evening, he texted Masood saying he had visited his home: “Khalid... called you and no answer..what is going on? We just knocked for you but no answer.”

The report said the man fully cooperated with police and denied knowledge of the attack, describing himself as a strict Muslim but “ignores the situation in Syria as he finds it too depressing”.

Another man, a 30-year-old associate of Masood was arrested after police found out he had received religious instruction from the terrorist had was “becoming more extreme and talking about jihad”.

Call data showed he had been in contact with Masood in the days and weeks leading up to the attack, and had visited Westminster for unclear purposes earlier in March.

He refused to answer questions in his first police interview on the advice of a solicitor, but later told investigators he met Masood at a gym, describing him as a “mentor who assisted him with his separation and child access issues”.

The man said he had not seen the terrorist for some time before the attack and knew nothing about it.

Four Hungarians who lived at an address where Masood was a former tenant were arrested, but did not know him.

Nor did a man and woman in their 20s living in a homeless hostel, which they moved into hours before being arrested.

Police also detained a Saudi Arabian married couple who were in a “professional relationship” with Masood through his teaching work.

Financial records showed the wife paid a total of £2,100 into Masood’s bank account in the two months before the attack with the reference “friend”, but they told police the payments were for “educational work completed”.

In total, police seized 584 pieces of potential evidence, including 256 electronic devices.

The evidence will be considered in ongoing inquests into the deaths of Masood and his five victims, British mother Aysha Frade, Romanian architect Andreea Cristea, pensioner Leslie Rhodes, American tourist Kurt Cochran and PC Palmer.

Mr Hill said police had fully accepted the findings of his report, which called on officers to give “greater thought” to transporting detainees hundreds of miles from the place of arrest, as was seen following the Westminster attack.

The lawyer, who has himself prosecuted several high-profile terror cases involving Isis and other groups, called on authorities to consider making it possible to release people arrested under the Terrorism Act on bail, make sure detainees are given their rights as soon as possible and review training on how people are questioned on their religion.

“None of them are major criticisms but they present learning opportunities,” Mr Hill said.

“I wanted to present as much information on the public as possible on Masood and his plans.

“There little public information as to what process follows when people are arrested on suspicion terror offences... it’s at the heart of this country’s response to terrorism and there’s a right to understand what police and individuals in their charge go through.”

Amber Rudd, the Home Secretary, said she would carefully consider the report’s recommendations and respond formally in due course.

It was published the day after an independent review into the emergency services’ response to the Manchester attack in May exposed failings by the fire service, which did not respond to the bombing for two hours after “poor communication” with police.

<b>HEADLINE</b>	<b>03/28 US almost struck Russians again Syria</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/us-wanted-attack-russians-syria-again-moscow-stepped-mattis-says-864666">http://www.newsweek.com/us-wanted-attack-russians-syria-again-moscow-stepped-mattis-says-864666</a>
<b>GIST</b>	<p>Defense Secretary James Mattis revealed Tuesday that U.S. forces nearly bombed Russians fighting on behalf of Syrian President Bashar al-Assad sometime in the past week, but a call with Moscow's own armed forces defused the situation.</p> <p>Mattis said he believed Russian military officials when they said they were not giving orders to private</p>

Russian citizens battling the Islamic State militant group (ISIS) and rebel groups as part of a coalition of pro-Syrian government militias. Following an incident last month, in which the U.S.-led coalition against ISIS killed a large number of these pro-Assad fighters, including Russians, Mattis said another clash was recently avoided after Marine Corps General Joseph Dunford, chairman of the Joint Chiefs of Staff, contacted Russia's top military leader, Army General Valery Gerasimov, via a deconfliction hotline.

"There were other Russian elements like this moving across the deconfliction line, which is the river, as you know, into an area that we'd agreed with the Russians they could operate in, as they had allowed us to operate basically to the west of the river, up at Tabqa and around Raqqa. We'd agreed for them being slightly east of the river at Deir Ezzor," Mattis told reporters at the Pentagon.

"These were forces moving into more advanced positions, too close. Deconfliction discussions between our chairman and his Russian counterpart, General Gerasimov [took place] and those elements fell back. So we have also drawn off slightly in order to maintain a deconfliction between the elements there," he continued.

"So it looks like, this time, it was resolved through the deconfliction communication line. It did not, you know, go into harm's way, as it did there a month ago," he added.

The battleground in eastern Syria has only grown more complex as the U.S.-led, mostly Kurdish Syrian Democratic Forces and the Russia-backed Syrian military fought two separate campaigns to destroy ISIS. As the Syrian military, backed by various pro-government militias—many of which were supported by Iran—and Russian warplanes, retook Deir Ezzor city and the border town of Al-Bukamal, they declared victory over ISIS and reclaimed the region for Assad.

On the other side of the Euphrates River, however, the Syrian Democratic Forces maintained control of lucrative oil fields. The Kurdish leadership had reportedly entered into preliminary talks with the Syrian government to negotiate the return of these sites in exchange for greater autonomy across majority-Kurdish northern Syria, but two major developments have upset the dynamics of eastern Syria.

First, Turkey protested to a U.S. plan to establish a Syrian Democratic Forces border force. Turkish President Recep Tayyip Erdogan threatened to crush the U.S.-backed Kurdish "terror army" he accused of being linked to the banned Kurdistan Workers' Party (PKK) that has waged a decades-long separatist guerrilla war in Turkey. Turkey rallied its rebel, once-CIA-backed Free Syrian Army allies in January to take the Kurd-held town of Afrin and Kurdish fighters have left the U.S.-led coalition frontlines in eastern Syria to resist the spreading Turkish invasion alongside pro-Syrian government forces as part of a deal with Assad.

Not long after, the mostly Arab faction of the Syrian Democratic Forces in eastern Syria said they had come under attack by pro-Syrian government forces. The U.S.-led coalition responded with massive force, killing up to 100 pro-Assad fighters, including at least dozens of Russian citizens—many of which were reportedly operating as part of private military companies.

Russia stated it had no control over Russian nationals working outside the military, but blamed the U.S. for provoking the attack and denied coalition claims that the U.S. had contacted Russian military officials before, during and after the attack. A U.S. drone killed more pro-Syrian government forces in a Russian tank days later.

While the degree to which Gerasimov was able to influence irregular Russian fighters on the ground was unclear, the elite general issued a direct warning that the U.S. military must not place his troops in danger. As negotiations over the evacuation of civilians and rebels from the insurgent-held districts outside of Damascus accompanied a violent Syrian air campaign earlier this month, U.S. ambassador to the United Nations Nikki Haley warned that "the United States remains prepared to act" in response to reports of chemical weapons and civilian casualties.

Russia has denied its Syrian ally's involvement in chemical weapons attacks, including an alleged sarin gas

	attack last April that convinced President Donald Trump to launch airstrikes at a Syrian air base, a move Russia argued threatened the lives of its personnel. In response to Haley's renewed threat against the Syrian military, Gerasimov said he would "take retaliatory measures to target both the missiles and their delivery vehicles" if Russian lives were put in harm's way.

<b>HEADLINE</b>	<b>03/28 Somber spring in Kashmir Valley</b>
<b>SOURCE</b>	<a href="http://www.thehindu.com/news/national/other-states/sombre-spring-in-kashmir-valley-as-six-youth-go-missing/article23375205.ece">http://www.thehindu.com/news/national/other-states/sombre-spring-in-kashmir-valley-as-six-youth-go-missing/article23375205.ece</a>
<b>GIST</b>	<p>Photos of three of them with weapons in hand surface online; those not found include a university student and a head constable's son.</p> <p>Security agencies in Kashmir are alarmed as six youth had gone missing in the Valley in March. Photos of three of them with weapons in hand surfaced online in the past few days, raising suspicion that they have joined militancy.</p> <p>One of those missing is a student of the University of Kashmir and another is a policeman's son. Protests broke out on the university campus on Wednesday, demanding the whereabouts of Sameer Ahmad Dar, a Department of Earth Sciences student, be revealed. The students say Dar has been missing since March 19 after leaving home at Kakpora in Pulwama.</p> <p>"The university has written to the Director-General of Police and requested him to ascertain the student's whereabouts. We request the agitating students to maintain calm and cooperate till the police ascertain the facts," a university official said.</p> <p>A senior police official told The Hindu that an investigation had failed to establish that Dar had links with the militants, but they could not rule out the possibility.</p> <p>At Kawa Mohallah in Khanyar of Old City here, Mymoona Jan, mother of Fahad Mushtaq Waza, 18, known as Faid, appealed to her son to "quit militancy". Faid went on a religious programme on March 23 and on Tuesday, his gun-wielding pictures were splashed on social media sites. He allegedly joined the Lashkar-e-Taiba and took the name Abu Usama.</p> <p>"He [Waza] betrayed, and lied to, me. He said he would be back by Monday after finishing a religious programme. I appeal to him to return now," Ms. Jan said.</p> <p>In Kupwara, the police have declared Junaid Ahmad Wani (25) of Tikkipora "missing". "The matter is under investigation. We cannot conclude that Wani has joined militancy," a senior police official said.</p> <p>Bilal Ahmad Shah (25), also from Kupwara, allegedly joined the militant ranks on March 20. He had been missing for three weeks and was seen carrying an AK 47 rifle in a photo posted online recently, showing that he has joined the Hizbul Mujahideen.</p> <p>Another youth who announced his alleged association with militants on social media is Abid Maqbool Bhat, son of a head constable at Tral in Pulwama, He is said to have joined the Jasih-e-Muhammad.</p> <p>Junaid Ahmad Khan, son of the newly appointed Tehreek-e-Hurriyat chairman Muhammad Ashraf Sehrai, joined the Hizb.</p>

<b>HEADLINE</b>	<b>03/28 Victory declared; US, Turkey remain</b>
<b>SOURCE</b>	<a href="http://www.newsweek.com/iraq-syria-win-wars-against-isis-us-turkey-will-not-leave-862653">http://www.newsweek.com/iraq-syria-win-wars-against-isis-us-turkey-will-not-leave-862653</a>

## GIST

Iraq and Syria have declared victory over the Islamic State militant group (ISIS), an international jihadi network whose presence in the Middle East drew in multiple local and international forces against it. However, months after Baghdad and Damascus both pronounced the militants' self-styled caliphate dead, the U.S. and Turkey have fought on in spite of calls to withdraw their forces.

While the U.S. has argued its indefinite military presence was necessary in both countries to prevent the resurgence of Islamist groups, Turkey has used the opportunity to launch a new campaign against Kurdish militias supported by the Pentagon but considered terrorist organizations by Ankara. As Turkish forces launched new attacks on Iraqi and Syrian Kurdish fighters combatting the remnants of ISIS, both countries have attempted to reduce or completely expel Turkey.

In a press conference Tuesday, Iraqi Prime Minister Haider al-Abadi assured reporters that the Iraqi military was "in complete control of all of Iraq's borders" and that the government had "a timetable for the reduction of the number of foreign troops in Iraq."

In neighboring Syria, where only Russia and Iran were considered legitimate foreign allies, an official Foreign and Expatriates Ministry statement issued Monday renewed "the demand for the immediate and unconditional withdrawal of the Turkish occupation forces from Syrian territory."

On Tuesday, Syrian ambassador to the United Nations Bashar al-Jaafari condemned "attacks directed against the sovereignty, safety and territorial integrity of Syria" by the U.S.-led coalition, Turkey and Israel, according to the ruling Baath Party's official newspaper.

The Kurds are a Middle Eastern ethnic minority that claim parts of Iran, Iraq, Syria and Turkey as their ancestral homeland and have alleged political oppression by the majority communities in all four countries. Iraqi and Syrian Kurds have since taken advantage of unrest in their home nations to challenge the dominance of their mostly Arab central governments.

ISIS formed out of a merger of jihadi groups, including Al-Qaeda in Iraq, in the wake of the 2003 U.S. invasion and overthrow of Iraqi President Saddam Hussein, a member of Iraq's Sunni Muslim minority and opponent both of the fellow Baathist government in neighboring Syria and of the Kurdish ambitions at home. As ISIS took half of Iraq and Syria in 2014, a U.S.-led coalition began bombing it, while also supporting Kurdish forces on the ground in these countries.

The U.S.'s 2015 decision to establish the mostly Kurdish Syrian Democratic Forces angered Turkey, which linked Syrian Kurdish militias such as the People's Protection Units (YPG) to the militant Kurdistan Workers' Party (PKK) at home. With ISIS mostly defeated in Syria, thanks to campaigns by the U.S.-led coalition and its Syrian Democratic Forces allies, as well as the Syrian military supported by Russia and Iran, Turkey launched a new offensive against U.S.-backed Kurds in the northwestern region of Afrin in January and successfully took the city earlier this month,

The campaign has caused major friction between Turkey and the U.S., which has refused to withdraw Special Forces operating alongside Kurds in the northern city of Manbij, one of at least six Syrian and Iraqi cities located along Turkish President Recep Tayyip Erdogan's warpath. The U.S. has also declined support for Kurds leaving the battle against ISIS in the east to enter into a deal with Syrian President Bashar al-Assad, whom the U.S. has attempted to overthrow since the beginning of Syria's seven-year civil war.

As Assad's government reclaimed most of the territory lost to rebels and jihadis, he and his Russian and Iranian allies have called on the U.S. to withdraw. But the Trump administration has declined to offer any timetables as to when or if it planned to withdraw U.S. forces.

Jennifer Cafarella, a senior intelligence planner at the Institute for the Study of War, told Newsweek that "the U.S. needs to be prepared to defend its positions in Syria and Iraq with force." She noted that "Russia, Iran and Assad seek to expel the U.S. from Syria and have attacked U.S. and partnered forces on numerous occasions" since President Donald Trump ordered a cruise missile strike against a Syrian air base in the

aftermath of what the U.S. said was a chemical weapons attack perpetrated by the Syrian military in the rebel-held province of Idlib last April.

In Afrin, the rebel Free Syrian Army, once backed by the CIA, has planted Turkish flags, signaling a potentially long-term presence for Ankara as it eyes the nearby town of Tel Rifaat, which reportedly was recently transferred from Syrian Democratic Forces to Syrian government control. The U.S.-led coalition said officials acknowledged "the departure of some SDF forces from the Middle Euphrates River Valley and continue to point out the potential costs of any distraction from the Defeat-ISIS fight" in a statement sent to Newsweek earlier this month.

Turkish airstrikes have also hit Kurdish militia targets in northern Iraq, where Ankara also felt vulnerable to PKK infiltration. Unlike Assad, Abadi has attempted to maintain a working relationship with Turkey, mostly due to its alliance with the U.S., which entered its 15th consecutive year operating in Iraq earlier this month. A number of local politicians have become increasingly vocal in their opposition to Turkish and U.S. military presence, however, and Abadi assured journalists on Tuesday that he told Turkish Foreign Minister Binali Yildirim that Iraqi forces could handle Kurdish militant activity in northern Iraq.

Iraqi Foreign Minister Ibrahim al-Jaafari also told his Turkish counterpart earlier this week that Turkey should withdraw from the city of Bashiqa. In addition to growing anger over the Turkish military presence in Iraq, Abadi has faced increased pressure to push for the U.S. to exit the country from the powerful, influential collective of Iran-backed Shiite Muslim militias known as the Popular Mobilization Forces.

This large paramilitary force was assembled in 2014 and fought alongside both Iraqi and Syrian troops to defeat ISIS. Earlier this month, they were made an official part of Iraq's armed forces. As Abadi prepared for elections later this year, the mostly Shiite Muslim force—which also included many Sunni Muslims, Yazidi Christians and other communities—has urged him to expedite the withdrawal of U.S. forces, threatening to wage a new conflict if they did not leave.

"The Iranians may be preparing to escalate against U.S. forces in Iraq in an attempt to expel them, as well," Cafarella told Newsweek.

"Iranian proxies are campaigning for Iraq's upcoming elections on a platform of resisting U.S. 'occupation.' Iran's proxies likely submitted a recent resolution that passed the vote in Iraqi parliament that demands a timeline on the full withdrawal of coalition forces. Iran likely seeks to gain an Iran-friendly prime minister after the election, enabling it to eject the U.S. politically," she added.

Earlier this month, the U.S.-led coalition told Newsweek in a separate statement that "as invited guests in Iraq, we work closely with the government of Iraq and its security forces" and that the coalition was "committed to the lasting defeat of Daesh [the Arabic-language acronym for ISIS] in Iraq and Syria."

<b>HEADLINE</b>	<b>03/29 Pakistan PM: terrorism eliminated</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/malala-yousafzai-pakistan-shahid-khaqan-abbasi-imran-khan-taliban-defeated/">https://www.cbsnews.com/news/malala-yousafzai-pakistan-shahid-khaqan-abbasi-imran-khan-taliban-defeated/</a>
<b>GIST</b>	<p>ISLAMABAD -- Nobel Peace Prize winner Malala Yousafzai returned to her native Pakistan early Thursday for the first time since she was shot in 2012 by Taliban militants angered at her championing of education for girls. Tight security greeted the now-20-year-old university student upon her arrival at Benazir Bhutto International Airport.</p> <p>Local television showed her with her parents in the lounge at the airport before leaving in a convoy of nearly 15 vehicles, many of them occupied by heavily armed police.</p> <p>Hours after her arrival, Yousafzai met with Pakistan Prime Minister Shahid Khaqan Abbasi, who praised her and said he was happy to welcome her back to Pakistan, where he said terrorism has been eliminated.</p> <p>Yousafzai said she was excited to be back. With tears in her eyes, she recalled having to leave the country for treatment when she was shot. At a ceremony at Abbasi's office, the university student said she had always thought about returning to Pakistan.</p> <p>"It is now actually happening and I am here," she said, vowing to continue to campaign for the education of girls.</p> <p>Her return had been shrouded in secrecy and it wasn't immediately clear how long she would be in the city or whether she planned to travel to her hometown of Mingora, where the shooting occurred.</p> <p>Local television channels have been showing her return to Pakistan with some replaying the horror of her shooting and the rush to get her treatment.</p> <p>Pakistani officials say they captured several suspects after the attack on Yousafzai, but the head of the Taliban in Pakistan, Mullah Fazlullah, is still on the run and believed to be hiding in neighboring Afghanistan.</p> <p>Fazlullah's spokesman, Mohammad Khurasani, earlier this month said Fazlullah's son was among 21 "holy warriors" killed by missiles fired by a U.S. drone at a seminary in Afghanistan.</p>

<b>HEADLINE</b>	<b>03/28 Judge rejects motion to dismiss 9/11 suit</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/judge-rejects-saudi-arabias-attempt-toss-911-lawsuits-54084366?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/judge-rejects-saudi-arabias-attempt-toss-911-lawsuits-54084366?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>A judge on Wednesday rejected Saudi Arabia's motion to end a New York lawsuit seeking to hold it responsible in the Sept. 11 attacks.</p> <p>In dismissing the motion, U.S. District Judge George Daniels said the plaintiffs' allegations met the requirements for the court to assume jurisdiction under the Justice Against Sponsors of Terrorism Act.</p> <p>Congress passed the act in 2016 over then-President Barack Obama's veto, allowing the claims to go forward against Saudi Arabia after they were rejected once in the courts.</p>

"This is really a historic day for the families," said Sean Carter, attorney for the plaintiffs. "The families have been trying for many years to have an opportunity for the Saudi government to answer on the merits."

A message seeking comment from lawyers representing the Saudi government was not immediately returned.

Daniels had previously rejected arguments that Saudi Arabia backed the hijackers. In Wednesday's ruling, he also dismissed claims against two Saudi banks and a construction company with ties to Osama bin Laden, saying he lacked jurisdiction.

Hundreds of victims' relatives and injured survivors, along with injured corporations, sued the Saudi government in 2003, saying its employees knowingly assisted hijackers who carried out the attacks and fueled al-Qaida's development into a terrorist organization by funding charities that supported the group.

Fifteen of the 19 attackers were Saudis. The U.S. investigated some Saudi diplomats and others with Saudi government ties who knew hijackers after they arrived in the U.S., according to now-declassified documents.

The 9/11 Commission report found "no evidence that the Saudi government as an institution or senior Saudi officials individually funded" the attacks al-Qaida masterminded, but the commission also noted "the likelihood" that Saudi-government-sponsored charities did.

The Saudi government has long denied any involvement in the attacks.

At a hearing in January, attorney Michael Kellogg, arguing for Saudi Arabia, cited the report repeatedly, along with the findings of probes by the FBI and CIA.

"All rejected Saudi Arabia was responsible," he said.

<b>HEADLINE</b>	<b>03/29 Militant leader, bin Laden ally, roams free</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/militant-leader-bin-laden-ally-roams-freely-pakistan-54088127?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/militant-leader-bin-laden-ally-roams-freely-pakistan-54088127?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>He is crisscrossing Pakistan championing a fatwa, or Islamic religious decree, forbidding militant violence inside the country. But the mere fact that Fazlur Rehman Khalil, veteran leader of an organization designated as a terror group by the U.S., is free has experts questioning Pakistan's willingness to fight extremism.</p> <p>Khalil, once a close friend of the late al-Qaida chief Osama bin Laden, co-founded Harakat-ul-Mujahedeen, a group accused by India of attacking its forces in the Kashmir region and by the U.S. of training militants and carrying out attacks in Afghanistan. The group has undergone several name changes over time and is now known as Ansar-ul Ummah.</p> <p>But authorities have left him alone. At his home on the outskirts of the capital, Islamabad, the gates are protected by a burly, bushy bearded guard whose automatic rifle is always at his side. Khalil's madrassa, or religious school, named for Khalid bin Al-Waleed, one of the most prominent early Muslim commanders leading the conquest of Iraq and Syria in the 7th century, occupies a sprawling compound next door in the middle of a crowded market.</p> <p>In an interview with The Associated Press, Khalil denied the accusations against his group and he applauded the fatwa, which he joined other Sunni and Shiite religious scholars in writing, denouncing militant violence in Pakistan as against Islam. The fatwa, issued in January, is the first such decree issued by such a broad range of scholars in Pakistan.</p>

"Terrorism, suicide attacks, blasts, and killing of innocent people are forbidden in Pakistan, in accordance with Sharia (Islamic law)," Khalil said, dressed in a starched white traditional shalwar kameez and looking relaxed on the manicured lush green lawn of his compound.

"Religious scholars belonging to different schools of thought are unanimous on the issue and are against terrorism."

Afghanistan has criticized the fatwa because it is specific to Pakistan. Khalil said Afghan President Ashraf Ghani should call Islamic scholars in his country together to issue a fatwa of their own. He offered to go to Kabul to help craft the fatwa.

"If Ghani does this we will support his initiative. We wish he would do it. If Afghans sit with us we will support them," he said.

Since the beginning of the year Pakistan has come under relentless pressure from the United States to crack down on militants, particularly the Haqqani network, it says has found safe havens in Pakistan. While Islamabad denies organized havens, it says insurgents move around among the 1.5 million Afghan refugees still living in Pakistan.

U.S. President Donald Trump in a blistering New Year's day tweet accused Pakistan of "lies and deceit" and later suspended hundreds of millions of dollars in military aid.

The 55-year-old Khalil's stature in the militant hierarchy has waned since the late 1990s, when he signed on to bin Laden's fatwa ordering the faithful to attack U.S. interests wherever they found them.

Still, his organization's publications are used to raise money and have exhorted the faithful to fight in Afghanistan, where the Afghan National Army, backed by the U.S.-led coalition, is struggling against a resurgent Taliban.

That sort of fundraising has contributed to the likelihood that Pakistan will be placed on a so called 'gray list' of countries doing too little to stop terrorism when the Financial Action Task Force, an inter-government group trying to stem terror financing, meets in June.

The U.S. State Department in 2014 said Khalil's group still runs training camps in eastern Afghanistan. In 2016, Indian security forces said they arrested five Harakat members on its side of the disputed Kashmir region, allegedly planning attacks on Indian dignitaries.

"This is someone who had close and direct ties to Osama Bin Laden, and is very plugged in to the militant networks of South Asia," said Michael Kugelman, deputy director of the Asia Program at the U.S.-based Wilson Center. "Even if he's not making much noise, he shouldn't be taken lightly."

Khalil dismissed U.S. criticism of Pakistan for allowing militant leaders to roam free.

"Whether America likes it or doesn't like it makes no difference to me. I am Pakistani. We have courts. We are not U.S. slaves," he said.

"If Pakistan has any charges of terrorism they can summon us. I am ready to go to court. The U.S. is not interested in courts, it is pressing for extra-judicial actions," he said.

Khalil called U.S. policy confused and contradictory. He dismissed suggestions that the Haqqani network, which the U.S. has declared a terrorist group, is separate from the Taliban, which has not been declared a terrorist group to leave open the possibility of future negotiations.

"You can't separate the two. ... Taliban and Haqqanis are the same," he said. "Sirajuddin Haqqani is the Number 2 in the Taliban. How can you separate the two?"

Khalil, like many militants in south and southeast Asia, traces his career back to Afghanistan during the Soviet Union's occupation in the 1980s. Then he fought on the side of the United States, which backed the mujahedeen — or, as President Ronald Reagan called them, "freedom fighters." Today, many have joined the Afghan Taliban.

Khalil said U.S. intelligence trained him on the sophisticated U.S. Stinger anti-aircraft missiles that historians say turned the tide of the war. The Soviets withdrew in 1989.

"I have fought with the Americans in Afghanistan," he said. "But I haven't gone to Kashmir for a single day."

Analysts say Pakistan's policy of allowing militants their freedom is mostly motivated by its concerns about India, against whom it has fought three wars, two of them over Kashmir.

Pakistan also repeatedly reminds the United States and its critics that it has lost thousands of soldiers — more than the U.S. and NATO combined in Afghanistan — fighting militants on its territory. It says U.S. criticism is unfair and an attempt to put its own failures in Afghanistan on the shoulders of Pakistan.

"Pakistan has certainly taken aggressive action against some militant groups" said Seth Jones, director of Transnational threats Project at the U.S.-based Center for Strategic and International Studies.

But its intelligence agencies "continue to use some militants as a tool of foreign policy in countries like Afghanistan and India."

<b>HEADLINE</b>	<b>03/29 Philippines: extremist leader surrenders</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/filipino-extremist-blamed-bombings-killings-surrenders-54087823?">http://abcnews.go.com/International/wireStory/filipino-extremist-blamed-bombings-killings-surrenders-54087823?</a>
<b>GIST</b>	<p>A senior commander of the Abu Sayyaf extremist group blamed for bombings and kidnappings has surrendered in the south, the defense chief said Thursday, expressing hope it would bring the "eventual collapse" of a key militant stronghold.</p> <p>Nurhassan Jamiri surrendered with 13 of his men to army forces in southern Basilan province Wednesday. They handed over 10 assault rifles and a large cache of ammunition and were undergoing questioning, military officials said.</p> <p>Defense Secretary Delfin Lorenzana said that Jamiri's surrender, which came after negotiations with authorities, "will hopefully bring the eventual collapse of the Abu Sayyaf group in Basilan," the birthplace of the small but violent group, "and bring justice to the death of thousands of soldiers."</p> <p>Emerging in the late 1980s as an offshoot of the decades-long Muslim separatist rebellion in the south, the Abu Sayyaf lost its top commanders early in combat and descended into a bloody path toward terrorism and criminality.</p> <p>The United States and the Philippines have blacklisted the Abu Sayyaf as a terrorist organization.</p> <p>Jamiri has been blamed for years of bloody attacks, including a 2007 ambush in largely Muslim Basilan that killed 24 Philippine marines, several of whom were beheaded. His group has given sanctuary to other Abu Sayyaf militants behind piracy and kidnappings, including of Vietnamese sailors in recent years, the military said.</p> <p>His group has also carried out bombings in the Basilan cities of Isabel and Lamitan and the southern port city of Zamboanga across the Basilan Strait, along with ransom kidnappings and extortion, military</p>

	<p>officials said.</p> <p>Military officials did not say if Jamiri and his men would be prosecuted for the bloody attacks.</p> <p>Last month, Malaysian security officials suspected that Jamiri was killed with two other gunmen in a firefight in a plantation in the east coast of the Malaysian state of Sabah. But Philippine military officials said the militant was in Basilan at the time.</p>

<b>HEADLINE</b>	<b>03/29 Italy: arrests 2016 Berlin Christmas attack</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/italian-police-arrest-linked-berlin-christmas-attacker-54088825?">http://abcnews.go.com/International/wireStory/italian-police-arrest-linked-berlin-christmas-attacker-54088825?</a>
<b>GIST</b>	<p>Italian police say they have arrested five people connected to Anis Amri, the Tunisian who carried out the 2016 Berlin Christmas market truck attack and was later killed in a shootout with police in Italy.</p> <p>In a tweet Thursday, police said one of the five was believed to have procured the fake Italian identity papers that allowed Amri, a failed asylum-seeker, to move around Europe.</p> <p>Amri killed 12 people when he hijacked a truck and drove it into a crowded Berlin Christmas market on Dec. 19, 2016. The attack was later claimed by the Islamic State group. Using fake documents, he fled to Italy and died in a shootout with police near Milan four days later.</p> <p>The arrests were the latest in a marked uptick in recent police operations targeting suspected extremists.</p>

<b>HEADLINE</b>	<b>03/28 UK: ISIS-inspired teacher gets 25yrs</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/03/28/isis-inspired-british-teacher-gets-25-years-in-prison-for-attempting-to-recruit-army-children.html">http://www.foxnews.com/world/2018/03/28/isis-inspired-british-teacher-gets-25-years-in-prison-for-attempting-to-recruit-army-children.html</a>
<b>GIST</b>	<p>A British teacher was sentenced to prison for a minimum of 25 years Tuesday after he was convicted of trying to recruit students to carry out Islamic State-inspired attacks across London.</p> <p>Umar Haque, 25, was accused of radicalizing some 110 children at two schools and a mosque making them re-enact deadly attacks on London and role-play attacks on police officers; he even exposed the children to gruesome videos of beheadings, Reuters reported.</p> <p>“The children were paralyzed by fear of Haque, who they understood to have connections to terrorists and who essentially told them that a violent fate would befall them if they told anyone what he was doing,” said Dean Haydon, the head of Metropolitan Police’s Counterterrorism Command.</p> <p>Haydon said a “number of exercise books” were recovered from Haque’s home and it was “evident from his notes that his plan was a long-term one.”</p> <p>“[Haque] intended to execute his plan years later, by which time he anticipated he would have trained and acquired an army of soldiers, including children,” he said.</p> <p>Haydon said Haque planned to “create an army of children” that would help carry out attacks at “multiple sites using multiple weapons.”</p> <p>“He tried and he did, we believe, radicalize vulnerable children from the ages of 11 to 14,” Haydon said.</p> <p>Prosecutors said Haque wanted to use the “army” to attack Big Ben, soldiers who guard Queen Elizabeth II and shopping centers.</p>

	<p>Police believe Haque was radicalized through the internet and was inspired by last year's attack on the Westminster Bridge that killed four people.</p> <p>Haque lacked qualifications for academic positions, however, police said he became employed under the guise of teaching Islamic studies, Reuters reported.</p>

<b>HEADLINE</b>	<b>03/28 Pulse nightclub shooter target: Disney</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/pulse-nightclub-shooter-intended-attack-disney-world-prosecutors-say-n860786">https://www.nbcnews.com/news/us-news/pulse-nightclub-shooter-intended-attack-disney-world-prosecutors-say-n860786</a>
<b>GIST</b>	<p>ORLANDO, Fla. — The Orlando nightclub shooter intended to attack Disney World's shopping and entertainment complex by hiding a gun in a stroller but became spooked by police and instead chose the gay club as his target, prosecutors said Wednesday.</p> <p>Prosecutors revealed the details during their closing arguments in the trial of Noor Salman, the widow of Pulse nightclub shooter Omar Mateen.</p> <p>Salman, 31, is accused of aiding her husband in the attack that killed 49 people in 2016. She is charged with obstruction and providing material support to a terrorist organization.</p> <p>"The defendant's steps don't have to equal to her husband," Assistant U.S. Attorney Sara Sweeney told jurors.</p> <p>Defense attorneys have described Salman as a simple woman with a low IQ who was abused by her husband, and who didn't know of his plans because he concealed much of his life from her. They will present their closing arguments later Wednesday.</p> <p>Sweeney said Salman didn't know that Mateen was going to the Pulse nightclub on the night of the attack — she thought he was at Disney World. They two had visited Disney in the days before the attack, according to one of her statements to federal authorities.</p> <p>"The target of that terrorist attack was not the Pulse nightclub," Sweeney said. "The target of the attack was Disney."</p> <p>Sweeney showed a video of the Disney Springs complex that captured Mateen walking near the House of Blues club in the hours before the Pulse attack. In it, he looks behind him at police officers standing nearby.</p> <p>"He had to choose a new target," she said.</p> <p>Sweeney also said that Mateen had bought a baby stroller and doll at Walmart on June 11 — the day before the attack — and had a plan to hide a gun in the stroller while going to Disney.</p>

<b>HEADLINE</b>	<b>03/28 Military airstrikes against AQ in Libya</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/28/politics/us-airstrike-al-qaeda-libya/index.html">https://www.cnn.com/2018/03/28/politics/us-airstrike-al-qaeda-libya/index.html</a>
<b>GIST</b>	<p>Washington (CNN)The US military conducted its first airstrike against al Qaeda in Libya Saturday, killing one of the group's leaders, according to US Africa Command, which oversees US military operations in the region.</p> <p>"This is the first precision airstrike the US has conducted against al Qaeda," Africa Command spokesperson Robyn Mack told CNN.</p> <p>Africa Command said in a statement Wednesday that the strike, which took place near Ubari, Libya, killed "two al Qaeda terrorists, including Musa Abu Dawud, a high ranking al-Qa'ida in the Lands of the Islamic Maghreb (AQIM) official."</p> <p>AQIM is the local al Qaeda affiliate in North Africa.</p> <p>"Dawud trained AQIM recruits in Libya for attack operations in the region. He provided critical logistics support, funding and weapons to AQIM, enabling the terrorist group to threaten and attack US and Western interests in the region," the statement added.</p> <p>The statement said the strike was "conducted in coordination with the Libyan Government of National Accord" and that the US military assesses that no civilians were killed.</p> <p>The US has carried out a series of airstrikes targeting ISIS in Libya, a country beset by internal divisions and conflict following the ousting of Libyan dictator Moammar Gadhafi in 2011.</p> <p>US aircraft carried out over 500 airstrikes against ISIS in the coastal city of Sirte after the terror group seized control of the city, helping to drive ISIS out by the end of 2016. The US has carried out additional strikes against ISIS in remote areas of the Libyan Desert.</p> <p>"It's very very hard to plan some kind of operation that has a large effect when you have two to three guys in the Libyan desert," a Africa Command official told CNN last month.</p> <p>"It's not an ideal solution but we're keeping them degraded," the official added.</p> <p>However, this is the first time the US has specifically targeted the local al Qaeda affiliate in Libya, though US forces have targeted operatives with links to the group. AQIM also has a presence in neighboring Algeria and other North African countries like Mali.</p>

<b>HEADLINE</b>	<b>03/29 IRS auditing fewer Americans</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/the-irs-is-auditing-a-lot-fewer-americans-1522315800">https://www.wsj.com/articles/the-irs-is-auditing-a-lot-fewer-americans-1522315800</a>
<b>GIST</b>	<p>The percentage of individuals receiving tax audits declined for the sixth consecutive year in 2017 to reach the lowest level since 2002, further showing the effect of budget cuts at the Internal Revenue Service.</p> <p>The IRS, which has lost nearly one-third of its enforcement staffers since the 2010 peak, audited 0.62% of individual returns in the fiscal year that ended Sept. 30, according to data to be released Thursday. The audit of about 1 in 160 individual returns in 2017 is down from 1 in 90 in 2010, the peak year in the past decade.</p> <p>The audit rate declined most for high-income households, even though the Treasury inspector general said over two years ago that these earners should be an enforcement priority for the IRS. In 2017, the IRS</p>

audited 4.37% of returns with income of \$1 million and higher, less than half of the 9.55% audit rate of such returns in 2015. It marked the lowest rate of audits for that income group since 2004, when the data was first released.

The audit rate for other income groups also declined, but not as much. For taxpayers earning less than \$200,000, the percentage of returns audited dropped to 0.59% in 2017 from 0.76% in 2015.

Andy Mattson, a certified public accountant at Moss Adams LLP in Silicon Valley with many wealthy clients, said he has noticed the decline in audits of high earners. “We get far more state audits of our clients than IRS audits,” he said.

In 2017, IRS funding was \$11.2 billion, down nearly 8% from its high in 2010, although the number of individual returns grew nearly 5% over the same period. In the past, the IRS has said that it can generate about \$4 to \$6 in tax revenue for every additional dollar it receives. For fiscal year 2018, the IRS’s funding rises slightly, to \$11.4 billion.

Revenue from individual income taxes is the single largest source of federal receipts and has been growing as a percentage of the total. In fiscal year 2017, it accounted for nearly 48% of federal revenue compared with 45% a decade earlier. The revenue from corporate taxes accounted for 9% of total revenue in 2017, according to data released by the Joint Committee on Taxation.

Business audits declined in 2017 for the second consecutive year. The audit rate for all businesses dropped to 0.44% in 2017 from 0.71% in 2012, the peak for the decade. The only category of businesses for which audits didn’t drop in 2017 was partnerships. Their audit rate was 0.38% for both 2016 and 2017.

<b>HEADLINE</b>	<b>03/28 Alt-Right is self-destructing?</b>
<b>SOURCE</b>	<a href="https://www.thedailybeast.com/less-than-a-year-after-charlottesville-the-alt-right-is-self-destructing?ref=home">https://www.thedailybeast.com/less-than-a-year-after-charlottesville-the-alt-right-is-self-destructing?ref=home</a>
<b>GIST</b>	<p>Some have turned federal informant. Others are facing prison time. More are named in looming lawsuits. All of them are fighting.</p> <p>Last summer, the American alt-right was presenting itself as a threatening, unified front, gaining national attention with a deadly rally in Charlottesville, Virginia. The collection of far-right and white nationalist groups proclaimed victory after President Donald Trump hesitated to directly condemn them and instead blamed “both sides” and the “alt left” for the violence. But less than a year after Charlottesville, the alt-right is splintering in dramatic fashion as its leaders turn on each other or quit altogether.</p> <p>Matthew Heimbach’s arrest in a March trailer park brawl with members of his neo-Nazi group—some of whom he was allegedly screwing—felt like a too-obvious metaphor. Heimbach was the head of the Traditionalist Worker Party, a youth-focused white supremacist group that floated to the front of media coverage and hate rallies in the run-up to Donald Trump’s election.</p> <p>But by March, Heimbach and the TWP had spent the previous months embroiled in a series of online spats with other alt-right factions. On March 14, police in his Indiana hometown arrested Heimbach after he allegedly assaulted TWP spokesperson Matthew Parrott during a fight over their wives, both of whom Heimbach was allegedly sleeping with. Heimbach’s wife is Parrott’s stepdaughter.</p> <p>The high-profile bust was an accelerant in what had been a slow-burning feud among the alt-right. Heidi Beirich, director of the Southern Poverty Law Center’s Intelligence Project, said the schism started after Unite the Right, a white supremacist rally in Charlottesville, Virginia, last August. The rally turned deadly after a man affiliated with a white supremacist group plowed a car into a crowd of counterprotesters, killing one and injuring more.</p>

“I think the splintering started there, but I have to say what happened in the last couple weeks has been at a much higher level,” Beirich told The Daily Beast on Wednesday.

Threats from the far-right are by no means over. The SPLC recently released a map documenting 954 hate groups in the U.S., a rise in 20 percent since 2014. In a January report, the Anti-Defamation League found that white supremacists had killed 18 people in 2017.

But the alt-right has had a bad month. In recent weeks, as Beirich described, prominent white supremacist Richard Spencer has dropped a lawsuit against Kent State University and canceled his speaking tour, after anti-fascist protesters opposed him at every stop. “Antifa is winning,” Spencer conceded in a video. Days earlier, Kyle Bristow, an alt-right lawyer who has represented Spencer, announced he was quitting the movement after the Detroit Free Press wrote an article critical of him.

Heimbach was arrested days after Spencer canceled his tour.

“The implosion of the Traditionalist Worker Party, it’s not exactly as though that was planned in some way, but it’s a spectacular implosion of a key player in this universe,” Beirich said of the alt-right’s terrible two weeks.

Even the TWP’s diehards say its prospects are bleak.

“There is no way for us to continue on with the TWP branding after what happened,” Tony Hovater, a TWP leader, wrote on Gab, a social media platform popular among the alt-right. In November, Hovater was the subject of an arguably sympathetic New York Times profile. Now he was on Gab discussing his plans to start a new organization after Heimbach’s arrest, which was “without a doubt a shameful” incident, he wrote. (Journalist Elizabeth King noted on Twitter that the TWP may have rebranded or splintered into something called the Nationalist Initiative.)

“I have no comment,” Parrott, the former TWP spokesperson whose wife allegedly slept with Heimbach, told The Daily Beast on Wednesday. “I am no longer involved in the movement, and I have no stake in all the stupid shit going on in it.”

He’s not the only one headed to the exits over infighting.

Earlier in March—after Bristow quit the movement, but before Spencer canceled his college tour—Heimbach and the TWP acted as a security force for Spencer outside a speech to a handful of people at Michigan State University. They scrapped with counterprotesters, resulting in at least a dozen arrests—including that of Greg Conte, director of operations for an alt-right group, HuffPost reported.

The physical brawl turned into a Twitter feud between Spencer and Patrick Casey, the executive director of white supremacist group Identity Evropa. Identity Evropa participated in the violent clashes at Charlottesville. But after the deadly rally, and two leadership changes (leader Nathan Damigo quit after Charlottesville, and his successor Eli Mosely quit to join a Spencer-affiliated group before it was revealed that Mosely lied about serving in the Iraq War) Identity Evropa promoted Casey to its head and attempted to rebrand itself as clean-cut.

On Twitter, two days after the TWP got in a brawl while acting as Spencer’s security force, Identity Evropa claimed to be “explicitly non-violent” and “peacefully effecting cultural change.” In a press-friendly, but largely meaningless semantic ploy, the group denied being a white supremacist organization.

Spencer interpreted the tweet as an attack. In a tweet of his own, Spencer said he was “baffled and shocked at the behavior” of Casey, and accused him of expelling Identity Evropa members who had supported Spencer during the brawl outside Michigan State University.

The spat was the latest over the alt-right’s “optics,” a divisive subject among the movement. The Unite the Right rally was so toxic for the alt-right’s image that some members started arguing that in-person protests

were bad publicity for the cause.

Currently “the biggest divide is between people who believe in online activism versus real-world activism.” Beirich said. After Charlottesville, Daily Stormer founder “Andrew Anglin, for example, posted things criticizing in-real-life protests... When PayPal and Facebook started banning accounts, he was pointing out that ‘these aren’t good things for us, taking to the streets isn’t necessarily positive, the optics were bad.’”

Anglin is currently on the run and claims to be in Cambodia while he attempts to avoid a lawsuit by a Jewish woman whose address and phone number he posted online after she argued with Spencer’s mother. Anglin encouraged readers on his neo-Nazi website The Daily Stormer to call the woman and visit her home, unleashing a campaign of harassment against her.

An opposing alt-right movement accuses people like Anglin of “optics-cucking,” a reference to a porn genre in which a man watches another man have sex with his wife. (The term was in vogue with the alt-right long before Parrott stood on a box outside a trailer to watch Heimbach have sex with Parrott’s wife, according to a police report in the incident.) The anti-optics crowd accuses the pro-optics faction of trying to splinter the movement.

Among the optics-skeptical is Chris Cantwell, a white supremacist who featured prominently in a Vice documentary on the Unite the Right rally, and who later became a meme when he cried on camera. Since Charlottesville, Cantwell has produced a podcast, which ran on The Daily Stormer until Anglin allegedly removed it without telling Cantwell earlier this month.

“As far as I can tell, that’s what’s going on and they’re just throwing barbs back and forth over it,” Beirich said. “I think there’s also a lot of, maybe ‘professional’ is the wrong word, but professional jealousies here. Cantwell’s blog or podcast gets more popular, that pisses off other members of the alt-right who want to be center-stage.”

On Gab, Cantwell alleged a conspiracy.

“I found out that new content was not being syndicated to [The Daily Stormer] when somebody asked about it in my Gab mentions. So I can’t say with any certainty what the motivation was,” Cantwell wrote last week. He suggested that the removal of his show and the flood of negative news about the TWP, in which he is not involved, was part of an effort to discredit the alt-right.

“I smell subversion,” he wrote.

Hovater, the remaining TWP leader who called Heimbach’s arrest “shameful,” shared the post. Cantwell’s attack on The Daily Stormer soon landed him in trouble with other members of the alt-right, when one of the blog’s contributors revealed that Cantwell was an FBI informant.

Andrew Auernheimer, a Daily Stormer contributor and hacker best known by his screen name “Weev,” posted screenshots of a conversation with Cantwell, in which Cantwell admitted to reporting members of Philadelphia ARA (anti-racist action groups) to authorities.

“I talked to cops too. gonna talk to the feds soon most likely,” Cantwell told Weev in the undated conversation, which references Cantwell’s pending felony case for alleged illegal use of tear gas at the Charlottesville rally. “I’m going after Philly ARA. Not throwing our people under the bus. We weren’t the bad guys last August, and Charlottesville is ignoring that fact. The feds want to bust Antifa and I’m keen to help them.”

Weev replied that “if you hadn’t talked to cops and media in the first place and had gotten scarce you wouldn’t be facing 40 years in prison.”

After Weev posted the screenshots, Cantwell confirmed their authenticity in a blog post of his own titled

“I Am A Federal Informant,” in which he attacked Weev as “a Jew in a foreign country” in reference to rumors that the neo-Nazi blogger is actually of Jewish ancestry. Cantwell also confirmed that his attorney had spoken with the FBI. The admission set off a fresh volley of criticism from alt-righters who are opposed to communicating with law enforcement.

Cantwell has good reason to try to deflect blame onto anti-fascist protesters. In addition to his pending criminal charges, he is named in two civil lawsuits against Unite the Right rioters. (He is only a defendant in one of the cases.) Between them, the lawsuits also name Spencer, the TWP, Identity Evropa, and the League of the South, the latter of which signed an agreement Monday not to host any future armed protests in Charlottesville.

Beirich said the two lawsuits “will probably drive some other people to abandon the movement. They just don’t want to get caught up in the legal fees.”

In her extensive time tracking the far-right, Beirich has seen other similar movements grow and implode. She drew a parallel between the alt-right and the National Alliance, a neo-Nazi group that, until the early 2000s, “was the biggest neo-Nazi group in America. It was the main player.”

But when the National Alliance’s leader William Pierce died in 2002, the group turned on itself.

“Within a very short period of time, the whole group was essentially decimated. One year after Pierce was dead, that group was done and had splintered into a whole bunch of factions,” Beirich said. “That was the case where a leader died, and I imagine Heimbach’s downfall is almost a death to the Traditionalist Worker Party.”

Under the pressure of lawsuits, jail time, scandal, and shame, she imagines some current alt-righters will simply slink away, if they haven’t already.

“I’m sure we’re going to lose some people and we’re going to have some fighting over the crumbs that are left.”

<b>HEADLINE</b>	<b>03/28 Bonney Lake crash and UFO mystery</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/940224/bonney-lake-crash-ufo-mystery/">http://mynorthwest.com/940224/bonney-lake-crash-ufo-mystery/</a>
<b>GIST</b>	<p>On the evening of Wednesday, April 1, 1959, an Air Force C-118 – that’s the military version of a DC-6 airliner – was on a training exercise. It was doing “touch and go” landings at McChord Air Force Base, or what’s now JBLM, taking off and landing, and then flying around the nearby countryside.</p> <p>At about 8:12 p.m. that night, the tower at McChord asked the pilots of the C-118 to delay their next return to the runway because several fighter planes were landing. The C-118 headed east toward Bonney Lake to fly in a holding pattern.</p> <p>It was about five minutes later when something went terribly wrong. The C-118 went down.</p> <p>And within a few days, some people were blaming a UFO. Some still aren’t sure what exactly happened.</p> <p>The crash site</p> <p>Lee Corbin is a retired military and airline pilot who for many years has been researching the story of what happened to the C-118. Last Friday, Corbin led a reporter on a hike to a wooded area not far from Highway 410, during an unusual bout of springtime snow.</p> <p>The woods where Corbin walked are in Pierce County near Bonney Lake, south of Highway 410, and not far from the growing “master planned community” called Tehaleh. Corbin had parked his truck off the</p>

side of the road, near a dead end that will one day connect the east and west halves of the development, and then walked up a gentle slope and onto a woodsy plateau.

“At the time this happened, and this is where the UFO controversy comes in, is supposedly the [pilot] made a radio call saying ‘We’ve hit something or something has hit us,’” Corbin said, leading the way along an old logging or fire road leftover from when the land belonged to Weyerhaeuser.

“[And] you don’t find [mention of that] in any of the accident reports, interestingly enough, but several newspapers carried that story,” Corbin said.

That quote mentioned by Corbin – with the pilots reporting some kind of collision – was attributed to Colonel Robert E. Booth, commander of the 1705th Air Transport Group. It appeared in the Seattle Times on April 2, 1959.

What had happened, it was later reported by the Air Force, was that the pilot and co-pilot thought the tower at McChord was tracking the plane’s altitude, and the tower thought the pilot and co-pilot were tracking their own altitude.

It was dark, and there weren’t many houses or lights in that area in those days. As it turned out, the plane was flying too low to clear a place called “Spar Pole Hill” near Orting. The right wing of the C-118 struck the treetops there. The wing was badly damaged, and it caught fire, but the plane kept flying.

Six or so miles north of Spar Pole Hill, the damage from striking the trees proved to be too much.

“The right wing peels off the airplane, and about this same time the co-pilot makes a radio call saying ‘This is it,’ because they know they’re going in,” Corbin said.

The pilot was later credited with somehow steering the plane clear of the homes and businesses in and around downtown Orting.

“So the airplane loses its wing, rolls inverted, then just basically noses in right here,” Corbin said, pointing to a wooded area, dense with underbrush and 50-foot tall evergreens.

The plane crashed and exploded, and a huge fire consumed much of the wreckage and was still smoldering the next day. At the crash site on Friday, Lee Corbin easily found pieces of the wreckage – small chunks of thick and twisted aluminum, some with rivets still attached – just sitting on the forest floor.

All four men aboard the plane died in the fiery crash, including 1st Lieutenant Robert Roy Dimick, the pilot; 1st Lieutenant Thomas E. Lasater, co-pilot; and Technical Sergeant Guy J. Cunningham and Staff Sergeant Arthur T. Foote, both flight engineers.

Corbin has researched military aviation accidents around the Northwest, and he lives not too far from the site of the C-118 crash. He’d ultimately like to see some kind of monument to the crew of the C-118, maybe when the Tehaleh development reaches this, so far, relatively untouched piece of land.

Corbin has also been in touch with the developers and asked them to keep him apprised when work is set to begin in the area near where the C-118 crashed, so that he can help keep a lookout for artifacts that might turn up during any tree removal or excavation.

What actually caused the crash? Officially, the Air Force cited “operator error” and “supervisory error” in the downing of the C-118, pointing to the confusion over who was keeping track of the plane’s altitude.

But in addition to the crash that night, a series of sonic booms had been heard and felt around much of the Puget Sound, and a series of odd and seemingly inexplicable lights had been witnessed near Bonney Lake. This, combined with the news that the pilot had reported that they might’ve hit something, helped spawn theories that the crash was caused by a collision with a UFO.

These theories were collected and written about by a Seattle firefighter named Bob Gribble. Gribble was a pioneer in the amateur scientific study of UFOs – and sharing of information – going back to the 1950s. He’s in his 90s now, and reportedly suffering from dementia.

Gribble is best known in the UFO community for founding the National UFO Reporting Center and UFO hotline in Seattle in the 1970s. When Gribble stepped down from running the hotline, a UW fisheries school graduate named Peter Davenport volunteered to take over.

Davenport had witnessed a UFO as a small child with his family in St. Louis back in the 1950s, and he wrote about UFOs for a local paper in New Hampshire as a teenager.

In July 1994, Davenport heard that Bob Gribble was thinking of closing down the hotline. So he called him up.

“We talked, and before I knew it, Bob said, ‘Would you like the hotline?’ He said, ‘If you’d like it, it’s yours,’” Davenport said by telephone late last week.

“I accepted the responsibility for the hotline in that conversation,” Davenport said. “There are many times when I wished I’d turned my back on the generous offer and not accepted it, because it has resulted in tens of thousands of hours of work, very interesting work in many instances, but work nevertheless.”

Davenport calls the hotline “work,” but it’s more of a volunteer project or labor of scientific love.

“Most of the expenses are met by me, out of my savings, in order to keep the process going. It’s a measure of my dedication to the field, but I’m convinced that we are being visited, frequently visited, by these objects we call UFOs,” Davenport said.

“The US government, is trying to convince people that it’s all a hoax and a fiction, but I don’t believe so,” Davenport said. “And I think it’s extremely important . . . that the American people know the truth about the UFO phenomenon.”

Peter Davenport was based in Seattle for more than 20 years and only recently moved his residence – and the hotline – to Eastern Washington. He’s heard as a guest, discussing recent UFO reports almost every week on “Coast to Coast AM,” broadcast nightly at 10pm on KIRO Radio.

As for the Bonney Lake crash, it’s not as famous as the time when Kenneth Arnold coined the term “flying saucer” near Mount Rainier in 1947 or the Maury Island Incident in the same year, but Peter Davenport had heard of it.

“I think Bob Gribble did mention this case to me once before,” Davenport said. “What triggered my memory was the fact that the plane appeared to have been pressed down vertically to earth rather than hitting, striking the earth at a slant angle.”

Gribble published an article in May 1959 in a publication called “A.P.R.O. Bulletin” – short for “Aerial Phenomena Research Organization.” Gribble’s piece detailed his investigations into the Bonney Lake crash. He described the odd sounds and lights that many witnesses had reported that evening, and what he described as the “silencing” of local officials in Orting – by the military – about what had really happened on the night of April 1, 1959.

UFO mystery years later

Nearly 60 years later, it doesn’t really help clear things up much to see that the crash investigation report prepared back then by the US Air Force still has about two pages of text redacted—even though Lee Corbin has tried for years to get the full report and has been denied multiple times.

All those details aside, it's fascinating to hear Peter Davenport describe the big-picture, scientific and non-sensationalized national approach that Bob Gribble took to studying UFOs, from right here in Seattle.

"He set up the National UFO Reporting Center and the Aerial Phenomena Research Group, and he also formed a telephone hotline which is the hotline I run today," Davenport said. "It's been in continuous operation since October of 1974." Gribble, Davenport says, also did mass mailings of information about the hotline to law enforcement agencies around the country, to make sure word got out that there was a place to call to report UFO sightings.

As it turns out, Bob Gribble was just one of several nationally influential people in this area who compiled information and studied UFOs for decades.

Dr. Marilyn Childs and her late husband Laurence Childs moved to Seattle in 1971 and were the first husband-and-wife team of UFO investigators. They were part of a local chapter of group called the Mutual UFO Network, or "MUFON" for short.

"What we did was, we kept the metaphysical part out of MUFON," Childs said earlier this week. "There's a lot of us who do believe in this stuff, but we want to keep it strictly scientific . . . because if it's going to [be taken seriously], we're going to have to do that."

"So we concentrated on mainly education and scientific research, and we trained our people," many of whom were engineers from Boeing and Fluke, Childs said.

The various groups also got along with each other, and the members of different organizations attended each other's meetings and were supportive of their groups' respective activities.

Marilyn Childs says this was unusual compared to what she heard about or saw in other parts of the country.

"I haven't ever heard of anybody working together like we all did," Childs said. "But we just loved each other and nobody was on a big ego trip, and it just worked out perfectly."

The earlier era described by Childs sounds downright idyllic, and it also seems to have changed somewhat in recent years.

Meanwhile, Peter Davenport is not sure about who's going to take over the hotline when he retires. He's also not sure about what will happen to the decades of UFO reports that he and Bob collected. Aside from their value to UFO researchers, these records likely say much about broad aspects of American culture and the human psyche.

"I've approached the University of Washington to inquire whether they'd like to have my records, and they expressed disinterest," Davenport said. "The library said, 'Because we don't have courses in the subject, we're not interested in having the archives.' Which makes sense, I guess. I might just burn it. There's very little good that the archives would do if people are not going to pay attention . . . I don't know what to do about it. I don't have a solution to that problem."

Davenport may also write a book about his experiences, but he says it likely won't be strictly about UFOs.

"It will be about the peculiar facets of human psychology that I've been witness to as a UFO investigator," Davenport said. "People do and say and believe strange things, some of which are true, most of which, in my opinion, are probably not true."

"But it's hard to know for sure."

<b>HEADLINE</b>	<b>03/28 No more tax payer funded govt. portraits</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/28/trump-signs-law-banning-tax-dollars-portraits/">https://www.washingtontimes.com/news/2018/mar/28/trump-signs-law-banning-tax-dollars-portraits/</a>
<b>GIST</b>	<p>Remember Ed Schaefer? You should — you paid \$30,500 for his hand-painted portrait.</p> <p>How about Steve Preston? His official government portrait cost you \$19,500.</p> <p>But the days of taxpayers paying for oil paintings of government officials, obscure or memorable, are gone.</p> <p>President Trump signed a law Tuesday prohibiting the use of government funds to pay for oil portraits of the president, vice president, Cabinet members and lawmakers. The portraits, an old tradition in Washington, can often cost \$20,000-\$40,000.</p> <p>The measure was first introduced in Congress in 2013, after reports that federal agencies spent more than \$400,000 on portraits displayed in government buildings, often in secure locations not open to the public.</p> <p>The Obama administration was guilty of the vanity practice, often as high-level officials were on their way out. The Environmental Protection Agency spent nearly \$40,000 on a portrait of Administrator Lisa Jackson, \$41,200 for a painting of Air Force Secretary Michael Donley, and \$22,500 for a 3-by-4-foot portrait of Agriculture Secretary Thomas Vilsack.</p> <p>The Washington Times reported in 2012 that the Obama administration paid out at least \$180,000 for official portraits in the previous year.</p> <p>The George W. Bush administration also indulged in the Washington tradition, spending more than \$40,000 on a painting of former Attorney General John Ashcroft.</p> <p>Mr. Schaefer, a former Bush administration Agriculture secretary, also was immortalized in oil paint. So was Mr. Preston, who served as secretary of Housing and Urban Development for only seven months in the waning days of the Bush administration.</p> <p>The current law, known as the EGO Act (Eliminating Government-Funded Oil-Painting), was introduced in January 2017 by Republican Sens. Bill Cassidy of Louisiana and Ron Johnson of Wisconsin, and Democratic Sens. Claire McCaskill of Missouri and Deb Fischer of Nebraska.</p> <p>“When America is trillions of dollars in debt, we should take every reasonable measure to reduce the burden passed on to our children and grandchildren,” Mr. Cassidy said at the time. “Tax dollars should go to building roads and improving schools — not oil paintings that very few people ever see or care about.”</p> <p>Portraits of former President Barack Obama and former first lady Michelle Obama, costing about \$500,000, were commissioned by the Smithsonian’s National Portrait Gallery, which unveiled the paintings last month.</p> <p>The White House Historical Association also has commissioned portraits of presidents with private donations.</p>

<b>HEADLINE</b>	<b>03/28 China facial recognition for jaywalkers</b>
<b>SOURCE</b>	<a href="https://www.fastcompany.com/40550856/china-is-using-ai-and-facial-recognition-to-fine-jaywalkers-via-text">https://www.fastcompany.com/40550856/china-is-using-ai-and-facial-recognition-to-fine-jaywalkers-via-text</a>
<b>GIST</b>	Traffic authorities in the Chinese city of Shenzhen have teamed up with an AI firm named Intellifusion to carry out the rather dystopian policing, reports the South China Morning Post.

Already traffic police in the city have been using Intellifusion software and cameras to identify passing jaywalkers and project their faces and identifying information on large screens located near intersections for all to see, but now Intellifusion is taking its surveillance a step further.

The company is partnering with social media platforms including WeChat and Sina Weibo and local mobile phone carriers so it can text jaywalkers the second they offend. Police will also have the option of delivering a ticket and fine on the spot for people who are picked up by the AI system for repeat offenses.

<b>HEADLINE</b>	<b>03/28 Bellingham Police Dept. under scrutiny</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/bellingham-police-dept-under-fire-after-three-officers-arrested-in-nearly-two-years">http://komonews.com/news/local/bellingham-police-dept-under-fire-after-three-officers-arrested-in-nearly-two-years</a>
<b>GIST</b>	<p>BELLINGHAM, Wash. - For Bellingham Police Chief David Doll it's a question of what to do next.</p> <p>Three officers arrested in nearly two years – one fired, one facing trial and the third in jail after being accused of violent crimes.</p> <p>“I’m crushed. I want our community to know that we are a professional law enforcement organization,” Doll said in an interview with KOMO Wednesday. “It’s not easy.”</p> <p>Late Monday night Doll received the latest call – Cpl. Brooks Laughlin was being sought by nearby Everson police for allegedly violating a domestic violence no-contact order.</p> <p>“It’s awful. It’s awful as a police chief,” Doll said. “I know I’m the one who is going to hold them accountable.”</p> <p>The victim, said Everson Police Chief Daniel MacPhee, said Laughlin contacted her almost daily since the no contact order was signed and Laughlin was charged with criminal trespass last month.</p> <p>“He agreed to turn himself in to the Bellingham Police Department,” MacPhee said about Laughlin.</p> <p>On Wednesday, Laughlin was ordered held in lieu of \$200,000 bail. The judge said she was denying the defense attorney’s request for a reduced bail amount because she feared Laughlin’s release would be a danger to community safety.</p> <p>The deputy prosecutor told the judge the victim was worried Laughlin wouldn’t stop harassing her.</p> <p>“One of her fears is Brooks was tracking her and trying to find her whereabouts,” he said. “She’s concerned Brooks is at the point where feels he has he has nothing to lose.”</p> <p>Laughlin’s attorney countered in court that his client is “not a danger to the community.”</p> <p>Doll, a longtime Bellingham officer who has only been chief for a few months, said he can’t recall another time there have been so many officers facing criminal allegations in his city.</p> <p>He said he has spoken to community groups, even posted a plea on Facebook, asking people to trust officers.</p> <p>“Know that we will hold our people accountable for things that they do,” Doll said.</p> <p>Doll said the Snohomish County Sheriff’s Office is investigating Laughlin’s case. A private attorney is reviewing the department’s adherence to city policies as well, he said.</p> <p>Laughlin’s arrest follows the arrest of Bellingham Officer Sukhdev Dhaliwal. He was charged with assault</p>

	<p>and harassment last year after allegedly beating up a man in Blaine, according to police.</p> <p>Doll said Dhaliwal he remains on administrative leave and is pending trial.</p> <p>Last fall Officer Jacob Esparza pleaded guilty to domestic violence harassment for assaulting his ex-wife. He has been fired, Doll said.</p> <p>“I’m hoping it’s a string of bad luck,” Doll said. “We are looking at systems that we can put into place so if there are people who are experiencing issues of domestic violence we can make it easier for them to reach out for help.”</p>

<b>HEADLINE</b>	<b>03/29 Colorado rise in rabid skunks</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/great-outdoors/2018/03/29/colorado-seeing-rise-in-rabid-skunks.html">http://www.foxnews.com/great-outdoors/2018/03/29/colorado-seeing-rise-in-rabid-skunks.html</a>
<b>GIST</b>	<p>The state of Colorado has seen what’s been described as an “unprecedented” increase in rabid skunks.</p> <p>So far in 2018, 23 skunks have tested positive for rabies across El Paso County, with similar problems elsewhere in the state, the Colorado Springs Gazette reported.</p> <p>Denver has seen 45 rabid skunks this year, the newspaper reported.</p> <p>“It’s kind of a cyclic thing that occurs; we happen to be in an up-cycle,” Robyn Weber, an El Paso County Public Health epidemiologist, told the newspaper. “One of the big concerns is that we have a lot of people and a lot of pets in these areas where we’re testing positive.”</p> <p>Warmer-than-average winter weather and a rising skunk population in the state are considered to be factors, state and county health officials say.</p>

<b>HEADLINE</b>	<b>03/28 Electric ferries coming to Washington?</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/electric-ferries-could-be-coming-to-washington/281-532970269">http://www.king5.com/article/news/local/electric-ferries-could-be-coming-to-washington/281-532970269</a>
<b>GIST</b>	<p>Toyota Prius cars are a pretty common sight on Washington streets and highways, and prototypes exist for electric trucks and airplanes. Electric-powered ferries could be next.</p> <p>Part of the 2018 state transportation budget recently signed by Gov. Jay Inslee includes funds to look into converting some of the ferry fleet, reports Northwest News Network.</p> <p>The Legislature gave \$600,000 to Washington State Ferries to explore converting three of the ferries from diesel to hybrid electric propulsion. The three ferries being proposed for conversation are the Tacoma, Wenatchee, and Puyallup, which serve the Bainbridge and Edmonds-Kingston runs.</p> <p>“We’ve done pre-design studies already to look at the vessels, terminals and the charging of the vessels,” Matt von Ruden, Director of Vessels with Washington State Ferries told Northwest News Network. “So we’re ready now to move forward to actually engage industry on the solution.”</p> <p>Ruden says massive banks of batteries would be installed below the deck of the three largest vessels of the fleet. Ruden says technology has advanced where battery power alone could propel a jumbo ferry across the Puget Sound. Some converted ferries, however, would still have backup diesel generators on board.</p> <p>A WSF spokesperson said we could potentially start riding electric-powered ferries in five years.</p>

<b>HEADLINE</b>	<b>03/28 Dangerous drug trend: wasping</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Health/dangerous-drug-trend-called-wasping-combines-meth/story?id=54068422&amp;cid=clicksource_26_4_article%20roll_articleroll_hed">http://abcnews.go.com/Health/dangerous-drug-trend-called-wasping-combines-meth/story?id=54068422&amp;cid=clicksource_26_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>The term “wasping” may not sound familiar, but first responders are learning about the emerging trend.</p> <p>The concerning new drug practice is an abuse of the active components in insect killer, most commonly wasp killer spray, to achieve a high. Abused in combination with methamphetamines or used as a meth substitute, it has been reported by users to generate a “rush,” feelings of déjà vu and a hallucinatory sense of smell. Users either spray the liquid onto the methamphetamine or crystallize the liquid using hot metal sheets, allowing the finished product to be inhaled or injected.</p> <p>Extreme physical responses to wasping have been reported in some cases. But because this practice is relatively new, it remains to be seen how toxic or deadly it will be on a large scale.</p> <p>How can an insect killer get someone high? The active ingredient in pesticides is a class of molecules known as pyrethroids, which penetrate the insect’s nervous system. In insects, pyrethroids stun and then kill. In humans, they block normal nerve signaling, causing abnormal sensation and, in the worst cases, seizures or even paralysis.</p> <p>The substance also causes over-activation of the sympathetic nervous system, often referred to as the “fight or flight” response, which can lead to excitability, heart racing and difficulty breathing.</p> <p>Pyrethroids are toxins that can be deadly, either through respiratory failure or paralysis. Other side effects that have been described are headache, nausea, incoordination, tremors, facial flushing and swelling and burning and itching sensations.</p> <p>The concern over people preparing and intentionally inhaling the drug is also tied to its known warnings -- the drug is most dangerous when inhaled. Working with the insect killer can lead to severe illness in approximately 4 to 14 percent of cases. On rare occasion, it can lead to death, which has been reported to occur in people with pre-existing lung conditions such as asthma.</p>

<b>HEADLINE</b>	<b>03/28 Increased activity at NKorea nuke site</b>
-----------------	---

SOURCE	<a href="http://abcnews.go.com/International/wireStory/ahead-trump-summit-activity-north-korea-nuke-site-54062730">http://abcnews.go.com/International/wireStory/ahead-trump-summit-activity-north-korea-nuke-site-54062730</a>
GIST	<p>Increased activity at a North Korean nuclear site has once again caught the attention of analysts and renewed concerns about the complexities of denuclearization talks as President Donald Trump prepares for a summit with Kim Jong Un in the coming weeks.</p> <p>Satellite imagery taken last month suggests the North has begun preliminary testing of an experimental light water reactor and possibly brought another reactor online at its Yongbyon Nuclear Research Center.</p> <p>Both could be used to produce the fissile materials needed for nuclear bombs.</p> <p>The findings come at a particularly sensitive time. Trump and Kim are planning to meet by May, according to officials, and denuclearization will likely be the biggest topic on their agenda if they do meet. North Korea tested its biggest nuclear device to date last September. Pyongyang claims it was an H-bomb.</p> <p>While the North hasn't conducted any tests since, or test-launched any long-range missiles since Nov. 28, the heightened activity at the Yongbyon complex could be ominous.</p> <p>According to an analysis in Jane's Intelligence Review published earlier this month, a testing program is now underway at the experimental reactor, which means it could become operational with "little warning later in 2018 or in 2019." It said the preliminary testing follows increased activity throughout 2017.</p> <p>The reactor was completed five years ago and is primarily designed to generate electricity for civilian use. But it could also be used to produce plutonium or tritium.</p> <p>The Jane's report cautioned that without international inspections it's impossible to tell for sure if it's being used to produce civilian electricity or weapons-grade material for bombs. The reactor has been linked to the local electricity grid and is believed to be potentially able to power a city of about 50,000 if operated at full capacity.</p> <p>"Further monitoring of the type and cadence of activity at the site is likely to reveal clues about North Korea's ultimate intentions," the Jane's report concluded.</p> <p>In a separate report posted on 38 North, a website that specializes in North Korea news and analysis, experts said they have detected activity at another reactor in the Yongbyon complex, which is located north of Pyongyang, that could be an even bigger concern.</p> <p>Imagery of Yongbyon's 5-megawatt reactor suggests it was brought into operation very recently. The website said that would mean "North Korea has resumed production of plutonium presumably for its nuclear weapons program."</p> <p>It said commercially available satellite imagery of the reactor revealed steam vapor plumes emanating from the generator hall, along with river ice melt near the reactor. Additionally, North Korean technicians might have stepped up efforts to conceal signs of the reactor's operations, "making monitoring efforts more difficult going forward."</p> <p>The March 5 report added that a military tent camp has been set up at Yongbyon, possibly for troops doing construction or providing enhanced security.</p>

HEADLINE	<b>03/28 Pilots report close encounter UFO</b>
SOURCE	<a href="http://abcnews.go.com/US/pilots-report-close-encounters-ufo-arizona-passed-us/story?id=54067123&amp;cid=clicksource_81_2_hero_headlines_bsq_hed">http://abcnews.go.com/US/pilots-report-close-encounters-ufo-arizona-passed-us/story?id=54067123&amp;cid=clicksource_81_2_hero_headlines_bsq_hed</a>
GIST	Two pilots on different aircraft reported having close encounters with a mysterious object flying high

above Arizona last month, according to the Federal Aviation Administration.

The sightings occurred within minutes of each other on the afternoon of Feb. 24, some 40,000 feet above southern Arizona near the New Mexico border. ABC News obtained the audio recording of the conversation between the pilots and the Albuquerque Air Route Traffic Control Center, released by the FAA.

The news comes amid a series of reports of military pilots coming into contact with what they believed to be UFOs and the disclosure of a secret, but now-defunct Pentagon program to track such incidents.

The controller was unable to verify that any other aircraft was in the area at the time of the reported sightings, according to a spokesperson for the FAA.

"We have a close working relationship with a number of other agencies and safely handle military aircraft and civilian aircraft of all types in that area every day, including high-altitude weather balloons," the spokesperson told ABC News in an email Wednesday.

<b>HEADLINE</b>	<b>03/28 China challenges US Navy at sea</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/28/asia/south-china-sea-drills-liaoning-intl/index.html">https://www.cnn.com/2018/03/28/asia/south-china-sea-drills-liaoning-intl/index.html</a>
<b>GIST</b>	<p>(CNN)In a move surely intended to put Washington on notice China's military has put on a show of force in the South China Sea, new satellite images show, with drills at sea and in the air to reinforce its claims in the contested region.</p> <p>Analysts said the images, provided by Planet Labs Inc and date-stamped March 26, showed China's only operational aircraft carrier, the Liaoning, accompanied by dozens of other vessels in the South China Sea, just south of the Chinese island province of Hainan.</p> <p>While the aircraft carrier has visited the South China Sea before, it was unusual to see such a large number of Chinese naval vessels training together in the area, Collin Koh, research fellow at the S. Rajaratnam School of International Studies' Maritime Security Program, told CNN.</p> <p>"I would say this is the new normal and this will not be a one-off show of force," he said.</p> <p>China said Friday that it would conduct live-fire military drills in the South China Sea at an undisclosed future date, adding they weren't "targeted toward any specific country or aim," state media reported. The Global Times, a state-run tabloid, said the Liaoning would likely take part.</p> <p>However, it wasn't clear if the photos were of the drills announced last week. The Chinese military has not released any official information on the Liaoning's movements.</p> <p>The carrier group is only the latest in a series of military maneuvers by the Chinese government in March. Images on Chinese state media showed armored amphibious vehicles training in the waters of the South China Sea on Monday and Tuesday. On Sunday, China's state media announced air force exercises had been carried out over the South China Sea and the West Pacific.</p> <p>On March 21, the Liaoning aircraft carrier sailed through the Taiwan Strait towards the South China Sea, according to Taiwan's Defense Ministry.</p> <p>A US State Department official told CNN the United States was concerned about China's lack of transparency around its military exercises and "associated strategic intentions."</p> <p>Koh said the flurry of military activity was the result of a newly-empowered Chinese President Xi Jinping following through on his plans for the country's armed forces.</p>

	"This show of force is not just to symbolize that China is ready to fight ... There is a lot more resolute determination on the part of China to push the military to much greater degrees of readiness," he said.

<b>HEADLINE</b>	<b>03/29 US, Mexico new maritime front in drug war</b>
<b>SOURCE</b>	<a href="https://apnews.com/9ffa13d422934b8d879d35c786b3b4a0/AP-Exclusive:-US,-Mexico-open-new-maritime-front-in-drug-war">https://apnews.com/9ffa13d422934b8d879d35c786b3b4a0/AP-Exclusive:-US,-Mexico-open-new-maritime-front-in-drug-war</a>
<b>GIST</b>	<p>SAN DIEGO (AP) — The U.S. and Mexican governments are sparring over immigration and trade, but the two countries are joining forces on the high seas like never before to go after drug smugglers.</p> <p>The United States, Mexico and Colombia will target drug smugglers off South America's Pacific coast in an operation that is scheduled to begin Sunday and last for the foreseeable future, Coast Guard officials told The Associated Press.</p> <p>U.S. Coast Guard Adm. Paul F. Zukunft teased the idea during a recent defense conference in San Diego, saying the United States "can't do it alone."</p> <p>"It's no secret we are besieged with the flow of drugs from Latin America to the United States," he said.</p> <p>U.S. and Mexican forces have routinely worked together at sea, but the latest effort "marks a significant step in terms of information sharing, collaboration and cooperation between the United States, Mexico and other partner nations," according to the Coast Guard.</p> <p>The Americans and Mexicans will exchange intelligence more freely than in the past, which could mean</p>

sharing information on well-traveled routes for drug smugglers or preferred paths for specific smuggling organizations, Coast Guard spokeswoman Alana Miller said.

They will also board the other country's vessels to view operations and gain expertise, Miller said. In 2015, three members of the Mexican navy boarded a Coast Guard vessel during a port call in Huatulco, Mexico, but this operation calls for more frequent exchanges, and they will be at sea.

The operation will last "for the foreseeable future as long as it's working for everyone," Miller said. "It's sort of open-ended."

Traffickers over the years have increasingly turned to the sea to move their illegal goods, traversing an area off South America that is so big, the continental United States could be dropped inside. Smugglers routinely move cocaine out of countries like Colombia to Central America and Mexico via fishing boats, skiffs, commercial cargo ships — even homemade submarines.

The operation comes after five years of record seizures by the Coast Guard. But U.S. officials say because of limited resources, the U.S. military's smallest service still catches only about 25 percent of illegal shipments in the Pacific.

Even so, the Coast Guard annually seizes three times the amount of cocaine confiscated at the U.S.-Mexico border. Yet ocean smuggling has not grabbed lawmakers' attention like the flow of drugs across the nearly 2,000-mile-long (3,200-kilometer-long) land border, where the Trump administration wants to spend billions to build a continuous wall.

As much as 20 percent of the cocaine moving through South America ends up in the United States, and most of it lands first in Mexico from seafaring smugglers. The hope is boats will be stopped before their shipments are loaded onto Mexican trucks that fan out on various routes bound for the U.S. border, authorities said. Large boats can cart 20 tons (18 metric tons) of cocaine or more.

Mexico has historically been among the Latin American countries that are most reluctant to join operations with the U.S., which can be traced back to the Mexican-American War that was fought 170 years ago. The United States cannot open military bases in Mexico, and U.S. officials, for instance, cannot venture into Mexican waters without prior permission, even if they are chasing drug vessels.

The Coast Guard now stops its pursuit and alerts Mexican authorities if suspicious boats cross into their territorial waters.

It's unclear whether this new cooperation will affect those restrictions.

Treaties with nations such as Colombia have allowed U.S. authorities more latitude, such as permitting Coast Guard officers to board Colombian-flagged ships. U.S. officials have touted Colombia's joint anti-drug efforts as a model for the region.

The U.S. and Mexican military relationship has strengthened since the two nations signed the 2008 Merida Initiative to work together in the drug war. There have been more cross-border trainings, especially with the Mexican Navy, which is considered less corrupt than the Mexican Army and has raised its profile with the captures and killings of drug bosses.

The combined operation was planned in a series of meetings over the past year. The maritime services signed letters of intent to work together to fight organized crime while respecting each country's sovereignty and territorial waters.

David Shirk, associate professor of political science at the University of San Diego, said the operation falls in line with Trump's vow to go after the "bad hombres," while President Enrique Pena Nieto has recognized organized crime is so severe that Mexico needs help.

“With more walled-off sections of the border, we’ve seen drug trafficking organizations literally go underground or offshore,” he said.

Last year, the Coast Guard seized more than 455,000 pounds (206,000 kilograms) of cocaine worth more than \$6 billion and brought more than 600 suspected traffickers back to the United States for prosecution. The Coast Guard has been criticized for holding suspects on ships where they cannot easily access lawyers. Shirk said joint operations could lead “to serious violations of suspects’ rights at sea and possible human rights violations in the process.”

Coast Guard officials say they respect suspects’ rights. Where suspects will be sent with the three countries participating in the operation will be decided on a case-by-case basis.

U.S. military officials have been reluctant to openly discuss details of the cooperation with their Mexican counterparts, sensitive to the Mexican public’s historical view and recent barbs between the two presidents.

Jorge Chabat, a political scientist at the Center for Economic Research and Teaching in Mexico City, said he doubts the combined operation will get much negative reaction from a Mexican public tired of drug violence.

“The more insecurity we have, the less nationalism we have in Mexico,” he said.

Ultimately, he doubts the joint operation will make much difference.

“This is something they have to do to maintain drug trafficking at the same level, and not allow it to grow,” he said. “That’s the most you can do. You can’t just surrender.”

<b>HEADLINE</b>	<b>03/28 ‘Lie and try’ gun prosecutions</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/28/officials-charge-eight-rhode-island-suspects-alleg/">https://www.washingtontimes.com/news/2018/mar/28/officials-charge-eight-rhode-island-suspects-alleg/</a>
<b>GIST</b>	<p>Federal and state prosecutors announced charges Wednesday against eight Rhode Island residents who they said lied on their background checks in order to buy guns, marking the latest prosecutions as the Trump administration steps up efforts to enforce gun laws already on the books.</p> <p>In at least some of the cases the buyers were “straw purchasers,” getting guns that they would then pass on to other individuals who were unable to buy or possess firearms themselves. In one of the cases the person was accused of lying about his marijuana use when buying firearms.</p> <p>These kinds of cases, dubbed “lie and try,” have launched to the forefront after recent high-profile shootings.</p> <p>“Stemming the flow of illegal firearms into our neighborhoods by keeping them out of the hands of those who either purchase them illegally or are prohibited by law from possessing them is a top priority of this office and of our law enforcement partners,” said U.S. Attorney Stephen G. Dambruch.</p> <p>Rhode Island federal and state prosecutors have charged five people in federal complaints with making false statements during purchases of firearms: Molyka Preap, 31, and Darien Young, 23, both of Providence, Ademola Kayode Jr., 25, of Warwick, Lucilo Mena, 56, of Cranston, and Tarriek Gill, 24, of Cumberland.</p> <p>Three people — Brian Luna, 22, Alex Cuevas-Polanco, 20, and Daniel Carides, 22, all of Providence — have been arrested on state firearms and drug charges.</p>

In the case of Mr. Mena, authorities say he bought one 9 mm pistol knowing he was going to resell it, but didn't say that on his purchase form. The gun was later recovered during an investigation into a shooting in Boston last summer.

It's a federal crime for someone lie on a background check form to try to hide past criminal or mental issues that would bar him from buying a gun, or to hide a straw purchase.

Earlier this month, Attorney General Jeff Sessions urged U.S. Attorneys across the country to swiftly and aggressively prosecute people who "lie and try" to buy guns, after the Obama administration oversaw a broad decline in gun-related prosecutions.

The number of prosecuted cases arising based on denials through the National Instant Criminal Background Check System (NICS) was "extremely low" compared to other gun crimes, according to a 2016 Justice Department inspector general report.

From 2008 to 2015, the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) referred 509 cases to U.S. attorneys and 254 of those were accepted for prosecution, the report said.

But in 2003 alone, 166 subjects were accepted for prosecution consideration, it said.

Prosecutions from U.S. Attorneys were most frequent when "aggravated circumstances" existed in addition to a false "no" on a gun buy application form, the report said.

Gun-related prosecutions have gotten renewed interest in the wake of last month's Parkland, Florida, shooting that killed 17 students and faculty at Marjory Stoneman Douglas High School.

<b>HEADLINE</b>	<b>03/28 Guilty plea for threats against mosque</b>
<b>SOURCE</b>	<a href="https://www.justice.gov/opa/pr/missouri-man-pleads-guilty-hate-crimes-making-threats-against-augusta-mosque">https://www.justice.gov/opa/pr/missouri-man-pleads-guilty-hate-crimes-making-threats-against-augusta-mosque</a>
<b>GIST</b>	<p>On March 26, 2018, Preston Q. Howard, 49, of Wright City, Missouri, entered a guilty plea before Chief United States District Court Judge J. Randal Hall, to three charges of Obstruction of Persons in the Free Exercise of Religious Beliefs, in violation of 18 U.S.C. § 247(a)(2). He faces up to 20 years in prison without the possibility of parole for each offense, and is subject to a sentencing enhancement because he chose his victims based on their religion, classifying his actions as hate crimes.</p> <p>According to information presented at the March 26 hearing, between June 22, 2017 and August 8, 2017, Howard made numerous telephone calls to the Islamic Society of Augusta, during which he threatened to "kill," "bomb," "shoot," "behead," "slaughter," "execute," "light on fire," and "murder" members of the mosque, to "hunt down" and "zone in" on Muslims, and to "blow up the mosque." At the hearing, Howard admitted committing these acts and obstructing or attempting to obstruct the mosque members' free exercise of their religious beliefs. Howard remains in federal custody pending his sentencing hearing, which has not yet been scheduled.</p> <p>"All people, regardless of where they worship or which religion they belong to, are entitled to live free from the threat of violence and discrimination," said Acting Assistant Attorney General John Gore of the Civil Rights Division. "Howard's threatening and hateful calls were criminal and unlawful. The Department of Justice will continue to hold anyone who commits hate crimes accountable under the law."</p> <p>"Those who perpetrate hate crimes by making abhorrent and venomous threats against members of our community in violation of federal law will be held accountable! We continue to work with our law enforcement partners to identify and bring to justice those who terrorize our citizens," said U.S. Attorney Bobby L. Christine for the Southern District of Georgia</p>

HEADLINE	<b>03/29 Better port security thru global training</b>
SOURCE	<a href="https://www.hstoday.us/subject-matter-areas/maritime-security/building-better-port-security-through-global-training-spot-illicit-cargo/">https://www.hstoday.us/subject-matter-areas/maritime-security/building-better-port-security-through-global-training-spot-illicit-cargo/</a>
GIST	<p>Port control units trained under a U.S.-backed initiative to boost interdiction of illegal good in shipping containers intercepted 45.5 tons of cocaine in Latin America and the Caribbean last year, the UN said in a recently released annual summary report.</p> <p>The United Nations' Office on Drugs and Crime Container Control Programme offers training "to build capacity in countries seeking to improve risk management, supply chain security and trade facilitation in sea, land and airports in order to prevent the crossborder movement of illicit goods." Four dozen countries participate with operational CCP programs while another seven have initiated CCP activities. The United States and the European Union are among the program's international donors.</p> <p>UN Security Council Resolution 1540 "establishes legally binding obligations to develop and enforce appropriate legal and regulatory measures against the proliferation of chemical, biological, radiological, and nuclear weapons and their means of delivery." Thus, CCP has developed advanced, three-phase training programs focusing on cross-border transport and the "control of imports, exports and transit of commodities subject to licensing or authorization, namely strategic trade controls on weapons of mass destruction, dual-use goods, and CBRNE materials."</p> <p>The program reported that after initiating Strategic Trade and Export Control Training (STEC training) in the third quarter of 2016 they "saw immediate positive seizure results," and as a result "will increase ... focus on this training module in the coming years." STEC training is focused on several regions "at high risk for trafficking in strategic materials and dual-use goods," including in Latin America, South Asia, Southeast Asia, and Southeastern Europe.</p> <p>This specialized training is conducted by the UN with the sponsorship of the Export Control and Related Border Security (EXBS) Program at the U.S. State Department.</p> <p>To tackle the "complex and dangerous activity, often transnational and organized in nature" of illegal fishing, CCP and the Norwegian Agency for Development Cooperation (NORAD) joined forces to strengthen customs agencies to better detect and prevent fisheries crime. Their FishNET training program launched in March 2017 with the first specialized three-day course in Chittagong, Bangladesh, centered on "international and national frameworks, methods, monitoring, control and surveillance."</p> <p>Another concern in cargo security has been intercepting looted and trafficked cultural property, with the UNODC calling it "an urgent issue in recent years," especially due to ISIS and al-Qaeda getting in on the illicit trade in stolen artifacts to "provide crucial income" to fund their nefarious activities.</p> <p>In response, CCP is developing specialized training including "advanced cultural property identification training, which will provide specialized knowledge for region-specific types of cultural property and methods to detect shipments containing such goods, as well as study tours to benchmark ports." Training in Jordan is planned this year and may later extend into Latin America and Southeast Asia.</p> <p>The UN report noted that air cargo is "at high risk of exploitation by organized criminal groups and terrorist organizations that exploit weak, ineffective and inconsistent border controls at airports," as evidenced by the 2010 printer bombs that originated as air freight in Yemen and went through several airports before being discovered in Britain. CCP-Air was developed to apply methodology used for land and seaport cargo screening training to air freight and "prevent the misuse of the international air transport system by establishing inter-agency units at airports" while contributing "to terrorism prevention through supporting civil aviation implementation of flight safety procedures in the screening of cargo."</p> <p>As far as seizure levels from trained units, the UNODC says that by the third quarter of last year CCP port control units had seized more than 200 tons of cocaine since the program's inception and throughout 2017</p>

	<p>“also made significant seizures of drugs, precursor chemicals, IPR goods and protected wildlife” including more than 1.5 tons of cannabis in a trio of Southeastern Europe seizures and 12 tons of ammonium nitrate, typically used to make explosive devices, in Afghanistan.</p> <p>Units in Latin America and the Caribbean also participated in the two-week international “Sports Bag” operation that netted more than 7 tons of cocaine.</p> <p>“Across all regions and countries PCU seizures have included a wide range of controlled goods, including IPR goods, illegal timber, falsified medicines, cigarettes and alcohol, incorrectly declared and undervalued goods,” said the UN report. “For the first time, after specialized training on fisheries crime was delivered, two illegal fishing-related seizures have been made in Ghana and Maldives.”</p> <p>Last September, the CCP also launched its “Chemical check-I” operation with Afghanistan, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Pakistan, Tajikistan and Uzbekistan to prevent trafficking of chemicals and associated substances through international supply chains. The op focused on “proper verification and identification of all chemicals/substances entering Afghanistan, either directly or transiting through other countries towards Afghanistan, as well as cargo that could potentially be re-exported to Afghanistan” and “interception of smuggled consignments of substances.”</p>

<b>HEADLINE</b>	<b>03/28 Smugglers swipe ‘nicest’ boats out Fla.</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/federal-pages/dhs/uscg/smugglers-swiping-nicest-boats-out-florida-docks-driveways/">https://www.hstoday.us/federal-pages/dhs/uscg/smugglers-swiping-nicest-boats-out-florida-docks-driveways/</a>
<b>GIST</b>	<p>Florida boat owners are being warned to secure their vessels after an uptick in boat thefts believed to be linked to international drug and human smuggling rings.</p> <p>Instead of just being swiped from docks and stripped of the motor and other parts, boat owners are learning from the Coast Guard that their vessels are gone and bound for Mexico to be used for nefarious purposes.</p> <p>The boat thieves usually come at night and are favoring twin or triple engine boats at least 30 feet long, reported Tampa Bay’s News Channel 8. In some cases, boats have been stolen from owners’ driveways.</p> <p>“They don’t go after the little ones and they don’t go after the old ones, they go after the nicest ones they can find that are not secured,” said Longboat Key Police Chief Pete Cumming.</p> <p>Law enforcement agencies across the state are teaming up to confront the spike in thefts, News Channel 8 reported.</p>

<b>HEADLINE</b>	<b>03/29 Parkland shooting suspect lots of fan mail</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/03/29/parkland-suspect-nikolas-cruz-showered-with-fan-mail-donations-report.html">http://www.foxnews.com/us/2018/03/29/parkland-suspect-nikolas-cruz-showered-with-fan-mail-donations-report.html</a>
<b>GIST</b>	<p>Lovestruck groupies from around the country are showering the Parkland, Fla., gunman Nikolas Cruz with fan mail, including sexually provocative photos and donations, according to a Wednesday report.</p> <p>One 18-year-old from Texas purportedly professed her love to Cruz in a March 15 letter adorned with smiley faces and hand-drawn hearts, South Florida's Sun-Sentinel reported.</p> <p>"When I saw your picture on the television, something attracted me to you," the letter said. "Your eyes are beautiful and the freckles on your face make you so handsome."</p> <p>The missive flatly concludes: "I'm really skinny and have 34C sized breasts."</p> <p>Another Texas woman reportedly sent a bizarre handwritten love note less than a week after Cruz gunned down 17 people Feb. 14 at Marjory Stoneman Douglas High School.</p> <p>"I reserve the right to care about you, Nikolas!" read the unsolicited declaration.</p> <p>A Chicago woman reportedly sent Cruz numerous suggestive photos, including one in which she slurps a Popsicle while wearing a bikini, and another in which she shows off her backside for the camera.</p> <p>Cruz, who jail officials say has received nearly \$800 in donations to his prison commissary account since the shooting, has also caught the eye of some members of his own sex.</p> <p>A New Yorker with a bushy moustache sent Cruz a card featuring a cat and a photo of himself sitting in a white 1992 Nissan convertible, according to the Sun-Sentinel.</p>

	<p>At least for now, though, the mass murderer's suitors are pining at the wind. Jail officials, who screen all letters to inmates, said Cruz has not seen the letters, and remains on suicide watch.</p> <p>As a matter of policy, authorities seize letters that contain obscene material, privileged communications, or threats to public safety.</p> <p>"We read a few religious ones to him that extended wishes for his soul and to come to God," Broward County Public Defender Howard Finkelstein told the Sun-Sentinel, "but we have not and will not read him the fan letters or share the photos of scantily-clad teenage girls."</p> <p>Finkelstein added that he's "never seen this many letters to a defendant" in his 40 years as a public defender.</p>

<b>HEADLINE</b>	<b>03/29 Paris rally for murdered Holocaust survivor</b>
<b>SOURCE</b>	<a href="http://www.france24.com/en/20180329-france-paris-rally-murdered-holocaust-survivor-mireille-knoll-jewish-anti-semitism">http://www.france24.com/en/20180329-france-paris-rally-murdered-holocaust-survivor-mireille-knoll-jewish-anti-semitism</a>
<b>GIST</b>	<p>The mood was sombre yet indignant as thousands marched in Paris on Wednesday in memory of Mireille Knoll, 85, who was found dead on Friday after what police suspect was a robbery and murder motivated by anti-Semitism.</p> <p>Knoll – who as a nine-year-old child escaped deportation to Auschwitz in the notorious 1942 Vel d’Hiv roundup – was found dead at her home in Paris’s 11th arrondissement (district) on March 23, with 11 stab wounds. Her apartment had been set on fire after the attack and her body was severely burnt.</p> <p>"I’m here to express my sadness," one demonstrator, Algerian-French poet Abder Zegout, told FRANCE 24. "It’s odious that someone could do this and not leave an old lady to live her last years in peace. This has to stop."</p> <p>Indeed, there was a strong feeling of anger as well as sorrow at the march. "Ne touche pas mon pote" ("Don’t touch my friend"), read cardboard cut-outs of hands held aloft by numerous demonstrators. Several banners bearing the insignia of the UEJF (Union of French Jewish Students) said: "In France, grandmothers are killed because they are Jewish."</p> <p>The murder of Knoll is the latest in a string of anti-Semitic killings in France that have caused increasing alarm in the country’s Jewish community.</p> <p>"Since 2000, there’s been a rise in anti-Semitism in France," said Robert Ejnias, executive director of CRIF, an umbrella organisation of French Jewish groups that organised Wednesday’s rally.</p> <p>"This has been expressed through violence, especially through the deaths of 11 people for the only reason being that they were Jewish," Ejnias told FRANCE 24. "There was Ilan Halimi in 2006, the Toulouse killings in 2012, the kosher supermarket in 2015, Sara Halimi last year, and now Mrs. Knoll."</p>

<b>HEADLINE</b>	<b>03/29 French police hunt swerving car driver</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-france-security/french-police-hunt-man-who-drove-car-at-soldiers-idUSKBN1H50XX">https://www.reuters.com/article/us-france-security/french-police-hunt-man-who-drove-car-at-soldiers-idUSKBN1H50XX</a>
<b>GIST</b>	<p>LYON, France (Reuters) - French police were hunting a man who had appeared to drive his car at a group of soldiers jogging outside their base in the foothills of the Alps on Thursday, authorities said.</p> <p>It was not clear if the driver had sought to run down the 10-strong group from the 93rd Mountain Artillery</p>

regiment or simply scare them, a spokesman for the local prefecture said.

The incident caused alarm in a country on edge after an Islamic State loyalist went on a rampage in southern France last Friday, killing four people in the first militant attack since President Emmanuel Macron lifted a state of emergency.

“We don’t know if it was an involuntary action, an act to try to scare the soldiers, or a deliberate gesture,” the spokesman said.

No one was injured in the incident, which took place in Varcès-Allières-et-Risset, a small town south of Grenoble.

The mayor said school children were being kept indoors while the driver remained at large, local media reported.

A source close to the investigation said the driver’s motivations were unclear, but that the incident was being taken seriously.

<b>HEADLINE</b>	<b>03/28 Seattle ‘Amber Alert’ ends in arrests</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/crime/boy-in-amber-alert-dramatically-rescued-in-seattle-2-men-arrested/281-532888858">http://www.king5.com/article/news/crime/boy-in-amber-alert-dramatically-rescued-in-seattle-2-men-arrested/281-532888858</a>
<b>GIST</b>	<p>A boy who was the subject of an Amber Alert out of Lake Forest Park Wednesday afternoon was rescued and two men, one believed to be his father, were taken into custody after police boxed in their car in Seattle. The arrest happened at about 2 p.m.</p> <p>Police said the 5-year-old boy was taken from a residence by his father, Taraille Chesney about 11 a.m.</p> <p>The incident started when operators received a 911 call from the residence and heard an argument taking place. Then the call ended abruptly according to Lake Forest Park Police Chief Stephen Sutton. When officers arrived, they saw the suspect’s car speed away from the scene recklessly. Officers gave chase but Chesney got away.</p> <p>"Chesney is well know and is a violent offender," said Sutton. While on the loose, Sutton said Chesney was involved in multiple crashes.</p> <p>Officers put out an Amber Alert about two and a half hours after the abduction. Sutton said it took that long to make sure the case met the criteria of an Amber Alert.</p> <p>After the abduction, police say Chesney parked a silver Mercedes at a gas station off East Marginal Way in Seattle. A young boy followed behind him into the store. He bought food for the child, then went to fill up, but backed into another car. After talking with the other driver, the gas station manager came out. The manager says Chesney told him his sick son was with him and he had to go. Then Chesney drove away.</p> <p>Within 45 minutes, tips came in and police located the car in Seattle.</p> <p>After a short chase, police cornered and surrounded the car at NE 63rd Street and 15th Avenue NE near Roosevelt High School. As police had their guns drawn, one man got out of the car and was taken into custody.</p> <p>During the chase, Sutton said Chesney tried to ram a Seattle police officer and that he appeared to be intoxicated.</p> <p>Officers pulled the boy from the car moments later. He was later seen sitting on the trunk of a police car</p>

	<p>with an officer, holding what appeared to be a stuffed animal. Sutton said many officer carry comfort Teddy bears for cases like this.</p> <p>The boy was taken to Children's Hospital, checked out and released to the custody of the state. Sutton said the boy is a ward of the state but his grandmother has access rights.</p> <p>Chesney will face multiple charges, Sutton said, including child endangerment, custodial interference and DUI.</p>

<b>HEADLINE</b>	<b>03/28 DOJ charges ex-FBI agent for 'media leaks'</b>
<b>SOURCE</b>	<a href="http://www.startribune.com/justice-dept-charges-minnesota-fbi-agent-for-leaking-secret-document-to-news-outlet/478203203/">http://www.startribune.com/justice-dept-charges-minnesota-fbi-agent-for-leaking-secret-document-to-news-outlet/478203203/</a>
<b>GIST</b>	<p>A former Minneapolis FBI agent who sought to expose what he called “systemic biases” within the bureau has been charged after allegedly leaking secret documents to a national news reporter, according to federal criminal charges filed in Minnesota this week.</p> <p>The charges, filed by prosecutors for the Justice Department’s National Security Division, are the first to come in Minnesota since Attorney General Jeff Sessions announced a broad crackdown on government leaks last year.</p> <p>A two-page felony information, a charging document that typically signals an imminent guilty plea, outlines two counts filed against Terry James Albury of unlawfully disclosing and retaining national defense information.</p> <p>Albury is accused of sharing a document on assessing confidential human sources — otherwise referred to as informants — and a document “relating to threats posed by certain individuals from a particular Middle Eastern country” with a reporter for a national media organization.</p> <p>The second count charged against Albury alleged that he failed to turn over a document “relating to the use of an online platform for recruitment by a specific terrorist group” last year.</p> <p>The charges do not name the reporter or news organization but allege that Albury possessed and shared the information between February 2016 and Jan. 31, 2017 — the same date that the Intercept published an entry to its “FBI’s Secret Rules” series on how the bureau assesses potential informants.</p> <p>The report drew upon a secret document obtained by the Intercept that has the same publication date described in the charges against Albury.</p> <p>In a statement Wednesday, attorneys JaneAnne Murray and Joshua Dratel said Albury would be taking responsibility for the charges, while also hinting at his motivations.</p> <p>“Terry Albury served the U.S. with distinction both here at home and abroad in Iraq,” the statement read. “He accepts full responsibility for the conduct set forth in the Information. We would like to add that as the only African-American FBI field agent in Minnesota, Mr. Albury’s actions were driven by a conscientious commitment to long-term national security and addressing the well-documented systemic biases within the FBI.”</p> <p>The FBI in Minneapolis and Justice Department both declined to comment on the charges on Wednesday.</p>

<b>HEADLINE</b>	<b>03/28 Drug trafficking ring bust: 20 charged</b>
-----------------	---

SOURCE	<a href="http://www.thenewstribune.com/news/local/crime/article207199514.html">http://www.thenewstribune.com/news/local/crime/article207199514.html</a>
GIST	<p>Federal agents from the Drug Enforcement Administration lowered the boom Wednesday on a drug-trafficking ring supplying methamphetamine and heroin to King, Pierce and Thurston counties.</p> <p>Agents arrested 16 people, including Seattle resident Derrick Donnell Taylor-Nairn, 32, believed to be the ringleader. Search warrants served in Tacoma, Seattle, Auburn, Fife, Renton, Bonney Lake and Tumwater yielded more than a dozen firearms and 11 pounds of heroin.</p> <p>“I commend the strong partnership between federal, state and local law enforcement that led to charges against twenty defendants responsible for pumping the misery of methamphetamine into south King County and beyond,” U.S. Attorney Annette L. Hayes said.</p> <p>U.S. Attorneys filed charges against 20 people in connection with the case. They were scheduled to appear Wednesday in U.S. District Court in Tacoma. The list of defendants includes residents of Bonney Lake, Fife, Tacoma, Puyallup, Auburn and Tumwater.</p> <p>The arrests reflect a collaboration among multiple agencies, including the Tahoma Narcotics Enforcement team (TNET) and the Puyallup Police Department.</p> <p>“Our partnership reveals the strength of federal and local agencies working together to make our communities safer,” Puyallup Police Chief Scott Engle said.</p> <p>Court records show an additional charge against a Seattle man accused of being a “straw buyer” and attempting to acquire a gun illegally for Taylor-Nairn, who wanted to pass the weapon to one of his enforcers. Both men were prohibited from buying guns themselves, according to court records.</p> <p>The straw buyer, a 49-year-old man, tried to purchase a gun known generically as a “Draco” and favored for its threatening look.</p> <p>“Because these firearms resemble short-barrelled assault rifles, they are intimidating in appearance, thereby making them popular among street gangs and organized crime groups,” according to court documents.</p> <p>Court records indicate that investigators used wiretaps to track Taylor-Nairns’ calls in September and October 2017, which revealed the plan to purchase the Draco for Taylor-Nairns’ associate. The trail led to a gun store in Federal Way. The alleged buyer ultimately tried and failed to make the purchase while under surveillance.</p>

HEADLINE	<b>03/28 Fla. officials: boy wanted to ‘kill kids’</b>
SOURCE	<a href="http://abcnews.go.com/US/13-year-told-investigators-wanted-school-shooter-officials/story?id=54067824">http://abcnews.go.com/US/13-year-told-investigators-wanted-school-shooter-officials/story?id=54067824</a>
GIST	<p>A 13-year-old boy who was taken into custody under Florida's Baker Act allegedly told investigators that he wanted to become the "next school shooter."</p> <p>The teen was taken into custody early Saturday after a woman called 911 to report a "young man" who was barefoot and passed out drunk on the sidewalk in the city of Davenport, the Polk County Sheriff's Office said in a press release.</p> <p>He was "falling everywhere," "nodding out" and had "bruises all over him," a woman said in the 911 call obtained by ABC Orlando affiliate WFTV.</p> <p>After the boy was taken to a local hospital, he allegedly made alarming statements to investigators that prompted them to investigate further and take him in for an involuntary mental health evaluation under</p>

Florida's Baker Act.

The teen allegedly told Polk County sheriff's deputies that "he wanted to die and see God" and that "he wanted to kill a lot of kids," according to a press release.

The 13-year-old also said that he wanted to "shoot up" Westside K-8 School in Osceola County, from which he was expelled from last month, because he wanted to be the "next school shooter," the sheriff's office said.

The boy said that he wanted to commit the killings because some of the children at the school "snitched" on him and got him expelled. He also said that he was expelled and charged with threatening a student from the school because the student "tried him."

The teen also claimed that he buried a handgun in his neighbor's backyard because he didn't want his mother to know that he had one, but no gun was found, according to the press release.

The boy told investigators at the hospital that he had drunk an entire bottle of liquor from his parents' liquor cabinet as well as taken a bunch of "happy pills."

The teen had threatened to bring a knife to school and kill another teen, according to the press release. He was expelled from the school in February for making similar statements and for "written threats to kill." The Osceola County Sheriff's Office also took him into custody under the Baker Act at the time of his expulsion.

During a search of the teen's home, detectives found images of Nikolas Cruz, the 19-year-old accused in the Parkland, Florida, school shooting, as well as images from the 1999 shooting at Columbine High School in Colorado on his Playstation, the sheriff's office said.

Eric Harris, whose son attends Westside K-8 School, told WFTV that "you have to take a threat very seriously," even if the student tries to pass it off as a joke.

"They gotta learn they can't joke like that," Harris said.

ABC News is not identifying the teen because he is a minor. He was charged in Polk County for aggravated stalking as a result of the most recent incident.

<b>HEADLINE</b>	<b>03/29 NYC: Black Lives Matter protest arrests</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/11-arrested-black-lives-matter-protest-york/story?">http://abcnews.go.com/US/11-arrested-black-lives-matter-protest-york/story?</a>
<b>GIST</b>	<p>At least 11 people were arrested, most for disorderly conduct, during a Black Lives Matter protest in New York City Wednesday night as hundreds gathered to express their anger over the recent death of Stephon Clark.</p> <p>The protesters marched from Columbus Circle to Times Square, approximately 15 to 20 blocks, according to ABC station WABC-New York. Social media videos of the march showed at least one police officer leaping over a barricade to make an arrest.</p> <p>Clark, 22, was killed in Sacramento on March 18 when two police officers shot at him 20 times as he stood in his grandmother's backyard holding a cellphone.</p> <p>Police were responding to a 911 call that a suspect allegedly was breaking car windows and hiding in a yard nearby. According to body-cam footage, the officers thought Clark may have been holding a toolbar or some other form of weapon.</p>

	The Rev. Al Sharpton is expected to deliver the eulogy at Clark's funeral Thursday in Sacramento.

<b>HEADLINE</b>	<b>03/28 Study: 'ACLU effect' Chicago crime rise</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/03/28/aclu-effect-is-to-blame-for-chicagos-sharp-rise-in-crime-study-says.html">http://www.foxnews.com/us/2018/03/28/aclu-effect-is-to-blame-for-chicagos-sharp-rise-in-crime-study-says.html</a>
<b>GIST</b>	<p>The American Civil Liberties Union is to blame for a spike in bloodshed on the troubled streets of Chicago – that is the conclusion of a new study released by the University of Utah.</p> <p>You may remember the shooting of Laquan McDonald. Dramatic video of a Chicago police officer shooting him 16 times was released in 2015. What followed was massive street demonstrations and strained discussion about ethnic profiling by police. Particular attention was paid to police officers stopping young black men and checking them for weapons.</p> <p>An agreement was reached between the Chicago Police Department and the ACLU and, by 2016, a plan was implemented requiring street cops to fill out contact cards with enhanced detail explaining why individuals were stopped. The cards have 70 entries, some in essay form.</p> <p>Authors of the study claim the paperwork takes 15 to 20 minutes to complete and has discouraged police from stopping suspicious people and checking them for weapons.</p> <p>About 100,000 stops were recorded for all of 2016, an 82 percent decrease from 600,000 the previous year. For the same time period, gun violence spiked – 754 people were killed in Chicago, a 58 percent increase from 480 the previous year. The study concludes Chicago endured 1,100 additional shootings from the previous year.</p> <p>“Criminals on the streets of Chicago became more emboldened to carry guns. The deterrent effect decreased,” said Paul Cassell, one of two authors of the study. “When there are more guns on the street being carried by criminals, the predictable result is an increase in gun-related crimes.”</p> <p>The ACLU argues that the study is flawed, that the authors simply looked at a couple of developments on a timeline and jumped to the conclusion that one caused the other.</p> <p>“It’s junk science,” said Karen Sheley, a lawyer with the ACLU. “It makes the claim that the math it uses can show one thing caused another. When people who understand social science know the most it can show is correlation that two things might have happened at the same time.”</p> <p>The ACLU also argues that the report disregards other factors, like anger on the street over the McDonald shooting and the appearance that police falsified their reports following the shooting.</p> <p>Cassell defends that he did look at factors like anger and mistrust of police, even the opioid epidemic. The study concludes that the anomaly is what he calls the ACLU effect; the administrative burden placed on street cops making them reluctant to police pro-actively. That, he claimed, loosened the scrutiny on criminals and resulted in bloodshed.</p> <p>“We have a collection of data,” Cassell said, “that comes together to make it clear that causation exists here.”</p>

<b>HEADLINE</b>	<b>03/28 Quebec mosque shooter pleads guilty</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/quebec-mosque-shooting-suspect-mind-pleads-guilty-54069044?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/quebec-mosque-shooting-suspect-mind-pleads-guilty-54069044?cid=clicksource_76_4_article%20roll_articleroll_hed</a>

<p><b>GIST</b></p>	<p>The man accused in the slayings of six men at a Quebec City mosque asked for forgiveness Wednesday after changing his mind and pleading guilty.</p> <p>Alexandre Bissonnette faced six charges of first-degree murder and six of attempted murder. More than 50 people were at the Islamic Cultural Centre in January last year when the shooting began during evening prayers. Six men aged between 39 and 60 were killed.</p> <p>"Every minute of my existence I bitterly regret what I did, the lives I have destroyed, the pain and suffering I have caused to so many people, without forgetting the members of my own family," Alexandre Bissonnette said as he read out a letter in court. "I am ashamed of what I did."</p> <p>Bissonnette, 28, spoke to the court shortly after a judge accepted his guilty pleas. Many people in the courtroom burst out sobbing and held hands as the judge confirmed the guilty pleas.</p> <p>He originally pleaded not guilty to the 12 charges Monday morning but that afternoon announced he wanted to plead guilty.</p> <p>Superior Court Justice Francois Huot refused to accept the pleas Monday pending a psychiatric assessment of the accused to ensure he fully understood the consequences of his decision. Huot placed a publication ban on Monday afternoon's proceedings but agreed Wednesday to accept the 12 guilty pleas.</p>

<p><b>SOURCE</b></p>	<p><a href="http://abcnews.go.com/International/wireStory/uk-police-make-arrest-major-2015-jewel-heist-54073498?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/uk-police-make-arrest-major-2015-jewel-heist-54073498?cid=clicksource_76_4_article%20roll_articleroll_hed</a></p>
<p><b>GIST</b></p>	<p>London police have made a new arrest in the 2015 Hatton Garden jewel heist, one of the largest burglaries in English history.</p> <p>Police said Wednesday that a 57-year-old man was taken into custody the day before on suspicion of burglary after a search of his home in the Islington neighborhood of London. The man has not been identified or charged. Police say a number of items were seized during the search.</p> <p>The Hatton Garden gang of mostly elderly men drilled through a concrete vault wall in London's diamond district over the Easter holiday in April 2015 and ransacked more than 70 safe deposit boxes. Prosecutors say they stole cash, jewelry and gold worth more than 14 million pounds from the vaults.</p> <p>Six men have been convicted in the theft.</p>

<b>HEADLINE</b>	<b>03/28 Penn. police: arrest for school threat</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/exchange-student-arrested-pennsylvania-allegedly-threatening-shoot-high/story?id=54070076&amp;cid=clicksource_4380645_1_hero_headlines_headlines_hed">http://abcnews.go.com/US/exchange-student-arrested-pennsylvania-allegedly-threatening-shoot-high/story?id=54070076&amp;cid=clicksource_4380645_1_hero_headlines_headlines_hed</a>
<b>GIST</b>	<p>An 18-year-old exchange student from Taiwan was arrested Tuesday night for allegedly "threatening to shoot up" a Pennsylvania high school, local police said this morning.</p> <p>According to the Upper Darby Police, the suspect, An Tso Sun, had items a slew of items in his home including: a military-style ballistic vest; high-powered crossbow with scope and light; arrows; 29 rounds of 9mm ammunition; a strangling device; a "military" ski mask; and ear protectors for firing.</p> <p>Authorities also found a school-issued iPad that allegedly showed Sun was searching weapons like AK-47s and AR-15s, said Michael Chitwood, superintendent of Upper Darby Police.</p> <p>Sun allegedly told a fellow student at Bonner Prendergast Catholic High School to "not come to school on May 1" because he "was going to shoot up the school," Chitwood said at a news conference today. Sun then allegedly told the classmate he was "kidding," Chitwood said.</p> <p>The classmate also said Sun asked how to purchase a gun, Chitwood said.</p> <p>That student went to school officials, who notified Upper Darby Police, Chitwood said. It was not immediately clear if Sun had a lawyer.</p> <p>Sun was charged with terrorist threats with the intent to terrorize another. He was arraigned Tuesday night and held without bail pending a psychological evaluation, authorities said.</p> <p>The teen is on a student visa that was issued in July 2017 and expires in July 2022, authorities said today. Federal authorities have been contacted.</p>

<b>HEADLINE</b>	<b>03/28 San Francisco: driver mows down 5</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/hit-and-run-altercation-several-injured-san-francisco-today-2018-03-28/">https://www.cbsnews.com/news/hit-and-run-altercation-several-injured-san-francisco-today-2018-03-28/</a>
<b>GIST</b>	<p>SAN FRANCISCO -- Five people have been struck by a car in San Francisco in a hit-and-run incident, police say. One victim has since died, according to a hospital spokesman. CBS San Francisco reports that police spokeswoman Giselle Linnane said the incident happened at around 10:24 a.m. in the city's Dogpatch neighborhood.</p>

	<p>The driver of a vehicle got into a physical altercation with five people and struck all five with his car, Linnane said.</p> <p>The Associated Press reports that three of the victims were in serious condition and the fourth was in fair condition, according to Brent Andrew of the San Francisco General Hospital. He didn't get into the details of the nature of their injuries.</p> <p>A witness who chose to remain anonymous said it was a dispute between a driver of a van and four or five people on the street which led to the driver getting out of his van and chasing after the people with an ax or a hatchet. The witness said the people were able to disarm the man and chase him back to his van, where he then got back in the vehicle and drove onto the sidewalk and into the group at high speed.</p> <p>The driver fled the scene and the five victims were taken to the hospital, with four of the victims in life-threatening condition, police said.</p> <p>Another witness told CBS San Francisco that the incident may have been how a "turf discussion" ended.</p> <p>Officials held a press briefing to say it was an isolated incident and that the public is not at risk.</p>

<b>HEADLINE</b>	<b>03/28 Immigration raid Arizona: 34 detained</b>
<b>SOURCE</b>	<a href="https://ca.news.yahoo.com/u-officials-detain-over-30-people-phoenix-immigration-144603087.html">https://ca.news.yahoo.com/u-officials-detain-over-30-people-phoenix-immigration-144603087.html</a>
<b>GIST</b>	<p>(Reuters) - Thirty-four people said to be illegal immigrants were in custody on Wednesday after federal agents raided a "drop house" in Phoenix suspected of being a part of a human smuggling operation, U.S. Immigration and Customs Enforcement (ICE) officials said.</p> <p>The raid late on Tuesday was precipitated by a tip that a "local residence contained a large group of suspected undocumented aliens," Lauren Mack, a spokeswoman for ICE, said in a statement.</p> <p>The information led agents with ICE Homeland Security Investigations to "dismantle a human smuggling drop house," she said.</p> <p>"Federal agents discovered 34 undocumented aliens inside the residence. The group included 27 Guatemalan nationals, 5 Mexican nationals and 2 Honduran nationals," Mack said.</p> <p>All 34 were detained for violations associated with the failed human smuggling operation and processed for removal. "The investigation into the smuggling activity is ongoing," Mack said.</p>

<b>HEADLINE</b>	<b>03/26 Daniels interview on television</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/25/politics/60-minutes-stormy-daniels-interview-main/index.html">https://www.cnn.com/2018/03/25/politics/60-minutes-stormy-daniels-interview-main/index.html</a>
<b>GIST</b>	<p>Washington (CNN)In her first extended television news interview since the news of her alleged 2006 affair with Donald Trump emerged, adult film actress Stormy Daniels declined to discuss whether she had evidence of the affair and said that she was threatened to stay silent about it.</p> <p>Risking hefty fines for violating a \$130,000 hush agreement, Daniels detailed what she said was the only time she and Trump had sex -- saying she spanked Trump with a magazine and that Trump had compared her to his daughter Ivanka.</p> <p>She also said she was threatened in Las Vegas in 2011 after attempting to sell her story of the alleged affair.</p> <p>The "60 Minutes" interview with Anderson Cooper is the most detailed televised account Daniels, whose real name is Stephanie Clifford, has so far offered of the affair she says she had with Trump. She also said Trump told her he and wife Melania, who had just given birth to their son, Barron, slept in separate rooms.</p> <p>Daniels didn't reveal evidence of the alleged affair with Trump, but continued to hint that she isn't yet revealing all she has.</p> <p>Asked if she has videos, pictures, emails or text messages that corroborate the affair, Daniels said, "I can't answer that right now."</p> <p>The threat, she said in an interview with CBS's "60 Minutes," came weeks after she'd agreed in May 2011 to sell the story of her affair to a magazine for \$15,000. The magazine backed out of the agreement after Trump's lawyer Michael Cohen threatened to sue, two former employees of the magazine told "60 Minutes." Daniels said she never received the money. The White House has denied the affair happened.</p> <p>Daniels said she was in a parking lot preparing to go into a fitness class, and was pulling her infant daughter's car seat and diaper bag out of her vehicle.</p> <p>"And a guy walked up on me and said to me, 'Leave Trump alone. Forget the story,'" Daniels said. "And then he leaned around and looked at my daughter and said, 'That's a beautiful little girl. It'd be a shame if</p>

	<p>something happened to her mom.' And then he was gone."</p> <p>Asked if she took it as a direct threat, Daniels said: "Absolutely."</p> <p>"I was rattled," she said. "I remember going into the workout class. And my hands are shaking so much, I was afraid I was going to drop her."</p> <p>Daniels didn't offer evidence that the approach she detailed had taken place. She said she never saw the man again.</p> <p>"If I did, I would know it right away," she said. "100%. Even now, all these years later. If he walked in this door right now, I would instantly know."</p>

<b>HEADLINE</b>	<b>03/25 Spokane 'Patriot' event ended peaceful</b>
<b>SOURCE</b>	<a href="http://www.spokesman.com/stories/2018/mar/25/spokane-keeps-its-peace-as-patriot-prayer-leader-j/#/0">http://www.spokesman.com/stories/2018/mar/25/spokane-keeps-its-peace-as-patriot-prayer-leader-j/#/0</a>
<b>GIST</b>	<p>Fears of a confrontation were dispelled Sunday as political rallies for and against a conservative U.S. Senate candidate – whose staged events have drawn violent altercations in the past – went off without incident.</p> <p>Joey Gibson, the Vancouver, Washington-based leader of the controversial Patriot Prayer group who recently announced his candidacy against Sen. Maria Cantwell, held a small rally in Spokane Valley's Centerplace Event Center, where a group of about 40 people peacefully gathered to hear talking points on his platform.</p> <p>At City Hall in downtown Spokane, several left-leaning groups held counterprotests, drawing about 50 people to march and rally outside on a chilly spring afternoon. Organizers said they made the decision not to protest at Gibson's event so as to not risk a violent confrontation.</p> <p>"I want to inspire Washington state," Gibson told the crowd seated in a small room in the event center's second floor. "To inspire people to believe in yourselves. It doesn't matter who you are."</p> <p>On hand were several deputies with the Spokane County Sheriff's Office. David Machado, Gibson's head of security, said he made it a point to call for extra security, given the candidate's history with clashes erupting at his rallies.</p> <p>In Portland, Seattle and Berkeley, California, Gibson and Patriot Prayer have drawn the presence of alt-right members and white supremacists, including the group Identity Evropa, which has claimed credit for the recent round of racist flyers posted in downtown Spokane and around area colleges.</p> <p>In response to these past appearances, members of Antifa, anti-fascists and anarchists have attended as well, and clashes have broken out as a result.</p> <p>Jeremy Christian, the Portland man charged in the stabbing deaths of two men on the MAX train in December 2017, had a brief affiliation with Patriot Prayer. Christian allegedly screamed racist slurs at a pair of teenage girls (one wearing a hijab), and stabbed two men to death, injuring another, when the men attempted to protect the teens.</p> <p>Gibson disavowed him after the Portland attack. Gibson did not, however, cancel a pro-Trump rally scheduled in the city the following week, and when it occurred, it drew a massive counterprotest. Several assaults were reported, and Portland police made 14 arrests, confiscating bricks, hammers, bats and sticks.</p> <p>Gibson told the Spokane crowd he's been maced a handful of times, and so has his staff.</p>

	<p>Gibson has repeatedly criticized the rhetoric of various white-supremacist groups that have been drawn to his rallies, but continues to push for an extreme position on freedom of speech. At rallies in the past, and again on Sunday, Gibson reiterated that he believes the First Amendment is under attack by the left.</p> <p>“There’s a battle going on for people’s minds,” he said. “And free speech is at the front line of this battle.”</p> <p>At City Hall in Spokane, Joan Braune, a lecturer at Gonzaga and member of the Spokane Democratic Socialists of America, helped organize the counterprotest.</p>

<b>HEADLINE</b>	<b>03/23 Stock market worst week in 2yrs</b>
<b>SOURCE</b>	<a href="http://time.com/5213656/trade-war-stock-market-slump/?xid=homepage">http://time.com/5213656/trade-war-stock-market-slump/?xid=homepage</a>
<b>GIST</b>	<p>Stocks around the world plunged Friday as investors feared that a trade conflict between the U.S. and China, the biggest economies in the world, would escalate. A second day of big losses pushed U.S. stocks to their worst week in two years.</p> <p>Investors fear that if China responds in kind to sanctions on \$60 billion worth of Chinese imports the White House announced on Thursday, it will be a first step toward a full-blown trade war that could damage the global economy and slash profits at big U.S. exporters like Apple and Boeing.</p> <p>The market’s two biggest sectors slumped the most. Technology stocks have made enormous gains over the past year, but since they do so much business outside the U.S., investors see them as particularly vulnerable in a trade dispute. The sector dropped 7.9 percent this week.</p> <p>Banks also fell sharply. Amid the trade-war rumblings, investors fled to the safety of bonds and drove down yields, a potential negative for bank profits. That marked a reversal from earlier in the week, when banks rose as the Federal Reserve raised interest rates.</p> <p>It wound up being the worst week for U.S. indexes since January 2016. The S&amp;P 500 index sank 6 percent. Among notable decliners was Facebook, which lost 13.9 percent, or \$68 billion in value, as outrage mounted over its handling of user data. That’s about as much as the company was worth in 2012, the year of its initial public offering.</p> <p>Stocks sagged at the start of this month after tariffs on aluminum and steel were announced, but they quickly recovered as the administration said the tariffs wouldn’t be as severe as they first looked. The losses this week were worse, and investors are hoping for hints the sanctions on China are more of a negotiating tactic.</p>

<b>HEADLINE</b>	<b>03/25 Pakistan officials seek border wall</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/25/donald-trump-border-wall-calls-echo-pakistan/">https://www.washingtontimes.com/news/2018/mar/25/donald-trump-border-wall-calls-echo-pakistan/</a>
<b>GIST</b>	<p>NORTH WAZIRISTAN, Pakistan — The Trump administration and national security officials in Pakistan don’t see eye to eye on issues these days — save, perhaps, for one.</p> <p>Mr. Trump’s desire for a border wall is finding a distinct echo thousands of miles away in Islamabad, where top military leaders often cite the U.S. president’s case for walling off the nation’s southern border with Mexico to defend Pakistan’s efforts to seal its porous border territories with Afghanistan.</p> <p>“Why is the U.S. looking at a border wall in Mexico? Because you need it. We need it in Pakistan as well,” Maj. Gen. Nadeem Ahmed Anjum, inspector general of Pakistan’s Frontier Corps for Balochistan</p>

province, said of the drive to erect a fence along the contested border with Afghanistan.

“It is the simplest solution in the history of the world,” he said.

Pakistani forces have begun lining the nearly 500 miles of its shared border with Afghanistan with chain-link fence and concertina wire, initially focused on cutting off access across the rugged terrain in North Waziristan.

The move has outraged the Kabul government, which has never recognized the Durand Line as the official border.

Standing on the parapets of Fort Kitton-2, one of several large Pakistani forts along the “zero line” between North Waziristan and Afghanistan’s Khost province, an observer can pick out long strands of shimmering metal and barbed wire crisscrossing the various peaks and valleys up to the horizon.

Troops from Pakistan’s Tochi Scouts, the Frontier Corps unit guarding the North Waziristan line, man small mud-brick outposts spaced evenly along the border fence. Pakistan’s 7th Army Division jointly patrols the volatile border regions in Pakistan’s Federally Administered Tribal Areas, including North Waziristan.

Islamabad plans to have the country’s entire 515-mile border with Afghanistan sealed off by next year, said Gen. Nadeem, head of the Frontier Corps’ Chaman Scouts. The Scouts are responsible for a majority of the Afghan-Pakistani border belt that cuts between Pakistan’s Balochistan province. “In three years, we will be able to completely seal this border,” he said during an interview at his headquarters in Chaman.

Gen. Nadeem made his comments days before Mr. Trump’s first visit to California as president this month to inspect prototypes for his proposed border wall with Mexico. The promise to build a wall was a staple of Mr. Trump’s campaign speeches in 2016 and remains the linchpin of the administration’s immigration and border policy, despite congressional resistance to financing the estimated \$25 billion project.

“We have a lousy wall over here now, but at least it stops 90, 95 percent,” Mr. Trump said of illegal border crossings. “When we put up the real wall, we’re going to stop 99 percent. Maybe more than that.”

But officials in the government of Afghan President Ashraf Ghani say a wall likely won’t work and won’t address the deeper problem of Islamabad’s treatment of militants within its territory.

A border wall is a ridiculous approach to the problem of extremist violence, Afghan National Security Adviser Mohammad Hanif Atmar told reporters Thursday on a visit to Washington.

“The terrorists cannot be walled off,” he said a breakfast roundtable at the Afghan Embassy. “You cannot stop the extremists with a wall or a chain-link fence.”

In Pakistan, the issue driving a border barrier with Afghanistan is not illegal immigration but terrorism and Kabul’s supposed ineffectiveness to control Islamist extremists from crossing the border and creating havoc in both Afghanistan and Pakistan.

Afghanistan’s southern and eastern provinces, long seen as safe havens for insurgents who can operate on both sides of the border, were the last areas handed over to Afghan security forces when U.S. and NATO troops transitioned to an advisory role at the end of 2014 under President Obama.

Pakistan has fielded just over 1,100 posts along the nearly 500 miles bordering Afghanistan’s southeastern provinces, which traditionally have been the sites of some of the toughest fighting, said Maj. Gen. Azhar Ali Shah, head of all 7th Division forces in North Waziristan.

By comparison, Afghan forces have fielded only 145 border posts along the same stretch of territory, roughly a 7-1 ratio, Gen. Azhar said, which has allowed extremists to flourish in the borderlands.

	Pakistan said in December that it had completed 92 percent of the border wall and hoped to finish it by the end of this year.

<b>HEADLINE</b>	<b>03/24 'March for our lives' fills Tacoma streets</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/news/local/article206711404.html">http://www.thenewstribune.com/news/local/article206711404.html</a>
<b>GIST</b>	<p>Renee Lloyd stood on the porch of her Tacoma home and clapped as more than 1,000 people marched down South 9th Street holding signs and chanting, "Guns in schools have got to go."</p> <p>"I love this," she said. "I love that we are doing this here and if we are doing this in every major city, hopefully it helps out."</p> <p>There were 838 "March for Our Lives" gun violence protests scheduled nationwide Saturday morning. Tacoma's march started and finished at People's Park and covered about 1.3 miles.</p> <p>Courtney Stoker and Kassandra Withrow were impressed with the size of the turnout. "The organization ability of these kids is phenomenal to see," Withrow said. "It's not easy to do."</p> <p>Stoker and Withrow want to see "sensible gun legislation." Withrow said that last year a friend of theirs bought a gun and later that day used it to kill herself.</p> <p>"My hope is that lawmakers will put our lives before guns and the NRA," Stoker said. "It seems ridiculous that we feel like we need to protest and say things like 'Protect kids, not guns.'"</p> <p>Other than occasional comments from passersby, there did not appear to be a guns rights presence at the march.</p> <p>C.J. Mercado watched the march pass his South 9th Street home and felt conflicted by what he saw.</p> <p>Mercado said he "basically grew up with a gun in his hand," loves hunting and has taught his children how to safely use guns.</p> <p>"I support their right to stand up for their believes," Mercado said of the marchers, "but at the same time the whole gun control thin is a gray area to me. I feel like we need to teach (children) about guns."</p> <p>He turned to his young son and asked, "Where do you point your gun?" The boy replied, "Up or down." "And never at a person," Mercado added.</p> <p>"I think it is more the video games that people play these days," Mercado said. "'Grand Theft Auto' and all these killing and shooting games where they kill mass people online and laugh about it. They (children) are totally desensitized."</p> <p>Saturday morning's march, was the second nationwide gun violence protest in less than two weeks. Students staged a school walkout March 14. The protests are a response to the Feb. 14 shooting at Marjory Stoneman Douglas High School in Parkland, Florida, that left 17 people dead.</p> <p>When the march arrived back at People's Park, several students spoke to the crowd. Mei Yun Loya, a 17-year-old Stadium High senior, urged marchers to vote for legislators who support stricter gun laws. She said she has already registered and will be of legal voting age by November's mid-term elections.</p> <p>The rally concluded with chants of "Vote them out."</p> <p>"I want people to know that we mean this," Loya said after the rally. "This is not just one march."</p>

<b>HEADLINE</b>	<b>03/25 Northwest Detention Center operator sues</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/937704/immigration-detention-center-operator-sues-city-of-tacoma/">http://mynorthwest.com/937704/immigration-detention-center-operator-sues-city-of-tacoma/</a>
<b>GIST</b>	<p>TACOMA, Wash. (AP) — The private company that runs the Northwest Detention Center is suing the city of Tacoma over an ordinance passed last month that restricts the facility from expanding.</p> <p>Florida-based GEO Group sued in federal court Thursday, saying that while Tacoma’s ordinance purports to be about land use control, it’s meant to ban federal immigration detention facilities such as the Northwest Detention Center because of the city’s political disagreement with current federal immigration policy.</p> <p>GEO Group is a for-profit company that runs the immigration detention center in Tacoma on contract with U.S. Immigrations and Customs Enforcement.</p> <p>The company is asking the court to invalidate the ordinance.</p> <p>The News Tribune reports that Tacoma Deputy City Attorney Steve Victor says the ordinance was meant to protect economically valuable land in the port of Tacoma from encroachment by non-industrial uses, including detention and correctional facilities.</p>

<b>HEADLINE</b>	<b>03/25 More explosives sniffing dogs at SEA</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/938115/more-explosives-sniffing-dogs-now-at-sea-tac-airport/">http://mynorthwest.com/938115/more-explosives-sniffing-dogs-now-at-sea-tac-airport/</a>
<b>GIST</b>	<p>TSA is doubling the number of explosive sniffing dogs at Sea-Tac Airport, just in time for the busiest travel season of the year.</p> <p>The number of these specially trained dogs at Sea-Tac was just five, but Port of Seattle officials said they need at least 10 dogs. And Saturday the feds came through.</p> <p>Everyone coming through Sea-Tac airport during peak travel times knows getting through security can seem daunting, but the Transportation Security Administration (TSA) is beefing up its arsenal with some additional four-legged workers to speed up wait times.</p> <p>“The TSA is introducing additional passenger-screening K-9s into Sea-Tac,” said Sen. Maria Cantwell, (D) WA.</p> <p>Washington’s junior senator made the announcement flanked by Sea-Tac and Port of Seattle officials.</p> <p>Cantwell said she had to make the case to officials in Washington D.C. about just how critical these explosives-trained dogs are. “Our booming economy has led this airport to grow faster over the last five years than any other large airport in the country,” Cantwell said.</p> <p>And that growth has come at the cost of much longer security lines. These dogs are trained to sniff out explosives before a traveler ever gets to the screening line. Five dogs were pressed into service a few months ago. Now five more dogs are joining the team.</p> <p>“You saw the line move much more rapidly when one of those TSA-trained dogs are helping move it along,” said Courtney Gregoire, Port of Seattle Commission President.</p> <p>And that was greeted with cheers from many travelers.</p> <p>“I love it, absolutely,” said Helene Reczka, a traveler from New Jersey. “It makes you feel safer. More</p>

	<p>security, the better it is.”</p> <p>But the dogs frightened others.</p> <p>“For a family going on a vacation, didn’t expect it,” said Rebecca Orth of Bonney Lake. “And the dog was circling us. We have like nothing. It was a little tough.”</p> <p>Gregoire says they plan to put up signs to let travelers know they could be sniffed by these explosives-trained dogs.</p> <p>Anyone who is allergic or frightened of dogs or is traveling with a pet, can skip the K-9 sniffing line, but it might mean more time getting through security.</p>

<b>HEADLINE</b>	<b>03/23 Technology trade war with China looms</b>
<b>SOURCE</b>	<a href="http://www.zdnet.com/article/trump-fires-starting-gun-on-technology-trade-war-with-china/">http://www.zdnet.com/article/trump-fires-starting-gun-on-technology-trade-war-with-china/</a>
<b>GIST</b>	<p>Technology is front and centre of the looming trade war between Washington and Beijing, as United States President Donald Trump initiated the process of installing tariffs on a number of Chinese products, restricting Chinese investment in "industries and technology deemed important" to US interests, and taking China to the World Trade Organization (WTO) for discriminatory technology licensing practices.</p> <p>In a Presidential Memorandum signed on Thursday, Trump said an investigation by United States Trade Representative Robert Lighthizer concluded that China uses foreign ownership restrictions to require technology transfer from US companies to Chinese organisations, as well as conducting espionage to acquire intellectual property and confidential business information.</p> <p>Additionally, the memorandum said China "directs and facilitates" investment and acquisitions of US companies for technology transfer purposes according to Beijing's plans, and lowers the ability of US companies to license technology to Chinese firms at proper market rates.</p> <p>As a consequence, Trump has directed Lighthizer to publish a list of products to have tariffs imposed upon them within the next 15 days, and to "pursue dispute settlement" at the WTO over China's technology licensing practices. The president has also directed Secretary of the Treasury Steven Mnuchin to address investment concerns.</p> <p>"We have a trade deficit, depending on the way you calculate, of \$504 billion, now some people would say it is really \$375 billion," Trump said on Thursday. "Many different ways of looking at it, but any way you look at it, it is the largest deficit of any country in the history of our world -- it's out of control."</p> <p>The president claimed intellectual property theft is costing America in the order of hundreds of billions of dollars each year, and the tariffs could hit \$60 billion worth of Chinese imports to America.</p> <p>"We are doing things for this country that should have been done for many, many years -- we've had this abuse by many other countries and groups of countries that were put together in order to take advantage of the United States, and we don't want that to happen, we're not going to let that happen," Trump said.</p> <p>"Frankly, it's going to make us a much stronger, much richer nation."</p> <p>Lighthizer added that the US has 44 million workers involved in "high-technology areas" and that technology would be the "the backbone of the future" for the American economy.</p> <p>On Friday, China announced a list of US goods including pork, apples, and steel pipe that it says may be hit with higher import duties in response to Trump's tariff hike on steel and aluminium.</p>

The Chinese Commerce Ministry called on Washington to negotiate a settlement as soon as possible, but set no deadline.

A ministry statement said the higher US tariffs "seriously undermine" the global trading system.

"The Chinese side urges the US side to resolve the concerns of the Chinese side as soon as possible," the ministry said. It appealed for dialogue "to avoid damage to overall Chinese-US cooperation".

Goods targeted for possible higher Chinese tariffs include wine, apples, and ethanol, which would hit agricultural areas where voters supported Trump in the 2016 presidential election.

The ministry said China bought about \$1 billion worth of those goods last year. They would be hit with a 15 percent tariff increase, mirroring the US duty hike of 15 percent on aluminium.

A second group of products targeted for a possible 25 percent tariff, mirroring the higher American charge on steel, includes pork and aluminium scrap, according to the ministry.

In September 2015, the two countries signed an agreement ostensibly to prevent economic espionage from being conducted online, which was subsequently claimed to be breached the very next day.

Over recent months, the United States has stepped up its rhetoric against China, particularly in the realm of technology.

In February, the heads of the CIA, FBI, NSA, and the director of national intelligence to the Senate Intelligence Committee recommended that Americans not use products from Huawei and ZTE.

Earlier this month, Trump issued an order sinking Broadcom's proposed takeover of Qualcomm, saying there was "credible evidence" the deal would hurt the national security of the United States.

At the time, the Committee on Foreign Investment in the United States said that if Broadcom succeeded in its plans, it could weaken Qualcomm and allow China to have greater influence over standards such as 5G.

<b>HEADLINE</b>	<b>03/23 Gov. boosts oil safety measures</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/935898/gov-jay-inslee-signs-bill-to-boost-oil-safety-measures/">http://mynorthwest.com/935898/gov-jay-inslee-signs-bill-to-boost-oil-safety-measures/</a>
<b>GIST</b>	<p>OLYMPIA, Wash. (AP) — Washington Gov. Jay Inslee has signed a measure that aims to boost safety around the transportation of oil in the state.</p> <p>The new law, signed Friday, extends the state's oil barrel tax to pipelines. That tax pays for spill response and prevention measures and currently applies to oil received by train or vessels.</p> <p>The measure also directs state regulators to address the risks of certain types of oil that sink or submerge as well as to study ways to reduce oil risks in Puget Sound. The new law also sets up an annual forum for the state to work with Canadian agencies on issues related to reducing oil spill risk and navigational safety.</p> <p>Starting in mid-2019, the first \$200,000 collected by the tax will be allocated to the National Guard for oil spill training and cleanup every year.</p>

HEADLINE	<b>03/25 Hate crimes rise prompts safety workshop</b>
SOURCE	<a href="http://q13fox.com/2018/03/25/rising-hate-crimes-in-seattle-prompts-workshop-for-womens-safety/">http://q13fox.com/2018/03/25/rising-hate-crimes-in-seattle-prompts-workshop-for-womens-safety/</a>
GIST	<p>SEATTLE – Hate crimes in Seattle is why more than a dozen women attended a workshop called “Hijabs and Harassment” in West Seattle. They say wearing a hijab as part of their religion makes them a target for harassment.</p> <p>“For my mother and my sisters that cover, you see that they are Muslim walking down the street, so they’re an easier target than myself who chooses not to cover or Muslim men who don’t have outward signs of their faith,” said Nimco Bulale, education program manager at One America.</p> <p>Bulale, who was born in Somalia, left her home country after the civil war moving to Uganda then to America when she was six years old. She now teaches fellow Somali women how to protect themselves.</p> <p>Bulale says Muslim women are feeling a heightened sense of anxiety with more negative rhetoric around Muslims since President Trump took office.</p> <p>“We don’t know what our right, we don’t know what to do,” said Farhiya Mohamed, executive director of the Somali Family Safety Taskforce. She says many women in her community have come to her asking what to do if someone yells a racial slur while they’re at a bus stop or physically attacks them because they’re wearing a hijab, so she decided it was time to put together an educational workshop to address those concerns.</p> <p>“2017 was our highest year rate for incidents against all groups,” said detective Elizabeth Wareing, the bias crimes coordinator of the Seattle Police Department.</p> <p>Wareing says police means different things to people of different cultures, she is emphasizing that the Seattle police department is here to help women and anyone affected by a hate crime. She is teaching these women how to report a crime, why that’s important, how the dispatch system works and what to expect when a police officer arrives to their call.</p> <p>“I want to make sure they know what SPD officers is help, not persecution or embarrassment or something negative they may have faced at their home country,” said Wareing.</p> <p>She says unlike problems like property crime, hate crimes are more challenging to solve using traditional methods.</p> <p>“We can throw more officers at the area or change our patrol patterns and it changes the patterns of incident, like for property crimes, but with bias crimes, we’ve noticed they happen all over the city at time frames that are random,” said Wareing.</p> <p>She says it’s critical for these women and anyone affected by hate crimes to report them because she says</p>

	<p>if police don't know it's happening they can't act to mitigate it.</p> <p>The city shows 418 incidents of bias crime in 2017 for all groups, with downtown Seattle, Capitol Hill and Northgate seeing the highest numbers by neighborhood.</p> <p>This group of women says they want to learn how to work with police to help make them feel safer.</p> <p>"America is my second home," said Sofya Omar, one participant who says people avoid her on a bus because she is wearing a hijab and she's too fearful to go out at night because she may get harassed.</p> <p>"I wish the larger community would know that we too are here seeking opportunity and a better life just like everyone else," said Bulale.</p>

<b>HEADLINE</b>	<b>03/25 Thousands register to vote at 'March'</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/march-our-lives-pushes-expand-voter-rolls-across-country-n859756">https://www.nbcnews.com/news/us-news/march-our-lives-pushes-expand-voter-rolls-across-country-n859756</a>
<b>GIST</b>	<p>At many of the March for Our Lives events across the United States on Saturday, speakers reminded the hundreds of thousands of people in attendance that there was an important way they could push for gun reform: register to vote and go to the polls.</p> <p>According to many of the student speakers at the Washington rally, voting is the only way to pressure politicians to propose legislation that would meet the movement's demands, which include universal background checks and bans on assault weapons and high-capacity ammunition magazines.</p> <p>"Let's take this to our local legislators and let's take this to midterm elections," said David Hogg, one of the survivors of the shooting at Marjory Stoneman Douglas High School, who helped organize the march. "Because without the persistent heat, without the persistence of voters and Americans everywhere getting out to every election, democracy will not flourish."</p> <p>HeadCount, a nonpartisan organization that registers young voters at concerts, partnered with the students behind March for Our Lives and sent close to 1,000 volunteers to register marchers at Saturday's crowd in Washington, which numbered 800,000 people, according to organizers.</p>

HeadCount spokesman Aaron Ghitelman said volunteers, who were dressed in neon yellow or neon green shirts, were coming back with 10 to 20 filled-out voter forms each. And the young people who filled out those forms are from all over the country.

“That’s a really invigorating number,” Ghitelman said of the Washington returns. “I mean, damn that’s awesome.”

HeadCount also sent volunteers to the many other marches that occurred throughout the country, and several other organizations also worked to register students, parents and teachers at the massive demonstrations.

As of Sunday, Ghitelman said they had registered approximately 4,800 people across the country.

Diane Burrows, a vice president of the League of Women Voters in New York, said her group had trained and sent out 45 volunteers into the city’s march on Saturday. Each carried a clipboard and 10 registration forms, and several of them had come back to their headquarters for more.

Burrows said on Sunday they had registered more than 150 voters in New York alone — 74 had birthdays in 1999 or 2000 — but about half the volunteers had not yet turned in their registration forms and were expected to bring them in next week.

“The engagement has really increased and I think it’s an awareness,” said Burrows. “People are really understanding the power of the vote and that’s what’s really motivating a lot of them. They’re figuring out the importance and power of civic engagement.”

<b>GIST</b>	There have been two lockdowns at Nabrath Sheriff's high school in Sammamish since last month's

shooting at Marjory Stoneman Douglas High School in Parkland, Florida.

Sheriff's school has added security measures and begun enforcing ones that had lapsed — doors that used to be open at Eastlake High are now closed, classrooms are locked and all visitors need badges.

Going to school feels subtly different, the 15-year-old sophomore said. The shooting at Parkland has made her newly conscious of a threat that's been there all along.

"Every time I walk in a classroom I'm looking for a place I could hide," Sheriff said. "I deserve to go to school and feel safe."

Sheriff was at Seattle's Cal Anderson Park on Saturday for the local March For Our Lives, joining thousands of others to march through downtown in a student-led protest demanding stricter gun laws in Washington and across the country.

Seattle's march was one of hundreds worldwide held alongside the main event in Washington, D.C., where hundreds of thousands of people packed into the nation's capital to hear 20 children and teenagers speak about the effect of gun violence on their lives. Among them were survivors of the Parkland shooting, which left 17 people dead.

The Parkland massacre was by no means the first, nor was it the deadliest, school shooting in U.S. history. But the outcry this time is unmatched, students said, in part because of the voices of the Parkland student activists who have used social media to recount their experiences, call out lawmakers and plan events such as Saturday's march.

Seeing those students on stage at rallies after the Feb. 14 shooting was impactful, said Rhiannon Rasaretnam, 17, a Tahoma High senior and march organizer. On Saturday, Rasaretnam was the one on stage.

"Now we are taking action to ensure that the next generation doesn't have to grow up with active shooter drills and faced with the reality that they and their classmates could be killed," she said.

While the energy of protest marches can sometimes fizzle into inaction, the student organizers have specific legislative goals in mind: universal background checks. Ending the effective ban on federally funded research into gun violence. Banning the sale of semi-automatic rifles. Raising the legal age to own a gun in Washington state, from 18 to 21.

Speakers and demonstrators emphasized that gun violence affects young people beyond school and that, while Parkland may be considered the tipping point for some, "others have been at that tipping point for years," Rasaretnam said. Representatives from the group Youth 4 Peace read names of young people killed by guns in Washington state and placed flowers in a pile after each name was read.

Dozens of volunteers fanned out along the march route, armed with clipboards to register potential voters. The importance of voting was a focus of the speakers and the organizers. The eight members of the march planning team signed voter-registration forms on stage, then held them up as the crowd cheered. Ingraham High senior and march organizer Catherine Zhu called the ballots "symbols of youth power."

"This is a youth-led effort and I want to be here to empower them," said Patricia Murray, 23, who was signing up voters. "Voting is one of the best ways we're able to make systematic change."

And the youth, whether they can vote in this election or not, are coming.

"Some of us can vote in 2018, most of us can vote in 2020 and all of us can vote in 2022," one speaker said. "We need to show our representatives that if they oppose us we will vote them out."

While much of the focus was on congressional inaction, some demonstrators looked to the state level as

	<p>well.</p> <p>“We live in a time when anyone who is 18 is able to go into a store, buy a gun and shoot other people, which is completely ridiculous.” said Sabreen Tuku, a 15-year-old freshman at Issaquah High School. “Start in Washington and then have other states follow, that’s going to be the most effective way for it to happen.”</p> <p>But even in reliably blue Washington, such changes have been few and far between.</p> <p>The Washington state Legislature recently banned bump stocks, which allow semi-automatic guns to fire nearly as rapidly as a machine gun.</p> <p>But efforts to pass more substantial gun laws — a ban on assault-style weapons, raising the age limit to buy such weapons and a ban on high-capacity magazines — stalled in the Democratic-controlled Legislature.</p> <p>Attorney General Bob Ferguson, a Democrat who has been pushing since 2016 for a ban on assault-style weapons, noted that Florida’s Republican-controlled Legislature recently raised the age for all gun purchases to 21.</p> <p>“Our Legislature did nothing,” Ferguson said, impugning his own party. “It is outrageous, it is unacceptable that our elected officials, in our state, in our home, will not listen.”</p> <p>He added: “I think they’re going to start listening now, because of each and every one of you.”</p> <p>Democratic Gov. Jay Inslee, in an interview after his speech at Seattle Center, said, “This is the start of an awakening of this generation that can help this state realize a new vision.”</p>

<b>HEADLINE</b>	<b>03/24 CDC: doctor visits for flu down 6<sup>th</sup> week</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Health_News/2018/03/24/CDC-Doctor-visits-for-flu-symptoms-down-for-6th-week-in-a-row/9771521902945/?utm_source=fp&amp;utm_campaign=ts_hn&amp;utm_medium=15">https://www.upi.com/Health_News/2018/03/24/CDC-Doctor-visits-for-flu-symptoms-down-for-6th-week-in-a-row/9771521902945/?utm_source=fp&amp;utm_campaign=ts_hn&amp;utm_medium=15</a>
<b>GIST</b>	<p>SATURDAY, March 24, 2018 -- It's been a particularly tough flu season, but spring -- and real relief -- may be near, new numbers show.</p> <p>The flu season continues to wind down, with yet another drop seen in doctor visits and less severe strains of influenza becoming ever more dominant.</p> <p>But hospitalizations for the flu are still a problem, and there have been additional pediatric deaths, the latest data shows.</p> <p>For the sixth week in a row, there was a decrease in the number of doctor visits for flu-like illness, the U.S. Centers for Disease Control and Prevention reported Friday.</p> <p>As of March 17, the CDC said, 2.7 percent of patient visits to doctors were for the flu, down from 3.3 percent of patient visits the week before.</p> <p>And, as health officials predicted, cases of less severe influenza B infections continue to be more common than cases of more severe influenza A infections.</p> <p>For the week ending March 17, influenza B infections accounted for 57.5 percent of cases, while influenza A infections accounted for 42.5 percent. For the entire season so far, influenza A strains have been responsible for 75.6 percent of all cases, the CDC report noted.</p>

	<p>Meanwhile, flu-linked hospitalization rates continued to rise -- from 89.9 per 100,000 people for the week ending March 10, to 93.5 per 100,000 people for the week ending March 17, the CDC data showed.</p> <p>Pediatric flu deaths are also still increasing slightly, with an additional five deaths reported for the week ending March 17. That brings the season's total to 133.</p>

<b>HEADLINE</b>	<b>03/24 China air force drills in disputed sea</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-china-defence/china-air-force-drills-again-in-south-china-sea-western-pacific-idUSKBN1H103L">https://www.reuters.com/article/us-china-defence/china-air-force-drills-again-in-south-china-sea-western-pacific-idUSKBN1H103L</a>
<b>GIST</b>	<p>BEIJING (Reuters) - China's air force has held another round of drills in the disputed South China Sea and the Western Pacific after passing though Japan's southern islands, the air force said on Sunday, calling such exercises the best preparation for war.</p> <p>China is in the midst of an ambitious military modernization program overseen by President Xi Jinping with a heavy focus on its air force and navy, from building stealth fighters to adding aircraft carriers.</p> <p>China insists it has no hostile intent, but its sabre-rattling in the busy South China Sea waterway, and around Taiwan, has touched a nerve in the region and in Washington.</p>

	<p>In a statement, the air force said H-6K bombers and Su-30 and Su-35 fighters, among other aircraft, carried out combat patrols over the South China Sea and exercises in the Western Pacific after passing over the Miyako Strait, which lies between two southern Japanese islands.</p> <p>It did not say when the exercises took place nor specify the parts of the South China Sea or the Western Pacific.</p> <p>In a “freedom of navigation” operation on Friday, a U.S. Navy destroyer came within 12 nautical miles of an artificial island China has built in the South China Sea, provoking condemnation from China, which claims most of the strategic waterway.</p> <p>Sending Su-35 fighters over the South China Sea aims to help increase the air force’s ability to fight far out at sea, the air force said in the statement on its microblog.</p> <p>Flying across the Miyako Strait, which also sits to the northeast of the self-ruled island of Taiwan that China claims as its own, accorded with international law and practice, it added.</p> <p>“Air Force exercises are rehearsals for future wars and are the most direct preparation for combat,” it said.</p>

<b>HEADLINE</b>	<b>03/25 Data show dramatic change in politics</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/politics/first-read/after-20-years-data-show-dramatic-changes-party-alignment-n859821">https://www.nbcnews.com/politics/first-read/after-20-years-data-show-dramatic-changes-party-alignment-n859821</a>
<b>GIST</b>	<p>In 2018, it’s essentially a given to say that the Democratic and Republican parties represent two different Americas. But a new set of data this week shows some of the most significant gaps between the two major parties are growing wider.</p>

The study of political partisanship from the Pew Research Center compares registered voters who self-identified as Republicans and Democrats in 1997 and 2017 and finds both are being affected by changes in the nation overall, but at very different rates. The net effect is that the two parties are in some ways headed in very different directions – demographically and culturally.

Take racial and ethnic diversity as a measure.

Of course, the data show the United States has grown more diverse since 1997. Among all voters in the Pew data, the percentage of white, non-Hispanic registered voters has dropped 14 points, to 69 percent in 2017 from 83 percent in 1997. But the numbers look very different for Democrats and Republicans.

The GOP has seen a smaller 9-point decline in the share of its voters who are white and non-Hispanic to 83 percent in 2017 from 92 percent in 1997. But the Democrats have seen a much steeper 16-point in the share of its voters who are white, to 59 percent from 75 percent in 1997.

As a result, the divide between the parties on the percentage of members who are white is wider now than it was then.

Age is another marker. The Pew data show the country is graying. In 2017, 50 percent of the registered voters they surveyed were older than 50. That number was up 10 points from 1997 when the figure was 40 percent. But the data show the Republicans are graying much faster than the Democrats.

In 2017, 57 percent of Republicans were age 50 or older, that age group made up only 39 percent of the party in 1997 – an increase of 16 points. Democrats have gotten grayer as well, but only by 5 percentage points – 47 percent now, versus 42 percent 20 years ago.

The partisan changes in college education rates are breathtaking. On the whole, more U.S. voters in the Pew data have a college degree than 20 years ago. The figure was 33 percent in 2017, up 8 points from 1997, when the number was 25 percent. But at the party level, the shift has been one-sided.

Among self-identified Democrats, the number of college-educated voters has climbed 15 points, to 39 percent, since 1997. But among Republicans, the number of college-educated voters is unchanged at 28 percent. This is a big shift. In 1997, Republicans were more likely to hold a college degree than Democrats. The figures are now reversed.

And on the often contentious issue of religion, the parties are moving further apart. In national terms, the percentage of registered voters with no religious affiliation is growing while the share of white evangelical Christians declines.

Again, this is true at the party-level as well, but the rates of change are dramatically different.

The percentage of Democrats with no religious affiliation climbed 24 points between 1997 and 2017. A third of Democrats, 33 percent, now claim no religious affiliation. With Republicans the increase was only 8 points. Only 13 percent of Republicans claim no religious affiliation today.

With white evangelical Christians, the differences are reversed.

The percentage of white Republican voters calling themselves evangelical Christians has declined ever so slightly since 1997, only 1 point to 33 percent. But among Democrats the white evangelical Christian drop has been much steeper, a 12-point drop to just 7 percent of all party voters.

In sum, the United States has changed a lot in the last 20 years and the nation's two major political parties haven't been immune to those changes. But the different rates of change among the Democrats and Republicans mean that the parties are, in many ways, growing ever further apart.

On all the measures listed here, the Democrats and Republicans look less similar than they did 20 years

	<p>ago, even as the two parties are generally moving in the same direction.</p> <p>And, to be clear, this is not merely an exercise in bean counting. The splits outlined here – race, age, education, religious adherence – are tied to deeper cultural and socio-economic differences that consistently appear in policy debates on a range of topics.</p> <p>In that way, these numbers are not just a tallying of party differences, they are numeric evidence for why compromise has become so scarce in Washington, and why it is only growing harder to find.</p>

<b>HEADLINE</b>	<b>03/25 How many attended 'March'?</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/march-for-our-lives-crowd-size-estimated-200000-people-attended-d-c-march/">https://www.cbsnews.com/news/march-for-our-lives-crowd-size-estimated-200000-people-attended-d-c-march/</a>
<b>GIST</b>	<p>More than 200,000 people attended the March for Our Lives demonstration in Washington D.C. on Saturday, according to Digital Design &amp; Imaging Service Inc (DDIS). The Virginia-based firm uses a proprietary method for calculating crowd size using aerial photos.</p> <p>The peak crowd size was 202,796 people, with a margin of error of 15 percent, the firm said. The crowd reached its largest size at 1 p.m., according to the company's estimates.</p> <p>The organizers put the total number of attendees at closer to 800,000. The largest single-day demonstration in U.S. history was the 2017 Women's March, with a crowd size of 440,000 people, according to DDIS' estimates.</p> <p>In addition to the massive march in Washington, an estimated 800 other marches were held across the country, including one in Parkland, Florida, where the movement was born following the shooting at Stoneman Douglas High School in February.</p>

<b>HEADLINE</b>	<b>03/24 Marysville first responders stretched thin</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/03/23/marysvilles-exploding-population-stretches-emergency-responders-to-breaking-point/">http://q13fox.com/2018/03/23/marysvilles-exploding-population-stretches-emergency-responders-to-breaking-point/</a>
<b>GIST</b>	<p>MARYSVILLE, Wash. - Marysville doubled in size between 2006-2016, jumping from 32,000 people to 65,000.</p> <p>That kind of increase affects everything from housing and traffic to infrastructure. It also puts a strain on those who are sworn to serve and protect.</p> <p>Back in 2009, the Marysville fire department responded to 10,000 calls. Last year they responded to more than 15,000 – a 47 percent increase, that's seen average daily calls jump from 29 to 42, even as the number of firefighters on duty has remained the same.</p> <p>“We are currently spending out of our reserve just to keep up with the amount of calls that we run and sustain a good service,” said battalion chief Aaron Soper.</p> <p>“We are so lean there is nothing that can be cut out. We rely every day on mutual aid - mutual aid is when other departments come in and help us run our calls. Mutual aid was never intended for everyday events. It was a big event where you are overwhelmed and can't provide the service.”</p> <p>The question, of course, is how to pay for it. The city says something could be on a ballot by the end of the year.</p>

	“We will always do the best we can with what we have,” Soper said. “Of course we would like more funding and more manpower to protect our citizens.”

<b>HEADLINE</b>	<b>03/24 Small counter-protests amid ‘March’</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/march-for-our-lives-rallies-small-counter-demonstrations/">https://www.cbsnews.com/news/march-for-our-lives-rallies-small-counter-demonstrations/</a>
<b>GIST</b>	<p>WASHINGTON -- Small counter-demonstrations were taking place Saturday in cities across the country as hundreds of thousands of teenagers and their supporters rallied under the banner "March for Our Lives" in the nation's capital -- and nationwide -- in support of gun control.</p> <p>About 30 gun-rights supporters staged a counter-demonstration in front of the FBI headquarters in Washington, D.C., standing quietly with signs such as "Armed Victims Live Longer" and "Stop Violating Civil Rights."</p> <p>In Boston, a group of about 100 counter-protesters began Saturday morning on the steps of the State House and moved onto Boston Common, CBS Boston reports. Counter-protesters and opposing activists shouted at one another. Police stepped in between the groups to keep the peace.</p> <p>When the counter-protesters moved to Boston Common, police officers on bicycles formed a perimeter around them to prevent any potential clashes.</p> <p>In Salt Lake City, a pro-gun rally was taking place Saturday. CBS affiliate KUTV reports gun rights advocates arrived at the Utah State Capitol. They chanted "freedom!" as they marched.</p> <p>The rally is called "March Before Our Lives" -- a counter-protest to the rally pressing for gun legislation. KUTV reports Utah Gun Exchange was holding the counter-demonstration.</p> <p>In Texas, Fort Worth police formed a protective circle Saturday morning around two counter-protesters using a microphone to disrupt the city's "March for Our Lives" event as it was about to get underway, J.D. Miles with CBS DFW reported.</p>

<b>HEADLINE</b>	<b>03/24 Students rally against gun violence</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/local/march-for-our-lives-huge-crowds-gather-for-rally-against-gun-violence-in-nations-capital/2018/03/24/4121b100-2f7d-11e8-b0b0-f706877db618_story.html?utm_term=.285aba0f558e">https://www.washingtonpost.com/local/march-for-our-lives-huge-crowds-gather-for-rally-against-gun-violence-in-nations-capital/2018/03/24/4121b100-2f7d-11e8-b0b0-f706877db618_story.html?utm_term=.285aba0f558e</a>
<b>GIST</b>	<p>Hundreds of thousands of demonstrators gathered in the nation’s capital and cities across the U.S. Saturday to demand action against gun violence, the latest and most visible show of force by a student-led political movement born in the wake of a deadly school shooting in Parkland, Fla.</p> <p>Led by students from Marjory Stoneman Douglas High School, where a shooter’s rampage last month left 17 dead, the teens who took the stage at the March for Our Lives in downtown Washington called for Congress to enact stricter gun controls in response to the nation’s relentless, two-decade stretch of campus shootings. Hundreds of sister protests were taking place in cities across the United States, including Philadelphia, New York, Chicago and Los Angeles.</p> <p>Although the D.C. march was bankrolled by left-leaning celebrities including Oprah Winfrey and George and Amal Clooney, students who survived the Parkland shooting, students directly affected by gun violence have been its faces. Their unequivocal message on Saturday: The inaction that has repeatedly characterized federal lawmakers’ response to school massacres and everyday gun violence would no longer be tolerated.</p>

“To the leaders, skeptics and cynics who told us to sit down, stay silent and wait your turn, welcome to the revolution,” Cameron Kasky, a Stoneman Douglas High student, said to a standing-room only crowd that packed at least 10 blocks of Pennsylvania Avenue. “Either represent the people or get out. Stand for us or beware. The voters are coming.”

About 20 speakers — all of them kids or teens — spoke to a striking diverse crowd that included students from every background: black and white, rich and poor, suburban and inner-city.

A huge crowd is expected for what is billed as a youth-led movement spearheaded by student survivors of school shootings. Many D.C.-area families, businesses and organizations are lending their support, and “sibling marches” are planned nationwide.

Together, they sang along to Miley Cyrus and Ariana Grande, shed tears during a chorus of “Happy Birthday” to a Parkland victim and chanted “Enough is enough!” as one of the movement’s leaders, Emma Gonzalez, stood silently on the stage.

One of the rally’s most emotional speeches was delivered by Zion Kelly, a senior at Thurgood Marshall Academy in Washington DC, whose twin brother Zaire was shot and killed by a robber in September. Choking back tears before a rapt crowd, Kelly described the close bond he had with his brother.

“From the time we were born we shared everything. I spent time with him every day because we went to the same schools, shared the same friends and we even shared the same room,” he said. “I’m here to represent the hundreds of thousands of students who live everyday in constant paranoia and fear on their way to and from school.”

Because many of the demonstrators were children, authorities in the nation’s capital said they were taking extra security precautions.

Nearly 200 people have died in school shootings since the 1999 massacre at Columbine High School in Colorado, which left 13 dead and inaugurated a relentless two-decade stretch of campus gun violence. During that period, more than 187,000 students attending at least 193 primary or secondary schools have experienced a shooting on campus during school hours, according to a Washington Post analysis.

Organizers had hoped for a crowd of half a million in Washington. Police did not provide crowd estimates, though by 1 p.m. about 207,000 people had ridden Metro, officials said. That was more than three times normal Saturday ridership, although it did not approach the 470,000 people who used the system by 1 p.m. for the Women’s March last year.

More than 800 events were scheduled to take place around the world Saturday, according to March for Our Lives organizers. Beyond major cities, they included rallies in Las Vegas, where a gunman killed 58 people at a country music festival last year; in Parkland, Fla., home to Stoneman Douglas; and in Jonesboro, Ark., where the community is marking the 20th anniversary of a middle school shooting that left four students and a teacher dead.

Survivors or relatives of those killed in other mass shootings were also at the march in Washington, including some from Columbine, Sandy Hook and Marysville Pilchuck High School in Washington state, where four were fatally shot in 2014.

By mid-afternoon Saturday the rallies had proceeded peacefully, with small and scattered counter-protests by opponents of stricter gun control.

<b>HEADLINE</b>	<b>03/23 Canada politicians in pipeline protest</b>
<b>SOURCE</b>	<a href="https://www.seattlepi.com/local/politics/article/Connelly-Members-of-Canada-s-parliament-busted-">https://www.seattlepi.com/local/politics/article/Connelly-Members-of-Canada-s-parliament-busted-</a>

	<a href="#">12777585.php</a>
<b>GIST</b>	<p>Two members of Canada's House of Commons were arrested Friday in a protest against the giant Kinder Morgan pipeline, which would create an oil port just east of Vancouver and send 34 tankers a month through waters shared by the U.S. and Canada.</p> <p>They are the latest of about 100 protesters detained for violating an exclusion zone around offices of the Texas company building the pipeline.</p> <p>"Non-violent civil disobedience is the moral obligation of the climate-aware, responsible citizen," said MP Elizabeth May, leader of Canada's Green Party, who represents a riding (district) on the Saanich Peninsula north of Victoria.</p> <p>The Houston-based Kinder Morgan pipeline builder plans to triple the volume of the existing Trans-Mountain Pipeline, which carries bitumen crude oil from Alberta's tar sands across British Columbia to Burnaby, B.C.</p> <p>The pipeline -- approved by the government of Canada's Prime Minister Justin Trudeau -- would have the capacity of 890,000 barrels of oil a day. The oil would be shipped out through the Haro Strait, which separates Canada's Gulf Islands from the U.S. San Juan Islands, and the Strait of Juan de Fuca.</p> <p>The pipeline is opposed by both B.C. Premier John Horgan and Washington Gov. Jay Inslee, and by First Nations groups in Canada. Opponents fear the catastrophic consequences of an oil spill in the Salish Sea.</p> <p>The British Columbia Supreme Court has put a buffer around Kinder Morgan's base of operations, where demonstrators are not permitted.</p> <p>May and Kennedy Stewart marched behind a banner reading: "Trudeau: Climate Leaders Don't Build Pipelines."</p> <p>The Kinder Morgan project has damaged Trudeau's image as a champion of climate-change response. The prime minister's party holds 17 British Columbia seats in the House of Commons, almost all of them from Vancouver. An election is slated for next year.</p> <p>"Canadians have the constitutional right to peaceful protest especially when governments abuse their powers," Stewart told the protest. "During the last election, Justin Trudeau said that 'while governments grant permits . . . only communities can grant permission.</p> <p>"I am here to help amplify the voices of my constituents who do not grant permission for this pipeline."</p>

<b>HEADLINE</b>	<b>03/23 Pierce Co. focus on tribal relations</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/pierce-county-puts-focus-on-tribal-relations/281-531505970">http://www.king5.com/article/news/local/pierce-county-puts-focus-on-tribal-relations/281-531505970</a>
<b>GIST</b>	<p>Respecting government-to-government relations with Native American tribes is at the center of a renewed effort in Pierce County.</p> <p>Pierce County Executive Bruce Dammeier recognized Puyallup Tribal Councilmember Tim Reynon during his State of the County address this week.</p> <p>"It's very important that we work together and have that open line of communication," said Reynon, "We all have important needs and important interests that we have to respect."</p> <p>Reynon said when people think of Native Americans, they often think about the cultural side. While that is important, he says it's also imperative to recognize Native American tribes as sovereign nations.</p>

	<p>"I think there's a lot of people that don't really recognize that tribes are governments. We govern ourselves," said Reynon.</p> <p>Economic development may be one of the most visible forces on the Puyallup Reservation with the construction of a new casino underway.</p> <p>"We contribute millions of millions of dollars to the county economy... to the city's economy," said Reynon. He says it's important that county and city governments recognize that.</p> <p>This year, Pierce County hired its first tribal liaison, Sarah Coleen Sotomish, from the Quinault tribe. "We're going to respect the tribes and we're going to go out and talk to them when we implement laws, policies and procedures that would impact the tribe it's land or it's tribal members."</p> <p>The goal is foster respect and iron out differences.</p> <p>"We are living in the same place and we have similar interests, but we are also bumping up against each other and we need to figure out how to live together."</p>

<b>HEADLINE</b>	<b>03/24 Outrage over military transgender ban</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/trump-transgender-military-ban-gop-silent-democrats-and-lgbt-groups-outraged/">https://www.cbsnews.com/news/trump-transgender-military-ban-gop-silent-democrats-and-lgbt-groups-outraged/</a>
<b>GIST</b>	<p>President Trump released an order Friday night banning most transgender troops from serving in the military except under "limited circumstances," following up on his calls last year to ban transgender individuals from serving.</p> <p>The White House said retaining troops with a history or diagnosis of "gender dysphoria" — those who may require substantial medical treatment — "presents considerable risk to military effectiveness and lethality."</p> <p>Mr. Trump surprised the Pentagon's leadership in a 2017 tweet when he declared he would reverse an Obama-era plan to allow transgender individuals to serve openly. His push for the ban has been blocked by several legal challenges, and four federal courts have ruled against the ban. The Pentagon responded by allowing those serving to stay in the military, and began allowing transgender individuals to enlist beginning Jan. 1.</p> <p>"This new policy will enable the military to apply well-established mental and physical health standards - including those regarding the use of medical drugs - equally to all individuals who want to join and fight for the best military force the world has ever seen," White House Press Secretary Sarah Huckabee Sanders said Friday.</p> <p>The new policy was promptly assailed by congressional Democrats and civil rights groups. House Democratic leader Nancy Pelosi tweeted, "No one with the strength &amp; bravery to serve in the U.S. military should be turned away because of who they are. This hateful ban is purpose-built to humiliate our brave transgender members of the military who serve with honor &amp; dignity."</p> <p>Democrats on the House Armed Service Committee said that the president's decision is "vicious, inhumane and utterly wrong," and they pointed out, "There are scores of transgender men and women serving in the military right now, under a policy that had already been established &amp; vetted by DOD and validated by the courts."</p> <p>The Human Rights Campaign, the nation's largest LGBT civil rights organization, accused the Trump administration of pushing "anti-transgender prejudices onto the military."</p>

<b>HEADLINE</b>	<b>03/24 Obesity element grows in adults</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Health/obesity-epidemic-grows-adults-levels-off-youth/story?id=53974864">http://abcnews.go.com/Health/obesity-epidemic-grows-adults-levels-off-youth/story?id=53974864</a>
<b>GIST</b>	<p>The U.S. is big, and getting bigger. Since the 1980s, American adults' obesity is at epidemic proportions, and there does not seem to be an end in sight.</p> <p>Rates of obesity in those younger leveled off between 2005 and 2014, but a recent report in JAMA wanted to know if there has been any change.</p> <p>The U.S. Centers for Disease Control and Prevention looked at data from the National Health and Nutrition Examination Survey (NHANES), which takes various measures of the health and nutrition of children and adults in the U.S., using interviews and physical exams.</p> <p>Body Mass Index (BMI) measures from almost 30,000 adults and 17,000 young people tell the story between 2007 and 2016.</p> <p>On BMI measurements: Adults are obese when their BMI is over 30; severe obesity is any BMI over 40. A</p>

normal BMI ranges between 18.5 and 24.9. In those under 20 years old, obesity is measured against what is normal for one's age -- obesity is greater than the 95th percentile, while severe obesity is at or above 120 percent of the 95th percentile.

The CDC results were mixed: in the young, the prevalence of obesity was 16.8 percent in 2007; it was 18.5 percent 10 years later.

There were no significant differences when looking at age or gender, but that's still nearly 2 out of every 10 kids weighing in as obese. Our youth aren't in the clear just yet.

For adults, it was a more stark story: obesity increased from 33.7 percent to 39.6 percent over 10 years -- it stood out most in women, and in adults over 40. That's a shocking 2 out of 5 adults.

Severely obese adults went from 5.7 percent to 7.7 percent, showing up the most in adults from age 20 to 59.

Americans, it seems, may not realize that these trends increase risk for all types of disease, from heart attack, stroke, and diabetes to many forms of cancer.

And although we are seeing a potential plateau of obesity cases in our kids, we continue to hear about them being diagnosed with high blood pressure and diabetes, requiring medication management -- for diseases we often associate with adults.

Although the report did not give any recommendations about these results, it is telling that the obesity epidemic isn't losing its heft.

<b>HEADLINE</b>	<b>03/24 Bolivians demand access to sea</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/bolivians-demand-access-sea-nationwide-parades-53970704">http://abcnews.go.com/International/wireStory/bolivians-demand-access-sea-nationwide-parades-53970704</a>
<b>GIST</b>	<p>Bolivians staged demonstrations across the country on Friday to demand sea access for their landlocked country.</p> <p>Bolivia lost its only seacoast to neighboring Chile during a war from 1879 to 1883 and the nation has demanded ocean access for generations. But Chile says the issue was settled once and for all in a 1904 treaty.</p> <p>Demonstrators flooded the streets of La Paz and other cities across Bolivia waving national flags and holding banners. It came at a time when the International Court of Justice is considering Bolivia's request to order Chile to negotiate access.</p> <p>President Evo Morales asked Chile's government on Friday to find a resolution for the benefit of future generations.</p> <p>"Let's not leave pending problems for our children and instead look for mutually beneficial solutions ... that can close the wounds of the past," Morales said in a speech in the Bolivian capital.</p> <p>Morales recently said that he's prepared to discuss options with neighboring Chile for gaining access to the Pacific, but he argues that powerful forces in Chile do not want talks.</p> <p>Chilean government spokeswoman Cecilia Perez said Friday that "Bolivia has no right to the Chilean sea or its territory." Chile's representative in The Hague, Claudio Grossman, said that Chile "will continue on the path of diplomacy, but does not feel judicially obliged."</p>

	The court's final and binding decision is expected to take months.

<b>HEADLINE</b>	<b>03/23 Puerto Rico rejects pension cut plan</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/puerto-rico-rejects-pension-cuts-sought-federal-board-53973860?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/puerto-rico-rejects-pension-cuts-sought-federal-board-53973860?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Puerto Rico government officials said Friday they will not bow to demands from a federal control board overseeing the island's finances that they implement cuts to a struggling public pension system as part of an upcoming fiscal plan to help pull the U.S. territory out of an economic crisis.</p> <p>Gov. Ricardo Rossello told reporters the biggest disagreement between his administration and the board is over a proposed average 10 percent cut to pensions of more than \$1,000 a month paid by a system facing nearly \$50 billion in liabilities.</p> <p>Christian Sobrino, the governor's representative to the board, defended the government's revised fiscal plan and said it would generate a \$5.5 billion surplus in upcoming years and help reverse the economic slump while avoiding the elimination of vacation or sick days and reductions in maternity leave, among other things he said the board has proposed.</p> <p>"We're not talking about business as usual here in Puerto Rico," Sobrino said. "The fiscal plan recognizes the island's fiscal and demographic spiral. If we don't stop it, the game is over. Puerto Rico will be a footnote in the history of the Caribbean."</p> <p>The board had been expected to vote on the revised fiscal plan Monday, but it announced Friday that it was postponing the vote, without providing a new date. The board has the power to implement its own measures if it disagrees with those proposed by the government.</p> <p>Sobrino warned that the board is considering some measures which would have a detrimental effect on an island mired in an 11-year-old recession as it struggles to rebound from Hurricane Maria and restructure a portion of its \$73 billion public debt.</p>

<b>HEADLINE</b>	<b>03/24 'March for Our Lives' goes global</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/march-lives-takes-place-world-london-berlin/story?id=53982310">http://abcnews.go.com/International/march-lives-takes-place-world-london-berlin/story?id=53982310</a>
<b>GIST</b>	<p>March for Our Lives is anchored by the main event in Washington, D.C., but hundreds of satellite marches are also taking place Saturday in cities across the country and around the globe.</p> <p>There were more than 800 so-called "sibling marches" planned worldwide for this weekend in support of the students, teachers, parents and other members of the public converging in Washington, D.C., on Saturday to rally for gun control and school-safety measures in the wake of last month's shooting in a Florida high school.</p> <p>Each sibling march is an independent, student-led initiative, according to the March for Our Lives official website.</p>

The main protest was organized by students of Marjory Stoneman Douglas High School in Parkland, Florida, where a gunman killed 17 people and injured others on Valentine's Day. The accused shooter, 19-year-old Nikolas Cruz, was a former student at the school and was armed with an AR-15-style rifle he had legally purchased a year ago, authorities said.

Now, students around the country -- and their allies around the world -- are calling on American lawmakers to make schools safer and pass stricter gun-control laws, such as by prohibiting the sale of high-capacity magazines and banning the high-powered, highly-lethal assault-style weapons often used in mass shootings.

As thousands of people began to gather in the U.S. capital Saturday morning, other marches were already underway in cities abroad, including London, Paris, Rome, Berlin and Sydney.

Outside the newly-built U.S. embassy in London, a young child participating in the March for Our Lives there held a sign that read, "Love is greater than FEAR." A minute of silence was held in honor of the victims of the Feb. 14 school shooting in Florida.

One of the London event's organizers from Amnesty International told Sky News how he admires the strength and courage of the shooting survivors in the U.S.

"They have come together at a very difficult time and raised their voices and really taken control of the narrative around gun control in the USA," he said.

March for Our Lives participants in Paris issued a poignant, rallying cry for gun control, with chants reminiscent of the Vietnam War protests.

American and international students wielding loudspeakers amassed near the U.S. Embassy in Rome. Some held banners reading, "Protect People, Not Guns," "Enough is Enough" and "Dress Codes Are More Regulated Than Guns."

American citizen Katelin Meffert participated in the March for Our Lives in Berlin. Meffert, who's originally from Michigan, told ABC News she's expecting her first child in May and will eventually return home to the United States, at which point she hopes lawmakers will have enacted tougher gun-control laws.

"As an American abroad living in a country where I don't feel fear, I see the benefit of creating common sense legislation that keeps people safe," Meffert said.

Australians participating in the March for Our Lives in Sydney read out the names and ages of the victims of the Florida school shooting.

March for Our Lives organizers explain on the official website that they support the constitutional right of law-abiding U.S. citizens to bear arms, but say the recent surge of mass shootings, particularly at schools, calls for an honest discussion about guns.

<b>HEADLINE</b>	<b>03/24 'March for our rights' rallies pop up</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/march-rights-rallies-pop-dc-utah-montana/story?">http://abcnews.go.com/US/march-rights-rallies-pop-dc-utah-montana/story?</a>
<b>GIST</b>	<p>Streets in Washington D.C. to Los Angeles became seas of protest on Saturday, led by hundreds of thousands of emboldened children, students, parents, and teachers in the "March for Our Lives" event pushing to end gun violence.</p> <p>But on the same day of these rallies, counter-protests took place with a central message of their own: protect the Second Amendment.</p> <p>In D.C., the pro-gun rally was surrounded by local cops and participants waved giant American flags.</p> <p>The 10 to 15 protesters may have been outnumbered, but they were vocal.</p> <p>Calling themselves "The Patriot Picket: Defenders of Liberty and the Second Amendment" the protesters stood on Pennsylvania Avenue in the middle of hundreds of thousands of March for Our Lives participants.</p> <p>Patriot Picket founder Jeff Hulbert told ABC that they thought it was important to come to the march and exercise their right to free speech and advocate for gun rights.</p> <p>Hulbert said there is actually a unified message on both sides, and that is to make schools safer.</p> <p>In Salt Lake City, chants of "Bill of Rights" were repeated as marchers, mostly older men garbed in black or camouflage, waved American flags.</p> <p>And as police whizzed by on a scooter or stood at a post on a street corner, the sparse crowd of pro-gun marchers yelled "Thank you!" and "Thank you, officer for keeping us safe!"</p> <p>When the crowd encountered a young man with blue-dyed hair one asked him to join them: "Come with us for your freedom," the protester said. "You'll be free to keep your blue hair."</p> <p>In Helena, Montana, not far from a local March for Our Lives protest, as many as 300 ontanans convened for a March for our Guns rally.</p> <p>State Representative Seth Berglee said he was glad he was there.</p> <p>He said that while the event was called "March for our Guns," it just as easily could have been called "March for our Rights."</p>

	<p>"It was just get together and reiterate what we believe in," Berglee, a 32-year-old reserve policeman and former soldier.</p> <p>He said that what started as a memorial quickly turned into a march trying to tread into gun rights.</p> <p>"We're all against gun violence. Nobody wants to see kids die," he said. "It comes down to solutions and in my perspective, we're marching for something but we want Montanans to know we haven't had a major school shooting for years and so it's not a major issue here."</p> <p>Rather, Berglee would like to see armed security guards and school buildings get modernized before guns and legal gun owners are forced to relinquish certain guns or rights.</p> <p>In the end, he agrees with memorializing the Parkland victims, but added, "Gun rights are important."</p>

<b>HEADLINE</b>	<b>03/24 'March' organizers pulled off revolution</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/march-lives-organizers-pulled-off-revolution-washington-analysis/story?id=53993159">http://abcnews.go.com/US/march-lives-organizers-pulled-off-revolution-washington-analysis/story?id=53993159</a>
<b>GIST</b>	<p>The organizers of the March for Our Lives rally managed a nearly impossible feat Saturday: they put on an event in the nation's capital that felt raw, authentic and pure.</p> <p>There were no signs from corporate sponsors. No time wasted on thank yous or acknowledgments. No politicians or career activists held a microphone -- with the exception of a few of the performers, hardly anyone over the age of 18 did.</p> <p>If anyone mentioned President Trump by name it was fleeting.</p> <p>While the students onstage called for political action and begged the crowd to register to vote, they did not align their message with one party. In a city paralyzed with partisanship there was no talk of red or blue teams.</p> <p>Instead, the students called themselves "the revolution," and said the entire system was broken and corrupt.</p> <p>Perhaps those students were able to talk unencumbered, simply presenting themselves as young people in America, because the biggest donors to the event were wealthy individuals -- Hollywood celebrity-types -- who did not ask for much in return.</p> <p>Sure, some companies and organizations sponsored buses and hotel rooms to get people to the march, but the folks in the crowd were quick to say it was a grassroots movement, those role model students from Stoneman Douglas High School, and their own experiences that inspired them to come to town.</p> <p>Hundreds of D.C. residents reportedly offered beds and couches to the visitors and marchers.</p> <p>Still, events of that scale and professionalism, at the steps of the U.S. Congress, with international press, A-list stars and security and infrastructure for a crowd stretching dozen of city blocks, do not appear out of thin air.</p> <p>Normally, in fact, they take months to plan.</p> <p>Remarkably, it has only been 37 days since the deadly shooting in Parkland, Florida.</p> <p>While the organizers made the poignant and powerful decision to limit the program to exclusively student</p>

voices, it took a very savvy team of political operatives to pull off the event.

Backstage, a team of seasoned Democrats, who have put on presidential inaugurations, campaigns and conventions in the past, saw the day through. Some of the same people who were backstage at The Women’s March again played an essential role this weekend.

The chief of staff for Saturday’s March for Our Lives event worked for the Obama administration. Now her Twitter handle describes her as an “organizing mercenary.”

Many of these top-tier staffers were called in just the final days to make the event happen.

The fact that that sort of organizing muscle was present should not take away from what the students themselves accomplished. If anything, it demonstrates that people at the highest levels are listening, wanting to help, and moving pieces in a city that is often so slow to react, in order to amplify their message.

It also reveals that at least someone inside these new, youth-led organizations calling for gun safety reform has a keen sense of what they need and what they don’t.

While it may take Washington insiders to build press risers and handle park police, American students’ outrage, vulnerability and exposure to violence has been enough to bring star-studded talent, millions of dollars and hundreds of thousands of protesters to this cause.

The leaders of this particular movement now have been smart and perceptive enough to decide their demands should be tall and their community should be wide, diverse and all-inclusive.

With their voting power yet to be realized, it seemed, at least Saturday, that they did.

<b>HEADLINE</b>	<b>03/24 Hundreds of thousands decry guns</b>
<b>SOURCE</b>	<a href="https://apnews.com/8f1ed175286a40eb9086e0d6588f1924/Tens-of-thousands-gather-nationwide-to-march-for-gun-control">https://apnews.com/8f1ed175286a40eb9086e0d6588f1924/Tens-of-thousands-gather-nationwide-to-march-for-gun-control</a>
<b>GIST</b>	<p>WASHINGTON (AP) — Summoned to action by student survivors of the Florida school shooting, hundreds of thousands of teenagers and their supporters rallied in the nation’s capital and cities across America on Saturday to press for gun control in one of the biggest youth protests since the Vietnam era.</p> <p>“If you listen real close, you can hear the people in power shaking,” David Hogg, a survivor who has emerged as one of the student leaders of the movement, told the roaring crowd of demonstrators at the March for Our Lives rally in Washington.</p> <p>He warned: “We will get rid of these public servants who only care about the gun lobby.”</p> <p>Chanting “Vote them out!” and bearing signs reading “We Are the Change,” “No More Silence” and “Keep NRA Money Out of Politics,” hundreds of thousands of protesters packed Pennsylvania Avenue between the Capitol and the White House.</p> <p>Large rallies with crowds estimated in the tens of thousands in some cases also unfolded in such cities as Boston; New York; Los Angeles; Chicago; Houston; Phoenix; Fort Worth, Texas; Minneapolis; and Parkland, Florida, the site of the Feb. 14 attack at Marjory Stoneman Douglas High School that left 17 people dead.</p> <p>Tens of thousands swarmed into the nation’s capital to march for gun control and ignite political activism among the young. Teenage marchers are pledging to vote in November for candidates that will listen to their cries for gun control. (March 24)</p>

Protesters denounced the National Rifle Association and its allies and complained that they are scared of getting shot in school and tired of inaction by grown-ups after one mass shooting after another.

They called for such measures as a ban on high-capacity magazines and assault-type rifles like the one used by the Florida killer, tighter background checks and school security, and a raising of the age to buy guns.

Organizers of the big rally in the nation's capital hoped their protest would match in numbers and spirit last year's women's march, which far exceeded predictions of 300,000 demonstrators.

"We will continue to fight for our dead friends," Delaney Tarr, another survivor of the Florida tragedy, declared from the stage. The crowd roared with approval as she laid down the students' central demand: a ban on "weapons of war" for all but warriors.

The Rev. Martin Luther King Jr.'s 9-year-old granddaughter Yolanda Renee King gave a rousing speech at the Washington rally, drawing from the civil rights leader's most famous words.

"I have a dream that enough is enough," she said. "That this should be a gun-free world. Period."

In Parkland, the police presence was heavy as more than 20,000 people filled a park near the school, chanting slogans such as "Enough is enough" and carrying signs that read "Why do your guns matter more than our lives?" and "Our ballots will stop bullets."

Since the bloodshed in Florida, students have tapped into a current of gun control sentiment that has been building for years — yet still faces a powerful foe in the NRA and its supporters.

Organizers hope the passions of the crowds and the under-18 roster of speakers will translate into a tipping point starting with the midterm congressional elections this fall. In addition to pushing for tighter gun laws, the students have been working to register young people to vote.

Polls indicate public opinion in the U.S. may be shifting on the issue.

A new poll conducted by The Associated Press-NORC Center for Public Affairs Research found that 69 percent of Americans think gun laws in the U.S. should be tightened. That is up from 61 percent in 2016 and 55 percent in 2013.

Overall, 90 percent of Democrats, 50 percent of Republicans and 54 percent of gun owners now favor stricter gun laws.

At the same time, the poll found that nearly half of Americans do not expect elected officials to take action.

<b>HEADLINE</b>	<b>03/23 Rural hospital closures increasing</b>
<b>SOURCE</b>	<a href="https://www.cnbc.com/2018/03/23/rural-hospital-closures-force-towns-to-take-action.html">https://www.cnbc.com/2018/03/23/rural-hospital-closures-force-towns-to-take-action.html</a>
<b>GIST</b>	<p>The rates of rural hospital closures are the highest seen in the last few decades, according to the North Carolina Rural Health Research Program, a group which tracks rural hospital closures throughout the United States. There has been a total of 83 hospital closures from January 2010 to January 2018 in rural areas across the United States, the NC RHRP's data showed.</p> <p>Hospital closures often hit rural communities hard economically, Mark Holmes, director of the North Carolina Rural Health Research and Policy Analysis Center, told CNBC. They also leave a void of emergency medical services, causing residents to travel sometimes 10 to 25 miles further to meet their</p>

critical health-care needs, he said.

When Pioneer Community Hospital announced that it was closing last September after financial struggles, some residents had to travel as much as three to four hours to receive their health-care needs, Debbie Foley, director of economic development for Patrick County, told CNBC.

Foley said the hospital's parent company, Mississippi-based Pioneer Health Services, had "financially mismanaged them" and the hospital eventually had to file for bankruptcy protection in 2016. The Stuart hospital "was profitable prior to the cost put down from the corporate level," Foley said.

Mark Holmes at NC RHRP told CNBC that the reasons for hospital closures vary for every community. But one factor can include social demographics: Rural populations are often older, sicker and poorer than urban populations, he said.

Other factors include decreased demand for inpatient services, consolidation in the health-care space, and a state's decision of whether to expand Medicaid, said Holmes, also a health policy and management professor at the University of North Carolina.

Hospital closures have been ticking up since the Great Recession, the research group said, but have slowed slightly in the last few years.

"Our working hypothesis is that it is the reverse of low-hanging fruit that has gone rotten," George Pink, the NC RHRP's deputy director, told CNBC. "The hospitals that were weak have finally succumbed and now we're moving in an area of hospitals that were hanging on for longer."

Closures can also impact communities in ways besides economics and health. Like sports teams can often function as a source of pride for major metropolitan areas, "hospitals can serve a similar role for rural towns," Holmes said. "We have a certain self-value because we have a hospital in town."

<b>HEADLINE</b>	<b>03/25 Trump tightens screws on Putin</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-03-25/trump-tightens-screws-on-putin-but-says-he-wants-to-get-along">https://www.bloomberg.com/news/articles/2018-03-25/trump-tightens-screws-on-putin-but-says-he-wants-to-get-along</a>
<b>GIST</b>	<p>President Donald Trump is poised to take his most aggressive actions yet against Russia on Monday, when he's likely to announce the expulsion of dozens of diplomats in response to the nerve-gas attack on a former Russian spy living in the U.K.</p> <p>The move, all but certain to provoke retaliation by President Vladimir Putin's government, comes as Trump has tried to maintain at least the semblance of a constructive relationship with the Russian leader.</p> <p>But the expulsions will align Trump with European allies who feel threatened by Russia and have had a turbulent relationship with the U.S. president, including U.K. Prime Minister Theresa May and German Chancellor Angela Merkel. Several European countries are expected to announce their own expulsions of Russian diplomats in concert with the U.S.</p> <p>While U.S. policy toward Russia has gradually grown more strident in recent months, the president's critics say he has been slow to respond to Putin's provocations. Some have drawn a connection to Special Counsel Robert Mueller's investigation of possible collusion between Trump's 2016 campaign and the Russian government as well as Trump's past business relationships with Russian figures.</p> <p>'Good Thing'</p> <p>Trump has denied any campaign collusion and as recently as Wednesday advocated for an amicable relationship with Russia. "Getting along with Russia (and others) is a good thing, not a bad thing," he said on Twitter.</p>

The U.S. considers the diplomats it plans to expel to be spies, carrying out intelligence activities under cover as embassy staff, one person familiar with the matter said. Trump's action would follow a similar move by May, who ordered 23 Russians that she said were spies to leave Britain over the attack on the former Russian spy, Sergei Skripal, and his daughter.

"The United States stands firmly with the United Kingdom in condemning Russia's outrageous action," White House Deputy Press Secretary Raj Shah said in a statement on Saturday. "The president is always considering options to hold Russia accountable in response to its malign activities."

But Putin has proven expert at exploiting even the slightest divisions among Western allies, and Trump is concerned that European capitals may not follow through on promises to tighten the screws on the Kremlin. The president regards Germany, in particular, as wobbly because of its dependence on Russian fuel supplies.

All of the people who discussed the president's deliberations asked not to be identified. Kremlin spokesman Dmitry Peskov declined to comment.

<b>HEADLINE</b>	<b>03/25 Russian attacks energy grid spark alarm</b>
<b>SOURCE</b>	<a href="http://thehill.com/policy/cybersecurity/380033-russian-attacks-on-energy-grid-spark-alarm">http://thehill.com/policy/cybersecurity/380033-russian-attacks-on-energy-grid-spark-alarm</a>
<b>GIST</b>	<p>Revelations about Russian cyberattacks on the U.S. energy grid are sparking new fears in Washington about the growing threat to the energy sector.</p> <p>The developments have some officials worried that Moscow or another nation state could execute a disruptive cyberattack targeting the U.S. power grid.</p> <p>"The next December 7 won't be airplanes and torpedoes coming at Pearl Harbor, it's going to be triggered with an attack on our energy grid with rolling blackouts and chaos," Rep. Don Bacon (R-Neb.), a member of the Homeland Security Committee, said this week.</p> <p>Officials with the Department of Homeland Security and FBI revealed last week that Russian hackers have staged cyberattacks against the energy sector and other critical infrastructure since 2016. They linked a coordinated hacking campaign the security community had been tracking for months to the Russian government.</p> <p>Officials issued a public alert describing how hackers penetrated commercial entities on the fringes of the energy sector to compromise their intended victims. They were ultimately able to gain access to information on industrial control systems, technology used to power critical services like electric power and water.</p> <p>In one case, hackers remotely accessed a Human Machine Interface, a device used by individuals to operate large industrial control systems – signaling they could have shut off power.</p> <p>"They were on machines that were on the operational network that had the control panel not only monitoring but also control for systems that were generating power, generating electricity," Eric Chien, technical director at cybersecurity firm Symantec, said.</p> <p>Lawmakers and other officials in Washington have sounded the alarm about potential cyber threats to the energy grid over the last year, after attacks took down power in parts of Ukraine in 2015 and 2016. Moscow is suspected in both attacks.</p>

Newly identified strains of malware targeting industrial control systems--which are highly rare--have underscored the threat. Last June, researchers released details on the malware linked to the 2016 attack in Ukraine. And in December, security firms identified malware targeting safety systems manufactured by Schneider Electric that shut down operations at an unknown industrial plant in the Middle East.

Experts note that the decentralized nature of the U.S. power grid--which is itself comprised of many small grids--means that it would take several simultaneous cyberattacks to take down power across a wide swath of the country.

But the latest revelations of Russian attacks spurred new concerns about the ability of hackers to breach power systems and other critical infrastructure, which are largely owned and operated by private companies.

"I am very much concerned, not only [about] Russia but any enemy, domestic enemy or foreign enemy," Rep. Bobby Rush (D-Ill.), who sits on the Energy and Commerce Committee, told The Hill. "Our energy sector is very vulnerable to invasive attacks."

The alert issued last week suggests that the Russians were collecting intelligence on control systems that could ultimately be used to stage disruptive or destructive attacks, should a motivation arise.

Those threats have been noticed at the Department of Energy, which last month announced plans to create a new office devoted to cybersecurity and energy security. The department's cyber funds would get a boost under President Trump's proposed fiscal 2019 budget, amid cuts to other programs.

In recent months, the Federal Energy Regulatory Commission (FERC), which sets mandatory standards for grid operators, has also proposed a series of new rules governing cybersecurity and cyber incident reporting.

Energy Secretary Rick Perry addressed the Russian cyberattacks on Thursday during a Senate Armed Services Committee hearing. Perry assured lawmakers the Trump administration was taking steps to stop attacks on the grid, though he refused to go into detail in a public setting.

"We're making, I think, every effort to protect the electrical grid from those types of attacks," Perry said.

When asked by Sen. Richard Blumenthal (D-Conn.) if the attacks were an act of war, Perry said he would "tend to agree."

Protecting the grid requires the Energy Department to coordinate with private companies in the energy sector and the Department of Homeland Security, which is responsible for protecting critical infrastructure from cyber and physical threats.

Rep. John Ratcliffe (R-Texas), who heads the Homeland Security subcommittee focused on cyber, told The Hill that his panel would examine the Russian attacks as part of its oversight role. Still, he expressed confidence that Homeland Security is responding adequately to the threat, citing the cyber expertise of Kirstjen Nielsen, the department's new secretary.

"We're constantly following up when we get reports like that," Ratcliffe said.

"The Department of Homeland Security has never had more cyber expertise than it has right now," Ratcliffe added. "For all of the concerns about Russian meddling into our election and more generally into our critical infrastructure, we're better equipped to deal with it than we've been at any point in the past."

Rep. Fred Upton (R-Mich.), chairman of the House Energy and Commerce subcommittee on energy, in an interview said he plans to make cybersecurity a big focus of an upcoming April 12 hearing with Perry.

The Russian grid attacks have widely been viewed in the context of Moscow's interference in the 2016

presidential election. The Trump administration disclosed the energy sector attacks when unveiling new sanctions on Moscow for meddling in the election and executing the global "notPetya" malware attack last summer.

Still, the threat to the energy sector extends beyond Moscow.

On Friday, U.S. officials indicted and sanctioned nine Iranian hackers for breaching hundreds of universities and other organizations to steal information on behalf of Iran's government and for financial gain.

One of their targets, officials said, was the Federal Energy Regulatory Commission.

"That is the agency that regulates the interstate transmission of electricity, natural gas, and oil," Geoffrey Berman, U.S. attorney for the southern district of New York, said Friday.

"That agency has details of some of this country's most sensitive infrastructure."

<b>HEADLINE</b>	<b>03/26 Cyberattack continues havoc on Atlanta</b>
<b>SOURCE</b>	<a href="http://www.cbs46.com/story/37806583/cyberattack-continues-to-wreak-havoc-on-city-of-atlanta">http://www.cbs46.com/story/37806583/cyberattack-continues-to-wreak-havoc-on-city-of-atlanta</a>
<b>GIST</b>	<p>ATLANTA (CBS46) - As a new work week begins, many are wondering if Atlanta is back to full speed following a cyberattack on the city's computer systems last week.</p> <p>It all depends on the department. Some departments were not affected at all by the cyberattack while employees in others are still not able to turn on their computers.</p> <p>The fire and police departments were not affected at all by the ransomware attack. The same goes for the housing authority and Hartsfield Jackson International Airport, although the airport has suspended its wi-fi services, just in case.</p> <p>But other departments have been forced to conduct businesses the old-fashioned way, by using pen and paper.</p> <p>For example, if you have an issue with trash pickup, traffic signals and potholes, you'll have to resolve it over the phone. Also, the city jail is having to process inmates manually.</p> <p>CBS46 spoke with cyber security expert Alex Defreese and he says it's malicious software that takes over a computer or a system and encrypts it.</p> <p>"So that you can't access the contents unless you have the key," says Defreese. "And then they take that key and they ship it back to their servers and they hold the information and the systems and the drives and whatever ransom until you either manage to revert from a backup or pay them however much they're asking for it."</p> <p>City officials have not said if they'll pay the ransom but questions are circling as to how this data breach happened.</p> <p>The FBI is investigating.</p>

<b>HEADLINE</b>	<b>03/25 Fla. health network paid 'ransom'</b>
<b>SOURCE</b>	<a href="http://www.fltimes.com/news/finger-lakes-health-pays-ransom-over-cyber-attack/article_2ed1e11c-">http://www.fltimes.com/news/finger-lakes-health-pays-ransom-over-cyber-attack/article_2ed1e11c-</a>

	<a href="#">7b17-536c-832b-39355f90db04.html</a>
GIST	<p>GENEVA — Finger Lakes Health officials confirmed Friday that a payment was made following the “ransomware” attack that disabled some electronic systems for close to a week.</p> <p>Lara Turbide, Finger Lakes Health’s vice president of community services, said the agency continues to bring systems back online after the cyber attack. She added that FL Health officials appreciate the community, patients, residents, family members and employees for their patience during the incident.</p> <p>“Our employees and medical staff are the heart of Finger Lakes Health,” Dr. Jose Acevedo, Finger Lakes Health’s president and CEO, said in a media statement. “We are very grateful to and proud of our incredible employees and medical staff’s efforts to serve our patients, residents and community.”</p> <p>The attack likely took place late last Saturday (March 17) night. Specific systems were encrypted by an unknown entity demanding payment to gain access to the systems.</p> <p>Turbide said computers and other electronic systems were shut down “for our own protection” within an hour of Finger Lakes Health being notified of the attack. Since then, the agency has been working with IT security professionals — both internal and external — to resolve the issue.</p> <p>Turbide said Finger Lakes Health’s information services team has been working around the clock and bringing systems back online in a step-wise approach. Email, internet, the majority of phone line access and several other electronic systems have been restored.</p> <p>“We are continuing to use our downtime paper procedures, which we have in place and utilize for situations including weather emergencies, power outages or other situations in which we have limited electronic access,” she said. “This underscores the reason that we regularly conduct downtime procedure drills which proved useful in our response preparedness.”</p> <p>Turbide said Finger Lakes Health has final confirmation from security experts that no patient, resident or employee data was compromised.</p> <p>“We have confirmation there was no unauthorized acquisition of protected health information or personally identifiable information,” she said.</p> <p>The FBI continues to investigate. Turbide said Finger Lakes Health has kept the FBI apprised of its work, including a decision to leverage the agency’s insurance carrier to make a payment to accelerate the recovery process.</p> <p>Turbide has repeatedly declined to say how much ransom was demanded.</p>

HEADLINE	<b>03/23 Legal: unlock phones w/deceased prints</b>
SOURCE	<a href="https://www.infosecurity-magazine.com/news/us-police-unlock-iphones/">https://www.infosecurity-magazine.com/news/us-police-unlock-iphones/</a>
GIST	<p>According to a report by Forbes, separate sources close to local and federal police investigations in New York and Ohio said it is now relatively common for fingerprints of the deceased to be depressed on the scanner of Apple iPhone devices, which have been wrapped up in increasingly powerful encryption over recent years.</p> <p>The article highlights that “once a person is deceased, they no longer have a privacy interest in their dead body.” This means that while some might consider it unethical, it is legal for the police to use this technique to gather evidence.</p> <p>For instance, the technique has been used in overdose cases, said one source. In such instances, the victim's phone could contain information leading directly to the dealer.</p>

	<p>Forbes also reported that the police are now looking at how they could use Apple's Face ID facial recognition technology, which was introduced on the iPhone X.</p> <p>Marc Rogers, researcher and head of information security at Cloudflare, told Forbes he'd been poking at Face ID in recent months and had discovered it didn't appear to require the visage of a living person to work. Whilst Face ID is supposed to use your attention in combination with natural eye movement, so fake or non-moving eyes can't unlock devices, Rogers found that the tech can be fooled simply using photos of open eyes. That was something also verified by Vietnamese researchers when they claimed to have bypassed Face ID with specially-created masks in November 2017, said Rogers.</p>

<b>HEADLINE</b>	<b>03/24 Facebook collected data off smartphones</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/technology/facebook-collected-call-and-sms-metadata-from-some-users-smartphones/">https://www.bleepingcomputer.com/news/technology/facebook-collected-call-and-sms-metadata-from-some-users-smartphones/</a>
<b>GIST</b>	<p>Several Facebook users who downloaded an archive of their Facebook data in the wake of the Facebook-Cambridge Analytica scandal discovered this week that the social network's mobile applications have been recording—in some cases—much more information than most people were expecting.</p> <p>Logged information includes data on all phone calls made on the phone, the start time of each call, its duration, and the contact's name. The Facebook app did not log phone calls to and from numbers not saved in the phone's address book.</p> <p>The app also gathered information on all sent or received SMS messages to contact list entries. Facebook did not record the SMS' actual text.</p> <p>The phone and SMS scraping behavior was confirmed earlier today by several users on Twitter, Reddit, and HackerNews, but also by this reporter, and an ArsTechnica journalist. In truth, we were all rediscovering something that Zimperium Android security expert Simone Margaritelli had found in January 2017, and detailed in a <a href="#">blog post</a> on Medium (in Italian).</p> <p>The reason why only now people have noticed this issue is because of the Facebook-Cambridge Analytica privacy scandal that erupted last weekend, and after which many users decided to <a href="#">deactivate</a> or <a href="#">delete</a> their Facebook profiles.</p>

<b>HEADLINE</b>	<b>03/23 Trickbot banking malware has new trick</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/trickbot-banking-malware-has-new-trick-up-its-sleeve/article/753255/">https://www.scmagazine.com/trickbot-banking-malware-has-new-trick-up-its-sleeve/article/753255/</a>
<b>GIST</b>	<p>Security researchers have discovered that the Trickbot malware has been updated with you capabilities to evade detection and lock victim's computers.</p> <p>The malware, first discovered in 2016, targets customers of major banks. According to a blog post by researchers at Webroot, the updated Trickbot has "continually undergone updates and changes in attempts to stay one step ahead of defenders".</p> <p>Researchers said that they observed a module (tabDll32 / tabDll64) being downloaded by TrickBot that has not been seen in the wild before this time. The malware is still, however, uses the MS17-010 Eternalblue vulnerability.</p> <p>The new module named spreader_x86.dll, exports four functions like the other TrickBot modules.</p> <p>"The file has an abnormally large rdata section which proves to be quite interesting because it contains two</p>

additional files intended to be used by spreader\_x86.dll. The spreader module contains an additional executable SsExecutor\_x86.exe and an additional module screenLocker\_x86.dll,” said researchers.

According to Jason Davison, Webroot's advanced threat research analyst, the module screenLocker\_x86.dll attempts to lock a user's machine.

“Similarly, to the other TrickBot modules, this module was written in Delphi. This is the first time TrickBot has shown any attempt at “locking” the victims machine,” he said.

He added that if the TrickBot developers are attempting to complete this locking functionality, this generates interesting speculation around the group's business model.

“Locking a victim's computer before you are able to steal their banking credentials alerts the victim that they are infected, thus limiting the potential for credit card or bank theft. However, extorting victims to unlock their computer is a much simpler monetisation scheme,” he said.

He said it was notable that this locking functionality is only deployed after lateral movement, meaning that it would be used to primarily target unpatched corporate networks.

Andy Norton, director of threat intelligence at Lastline, told SC Media UK that it's not just financial institutions that are targeted, it is the customers of financial institutions and the finance function that are always targeted. “The reason is again, that the bad guys are closer to the money. The side effect of having multiple payloads in order to maximise the chance of making money, is that, from a behavioural analysis alerting perspective these threats light up like a Christmas tree. Adding Dynamic or behavioural analysis to an organisations defence in depth strategy, will protect organisations from this type of threat,” he said.

Matt Walmsley, EMEA director at Vectra, told SC Media UK that Trickbot's use of a network worm means it is spreading like wildfire across vulnerable systems.

<b>HEADLINE</b>	<b>03/23 Github: 4M vulnerabilities in repositories</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/in-2017-the-code-sharing-site-started-vulnerability-scanning-for-known-common-vulnerabilities-and-exposures-in-ruby-and-javascript-libraries/article/753460/">https://www.scmagazine.com/in-2017-the-code-sharing-site-started-vulnerability-scanning-for-known-common-vulnerabilities-and-exposures-in-ruby-and-javascript-libraries/article/753460/</a>
<b>GIST</b>	<p>Github announced the discovery of more than 4 million vulnerabilities located in 500,000 plus repositories.</p> <p>In 2017, the code sharing site started vulnerability scanning for known Common Vulnerabilities and Exposures in its Ruby and JavaScript libraries, according to a March 21 blog post. The libraries are operated through the company's Dependency Graph which matches the code against the vulnerabilities.</p> <p>Shortly after the program was launched, Github said 450,000 of the identified flaws had been resolved by Dec. 1, 2017 and its rate of vulnerabilities resolved in the first seven days of detection has been about 30 percent.</p> <p>“Additionally, 15 percent of alerts are dismissed within seven days—that means nearly half of all alerts are responded to within a week,” the company said. “Of the remaining alerts that are unaddressed or unresolved, the majority belong to repositories that have not had a contribution in the last 90 days.”</p> <p>The company is seeing maintainers patching vulnerabilities in fewer than seven days for almost all repositories with recent contributions. Github emphasized that it never publicly discloses identified vulnerabilities for any repository and that it detects vulnerable dependencies in public repositories by default. Owners and admins of these repositories have the option to opt into vulnerability detection for the repository.</p>

<b>HEADLINE</b>	<b>03/23 New leak hits India national ID database</b>
<b>SOURCE</b>	<a href="http://www.zdnet.com/article/another-data-leak-hits-india-aadhaar-biometric-database/">http://www.zdnet.com/article/another-data-leak-hits-india-aadhaar-biometric-database/</a>
<b>GIST</b>	<p>India's national ID database has been hit by yet another major security lapse.</p> <p>Known as Aadhaar, the government ID database is packed with identity and biometric information -- like fingerprints and iris scans -- on more than 1.1 billion registered Indian citizens, official figures show.</p> <p>Anyone in the database can use their data -- or their thumbprint -- to open a bank account, buy a cellular SIM card, enroll in utilities, and even receive state aid or financial assistance. Even companies, like Amazon and Uber, can tap into the Aadhaar database to identify their customers.</p> <p>Enrolling in the database isn't mandatory, but Indian citizens who aren't subscribed are unable to access even basic government services. Other countries are set to follow India's lead.</p> <p>But the system has been dogged with security problems -- including, according to India's Tribune, a data breach. India's ruling Bharatiya Janata political party later called the report "fake news."</p> <p>Now, the database is leaking information on every Aadhaar holder, a security researcher has told ZDNet.</p> <p>A data leak on a system run by a state-owned utility company can allow anyone to download private information on all Aadhaar holders, exposing their names, their unique 12-digit identity numbers, and information about services they are connected to, such as their bank details and other private information.</p> <p>Karan Saini, a New Delhi-based security researcher who found the vulnerable endpoint, said that anyone with an Aadhaar number is affected.</p> <p>Yet the Indian authorities have done nothing to fix the flaw. ZDNet spent more than a month trying to contact the Indian authorities, but nobody responded to our repeated emails.</p> <p>We later contacted the Indian Consulate in New York and alerted Devi Prasad Misra, consul for trade and customs. Over two weeks, this issue was explained in detail, and we responded to many follow-up questions. A week passed, and the vulnerability was still not fixed. At the start of this week, we told the consul that we would publish our story on Friday and requested comment from the Indian government.</p> <p>The consul did not respond to that last email. At the time of publishing, the affected system is still online and vulnerable. For that reason, we're withholding specific details about the vulnerability until it's fixed. (Once it has been fixed, we will update the story with additional details.)</p>

<b>HEADLINE</b>	<b>03/23 CLOUD Act passes; hidden in budget bill</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/government/us-congress-passes-cloud-act-hidden-in-budget-spending-bill/">https://www.bleepingcomputer.com/news/government/us-congress-passes-cloud-act-hidden-in-budget-spending-bill/</a>
<b>GIST</b>	<p>The United States Congress passed late last night a \$1.3 trillion budget spending bill that also contained a piece of legislation that allows internal and foreign law enforcement access to user data stored online without a search warrant or probable cause.</p> <p>The legislation is the Clarifying Lawful Overseas Use of Data Act (CLOUD Act), a bill proposed in mid-February, this year (S. 2383 and H.R. 4943).</p> <p>Lawmakers use toddler trick to pass controversial bill</p> <p>US officials never discussed the bill, but merely appended it to the Omnibus budget spending bill (page</p>

2201) they introduced in Congress on Wednesday night.

The budget bill was deemed a priority and officials were almost forced to approve it in its current form to avoid a complete US government shutdown starting next week.

The budget bill passed a day later, Thursday, with a 256-167 vote in the House of Representatives, and a 65-32 vote on the Senate floor, including with the embedded CLOUD Act that got zero discussion, feedback, or modifications from regulators.

What is the CLOUD Act?

The unaltered and now official CLOUD Act effectively gets rid of the need for search warrants and probable cause for grabbing a US citizen's data stored online.

US police only need to point the finger at some account, and tech companies must abide and provide all the needed details, regardless if the data is stored in the US or overseas.

Further, the bill recognizes foreign law enforcement and allows the US President to sign data-sharing agreements with other countries without congressional oversight. The CLOUD Act will then allow foreign law enforcement to require data on their own citizens stored in the US, also without obtaining a warrant or proving probable cause.

Privacy groups like the Electronic Frontier Foundation argue that in the US' hunt for criminals located in other countries, it might enter data-sharing agreements with countries known for human rights abuses and allow autocratic regimes easy access to their own citizen's data. Since there's no more need for a foreign law enforcement agency to obtain US warrants or prove probable cause, this opens the door wide open to political abuses.

But these data-sharing agreements might be a poisoned pill that could be employed for espionage and intelligence gathering as well. For example, foreign law enforcement could request data from their own citizens engaging in communications with US citizens. Tech companies will then be required to pass over that foreign citizens' entire communications, including his messages exchanged with the US person, potentially exposing details that an intelligence agency will consider valuable.

EFF: There was no need to backdoor the Fourth Amendment

Nonetheless, giving law enforcement access to data stored overseas could have been done by preserving the need for search warrants and proving probable cause, and without backdooring the Fourth Amendment, as EFF experts bluntly put it.

The reason why the CLOUD Act was proposed in the first place was to end any future litigations like the one put forward by Microsoft five years ago when it fought a US police's request to access a US citizen's data stored on a server in Ireland.

Regulators also argued the CLOUD Act will help with fighting terrorism, albeit its most important impact will be in going after ordinary criminals, like fraudsters, hackers, scammers, and more.

HEADLINE	<b>03/23 US charges 9 Iranian 'hackers for hire'</b>
SOURCE	<a href="https://www.bleepingcomputer.com/news/security/us-charges-nine-iranians-with-hacking-over-300-universities/">https://www.bleepingcomputer.com/news/security/us-charges-nine-iranians-with-hacking-over-300-universities/</a>
GIST	US authorities have charged nine Iranian hackers with cyber-attacks against 144 US universities, 176 universities in 21 foreign countries, and 47 US and foreign companies active in various private sectors.

The nine Iranians acted as a group and US officials said they were "hackers-for-hire or affiliates of the Mabna Institute, an Iran-based company that, since at least 2013, conducted a coordinated campaign of cyber intrusions," at the behest of Iran's Islamic Revolutionary Guard Corps (IRGC), one of the country's intelligence agencies.

Officials said the group targeted the email accounts of more than 100,000 professors from all over the world, and appear to have successfully compromised 8,000 email accounts for professors at US universities.

Hackers then used access to these accounts to search internal networks for data, which they exfiltrated back to Iran. Some of the stolen data and login credentials into the hacked institutions ended up for sale on Megapaper.ir (Megapaper) and Gigapaper.ir (Gigapaper), two websites operated by a company controlled by one of the nine suspects.

The Mabna hackers, as some officials called them in a press conference today, were responsible for the theft of "more than 31.5 terabytes of academic data and intellectual property from universities, and email accounts of employees at private sector companies, government agencies, and non-governmental organizations."

Investigators estimated the value of the stolen intellectual property at around \$3.4 billion.

Answering questions from the press during a joint press conference, US officials declined to say if any of the stolen intellectual property has ended up in the hands of the Iranian government, academics, or other entities.

The US Department of Justice has filed official charges, and the FBI has added the nine suspected hackers to its list of Most Wanted cyber-criminals.

The US Treasury Department has blocked any assets associated with the nine hackers and forbade any US citizen or entity in engaging in business dealings with the nine.

The sanctions also include the Magna Institute and Behzad Mesri, a hacker the US charged last year on accusations of hacking and trying to extort HBO.

<b>HEADLINE</b>	<b>03/23 Rapid ransomware 2.0 released</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/rapid-20-ransomware-released-will-not-encrypt-data-on-pcs-with-russian-locale/">https://www.bleepingcomputer.com/news/security/rapid-20-ransomware-released-will-not-encrypt-data-on-pcs-with-russian-locale/</a>
<b>GIST</b>	<p>Precisely two months on the day since the release of its first version, the group behind the Rapid ransomware strain has released v2.0 today.</p> <p>This new version has not suffered any major modifications compared to its previous release, but small changes have occurred.</p> <p>The biggest is the addition of a code routine that detects the user's PC locale settings before launching encryption operations. If the user has locale settings set to Russian, the ransomware will not encrypt files.</p> <p>Second, the ransomware now adds a randomly generated string as the file extension at the end of encrypted files. Version 1.0 used ".rapid", which allowed victims to easily detect what ransomware strain had infected their PCs.</p> <p>But users now can detect they've been infected with Rapid 2.0 because the ransom note says so right at the top. The ransom note also uses different wording, compared to v1.0, and a subsequent updated version that was deployed in fake IRS malspam campaign.</p>

	<p>Rapid 2.0 still relies on asking victims to get in contact with the ransomware's operators via email. This version uses supp1decr@cock.li and supp2decr@cock.li as contact addresses.</p> <p>First spotted by security researcher MalwareHunter, Rapid 2.0 seems to have been released into the wild by accident, as the ransomware's source code was not packed and included debug messages that helped researchers quickly analyze its source code. The AVCrypt ransomware, also spotted for the first time today, was also not packed, revealing its secrets to researchers in a similar manner.</p>

<b>HEADLINE</b>	<b>03/24 Hackers infect Linux servers w/miner</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/hackers-infect-linux-servers-with-monero-miner-via-5-year-old-vulnerability/">https://www.bleepingcomputer.com/news/security/hackers-infect-linux-servers-with-monero-miner-via-5-year-old-vulnerability/</a>
<b>GIST</b>	<p>A hacker group has made nearly \$75,000 by installing a Monero miner on Linux servers after exploiting a five-year-old vulnerability in the Cacti "Network Weathermap" plugin.</p> <p>Experts from US security firm Trend Micro said they found evidence connecting these attacks to past attacks on Jenkins servers —during which a hacker group made around \$3 million installing a Moner miner on Jenkins installations by exploiting the CVE-2017-1000353 vulnerability.</p> <p>This time around, attackers leveraged CVE-2013-2618, a vulnerability in Cacti, a PHP-based open-source network monitoring and graphing tool, and more specifically in its Network Weathermap plugin, responsible for visualizing network activity.</p> <p>Just like in the previous attacks, hackers exploited the flaw to gain code execution ability on the underlying servers, where they downloaded and installed a customized version of XMRig, a legitimate Monero mining software.</p> <p>Attackers also modified the local cron jobs to trigger a "watchd0g" Bash script every three minutes, a script that checked to see if the Monero miner was still active and restarted XMRig's process whenever it was down.</p> <p>Attackers made approximately 320 XMR (\$75,000) using this simple mode of operation. All infected servers were running Linux, and most of the victims were located in Japan (12%), China (10%), Taiwan (10%), and the US (9%).</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>03/25 US grants foreign police access to data</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/politics/2018/03/25/congress-gives-police-other-countries-easier-access-u-s-data-raising-privacy-concerns/452782002/">https://www.usatoday.com/story/news/politics/2018/03/25/congress-gives-police-other-countries-easier-access-u-s-data-raising-privacy-concerns/452782002/</a>
<b>GIST</b>	<p>WASHINGTON — Police in other countries will be able to get emails and other electronic communication more easily from their own citizens and from Americans under a bill that Congress stuffed inside the massive \$1.3 trillion spending deal passed this week.</p> <p>Supporters say the bill, dubbed the CLOUD Act, will simplify the process for the U.S. government and its allies to get evidence of serious crimes and terrorist threats when that evidence is stored on a server in another country.</p> <p>Under current law, Internet providers can stop police agencies from gaining access to their own citizens' emails if those emails are stored in a foreign nation. Microsoft alone stores data on about 1 million servers in 40 countries.</p>

"The CLOUD Act can save lives, preserve international relations, empower law enforcement, and ensure justice for citizens," said James Scott, senior fellow at the Institute for Critical Infrastructure Technology.

But opponents, including civil liberty and privacy rights groups, said the law could make it easier for nations with human rights abuses to spy on dissidents and collect data on Americans who communicate with foreign nationals.

"Tucked away in the omnibus spending bill is a provision that allows Trump, and any future president, to share Americans' private emails and other information with countries he personally likes," said Sen. Ron Wyden, D-Ore. "That means he can strike deals with Russia or Turkey with nearly zero congressional involvement and no oversight by U.S. courts."

In a letter to Congress, the American Civil Liberties Union, the Electronic Frontier Foundation, Human Rights Watch and other civil liberties groups said the CLOUD Act allows foreign governments to wiretap on American soil using standards that don't comply with U.S. law and gives the executive branch the power to enter into agreements with other nations without congressional approval.

The 24 groups said the law also would permit foreign police agencies to get information about people in the U.S. without having to follow the search and seizure rules imposed by the U.S. Constitution, and possibly give foreign governments access to information they could use to torture their critics.

"We believe the CLOUD Act undermines privacy and other human rights, as well as important democratic safeguards," the letter says.

**HEADLINE** 03/25 NY man pleads guilty to 'sextortion'

**SOURCE** <http://www.foxnews.com/us/2018/03/25/man-pleads-guilty-to-sextortion-blackmailing-women-to-provide-lewd-photos.html>

**GIST** A 22-year-old New York man pleaded guilty last week to threatening more than 30 women with posting "revenge porn" photos, prosecutors said.

Joseph Iorio, 21, of Holtsville, a New York City suburb, was arrested last July on charges relating to an alleged "sextortion" scheme, the New York Post reported.

Prosecutors say Iorio moderated a website's chat room, which featured explicit photos of women that had been submitted by men and boys, Newsday reported. Iorio would not allow clients to view the raciest material submitted by others until they disclosed names and contact information for the women in the photos the clients submitted.

Iorio would then contact the women, and threaten to share the racy photos in his possession -- unless the women provided him with even more lurid shots, the report said.

"We can only imagine the type of fear, isolation and desperation that these women must feel when they receive a message showing that someone they don't know has an image of them naked or performing a sex act," Suffolk County District Attorney Timothy Sini said Friday in a statement. He likened Iorio's actions to "a modern form of sexual torture."

According to the Post, the DA's office was first notified of Iorio's alleged scheme in July 2017. A subsequent investigation revealed evidence that Iorio had uploaded the explicit images to an online forum along with the women's personal information.

If convicted, Iorio faces five years in prison, Sini said. His sentencing is scheduled for May 2.

<b>HEADLINE</b>	<b>03/23 Craigslist closes personals section in US</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/craigslist-closes-personals-sections-in-u-s/">https://www.cbsnews.com/news/craigslist-closes-personals-sections-in-u-s/</a>
<b>GIST</b>	<p>SAN FRANCISCO -- Americans looking for love or companionship on Craigslist can't make a connection. The classified ads site on Friday has taken its personals section offline in the United States.</p> <p>The action comes after the U.S. Senate on Wednesday passed an anti-sex trafficking bill that could hold the website and others responsible for illegal activity if it becomes law. The company says the Fight Online Sex Trafficking Act seeks to subject websites to criminal and civil liability.</p> <p>A message on the site says any tool or service can be misused and the company hopes it can bring them back "some day." Craigslist closed by saying: "To the millions of spouses, partners, and couples who met through craigslist, we wish you every happiness!"</p> <p>A message seeking comment from Craigslist was not immediately returned.</p>

<b>HEADLINE</b>	<b>03/23 Atlanta mayor: massive inconvenience</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/atlanta-cyberattack-massive-inconvenience-city-mayor/story?">http://abcnews.go.com/US/atlanta-cyberattack-massive-inconvenience-city-mayor/story?</a>
<b>GIST</b>	<p>Atlanta officials are reassuring the public that operations will continue as normal as they deal with a cyberattack on the city's systems.</p> <p>While most of the city's websites are working normally, a number of web pages that customers use to pay bills began to be affected Thursday morning. Access to court information was also affected.</p> <p>Whoever is behind the attack is asking for a \$50,000 ransom.</p> <p>As the city struggled to contain the spread of the attack, city officials have been forced to take down web pages in other departments and literally unplug city computers. Some city workers aren't even receiving email.</p> <p>Mayor Keisha Lance Bottoms said that her office is working with the FBI.</p> <p>"We are continuing to work with our federal partners and other stakeholders who continue to advise us on how best to navigate and approach this," Bottoms said.</p> <p>City leaders stress that there have been no impacts to police, water service, 911 and Atlanta's Hartsfield International Airport. The city, they point out, was built before computers. As a protective measure, Wi-Fi at the airport has been turned off. Security wait time signs and flight information signs may not be accurate as a result, officials cautioned.</p> <p>The greatest impacts appear to be at municipal court and the city detention center -- with computers down, many taken down protectively, city employees are having to manually admit inmates, handle tickets and warrants. The city court currently cannot validate warrants or process ticket payments online or in person.</p> <p>Customers will not be penalized for late payments, the city said.</p> <p>The city government isn't getting specific about who the demands are from, what kind of data has been stolen and what's being held hostage, but it's clear that city's systems have been severely compromised.</p> <p>Bottoms did not say Friday whether the city planned to pay the \$50,000 ransom, but already city council members are promising her millions if she needs to build a new secure system from the ground up. She referenced similar ransom attacks on corporations, and on other government agencies in Colorado and North Carolina.</p>

“What we know is that someone is in our system, and that there is a weakness there,” Bottoms said.

“It is absolutely not what we wanted to have happened in the city of Atlanta. But to the extent that there are changes and upgrades that we need to make to our system, we need to do it now.”

She added: “This is a massive inconvenience to the city.”

<b>HEADLINE</b>	<b>03/23 Video games turn teens into millionaires</b>
<b>SOURCE</b>	<a href="http://www.bbc.com/capital/story/20180323-how-video-games-make-some-teens-millionaires">http://www.bbc.com/capital/story/20180323-how-video-games-make-some-teens-millionaires</a>
<b>GIST</b>	<p>Alex Balfanz is an 18-year-old student at Duke University in North Carolina. Every day he has lectures or seminars, followed by assignments. Like many students his age, he devotes a couple of hours per day, and many more at weekends, to video games.</p> <p>But he’s not just playing them – he’s making them. And making a lot of money doing it.</p> <p>“In the 10 months that Jailbreak has been released, it has already yielded seven figure profits,” Balfanz says of his cops-and-robbers adventure game released last year. A few weeks ago, it was played for the billionth time.</p> <p>Balfanz is just one of thousands of young gaming entrepreneurs in their teens or twenties making money in an industry that made \$36 billion last year.</p> <p>It’s offering new ways to make a living that didn’t exist 10 or even five years ago, even within the games industry.</p> <p>Another 18-year-old student, Andrew Bereza, is the creator of Miner’s Haven and Azure Mines, two games he made over the last two years for Roblox, a kids-focused platform that allows children to build their own games and publish them online – it’s the same platform that houses Balfanz’s Jailbreak.</p> <p>“While I’m not in the annual millions like a couple of my colleagues have recently hit, I’ve been steadily earning six figures every year since I started,” he says.</p> <p>He is using his earnings to pay for university, where he is studying computer science.</p> <p>If he didn’t have a platform to distribute his games, “I don’t know how I ever would have been able to afford college or the ability to do full-time game development”, he says.</p> <p>Today, thanks to online sales platforms like the App Store, Steam or Roblox, anyone with the right idea and some development nous can reach more than a billion people.</p> <p>But while the technology and ecosystem to reach this vast customer base has only appeared in the last decade, the DIY mentality of young app developers is nothing new: it’s actually not too different from wannabe rock stars starting bands in their garages in the 1970s, or aspiring directors filming home movies on a VHS camcorder in the 1980s.</p> <p>“With creative industries, that’s always been the case, particularly in young people,” says Roger Altizer, co-founder of the entertainment arts and engineering programme at the University of Utah. He says that young people have always come up with creative expressions and have tried to monetise them.</p> <p>With video games specifically, Altizer points out that in the 1980s, young designers made their own video games, stored them on floppy disks and put them in plastic bags, then sold them physically at stores, capturing a certain entrepreneurial spirit.</p>

Today? We have indie games like Flappy Bird that become worldwide sensations, achieving overnight success. However, there are now so many being published, it's becoming an ever-more crowded market.

Still, the idea of possible success in this field fuels dreams.

A relatively new way of making money is by playing video games – and getting strangers on the internet to watch you do it.

“Let's Play” videos, in which an online personality films themselves playing a video game as they add colour commentary for viewers, is a trend that grew so popular, it eventually led to a new platform, Twitch – an entire site devoted to streaming videos of other people playing video games. It is now one of the most popular websites on the internet globally, and was bought by Amazon in 2014 for nearly \$1 billion.

Being a streamer on a place like Twitch requires entrepreneurial skills, scrappiness and a tolerance for risk.

Elsbeth Eastman, a Twitch streamer with 103,000 followers, says that after university she spent \$2,000 on a new computer to try her hand at streaming. Today, she says she makes a living doing what she loves full-time.

“Right now, I'm sitting in a room that's 90% wires and computers,” Eastman says over the phone from her filming studio. “It's absolutely your own business. You have to do everything at once: you're the lights guy, and you're also the person on stage.”

Eventually, it can lead to advertising partnerships, or paid subscriptions, with a cut of the funds going to the streamers. But for a lot of newer streamers, it's asking for donations from subscribers. It takes a while to get enough viewers to be able to monetise.

“This patronage model where people would sponsor artists is very common,” Altizer says.

Eastman and another streamer, who goes by Valkyrae who has 200,000 followers and has had a full-time job streaming for three years, point to the importance of networking and self-promoting yourself on social media, or filming videos with streamers who have more subscribers than you.

And like DIY app development, the community-centred nature of streaming can also drive a greater good. Valkyrae mentions a charity stream that she participated in last Christmas that raised \$8,700 in six hours for St. Jude Children's Research Hospital.

“One of my subscribers had cancer and he needed surgery,” she says. “And we raised enough money for his surgery, which was like \$8,000. You can help people financially – I'm helping my mum financially because of all this extra income I'm getting.”

But perhaps the most ambitious – and lucrative – avenue to success that didn't exist in the mainstream a decade ago is the rise of the professional video game player. Many of these people are in their 20s or younger.

The sport is estimated to attract 600 million viewers and be worth £1 billion (\$1.4bn) by 2020. The International Olympics Committee is even thinking about adding it to the official roster of events.

Sumail Hassan is the youngest gamer to win \$1 million in eSports winnings. He's made more than \$2.5 million playing Dota, an online multiplayer game. He calls it a full-time job.

“ESports have only gotten bigger since my career started in 2015,” Hassan says. He's 19 now but has been gaming since he was seven. “I knew video games were the thing I was best at and so went pro.”

Whether it's eSports, streaming or developing indie video games out of your bedroom, the games industry

	has evolved rapidly over the last couple of decades, and many of these new career paths were born alongside the growth of the internet.

<b>HEADLINE</b>	<b>03/24 France: IEDs found in market attack</b>
<b>SOURCE</b>	<a href="http://time.com/5214027/france-terrorist-attack-supermarket/?xid=homepage">http://time.com/5214027/france-terrorist-attack-supermarket/?xid=homepage</a>
<b>GIST</b>	<p>(TREBES, France) — A French judicial official says three homemade explosive devices have been found in the supermarket in southern France that was the site of a deadly attack by a man calling himself “a soldier” of the Islamic State group.</p> <p>Also found were a 7.65-caliber handgun and a hunting knife, the official said on Saturday. He wasn’t authorized to speak publicly about an ongoing investigation.</p> <p>The supermarket in Trebes was the site of an hours-long attack Friday that killed four people. The 25-year-old Moroccan-born attacker was himself killed when special police stormed the market.</p> <p>It wasn’t clear whether the knife and handgun found were the weapons he wielded when entering the supermarket.</p> <p>French police searching the home of the man found notes referring to the Islamic State group that appeared to be a final testament, the official said.</p> <p>Also found in the search of the home were a computer and telephone, the official said Saturday, a day after the attack.</p> <p>Police searched the home of Moroccan-born Redouane Lakdim, 25, after Friday’s attack that killed four people — two in a supermarket near the southern city of Carcassonne where the attacker was killed in an assault. The fourth victim, a gendarme who stood in for a female hostage and was shot, died early Saturday.</p> <p>The official says there apparently was no mention in the notes of the attack plans.</p>

<b>HEADLINE</b>	<b>03/25 Canadian in Mich. charged with terrorism</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/federal-pages/doj/canadian-man-charged-superseding-indictment-terror-transcending-national-boundaries/">https://www.hstoday.us/federal-pages/doj/canadian-man-charged-superseding-indictment-terror-transcending-national-boundaries/</a>
<b>GIST</b>	<p>Amor M. Ftouhi, 50, of Montreal, Canada, who was previously indicted in July 2017 for charges relating to an attack on a Bishop Airport officer in Flint, Mich., was charged Wednesday with an additional offense of committing an act of terrorism transcending national boundaries.</p> <p>According to court records, Ftouhi entered the United States from Canada for the purpose of killing government personnel in the United States. Before entering the United States on June 16, 2017, while in Canada, Ftouhi conducted online research of American gun laws and for gun shows in Michigan. Ftouhi subsequently traveled to Michigan where he was unsuccessful in purchasing a gun and purchased a knife instead. On June 20, 2017, Ftouhi walked up to the victim, who is a lieutenant with the Bishop Airport Authority and was in full uniform, and stabbed the police officer in the neck with a knife. Ftouhi referenced killings in Syria, Iraq and Afghanistan, and yelled “Allahu Akbar.” After his arrest, Ftouhi told law enforcement that he was a “soldier of Allah” and subscribed to the ideology of al-Qaeda and Osama bin Laden.</p>

	Ftouhi will be arraigned on the new indictment in federal court in Flint. He faces a statutory maximum sentence of life in prison.

<b>HEADLINE</b>	<b>03/25 Yemen rebels missile barrage at Saudis</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/saudi-arabia-yemen-rebels/2018/03/25/id/850718/">https://www.newsmax.com/newsfront/saudi-arabia-yemen-rebels/2018/03/25/id/850718/</a>
<b>GIST</b>	<p>DUBAI, United Arab Emirates — Yemen's Shiite rebels fired a barrage of ballistic missiles targeting Saudi Arabia late Sunday on the third anniversary of a kingdom-led war in Yemen, with fragments of one missile over Riyadh killing one person and wounding two.</p> <p>The casualties were the first in Saudi Arabia's capital since the Saudi-led war in Yemen began in March 2015, though previous rockets fired by the Yemeni rebels have caused deaths in other parts of the kingdom.</p> <p>The rebels known as Houthis said they launched a missile attack targeting Riyadh's King Khalid International Airport and other sites, again showing their ability to strike deep into the neighboring kingdom amid the stalemated war in Yemen, the Arab world's poorest country.</p> <p>The barrage likely will spark new criticism of Iran's role in the conflict as well, as the Houthis identified some of the missiles fired as a type that the United Nations and the West say comes from Tehran.</p> <p>The Saudi military said it intercepted seven ballistic missiles fired by the Houthis at the kingdom, three of them targeting Riyadh, two targeting Jazan and one apiece targeting Najran and Khamis Mushait.</p> <p>The Saudi-owned satellite news channel Al Arabiya aired footage that it said showed Patriot missile batteries firing at the incoming Houthi missiles. Online videos showed what appeared to be a missile fuselage lying on a street in Riyadh.</p> <p>One Egyptian national was killed and two other Egyptians suffered wounds when a fragment of a missile over Riyadh fell on a residential neighborhood, the state-run Saudi Press Agency said.</p> <p>Houthi ballistic missiles have increased in range over time, with the first one targeting Riyadh fired on May 19, 2017, according to the United Nations. A Nov. 4 launch previously targeted King Khalid International Airport, showing the missiles had a range of over 1,000 kilometers (620 miles).</p> <p>The Nov. 4 attack saw the Saudi-led coalition escalate its attacks. It wasn't immediately clear how the coalition would react to Sunday's attack, though the barrage marks some 90 Houthi ballistic missile launches targeting Saudi Arabia.</p> <p>Al Masirah, a Houthi-run satellite news channel, identified some of the missiles fired as the Burkan, or Volcano, missile. The United Nations, Western countries and the Saudi-led military coalition fighting in Yemen all say the Burkan mirrors characteristics of an Iranian Qiam ballistic missile. They say that suggests Tehran either shared the technology or smuggled disassembled missiles to the Houthis who then rebuilt them.</p> <p>Iran long has denied supplying arms to the Houthis, though a growing body of evidence contradicts their claim.</p>

<b>HEADLINE</b>	<b>03/26 Group: Yemen bombs show Iran influence</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/report-bombs-disguised-rocks-yemen-show-iranian-aid-54009253?">http://abcnews.go.com/International/wireStory/report-bombs-disguised-rocks-yemen-show-iranian-aid-54009253?</a>

## GIST

Roadside bombs disguised as rocks in Yemen bear similarities to others used by Hezbollah in southern Lebanon and by insurgents in Iraq and Bahrain, suggesting at the least an Iranian influence in their manufacture, a watchdog group said on Monday.

The report by Conflict Armament Research comes as the West and United Nations researchers accuse Iran of supplying arms to Yemen's Shiite rebels known as Houthis, who have held the country's capital since September 2014.

Those weapons allegedly included ballistic missiles used to target Saudi Arabia, which leads a military coalition of Arab nations backed by the United States that is stuck in a stalemate war with the Houthis. A barrage of Houthi missile fire late on Sunday killed one person in the Saudi capital, Riyadh, and wounded two others.

Iran has long denied supplying arms to the Houthis, and its mission to the United Nations is dismissing the new report. Iranian Foreign Minister Mohammad Javad Zarif has derided such weapons research as "fabricating evidence."

The report is just the latest sign of how the conflict in Yemen, the Arab world's poorest country where over 10,000 people have been killed, has changed from a civil war to a proxy fight among Mideast rivals. The Saudi-led war there turned three years old on Sunday.

"What we're hoping this does is make plausible deniability not very plausible," said Tim Michetti, head of regional operations for Conflict Armament Research. "You can't really deny this anymore once the components these things are made with are traced to Iranian distributors."

Michetti's organization, an independent watchdog group that receives funding from the United Arab Emirates, Germany and the European Union to research weaponry recovered in Yemen, said it examined a fake rock bomb in January near Mokha, some 250 kilometers (150 miles) southwest of the capital, Sanaa.

The fiberglass-encased bomb, packed with explosives, could be armed by radio and triggered by an infrared beam, the group said. It said there were three varieties, including anti-personnel mines and so-called explosively formed projectiles, which can penetrate armored vehicles and were used with lethal effect against U.S. troops following the 2003 invasion of Iraq.

Electrical circuitry in the bombs mirrored those manufactured by militants in Bahrain, while the bombs bore markings suggesting one workshop mass-produced the explosives, the report said. Such bombs, however, have yet to be used in Bahrain, an island kingdom off Saudi Arabia in the midst of a crackdown on all dissent.

Investigators also found a type of Chinese-manufactured wire covering used in other Iranian materiel, the report said.

It said independent experts also examined the explosives. Those experts said that "construction indicates that the bomb maker had a degree of knowledge in constructing devices that resembled, and possibly functioned in a manner similar to (explosively formed projectile bombs) that have been forensically tied to Iran and Hezbollah," the report said.

Alireza Miryousefi, a spokesman for Iran's mission to the United Nations, dismissed the report, saying the Houthis had no need for such weapons as they control stockpiles of arms purchased under former Yemeni President Ali Abdullah Saleh. The Houthis killed Saleh, their one-time ally, in December.

HEADLINE	<b>03/26 Egypt: militants killed in raid</b>
SOURCE	<a href="http://abcnews.go.com/International/wireStory/latest-polls-open-egypts-presidential-election-54009876?">http://abcnews.go.com/International/wireStory/latest-polls-open-egypts-presidential-election-54009876?</a>
GIST	<p>The Latest on Egypt's presidential election (all times local):</p> <p>9:35 a.m.</p> <p>Egypt's Interior Ministry says it has killed six militants believed to be involved in a weekend bombing in the coastal city of Alexandria that killed two policemen.</p> <p>The statement late on Sunday said the militants belonged to the Hasm movement and were killed in a raid on their hideout in Beheira province.</p> <p>The Alexandria blast occurred when an explosive device that was placed under a car detonated as the city's security chief's convoy was driving by in Saturday. He was unharmed.</p> <p>No group has claimed responsibility for the attack.</p> <p>The bombing came just ahead of Egypt's presidential election that got underway on Monday. President Abdel-Fattah el-Sissi faces no serious challenge in the vote.</p> <p>Authorities consider Hasm, which routinely targets security personnel, to be a splinter group of the outlawed Muslim Brotherhood group. Militant attacks have surged in Egypt since the military's 2013 ouster of an elected Islamist president, Mohammed Morsi.</p>

HEADLINE	<b>03/24 Russia denies aiding Afghan Taliban</b>
SOURCE	<a href="https://www.reuters.com/article/us-afghanistan-russia/russia-denies-aiding-afghan-taliban-in-wake-of-u-s-generals-comments-idUSKBN1H1064">https://www.reuters.com/article/us-afghanistan-russia/russia-denies-aiding-afghan-taliban-in-wake-of-u-s-generals-comments-idUSKBN1H1064</a>
GIST	<p>KABUL (Reuters) - Russia has rejected comments by NATO's top commander in Afghanistan that it has been supporting and even supplying weapons to the Taliban, in a clash of words that underlines growing tension over Moscow's involvement in the conflict.</p> <p>In an interview with the BBC last week, General John Nicholson said that Russia had been acting to undermine U.S. efforts in Afghanistan despite shared interests in fighting terrorism and narcotics, with</p>

	<p>indications that Moscow was providing financial support and even arms.</p> <p>“We’ve had weapons brought to this headquarters and given to us by Afghan leaders and said this was given by the Russians to the Taliban,” he said.</p> <p>A statement from the Russian embassy in Kabul dismissed the comments as “idle gossip”, repeating previous denials by Russian officials.</p> <p>“Once again, we insist that such statements are absolutely baseless and appeal to officials not to talk nonsense,” the embassy said.</p> <p>U.S. commanders, including Nicholson, have said on several occasions over the past year that Russia may be supplying arms to the Taliban although no confirmed evidence has so far been made public.</p> <p>However, Nicholson’s comments were unusually blunt and came in a context of growing tensions between NATO members and Moscow over the case of Sergei Skripal, a former intelligence agent found poisoned with a rare nerve agent in Britain.</p> <p>Russian officials have said that their limited contacts with the Taliban were aimed at encouraging peace talks and ensuring the safety of Russian citizens. Moscow has offered to help coordinate peace talks in Afghanistan.</p> <p>Taliban officials have told Reuters that the group has had significant contacts with Moscow since at least 2007, adding that Russian involvement did not extend beyond “moral and political support”.</p>

<b>HEADLINE</b>	<b>03/25 Car bomb near Somalia parliament</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/03/25/car-bomb-near-parliament-in-somali-capital-kills-at-least-4-police-say.html">http://www.foxnews.com/world/2018/03/25/car-bomb-near-parliament-in-somali-capital-kills-at-least-4-police-say.html</a>
<b>GIST</b>	<p>A car bomb exploded near Somalia's parliament headquarters in the capital, Mogadishu, killing at least four people along with the driver, police said Sunday, with several others injured.</p> <p>A huge cloud of smoke could be seen billowing over the area dotted with security checkpoints erected along a road leading to the presidential palace, whose main gate is just 200 meters (yards) from the blast site. The checkpoint also is close to the interior ministry.</p>

	<p>The car bomb was detonated at a checkpoint after soldiers intercepted and stopped a suspicious vehicle, senior police Capt. Mohamed Hussein told The Associated Press. Those dead included two soldiers, he said, while many of the nearly 10 people wounded are rickshaw drivers.</p> <p>A few hours earlier, another car bomb outside the capital killed one person plus the driver, police said. Officer Mohamed Abdi told the AP that the explosion occurred after soldiers arrived at the scene to inspect the "suspicious" car which had become stuck on a sandy road in the Sinka Dheer area.</p> <p>The car bombings come three days after at least 14 people were killed and 10 others wounded in a car bomb blast near the Weheliye hotel on the busy Makka Almukarramah road.</p> <p>Mogadishu is often a target of attacks by the Somalia-based extremist group al-Shabab, the deadliest Islamic extremist group in Africa. A truck bombing in October killed 512 people in the country's deadliest-ever attack. Only a few attacks since 9/11 have killed more people.</p>

<b>HEADLINE</b>	<b>03/24 Car bomb Afghan sports stadium kills 13</b>
<b>SOURCE</b>	<a href="https://nation.com.pk/24-Mar-2018/afghan-car-bomb-kills-13-wrestling-fans?show=756">https://nation.com.pk/24-Mar-2018/afghan-car-bomb-kills-13-wrestling-fans?show=756</a>
<b>GIST</b>	<p>KABUL : A car packed with explosives blew up outside a sports stadium in Afghanistan’s restive south on Friday, killing at least 13 people and wounding dozens more, officials said, capping a bloody week in the war-torn country.</p> <p>The suicide attack happened in Lashkar Gah, the capital of opium poppy-rich Helmand province, as spectators were leaving a wrestling match at the stadium, provincial governor spokesman Omar Zwak told AFP.</p> <p>There was no immediate claim of responsibility for the attack, which Zwak said killed at least 13 people and wounded 45 others, including children. Helmand police spokesman Salam Afghan had earlier given a lower toll of 10 dead and 35 wounded. Afghan officials often give conflicting figures in the wake of attacks.</p>

	<p>“The suicide bomber detonated his car bomb as spectators were leaving the stadium,” Zwak said. “The bomber wanted to go inside the stadium but he was identified by the police and he detonated himself.”</p> <p>Local officials were at the match, which witnesses said had been held as part of celebrations for Nawrooz, the Persian new year holiday that some fundamentalist Muslims consider un-Islamic.</p> <p>President Ashraf Ghani, whose government has been lambasted for its inability to protect ordinary Afghans, condemned the attack against “innocent people”, according to a statement.</p> <p>Helmand is largely controlled by the Taliban, which is under growing pressure to take up Ghani’s offer of peace talks to end the 16-year war. So far the Taliban, Afghanistan’s largest militant group, has given only a muted response.</p> <p>The attack caps a bloody few days in Afghanistan as Taliban and Islamic State militants ramp up attacks even before the official start of the spring fighting season.</p>

<b>HEADLINE</b>	<b>03/24 Malaysia: arrests foil militant plot</b>
<b>SOURCE</b>	<a href="http://news.kuwaittimes.net/website/malaysia-arrests-7-men-with-islamic-state-militant-group-links/">http://news.kuwaittimes.net/website/malaysia-arrests-7-men-with-islamic-state-militant-group-links/</a>
<b>GIST</b>	<p>KUALA LUMPUR: Malaysian police have arrested seven men with links to the Islamic State militant group who were planning attacks on non-Muslim places of worship and other targets, authorities said yesterday. The Muslim-majority country has been on high alert since gunmen allied with Islamic State (IS) carried out a series of attacks in Jakarta, the capital of neighboring Indonesia, in January 2016.</p> <p>Six Malaysians were arrested in Johor state, north of Singapore, while a seventh, a Filipino member of the IS-linked Abu Sayyaf group, was detained in the eastern state of Sabah, in multiple operations between Feb. 27 and Mar. 15, Inspector-General of Police Mohamad Fuzi Harun said in a statement. He said the six detained in Johor were members of an IS cell and included a 37-year-old technician who recruited new militants and was believed to be the mastermind of planned attacks on non-Muslim places of worship in the state’s capital.</p> <p>A second suspect was a security guard who served as the cell’s advisor and ensured members kept their activities secret. A third man was tasked with buying firearms from a neighboring country and identifying targets for attacks, he said. “All of them planned to escape to a neighboring country and seek shelter from members of a militant group there after successfully carrying out the plan,” Muhamad Fuzi said, without naming the country.</p> <p>Authorities arrested three other members of the same cell in follow-up operations, including a 25-year-old restaurant worker who had been ordered to kidnap and kill police personnel. Police also detained a 31-year-old Philippine national in Sabah, on Borneo Island, who was said to be a trusted lieutenant to Abu Sayyaf group leader Furuji Indama and has links to Malaysian militant Mahmud Ahmad, Mohamad Fuzi said.</p> <p>The man, wanted by the Philippines for his involvement in a kidnap-for-ransom syndicate, was also an expert in making improvised explosive devices. Mohamad Fuzi said the suspect had planned to carry out several attacks in Sabah and was responsible for making the state a safe haven for terror groups from the Philippines. Malaysia has arrested hundreds of people over the past few years for suspected links to militant groups. A grenade attack on a bar on the outskirts of the Malaysian capital, Kuala Lumpur, in June 2016 wounded eight people. Islamic State claimed responsibility for the attack, the first such strike on Malaysian soil</p>

<b>HEADLINE</b>	<b>03/24 Turkey, allies ‘total control’ Syria enclave</b>
-----------------	---

SOURCE	<a href="http://abcnews.go.com/International/wireStory/turkish-army-allies-total-control-syrias-afirin-53987757?">http://abcnews.go.com/International/wireStory/turkish-army-allies-total-control-syrias-afirin-53987757?</a>
GIST	<p>The Turkish army and Syrian opposition fighters it backs have "total control" of the Kurdish enclave of Afrin in northern Syria, according to the country's official news agency on Saturday, nearly a week after they captured the main town that carries the same name.</p> <p>Anadolu news agency said the Turkish military was continuing its sweep for mines and explosives to allow Afrin's resident's to return, following airstrikes and clashes with Syrian Kurdish forces.</p> <p>Associated Press journalists on a press tour organized by the Turkish government Saturday passed through the northwestern town of Jinderes en route to central Afrin.</p> <p>Jinderes, captured by Turkey and allied Syrian opposition fighters, was the scene of heavy street clashes earlier in March. The AP saw a widely destroyed and empty town.</p> <p>Turkey launched a ground and air offensive on Jan. 20 codenamed Olive Branch to oust the main Syrian Kurdish militia known as the People's Protection Units, or YPG, from Afrin. Turkey considers the YPG a terror group and an extension of Kurdish rebels waging an insurgency within its own borders.</p> <p>Syrian Kurdish officials and the country's state media said the Turkish offensive displaced more than 200,000 people from their homes.</p> <p>In Afrin's town center, captured Sunday, allied Syrian forces patrolled the streets as Turkish tanks and armored personnel carriers drove past.</p>

HEADLINE	<b>03/23 France: gun-wielding extremist kills 3</b>
SOURCE	<a href="https://www.cbsnews.com/news/france-hostage-situation-redouane-lakdim-trebes-grocery-store-2018-03-23-latest/">https://www.cbsnews.com/news/france-hostage-situation-redouane-lakdim-trebes-grocery-store-2018-03-23-latest/</a>
GIST	<p>TREBES, France -- A gun-wielding extremist went on a rampage Friday in a quiet corner of southern France, killing three people as he hijacked a car, opened fire on police and took hostages in a supermarket, where panicked shoppers hid in a meat locker or ran through the aisles. After an hours-long standoff, the 25-year-old attacker was killed as elite police forces stormed the market.</p> <p>They were aided by a heroic police officer who had offered himself up in a hostage swap and suffered life-threatening wounds as a result -- one of 16 people injured in the day's violence.</p> <p>The Islamic State of Iraq and Syria (ISIS) claimed responsibility for the attack near Carcassonne, a medieval city beloved by tourists, and the town of Trebes. It was the deadliest attack in France since Emmanuel Macron became president last May.</p> <p>The officer who volunteered to take the place a female hostage was identified as Col. Arnaud Beltrame. He managed to surreptitiously leave his cellphone on so that police outside could hear what was going on inside the supermarket. Officials said once they heard shots inside the market they decided to storm it.</p> <p>A police official who was not authorized to be publicly identified confirmed the officer's identity to The Associated Press.</p> <p>"He saved lives," Macron said.</p> <p>Macron said investigators will focus on establishing how the gunman, identified by prosecutors as Moroccan-born Redouane Lakdim, got his weapon, and how he became radicalized.</p> <p>CBS News correspondent Elizabeth Palmer reported that if, as it appeared, Friday's attack was the work of</p>

	<p>a lone gunman with little or no help from any coordinated terror cell, it may not prompt a change in France's already heightened security posture.</p> <p>On Friday night, authorities searched a vehicle and a building in central Carcassonne.</p> <p>Lakdim was known to police for petty crime and drug-dealing. But he was also under surveillance and since 2014 was on the so-called "Fiche S" list, a government register of individuals suspected of being radicalized but who have yet to perform acts of terrorism.</p> <p>Despite this, Paris prosecutor Francois Molins there was "no warning sign" that Lakdim would carry out an extremist attack.</p>

<b>HEADLINE</b>	<b>03/24 Egypt: car bomb in Alexandria kills 1</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/egypt-interior-ministry-explosion-alexandria-kills-53982059?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/egypt-interior-ministry-explosion-alexandria-kills-53982059?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>A bomb placed under a nearby car exploded Saturday in the coastal city of Alexandria as the city security chief's convoy passed by, killing at least one policeman and wounding four others, the Interior Ministry said.</p> <p>Local media reports said Gen. Mostafa al-Nimr survived the explosion and he was seen on a local TV channel in good condition while inspecting the area of the blast shortly after it took place. No group immediately claimed responsibility for the explosion, which happened in the vicinity of a police station in the central district of Roshdi.</p> <p>The attack came just days ahead of Egypt's presidential election, in which President Abdel-Fattah el-Sissi is virtually certain to be re-elected. It also comes during a massive security operation involving land, sea and air forces in areas covering north and central Sinai and parts of Egypt's Nile Delta and the Western Desert, along the porous border with Libya.</p> <p>The Interior Ministry said the explosive device had been placed under a car and it exploded as the convoy passed by.</p> <p>State-run MENA news agency said the public prosecutor ordered an investigation into the incident.</p> <p>Egypt has for years been struggling to contain an Islamic insurgency spearheaded by a local affiliate of the extremist Islamic State group in the turbulent Sinai region but attacks on the mainland have also occurred.</p>

<b>HEADLINE</b>	<b>03/24 France: ISIS notes in home of attacker</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/latest-french-officer-mom-surprised-courage-53981434?">http://abcnews.go.com/International/wireStory/latest-french-officer-mom-surprised-courage-53981434?</a>
<b>GIST</b>	<p>The Latest on the extremist attack in southern France (all times local):</p> <p>4:25 p.m.</p> <p>A judicial official says French police searching the home of the man responsible for a deadly rampage in southern France have found notes referring to the Islamic State group that appeared to be a final testament.</p> <p>Also found in the search of the home were a computer and telephone, the official said Saturday, a day after the attack. He was not authorized to discuss an ongoing investigation and couldn't be named.</p>

	<p>Police searched the home of Moroccan-born Redouane Lakdim, 25, after Friday's attack that killed four people — two in a supermarket near the southern city of Carcassonne where the attacker was killed in an assault. The fourth victim, a gendarme who stood in for a female hostage and was shot, died early Saturday.</p> <p>The official says there apparently was no mention in the notes of the attack plans.</p>

<b>HEADLINE</b>	<b>03/24 France: 'hero' officer dies in terror attack</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/24/europe/france-trebes-officer-dead/index.html">https://www.cnn.com/2018/03/24/europe/france-trebes-officer-dead/index.html</a>
<b>GIST</b>	<p>(CNN) — A police officer who swapped places with a female hostage during an attack by an ISIS supporter on a supermarket in southern France has died of his wounds, French authorities said.</p> <p>Lt. Col. Arnaud Beltrame, 45, was shot in the neck Friday after offering to take the place of a woman in an gunman's assault on the Super U supermarket in Trèbes.</p> <p>The attacker, Radouane Lakdim, 26, a Moroccan-born French national, was a petty criminal already on the radar of French police for his links to radical Salafist networks, authorities said.</p> <p>When he burst into the supermarket Friday, he shouted he was a soldier from ISIS, witnesses said, before opening fire and killing a worker and a customer. He was shot dead by police on the scene.</p> <p>"Lt. Col. Arnaud Beltrame died in the service of the nation to which he had already contributed so much," French President Emmanuel Macron said in a statement. "By giving his life to end the murderous escapade of a jihadist terrorist, he died a hero."</p> <p>Interior Minister Gérard Collomb announced the officer's death Saturday, which raised the number of victims in the gunman's rampage to four.</p> <p>The attacker killed two other people and wounded more than a dozen others in the supermarket raid. Before then, he had killed another person Friday while stealing a car.</p> <p>"France will never forget his heroism, his bravery, his sacrifice," Collomb said on Twitter.</p>

<b>HEADLINE</b>	<b>03/25 Syria rebels exit second enclave pocket</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/syrian-rebels-exit-pocket-eastern-ghouta-53998548?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/syrian-rebels-exit-pocket-eastern-ghouta-53998548?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Hundreds of Syrian rebels and civilians were bussed out of a second pocket of the besieged eastern Ghouta suburbs of Damascus on Sunday after rebels agreed to leave several towns and villages after years of siege and weeks of heavy bombardment.</p> <p>Close to 900 people were evacuated from the southernmost of three eastern Ghouta pockets on Sunday, according to state-affiliated al-Ikhbariya TV, following some 1,000 fighters, family members, and other civilians who departed late Saturday, as reported by the Syrian Observatory for Human Rights.</p> <p>They left in a fleet of buses, including the lime-green municipal buses, that have come to symbolize defeat for the Syrian opposition, and the steady rearrangement of Syria's population as the government takes back control of cities around the country.</p> <p>Fighters dressed in fatigues slumped in their seats, hiding their faces from the news cameras on the road, and children peered out the windows.</p> <p>The evacuation is modeled on others in which rebels have surrendered swathes of territory around the capital and other major cities after years of siege and bombardment at the hands of President Bashar Assad's forces. They have been helpless against the government's overwhelming artillery and air power, boosted with support from Iran's Revolutionary Guard and Russia's air force.</p> <p>Rebels began evacuating another pocket of eastern Ghouta on Thursday. Some 7,000 people left the town of Harasta, bound for the rebel-held Idlib province in northern Syria.</p>

<b>HEADLINE</b>	<b>03/25 State wolf population surge slows</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/03/25/washingtons-wolf-population-surge-slows-worrying-advocates/">http://q13fox.com/2018/03/25/washingtons-wolf-population-surge-slows-worrying-advocates/</a>
<b>GIST</b>	<p>SPOKANE, Wash. — Growth in Washington's gray wolf population slowed dramatically last year, raising concerns from an environmental group that says the state should stop killing wolves that prey on livestock.</p> <p>At the end of 2017, Washington was home to at least 122 wolves, 22 packs and 14 successful breeding pairs, the state Department of Fish and Wildlife said in a report released last week.</p> <p>That's the highest the population has been since annual surveys started in 2008, the agency said. However, last year's count was up just 6 percent from the minimum of 115 wolves — with 20 packs and 10 breeding pairs — reported at the end of 2016.</p> <p>By contrast, wolf populations grew at a rate of around 30 percent per year the previous decade.</p> <p>“The sharp departure from wolf number increases in past years is cause for serious concern,” said Amaroq Weiss, wolf advocate at the Center for Biological Diversity. “While population growth hasn't stopped entirely, these modest numbers clearly indicate the state should not kill any more wolves.”</p> <p>Wolves are rebounding in several Western states after being wiped out in the continental U.S. in all but a slice of Minnesota. But their return has brought contentious discussions among conservationists, ranchers, hunters and others about how the animals should be managed.</p>

<b>HEADLINE</b>	<b>03/25 Orange snow hit parts of Europe</b>
<b>SOURCE</b>	<a href="http://time.com/5214941/orange-snow-europe/?xid=homepage">http://time.com/5214941/orange-snow-europe/?xid=homepage</a>
<b>GIST</b>	<p>A rare phenomenon that occurs just once about every five years is turning the snow orange in eastern Europe.</p> <p>The orange snow is a result of sand storms from the Sahara Desert mixing with rain and snow, according to the BBC.</p> <p>People have taken to social media to post photos of the orange-tinted snow, which is falling in countries like Russia, Ukraine, Bulgaria and Romania. Skiers posted photos of the colored snow at a resort near Sochi, Russia.</p> <p>Steven Keates, a meteorologist who works for the U.K.'s national weather service, known as the Met Office, told The Independent that the orange snow is caused by sand being lifted up into the upper layers of the atmosphere and spreading out due to the wind and weather patterns.</p> <p>“There has been a lot of lifted sand or dust originating from North Africa and the Sahara, from sand storms which have formed in the desert,” he explained to the U.K. newspaper. “Looking at satellite imagery from Nasa, it shows a lot of sand and dust in the atmosphere drifting across the Mediterranean. When it rains or snows, it drags down whatever is up there, if there is sand in the atmosphere.”</p> <p>Keates also said the orange snow phenomenon has previously been seen in other regions around the world.</p>

<b>HEADLINE</b>	<b>03/23 Homicides, suicides rise in Pierce Co.</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/news/local/crime/article206598744.html">http://www.thenewstribune.com/news/local/crime/article206598744.html</a>
<b>GIST</b>	<p>Law enforcement leaders can't point to a single cause, but they feel the trend.</p> <p>“We have had a really hard spike. Our people have been worked very hard,” said county Sheriff Paul Pastor. “Why the spike, I don't know. Parents killing kids, kids killing parents. I don't expect we will be having those challenges constantly through the year, but we'll probably have a fairly high year in homicide.”</p> <p>The year 2017 saw 38 homicides — an average year in historical terms, according to figures compiled by The News Tribune and verified with the Pierce County Medical Examiner and the state Department of Health.</p> <p>This year's early surge sets an ominous pace. Law enforcement observers tend to think it's an anomaly even as they cross their fingers.</p> <p>“Even when crime trends down, there can be spikes,” said Pierce County Prosecutor Mark Lindquist, who pointed to an overall downward trend in felony referrals to his office when compared to last year.</p> <p>“I think the current spike in homicides could be an anomaly, or it could be violence feeding on itself, compounded by drugs and mental health issues,” Lindquist added. “Either way, we do our jobs, reduce crime through accountability, and try to keep the community safe. Our drug court and mental health court, for example, are designed to address these issues before they escalate.”</p> <p>Forecasting crime statistics is anything but a precise venture, but one approach involves regression to the mean. In other words, assume homicide trends for the rest of the year subside to average numbers.</p> <p>In that scenario, the county would still see 53 homicides, a number the area hasn't approached since 1998, when 52 homicides were recorded. That figure would still fall below the watermark of 66, set in 1992,</p>

largely driven by crime rates in Tacoma.

The city has seen its share of slayings already this year: Taxi driver Robert “Big Dave” Crall was fatally shot on March 15. A 19-year-old man suspected in a series of recent robberies has been charged with first-degree murder in the case. Before that, police responded to a pair of stabbing deaths. One killed a 15-year-old boy.

A separate shooting incident, deemed accidental by prosecutors, led to the death of 63-year-old Rhonda Randle, fatally shot by her son, who mistook her for an intruder.

Ask Tacoma Police spokeswoman Loretta Cool what accounts for the homicide uptick, and she points to a mixture of factors, including national events such as mass shootings. When she speaks to community groups about criminal justice, she's sometimes asked what she would fix with a magic wand. Her answer: kill the internet, and stop the flow of instant information and knee-jerk reaction.

“I think it’s kind of a confluence of things that are going on,” she said. “The political environment that people are bombarding all social media with. Everything is negative. We’ve had a tremendous amount of violent acts. People have been inundated with the idea that shooting is the answer.

“People have come out of the recession and some are recovering, but many people are not. People truly did lose their jobs, lose their houses and are not able to get them back. I think what we’re seeing overall is that homicide is, at this moment in time, an acceptable way to handle things.”

The number of killings adds a layer of despair to a separate and starker trend: the rising rate of suicide, which has climbed steadily since the Great Recession and continues upward, drawing additional momentum from the opioid epidemic.

State and local statistics tracking suicides tend to lag, since causes of death are more difficult to determine. Pierce County counted 173 suicides in 2016, according to the Department of Health. The number is a record: the highest in county history, and the peak of an upward line that has risen steadily since 2008.

“We’re getting two or three a day,” said Medical Examiner Thomas Clark. He can’t explain the trend, though he leans on “apocryphal knowledge” that suggests suicides rise in times of economic stress.

More practically, Clark can’t be precise about the latest suicide numbers. The sheer volume contributes to a backlog.

“The problem isn’t that we don’t track them, it’s getting them out,” he said.

Tracking suicides is a complicated task because the cause isn’t always clear. If people end their lives with firearms, determining the cause is comparatively simple. Add drugs and overdoses to the mix, and answers become elusive.

Like his counterparts throughout the state, Clark must rely on toxicology tests from the Washington State Patrol Crime Laboratory, which faces its own backlog. Clark is still waiting on results from 2017 deaths, and he can’t begin to count 2018.

Crime lab manager Brianna Peterson confirmed the backlog but said the primary driver of delay is an increased number of tests related to drunken driving cases. Such tests might take as little as two weeks, but that still represents time.

When it comes to assessing deaths related to possible drug overdoses, the process lengthens.

“Drug cases take longer,” Peterson said. “Once drugs are present, it might take four to eight weeks. We can’t just do one test that might detect every drug that might be present. We have to do multiple tests sometimes in order to detect the drugs that are there.”

	<p>Regardless of circumstances, unnatural deaths require a response and initial investigation from law enforcement. When homicides come in bunches, first responders feel the stress.</p> <p>“We go to all the suicides,” said sheriff’s spokesman Ed Troyer. “We go to all the death investigations. Suicides are jumping, and suicides of young people are jumping.”</p> <p>Troyer sees the same detectives responding to scene after scene. Deputies and police officers sometimes rely on grim humor to cope with such incidents, but it doesn’t always work. A March 13 triple homicide in Spanaway was one such example: a 29-year-old man despondent over his failing marriage shot his wife and two young children to death before turning his gun on himself.</p> <p>“It wears on people, especially when there’s kids involved,” Troyer said. “A lot of these deputies have kids of their own. When it’s kids, they’re very quiet, talking to each other very somberly.”</p> <p>Surveying the overall trends and pondering prevention, Sheriff Pastor returns to a familiar topic: personnel. He regularly notes that unincorporated Pierce County rank as the state’s second-largest city in terms of population, while adding that the number of deputies falls short of the need.</p> <p>“We’re a growing county,” Pastor said. “We’re going to have 1 million people in the next six or seven years. What are we doing about it now?”</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>03/25 Underfunded public pensions persist</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-financial-crisis2008-municipals-pensi/battered-by-great-recession-underfunded-public-pensions-to-persist-idUSKBN1H20EG">https://www.reuters.com/article/us-financial-crisis2008-municipals-pensi/battered-by-great-recession-underfunded-public-pensions-to-persist-idUSKBN1H20EG</a>
<b>GIST</b>	<p>CHICAGO (Reuters) - Ten years on from the financial crisis, many U.S. state and local public pension systems are still the worse for wear.</p> <p>Investment returns have been uneven and funding levels have yet to recover. Many pension funds have meanwhile attempted to boost returns by loading up on alternative investments to levels unheard of a decade earlier.</p> <p>“Some just cannot grow their way out of it. We have had several years of stellar (stock market) returns and it barely improved the underfunding situation,” said Mikhail Foux, municipal credit analyst at Barclays in New York.</p> <p>The benchmark S&amp;P 500 U.S. stock index has tripled in the past nine years, driven in part by unprecedented zero interest rate policies and massive monetary stimulus from central banks around the globe aimed at combating the deepest recession in a generation.</p> <p>But pension returns struggled to match the broad market, and recent wobbles in U.S. equities have fed fears of another downturn.</p> <p>“Now what happens when markets are falling 10 to 15 percent?” Foux asked.</p> <p>In 2007, a year before the crisis began, the median funded level was 92 percent for state retirement and 97 percent for local plans, according to Wilshire Funding Studies. That fell to 68 percent for states and 72 percent for local governments by 2016, the most recent data.</p> <p>A lower funded ratio indicates the overall soundness of a pension fund is weaker and more money is required to meet future obligations.</p> <p>Persistently low post-crisis interest rates meant pension funds could no longer depend to the same degree</p>

on fixed income to help meet withdrawal demands of an aging pensioner population.

“When the crisis hit, it exposed the kind of precarious nature of the status of plans,” said Jean-Pierre Aubry, state and local research director at Boston College’s Center for Retirement Research.

Even with U.S. rates inching higher since 2016 and stocks mounting record highs, pensions still struggled to generate consistent returns.

The number of active public sector workers per retiree has been falling. That ratio declined to 1.42 in 2016 from 2.43 in 2001, according to a November 2017 National Association of State Retirement Administrators (NASRA) Public Fund Survey. That can boost pension costs when combined with a poorly funded plan.

The sharp economic downturn that accompanied the 2007-2009 financial crisis weighed on core tax revenue, leading governments to pursue an unprecedented amount of reform measures to shore up pensions by boosting contributions and cutting benefits.

“Just as these pension funds required higher contributions as a result of the market decline, the plan sponsors were less able to pay those higher contributions,” said Keith Brainard, NASRA’s research director.

That prompted retirement systems to turn to riskier alternative investments such as hedge funds, private equity, real estate and commodities to pad returns.

U.S. public pension funds became the biggest risk-takers among pension funds internationally, according to one academic study updated in February 2017.

Alternative investment allocations jumped to 24 percent in 2015 from 9 percent in 2005, according the Center for Retirement Research.

“We know for the most part that alternatives have not been the panacea since the financial crisis,” Aubry, noting that hedge funds and commodities have underperformed equities during that period.

Public pension funds’ assumed rates of investment return have trended lower since the crisis. If a plan’s returns fall below that expected rate, government sponsors need to make up for the loss.

But public plans in general have tended to lag private-sector pension plans in lowering those discount rates, according to data cited by New York’s Rockefeller Institute of Government last year.

Between 1993 and 2012, as 10-year U.S Treasury yields fell by 4.3 percentage points, large private-sector U.S. plans reduced their discount rates to 4.4 percent from 8.2 percent.

For large public plans for funding purposes, the rate only fell from 7.8 percent to 7.7 percent in the same period, according to the institute’s report.

In the years since the crisis it has proven difficult for some governments to modify retirement benefits, and legal wranglings are ongoing.

Legal or political constraints have stymied changes in states like Illinois, Kentucky and New Jersey, where contributions have lagged actuarially required levels for decades.

Lawsuits filed against more than 40 state and local governments since 2008 contested pension changes on constitutional grounds, according to the Laura and John Arnold Foundation, which tracks the litigation.

Courts in 13 states have upheld reductions in cost-of-living adjustments (COLA) for retirees’ pension payments, but have struck reductions down in four.

	In California, long-standing judicial rulings prohibiting the state and local governments from reducing benefits will be tested in three lawsuits before the state supreme court, according to Stuart Buck, the Arnold Foundation's vice president of research.

<b>HEADLINE</b>	<b>03/25 NKorea slows down nuke operations</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Top_News/World-News/2018/03/25/North-Korea-slows-down-operations-at-main-nuclear-test-site/4221521958971/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=1">https://www.upi.com/Top_News/World-News/2018/03/25/North-Korea-slows-down-operations-at-main-nuclear-test-site/4221521958971/?utm_source=fp&amp;utm_campaign=lh&amp;utm_medium=1</a>
<b>GIST</b>	<p>SEOUL, March 25 (UPI) -- North Korea appears to have slowed down operations at its main nuclear site of Punggyeri, ahead of leader Kim Jong Un's upcoming summits on denuclearization with South Korea and the United States.</p> <p>North Korea tracker 38th North cited satellite imagery from March 17 which showed there hadn't been new tunneling activities at the West Portal of the nuclear site.</p> <p>It also noted the lack of mining carts or personnel in the same area.</p> <p>Calling this an "important development," the commentary says the latest imagery compares with those from early March where there were signs of continued tunneling excavations which began September last year, shortly after the North's sixth underground nuclear test.</p> <p>Up until March 2, spoil pile had been growing as well as frequency of mining carts and personnel moving around in the area.</p> <p>A small group of personnel that was previously sighted in the nuclear site's Main Administration Area was also nowhere to be seen, although this may be due to seasonal factors, 38 North said.</p> <p>The apparent slowdown of tunneling activities came after North Korea's landmark decision to hold talks with Seoul and Washington.</p> <p>In a meeting with Seoul envoys in early March, Kim Jong Un also said he would freeze nuclear weapons development during the talks.</p>

<b>HEADLINE</b>	<b>03/25 China space station to hit Earth soon</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/science/2018/03/25/chinas-space-station-expected-to-hit-earth-soon-possibly-in-europe.html">http://www.foxnews.com/science/2018/03/25/chinas-space-station-expected-to-hit-earth-soon-possibly-in-europe.html</a>
<b>GIST</b>	<p>A space station launched by China – which it reportedly lost track of – is expected plummet to Earth on or near April Fool's Day.</p> <p>The Tiangong-1 stopped responding to China's commands 2016, according to Space.com. Scientists have since anticipated the space station returning to Earth as a manmade meteorite, but are unsure where it will land.</p> <p>In recent months, scientists have had a better approximation of where the station may land. According to the Washington Post, they've warned that Spain, Portugal, France and Greece may see the 19,000-pound meteorite plummet within their borders.</p> <p>Scientists say the Tiangong-1 is currently spinning around Earth at 17,500 mph, which amounts to a trip around the planet every 90 minutes. As the station descends closer to Earth and gains momentum, the thicker air will cause friction to surround the craft in superheated plasma, the Post reported.</p>

Depending on the time of day and location, the nonprofit research firm Aerospace says, the returning station may be visible for “up to a minute or more.”

There is reportedly a slight chance the falling debris will hit somebody.

<b>HEADLINE</b>	<b>03/23 Vanishing Arctic ice link to Nor-easters</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/how-vanishing-arctic-ice-may-set-stage-extreme-nor-easters-n858886">https://www.nbcnews.com/news/us-news/how-vanishing-arctic-ice-may-set-stage-extreme-nor-easters-n858886</a>
<b>GIST</b>	<p>The amount of ice formed in the Arctic was near an all-time low over the winter that just concluded, scientists announced Friday — part of a warming phenomenon that some experts believe has increased the likelihood of severe weather like the recent Nor’easters.</p> <p>Sea ice is believed to have reached its maximum extent over the Arctic Ocean on March 17, at 5.59 million square miles. That is the second lowest in the 39 years that satellite images have helped make measurements, slightly ahead of last year's total. The four lowest seasonal totals for Arctic ice have all come in the last four years.</p> <p>“This again shows the absolute urgency of what is happening to the planet’s climate system," said Rafe Pomerance, chairman of Arctic 21, a network of climate scientists and environmental advocates. “The globe is in a state of rapid transformation, and no place is clearer than the Arctic, where the sea ice loss is very fast and seemingly inexorable.”</p> <p>The extent of sea ice is tracked closely by researchers and is being connected by some scientists to unusual weather hundreds of miles to the south, including drought in California and big snowfalls along the East Coast. These researchers say that although it would be wrong to cite warming as the cause of any single weather event, the likelihood of extreme weather has increased as temperatures in the Arctic jump up.</p> <p>Other scientists cautioned against putting too much focus on Arctic warming, saying other factors are contributing to changing weather patterns in the lower latitudes. Both sides agree that more research is needed into the connection between warming in the far north and weather elsewhere.</p> <p>Temperatures in the Arctic have increased about twice as fast as they have in the rest of the globe over the past 25 years, an increase of seven degrees Fahrenheit, or more, in some areas. Less white ice on the Earth's surface means that less of the sun’s heat is reflected back into space. That exacerbates the warming pattern and, in a vicious cycle, melts even more ice.</p> <p>The scientific consensus is that the higher temperatures all over Earth have created secondary effects, like rapid sea level rise, more intense heat waves and a shifting in the ranges of some animals. As much as one-quarter of the globe's warming has been linked to the loss of sea ice.</p> <p>Researchers six years ago first suggested another profound impact: warming in the Arctic contributes to extreme weather events in the Northern Hemisphere. The theory goes like this: Warmer Arctic air is closer to the temperature in the lower latitudes, thereby weakening the atmospheric barrier that previously kept the jet stream flowing in a relatively straight line. The river of air that speeds west to east around the globe now meanders north and south. The peaks and troughs in this "wavier" path drive weather on Earth. And because the unleashed jet stream moves more slowly, weather systems tend to linger.</p> <p>“There are some very clear signals emerging from the noise, and one of them is this tendency for warm west, cold east in North America and very cold winters recently,” said Jennifer Francis, a Rutgers University research professor who co-authored one of the first papers connecting Arctic warming to jet stream upheaval. “It’s all a very consistent story, and there is no reason to think it’s going to go back to normal, maybe ever.”</p>

	As weather systems linger, then move on, only to stall again, they create a kind of “weather whiplash,” said Francis, who noted that Boston had record high temperatures in late February before flipping to the string of Nor’easters that dominated the last month.

<b>HEADLINE</b>	<b>03/23 UN report: Earth losing plants, animals</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/united-nations-reports-lonelier-planet-with-fewer-plants-animals-biodiversity/">https://www.cbsnews.com/news/united-nations-reports-lonelier-planet-with-fewer-plants-animals-biodiversity/</a>
<b>GIST</b>	<p>WASHINGTON -- Earth is losing plants, animals and clean water at a dramatic rate, according to four new United Nations scientific reports that provide the most comprehensive and localized look at the state of biodiversity. Scientists meeting in Colombia issued four regional reports Friday on how well animal and plants are doing in the Americas; Europe and Central Asia; Africa; and the Asia-Pacific area.</p> <p>Their conclusion after three years of study: Nowhere is doing well.</p> <p>The Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem was about more than just critters, said study team chairman Robert Watson. It is about keeping Earth livable for humans, because we rely on biodiversity for food, clean water and public health, the prominent British and U.S. scientist said.</p> <p>"This is undermining well-being across the planet, threatening us long-term on food and water," Watson said in an interview.</p> <p>Scientists pointed to this week's death of the last male northern white rhino in Africa, severe declines in the numbers of elephants, tigers and pangolins, but said those are only the most visible and charismatic of species that are in trouble.</p> <p>What's happening is a side effect of the world getting wealthier and more crowded with people, Watson said. Humans need more food, more clean water, more energy and more land. And the way society has tried to achieve that has cut down on biodiversity, he said.</p> <p>Crucial habitat has been cut apart, alien species have invaded places, chemicals have hurt plants and animals, wetlands and mangroves that clean up pollution are disappearing, and the world's waters are overfished, he said.</p> <p>Man-made climate change is getting worse, and global warming will soon hurt biodiversity as much as all the other problems combined, Watson said.</p> <p>"We keep making choices to borrow from the future to live well today," said Jake Rice, Canada's chief government scientist for fisheries and oceans, who co-chaired the Americas report.</p> <p>Duke University conservationist Stuart Pimm, who wasn't part of the study team, said the reports make sense and are based on well-established scientific data: "Are things pretty dire? Yes."</p>

<b>HEADLINE</b>	<b>03/24 Mount Etna 'slowly moving to the sea'</b>
<b>SOURCE</b>	<a href="https://www.telegraph.co.uk/news/2018/03/24/mount-etna-slowly-sliding-towards-mediterranean-sea/">https://www.telegraph.co.uk/news/2018/03/24/mount-etna-slowly-sliding-towards-mediterranean-sea/</a>
<b>GIST</b>	<p>Mount Etna, Europe's largest and most active volcano, is slowly sliding towards the Mediterranean Sea, scientists have observed.</p> <p>The entire 3,350m (11,000ft) stratovolcano, located on the east coast of the Italian island of Sicily, is currently moving downslope at an average rate of 14 mm per year - or 1.4 metres over 100 years.</p> <p>Experts have warned the sliding could eventually lead to greater risk of large scale slope failure, which could trigger landslides, however researchers at The Open University emphasised there is currently no sign of that happening.</p> <p>Dr John Murray, lead author of the paper published in the Bulletin of Volcanology, stressed the minute movement currently posed no danger to life, but warned that monitoring the volcano for more significant changes was crucial.</p> <p>"At the moment there is no cause for concern from the sliding of the volcano towards the sea, the movement is just too small," Dr Murray told The Telegraph. "However, the possibility of things changing</p>

	<p>in the future needs to be taken seriously, so it is important to keep monitoring the movement.”</p> <p>The UK-led team, who monitored the changes using GPS technology placed around the mountain, found the sliding is lubricated by the weak sediments beneath Etna and the slope of the basement.</p> <p>Dr Murray, who has been working for 49 years studying the active volcanoes of Mount Etna, said if a sector collapse were to occur, the results could be “catastrophic”.</p>

<b>HEADLINE</b>	<b>03/23 Venezuela tackles world's worst inflation</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/worldviews/wp/2018/03/23/venezuela-hopes-to-tackle-the-worlds-worst-inflation-by-deleting-zeros-from-its-currency/">https://www.washingtonpost.com/news/worldviews/wp/2018/03/23/venezuela-hopes-to-tackle-the-worlds-worst-inflation-by-deleting-zeros-from-its-currency/</a>
<b>GIST</b>	<p>CARACAS, Venezuela — Economic pledges may be par for the course in election campaigns, but in hyperinflationary Venezuela, the candidates' dueling promises are going further, with the incumbent vowing to lop a few zeros off the currency, while his main challenger calls for the adoption of the U.S. dollar.</p> <p>President Nicolás Maduro late Thursday briefly outlined his monetary rescue plan. In a country where a dozen eggs can cost 250,000 bolivars (\$5) amid worsening inflation, he would chop three zeros off the currency — arguably bringing the price for those eggs down to 250.</p> <p>“I ask you all for your prayers and support for the success of the monetary reconversion,” Maduro said in a televised event Thursday night.</p> <p>The move came as Henri Falcon — a former governor running against Maduro in elections set for May — is proposing a far more radical fix. He wants to follow the path of countries such as Ecuador and Panama by dollarizing the Venezuelan economy. Doing so, he says, would prevent the printing of new bills — instantly constraining inflation.</p> <p>Socialist Venezuela is going through a crisis that has left people struggling to pay for food and find medicines. Prices are being influenced by a black-market exchange rate that rises by the day and is currently five times the nearly inaccessible official rate.</p> <p>Customers are standing in hours-long lines at banks to take out a daily limit, set so low that it barely covers the price of a cup of coffee. Larger transactions are done by bank card or transfer — although some vendors are charging double for electronic payments.</p> <p>Maduro’s redenomination plan was met with serious skepticism by critics and analysts, who say that the impact on hyperinflation would be minimal — and that the plan would be confusing. By June 2, under Maduro’s plan, new bolivars with lower denominations would be circulated — but old ones, with denominations as high as 100,000, would remain valid. It would leave vendors charging two prices — one for old bills, the other for the redenominated bolivar.</p> <p>Salaries too would be redenominated — so little would change in terms of buying power.</p> <p>Economists say simply chopping zeros off the bolivar notes is unlikely to halt hyperinflation, since the government would still be printing reams of cash. In addition, the forces that have sent prices soaring, including food and medical scarcities, would remain in place. In fact, some Venezuelan business owners have already started eliminating three zeros from prices, simply because they're too long to fit in printed receipts.</p> <p>“Taking out three zeros doesn’t in any way solve any of the causes of hyperinflation,” said Jean Paul Leidenz, senior economist at Caracas-based Ecoanalitica. “It’s just a cosmetic fix that won’t work.”</p>

	<p>Maduro’s announcement is just his latest attempt to control runaway inflation: He has already launched a new cryptocurrency, the petro. An executive order by President Trump, however, has banned U.S. transactions in the petro, which U.S. officials have dubbed “a scam.” Few see the petro as a genuine solution — and Maduro’s new redenomination plan appears to be a tactical admission that the government is seeking another answer.</p>

<b>HEADLINE</b>	<b>03/24 When did clowns become scary?</b>
<b>SOURCE</b>	<a href="https://apnews.com/533cac182c5841659222fd99f9d00a83/No-laughing-matter:-When-exactly-did-clowns-become-scary?">https://apnews.com/533cac182c5841659222fd99f9d00a83/No-laughing-matter:-When-exactly-did-clowns-become-scary?</a>
<b>GIST</b>	<p>NEW YORK (AP) — His nose was round and bright red, his face as white as a sheet. His mouth was surrounded by an exaggerated smear of red makeup and his arched eyebrows hung ridiculously high on his forehead.</p> <p>Such was the daily uniform of Bozo the Clown, who entertained kids for decades when TV was in its infancy. It’s also a uniform that for many now seems grotesque and sinister.</p> <p>The death of longtime Bozo performer Frank Avruch this week triggered both feelings — warm memories from some and a shiver of fear from others who associate clowns more with the film “It.”</p> <p>Which begs the question: When exactly did clowns go from birthday-party goofy to downright sinister? Well, hold onto your really big shoes — experts are divided.</p> <p>David Carlyon, author, playwright and a former clown with Ringling Bros. and Barnum &amp; Bailey Circus in the 1970s, argues that the fear of clowns — known officially as coulrophobia — is a relatively new phenomenon, born from the counter-culture 1960s and emerging as a popular force in the 1980s.</p> <p>“There is no ancient fear of clowns,” he said. “It wasn’t like there was this panic rippling through Madison Square Garden as I walked up through the seats. Not at all.”</p> <p>Carlyon said clowns were considered sweet and funny for two centuries until an inevitable backlash that included Stephen King’s hit novel “It,” the film “Poltergeist,” Heath Ledger’s white-faced maniac Joker, the misanthrope Krusty the Clown from “The Simpsons,” the shock band Insane Clown Posse and Homey D. Clown from “In Living Color.”</p> <p>“Anything that gets that much glorification and is sentimentalized within an inch of its life invites someone to snark at it,” said Carlyon, who recently discovered the cover of a National Lampoon from 1979 with a girl cowering in fear of a malevolent clown.</p> <p>“There’s nothing in any available evidence that kids were afraid of clowns in the ’40s, the ’50s, the ’60s, the ’70s,” he said. “Who said that about Red Skelton?”</p> <p>Not so fast, argues Benjamin Radford, an author and editor at Skeptical Inquirer magazine who literally wrote the book on the subject, 2016’s “Bad Clowns.” Not to throw a pie in anyone’s face, but he argues that evil clowns have always been among us.</p> <p>“It’s a mistake to ask when clowns turned bad because historically they were never really good. They’ve always had this deeply ambiguous character,” he said.</p> <p>“Sometimes they’re good; sometimes they’re bad. Sometimes they’re making you laugh. Other times, they’re laughing at your expense.”</p> <p>Radford traces bad clowns all the way to ancient Greece and connects them to court jesters and the Harlequin figure. He notes that Punch, an evil puppet who frequently smacks his partner Judy with a stick,</p>

made his first appearance in London in the 1500s. “You have this mass-murdering, baby-killing clown that’s beloved by Britons everywhere of all ages,” he said.

Clowns in America had their roots in circuses and they were at first meant to amuse adults, but clowning history took a detour in the 1950s and ’60s when the squeaky-clean Bozo and Ronald McDonald became the “quintessentially American default clowns” for kids, Radford said.

The more sinister clown waited patiently for his day to shine. “Stephen King didn’t invent the evil clown. That was long before his time. But what he did was turn the coin over, if you will,” Radford said.

Even if there’s debate on the issue, Radford paid homage to Avruch, the first nationally syndicated incarnation of the iconic Bozo. Without virtuous clowns like him to lay the foundation, the bad ones make no sense.

“The fact is that we need both bad and good clowns because without the good clowns like Bozo, there’s no contrast, there’s no tension to make the evil or scary clowns entertaining or interesting,” Radford said.

<b>HEADLINE</b>	<b>03/24 Mexico: Iowa family found dead</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/post-nation/wp/2018/03/23/police-confirm-iowa-family-of-four-found-dead-in-mexico-condo/?utm_term=.37ba33f46420&amp;wpisrc=nl_most&amp;wpm=1">https://www.washingtonpost.com/news/post-nation/wp/2018/03/23/police-confirm-iowa-family-of-four-found-dead-in-mexico-condo/?utm_term=.37ba33f46420&amp;wpisrc=nl_most&amp;wpm=1</a>
<b>GIST</b>	<p>Kevin and Amy Sharp informed their family members in Iowa that they had arrived safely at their vacation condominium in Tulum, Mexico. That was on March 15.</p> <p>So when their family didn’t hear from them on Thursday — a day after they were to have arrived in St. Louis — they became worried.</p> <p>“If you have any information (last contacted, resources, or ANYTHING!) contact the family ASAP!” said Ashli Peterson, a relative of the Sharps, in a Facebook post late Thursday night that was shared hundreds of thousands of times.</p> <p>On Friday afternoon, Peterson posted an update.</p>

“Please respect the family at this time as they go through the grieving process,” she wrote. “Thank you for all the posts, shares, and kind words.”

Kevin Wayne Sharp, 41, his wife, Amy Marie Sharp, 38, and their children Sterling Wayne Sharp, 12, and Adrianna Marie Sharp, 7, were found dead in the Tulum condominium where they had been vacationing, police confirmed Friday. The family had been reported missing by their immediate family members early Friday morning to police in Creston, Iowa, which is located about 70 miles southwest of Des Moines.

The Sharps had planned to return home Wednesday, family members said.

Police quickly made contact with the U.S. State Department, Creston police said in a statement. A welfare check at the condominium where the family was believed to be staying led to the discovery of the four bodies.

It is not immediately clear what led to the Sharp family’s deaths, but Creston police chief Paul Ver Meer told KCCI that there were no signs of trauma.

This was the Sharp family’s second trip to Mexico. They left the United States for Cancun on March 14, then rented a car and drove to Tulum, where they were renting a condo, according to Amy Sharp’s sister Renee Hoyt, who spoke with the Creston News Advertiser.

The family had planned to meet up with some friends at a water park, Amy Sharp’s cousin, Jana Weland, told ABC News.

But “they never showed up at that water park to meet them,” Weland said.

In fact, the Sharps’ family members hadn’t heard anything from Kevin or Amy since the day they arrived to Mexico.

It was also unusual for the family not to post photos of their vacation to social media, because “last year they shared pictures about every day,” Weland said.

About a week later, on Thursday night, the family had a sinking feeling that something wasn’t right. The Sharps were supposed to return to the United States about 2:45 p.m. Wednesday from Cancun and arrive in St. Louis at about 6 p.m., family members said.

The Sharps’ family members decided to wait for the last flight from Cancun to St. Louis to arrive on Thursday in case the Sharps had just planned to stay an extra day, Weland told ABC News.

“I guess we were all kind of hoping for the best,” she said.

Then, the family tracked Kevin Sharp’s phone using Apple’s Find my iPhone app. It pinged in Mexico, Hoyt told the Creston News Advertiser. The phone had not moved from its location since Thursday morning.

The family’s mysterious deaths come amid increased travel warnings to Quintana Roo state, which is home to Tulum — a popular destination for those looking to explore Mayan ruins or snorkel in limestone sinkholes. The State Department issued a Level 2 advisory to those traveling to Quintana Roo on March 16, meaning visitors should be cautious because of increased crime there. Department officials cited a spike in Quintana Roo’s homicide rate since 2016.

Last month, the Milwaukee Journal Sentinel published an investigation that identified more than 150 reports from travelers who said they blacked out or became violently ill after having just one or two drinks at dozens of Mexican resorts in Cancun, Playa del Carmen, Puerto Vallarta and Los Cabos. It’s unclear whether those tourists were deliberately drugged or became random victims of tainted alcohol, according

	<p>to the investigation.</p> <p>Autopsies on the Sharps are being performed in Mexico. Local Mexican authorities have taken over the investigation, according to the State Department. The Mexican Tourism Board said in a statement obtained by CBS that “preliminary reports from local officials conclude that there were no signs of violence or struggle.”</p> <p>Paulina Chávez Alonzo, a spokeswoman for the Mexican Embassy in Washington D.C., told NBC News that the government offered its “deepest condolences to the family and friends of the Sharps.”</p>

<b>GIST</b>	<p>RIO DE JANEIRO — To quell a burst of carjackings, supermarket lootings and murders, military troops rolled into this tropical metropolis last month heading straight for the slums. They set up checkpoints and sent armed patrols to root out criminals, searching everyone from children to grandmothers.</p> <p>The military campaign, the first of its scale since Brazil's return to democracy in the 1980s, brought an outcry from human rights groups. Had this happened in the United States or Europe, some argued, lawsuits would have been filed. Communities would have rebelled.</p> <p>But in Latin America's largest nation — where security has emerged as the No. 1 issue amid a surge of urban violence — an extraordinary thing happened. Rather than view the move as an invasion, violence-weary residents of the favelas, or shantytowns, hailed it as a liberation.</p>

“They want to check my ID? Fine!” said Magna Oliveira, 50, who runs a van-rental business in Vila Kennedy, a favela founded in the 1960s with the aid of U.S. funds disbursed by President John F. Kennedy’s government. One of Rio’s most violent slums, it is now the epicenter of the military takeover of the state’s security.

“Here, here,” she said, pretending to take multiple ID cards out of her pocket. “Check them. Please! I only wish I had more IDs for them to check. Everything has changed since they arrived. I feel free.”

The response here illustrates a national reality: Brazilians want security — and are backing heavy-handed tactics to get it.

To the chagrin of critics, but cheers from much of the public, one of those tactics is deploying the military to fight crime. In February 2017, the armed forces took over security in Espirito Santo state after 62 people were killed during the first three days of a police strike. The military also assumed control of security in the state of Rio Grande do Norte after it ran out of cash to pay police salaries.

There are indications the deployments may not be working — crime in the state of Rio, for instance, has continued to worsen despite the military takeover of security. Yet, as this troubled country of 208 million people hurtles toward presidential elections in October, calls for a firmer hand are growing.

“Fear of violence has reached such high levels that the population is crying for help,” said Renato Sérgio de Lima, president of the Brazilian Forum on Public Security, a think tank that studies violence. “It’s a demand for order that almost always brings risks of authoritarianism if you don’t have solid democratic institutions.”

In Rio, the showcase city of the 2016 Olympics Games is now a distant memory.

Crime has exploded, with a toxic mix of corrupt police officers, feuding drug dealers and gang warfare fueling the surge. The city is also floundering because of a massive nationwide corruption scandal and lower energy prices that hit one of its primary economic engines: the national oil giant, Petrobras.

With acute budget shortfalls looming, police officers are no longer being paid overtime, and many are owed back wages. Roughly 50 percent of police vehicles don’t work. The force lost 2,000 officers last year, more than three times the normal attrition rate.

Last year, homicides reached an eight-year high of 6,731, according to government figures. Car thefts rose by 30.3 percent year-on-year. Nearly 400 schools have had to cancel classes because of violence.

The military has been called to help with security in the city more than a dozen times in recent years. But past interventions were mostly limited to special events, such as the Olympics and the World Cup, or to operations in specific neighborhoods. This time, the military has been charged with overseeing security for the whole surrounding state — Brazil’s most densely populated, with 16.5 million inhabitants. The armed forces have been ordered to both deploy troops and take command of the state’s police force. Current plans have the military presiding over the state’s security at least through December.

Roughly 1,400 troops arrived a month ago. In the initial phase, soldiers stopped and searched thousands of people entering the west Rio slum, photographing their IDs and running their names through police databases for outstanding criminal warrants.

There are no statistics available on the total number of arrests by the military thus far. Some people have been detained simply for disrespecting the military.

The aggressive stop-and-search patrols, however, lasted only a few weeks — part of what the military called a blitz to gain a grip on the favela. Military officials insist they have succeeded in driving out at least some of the traffickers who controlled the area. In a sign of progress, city authorities who were

	<p>previously too afraid to enter the slum recently held a citizens' fair where residents lined up for yellow fever vaccinations, ID registrations and even to enroll for military service.</p> <p>"It's about bringing normalcy here," said Col. Carlos Cinelli, a military spokesman.</p> <p>Many residents say the problem isn't too much military presence — it's too little of it.</p> <p>Each day, the troops arrive at 6 a.m. and depart at 5 p.m. While their presence has brought a rare tranquility to the daylight hours, residents say, at night, the drug traffickers return and the cycle of violence resumes.</p> <p>Theoretically, the military is leaving the favela under the control of police at night — and taking special precautions to weed out corrupt officers who are as much responsible for the violence here, residents say, as the traffickers.</p> <p>But that plan doesn't seem to be working.</p> <p>Military officials themselves say it is unrealistic to think they could entirely fix the problem of entrenched urban violence — a problem that may require vast amounts of investment to boost education, fight poverty and offer the kinds of social services that troops cannot provide.</p>

<b>GIST</b>	<p>Three men were hospitalized Saturday morning when an attempted robbery ended with a shootout between the suspects and the residents, Tacoma Police spokeswoman Loretta Cool said.</p> <p>The owner of a home on the 3600 block of South Ainsworth Avenue armed himself with a handgun after noticing two intruders near his garage on his surveillance cameras at about 12:30 a.m., Cool said. He and his roommate confronted the alleged intruders.</p> <p>During the encounter the residents reportedly sprayed one suspect with bear spray and struck the other in the head with a baseball bat. One of the suspects then fired a gun at the victims, hitting one of them, Cool said. One of the residents then reportedly returned fire and hit one of the suspects.</p> <p>The two suspects were transported to a hospital to be treated for their injuries. The suspect's gun wound was considered life-threatening.</p> <p>The resident who was shot also was transported to the hospital. His injuries were considered serious but not life-threatening, Cool said.</p> <p>The incident is under investigation.</p>

<b>HEADLINE</b>	<b>03/23 Charge: made hoax calls to Coast Guard</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/936220/oregon-man-accused-of-making-hoax-calls-to-coast-guard/">http://mynorthwest.com/936220/oregon-man-accused-of-making-hoax-calls-to-coast-guard/</a>
<b>GIST</b>	<p>PORTLAND, Ore. (AP) — Authorities arrested an Oregon man accused of making hoax distress calls to the U.S. Coast Guard in 2016.</p> <p>The defendant — 35-year-old Bud Burkleo of Warrenton — pleaded not guilty Friday at the federal courthouse in Portland.</p> <p>U.S. Magistrate Judge John V. Acosta set a May 29 trial date and granted Burkleo pretrial release.</p>

	<p>An indictment unsealed Friday alleges Burkleo made four calls that led the Coast Guard to needlessly dispatch personnel. He's also accused of lying to federal investigators.</p> <p>The Coast Guard Sector Columbia River command center received dozens of false mayday calls in 2016. The agency released recordings of a few of them late that year in hopes of getting a tip from the public.</p>

SOURCE	<a href="https://www.bloomberg.com/news/articles/2018-03-23/this-mexican-city-is-so-dangerous-that-coke-femsa-is-pulling-out">https://www.bloomberg.com/news/articles/2018-03-23/this-mexican-city-is-so-dangerous-that-coke-femsa-is-pulling-out</a>
GIST	<p>Altamirano in the southwestern state of Guerrero in Mexico is so dangerous that Coca-Cola Femsa is leaving.</p> <p>Citing two months of harassment of workers by local criminal groups and the lack of an effective police response, the country's largest bottler said it's indefinitely closing its distribution operations there starting Friday, affecting about 160 jobs.</p> <p>"The lack of conditions to efficiently and safely operate in this part of Guerrero and the recent, unjustified aggression to one of our collaborators led the company to this decision," Coke Femsa said in a statement. Employees had received threats and the company's facilities had been affected.</p> <p>The company didn't elaborate beyond the statement.</p> <p>At least two mayors of towns in Guerrero have been gunned down recently. The wave of violence coincides with record homicides across Mexico. Last October was the deadliest month of the century, according to data from the Interior Minister.</p> <p>The company closed another facility in Guerrero in 2014 amid threats to delivery workers.</p> <p>Fomento Economico Mexicano SAB, better known as Femsa, owns 47 percent of Coke Femsa, according to the company's website.</p>

<b>HEADLINE</b>	<b>03/25 Ohio: Texas trio \$1M fentanyl bust</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/03/25/1m-in-fentanyl-seized-from-texas-trio-plotting-to-mail-drugs-back-from-ohio-authorities-say.html">http://www.foxnews.com/us/2018/03/25/1m-in-fentanyl-seized-from-texas-trio-plotting-to-mail-drugs-back-from-ohio-authorities-say.html</a>
<b>GIST</b>	<p>Three Texans were arrested in Ohio last week after an investigation yielded evidence that they had attempted to mail a large quantity of fentanyl back to Texas, authorities said.</p> <p>According to U.S. Attorney Justin Herdman of the Northern District of Ohio, it was enough fentanyl "to kill everyone in Toledo several times over."</p> <p>One kilogram of the opioid was seized at a Toledo post office, and another half-kilo and \$8,500 in cash were seized at a motel room where the trio were staying, the Toledo Blade reported.</p> <p>The drugs had an estimated total street value of about \$1 million, authorities said.</p> <p>Fentanyl is "a dangerous synthetic opioid with deadly consequences for users and those in law enforcement," Steve Francis, special agent in charge of the U.S. Immigration and Customs Enforcement homeland security investigations office in Detroit, told the Blade.</p>

	<p>The investigation began Monday after authorities learned that three "suspicious" people had checked in to two rooms at a Red Roof Inn in Toledo, the Dallas Morning News reported.</p> <p>On Monday and Tuesday, police reportedly watched three individuals – identified as Darius Lonzo Lewis, 29; Anthony Ray Robinson, 32; and Barbara Nykitta Wilson, 21 – leaving and entering the rooms.</p> <p>Authorities said they watched Robinson and Wilson drive in separate cars to a post office Tuesday. Robinson reportedly entered the post office with a package, while Wilson returned a rental car before going back to the hotel in Robinson's car, the Dallas Morning News reported.</p> <p>After obtaining a search warrant, police found the drugs and cash and arrested the suspects.</p>

<b>HEADLINE</b>	<b>03/25 Austin bomber calls self 'psychopath'</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/25/us/austin-bombings-investigation/index.html">https://www.cnn.com/2018/03/25/us/austin-bombings-investigation/index.html</a>
<b>GIST</b>	<p>Austin, Texas (CNN) — Days after the Austin bomber blew himself up as police closed in, investigators are no closer to answering the question nearly everyone in the community is asking: Why?</p> <p>Investigators searching for a potential motive are relying on Mark Anthony Conditt's own words from a 25-minute recording he made hours before he was confronted by a SWAT team early Wednesday.</p> <p>In the cellphone recording, Conditt, 23, refers to himself as a "psychopath" and shows no contrition for carrying out a nearly three-week-long bombing spree that left two people dead and spread fear across the city.</p> <p>"Why would someone do such a senseless act of random violence? To many of us it doesn't make a whole lot of sense," Texas Rep. Michael McCaul said Saturday. "All we really have at this point in time ... are his own words from his confession tape where he describes himself as a psychopath, apparently expressing no remorse for the killings that he committed.</p> <p>"It's hard to imagine someone whose mind is so sick that they could commit bombings like this and feel absolutely no remorse," McCaul said.</p> <p>Both McCaul and Austin Police Chief Brian Manley said Conditt does not address race in the recording, but authorities have not ruled anything out as the investigation continues.</p> <p>The two victims in the bombings were African-American and the first three bombings were carried out in a largely minority area of Austin, prompting fears of a racially motivated killer.</p>

<b>HEADLINE</b>	<b>03/23 Seattle man admits NJ armed robbery</b>
<b>SOURCE</b>	<a href="https://www.seattlepi.com/local/crime/article/Seattle-man-charged-in-4-deaths-admits-to-armed-12778328.php">https://www.seattlepi.com/local/crime/article/Seattle-man-charged-in-4-deaths-admits-to-armed-12778328.php</a>
<b>GIST</b>	<p>A 33-year-old Seattle man who allegedly killed four people as retribution for U.S. policies in the Middle East pleaded guilty Friday to two charges related to armed robbery in New Jersey.</p> <p>Ali Muhammad Brown pleaded guilty to first-degree robbery and second-degree unlawful possession of a handgun in New Jersey Superior Court on Friday, according to the Asbury Park (N.J.) Press.</p> <p>Brown robbed a Washington, D.C., man outside a Point Pleasant Beach, N.J. cafe on June 29, 2014, four days after he allegedly killed a 19-year-old college student near Newark, N.J.</p> <p>Authorities say Brown was on the lam from a trio of killings in the Seattle area. He has been charged with the deaths of two men in the Leschi neighborhood on June 1, 2014 and the shooting death of another man on April 27, 2014 in Skyway.</p> <p>Investigative records filed in King County Superior Court indicate that Brown told King County and Seattle detectives in Essex County, New Jersey, that he was following his Muslim faith by killing people in retaliation for the United States' policies regarding Iraq, Iran and Afghanistan.</p> <p>"(If a) man sees evil then he must take action against that evil," Brown said, according to court records.</p> <p>The crime for which Brown pleaded guilty Friday was his undoing. He fled the scene with the victim's wallet and car keys but couldn't operate the vehicle because he didn't know how to drive a stick shift, police said. But, they added, he left behind a fingerprint and was later apprehended after another alleged robbery while in possession of the gun linked to the four killings.</p> <p>Brown was convicted in that later robbery and is serving a 35-year sentence for that crime.</p> <p>He is currently on trial for the New Jersey killing, after which he will await extradition for the Seattle-area slayings.</p>

HEADLINE	<b>03/23 NYPD neighborhood policing program</b>
SOURCE	<a href="https://www.cbsnews.com/news/nypd-community-policing-lower-crime/">https://www.cbsnews.com/news/nypd-community-policing-lower-crime/</a>
GIST	<p>In 2017, New York City saw some of its lowest violent crime numbers in decades. The nation's largest city police department reported historic reductions in crime last year, including the first time the number of shooting incidents fell below 800 and the number of murders below 300 — the city's lowest per-capita murder rate in almost 70 years. Other reductions were seen in the number of robberies and burglaries in the city.</p> <p>With those benchmarks in mind, the NYPD now faces the challenges of sustaining, and attempting to surpass, that progress in 2018. The police force kicked off the year with some key internal promotions including the appointment of Rodney Harrison as Chief of Patrol. At the core of their approach to crime reduction is a concept called neighborhood policing.</p> <p>"We have more police officers on the streets who are in the process of building relationships," said Harrison. "Having that shared responsibility with the residents of the city of New York, that's a great way of being able to maintain violence at a low level."</p> <p>That concept of "shared responsibility" is often reiterated by NYPD Commissioner James O'Neill. In order to build a sense of unity, the NYPD is training neighborhood coordination officers through the Neighborhood Policing Program to deepen community relationships and make cops accessible to residents, not just in times of distress but as an integral part of their daily lives.</p> <p>Officers John Buchanan and Robert Bramble are neighborhood coordination officers at the 79th Precinct, focusing on the people and issues of their Brooklyn community.</p> <p>"The policing module is changing the way the community and police interact," said Buchanan. "It's taking officers that are generally scattered throughout the precinct everyday and assigning them to the same areas consistently so that if they have an issue, a problem in that area, that they're aware of it and they respond.... A person doesn't have to re-explain their problem over and over. It provides a sense of consistency for the officer and person knowing who's gonna show up when they call 911."</p> <p>Modern technology also helps make them more accessible. All 36,000 officers in the department have cellphones and many use them as ways to be contacted by their local residents.</p> <p>"Have you ever had a personal issue like if you had an ailment you had to go see a doctor? You always go see the same doctor," said Chief Harrison. "Well, it's kind of the same thing now. You have police officers in your neighborhood that are always assigned to you and you have access to them and you'll be able to call them when you need them and you'll be able to email them and there's always dialogue going back and forth."</p> <p>This focus on developing more meaningful connections with neighborhood residents comes amid a tense time in modern policing. Individual cases of police brutality — often caught on video and circulated on social media — have fueled public outrage and heightened scrutiny of the actions of police officers.</p> <p>Tracie Keesee, PhD, is the Deputy Commissioner of Equity and Inclusion at the NYPD and formerly served as the Deputy Commissioner of Training. In addition to her leadership and work with the NYPD, Keesee also has a doctorate in human and intercultural communications. In her thesis she focused on racial profiling and the interactions "through the car window" between law enforcement and members of the African-American community. That deep understanding of the complex societal dynamics shines through in her work.</p> <p>"You'll hear a lot of conversations around unconscious bias or implicit bias, and so we're human," said Keesee of the officer's perspective. "With the person on the other side of that window — the driver, African-American, male — you're coming with a history of interactions with law enforcement hoping that it will go well, that you have everything you need for that interaction."</p>

But some in the community say the reality has yet to live up to the promise.

Terrell J. Starr is a senior reporter for The Root and a resident of Bedford-Stuyvesant, Brooklyn, one of the neighborhoods patrolled by neighborhood coordination officers like Buchanan and Bramble. Starr argues that policing is inherently an adversarial role and putting more police officers into an area can actually increase tension with community members, especially minorities.

"The average young black male in New York City, they're not engaging with police officers at that level. The only time they're engaged with a police officer is normally in handcuffs," said Starr.

He remains troubled by how easily police encounters can escalate into the use of deadly force — and dismayed by the justifications that are often given when that happens.

"That's all it takes for a police officer to shoot you or to attack or to apply force: 'I felt.' That's something that Trayvon Martin's mother said when she was talking about policing, 'I felt.' And I hope that a black cop, or even a Latino cop when they look at me, they're not going to have that 'I felt' something or 'I fear for my life,'" said Starr.

Starr's skepticism also comes from a belief among some residents that cops, even if diverse, have more of a loyalty to their uniform than to the community — considering themselves "blue" before any other color.

But police departments nationwide have come under fire for a perceived lack of accountability in the tense atmosphere surrounding police brutality and the use of force in disputed circumstances.

"The problem comes in when a police officer engages in egregious activity and they're not held accountable, that's something that has not been touched at all. That's not an NYPD issue, that's not even a state of New York issue, that's an America issue," said Marc Morial, the president of the National Urban League and former mayor of New Orleans.

Lack of accountability is also a key concern for Starr.

"I don't think we need more contact with police, I think we need less — and more accountability," he said.

The NYPD's training programs aim to address situations that could escalate to violence and prevent the situation from ever reaching the point of an unnecessary fatality.

By putting officers into high-pressure simulations before sending them into the field, the NYPD hopes to prepare officers for difficult situations, such as dealing with someone with mental health issues.

"We do the best that we can to have officers understand that some of these things you can control and some of them will happen so fast that you will have to do and react in a way that you might not find yourself normally doing. And I think that it's important, though, for us to find that balance to make sure they understand the dangers of the job," said Keesee.

By focusing on programs that increase community relations and diversity in the force, the NYPD hopes to rebuild some of the trust between city residents and law enforcement.

The NYPD is not the first big city police department to turn to a neighborhood policing strategy. In the 1990s, New Orleans saw a 60 percent drop in violent crime after the mayor at the time, Marc Morial, implemented a combination of community policing and community-oriented development programs. Morial recounted that they went from being a city with one of the highest number of FBI complaints for police brutality and misconduct to having just a handful per year.

Morial called the NYPD's efforts "an ambitious and worthwhile undertaking," but emphasized, "time will tell" if it's fully successful.

<b>HEADLINE</b>	<b>03/23 Spain charges Catalan leaders w/rebellion</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/spain-wraps-judicial-probe-catalan-secession-attempt-53956842?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/spain-wraps-judicial-probe-catalan-secession-attempt-53956842?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>A Spanish Supreme Court judge charged 13 Catalan separatist politicians with rebellion Friday for their attempts to make the region independent of Spain, dealing a heavy blow to the secessionist movement with an indictment that could put its political elite behind bars for decades.</p> <p>Judge Pablo Llarena ordered five of the Catalan politicians who answered a court summons Friday to be held without bail. Another of the summoned politicians, the ERC party's Marta Rovira, did not heed the order and announced in a letter that she was fleeing the country to live "in exile." Spanish media reported that she went to Switzerland.</p> <p>The judge also ordered that European and international arrest warrants be issued for six fugitive Catalan politicians, including former regional president Carles Puigdemont and Rovira. Two other Catalan politicians are already in jail.</p> <p>The charges of rebellion stem from an illegal independence declaration by the Catalan parliament last October. Rebellion is punishable with up to 30 years in prison.</p> <p>Spanish courts sought Puigdemont's extradition from Brussels last year but canceled that petition amid concerns that Belgium might send him back but restrict the crimes with which he could be charged.</p> <p>The jailings Friday are likely to cause outrage in Catalonia, where many supporters describe the Catalan officials in custody as "political prisoners." The pro-independence civil society group ANC called for marches late Friday in towns across the region.</p> <p>The separatist movement in Catalonia, a wealthy region of 7.5 million in northeast Spain, has ignited Spain's biggest constitutional crisis in decades. The indictment Friday appeared to scotch hopes of breaking the political deadlock and installing a new Catalan government any time soon.</p>

<b>HEADLINE</b>	<b>03/24 Protests in Sacramento grow unruly</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/protests-sacramento-over-unarmed-mans-death-grow-unruly-stephon-clark/">https://www.cbsnews.com/news/protests-sacramento-over-unarmed-mans-death-grow-unruly-stephon-clark/</a>
<b>GIST</b>	<p>SACRAMENTO, Calif. -- Demonstrators broke at least one car window, doused a bystander with drinks, and blocked busy downtown Sacramento thoroughfares in a second day of protests over the fatal officer-involved shooting of an unarmed black man. The Sacramento Bee reports Friday's protests grew unruly and sometimes violent.</p> <p>About 200 protesters confronted drivers in traffic, breaking the rear window of one car as it made its way through the throng.</p> <p>One video shows a protester jumping on an SUV's hood and the vehicle starting to drive off with him on top. The man jumped off, and the SUV sped away.</p> <p>The California Highway Patrol blocked ramps to Interstate 5 from protesters trying to disrupt traffic for a second day.</p> <p>Police fatally shot 22-year-old Stephon Alonzo Clark in the darkened backyard of his grandparents' home. He was shot while holding a cellphone that police said they thought was a gun, CBS News' John</p>

	Blackstone reported.

<b>HEADLINE</b>	<b>03/23 Driver identified in Travis AFB crash</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/23/us/travis-air-force-base-security-breach/index.html">https://www.cnn.com/2018/03/23/us/travis-air-force-base-security-breach/index.html</a>
<b>GIST</b>	<p>(CNN) — The man who died after the vehicle he drove onto Travis Air Force Base in Northern California caught fire has been identified, the FBI said Friday.</p> <p>Hafiz Kazi, 51, had lived in the United States since 1993 and was a legal resident, FBI Special Agent Sean Ragan said at a news conference. He was originally from India.</p> <p>Authorities have not announced a motive but the security breach does not appear at this point to be terrorism-related, Ragan said.</p> <p>"We don't have any nexus to terrorism at this point," he said.</p> <p>However, agents are searching his phones and social media for any possible connections. Kazi apparently lived in the San Francisco area and had worked as a cab driver, Ragan said.</p> <p>Ragan said a Kia minivan drove through the main gate at the base about 7 p.m. Wednesday. It looked like there were flames inside the vehicle, he said.</p> <p>The vehicle veered, crashed and started burning, Ragan said. By the time first responders broke through the locked doors, Kazi was dead, Ragan said.</p> <p>No shots were fired, he said. An autopsy is pending.</p> <p>Investigators discovered five propane tanks, three phones, gas cans, several lighters and a gym bag inside the car, Ragan said.</p> <p>"The investigation is ongoing and there are no current known threats to the base or community," the base said. " The main gate has reopened and all other facilities are operating as normal."</p> <p>Travis Air Force Base is home to 10,000 military personnel and is a major hub for logistics and military cargo in the Pacific. It's the largest military aerial port in the United States and includes facilities for airlift and aerial refueling.</p> <p>The base is located in Solano County and is midway between Sacramento and San Francisco.</p>

<b>HEADLINE</b>	<b>03/25 Germany arrests ex-Catalan leader</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/fugitive-catalan-leader-held-police-germany-53998737?">http://abcnews.go.com/International/wireStory/fugitive-catalan-leader-held-police-germany-53998737?</a>
<b>GIST</b>	<p>Carles Puigdemont, the fugitive ex-leader of Catalonia and ardent separatist, was arrested Sunday by German police on an international warrant as he tried to enter the country from Denmark.</p> <p>The Spanish government told The Associated Press it had received "official confirmation from German authorities of the arrest" of Puigdemont in response to the warrant issued by Spain's Supreme Court.</p> <p>Police in the northern German state of Schleswig-Holstein said highway police arrested Puigdemont on Sunday morning near the A7 highway that leads into Germany.</p>

	<p>His lawyer, Jaume Alonso-Cuevillas, said Puigdemont was on his way back to Belgium where he has been staying since fleeing Spain following a failed bid by his regional government in October to declare independence from Spain.</p> <p>A Spanish Supreme Court judge reactivated an international arrest warrant for Puigdemont on Friday when he was visiting Finland. Arrest warrants have also been issued for five other fugitive Catalan separatists.</p> <p>Spain was plunged into its worst political crisis in three decades when Puigdemont's government flouted a court ban and held an ad-hoc referendum on independence for the northeastern region in October.</p>

HEADLINE	03/23 Who counted the votes in Russia?
SOURCE	<a href="https://www.washingtonpost.com/news/monkey-cage/wp/2018/03/23/who-counted-the-votes-in-russia-we-checked/?utm_term=.485dec5958ee">https://www.washingtonpost.com/news/monkey-cage/wp/2018/03/23/who-counted-the-votes-in-russia-we-checked/?utm_term=.485dec5958ee</a>
GIST	<p>On March 18, 2018, Russians reelected President Vladimir Putin by a huge margin. Official reports say that 67 percent of voters went to the polls and that 76 percent of those supported the incumbent. This result comes as zero surprise, and media coverage has focused on the lack of true opposition candidates and allegations of ballot-stuffing.</p> <p>But there is more to this story. About 800,000 poll workers at more than 95,000 polling stations across Russia delivered basic administrative services for this election. This army of street-level bureaucrats verified voter identities, issued/counted the ballots and established the voting tallies at each precinct.</p> <p>How did Sunday’s election look, behind the scenes? We tend to assume that poll workers, whether they are in South Dakota or the Northern Caucasus, are professional and independent. Put simply, we expect poll workers to leave aside their political biases and ensure that voting takes place according to fair and impartial procedures.</p> <p>And we tend to believe that polling commissions — whose job is to organize and manage elections properly — should include representatives of different parties. This makes for balanced monitoring and control, which helps diminish voting manipulation and election fraud.</p> <p>Russia’s elections do not look impartial</p> <p>On the basis of data about poll workers that we collected and analyzed, a number of reasons exist to be doubtful that Russia’s election commissions were balanced and unbiased. We spent several months monitoring the composition of precinct commissions before the 2018 election. We used official data disclosed by the Central Election Commission of the Russian Federation.</p> <p>We considered poll workers’ names, their positions as commissioners (head, deputy head, secretary, regular member), and what type of organization nominated them to the commission. Here is what we found:</p> <ol style="list-style-type: none"> <li>1. Many poll workers probably came under pressure to manipulate the voting process and voting tallies. Russia’s political parties, gatherings of voters and civic organizations nominated about 385,000, 355,000 and 65,000 poll workers, respectively. These figures tell little about the exact political affiliations of poll workers, but they shed light on mechanisms for recruiting commissioners. And the “gatherings of voters” is the most voluminous and electorally sensitive mechanism of poll workers’ mobilization.</li> </ol> <p>The vast majority (nearly two-thirds) of the 355,000 poll workers from this category were recruited from their workplaces. Many are “bjudgetniki” (from the word “budget”) — workers who get their salaries from the state. Thus, teachers, local bureaucrats and administrators, service members and workers at state enterprises are particularly vulnerable to administrative resource, a form of political coercion.</p>

This means their bosses — higher-ranking school administrators and bureaucrats, heads of enterprises and commanders — can either push them to commit illegal actions, electoral manipulations or fraud. Or they can calm poll workers who see these actions at their precincts and might think about reporting the irregularities.

2. Putin supporters occupied 1 in 3 electoral commission head positions. More than 60 political parties recruited 385,000 poll workers. And the vast majority of the electoral commissioners were nominated by political parties that got seats in the December 2016 Duma elections.

Among them, the governing United Russia party and ally Just Russia both supported the candidacy of Putin in 2018. These parties control a combined 37.5 percent of party-nominated commissioners. Heads of commissions, in particular, possess more powers, influence and discretion than regular poll workers: Whoever has control over the commissions' officers also has more control over the commission in general.

And this is exactly what we observed in the selection of Russia's commission heads. More than 38,000 of these heads were recruited from the gatherings of the voters' nominees, which means a large portion of them are, therefore, more vulnerable to administrative pressure, mainly at their workplaces. An additional 28,000 commission heads were recruited from United Russia, which, by itself, controls twice as many commission heads as all other parties combined.

What does this mean on the ground? Basically, every third head of a polling station commission in Russia was nominated by United Russia, which backed Vladimir Putin.

3. A closer look at Crimea's poll workers shows many newcomers. This was the first time that voters in Crimea cast ballots in a Russian presidential election since Russia occupied the peninsula in 2014. In our analysis, we compared the composition of poll workers in Crimea for the 2018 election with the poll workers from the last election, held in 2012 under Ukrainian rule.

We found that fewer than 20 percent of the 2012 poll workers were signed up to work in 2018. This suggests that the new regime has extensively substituted new poll workers for previous election administration personnel. Considering the absolute number of people needed — more than 14,000 commissioners — the Russian administration in Crimea seemed to set up an efficient system to recruit poll workers.

What do all of these findings suggest, then? Taken together, they paint a picture of the many ways that the Russian regime can control what happens on election day. By filling election commissions with poll workers who depend on the state for their livelihoods, integrating representatives from the parties that actively backed the Putin regime, and controlling officer positions — mainly heads of the commissions — the story seems straightforward.

In Russia, the regime does pay close attention to those “who count the votes.”

<b>HEADLINE</b>	<b>03/23 Congress just averted govt. shutdown</b>
<b>SOURCE</b>	<a href="http://time.com/5212173/congress-shutdown-budget-1-3-trillion/?xid=homepage">http://time.com/5212173/congress-shutdown-budget-1-3-trillion/?xid=homepage</a>
<b>GIST</b>	<p>(WASHINGTON) — Congress gave final approval Friday to a giant \$1.3 trillion spending bill that ends the budget battles for now, but only after late obstacles skirted close to another shutdown as conservatives objected to big outlays on Democratic priorities at a time when Republicans control the House, Senate and White House.</p> <p>Senate passage shortly after midnight averted a third federal shutdown this year, an outcome both parties wanted to avoid. But in crafting a sweeping deal that busts budget caps, they've stirred conservative opposition and set the contours for the next funding fight ahead of the midterm elections.</p>

	<p>The House easily approved the measure Thursday, 256-167, a bipartisan tally that underscored the popularity of the compromise, which funds the government through September. It beefs up military and domestic programs, delivering federal funds to every corner of the country.</p> <p>But action stalled in the Senate, as conservatives ran the clock in protest. Then, an unusual glitch arose when Sen. James Risch, R-Idaho, wanted to remove a provision to rename a forest in his home state after the late Cecil Andrus, a four-term Democratic governor.</p> <p>At one point, Sen. Bob Corker, R-Tenn., stepped forward to declare the entire late-night scene “ridiculous. It’s juvenile.”</p> <p>Once the opponents relented, the Senate began voting, clearing the package by a 65-32 vote a full day before Friday’s midnight deadline to fund the government.</p>

<b>HEADLINE</b>	<b>03/22 School shooting generation #NeverAgain</b>
<b>SOURCE</b>	<a href="http://time.com/longform/never-again-movement/?xid=homepage">http://time.com/longform/never-again-movement/?xid=homepage</a>
<b>GIST</b>	<p>It’s lunchtime on a Tuesday, and the kids are piling into a pizzeria booth in Coral Springs, Fla., to plot a revolution. “The adults know that we’re cleaning up their mess,” says Cameron Kasky, an 11th-grader at Marjory Stoneman Douglas High School, who started the #NeverAgain movement to curb gun violence three weeks earlier in his living room. “It’s like they’re saying, ‘I’m sorry I made this mess,’” adds buzzcut senior Emma González, “while continuing to spill soda on the floor.”</p> <p>Kasky and González are sitting with two more of the movement’s leaders, Alex Wind and Jaclyn Corin. Except they’re not sitting, exactly. They’re crouching diagonally on the seat and leaning back on one another’s knees in order to devour their calzones while maintaining as much physical contact as possible. Corin throws a crouton into González’s mouth. Kasky uses Corin’s knees as a pillow. The conversation turns from their fellow organizer David Hogg (“So laser-focused,” González says, that “he could make his body get pregnant if he wanted to”) to the conspiracy theory that they’re actors being paid by shadowy donors (prompting Kasky to ask why his credit card was recently declined at McDonald’s) to their prolific trolling of the NRA. They agree that the gun lobby’s spokeswoman, Dana Loesch, is “very hot but kind of scary,” as González puts it.</p> <p>The pizza joint is a few hundred yards away from the school where 17 of their peers and teachers were murdered a month ago. At 2:21 p.m. on Valentine’s Day, according to authorities, 19-year-old Nikolas Cruz, a former student, entered the freshman building armed with an AR-15 and opened fire into four classrooms on the first floor. Corin had just delivered carnations to the building to raise funds for junior prom; she had handed one flower to a girl who was shot minutes later. After the fire alarm went off during his AP environmental science class, Hogg took a video of students crouching inside a tiny classroom to hide from the shooter. The video went viral, landing him a recurring spot on the cable-TV circuit. The next day, Kasky invited Wind and Corin over to his house to plan a march for gun reform. Together, they started the #NeverAgain hashtag on Twitter.</p> <p>Most of these kids cannot vote, order a beer, make a hotel reservation or afford a pizza without pooling some of their allowance. On the surface, they’re not so different from previous generations of idealistic teenagers who set out to change the world, only to find it is not so easy. Yet over the past month, these students have become the central organizers of what may turn out to be the most powerful grassroots gun-reform movement in nearly two decades. For much of the rest of the country, numbed and depressed by repeated mass shootings, the question has become, Can these kids actually do it?</p> <p>No one thinks it will be easy. Gun violence in America is one of those problems that can feel truly hopeless. The U.S. has only 4.4% of the world’s population, yet it accounts for roughly 42% of the world’s guns, according to the comprehensive 2007 Small Arms Survey. And roughly 31% of the world’s mass shooters are American, according to a University of Alabama study. Even as mass-shooting deaths mount,</p>

our Second Amendment has made gun rights a third-rail issue: roughly 90% of Americans agree on “common-sense” solutions like universal background checks, yet absolutists stand in the way of any meaningful action.

After Adam Lanza killed 20 first-graders and six staff members at a Connecticut elementary school in December 2012, politicians tried to tackle the issue. President Obama issued Executive Orders to strengthen the background-check system and study gun violence, and several states tightened gun restrictions. Yet Congress failed to pass a modest bipartisan bill to close loopholes for gun sales. In the five years since, a familiar pattern has emerged. Every month or so, a killer shoots innocent people at random. There is a brief period of mourning. Democrats offer feeble pleas for new gun limits; Republicans offer “thoughts and prayers.” No substantial laws are passed, and the nation moves on. This was the response when Omar Mateen killed 49 people at an Orlando nightclub in 2016; when Stephen Paddock massacred 58 people at a Las Vegas concert last October; when Devin Patrick Kelley killed 26 people in a Sutherland Springs, Texas, church in November.

But in the days after the Parkland shooting, something different happened. The Parkland kids, at once tearful and cutting, publicly called out the NRA’s influence on national politics, and shamed the leaders they considered responsible for the nation’s lax gun laws. (Privately, they have dubbed Florida Governor Rick Scott “Voldemort” and called Senator Marco Rubio some names that are unprintable.) Their voices quickly went viral. González had no Twitter account before the shooting—11 days later, she had more followers than the NRA. They called for specific changes like a renewed assault-weapons ban, universal background checks and digitized gun—ownership records.

Perhaps most important, the Parkland kids painted the NRA and their allies as the mortal enemies of the roughly 50 million schoolkids growing up in what Kasky calls “the mass-shooting generation.” They took the mantle of “personal protection” from the gun lobby, while reframing the larger gun debate along generational lines.

And so news that was once met with sad resignation now drives teenagers to march in the streets. On March 14, nearly a million kids across the country left class for the National School Walkout to protest the school-shooting epidemic. Support for stronger gun regulations spiked to 68% after the shooting, up from 60% last November, according to a Politico/Morning Consult survey. Public support for the NRA is down to 37%, according to a WSJ/NBC poll, the first time since 2000 that the organization has been viewed more negatively than positively. Companies from Delta Airlines to Hertz to MetLife cut ties with the NRA. Dick’s Sporting Goods announced it would stop carrying assault weapons. Florida, known for its historically soft gun policies, passed a bill March 9 that bans bump stocks, imposes a waiting period, raises the minimum age to buy a weapon and allows cops to take guns from mentally disturbed people. Sixty-seven NRA-endorsed Republicans voted for the bill, and the gun-friendly GOP Governor Scott signed it.

How a movement catches fire is always a mystery, but the Parkland kids seem matched for this moment. They’re young enough to be victimized by a school shooting, but old enough to shape the aftermath. Like many teenagers, they’re at a peculiar stage in their lives where they feel at once vulnerable and invincible, highly social yet impervious to the etiquette expected from adults. Their bombastic style mirrors President Trump’s: they call their enemies names and hurl sick burns at politicians and lobbyists as if they’re shouting across the locker room.

None of which means they’ll actually succeed, and the kids are not entirely naive about their chances. They know the GOP-controlled Congress is unlikely to pass meaningful new gun laws. Although Trump briefly signaled support for strengthening background checks, he quickly abandoned that position. Nor do the Parkland kids speak for everyone, by a long shot: polls show that young people as a whole do not necessarily favor stricter gun laws than their parents. Which means the kids face the same question as the movements before them: If this government doesn’t respond to their demands, did their movement make a difference?

The first big test will come on March 24 with the student-led March for Our Lives, which already has registered more than 800 demonstrations in all 50 states and on six continents. (“Sorry, Antarctica, y’all

are gonna get shot,” Kasky quips.) The organizers plan to allow only young speakers to address the Washington march, and only artists under 24 can submit official poster designs. The march is meant to expand voter registration among like-minded members of the school-shooting generation: the kids that grew up post-Columbine, who huddled behind barricades during active-shooter drills and learned to tape construction paper over classroom windows.

From there, the Parkland kids plan to make gun reform the central issue for young voters in the midterms. “We’re going to show these politicians that we’re coming for them,” says Hogg. Kasky is more ambitious. “The world failed us,” he says, “and we’re here to make a new one that’s going to be easier on the next generation. If you’re against that, then get out.”

The youth revolt is being planned in a donated office space in a strip mall, next to a mediocre deli in a small town near Parkland. To get inside the three windowless rooms where the #NeverAgain movement is headquartered, you have to knock three times on a locked glass door and then loudly identify yourself so the kids are sure you’re not an armed stalker. (They have received death threats.) Inside the lair, there are boxes of March for Our Lives T-shirts and a bust of Robert F. Kennedy next to whiteboards with schedules of conference calls. On one wall there’s a collage of mail that runs the gamut from encouraging to obscene. (An excerpt from one letter, sent to 17-year-old Parkland organizer Delaney Tarr: “Shut the f-ck up, you stupid f-cking c-nt.”) On another there’s a map of the U.S. where the teens have labeled the hundreds of sibling marches. A broom closet near the back bears a sheet of notebook paper that says Cameron Kasky’s office, directly across from a tiny bathroom labeled Cameron Kasky’s other office.

Everything crackles with a sense of ferocious optimism. It feels like the last rehearsal of a high school musical, halftime at state championships, the final days of senior year. The kids stream in and out on no particular schedule, tumble to the floor to read their fan mail, twirl around on chairs while composing tweets and crowd into a tiny conference room for calls with reporters or lawmakers. One day, they spent an afternoon making a video mocking NRA spokeswoman Loesch (they call her “the woman from the SuperBeets commercial” after digging up an old spot she did for a beet-juice product). Another day, they met with Representative Ted Deutch, a Florida Democrat who represents Parkland in Congress. There’s a sense that anything can happen in this little corner of the teenage universe, because all kinds of things can.

Gun politics have vexed adult organizers for decades, but so far the Parkland teens have had striking successes. Even though the kids are disappointed in the Florida bill (“It’s like they tried to take a big step forward and then tripped,” Hogg says), it’s still the first significant piece of gun legislation to come out of the Florida legislature in at least 20 years. The March 14 school walkouts, organized by Women’s March youth groups, surpassed the 750,000 protesters who flooded the Washington Mall for the Million Mom March in 2000 in what was then the largest gun-safety protest in U.S. history. “This youth movement is unprecedented,” says Kris Brown, co-president of the Brady Campaign to Prevent Gun Violence, which was formed by the organizations behind the 2000 march. “What’s different here is that the children who are impacted are older, and they are able to give voice in a way that could not happen before.”

The #NeverAgain organizers built a movement with the skills they learned in high school. Hogg, an aspiring journalist who studies TV production at Stoneman Douglas, has anointed himself the movement’s “press secretary.” Corin, the bubbly junior class president who did a 50-page term paper on gun control last year, organized roughly 100 students to travel to Tallahassee to lobby the state legislature. Kasky and Wind, both drama kids, have given some of the most emotional testimony about the shooting and their dead classmates. González gave a speech about the NRA’s influence that was informed by an AP government lesson on special-interest groups.

The kids are social-media natives who have used Twitter to stir up the same kind of fervor Trump does. If the President can mock his enemies, they reason, then why can’t high school students? “People always say, ‘Get off your phones,’ but social media is our weapon,” says Corin. “Without it, the movement wouldn’t have spread this fast.”

Teens have always had a unique talent for humiliation, and social media only sharpens their knives. If the Parkland kids were targeting their classmates instead of powerful lobbyists or Senators, their taunts could

be mistaken for bullying. But going up against the NRA, they're like mouthy Davids slinging stones at Goliath. "They're using Twitter as a means to ridicule, to dismiss, to brush past the usual criticisms and just say, 'These people are full of it,'" says Robert Spitzer, a professor of political science at SUNY Cortland who has written five books on gun policy. "The door for this has been opened by Donald Trump himself."

As teenagers who survived a school shooting, they're politically hard to hit: if the NRA or the GOP fight back, they are attacking young victims of a tragedy. One GOP candidate for the Maine house of representatives who called González a "skinhead lesbian" on Twitter faced so much online backlash that he dropped out of the race.

The students have had plenty of help. They've raised more than \$4 million from small donors on the crowdfunding site GoFundMe, plus a couple million more from celebrities like George and Amal Clooney, Steven Spielberg and Oprah Winfrey. A top Hollywood PR firm is assisting with press requests pro bono, and Women's March organizer Deena Katz is volunteering as a consultant on the march. The gun-reform advocacy group Everytown for Gun Safety, backed by billionaire former New York City mayor Michael Bloomberg, has given out more than \$1 million in grants to local organizers planning sibling marches around the country, and the Brady Campaign to Prevent Gun Violence is sending busloads of kids to Washington, D.C. Democratic megadonor Tom Steyer pledged \$1 million to gun-safety groups' efforts to register more high school students to vote. "Our biggest problem is that we're getting too much help," says Corin.

They know that other youth campaigns against gun violence, including those led by black activists in urban communities, have not gotten the same financial support or media attention. "We came from an affluent area, and we're mostly white, and we have to use that privilege," says Tarr. The kids say they are trying to correct the imbalance. A letter from the Dream Defenders, a racial-justice group formed after the killing of Trayvon Martin, is hanging on the office wall. And in early March, the teens invited young activists from the Peace Warriors, a Chicago anti-violence group, to Parkland to discuss coordinating their efforts. "We're fighting for the same thing," says Arieyanna Williams, a high school senior from Chicago who has been working with the Peace Warriors since sophomore year. "We found our voice in Parkland. We didn't really have it here."

Inside the office, there is no adult supervision beyond Matt Deitsch and Kaylyn Pipitone, two 20-year-old college students and recent Stoneman Douglas alums who help with things that only adults can do, like signing contracts and insurance forms and paperwork for their 501(c)(4). "We want the grownups we need in this, and nothing more," says Kasky. "We only have people doing the things that as 17-year-olds we cannot." At an early #NeverAgain meeting, parents asked how they could help, recalls Alex Wind's mother.

The answer came back: "Order pizza."

The March for Our Lives almost certainly won't lead to major gun legislation in Congress this year. But the Parkland teens are taking the long view. To them, this movement is as much about mobilizing young voters as it is about gun violence. The voter-registration group HeadCount plans to dispatch roughly 5,000 volunteers to sign up young voters at U.S. marches. The Parkland kids say their goal is for 4 out of 5 young people to vote in November's midterm elections. "Either have the politicians pass legislation or set them up to be voted out," Kasky says. "It's a win-win." If only it were that simple. Only 39% of voters between 18 and 20 voted in the 2016 election, according to the Center for Information & Research on Civic Learning and Engagement at Tufts University, and only 14% of voters that age showed up to cast a ballot in the 2014 midterms. Previous turnout drives have not had much success. Not all young people vote Democratic, either. While Trump has a historically low approval rating among millennials (only 6% strongly approve of him, while 46% strongly disapprove), almost a third of millennials lean Republican, according to a Pew survey. Only 49% of 18-to-29-year-olds favored a renewed assault-weapons ban in a 2015 Pew survey, while more than half of respondents of other age groups did support a ban.

They envision a youth political movement that will address many of the other issues affecting the youngest

Americans. Hogg says he would like to have a youth demonstration every year on March 24, harnessing the power of teenage anger to demand action on everything from campaign-finance reform to net neutrality to climate change. But even if none of this works—even if they never pass comprehensive gun reform, and net neutrality fails, and Citizens United endures, and climate-change legislation stalls—today’s teenage rebels will become tomorrow’s establishment leaders, informed by the experience that may already be shaping the gun debate.

And that, says Hogg, is the bottom line for politicians who side with the NRA. “You’re gonna be smeared in the textbooks. Your legacy is gone,” he says. “If you don’t stand up with us now, you’ll be standing against us.”

<b>HEADLINE</b>	<b>03/22 Census: people, jobs, housing costs up</b>
<b>SOURCE</b>	<a href="http://www.thenewtribune.com/news/business/article206326214.html">http://www.thenewtribune.com/news/business/article206326214.html</a>
<b>GIST</b>	<p>Last year, enough people arrived in Pierce, King and Snohomish counties to fill Cheney Stadium nearly 10 times over.</p> <p>From April 2016 through April 2017, the population of the Seattle-Tacoma-Bellevue area grew by more than 64,000 people, according to data released Thursday by the U.S. Census Bureau.</p> <p>The three-county area was the sixth-fastest growing metro area in the country, topped only by Dallas, Houston, Atlanta, Phoenix and Washington, D.C., areas, the Census Bureau says.</p> <p>The population numbers account for births and deaths, with the primary driver for growth being people who came here from other places.</p> <p>King County accounted for more than half of the increase, with nearly 33,000 more people living there than the previous year. The county saw the sixth-highest growth nationally in the number of people who moved there.</p> <p>Pierce County’s growth was 26th nationally, with a little over 17,000 more people here in 2017 than the prior year. That’s more than 46 people moving to Pierce County or being born here each day.</p> <p>Last year also saw job growth throughout the region.</p> <p>According to figures from the Puget Sound Regional Council, Seattle experienced 3 percent job growth in 2017. Pierce County was at 2 percent.</p> <p>Since 2010, the region has added nearly 370,000 jobs.</p> <p>All of this puts more pressure on transportation systems and is driving up housing costs throughout the region.</p> <p>Rents in the area remain among the fastest-growing nationwide, according to real estate data website Zillow. Median rent in Seattle is \$2,200 a month, a nearly 5 percent increase from the previous year.</p> <p>The pace of rent increases in Tacoma is stunning compared to national figures, where median rents increased nearly 3 percent to \$1,445 per month nationwide.</p> <p>Tacoma’s rents rose by 9 percent in a year, with typical rents hitting \$1,600 a month.</p> <p>If you’re looking for affordable housing, there’s more bad news: Zillow says a third fewer homes are on the market in Tacoma now than last year, when inventories hit a record low.</p>

Median home values in Tacoma rose 14 percent in a year, to a median of \$279,600, according to Zillow. (The company's algorithm values all homes, not just those that sell.)

It's already difficult to find a place to rent in some parts of Tacoma. Now Zillow says renters are staying in place longer for a variety of reasons: Those who want to buy can't find a home, or if they want to move, it's hard to find another apartment or rental home.

"Searching for the 'right' home has become a drawn-out affair, and rising prices require more savings for a down payment," Zillow senior economist Aaron Terrazas said in a news release.

"Were it not for strong new apartment construction over the past half-decade, rental appreciation would be even stronger than it is now."

Still, builders are not keeping pace with people moving here.

Construction firms have said they can't hire skilled laborers fast enough, and the state predicts hundreds more construction jobs will be needed in the coming years to fill the demand.

As such, people have been venturing to areas farther from urban job centers, adding to rapid growth in smaller Western Washington communities.

The new census data noted that Shelton and Centralia were among the largest-gaining metropolitan areas in the United States — defined as urban areas with core populations of at least 10,000 but fewer than 50,000.

The two towns were ranked No. 9 and 10, respectively, on the latest Census Bureau list. Shelton's population grew by 1,587 to 63,710; Centralia grew by 1,570 to 78,200.

The latest data track with trends seen last year of more people looking beyond Seattle to areas such as Mason County.

Kristy Buck, managing broker with John L. Scott's Shelton office, told The News Tribune in September that its waterfront was "drawing people from Seattle, Tacoma and California."

<b>HEADLINE</b>	<b>03/22 Teen wins Tacoma PD, mall lawsuit</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/news/local/article206484374.html">http://www.thenewstribune.com/news/local/article206484374.html</a>
<b>GIST</b>	<p>The teen thrown to the ground by an off-duty Tacoma police officer working security at the Tacoma Mall were awarded more than half a million dollars Thursday in federal court.</p> <p>Monique Tillman and her brother, Eric Branch, sued Officer Jared Williams and the city of Tacoma in U.S. District Court in Tacoma, alleging that Williams' conduct while attempting to detain the two on May 24, 2014, in the mall parking lot was assaultive and excessive. A jury found their claims to be true and awarded them \$550,000, attorney Rick Friedman said.</p> <p>"Monique and Eric are just looking forward to putting this behind them and getting on with their lives," Friedman said. "I think it was important for them to stand up for their civil rights and not take this lying down, but they also don't want to hold any grudges moving forward."</p> <p>A call and email seeking comment from the city of Tacoma were not immediately returned.</p> <p>Security footage captured Williams throwing Tillman to the ground by her hair after she and Branch were bicycling through the mall parking lot. Williams was in his Tacoma police cruiser and in uniform when he turned on the car's lights and pulled them over without seeing them commit a crime.</p>

	<p>Tillman asked why she had been pulled over, and Williams said she had caused a disturbance and was going to trespass her from mall property, meaning she could be arrested if she returned. Tillman asked again why she had been pulled over, and then tried to bike away.</p> <p>As she rode away, Williams pulled her to the ground, then slammed her to the pavement and used his Taser on her.</p> <p>Williams remains employed as an officer with the Tacoma Police Department, spokeswoman Loretta Cool said Thursday.</p>

<b>HEADLINE</b>	<b>03/22 ACLU decries CBP raids Greyhound buses</b>
<b>SOURCE</b>	<a href="https://crosscut.com/2018/03/aclu-objects-immigration-raids-greyhound-buses">https://crosscut.com/2018/03/aclu-objects-immigration-raids-greyhound-buses</a>
<b>GIST</b>	<p>The American Civil Liberties Union in Washington and other states have issued a letter asking that Greyhound Lines stop allowing U.S. Customs and Border Protection (CBP) agents to routinely board its buses to question passengers about their immigration status.</p> <p>The ACLU and other advocates argue the raids, which customs agents have conducted on an increasing basis since the election of President Donald Trump — including here in Washington state near the Canadian border — violate passengers’ Fourth Amendment rights. Those rights protect against “unreasonable searches and seizures.”</p> <p>“These intrusive encounters often evince a blatant disregard for passengers’ constitutional rights and have even resulted in CBP agents removing passengers from buses and arresting them,” reads the letter sent on Wednesday to Dave Leach, president and chief executive officer of Greyhound Lines, Inc. based in Dallas, Texas.</p> <p>“Greyhound is in the business of transporting its passengers safely from place to place. It should not be in the business of subjecting its passengers to intimidating interrogations, suspicionless searches, warrantless arrests, and the threat of deportation.”</p> <p>Greyhound confirmed that it had received the letter and said it planned to respond.</p> <p>“We understand their concerns and those of our customers with regard to this matter,” Greyhound said in a statement provided to Crosscut. “However, Greyhound is required to comply with the law. We are aware that routine transportation checks not only affect our operations, but our customers’ travel experience, and will continue to do everything legally possible to minimize any negative experiences.”</p> <p>“Greyhound has opened a dialogue with the Border Patrol to see if there is anything that can be done to balance the enforcement of federal law with the dignity and privacy of our valued customers.”</p> <p>ACLU and other advocates argue Greyhound is not legally obligated to cooperate with Customs and Border Protection because as a business it, too, is protected under the Fourth Amendment.</p> <p>Under the law, officials are allowed to conduct warrantless searches as long as they’re near the border. “Case law seems to suggest within 100 air miles just about anything is fair game,” said Stephen I. Vladeck, a professor of law at the University of Texas. (According to The New York Times, a “measure to limit that distance to 25 miles passed the Senate in 2013 but was rejected by the House; it was proposed after Senator Patrick J. Leahy, Democrat of Vermont, was stopped by the Border Patrol at an immigration checkpoint.”)</p> <p>The U.S. Department of Justice adopted the regulations establishing officials’ ability to operate without a warrant close to the border in 1953. Two Supreme Court cases in the 1970s — <i>Almeida-Sanchez v. United</i></p>

States and *United States v. Martinez-Fuerte* — generally upheld the new regulations, Vladeck explained. Yet both Vladeck and the ACLU point out that, legally, officials must still have either probable cause or consent to conduct the searches — even without a warrant.

In fact, in 2013, the ACLU of Washington and the Northwest Immigrant Rights Project announced a settlement in a case that challenged the Border Patrol's practice of stopping vehicles and interrogating passengers on the Olympic Peninsula. As part of the settlement, the agency acknowledged that vehicle stops away from the border must be based on reasonable suspicion and promised to give agents additional training in Fourth Amendment protections.

Matt Adams, legal director of Northwest Immigrant Rights Project, said at the time: "This agreement confirms that Border Patrol can't pull over a vehicle because of the driver's race or ethnicity or simply because the person lives in proximity to the border."

In its March letter, the ACLU argues Border Patrol has fallen back on regularly interrogating passengers without probable cause and singling out individuals "because of the color of their skin or because they have a foreign accent."

According to U.S. Customs and Border Protection records obtained through a Freedom of Information Act request by the University of Washington's Center for Human Rights that were shared with Crosscut, agents who board Greyhound buses often stay at the front of the bus "near the driver's area to leave the aisle open to anyone who wished to freely enter or exit the bus."

"I went to the back of the bus and, in the English language[,] began to ask each passenger as to his or her citizenship," the description of a Greyhound search in a CBP document goes on to read. "When I questioned each passenger, I stood at the rear of seat in which the passenger was sitting to allow him or her to depart from the bus if they wished to do so."

Vladeck said the U.S. Supreme Court would likely be uncomfortable with the way those searches are being conducted. Agents make it clear they've given passengers the ability to leave the bus because otherwise they would be legally obligated to read them their Miranda Rights, which would include a statement about how they have the right to remain silent, Vladeck explained. With the way searches are conducted now, passengers have the right to remain silent when questioned but often aren't aware of the fact.

And even if passengers were aware of their rights, Adams of NWIRP asks: "What are they going to do, get off and lose out on their bus trip?"

"It just defies common sense to say oh, yes, they have the opportunity to walk away," Adams said.

According to the 856 pages of CBP documents obtained by the UW's Center for Human Rights, CBP has been routinely conducting Greyhound searches in Washington state. But information on exactly where the agents are boarding buses has been redacted in the documents.

According to CPB records from the first half of last year, from January 2017 to May 2017, the agency conducted Greyhound searches at least seven times, which averages to more than once a month. According to one news report, in 2017 alone, CBP agents took into custody at least 34 people in the Spokane area.

Angelina Godoy, director of the UW's Center for Human Rights, has filed an appeal challenging the redactions. According to Godoy, the agency had initially claimed it had no records pertaining to searches in Washington state. Customs and Border Protection also promised to respond to the Center's latest appeal by Feb. 9 but has not done so.

When asked directly, a spokesperson for CBP, which is an arm of the Department of Homeland Security, would not provide statistics on how often, or where, it questions passengers.

<b>HEADLINE</b>	<b>03/22 WA phases out Atlantic salmon farming</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/934759/washington-state-phases-out-atlantic-salmon-farming/">http://mynorthwest.com/934759/washington-state-phases-out-atlantic-salmon-farming/</a>
<b>GIST</b>	<p>SEATTLE (AP) — Washington state is phasing out marine farming of Atlantic salmon and other nonnative fish under legislation signed by Gov. Jay Inslee.</p> <p>Inslee signed the measure Thursday but vetoed a section of the bill he said wasn't needed to implement the bill.</p> <p>Net pens have operated in state waters for several decades but the practice came under heavy criticism after thousands of nonnative fish escaped into waterways last summer.</p> <p>Inslee has said the risks, while low, are unacceptable given how much money and effort the state spends to restore wild Pacific salmon runs.</p> <p>The bill sponsored by Rep. Kristine Lytton would end state leases and permits for operations that grow nonnative finfish in state waters when current leases expire in 2022.</p> <p>It targets Canada's Cooke Aquaculture Pacific, which the state fined \$332,000 for the Aug. 19 net pen collapse. Cooke, the largest producer of farmed Atlantic salmon in the U.S., currently holds two leases with the state.</p>

<b>HEADLINE</b>	<b>03/22 Regional Eastside bikeshare begins May</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/932691/bellevue-eastside-bikeshare-begins-may/">http://mynorthwest.com/932691/bellevue-eastside-bikeshare-begins-may/</a>
<b>GIST</b>	<p>One thing is clear after the Bellevue City Council discussed its emerging bikeshare program this week: officials are grateful Seattle went first before an Eastside bikeshare could be launched.</p> <p>"I drive around Seattle quite a bit ... I think we have something to show us how not to do things," said Bellevue Councilmember John Stokes. "But this is something that has worked in a lot of cities ... we're innovating and we're willing to go out and make things happen and work together."</p> <p>The Bellevue council discussed a proposed bikeshare pilot similar to Seattle's on Monday, March 19. Seattle's pilot has become a guinea pig for cities like Bellevue to develop their own, slightly tweaked program. For example, Bellevue will be the only city in America to launch an entirely electric bikeshare system, according to Clifford Chirls, a member of Bellevue's transportation commission.</p> <p>"We didn't want to see the situation that many of us have seen with bikes all over the place in Seattle, and many that have arrived on our shores," Chirls said, noting one lesson learned from Seattle. "We were concerned about clutter."</p> <p>Chirls wasn't alone with that sentiment as the Eastside bikeshare was discussed.</p> <p>"I appreciate the fact we've already learned some lessons from Seattle," Councilmember Jared Nieuwenhuis said. "Waiting for a full report from Seattle might not benefit us that much from some of the things I've seen. Limiting the eBikes makes a lot of sense ... I think we may get more use of the bikes if they are eBikes with our terrain and our hills."</p> <p>Eastside bikeshare</p> <p>Bellevue is among a handful of Eastside bikeshare programs. Bellevue Transportation Director Dave Berg informed the council that Kirkland and Redmond will allow bikeshare operators in their cities beginning in May.</p>

	<p>Bothell has already created a bikeshare program of its own. Limebike is currently up and running there.</p> <p>“Both Redmond and Kirkland are targeting a launch and permitting bikeshare in May of this year; this dockless type of bikeshare,” Berg said. “You’ve probably already seen these bikes in Bellevue. You see them all over the place, throughout the region, whether they are permitted or not. So we are trying to stay ahead of this with a permitting process.”</p> <p>Bellevue will accept applications from bikeshare operators in April. And like Redmond and Kirkland, it will allow companies to launch onto its streets in May. Bellevue will evaluate how well the program is operating in September and again in February 2019. The city council will revisit the experiment next March.</p>

<b>HEADLINE</b>	<b>03/22 Oso community fundraising for memorial</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/934814/fundraising-oso-mudslide-memorial/">http://mynorthwest.com/934814/fundraising-oso-mudslide-memorial/</a>
<b>GIST</b>	<p>It was four years ago today that a <a href="#">huge hill came crashing down on a neighborhood near Oso</a>, killing 43 people.</p> <p>“It is very difficult, still,” said Tom Pszonka at the site of the slide. “And I imagine it will never go away.”</p> <p>On a Saturday morning, a wall of mud swallowed up the Steelhead Haven neighborhood, destroying 49 homes. Family members of those who were lost and Snohomish County leaders announced Thursday that a fundraising effort is underway for a memorial at the slide site. The memorial will honor those killed, the survivors, and the first responders who sifted through the debris for weeks.</p> <p>“I think it’s first and foremost for the families,” said Snohomish County Emergency Management Director Jason Biermann. “It’s to memorialize their loss and to have a place where they can come and have some peace. I think it’s humbling that they have chosen to have an area of it that is dedicated to the first responders.”</p> <p>Supporters say the memorial will also serve as a way to teach about what happened.</p> <p>“There were people who were very invested in the work, emotionally, physically, and mentally,” Biermann said. “There was a lot of work and a lot of people who were out here and it certainly established some strong bonds that will last forever.”</p> <p>“The first time we saw it, we were overwhelmed. We were all crying looking at it,” Karen Pszonka said at the slide site. “I think to be able to walk around there and see all this, it will make the site feel a lot better and look a lot better.</p>
<a href="#">Return to Top</a>	<i>You can donate to the memorial effort at <a href="http://www.slidememorial.com">www.slidememorial.com</a>.</i>

<b>HEADLINE</b>	<b>03/22 Strikes in France disrupt air, rail services</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/europe/strikes-in-france-disrupt-rail-air-service-in-opening-shot-against-macrons-labor-plans/2018/03/22/ba0b1abe-8a69-4729-90c9-bd94d839f60c_story.html?utm_term=.60243c314873">https://www.washingtonpost.com/world/europe/strikes-in-france-disrupt-rail-air-service-in-opening-shot-against-macrons-labor-plans/2018/03/22/ba0b1abe-8a69-4729-90c9-bd94d839f60c_story.html?utm_term=.60243c314873</a>
<b>GIST</b>	<p>PARIS — Railway workers and air traffic controllers led strikes across France on Thursday, opening a bitter showdown over labor overhauls sought by French President Emmanuel Macron.</p> <p>The strikes — which disrupted travel across the country — signal a critical test for Macron as his government seeks to challenge France’s tightly controlled public-sector labor markets in attempts to</p>

stimulate a stagnant economy.

Macron, a 40-year-old former investment banker, faced only minimal resistance to the first wave of workplace changes last fall, and unemployment figures have already begun to drop.

But France's powerful public sector, which employs more than 5 million people, is putting its foot down against the next stage: proposals to cut 120,000 public-sector jobs, hire more contract workers and slash budgets across the board.

Rail workers planned to go for the jugular with a new type of "rolling" protest: a two-day strike every three days, a major upheaval to a transport system that handles millions of passengers every day.

Many high-speed trains — including the renowned high-speed TGV service — were canceled between Paris and other French cities in Thursday's opening salvo. Commuter train service within the capital was also suspended.

Meanwhile, the Eurostar, connecting Paris with London, canceled some runs through the English Channel tunnel, and many short-haul flights at the Paris-area airports of Orly, Beauvais and Charles de Gaulle were grounded.

Teachers and other workers also joined the strike.

Elisabeth Borne, Macron's transport minister, defended the labor plans as crucial to ensure the strength and survival of France's state-owned railway company.

"This is a necessary, indispensable reform," Borne said, appearing on France's BFM TV on Thursday. "My hope is not a test of strength; my hope is for negotiations."

So far, Macron has been spared the kind of devastating strikes that have unraveled previous French governments.

<b>HEADLINE</b>	<b>03/22 US moves toward tariffs China goods</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/business/economy/trump-moves-to-crack-down-on-china-trade-with-50-billion-in-tariffs-on-imported-products/2018/03/22/c09309e8-2de3-11e8-8ad6-fbc50284fce8_story.html?utm_term=.864dace1ad05">https://www.washingtonpost.com/business/economy/trump-moves-to-crack-down-on-china-trade-with-50-billion-in-tariffs-on-imported-products/2018/03/22/c09309e8-2de3-11e8-8ad6-fbc50284fce8_story.html?utm_term=.864dace1ad05</a>
<b>GIST</b>	<p>President Trump took the first steps toward imposing tariffs on \$60 billion in Chinese goods and limiting China's ability to invest in the U.S. technology industry Thursday, saying the moves were a response to Beijing's history of forcing U.S. companies to surrender their trade secrets to do business in China.</p> <p>The president directed U.S. Trade Representative Robert E. Lighthizer to announce within 15 days a proposed list of products to be hit with tariff increases. After a public comment period, the final list, designed to target Chinese products that benefited from improper access to U.S. technology, will be made public.</p> <p>"We're doing things for this country that should have been done for many, many years," the president said before signing a memorandum setting in motion the trade actions.</p> <p>The president blamed China for the loss of 60,000 factories and 6 million jobs, a number that most economists say blends the impact on U.S. employment of both Chinese competition and automation.</p> <p>Trump said that unfair Chinese trade practices are responsible for the yawning U.S. trade deficit with China, which has reached a record \$375 billion on his watch.</p>

“Anyway you look at it, it’s the largest of any country in the history of our world,” the president said. “It’s out of control.”

The White House expects the new taxes, which could reach up to 1,300 specific imports, will have a “minimal impact” upon consumers. But markets were down sharply Thursday morning in anticipation of the move and many business groups voiced opposition.

“There is no way to impose \$50 billion in tariffs on Chinese imports without it having a negative impact on American consumers. Make no mistake, these tariffs may be aimed at China, but the bill will be charged to American consumers who will pay more at the checkout for the items they shop for every day,” said Hun Quach, vice president for international trade at the retail Industry Leaders Association.

The president described the actions against China as part of a broader reappraisal of U.S. global relationships, featuring a willingness to use tariff threats to force concessions from U.S. trading partners.

“We will end up negotiating these things rather than fighting over them,” Commerce Secretary Wilbur Ross said, in an apparent reference to fears of a trade war.

The president also alluded to political calculations, saying that voter concerns over economic losses from bad trade deals was “maybe one of the main reasons” he won the White House.

“The era of economic surrender is over,” added Vice President Michael Pence.

But the trade moves drew fire from the conservative National Taxpayers Union’s Bryan Riley, who called the proposed China tariffs “self-destructive and reckless.”

Under the measures targeting Beijing announced Thursday, Treasury Secretary Steven Mnuchin will draw up new investment restrictions to address concerns about Chinese investors, including state-sponsored investment funds, acquiring American companies to gain access to their technology.

“The end objective of this is to get China to modify its unfair trading practices,” said Everett Eissenstat, deputy assistant to the president for international economic affairs.

<b>HEADLINE</b>	<b>03/22 Seattle ‘March for Our Lives’ to draw 50K</b>
<b>SOURCE</b>	<a href="https://crosscut.com/2018/03/when-lockdowns-are-normal-teens-say-its-time-march">https://crosscut.com/2018/03/when-lockdowns-are-normal-teens-say-its-time-march</a>
<b>GIST</b>	<p>For Rhiannon Rasaretnam, it’s the future of her little sister, Dylan. For Emilia Allard, it’s the life of her four younger sisters, and one in particular: Charlotte. For Katalia Alexander, it’s the all-too-real potential that she could have lost her best friend a month ago in what mercifully turned out to be a false alarm.</p> <p>The high school seniors know all too well that a school shooting could still happen to them. Just as easily and abruptly and tragically as it happened in Parkland, Fla., last month or in Newtown, Conn., six years ago.</p> <p>They’ve prepared for years with “active shooter” drills and lockdowns that have been a routine part of their upbringing in a post-Columbine world. They’ve grown to somewhat shrug off mass shootings with the same desensitized apathy as much of the rest of the country. But, this time inspired by the Parkland students, they say: No more.</p> <p>On Saturday, these teenage students-turned-activists from metro Seattle will join the worldwide March For Our Lives. They’re taking a stand to give their siblings and friends and younger classmates a different future.</p> <p>“I have a little sister in the sixth grade, so she still has six more years in the school system,” Rasaretnam</p>

said of Dylan. “I don’t want her to be growing up in this society where gun culture is normalized, and she has to go into these active shooter drills and be afraid when she’s going to school in the morning.

“I just want to change our society to the point where all these young students growing up don’t have to go through the same process that my peers and I did,” she said.

March For Our Lives originated with the teenage activists from Parkland who are convening a primary march in Washington, D.C. Simultaneously around the globe, some 800 sister marches — including Seattle’s and several others around the Puget Sound area — will also call for politicians to change laws to improve school safety, stop mass shootings and end gun violence.

Seattle’s march is anticipated to draw around 50,000 people as it winds through downtown, from Cal Anderson Park on Capitol Hill to Seattle Center, beginning at 10 a.m.

“My biggest long-term goal would be to not have this march be a singular day where we all go out and scream about gun control because that’s not enough,” said Allard, an 18-year-old senior at Seattle’s Ballard High School. She and Rasaretnam are lead organizers of Saturday’s Seattle march. “We need more than that. We need to start having these conversations about sensible gun control but then actually doing things to implement that.”

Just this week, Rasaretnam, 17, participated in a lockdown drill at Tahoma High School in Maple Valley. The senior said it’s natural to talk about school shootings “with our parents, with our teachers, with our friends ... because, of course, we have to know how to defend ourselves if a school shooter comes in.”

Such conversations and the routine drills, she said, are her generation’s “normal.”

But lately, Rasaretnam says she’s been struck by the cruel reality of lockdown drills: “It’s just really hard when we’re having these conversations about how to position ourselves in a way that most students won’t be hit. But we all know that it’s inevitable that some kids would be shot and even killed” if a shooter broke through the classroom door.

“As a high schooler, it gives me the chills and I can’t imagine what these elementary and middle school kids are thinking” as they practice the same drills, she said.

For Allard, last month’s tragedy in Parkland sparked a painfully real topic of conversation with her mother — what might happen if her younger sister, Charlotte, was in a school that was under fire.

Charlotte is autistic. Because of that, said Allard, “she can’t just stay quiet and she can’t just hide in the back of the room. I mean, she can’t do it.”

“Just coming to terms with the barriers that would be stacked against my own sister if she were to be in a school shooting,” Allard continued, “I just realized that — obviously, I care about Charlotte a lot; she’s my sister — but I also care about the other 25 kids in that room that she would be putting at risk. She’d be putting herself at risk. And it’s not her fault and she shouldn’t be in those situations.”

In the days after Parkland, both Allard and Rasaretnam created social media pages for a Seattle March For Our Lives. They quickly teamed up and brought together dozens of student volunteers from Seattle and its suburbs.

The students started a GoFundMe page to raise \$60,000 for portable bathrooms, police barricades, staging and other costs associated with putting on Saturday’s Seattle march. As of mid-afternoon Wednesday, they had raised more than \$28,000.

They’ve also been taking donations at collection boxes at Cupcake Royale locations around Seattle.

Saturday’s march, said Rasaretnam, marks the start of a “huge movement” of youth activism that extends

	beyond gun control. “Racism, sexism, the environment. I think this is a catalyst for all of these students to realize that they do have an impact, they do have a voice.”

<b>HEADLINE</b>	<b>03/22 Milestones I-5 project in Tacoma</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/933415/milestones-on-the-horizon-for-i-5-project-in-tacoma/">http://mynorthwest.com/933415/milestones-on-the-horizon-for-i-5-project-in-tacoma/</a>
<b>GIST</b>	<p>Four years of work remains, but drivers will soon to start to see the fruits of 17 years of construction on I-5 through Tacoma.</p> <p>The new northbound Puyallup River Bridge should open to all drivers in May. That is a huge step forward for the HOV widening project. But it’s not the only change.</p> <p>The horrible, temporary, collector-distributor lane on southbound I-5 that forces drivers to leave the freeway about two miles before the actual exit to Highway 16 will go away in a few weeks.</p> <p>“They have just a little bit of work left to pour that concrete and get those lanes striped, and then they are going to remove the barrier and return all southbound I-5 back to its almost original configuration,” Cara Mitchell with the Washington State Department of Transportation said. “All of the ramps have been rebuilt, and they have been realigned.”</p> <p>Before you start celebrating too hard, Mitchell said one of the most-hated lane configurations will return. The ramp from eastbound 16 to northbound I-5 is going to be reduced to one lane again.</p> <p>“We know this wasn’t very popular before,” Mitchell said, “but we really have no other way to access the work zone unless we reduce that ramp.”</p> <p>That change will happen in early April. It will remain that way until August.</p> <p>Construction continues to move along on the new dedicated HOV to HOV ramps from I-5 to Highway 16. Overnight closures on Tacoma Way began this week as workers began moving girders around.</p> <p>Work to rebuild the McKinley overpass continues too.</p> <p>Next year, construction will begin on the new southbound Puyallup River Bridge. That work will take several years to complete.</p> <p>Construction on this entire HOV project is set to finish in 2022. The projects began in 2001.</p>

<b>HEADLINE</b>	<b>03/21 Oregon in path of falling space station</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/oregon-in-path-of-chinese-space-station-on-collision-course-with-earth">http://komonews.com/news/local/oregon-in-path-of-chinese-space-station-on-collision-course-with-earth</a>
<b>GIST</b>	<p>EUGENE, Ore. - A Chinese space station could reenter the Earth's atmosphere over Oregon in the next two weeks, according to experts in the field of space debris.</p> <p>China lost control of the Tiangong-1, the country told the United Nations in 2016.</p> <p>The space station will make an uncontrolled reentry into the Earth's atmosphere on April 1, 2018, plus or minus 4 days, according to The Aerospace Corporation of El Segundo, California.</p> <p>Aerospace says the space station will crash to Earth between 43 degrees north and 43 degrees south, roughly two-thirds of the planet's surface.</p>

	<p>For reference, Roseburg sits at 43.2165 degrees north.</p> <p>Medford is at 42.3265 degrees north - within the reentry window.</p> <p>Debris is more likely to land in regions towards the extremes of that range, which includes Southern Oregon and all of California, according to Aerospace. Those areas are denoted in yellow in the map above.</p> <p>Most of the space station will burn up upon reentry.</p> <p>"Hydrazine, a highly toxic and corrosive substance, may survive reentry on pieces of space debris," Aerospace notes.</p> <p>Overall, the debris poses little risk to the Earth, Aerospace says.</p>

<b>HEADLINE</b>	<b>03/23 IAFC: fire chiefs' legislative priorities</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/subject-matter-areas/law-enforcement-and-public-safety/fire-chiefs-legislative-priorities-include-repealing-requirement-t-band-spectrum-auction/">https://www.hstoday.us/subject-matter-areas/law-enforcement-and-public-safety/fire-chiefs-legislative-priorities-include-repealing-requirement-t-band-spectrum-auction/</a>
<b>GIST</b>	<p>The International Association of Fire Chiefs unveiled its legislative priorities for the years, starting with working to increase funding for the U.S. Fire Administration in FY 2019 in order to see it funded at \$50 million. This increase will help USFA improve classes and training at the National Fire Academy.</p> <p>IAFC will also continue to ask Congress to fund the AFG and SAFER Grant programs at the FY 2011 amount of \$405 million, restore funding for the Urban Search and Rescue program and protect funding for homeland security grant programs, like the Urban Areas Security Initiative and the State Homeland Security Grant Program.</p> <p>“When Congress established FirstNet, it also mandated that the Federal Communications Committee</p>

(FCC) auction public-safety spectrum in the T-Band (470-512 MHz) by February 2021. Local public-safety organizations that use T-Band spectrum would have to clear this spectrum within two years of the auction,” IAFC said. “The problem with this requirement is that it would affect communications in 11 major metro areas, including New York City, the Washington, DC area, Boston, Chicago and Los Angeles. For example, the T-Band spectrum was used as the interoperable communications channel in Boston during the response to the Patriots’ Day bombing in 2013. In addition, the cost of migrating these jurisdictions would be catastrophic (\$5.9 billion), even though some jurisdictions would have no other spectrum to migrate to.”

Thus, the fire chiefs association is among affected organizations asking Congress to repeal the requirement that this T-Band spectrum be auctioned.

The IAFC will also be urging the Senate to pass the Firefighter Cancer Registry Act and will urge Congress to pass the Volunteer Responder Incentive Act (H.R. 1550/S. 1238), which would exempt, from federal taxation, any property tax benefits and up to \$600 in any other state and local benefits that are given to local volunteer firefighters.

<b>HEADLINE</b>	<b>03/23 White House declares new war on drugs</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/subject-matter-areas/law-enforcement-and-public-safety/white-house-declares-new-war-drugs-stop-escalating-opioid-crisis/">https://www.hstoday.us/subject-matter-areas/law-enforcement-and-public-safety/white-house-declares-new-war-drugs-stop-escalating-opioid-crisis/</a>
<b>GIST</b>	<p>The White House this week announced a plan to stem drug supply and demand fueling the opioid crisis, with Attorney General Jeff Sessions telling law enforcement officers that “this administration will not stand back as addiction shatters our families and devastates our communities.”</p> <p>Sessions cited the sobering statistics of America’s opioid crisis during his Thursday speech in Tallahassee: 64,000 Americans died from drug overdoses in 2016, “the highest drug death toll and the fastest increase in that death toll in American history.”</p> <p>“That’s the equivalent of the entire city of Daytona Beach dying from drug overdoses in a single year,” he said. “Preliminary data show another — but what appears to be a smaller — increase for 2017. Amazingly, for Americans under the age of 50, drug overdoses are now the leading cause of death.”</p> <p>Of those 2016 overdose deaths, 42,000 were attributed to opioids.</p> <p>“We are experiencing death rates the likes of which we have never seen before. By the time I have finished speaking, another American will have died of an opioid overdose,” Sessions said. “...By the time this speech is over, another baby will be born in the United States who is physically dependent on opioids.”</p> <p>The initiative framework released by the White House aims to “address factors fueling the opioid crisis, including over-prescription, illicit drug supplies, and insufficient access to evidence-based treatment, primary prevention, and recovery support services.”</p> <p>President Trump’s Opioid Initiative, the White House said, will “reduce drug demand through education, awareness, and preventing over-prescription,” “cut off the flow of illicit drugs across our borders and within communities,” and “save lives now by expanding opportunities for proven treatments for opioid and other drug addictions.”</p> <p>The administration wants to support research and development “for a vaccine to prevent opioid addiction and non-addictive pain management options” and “cut nationwide opioid prescription fills by one-third within three years.” The plan also advocates border security to cut down drug smuggling and vows to “require advance electronic data for 90 percent of all international mail shipments (with goods) and consignment shipments within three years, in order for the Department of Homeland Security to flag high-risk shipments.”</p>

	<p>The Department of Justice Prescription Interdiction and Litigation Task Force will “expand the DOJ Opioid Fraud and Abuse Detection Unit’s efforts to prosecute corrupt or criminally negligent doctors, pharmacies, and distributors” and “aggressively deploy appropriate criminal and civil actions to hold opioid manufacturers accountable for any unlawful practices.”</p> <p>Furthermore, the White House vows to “work to ensure first responders are supplied with naloxone, a lifesaving medication used to reverse overdoses” and “leverage federal funding opportunities to state and local jurisdictions to incentivize and improve nationwide overdose tracking systems that will help resources to be rapidly deployed to hard-hit areas.” The plan would also support more “evidence-based addiction treatment” and screen federal inmates for opioid addiction.</p> <p>Sessions said his DOJ task force will “consider assisting with ongoing state and local government lawsuits against opioid manufacturers.”</p> <p>He announced that the DEA “will surge 250 task force officers — and dozens more analysts — to places across America where the opioid crisis is at its worst.”</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>03/22 Report: air getting cleaner around ports</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/environment/you-can-breathe-cleaner-around-puget-sound-ports-report-finds/">https://www.seattletimes.com/seattle-news/environment/you-can-breathe-cleaner-around-puget-sound-ports-report-finds/</a>
<b>GIST</b>	<p>The air is generally getting cleaner around Puget Sound ports, which over the decades have been a significant source of pollutants that increase the risk of respiratory problems and cancer.</p> <p>A new report finds that seven different air pollutants declined by amounts ranging from 9 to 97 percent in 2016 compared to 2011.</p> <p>The improvements result from a mix of voluntary investments in greening port operations and new regulations that require lower emissions and cleaner fuels, according to a report scheduled for release Thursday by the Puget Sound Maritime Air Forum.</p> <p>But those efforts, over the past five years, didn’t do much to change greenhouse-gas emissions — mainly carbon dioxide. These fossil-fuel emissions, which scientists say are driving climate change, have declined by 1 percent since 2011.</p> <p>The report covers a broad area, tracking pollutants in the U.S. portion of the international airshed formed by the Puget Sound and Georgia Basin.</p> <p>The reports uses models — rather than air monitors — to estimate emissions from a range of sources including cargo ships, harbor and recreational vessels, port equipment and trucks that deliver and take away freight.</p> <p>The report is developed by a partnership of ports, government agencies and businesses. It notes that the air has benefitted from International Maritime Organization regulations that took effect in 2015 requiring cargo ships to use lower-sulfur fuels within 200 miles of the U.S. coasts.</p> <p>That is the main reason emissions of sulfur dioxide, a pollutant that can make breathing more difficult and aggravate asthma, plummeted by 96 percent between 2011 and 2016 in the study area.</p> <p>Those rules also helped drive down emissions of particulates, which can damage the lungs and heart. Three different types of this pollution each declined by at least 60 percent, according to the estimates in the study.</p>

	<p>Environmental Protection Agency regulation also has played a role in improving the port's air quality. During the past two decades, the agency has required dramatic changes to truck, train and ship engines and fuel sources as more information revealed the significant health dangers associated with diesel exhaust.</p> <p>In 2007, after a two-year study outlined just how dirty Puget Sound's marine-transportation system was, the Puget Sound Clean Air Agency and the ports of Seattle, Tacoma and Everett, helped by EPA grants, set out to make reductions faster than required by law.</p> <p>One part of that effort has been to increase the use of electricity. Two of Seattle's three cruise-ship terminals, for example, are outfitted with plug-ins to electric grid, so the vessels don't have to generate power by idling while moored.</p> <p>The new study shows one pollutant — carbon monoxide — bucked the downward trend, increasing by 9 percent from 2011 to 2016. That was largely due to an increase in activity by recreational boats and harbor vessels, according to Graham VanderSchelden, environmental project manager for The Northwest Seaport Alliance.</p> <p>The strong maritime activity also makes it hard to achieve big reductions in greenhouse gases, according to Paul Meyer, a Seattle port official.</p>
<p><a href="#">Return to</a> <a href="#">Top</a></p>	

<b>HEADLINE</b>	<b>03/22 Seattle 'March' organizers demand change</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/seattles-march-for-our-lives-organizers-demand-concrete-political-change-to-end-gun-violence/">https://www.seattletimes.com/seattle-news/seattles-march-for-our-lives-organizers-demand-concrete-political-change-to-end-gun-violence/</a>
<b>GIST</b>	<p>Senior Rhiannon Rasaretnam didn't know what to expect last Wednesday morning at Tahoma High School in Maple Valley, as a wave of demonstrations swept the nation in protest of gun laws the country's young people say threaten their lives.</p> <p>But then 150 of her peers left class — far more than she thought would join her.</p> <p>“The biggest criticism was that it wasn't accomplishing anything, or that kids just wanted to leave school,” said Rasaretnam, 17, of the National School Walkout demonstrations. “But when you participate, it inspires you to move forward. It shows how much we're able to do.”</p> <p>Now she's hoping that the energy she saw at her school last week translates to Saturday's March For Our Lives, which she and other students throughout the Seattle area have spent a month planning.</p> <p>Those students have been brought together by a common goal: ending gun violence. They feel inspired by the momentum from March 17 school walkouts, and they hope it continues after the march.</p> <p>“We hope that this is not just one moment,” said Catherine Zhu, 18, a senior at Ingraham High School and a lead march coordinator. “We want concrete political change.”</p> <p>The march in Seattle is one of hundreds planned alongside the main event in Washington, D.C., in the wake of the shooting in Parkland, Florida, where 17 people were killed at their school. The march is set to begin at Cal Anderson Park at 10 a.m. with speeches, followed by a walk at 11 a.m. to Seattle Center. A second round of speeches and performances will start at 12 p.m. at Seattle Center.</p> <p>Nearly 10,000 people have replied on the event's Facebook page that they'll be attending. Elected officials, including Gov. Jay Inslee and Attorney General Bob Ferguson, are expected to speak. Singer-songwriter Brandi Carlile is expected to perform on a Seattle Center stage, as will students who have been directly affected by gun violence. Commuters should expect traffic delays in downtown Seattle and organizers are encouraging participants to take public transportation. Rideshare company Lyft is offering free rides to the rally at Cal Anderson Park.</p>

March organizers have specific demands, including raising the age allowed to buy assault weapons to 21 and banning the sale of high-capacity magazines. They want politicians to listen to them. And the politicians who don't?

"We aren't afraid to push them out" of office in the November election, said Ballard High School senior Emilia Allard, 17, a march organizer. The importance of voting will be a focus of Seattle's march; volunteers will be at booths and throughout the crowd with information about how to register to vote.

"The 18-21 voter turnout is historically low," said Rasaretnam, of Tahoma High. "We want to flip that. We want to stay engaged and active."

Last week, Zhu joined her Ingraham classmates and students from Lakeside as they lined an Interstate 5 overpass, chanting and holding signs. Allard walked out with Ballard students and then went to a larger rally at the University of Washington. Rasaretnam gathered in her school's commons area.

Throughout the past month, they've juggled school, extracurricular activities and jobs, along with planning an event for thousands of people. Earlier this week, they sat around a long table at Cupcake Royale on Capitol Hill, working on finalizing the speaker schedule and making sure all 400 volunteers are accounted for. Talks about gun laws were mixed in with stories about homework — and laughs when someone made a mess while eating her cupcake, decorated with the March For Our Lives logo.

For them, any gun legislation that comes will likely be too late for their school careers, they say.

But they're not thinking of themselves. They're thinking of their younger siblings, friends and classmates.

"We almost have no other choice (but to march)," said Allard, who has four younger siblings. "It literally is that — a march for our lives."

<b>HEADLINE</b>	<b>03/22 Saudi crown prince to visit Seattle Mar. 30<sup>th</sup></b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/business/boeing-aerospace/saudi-crown-prince-both-a-reformer-and-an-autocrat-will-visit-seattle/">https://www.seattletimes.com/business/boeing-aerospace/saudi-crown-prince-both-a-reformer-and-an-autocrat-will-visit-seattle/</a>
<b>GIST</b>	<p>Mohammed bin Salman, the Crown Prince and effective ruler of Saudi Arabia, will visit Seattle on March 30, with expected stops to meet with Bill Gates and to tour Boeing's widebody jet plant in Everett, said people with knowledge of the plans.</p> <p>He's expected to leave the next day for California, though no details of the stop in the area have yet been confirmed, according to two people familiar with the planning.</p> <p>The 32-year-old prince, who typically travels with a huge entourage aboard a Saudi Royal VIP Boeing 747 jumbo jet, has jolted the politics of the Middle East, presenting himself as both a liberalizing modern and at the same time a military strongman.</p> <p>On the one hand, he just lifted a 35-year ban on cinemas and allowed Saudi women for the first time to attend mixed-gender public entertainments such as soccer games.</p> <p>On the other, he has aggressively confronted Iran, his Sunni kingdom's Shia rival, through proxy wars playing out in Syria and in Yemen, where his Air Force is conducting intense aerial bombing to suppress a Shia uprising.</p> <p>President Donald Trump welcomed Prince Mohammed to the White House on Tuesday at the beginning of a U.S. tour lasting almost three weeks, aimed at strengthening both foreign policy and economic ties with the U.S.</p>

	<p>The emphasis of the first week of the visit was on gathering support in Washington, D.C., for the U.S.-Saudi political and military axis now aligned against Iran.</p> <p>In that struggle for Middle East dominance, Trump has sided definitively with the Saudis.</p> <p>The Seattle stop is the first on a West Coast swing that will switch the focus mostly to business relationships.</p> <p>On this leg of the trip, the prince, who aims to diversify Saudi Arabia's economy and make it less dependent on oil revenue, will visit Seattle, San Francisco, Silicon Valley and Los Angeles.</p> <p>The Saudi Embassy said he'll meet with "philanthropic organizations, technology and defense companies, and entertainment conglomerates, including meetings at Google, Apple and Lockheed Martin."</p> <p>Bloomberg News added Amazon to that list, though it's unclear if that meeting will be in Seattle.</p>

<b>HEADLINE</b>	<b>03/22 State, local income, property taxes at high</b>
<b>SOURCE</b>	<a href="https://www.cnsnews.com/news/article/terence-p-jeffrey/state-and-local-income-sales-and-property-taxes-hit-records-2017">https://www.cnsnews.com/news/article/terence-p-jeffrey/state-and-local-income-sales-and-property-taxes-hit-records-2017</a>
<b>GIST</b>	<p>(CNSNews.com) - Real state and local income, sales and property taxes all hit records in 2017, according to data released this week by the Census Bureau.</p> <p>State and local governments collected a record \$404,509,000,000 in individual income taxes in 2017, according to the Census Bureau. Before 2017, the greatest level of individual income tax revenues collected by state and local governments occurred in 2015, when those governments collected \$399,933,270,000 in individual income taxes (in constant 2017 dollars converted using the Bureau of Labor Statistics inflation calculator).</p> <p>State and local governments also collected a record \$386,153,000,000 in general sales and gross receipts taxes in 2017. Prior to that, the largest state and local general sales and gross receipt tax collections took place in 2015, when state and local governments collected \$385,904,260,000 in those taxes (in constant 2017 dollars).</p> <p>At the same time, state and local governments collected a record \$573,064,000,000 in property taxes in 2017. Before 2017, the largest property tax collections took place in 2016, when state and local governments collected \$551,936,350,000 in property taxes (in constant 2017 dollars).</p> <p>Property taxes also hit a record in 2017 on a per capita basis. During the year, the record \$573,064,000,000 in property taxes that state and local governments collected from property owners equaled \$1,759 per each of the 325,719,178 men, women and children in the United States.</p> <p>Per capita state and local income taxes peaked in 2015 at approximately \$1,246 and per capita state and local general sales and gross receipts taxes peaked in 2006 at approximately \$1,214.</p>

<b>HEADLINE</b>	<b>03/23 EU confirms Brexit transition stance</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/uk-britain-eu-tusk/eu-leaders-confirm-brexit-transition-offer-joint-trade-line-idUSKBN1GZ16G">https://www.reuters.com/article/uk-britain-eu-tusk/eu-leaders-confirm-brexit-transition-offer-joint-trade-line-idUSKBN1GZ16G</a>
<b>GIST</b>	BRUSSELS (Reuters) - European Union leaders formally adopted on Friday their joint negotiating stance on a future trade relationship with Britain after it leaves the bloc, said the chairman of the summit, Donald

	<p>Tusk.</p> <p>That comes together with an offer of a 21-month transition period to help business adapt after Brexit, due in March 2019.</p> <p>The coup for British Prime Minister Theresa May comes at the expense of another fudge over how to avoid an Irish border.</p> <p>Both sides say that, after Brexit, they do not want to go back to border checks between the Republic of Ireland and Northern Ireland - as was the case during decades of violence in the British province.</p> <p>Irish Prime Minister Leo Varadkar highlighted the EU stance that the transition would only become final as part of a broader deal between bloc and London, which means they have to settle on all outstanding issues - including the Irish border - first.</p> <p>“As Ireland, we’re not under particular time pressure, we’re not the ones who are leaving so we are not under time pressure in that regard,” Varadkar told reporters. “Nothing is agreed until everything is agreed.”</p> <p>Under pressure from the EU and determined to get the interim transition deal to ease business concerns about the practical effects of Brexit, London agreed that its final agreement with the bloc would include an emergency backstop for Ireland.</p> <p>For the EU that would mean to go on treating Northern Ireland as if it remained inside the bloc’s customs union even after the end of transition period at the end of 2020.</p> <p>May, who says Britain will also be leaving the EU’s single market and the customs union, has strongly rejected that. But the two sides agreed some sort of emergency solution will be there to avoid an Irish border if everything else fails.</p> <p>“If we can have an agreement on the terms backstop or an alternative to the backstop before June, that’s something we would very much welcome,” Varadkar said.</p> <p>The Brexit schedule assumes the bloc and London would agree on the divorce deal, the transition and a framework for their future relationship in the summer so that the 27 EU leaders could endorse it at their summit in October and take back to their national capitals for ratification, hopefully early next year and before the Brexit date.</p> <p>The bloc’s Brexit negotiator Michel Barnier said the new deal with Britain, talks on which are due to start next month, “will have to respect the principles and the identity of the EU and our single market”.</p>

<b>HEADLINE</b>	<b>03/23 Navy destroyer sails near disputed islands</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-usa-china-southchinasea/exclusive-u-s-warship-sails-near-disputed-islands-in-south-china-sea-officials-say-idUSKBN1GZ0VY">https://www.reuters.com/article/us-usa-china-southchinasea/exclusive-u-s-warship-sails-near-disputed-islands-in-south-china-sea-officials-say-idUSKBN1GZ0VY</a>
<b>GIST</b>	<p>WASHINGTON (Reuters) - A U.S. Navy destroyer carried out a “freedom of navigation” operation on Friday, coming within 12 nautical miles of an artificial island built by China in the South China Sea, U.S. officials told Reuters, a move likely to anger Beijing.</p> <p>Friday’s operation was the latest attempt to counter what Washington sees as Beijing’s efforts to limit freedom of navigation in the strategic waters.</p> <p>The officials, speaking on condition of anonymity, said the USS Mustin traveled close to Mischief Reef in the Spratly Islands and carried out maneuvering operations. China has territorial disputes with its</p>

	<p>neighbors over the area.</p> <p>Neither China’s Foreign nor Defence Ministries immediately responded to a request for comment.</p> <p>In the past, Beijing has reacted angrily to such moves, saying they are provocative.</p> <p>The U.S. military has a longstanding position that its operations are carried out throughout the world, including in areas claimed by allies, and they are separate from political considerations.</p> <p>However, the latest operation, the first since January, comes just a day after U.S. President Donald Trump lit a slow-burning fuse when he signed a presidential memorandum that will target up to \$60 billion in Chinese goods with tariffs, but only after a 30-day consultation period that starts once a list is published.</p> <p>The United States has criticized China’s construction of islands and build-up of military facilities in the sea, and is concerned they could be used to restrict free nautical movement.</p> <p>China’s claims in the South China Sea, through which about \$5 trillion in ship-borne trade passes each year, are contested by Brunei, Malaysia, the Philippines, Taiwan and Vietnam. The U.S. military put countering China and Russia at the center of a new national defense strategy recently unveiled.</p> <p>China’s navy will carry out combat drills in the South China Sea, the military’s official newspaper said on Friday, describing the move as part of regular annual exercises.</p>

<b>HEADLINE</b>	<b>03/23 Europeans eye Russian expulsions</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-britain-russia-eu/europeans-eye-russian-expulsions-over-uk-spy-attack-idUSKBN1GZ166">https://www.reuters.com/article/us-britain-russia-eu/europeans-eye-russian-expulsions-over-uk-spy-attack-idUSKBN1GZ166</a>
<b>GIST</b>	<p>BRUSSELS (Reuters) - Several European governments moved closer on Friday to expelling Russian diplomats in a show of support for Britain, which ordered out 23 “undeclared intelligence agents” after a nerve agent attack on a former Russian spy.</p> <p>In a boost for Prime Minister Theresa May, the European Union as a whole agreed late on Thursday to pin the blame on Moscow for the attack, which a judge in England said may have left Sergei Skripal and his daughter brain damaged.</p> <p>That hardened up previous EU language on the issue as French President Emmanuel Macron and others helped May overcome hesitation on the part of some of Moscow’s friendlier states, some of whom questioned how definitive Britain’s evidence is.</p> <p>In a symbolic move that displayed unity of purpose, the bloc also recalled the EU ambassador to Russia for consultations — a conventional form of diplomatic protest.</p> <p>And in a sign that nations were prepared to go further to punish Russia, which denies any involvement in the attack, several EU leaders said on Friday they were considering expelling diplomats.</p> <p>“What we will now consider in the coming days is whether we want to take individual action relating to Russian diplomats in Ireland,” Irish Prime Minister Leo Varadkar told reporters as he arrived at the second day of an EU summit in Brussels.</p> <p>“So we would have to do a security assessment just like they (Britain) did ... We’re not going to randomly expel people.”</p>

HEADLINE	03/22 Local leaders react to China tariffs
SOURCE	<a href="http://www.king5.com/article/news/politics/china-retaliation-to-tariffs-worries-washington-state-leaders/281-531170640">http://www.king5.com/article/news/politics/china-retaliation-to-tariffs-worries-washington-state-leaders/281-531170640</a>
GIST	<p>Washington leaders are expressing bipartisan concern to President Donald Trump's announcement of tariffs on Chinese goods, <a href="#">a move triggering fears of a potential trade war between the countries with the two biggest economies.</a></p> <p>Washington state, among the most trade dependent states in the nation, also counts China as its largest trading partner for both imports and exports. Last year, Washington exported more than \$18 billion in goods to China, <a href="#">according to U.S. trade data</a>, with airplanes and wheat among the top exports.</p> <p>"I am concerned about the impact the Trump administration's tariffs on Chinese imports will have on our businesses and consumers," said Governor Jay Inslee in a statement to KING 5.</p> <p>President Trump, meanwhile, blasted the country's trade imbalance with China and says the measures are designed to punish China for theft of American companies' intellectual property.</p> <p>"We're gonna get it taken care of, and frankly, it's gonna make us a much stronger, much richer nation," President Trump said Thursday.</p> <p>"The issue of Chinese piracy is a real issue, and we need to deal with it, but I don't think this is going to accomplish that objective," said former Republican gubernatorial candidate Bill Bryant, whose firm Bryant Christie works with U.S. exporters. "You're going to raise the price on cell phones, tennis shoes. The American consumer is going to pay a higher price."</p> <p>The U.S. Trade Representative's office will release a list within 15 days of proposed products that could face the higher tariffs.</p> <p>Experts caution it's too early to know the full scope of potential impact, but Bryant and others worry about retaliation.</p> <p>"China is not going to take this lying down," said Bryant. "They're going to retaliate, and so yeah, if you're exporting airplanes, or you're exporting wheat, apples or seafood, any number of manufactured technology products, you should be concerned."</p> <p>China's embassy in a statement late Thursday only intensified fears, reading in part, "China is not afraid of and will not recoil from a trade war.</p> <p>"China would fight to the end to defend its own legitimate interests with all necessary measures," <a href="#">the statement continued.</a></p> <p>By Thursday evening in the United States, <a href="#">China's commerce ministry proposed a list of 128 U.S. products</a> that could become potential retaliation targets, including pork, wine, fresh fruit, steel and recycled aluminum goods.</p> <p>"This is how trade wars begin, and the effects for Washington are real. We export more per capita than any other state, and therefore stand to lose the most in the event of a trade war," said Lt. Governor Cyrus Habib in a statement Thursday.</p> <p>"Particularly concerning are the 15% tariffs on fruit and wine, two critical Washington state commodities," Habib continued referencing the proposed reciprocal tariffs announced by China.</p> <p>Former Washington Governor Gary Locke, who also served as U.S. Ambassador to China, fears what it might mean for Boeing, which he says exports one-third of its planes to China.</p> <p>"A lot of those orders that are going to Chinese airlines will be given to Airbus. And so we're going to see</p>

a long term decline in the sales of Boeing airplanes which means less workers which means less jobs in the Puget Sound area," Locke said.

Bill Bryant also worries about the ancillary impact to port and transportation jobs if tariffs result in a decline in trade.

"We need to deal with Chinese piracy but we need to do it in a way that actually targets the problem, not imposes harm on people in Washington state, and certainly not in a way that costs people in Washington state their jobs," he said.

#### **More reaction to Thursday's announcement:**

##### **Rep. Dave Reichert, R-Washington, chairman of subcommittee on trade:**

"I share the same goal of protecting the technology and intellectual property of American companies, but we must pursue a strategy that targets the problem and protects American families and workers. A strategy that doesn't put an end to the problem, but harms American families and businesses, is not the right answer. A successful strategy requires a narrow approach and a global partnership to address China's unfair practices. If we don't apply the right remedy, it is Americans who will bear the brunt, not China," Reichert said in a statement.

##### **Senator Maria Cantwell, D-Washington**

"I want a more sophisticated approach to address trade disputes with China," Cantwell said in a tweet. "I get that a kind of stomp-your-feet approach makes some people feel good, but in the integrated economy that we already have, it's more complex."

##### **Paul Guppy of the Washington Policy Center**

"The U.S. and Washington state gain from trade with other countries, but if trade deals aren't fair they need to be re-balanced. If research shows China is taking advantage of U.S. firms, or using business partnerships to steal U.S. technology, Trumps tariff policy sends a positive signal that should lead to a negotiate solution, but he should carry the policy so far that it sparks a trade war with one of our largest trading partners," said Guppy.

##### **Dr. Richard Ellings of the National Bureau of Asian Research and executive director of the IP Commission:**

"The administration is acting to protect American interests in the face of coordinated political and commercial pressure from China to take the intellectual property of American companies and force their transfer of technology," said Dr. Ellings. "Our system must respond as an integrated whole to this challenge, and so charging the secretary of the Treasury to limit Chinese investment in the U.S. economy where it runs counter to American national security interests is a good first step."

##### **Brian Kelly, Economics Professor at Seattle University, previously worked for U.S. Department of Commerce**

"China does pressure companies to give up their intellectual property and this is a problem. But this needs to be addressed as a team effort with our allies in direct, forceful negotiation. Going straight to retaliation - the tariffs - will not cause China to change its behavior. In doing so, we give up one of our negotiating levers, just as we did in withdrawing from the TPP, without getting anything from China in return," said Kelly.

"In my experience, China retaliates. I think that they will wait to see what the White House ends up actually proposing. Perhaps, like the steel and aluminum tariffs, the actual policy will be watered down a lot, which China may view as a sufficient victory. But if the tariffs are as substantial as promised, I think that China will try to hit the us in areas where it has leverage, such as agriculture or services," Kelly continued.

HEADLINE	<b>03/22 Help wanted: teachers, police, even mayors</b>
SOURCE	<a href="https://www.usatoday.com/story/news/nation/2018/03/22/teachers-police-local-government-jobs-recruiting-retainment-stress/425752002/">https://www.usatoday.com/story/news/nation/2018/03/22/teachers-police-local-government-jobs-recruiting-retainment-stress/425752002/</a>
GIST	<p>On Saturday, tens of thousands of students are expected to join March for Our Lives protests against gun violence. Many teachers will join them — and in some cases, former teachers.</p> <p>"I'll be there" at the Washington, D.C., march, said Rowan Langford, who used to teach at a school where fights broke out often. "The idea that we should add guns to that is mind boggling to me."</p> <p>Langford is opposed to the idea of arming teachers, which President Trump proposed after a gunman left 17 dead at Marjory Stoneman Douglas High School in Parkland, Fla.</p> <p>Among the dead was Scott Beigel, a social studies teacher credited with saving student lives. Such actions have led teachers across the country — who may have entered the field simply to share a love of chemistry or history — now to grapple with thoughts like those of police or firefighters: Will they put their lives on the line?</p> <p>"Nobody walks into teaching to martyr themselves," said Randi Weingarten, president of the American Federation of Teachers. "But people believe that they protect kids, and that is part and parcel of what we do." Though she said she hasn't seen anyone avoid teaching specifically because of shootings, it's a stressor that makes the job harder. "Teachers have become first responders for everything in a child's life."</p> <p>It was the many other stressors that drove out 23-year-old Langford.</p> <p>Within three weeks of the 2016-2017 school year, Langford says she was the sole Algebra II teacher at D.C.'s Ballou High School after another quit.</p> <p>"I knew that it was going to be hard," Langford said. "I just wasn't fully prepared to be thrown into that as much as I was." The job was stressful, and she faced "chaos" in her classroom.</p> <p>Just after winter break, Langford put in her two weeks notice. Now a data analyst at a consulting firm, Langford said she felt guilty for six months after quitting, but her new job is less stressful.</p> <p>Langford's case isn't unique, and teachers are not alone. Around the USA, jobs that are essential to civil society are struggling to attract new recruits and retain veteran professionals due to high stress, increased public scrutiny and, in some cases, low pay.</p> <p>Education: More than 40 states face teacher shortages, and 100,000 classrooms are filled with people not qualified to teach the subject they're assigned, said Linda Darling-Hammond, president of the non-profit, non-partisan Learning Policy Institute.</p> <p>The number of educators who said their mental health was "not good" for seven or more of the past 30 days rose to 58% in 2017, compared to just 34% two years earlier, according to a survey by the American Federation of Teachers.</p> <p>Local government: About half of mayoral elections from 2000 to 2016 in six states featured only one candidate, according to an analysis by Rice University's Center for Local Elections in American Politics.</p> <p>Law enforcement: Police departments around the United States have reported shortages in the past five years — including major cities, such as Washington, D.C., Baltimore, Los Angeles, Houston and Palo Alto, Calif. However, tracking national data on police officer recruitment is a challenge, said Jim Bueermann, president of the Police Foundation, a D.C.-based non-profit that seeks to support police forces nationwide through its research.</p> <p>Chief Jeff Hadley of Chatham County Police Department is trying to build his police department from scratch.</p>

After sharing a force for more than 10 years, Georgia's Savannah-Chatham Metropolitan Police Department split back into two departments. Hadley's seen interest from experienced officers in higher ranking roles, but his challenge has been finding recruits for patrol duty. Starting salary for a new recruit is roughly \$35,000, more than \$20,000 less than the U.S. median household income in 2016.

In some cases, there just aren't qualified candidates due to past felony convictions or drug use. Some flunk polygraph tests. Others don't complete the lengthy background investigation form.

The entire process can take up to three to six months, which weeds out people who need a job immediately, said Hadley, who also recruited officers when he was head of the public safety department in Kalamazoo, Mich.

To get 20 good applicants, it can take 200, he said.

Bueermann, who also worked 33 years in the Redlands, Calif., Police Department, said police departments need to have intentional recruitment processes. Police-work can be dangerous and hours can be long and irregular. Having the authority to use deadly force makes policing unique.

"You just don't see that in any other job," Bueermann said.

In a 2017 Pew survey of nearly 8,000 officers, 86% said high-profile fatal incidents between black citizens and police officers have made their jobs more challenging and 93% said the incidents have increased their concerns about their own safety.

"If that's the imagery you see all the time, it might be very difficult for you to consider policing as a potential occupation," Bueermann said of young people considering the career. "I don't think that there aren't enough people, it's that there aren't enough of the right people

Robert Congdon wanted to retire after 22 years in office, but no one stepped up. The first selectman of Preston, Conn., announced two years before the November 2017 election that he'd be stepping down.

Congdon, 69, is now in his 23rd year as the small rural town's chief executive, a role he compares to running a small business.

Preston is governed by a board of selectman, which sets the town's policy agenda, and a town meeting, which acts as a legislative body. When Congdon started this role, dozens would attend each meeting. Now, maybe 20 people show up each year, he said.

"What got lost is the discussion" on why decisions are made, Congdon said, and "we're not a better place because of it."

Similar to policing, social media has changed how elected officials work and how citizens interact with them

"When I first took my job 23 years ago, I would get 30 to 40 to 50 phone calls a day, and you actually talked to somebody who had a concern or issue. Today you receive 150 emails," Congdon said. Being first selectman "was the most rewarding job I ever had — and it's still very rewarding — but it was much more rewarding when you were dealing with people rather than Facebook or Twitter."

On top of dealing with angry citizens, many local elected roles receive little to no pay, especially in small towns, said Rice University political science professor Melissa Marschall.

When she studied mayoral elections in California, Indiana, Kentucky, Louisiana, Minnesota and Virginia, more than 70% of contests in small towns were unopposed.

“It's kind of volunteerism that takes a lot of time and energy,” Marschall said. “You don't hear from constituents when they're happy.”

Low pay and job insecurity may have contributed to no candidate rising to take Congdon's seat, the first selectman said. While he thinks it's important for young people to get involved in local politics, the role of first selectman comes with sacrifices he said he wouldn't recommend even his own children make.

When Congdon entered office, he had two specific goals that he said he feels he's accomplished: forming a strong relationship with a growing casino industry near his town and repurposing an abandoned mental health hospital to help fuel economic development in the area.

“You make your decisions based on what you think is best for the greatest good,” Congdon said of local office. While many people are “disenchanted” with politics at the national level, Congdon said the ability to accomplish specific goals could attract new people to local roles.

“It's not all partisan politics at the local level,” Marschall agreed. After the 2016 election, Marchall said she saw a slight uptick in candidates in the six states she studied. While it's not clear whether the increase will be sustained, it could be an indication of renewed interest.

Teachers, too, have seen recent positive change.

Teacher compensation gained national attention in recent weeks after educators from all 55 counties in West Virginia went on strike to protest their low pay. After nine school days, the strike ended with a deal to give all state employees a 5% raise and stop health insurance premiums raises.

What's needed is “to make sure teachers are armed with their voice now more than ever before,” said Weingarten, whose group's West Virginia chapter represented teachers. “There will always be people who want to teach because of a calling.”

<b>HEADLINE</b>	<b>03/22 EU backs Britain in blaming Russia</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/european-union-supports-britain-blame/2018/03/22/id/850298/">https://www.newsmax.com/newsfront/european-union-supports-britain-blame/2018/03/22/id/850298/</a>
<b>GIST</b>	European Union leaders backed Britain on Thursday in blaming Moscow over a nerve agent attack on a former Russian spy in England, raising the possibility of additional retaliatory steps by European countries.

The solid show of support from the EU, at a time when Britain is grappling with its departure from the bloc, will boost Prime Minister Theresa May, who has been asking other nations to match her decision to expel Russians over the attack.

In what will form the basis of a formal statement later on Thursday, the chairman of the EU leaders' summit, Donald Tusk, said on Twitter that the bloc "agrees with U.K. government that [it is] highly likely Russia is responsible for the Salisbury attack and that there is no other plausible explanation."

May accused Russia of the first known offensive use of a nerve toxin in Europe since World War Two after Sergei Skripal, a former Russian double agent, and his daughter were found unconscious in the city of Salisbury on March 4.

The attack has sparked tit-for-tat retaliatory action, with May's decision to expel 23 Russian "undeclared intelligence officials" followed by similar measures from Moscow, including the closure of Britain's cultural centre in Russia's second city of St Petersburg.

Over a dinner of lamb, May called on EU leaders to work together to confront the challenge Russia presented, saying that the attack in Salisbury was "part of a wider pattern of behavior" by a country to thwart international norms.

"Russia staged a brazen and reckless attack against the United Kingdom," May told reporters in Brussels. "It's clear that the Russian threat does not respect borders and indeed the incident in Salisbury was a pattern of Russian aggression against Europe and its near neighbors."

In the early days after the attack, May won the support of French President Emmanuel Macron, German Chancellor Angela Merkel and U.S. President Donald Trump when they said they shared Britain's assessment of Russian culpability.

But in Brussels, May had to convince more dovish states including Greece, Hungary and Bulgaria, that they should blame Russia squarely over the attack.

Tusk's statement means they had been convinced, opening the way for EU leaders to discuss future "coordinated action". Lithuanian President Dalia Grybauskaitė said she was ready to expel Russian spies and diplomats said Poland could do so too.

Both had held off to see who else would join.

Slovakia's new prime minister, Peter Pellegrini, said he wanted "constructive dialogue" with Russia despite the poisoning of the Skripals, who British authorities say have been critically ill since the attack by a Soviet-designed, military-grade nerve agent called Novichok.

May has also asked fellow European leaders to step up intelligence cooperation to start going after Russian spy networks, diplomats said.

"Britain says there are these networks that organise such things like Salisbury, that these networks exist across our borders and that it would be good to go after them together," a senior EU diplomat said.

Another diplomat said: "There is movement among several willing states to do something together in reaction to Skripal." The person added this would be done by states individually, so as not to press more reluctant EU member states too hard.

Russia has offered several different motives to explain the attack on the Skripals, who may have been left brain-damaged, and absolve Moscow of responsibility — something London labels disinformation and distraction.

<p><a href="#">Return to Top</a></p>	<p>On Thursday, Moscow's ambassador to London, Vladimir Yakovenko, said that, had Novichok been used, the Skripals would have died and he rebuked British Foreign Secretary Boris Johnson for comparing Russia's hosting of the soccer World Cup this summer with Nazi Germany's hosting of the Olympics in 1936.</p> <p>In Moscow, President Vladimir Putin discussed Britain's "unfriendly and provocative" policy at a session of the national security council, RIA news agency quoted the Kremlin as saying.</p> <p>Ties between Russia and the West plummeted over Moscow's 2014 annexation of Crimea and support for rebels in eastern Ukraine. Both have triggered rounds of EU sanctions.</p> <p>A British official stressed that Britain was not seeking regime change in Russia, but that "Russia has shown itself as a strategic enemy, not a strategic partner."</p>

<b>HEADLINE</b>	<b>03/22 US to sell \$1B in arms to Saudi Arabia</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/politics/us-saudi-arabia-the-latest-arms-sale/2018/03/22/id/850284/">https://www.newsmax.com/politics/us-saudi-arabia-the-latest-arms-sale/2018/03/22/id/850284/</a>
<b>GIST</b>	<p>The Trump administration is signing off on selling more than \$1 billion in arms to Saudi Arabia as Crown Prince Mohammed bin Salman visits the United States.</p> <p>The State Department says the administration told Congress on Thursday that it plans to approve the sale. Lawmakers will have 30 days to act if they want to try to stop it.</p> <p>The package includes up to about 6,700 U.S.-built anti-tank missiles. Raytheon Co. makes the missiles.</p> <p>Other items include support, maintenance and spare parts for American tanks, helicopters and other equipment already in Saudi Arabia's arsenal.</p> <p>Prince Mohammed met Tuesday with President Donald Trump as he started his three-week U.S. tour.</p>

<b>HEADLINE</b>	<b>03/23 China: \$3B US goods for possible retaliation</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/china-hike-tariffs-us-pork-aluminum-goods-53956078">https://abcnews.go.com/Technology/wireStory/china-hike-tariffs-us-pork-aluminum-goods-53956078</a>
<b>GIST</b>	<p>China announced a \$3 billion list of U.S. goods for possible retaliation in a tariff dispute with President Donald Trump and girded for a bigger battle over technology policy as financial markets sank on fears of disruption to global commerce.</p> <p>The Commerce Ministry said higher duties on pork, apples, steel pipe and other goods would offset Chinese losses due to Trump's tariff hike on steel and aluminum imports. It urged Washington to negotiate a settlement but set no deadline.</p> <p>In a separate dispute with potentially bigger consequences, the ministry criticized Trump's decision Thursday to approve a possible tariff hike on Chinese goods worth up to \$60 billion over Beijing's technology policy. It gave no indication of a possible response but the foreign ministry said Beijing will take "all necessary measures" to protect its interests.</p> <p>Financial markets sank on concern the escalating tensions might disrupt the biggest global trading relationship or lead other nations to raise import barriers.</p> <p>U.S. stocks sank. In Asia, Tokyo's benchmark tumbled by an unusually large 4.6 percent while the Shanghai Composite index fell 4.5 percent.</p>

	<p>The dollar dipped to 104.85 yen as investors shifted into the Japanese currency, which is viewed as a "safe haven" from risk.</p> <p>China's response Friday appeared to be aimed at increasing domestic U.S. pressure on Trump by making clear which exporters, including farm areas that voted for him in 2016, might be hurt.</p> <p>"Beijing is extending an olive branch and urging the U.S. to resolve trade disputes through dialogue rather than tariffs," said economist Vishnu Varathan of Mizuho Bank in a report. "Nevertheless, the first volley of shots and retaliatory response has been set off."</p> <p>The Commerce Ministry said Friday's list was linked to Trump's steel and aluminum tariffs , but companies already were looking ahead to potential disruption from the bigger squabble over American complaints Beijing steals or forces companies to hand over technology.</p> <p>The list made no mention of jetliners, soybeans or other products that are the biggest U.S. exports to China by value and that the American Chamber of Commerce in China said might be targets. That leaves Beijing options to take more drastic steps.</p>

<b>HEADLINE</b>	<b>03/23 Pakistan celebrates National Day</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/pakistan-celebrates-national-day-military-parade-53955374?">http://abcnews.go.com/International/wireStory/pakistan-celebrates-national-day-military-parade-53955374?</a>
<b>GIST</b>	<p>Pakistanis celebrated on Friday their National Day with a military parade in the capital, Islamabad, showcasing short- and long-range missiles, tanks, jets, drones and other hardware. Troops, including female soldiers, marched past a stand with political and military leaders.</p> <p>Thousands chanted "Long Live Pakistan" as Pakistani air force jets flew over, showing off the country's air power, and paratroopers jumped out of helicopters.</p> <p>Pakistan air force has been critical to the military's offensive against militant hideous in the tribal regions bordering Afghanistan. The military has claimed success in routing militants, but violent attacks have has continued.</p> <p>As part of security measures in Islamabad, authorities suspended mobile phone services during the parade, presumably as a precaution against homemade bombs being triggered remotely by cell phones.</p> <p>Pakistani President Mamnoon Hussain used the occasion to promise to defeat militants who have killed thousands of people in attacks over the past decade. In a televised speech, he also criticized neighboring India for what he called human rights violations in the disputed Himalayan region of Kashmir.</p> <p>Pakistan and India have tensed relations and they have fought two of their three wars over Kashmir.</p> <p>Authorities blocked some roads in Islamabad during the parade, considered a main event in the day's festivities. Later on Friday, 141 Pakistanis and foreigners are to be honored for outstanding services and achievements, as part of the celebrations.</p> <p>This year, Cuba's late ruler Fidel Castro is to be honored, in gratitude for sending Cuban doctors to Pakistan in the 2005 earthquake that killed 75,000 people.</p> <p>Pakistani right activist Asma Jahangir, who died last month in Lahore and often criticized the military's interference in civilian affairs, will also be honored. Her family will receive her award.</p>

<b>HEADLINE</b>	<b>03/22 National security adviser resigning</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Politics/gen-hr-mcmaster-resigning-national-security-adviser/story?id=53948256">http://abcnews.go.com/Politics/gen-hr-mcmaster-resigning-national-security-adviser/story?id=53948256</a>
<b>GIST</b>	<p>President Donald Trump and National Security Adviser Gen. H.R. McMaster mutually agreed that the three-star general and Iraq war veteran will leave the Trump administration, the White House confirmed on Thursday.</p> <p>He will be replaced by former United Nations ambassador John Bolton — the third person to take on the role during the current administration.</p> <p>“After thirty-four years of service to our nation, I am requesting retirement from the U.S. Army effective this summer after which I will leave public service. Throughout my career it has been my greatest privilege to serve alongside extraordinary servicemembers and dedicated civilians,” McMaster said in a statement adding. “I am thankful to President Donald J. Trump for the opportunity to serve him and our nation as national security advisor.”</p> <p>Trump lauded McMaster's service saying "I thank General McMaster and his family for their service and wish them the very best.”</p> <p>McMaster's departure in early 2018 had been planned and expected, especially as Trump re-tools his team ahead of historic talks with North Korea, sources with direct knowledge told ABC News.</p> <p>He was seen as adding a steady and intellectual voice to Trump’s security team, but the president chafed at his style and disposition in Oval Office briefings, the sources said. He also clashed with former Trump advisor Steve Bannon and other top military brass, including Defense Secretary Jim Mattis.</p> <p>He was also reportedly unable to keep the president's attention in complex briefings, correcting him when he doesn't want to be corrected, and seen as a lecturer, the sources said.</p> <p>Three months on the job, the New York Times reported that Trump described McMaster as "a pain" and complained he talked too much.</p> <p>Just last month, following new indictments targeting Russian cyber operatives, Trump publicly rebuked McMaster, tweeting the general forgot to mention that results of the 2016 election were not impacted or changed by the Russians - something the indictment never said.</p>

	<p>McMaster also broke with Trump on several issues.</p> <p>He has urged continuation of the Iran nuclear deal; opposes the label “radical Islamic terrorism;” supports free trade deals with key allies like South Korea, and forcefully protested the racially charged violence in Charlottesville.</p> <p>After reports surfaced that Trump revealed highly classified info to the Russians in an Oval Office meeting in May 2017, McMaster vigorously defended the president in an ad hoc press conference outside the West Wing.</p> <p>He remains on active duty as a Lieutenant General in the US Army (3-star). The Pentagon has considered giving McMaster a fourth star and new assignment in the military.</p>

<b>HEADLINE</b>	<b>03/22 Dow tanks amid fears China trade war</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/dow-tanks-700-points-amid-fears-china-trade/story?">http://abcnews.go.com/US/dow-tanks-700-points-amid-fears-china-trade/story?</a>
<b>GIST</b>	<p>The Dow Jones Industrial Average plunged more than 700 points today amid Wall Street fears of a potential trade war with China sparked by punishing tariffs announced by President Donald Trump.</p> <p>At the closing bell at the New York Stock Exchange, the Dow finished the day down 724 points to 23,957.</p> <p>The other major indexes also tanked. The S&amp;P 500 fell 68 points to 2,643, while the Nasdaq plunged 178 to 7,168.</p> <p>The market tumble came shortly after Trump announced his plans for tariffs on up to \$60 billion annually in Chinese imports. The move by the White House was designed as retaliation for Beijing’s violation of U.S. intellectual property outlined in an administration report.</p> <p>Trump signed a presidential memorandum directing the U.S. Trade Representative to publish a proposed list of products in 15 days along with an intended tariff increase, after which the list will be opened up for public comment.</p> <p>The president said he’s spoken to China's President Xi Jinping about the actions and that he continues to have “tremendous respect” for him.</p> <p>On Tuesday, Chinese Premier Li Keqiang sent a warning to the White House to "act rationally" to avoid disrupting trade over steel and technology.</p> <p>"No one will emerge a winner from a trade war," Li said at an annual news conference held during the meeting of China's ceremonial legislature.</p>

<b>HEADLINE</b>	<b>03/23 Young activists to ‘March for Our Lives’</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/young-activists-descend-washington-tomorrow-march-lives/story?id=53850670">http://abcnews.go.com/US/young-activists-descend-washington-tomorrow-march-lives/story?id=53850670</a>
<b>GIST</b>	<p>Tens of thousands of young people are set to descend on the nation's capital tomorrow for March for Our Lives, an event organized by the student survivors of the Feb. 14 mass shooting at Marjory Stoneman Douglas High School in Florida that killed 17 people.</p> <p>The student participants are marching "to demand that their lives and safety become a priority and that we end gun violence and mass shootings in our schools today," according to the event website.</p>

"In the tragic wake of the seventeen lives brutally cut short in Florida, politicians are telling us that now is not the time to talk about guns. March for Our Lives believes the time is now," the event said.

The march extends beyond Washington, D.C.: Over 800 sister marches are registered touching every part of the nation, from Hawaii to Alaska, and from Texas to Maine. Sister marches have even spread throughout the world, from Canada to Iceland, from Spain to Israel, and India to Hong Kong.

"It just shows that the youth are the future," Stoneman Douglas survivor Alex Wind told "Good Morning America" on Monday. "One day we're going to have a president from our generation, and we're trying to make the change before that happens."

"I just think young voices everywhere, they're just as equal as any other voice," another survivor, Ryan Deitsch, added on "GMA." "In this country, we have the freedom to say whatever we want and we have to use that to the best of our ability to be able to spread messages that we have to spread to make the world a better place."

Concerned parents are also participating.

Rebecca Boldrick, the mother of Stoneman Douglas student David Hogg, told ABC News, "As a mother and a teacher I am marching because our schools need to return to being the sanctuaries they should be. I don't want there to be any more senseless mass killings by assault rifles. I want to protect every American in school -- and in public."

Celebrities including Oprah Winfrey and Steven Spielberg have donated to March for Our Lives. George and Amal Clooney, who are among the A-listers who donated, also said they will participate in the march, which begins at noon EST Saturday.

Ariana Grande, Demi Lovato, Common, Jennifer Hudson and Vic Mensa will perform at the event.

<b>HEADLINE</b>	<b>03/22 Protest in fatal shooting unarmed man</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/demonstrators-protest-fatal-shooting-unarmed-man-sacramento/story?">http://abcnews.go.com/US/demonstrators-protest-fatal-shooting-unarmed-man-sacramento/story?</a>
<b>GIST</b>	<p>Demonstrators in Sacramento, California, gathered Thursday evening to protest the death of 22-year-old Stephon Clark, who was killed in his grandmother's backyard over the weekend after two police officers fired 20 shots at him.</p> <p>A crowd of people went to Sacramento's City Hall, chanting phrases like "Stand up, fight back" and "No justice, no peace." The march then moved to Interstate 5, which was shut down as a result, before demonstrators blocked the entrance to Golden 1 Center, delaying a Sacramento Kings game there. The game eventually got underway, but with few spectators as the doors to the arena were locked.</p> <p>Black Lives Matter Sacramento is hosting the demonstration, according to the Facebook event titled "Turn Up - for [Stephon] Clark!"</p> <p>"We are tired of Sacramento law enforcement killing us!" the event description reads. "We are tired of talking and meeting and sitting trying to convince our elected officials that there needs to be change!"</p> <p>Police released body camera footage from the shooting on Wednesday night as well as thermal-imaging video from a Sacramento Sheriff's Department helicopter, which shows Clark running from a neighbor's yard and onto his grandmother's property.</p> <p>After police are seen running down a driveway after Clark and taking cover at the edge of the building, they yell several times for Clark to stop and show them his hands before several shots are fired.</p>

	<p>Chopper video shows Clark moving toward the officers before the shooting, but it is unclear whether his arms were extended.</p> <p>Organizers wrote on the event page that they waited until the video was released to schedule a protest.</p> <p>In a press conference Thursday afternoon, Sacramento Mayor Darrell Steinberg praised the city's efforts to remain transparent by releasing the video but also said "it is not fair" to "render a judgment on the specifics in this case until more facts are known that explain what we all saw in the video."</p> <p>Steinberg also encouraged the community to make sure voices heard, emphasizing his desire to make sure this kind of death never happens again.</p>

## Cyber Awareness

[Top of page](#)

<b>HEADLINE</b>	<b>03/22 Pop up ads help distribute botnets</b>
<b>SOURCE</b>	<a href="https://blog.trendmicro.com/trendlabs-security-intelligence/pop-up-ads-and-over-a-hundred-sites-are-helping-distribute-botnets-cryptocurrency-miners-and-ransomware/">https://blog.trendmicro.com/trendlabs-security-intelligence/pop-up-ads-and-over-a-hundred-sites-are-helping-distribute-botnets-cryptocurrency-miners-and-ransomware/</a>
<b>GIST</b>	<p>The Trend Micro Cyber Safety Solutions team has been tracking a potentially unwanted app (PUA) distribution campaign that installs PUA software downloaders. During our research, we found that some of these distributors started pushing malware along with PUAs in late 2017. In this post we focus on one of the older PUA software downloaders called ICLoader (also called FusionCore and detected by Trend Micro as PUA_ICLOADER). Different reports identified it as a PUA software downloader because it installed adware or unwanted software.</p> <p>Like most threats, ICLoader evolved and adapted to the current landscape. In 2017, it began pushing various botnets, cryptocurrency miners, and the new emerging GandCrab ransomware (detected by Trend Micro as RANSOM_GANDCRAB.A). Pop-up ads were used to distribute the malware on file sharing websites and over a hundred fake software sharing websites — all of which are still live (at the time of writing). The distributors of ICLoader seem to be targeting users who are actively looking for specific software since even the pop-up ads are hosted on sites that supposedly share software.</p> <p>The distribution campaign</p>

While tracking the campaign, we found three sources distributing ICLoader. As mentioned above, one distribution method involves using pop-up ads on free file sharing service websites — a known avenue for distributing unwanted applications and malware. These file sharing websites allow users to upload their file and share a download link with other people. Pop-up advertisements appear when people click the download buttons on their page.

ICLoader uses these pop-up ads as lures for installation. When users click the download button, a pop-up ad opens on a new window with malicious links that lead to the ICLoader download page.

Users are led to believe that these are real files from the sharing website. Clicking on the link installs ICLoader, which can drop malware or unwanted apps onto the victim's device.

The second distribution vector is fake software sharing websites. One group has made 117 of these sites, each one sharing hundreds of cracked software. The sites list detailed descriptions of software and have 'free download' buttons to the cracked versions at the bottom of the page. We found that these download links all connect to servers that redirect users to download different PUA downloader software, mainly ICLoader.

<b>HEADLINE</b>	<b>03/22 Atlanta officials warn: data compromise</b>
<b>SOURCE</b>	<a href="https://www.myajc.com/news/crime--law/atlanta-officials-warn-cyber-attack-may-compromise-sensitive-data/afZLYCO14WySOBFATzKXRP/">https://www.myajc.com/news/crime--law/atlanta-officials-warn-cyber-attack-may-compromise-sensitive-data/afZLYCO14WySOBFATzKXRP/</a>
<b>GIST</b>	<p>City of Atlanta officials are struggling to determine how much sensitive information may have been compromised in a Thursday cyber attack.</p> <p>They urged employees to check their bank accounts to make sure their financial information had not been accessed and said that anyone who had conducted transactions with the city could be at risk.</p> <p>“Because we don’t know, I think it would be appropriate for the public just to be vigilant in checking their accounts and making sure their credit agencies have also been notified,” Mayor Keisha Lance Bottoms said at a Thursday press conference.</p> <p>The city has also received demands that it pay a ransom of an unspecified amount, officials confirmed. But officials had yet to make a determination if it would pay the ransom.</p> <p>“We can’t speak to that right now,” Bottoms said. “We will be looking for guidance, specifically from our federal partners.”</p> <p>The FBI, the Department of Homeland Security and the Secret Service had been called on for advice.</p> <p>For years, the FBI has warned that the use of ransomware — malicious software that threatens to block access to data or to publish it unless the infected organization pays a ransom — is a fast growing criminal enterprise.</p> <p>Organizations often don’t learn they have been infected until they can’t access their data or until computer messages appear demanding a ransom payment in exchange for a decryption key, according to the FBI’s website.</p> <p>The messages include instructions on paying the ransom, usually in the form of bitcoins — a crypto currency that allows for anonymous transactions online.</p> <p>Both Davidson County North Carolina and the Colorado Department of Transportation suffered ransomware attacks last month.</p>

The city's Department of Atlanta Information Management at 5:40 a.m. Thursday learned of outages of various internal and customer applications "including some applications customers use to pay bills or access court related information," said Richard Cox, the city's interim Chief of Operations.

Cox called it a "ransomware cyber attack."

The public safety department, water services and the Hartsfield-Jackson Atlanta International Airport operated without incident, Cox said.

Cox said the city would offer employees additional resources to help them protect their information in coming days.

Bottoms said that the city's municipal courts should be open on Friday.

Atlanta Police Chief Erika Shields said that her department's emergency response system had not been affected at all.

Shields said that officers had reverted to writing reports on paper out of an abundance of caution, but that as far as she knew the police departments computer systems were still operational.

Shields insisted that earlier reports attributed to a department memo that warned that payroll might be disrupted were not true.

"We did not put out a memo," Shields said. "I can't control what is said. I'm deferring to experts here who said, 'It won't be affected.' And I believe them."

Bottoms also said that city's 8,000 employees would be paid on Friday.

"I'll be signing 8,000 checks today if necessary," Bottoms said.

<b>HEADLINE</b>	<b>03/22 Financial fallout from data breaches</b>
<b>SOURCE</b>	<a href="https://www.govinfosecurity.com/financial-fallout-from-data-breaches-a-10734">https://www.govinfosecurity.com/financial-fallout-from-data-breaches-a-10734</a>
<b>GIST</b>	<p>Recent financial reports from three healthcare sector organizations that suffered cyberattacks demonstrate how costly data breaches can be to not-for-profit healthcare providers and for-profit companies alike.</p> <p>For example, a new auditor report for Arizona-based Banner Health acknowledges that anticipated federal fines resulting from a 2016 breach incident, and a pending lawsuit, could impact the not-for-profit Arizona healthcare system's financial performance.</p> <p>Similarly, recent 2017 fiscal year-end filings with the U.S. Securities and Exchange Commission by medical transcription vendor software vendor Nuance and pharmaceutical giant Merck reveal the financial effect on each of those organizations of the NotPetya ransomware attacks last June that disrupted their operations.</p> <p>The financial impact from cyberattacks on all these organizations offers a powerful lesson for others, says privacy attorney Adam Greene of the law firm Davis Wright Tremaine.</p> <p>"Healthcare entities have historically lagged behind many other industries with respect to how much budget is spent on information security," he says. "But the last few years have really highlighted the substantial damage that information security breaches can cause, demonstrating a much higher return on investment for robust information security controls."</p> <p>Banner Health Breach</p>

A consolidated financial statement report for 2016 and 2017 issued on March 16 by the consultancy Ernst & Young about Banner Health notes that it's facing a consolidated class action lawsuit as well as an investigation by the Department of Health and Human Services related to a 2016 data breach.

The auditor report states that Banner Health expects potential "negative findings" from the breach investigation by HHS' Office for Civil Rights as well as a possible fine.

"The OCR investigation is still active, and OCR has indicated that initial Banner responses with respect to its past security assessment activities are inadequate," the report says. "Although Banner has supplemented its initial responses, Banner anticipates it may receive negative findings with respect to information technology security program and that a fine may be assessed against Banner."

The report notes that the class action lawsuit against Banner - which represents the consolidation of nine lawsuits - seeks damages and other remedies on behalf of individuals impacted by the breach. The report notes that Banner intends to vigorously defend itself against the suit and expects a "substantial portion of the potential exposure from the cyberattack and litigation" will be covered by its cyber risk insurance policy. "The extent of potential liability has not yet been settled," it notes.

The Ernst & Young report notes that a forensics investigation into the Banner breach determined that the organization's computer systems that process credit cards in food and beverage outlets at some locations were accessed by unauthorized users resulting in the copying of about 21,000 credit cards numbers. The attackers also gained access to a number of Banner servers containing other information of 3.7 million Banner patients and healthcare providers.

In a statement provided to Information Security Media Group, Banner says that after it reported the August 2016 cyberattack, OCR opened an initial investigation in November 2016, which is progressing. "Banner provided all of the information the OCR requested, and has fully cooperated in the investigation," the statement says.

"Over the last 16 months, Banner has participated in an ongoing dialogue with the OCR to ensure they were highly informed about the advances we are making in our information security program to help protect against future intrusions," the statement notes.

OCR declined to comment, saying it doesn't discuss current or potential investigations.

Privacy attorney David Holtzman, vice president of consulting firm CynergisTek, notes that the SEC recently issued guidance greatly expanding the responsibilities of public companies to disclose obligations related to cybersecurity risks and incidents.

"This new guidance applies to disclosures in registration statements and periodic reports filed by publicly traded companies," he says. But some not-for-profit organizations, such as Banner Health, apparently are choosing to follow the guidance as well, he points out.

#### Nuance's Financial Impact

Cyberattacks have also taken a financial toll on Nuance and Merck.

In Nuance's 10K filings with the SEC for fiscal 2017 ended Sept. 30, the Waltham, Mass.-based company says its revenue and operating results for fiscal year 2017 were negatively impacted by the NotPetya malware incident.

"For fiscal year 2017, we estimate that we lost approximately \$68 million in revenues, primarily in our healthcare segment, due to the service disruption and the reserves we established for customer refund credits," the company reports.

"Additionally, we incurred incremental costs of approximately \$24 million for fiscal year 2017 as a result of our remediation and restoration efforts, as well as incremental amortization expenses."

Nuance says in the filing that it's evaluating its insurance coverage to determine the amount, if any, of the malware incident losses that are recoverable under the company's policies.

Additionally, as a result of the ransomware attack, Nuance reports to the SEC it incurred capital expenditures of approximately \$13 million related to upgrading its existing technology infrastructures during the fourth quarter of fiscal year 2017.

#### Impact on Merck

In its 10-K filing with the SEC for its fiscal year 2017, which ended on Dec. 31, Merck says that the June 27, 2017, network attack involving NotPetya led to a disruption of the company's worldwide operations, including manufacturing, research and sales operations.

"Due to the cyberattack, the company was unable to fulfill orders for certain products in certain markets, which had an unfavorable effect on sales in 2017 of approximately \$260 million," Merck says in the filing. <p>

In addition, the company says it recorded other related expenses totaling \$285 million in 2017, net of insurance recoveries of approximately \$45 million.

But the impact on Merck will linger into 2018, the company warns.

"Due to a residual backlog of orders, the company anticipates that in 2018 sales will be unfavorably affected in certain markets by approximately \$200 million from the cyberattack. Merck does not expect a significant impairment to the value of intangible assets related to marketed products or inventories as a result of the cyberattack."

The company notes that it has insurance coverage insuring against costs resulting from cyberattacks and has received proceeds. "However, there may be disputes with the insurers about the availability of the insurance coverage for claims related to this incident," Merck says in the filing.

#### Sales Affected

Merck also notes that the temporary production shutdown as a result of the cyberattack also contributed to the company's inability to meet higher than expected demand for vaccine Gardasil 9, which resulted in Merck's decision to borrow doses of Gardasil 9 from the U.S. Centers for Disease Control and Prevention Pediatric Vaccine Stockpile.

"The company subsequently replenished a portion of the borrowed doses in 2017. The net effect of the borrowing and subsequent partial replenishment was a reduction in sales of \$125 million in 2017," according to the SEC filing.

Merck says it has implemented a variety of measures to further enhance its systems to guard against similar attacks and taking steps to enhance the company's resiliency following a cyberattack.

"The objective of these efforts is not only to protect against future cyberattacks, but also to improve the speed of the company's recovery from such attacks and enable continued business operations to the greatest extent possible during any recovery period," the company says.

#### Insurance Benefits

Banner, Nuance and Merck each appear hopeful that their cyber insurance policies can potentially help cover some of the expenses related to cyberattacks.

"The importance of cyber insurance cannot be understated," attorney Greene notes. "Because the cyber market is relatively new, insurance policies aren't as standardized. They should typically cover regulatory investigations and regulator settlements or fines, but each policy must be carefully reviewed on this point, including whether there are specific sub-limits."

The attorney emphasizes: "It's very important that information security staff are involved in the cyber insurance process, so that an organization does not fill out an insurance application inaccurately regarding what safeguards are in place, potentially leading to coverage issues later should an incident occur."

<b>HEADLINE</b>	<b>03/22 Europe power plants brace for attacks</b>
<b>SOURCE</b>	<a href="https://www.forbes.com/sites/davekeating/2018/03/22/european-power-plants-brace-for-russian-hack-attacks/#cdc20db72261">https://www.forbes.com/sites/davekeating/2018/03/22/european-power-plants-brace-for-russian-hack-attacks/#cdc20db72261</a>
<b>GIST</b>	<p>Last week, the U.S. Computer Emergency Readiness Team warned that Russia had hacked into a number of public and private companies in the energy sector, including power plants. The targeted plants were in both the United States and Europe, they said.</p> <p>As alarming as the news was, it left many more questions than answers – particularly because the report did not specify which plants had been affected.</p> <p>It's unclear at this stage whether more specific information has been handed over to European governments by the Americans. A spokesperson for the European Commission, the European Union's executive, told me that while they cannot reveal the details of what information has been passed on from the American authorities, they are "cooperating very closely with the U.S. counterparts."</p> <p>However, a European national government source says many countries are still in the dark about what plants might have been affected, and if any intelligence has been passed on to specific EU member states, it isn't being shared.</p> <p>The Times, a British newspaper, reported this week that the manager of the UK's national electricity grid has been put on alert by the government, told to boost its security amid fears of a Russian cyber-attack.</p> <p>The warning went out to electricity, gas and water firms as well as a nuclear power plant, according to the paper, citing national security officials at the country's National Cyber Security Centre. Hospitals also received warnings.</p> <p>The warning comes as tensions between London and Moscow heat up after a nerve-agent attack in England that the government blames on Russia. Russia has denied being involved.</p> <p>Concern about the potential of state-sponsored cyber attacks has been growing for some time. But with global tensions rising, the anxiety has suddenly become acute.</p> <p>"The atmosphere around these types of attacks is ratcheting up as global tensions, and global interconnectivity, rise," says Chris Day, an expert with cybersecurity firm Cyxtera. "Ukraine's power grid was successfully infiltrated in 2015 and 2016, so it's not surprising that other countries are in the crosshairs. This is a real and present danger requiring immediate action."</p> <p>"Power companies should employ all offense and defence-oriented tools at their disposal."</p> <p>European response</p> <p>According to the current EU cyber incident regulations, preparedness for and responses to an attack against critical energy infrastructure is the responsibility of national European governments rather than the European Union. But the EU has set up a voluntary information sharing mechanism called the Computer Incident Response Teams.</p> <p>Under EU law, energy providers must adopt specific security measures to prevent network and information security incidents. And they must report any incidents that could impact energy supply.</p>

	<p>National governments are currently putting together detailed risk preparedness plans for an electricity crisis, which takes into account the possibility of a cyber attack.</p> <p>“We’ve put in place a cyber diplomacy toolbox for malicious cyber activities by state and non-state actors,” Nathalie Vandystadt, a spokesperson for the European Commission, told Forbes. “The framework is expected to encourage cooperation, facilitate mitigation of threats, and influence the behaviour of potential aggressors in the long term.” But these frameworks are still in development, having only recently become EU law.</p> <p>What power plants can do</p> <p>While these coordinated plans are coming into place, Day says there are specific things energy utilities should be doing at a minimum to protect themselves from cyber attacks.</p> <p>“Test the security of devices and applications and review architecture and source code,” he says. “Assess the security of networks and systems, searching for unpatched vulnerabilities and inadequate protection of system information.”</p> <p>He also recommends conducting adversary simulation, which can model an advanced persistent threat from inside the infrastructure and evaluate how the security team will react.</p> <p>Additionally, a software defined perimeter, which only grants access a one-to-one connection based on the context the user presents, can stop unauthorized access to network resources.</p> <p>The details of the potential risk to European plants detected by the US government are still unclear. But the subject may come up today at a summit of European national leaders in Brussels, where Russia, relations with the United States and the EU’s energy union are all on the agenda.</p>

<b>HEADLINE</b>	<b>03/22 Honeypot: database wiped out 13sec.</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/hackers-left-ransom-note-after-wipingout-mongodb-in-13-seconds/">https://www.hackread.com/hackers-left-ransom-note-after-wipingout-mongodb-in-13-seconds/</a>
<b>GIST</b>	<p>For the last couple of years, hackers have been exploiting unprotected MongoDB based servers to steal data and hold the exposed databases for ransom. In order to raise awareness, hackers leaked 36 million records of internal data collected from several vulnerable servers.</p> <p>The seriousness of the matter can be understood by the fact that in July of 2015 John Matherly of Shodan, the world’s first search engine for the Internet of Things (IoT devices) revealed that there are over 30,000</p>

unprotected MongoDB databases exposed for public access.

Now, to determine and measure the depth of attacks against MongoDB, the IT security researchers from German firm Kromtech conducted an experiment in which they purposely left a MongoDB database exposed to the public and kept an eye on the incoming connections.

This practice is called as honeypot which is a security mechanism set to detect and counteract attempts at unauthorized use of information systems.

According to Kromtech's blog post, the honeypot database contained 30GB of fake data. Little did they know, it took only three hours for hackers to identify the database before wiping out its data in just 13 seconds and leaving a ransom note demanding 0.2 Bitcoin.

Here it is noteworthy that in January 2017, hackers held several MongoDB databases for ransom and demanded 0.2 Bitcoin in return. It is unclear if the hackers who took over the honeypot database are part of the same group. However, according to Kromtech's Chief Communication Officer Bob Diachenko, the attack on their database has been traced back to China.

The researchers are certain that only an automated script can complete such task within 13 seconds.

“The attacker first connects to our database, then drops the databases to delete them, drops the Journals to erase their tracks, creates a database called Warning with Readme collection and the Solution Record, then drops the Journals again to cover their tracks. This was all completed in just thirteen seconds, leading to the conclusion that this was the work of an automated script,” noted Kromtech researchers.

The researchers are advising users to secure their database since exposed MongoDB servers are still at risk. Another important aspect of ransom attacks against MongoDB is that hackers are simply deleting the database therefore even if victim pays them off, their data will never be returned. Therefore, keep a back up of your data and never pay ransom in such cases.

<b>HEADLINE</b>	<b>03/22 Report: cyber-terrorism top threat by 2020</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/cyberterrorism-top-threat-by-2020/">https://www.infosecurity-magazine.com/news/cyberterrorism-top-threat-by-2020/</a>
<b>GIST</b>	<p>Nation-state-led cyber-terrorism will be a top threat by 2020 – and every organization should prepare.</p> <p>That's the word from the Information Security Forum (ISF)'s latest Threat Horizon 2020 report, which postulates that terrorist groups, organized criminals, hacktivists and hackers working in various collaborations and configurations to increasingly weaponize the cyber-domain, launching attacks on critical national infrastructure that cause widespread destruction and chaos. Further, their activities will take no account of land barriers or legislation.</p> <p>With power, communications and logistics systems down, organisations will lose the basic building blocks needed for doing business; heating, air conditioning, lighting, transport, information, communication and a safe working environment will no longer be taken for granted.</p> <p>“Over the next two years, business leaders will face regular and complex decisions about protecting their critical information and systems. Existing solutions that have been relied upon for years will be exposed as inadequate,” said Steve Durbin, managing director, ISF. “Only organizations that understand this rapidly changing and complex environment will remain firm and unshakable. Those that are unprepared and incapable of responding quickly will crumble as they defend against an onslaught of potent, day-to-day cyber-attacks.”</p> <p>Aside from the doomsday-like prediction, the report also predicts that technology will outpace controls. Capabilities that seemed impossible only a short time ago will develop extremely quickly, aiding those</p>

who see them coming and hindering those who don't. Developments in smart technology will create new possibilities for organizations of all kinds – but they will also create opportunities for attackers and adversaries by reducing the effectiveness of existing controls. Previously well-protected information will become vulnerable.

Also, according to the ISF, pressure will skew judgement. Existing controls and methods of managing information risk will be put under severe stress by an avalanche of new technologies, regulations and pressures on employees. Organizations that have a good record of securing information will be at risk of complacency, judging that the way they have always done things will continue to work in the future – a dangerous attitude to take.

“Over the coming years, the very foundations of today’s digital world will shake – violently,” Durbin said. Innovative and determined attackers, along with seismic changes to the way organizations conduct their operations, will combine to threaten even the strongest establishments. Only those with robust preparations will stand tall.”

<b>HEADLINE</b>	<b>03/22 Iran-linked hackers adopt new methods</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/iran-linked-hackers-adopt-new-data-exfiltration-methods">https://www.securityweek.com/iran-linked-hackers-adopt-new-data-exfiltration-methods</a>
<b>GIST</b>	<p>An Iran-linked cyber-espionage group has been using new malware and data exfiltration techniques in recent attacks, security firm Nyotron has discovered.</p> <p>The threat actor, known as OilRig, has been active since 2015, mainly targeting United States and Middle Eastern organizations in the financial and government industries. The group has been already observed using multiple tools and adopting new exploits fast, as well as switching to new Trojans in recent attacks.</p> <p>Nyotron now says that OilRig has used roughly 20 different tools in its latest campaign, including off-the-shelf, dual-purpose utilities and previously unseen malware. In addition to data exfiltration, the group has been heavily focused on bypassing network-level security products to establish a foothold into targeted environments.</p> <p>Since November 2017, the notorious Iran-linked threat group has been targeting various organizations in the Middle East with evolved tactics, techniques and procedures (TTPs), including the abuse of Google Drive and SmartFile for command and control (C&amp;C) purposes, Nyotron’s report (PDF) reveals.</p> <p>After compromising a targeted network (phishing emails are likely used to steal login credentials), the group downloads necessary tools from public file sharing services such as Dropbox, Degoo, Files.fm, and File.ac, and from an attacker-controlled server.</p> <p>The hackers used Windows shares to transfer tools to endpoints that did not have an Internet connection or had downloads blocked by firewalls. They also used web shells to upload and execute files on compromised servers.</p> <p>For the attacks, the hacker(s) built a sophisticated Remote Access Trojan (RAT) that uses Google Drive for C&amp;C purposes and which is deployed on the target systems as a file named Service.exe. The malware registers as a service to achieve persistence, receives commands from the attacker’s account on Google Drive, and sends files to it.</p> <p>With no anti-virus programs in VirusTotal detecting the RAT, multiple organizations appear to have been compromised by the malware. The account used to control the malware was created in August 2015, but wasn’t used until recently.</p>

HEADLINE	<b>03/22 Report: cybercrime-as-a-service costs</b>
SOURCE	<a href="https://www.securityweek.com/you-can-ddos-organization-just-10-hour-cybercrime-report">https://www.securityweek.com/you-can-ddos-organization-just-10-hour-cybercrime-report</a>
GIST	<p>The cost of having an organization targeted by a distributed denial of service (DDoS) attack for an hour is as low as \$10, cybersecurity firm Armor says.</p> <p>The low cost of launching such attacks results from the proliferation of cybercrime-as-a-service, one of the most profitable business models adopted by cybercriminals over the past years. It allows criminals-wannabe to employ the resources of established cybercriminals for their nefarious purposes, including malware distribution, DDoS-ing, spam, and more.</p> <p>All that miscreants have to do is to access underground markets or forums and hire the desired cybercrime service to conduct the malicious actions for them. And while the incurred financial losses total billions or even more for affected organizations, the price of hiring such a service is highly affordable to anyone.</p> <p>According to Armor’s The Black Market Report: A Look into the Dark Web (PDF), anyone can DDoS an organization for only \$10 an hour or \$200 per day. Remote Desktop Protocol (RDP) access for a system for three months costs only \$35.</p> <p>The data was collected through the analysis of dozens of online underground markets and forums during the fourth quarter of 2017 and reveals a slight increase in prices compared to a couple of years ago. Considering how powerful DDoS attacks have become lately, however, the cost of launching an attack remains incredibly low.</p> <p>DDoS-for-hire services, however, are only one example of how cheap cybercrime services are on the dark web. The Disdain exploit kit could be rented for \$80 a day, \$500 a week or \$1,400 a month, Armor has discovered. A botnet capable of webinject and other nefarious actions was available at \$750 or \$1,200 a month, with support available at an extra \$100 or \$150 a month.</p> <p>“When source code is offered, there is a trend toward offloading risk by selling malware or exploit code to someone else and then selling support as well. In the spirit of helping others, some sellers have taken to hawking hacker tutorials and known exploits in bundles at relatively low cost, most likely to low-skill hackers known as script kiddies,” the security firm says.</p> <p>Armor’s researchers found a Microsoft Office exploit builder targeting the CVE-2017-0199 vulnerability available at \$1,000. A banking Trojan license, on the other hand, was available at \$3,000 to \$5,000, while a remote access Trojan was seen selling for \$200.</p> <p>On underground forums, buyers can also find code-signing certificates (a Class 3 code-signing certificate was selling for \$400, while an Extended Validation (EV) certificate was offered for \$2,500), account hacking programs (for as low as \$12.99), WordPress exploits (at \$100), password stealers (\$50), Android malware loader (\$1,500), ATM skimmers (\$700 - \$1,500), and various other tools as well.</p> <p>Credit card skimmers and magnetic stripe readers were found selling for as little as \$700 and \$450, respectively. Credit card data is available for purchase as well, with prices starting as low as \$7 for US Visa cards.</p> <p>Card numbers sold with additional identifying information are a bit more expensive: \$18 vs \$10-\$12 at the same vendor. Customers looking to verify the bank information number (BIN) may be charged as much as \$15 for the operation, Armor has discovered. American Express and Discover card numbers were available at \$12 to \$17 with BIN verification.</p> <p>The cost of credit card information was also influenced by the credit limit on the card: one with a \$10,000 limit was available at \$800, while another with a \$15,000 limit was \$1,000. Access to bank accounts too is priced in line with the available balance, ranging from \$200 to \$1,000 for accounts at Wells Fargo, JPMorgan Chase and Bank of America with balances between \$3,000 and \$15,000.</p>

PayPal accounts were also available for sale: \$200 for a verified PayPal account with a balance of \$3,000. Furthermore, the researchers found U.K. bank accounts up for sale, priced at 300 and 400 GBP, for accounts at Lloyds Bank with balances of 3,000 GBP and 5,000 GBP, respectively.

“Buying access to an account, however, is only part of a successful heist. From there, the buyer needs to be able to get their hands on the money. To accomplish this, cybercriminals traditionally have turned to money mules. Their role is to receive the funds from the compromised account, after which, they will be often tasked with transferring that money to another account overseas in exchange for a commission,” Armor notes.

The security researchers discovered that one can buy all kinds of compromised accounts on the dark web, not only finance-related accounts. One vendor offered 1,000 Instagram accounts for a price of \$15, 2,500 for \$25, 5,000 for \$40 and 10,000 for \$60. Another said they would hack into accounts for Facebook, Netflix, Twitter and other services for as low as \$12.99.

Personally identifiable information (PII) and counterfeit documents are also available on underground markets and forums. The price for U.S. PII (name, address, phone number, SSN, DOB, bank account data, employment history, credit history, criminal history) was of \$40 - \$200, while U.S. green cards, driver’s license, Insurance, and Passport Visas (bundled) would cost \$2,000.

Other data being sold on the dark web that attackers can turn into profit includes airline and hotel rewards points. A Southwest Airlines rewards account with at least 50,000 miles was being sold for \$98.88, while a large international hotel chain rewards points account with at least 50,000 points was available at \$74.99.

“Whether you are a small business owner, an enterprise executive or a private individual using a computer from the comfort of your home, there are attackers who are interested in your data. As long as these markets continue to thrive, cyberattacks will remain a constant threat, making it vital business leaders arm their security teams with the resources they need to keep information secure,” Armor concludes.

<b>HEADLINE</b>	<b>03/22 Study: malware from piracy sites</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/study-malware-counts-higher-on-computers-whose-users-visited-piracy-sites/article/753135/">https://www.scmagazine.com/study-malware-counts-higher-on-computers-whose-users-visited-piracy-sites/article/753135/</a>
<b>GIST</b>	<p>Each time a user doubles the amount of time he spends visiting illegal torrent and streaming websites, the malware count on his machine jumps another 20 percent, according to an academic paper released earlier this month.</p> <p>The report, by Carnegie Mellon University researcher Rahul Telang, is an attempt at quantifying the impact of illegal content websites on cybersecurity, following a year-long study of 253 users' online activities throughout all of 2016.</p> <p>Based on data collected by sensors, 174 out of the 253 studied users visited an illegal site at least once, and were found to have an average of 1.4 malware files on their machines, or 1.5 when factoring in adware. In contrast, users who did not use the illegal sites had an average of only 0.7 malware files on their devices -- although when factoring in adware, they had a considerably higher count of 1.4.</p> <p>"Doubling the amount of time spent (a 100% increase) on infringing sites increases the number of malware count by almost 0.05 units," Telang wrote in his report. "While this number may look small, the mean number of malware count on a user machine is 0.24 per month. So a 0.05 increase translates to a 20 percent increase in malware count due to infringing alone."</p> <p>Further extrapolating his results (albeit from a small sample size), Telang also determined that users who visited pirate sites were actually less likely to install anti-malware software as a precaution.</p>

<b>HEADLINE</b>	<b>03/22 Cryptominers target Linux servers</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/hackers-exploit-old-flaw-to-turn-linux-servers-into-cryptocurrency-miners/article/753144/">https://www.scmagazine.com/hackers-exploit-old-flaw-to-turn-linux-servers-into-cryptocurrency-miners/article/753144/</a>
<b>GIST</b>	<p>The malicious actors who installed and ran a cryptocurrency mining operation on hacked Tesla ASW servers and Jenkins servers is now targeting servers running Linux and has so far generated more than \$74,000 in Monero.</p> <p>The new campaign uses the legitimate, open-source XMRig cryptominer in conjunction with exploiting the old vulnerability CVE-2013-2618, which is found in Cacti's Network Weathermap plug-in, according to a Trend Micro Cyber Safety Solutions Team report. The vulnerability is a cross-site scripting vulnerability in editor.php in Network Weathermap before 0.97b and allows remote attackers to inject arbitrary web script or HTML via the map_title parameter.</p> <p>This active campaign is hitting targets primarily in active campaign, primarily affecting Japan, Taiwan, China, the U.S., and India.</p> <p>“As to why they're exploiting an old security flaw: Network Weathermap only has two publicly reported vulnerabilities so far, both from June 2014. It's possible these attackers are taking advantage not only of a security flaw for which an exploit is readily available but also of patch lag that occurs in organizations that use the open-source tool” the team wrote.</p> <p>Trend Micro was able to trace the activity back to two usernames associated with two Monero wallets where \$74,677 has been deposited as of March 21. However, Trend's team noted that the people behind this campaign have made in excess of \$3 million when the Tesla hack and Jenkins server vulnerability exploitation are included. In each of these cases XMRig was also used.</p> <p>The attackers do need to look for targets with a very specific set up in order to be successful.</p> <p>This includes having a web server running Linux (x86-64) and the server has to be publicly accessible. The Cacti plug-in has to be present and implemented with the Plugin Architecture working and an outdated Network Weathermap (0.97a and prior), the web server should not require authentication and finally the web server should be running with root permissions.</p> <p>The Trend researchers could understand why the first two issues might be present, but “why would one want to share network data publicly (Cacti)? Is the web server really being run as root?”</p> <p>They theorized that the server operator might have this set up in place in order might make it easier to monitor the servers, through say a basic browser bookmark, but it also makes it easier for any threat actors to find and gain access.</p> <p>Because turning a Linux server into a mining operation does require that an older vulnerability be left unpatched the best way to protect against such an attack is to keep systems updated with the latest patches, Trend suggested.</p>

<b>HEADLINE</b>	<b>03/22 Guccifer 2.0 is Russian GRU operative</b>
<b>SOURCE</b>	<a href="https://www.scmagazine.com/misstep-reveals-guccifer-20-as-russian-gru-operative/article/753229/">https://www.scmagazine.com/misstep-reveals-guccifer-20-as-russian-gru-operative/article/753229/</a>
<b>GIST</b>	<p>Guccifer 2.0 apparently forgot to activate a virtual private network during communications, allowing U.S. investigators to identify the hacker as an intelligence agent at Russia's GRU.</p> <p>They were able to peg the hacker from his Moscow IP address, which appeared in a U.S. social media company's logs, according to a report from the Daily Beast.</p>

Guccifer 2.0 emerged in 2016 as a counterpoint to the narrative that Russia had hacked the Democrat National Committee (DNC), claiming to be the “lone hacker” behind the attack. President Trump adviser Roger Stone claimed to have communicated directly on Twitter with the self-proclaimed Romanian hacktivist.

Stone's seemingly prior knowledge that the emails of Hillary Clinton's campaign manager John Podesta would be leaked landed him before the House Intelligence Committee last September where he refused to answer questions around his interactions with WikiLeaks founder Julian Assange, who released the emails in a steady drip throughout the 2016 presidential campaign.

At the time, Stone claimed in a pre-hearing statement that he had “no involvement in the alleged activities that are within the publicly stated scope of this committee's investigation -- collusion with the Russian state to affect the outcome of the 2016 election.”

The report said that Special Counsel Robert Mueller has taken the reins in the Guccifer 2.0 investigation.

<b>HEADLINE</b>	<b>03/22 Using web injects to steal cryptocurrency</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/criminals-using-web-injects-to-steal-cryptocurrency/d/d-id/1331350">http://www.darkreading.com/attacks-breaches/criminals-using-web-injects-to-steal-cryptocurrency/d/d-id/1331350</a>
<b>GIST</b>	<p>Criminals have deployed a variety of tactics in recent months to try and profit from the cryptocurrency boom.</p> <p>One of them is the use of Web injects to intercept and modify traffic between user browsers and cryptocurrency sites in order to steal coins from victims and transfer it to accounts held by criminals.</p> <p>Third-party risk management firm SecurityScorecard says it has seen recent evidence of threat actors using Web injects to target cryptocurrency exchange Coinbase and Bitcoin wallet Blockchain.info. Tens of thousands of bots can run the Web injects to steal cryptocurrency, making them a potent threat for investors and exchanges, according to SecurityScorecard.</p> <p>A Web inject is basically code for injecting malicious content into a Web page before the page is rendered on a user's browser. This work by intercepting and modifying traffic between a Web server and user browser in such a manner that the victim typically does not notice anything amiss.</p> <p>Web injects can be used to add or delete content on the Web pages that a victim sees. For instance, a Web inject can be used to add a field in the login screen for capturing the PIN a user might use to access his or her bank account, or it can be used to delete warnings that a user might normally see when viewing a particular Web page. Web injects typically have been used to steal credentials for accessing bank accounts, but recently have begun to play a role in cryptocurrency heists as well.</p> <p>Bot masters can readily buy the Web injects for Coinbase and Blockchain.info and distribute them to infected computers in a botnet, says Doina Cosovan, malware researcher at SecurityScorecard. The malware installed on those infected computers receive the Web injects and inject them in the Coinbase and Blockchain.info websites if a user happens to visit either site.</p> <p>These Web injects are provided as a service, so different malware families can use them. Cosovan says. "We noticed Zeus and Ramnit in particular, but these are simply examples we observed. Any other bot master controlling bots infected with a malware family which has capabilities to inject code in websites can buy and use these Web injects on their bots," she notes.</p> <p>The Web inject for Coinbase that SecurityScorecard discovered is designed to change the settings on a victim's account in order to enable digital coin transfers without requiring the user's confirmation. When a</p>

user tries to log in to his or her Coinbase account, the injected JavaScript content first disables the "Enter" key for the email and password fields so the user has to actually click on the "Submit" button in order to submit the form, according to SecurityScorecard.

It also creates a new button that has mostly the same attributes as the original button, and a few additional malicious ones. It then adds the rogue "Submit" button on top of the original sign-in button so that the victim clicks on the malicious button rather than the original. The ultimate goal is to capture the victim's multifactor authentication information and then using it to change account settings so further transactions can be carried out without requiring the user's approval.

"Once this change is made, the injected content can start making transactions without the need to authorize them with [two-factor authentication]," Cosovan says. "Even more, the user's access to the settings is blocked, so that he can't enable the two-factor authentication for transactions," she adds.

The Blockchain.info Web inject has somewhat similar functionality but in this case is designed to steal from a user's Bitcoin wallet and transfer the digital currency to accounts held by threat actors. As a final touch, the Web inject presents the user with a "Service Unavailable" notice after stealing the cryptocurrency, thereby delaying the victim's ability to detect the theft, SecurityScorecard said.

The use of Web injects in cryptocurrency theft is one of many tactics that cybercriminals are employing to profit from the surging interest in Bitcoin, Monero, and other cryptocurrencies worldwide. Even as defenders have adapted their tactics to deal with threats, criminals have come up with new ways around them.

<b>HEADLINE</b>	<b>03/22 Best Buy dumps Huawei smartphones</b>
<b>SOURCE</b>	<a href="http://www.zdnet.com/article/best-buy-dumps-huawei-what-trade-war-fallout-hits-the-tech-sector-next/">http://www.zdnet.com/article/best-buy-dumps-huawei-what-trade-war-fallout-hits-the-tech-sector-next/</a>
<b>GIST</b>	<p>Best Buy will stop selling Huawei smartphones in a move that may highlight how an escalating trade war is going to hit technology vendors.</p> <p>CNET's Roger Cheng <a href="#">reported that Best Buy will end the sale of Huawei smartphones</a> in the weeks ahead. Huawei already has been shut out by U.S. wireless carriers.</p> <p>On the surface, Best Buy's move isn't all that surprising. Consider:</p> <ul style="list-style-type: none"> <li>• <a href="#">China-U.S. trade is becoming a larger issue</a> with tariffs being launched on a bevy of goods.</li> <li>• Huawei has been flagged as a security concern by the U.S. government. <a href="#">Citing risks but no evidence, US intel chiefs warn against using Huawei, ZTE phones</a>   <a href="#">Huawei: National security concerns not a blank cheque for public policy decisions</a></li> <li>• Huawei has been a lightning rod in the U.S. for its power on networking infrastructure as well as mobile devices.</li> <li>• Brands are wary of being caught in the vortex of President Trump tweets and political issues.</li> </ul> <p>From the Best Buy side of the equation, ditching Huawei makes business sense. The sales of Huawei's unlocked devices simply weren't enough to outweigh the potential risks.</p> <p>On the Huawei side of the fence, the Best Buy move is devastating from a distribution perspective. But it's worth pondering a few other wrinkles, including:</p> <ul style="list-style-type: none"> <li>• Huawei has never had a foothold in the U.S. on the enterprise or consumer side of the business. Losing out on the U.S. isn't that big of a loss considering that Huawei was never a player.</li> <li>• Huawei's approach would likely be well received in the Android ecosystem</li> <li>• The game for Huawei is being dominant in the rest of the world on devices as well as networking and smart city deployments. Huawei has succeeded in emerging markets relative to U.S. rivals.</li> <li>• Via the passive aggressive U.S. ban on Huawei devices, the company may actually see a boost in</li> </ul>

interest. In the U.S., a device like the Mate 10 may be seen as cooler simply because of the lack of availability. Demand abroad could also improve where Huawei is available. It's doubtful, Huawei would have a marketing line like "banned in the U.S.," but you get the gist.

Perhaps the broader question is what happens to other companies with China ties as trade tensions escalate. Will Lenovo have issues? What about those Apple devices manufactured in China? Huawei may or may not be a security threat, but it doesn't take much to play out more tech industry issues ahead.

<b>HEADLINE</b>	<b>03/23 GhostMiner advanced techniques net \$200</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/security/ghostminer-uses-fileless-techniques-removes-other-miners-but-makes-only-200/">https://www.bleepingcomputer.com/news/security/ghostminer-uses-fileless-techniques-removes-other-miners-but-makes-only-200/</a>
<b>GIST</b>	<p>Security researchers from Minerva Labs have discovered a new strain of cryptocurrency-mining malware that uses PowerShell code to obtain fileless execution, and scans and stops the process of other miners that might be running on the same infected host.</p> <p>But in spite of all these highly advanced techniques, this coinminer strain —codenamed GhostMiner by researchers— has failed to earn any substantial revenue for its creators.</p> <p>Experts say that after a three-week-long campaign, GhostMiner only racked up 1.03 Monero, which is worth only around \$200, at the time of writing.</p> <p>This is peanuts compared to other coinmining crews who managed to rack up tens or hundreds of thousands, with one crew making nearly \$3 million.</p> <p>But while GhostMiner appears to be a resounding failure in terms of operational success, the malware is certainly not a technical fiasco.</p> <p>For starters, this appears to be the first fileless cryptocurrency miner malware strain detected. The fileless technique has become quite popular with malware in recent years, allowing them to run malicious code directly from memory, without leaving files on disk, hence fewer artifacts that classic antivirus engines could detect.</p> <p>Further, GhostMiner also employs another advanced technique, of hunting competing miners and shutting down their processes. The technique isn't new, as it's been used by another nondescript coinminer strain, but this shows that GhostScript's author has put a lot more thought into assembling his code than most other crooks.</p> <p>As for targeting, GhostMiner can infect systems running MSSQL, phpMyAdmin, and Oracle WebLogic servers. But according to Minerva Labs experts, only the WebLogic infection system was active when they analyzed the recent campaign.</p> <p>Researchers say GhostMiner would scan random IPs for WebLogic servers, use the CVE-2017-10271 exploit to gain a foothold on a new victim's system, and run two PowerShell scripts to launch into its fileless operational mode, from where it downloads its coinmining component and the self-protection mechanism.</p> <p>GhostMiner isn't the first or only coinminer that targets WebLogic servers, as two separate campaigns were detected active earlier this year [1, 2], with one of them earning more than \$226,000 in revenue.</p>

<b>HEADLINE</b>	<b>03/22 CoinMiner campaigns move to the cloud</b>
-----------------	--

SOURCE	<a href="https://www.bleepingcomputer.com/news/security/coinminer-campaigns-move-to-the-cloud-via-docker-kubernetes/">https://www.bleepingcomputer.com/news/security/coinminer-campaigns-move-to-the-cloud-via-docker-kubernetes/</a>
GIST	<p>After becoming a scourge inside browsers, on desktops, and on servers, cryptocurrency-mining malware is now invading the cloud, and it appears to be quite successful.</p> <p>Several reports during the past month suggest malware authors are now actively looking to gain access to Docker and Kubernetes systems, two types of applications that are the basic building blocks of many of today's cloud computing services.</p> <p>The role of these two tools is to help developers roll out containerized/virtualized apps or even entire server setups whenever a company's infrastructure needs more processing power to handle traffic spikes or extra computing tasks.</p> <p>As such, if a hacker manages to gain access to these systems, they not only have the keys to a company's entire kingdom but also access to vast computational power.</p> <p>And based on recent reports, it appears that a vast majority of these recent hacks of cloud infrastructure are now focusing on using this enormous computational power to mine cryptocurrency for the attackers.</p> <p>And attacks aren't stopping. Just today, security researcher Robbie Wiggins spotted a cluster of 48 nodes where two hackers were fighting over server resources.</p> <p>All in all, these attacks are just part of a bigger picture that started to take shape last year when ransomware operations slowed down, and crooks migrated towards cryptocurrency mining.</p> <p>Past campaigns targeted almost any known type of technology (databases, browsers, CMSs, CRMs, etc.), and it was to be expected that at one point or another, hackers would look toward the cloud for running hidden cryptocurrency mining scripts.</p>

HEADLINE	<b>03/22 Atlanta hit by ransomware cyberattack</b>
SOURCE	<a href="https://www.bleepingcomputer.com/news/security/city-of-atlanta-it-systems-hit-by-samsam-ransomware/">https://www.bleepingcomputer.com/news/security/city-of-atlanta-it-systems-hit-by-samsam-ransomware/</a>
GIST	<p>The Mayor of Atlanta, Georgia has confirmed today in a press conference that several local government systems are currently down due to a ransomware infection.</p> <p>City officials said the ransomware infection took root earlier today, at around 5:40 AM, local time.</p> <p>Richard Cox, the City of Atlanta's new Chief Operations Officer, said the infection affected several internal and customer-facing applications, such as the online systems that residents used to pay city bills or access court documents.</p> <p>Cox, who is in his first week on the job, said that the infection did not affect the critical infrastructure such as the city's water services, the local airport, and the public safety system.</p> <p>Cox and his team are working with the FBI and DHS agents, but also with incident response teams from Cisco and Microsoft. Investigators are still assessing the damage and validating the infection's impact on city systems.</p> <p>Mayor Keisha Lance Bottoms expects city departments to open tomorrow, but operate without IT support.</p> <p>Asked if the city plans to pay the ransom note, Mayor Bottoms said "We can't speak to that right now. We will be looking for guidance from specifically our federal partners."</p>

	<p>Not all IT infrastructure were affected because the city was in the process of moving some systems to cloud services, and those were not affected.</p> <p>According to 11Alive, a local TV station, the infection was caused by the SamSam ransomware, a strain that's been very active at the start of this year, and had previously also infected the Colorado Department of Transportation.</p>

<b>HEADLINE</b>	<b>03/22 User Facebook data \$5.20 on dark web</b>
<b>SOURCE</b>	<a href="https://www.marketwatch.com/story/spooked-by-the-facebook-privacy-violations-this-is-how-much-your-personal-data-is-worth-on-the-dark-web-2018-03-20">https://www.marketwatch.com/story/spooked-by-the-facebook-privacy-violations-this-is-how-much-your-personal-data-is-worth-on-the-dark-web-2018-03-20</a>
<b>GIST</b>	<p>Perhaps this is the most depressing aspect of the recent privacy violations on Facebook FB, -1.61% : The most important parts of your identity can be sold online for just a few dollars.</p> <p>Consumers have to spend hours of their time — and, sometimes, their own money — when they find out their driver's license, Facebook "likes" or Social Security number have been exposed to hackers. But those who sell them are making only petty cash.</p> <p>That's according to a new report from the content marketing agency Fractl, which analyzed all the fraud-related listings on three large "dark web" marketplaces — Dream, Point and Wall Street Market — over several days last month.</p> <p>The "dark web" is part of the internet that people can only access by using special software. To create this report, Fractl accessed the dark web through the browser Tor. People buy other risky or illegal substances on the dark web, including drugs, pirated content like movies or music and materials that help with scams, including credit-card "skimmers."</p> <p>Facebook logins can be sold for \$5.20 each because they allow criminals to have access to personal data that could potentially let them hack into more of an individual's accounts. The credentials to a PayPal PYPL, -2.04% account with a relatively high balance can be sold on the dark web for \$247 on average, the report found.</p> <p>One's entire online identity, including personal identification numbers and hacked financial accounts, can be sold for only about \$1,200 on the dark web, Fractl found.</p> <p>That's because so much personal information may already available to hackers, after repeated data breaches across a range of industries. It comes down to supply and demand, said Adam Levin, the founder of the security firm CyberScout and the author of "Swiped." Hackers want to grab personal information and sell it as fast as they can, so they can move on, he said.</p> <p>"With 5.3 billion records released due to accidents and 2.6 billion records released due to hacking last year, personal information is becoming cheap," said Rick McElroy, a security strategist at the security firm Carbon Black.</p> <p>Wealthier individuals are more valuable to criminals, and those without money are worth less, said Al Pascual, a senior vice president and research director at the security firm Javelin. But the more information hackers have, the more valuable the data.</p> <p>"A college student with not a lot of money in the bank might be worth \$50," Pascual said. "If you're near retirement, with a fat retirement account and plenty of money in the bank, you'll be worth more."</p> <p>Voter data are also vulnerable and valuable during election season, Pascual said. There are more attempts to compromise voter records in the run-up to elections, including attacks against registrars' offices. Electronic voting machines can also be compromised, he said.</p>

	<p>Type of account Average price log-in goes for on dark web</p> <ul style="list-style-type: none"> <li>• PayPal \$247</li> <li>• Costco \$5</li> <li>• ASOS (clothing) \$2</li> <li>• Airbnb \$8</li> <li>• Uber \$7</li> <li>• T-Mobile \$10.51</li> <li>• DHL \$10.40</li> <li>• Facebook \$5.20</li> <li>• Gmail \$1</li> <li>• Grubhub \$9</li> </ul> <p>Logins for food delivery websites such as Grubhub can be sold for about \$9 because they allow criminals to fraudulently order expensive food and alcohol.</p> <p>And a login for the lodging site Airbnb can be sold for about \$8 because it opens up “a world of scams,” Fractl said. Fraudsters have changed hosts’ payment details to steal their earnings, or have been able to assume the identities of well-reviewed guests in order to book their own stays. Airbnb has updated its security measures in the last year to combat fraud.</p>

<b>HEADLINE</b>	<b>03/21 Revelations of open secrets</b>
<b>SOURCE</b>	<a href="https://www.newyorker.com/news/news-desk/cambridge-analytica-facebook-and-the-revelations-of-open-secrets">https://www.newyorker.com/news/news-desk/cambridge-analytica-facebook-and-the-revelations-of-open-secrets</a>
<b>GIST</b>	<p>What are we to make of the revelations published over the weekend, in the Observer and the Times, that Cambridge Analytica, the data-analytics and messaging company financed, in part, by the conservative billionaire Robert Mercer, used tens of millions of ill-gotten Facebook profiles to create algorithms aimed at “breaking” American democracy?</p> <p>First, that these were not really revelations at all. Reporters from the Guardian, The New Yorker, The New York Review of Books, Das Magazin, and the Intercept have been reporting these facts for years.</p> <p>We knew as early as December, 2015, for instance, that Facebook data obtained without users’ knowledge was being exploited by Cambridge Analytica on behalf of Senator Ted Cruz, who at that time was Mercer’s preferred candidate in the Republican Presidential primaries. Later, when the Mercer family, along with Steve Bannon, came to support Donald Trump, it was no secret that they brought with them Cambridge Analytica, a firm that boasted of being able to parse and influence the electorate through “psychographic” algorithms derived from that data. After Trump won, Alexander Nix, the head of Cambridge Analytica, crowed that the company’s psychographic algorithms had carried the day. (He later retracted that, then reaffirmed it.)</p> <p>The millions of Facebook accounts in question—as the reporter Mattathias Schwartz pointed out last March—were mostly culled from the friend networks of people who clicked on a cute personality quiz on the site. A significant number of the initial test takers, starting in around 2014, were paid freelancers recruited through Amazon’s Mechanical Turk marketplace by a British research company called GSR. They and others who took the quiz likely did not know that they were giving GSR permission to access their Facebook friends’ profiles. If Facebook officials were not aware of this at the time, when GSR sold this data to Cambridge Analytica, they certainly knew it by January, 2017, when the Swiss researchers Hannes Grassegger and Mikael Krogerus published “The Data That Turned the World Upside Down,” a detailed account of how C.A.’s psychological modelling was used by the Trump campaign. (The Guardian recently quoted a former Facebook employee in charge of data security explaining that he “always assumed there was something of a black market” for data obtained by third-party companies such as GSR, and that when he brought this up to his bosses he was discouraged from investigating too deeply. “Do you</p>

really want to see what you'll find?" he says a Facebook executive told him.)

When Facebook finally acknowledged that Cambridge Analytica was using Facebook data it had obtained surreptitiously, the company's response was not to alert its users or audit its partners or engage in any sort of meaningful reform. Rather, it sent a polite request to Cambridge Analytica asking it to delete the GSR-sourced material, some of which, according to the Times, remains on the company's servers.

This weekend's reports about Facebook and Cambridge Analytica did introduce us to Christopher Wylie, a twenty-eight-year-old Canadian coder and data scientist, who conceived and helped construct C.A.'s psychographic tools. For at least a year, it seems, Wylie had been feeding information to Carole Cadwalladr and her team at the Guardian and its sister paper, the Observer. Now he is out of the shadows. In a thirteen-minute video posted on the Guardian's Web site on Saturday, Wylie details the story of the creation and deployment of "the weapon" that he and Nix sold to Bannon, and then to Mercer, to fight their "culture war." It was in those early days of 2014, Wylie says, that he and Bannon began testing slogans like "drain the swamp" and "the deep state" and "build the wall," and found a surprising number of Americans who responded strongly to them. All they needed was a candidate to parrot them. Cambridge Analytica promised that psychographics could not only target people as voters but also as personalities. "We would know what kind of messaging you'd be susceptible to and where you are going to consume it and how many times we are going to have to touch you with it to change how you think about something," Wylie told the Guardian. "Web sites will be created. Blogs will be created—whatever we think this target profile will be receptive to. See it, click it, and go down the rabbit hole until they start to think something different." The goal was to break society. "It is only when you break it can you remodel the pieces into your vision of a new society." As one former executive of Mercer's hedge fund told The New Yorker's Jane Mayer, last year, "He wants it to all fall down."

Perhaps the most telling revelation from the recent reporting—aside from the U.K.'s Channel 4 catching Alexander Nix on camera explaining how his company could supply beautiful Ukrainian women to entrap politicians—is that Cambridge Analytica is essentially a shell company created by the British firm Strategic Communications Laboratories. During the 2016 campaign, according to Cadwalladr, C.A. was staffed primarily by non-U.S. citizens, in possible violation of American campaign-finance laws. This included the contractors the firm brought to Austin, Texas, to work with Trump's digital team there.

"We were really speaking directly to the voters in a number of states," one former C.A. employee, who worked with a number of non-U.S. citizens or green-card holders, told the Guardian. Cadwalladr writes, "It is understood that some were working on tourist visas. Another ex-employee claimed that they had been provided with letters to give to US border control officials where needed, stating that they would not be working" in the United States. And, she points out, Bannon, Nix, and Rebekah Mercer (Robert's daughter) knew that this was illegal. Their counsel, who happened to work at Rudolph Giuliani's law firm, let them know in a memo written in July, 2014.

These Cambridge Analytica contractors worked with Trump's digital team, headed by Brad Parscale and Jared Kushner. Alongside all of them were Facebook employees who were embedded with the Trump campaign to help them use Facebook's various tools most effectively—including the so-called "dark posts," used to dissuade African-Americans from showing up to vote. Did any of them know that the data that Cambridge Analytica was using to target voters, craft ads and blog posts, and determine Trump's travel schedule came from millions of American Facebook members whose data had been taken without consent and sold for a million dollars—what Cadwalladr is calling a massive data "breach"? Maybe, or maybe not—and it hardly matters. For more than a year, Cadwalladr has done yeoman work, reporting on the nihilism of Bannon and the Mercers, the cravenness of Nix, and connecting the dots between them and Trump and Facebook. But those millions of Facebook profiles do not in fact constitute a breach: they were obtained legally. Nobody hacked Facebook—nor would they have had to—because the business model of Facebook is predicated on mining the personal details of its two billion users. In a statement on Wednesday, Mark Zuckerberg could only chalk the whole saga up to "a breach of trust between Kogan, Cambridge Analytica and Facebook." The company is aided in maintaining this position by privacy policies that are as obscure as they are lax. As a consequence, Facebook created the conditions for millions of Americans to become unwitting cogs in the effort to get Trump elected.

	<p>Christopher Wylie knew all this, and he watched what he now calls his “grossly unethical experiment” unfold in real time. It is, he says, “something that I regret.” So now he’s blown the whistle and, in turn, Facebook has suspended his account. The company may have shot the messenger, but, even so, his message has been heard loud and clear, in Parliament (where Nix, who has now been suspended by Cambridge Analytica, will be called back to explain what appear to be the lies he told there last month, during hearings on fake news), in Congress (where Nix and possibly Zuckerberg will also be called to account), on the front page of newspapers around the world, and on Twitter (where the hashtags “Where’s Zuck?” and “DeleteFacebook” have been trending). Wylie’s words have also reverberated on Wall Street, where, in the first two hours of trading after his video confession (and the news that he had supplied e-mails and documents to American and British authorities), Facebook stock lost thirty billion dollars in value. It is now down by sixty billion dollars. It would not be wrong to call this payback.</p>

<b>HEADLINE</b>	<b>03/22 Ransomware out; cryptojacking in</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/ransomware-out-cryptojacking-in/">https://www.infosecurity-magazine.com/news/ransomware-out-cryptojacking-in/</a>
<b>GIST</b>	<p>Cryptojacking attacks exploded by 8,500% in 2017 resulting from the sudden increase in cryptocurrency values. According to research released by Symantec, UK ranked as the fifth highest country worldwide, with a staggering 44,000% increase in coin-miner detections.</p> <p>With a low barrier to entry – only requiring a couple lines of code to operate – cyber-criminals are harnessing stolen processing power and cloud CPU usage from consumers and enterprises to mine cryptocurrency. Coin-miners can slow devices, overheat batteries, and in some cases, render devices unusable. For enterprise organizations, coin-miners can put corporate networks at risk of shutdown and inflate cloud CPU usage, adding cost.</p> <p>Symantec also found a 600% increase in overall IoT attacks in 2017, which means that cyber-criminals could exploit the connected nature of these devices to mine en masse.</p> <p>“Attackers could be co-opting your phone, computer or IoT device to use them for profit,” said Darren Thomson, CTO and VP EMEA, Symantec. “People need to expand their defences or they will pay the price for someone else using their device.”</p> <p>The Annual Threat Report also showed that while ransomware was still being used in 2017, there were fewer ransomware families and lower ransom demands. Symantec outlined in its report that “many cyber-criminals may have shifted their focus to coin mining as an alternative to cash in while cryptocurrency values are high” and that “some online banking threats have also experienced a renaissance as established ransomware groups have attempted to diversify.”</p> <p>Last year, the average ransom demand dropped to \$522, less than half the average of the year prior. While the number of ransomware variants increased by 46%, indicating the established criminal groups are still quite productive, the number of ransomware families dropped, suggesting they are innovating less and may have shifted their focus to new, higher value targets.</p> <p>The report analyzed data from the Symantec Global Intelligence Network, which tracks over 700,000 global adversaries, records events from 98 million attack sensors worldwide and monitors threat activities in over 157 countries and territories.</p>

<b>HEADLINE</b>	<b>03/22 Netflix public bug bounty program</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/netflix-launches-public-bug-bounty-program">https://www.securityweek.com/netflix-launches-public-bug-bounty-program</a>
<b>GIST</b>	<p>Netflix announced on Wednesday the launch of a public bug bounty program with rewards of up to \$15,000, and Dropbox has made some changes to its vulnerability disclosure policy, promising not to sue</p>

	<p>researchers.</p> <p>Netflix has had a vulnerability disclosure policy for the past 5 years and a private bug bounty program since September 2016. The company has now decided to make its bug bounty initiative public through the Bugcrowd platform.</p> <p>Its vulnerability disclosure policy and private bug bounty have helped Netflix patch 190 vulnerabilities. The private program started with 100 of Bugcrowd's top researchers, but more than 700 white hat hackers were later invited in preparation for the public program.</p> <p>Researchers can earn between \$100 and \$15,000 for flaws affecting one of several Netflix domains and the mobile applications for iOS and Android. The company claims the highest reward paid out to date is \$15,000 for a critical security hole.</p> <p>The types of vulnerabilities that can be submitted include cross-site scripting (XSS), cross-site request forgery (CSRF), SQL injection, authentication and authorization, data exposure, remote code execution, redirection, business logic, MSL protocol, and mobile API issues. Netflix says it acknowledges vulnerability reports, on average, in less than 3 days.</p> <p>"Engineers at Netflix have a high degree of ownership for the security of their products and this helps us address reports quickly," Netflix said in a blog post. "Our security engineers also have the autonomy and freedom to make reward decisions quickly based on the reward matrix and bug severity. This ultimately helps create an efficient and seamless experience for researchers which is important for engagement in the program."</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>03/22 Supply chain cyberattacks surged 200%</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/supply-chain-cyberattacks-surged-200--in-2017/d/d-id/1331337">http://www.darkreading.com/attacks-breaches/supply-chain-cyberattacks-surged-200--in-2017/d/d-id/1331337</a>
<b>GIST</b>	<p>Major software update compromises occurred at least once a month last year as attackers adopted this more stealthy and efficient way to reach their targets – compared to just three such attacks per year previously.</p> <p>That 200% increase in such supply chain attacks only accounts for breaches in 2017 that were reported publicly, so the actual rate of these attacks could be even higher, according to new cyber threat data from Symantec's annual "Internet Security Threat Report," published today.</p> <p>These are attacks where hackers hijack the software update process and replace it with malicious code; the most high-profile of these incidents last year was NotPetya, where Russian hackers compromised a Ukrainian accounting vendor's software as a way to spread malware to its targets.</p> <p>"All of a sudden this is a huge issue," says Kevin Haley, director of Symantec Security Response. "This is something organizations really need to be concerned about. It's not just some on-offs."</p> <p>Supply chain attacks were one of the main trends cited by CrowdStrike in its annual threat report as well. In addition to NotPetya, there were attacks on Avast's CCleaner and the HandBrake media player software for Apple Mac machines, notes Adam Meyers, vice president of intelligence at CrowdStrike. Attackers can target victims via plugins and other software updates, he says.</p> <p>"It used to be that we talked about the hardware supply chain" being at risk, Meyers says. "Now you get updates via an app store that will validate as much as possible" but still can be corrupted or abuse permissions, he says.</p> <p>It's tough to defend against supply chain attacks because patching software with the latest releases is a best</p>

security practice. "You can't stop" patching, but organizations should start looking at their supply chain vendors and be sure they are protecting them," Symantec's Haley says.

Behavior monitoring is another way to track any suspicious activity with an application update, but app vendors also need controls to catch any unauthorized changes in their update systems and processes, Symantec advises.

The spike in supply chain attacks coincided last year with a drop in zero-day attacks detected by Symantec. It's getting harder to find - and less appealing to burn – expensive zero-day vulnerabilities in an attack. Just under 30% of the 140 cyber threat groups Symantec tracks that wage targeted attacks have ever used an Oday in an attack. It's all part of the trend of sophisticated attackers employing legitimate tools and applications on their victims' networks to stay camouflaged for the long haul.

Targeted cyberattacks increased by 10% last year, with some 90% of the attacks purely for intelligence-gathering, including spying, information-stealing, and surveillance. Most of the attackers here are nation-state sponsored groups. About 10% of targeted attack groups wage disruptive attacks on their victims. Another 9% are doing so for financial gain, and spear phishing is the main initial attack vector (71%) in all targeted attacks.

Symantec has discovered an average of three new targeted attack groups per year, it says, and the most active ones hit an average of 42 organizations in the past three years. Researchers at Symantec identified 29 new such groups this past year. "And those are only the ones we know about," Haley says.

The US unsurprisingly is the most attacked, with nearly 30% of all targeted attack incidents.

<b>HEADLINE</b>	<b>03/21 Ex-employee visits cloud, steals data</b>
<b>SOURCE</b>	<a href="https://www.csoonline.com/article/3265109/security/former-employee-visits-cloud-and-steals-company-data.html">https://www.csoonline.com/article/3265109/security/former-employee-visits-cloud-and-steals-company-data.html</a>
<b>GIST</b>	<p>Employees aren't always going to be employees, and therefore you must have in place a mechanism to address what happens when someone is no longer a member of the company team. The circumstances of a person's departure may affect the manner and means in which you act, but the result needs to be the same: full and complete termination of access to company information. Any employee who departs is no longer a trusted insider.</p> <p>This is called off-boarding, and without a comprehensive off-boarding process, you risk being exploited by a malevolent former employee. Former employees whose access is not terminated can attempt to access data from which they should now be excluded.</p> <p>This is precisely what occurred to the Transformations Autism Treatment Center (TACT), in Bartlett, Tenn. One of its employees, a behavioral analyst, Jeffrey Luke, was terminated. The TACT did what many companies do: It terminated his access to sensitive data and changed the email address authorized to access its data. In this case, the TACT kept its patient records in the cloud, specifically the Google Drive version of cloud storage. The steps it took were consistent with what one would expect from an entity that falls under the Health Insurance Portability and Accountability Act (HIPAA).</p> <p>All looked good until the following month, when the TACT noticed that information on 300 current and past clients of TACT had been accessed. The executive director of the TACT, speaking to the Commercial Appeal, explained how TACT noticed files had been moved, and immediately called the police, who brought in the FBI.</p> <p>The IP address that was used in the compromise of the email address was traced to Luke's residence, according to the Department of Justice. The subsequent search of Luke's residence found that he had on his computer patient records, forms and templates, as well as records from a former employer, Behavioral</p>

and Counseling Services (BCS) in Somerville, Tenn. The BCS data also contained patient data.

Luke went on to plead guilty to the crime and was sentenced this month to 30 months' imprisonment and three years' supervised release, and he was ordered to pay approximately \$15,000 in restitution.

Luke, though he entered a guilty plea, appealed his sentence on March 14, to the U.S. Court of Appeals for the Sixth Circuit.

<b>HEADLINE</b>	<b>03/23 Facebook widening crisis over user data</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/ap-news-guide-facebooks-widening-crisis-user-data-53956220">https://abcnews.go.com/Technology/wireStory/ap-news-guide-facebooks-widening-crisis-user-data-53956220</a>
<b>GIST</b>	<p>Facebook is facing the most serious crisis in its 14-year history as it deals with fallout from a major leak of user data to political consultants associated with the 2016 Trump campaign.</p> <p>Here's a look at the scandal and what it means.</p> <p><b>WHAT'S GOING ON?</b></p> <p>The U.K.-based data-mining firm Cambridge Analytica has been accused of lifting the Facebook profiles of more than 50 million users without their permission in order to manipulate elections. A former employee of the firm, Christopher Wylie, played a role in that action, and later told his story to journalists.</p> <p>The crisis has renewed questions about Facebook's ability to protect the privacy of its users while also exploiting their personal details to fuel its lucrative advertising business. It has also deepened concerns about the social media network's ability to avoid being exploited to spread propaganda and sway elections.</p> <p>Authorities in both the U.S. and the U.K. are investigating both Facebook and Cambridge Analytica. Facebook shares have fallen and some users are contemplating deleting their accounts.</p> <hr/> <p><b>WHAT DID CAMBRIDGE ANALYTICA DO?</b></p> <p>Wylie says the firm sought Facebook information in order to build psychological profiles on a large portion of the U.S. electorate. He said the company was able to amass the database quickly with the help of an academic, Aleksander Kogan, who developed a Facebook app called "This is Your Digital Life" that appeared to be a personality test.</p> <p>That app vacuumed up information from users who gave the app permission to access their accounts ... as well as additional data from their Facebook friends,</p> <p>Kogan paid about 200,000 people to take part; tens of millions of their friends were also caught in the data dragnet.</p> <hr/> <p><b>HOW DID CAMBRIDGE ANALYTICA RESPOND?</b></p> <p>Cambridge Analytica has denied wrongdoing, and the firm said it deleted any data it received from Kogan and denied using any Facebook data in its political work. Facebook, however, said it recently learned from journalists that Cambridge Analytica may have kept some of the data, spurring an investigation.</p> <p>Kogan said he has been scapegoated by both Cambridge and Facebook. He says the data firm approached</p>

him for the project and assured him that everything he did was legal.

---

#### WHAT'S THE CONNECTION TO THE TRUMP CAMPAIGN?

Federal election records show that the Trump campaign paid Cambridge Analytica roughly \$6 million. But the campaign has denied using the firm's data, saying it relied on the Republic National Committee for its voter information.

Cambridge Analytica was backed by the conservative billionaire Richard Mercer, a hedge fund manager who supported the Trump campaign. At one point, the firm's vice president was Stephen Bannon, who later became Trump's campaign chairman and White House adviser.

Trump's former national security adviser, Michael Flynn, disclosed an advisory role with Cambridge Analytica last August. But the firm's parent company, Strategic Communication Laboratories, later said that position never materialized. The company has surfaced in the U.S. probes into Russian interference in the 2016 presidential election. Special counsel Robert Mueller has requested that the firm turn over the emails of any employees who worked on the campaign, according to a Wall Street Journal report.

Wylie, the whistleblower who worked for Cambridge from 2013 to 2015, said his team spoke to Americans in focus groups to identify deep-seated concerns and tested ways to tap into those fears through social media. He claims the slogans they developed later became the catchphrases of the Trump campaign, including "drain the swamp" and "build the wall."

Cambridge Analytica CEO Alexander Nix was caught bragging about the firm's pivotal role in the Trump campaign on a sting video from the U.K.'s Channel 4. He said Cambridge handled "all the data, all the analytics, all the targeting" for the campaign.

---

#### WHY ARE PEOPLE MAD AT FACEBOOK?

The Cambridge Analytics fiasco appears to have crystallized the anxiety many people feel about Facebook's enormous sway over daily life and its massive data trove.

A sell-off in Facebook shares reflects fear that the social network may face new regulations that could hurt profits — or that advertisers and users will sour on it.

A U.K. parliamentary media committee is investigating how Facebook uses data, and has summoned CEO Mark Zuckerberg to testify. Various U.S. congressional committees are also seeking answers, although Democrats and Republicans have disagreed on what steps to take. Privacy advocates have asked the Federal Trade Commission to investigate as well.

The hashtag #deletefacebook has been trending. Brian Acton, the co-founder of WhatsApp, which was acquired by Facebook four years ago for \$19 billion, has joined the cause. But there are no signs, so far, that users — or advertisers — are abandoning Facebook in droves.

---

#### HOW IS FACEBOOK ADDRESSING THE CRISIS?

After five days of silence, Zuckerberg released a Facebook post admitting mistakes and outlining steps to protect user data. He followed up with rare media appearances where he apologized for a breach of trust.

Facebook's response, however, is limited to a narrow range of technical changes that will further limit the

	<p>data apps can collect and lead to audits of apps that exhibit troubling behavior.</p> <p>Zuckerberg also emphasized steps the company has already taken, including reducing access outside apps had to user data in 2014. That came too late to stop Cambridge. The company said nothing about overhauling its data collection policies or taking steps to prevent the unauthorized political use of Facebook data.</p> <p>Facebook suspended Cambridge over allegations that it kept the improperly obtained user data. It has also suspended the access of Kogan and Wylie, as well as Cambridge's parent company, SCL.</p>

<b>GIST</b>	<p>TRAVIS AIR FORCE BASE, Calif. -- A car loaded with propane tanks ran through the main gate at Travis Air Force Base in northern California on Wednesday night. Military personnel ran up to the burning car that exploded in flame after breaching the security gates.</p> <p>In video posted on an Air Force forum on Facebook, firefighters are seen attempting to put out the flames.</p> <p>Law enforcement sources say the car carried propane tanks and the driver deliberately ignited the fire. He died inside the car, which drove off the road into a ditch. There are no reports of shots fired during the incident. The driver has been identified by law enforcement but not been named.</p> <p>Since he ignited himself, investigators are treating this as an act of terrorism. The FBI has joined the Air Force in the investigation.</p> <p>Travis Air Force Base is a main military air cargo and transport terminal on the West Coast, supporting operations across the Pacific. It's home to some 7,000 active U.S. Air Force military personnel.</p> <p>The main gate at Travis was closed for 12 hours after the incident and officials say there is no known threat to the base or the community.</p>

<b>GIST</b>	<p>At least one person was believed to have been killed when a gunman claiming allegiance to the Islamic State group opened fire and took hostages at a supermarket in southwest France on Friday. French prosecutors are treating the incident as a terror attack.</p> <p>Main Info</p> <ul style="list-style-type: none"> <li>• Gunman opens fire and takes hostages in supermarket in Trèbes near Carcassonne</li> <li>• Unconfirmed reports that at least one person was killed</li> <li>• Supermarket gunman claims links to Isis</li> <li>• Gunman now alone in supermarket with member of French security forces, latest reports say</li> <li>• Earlier incident saw same gunman open fire on police who were jogging</li> <li>• One officer left injured, but not critical</li> <li>• Gunman reported as a Moroccan national</li> </ul>

- At least one person was believed to have been killed after a gunman claiming allegiance to the Islamic State group opened fire and took hostages at a supermarket in the Aude department in southwest France on Friday.

In Trèbes, a picturesque medieval town of around 5,000 people, the man "entered the Super U supermarket at around 11:15 am and shots were heard," a source told AFP on condition of anonymity.

A witness who was in the supermarket at the time of the incident told France Info: "A man shouted and fired a number of times. I saw a fridge door, I asked people to come and get in. There were ten of us and we stayed there for an hour. There were more shots and we went out the back door. (...) He shouted 'Allahu...something', I did not see him."

French Prime Minister Edouard Philippe described the ongoing incident as a "serious situation" while Interior Minister Gerard Collomb announced he was heading immediately to Trèbes.

Reports claim at least one person was killed while some French media reported there were two victims in the supermarket believed to have been killed.

"We unfortunately presume one person has been killed, but we cannot bring a doctor on site to check," Jean-Valery Lettermann, the regional police chief.

The gunman claimed allegiance to the Islamic State group, the local prosecutor's office said.

According to French newspaper Le Depeche du Midi, the gunman was about 30-years-old, was armed with knives and one or more grenades and several reports stated that he spoke of wanting to "avenge Syria".

He is believed to be a Moroccan national, according to French press reports and was known to intelligence services for having been radicalized.

It has been reported that he has demanded for the release of Salah Abdeslam, the only surviving suspect of the 2015 Paris attacks, who is in jail in France.

The latest reports say the gunman was alone inside the supermarket along with a member of France's security forces.

<b>HEADLINE</b>	<b>03/22 Britain targets terror recruiters</b>
<b>SOURCE</b>	<a href="http://www.xinhuanet.com/english/2018-03/23/c_137058161.htm">http://www.xinhuanet.com/english/2018-03/23/c_137058161.htm</a>
<b>GIST</b>	<p>LONDON, March 22 (Xinhua) -- British Home Secretary Amber Rudd on Thursday pledged a new drive against extremist recruiters as families and friends of terror victims marked the anniversary of last year's Islamic State-inspired attack on Westminster Bridge near British Parliament.</p> <p>Rudd vowed that Britain will "not be defeated" by terrorism, saying action would be taken against both Islamist and far-right radicalizers seeking to spread hatred and violence.</p> <p>One aim will be to counter attempts by Islamic State to "foster a grievance narrative" by making Muslims in Britain feel under attack, she said, adding that there will be also renewed efforts to stop "racists" exploiting Islamist murders to justify retaliatory "acts of cruelty and hatred."</p> <p>Rudd, who attended a special service in memory of the five victims of the attack last year at the St Mary Undercroft Chapel in Parliament, said that all forms of terror needed to be stamped out.</p> <p>"Islamists and far-right terrorists share one thing in common -- they are united through their adherence to hate. We need to respond by stamping out those recruiters in the first place," she said.</p>

Five people were killed on March 22, 2017 after Khalid Masood drove his car at people on Westminster Bridge before stabbing PC Palmer in the Palace of Westminster.

Three people were killed outright on the bridge and one died later in hospital.

Victims' families and friends, politicians and police were among those who marked the anniversary by commemorating people killed or injured at Westminster and the terror atrocities which followed.

The following month, 22 people were killed in the Manchester arena suicide bombing, eight died in the London Bridge attack, and a man was killed when Darren Osborne rammed a van into a crowd at Finsbury Park mosque.

There was also a botched attempt to bomb a subway station at Parsons Green in London, which injured 30 people.

In a signed article published by the Evening Standard newspaper, Rudd said "We need to respond by stamping out those recruiters, whether it is an Islamist terrorist disseminating material that inspires and instructs how to carry out an attack, or a racist who uses Westminster to provide justification for further acts of cruelty and hatred."

"We cannot only deal with those who have been already drawn into terrorist activity," she wrote. "We need to intervene earlier and stop people being radicalized in the first place."

<b>HEADLINE</b>	<b>03/22 Belgium deals w/returning jihadist fighters</b>
<b>SOURCE</b>	<a href="http://www.brusselstimes.com/brussels/10756/how-belgium-deals-with-returning-jihadist-fighters">http://www.brusselstimes.com/brussels/10756/how-belgium-deals-with-returning-jihadist-fighters</a>
<b>GIST</b>	<p>Two years after the terrorist attacks in Brussels, Belgium has learned some hard-won lessons and is doing relatively well in dealing with the threat of returning fighters. But there is still a risk of radicalization in Belgian prisons and the integration of released prisoners in society is a major challenge.</p> <p>According to researchers Rik Coolsaet and Tomas Renard at the Brussels-based Egmont Institute, Belgium was the first European country which already in 2012 warned other countries that radicalized youngsters had started travelling in growing numbers to join terrorist organisations.</p> <p>The federal counterterrorism centre has defined about 500 people from Belgium as foreign terrorist fighters. Out of them more than 400 people actually reached Syria and Iraq and 80 % among them were young men between 20 and 30. This made Belgium the country with the highest ratio of terrorist fighters in Europe.</p> <p>Since then, and after the defeat of the Islamic State, Belgian authorities have sought to craft a coherent response to the threat of returning fighters. According to the authors, the return rate up to now is about 30 %, with fighters having returned in different waves. About half of those still left in combat zones are assumed to have been killed.</p> <p>However, about 150 Belgian fighters are still thought to be alive – some of them prisoners in Iraq and Syria – and a number of these could still return. There are also about 130 Belgian children, mostly born there, who will return sooner or later.</p> <p>Definition of terrorist activities</p> <p>A multi-agency approach involving a broad range of actors among intelligence, enforcement, and social services has been developed and put down on paper in recent years.</p>

Furthermore, the Belgian penal code was revised in 2015 as regards the definition of a terrorist crime. Travelling to join a terrorist organisation abroad, providing or receiving terrorist training or funding a terrorist organisation abroad are now considered terrorist crimes.

Anyone returning from the battle fields in Syria and Iraq now faces pre-trial detention and a three–five-year (and sometimes longer) prison sentence. In January 2018, there were 100 foreign terrorist fighters, of which 44 were returnees, in Belgium’s 32 prisons.

In jail, most of them are spread among the general prison population with individual security measures and monitoring, as well as constant assessment of radicalization behaviour by trained staff and special units. This poses a dilemma for the prison authorities since radicalized detainees can influence other prisoners.

#### Dispersal or separation

According to the authors, the preferred regime in Belgium is dispersal among the general prison population. However, dangerous individuals are screened by the prison administration’s so-called CellExtremism unit and can be separated from other inmates though not kept isolated. The prisons of Hasselt and Ittre have 20 places each for such cases but only 22 places were used in January 2018.

Inmates are offered tailor-made disengagement programmes and probation measures to facilitate their return to society. Security services and local agencies receive information from the prison authorities to ensure continued monitoring and adequate counselling. But they caution that this is still work in progress, and there are still several weaknesses.

Prisons, for instance, are still breeding grounds for extremist ideologies. Although the majority of detainees are not religiously radicalized, CellExtremism is currently monitoring 237 detainees. It is estimated that a significant proportion of returnees might leave prison without leaving violent extremism behind.

“The transition to post-prison life remains one of the most challenging dimensions of the Belgian response to returnees,” according to the researchers.

#### Crime-terror nexus in Belgium

Another worrying problem is the connections between criminality and terrorism. In Belgium, like elsewhere, the authorities have witnessed criminals joining terror groups in Syria. There are also documented interactions between terrorist networks and criminal ones, for instance to acquire weapons or falsified identity documents.

An on-going study by two British researchers, Peter Neumann and Rajan Basra, aims at mapping the links between criminality and terrorism in all EU member states. The first results for Belgium and Luxembourg were presented last week at the Egmont Institute.

According to the writers, criminals and terrorists are often recruited from the same pool of people, not the least in prisons. A few charismatic persons managed to recruit hundreds of fighters in Belgium. Approximately half or more of those recruited had a criminal background. They see jihadism as a kind of redemption and justify crimes against “non-believers” as a means to fund terrorism.

Asked about the role of religion in the radicalisation of criminals, Neuman replied that a distinction should be made between religious knowledge, which almost is non-existent among them, and a new-born religious identity.

“Radicalisation isn’t a crime,” said a Brussels prosecutor. “We have to respect the rules of the game once a detainee is released and cannot limit his freedom. In Belgium we have chosen the right direction by focusing on local structures and task forces that can intervene at the first sign of violent extremism.”

**HEADLINE** 03/22 Iran: US created ISIS to destabilize region**SOURCE** <http://www.newsweek.com/us-created-isis-distract-world-israel-iran-defeated-it-khamenei-says->

	<a href="#">857359</a>
<b>GIST</b>	<p>Iran's supreme leader criticized U.S. involvement in the Middle East, accusing it of sponsoring organizations such as the Islamic State militant group (ISIS) that were responsible for destabilizing the region.</p> <p>Speaking to a large audience gathered at the Shrine of Imam Reza in the northeastern city of Mashhad on Wednesday, Iranian Ayatollah Ali Khamenei wished Iranians and celebrants around the world a happy Nowruz—the Persian New Year—and called on citizens to invest in the local economy by purchasing domestically produced goods. He also took the opportunity to condemn an alleged conspiracy by the U.S. and its ally, Israel, which Iran has accused of illegally annexing Palestinian land.</p> <p>"The Islamic Republic could diffuse the United States' plan for the region. What was America's plan? The plan was to create venomous, evil, and destructive groups, such as ISIS, to divert nations' attention from the occupying Zionist regime and not to let them think about the Zionist regime. This is the plan we could defuse," Khamenei said.</p> <p>"They claim they were involved in the destruction of ISIS. This is a lie. The policy of the U.S. is to keep ISIS, but under their own thumb. Of course, ISIS, and other such groups, are easy to create for the U.S., but difficult to handle. They want to keep calling the shots with ISIS. Beside the fact that the U.S. is not able to make the region secure," he added.</p>

<b>HEADLINE</b>	<b>03/22 Rebels begin evacuating Syria enclave</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/22/middleeast/syrian-eastern-ghouta-fighters-deal-intl/index.html">https://www.cnn.com/2018/03/22/middleeast/syrian-eastern-ghouta-fighters-deal-intl/index.html</a>
<b>GIST</b>	<p>(CNN)Hundreds of rebel fighters began leaving the Syrian enclave of Eastern Ghouta on Thursday, forced out after weeks of heavy aerial bombardment that has caused more than 1,500 deaths.</p> <p>Eastern Ghouta, on the outskirts of the capital Damascus, is one of Syria's last significant rebel-held areas and the latest target of regime forces, who have besieged the territory. The Syrian regime is continuing with a sweeping campaign to flush rebel fighters from key parts of the country with the backing of their powerful ally Russia and its warplanes.</p> <p>Fighters belonging to the group Ahrar Al-Sham agreed to leave the Eastern Ghouta town of Harasta in a deal with the regime and Russia's support. Syria and Russia have agreed to provide them safe passage, and allowed them to take their weapons and families with them.</p>

As many as 1,500 fighters and 6,000 of their family members are expected leave Harasta, according to Al-Manar, a Lebanese television station affiliated with the regime-allied armed group Hezbollah. Syrian state news agency SANA reported that more than 500 people on 20 buses had left by early afternoon.

Thirteen men held by armed groups in the town were also released earlier in the day as part of the deal, Syrian state TV reported.

Ahrar Al-Sham is one of three main rebel groups in Eastern Ghouta. The regime offensive on Eastern Ghouta has split the enclave into three pockets, and Thursday's evacuation would essentially return power to the regime over the smallest of these pockets around Harasta.

There is no indication that the other two armed rebel groups have struck similar deals, but the agreement puts pressure on them to leave.

A spokesman for Ahrar al-Sham, Omran Mohammad, confirmed the agreement and said that fighters had begun leaving Thursday and were allowed to take their weapons and families.

It wasn't immediately clear where they would go, but previous similar deals have bussed rebels to Idlib, the only province fully controlled by rebel groups.

Idlib is also being bombarded by the regime. On Wednesday, 20 people, including 16 children, were killed in Idlib's countryside, according to the White Helmets rescue group and the activist Idlib Media Center.

<b>HEADLINE</b>	<b>03/21 Belgium: 3 attacks prevented since 2017</b>
<b>SOURCE</b>	<a href="https://en.trend.az/world/europe/2875886.html">https://en.trend.az/world/europe/2875886.html</a>
<b>GIST</b>	<p>Belgian special services have prevented three potential terrorist attacks since the beginning of 2017, Eric Jacobs, the head of the Federal Judicial Police (PJF) in Brussels, said on Wednesday, Sputnik reported.</p> <p>Belgium's terror alert level has remained at the third out of the four existing terror alert levels since the March 2016 attacks. The fourth level of alert was in effect for only three days after the bombings at the Brussels airport and underground that month.</p> <p>"Given the fact that the enemy is no longer so structured now, it is very difficult to talk about a thwarted attack. I will rather say that since early 2017, we had three sensitive cases," Jacobs told La Libre Belgique on Wednesday.</p> <p>According to Jacobs, special services are currently managing more than 1,000 cases related to terrorism.</p> <p>"This indicator has decreased, but we must remain vigilant, since the number of radicals, however, has not decreased... Last year, 45 percent of all PJF staff were engaged in [counterterrorism affairs]. Now, this figure is little under 30 percent," Jacobs added.</p> <p>On March 22, 2016, two explosions hit the Brussels airport, with a third detonating inside a train carriage at the Maalbeek metro station half an hour after the airport attack. A total of 32 people were killed, and over 300 more were injured. Daesh terrorist group claimed responsibility for the attacks.</p>

<b>HEADLINE</b>	<b>03/22 Police: UK 'less hostile for terrorists'</b>
<b>SOURCE</b>	<a href="https://www.independent.co.uk/news/uk/home-news/westminster-attack-uk-terrorists-counter-terror-police-isis-manchester-parsons-green-attacks-a8267061.html">https://www.independent.co.uk/news/uk/home-news/westminster-attack-uk-terrorists-counter-terror-police-isis-manchester-parsons-green-attacks-a8267061.html</a>

GIST

Extremists were able to launch a barrage of attacks in the UK because it was a “less hostile place for terrorists” in 2017, the head of counter-terror policing has admitted.

Metropolitan Police Assistant Commissioner Neil Basu, who took over the post from Mark Rowley this month, said security services had “raised the bar” since the Westminster attack triggered four months of bloodshed.

“To say that there would not be another attack would be foolish,” he told The Independent. “But I am optimistic – I think we have an incredible machine in this country.”

It is a year since Islamist extremist Khalid Masood ploughed his car into pedestrians on Westminster Bridge, killing four victims before running towards Parliament and stabbing a police officer to death.

Masood, a Muslim convert with a history of violent crime, was known to MI5 for links to Islamist networks but was not under active investigation or considered an imminent threat.

His rampage was the first attack claimed by Isis in Britain, shaking the country that had previously been spared the massacres carried out in France, Belgium and elsewhere.

The assault was followed by the Manchester bombing on 22 May and the London Bridge attack on 3 June, both claimed by Isis, and the far-right Finsbury Park attack on 19 June.

The attacks killed a total of 36 victims, injuring hundreds, and saw all perpetrators apart from Finsbury Park attacker Darren Osborne die.

Melissa Cochran, whose husband Kurt was killed in the Westminster attack, said she was thinking of other victims of the “terrible day”.

“We all miss Kurt very much and speak of him often,” she added. “While I continue to grieve for my husband and all the victims of that day, I strive to move ahead and focus on my recovery, as well as honouring Kurt’s life by advocating love, forgiveness and peace.”

Inquests into the deaths of Mr Cochran, an American tourist, British mother Aysha Frade, Romanian architect Andreea Cristea, pensioner Leslie Rhodes and PC Keith Palmer are due to start in September.

Patrick Maguire, a lawyer representing injured victims on behalf of Slater and Gordon, said Masood had changed their lives forever with his “despicable act of evil”.

“Many still face a daily struggle with their physical injuries that are unlikely to ever properly heal,” he added.

“But what has blighted all of their lives are the mental scars from the horrors they experienced. The anniversary of this terrible day should be used to remember those who lost their lives and support those who survived with their recovery.

“We look forward to the inquest, when questions about how this atrocity was ever allowed to happen will hopefully be answered.”

Since the Westminster attack, a further 14 plots – 10 from Islamists and four by extreme the right wing – have been foiled, and terror arrests are averaging more than one a day.

But the UK threat level remains at “severe”, meaning an attack is deemed highly likely, and the risk from both jihadi and far-right extremists continues to rise.

Mr Basu said police had worked to “break the momentum” of attacks, sparking successful efforts to disrupt fresh plots in the latter part of 2017.

“People saw the bar had been lowered in this country and it was a less hostile place for terrorists,” he added. “I think we raised that bar again.”

The head of national counter-terror policing said the tempo of plots had increased to an unprecedented rate. “It is possible for attacks to get through, and we’ve seen that in the speed people are radicalised, the speed of which they plan and the speed they commit the crime,” he added.

“It’s becoming harder to stop these things.”

Mr Basu cited changes including online radicalisation and encrypted communications among the challenges, after calling for members of the public to provide real-world information on suspicious behaviour, which he said remains a “valuable part of the jigsaw”.

A review by David Anderson QC, the former Independent Reviewer of Terrorism Legislation, found security services missed opportunities to stop the Manchester and London Bridge attacks. But he concluded that neither MI5 nor the police had any reason to anticipate the Westminster attack.

“You’re looking at someone [Masood] who is such a long way from the top of anyone’s grid that, frankly, it’s a bit difficult to see how they would have been easily stopped, whatever agencies had done,” Mr Anderson said in December.

His review did not cover the Finsbury Park attack or Parsons Green bombing, in which a homemade device partly exploded on a District Line train in September.

Ahmed Hassan, an Iraqi teenager who told immigration officials he underwent Isis training in his home country, had been reported to Prevent on at least two occasions. An internal probe into potential failings is ongoing.

“We are always concerned if we haven’t joined all of the dots,” Mr Basu said.

“Over the course of the last five years 23 plots have been disrupted, all of which saved lives. We are good at this, we can always be better.”

The senior officer said it was a “prime objective” to have online propaganda removed using the Counter-Terrorism Internet Referral Unit and by working with social media companies.

And where potential extremists are caught viewing terrorist posts, police want to “take earlier action”.

“We want to act as soon as possible,” Mr Basu said. “Sometimes that may stop more serious offences being detected, but we won’t take risks with public safety.”

But he suggested that current punishments available for lower-level terror offences, like dissemination of terrorist publications and collecting information useful to someone planning an attack, are not sufficiently “robust”.

Many such cases see convicted terrorists imprisoned for fewer than five years, if at all, and the Parole Board raised concerns they could be further radicalised inside jail.

<b>HEADLINE</b>	<b>03/22 Lone captive schoolgirl refused to convert</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/lone-nigerian-schoolgirl-still-captive-refused-to-convert-for-boko-haram/">https://www.cbsnews.com/news/lone-nigerian-schoolgirl-still-captive-refused-to-convert-for-boko-haram/</a>
<b>GIST</b>	<p>LAGOS, Nigeria -- The mother of the only Nigerian schoolgirl still in Boko Haram captivity after the extremists released 104 classmates said Thursday her daughter was blocked from boarding the vehicle to freedom and told to convert to Islam. Fifteen-year-old Leah refused, Rebecca Sharibu told The Associated Press.</p> <p>"She was about to board the vehicle that was to bring them back. Then Boko Haram said she should convert," the mother said.</p> <p>"Her friends said they tried to convince her but she said she will not convert to Islam. Boko Haram said since she will not convert to Islam she should remain behind. That was how they left her. She is alone."</p> <p>Leah Sharibu asked her departing Muslim classmates to pray for her.</p> <p>CBS News' Debora Patta said similar cases have been seen before. In the kidnapping of the Chibok girls several years ago, "some of them did refuse to renounce their Christianity, they refused to wear Muslim attire, to chant Muslim prayers, as was shown over and over again in those 'proof of life' videos," Patta said.</p> <p>President Muhammadu Buhari confirmed that Sharibu was the only schoolgirl still held by Boko Haram after the extraordinary release of the girls on Wednesday and vowed that she "will not be abandoned."</p> <p>Buhari, himself a Muslim, said "true followers of Islam all over the world respect the injunction that there is no compulsion in religion." He added that he looked forward to meeting with the girls who were freed.</p> <p>The president's statement had no word on the five girls still unaccounted for.</p>

<b>HEADLINE</b>	<b>03/22 Great Pacific Garbage Patch 'expanding'</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/news/energy-environment/wp/2018/03/22/plastic-within-the-great-pacific-garbage-patch-is-increasing-exponentially-scientists-find/?utm_term=.8e374b70c7fe">https://www.washingtonpost.com/news/energy-environment/wp/2018/03/22/plastic-within-the-great-pacific-garbage-patch-is-increasing-exponentially-scientists-find/?utm_term=.8e374b70c7fe</a>
<b>GIST</b>	<p>Seventy-nine thousand tons of plastic debris, in the form of 1.8 trillion pieces, now occupy an area three times the size of France in the Pacific Ocean between California and Hawaii, a scientific team reported on Thursday.</p> <p>The amount of plastic found in this area, known as the Great Pacific Garbage Patch, is "increasing exponentially," according to the surveyors, who used two planes and 18 boats to assess the ocean pollution.</p> <p>"We wanted to have a clear, precise picture of what the patch looked like," said Laurent Lebreton, the lead oceanographer for the Ocean Cleanup Foundation and the lead author of the study.</p> <p>The Garbage Patch has been described before. But this new survey estimates that the mass of plastic contained there is four to 16 times larger than previously supposed, and it is continuing to accumulate because of ocean currents and careless humans both onshore and offshore.</p> <p>The "patch" is not an island or a single mass, leading some scientists to object to the name (which the current study uses). Instead, it's a large area with high volumes of plastics, one in which concentrations increase markedly as you move toward its center. The debris ranges from tiny flecks to enormous discarded fishing nets, which make up 46 percent of the material, the study found.</p> <p>The study was led by the Ocean Cleanup Foundation and researchers at institutions in New Zealand, the United States, Britain, France, Germany and Denmark, who published the findings in the journal Scientific Reports.</p> <p>There's a key distinction between the mass of plastic within the patch increasing — which it is — and the overall size of the patch, which does not seem to be changing. Rather, it's just that trash within the patch seems to be accumulating, or growing more dense.</p> <p>The plastic is probably mostly coming from Pacific countries, Lebreton said. But it could be coming from</p>

anywhere since plastic now travels across the entirety of the ocean and has even shown up in Arctic waters, where very few humans live. That suggests the plastic traveled there from elsewhere, riding the ocean currents.

Some of the debris probably also came from the 2011 tsunami that devastated Japan and washed large amounts of waste back out to sea, the study said.

The location of the patch is in a zone of slack currents where debris arrives and then lingers, increasing in the calm waters.

The study finds that, based on prior examinations dating back to the 1970s, the amount of plastic in the patch is steadily growing as more flows in than flows out — saying that plastic levels are “increasing exponentially.”

“We think there’s more and more plastic basically accumulating in this area,” Lebreton said.

The most striking aspect of the findings — and perhaps the most damaging — was the large volume of fishing nets or “ghostnets,” said Chelsea Rochman, an assistant professor at the University of Toronto who studies marine plastic but was not part of the current study.

“This suggests we might be underestimating how much fishing debris is floating in the oceans,” she said in an emailed comment. “Entanglement and smothering from nets is one of the most detrimental observed effects we see in nature.”

The fact that the plastic content of the Patch is increasing is consistent with research that has been conducted on land, showing that waste volumes entering the ocean are large and increasing, said Jenna Jambeck, an environmental engineer at the University of Georgia who has studied plastic waste processes.

In a 2015 study, Jambeck found that humans are filling the oceans with an estimated 8 million tons of plastic every year, and that is expected to increase 22 percent by 2025.

<b>HEADLINE</b>	<b>03/22 Gov. EO w/‘unintended consequences’</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/933920/inslee-immigration-order-consequences/">http://mynorthwest.com/933920/inslee-immigration-order-consequences/</a>
<b>GIST</b>	<p>An executive order signed by Washington Governor Jay Inslee aims to draw a line between local police and federal immigration enforcement. It’s proving to make things difficult for officers.</p> <p>“I think everybody has the same goal,” Steve Strachan told Dori Monson. “We want to keep truly bad, violent guys from doing bad things. But there’s a lot of unintended consequences as we move along. I would say the governor’s office has been open-minded about this. They understand it. They want to work together to find ways to fix this.”</p> <p>Strachan is executive director of the Washington Association of Sheriffs and Police Chiefs. He’s pointing out a flaw in an executive order signed by Inslee in February 2017. The order counters Trump administration immigration policies. State agencies are not allowed to share information that could lead to the discovery of a person’s immigration status. But it has proven to be difficult as state agencies try to work together.</p> <p>“State resources cannot be used, by his order, for immigration enforcement,” Strachan said. “What’s been going on since; state agencies like the department of licensing have been trying to comply with the governor’s order as best they can. But it’s a complicated issue.”</p> <p>“These different databases are connected because they should be,” he said. “When we work with folks like the FBI, we need to know what everyone else is doing and have good information. So it’s led to</p>

	<p>unintended consequences and I think that's what we are seeing now.”</p> <p>For example, the Washington State Department of Licensing told police it would no longer provide them social security numbers. That information could be used for immigration enforcement. However, that information is also used for gun control regulations and other protections.</p> <p>“This change with social security means that it will be more difficult to do background checks for pistol transfers, conceal permits, and the important one is for protective orders ... things like domestic violence,” Strachan said.</p> <p>“One of our chiefs mentioned to me that ‘We don’t do immigration enforcement, we understand that ... but we have other important enforcement to do,’” he said. “We have to be mindful of how these decisions ... affect the ability to do enforcement that has nothing to do with immigration.”</p>

<b>HEADLINE</b>	<b>03/22 Fewer foreign-born tech workers in state?</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/934053/will-washington-begin-to-see-fewer-foreign-born-tech-workers/">http://mynorthwest.com/934053/will-washington-begin-to-see-fewer-foreign-born-tech-workers/</a>
<b>GIST</b>	<p>Uncertainty over President Trump’s protectionist policies on immigration coupled with an increasingly difficult federal screening process appears to be leading to a decline in skilled worker visa applications in Washington state.</p> <p>According to interviews with employers and immigration attorneys who write the petitions for so-called H1B Visas, some local employers might have begun to lose faith in the long-term prospects in the U.S for legal, foreign-born workers.</p> <p>Washington employers are among the heaviest users of the visas nationally with 25,000 H1B employees statewide.</p> <p>Megan Vogel, an immigration attorney with Dave Wright Tremaine, said with the opening date for next year’s applications coming up on April 2, she’s seeing a surprising decline in worker visa interest when compared to previous years.</p> <p>“People are seeing much more prevalent denials and tougher requests for evidence on petitions that were filed so employers just might be a little gun shy right now to proceed with even trying,” she said.</p> <p>“It’s been a really tough year in the H1B world.”</p> <p>This is, in part, the intended effect of the president’s “Buy American, Hire American” agenda. From trade tariffs to new barriers for legal immigration and guest-worker employment, the Trump Administration has made a concerted push to narrow the flow of products and employees from other countries.</p> <p>And this is felt acutely by the local companies that use H1B visas which are defined as, “non-immigrant visa which allows U.S. employers to temporarily employ foreign professionals in specialty occupations for three years, extendable to six years,” according to the MyVisaJobs.com website.</p> <p>Popular among technology companies, the skilled worker visa historically has been used by employers seeking workers with skills not easily found domestically. Most of the 25,000 H1B workers in Washington are employed in tech companies, with Microsoft and Amazon leading the way.</p> <p>Critics have claimed tech companies have used the visa to expand the labor pool and drive down wages – something tech companies strongly deny. For states with more than 1,000 H1B workers, Washington state has the highest average H1B salary at \$107,000.</p> <p>Employers say that while the federal government hasn’t lowered the cap on H1Bs – something that might</p>

	<p>attract unwanted political attention – the US Citizen and Immigration Services department has strongly stepped up “requests for evidence” to slow or even stop the process.</p> <p>“We are definitely seeing more of those requests,” Vogel said.</p> <p>One local tech company employee who deals with helping to secure H1Bs, said the restrictions are a by-product of the Trump administration’s misunderstanding of foreign-born, non-citizen workers.</p> <p>“In the tech industry, it’s often more expensive to hire from other countries when you factor everything in, legal services, moving costs, employee retention,” said the worker who asked to remain anonymous out of fear of reprisals. “We hire American when we find qualified applicants. And we use H1Bs when we don’t.</p> <p>“And all of it grows the economy. It’s good for the U.S.”</p>

<b>HEADLINE</b>	<b>03/22 Hurricane Harvey's toxic impact</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/hurricane-harveys-toxic-impact-deeper-than-public-told/">https://www.cbsnews.com/news/hurricane-harveys-toxic-impact-deeper-than-public-told/</a>
<b>GIST</b>	<p>HOUSTON — A toxic onslaught from the nation's petrochemical hub was largely overshadowed by the record-shattering deluge of Hurricane Harvey as residents and first responders struggled to save lives and property.</p> <p>More than a half-year after floodwaters swamped America's fourth-largest city, the extent of this environmental assault is beginning to surface, while questions about the long-term consequences for human health remain unanswered.</p> <p>County, state and federal records pieced together by The Associated Press and The Houston Chronicle reveal a far more widespread toxic impact than authorities publicly reported after the storm slammed into the Texas coast in late August and then stalled over the Houston area.</p> <p>Some 500 chemical plants, 10 refineries and more than 6,670 miles of intertwined oil, gas and chemical pipelines line the nation's largest energy corridor.</p> <p>Nearly half a billion gallons of industrial wastewater mixed with storm water surged out of just one chemical plant in Baytown, east of Houston on the upper shores of Galveston Bay.</p> <p>Benzene, vinyl chloride, butadiene and other known human carcinogens were among the dozens of tons of industrial toxins released into surrounding neighborhoods and waterways following Harvey's torrential rains.</p> <p>In all, reporters catalogued more than 100 Harvey-related toxic releases — on land, in water and in the air. Most were never publicized, and in the case of two of the biggest ones, the extent or potential toxicity of the releases was initially understated.</p> <p>Only a handful of the industrial spills have been investigated by federal regulators, reporters found.</p> <p>Texas regulators say they have investigated 89 incidents, but have yet to announce any enforcement actions.</p> <p>Testing by state and federal regulators of soil and water for contaminants was largely limited to Superfund toxic waste sites.</p> <p>Based on widespread air monitoring, including flyovers, officials repeatedly assured the public that post-Harvey air pollution posed no health threat. But the U.S. Environmental Protection Agency official in charge now says these general assessments did not necessarily reflect local "hotspots" with potential risk to people.</p> <p>Regulators alerted the public to dangers from just two, well-publicized toxic disasters: the Arkema</p>

chemical plant northeast of Houston that exploded and burned for days, and a nearby dioxin-laden federal Superfund site whose protective cap was damaged by the raging San Jacinto River.

Samuel Coleman, who was the EPA's acting regional administrator during Harvey, said the priority in the immediate aftermath was "addressing any environmental harms as quickly as possible as opposed to making announcements about what the problem was."

In hindsight, he said, it might not have been a bad idea to inform the public about the worst of "dozens of spills."

Local officials say the state's industry-friendly approach has weakened efforts by the city of Houston and surrounding Harris County to build cases against and force cleanup by the companies, many of them repeat environmental offenders.

"The public will probably never know the extent of what happened to the environment after Harvey. But the individual companies of course know," said Rock Owens, supervising environmental attorney for Harris County, home to Houston and 4.7 million residents.

The amount of post-Harvey government testing contrasts sharply with what happened after two other major Gulf Coast hurricanes. After Hurricane Ike hit Texas in 2008, state regulators collected 85 sediment samples to measure the contamination; more than a dozen violations were identified and cleanups were carried out, according to a state review.

In Louisiana after Hurricane Katrina's floodwaters ravaged New Orleans in 2005, the EPA and Louisiana officials examined about 1,800 soil samples over 10 months, EPA records showed.

"Now the response is completely different," said Scott Frickel, an environmental sociologist formerly at Tulane University in New Orleans.

Frickel, now at Brown University, called the Harvey response "unconscionable" given Houston's exponentially larger industrial footprint.

Reporters covered some environmental crises as they happened, such as AP's exclusive on the flooding of toxic waste sites and the Chronicle's Arkema warnings before fires broke out. But the sheer quantity of spills was impossible to document in real time.

Academic researchers are now trying to fill in the gaps in environmental monitoring, helped by grants from the National Science Foundation and National Institute of Environmental Health Sciences. One project, a Harvey-related public health registry for Houston, was funded just this month but is not yet underway.

"People are left in a state of limbo of not knowing if they were exposed or not — or if they were, what the implications are for their health," said Dr. Nicole Lurie, who oversaw federal public health responses to the Superstorm Sandy and Deepwater Horizon disasters while at the U.S. Department of Health and Human Services.

Scientists say the paucity of data also could hamstring efforts to prepare for and mitigate damage from future violent weather events that climatologists predict will happen with increasing frequency.

HEADLINE	<b>03/23 Airlines balk at new lost bag rules</b>
SOURCE	<a href="https://www.bloomberg.com/news/articles/2018-03-23/airlines-balk-at-new-rules-over-lost-bags">https://www.bloomberg.com/news/articles/2018-03-23/airlines-balk-at-new-rules-over-lost-bags</a>
GIST	A federal rule change about how airlines count the luggage they lose has pitted Southwest Airlines Co., the "bags fly free" carrier, against its two larger rivals, which tend to charge for the privilege of using the

cargo hold.

For decades, an airline's lost-bag rate has been calculated by dividing the number of people it flies by the number of bags reported missing. Starting next year, the U.S. Department of Transportation plans to change the lost-bag rate arithmetic, replacing passenger counts with bag totals and requiring airlines to tally every checked bag they accept, including those at the gate, transferred from other carriers and the "valet" bags left on a jetway because the overhead bins were too stuffed.

To comply, U.S. airlines will have to improve their counting systems to achieve an accurate sum of the hundreds of millions of bags they fly each year. The rule change is likely to alter airlines' monthly performance rankings against each other (although it won't affect the tally of bags they lose, since that's based on customers reports.)

Last year, the dozen largest U.S. carriers misplaced 2.46 bags per 1,000 passengers, an improvement from 2.7 bags per 1,000 in 2016. Overall passenger numbers at the 12 rose by 21.2 million, to 652.2 million, in 2017. The DOT sees the new method for calculating mishandled baggage rates as more accurate.

American Airlines Group Inc. and United Continental Holdings Inc. contend the new rule would cost the industry more than \$16 million to comply. Southwest, which flies more domestic passengers than any U.S. carrier and favors the change, told the DOT it could equip 600 of its gates with technology to track gate-checked bags for less than \$3 million. In an earlier round of comments on the proposal, Delta Air Lines Inc. also opposed the measure, arguing that compliance would cost \$10.9 million, along with passenger delays and inconvenience.

American and United are also curious as to why Uncle Sam even tracks lost bags, given that Congress deregulated the industry 40 years ago. "No party has convincingly demonstrated that the government has a legitimate role in a deregulated industry of requiring airlines to report this service metric," the two giants wrote Feb. 21 in a joint letter to the agency. Moreover, neither the government nor anyone else has been able to show "any quantifiable, or even unquantifiable, public benefits" from having such a measure, American and United wrote.

The industry's divergence of opinion stems largely from the \$25-and-higher baggage fees that have become an integral component of U.S. airline profits—except at Southwest.

No one flies more bags than Southwest, in part because the carrier allows passengers to check two for free. This also means the carrier ends up with the most lost bag reports. Meanwhile, passengers who fly with its rivals—desperate to avoid those fees—try to scoot past the gate agent. When they fail, the items end up in baggage—and not always tallied.

"Right now, the metric is out of date and highly misleading," Leslie Abbott, a senior attorney for Southwest, said in an interview Wednesday. "It compares two numbers that are unrelated to each other."

Under the new rule, airlines also must start tracking and reporting mishandled wheelchairs and scooters. American and United haven't objected to that mandate.

"They do not have as many checked bags as Southwest Airlines."

"We don't oppose monthly operational metrics on Mishandled Baggage Reports," Meghan Ludtke, managing director of regulatory affairs for American Airlines. "We support a consistent industry standard that puts all carriers on a level playing field and gives consumers the ability to make a true comparison."

Dallas-based Southwest is also opposing its larger peers' efforts to squelch a DOT rule that would require airlines to report mishandled baggage, as well as on-time performance and denied-boarding, of flights operated by their domestic code-share partners. For example, if American flies a route on which Alaska Air Group Inc. has sold tickets, or vice-versa, it has to report any of these shortcomings. Southwest currently has no such flights.

<b>HEADLINE</b>	<b>03/23 Secret plot to reverse Brexit</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/features/2018-03-23/inside-the-secret-plot-to-reverse-brexit">https://www.bloomberg.com/news/features/2018-03-23/inside-the-secret-plot-to-reverse-brexit</a>
<b>GIST</b>	<p>Early every Wednesday morning, 15 people leave their homes and travel separately to a secret location in central London, where, over cups of Indian-style filter coffee and plates of cookies, they plot to stop Brexit. Those who gather, bleary-eyed, in the meeting room are a mix of women and men, old and young. They include politicians and activists, both professional and little-known, though their identities haven't been formally released. The one thing that unites them is opposition to Theresa May's plan for Britain to make a clean break from the European Union.</p> <p>Their aim: engineer a new referendum so the British people can reconsider Brexit before it's too late. "I do not want to see Brexit happen. I think it will destroy the futures of the next generation in this country," says Chuka Umunna, the charismatic, 39-year-old member of Parliament who chairs the weekly gathering. "But it's not about what I think—and shouting 'Stop Brexit' is not a political strategy. I want the people to get a vote."</p> <p>For the first time, people in the anti-Brexit movement in the U.K. are getting organized. That's because, for the first time, they believe they can win. Ever since May lost her majority in Parliament after a catastrophic gamble on an early election last June, it's been clear that she is in a weak position to lead the country through withdrawal from the EU. For six months after her election failure, she held her ruling Conservative Party together and managed to navigate the first phase of Brexit negotiations, albeit only after agreeing to pay the other 27 member states a 40 billion-pound (\$56.4 billion) divorce bill.</p> <p>Then came her first defeat. On Dec. 13, 11 members of May's Tory party defied her orders and overturned the government's will in a key vote in Parliament. The rebels ensured that lawmakers will get a binding vote on whether to accept or reject May's final Brexit deal once negotiations with the EU end later this year. Put simply, this means that May must get an agreement that is good enough to please her own lawmakers, and that she cannot simply impose her policy on the country.</p> <p>It is this make-or-break vote in Parliament—which is likely to come around October this year—that the Brexit resistance is now targeting. By lobbying legislators, they hope to block May's deal, bring about a new referendum, or perhaps trigger a new national election. The pro-EU alliance that Umunna chairs—which includes Brexit rebels in Parliament and thousands of activists around the country—played a crucial role behind the scenes in inflicting the defeat on May.</p> <p>Speaking in his exposed-wood and glass office overlooking the Palace of Westminster, Umunna says that campaigners across the country targeted different members of Parliament in the run-up to the December vote to persuade them to back the rebellion. They got "an avalanche of emails and hundreds of visits" to their offices, he says.</p> <p>Increasingly, the public and politicians alike can see the dangers of Brexit and are changing their attitude as the economic risks become clear, he says. A recent leak of government analysis showed how Brexit will reduce growth by as much as 5 percentage points over 15 years if there's a free-trade deal, or 8 points if there's no deal at all. The most-affected areas are likely to be some of those that voted heavily to leave the EU. "It terrified some people what it was saying was going to happen in their communities," Umunna says. "If it does happen, and they are still the members of Parliament, they won't be forgiven."</p> <p>Umunna is always immaculately dressed, a slick media performer who briefly stood for the leadership of his Labour party in 2015, before what he called "the added level of pressure" prompted him to pull out of the race. (It was ultimately won by socialist firebrand Jeremy Corbyn). Until recently, he's been careful to keep quiet about the work of his Grassroots Coordinating Group, as the committee is unfashionably known. He won't say where or exactly when they meet, because he doesn't want the gatherings to be mobbed by photographers and reporters.</p>

Away from prying camera lenses, Umunna and his fellow Brexit rebels have been seeking the help of European leaders for their mission. On Jan. 15, he joined senior members of the Conservative party, including Anna Soubry, a former business minister, and Dominic Grieve, who served as the U.K.'s Tory attorney general (before masterminding May's December defeat), to visit the EU's chief Brexit negotiator, Michel Barnier, in Brussels. They've met senior officials in other EU institutions, European foreign ministers, and ambassadors from the bloc's remaining 27 member states—even the heads of foreign governments. Some involved privately confide that the access to senior EU politicians has been “extraordinary.”

The high-level contact is paying off. While EU officials know they must tread lightly to avoid appearing to meddle in British affairs, they are privately feeding valuable intelligence on the unfolding negotiations to their British allies. On March 6, a day before the EU published its draft plan for the next phase of Brexit negotiations, Umunna was in his office, focusing on the future trade deal with the U.K. He told Bloomberg reporters something that not even the British government officially knew at that point: that the EU would make clear in its document that its offer of a limited trade deal, with poor access for services such as banks, could be improved—if May backs down on her own strict “red lines.”

The prime minister has laid down hard rules for the talks. She wants to leave the single market, the customs union, and the direct jurisdiction of the European Court of Justice, as well as to end the free migration of people. But Umunna's information proved accurate. When the bloc published its guidelines the following day, they said that if May's position “evolves” and she backs down on these issues, the EU will be willing to consider making a better offer.

The EU's controversial gambit became known as the “evolution clause.” It was seen as an attempt to pry open divisions among U.K. strategists, a temptation to water down May's hard-line stance. To some of the more paranoid anti-EU campaigners in the U.K., Umunna's prior knowledge of the clause will serve as evidence of an international conspiracy against Brexit.

May's defeat in December was a turning point for politicians in Europe, too. For many EU officials in Brussels and European capitals, Brexit had seemed inevitable. Their only hope was to limit the damage that the split would do and try to find a way to plug the 10 billion-euro hole in the bloc's annual budget that the U.K.'s exit will leave. All that changed after May lost the vote in Parliament. “They recognize that Theresa May does not necessarily have a mandate for her negotiating position,” Umunna says. “They are very aware that actually, she isn't in the driving seat of this. It is Parliament that will be in the driving seat.”

Since the start of the year, European leaders have lined up to tell Britain that it is free to change its mind. If May—or a different prime minister—were to write to European Council President Donald Tusk to say Brexit is off, the EU would welcome the country back into the club without hesitation, they say. While the EU continues to take the hardest line in the negotiations, officials have made clear privately that they will agree to pause the Brexit process to allow time for a new referendum, perhaps even another election if necessary, according to Umunna. “If a crisis is precipitated and there were a general election, or a new national poll, we would be granted the time to do that,” he says.

Six of the 10 groups that send representatives to join Umunna's Wednesday morning coffee meetings have now moved into the same offices at Milbank Tower, a 10-minute walk from Parliament. This shared space—along with the weekly gatherings—makes it easier for the separate groups to brainstorm, decide on the best media lines to use, and coordinate their campaign strategy and activities. “We've got six months to change the game and get a people's vote on the Brexit deal,” says Eloise Todd, chief executive of Best for Britain, one of the groups in Umunna's weekly meeting. Partly because it accepts large donations, including 400,000 pounds from billionaire investor George Soros, Best for Britain has found itself the target of right-wing newspapers that campaigned for the U.K. to leave the EU.

Todd reckons the press attacks backfired and fueled a surge of interest in—and donations to—her campaign. She puts the odds of engineering a new referendum at “50/50.” Her team has already trained 2,000 activists in street-campaigning techniques and aims to prepare an additional 1,000 by the end of

April. Digital operations are also getting the funding and resources they will need for a massive “Remain” campaign designed to build support over the summer for a referendum on May’s exit deal. Many in the movement believe that only a new public vote would have the political legitimacy to halt Brexit.

The public is warming to the idea of having the final say on the Brexit deal, says James McGrory, executive director of Open Britain. With more than 500,000 supporters, his is the largest group attending Umunna’s weekly meetings. “This is not a slam dunk, either with the public or Parliament,” McGrory says. “People will holler and say, ‘How dare you?’ but what is absolutely critical is that the democratic argument is on our side.”

The campaign against May’s version of Brexit faces huge challenges. There is no clear evidence that a new referendum would deliver a different result. In order to bring about a second national vote—against May’s wishes—Umunna and company will need to persuade enough Conservative politicians to defy their leader on an issue that could bring down her government. They must also convince the main opposition Labour Party to back their cause. At the moment, Corbyn does not support a new referendum, though he hasn’t ruled it out in the future. Umunna believes that Labour’s leadership could be persuaded, “particularly if they feel it can bring a general election closer.”

Nevertheless, the first task for the campaign groups is to make more noise in the run-up to the Parliamentary vote on May’s Brexit deal in October. “There is a weird silence that has befallen our country,” says Todd. “Businesses have persuaded themselves that they are Brexiting and they need to shore up their political capital. But it would be much better for businesses to speak truth to power.”

When it comes time for the fight, Umunna is confident the pro-EU side will be ready. The disparate groups now working together have learned from the insurgent campaign that Brexit backers fought to take Britain out of the EU. “There is a role-reversal now,” he says. “We are not the establishment any more.”

<b>HEADLINE</b>	<b>03/23 Bumped airline passenger \$10,000 voucher</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/bumped-united-passenger-walks-10000-voucher/story?id=53956077">http://abcnews.go.com/US/bumped-united-passenger-walks-10000-voucher/story?id=53956077</a>
<b>GIST</b>	A United Airlines passenger bumped from a flight on walking away with a travel voucher isn’t terribly surprising -- except that hers was worth \$10,000.

For Allison Preiss, a communications director from Washington who began tweeting Thursday morning from Dulles International Airport after she was asked to deboard, her travel experience ended much better than it began.

"Well," she later told ABC News, "I can say it was the best flight delay ever."

United oversold the flight and asked Preiss, the lowest-fair passenger, to deboard. Thus began her tweetstorm:

"United is offering \$1K in travel credit for an oversold flight. If nobody bites, they will kick off the lowest fare passenger by pulling them out of the boarding line. For a flight that THEY oversold. Unreal."

"I AM THE LOWEST FARE PASSENGER."

"They are kicking me off this flight."

"They can't board me on this plane because there is a broken seat."

“.@united IS THE WORST.”

"United tried to get me to sign a document that says I volunteered my seat on this plane when I was involuntarily denied boarding. Sketchy af."

"On the upside, I wasn't physically dragged off the plane and my dog wasn't killed on board, so I've got that going for me ... which is nice."

"They really do not want to give me cash. They just offered me \$10,000 in travel credit. TEN THOUSAND."

Preiss posted a photo of the voucher on Twitter with the comment, "This is how badly United didn't want to give me cash."

She added: "I also got two \$10 meal vouchers. I am going to go INSANE at Pizza Hut."

United raised its payment cap to \$10,000 last year after a passenger was literally dragged off a flight.

In a statement obtained by ABC News, United confirmed Preiss' account and that the flight was oversold.

"Yes," the airline said, "we issued this voucher per our policy."

HEADLINE	03/23 Seattle-to-Nashville pot pipeline?
SOURCE	<a href="https://patch.com/tennessee/nashville/there-seattle-nashville-plane-based-pot-pipeline">https://patch.com/tennessee/nashville/there-seattle-nashville-plane-based-pot-pipeline</a>
GIST	<p>NASHVILLE, TN -- It appears there may be a Seattle-to-Nashville pot pipeline after another man was arrested with marijuana in his baggage at the airport in nearly identical circumstances to an incident earlier this week.</p> <p>Drug Enforcement Administration agents in Seattle alerted Nashville airport detectives that someone had checked two bags on an Alaska Airlines flight but did not board the plane.</p> <p>Once the plane landed at BNA, detectives say they saw Willie James Wilson, 50, stand near the luggage</p>

	<p>carousel and pick up the orphan baggage. Officers approached Wilson, telling him a K-9 had detected drugs in the bags and Wilson allowed a search, according to an affidavit.</p> <p>Inside the bags: 40 pounds of marijuana in 40 vacuum-sealed bags. Wilson reportedly told detectives he was paid \$1,500 to pick up the bags. He is charged with possession of a controlled substance.</p> <p>Earlier this week, a 27-year-old man reportedly admitted to being a "marijuana courier" after police found 25 pounds of pot in 25 vacuum-sealed bags in his luggage, also on a Seattle-to-Nashville Alaska Airlines flight.</p>

<b>HEADLINE</b>	<b>03/23 Austin bombings not labeled 'terrorism'</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/22/us/terrorism-definition-trnd/index.html">https://www.cnn.com/2018/03/22/us/terrorism-definition-trnd/index.html</a>
<b>GIST</b>	<p>(CNN)A man terrifies a city for weeks, detonating explosive devices that kill two people. Then, when cornered by police, he blows himself up with one of his bombs. The acts of a terrorist in some Middle Eastern nation? No, the acts of a "very challenged young man" in Texas.</p> <p>But when a man in a rented truck mows down people on a busy bicycle path near the World Trade Center - killing eight people -- the attack is almost immediately called an act of terror.</p> <p>Why are some violent acts labeled terrorism and others not? And does it even matter?</p> <p><b>What's terrorism?</b></p> <p>It's understandable that last fall's New York truck attack was called terrorism. The suspect, Sayfullo Habibullaevic Saipov, said he was inspired by ISIS, and other ISIS sympathizers have used vehicle-ramming attacks overseas to terrify and kill scores of people in recent years. It was the deadliest terror attack in New York since 9/11.</p> <p>But people in Austin, Texas, were also terrified over the past three weeks as 23-year-old Mark Anthony Conditt unleashed a wave of deadly bombings. Authorities won't call what Conditt did terrorism, especially since a 25-minute confession video found on his cell phone doesn't shed light on his motive.</p> <p>"He does not at all mention anything about terrorism, nor does he mention anything about hate," Austin police Chief Brian Manley said. "But, instead, it is the outcry of a very challenged young man talking about challenges in his personal life that led him to this point."</p> <p>That characterization of Conditt's actions -- that this was just the work of a troubled young man -- angers some people, who say violent acts by people of color are treated as terrorism, while those perpetrated by whites are downplayed as byproduct of troubled minds.</p> <p><b>So why aren't the Austin bombings being called acts of terror?</b></p> <p>Part of the confusion stems from the fact that the world has never really settled on a standard definition of "terrorism." The US Code of Federal Regulations defines it as "the unlawful use of force and violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political or social objectives."</p> <p>But it is not a standalone criminal charge.</p> <p>"There is not a domestic terrorism crime as such," FBI Director Christopher Wray said in a Senate hearing in September. "We in the FBI refer to domestic terrorism as a category, but it's more of a way in which we allocate which agents, which squad is going to work on it."</p> <p>So once again, it all comes down to motive. Was there a political or ideological agenda behind the attack? In another example, from March 2017, a white man named James Harris Jackson is accused of stabbing to</p>

death a black man in New York, saying he did so as a "practice" run for more killings of black people. Jackson was charged with murder in the second degree as a hate crime.

But Jackson also faces a terrorism charge in the case -- murder as an act of terrorism in the first and second degrees.

According to police, Jackson, a Baltimore resident, said he traveled to New York because it is the media capital of the world and he wanted to make a statement.

That was enough to convince Manhattan District Attorney Cyrus R. Vance Jr. that Jackson should be charged with terrorism.

"James Jackson prowled the streets of New York for three days in search of a black person to assassinate in order to launch a campaign of terrorism against our Manhattan community and the values we celebrate," Vance said.

### **What's not terrorism?**

Some attacks, at first glance, seem like they should be labeled terrorism. But they're not.

In October, Stephen Paddock smashed two windows on an upper floor at the Mandalay Bay Resort and Casino in Las Vegas and fired on thousands of people at a country music festival below. He killed 58 people in the worst mass shooting in modern American history. But neither President Donald Trump nor investigators called the massacre an act of terror.

Trump described Paddock as a "sick man, demented man" but did not answer reporters' questions at the White House about whether he committed an act of domestic terror.

"We have to establish what his motivation was first," Clark County Sheriff Joseph Lombardo said at the time. The investigation, which is ongoing, has so far not discovered a motive for Paddock's violent rampage.

Think back to Dylann Roof and the killing of nine people at historically black Emanuel African Methodist Episcopal Church in Charleston, South Carolina, in June 2015. Roof, a white supremacist, said he killed the nine attendees of a Bible study at the church because he wanted to start a race war. He was convicted of hate crimes and sentenced to death but never charged with terrorism.

That's despite an outcry from many who said what Roof did was, in their eyes, the textbook definition of terrorism. In an CNN Digital opinion piece, CNN national security analyst Peter Bergen wondered what the United States would have called the attack if Roof had been a Muslim.

"But do the thought experiment: If this attack on the church in Charleston had been conducted by a Muslim man shouting 'Allahu Akbar,' what is already a big news story would have become even bigger, as it would appear to fit so well into the political and media narrative that Muslim militants are the major terrorist problem in the United States," Bergen wrote.

His comments get at what some observers have been saying for years -- some acts of violence are only labeled terrorism if the attacker is dark-skinned and Muslim.

"There's a danger that we only use the word 'terrorism' to refer to a particular racial profile of perpetrator," said Andrew Mumford with the Center for Conflict, Security and Terrorism. "The Charleston example is a really important one ... Sometimes (the label) terrorism is not used when the nationality of the perpetrator does not fit conventional stereotypes."

### **Does it matter what you call it?**

There are legal distinctions to calling an act of violence a hate crime or terrorism. And because labeling something as terrorism has legal ramifications, it is not applied lightly.

	<p>Federal officials work with a very specific definition of when something is an act of domestic terrorism. It has to have three characteristics: an act that takes place in the United States, that's dangerous to human life, and is intended to intimidate civilians or affect government policy by "mass destruction, assassination or kidnapping."</p> <p>Consider the Fort Hood, Texas, shooting in 2009. To the victims at the military base, it was an act of terror when Maj. Nidal Hassan opened fire on his fellow service members, killing 13 people. But again, even though the attack met some of the criteria, federal authorities never used the terrorism label. Avoiding the label made it easier for them to pursue the death penalty.</p> <p>At the end of the day, does it really matter if something is or isn't labeled a hate crime or an act of terror? The pain and anguish felt by the survivors of such violence and the victims' families is just as unbearable - no matter what you call it.</p>

<b>HEADLINE</b>	<b>03/22 Corruption scandal w/3 Peru presidents</b>
<b>SOURCE</b>	<p><a href="https://www.washingtonpost.com/world/the_americas/the-corruption-scandal-thats-ensnared-not-one-but-three-peruvian-presidents/2018/03/22/7d15a75a-2c50-11e8-8dc9-3b51e028b845_story.html?utm_term=.647380358d0b">https://www.washingtonpost.com/world/the_americas/the-corruption-scandal-thats-ensnared-not-one-but-three-peruvian-presidents/2018/03/22/7d15a75a-2c50-11e8-8dc9-3b51e028b845_story.html?utm_term=.647380358d0b</a></p>
<b>GIST</b>	<p>LIMA, Peru — A day after tendering his resignation, Pedro Pablo Kuczynski, the third Peruvian president to fall victim to Latin America’s rumbling corruption mega-scandal, appeared to be facing increasing legal jeopardy.</p> <p>According to local reports, prosecutors have requested that Kuczynski be barred from leaving the country until they finalize their investigations into his dealings with the Brazilian construction company Odebrecht SA, which has admitted paying about \$800 million in bribes to win public contracts in a dozen countries, mostly in Latin America.</p> <p>The move marks yet another humiliation for the 79-year-old center-right economist, whose surprise election in July 2016 was widely hailed as an advance for Peruvian governance. Elected in part on his promises to tackle rampant corruption, the Oxford- and Princeton-educated former senior World Bank official was regarded as a distinguished technocrat unconnected from most of Peru’s unpopular political class.</p> <p>But his downfall, over allegations of using his government contacts to lobby for Odebrecht in the past — including indirectly receiving six-figure payments for work reportedly carried out during a previous stint as economy minister — appears to have left Peru’s democracy in a more fragile state than ever.</p> <p>Kuczynski has said he is innocent, having placed a “Chinese wall” between his public work and his consulting firm, and said that the payments were for work done by business partners of which he was unaware. That explanation hasn’t convinced many Peruvians.</p> <p>Kuczynski had been facing an impeachment vote Thursday on allegations of “permanent moral incapacity,” which he was expected to lose. But lawmakers instead debated Kuczynski's resignation. They appeared likely to accept his resignation letter on Friday, rather than having an impeachment trial.</p> <p>Odebrecht is at the center of what has become Latin America’s biggest corruption scandal, with politicians across the region facing allegations of graft. Almost no major political figure in Peru has escaped the crisis. In recent weeks, Odebrecht executives have testified about undeclared campaign funding to various presidential candidates, including \$1.2 million for the 2011 presidential run of Keiko Fujimori, the leader of the opposition Popular Force.</p> <p>Some analysts are now comparing Peru’s plight with that of Brazil’s, where the Odebrecht scandal has</p>

tarnished virtually the entire political class and left the country with an unelected and unpopular chief executive after the 2016 impeachment of former president Dilma Rousseff.

Kuczynski's successor, Vice President Martín Vizcarra, was due to be sworn in to the top job on Friday and faces the urgent task of forming a cabinet just three weeks before Lima hosts the Summit of the Americas, to be attended by President Trump and other Western Hemisphere leaders. The meeting's theme, proposed by Kuczynski's administration, is "democratic governance against corruption."

A mild-mannered former regional governor who has been serving as Peru's ambassador to Canada, Vizcarra was reported to have fallen out with the president y after the lobbying revelations.

Despite leaving office with an 81 percent disapproval rating, Kuczynski was just about as unpopular as the Congress that forced him out. Its disapproval rating is 82 percent, according to a new survey by polling firm GFK, an indication of how generalized corruption, and the Odebrecht scandal in particular, have ravaged Peruvians' faith in their elected leaders. Nearly half the electorate wants an immediate general election, according to polls.

One previous president of Peru, Ollanta Humala, is in pretrial detention for allegedly receiving illegal campaign funding from Odebrecht, Latin America's largest engineering firm, while another, Alejandro Toledo, a former visiting lecturer at Stanford University, is fighting extradition from the United States on charges that he took millions of dollars in bribes. They both deny wrongdoing.

In court in New York, Odebrecht and an affiliate agreed in 2016 to pay a \$3.5 billion fine, thought to be a global record in a graft case, for paying bribes in various countries to get contracts. The United States claimed jurisdiction because some of the bribes flowed through its financial system.

Here in Peru, Kuczynski is hardly the only politician who has been seriously damaged in the last few days. Keiko Fujimori's estranged younger brother, Kenji, is facing expulsion from Congress after being caught on video apparently offering kickbacks to legislators in return for voting against impeachment.

He and nine other lawmakers had split from Popular Force in December after breaking with the party during a previous impeachment vote. Three days after they saved Kuczynski's political career, the president pardoned Alberto Fujimori, the 1990s strongman president serving a jail sentence for embezzlement and serious human rights violations. That move is said to have infuriated Keiko, who has opposed her father's liberation, which threatened to harm her own presidential ambitions.

The video of Kenji Fujimori was taped clandestinely by a lawmaker loyal to his sister. For many Peruvians, the surreptitious recording brought back painful memories of the corruption and blackmail techniques used by the Fujimori regime two decades ago.

<b>HEADLINE</b>	<b>03/22 Austin bomber audio 'confession'</b>
<b>SOURCE</b>	<a href="https://www.mystatesman.com/news/crime--law/austin-bombing-suspect-recording-wish-were-sorry-but-not/ymCRWQSGfwSeqsKbye2xJ/">https://www.mystatesman.com/news/crime--law/austin-bombing-suspect-recording-wish-were-sorry-but-not/ymCRWQSGfwSeqsKbye2xJ/</a>
<b>GIST</b>	<p>The man who killed two people and wounded five others with a series of bomb attacks in the Austin area left an audio recording for police that includes a haunting revelation about himself.</p> <p>"I wish I were sorry but I am not," Mark Conditt said in the cell phone recording, according to sources familiar with his statements. He described himself as a "psychopath" and said he feels as though he has been disturbed since childhood.</p> <p>Conditt also promised that he would go inside a crowded McDonald's to blow himself up if he thought authorities were closing in on him, according to law enforcement sources briefed on the contents of the audio. The sources declined to be identified because they are not authorized to speak about the recording,</p>

which police are using as evidence in the case.

Interim Police Chief Brian Manley confirmed the existence of the audio in a news conference Wednesday, but provided limited details about its specifics. He called it a “confession.”

Police say Conditt, 23, detonated a bomb inside his car as officers closed in on him along Interstate 35. He had a laptop computer with him that was destroyed in the blast, but officials say they think it may have contained other recordings.

According to the sources, he began his 28-minute statement, which was recorded after 9 p.m. on Tuesday, saying “it’s me again” and blamed himself for helping investigators find him by going into a FedEx store on Brodie Lane in Sunset Valley to mail two explosive devices, one of which blew up at a transfer facility in Schertz.

That decision, Conditt realized, allowed him to be captured on video cameras inside the store and for outside cameras to snap photographs of his license plate, which authorities used to learn his identity.

Conditt also acknowledged that he recognized his actions left family members without loved ones, and caused permanent injuries to other victims, including an elderly woman, but said little else about them.

The sources also repeated what Manley said at the news conference: That Conditt gave no hint about how or why he chose the targets of the bomb attacks.

<b>HEADLINE</b>	<b>03/23 Hunt for Austin bomber frustrated police</b>
<b>SOURCE</b>	<a href="https://www.usnews.com/news/us/articles/2018-03-23/hunt-for-austin-bomber-frustrated-police-before-breakthrough">https://www.usnews.com/news/us/articles/2018-03-23/hunt-for-austin-bomber-frustrated-police-before-breakthrough</a>
<b>GIST</b>	<p>AUSTIN, Texas (AP) — After the first package exploded on an Austin doorstep, police assured the public that there was no wider threat, no signs of terrorism. The idea of a serial bomber striking random strangers never came up.</p> <p>The March 2 blast killed Anthony Stephan House, a 39-year-old man with a background in finance and an 8-year-old daughter. Investigators didn't rule out that House may have mishandled homemade explosives.</p> <p>Hours later, in an interrogation room, detectives told one of House's neighbors their main theory: The deadly package was retaliation, maybe from a drug cartel, for a raid days earlier that seized more than \$300,000 and 30 pounds of pot. The cartel just got the address wrong.</p> <p>"They're saying, 'Who's trying to blow you up?' They're trying to do the whole thing, 'Help us help you, because they're not going to miss again,'" said Mark McCrimmon, an Austin attorney who represents the neighbor.</p> <p>It wouldn't be the last wrong lead in the three-week search that eventually led to Mark Anthony Conditt, an unemployed community college dropout who blew himself up Wednesday as officers closed in.</p> <p>The manhunt intensified after more explosions in the weeks that followed House's death. By the time the suspect too was dead, his bombs had killed two people, badly wound four others and unnerved the Texas capital.</p> <p>On Thursday, authorities gave no indication they were any closer to understanding why Conditt did it. Austin Police Chief Brian Manley said the bomber left behind a 25-minute cellphone recording that amounted to a confession but revealed no clear motive.</p> <p>It's one last mystery in a case that police struggled to crack. More than 500 federal agents swarmed Austin</p>

in what Rep. Michael McCaul, chairman of the House Homeland Security Committee, called the nation's largest bombing manhunt since the 2013 Boston Marathon attacks.

The trail to Conditt included many dead ends among more than 500 phoned-in tips. There were theories that didn't pan out and surveillance cameras that failed to record a glimpse of the suspect.

"They got a lot of calls," McCaul said of investigators, "but not a lot of credible leads."

Early miscalculations stoked frustration in the neighborhoods where the second and third bombings went off on March 12.

Because police initially believed House's death was an isolated attack, they did not warn Austin residents about suspicious deliveries before another package killed 17-year-old Draylen Mason and wounded his mother. Mason and House were both black and related to prominent Austin families, which led police to consider whether they were dealing with a hate crime.

"They didn't consider all the alternatives, and it came back to bite us," said Nelson Linder, president of the Austin chapter of the NAACP.

When the third bomb wounded a 75-year-old Hispanic woman, investigators wondered whether it was actually intended for a neighbor, Erica Mason, who has the same last name as the slain teenager.

Erica Mason, who is white, said she told police she had no connection to Draylen Mason's family. Police now think the shared name was just a coincidence.

Even after three bombings, investigators were still unsure whether they were dealing with a single attacker. "We're not calling it a serial bomber," Manley told reporters on March 12.

A week later, they were.

By then, police had urged residents to report any strange packages. The warning flooded 911 operators with more than 1,000 calls. Six days after Mason's death, authorities increased the pot of reward money to \$115,000 and tried a new tactic to draw the bomber out: a news conference that included a direct appeal for him to get in touch. Hours later, another explosion seemed to be his answer.

The fourth blast, triggered by a tripwire attached to a "children at play" sign that Conditt purchased at Home Depot, was the first on the city's more affluent west side. The new location dampened earlier theories about who the bomber was targeting.

After a fifth explosion Monday at a FedEx processing center outside San Antonio, authorities finally got their big break.

Conditt had been careful to avoid cameras before entering a FedEx store in southwest Austin disguised in a blond wig and gloves, said McCaul, who called it the bomber's "fatal mistake."

Surveillance at the store also captured a license plate linked to Conditt, which in turn gave authorities a cellphone number they could track.

Texas Gov. Greg Abbott said police were able to monitor Conditt and his movements for about 24 hours before his death. The cellphone number tied Conditt to bombing sites around Austin, but McCaul said Conditt had eluded authorities by powering off the phone for long stretches.

By Tuesday night, police began closing in on Conditt's home in suburban Pflugerville. They finally found him early Wednesday at a hotel north of Austin, and officers prepared to move in for an arrest. When the suspect's sport utility vehicle began to drive away, they followed.

	<p>Conditt drove into a ditch on the side of the road, and SWAT officers approached, banging on his window. That's when he ended his life by setting off one of his own devices inside the vehicle.</p> <p>Police found him because he turned his phone back on, McCaul said.</p> <p>"He turned it on. It pinged, and then the chase ensued," he said.</p>

<b>HEADLINE</b>	<b>03/22 Canadian drug smuggler pleads guilty</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/934799/canadian-who-ran-airborne-drug-smuggling-ring-pleads-guilty/">http://mynorthwest.com/934799/canadian-who-ran-airborne-drug-smuggling-ring-pleads-guilty/</a>
<b>GIST</b>	<p>SEATTLE (AP) — A Canadian man who spent nearly a decade fighting his extradition to the U.S. for running a helicopter-based drug-smuggling ring has pleaded guilty.</p> <p>Colin Hugh Martin, formerly of Malakwa, British Columbia, entered the plea Thursday in U.S. District Court in Seattle to a conspiracy charge. The U.S. Attorney's Office said it would recommend no more than 10 years when he is sentenced in June.</p> <p>The 46-year-old admitted he headed a drug ring that flew marijuana and MDMA south into Washington state and cocaine north into Canada. One of his pilots, Sam Lindsay-Brown, killed himself in the Spokane County Jail after flying into a law-enforcement set-up in 2009.</p> <p>In an interview with the Associated Press that year, Martin said he became involved in the drug trade after watching his best friend get killed in a logging accident and seeing the region's logging industry dry up.</p>

<b>GIST</b>	<p>SEATTLE (AP) — A former Seattle police officer has been sentenced to six years in prison for his role in smuggling hundreds of pounds of marijuana to Baltimore.</p> <p>The U.S. Attorney's Office says 44-year-old Alex Chapackdee was sentenced Thursday.</p> <p>Chapackdee, who spent 16 years on the force, resigned shortly after his arrest last May. He pleaded guilty in November to conspiracy to distribute marijuana and conspiracy to commit money laundering.</p> <p>According to his plea agreement, Chapackdee conspired with his brother-in-law, Tuan Van Le, of Maple Valley, Washington, and two others to transport the drugs and launder the proceeds. He made multiple cross-country trips in 2016.</p> <p>Investigators said after a confidential source reported that Le had been paying Chapackdee \$10,000 a month to keep an eye on marijuana grow houses and to provide him with information about law-enforcement activities.</p> <p>Le was sentenced to 14 years in prison.</p>

<b>HEADLINE</b>	<b>03/22 Man evaded police 25yrs faces justice</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/935409/man-who-evaded-police-for-25-years-guilty-of-manslaughter/">http://mynorthwest.com/935409/man-who-evaded-police-for-25-years-guilty-of-manslaughter/</a>
<b>GIST</b>	<p>EPHRATA, Wash. (AP) — A man who evaded authorities for 25 years has been found guilty by a Grant County jury of manslaughter in connection with the 1991 death of Barbara J. Kipp.</p>

	<p>The Columbia Basin Herald reported Thursday that 66-year-old Arnolfo Bravo had also faced second-degree murder, but the jury found him not guilty on that charge.</p> <p>Kipp was found dead Oct. 1, 1991, by her roommate. Court documents say people associated with Kipp told police she was planning on breaking up with Bravo.</p> <p>Bravo acknowledged to a detective that he stole items out of Kipp's house, as well as her vehicle, but he did not admit to killing her. Warrants were issued for Bravo's arrest after the interview, but he was able to avoid authorities until his November 2016 arrest in Texas.</p>

<b>HEADLINE</b>	<b>03/22 Las Vegas gunman's final moments</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/03/22/us/las-vegas-shooting-stephen-paddock.html">https://www.nytimes.com/2018/03/22/us/las-vegas-shooting-stephen-paddock.html</a>
<b>GIST</b>	<p>Sometimes we see him as other hotel guests would have seen him: as the tall gambler intent on the video poker machine across the casino floor, or as the customer standing in line in front of you at the gift shop, buying snacks, or as the guy you briefly glance at as he waits for you to get off the elevator — polite, unhurried, unmemorable.</p> <p>Sometimes we see him as the employees would have seen him, as the casually dressed V.I.P. with the many suitcases who jokes with bellhops, chats with valets and gives out tips along with handshakes. And sometimes we see him as only the surveillance cameras saw him — riding the elevator alone.</p> <p>Within a few days, he would use the arsenal he had moved upstairs in those suitcases to shoot and kill 58 people from his 32nd-floor suite at the Mandalay Bay Resort and Casino in Las Vegas.</p> <p>These were Stephen Paddock's final movements in the days before he opened fire from his hotel suite on Oct. 1: an apparently relaxed solo vacation that, as surveillance footage obtained by The New York Times from MGM Resorts makes clear, was actually the methodically planned prelude to a massacre.</p> <p>Rarely are investigators or the public able to track the preparations of a mass gunman in such molecular detail. Yet for all the material the footage offers about the who, the what, the where, the when and the how, we are no closer to the why.</p> <p>Watching the footage, nearly six months later, is a kind of compulsive ghost-hunting. In the antiseptic stare of the surveillance camera, even the most ordinary interactions are deformed, made weird only by what we know now. It is unnerving because it ends in the deadliest mass shooting in modern American history. It is unnerving because even with his every movement laid out, the grotesquely composed protagonist of this film gives away nothing.</p> <p>The faces of hotel guests and staff are blurred to preserve their privacy, reducing them to smudges that crisscross the screen at random. Mr. Paddock is the only person who appears throughout, the Waldo whose distinctive frame and faintly lopsided gait our eyes quickly learn to seek out in every frame. The clips begin when he appears and end after he leaves. The other people are little more than a backdrop.</p> <p>Except that some of them may become his victims. And some are already his unwitting accomplices.</p> <p>Over and over in the clips, Mr. Paddock is seen leaving the Mandalay Bay for his home in Mesquite, returning with a dark minivan loaded with suitcases. Over and over, valets take his keys; over and over, bellhops stack his luggage on gold carts, helping him transport at least 21 bags over the course of seven days. As they take the service elevator upstairs, Mr. Paddock chats with them. He cracks a joke. He tips.</p> <p>They have no idea that the suitcases they are so conscientiously carrying are full of guns and ammunition.</p> <p>Mandalay Bay employees are virtually the only people with whom Mr. Paddock interacts in the</p>

surveillance footage. He checks in at the V.I.P. desk, eats alone at the resort's sushi restaurant, makes snack runs to the gift shop and gambles at the high-stakes video poker machines. Casino hosts greet him as a regular. Security cameras capture him with arms aloft, celebrating a \$1,000 win.

But his movements are otherwise sedate, deliberate, unobtrusive, so much so that when he raises a hand to scratch his face in the elevator at one point, the extra movement registers as significant, even sinister.

Toward the end of the footage, two guests carrying shiny plastic inner tubes get off the elevator, padding out in flip-flops. Mr. Paddock pauses to let them off, then gets on.

It is the afternoon of Sept. 30. They seem to be on their way to the pool. He is on his way upstairs, where his guns await

<b>HEADLINE</b>	<b>03/22 Catching stoned drivers isn't so easy</b>
<b>SOURCE</b>	<a href="http://www.latimes.com/local/lanow/la-me-ln-marijuana-dui-20180322-story.html">http://www.latimes.com/local/lanow/la-me-ln-marijuana-dui-20180322-story.html</a>
<b>GIST</b>	<p>The man San Diego Police Officer John Perdue pulled over in the Hillcrest neighborhood late last year did not hesitate to admit the smell wafting from his car was marijuana.</p> <p>After the driver said he not only smoked pot recently but did it on a regular basis, Perdue ran him through several field sobriety tests. The man passed them all without a stumble.</p> <p>In the case of a drunk driver, a breathalyzer could have confirmed whether a person was impaired by alcohol. But there isn't such a device for marijuana.</p> <p>Faced with a driver who confessed to habitually smoking marijuana but no proof the man was impaired at the moment, Perdue decided to let him go.</p> <p>After the legalization of recreational pot in California, law firms specializing in DUI stepped up warnings to marijuana users about being busted. Signs along freeways also have warned drivers that being high on marijuana can get them arrested. A bill proposed in the state Senate last month calls for a one-year driving suspension for any motorist under 21 caught with marijuana in his or her system.</p> <p>But as Perdue's stop in the waning months of 2017 shows, policing marijuana-induced DUIs isn't as easy as arresting and prosecuting drunk drivers. And with Proposition 64 now in full effect, police across California are more concerned than ever about stoned drivers taking to the state's streets and freeways.</p> <p>Unlike Washington — which also made recreational pot use legal — California has not established a "per se" level, such as a 0.08% blood-alcohol level, that would make a person legally too stoned to drive.</p> <p>Lt. Rob Sharpe, who works for the Washington State Patrol's impaired driving unit, said he believes establishing a legal limit for pot is a necessity.</p> <p>"If I don't know how much marijuana I can consume and safely drive, how can I be held to a standard that it's unsafe to drive?" he asked.</p> <p>Absent a standard, the final decision on whether an arrested driver was impaired will rest with a judge or jury.</p> <p>California, like other states that have legalized marijuana, now relies on drug recognition experts — police officers trained during a two-week course to conduct cognitive tests and notice other physical signs of drug-related impairment during a motor vehicle stop — to make the initial determination that a driver is intoxicated.</p>

Law enforcement officials said they believe these experts are more than capable of determining impairment, even without an objective standard. In addition to those experts, the California Highway Patrol has trained thousands of officers through its Advanced Roadside Impaired Driving Enforcement program, according to Sgt. Glen Glaser of the agency's impaired driving unit.

"They do a 12-step examination. It goes from having the subject perform a field sobriety test, but we also evaluate their physical signs, take their blood pressure several times, take their pulse," Glaser said. "It's a very thorough exam."

Glaser said the CHP has no interest in conducting sweeping arrests.

"We want them arresting people who are impaired," he said. "Those are the people we want to remove off the roadways. We don't want someone who just has the presence of THC."

But cannabis entrepreneur Virgil Grant said that's not good enough.

Although he wants to ensure that people don't get behind the wheel if they've ingested too much marijuana, Grant is concerned that the lack of an objective intoxication standard could lead to racial profiling in motor vehicle stops.

"As a black man in America, I think that's a no-brainer," Grant said. "If we left everything up to law enforcement in our community, we would be getting locked up at even more alarming rates."

San Diego police have been using two Dräger DrugTest 5000 machines during DUI checkpoints since March 2017. Although the devices can detect the presence of the psychoactive compound THC — which shows if a person has used marijuana recently — in a person's saliva, they cannot tell if a person is impaired.

The CHP does not have the devices, and the Los Angeles Police Department is not currently using them in the field.

Blood remains the forensic standard to measure intoxication in California, but it may take as long as two hours after a traffic stop to get the driver's blood drawn. Nearly 70% of the psychoactive THC in a person's bloodstream might vanish within an hour, according to Glaser, and that lag time could weaken a DUI case.

"The critical time element in any DUI case, whether marijuana or any other intoxicant, is the driver's condition at the time of driving," said attorney Darren Kavinoky, whose firm specializes in defending DUI cases. "If you're talking about a test a couple of hours later, you have some inherent difficulties."

Some cannabis users may be taking advantage of this state of flux, he added, especially because its effects are less obvious than effects produced by alcohol.

"They're more readily masked through Visine and breath mints," Kavinoky said. "You may not pick up on it, especially in the case of experienced marijuana users."

In the absence of more accurate testing, police officers have to make a judgment call to determine if someone is driving high.

"There's a lot of subjectivity on the officers, and it puts a lot of pressure on them, in that moment, to determine what to do without having any forensic evidence to prove it," said Lou Shapiro, a Los Angeles criminal defense attorney and member of the National College for DUI Defense.

It's also unlikely that a drug recognition expert can be present each time an officer is concerned about a marijuana-impaired driver. The CHP has increased the number of courses it offers to train such officers since the passage of Proposition 64, but there are only 1,549 qualified drug recognition experts across California, according to CHP records.

As of December 2016, more than 26 million people held drivers licenses in the state, according to the Department of Motor Vehicles.

Drivers in Washington, where recreational marijuana became legal in December 2012, are presumed to be impaired if they have more than 5 nanograms of THC per milliliter in their bloodstream.

Statistics show that the number of fatal crashes involving people with marijuana in their system increased steadily from 2013 through 2016, although the data do not clarify whether or not the person was impaired at the time of the crash. The data track people who had carboxy-THC in their system, which can build up from repeated use, rather than psychoactive THC.

Recreational marijuana became legal in Colorado in January 2014. The number of marijuana-related crashes reported to the Colorado State Patrol has remained relatively static since 2014, records show.

The question of whether California should establish an impairment standard similar to Washington's has split marijuana advocates and attorneys.

Paul Armentano, a California-based deputy director for the National Organization for the Reform of Marijuana Laws, believes establishing a hard cap for intoxication would fly in the face of accepted science.

"Peak drug effects lag behind peak drug blood levels," he said. "We don't have that with alcohol, fortunately. Peak blood-alcohol content corresponds with peak impairment of performance."

A study published by the National Highway Traffic Safety Administration last year also suggests there is little correlation between THC levels and driver impairment.

Shapiro believes the lack of a uniform standard could open the door for unnecessary arrests and fear-driven plea deals. In Los Angeles, Shapiro said, he has seen a number of clients arrested on suspicion of impaired driving this year who almost immediately pleaded guilty to a lesser crime for fear of an effect on their license.

"You never know what a jury is going to do," he said. "They actually end up suffering a criminal conviction. It's not a DUI, but it does affect their public record, and they are put on probation. The status quo is really unacceptable, and it's unfair to the average recreational user... The state has to come up with some kind of law and/or technology to clear up all this ambiguity."

Calaveras County Sheriff Rick DiBasilio said California should have had a system in place before legalizing recreational marijuana.

"We can say the person crossed the double yellow line or he was lethargic or failed the field sobriety test, but it falls on the court to decide if the officer did their job correctly," he said. "We're back to the proverbial cart before the horse."

<b>HEADLINE</b>	<b>03/22 Britain: teen arrested for school threats</b>
<b>SOURCE</b>	<a href="https://www.thesun.co.uk/legal-removal/5852726/teenager-arrested-over-bomb-hoax-that-closed-more-than-400-schools/">https://www.thesun.co.uk/legal-removal/5852726/teenager-arrested-over-bomb-hoax-that-closed-more-than-400-schools/</a>
<b>GIST</b>	A TEENAGER has been arrested over a bomb hoax that saw more than 400 schools in England closed.  The 19-year-old was held in Watford, Hertfordshire, after a chilling ransom note was emailed to schools on Monday.

A National Crime Agency spokesman said: "Hertfordshire police officers, working as part of an NCA-led investigation, arrested a 19-year-old man in Watford on suspicion of blackmail and making malicious communications relating to the hoax bomb threat that closed hundreds of UK schools this week.

"We understand parents' and teachers' concerns but stress there was no credible threat to the emails schools received. However we are taking the communications extremely seriously.

"As this is now a live investigation we are unable to comment further."

Schools in the North East, London, Bristol and Humberside received messages claiming an explosive had been placed on the grounds.

The messages went on to say the bombs would go off unless a cash payment was sent.

Up to 24,000 threatening emails were sent with parents told to pick their children up as schools across England were evacuated.

Humberside Police said 400 schools were affected across the country.

HEADLINE	03/22 Man stole semi, crashed into JBLM
SOURCE	<a href="http://komonews.com/news/local/man-who-crashed-stolen-semi-into-jblm-pleads-not-guilty">http://komonews.com/news/local/man-who-crashed-stolen-semi-into-jblm-pleads-not-guilty</a>
GIST	<p>JOINT BASE LEWIS-McCHORD, Wash. -- A man who police say was high on meth in search of "better dope" when he crashed a stolen semi-truck onto the Joint Base Lewis-McChord base pleaded not guilty in court Thursday.</p> <p>Michael Thompson, 37, is facing charges of auto theft and driving without a license.</p> <p>Prosecutors say Thompson's wild ride began Tuesday evening when after he had "bad dope from Olympia", his car ran out of gas in Tacoma while in search of "better dope."</p> <p>He wandered into a Bates Technical College parking lot and stole one of their semi trucks for his continued quest, officials said.</p> <p>The problem (among many others)? He had never driven a semi truck before. Thompson told investigators he had trouble working the brakes and began losing control. He eventually careened through the yard of a home on 138th Street South and smashed into a fence thinking it would slow him down, he told police.</p> <p>It didn't.</p> <p>Thompson would eventually crash through two more fences -- then finally a fence that established the perimeter of the military base, investigators said.</p> <p>The semi finally stopped near an airstrip where as bad timing would have it, Special Forces military exercises were under way. Thompson made his way across a runway and was nearly struck by a plane, then saw four paratroopers fall from a plane flying over the base, police said. Thompson told detectives that in his drug-induced haze, he realized he had left his wallet in the truck and feared they were all coming to get him.</p> <p>Meanwhile, the property owner who had the semi truck plow through his yard called 911 and deputies followed the trail of destruction to the semi. They found the forgotten wallet, identifying the driver as an Olympia man who was wanted on a felony warrant out of Idaho.</p> <p>Military officers and a police dog eventually tracked Thompson down as he was trying to break into a fuel</p>

	<p>depot and he was arrested.</p> <p>"It just doesn't seem like something you could actually script," said Det. Ed Troyer with the Pierce County Sheriff's Department, "because it's something that seems made up. But it wasn't."</p> <p>Thompson is now being held on \$25,000 bail. Bates says it's looking into why the keys were left inside the semi.</p>

<b>GIST</b>	<p>BURIEN, Wash. - A 19-year-old suspect is in the King County Jail after deputies say he robbed a KeyBank in White Center and then threw a bag of money over the railing of a Burien apartment building.</p> <p>Khalid Mohamed appeared to smile as he was led by deputies to a waiting officer's car. The SWAT team had surrounded the Gateway Lanai apartment complex and was approaching the unit in which he was hiding when he surrendered Thursday afternoon.</p> <p>Deputies are also investigating whether Mohamed is a suspect in other robberies in the area.</p>

<b>HEADLINE</b>	<b>03/22 Everett police search for pickpocket group</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/news/police-seek-well-traveled-pickpockets-after-thefts-here/">http://www.heraldnet.com/news/police-seek-well-traveled-pickpockets-after-thefts-here/</a>
<b>GIST</b>	<p>EVERETT — Everett police are searching for a group of pickpockets suspected of an "extremely large and organized" theft ring that has nabbed wallets from unsuspecting customers across the country.</p> <p>Store security footage of the suspects was released Thursday by Everett police. Along with still images and video, detectives listed nine cases that appear to be connected in Snohomish and King counties. Many of those occurred at Panera Bread or Trader Joe's, where victims were distracted by someone else who was part of the scheme.</p> <p>The incidents include:</p> <ul style="list-style-type: none"> <li>• On Dec. 9, thieves stole wallets at a Panera in Lynnwood and another location of the same chain in Woodinville. The same day, a thief took a purse at an Italian restaurant in Bellevue.</li> <li>• Around 2:30 p.m. Jan. 3, a wallet was stolen from a Panera in Factoria, with the thieves spending about \$4,000 at a Best Buy.</li> <li>• Around 1:15 p.m. Feb. 2, a thief stole a wallet at a Trader's Joe's on Everett Mall Way.</li> <li>• Around 2 p.m. Feb. 19, another wallet was stolen at a Panera in Bellevue.</li> <li>• Around noon March 7, a thief bumped into a woman at a Panera on Everett Mall Way. She later noticed her wallet was gone and found that about \$14,000 had been spent at Best Buy and Bed Bath &amp; Beyond. Security footage showed multiple people using her credit cards. The same afternoon, a woman was approached by a stranger who asked her questions. After the conversation, she realized her wallet had been taken. Almost immediately, \$3,200 in gift cards were bought at a local Target.</li> <li>• On the afternoon of March 14, a wallet was stolen from a Panera Bread in Bellevue.</li> </ul>

	<p>Suspects used the wallets to buy merchandise from Apple, Nordstrom and Target, or gift cards at retail stores.</p> <p>Local detectives are working with police across the country, from the Pacific Northwest to New York and Florida, to piece together the case.</p>

<b>HEADLINE</b>	<b>03/22 Mistakenly released early; sues rearrest</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/politics/washington-state-prisoner-mistakenly-released-early-sues-over-re-arrest/">https://www.seattletimes.com/seattle-news/politics/washington-state-prisoner-mistakenly-released-early-sues-over-re-arrest/</a>
<b>GIST</b>	<p>A man who was released early from a Washington state prison due to a software glitch is suing the Department of Corrections, saying his rearrest three years later to serve the remaining time was illegal and upended the life he had painstakingly rebuilt.</p> <p>Orlando Wright was released in 2012, 76 days early, from his eight-year term for robbery. He was one of more than 3,000 inmates released prematurely due to the coding error, which lasted from 2002 to 2015.</p> <p>State authorities discovered the problem in 2012, but fixes were repeatedly delayed before the department notified Gov. Jay Inslee in late 2015. Amid a public outcry, the department rearrested some offenders it had released early.</p> <p>Among them was Wright, who says by then he had obtained an apartment, a car and a job at a car wash; enrolled in a welding program at a technical school; and had a baby daughter, whom he saw regularly. When he was released again in April 2016, that was all gone. He wandered the streets of Seattle for nearly two weeks, homeless.</p> <p>“Seventy-six days: It’s just long enough to lose everything,” he said.</p> <p>Spokesman Jeremy Barclay said the department does not comment on pending litigation.</p> <p>According to a department report, officials reviewed more than 1,500 releases dating to 2011 and determined that 116 offenders should be rearrested. Authorities decided not to rearrest more than 1,000 others, under a state Supreme Court decision that held prisoners mistakenly released are entitled to credit for time spent at liberty if they don’t “abscond legal obligations.”</p> <p>It’s not clear why officials targeted Wright, but it is possible they declined to credit the time he spent in the community because he had supervision violations, including drinking alcohol and failing to report, in the months after his release. He later completed alcohol treatment, and in early 2015 — a year before he was rearrested — his community corrections officer notified King County Superior Court that Wright had “successfully completed his DOC supervision.”</p> <p>The department has faced claims from the families of two people killed by prisoners freed early, settling one for \$3.25 million. Barclay said he was not aware of other lawsuits brought by a rearrested offender.</p> <p>Several employees were demoted over the scandal. Four others resigned, including Corrections Secretary Dan Pacholke, who had only become chief in October 2015 and brought the issue to the governor’s attention. Lawmakers also passed reforms designed to avoid future problems.</p> <p>In his complaint, filed March 16 in U.S. District Court in Seattle, Wright, 37, seeks damages for wrongful arrest and constitutional violations. His maximum sentence date had expired, and officials had no authority to return him to prison over a mistake they had made and known about for three years, the complaint says.</p> <p>Nevertheless, they rearrested him. Instead of obtaining a warrant from a court, they issued a “secretary’s warrant” claiming he had escaped from custody or work-release — something his lawyer, Tiffany</p>

	<p>Cartwright, called “completely unauthorized.”</p> <p>Further, he should have been credited for time in the community because — despite having some missteps — he completed his supervision and thus did not “abscond legal obligations,” she said.</p> <p>“They knew the whole time they were releasing people early,” Cartwright said. “They let people go out and start to reintegrate and rebuild their lives, and when it became public, they wanted to make a big show and round everybody up.”</p> <p>Wright served his sentence for robbing a man at an ATM, at gunpoint, of \$300.</p>

<b>HEADLINE</b>	<b>03/22 Alabama to execute 1989 mail bomber</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/alabama-to-execute-convicted-mail-bomber-nearly-30-years-after-crimes/">https://www.cbsnews.com/news/alabama-to-execute-convicted-mail-bomber-nearly-30-years-after-crimes/</a>
<b>GIST</b>	<p>BIRMINGHAM, Ala. — Judge Robert S. Vance was at his kitchen table on Dec. 16, 1989, when he opened a package that had been mailed to his home. The bomb hidden inside exploded with brutal force, killing Vance instantly and severely injuring his wife.</p> <p>Two days later, a similar device killed an attorney in Georgia. Two other mail bombs were later intercepted and defused, one at a federal courthouse in Atlanta and the other at an NAACP office in Jacksonville, Florida.</p> <p>The bombings created a wave of terror across the South. Now, nearly 30 years later, Alabama is preparing to execute the man convicted in Vance's killing, Walter Leroy Moody Jr. of Rex, Georgia. Moody is set for lethal injection next month.</p> <p>The long-delayed resolution to the old crime comes as Texas officials grapple with a deadly spate of bombings over three weeks that ended Wednesday when the suspect blew himself up.</p> <p>The complex investigation that led to Moody's prosecution is a reflection of how difficult it can be to get to the bottom of sporadic bombings like the ones in Texas. And it is also a testament to the lingering effects that such a crime can have.</p>

Tom Thurman, who retired from the FBI's crime laboratory after handling cases including the Vance assassination, said bombings are "more complicated in many aspects" than other crimes.

"On the investigative side it's so different from other crimes that involve personal contact," he said. "An individual is there to stab, hit or shoot somebody ... and a lot of times law enforcement is fortunate to have someone who was there. In most bombing cases, the person who sets the device or sends it is not there. They've got some anonymity."

Vance's son, Robert Vance Jr., said he is thankful Moody is in prison, and he feels for the victims in Texas, where two people were killed and four were badly injured by package bombs.

"I've been in the place of the families down in the Austin area going through this. It's just so frustrating because you don't know who is responsible or why," said Vance, now a Democratic state court judge seeking the office of chief justice of the Alabama Supreme Court.

Moody has always maintained his innocence. Agents arrested him in July 1990 after what leaders called one of the largest federal investigations ever.

Robert S. Vance was a member of the Atlanta-based 11th U.S. Circuit Court of Appeals, and prosecutors alleged Moody targeted him out of anger at the 11th Circuit's refusal to overturn a conviction that blocked Moody, who had attended law school, from ever practicing law.

The bomb that killed Robert E. Robinson, a black civil rights attorney from Savannah, Georgia, was meant to cast suspicion on the Ku Klux Klan, as was the bomb sent to the NAACP office, authorities said.

By reconstructing the two bombs that killed Vance and Robinson and disarming the two others, investigators determined they were wrapped in nearly identical packages and mailed using the same kind of stamps. There were also similarities between the materials used in the bombs, including improvised detonators and wiring methods, Thurman said.

It's the same with any bombing case, Thurman said: Investigators have to consider a multitude of factors, starting with the components of the device. In Moody's case, the bomb was manufactured in a way that led back to its maker, he said.

After Vance's death, officials retrieved an intact bomb from the courthouse that housed 11th Circuit judges in Atlanta. Forensic chemist Lloyd Erwin of the U.S. Bureau of Alcohol, Tobacco, Firearms and Explosives recognized a unique element of its construction from a previous case: The ends of the pipe bomb were made of flat, welded pieces of metal rather than the screw caps most commonly used.

That tidbit led investigators to Moody, who had been convicted in a 1972 case involving a bomb with flat, welded end pieces.

Moody's former wife testified that she purchased bomb-making materials at his direction, and evidence linked Moody to a manual typewriter with a misplaced "a" that experts said had been used to write a letter claiming responsibility for the bombs. One letter talked about a "declaration of war" against the judiciary and complained about the 11th Circuit's "callous disregard for justice," court documents show.

A prosecution team led by Louis Freeh, who later became FBI director, convinced a federal jury that Moody was to blame for the bombing wave, and a judge sentenced him to seven life sentences plus 400 years in August 1991.

Moody was convicted on a state capital murder charge in 1996 in Vance's killing, and he has been on death row since 1997. Now 82, he is the oldest inmate awaiting execution in Alabama.

The Alabama Supreme Court has set Moody's lethal injection for April 19, but Moody has sent a letter to

	<p>Vance's son and others claiming he is the innocent victim of a government conspiracy. A federal defender has asked a federal court to block the execution, arguing the state can't execute Moody because he's technically in federal custody. A judge has not yet ruled.</p> <p>Vance said he feels peace "that justice has been done" in his father's case, and he doesn't plan to witness Moody's execution. But every new bombing, like the string of blasts in Texas, dredges up old feelings.</p> <p>"Usually these days I get up and don't really think about what happened 30 years ago," Vance said. "But when you see that in the media, you go back to December 1989."</p>

<b>HEADLINE</b>	<b>03/22 Parents of bombing suspect 'devastated'</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/parents-austin-serial-bombing-suspect-devastated-families-neighbors/story?">http://abcnews.go.com/US/parents-austin-serial-bombing-suspect-devastated-families-neighbors/story?</a>
<b>GIST</b>	<p>The parents of the man police say was responsible for a string of bombings in Texas are "devastated for the other families," neighbors told ABC News.</p> <p>Jeff and Nancy Reep said the Conditts told them they had no idea their son, Mark Conditt, was the suspect in the serial bombings until a reporter knocked on their door asking for comment before dawn Wednesday.</p> <p>"They were shell-shocked," Nancy Reep told ABC News. "They're devastated for the other families."</p> <p>"Now, they're grieving their son," she added. "What he did was horrible and they know that too, but still, he's their son."</p> <p>Conditt's family said in a statement to ABC News that they "are devastated and broken at the news that our family member could be involved in such an awful way."</p> <p>"We had no idea of the darkness that Mark must have been in," the family continued in their statement. "Our family is a normal family in every way. We love, and we pray and, we try to inspire and serve others. Right now our prayers are for those families who have lost loved ones, for those impacted in any way, and for the soul of our Mark. We are grieving, and we are in shock. Please respect our privacy as we deal with this terrible, terrible knowledge and try to support each other at this time."</p> <p>"Mark was just a kid. He was quiet and very intelligent," Nancy Reep told ABC News. "They were good parents. They were involved parents. They did so much for their children. There's no rhyme or reason as to why this happened."</p> <p>"As far as we're concerned as neighbors, you know, you've got a great family living next door to you, you've got kids that were brought up and interacted with your children like any normal family would do," her husband, Jeff Reep, added.</p>

<b>HEADLINE</b>	<b>03/19 Storm system w/severe weather South</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/large-storm-system-bring-severe-weather-south-east/story?id=53845929">http://abcnews.go.com/US/large-storm-system-bring-severe-weather-south-east/story?id=53845929</a>
<b>GIST</b>	<p>A large storm system is moving through the Great Plains on Monday morning bringing unsettled weather from the Dakotas all the way to the southeastern United States.</p> <p>Yesterday, more than three dozen damaging storm reports were made, most of them in east-central Texas where hail was larger than a baseball. There were also two reported tornadoes in the Texas panhandle and winds of 60 mph or greater in eastern Texas.</p> <p>On the northern side of the storm, heavy snow fell around Denver, with anywhere from 5 to 10 inches overnight in the metro area.</p> <p>The storm system is moving east Monday, and is now stretching from the Northern Plains to the Gulf Coast. To the north, snow is falling in the Dakotas while tornado warnings have been issued for part of the Florida panhandle.</p> <p>The storm system will move further east Monday afternoon, and will pick up moisture from the Gulf of Mexico. Severe storms will break out from Jacksonville, Florida, to Atlanta; Birmingham, Alabama; and into Nashville, Tennessee.</p> <p>The biggest threat will be huge damaging hail, tornadoes and wind. Flash flooding is also possible.</p>

	The biggest threat for tornadoes will be from Nashville to Birmingham and just west of Atlanta this afternoon and evening.

<b>HEADLINE</b>	<b>03/18 Policing groups helped pass new law</b>
<b>SOURCE</b>	<a href="http://kuow.org/post/washington-policing-groups-joined-critics-pass-new-state-law">http://kuow.org/post/washington-policing-groups-joined-critics-pass-new-state-law</a>
<b>GIST</b>	<p>Marilyn Covarrubias said there are still a lot of things she doesn't understand about why her son Daniel died in an encounter with Lakewood police officers in 2015. Like why the officers mistook his cell phone for a gun, why they didn't seek medical help sooner after the shooting, and why they acted so quickly.</p> <p>"They need to learn how to ascertain what is actually happening. Before they go into 'kill' mode," Covarrubias said.</p> <p>Covarrubias campaigned for Initiative 940, which was sponsored by the group De-Escalate Washington. But she said she's happy with the compromise bill that brought some law enforcement groups onboard as well. It requires new training for law enforcement officers, makes it easier to prosecute officers for negligent shootings, and mandates independent investigations of shootings by police.</p> <p>"I want something good to come out of this," she said. "I want to stop seeing people die. Because every time I see people die unnecessarily, needlessly, it brings all of the pain back."</p> <p>The Seattle Police Officers Guild called Initiative 940 "anti-cop," saying it would make it easier to prosecute police for political reasons.</p> <p>But Sue Rahr, executive director of the state's Criminal Justice Training Commission, said the public and law enforcement turned out to have many issues in common.</p> <p>"As the initiative was gaining momentum there was certainly a perception about it being very anti-cop," Rahr said. "Because a lot of the people who supported I-940, there were people who said some pretty inflammatory things. But at the end of the day, many of the people in that group I worked with and we had the same goal, and that is to reduce deadly encounters."</p> <p>Rahr said they have almost two years to implement new trainings under the law, but she hopes to get them up and running sooner. Another factor in the law would be Tim Eyman's lawsuit. He wants a judge to put the initiative and the compromise language on the November ballot.</p> <p>Rahr's police academy already trains new police recruits in concepts like de-escalating violent confrontations. But until this law, she says they weren't able to train all the officers already on the job across the state</p> <p>"That part of the legislation is very good news," she said. "This is important training. Now we have funding and capacity to actually do that training."</p> <p>Rahr said she's also responsible for assembling stakeholders to weigh in on the new law. And for figuring out how to conduct independent investigations when someone dies at the hands of law enforcement.</p> <p>"That's going to be an area where we're going to have to do a lot of groundwork and create something that doesn't currently exist," she said, adding that the interagency team used in Snohomish County is one well-regarded model.</p> <p>The new law changes the threshold for prosecuting officers for negligent deaths. Critics said the old standard, which required a showing of "malice" by the officer, made prosecution nearly impossible. Now the standard will be whether the officer acted as any "reasonable" officer would have. Rahr says that's already the standard they use in their police training.</p>

	<p>“I personally am glad that the word ‘malice’ was removed,” she said, “because I think removing that word does a lot to reassure the public, and we’re starting to rebuild the trust of people that were concerned about having that malice standard there.”</p> <p>Law enforcement groups did not support Initiative 940 as proposed by De-Escalate Washington, but many did support the final compromise.</p> <p>James McMahan, the policy director for WA Association of Sheriffs and Police Chiefs, said the negotiations resulted in real dialogue. “We started something new where both sides of an emotional and polarizing issue began to truly listen to each other. And we want to build on that,” he said.</p> <p>The law emphasizes the need for police officers to provide first aid to shooting victims, as soon as the scene is secure.</p> <p>“I think the big point that I-940 was trying to make in that section was, when somebody needs help don’t just stand there,” McMahan said. “And I have every confidence that in the vast majority of cases where this would be applicable law our officers don’t just stand there, they provide help to those who need help.”</p> <p>Rahr said Eyman’s lawsuit has not affected plans to implement the law so far. However, a hearing in the case has been scheduled for April 20 in Thurston County.</p>

<b>HEADLINE</b>	<b>03/18 Weakness in Calif. emergency planning?</b>
<b>SOURCE</b>	<a href="http://www.latimes.com/local/lanow/la-me-ln-emergency-alerts-california-20180318-story.html">http://www.latimes.com/local/lanow/la-me-ln-emergency-alerts-california-20180318-story.html</a>
<b>GIST</b>	<p>A reckoning on public preparedness long in the making is underway in California after a year that saw unprecedented death, destruction and loss from disasters set off by extreme weather.</p> <p>Though California has long experienced natural disasters tied to weather, the last year recorded a staggering human toll — more than 40 dead in wine country fires and more than 20 in Santa Barbara County mudslides.</p> <p>The disasters revealed gaping holes in the state's county-controlled warning systems — a mix of services from multiple vendors, subscriber programs with low participation rates, outdated landline lists, and a federal cellphone alert system so imprecise some emergency managers are afraid to use it. Public warnings failed to reach most of those in harm's way, or understated the risk.</p> <p>California emergency managers have released a critical review faulting Sonoma County emergency managers for failing to use all means possible to warn residents in October's deadly fire siege. Evacuation orders went to only a fraction of the residents in limited areas, and managers quickly lost track of the fast-moving blazes, leaving entire communities in the dark about their danger.</p> <p>But they warn that the weaknesses found in Sonoma County are not unique, and it is time for the state to wade into what has historically been a local matter.</p> <p>"Some are better. Some are worse," said Mark Ghilarducci, director of the Office of Emergency Services, the state's disaster agency. "We have seen a lot of inconsistencies."</p> <p>State Sen. Mike McGuire (D-Healdsburg), whose wine country district was hit hard by the October fires, is pushing legislation that would mandate up-to-date warning systems. And Senate Democrat Hannah-Beth Jackson, from fire- and mud-ravaged Santa Barbara County, promises a bill that would override state privacy laws to automatically enroll residents in emergency notification systems, leaving it to residents to opt out.</p>

"We have to do a statewide movement on preparedness, response and recovery," said James Gore, Sonoma County's chairman. "We don't have to be quaking in our boots that Armageddon is coming, but what we do have to do is get on our toes and manage into our future."

The county last month received an independent report from the state Office of Emergency Services that found its ability to alert and warn its constituents before and during October's deadly firestorm was "uncoordinated and included gaps, overlaps and redundancies," exacerbated because administrators at the central emergency management center were cut off from commanders on the fire lines, and were unaware of how quickly the danger was spreading, and where.

"During the early hours of the disaster, the county lacked reliable, timely and coordinated situational awareness as to the scale, size and scope of the fire's growth, character, and movement," the report stated. Among significant changes Ghilarducci seeks is giving incident commanders a greater role in alerting the public.

But most of the state review is focused on Sonoma County's failure — as fires swept over mountain ridges in the middle of the night and into sleeping suburbs — to use the national Wireless Emergency Alert system to broadcast loud warnings to every cellphone in reach of a tower. Sonoma Emergency Manager Chris Helgren, who was removed from the job days before release of the critical state review, said he was afraid a mass alert would trigger mass evacuations and block the narrow roads that firefighters needed to access.

Other disaster-struck counties also opted to not send mass cellphone warnings and relied instead on private vendor systems. In addition, The Times found, public warnings were delayed or underplayed. In Mendocino County, dispatchers held up alerts for a supervisor to drive in from home to eyeball the fires firsthand, and public warning sirens at a volunteer fire station were never sounded. In Napa County, only a small percentage of the population was registered to receive the county's warnings, and firefighters went door-to-door trying to wake sleeping residents. In Santa Barbara County, emergency managers ignored the danger shown on their own in-house risk maps and told residents living in high-danger zones they were only under a voluntary "watch."

Public anger over the failures has charged the debate.

"People didn't die from the smoke. People didn't die from the fire. People died because they didn't know something was coming," said Joseph Solis, a former 911 dispatch employee and police officer in Sebastopol. A friend and his daughter died in the Sonoma County fires. Solis' brother and family barely escaped, and they lost their home.

The state review said Sonoma County officials decided long before the fires not to trust the WEA system, even as they agreed to pay \$14,500 for a private vendor to add WEA capability to the county's automated phone dialing system.

Without explicitly naming Helgren, the state report and Ghilarducci blamed Sonoma County emergency management for failing to keep up with technical improvements to the cellphone alert system and accused it of relying on private vendors for information on the alert system's capabilities.

"This was a misconception, I guess I would say, on the part of the policymakers and the leaders there, that it wasn't worth, from their opinion at the time, of investing in the effort to incorporate [the national alerts] into their system," Ghilarducci said.

However, he and other state officials were unable to cite the specific advancements to those systems. Requirements for increased message length and precise targeting of who gets those messages are not mandated to take place before 2019. Even then, coverage will be incomplete. Lobbyists for the cellphone carriers succeeded in persuading the Federal Communications Commission to relax the proposed rule to cover "100% of the target area" rather than 100% of the cell devices in that area, and to delay the rollout of Spanish-language alerts.

In the interim, emergency managers can request a targeted alert, but carriers can default to a county-wide blast, a loophole that FCC records show was requested by lobbyists for the cellphone industry. Earlier this year, Sonoma County officials joined emergency managers across the country, and in California, voicing their concern.

"Improvements to WEA have yet to be enacted by the FCC and wireless carriers to render the system more practical...." Sonoma County Board of Supervisors Chair Shirlee Zane wrote to the FCC on behalf of the county. "We need to be able to utilize WEA to alert only those who may be impacted to avoid the negative consequences of over-alerting people who are not the intended audience."

Sonoma County used its vendor services to send calls to a small population of residents who had registered in advance for warnings, as well as to landline numbers provided by telephone companies. The phone lists turned out to be outdated.

A Times analysis of the first warnings shows those calls reached less than 10% of the households in peril — and less than a third of even those calls were answered.

"Every year that landline [list] gets smaller," said Robert Lewin, director of Santa Barbara County's Office of Emergency Management.

Lewin also distrusts the WEA system and hesitated before using it in January when a once-in-200-year storm cell bore down on Montecito and dissolved the hillsides into a river of mud, debris and boulders, killing at least 21 people.

Authorities sent only one WEA message during the debris flow — just before 4 a.m. — because they were concerned about how well it could target a specific area and its effectiveness given its limited message length.

In a letter to the FCC dated Jan. 4, Lewin criticized the federally backed tools that operate under the Integrated Public Alert & Warning System as "seriously deficient."

The county instead relied on its subscription-based program in the days and hours ahead of the storm to send out information via thousands of texts, email and robocalls.

But the limited reach of those warnings and their failure to instill urgency in residents has other agencies looking inward to see if what they have in place is enough.

At the state level, Office of Emergency Services officials will look to fill what they call "unintentional gaps" in public warnings, said Kelly Huston, deputy director of crisis communications for the agency. The decision marks a change for an office that previously left public warnings to the locals.

"We're going to be checking with the counties to be more sure they have capabilities to issue the alerts they need. The whole thing has raised up the issue statewide," Huston said.

<b>HEADLINE</b>	<b>03/18 Moscow's secret military labs</b>
<b>SOURCE</b>	<a href="https://www.washingtonpost.com/world/national-security/poisoning-of-russian-ex-spy-puts-spotlight-on-moscows-secret-military-labs/2018/03/18/9968efb6-2962-11e8-b79d-f3d931db7f68_story.html?utm_term=.ea7a58f6b4d9">https://www.washingtonpost.com/world/national-security/poisoning-of-russian-ex-spy-puts-spotlight-on-moscows-secret-military-labs/2018/03/18/9968efb6-2962-11e8-b79d-f3d931db7f68_story.html?utm_term=.ea7a58f6b4d9</a>
<b>GIST</b>	During his last run for the presidency, in 2012, Russian leader Vladimir Putin startled U.S. military experts with a mysterious pledge to develop novel kinds of weapons to counter the West's technological edge. Armies of the future, he said, would need weapons "based on new physical principles" including "genetic" and "psychophysical" science.

“Such high-tech weapons systems will be comparable in effect to nuclear weapons,” Putin said in an essay published in Rossiyskaya Gazeta, the Russian government’s newspaper of record, “but will be more ‘acceptable’ in terms of political and military ideology.”

Exactly what Putin meant — and how any “genetic” weapon could square with international treaties outlawing chemical and biological warfare — remains uncertain. But what is now clear is that Putin’s words unleashed a wave of activity across a complex of heavily guarded military and civilian laboratories in Russia.

Since the start of Putin’s second term, a construction boom has been underway at more than two dozen institutes that were once part of the Soviet Union’s biological and chemical weapons establishment, according to Russian documents and photos compiled by independent researchers. That expansion, which includes multiple new or refurbished testing facilities, is particularly apparent at secret Defense Ministry laboratories that have long drawn the suspicions of U.S. officials over possible arms-treaty violations.

Russian officials insist that the research in government-run labs is purely defensive and perfectly legal. But the effort has come under increased scrutiny in the wake of allegations of Moscow’s involvement in the poisoning of a former Russian spy and his daughter in Britain. Both were sickened by exposure to Novichok, a kind of highly lethal nerve agent uniquely developed by Russian military scientists years ago.

“The big question is, why are they doing this?” said Raymond Zilinskas, a chemical and biological weapons expert with the James Martin Center for Nonproliferation Studies in Monterey, Calif. In a newly released book, “Biosecurity in Putin’s Russia,” Zilinskas and co-author Philippe Mauger analyze hundreds of contract documents and other records that show a surge in Russian research interest in subjects ranging from genetically modified pathogens to nonlethal chemical weapons used for crowd control.

The analysis also tracks a simultaneous rise in sensationalist Russian claims that the United States is itself pursuing offensive biological weapons. Reports posted on state-sponsored news sites and amplified over social media have accused U.S. scientists of being behind recent outbreaks of the Zika virus as well as the Ebola epidemic in West Africa that began in 2014. In each instance, U.S. federal agencies marshaled a sizable response to counter or contain the outbreaks.

Such baseless claims could be viewed as part of a deliberate effort to “explain to their own people why they need to do this research,” Zilinskas said in an interview.

A spokeswoman for Russia’s Ministry of Foreign Affairs declined to answer written questions but forwarded a March 13 statement by Vassily A. Nebenzia, Russia’s ambassador to the United Nations. Nebenzia denied any involvement by the Kremlin in the March 4 nerve-agent attack and suggested that it was the United States and Britain, not Russia, that were continuing to conduct illegal research to create “new toxic substances.”

The research by Zilinskas and Mauger appears to bear out long-held concerns by the State Department, which has sharply criticized Russia in recent years over a lack of transparency in its military-related biological and chemical research. Since 2012, State Department officials have issued a series of reports faulting Moscow for refusing to open its military research laboratories to outside inspectors, and for failing to provide proof that it destroyed the highly lethal arsenals created by Red Army scientists in the years before the Soviet Union’s collapse.

Thomas Countryman, an assistant secretary of state for international security and arms control during the Obama administration, said that even before Putin, U.S. officials questioned whether the Kremlin had owned up to its past “fully and transparently.” But over the past six years, official distrust has grown as Moscow has embraced a more aggressive foreign policy that includes intimidation of Russia’s neighbors and an unabashed support for a Syrian dictator who uses nerve agents to kill his own people.

“Moscow’s full-throated defense of Syrian use of chemical weapons — and, especially, its apparent use of

chemical agents in targeted assassinations — only add to the concerns,” Countryman said.

When the Soviet Union was dismantled in 1991, the Russian Federation became the heir to history’s most dangerous arsenal of chemical and biological weapons.

During the Cold War, Soviet leaders spent vast sums to create weaponized versions of 11 different pathogens — including the microbes that cause anthrax, smallpox and the plague — while also experimenting with genetically altered strains. They created new classes of chemical toxins, such as Novichok, reportedly used in the attempted assassination of former Russian spy Sergei Skripal and his daughter, Yulia, in Salisbury, England.

A fourth-generation nerve agent more deadly than VX, Novichok is the stuff of legend. Russia denies that it ever researched or manufactured such nerve agents, but it arrested a former Soviet weapons scientist on charges of divulging state secrets after he published details about Soviet Novichok production in newspaper articles and a memoir.

The Soviet program was motivated in part by competition with the United States. Washington maintained its own stockpile of nerve agents during the Cold War and manufactured biological weapons until 1969, when President Richard M. Nixon dismantled the program. But the Kremlin pressed ahead, convinced that the Pentagon was continuing bioweapons research in secret. Finally, in 1992, newly installed Russian President Boris Yeltsin acknowledged the existence of the secret program to U.S. officials and reported that all Soviet bioweapons had been destroyed.

In the years immediately following the Cold War, securing and dismantling Soviet weapons of mass destruction united Americans and Russians in a common cause. The United States helped Russia build incinerators for destroying its chemical weapons, and it sponsored programs that paired former Soviet bioweapons scientists with Western companies to keep them employed during the country’s economic transition.

Such U.S.-Russian technical cooperation began to wane after Putin’s election as president, and it collapsed after the Russian strongman won a second term in 2012. Yet, even during the Yeltsin years, Russia refused to grant access to key weapons sites, including four biodefense laboratories run by the Russian military and perpetually sealed off from outside visitors, former U.S. officials said.

“We were always curious: Were they embarrassed to let us in because of the shape of their labs? Or were they hiding something?” said Laura Holgate, a senior adviser to President Barack Obama on preventing biological, chemical and nuclear terrorism.

Holgate allowed that Russia’s reluctance also may have reflected a “paranoia about what the U.S. might be learning” about the country’s military capabilities. In any case, she said, it became clear over time that Putin intended to preserve some Soviet-era capabilities for use in very specific situations. One of these was assassination — the killing of the Kremlin’s opponents using methods that were dramatic, yet allowed Moscow to plausibly deny culpability. Another was crowd control: the use of controversial “knockout” chemicals to incapacitate individuals involved in hostage standoffs and other mass disturbances.

Officials familiar with Russia’s program said the expanded activity at military labs may be partly aimed at honing those capabilities, giving Putin a variety of tools for dealing with adversaries while seeking to avoid the most flagrant violations of Russia’s treaty obligations.

“That would be in line with behavior that we’ve been seeing for years,” Holgate said.

Whatever the explanation, the buildup is striking. Data collected by Zilinskas and Mauger includes contract documents, Russian-language reports and aerial imagery that shed light on a dramatic expansion at the four secret Defense Ministry laboratories and numerous government-run civilian research centers across the country.

At one military complex at Yekaterinburg — the scene of an accidental release of anthrax spores in 1979 that is said to have killed 100 workers and townspeople — satellite images show clusters of newly built, warehouse-size industrial buildings dotting a walled campus. Renovations can be observed in older buildings that in Soviet times were factories for mass-producing bacillus anthracis, the bacteria that causes anthrax.

At the 33rd Central Research Test Institute at Shikhany — formerly a “closed” Russian military city on the Volga River in southwest Russia — records point to a recent spending spree for specialized equipment such as freeze-drying machines used in microbial production. Lab officials are shown soliciting bids for repairs to a wind tunnel, the type used in testing aerosolized bacteria and viruses, as well as upgrades to an area of bermed storage pens that the researchers say are probably intended for open-air testing involving explosives.

Wind tunnels and outdoor testing facilities can be used legitimately to develop defenses against biological and chemical attacks. Indeed, the Pentagon employs similar equipment at its biodefense research facilities in Maryland and Utah. But Zilinskas and Mauger say the Russian expansion invites a higher level of scrutiny in light of the explicit calls by Russian leaders for work on novel kinds of weapons, including “genetic” ones.

After Putin’s essay in 2012, several senior military officials, including the defense minister at the time, Anatoly Serdyukov, publicly endorsed Putin’s appeal for new kinds of weapons and promised to start building them, the researchers note. Serdyukov specifically pledged to incorporate “genetic” research in creating Russia’s next-generation arsenals.

“We noted the numerous high-level calls for the development of biotechnology-based weapons in Russia, without further specification,” Zilinskas and Mauger write. At minimum, the vagueness of such statements potentially opens the door for any military official or “ambitious scientist” to lobby for a chance to develop a new kind of weapon — with the implicit blessing of top Russian officials, they write.

“When taken in conjunction with the [military’s] apparent support for the development of ‘genetic’ weapons, these statements erode normative barriers toward biological weapons in Russia,” the authors say.

<b>HEADLINE</b>	<b>03/19 Seoul: North committed denuclearization</b>
<b>SOURCE</b>	<a href="http://time.com/5204996/us-japan-north-korea-nuclear-talks/?xid=homepage">http://time.com/5204996/us-japan-north-korea-nuclear-talks/?xid=homepage</a>
<b>GIST</b>	<p>(SEOUL, South Korea) — Top U.S., South Korean and Japanese officials discussed how to achieve complete denuclearization of the Korean Peninsula during weekend talks ahead of upcoming inter-Korean and U.S.-North Korean summits, Seoul said Monday.</p> <p>Seoul officials who visited Pyongyang recently say North Korean leader Kim Jong Un agreed to hold summit talks with South Korean President Moon Jae-in in late April. Seoul says Kim proposed meeting with President Donald Trump, and Trump agreed to him by the end of May.</p> <p>The developments have raised hopes for a potential breakthrough in the North Korean nuclear crisis. But many experts say animosities would flare again if the summit meetings fail to produce any progress and leave the nuclear issue with few diplomatic options. North Korea has yet to confirm North Korea-U.S. summit talks.</p> <p>U.S. National Security Adviser H.R. McMaster met his South Korean and Japanese counterparts Chung Eui-yong and Shotaro Yachi in San Francisco for talks over the weekend on denuclearization and the summit talks, South Korea’s presidential office said in a statement.</p> <p>They agreed to maintain close trilateral cooperation in the next several weeks and shared a view that it’s important not to repeat past mistakes, the statement said. It didn’t elaborate but likely refers to criticism that North Korea previously used disarmament negotiations as a way to ease outside pressure and win aid while all along secretly pressing its weapons development.</p> <p>Appearing on CBS’ “Face the Nation” aired Sunday, South Korea’s Foreign Minister Kang Kyung-wha said Kim has “given his word” he’s committed to denuclearization. “He’s given his word. But the significance of his word is, is quite, quite weighty in the sense that this is the first time that the words came directly from the North Korean supreme leader himself, and that has never been done before,” she said.</p>

<b>HEADLINE</b>	<b>03/18 COPS grant program budget slashed</b>
<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/18/cops-grants-cut-in-trump-budget/">https://www.washingtontimes.com/news/2018/mar/18/cops-grants-cut-in-trump-budget/</a>

## GIST

There is little doubt that the COPS grant program, sprung from the 1994 crime bill, helped craft the modern approach to community-based policing. The cash was supposed to be a six-year infusion of federal taxpayer money to encourage local police and sheriff's departments to focus on communities by putting 100,000 more officers on the streets.

Whether it ever reached that goal, analysts said what might be called "peak COPS" has come and gone. Consequently, the program, while well-intentioned, lacks the concentrated success it generated in places in the late 1990s, according to the Trump administration.

Consequently, President Trump's budget sent to Congress last month has a proposed throttle-down, with a nearly 50 percent cut tucked inside it.

"The Trump administration doesn't like the community policing approach anyway because it prefers to 'hook and book,'" said Peter Scharf, a sociologist who specializes in criminal justice issues at LSU School of Public Health in New Orleans.

Authorities in his home city, which grabbed tens of millions of dollars throughout the 1990s under the Community Oriented Policing Services program, were able to make a real dent in a calamitous homicide rate.

But without sufficient funding and a clear emphasis, the COPS money sprinkled around scores of agencies today is less effective, Mr. Scharf said.

Indeed, COPS has lived 18 years past its six-year proposed life cycle and spent considerably more than its \$8.8 billion initial price tag. In addition, the administration says that overlapping pieces within the Justice Department and COPS can be merged and thus save money by streamlining bureaucracy and eliminating redundancies.

By putting it all under the Office of Justice Programs umbrella, more than 210 positions will be cut by the end of fiscal year 2019, officials said.

"Generally speaking, I would say 'no' to things like COPS because policing is a completely local issue," said Jonathan Blanks with the Project on Criminal Justice at the Cato Institute. "But I liked the Obama administration's '21st Century Policing' report and the emphasis on building bridges between the community and the police. But it's not a priority of this administration, and the way the grants work now, it simply isn't something we need."

State and local law enforcement agencies, however, argue that the U.S. has received a solid bang for its buck with COPS and say the money should keep flowing.

"We remain big believers in the adage 'It if ain't broke, don't fix it,'" said Jim Pasco, executive director of the Fraternal Order of Police.

As the name suggest, the brunt of COPS was more cops, with grants mandated to provide some — but not all — of a law enforcement officer's salary and benefits. Local revenue was to cover the remainder.

The notion that more police equals less crime grew out of the successful crime fighting strategies of New York Mayor Rudolph W. Giuliani and the police department put into place there in the 1990s. The emphasis shifted from solving crimes to deterrence, and the tactics involved a combination of statistical patterns mapped at headquarters and visible cops out of their cars and on the beat in neighborhoods.

New Yorkers called it the "broken windows" strategy — that getting to small problems prevented bigger problems later.

But once federal bureaucrats got at it, their English alchemy defined community policing as "a philosophy that promotes organizational strategies that support the systemic use of partnerships and problem-solving

techniques to proactively address the immediate conditions that give rise to public safety issues such as crime, social disorder and fear of crime.”

In 2017, that meant \$5 million on an anti-methamphetamine program, more than \$3.5 million on the Community Policing Development Program, and more than \$7.1 million on the Anti-Heroin Task Force, which also dealt with opioids, according to Justice Department figures. But the bulk of the money was the \$98,495,397 spent on the COPS hiring program in fiscal 2017.

Just how effective all this spending has been in reducing crime is hotly debated among social scientists.

One of the COPS program’s sharpest critics was David Muhlhausen, a former scholar at the conservative Heritage Foundation. In September 2000, he co-authored a paper that indicted COPS as an expensive disappointment.

“At a cost of almost \$7.5 billion at the end of FY 2000,” Mr. Muhlhausen and two other scholars wrote, “the COPS program represents the federal government’s most significant criminal justice initiative of the last decade. However, the COPS program has not fulfilled its goal: Far fewer officers have actually been placed on the streets than the more than 100,000 [that] President [Clinton] claims.”

A principal reason for the failure was the use of COPS grants, despite explicit guidelines prohibiting the practice, “to supplant money that state and local authorities would have spent otherwise to hire additional officers,” the conservative scholars wrote.

The Heritage study criticized COPS on other grounds, too — chiefly the pattern of grants, and for the federal government taking over duties properly left to state and local authorities.

“Regrettably, much of the funding has flowed to communities that have a relatively low need for additional community policing while areas with more pressing needs have received little or no assistance,” they concluded.

Mr. Muhlhausen is now director of the National Institute of Justice, making him one of the bosses of COPS, which could be why the Trump administration has sent the program under the knife.

His findings, though, were disputed in a study by the liberal Brookings Institution. In March 2007, two scholars credited COPS with contributing to the nationwide decline in violent crime rates. Consequently, in an argument that mirrors what supporters offer today, they said cutting the COPS budget would be unwise.

“It would be unrealistic to expect crime to continue dropping sharply as it did in the 1990s, but that is no reason to undermine the progress brought by successful policies,” they wrote.

Some law enforcement organizations, with many members who supported Mr. Trump in the 2016 presidential election, are miffed that the administration is proposing broad cuts to a popular program, although Mr. Pasco said the FOP remains behind the president and believes he retains trust in community policing.

“We’re all trying to get to the same place; we just have a disagreement about the best way to get there,” Mr. Pasco said.

Yet even many agencies that received grants struggled to provide descriptions of how the money was spent. The Washington Times contacted myriad law enforcement agencies in big cities and smaller communities that received grants in fiscal 2017, according to Justice Department records.

The biggest 2017 grants were for \$3.125 million, and they went to four agencies: police departments in Chicago (for “gun violence”), Houston (“assault”), Miami-Dade County (“gun violence”) and San Antonio (“gun violence”). The grants presumably provided some percentage of salary and benefits for what Justice

said would be 25 additional officers in the next three years.

In Houston, which already spends a substantial portion of its annual budget on law enforcement, a spokeswoman for the force said 25 officers had been added and that the city would assume the full cost in three years. This is not the first COPS grant Houston has obtained, she said, and it's been "a way for us to grow the department because we are understaffed to begin with."

San Antonio's police did not respond to questions submitted to its public affairs office. Similarly, the Kansas City Board of Police Commissioners, which got \$1.875 million to hire 15 officers on homicide, did not respond to questions or a request for comment.

In some cases, the law enforcement agency has yet to touch the grant money. That's true in St. Louis, where the police are still using a 2014 COPS grant and have not tapped the \$1.875 million it received for gun violence in 2017, according to a department spokeswoman. The police chief in St. Louis has "no historical perspective on COPS funding" and thus declined to comment, the spokeswoman added.

The homicide rate has surged in St. Louis and Kansas City and did not abate in either city in 2017, according to crime reports.

Some smaller agencies did offer details on their spending. The St. Tammany Parish Sheriff's Office in Louisiana, for instance, received more than \$1 million to deal with assault. While the incidents of aggravated assault there rose a modest 2.7 percent in 2017, according to its crime reports, the area north of New Orleans is hardly a crime hotbed.

The sheriff's office used that money to cover some 75 percent of the salary and benefits of 9 deputies it retained, a spokeswoman said. The parish was required to come up with another \$336,598 to cover its portion in the three-year stretch and has agreed to keep the deputies on the payroll for at least 12 months after the grant expires, the spokeswoman said.

<b>HEADLINE</b>	<b>03/16 Speed limit boost not slowing down</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/speed-limit-boosts-show-no-signs-of-slowing-down-1521205200">https://www.wsj.com/articles/speed-limit-boosts-show-no-signs-of-slowing-down-1521205200</a>
<b>GIST</b>	<p>Nebraskans who want to put the pedal to the metal may soon be able to floor it—at least on some roads—with the blessing of the state legislature.</p> <p>A bill introduced in January, and backed by Gov. Pete Ricketts, would raise the state's maximum speed limit to 80 mph, up from 75. Six other states have an 80-mph maximum. A seventh, Texas, has a top limit of 85.</p> <p>Safety advocates warn that more people die when speed limits rise, but drivers covet faster travel times. In a battle of aphorisms, the Need for Speed seems to be trumping Speed Kills.</p> <p>For the most part, speed limits in the U.S. have gone in a single direction—up. An exception is Montana, which had no daytime limit for cars for several years in the 1990s but later set the limit at 75.</p> <p>Nebraska's proposed law would permit the speed limit on certain roadways to increase by 5 mph. In some cases, that would raise the top speed to 65 or 70 mph. But on parts of Interstate 80, including a 50-mile stretch from Omaha to Lincoln, the limit could rise to 80 mph.</p> <p>Although cutting down on travel time is the major reason given for supporting faster speeds, the savings don't amount to much on most daily trips.</p> <p>Drivers who maintain a speed of 80 mph over 50 miles would arrive at their destination 2 1/2 minutes sooner than if they drove 75 mph the whole way.</p>

Those willing to break the limit and hurtle down the highway at, say, 89 mph without slowing down would shave around 6 minutes off the trip compared with someone driving 75.

In reality, the savings would likely be less.

Maintaining any rate of speed is harder than it sounds because faster and slower drivers must adjust to one another, and the mix is reflected in average highway speeds.

#### Warning Signs

While traffic fatalities have been falling overall, the Insurance Institute for Highway Safety estimates there were nearly 27,000 vehicle fatalities since 2000 because of higher speed limits.

“For every 5 mph increase in the speed limit, operating speed goes up 1 to 2 mph on average,” said Ivan Cheung, a research analyst at the National Transportation Safety Board.

Saving a few minutes here and there could add up, but it’s not as if the minutes accrue into a usable block of time, like deferred vacation days.

So, in the absence of substantial time savings, why raise the limit?

“One excuse is that people go that fast anyway,” said Chuck Farmer, vice president of research for the Insurance Institute for Highway Safety.

Traditionally, speed limits are set within 5 mph of the speed at which 85% of vehicles travel along a roadway in free-flowing traffic.

That guideline dates to the 1940s and is endorsed by the Federal Highway Administration, but the NTSB advocates requiring the use of crash statistics and other factors to set speed limits.

In part, that’s because the operating speed of the 85th percentile is a moving target: It increases as speed limits climb.

In response, some states choose to go with the flow—again and again.

In 2011, Texas raised the speed limit on a segment of State Highway 130 to 75 mph. The next year, it raised it to 80 mph. Soon after, it lifted a portion of the road to 85 mph.

According to estimates by the IIHS, each 5 mph increase in speed limit results in an 8% increase in fatalities on interstates and other freeways.

The most convincing evidence is the 55 mph National Maximum Speed Limit set in 1973. Before that, speed limits on rural interstates typically ranged from 65 to 75 mph.

The lower speed limit was implemented to save fuel, not lives, but in the first year, the National Research Council found that 9,100 fewer people died in motor-vehicle accidents.

The council attributed some of the decrease to economic factors that kept drivers off the road but concluded that 3,000 to 5,000 fewer highway deaths occurred because of the lower speed.

In later years, the trend hasn’t been as easy to discern.

After the national limit was fully repealed in 1995, speed limits began to increase, but traffic fatalities did not.

Comparing those before-and-after numbers has led some analysts to conclude that higher speeds don’t

	<p>contribute to more traffic deaths—a finding the IIHS and NTSB reject.</p> <p>“That’s not the comparison you should make,” Dr. Farmer said. “You need to compare states that raised the speed limit to states that did not.”</p> <p>Safety agencies say safer cars, improved roadways and stricter drunken-driving laws are behind the overall decrease in deaths and that even fewer people would have died if speed limits hadn’t increased.</p> <p>In its latest study, the IIHS compared the effect of all speed-limit increases from 1993 through 2013 in 41 states and found that 33,000 fewer fatalities would have occurred if there had been no increases.</p> <p>Nationwide, about 10,000 people die annually in speed-related crashes, yet most drivers seem willing to risk it. Why?</p> <p>Maybe it’s because, as Dan Rather once observed, Americans will put up with anything provided it doesn’t block traffic.</p>

<b>HEADLINE</b>	<b>03/16 UK defense site center of controversy</b>
<b>SOURCE</b>	<a href="https://www.mirror.co.uk/news/uk-news/inside-porton-down-britains-controversial-12192830">https://www.mirror.co.uk/news/uk-news/inside-porton-down-britains-controversial-12192830</a>
<b>GIST</b>	<p>It is one of Britain's most secretive sites, remaining shrouded in mystery for more than 100 years.</p> <p>But this week Porton Down found itself at the centre of one of the biggest diplomatic crises the UK has faced in recent years.</p> <p>The top secret defence base in Wiltshire was instrumental in helping identify the nerve agent used to poison a former Russian spy in Salisbury.</p> <p>Sergei Skripal and his daughter Yulia were poisoned with a weapons grade nerve agent in the city last week, leaving them fighting for their lives in hospital.</p> <p>And, not only have scientists from the specialist laboratory been at the centre of a clean-up operation following the attack, but its helped identify Russia as the source of the poison.</p> <p>The 7,000 acre site, near Salisbury, is one of the UK's most secretive and controversial military research facilities and the oldest chemical warfare research installations in the world.</p> <p>Scientists from Porton were among the first to create biological weapons as well as one of the world's most lethal chemical weapons, but now its main purpose is to support the military and help combat terrorism.</p> <p>Porton Down opened in 1916 as the War Department Experimental Station for testing chemical weapons during WW1.</p> <p>Scientists at the lab researched and developed weapons agents used by the British military during the war such as chlorine, mustard gas and phosgene.</p> <p>After the war the government decided that work should continue at the site and by 1930 it had grown and developed into the Chemical Defence Experimental Station.</p> <p>During WW2 research concentrated on chemical weapons like nitrogen mustard and nerve agents such as sarin.</p> <p>It then led to the development of CS - or tear gas- and VX nerve agent in 1952, one of the most lethal substances ever created which results in a painful death.</p>

The base was later named the Chemical Defence Experimental Establishment.

Chemical weapons were tested on site. Scientists built cannisters full of poison gas that could be released by a timer and they also filled shells with it and released them at targets.

But many of the shells failed to explode meaning the fields are still full of the active chemical agents.

Now Porton concentrates on devising defensive measures against gas attacks after its chemical and biological weapons programme was closed down in the 1950s.

On the government's website it says: "To help develop effective medical countermeasures and to test systems, we produce very small quantities of chemical and biological agents.

"They are stored securely and disposed of safely."

Since 1916 more than 20,000 people have taken part in studies at the base.

Porton Down's experiments on humans have been widely criticised as it is alleged some human 'guinea pigs' were duped into taking part in tests.

Tests were carried out on servicemen to try and determine the effects of nerve agents on humans - with one recorded death due to a nerve gas experiment.

Leading Aircraftman Ronald Maddison died aged 20 in 1953 after taking part in sarin nerve agent toxicity tests.

During the tests sarin was dripped onto his arm through two layers of cloth. He died shortly after and an inquest in 2004 returned a verdict of unlawful killing.

There are still concerns that the tests have damaged the long-term health of many of the subjects.

From 1945 to 1989 the base exposed more than 3,400 people to nerve gas - testing more human subjects with the chemical than anywhere else in the world.

Tests included going into gas chambers, repeated exposure, mental performance tests and tests on bare skin.

Subjects were monitored to see how their performance would be effected and what psychological impact it had on them.

Other tests included the impact nerve gas had on different parts of the body such as hearing and sight.

The government says that "without their involvement we could not have developed the highly effective protective clothing and medical countermeasures that our armed forces rely on".

Adding: "We still carry out trials with human volunteers to make protective equipment easier to wear and to develop better training procedures.

"These trials comply with all nationally and internationally accepted ethical standards."

Some of the equipment includes better gas masks and the creation of lighter, more bullet-proof body armour.

And speaking of the death of Maddison it said it was a "tragic and regrettable incident".

	<p>It said: "He is the only member of the UK Armed Forces to have died as the direct result of participation in experimental tests carried out at Porton Down on behalf of the Ministry of Defence."</p> <p>Animal testing is also carried out.</p> <p>Viruses Initial samples of the Ebola virus were sent to the Porton Down lab in 1976.</p> <p>The lab now allegedly contains samples of some of the world's most aggressive diseases including Ebola, anthrax and the plague.</p> <p>Between 1953 and 1976 a number of aerial release trials were carried out to help the government understand how a biological attack might spread across the UK.</p> <p>The government said: "Given the international situation at the time these trials were conducted in secret."</p> <p>And added: "The information obtained from these trials has been and still is vital to the defence of the UK."</p> <p>Two separate and independent reviews concluded the trials did not have any adverse health effects on the UK population.</p>

<b>HEADLINE</b>	<b>03/18 Forecast: fourth nor'easter in 3 weeks</b>
-----------------	---

<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/18/us/us-noreaster-weather/index.html">https://www.cnn.com/2018/03/18/us/us-noreaster-weather/index.html</a>
<b>GIST</b>	<p>(CNN)Spring begins Tuesday, but winter isn't ready to retire just yet.</p> <p>A low-pressure system moving across the Southeast on Sunday and Monday is expected to develop into yet another nor'easter beginning Tuesday, according to CNN meteorologist Jenn Varian. This incoming storm, which will bring rain and snow across the mid-Atlantic and Northeast, will be the fourth storm to ravage the East Coast in three weeks.</p> <p>The system is still far enough out that models are still highly uncertain of the exact location of the storm, Varian said.</p> <p>"If the storm remains too far east off of the coast, then it will not reach Boston/other New England coastal cities," Varian said. "Snowfall accumulations at this time are with very low confidence."</p> <p>For now, the storm is looking to directly impact the mid-Atlantic, CNN meteorologist Haley Brink said. Washington is expected to get 4 to 6 inches of snow starting Tuesday, while southern New England is forecast to get 2 to 4 inches.</p> <p>The National Weather Service said the storm could bring accumulating snow to coastal Massachusetts on Wednesday night into Thursday morning, along with wind gusts as high as 50 mph. The weather service also said the eastern coast of Massachusetts may be vulnerable to flooding early Thursday morning. Tides in Boston are forecast around 10.5 feet, Brink said.</p> <p>New England is still reeling from last week's storm, which the weather service declared a blizzard. Before that, a storm dropped heavy, wet snow in areas west of Interstate 95 and left one person dead in New York state.</p> <p>On March 2, a nor'easter that morphed into a "bomb cyclone" slammed much of the Northeast with heavy snow and rain, hurricane-force wind gusts and significant coastal flooding. The storm left six people dead from falling trees, and about 900,000 people lost power.</p> <p>Nor'easters aren't uncommon for New England during this time of year, Varian said. They can occur any time of year, but they're strongest from September to April.</p>

<b>HEADLINE</b>	<b>03/18 Russia ambassador vows retaliation on US</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/russian-ambassador-vows-retaliation-after-u-s-sanctions/">https://www.cbsnews.com/news/russian-ambassador-vows-retaliation-after-u-s-sanctions/</a>
<b>GIST</b>	<p>As a steady stream of voters shuffled into the Russian embassy in Washington, D.C., to vote in the Russian presidential election, Russian Ambassador Anatoly Antonov stood outside and spoke with CBS News about the sanctions against Russia announced last week. He warned that the new sanctions, over Russian meddling in the U.S. election, will prompt retaliatory measures by the Kremlin.</p> <p>"If somebody sticks you, hits you, what will be your retaliation?" said Antonov to CBS News. "Of course there will be -- there will be retaliation."</p> <p>Antonov said he has sent proposals to the Kremlin laying out options for retaliation. He wouldn't share the details, but indicated that a decision is coming.</p> <p>"It will not be wise for me to reveal all my cables," explained Antonov.</p> <p>Last year, Antonov claimed that there was no proof that Russia had interfered in the election. Antonov's assertive tone on Sunday matched that of Russia's Deputy Foreign Minister Sergei Ryabkov who said that Russia would expand its "black list" of American citizens who can't visit or do business in Russia.</p>

	<p>"From the very beginning, we use the principle of parity on the number of people included in sanction lists. So we will expand our 'black list' with another group of Americans," Ryabkov said Friday, according to Russia's state-run media.</p> <p>Antonov was, however, less forthcoming when he spoke to a group of reporters after he had cast his own ballot inside the embassy. Because it's Election Day in Russia, Antonov said he wasn't talking about sanctions Sunday.</p> <p>"It is a holiday in the Russian federation. That is why we don't want to speak about sanctions," said Antonov. "It is not appropriate today, today to speak about sanctions."</p>

<b>HEADLINE</b>	<b>03/18 Dot plot: understanding next Fed forecast</b>
<b>SOURCE</b>	<a href="https://www.bloomberg.com/news/articles/2018-03-19/do-you-dot-plot-understanding-the-next-fed-forecast-quicktake">https://www.bloomberg.com/news/articles/2018-03-19/do-you-dot-plot-understanding-the-next-fed-forecast-quicktake</a>
<b>GIST</b>	<p>It’s probably the most closely scrutinized scatter chart in world financial markets. Every three months since January 2012, the Federal Reserve has sent analysts scurrying by updating its "dot plot," which has become the de facto monetary policy forecast of the U.S. central bank -- whether the Fed wants it to be or not. It’s also an important source of clues to dissent within the Fed’s policy-making committee, even if it can be as cryptic as it is crucial. The big question about the Fed’s next dot plot, to be released Wednesday, is whether it will suggest four rate increases this year, instead of the median forecast in December for three.</p> <ol style="list-style-type: none"> <li> <p><b>1. What is plotted on the dot plot?</b></p> <p>It’s a chart showing estimates of what the federal funds rate, the short-term interest rate controlled by the Fed, should be. Members of the rate-setting Federal Open Market Committee each assign a dot for what they view as the midpoint of the rate’s appropriate range at the end of each of the next three years and over the longer run. Investors focus on the median dot. As many as 19 monetary policy makers -- the seven Fed governors in Washington and the presidents of the 12 regional banks -- can contribute a dot. (Of late, there have only been 16 as there are three vacancies.)</p> </li> <li> <p><b>2. Where does the dot plot stand now?</b></p> <p>The latest dot plot, released after the FOMC’s December meeting, shows the federal funds rate rising gradually to a range of 3 percent to 3.25 percent by the end of 2020, from its current range of 1.25 percent to 1.5 percent.</p> </li> <li> <p><b>3. What good is a projection of the fed funds rate?</b></p> <p>The dot plot was invented in late 2011, at a time when Fed officials were considering how to prepare markets for the shift they hoped to make away from the unprecedented array of monetary support measures they’d put in place after the financial crisis. The Fed chairman at the time, Ben Bernanke, and Janet Yellen, who served as Bernanke’s deputy before a four-year stint as chair that ended last month, saw the dot plot as a way of giving markets a look into the Fed’s thinking beyond any immediate decision-making. FOMC statements focus mainly on current economic conditions and the immediate interest-rate target, though they’d evolved somewhat since the crisis and by December 2011 were offering investors forward guidance that rates would be held exceptionally low “at least through mid-2013.”</p> </li> <li> <p><b>4. Why does it matter?</b></p> <p>When the dot plot shifts, it can send a powerful message to investors on whether the U.S. central bank expects to speed up or slow down its planned tightening of monetary policy. It also creates a benchmark that can be used to highlight differences between the Fed’s official view and that of the financial markets. The central bank has been consistently more upbeat about its ability to lift inflation and, therefore, interest rates, than investors, though that gap narrowed during 2017 as economic growth picked up.</p> </li> <li> <p><b>5. Can I tell which Fed official offered which dot?</b></p> <p>No. The dot plot carries no names, so there’s no way to tell, say, which estimate was offered by the Fed chair (though analysts have their suspicions). The anonymous nature of the dot plot is one reason it has critics as well as fans.</p> </li> <li> <p><b>6. What else do dot plot detractors say?</b></p> <p>Maybe the biggest beefs are that the projections don’t reflect a commitment by the FOMC to act and that they aren’t an official consensus forecast, which would be a more powerful signal. (Fed staff explored hammering out a consensus dot, but officials decided that it would be too hard to get agreement among so</p> </li> </ol>

many officials with such disparate views.) Each individual member may base his or her forecast on a different economic model or set of assumptions, which means there's no consistency in how the dots are generated and no sense of the thinking behind them. Further complicating things, of the 12 regional Fed presidents, only five are voting members of the FOMC in any given year. That raises questions over how well the dots accurately reflect longer-term FOMC intentions.

7. What have Fed leaders said about the dots?

During her time as chair, Yellen's view of the dot plot shifted between hot and not. In March 2014, at her first FOMC press conference as chair, she said, "one should not look to the dot plot, so to speak, as the primary way in which the Committee wants to or is speaking about policy to the public at large." That was in response to a question asking her to explain an upward shift in the dot plot showing that more than half of Fed officials expected rates, which were still near zero, to be at 1 percent or above by the end of 2015. Fast forward two years. Global financial markets were in turmoil and Fed officials had just trimmed their forecast for the number of rate hikes that year to two from four in their previous dot plot. Rather than distancing herself from the downgrade, Yellen told reporters that the shift in dots "largely reflects a somewhat slower projected path for global growth" and a tightening in credit conditions.

8. Is the dot plot here to stay?

It's possible. Jerome Powell, who took over from Yellen as chair in February, criticized the quarterly forecasts while he was a Fed governor in a speech in February 2016 that highlighted a number of these issues. As chairman, he'll have a chance to do something about it, under any review of Fed communication strategy that he decides to undertake.

<b>HEADLINE</b>	<b>03/18 Australian wildfires raze dozens homes</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/australian-wildfires-raze-dozens-homes-kill-livestock-53842689">http://abcnews.go.com/International/wireStory/australian-wildfires-raze-dozens-homes-kill-livestock-53842689</a>
<b>GIST</b>	<p>Wildfires razed dozens of homes in southeast Australia, cut power to thousands more and killed livestock, but most of the weekend blazes had been contained by Monday. There have been no reports of serious injury, officials said.</p> <p>The worst-hit town was Tathra on the south coast of New South Wales state where more than 70 homes and businesses had been severely damaged or destroyed by a fire that started in woods around midday on Sunday, Rural Fire Service Commissioner Shane Fitzsimmons said.</p> <p>In neighboring Victoria state, up to 18 homes had been destroyed over the weekend by three fires and 40,000 homes lost power, Emergency Management Commissioner Craig Lapsley said. Sheep and cattle losses had yet to be assessed.</p> <p>Some of Tathra's evacuated residents would be able to return to their homes on Monday, as emergency workers restore power to the devastated area, Fitzsimmons said.</p>

<b>HEADLINE</b>	<b>03/19 Putin win mandate for nationalist policies</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/putins-huge-victory-deflates-divides-russian-opposition-53844407">http://abcnews.go.com/International/wireStory/putins-huge-victory-deflates-divides-russian-opposition-53844407</a>
<b>GIST</b>	<p>Russian President Vladimir Putin won a fourth presidential term with nearly 77 percent of the vote — his highest score ever and a massive mandate to pursue his nationalist, assertive policies for another six years in power.</p> <p>Near-final results released Monday showed that the other seven candidates were far behind Putin in Sunday's voting.</p>

Observers reported widespread ballot stuffing and unprecedented pressure on Russians to vote, but that is unlikely to seriously damage Putin given his popularity and his tight control over Russian politics.

With 99.8 percent of the vote counted, the Central Election Commission said Monday that communist Pavel Grudinin came in a distant second with 11.8 percent. Third was ultranationalist Vladimir Zhirinovskiy with 5.6 percent. The only candidate to openly criticize Putin during the campaign, liberal TV star Ksenia Sobchak, won just 1.6 percent.

Putin's most serious rival, opposition leader Alexei Navalny, was barred from the race.

The electoral commission said official turnout was 67 percent, but the figure was thrown into question by images circulating online of ballot stuffing and nationwide accounts of workers being coerced to vote.

Putin has never faced a serious threat to his rule since he came to power on the eve of the new millennium. He won 53 percent of the vote in the 2000 presidential election, 71 percent in 2004 and 63 percent in 2012.

The massive victory gives Putin new confidence to stand up to the West.

The election was such a foregone conclusion that Putin gave only a perfunctory victory speech and said nothing about what he will do for his country.

"We are bound for success," he said, to crowds near the Kremlin chanting "Russia! Russia!"

Putin's victory puts his opponents in a tough spot.

<b>HEADLINE</b>	<b>03/19 After Sep. Mexico quake: homeless camps</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/months-mexico-quake-camp-homes-53843206">http://abcnews.go.com/International/wireStory/months-mexico-quake-camp-homes-53843206</a>
<b>GIST</b>	<p>Under a patchwork shelter of overlapping tarps and repurposed vinyl advertisements, several dozen residents of 18 Independence Street pack cheek by jowl into donated tents in the street near their building, which was damaged in the Sept. 19 earthquake.</p> <p>Six months after the temblor, improvised camps like this one erected by displaced residents are among the most visible signs that not everyone has moved on from the earthquake that killed 228 people in Mexico City and 141 more elsewhere.</p> <p>Mexico City Reconstruction Commissioner Edgar Oswaldo Tungui Rodriguez said there are 27 such camps around the capital, but denied that people were living in any of them. Rather, he said, quake victims had just posted guards to watch over their property.</p> <p>Camps visited by Associated Press journalists offered a different reality.</p> <p>Maria Patricia Rodriguez Gonzalez has been living under tarps on the sidewalk near the Independence Street building with her 13-year-old son and 27-year old daughter for the past six months.</p> <p>The residents are still allowed to enter the building, but nobody risks staying there.</p> <p>The bedroom floor in Rodriguez's apartment has sunk since the earthquake. The ceiling sags and plaster has fallen from the walls. Afraid to use the bathroom there, she heats water on a gas burner under the tarps and manages a sort of bath inside a portable toilet on the sidewalk.</p> <p>At first, Rodriguez and other residents say, there was a lot of solidarity in the neighborhood. Some neighbors let them use their bathrooms and shared food after the magnitude 7.1 quake. But as the days</p>

	<p>turned to weeks and then to months, sentiments shifted.</p> <p>People have stolen the gas tanks they use to heat food. Cars have come close to driving through the camp. Some neighbors have stopped speaking to them, others hurl insults.</p> <p>"It makes us sad that people insult us without knowing the reality we are living," Rodriguez said. "We're not here because we want to be. We're here out of necessity."</p> <p>Displaced residents received 3,000 pesos (\$160) each month for the first three months from the government. The idea was that they would rent apartments elsewhere. But residents say that was not enough to rent apartments in their neighborhood and they fear that without their presence, looters will clear out their possessions. Many residents had lived in the building's 37 units for more than 30 years.</p> <p>Tungui, the reconstruction commissioner, said in written responses to questions that city officials so far have determined what to do with 757 structures out of 911 on a list of damaged buildings compiled by an emergency committee. Some will be demolished, others repaired or reinforced. So far the city has demolished 28 buildings and is currently working on 15 others, he said.</p>

<b>HEADLINE</b>	<b>03/17 Ex-deputies sue Pierce Co. Sheriff Dept.</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/news/local/crime/article205612084.html">http://www.thenewstribune.com/news/local/crime/article205612084.html</a>
<b>GIST</b>	<p>Two former Pierce County sheriff's deputies allege the agency tried to cover up how a man who killed his wife and then himself got access to the gun used in the violence.</p> <p>They also say the Sheriff's Department used threats, violence and "fabricated charges" to retaliate against them for trying to bring attention to the issue, according to a lawsuit they filed against the county.</p> <p>The Sheriff's Department refuted those allegations and said the information the former deputies allege was covered up is documented in police reports.</p> <p>"This is one that we'll go all the way to the mat on if we need to, and we're considering counter lawsuits," sheriff's spokesman Ed Troyer said Friday.</p> <p>Deputies Daniel Bray and Joey Tracy seek unspecified damages in their lawsuit, which accuses the county of wrongful termination, emotional distress, malicious prosecution, defamation and invasion of privacy.</p> <p>They joined the Sheriff's Department in 2012 and were working for the agency's Foothills detachment when they responded to the homicide-suicide April 17, 2015.</p> <p>Their complaint, filed March 12 in Pierce County Superior Court, gives this account of what followed:</p> <p>They learned 40-year-old David Annas fatally shot his wife, shot and injured her friend, then killed himself at the Annas' Prairie Ridge home.</p> <p>His wife, 33-year-old Regina Annas, filed for a restraining order earlier that day. She wrote in court papers that her husband got upset when she said she wanted to leave him and that she feared he would hurt her.</p> <p>While investigating, Bray and Tracy discovered that other deputies had served the protection order hours before the shooting and that one of them allegedly had handed Annas his loaded gun as he gathered his things. That gun was the weapon he used in the shooting.</p> <p>Bray and Tracy told supervisors about the violation, and allege that they were told to keep quiet.</p> <p>When the former deputies refused to drop it, they say the Sheriff's Department started to target and harass them.</p> <p>Sheriff's spokesman Troyer said that's not true and that the information about the gun was documented in police reports from the incident.</p>

<b>HEADLINE</b>	<b>03/18 March for our lives: #NeverAgain</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/march-lives-neveragain-event/story?id=53767650">http://abcnews.go.com/US/march-lives-neveragain-event/story?id=53767650</a>
<b>GIST</b>	<p>Students, teachers, parents and their allies will converge on the nation's capital next weekend to rally for gun control and school safety measures in the wake of last month's shooting in a Florida high school.</p> <p>Thousands of people from across the country are expected to participate in the "March for Our Lives," organized by students of Marjory Stoneman Douglas High School in Parkland, Florida, where a gunman killed 17 people and injured others on Valentine's Day. The accused shooter, 19-year-old Nikolas Cruz, was a former student at the school and was armed with an AR-15-style rifle he had legally purchased a year ago, authorities said.</p> <p>Now, students around the country -- using the slogan "Never Again" -- are calling on lawmakers to make</p>

schools safer and enact tougher gun control laws, such as prohibiting the sale of high-capacity magazines and banning the high-powered, highly-lethal assault-style weapons often used in mass shootings.

Here's everything you need to know about the upcoming "March for Our Lives."

### **When is the march?**

"March for Our Lives" will begin at noon ET on Saturday, more than five weeks after the deadly school shooting.

There have been other events in support of the shooting survivors, including a National School Walkout on March 14 that lasted for 17 minutes to honor those killed a month earlier in Parkland and to protest gun violence across the country.

### **Where is the march?**

The main "March for Our Lives" event will take place in Washington, D.C., beginning on Pennsylvania Avenue between 3rd Street NW and 12th Street NW.

But there are hundreds of satellite marches, or "sibling marches," planned for the same day around the world. Each sibling march is an independent, student-led initiative, according to the "March for Our Lives" official website.

There are sibling marches planned in cities including Los Angeles, Chicago, New York City, Boston, Ottawa, Buenos Aires, Madrid, Paris, Dublin, London, Berlin, Stockholm, Rome, Tel Aviv, Mumbai, Hong Kong, Tokyo and Sydney, to name just a few.

### **Who's supporting the event?**

Countless people, including a number of celebrities, have voiced their support for the march by announcing their plans to participate or donating to the movement's GoFundMe page, which has raised over \$3.3 million in just 24 days. Half of the funds raised via the crowdfunding platform will go toward the March for Our Lives Action Fund, which will cover expenses associated with the March 24 event in Washington, D.C.

The other half will be given to the victims and their families of the Feb. 14 school shooting via the Broward Education Foundation.

Actor George Clooney and his wife, Amal, a human rights lawyer, gave \$500,000 to "March for Our Lives" and said their family will be at the event in Washington, D.C.

Media mogul Oprah Winfrey announced via Twitter that she will match the Clooneys' donation. She tweeted, "George and Amal, I couldn't agree with you more. I am joining forces with you and will match your \$500,000 donation to 'March For Our Lives.' These inspiring young people remind me of the Freedom Riders of the 60s who also said we've had ENOUGH and our voices will be heard."

Many celebrities, including singers Harry Styles, Mariah Carey and Justin Bieber, have also shown their support by signing a petition created by the "March for Our Lives" organizers that calls for action to end gun violence and protect schools.

### **Why are people marching?**

The "March for Our Lives" organizers explain on the official website that they support the constitutional right of law-abiding U.S. citizens to bear arms, but the recent surge of mass shootings, particularly at schools, calls for an honest discussion about guns.

	<p>So students, teachers and their supporters will take to the streets because they "will no longer risk their lives waiting for someone else to take action to stop the epidemic of mass school shootings that has become all too familiar," the organizers say.</p> <p>"Not one more. We cannot allow one more child to be shot at school. We cannot allow one more teacher to make a choice to jump in front of a firing assault rifle to save the lives of students," the organizers say in their online mission statement. "In the tragic wake of the seventeen lives brutally cut short in Florida, politicians are telling us that now is not the time to talk about guns. March For Our Lives believes the time is now."</p>

<b>HEADLINE</b>	<b>03/17 Violence on healthcare workers common</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/veterans-hospital-killings-spotlight-problem-violence-against-health-care-workers-n855931">https://www.nbcnews.com/news/us-news/veterans-hospital-killings-spotlight-problem-violence-against-health-care-workers-n855931</a>
<b>GIST</b>	The man's complaint seemed straightforward: He had come to the emergency room last June at Harrington

Hospital in Southbridge, Massachusetts, for wrist pain that wouldn't quit.

The 24-year-old patient seemed anxious. But he didn't present any signs of being dangerous — red flags that nurse Elise Wilson had come to recognize over the course of her four-decade career. She had spent 35 years in the ER, where nurses encounter violence from patients or patients' relatives "almost on a daily basis," she said.

Wilson started entering the patient's vital information into a computer in a triage room. When she turned around, he was looming over her with a knife.

"The first thing he did was punch me in the head," Wilson, 66, said.

From there, a normal day at work turned into a fight for survival as Wilson got stabbed in her neck, then nearly a dozen times in her arm. With the other arm, Wilson grabbed her nurses' clogs and banged them on the floor to catch other hospital employees' attention and screamed.

Nearly 10 months later, Wilson still hasn't recovered from the stabbing and cannot return to work. (The man accused of stabbing her, Conor O'Regan, has schizophrenia, has been deemed unfit for trial and is in a psychiatric facility.)

But her resolve to protect other health care workers is stronger than ever — especially after the killing last week of three staff members at a Yountville, California, treatment facility by a troubled veteran.

Health care workers face an alarmingly high rate of serious workplace violence, which is on average four times more common in health care than in other private industries, according to the Occupational Safety and Health Administration.

The World Health Organization estimates that up to 38 percent of health workers throughout the globe suffer physical violence at some point in their careers. And the American Nurses Association, which represents 3 million nurses in the U.S., reports that 1 in 4 nurses has been assaulted at work.

There have been high-profile incidents in recent years: the Utah nurse whose rough arrest after she refused to draw an unconscious patient's blood was caught on video; a Boston surgeon who was fatally shot by a patient's son.

But health care workers say they deal with other violence on a regular basis, like being kicked, pushed, hit, spit on, and verbally abused.

"We work with people with histories of violence who may be delirious, have dementia, be under the influence of drugs, and we also work very close to them, almost intimately, and often we're alone when we're working with our patients," said Seun Ross, the director of nursing practice and work environment at the American Nurses Association. "I think that all of those aid in the profession's propensity to being exposed by violence."

Yet despite the frequency with which the incidents happen, there are no federal regulations that protect health care professionals from workplace violence — only some scattered state laws. While OSHA has offered voluntary guidelines for keeping health care workers safe for more than two decades, they don't require that hospitals or other health care centers implement them.

<b>HEADLINE</b>	<b>03/18 Israel: new Hamas tunnel destroyed</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/israel-destroys-hamas-tunnel-network-gaza-53831315?">http://abcnews.go.com/International/wireStory/israel-destroys-hamas-tunnel-network-gaza-53831315?</a>
<b>GIST</b>	<p>The Israeli military says it has destroyed a Gaza tunnel built by the Hamas militant group.</p> <p>Military spokesman Lt. Col. Jonathan Conricus says Sunday the new tunnel was intended to connect to an old tunnel that Israel partially destroyed. He says Israel has been following Hamas' progress for some time and has rendered the whole network unusable.</p> <p>Conricus called the tunnel construction a "futile effort" by the Islamic militants and a waste of resources that could benefit Gaza residents.</p> <p>Israel has placed a high priority on halting the tunnel threat since Hamas infiltrated Israel during the 2014 war. It marks the fourth such tunnel Israel has destroyed over the past four months.</p> <p>The operation followed Israeli airstrikes against Hamas targets in Gaza over the weekend after explosions along the border.</p>

<b>HEADLINE</b>	<b>03/17 Probe: deaths in air bag failures</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/us-probes-deaths-hyundai-kia-cars-air-bags-53817855">http://abcnews.go.com/International/wireStory/us-probes-deaths-hyundai-kia-cars-air-bags-53817855</a>
<b>GIST</b>	<p>Air bags in some Hyundai and Kia cars failed to inflate in crashes and four people are dead. Now the U.S. government's road safety agency wants to know why.</p> <p>The National Highway Traffic Safety Administration says it's investigating problems that affect an estimated 425,000 cars made by the Korean automakers. The agency also is looking into whether the same problem could happen in vehicles made by other companies.</p> <p>In documents posted on its website Saturday, the safety agency says the probe covers 2011 Hyundai Sonata midsize cars and 2012 and 2013 Kia Forte compacts. The agency says it has reports of six front-end crashes with significant damage to the cars. Four people died and six were injured.</p> <p>The problem has been traced to electrical circuit shorts in air bag control computers made by parts supplier ZF-TRW. NHTSA now wants to know if other automakers used the same computer.</p> <p>On Feb. 27, Hyundai recalled nearly 155,000 Sonatas due to air bag failures, which the company blamed on the short circuits. Hyundai's sister automaker Kia, which sells similar vehicles, has yet to issue a recall.</p> <p>In a statement Saturday, Kia said that it has not confirmed any air bag non-deployments in its 2002-2013 Kia Forte models arising from "the potential chip issue." The company said it will work with NHTSA investigators.</p> <p>"Kia will act promptly to conduct a safety recall, if it determines that a recall would be appropriate," the company said.</p> <p>But a consumer complaint cited in NHTSA's investigation documents said Kia was informed of a crash near Oakland in which air bags failed to deploy and a passenger was killed.</p> <p>In October 2015, the complainant told NHTSA that a 2012 Forte was involved in a serious front-end crash that occurred in July 2013. A passenger was killed and the driver was injured. According to the complaint, Kia was notified, the air bag computer was tested and it was "found not to be working."</p> <p>People who complain to the NHTSA are not identified in its database. It was unclear whether the agency verified the complainant's statement. A message was left Saturday for agency spokeswomen.</p> <p>Kia spokesman James Bell said he could not comment beyond the company's statement.</p> <p>In addition, no deaths or injuries were disclosed in Hyundai's recall documents, which were posted by NHTSA in early March.</p> <p>Hyundai spokesman Jim Trainor says the problem occurred in rare high-speed head-on collisions that were offset from the center of the vehicles. "It's very unusual to have that kind of collision," he said Saturday.</p> <p>Dealers will consider offering loaner cars to owners until the problem can be repaired, he said. "We certainly would do everything we can to help our customers," Trainor said.</p> <p>Hyundai said in a statement that the air bag control circuitry was damaged in three crashes and a fourth crash is under investigation.</p> <p>ZF-TRW said in a statement that it is prevented by confidentiality agreements from identifying other</p>

automakers who bought its air bag control computers. The company said it is working with customers and supports the NHTSA investigation.

According to NHTSA, Hyundai investigated and found the problem was "electrical overstress" in the computers. The company didn't have a fix developed at the time but said it was investigating the problem with ZF-TRW. Hyundai does not yet have a fix for the problem but said it expects the Sonata recall to start April 20. The problem also can stop the seat belts from tightening before a crash.

In the documents, NHTSA said it understands that the Kia Fortes under investigation use similar air bag control computers made by ZF-TRW. The agency noted a 2016 recall involving more than 1.4 million Fiat Chrysler cars and SUVs that had a similar problem causing the air bags not to deploy. Agency documents show those vehicles had air bag computers made by ZF-TRW.

The agency says it will evaluate the scope of Hyundai's recall, confirm Kia's use of the same or similar air bag control computers and look into the cause. It also will investigate whether "any other vehicle manufacturers used the same or similar" ZF-TRW computers and whether there have been any similar air bag failures.

<b>HEADLINE</b>	<b>03/16 Local students w/detention for walkout</b>
<b>SOURCE</b>	<a href="http://www.thenewstribune.com/news/local/article205586419.html">http://www.thenewstribune.com/news/local/article205586419.html</a>
<b>GIST</b>	<p>Angry phone calls from around the country poured into the Orting High office on Friday morning.</p> <p>Orting High announced Thursday that 62 students would get detention after walking out of class on Wednesday during a nationwide student call for stronger gun-control legislation. The punishment didn't sit well with some people.</p> <p>But by the time most of the conversations were over, said principal Cliff Fries, they parted on positive terms.</p> <p>"I think people just wanted to make sure that because we are a conservative small town that this didn't have anything to do with political views," Fries said. "And it doesn't. ... My job as a principal is that you can't tell my political views by the punishment I hand out."</p> <p>Fries said he spoke to civics classes and student leaders in advance of the walkout and stressed the importance of civil disobedience. But he also pointed out that these actions come with consequences.</p> <p>The 45-minute detention is the standard punishment for truancy "whether you're walking out or going to your car to get a candy bar," Fries said. Fries plans to speak to students about the importance of civil disobedience during the March 26 detention.</p> <p>Most, but not all, of the students facing detention took part in the walkout, Fries said. He said no students took part in pro-gun protests but said they would have faced the same punishment.</p> <p>Some parents expressed concern that the detention was not made clear until the day after the protest, KIRO-TV reported.</p> <p>A Feb. 22 post on the school district's Facebook page stated that the district was aware of the planned walkouts but did not state that participants would be punished. "As a result of the tragedy in Florida, some students across the country are planning to participate in a peaceful protest (walkout)," the post read. "While this is not a school-sponsored activity, as educators we seek to find ways to educate our students around these activities. Our school rules are designed to support learning and keep students safe, so our school leaders will clearly identify and communicate parameters to ensure this. We encourage families to discuss these events at home. If you have questions, please contact your child's school administration."</p>

	Fries said he spoke with officials from many other schools. He said larger schools may have wanted to take similar action, but that it may have been unrealistic to coordinate detention for such a large number of students. About 8 percent of Orting High's 800 students participated in the walkout.

<b>HEADLINE</b>	<b>03/16 Schools opposite approach on doors</b>
<b>SOURCE</b>	<a href="http://komonews.com/news/local/schools-take-opposite-approaches-on-locking-classroom-doors">http://komonews.com/news/local/schools-take-opposite-approaches-on-locking-classroom-doors</a>
<b>GIST</b>	<p>ARLINGTON, Wash. - They come standard in every school building, but in the debate over campus safety, districts are split on whether or not to use the locks on classroom doors.</p> <p>Arlington Public Schools locks the perimeter doors, but not the ones for each classroom. However, in the Kent School District, teachers were just told this week that all doors must be latched shut.</p> <p>"Today, yesterday and Wednesday, it was official. We had all of our doors locked all day," said Spencer McLaughlin, a senior at Kentwood High School.</p> <p>At first, McLaughlin said the new policy in Kent seemed like a good idea and he felt safer. Then he considered the students who routinely step out of class to go to the bathroom or visit the office, and what that would mean if a shooter was in the building.</p> <p>"No one wants to be that kid who gets left out in the hallway," McLaughlin said.</p> <p>On the other side is Gregg Winter, whose son attends middle school in Arlington.</p> <p>"Lock the doors. It's just as simple as that," Winter said.</p> <p>Arlington school officials said locked classroom doors would create too many disruptions as students try to come and go while teachers present their lessons. Instead, the district monitors the main entrance and locks the perimeter doors.</p> <p>Winter said while that may be the policy, in practice he sees people using multiple entry points.</p> <p>"If we're going to secure the building, secure it, have one entrance," Winter said. "Then the interior locks aren't that big of a deal."</p> <p>McLaughlin is undecided on locked doors. He said what got left out during the change is an explanation to students about how to respond if they are caught on the wrong side of the door.</p> <p>"I'd like to see, maybe even a day or two, try to train kids and teach them what to do," McLaughlin said.</p> <p>Arlington school officials said they will be unveiling several new security changes in the coming weeks. The district had hoped to invest in surveillance systems and "hardened" entryways, but in February voters shot down the bond that would have paid for it.</p> <p>Now the district will focus on new practices that could achieve the same safety goals using existing resources. They said the changes could be in place before the end of April.</p>

<b>HEADLINE</b>	<b>03/16 ABC bridges in Washington</b>
<b>SOURCE</b>	<a href="http://www.kiro7.com/news/local/washington-bridges-built-with-same-technique-as-florida-tragedy-bridge/717127640">http://www.kiro7.com/news/local/washington-bridges-built-with-same-technique-as-florida-tragedy-bridge/717127640</a>

<p><b>GIST</b></p>	<p>BELLEVUE, Wash. - The pedestrian bridge that collapsed at Florida International University was prefabricated nearby then moved into place above a roadway. The whole process is called Accelerated Bridge Construction.</p> <p>The technique is hardly novel. In 2003, the Washington Department of Transportation moved the prebuilt expansion of Bellevue's Northeast Eighth over I-405 into place. The highway was closed for a weekend instead of the 15 months it would have taken to construct the bridge in the conventional manner.</p> <p>"The big thing is speed, what we're trying to do is to be able to construct our projects and get the facility open to the public as quickly as possible," said State Bridge Engineer Mark Gaines in an interview with KIRO-7.</p> <p>He was involved when the I-5 Bridge over the Skagit River was quickly replaced using accelerated bridge construction techniques.</p> <p>"We do not sacrifice safety. We are very careful about that. We work very collaboratively with the contractor to make sure any safety issue is addressed very quickly. Typically, we do an inspection on our projects every two years."</p> <p>Gaines doesn't know what went wrong in Florida. But we asked him about the risk of a similar tragedy in our state.</p> <p>"From my perspective the risk is very low. Again, we're not compromising safety at all when we use accelerated bridge construction. We're making sure that it meets all the same safety standards we would have if we were building the bridge in place."</p> <p>The companies involved in leading the Florida bridge construction project have apparently not done any projects for the Washington Department of Transportation.</p> <p>Florida International University maintains a research center for Accelerated Bridge Construction.</p>

<p><b>HEADLINE</b></p>	<p><b>03/16 No charges in I-5 road rage shooting</b></p>
<p><b>SOURCE</b></p>	<p><a href="http://www.kiro7.com/news/local/no-charges-filed-after-man-killed-in-apparent-road-rage-shooting-on-i-5/717152012">http://www.kiro7.com/news/local/no-charges-filed-after-man-killed-in-apparent-road-rage-shooting-on-i-5/717152012</a></p>
<p><b>GIST</b></p>	<p>Pierce County Prosecutor's Office announced Friday that no charges will be filed in connection with a deadly road rage confrontation on I-5 near Milton, Washington, in February.</p> <p>Aubrey Tayler Bowlin shot Bruce W. Jones on the side of I-5 on Feb. 8, 2018, but prosecutors say, "Ms. Bowlin acted in self-defense and, given the evidence, the prosecutor's office cannot prove otherwise." <a href="#">Click here to read our original story.</a></p> <p>The prosecutor's office says that according to witnesses the incident began when Jones boxed Bowlin, who was riding a motorcycle, "into a location she could not drive away from. After exiting his (Jones) vehicle, he (Jones) aggressively approached her (Bowlin) on the shoulder of Interstate 5."</p> <p>The prosecutor's office then says that a fight that followed was started by Jones, and that at some point during the altercation, "Bowlin head-butted Jones, who then drove Bowlin's head into the jersey barrier before taking her to the ground. Bowlin shot Jones once in the chest when he attempted to climb on top of her."</p> <p>"This is another reminder to everyone to keep a cool head on our roads," prosecutor Mark Lindquist said. "Nothing good is going to come from physically confronting another driver."</p>

<b>HEADLINE</b>	<b>03/16 Seattle HSD director resigns</b>
<b>SOURCE</b>	<a href="https://www.seattletimes.com/seattle-news/homeless/seattle-human-services-director-catherine-lester-who-oversaw-homelessness-response-is-stepping-down/">https://www.seattletimes.com/seattle-news/homeless/seattle-human-services-director-catherine-lester-who-oversaw-homelessness-response-is-stepping-down/</a>
<b>GIST</b>	<p>Catherine Lester, one of the chief architects of Seattle’s response to the region’s homelessness crisis, is stepping down, becoming the second high-level person involved in the effort to resign in recent months.</p> <p>Mayor Jenny Durkan announced the resignation in a statement Friday, saying Lester was leaving Seattle for Toronto to care for her parents. Her last day on the job will be May 1.</p> <p>“As many of you know, my family is very important to me,” Lester said in the statement. “And so, it was family that motivated my decision to return home to Toronto to be closer to my parents.”</p> <p>Lester has led the city’s Human Services Department (HSD) since 2015, when former Seattle Mayor Ed Murray and King County Executive Dow Constantine declared a “state of emergency” over homelessness.</p> <p>Her departure comes at a critical time in the region’s efforts to tackle homelessness. Seattle’s homelessness problem has only become more visible over the course of Lester’s tenure, with city officials struggling to find effective strategies for dealing with illegal encampments, perpetually filled shelters and an affordable-housing crunch that is only growing worse.</p> <p>Her announcement is three months after Mark Putnam stepped down as the head of All Home, King County’s coordinating agency for homeless services.</p> <p>The two officials’ departures come as their respective departments are putting the final touches on policy shifts authorities say are needed to slow the steady increases in the numbers of people living on the streets.</p> <p>As director, Lester oversaw an overhaul of the city’s approach, culminating late last year when her department conducted the first competitive rebidding process for homeless services in a decade. Lester also led a push to shift from the city’s old model, which emphasized basic survival services for the homeless, to providing wraparound case management services focused on getting them into permanent housing.</p> <p>As part of the strategy shift, the city is projecting it can house 7,400 homeless people by the end of 2018, more than double the previous year’s goal. However, achieving those numbers has proved difficult, with a limited supply of affordable housing in the city and many enhanced shelters still not fully on line.</p> <p>What Lester’s departure means for the future of the city’s homelessness policies is unclear. Human Services Deputy Director Jason Johnson will serve as interim director, effective May 2, Durkan said in the statement. He has been with the department for the last three years.</p> <p>“Catherine’s tenacity and laserlike focus on results have helped victims of domestic violence, Seattle’s youth, vulnerable seniors and tens of thousands of people experiencing homelessness — her leadership and compassion will be missed,” said Durkan. “She leads a department that is addressing our city’s most urgent challenge, and following her departure, I know Jason will continue HSD’s important work to move people out of tents, shelters and transitional housing into permanent homes.”</p> <p>Durkan said she will make a decision about a permanent replacement following recommendations from One Table, a regional task force focused on the homelessness problem.</p> <p>In addition to homelessness, the Human Services Department oversees and funds services for people with disabilities, those experiencing sexual assault and domestic violence, and low-income families.</p>

<b>HEADLINE</b>	<b>03/16 B.C. backs high-speed rail study</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/929357/b-c-backs-high-speed-rail-study/">http://mynorthwest.com/929357/b-c-backs-high-speed-rail-study/</a>
<b>GIST</b>	<p>OLYMPIA, Wash. (AP) — A study looking at high-speed rail connecting Vancouver, B.C. to Seattle and Portland is getting funding from the government of British Columbia.</p> <p>Premier John Horgan was joined by Gov. Jay Inslee during Friday’s announcement that B.C. will contribute \$300,000 toward the study that will build upon an economic analysis released by Washington state last month. That previous report estimated that a high-speed corridor link could create up to 200,000 jobs for B.C. and U.S. workers, and generate billions of dollars in economic benefits.</p> <p>According to a news release from Inslee’s office, the new study will look at factors such as ridership levels, system development, delivery methods and financing.</p> <p>Up to \$1.2 million in funding for the new study has been approved by the Washington Legislature.</p>

<b>HEADLINE</b>	<b>03/17 Kansas: 100+ wildfires, 16,800 acres</b>
<b>SOURCE</b>	<a href="http://www.kansas.com/news/local/article205658224.html">http://www.kansas.com/news/local/article205658224.html</a>
<b>GIST</b>	<p>The Kansas Division of Emergency Management has tracked more than 100 wildfires in the state from Wednesday to Friday — mostly in the south central region.</p> <p>Those fires have burned an estimated 16,800 acres. As of Friday night, there was one active fire and five that were under control, a news release from KDEM said.</p> <p>No deaths have been reported due to fires, but one person was treated for smoke inhalation and two firefighters have been treated for minor burns.</p> <p>The State Emergency Operations Center in Topeka will remain staffed through the weekend. There is moderate to extreme fire danger across the state.</p> <p>An elevated fire weather condition remains in effect for far southwest Kansas as humidity falls to 20 to 25 percent Saturday afternoon with winds increasing to 15 to 20 mph, according to the National Weather Service in Wichita.</p> <p>There's a significant risk for fire weather on Sunday and an elevated risk through Tuesday.</p> <p>Kansas Army National Guard Black Hawks with Bambi buckets will remain on standby through the weekend to assist local jurisdictions with aerial fire suppression. Each bucket can disperse 660 gallons of water over the fire.</p> <p>Additional aerial support will be provided by Nebraska National Guard through the Emergency Management Assistance Compact. Two Black Hawk helicopters from Nebraska will arrive Saturday morning, the release said.</p> <p>Local disaster declarations have been made by Barber, Butler, Kiowa, Labette, McPherson, Montgomery, Reno, and Rice counties.</p> <p>Grass fires and heavy smoke led to the closure of the Kansas Turnpike in the Flint Hills on Friday afternoon. Flames had jumped over the turnpike in two locations near El Dorado, authorities said.</p>

HEADLINE	<b>03/16 Russian president Vladimir Putin</b>
SOURCE	<a href="https://www.usatoday.com/story/news/world/2018/03/09/what-you-didnt-know-russian-president-putin/408913002/">https://www.usatoday.com/story/news/world/2018/03/09/what-you-didnt-know-russian-president-putin/408913002/</a>
GIST	<p>Vladimir Putin, Russia's longest serving leader since Josef Stalin, seeks a fourth term as president in this Sunday's election.</p> <p>Putin is a former KGB spy who earned a Ph.D. in economics and has a judo blackbelt. His tough-guy image is well known because he invited government photographers to tag along as he rode on horseback while shirtless, treated a tranquilized tiger and a polar bear, and flew in an ultralight with migratory birds.</p> <p>But here a few things you might not know about the Russian leader:</p> <p><b>Putin is fabulously wealthy</b> According to Russia's Central Election Commission, Putin earned \$860,000 between 2011 and 2016. But estimates of his net worth range from \$40 billion to \$200 billion. The latter estimate would make Putin, a life-long public servant, more than twice as wealthy as Microsoft-founder Bill Gates, who holds the title as the world's richest human.</p> <p>How did it happen? As a KGB spy during the Soviet era, Putin maintained ties to organized crime, according to Karen Dawisha, author of <i>Putin's Kleptocracy; Who Owns Russia?</i> As president, he steers government contracts and the sale of state-owned enterprises to businessmen who support his rule and present him with valuable gifts, Dawisha wrote in 2014.</p> <p><b>The judo schtick might be just that</b> Putin has practiced some form of martial arts since he was 14, first with a Russian form called sambo and then switched to judo, according to his official biography and interviews. <a href="#">He told NPR in 2001</a> that he considered the sport a type of philosophy that he has practiced his entire adult life.</p> <p>Legal analyst Benjamin Wittes of Lawfare blog says that while there are lots of photos of Putin warming up and throwing opponents, they seem to be willing participants.</p> <p>"Putin is fraud martial artist," Wittes <a href="#">wrote on Facebook</a>. "He only fights people who are in his power, and they are all taking falls for him."</p> <p>Putin used his martial arts prowess to earn good pay as a movie stuntman in the 1970s, according to a December report in the <a href="#">Russian Dozhd news site</a>.</p> <p><b>Putin's judo buddies are really, really rich</b> Several members of Putin's Yawara-Neva judo club in St. Petersburg became extraordinarily wealthy or powerful since Putin rose to power. They include Putin's former sparring partner, Arkady Rotenberg, worth \$3.1 billion, his brother Boris (\$1.2 billion), oil trader Gennady Timchenko (\$16.4 billion) and Vasily Shestakov. Shestakov, president of the International Sambo Federation who got his start as a judo trainer, is the only member who does not appear in the <i>Forbes</i> list of Russian billionaires.</p> <p><b>Putin's dissertation included 'extensive plagiarism'</b> Putin in 1996 earned a post-graduate degree that is a rough equivalent of a Ph.D. at the St. Petersburg Mining Institute, though he never attended that school, <a href="#">according to a 2006 presentation</a> by analysts Igor Danchenko and Clifford Gaddy at the Brookings Institution think tank in Washington, D.C.</p> <p>His dissertation was on the investment in large-scale natural resource extraction, like oil and gas, to "restore Russia's great power status." Pages of it were largely copied from a 1982 American business school text book called <i>Strategic Planning and Policy</i>, Gaddy said.</p> <p><b>Dark stories surround his rise</b> As prime minister in 1999, Putin was alleged to have been behind a string of apartment bombings that killed 300 residents and were officially blamed on Chechen separatists, according to Alexander</p>

	<p>Litvinenko, a former FSB officer and whistleblower who fled to Britain. Putin denied the allegations, which Litvinenko wrote in a 2001 book <i>Blowing Up Russia</i>. The bombings provided the rationale for a military campaign in Chechnya that coincided with Putin's first run for the presidency.</p> <p>Putin's war in Chechnya employed a scorched-earth policy that left thousands of dead Chechens. Human rights violations were exposed by Russian reporter Anna Politkovskaya.</p> <p><b>Several of his critics and opponents died in brutal ways</b></p> <p>Politkovskaya was shot to death at the entrance to her apartment building in Moscow in October 2006. Litvinenko was poisoned to death in London with a rare radioactive isotope, polonium-210, the next month. At least three other people who investigated or worked to expose their findings about the apartment bombings were murdered. And opposition leader Boris Nemtsov was shot to death in 2015, while strolling near the Kremlin with his girlfriend after dinner.</p>

<b>HEADLINE</b>	<b>03/16 China angry over US-Taiwan travel bill</b>
<b>SOURCE</b>	<a href="https://www.reuters.com/article/us-usa-taiwan-china/trump-signs-u-s-taiwan-travel-bill-angering-china-idUSKCN1GS2SN">https://www.reuters.com/article/us-usa-taiwan-china/trump-signs-u-s-taiwan-travel-bill-angering-china-idUSKCN1GS2SN</a>
<b>GIST</b>	<p>WASHINGTON (Reuters) - U.S. President Donald Trump on Friday signed legislation that encourages the United States to send senior officials to Taiwan to meet Taiwanese counterparts and vice versa, angering China, which views the self-ruled island as a wayward province.</p> <p>The bill, which is non-binding, would have gone into effect on Saturday morning, even if Trump had not signed it, said the White House.</p> <p>The move adds to strains between the two countries over trade, as Trump has enacted tariffs and called for China to reduce its huge trade imbalance with the United States, even while Washington has leaned on Beijing to help resolve tensions with North Korea.</p> <p>Earlier on Friday, Chinese Foreign Ministry spokesman Lu Kang reiterated that Beijing was opposed to the legislation and urged the United States to abide by the "one China" policy, that stipulates that Taiwan is part of China, and cease official exchanges with Taiwan.</p> <p>In a statement after Trump's signing of the bill, the Chinese embassy said clauses of the legislation "severely violate the one-China principle, the political foundation of the China-U.S. relationship".</p>

	<p>“China is strongly dissatisfied with that and firmly opposes it,” the statement said, adding that the United States should “stop pursuing any official ties with Taiwan or improving its current relations with Taiwan in any substantive way.”</p> <p>Taiwan’s Foreign Ministry expressed its thanks for the “friendly move” by the Trump administration, saying the government would continue to deepen its cooperation and partnership with the United States at all levels.</p> <p>The United States does not have formal ties with Taiwan but is required by law to help it with self-defense and is the island’s primary source of weapons.</p>

<b>HEADLINE</b>	<b>03/16 CDC: 17B binge drinks in a year</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/americans-binge-drink-17-billion-alcoholic-drinks-a-year-cdc/">https://www.cbsnews.com/news/americans-binge-drink-17-billion-alcoholic-drinks-a-year-cdc/</a>
<b>GIST</b>	<p>A new report from the Centers for Disease Control and Prevention offers some striking findings on Americans' drinking habits. The study focuses on binge drinking and finds that U.S. adults consumed an astounding 17.5 billion binge drinks in 2015. That works out to nearly 470 binge drinks a year for each of the 37.4 million people who reported alcohol binges.</p> <p>Binge drinking is defined as consuming five or more alcoholic beverages for men, or four or more drinks for women, within about two hours.</p> <p>Researchers found that about 1 in 6 U.S. adults reported binge drinking an average of about once a week, consuming an average of seven drinks per binge.</p> <p>"This study shows that binge drinkers are consuming a huge number of drinks per year, greatly increasing their chances of harming themselves and others," study co-author Dr. Robert Brewer, lead researcher in CDC's alcohol program, said in a statement. "The findings also show the importance of taking a comprehensive approach to prevent binge drinking, focusing on reducing both the number of times people binge drink and the amount they drink when they binge."</p> <p>While binge drinking was more common among younger adults age 18 to 34, more than half of the binge drinks consumed over the study period were by adults age 35 and older.</p> <p>Binge drinking was also much more common in men than women, with 4 out of 5 binge drinks consumed by males.</p> <p>Geographically, binge drinkers consumed the most alcohol in Arkansas, Mississippi, Kentucky, and Hawaii, and the least in Washington, D.C., New Jersey, New York, and Washington state.</p> <p>Finally, binge drinking was more common in lower income households and among people with lower educational levels.</p> <p>The CDC warns of the dangers of binge drinking, including the increased likelihood of dangerous driving and risky sexual behavior. Excessive alcohol use is also associated with a higher risk of serious health problems such as cancer, heart disease, and liver failure.</p> <p>According to the CDC, 88,000 deaths are directly attributed to alcohol use each year and half of those are due to binge drinking.</p>

<b>HEADLINE</b>	<b>03/17 China reappoints president for life</b>
-----------------	--

<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/xi-jinping-reappointed-as-president-with-no-term-limits/">https://www.cbsnews.com/news/xi-jinping-reappointed-as-president-with-no-term-limits/</a>
<b>GIST</b>	<p>BEIJING -- Xi Jinping was reappointed Saturday as China's president with no limit on the number of terms he can serve. The National People's Congress, China's rubber-stamp legislature, also appointed close Xi ally Wang Qishan to the formerly ceremonial post of vice president.</p> <p>At the Great Hall of the People, Xi, Wang and other officials took turns stepping to the lectern to place their left hands on the constitution and raise their right fists as they delivered an oath swearing loyalty to the constitution, the motherland and the people.</p> <p>Xi, 64, is considered the most powerful Chinese leader since Mao Zedong and last Sunday was given the right to continue in office indefinitely after the legislature scrapped term limits for the president and vice president.</p> <p>Chinese officials defended the move saying it would bring the presidency in-line with Xi's other two main positions of head of the ruling Communist Party and commander of the armed forces.</p> <p>Critics say the move overturning a push to institutionalize China's ruling practices dating from 1982 will likely lead to increased political repression and possible infighting among party factions seeking to promote their own candidates within the closed system.</p> <p>Xi took office as president in 2013 and hasn't said how many additional five-year terms he intends to serve. State media has said the removal of term limits will not alter conditions for retirement or create a president in perpetuity, but has offered no details.</p>

<b>HEADLINE</b>	<b>03/16 Venezuela begins power rationing</b>
<b>SOURCE</b>	<a href="https://www.yahoo.com/news/venezuela-begins-power-rationing-drought-causes-severe-outages-193846729.html">https://www.yahoo.com/news/venezuela-begins-power-rationing-drought-causes-severe-outages-193846729.html</a>
<b>GIST</b>	<p>SAN CRISTOBAL, Venezuela (Reuters) - Venezuela imposed electricity rationing this week in six western states, as the crisis-hit country's creaky power grid suffered from a drought that has reduced water levels in key reservoirs needed to run hydroelectric power generators.</p> <p>The four-hour formal outages began on Thursday. But many residents scoffed at the announcement, wryly noting that they have been suffering far more extended blackouts during the last week.</p> <p>"We have spent 14 hours without electricity today. And yesterday electricity came and went: for six hours we had no power," said Ligthia Marrero, 50, in the western state of San Cristobal, noting that her fridge had been damaged by the frequent interruptions.</p> <p>Crumbling infrastructure and lack of investments have hit Venezuela's power supply for years. Now, the situation has been exacerbated by dwindling rains.</p> <p>In the worst-hit western cities, business has all but ground to a halt at a time when the OPEC nation of 30 million is already suffering hyperinflation and a profound recession. Many Venezuelans are unable to eat properly on salaries of just a couple of dollars per month at the black market rate, sparking malnutrition, emigration and frequent sights of Venezuelans digging through trash or begging in front of supermarkets.</p> <p>Maybelin Mendoza, a cashier at a bakery in Tachira state, said business has been further hit because points of sale stop working during blackouts - just as Venezuelans are chronically short of cash due to hyperinflation.</p> <p>"Of a possible 1,100 megawatts, we are only generating 150 right now," Energy Minister Luis Motta told reporters referring to the Fabricio Ojeda dam, in the western Andean state of Merida.</p>

	<p>Capital city Caracas and other major cities have not been hit by rationing yet. Two years ago, rationing there lasted five months when a drought hit the Guri dam, the country's largest hydroelectric dam.</p> <p>But because of the economic crisis, Venezuela has reduced electricity consumption to about 14,000 megawatts at peak hours, according to engineer and former electricity executive Miguel Lara. Two years ago, state-run Corpoelec put the figure at 16,000 megawatts.</p>

<b>HEADLINE</b>	<b>03/16 Russia to expand American 'blacklist'</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/16/politics/russia-us-sanctions-response-intl/index.html">https://www.cnn.com/2018/03/16/politics/russia-us-sanctions-response-intl/index.html</a>
<b>GIST</b>	<p>(CNN) — Russia will expand its own "blacklist" of Americans in response to new US sanctions announced by the Trump administration, a Russian minister said Friday.</p> <p>The Trump administration confirmed Thursday it was enacting the new sanctions on Russia, including individuals indicted last month by special counsel Robert Mueller, in a sweeping new effort to punish Moscow for its attempts to interfere in the 2016 US election.</p> <p>Russia will use "the principle of parity" as it responds, Russian Deputy Foreign Minister Sergei Ryabkov said Friday, as quoted by state news agency RIA Novosti. Additional measures are not ruled out, he added.</p> <p>He also said that the retaliatory measures Russia will take are not the preference of Moscow.</p> <p>Ryabkov appeared slightly to soften the blow by adding that Russia did not want to close the window of dialogue with the US or the possibility of stabilizing bilateral relations.</p> <p>"It is also worth thinking about that, destroying Russian-American relations," said Ryabkov. "These politicians play with fire, because they simultaneously undermine global stability."</p>

<b>HEADLINE</b>	<b>03/17 Russia expels 23 British diplomats</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/17/europe/russia-uk-spy-attack-diplomats-intl/index.html">https://www.cnn.com/2018/03/17/europe/russia-uk-spy-attack-diplomats-intl/index.html</a>
<b>GIST</b>	<p>Moscow (CNN) — Russia's Foreign Ministry ordered the expulsion of 23 British diplomats from Russia on Saturday in a tit-for-tat response to Britain's decision to expel Russian envoys in connection with the poisoning of a former Russian double agent and his daughter on British soil.</p> <p>The ministry also declared it was closing the British Consulate General in St. Petersburg and the British Council in Russia, in a step beyond the measures taken by Britain. The British Council is a cultural institute with artistic, language and educational programs.</p> <p>The British diplomats have a week to leave, the Russian Foreign Ministry said, adding that its actions came "in response to the provocative actions of the British side and groundless accusations" against Russia over the Salisbury attack.</p> <p>"The British side is warned that in case of further unfriendly actions against Russia, the Russian side reserves the right to take further retaliatory measures," the ministry said.</p> <p>The United Kingdom's ambassador to Moscow, Laurie Bristow, was summoned to the ministry on Saturday morning to be told of Moscow's decision. The British Embassy in Moscow told CNN it had been given a list of 23 specific individuals that were to be expelled from Russia.</p> <p>Relations between the two nations have deteriorated rapidly since the March 4 nerve agent attack on Sergei Skripal and his daughter Yulia in the English city of Salisbury. The pair remain critically ill in the hospital.</p>

<a href="#">Return to Top</a>	
<b>HEADLINE</b>	<b>03/17 AG fires FBI deputy director</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/16/politics/andrew-mccabe-fired/index.html">https://www.cnn.com/2018/03/16/politics/andrew-mccabe-fired/index.html</a>
<b>GIST</b>	<p>(CNN) — Attorney General Jeff Sessions fired former FBI Deputy Director Andrew McCabe late Friday, less than two days shy of his retirement, ending the career of an official who had risen to serve as second-in-command at the bureau.</p> <p>McCabe had more recently been regularly taunted by President Donald Trump and besieged by accusations that he had misled internal investigators at the Justice Department.</p> <p>In a blistering statement Friday night, McCabe said his firing is part of a larger effort to discredit the FBI and the special counsel's investigation.</p> <p>"This attack on my credibility is one part of a larger effort not just to slander me personally, but to taint the FBI, law enforcement, and intelligence professionals more generally," McCabe said. "It is part of this Administration's ongoing war on the FBI and the efforts of the Special Counsel investigation, which continue to this day. Their persistence in this campaign only highlights the importance of the Special Counsel's work."</p> <p>McCabe had been expected to retire this Sunday, on his 50th birthday, when he would have become eligible to receive early retirement benefits.</p> <p>But Friday's termination could place a portion of his anticipated pension, earned after more than two decades of service, in significant jeopardy.</p> <p>The origin of his dramatic fall stems from an internal review conducted by Justice Department Inspector General Michael Horowitz. That report -- the details of which have not been publicly released -- is said to conclude that McCabe misled investigators about his role in directing other officials at the FBI to speak to The Wall Street Journal about his involvement in a public corruption investigation into the Clinton Foundation, according to a source briefed on it.</p> <p>CNN reported on Wednesday that the findings in Horowitz's report on McCabe were referred to the FBI's Office of Professional Responsibility, staffed with career officials, who recommended McCabe's termination. McCabe, accompanied by his lawyer, tried making a last-ditch effort Thursday to avoid the firing, meeting with officials at the deputy attorney general's office at the Justice Department for several hours while Sessions was traveling, but to no avail.</p> <p>"After an extensive and fair investigation and according to Department of Justice procedure, the Department's Office of the Inspector General (OIG) provided its report on allegations of misconduct by Andrew McCabe to the FBI's Office of Professional Responsibility (OPR)," Sessions said in a statement late Friday. "The FBI's OPR then reviewed the report and underlying documents and issued a disciplinary proposal recommending the dismissal of Mr. McCabe. Both the OIG and FBI OPR reports concluded that Mr. McCabe had made an unauthorized disclosure to the news media and lacked candor – including under oath – on multiple occasions."</p>

<b>HEADLINE</b>	<b>03/17 Before collapse, cracks seen in bridge</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/16/us/bridge-collapse-florida/index.html">https://www.cnn.com/2018/03/16/us/bridge-collapse-florida/index.html</a>
<b>GIST</b>	<p>(CNN) — An engineer for the company that designed a pedestrian bridge that collapsed Thursday, killing at least six people, left a voice mail two days earlier for a Florida Department of Transportation employee advising there was "some cracking that's been observed on the north end of the span."</p>

	<p>The state employee was out on assignment Tuesday and didn't hear the voice mail from W. Denney Pate of FIGG Bridge Engineers until he returned to the office Friday, the DOT said.</p> <p>Pate's voice mail said the design company didn't see any safety concerns on the project near Florida International University but that the cracking was not a good development and would have to be repaired.</p> <p>The news came as the National Transportation Safety Board disclosed that construction crews were working on diagonal beams on the north end of a future pedestrian bridge when the structure collapsed.</p> <p>The NTSB investigator in charge, Robert Accetta, said Friday night it was too early to tell whether the bridge failed at the point construction workers were applying post-tensioning force to strengthen the beams.</p> <p>When asked about the cracking, Accetta said: "I would have to say that a crack in the bridge does not necessarily mean that it is unsafe."</p> <p>FIGG said it was working with the construction team to figure out why the bridge fell.</p>

## Cyber Awareness

[Top of page](#)

<b>HEADLINE</b>	<b>03/19 Cybercriminals launder up to \$200B year</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/attacks-breaches/cybercriminals-launder-up-to-\$200b-in-profit-per-year/d/d-id/1331298">http://www.darkreading.com/attacks-breaches/cybercriminals-launder-up-to-\$200b-in-profit-per-year/d/d-id/1331298</a>
<b>GIST</b>	<p>Cybercriminals launder an estimated \$80-200 billion in illegal profit each year, which amounts to 8-10% of all illegal proceeds laundered around the world. Virtual currencies are the most common tool used for money laundering - but Bitcoin isn't quite as trendy among hackers.</p> <p>The data comes from Into the Web of Profit, an independent academic study sponsored by Bromium and conducted by Dr. Mike McGuire, senior lecturer in Criminology at Surrey University in England. It's a nine-month study into the macroeconomics of cybercrime and how cybercriminals "cash out" the funds they generate through illegal activity.</p> <p>With his academic background as a criminologist, Dr. McGuire has a decidedly different approach to cybercrime and focuses on how human factors affect behavior. In other words, he explores "not just that there are bad guys doing bad things, but the way responses are made."</p> <p>This study began as a simple question: What do cybercriminals spend their money on? However, it quickly evolved as Dr. McGuire discovered what he calls the "cybercrime economy." His research turned into a broader study on how money flows around the criminal ecosystem.</p> <p>"We've got to move beyond this idea that cybercrime is like a business - it's more than that. It's like an economy which mirrors the legitimate economy," he explains. "Increasingly, what we're seeing is the legitimate economy is feeding off the cybercrime economy."</p> <p>This economy consists of three parts: how cybercriminals' revenue is generated, where that money goes, and what they do with the money when they move it around. Once the flow of money is understood, businesses can better determine how to protect themselves.</p>

<b>HEADLINE</b>	<b>03/17 Senior citizens facing new online scams</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/money/personalfinance/2018/03/17/more-fraudsters-scamming-">https://www.usatoday.com/story/money/personalfinance/2018/03/17/more-fraudsters-scamming-</a>

	<a href="#">senior-citizens-through-technology-and-its-costing-them-millions/428406002/</a>
GIST	<p>America's senior citizens are facing new scams designed to sucker money from them as fraudsters target their computers and cell phones, and use social media posts to lend authenticity to bogus kidnapping calls.</p> <p>While authorities say mail and telemarketing scams remain the biggest rip-offs for older Americans, they worry online activity and cell phones leave seniors — and everyone else — more vulnerable.</p> <p>The Justice Department recently announced its largest-ever sweep of elder fraud cases, involving 250 defendants worldwide who victimized more than a million Americans, largely targeting or affecting seniors to the cost of more than \$500 million. The FTC last year recovered about \$300 million on behalf of victims, and federal prosecutors and state attorneys general are bringing criminal cases following the elder fraud sweep.</p> <p>“Technology has given scammers the ability to reach more people at a lower cost,” said Amy Nofziger, who works for the AARP Foundation and teaches elder fraud seminars. “You can reach millions of people with one hit of button.”</p> <p>Overall, scammers extracted an estimated \$1 billion from Americans last year, and 70% of reported fraud began with a phone call, according to the Federal Trade Commission, which says phone-based scams took nearly \$300 million from Americans, while online fraud took \$141 million and email-based fraud another \$100 million.</p> <p>Still, scams involving fake tech support help, online dating and tax refunds are rapidly gaining ground. And while federal officials say millennials are twice as likely to be scammed as seniors, they're less likely to lose as much: Consumers in their 70s lost an average of \$621, while victims ages 80 and older lost nearly \$1,100. Millennials, in contrast, lost \$400 on average, according to the FTC.</p> <p>Nofziger and FTC officials said that technology combined with a personal touch is a growing concern. Scammers can look up a target's Facebook page and pretend to be the authorities or a kidnapper in a far-off place demanding money to release a loved one or head off an impending arrest. Even worse: sophisticated online dating scams that target people living alone. That type of scam takes longer to execute but can be both financially and emotionally devastating.</p> <p>Nofziger said she advises people to ignore phone calls unless they know who is calling. Spammers can spoof a number so it looks like a neighbor or a local police department, but they rarely leave a message. “People really love their phones. And my advice is that if you don't know who is calling, just don't pick up the phone,” she said. “It's not a long-lost boyfriend or Oprah calling. It's just not.”</p> <p>If a family member or friend has been scammed, remember that yelling at them won't make anything better, Nofziger and Vaca said. In most cases, the victim is already embarrassed and ashamed, in addition to being out the money. Nofziger said she advises giving a hug, any other support that person might need and then helping them report the scam and figuring how not to get victimized again.</p> <p>No matter what, Nofziger and Vaca said, it's important to remember that anyone can fall victim to a scam because crooks are using sophisticated techniques and technology to target you. They said the most important thing for people of any age is to remain on guard.</p>

HEADLINE	<b>03/16 Russian hackers target power, water</b>
SOURCE	<a href="http://ens-newswire.com/2018/03/19/russian-hackers-target-u-s-power-water-facilities/">http://ens-newswire.com/2018/03/19/russian-hackers-target-u-s-power-water-facilities/</a>
GIST	WASHINGTON, DC, March 16, 2018 (ENS) – Russian government hackers have been targeting U.S. government entities as well as organizations in the energy, nuclear, commercial facilities, water, aviation, and critical manufacturing sectors for the past two years, according to a joint Technical Alert issued by the Department of Homeland Security and the Federal Bureau of Investigation.

The alert contains indicators of compromise and technical details on the tactics, techniques, and procedures used by Russian government cyber actors on compromised victim networks.

Issued Thursday, the alert was the first official confirmation that Russian hackers can control facilities on which the majority of Americans rely for basic services. But it was not the first warning.

A report by the computer security company Symantec disclosed in October 2017 that, “The energy sector in Europe and North America is being targeted by a new wave of cyber attacks that could provide attackers with the means to severely disrupt affected operations.”

“The group behind these attacks is known as Dragonfly. The group has been in operation since at least 2011 but has re-emerged over the past two years from a quiet period following exposure by Symantec and a number of other researchers in 2014. This “Dragonfly 2.0” campaign, which appears to have begun in late 2015, shares tactics and tools used in earlier campaigns by the group,” Symantec wrote in its report.

Bloomberg News reported in July 2017 that Russian hackers had breached more than a dozen power plants in seven states, an aggressive campaign that has since expanded to dozens of states.

At risk systems are domain controllers, file servers and email servers, the alert warns.

DHS and FBI produced the alert Thursday and updated it today “to educate network defenders to enhance their ability to identify and reduce exposure to malicious activity.”

DHS and FBI characterize this activity as “a multi-stage intrusion campaign by Russian government cyber actors who targeted small commercial facilities’ networks where they staged malware, conducted spear phishing, and gained remote access into energy sector networks.”

After obtaining access, the Russian government cyber actors conducted network reconnaissance and collected information relevant to industrial control systems.

Since at least March 2016, Russian government cyber actors, called “threat actors,” have targeted government entities and multiple U.S. critical infrastructure sectors, including nuclear power plants. There are 61 commercially operating nuclear power plants with 99 nuclear reactors in 30 U.S. states.

DHS used the Lockheed-Martin Cyber Kill Chain model to analyze, discuss, and dissect malicious cyber activity. Phases of the model include reconnaissance, weaponization, delivery, exploitation, installation, command and control, and actions on the objective.

This campaign identifies two distinct categories of victims – staging and intended targets. The initial victims are peripheral organizations such as trusted third-party suppliers with less secure networks, referred to as staging targets.

The threat actors used the staging targets’ networks as pivot points and malware repositories when targeting their final intended victims.

The FBI and National Cybersecurity and Communications Integration Center conclude that the ultimate objective of the hackers is to compromise organizational networks, the intended targets.

HEADLINE	<b>03/18 UK energy system at-risk from Russia</b>
SOURCE	<a href="https://www.telegraph.co.uk/business/2018/03/18/uks-energy-system-risk-attack-russian-state/">https://www.telegraph.co.uk/business/2018/03/18/uks-energy-system-risk-attack-russian-state/</a>
GIST	Britain risks being held to ransom by Russia unless the vulnerable energy system is fortified, the Government has been warned amid escalating tensions with Europe’s main gas supplier.

As relations with Russia sour, energy infrastructure bosses been told by security officials to bolster their defences to guard against a crippling cyber attack on power plants or the national grid.

Industry experts have today responded by warning ministers to address the UK's growing reliance on foreign energy imports, which could allow Russia to use its gas market dominance as a political weapon.

Russia supplies around a third of Europe's gas, and its record exports are expected to increase. Algy Cluff, a North Sea oil veteran whose Cluff Resources firm still operates in the North Sea, warned that Britain could "so easily be held to ransom" by Russia.

Mr Cluff called on the Government to prioritise Britain's own gas resources, both in the North Sea and onshore, as part of a growing chorus of pleas for ministers to act.

"The bad weather could prove not the only 'Beast from the East' if we get this wrong as a nation," he said.

Although the UK import relatively little from Russia directly it is still more vulnerable to dramatic market price shocks than other European countries after the shutdown of its main gas storage facility at Rough.

Tomas Marzec-Manser, a gas market expert at ICIS, said: "In the next fortnight the Dutch government will slash permitted natural gas production at their massive Groningen field. That means Gazprom will fill that gap and, like it or not, more Russian gas will come to the British gas market," he said.

<b>HEADLINE</b>	<b>03/17 New, unusual cryptominer distribution</b>
<b>SOURCE</b>	<a href="https://www.hackread.com/hackers-hide-monero-cryptominer-in-scarlett-johansson-picture/">https://www.hackread.com/hackers-hide-monero-cryptominer-in-scarlett-johansson-picture/</a>
<b>GIST</b>	<p>Security researchers have identified a new but unusually distributed Monero cryptominer scam campaign involving the face of a popular celebrity.</p> <p>The IT security researchers at Imperva have discovered a campaign in which hackers have compromised PostgreSQL servers to install cryptocurrency mining malware.</p> <p>The malware is hidden in a picture of well-known Hollywood starlet Scarlett Johansson. The crypto-miner aims to mine Monero cryptocurrencies.</p> <p>PostgreSQL is a commonly used open source database, which researchers deem more sophisticated than MySQL. The malware was discovered in a honeypot, which was part of the StickyDB honeypot project from Imperva.</p> <p>It is worth noting that a honeypot is basically a computer but in this case, it was a database server that is configured deliberately to lure hackers. It is just like bait for hackers as they regard it as an easily exploitable database but it is actually a hatch.</p> <p>Imperva researchers used the database to understand common database attacks, and tools and methods used by hackers as well as to learn how they obtain access and what they do after compromising a database. They were following standard information gathering steps when they identified an unusual incident.</p> <p>Attackers had downloaded an image from a legit file hosting website. The file was a picture of Scarlett Johansson. When probed further, they learned that the file contained a hidden binary payload.</p> <p>Researcher left the database intentionally exposed. Considering that there are nearly 710,000 PostgreSQL servers that can be accessed easily from the internet, this is not a very reliable practice though and can allow attacks to launch brute-force attacks.</p>

<b>HEADLINE</b>	<b>03/16 GandCrab ransomware finds new shell</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/gandcrab-ransomware-finds-a-new/">https://www.infosecurity-magazine.com/news/gandcrab-ransomware-finds-a-new/</a>
<b>GIST</b>	<p>Ransomware actors are increasing their development agility week by week, as evidenced by the GandCrab ransomware. According to Check Point, this well-known malware has gotten around a free decryption tool meant to dull its claws.</p> <p>GandCrab is distributed on the dark web, is probably Russian in origin and targets mainly English-speaking countries, according to Check Point researchers. It’s relatively virulent, having infected over 50,000 victims and extorted an estimated \$300,000 to \$600,000 in ransom payments. More than 70% of victims are in the US and UK.</p> <p>GandCrab spreads via the RIG and GrandSoft exploit kits, as well as via email spam. However, the secret to its propagation success lies in its "franchise" model: The GandCrab Affiliate Program pays participants that commit to a set of OPSEC rules 60% to 70% of the ransom revenue in return for full technical support. GandCrab has 80 active affiliates, the largest of which has distributed over 700 different samples of the malware during the past month, according to Check Point.</p> <p>That said, GandCrab’s reign of terror looked to be at an end after a joint operation by Romanian police, Bitdefender and Europol was able to hack into the malware’s infrastructure, gathering analysis that ultimately produced a tool allowing victims to decrypt their files for free.</p> <p>“The decryption tool exploited a basic flaw in the ransomware code that gave access to the master server, enabling recovery of all of the encryption keys used in the malware,” Check Point researchers noted. “It’s the equivalent of someone locking you out of your house but leaving a spare key for you under the doormat. With this, it looked like ‘game over’ for GandCrab.”</p> <p>But it wasn’t to be: Developers behind GandCrab quickly hit back with GandCrab 2, which fixes the critical encryption flaw that would have trivially allowed a universal decryptor.</p> <p>Check Point pointed out that the GandCrab developer team could have fired the web developer and started</p>

	afresh on a better-protected server; but instead they decided to restart, showcasing unprecedented agility.

<b>HEADLINE</b>	<b>03/16 China-linked group targets maritime</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/china-linked-hackers-target-engineering-and-maritime-industries">https://www.securityweek.com/china-linked-hackers-target-engineering-and-maritime-industries</a>
<b>GIST</b>	<p>A China-related cyberespionage group that has been active for half a decade has increased its attacks on engineering and maritime entities over the past months, FireEye reports.</p> <p>Referred to as Leviathan or TEMP.Periscope, the group has been historically interested in targets connected to South China Sea issues, which hasn't changed in the recently observed attacks. Targets include research institutes, academic organizations, and private firms in the United States.</p> <p>“The current campaign is a sharp escalation of detected activity since summer 2017. Like multiple other Chinese cyber espionage actors, TEMP.Periscope has recently re-emerged and has been observed conducting operations with a revised toolkit,” FireEye says.</p> <p>Over the years, the group has also shown interest in professional/consulting services, high-tech industry, healthcare, and media/publishing. Most of the identified victims were in the United States, with some located in Europe and at least one in Hong Kong.</p> <p>The group’s tactics, techniques, and procedures (TTPs), as well as its targets, overlap with those associated with the group called TEMP.Jumper, which in turn overlaps significantly with the NanHaiShu group.</p> <p>The recently observed spike in activity also revealed the use of a broad range of malware that other suspected Chinese groups also use. These tools include backdoors, reconnaissance tools, file stealers, and webshells.</p>

<b>HEADLINE</b>	<b>03/19 Facebook confirms misuse of data</b>
<b>SOURCE</b>	<a href="https://www.bleepingcomputer.com/news/technology/facebook-confirms-gross-misuse-of-user-data-for-us-election/">https://www.bleepingcomputer.com/news/technology/facebook-confirms-gross-misuse-of-user-data-for-us-election/</a>
<b>GIST</b>	<p>Facebook has confirmed over the weekend reports that an app made by a team of academics had collected vast amounts of user data, who then shared this information with Cambridge Analytica —a commercial data analytics firm that allegedly used this info to target US voters in the 2016 Presidential election.</p> <p>In a statement outlining its version of events, Facebook revealed how University of Cambridge psychology lecturer Dr. Aleksandr Kogan had created an app named "thisisyourdigitallife" that he made available to users in 2014.</p> <p>The professor offered the app through an entity named Global Science Research (GSR), which asked users to take an online survey for \$1 or \$2. The app —just like any Facebook app— requested access to the user's profile information.</p> <p>Over 270,000 users gave the app permission to use their personal details for academic research. But besides data on the survey taker, the app also harvested information on the users' friends who had not set their profile to private. By exploiting this trick, the app harvested data on over 50 million users.</p> <p>App's data used to target US voters by Trump campaign</p> <p>But according to a report from last year from The Intercept, Kogan's work on the app was done on behalf of Strategic Communication Laboratories (SCL), a military contractor that also owns Cambridge Analytica —the data analytics company behind Donald Trump's US presidential campaign.</p>

According to Christopher Wylie, one of Kogan's collaborators, the data has been used in the US presidential election to profile individuals and target them in such a way to obtain certain responses to political messages.

This was done because the app gained access to content liked by the 50 million users, an important detail that allowed the data analytics firm to easily classify users based on their lifestyle choices and preferences.

Facebook discovered the incident in 2015

Facebook said on Friday that it became aware of the data harvesting incident from Facebook users, and took steps to make sure the involved parties had deleted the data from their servers.

"When we learned of this violation in 2015, we removed his app from Facebook and demanded certifications from Kogan and all parties he had given data to that the information had been destroyed," Facebook said. "Cambridge Analytica, Kogan and Wylie all certified to us that they destroyed the data."

But according to Wylie, the data had not been destroyed. The whistleblower provided copies of this data to New York Times and Guardian journalists —who on Friday published numerous tell-all stories from inside the Cambridge Analytica data harvesting operation [1, 2, 3].

Facebook has, in the meantime, suspended Cambridge Analytica and SCL Group from the platform, on the grounds that they violated the company's terms of service. Facebook is clearly irritated that a professional data analytics firm abused an academics license to harvest data on its users.

Facebook's ban hammer also fell on Christopher Wylie Facebook account, something that Wylie was not happy about on Sunday.

Cambridge Analytica responded to the Facebook ban on Saturday, claiming they've been misled about the data's source by GSR and indirectly by Kogan's team.

"When it subsequently became clear that the data had not been obtained by GSR in line with Facebook's terms of service, Cambridge Analytica deleted all data received from GSR," Cambridge Analytica said.

<b>HEADLINE</b>	<b>03/17 Struggling w/human side fake news</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/tech/social-media/tech-companies-struggle-human-side-fake-news-n857426">https://www.nbcnews.com/tech/social-media/tech-companies-struggle-human-side-fake-news-n857426</a>
<b>GIST</b>	<p>Fake news is a human problem. And Silicon Valley is not good at solving human problems.</p> <p>With tech platforms built to supercharge the sharing of information, tech companies, journalists, and academics are scrambling for a solution to the spread of misinformation on the internet.</p> <p>A study published last week in the academic journal Science provided a stark reminder of the challenge posed by misinformation — and why modern technology is making it worse. The study found that it took true information on Twitter six times as long as misinformation to reach 1,500 people.</p> <p>For all the concern about Russian trolls and Twitter bots, the study found that real people remain the biggest conduit for fake news.</p> <p>"You can see the viral chain of this information," said Jeremy Littau, a professor of journalism and communication at Lehigh University. "I shared from this person I trust who shared from this person they trust...It's a recipe ripe for exploitation for people who make fake news."</p>

So far, nothing has been able to stop this people problem, and Silicon Valley is running out of ideas. In an unprecedented move, Twitter CEO Jack Dorsey recently announced the company will start taking outside proposals to deal with “collective health, openness, and civility of public conversation, and to hold ourselves publicly accountable towards progress.”

Facebook, which has been shown to be an epicenter for the spread of misinformation, has rolled out a variety of tools and features. None of them appear to have been successful. Facebook ditched its fake news warning flag last December after testing it for one year.

Turns out, those kinds of flags can have the opposite of the intended effect.

"Academic research on correcting misinformation has shown that putting a strong image, like a red flag, next to an article may actually entrench deeply held beliefs – the opposite effect to what we intended," Tessa Lyons, a Facebook product manager, said in a blog post.

Alex Hardiman, Facebook’s head of news product said during a panel discussion at South by Southwest, an annual tech conference, that the company is considering drastic measures.

"As we are making the shift to quality, everything is on the table," she said.

Facebook’s previous approach did not distinguish between news sources and “that was problematic,” she said. “Flattening the news meant you couldn’t always tell the difference between something that was trusted and credible, versus something fraudulent.”

A few days later, Adam Mosseri, the head of Facebook’s Newsfeed product, admitted that people at the company are seriously concerned about reports that Facebook played a role in violence against Rohingya Muslims in Myanmar.

“We lose some sleep over this,” he said on Slate’s “If Then” podcast.

Twitter is also working on its problems. The company said that it’s figuring out how to boost “conversational health” by showing more tweets from reliable news partners.

Those efforts have been mostly cheered, but there is also concern that handing too much authority to tech companies could backfire. Most companies tried to take a hands off approach with the information posted to their platforms. Now, there’s a question of just how far they’ll go.

"We are all super concerned about these middle spaces," said Jen Golbeck, a professor at the University of Maryland's College of Information Studies. "There's a lot of misinterpretation, taking stuff out of context. We want to be really careful about censoring that. We're not interested in creating a truth-only platform because who is deciding the truth?"

Tech companies are built to spread information quickly and cheaply, and they’ve gotten very good at that.

But that speed and ease poses a serious problem when it comes to countering misinformation. Golbeck said that by the time people read something wrong, the damage is already done.

“Psychological studies have shown that "calling out conspiracy theories with the truth makes people believe false stuff more," she said.

Facebook, Twitter and YouTube have taken some action to stop harassment and abuse at the source by banning accounts. But when it comes to misinformation, they have been hesitant or slow to take similar action.

Even relatively swift responses are lacking. YouTube pulled several videos that claimed Parkland shooting survivor David Hogg was a “crisis actor.” By the time the platform took action, the videos had already

reached the top of YouTube's "Trending" section and logged millions of views and had become a talking point on the far right.

There have been journalistic approaches by internet entrepreneurs hoping to lend their expertise by creating organizations offering a community of news gatekeepers acting as sheriffs on the Wild West of the internet.

Jimmy Wales, the co-founder of Wikipedia, is piloting WikiTribune, a reader supported news source that allows anyone to fact check or flag something in an article.

"Ads are cheap, competition for clicks is fierce and low quality news sources are everywhere," Wales said in a campaign video. "Social media, where most people get their news these days, is literally designed to show us what we want to see, to confirm our biases and to keep us clicking at all costs. It fundamentally breaks the news, and the truth is, on the internet, no one is guarding the gate."

Steve Brill, a media entrepreneur who founded American Lawyer and Court TV, and Gordon Crovitz, a media executive, announced their NewsGuard venture earlier this month.

"Our goal is to help solve this problem now by using human beings—trained, experienced journalists—who will operate under a transparent, accountable process to apply basic common sense to a growing scourge that clearly cannot be solved by algorithms," Brill said in a statement.

While humans spreading fake news is a problem and every effort to stop it may have the best of intentions, perhaps the most worthwhile effort, experts suggest, is teaching a new generation about news literacy.

"The issue really becomes one... of social literacy and teaching people how to evaluate sources," Golbeck said. "If you look at elementary and high school, it's something we're not doing a great job of yet."

Littau said news literacy is one of the "greatest generational challenges" people need to address.

<b>HEADLINE</b>	<b>03/17 Claim: Facebook aware of data 'breach'</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/cambridge-analytica-facebook-knew-for-two-years-no-action-taken/">https://www.cbsnews.com/news/cambridge-analytica-facebook-knew-for-two-years-no-action-taken/</a>
<b>GIST</b>	<p>Facebook knew for two years that a data firm harvested data from more than 50 million profiles of U.S. voters without their permission but did nothing to protect its users, Guardian reporter Carole Cadwalladr told CBSN on Saturday. Cadwalladr said Facebook threatened to sue in a bid to prevent The Guardian publishing an exposé on the data harvesting. She believes Facebook didn't inform users of the misuse of data because it wasn't in the company's best interest. The Guardian story, based on interviews with whistleblower Chris Wylie who worked for the firm, published online on Saturday.</p> <p>"This continual pattern that we've seen with Facebook -- trying to shut the story down, finally when it has no choice, acknowledge it. They've just really got to do better," she said.</p> <p>"What we desperately need is for Facebook to finally open up and be as honest and transparent as it can be about the way that their platform was used and manipulated during the U.S. presidential elections, during Brexit in the U.K.," Cadwalladr said, adding that Facebook continually tried to prevent her story from being published.</p> <p>In a statement released late on Friday, Facebook acknowledged that it learned it had been "lied to" about Cambridge Analytica and an affiliate's activities in 2015, more than two years before suspending the firm from its platform, but did not alert users at the time. Facebook insisted there was no breach of their system.</p> <p>After speaking with the U.K. Information Commissioner's Office, which promotes the protection of private information, Cadwalladr said it is clear "this is a data breach."</p>

"Facebook has just turned around and blamed a third party," Cadwalladr said. "We are clear this is a data breach, and Facebook's denials in the face of it -- their claim that it's not a data breach because nobody hacked into their system -- well, failing to secure your own data, failing to see how it's being used ... that falls within the definition of a data breach. Accept it, Facebook. Own it."

"In a way it's even more damning that [Cambridge Analytica] got all of this data from Facebook without it being a breach," Wired editor-in-chief and CBS News contributor Nick Thompson said on CBSN.

"It didn't work because somebody hacked in and broke stuff," Thompson added. "It worked because Facebook has built the craziest most invasive advertising model in the history of the world and someone took advantage of it."

Since it was a violation of Facebook's terms of services, Thompson said he's not sure what government agency would be tasked with regulating the platform to prevent a recurrence in the political sphere.

<b>HEADLINE</b>	<b>03/17 Social media weaponized; data harvested</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/03/17/us/politics/cambridge-analytica-trump-campaign.html">https://www.nytimes.com/2018/03/17/us/politics/cambridge-analytica-trump-campaign.html</a>
<b>GIST</b>	<p>LONDON — As the upstart voter-profiling company Cambridge Analytica prepared to wade into the 2014 American midterm elections, it had a problem.</p> <p>The firm had secured a \$15 million investment from Robert Mercer, the wealthy Republican donor, and wooed his political adviser, Stephen K. Bannon, with the promise of tools that could identify the personalities of American voters and influence their behavior. But it did not have the data to make its new products work.</p> <p>So the firm harvested private information from the Facebook profiles of more than 50 million users without their permission, according to former Cambridge employees, associates and documents, making it one of the largest data leaks in the social network's history. The breach allowed the company to exploit the private social media activity of a huge swath of the American electorate, developing techniques that underpinned its work on President Trump's campaign in 2016.</p> <p>An examination by The New York Times and The Observer of London reveals how Cambridge Analytica's drive to bring to market a potentially powerful new weapon put the firm — and wealthy conservative investors seeking to reshape politics — under scrutiny from investigators and lawmakers on both sides of the Atlantic.</p> <p>Christopher Wylie, who helped found Cambridge and worked there until late 2014, said of its leaders: "Rules don't matter for them. For them, this is a war, and it's all fair."</p> <p>Details of Cambridge's acquisition and use of Facebook data have surfaced in several accounts since the business began working on the 2016 campaign, setting off a furious debate about the merits of the firm's so-called psychographic modeling techniques.</p> <p>But the full scale of the data leak involving Americans has not been previously disclosed — and Facebook, until now, has not acknowledged it. Interviews with a half-dozen former employees and contractors, and a review of the firm's emails and documents, have revealed that Cambridge not only relied on the private Facebook data but still possesses most or all of the trove.</p> <p>Cambridge paid to acquire the personal information through an outside researcher who, Facebook says, claimed to be collecting it for academic purposes.</p> <p>During a week of inquiries from The Times, Facebook downplayed the scope of the leak and questioned</p>

whether any of the data still remained out of its control. But on Friday, the company posted a statement expressing alarm and promising to take action.

“This was a scam — and a fraud,” Paul Grewal, a vice president and deputy general counsel at the social network, said in a statement to The Times earlier on Friday. He added that the company was suspending Cambridge Analytica, Mr. Wylie and the researcher, Aleksandr Kogan, a Russian-American academic, from Facebook. “We will take whatever steps are required to see that the data in question is deleted once and for all — and take action against all offending parties,” Mr. Grewal said.

Alexander Nix, the chief executive of Cambridge Analytica, and other officials had repeatedly denied obtaining or using Facebook data, most recently during a parliamentary hearing last month. But in a statement to The Times, the company acknowledged that it had acquired the data, though it blamed Mr. Kogan for violating Facebook’s rules and said it had deleted the information as soon as it learned of the problem two years ago.

In Britain, Cambridge Analytica is facing intertwined investigations by Parliament and government regulators into allegations that it performed illegal work on the “Brexit” campaign. The country has strict privacy laws, and its information commissioner announced on Saturday that she was looking into whether the Facebook data was “illegally acquired and used.”

In the United States, Mr. Mercer’s daughter, Rebekah, a board member, Mr. Bannon and Mr. Nix received warnings from their lawyer that it was illegal to employ foreigners in political campaigns, according to company documents and former employees.

Congressional investigators have questioned Mr. Nix about the company’s role in the Trump campaign. And the Justice Department’s special counsel, Robert S. Mueller III, has demanded the emails of Cambridge Analytica employees who worked for the Trump team as part of his investigation into Russian interference in the election.

While the substance of Mr. Mueller’s interest is a closely guarded secret, documents viewed by The Times indicate that the firm’s British affiliate claims to have worked in Russia and Ukraine. And the WikiLeaks founder, Julian Assange, disclosed in October that Mr. Nix had reached out to him during the campaign in hopes of obtaining private emails belonging to Mr. Trump’s Democratic opponent, Hillary Clinton.

The documents also raise new questions about Facebook, which is already grappling with intense criticism over the spread of Russian propaganda and fake news. The data Cambridge collected from profiles, a portion of which was viewed by The Times, included details on users’ identities, friend networks and “likes.” Only a tiny fraction of the users had agreed to release their information to a third party.

“Protecting people’s information is at the heart of everything we do,” Mr. Grewal said. “No systems were infiltrated, and no passwords or sensitive pieces of information were stolen or hacked.”

Still, he added, “it’s a serious abuse of our rules.”

<b>HEADLINE</b>	<b>03/16 Puppy scams litter the internet</b>
<b>SOURCE</b>	<a href="http://www.kansas.com/news/local/article205492564.html">http://www.kansas.com/news/local/article205492564.html</a>
<b>GIST</b>	<p>National Puppy Day, March 23, may not be a red-letter holiday on any of our calendars but millions of Americans seem to be in love with its subject.</p> <p>The Better Business Bureau warns that if you have a case of puppy love and it was prompted by a picture seen in an online ad, beware: Odds are that puppy is fictional. Experts say up to 80% of sponsored online pet advertisements may be fake.</p>

Scammers, often but not always from overseas, know how cute puppy pictures can tug on the heartstrings. For several years they have used photos taken from other online sources to lure animal lovers into sending them money. Once they have hooked a victim, the requests for more and more money continue.

A BBB investigation found that the scams usually come from Cameroon in West Africa. With the help of their fellow countrymen residing in the U.S., they collect their victims' money. Fake online ads are placed offering the pets at deeply discounted prices. Shipping costs are requested and often a special shipping crate is also mentioned as a necessary purchase. Then comes charges for special insurance and shots for the animal.

If money continues to be sent, more requests follow. There may be a claim that the pet is stuck at an airport and money should be sent for care for them. Eventually the victim realizes they have been scammed and stops the process.

Embarrassment and humiliation at having been fooled keeps many from ever even reporting that they have been taken in. The FTC estimates that only 10% of those who fall for the scam ever notify authorities about their experience.

<b>HEADLINE</b>	<b>03/16 Feds: Russia hack didn't compromise grid</b>
<b>SOURCE</b>	<a href="https://www.newsmax.com/newsfront/us-russian-hack-power-grid/2018/03/16/id/849193/">https://www.newsmax.com/newsfront/us-russian-hack-power-grid/2018/03/16/id/849193/</a>
<b>GIST</b>	<p>A Russian government hacking operation aimed at the U.S. power grid did not compromise operations at any of the nation's power plants, federal regulators and the industry said Friday.</p> <p>Corporate networks at some of the 99 nuclear power plants licensed by the Nuclear Regulatory Commission were affected by the 2017 hack aimed at the energy grid and other infrastructure, but no safety, security or emergency preparedness functions were impacted, the NRC said in a statement.</p> <p>The Federal Energy Regulatory Commission also said the incident had no operational impacts on interstate transmission of electricity.</p> <p>Even so, government and industry leaders said the attacks underscored the increased threat of electronic and computer-based attacks on a range of infrastructure.</p> <p>Energy Secretary Rick Perry said the prolonged cyberattack "demonstrates exactly why" he is creating an Office of Cyber Security and Emergency Response. The new office will consolidate and strengthen efforts to "combat the growing nefarious cyber threats we face," Perry said, adding that his department worked closely with other federal agencies and energy providers to help ensure that hacking attempts "failed or were stopped."</p> <p>The Trump administration accused Moscow on Thursday of an elaborate plot to penetrate America's electric grid, factories, water supply and even air travel through cyber hacking.</p> <p>U.S. national security officials said the FBI, Department of Homeland Security and intelligence agencies determined Russian intelligence and others were behind a broad range of cyberattacks starting more than a year ago. Russian hackers infiltrated the networks that run the basic services Americans rely on each day: nuclear power, water and manufacturing plants.</p> <p>U.S. officials said the hackers chose their targets methodically, obtained access to computer systems, conducted "network reconnaissance" and then attempted to cover their tracks by deleting evidence of the intrusions. The operation resorted to various methods — including a kind of cyberattack known as spear-phishing — to try to compromise legitimate user accounts, gather user credentials, and target industrial control systems and their networks, officials said.</p>

The U.S. government has helped the industries expel the Russians from all systems known to have been penetrated, but additional breaches could be discovered, officials said.

The Nuclear Energy Institute, an industry lobbying group, said the Russian hacking campaign targeting U.S. infrastructure "demonstrated that America's nuclear plants can withstand a nation-state sponsored attack."

U.S. nuclear plants are designed as operational "islands" that are not connected to the internet and other networks. Nuclear power provides about 20 percent of the nation's electricity.

The Edison Electric Institute, which represents investor-owned electric companies that provide electricity for about 220 million Americans, said the government informed energy grid operators last year of a threat targeting them.

"While this incident did not have operational impacts, we have worked across the sector and with government partners to ensure the ongoing protection of the grid from this specific threat and from all cyber and physical security risks," said Scott Aaronson, the group's vice president of security and preparedness.

Sen. Maria Cantwell of Washington state, the top Democrat on the Senate Energy Committee, criticized the "belated response" by the Trump administration to Russian cyber threats and urged "a robust and aggressive strategy to protect our critical infrastructure."

Calling cyber security "an issue that keeps me up at night," Cantwell said the grid and its infrastructure are "under attack from the Russians and other foreign actors. If we don't make the necessary investments ... our enemies could succeed in causing a blackout that harms our economy."

<b>HEADLINE</b>	<b>03/18 Boko Haram Dapchi girls taunts Nigeria</b>
-----------------	---

SOURCE	<a href="https://www.nytimes.com/2018/03/18/world/africa/boko-haram-dapchi-girls-nigeria.html">https://www.nytimes.com/2018/03/18/world/africa/boko-haram-dapchi-girls-nigeria.html</a>
GIST	<p>DAPCHI, Nigeria — When he heard the gunfire, the guard ran outside the all-girls boarding school and saw camouflaged vehicles barreling toward the gate. Thinking they were Nigerian military troops, he rushed toward them.</p> <p>“Have you heard the gunshots?” Ali Gambo, 70, the unarmed guard, asked the men inside the truck. “What’s happening?”</p> <p>Three men dressed in army fatigues and turbans jumped down from the vehicles, threw Mr. Gambo to the ground and pointed a gun at his head.</p> <p>“We are Boko Haram,” Mr. Gambo recalled him saying. “We are here for your students.”</p> <p>Hours of chaos and confusion followed as the militants stormed the campus last month, firing into the air. Students and teachers at the Dapchi school in northern Nigeria ran for their lives.</p> <p>The gunmen gathered up 110 girls, some as young as 11, dragged them into their trucks and sped away, leaving girls’ sandals and flip-flops scattered across the schoolyard in their wake.</p> <p>President Muhammadu Buhari has declared Boko Haram, the Islamist extremist group, defeated time and again. But the militants’ attack on the Dapchi school has left anguished parents and community members asking how such a kidnapping could happen again, not even four years after another mass abduction of schoolgirls shocked the world.</p> <p>But even as the president says he intends to negotiate for their release, the kidnappings are threatening to become a major issue in next year’s presidential election.</p> <p>In April 2014, Boko Haram kidnapped nearly 300 girls from another northern secondary school, in Chibok. Dozens were released last year through government negotiations, and a few have escaped. But nearly four years later, more than 100 are still being held.</p> <p>Goodluck Jonathan, who was president at the time of the Chibok kidnapping, was widely criticized for not immediately acting to find the students, and government officials had vowed nothing like that would ever happen again.</p> <p>Nigeria’s war with the Islamist militants is entering its ninth year, having swept up scores of victims who lost their homes, their children and their lives to brutal violence that spilled across the nation’s borders. Villages have been burned, children have been kidnapped and conscripted into fighting, women and girls have been raped, and teenagers have been forcibly strapped with explosives to carry out suicide bombings.</p> <p>Not long ago, it seemed as if the Nigerian military was making progress against the extremists, who want to create a religious state of their own. Soldiers regained territory controlled by Boko Haram and captured or killed fighters whose capabilities became so weak that they could no longer pull off complicated operations. The group splintered amid infighting.</p> <p>But in the past few months, Boko Haram has raged back, attacking military convoys and outposts and dispatching a steady stream of suicide bombers to attack checkpoints and crowds. In December, a faction that has pledged allegiance to the Islamic State engaged in a firefight with the American military carrying out training exercises in neighboring Niger. Eleven militants were killed, including two wearing suicide vests.</p> <p>President Buhari, who pledged to crush the militants, visited Dapchi on Wednesday to set up a committee to look into the kidnappings in an attempt to soothe outraged critics who accuse federal officials of being slow to respond.</p> <p>“There will be no rest till the last girl, whether from Chibok and Dapchi, is released,” Mr. Buhari said in a</p>

statement. “The girls, like all our citizens, must enjoy unhindered freedom and pursue their legitimate aspirations.”

This past week, the president had also assured Rex W. Tillerson, the United States secretary of state before he was fired, that the government was “trying to be careful” by pursuing negotiations with militants to bring back the Dapchi girls and the rest of the Chibok students.

Gen. Thomas D. Waldhauser, head of the United States Africa Command, told a congressional committee this month that Nigeria had asked for intelligence and other support to help find all the missing girls. He said the Dapchi students were most likely taken by a faction of militants that had pledged allegiance to the Islamic State, and he called Boko Haram “one of the most deplorable organizations on the planet.”

In recent months, President Buhari has suffered embarrassing setbacks.

This month, a Boko Haram attack killed security forces and humanitarian workers at a camp for displaced workers in Rann that Nigerian military jets accidentally bombed last year, killing dozens. A few months ago, militants kidnapped a group of policewomen and a team of university professors who were on an oil exploration trip. The government recently negotiated for their release.

Last year, officials bargained to free dozens of students taken from the Chibok school, paying millions of dollars in ransom and exchanging several Boko Haram commanders as part of a hostage swap, according to negotiators. Many Nigerians questioned the wisdom of paying ransom to militants who may view abductions as a reliable revenue source.

In Dapchi, parents, teachers, students and residents recalled the night that Boko Haram arrived, the first major security incident there since the war began. Aliyu Musa Mabu, the school’s vice principal, had just finished serving meals to students and was heading to the mosque when he heard the first gunshot. It must be nothing, he said he thought to himself, and settled in to pray. Then he heard another shot.

He raced outside and saw two military trucks and a pickup armed with an anti-aircraft gun. Men were crammed inside, wearing turbans and military fatigues. They were heading toward the school.

By the time Mr. Mabu caught up with them, chaos had unfolded. According to witness accounts, girls were running everywhere, some scaling the fence to get free. Militants pulled some down and told others they were soldiers, guiding the girls into their vehicles saying they would protect them. In the confusion, many of the girls believed them and scrambled over one another to get inside the men’s trucks.

Militants who saw one student, Hafsat Lawan, 17, and her friends hurrying over the fence beckoned them to come for safety. The girls started toward the fighters but, Ms. Lawan later said, became suspicious of their turbans and sandals and their use of the local language, which is often unfamiliar to soldiers recruited from across the country. She fled.

“The sad thing is some of the students ran to them — including my younger sister,” said Ms. Lawan, whose 14-year-old sister is presumed to be among the hostages.

As the trucks headed outside town, witnesses said, some of the girls appeared to be tied up with their own clothing. They heard the screams as the vehicles sped away.

Afterward, an eerie silence fell over the area. Not long after, many of the girls who had been hiding in the bush started to trickle back to the school. But tallying the missing was complicated. Some girls, like Fatima, spent the entire night in the countryside, too terrified to return. Some fled straight to their family farms, far from the reach of cellular networks. Hours after the kidnapping, school officials found girls still hiding in toilets, classrooms and other buildings on the campus.

In the days immediately after the attack, the police denied an abduction had taken place. Then a state official announced that the girls had been rescued. Elated parents rushed to the school as the governor’s

convoy rolled into town with vehicles they presumed were carrying their daughters. Instead, the governor announced he had been mistaken; the girls were still missing. He apologized. Parents rioted.

Residents have since learned that a military checkpoint at the entrance to town had been dismantled not long before the kidnapping, when soldiers left to pursue Boko Haram near the Nigerian border. Dapchi employs a police force, but on the night of the attack, the commander was out of town.

“They came and did their operation uninterrupted and left,” said Hadiza Jibo, the school matron. “This is something that would have been averted if military presence was visible in the town. It’s really traumatic, honestly.”

The military and the president have sought to reassure Nigerians that they are looking for the girls. But Mr. Buhari recently angered residents by traveling to a lavish wedding before heading to Dapchi to sympathize with the missing girls’ families.

Even the girls who escaped are traumatized, he said, and some are afraid to return to school. Several public figures in Nigeria have said the kidnapping reflects poorly on the government.

“We are spending billions trying to encourage girls to go to school, only to allow them be abducted by terrorists,” said Atiku Abubakar, a former vice president who is likely to run for president in 2019. “I condemn these abductions, and I urge the federal government to take firm action to ensure that it would never reoccur in Nigeria.”

As the election approaches, calls are growing from both the president’s critics and one-time supporters for him not to seek a second term in office. Some rivals are using the Dapchi kidnapping to build their case, and a fringe element has even accused the president of orchestrating the kidnappings so that he could emerge heroic by negotiating the girls’ release.

<b>HEADLINE</b>	<b>03/18 Israel: ‘mapping’ potential terrorists</b>
<b>SOURCE</b>	<a href="https://worldisraelnews.com/idf-adopts-techniques-for-mapping-potential-terrorists/">https://worldisraelnews.com/idf-adopts-techniques-for-mapping-potential-terrorists/</a>
<b>GIST</b>	<p>The Israel Defense Forces is developing new sophisticated techniques, including extensive psychological profiling, in an effort to prevent “lone wolf” terror attacks, the Hebrew language daily Makor Rishon reported on Sunday.</p> <p>According to the report, intelligence services in IDF Central Command have adopted a process of “mapping” potential terrorists. This allows the IDF to preempt possible attacks as well as capture terrorists who have already committed them.</p> <p>A senior officer involved in the program told Makor Rishon, “In this work we search for direct connections to terror or attempts to create connections like this. An index system classifies who is likely to get involved in terror. Bottom line, we thwart dozens of attacks before they are carried out thanks to intelligence work and operational actions.”</p> <p>The main problem, however, is attacks committed by those with no previous connection to terrorism or terrorist organizations.</p> <p>The IDF is seeking to combat this problem through the psychological profiling. Another officer involved in the project explained, “To understand who their friends are, who influences them, what their psychological state is, and even signs they leave in the field, can teach us about their intentions.”</p>

HEADLINE	<b>03/18 Pakistan claims rebirth in tribal regions</b>
SOURCE	<a href="https://www.washingtontimes.com/news/2018/mar/18/pakistan-ousts-terrorists-rebuilds-border-region/">https://www.washingtontimes.com/news/2018/mar/18/pakistan-ousts-terrorists-rebuilds-border-region/</a>
GIST	<p>MIRAN SHAH, Pakistan — Clean, safe and secure.</p> <p>These are the supposed hallmarks of Pakistani tribal border regions touted by Islamabad, an image paid for with blood and treasure in a two-year campaign to clear North Waziristan’s provincial capital from groups such as the Pakistani Taliban and notorious Haqqani network.</p> <p>But the new schools, homes and markets with their glistening coats of paint and freshly poured concrete mask a seeming ghost town.</p> <p>Few residents of the largest city in North Waziristan rarely venture into the heart of the city center — the site of the some of the most intense clashes with radical Islamic militant groups that refuse to go away.</p> <p>The fighting had become so intense that Pakistan’s military, at the onset of the operation, forcefully evacuated thousands of civilians into “temporary displaced persons” camps elsewhere within the border region between Afghanistan and Pakistan — known as the Federally Administered Tribal Areas.</p> <p>From high atop Sarbanki Fort, one of several Pakistani army outposts manned by units from the “Golden Arrows” 7th Division, Brig. Gen. Jawad proudly pointed out for a small group of visiting reporters the burgeoning skyline of markets, schools, homes and businesses that cover a wide swath of Miran Shah’s new city center.</p> <p>When asked what happened to the homes and businesses that stood in their place before the government offensive into North Waziristan, Gen. Jawad replied dispassionately, “They were no more. Wiped away clean.”</p> <p>In the two years since the official end of the North Waziristan operation, Islamabad claims life has slowly returned to Miran Shah and the surrounding provinces, despite continuing complaints from the Trump administration and the Afghan government that Pakistan is not going enough to root out extremist groups that use the border regions as a sanctuary, training base and launching pad for attacks inside Afghanistan.</p> <p>Maj. Gen. Azhar Ali Shah, head of all 7th Division forces in North Waziristan, said in a briefing that he has “taken a back seat” to Pakistani military and civilian-led redevelopment operations in Miran Shah, one of the largest cities in the Federally Administered Tribal Areas.</p> <p>“In this whole area, I do not have any enemies,” he said.</p> <p>One fresh sign of progress: Pakistan on March 10 announced the reopening of a key Ghulam Khan border post between the North Waziristan tribal region and Afghanistan, allowing for trade convoys to pass. The crossing was closed for three years after government forces launched a major operation against the Pakistani Taliban and foreign militants in the area.</p> <p>At a low point in Islamabad-Washington relations, President Trump singled out Pakistan as a problem last summer in his revised battle plan for Afghanistan.</p> <p>Gen. Joseph L. Votel, head of Central Command, which oversees the South Asian theater, and Gen. John Nicholson, who commands the 14,000-plus U.S. troops stationed in Afghanistan, recently called out Pakistan from what the Pentagon said was an insufficient effort in dealing with terrorist groups on its soil.</p> <p>“Having sanctuary in Pakistan or having support from other actors in the region certainly is an aspect of the Taliban’s success here,” Gen. Votel told a March 14 Senate Armed Services Committee hearing in Washington. “I cannot tell you that we have seen decisive changes in the areas in which we’re working, but I remain very well-engaged with my [Pakistani] partner to ensure that we are moving forward on this.”</p>

	<p>Radical links</p> <p>Despite Pakistan’s public pronouncements, many U.S. officials and private analysts contend its powerful intelligence services maintain long-standing links to radical Islamist groups as a lever to pressure Kabul and as an asset in Islamabad’s rivalry with its greatest strategic challenge: India.</p> <p>But Gen. Azhar said his country’s contributions and sufferings from the global war on terror, some with roots in the U.S.-backed war against the Soviet Union in Afghanistan in the 1980s, have been consistently overlooked by Washington and other foreign critics. Over 800 Pakistani soldiers died and 3,500 were wounded in the operation to flush out extremist groups from their redoubts in North Waziristan, he said.</p> <p>“We did not fight the population; we [only] fought the terrorists” he said.</p> <p>But that success has come at a cost that is evident from a quick survey of the landscape.</p> <p>Bombed-out plots of land that once housed local businesses lay in tatters, as do mud-brick compounds that housed generations of Waziri families. Trash and debris line the newly paved roads that cross the former Haqqani stronghold.</p> <p>Small black placards baking in the sun, erected by 7th Division troops, list the family names of those who owned the shops and homes, waiting for them to reclaim their property.</p> <p>Those who have stuck it out agree with Gen. Azhar’s contention that the most dangerous place on earth has turned a corner.</p>

<b>GIST</b>	<p>March 18 (UPI) -- A New York City ferry captain-turned-firefighter who helped hundreds of people evacuate from the World Trade Center during the 9/11 attacks died on Friday at the age of 45.</p> <p>Thomas Phelan died of cancer that he developed from toxic fumes at Ground Zero in the aftermath of the terrorist attacks.</p> <p>Phelan was a captain of the Statue of Liberty ferry at the time of the attacks. When the planes hit the towers, he turned the ferry around and took part in the "largest evacuation in NYC history" by taking people to the other side of the Hudson River, NYC Fire Wire said in a statement.</p> <p>"He brought supplies, rescue workers &amp; was a huge part of the operation," NYC Fire Wire said.</p> <p>Two years later, Phelan joined the New York City Fire Department.</p> <p>"He would help anyone and everyone any chance he could," wrote Paul Iannizzotto, who worked with Phelan at Engine 55, according to the New York Daily News. "I just can't believe this and honestly don't understand why it's always the good ones we lose way to early. Always a stand up guy, always doing the right thing, and will be sorely missed."</p> <p>More than 170 FDNY crew members have died of illnesses caught from toxic fumes in the aftermath of the 9/11 attacks, according to the Uniformed Firefighters Association of Greater New York.</p> <p>More than 5,400 people have been diagnosed with cancer related to the 9/11 attacks, according to the Centers for Disease Control and Prevention.</p>

<b>HEADLINE</b>	<b>03/16 Claim: CIA 'kill teams' target terrorists</b>
<b>SOURCE</b>	<a href="https://www.buzzfeed.com/aramroston/cia-trump-kill-teams-terrorists?bfsplash&amp;utm_term=.bxOjEQKnG#.qu8Q6VNKR">https://www.buzzfeed.com/aramroston/cia-trump-kill-teams-terrorists?bfsplash&amp;utm_term=.bxOjEQKnG#.qu8Q6VNKR</a>
<b>GIST</b>	<p>The Central Intelligence Agency has been deploying small teams of commandos to kill selected suspected terrorists, according to two sources familiar with the program.</p> <p>The program, which has not been previously disclosed, is coordinated by units from the CIA's Special Activities Center, which oversees the agency's paramilitary capability, the sources said.</p> <p>The CIA denied that it has such a program. "Your story is wrong," said Ryan Trapani, an agency spokesperson.</p> <p>Director Mike Pompeo, who President Trump has just tapped to become secretary of state, has publicly said the agency will become more "aggressive" and "vicious" but has not mentioned the new effort to kill terrorists.</p> <p>The two sources said that now CIA commandos are leading squads on missions to kill terrorists on the ground. "It's a small number where it has been kinetic, but it is happening," said one of the sources, a recently retired intelligence official familiar with the program. "Kinetic" is the euphemism often used for violent military action.</p> <p>Both sources said that when Pompeo became director and first pushed for these lethal ground operations, there was resistance to this type of program from the military and the National Security Council. Later, though, they said, the effort was approved.</p> <p>"They are getting people on targeting lists," one of the sources said. "Small teams are locating and killing bad guys. That's what we are doing."</p> <p>In 2009, the Obama administration shut down a similar CIA effort to stand up assassination squads. Under Obama, killing by unmanned drones surged, and the agency continues to use drones to attack suspected terrorists.</p>

The Special Activities Center is now led by a former commando at the agency. BuzzFeed News is withholding his name at the request of the CIA. Until this spring, he was a senior aide to Pompeo, and before that, he served under John Brennan, Pompeo's predecessor. He was, according to a source who knows him, a vocal proponent of more aggressive and audacious operations, and he pushed for the use of the SAC to kill terrorists.

Pompeo, according to the two sources, also pushed for the capabilities and the authorization to launch lethal ground operations.

The idea of using commandos to kill terrorists, rather than using Predator drones, is not new.

Under Obama, of course, the CIA sent SEALs to Pakistan to kill Osama bin Laden. But sources say this tactic was extremely rare, as the Obama administration focused on the use of drones in its counterterror efforts. Under Obama, the military's Joint Special Operations Command did conduct frequent raids in Afghanistan and elsewhere, but the CIA was not active, sources say, in the on-the-ground effort.

Under former president Bush, the CIA had turned to Prince, the Blackwater founder, to develop the capability to conduct assassinations of terrorists. As BuzzFeed News reported, Pompeo installed a CIA official at the White House National Security Council who had once worked on that program.

The Special Activities Center, previously known as the Special Activities Division, houses the CIA's Ground Branch, a group of commandos; the Air Branch, which has intelligence, attack, and transport aircraft; and the Maritime Branch. All three branches have been on a recruitment and hiring and acquisition binge, according to the two sources familiar with the program.

The Ground Branch, shortened to just "Branch" or "GB," inside the agency, is made up of elite fighters, often taken from the ranks of SEALs, Delta Force, and Marine Special Operations Command. They are dubbed Paramilitary Operations Officers, or PMOO, which they pronounce "peemoo." In the past, they were largely seen as support staff, helping case officers on projects, or for training foreign forces. Now they are used in direct actions and are operating on their own.

There are only about 100 or so of these fighters, but under Trump the numbers have been growing.

As BuzzFeed News first reported last year, another unconventional counterterrorism tactic the agency considered under Pompeo was privatizing some covert operations, intelligence gathering, and even a terrorist "rendition" in a Middle Eastern country. This plan, according to a source familiar with the project, has faded since news of the effort broke.

<b>HEADLINE</b>	<b>03/16 Military: 7 killed in Iraq helicopter crash</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/military/u-s-helicopter-crashes-western-iraq-rescue-underway-n857156">https://www.nbcnews.com/news/military/u-s-helicopter-crashes-western-iraq-rescue-underway-n857156</a>
<b>GIST</b>	<p>All seven service members aboard an American military helicopter that crashed in western Iraq late Thursday were killed, according to two U.S. military officials.</p> <p>The crash of the U.S. HH-60 Pave Hawk helicopter does not appear to be a result of enemy activity and the incident is under investigation, U.S. Central Command and military officials said.</p> <p>"All personnel aboard were killed in the crash," said U.S. Army Brig. Gen. Jonathan P. Braga, the director of operations for the U.S.-led anti-Islamic State coalition in Iraq and Syria.</p> <p>The helicopter was used by the Air Force for combat search and rescue, and was in transit from one location to another when it went down Thursday afternoon near the town of Qaim, where where the anti-ISIS coalition has an outpost near the Syrian border.</p>

	<p>An accompanying U.S. helicopter immediately reported the crash and a quick reaction force comprised of Iraqi Security Forces and Coalition members secured the scene, according to a statement from CENTCOM.</p> <p>"While the investigation is still ongoing, there is absolutely no reason to believe this involved enemy action," said Col. Thomas Veale, a spokesman for the U.S.-led coalition battling the Islamic State. "All indications are this was an accident during a routine troop movement. The Department of Defense will release casualty details after next of kin notifications are complete."</p>

<b>HEADLINE</b>	<b>03/18 Austin bombings 'meant to send message'</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/us-news/deadly-austin-bombings-were-meant-send-message-police-chief-says-n857786">https://www.nbcnews.com/news/us-news/deadly-austin-bombings-were-meant-send-message-police-chief-says-n857786</a>
<b>GIST</b>	<p>A deadly string of unsolved bombings in Texas this month was "meant to send a message," though Austin Police Chief Brian Manley didn't say what that message was during a Sunday news conference.</p> <p>Manley said that he hoped the bomber was watching and would "reach out to us before anyone else is injured or killed."</p> <p>The plea came as local and federal authorities increased the reward for information leading to a conviction in the bombings, which killed two and injured two others earlier this month, to \$100,000, Manley said. Texas Gov. Greg Abbott was also offering \$15,000.</p> <p>Late Sunday, Austin police were investigating an explosion in a neighborhood in the southwestern part of the city. Authorities said that two men in their 20s sustained non-life-threatening injuries and that they were still examining a suspicious backpack in the area.</p> <p>The nature of the explosion wasn't immediately clear, and there was no immediate indication that it was connected to the package bombings that killed Stephen House and Draylen Mason. Both men were African-American members of the same church, Nelson Linder, the local NAACP chapter president, told NBC News last week.</p> <p>Asked Sunday whether the bombings were racially motivated, Manley said it's possible.</p> <p>"We don't have any evidence," he said. "What we know for certain is: We have three victims that are victims of color, and we have three package bombs that have exploded on the east side of Austin," where many of the city's minority residents live.</p> <p>Brian Jenkins, an analyst with Rand Corp. who has studied bombings, said in an interview that Manley's invitation to contact authorities could prove fruitful.</p> <p>He pointed to the Unabomber, Theodore Kaczynski, who killed three people and injured nearly two dozen more during a bombing campaign that lasted two decades, and his "desire to communicate, to have some kind of pronouncement or manifesto."</p> <p>"He made the offer that he'd suspend his campaign if his manifesto was published," Jenkins said. "The publication of that ultimately led to him being identified."</p>

HEADLINE	<b>03/18 UK: nerve agent in car vent system</b>
SOURCE	<a href="http://abcnews.go.com/International/russian-spys-poisoning-uk-believed-nerve-agent-car/story?id=53832515">http://abcnews.go.com/International/russian-spys-poisoning-uk-believed-nerve-agent-car/story?id=53832515</a>
GIST	<p>The Russian ex-spy who along with his daughter was poisoned by a nerve agent in the U.K. may have been exposed to the neurotoxin through his car's ventilation system, sources told ABC News.</p> <p>Former Russian spy Sergey Skripal and his daughter, Yulia, were found slumped over, unconscious on a park bench earlier this month in the southern English town of Salisbury. The U.K. has accused Russia of bearing responsibility for the March 4 attack, which British officials say involved a military-grade nerve agent of a type developed secretly by Russia.</p> <p>U.K. officials now have a clearer picture of just how the attack was conducted, sources said. They believe the toxin was used in a dust-like powdered form and that it circulated through the vents of Skripal's BMW.</p> <p>Three intelligence officials told ABC News that the Russian military origin and the nature of the substance, a “dusty” organophosphate neurotoxin, are clear to them.</p> <p>“It is a Cold War substance, something they claimed never to have,” one senior intelligence official said of Russia to ABC News.</p> <p>The intelligence officials told ABC News up to 38 individuals in Salisbury have been identified as having been affected by the nerve agent but the full impact is still being assessed and more victims sickened by the agent are expected to be identified.</p> <p>U.S. government chemical warfare experts are also working closely with their British counterparts on what is a major investigation.</p> <p>“It's seen here as an attempted murder and premeditated,” rather than an attempt just to sicken Skripal with a non-lethal toxin or scare other Russian ex-spies, an intelligence official told ABC News.</p> <p>Among the more than three dozen sickened by exposure to the agent, most are believed to be suffering minimal symptoms in contrast to the hospitalized Skripal, his daughter Yulia and a responding police officer.</p> <p>Another possible clue to the poisoning is that sources told ABC News Skripal was shouting and acting incoherently in a restaurant just before he and his daughter collapsed. Such incoherent behavior could be consistent with the early stages of exposure to a nerve agent.</p>

HEADLINE	<b>03/17 United diverts flight; 3<sup>rd</sup> dog incident</b>
SOURCE	<a href="https://www.washingtonpost.com/news/dr-gridlock/wp/2018/03/17/united-flight-had-to-be-diverted-because-it-accidentally-had-a-dog-onboard/?utm_term=.ce39f1b3f3ae">https://www.washingtonpost.com/news/dr-gridlock/wp/2018/03/17/united-flight-had-to-be-diverted-because-it-accidentally-had-a-dog-onboard/?utm_term=.ce39f1b3f3ae</a>
GIST	<p>United Airlines had an in-flight incident involving a dog.</p> <p>No, not that <a href="#">one</a>.</p> <p>Or this <a href="#">one</a>.</p> <p>Another one.</p> <p>A United flight from Newark to St. Louis was diverted Thursday after the airline learned it had an unauthorized passenger onboard: a dog. The pet was bound for Akron, Ohio, but was mistakenly loaded onto the St. Louis flight, company spokeswoman Natalie Noonan told The Washington Post on Saturday.</p>

And so the plane followed the dog's itinerary. Flight 3996 banked toward northeast Ohio after the airline "chose the fastest option to reunite the dog with his family," Noonan said.

Passengers were provided compensation for the delay, Noonan said, but she declined to describe the compensation or confirm how many passengers were onboard. CNN reported 33.

Ian Petchenik, a spokesman for the flight-data company [Flightradar24](#), told The Post that the flight averages about two hours. This was a four-hour journey, with roughly an hour and a half spent on the ground in Akron after diverting near Columbus, he said.

The incident was United's third dog-related incident this week; fortunately this time, it led to a happier conclusion than the first. On Monday, a French bulldog puppy named Kokito [suffocated to death](#) in an overhead bin, after a flight attendant insisted the owner stow the dog there for a three-hour flight from Houston to New York.

<b>HEADLINE</b>	<b>03/17 Claim: UK cops at risk from Kremlin</b>
<b>SOURCE</b>	<a href="https://www.thedailybeast.com/uk-cops-will-be-at-risk-from-the-kremlin-if-inquiry-takes-them-to-russia-says-the-detective-who-hunted-litvinenkos-killers?ref=home">https://www.thedailybeast.com/uk-cops-will-be-at-risk-from-the-kremlin-if-inquiry-takes-them-to-russia-says-the-detective-who-hunted-litvinenkos-killers?ref=home</a>
<b>GIST</b>	<p>LONDON—As one of Britain's most senior counterterror investigators, former Detective Inspector Brian Tarpey conducted operations at the height of The Troubles in Northern Ireland; followed the trail of jihadis to North Africa; entered the notorious Black Beach prison in Equatorial Guinea; and tracked the 2005 London terrorists all the way back to their lawless training camps in Pakistan.</p> <p>In all of his investigations, he says he was harmed only once: in Moscow, during the hunt for the killers of Alexander Litvinenko. The Russian dissident had died in London after being poisoned with a dose of the radioactive isotope polonium-210 that was slipped into a pot of tea.</p> <p>The Russian authorities said they would help the team from Scotland Yard to run down their leads and interview the prime suspects. Instead the detectives encountered obstruction, ultimatums, subterfuge, intimidation, a possible body double, and even a case of suspected poisoning.</p> <p>It was the most difficult foreign assignment of Tarpey's career.</p> <p>When he sat opposite a delegation from the Russian prosecutor general's office at the beginning of the trip in December 2006, he had no idea that the rogues' gallery on the other side of the long table featured some of Vladimir Putin's top enforcers including a future member of the U.S. Treasury's sanctions list and the suspected mastermind of Russia's alleged pro-Trump influence campaign.</p> <p>After just a few days of investigation in Moscow, it was obvious to Tarpey that this supposedly independent branch of the justice system was being run as a de facto intelligence operation with immense power and resources. They weren't tested at the time, but he's convinced that he and a colleague were given tainted cups of tea inside the prosecutor general's office, which left them both suffering from gastroenteritis-like symptoms. Tarpey began to feel unwell as soon as he left the building.</p> <p>The very first thing the prosecutors had demanded from the British delegation at the meeting was a quid pro quo—we'll let you interview your witnesses if you help us secure access to an anti-Putin dissident who had sought exile in Britain. At each subsequent meeting they would ask for updates on their request to question the arch-critic Boris Berezovsky, an oligarch who was once a powerful ally of Vladimir Putin.</p> <p>"It was a barter. They'd say 'Yeah we'll help you, but what about Berezovsky?' And the long and short of it was that their investigator was allowed to come here to the U.K. and interview him," Tarpey told The Daily Beast.</p>

The British government has never admitted there was a trade-off to allow access to one of Putin's most hated foes. Some five years after his visit from the Russians, Berezovsky was found dead with a ligature around his neck.

An inquest recorded an open verdict, with the coroner admitting that he did not know if this was a suicide or an unlawful killing. One of Berezovsky's friends who most vociferously argued that the oligarch had been murdered was Nikolai Glushkov.

This week Glushkov body was found at his London home. He was the former head of the national airline Aeroflot, and was wanted in Russia on charges of fraud and embezzlement. His death may have looked like yet another suicide by a Russian dissident in England, but this time a pathologist observed that a compression to the back of the neck had been fatal.

Thus, Scotland Yard's SO15 counter terror command opened its second inquiry into the murder or attempted murder of a Russian émigré in less than two weeks. Sergei Skripal and his daughter, Yulia, are still in the hospital after being poisoned with a Russian nerve agent in the city of Salisbury in south-west England.

"It just underlines the arrogance, doesn't it," Tarpey said. "In the midst of what's happening in Salisbury, they may have gone and done another one. It's almost like somebody is out of control. If you were the Mr. Big ordering these hits—which somebody obviously is—then you'd think, OK, maybe I'll lay low a little while until Salisbury blows over before taking out the next one.

"For me the second one is almost as scary, if not more scary than the nerve agent. It looks like you've got professional assassins effectively running around south London cold-bloodedly murdering people and setting it up like suicide."

The Home Office announced last week that it would review 14 cold cases reportedly linked to Russia by U.S. intelligence sources—many of them involved apparent suicide.

Either of these Russian murder inquiries could end with another Scotland Yard inquiry in Moscow. Investigators may be able to follow traces of the novichok nerve agent used on Skripal in a hunt that's reminiscent of the radioactive breadcrumbs left in the Litvinenko murder.

The molecular signature of the chemical agent has already indicated that this substance was created in a Soviet-era covert chemical weapons laboratory.

If another team is dispatched to Russia, Tarpey thinks the detectives would be put at risk. "I have no reason to think they wouldn't be," he said. "They did it to us, and they've come over here and done this again."

<b>HEADLINE</b>	<b>03/18 NKorea diplomat to Finland for talks</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/north-korean-diplomat-heads-finland-us-talks-53831159?">http://abcnews.go.com/International/wireStory/north-korean-diplomat-heads-finland-us-talks-53831159?</a>
<b>GIST</b>	<p>A senior North Korean diplomat handling North American affairs is heading to Finland for talks with the U.S. and South Korea.</p> <p>South Korea's Yonhap news agency says Choe Kang Il was seen Sunday at a Beijing airport before boarding a flight to Finland. The report cites unnamed "diplomatic sources" in Seoul as saying Choe would take part in a meeting in Finland with former U.S. diplomats and South Korean security experts.</p> <p>Choe was in the delegation North Korea sent to last month's Winter Olympics in South Korea.</p>

	South Korea's Foreign Ministry did not give any details on the talks, but said the gathering would be similar to the so-called "Track 2" dialogue that has involved North Korean officials and former U.S. officials and experts.

<b>HEADLINE</b>	<b>03/16 Metro: SDOT misleading cost information</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/929009/seattle-operating-cost-streetcar/">http://mynorthwest.com/929009/seattle-operating-cost-streetcar/</a>
<b>GIST</b>	<p>The Seattle Department of Transportation provided misleading information about the cost to operate an expanded streetcar network to the Federal Transit Authority and the city council, according to King County Metro.</p> <p>A document obtained by The Seattle Times outlines a “concerning” situation.</p> <p>“SDOT appears to have ignored Metro’s estimated labor cost for streetcar O &amp; M by \$8 million and submitted information to the FTA and to the Seattle City Council that significantly underestimates the annual cost of operating the Seattle streetcar system when C3 is added.</p> <p>“Metro’s Rail Section has communicated to SDOT information that contradicts published information about estimated labor costs for Streetcar operations staffing, but neither FTA nor the Seattle Council appear to be aware of contradictory information,” the document states.</p> <p>Essentially, SDOT’s labor cost estimates were much too low. According to the document, SDOT assumed it would cost just over \$16 million to operate the line. A total of \$8.15 million was budgeted for staffing. Metro says more staff is needed to meet the expectations put in place by SDOT. It will cost an estimated \$8 million more to pay for additional staff — raising total operating costs to \$24 million.</p> <p>Metro is concerned because it will be running the system.</p> <p>It’s yet another black mark for the Center City Connector project that will cost an estimated \$177 million. It will add a 1.2-mile streetcar tuck that connects the line in South Lake Union and First Hill line.</p> <p>The project broke ground last year. City leaders questioned the project just days before crews began their work. The concerns raised then are what sparked the financial report by SDOT that is now in question.</p> <p>The price tag of \$177 million was higher than initial estimates. Funding for the project includes a \$75 million grant from the FTA, about \$30 million from City Light for utility relocation, and \$45 million from the city’s budget through 2020.</p> <p>Actual ridership numbers are also in question. Currently under-utilized, SDOT projects the streetcar lines will get 22,000 riders per day in its first year of expanded service. By 2035, 30,000 riders will ride the streetcars.</p>

<b>HEADLINE</b>	<b>03/17 FBI at Civil War site for ‘lost gold’?</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/nation-now/2018/03/17/fbi-went-site-suspected-lost-civil-war-gold-pennsylvania/434674002/">https://www.usatoday.com/story/news/nation-now/2018/03/17/fbi-went-site-suspected-lost-civil-war-gold-pennsylvania/434674002/</a>
<b>GIST</b>	<p>A 155-year-old legend about buried federal gold appears to have caught the attention of the FBI.</p> <p>Dozens of FBI agents, along with Pennsylvania state officials and members of a treasure-hunting group, trekked this week to a remote site where local lore has it that a Civil War gold shipment was lost or hidden during the 1863 Battle of Gettysburg.</p>

	<p>The treasure-hunting group Finders Keepers has long insisted it found the gold buried in a state forest at Dents Run, about 135 miles (217 kilometers) northeast of Pittsburgh, but said the state wouldn't allow it to dig.</p> <p>The FBI has refused to say why it was at the site Tuesday, revealing only that it was conducting court-authorized law enforcement activity. Finders Keepers owner Dennis Parada said Friday he's under FBI orders not to talk.</p> <p>Historians have cast doubt on the claim that a shipment of gold was lost on its way to the U.S. Mint in Philadelphia.</p> <p>Depending on who's doing the telling, the shipment had either 26 gold bars or 52 bars, each weighing 50 pounds (23 kilograms), meaning it would be worth about \$27 million or about \$55 million today.</p> <p>In an older post on the Finders Keepers website, Parada said his group found the likely burial site using a high-powered metal detector. But he said the state Department of Conservation and Natural Resources has refused to allow the group to dig.</p> <p>A department spokesman said Friday that the group previously asked to excavate the site but elected not to pay a required \$15,000 bond. The spokesman referred comment on Tuesday's activity to the FBI.</p>

<b>HEADLINE</b>	<b>03/16 Police: dead friend Putin critic strangled</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/world/friend-dead-putin-critic-was-strangled-british-police-say-n857346">https://www.nbcnews.com/news/world/friend-dead-putin-critic-was-strangled-british-police-say-n857346</a>
<b>GIST</b>	<p>British police launched a murder investigation Friday after an autopsy revealed that a Russian exile who was critical of Vladimir Putin was strangled in his home.</p> <p>Nikolay Glushkov, whose body was found Monday, died as a result of "compression to the neck," London's Metropolitan Police said in a statement.</p> <p>Glushkov's death was a eerie echo of his friend Boris Berezovsky, an exiled Russian oligarch and an outspoken critic of Putin who was found in 2013 with a rope around his neck — and whose death was initially a suspected suicide. It was reclassified as unexplained.</p> <p>"Boris was strangled," Glushkov said afterward in an interview with The Guardian newspaper. "Either he did it himself or with the help of someone. [But] I don't believe it was suicide."</p> <p>So far, police said, there is no link between the death of Glushkov and "the attempted murders in Salisbury, nor any evidence that he was poisoned."</p> <p>That was a reference to the attempted assassinations of former Russian double agent Sergei Skripal and his daughter Yulia, who were found unconscious last weekend on a bench in the city of Salisbury — and who police later said were poisoned with a nerve agent.</p>

<b>HEADLINE</b>	<b>03/16 DOE questions safety w/Hanford project</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/hanford/us-demands-proof-steel-is-safe-at-hanford/281-529405621">http://www.king5.com/article/news/local/hanford/us-demands-proof-steel-is-safe-at-hanford/281-529405621</a>
<b>GIST</b>	SPOKANE, Wash. (AP) — The federal government is demanding that the company building a giant nuclear waste treatment plant in Washington state provide records proving that the steel used in the nearly \$17 billion project meets safety standards.

The U.S. Department of Energy says in a letter obtained by The Associated Press that records needed to ensure that the structural steel used in the project is safe are either missing or of "indeterminate quality."

"This condition is a potentially unrecoverable quality issue," said the letter sent March 6 from the agency's Office of River Protection in Richland, Washington, to Bechtel National Inc., which is building the long-delayed plant to dispose of wastes created in the production of plutonium for nuclear weapons.

The agency gave Bechtel National 14 days to provide proof that work on the project should continue.

The plant is located on the Hanford Nuclear Reservation near Richland, Washington, which for decades made most of the plutonium for the nation's nuclear weapons arsenal. The resulting 56 million gallons (211 million liters) of radioactive and hazardous wastes are stored in 177 underground tanks, many of which are leaking.

The waste treatment plant is designed to turn much of that waste into glass-like logs for burial, a technically demanding process.

But construction of the giant plant, which began in 2002, has long been slowed by safety and technical issues.

Bechtel National is working on providing the records, spokeswoman Staci West said.

<b>HEADLINE</b>	<b>03/16 Sheriff pocketed \$750K from food fund</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/alabama-sheriff-legally-pocketed-750k-from-inmate-food-funds-bought-beach-house/">https://www.cbsnews.com/news/alabama-sheriff-legally-pocketed-750k-from-inmate-food-funds-bought-beach-house/</a>
<b>GIST</b>	<p>GADSDEN, Ala. -- An Alabama sheriff legally used more than \$750,000 of funds meant to feed inmates to purchase a beach house. Etowah County Sheriff Todd Entrekin told The Birmingham News he follows a state law passed before World War II that allows sheriffs to keep "excess" inmate-feeding funds for themselves.</p> <p>Entrekin reported on state ethics forms that he made "more than \$250,000" each of the past three years through the funds.</p> <p>The sheriff's annual salary is more than \$93,000. He and his wife purchased a four-bedroom house with an in-ground pool and canal access in September for \$740,000.</p> <p>Entrekin got a \$592,000 mortgage. The home is one of several properties with a total assessed value of more than \$1.7 million that the couple own together or separately.</p> <p>In a statement to NPR, Entrekin said the "liberal media has began attacking me for following the letter of the law."</p> <p>This is not the first time the law has made national headlines. In 2009, Greg Bartlett, who was then the sheriff of Morgan County, was thrown into his own jail by a federal judge after testimony from inmates about inadequate meals, including paper-thin bologna and cold grits. Bartlett testified that he legally kept as personal income about \$212,000 over three years with surplus meal money but denied that inmates were improperly fed.</p> <p>In January, advocacy groups sued for access to public records to find out how much jail food money is given to sheriffs and pocketed. In the lawsuit, the Southern Center for Human Rights and the Alabama Appleseed Center for Law and Justice said 49 sheriffs had not complied with the request.</p>

<b>HEADLINE</b>	<b>03/16 Austin package bombings mystery</b>
<b>SOURCE</b>	<a href="https://www.statesman.com/news/for-investigators-race-decode-hidden-message-austin-bombings/4PaxEkZ4ZrP7qQsCzFbdFI/">https://www.statesman.com/news/for-investigators-race-decode-hidden-message-austin-bombings/4PaxEkZ4ZrP7qQsCzFbdFI/</a>
<b>GIST</b>	<p>If the package bombs that have killed two Austin residents and seriously injured a third in recent weeks turn out to be the work of a single person, he or she will join a tiny but grim fraternity — serial killers whose weapon of choice was an incendiary device.</p> <p>The group is so small that police and psychologist’s efforts to draw meaningful conclusions about its members has met with uneven success. An FBI profile of the Unabomber identified him as an uneducated man in his 30 or 40s who probably worked menial jobs. But Ted Kaczynski was a 53-year-old hermit who held several advanced college degrees.</p> <p>Even within the minuscule group of deadly serial bombers, there are important distinctions, experts said.</p> <p>Some of the killers identified by forensic crime researchers selected their targets carefully. Thirty years ago, Walter Moody had a bomb delivered to an Atlanta judge he felt was responsible for his misfortunes.</p> <p>Other killers saw their deadly explosives as a dramatic protest against particular groups, with the individual identities of their victims apparently unimportant. In England, David Copeland’s 1999 bombs targeted blacks, Asians and gays.</p> <p>Still, researchers have identified some broad characteristics that police turn to in an effort to identify deadly detonators. All have been white men. While they have varied educational attainment, they were of above-average intelligence and mechanically inclined.</p> <p>Almost always, they were furious.</p>

<b>HEADLINE</b>	<b>03/17 Indiana: fake Wounded Warrior bust</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/03/17/four-arrested-in-indiana-for-running-fake-wounded-warrior-fundraisers-pocketing-money.html">http://www.foxnews.com/us/2018/03/17/four-arrested-in-indiana-for-running-fake-wounded-warrior-fundraisers-pocketing-money.html</a>
<b>GIST</b>	<p>Four people in Indiana were busted for running fake “Wounded Warrior” fundraisers to raise money for veterans but instead pocketing more than \$125,000 for themselves.</p> <p>Police charged James D. Linville, 44, and Joanie Watson, 38, of Clarksville, as well as Thomas A. Johnson, 42, and Amy L. Bennett, 40, both of Henryville, with conspiracy to commit wire fraud and conspiracy to commit mail fraud. If convicted, the four could face up to 20 years in prison, the Courier-Journal reported.</p> <p>Authorities said the four suspects led others to believe they were donating to various causes like the Wounded Warrior Project, which “serves veterans and service members who incurred a physical or mental injury, illness, or wound, co-incident to their military service,” according to the website.</p> <p>However, the donations went to the Wounded Warrior Fund Inc. and the Wounded Warrior Foundation Inc., which were created by one of the four people, U.S. Attorney Josh J. Minkler said Friday.</p> <p>The fake organizations claimed donations would go toward military families living in Indiana, Kentucky and Ohio.</p> <p>Officials said the four collected more than \$125,000 donations from about 1,000 people and businesses who believed they were giving money to the real organization. Instead, the defendants deposited the money into fraudulent checking accounts and used it to go shopping for themselves, the indictment stated.</p> <p>Police said Linville also used the alias Sgt. Bob Davis while Johnson went by Paul Bradley throughout the scheme.</p> <p>The U.S. Secret Service and the Clark County Sheriff’s Department have been investigating the scheme for three years.</p>

## GIST

Southern California has long been an epicenter of high-speed car culture. Wild police pursuits dominate television newscasts. The “Fast & Furious” film franchise, which many cops blame for hyping street racing, was set in Los Angeles.

Police say incidents of street racing are on the rise, driven by popular culture and the use of social media to draw contestants and evade authorities. In what racers call “takeovers,” participants use their cars to block off streets or freeways to stage races.

In recent years, car clubs from neighboring areas including Orange County and the Inland Empire region have begun traveling to Los Angeles to compete against local racing crews, increasing the number of dangerous drivers in the county, investigators say.

“We have the locations. We have lots of flat street. We have industrial parks. And the Hollywood connection,” said Chief Chris O’Quinn, who leads the California Highway Patrol’s Southern Division in L.A. County. “This is the place to be.”

The deadliest year on record was 2007, with 18 fatal crashes. After a period with relatively few recorded deaths, the count grew in recent years, with 15 fatalities in 2015, 11 in 2016 and 12 deaths in 2017, the Times analysis shows.

The dead were overwhelmingly male and young: More than half were 21 or younger, including two children, ages 4 and 8, killed along with their mother. Slightly less than half of the victims — 47 percent — were behind the wheel. The rest were either passengers in the speeding vehicles, spectators or people simply walking on a sidewalk or driving home.

Deaths have occurred across Los Angeles County, but some places — Long Beach, Santa Clarita, industrial zones southeast of downtown and the wide boulevards that stretch across South L.A. and the San Fernando Valley — have been trouble spots.

The only statewide agency tracking street racing incidents is the CHP, which has been doing so only since 2016. From July 2016 to July 2017, the CHP recorded nearly 700 racing incidents in L.A. County. Those races involved roughly 17,000 vehicles and 22,000 people, according to the CHP data. The agency did not track fatalities.

The Times examined street racing deaths since 2000. Its tally of 179 killed is a conservative estimate, because few law enforcement agencies track street racing fatalities and the incidents themselves are difficult to classify.

Eric Siguenza, 26, and Wilson Thomas Wong, 50, were killed in February 2015 in an area of Chatsworth known as the “Canoga Speedway” while watching a street race with more than 60 others.

Nine months later, three people, including a 15-year-old, were killed in Commerce when a Dodge doing doughnuts in the street collided with a Ford, striking spectators. Sheriff’s deputies said more than 100 vehicles may have been in the area at the time.

Those deaths occurred during takeovers. The potential for danger, authorities said, is high, reinforced by drugs, large amounts of cash and other criminal activity.

“When you look at a takeover, you have a very large concentration of people, out of their vehicles, in a small area, and again you’ve got that 3,000-pound machine that is semi in control at best,” said Sgt. Jesse Garcia, one of the Los Angeles Police Department’s top street racing investigators. “You have the potential of a much higher number of victims should that vehicle lose control.”

Racers at takeover scenes have grown more aggressive toward police in recent years as well, said O’Quinn of the CHP. Officers once were able to scatter racers with a flash of their cruisers’ lights. Now, some in the car scene fight back, either blocking roadways to allow friends to escape or, at times, physically

confronting officers.

A fire engine and ambulance responding to a medical emergency near downtown last year came across a takeover and were “surrounded by a large group in the hundreds, possibly more,” said Peter Sanders, a spokesman for the Los Angeles Fire Department. The crew put out a distress call after some racers leaped into the emergency vehicle, Sanders said.

No one was injured, but another ambulance needed to be dispatched to help the subject of the original emergency call, who was struggling to breathe.

“That activity placed somebody’s life in danger,” said Capt. Al Lopez of the LAPD’s Central Traffic bureau, whose investigators are searching for suspects in that incident.

The takeover scene, police say, has grown stronger in recent years, bolstered by a young population hungry for attention on social media. Events can be organized within hours, and locations can be changed on the fly.

Instagram “likes” on viral videos of stunts — people performing doughnuts or bouncing lowriders — are the new street cred, Garcia said. As much as \$20,000 is bet on some illegal drag races.

Tracking the number of street races is difficult. Street racing is not listed as a possible cause on state forms that record traffic collisions, so many agencies don’t keep detailed records. Others don’t agree on how to define a street race or speed contest. The penal code’s definition is broad and includes races against a “clock or timing device.”

At least a dozen officers in the LAPD’s Central Bureau investigate street racing, focusing on organized meet-ups because spontaneous racing is nearly impossible to deter. Efforts to place a similar unit in the Valley, another racing hot zone, were abandoned for lack of staff, a street racing investigator said.

Los Angeles City Councilman Mitchell Englander, whose district includes a stretch of the San Fernando Valley that is infamous for racing, is an outspoken critic of the scene’s culture and the department’s response. Three years ago, the city council approved an ordinance he authored that requires the LAPD to incorporate a wide array of data regarding street racing into the department’s crime tracking system. After a fiery racing-related crash claimed the lives of four young people in Northridge last October, LAPD officials admitted during a public hearing that they still weren’t doing so.

“You can’t solve a problem that you don’t measure,” Englander said.

Late last year, the LAPD began tracking fatalities, injuries, crashes and the number of citations related to races late last year, said Josh Rubenstein, a department spokesman. The information was added to the department’s crime tracking system in January, he said.

The Times’ analysis found that at least 60 people died in crashes related to street racing in the city of Los Angeles from 2000 to 2017. Only two other cities in the county — Long Beach and Commerce — saw more than 10 deaths during that period.

Neither the Los Angeles County Sheriff’s Department nor the Long Beach Police Department, two of the largest agencies in the region, have officers assigned to the county task force.

County deputies are being trained to recognize vehicles that have been modified for racing, but, Detective Christine Ostrander said, “Our deputies are just overworked, understaffed.”

HEADLINE	<b>03/17 Albania busts immigration crime rings</b>
SOURCE	<a href="http://abcnews.go.com/International/wireStory/albania-arrests-39-crackdown-immigration-crime-">http://abcnews.go.com/International/wireStory/albania-arrests-39-crackdown-immigration-crime-</a>

	<a href="#">rings-53819220</a>
<b>GIST</b>	<p>Albania police have arrested 39 people in a crackdown on crime rings illegally sending about 1,000 Albanians to Britain, the United States and Canada.</p> <p>Police chief Ardi Velju said Saturday that, after months of an international investigation, authorities have identified seven criminal structures in ten countries in Europe and overseas that helped Albanians emigrate illegally by "falsifying travel and identity documents of European Union countries."</p> <p>Each had paid from \$9,750 to \$30,000 for the forgeries.</p> <p>In addition to those arrested, 12 people are still at large, including two Bulgarians. Police have also confiscated computers, cellphones, vehicles, cash, different documents and weapons in the case.</p> <p>Fighting organized crime and illegal trafficking remain key challenges for Albania, a NATO member since 2009 which is hoping to launch EU membership negotiations this year.</p>

<b>HEADLINE</b>	<b>03/17 Hate crimes in Texas underreported</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/package-bombings-killed-hate-crimes-state-hate-crimes/story?id=53769512">http://abcnews.go.com/US/package-bombings-killed-hate-crimes-state-hate-crimes/story?id=53769512</a>
<b>GIST</b>	<p>Three package bombings that killed two people and injured two others, all of them African-American or Hispanic, in Austin, Texas, may have been motivated by hate, authorities said.</p> <p>Killed were a 17-year-old boy, an orchestral musician and essay contest winner, and a 39-year-old father, both of them African-American. A 75-year-old Hispanic woman was critically injured and an African-American woman in her 40s was also wounded in the explosions.</p> <p>"We are not ruling out hate," Austin Police Chief Brian Manley said in a press conference this week of the bombings that occurred in an 11-day span this month. In an interview with ABC News, Manley speculated on possible motivations for the crimes: "Is this driven by an ideology? A philosophy? Is it driven by hate?"</p>

If whoever planted the exploding packages is found to have been motivated by hate, the bombings will be part of a larger trend of an increase in hate crimes in the Texas capital. But experts suspect hate crimes overall are underreported in Texas, and federal and state data obtained by ABC News show very few suspects are ever convicted of hate crimes in the state.

"We don't know for sure what the motivation is, not until the suspect is caught, questioned and prosecuted will we know that," cautioned Ryan Lenz, an investigative writer for the Southern Poverty Law Center, an anti-bigotry organization.

But he noted that with all of the package bombings apparently aimed at minority residents, "There is the commonality of target."

Reports of hate crimes in Austin rose by 46 percent in 2016, but that is against the relatively small totals of 13 in 2015 and 19 in 2016, according to the FBI's annual report on hate crimes. The city has nearly 950,000 residents.

Statewide in Texas -- the nation's second-most populous state with about 26.9 million residents -- the total number of reported hate crimes in 2016 was just 178, according to the Texas Department of Public Safety's Texas Crime Report.

That fits the trend of roughly 200 hate crimes getting reported each year to law enforcement agencies in Texas, according to publicly-available Texas Crime Reports analyzed by ABC News.

But those numbers strike hate-crimes expert Brian Levin as suspiciously low for such a big state.

"Relative to its population, Texas reports fewer hate crimes than other big states," said Levin, a criminologist and attorney who directs the Center for the Study of Hate and Extremism at California State University, San Bernardino.

He noted that California -- which with 38.8 million residents is the only state bigger than Texas -- reported 931 hate crimes in 2016. New York, the nation's fourth-most populous state with a population of 19.4 million reported 595 such crimes.

"Something is wrong when Texas, as a state, has fewer hate crimes than some of the major cities in the U.S.," Levin said.

Texas had a rate of 0.7 hate crimes reported for every 100,000 residents, far lower than the rate of 3.1 for every 100,000 residents in New York and 2.4 for every 100,000 in California, using 2017 Census population figures.

It's not just Texas.

Levin said law enforcement in Texas could do more to ensure officers recognize and investigate potential hate crimes.

Indeed, Texas does not mandate training for police officers on how to investigate potential hate crimes. Gretchen Gribbs with the Texas Commission on Law Enforcement confirmed.

In addition, Texas' geography with its high numbers of people living in rural areas may partially explain why there are relatively few reports of hate crimes in the state, said Lenz of the Southern Poverty Law Center.

"Less densely populated areas tend to report fewer hate crimes," Lenz said.

But he said Texas isn't alone in what he said is a general underreporting of such crimes.

	<p>”Hate crimes are wildly underreported, I mean, horrifically underreported,” Lenz said.</p> <p>One reason may be that victims of hate crimes may be reluctant to report what happened, he said.</p> <p>“Hate crimes likely aren’t being reported because victims fear law enforcement may not believe them or they may be embarrassed and not report to police at all for fear of putting a target on their home,” Lenz said.</p>

<b>HEADLINE</b>	<b>03/15 Man accused in \$500K+ gift card scam</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/news/man-accused-of-gift-card-scam-in-excess-of-500k/">http://www.heraldnet.com/news/man-accused-of-gift-card-scam-in-excess-of-500k/</a>
<b>GIST</b>	<p>LYNNWOOD — Hundreds of thousands of dollars were stolen from Target in a scam by a Snohomish County man, who figured out algorithms for the company’s gift cards, according to charges in King County Superior Court.</p> <p>The \$500,000-plus fraud case was cracked by a journal found in a stolen car at a Kirkland motel.</p> <p>It was around 6 a.m. Nov. 28, when a Kirkland police officer found a Subaru with no license plates and many purses inside at a motel. A strip of plastic conveniently covered the VIN on the dash. A sloppy paint job left spray paint splashed over the tires, according to charging papers.</p> <p>Nearby, the officer noticed a man smoking, Jeffery Douglas Mann, 28. Mann watched the officer, but told him he didn’t know anything about the car. He walked away.</p> <p>Officers learned the Subaru was stolen a week earlier near Lynnwood. In the car police found burnt tinfoil, traces of what looked like crystal meth and more than 150 pieces of mail taken from addresses around Everett. Police recovered jail booking paperwork for a woman, 41, and handwritten notes.</p> <p>“He can get like 100 check digits in literally minutes,” one of the notes said. “Being around him is how I’ve always gotten my bomb.com card numbers that he’s gotten from Cali and Colorado and places like that.”</p> <p>A handwritten address book listed info for Jeff Mann, who has ties to Marysville. Letters mentioned going to Target stores that hadn’t been “burnt yet,” with a guy named Jeff. Police found gift cards for Hotels.com, Costco and the online video gaming service Steam, among other evidence.</p> <p>One Target receipt documented a purchase of \$1,582 that had been paid for with dozens of gift cards.</p> <p>A registry showed Mann had been staying in a room at the Kirkland motel for a few weeks, and that he’d been driving a Volvo with temporary tags. Two days later he was driving the Volvo, with no license plates, when Kirkland police pulled him over. Inside the vehicle police could see about 100 gift cards. Mann had a fake ID and the tags on the car looked obviously forged, according to the charges.</p> <p>Mann agreed to talk with police for about an hour and a half — and his story often conflicted, the charges say. He told the detective he’d been working in the drywall business, but he couldn’t give details, and eventually admitted he hadn’t been employed for a while.</p> <p>Detectives asked why he went to far away places to avoid “burnt” Targets. He reportedly said the stores sometimes got suspicious and denied him when he tried to use too many cards at once.</p> <p>But he insisted to officers that his “side business” with the gift cards was legitimate. He’d buy cards off Paxful.com, a site that converts U.S. dollars to Bitcoin, at a rate of about 50 cents on the dollar, according to his explanation in court papers. He’d sell the cards at a profit, 70 cents per dollar.</p>

Police confronted him about how suspicious that sounded, because gift cards bought at half price probably were stolen.

“Mann claimed to not know that the funds were likely stolen and could not explain why he was being so deceptive if he had nothing to hide and was not doing anything illegal,” Kirkland detective Sean Carlson wrote in a report.

Mann gave police permission to search the Volvo. Inside they found Target receipts; “dozens and dozens of gift cards” from Target, Steam and other businesses; laminating film; printer ink; blank gift card stock; and about a dozen grids full of numbers that were partly filled out.

Police suspect he’d been using the grids to figure out the final digits in a series of gift cards. That could allow him to check balances and cash out the cards.

Eventually, Mann admitted he and a friend had figured out the algorithm for the barcodes that ran on Target cards. He could take a group of barcodes to predict codes on other cards. Those cards would be bought and loaded by unsuspecting customers. He could use his profits to buy thousands of dollars in more gift cards, for resale online.

Lynnwood police had been notified of a gift card scam linked to Mann as early as July 6. Police wrote an overview of what was happening at the Target in Lynnwood, and passed along the case to the U.S. Secret Service.

Target released a statement about the case to The Daily Herald on Wednesday.

“Last year, we identified an organized crime ring in the northwest United States that was accessing funds from select Target gift cards,” the statement read, in part. “We immediately contacted and began working with federal and local law enforcement agencies to investigate.”

Mann was booked into jail Nov. 30. He’s charged with first-degree identity theft, forgery and money laundering in King County Superior Court. Police believe Mann is linked to a group that has stolen at least \$500,000 in Washington state. The charges don’t give details about the fraud ring.

Further investigation revealed the magnitude of the losses for Target — at least \$249,000 directly attributed to Mann, in Washington, Nevada and Colorado, according to court papers. His bail was set at \$200,000.

He was supposed to show up for a jail work crew near the end of December but didn’t hook up his electronic monitoring equipment, according to the King County Jail. He escaped.

“We haven’t seen him since,” jail Capt. Troy Bacon said.

Snohomish County sheriff’s deputies arrested Mann again Sunday. He was being held in the Snohomish County Jail.

<b>HEADLINE</b>	<b>03/16 Settlement after police dismissed 'hoax'</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/us/2018/03/17/2-5m-settlement-after-police-dismiss-womans-kidnapping-as-gone-girl-hoax.html">http://www.foxnews.com/us/2018/03/17/2-5m-settlement-after-police-dismiss-womans-kidnapping-as-gone-girl-hoax.html</a>
<b>GIST</b>	A couple have reached a \$2.5 million settlement with a Northern California city and its police department after investigators initially dismissed the woman's kidnapping as a "Gone Girl" hoax.

The term refers to a 2012 novel and 2014 film about a woman who fakes her own abduction.

Police in Vallejo initially discounted a report by Denise Huskins and her boyfriend that a masked intruder drugged, kidnapped and sexually assaulted her in 2015.

They realized the couple was telling the truth after a disbarred attorney, Matthew Muller, was implicated in another crime and connected to the abduction. He pleaded guilty to the kidnapping and is serving a 40-year prison term.

Vallejo police apologized after discounting the request for help. The city is about 32 miles northeast of San Francisco.

“The conduct plaintiffs allege goes beyond defendants being skeptical, investigating alternate theories, and expressing skepticism,” U.S. District Judge Troy Nunley wrote in his 22-page decision, adding that, “A reasonable jury could find that defendants engaged in conduct that was extreme and outrageous.”

Muller broke into the couple’s home, tied them up, and drugged them, prosecutors said. He put Huskins in the trunk of his car, and held her for two days in his South Lake Tahoe home. Investigators said they found videos of Muller sexually assaulting Huskins.

During and after the kidnapping, Muller sent messages to a San Francisco reporter claiming that Huskins was abducted by a team of elite criminals. After she was released in Huntington Beach in Southern California, Vallejo police called the kidnapping a hoax, the Mercury News of San Jose reported.

Muller was later arrested in connection with an unrelated attempted robbery in the San Francisco Bay Area. Authorities said they traced a cellphone to Muller and a subsequent search of a car and home turned up evidence connecting him to the Huskins abduction. Huskins sued police, and a judge ruled last year that the lawsuit could proceed.

<b>HEADLINE</b>	<b>03/17 NKorea ‘pirate tactics’ for illicit trade</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/news/north-korea/north-korea-uses-pirate-tactics-earn-millions-sanction-busting-n856921">https://www.nbcnews.com/news/north-korea/north-korea-uses-pirate-tactics-earn-millions-sanction-busting-n856921</a>
<b>GIST</b>	<p>North Korea defied global sanctions to earn nearly \$200 million in 2017 from illicit trade in goods like coal, oil and arms, in part by borrowing tactics from the golden age of piracy, says the leader of a UN panel of experts that issued a report on North Korea Friday.</p> <p>According to the report, despite four new sets of UN sanctions in 2017, the isolated nation has continued to earn hard currency through increasingly evasive shipping practices, like transferring petroleum from ship to ship at sea, manipulating locator signals, and changing vessel identifiers in the middle of a journey.</p> <p>"It's a bit like the pirates of the 18th century," said Hugh Griffiths, leader of the UN Panel of Experts on North Korea. "They're renaming the ships. They're disguising their nationality. They're painting false names on the ships to suggest that these ships come from other countries."</p> <p>The report says North Korea "is already flouting the most recent resolutions by exploiting global oil supply chains, complicit foreign nationals, offshore company registries, and the international banking system."</p> <p>Griffiths told NBC News that sanctions are working, but the North Koreans are also getting smarter.</p> <p>Last month, the U.S. Treasury Dept. published a sanctions advisory outlining the types of deceptive shipping practices North Korea employs and a list of the 24 tankers capable of executing ship-to-ship</p>

	<p>transfers of petroleum and other banned items. A number of those tankers feature in the new UN report.</p> <p>In December, a tanker flying the Sierra Leone flag lingered in the East China Sea alongside a North Korean tanker called the Chon Ma San for an illegal ship-to-ship transfer of petroleum products. To avoid detection, the Chon Ma San's North Korean flag was painted over and the 3's in its international identification number changed to 8's.</p> <p>This January, a ship-to-ship transfer of petroleum products between the North Korean-flagged tanker Rye Song Gang 1 and the Dominica-flagged Yuk Tung took place at night. The panel said the nighttime transfer shows North Korea "is adapting its evasion tactics."</p> <p>Catherine Dill, a senior research associate at the Middlebury Institute of International Studies, agreed with the panel's assessment. "Part of the reason we focus on this is because ship-to-ship transfers are so dangerous," she said. "You have to have the right conditions. If you have rough seas it can be hazardous for the crew."</p>

<b>HEADLINE</b>	<b>03/16 UN: 84 activists Colombia killed last year</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/84-rights-activists-killed-colombia-year-53807967?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/84-rights-activists-killed-colombia-year-53807967?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>The United Nations said Friday that 84 human rights activists were killed in Colombia last year as the country struggles to contain violence following a 2016 peace deal with the Revolutionary Armed Forces of Colombia.</p> <p>Analysts say the peace deal has led to an overall decrease in homicide rates. But in a report, the United Nations High Commissioner for Human Rights said activists and social leaders are still being targeted by drug traffickers, right wing death squads and smaller rebel groups.</p> <p>The report said the FARC's withdrawal from some remote areas of Colombia has set off fierce competition among criminal groups to gain control of the former guerrillas' assets, including drug trafficking routes</p>

	<p>and fields of coca used to make cocaine.</p> <p>Human rights activists have been caught up in this new power struggle.</p> <p>"Several of the victims were apparently killed due to their support for policies derived from the (peace) agreement, such as the substitution of illegal crops and integral rural reform," the report said.</p> <p>The U.N. agency called on the Colombian government to provide greater presence in rural areas and develop programs that will lure local farmers away from illegal crops. It also urged Colombia to prosecute those who attack rights activists.</p> <p>"While significant progress has been made by the Office of the Attorney General to identify the material authors of the crimes, in most cases the intellectual authors have not been identified," the report said.</p>

<b>HEADLINE</b>	<b>03/16 France: huge wine fraud scam uncovered</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/french-fraud-body-unveils-huge-cotes-du-rhone-53796158?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/french-fraud-body-unveils-huge-cotes-du-rhone-53796158?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>France's anti-fraud body says it has uncovered a huge scam in which a merchant tried to sell more than 48 million liters (some 12.7 million gallons) of wine falsely labeled as Cotes-du-Rhone.</p> <p>The DGCRF said in its annual report Friday that the fraud encompassed the equivalent of 13 Olympic-sized swimming pools full of wine.</p> <p>About 20 million liters (5.3 million gallons) of the fake Cotes-du-Rhone were offered for sale between 2013 and 2016 through the scam, including 1 million liters (264,000 gallons) bearing the prestigious Chateaneuf-du-Pape name. Investigators seized a 100,000-liter (26,400-gallon) vat of the latter wine.</p> <p>The merchant, whose identity wasn't released, was handed preliminary charges of fraud and deception. He was freed on a 1 million euro (\$1.2 million) bail and banned from working at his company.</p>

<b>HEADLINE</b>	<b>03/17 Tip leads to arrest, weapons cache</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/US/walmart-employee-turns-man-charged-possessing-weapons-cache/story?id=53816017">http://abcnews.go.com/US/walmart-employee-turns-man-charged-possessing-weapons-cache/story?id=53816017</a>
<b>GIST</b>	<p>A Walmart employee's tip has led to a large weapons bust near a college campus in upstate New York.</p> <p>Federal authorities filed charges against Maximilien Reynolds, 19, on Friday for two counts of possession of an unregistered destructive device and a silencer, false statement in acquisition of a firearm and a false statement in required firearm record.</p> <p>According to the criminal complaint, a Walmart employee in Ithaca, New York, called police after Reynolds allegedly purchased ammunition, camping gear, drill bits, tools, hacksaw blades and knives with a gift card.</p> <p>Ithaca police and two FBI agents responded to Reynolds' apartment, where they encountered his girlfriend, who allowed them inside. The complaint alleges the small apartment was "in severe disarray" with random piles of clothes, food, laboratory glassware and math formulas written on the windows. The authorities also found a bulletproof vest, gas mask and saw knives lying out in the open before the woman alleged to be Reynolds' girlfriend ushered them out.</p> <p>Authorities later returned, voluntarily spoke to investigators and allowed his apartment to be searched, the</p>

	<p>complaint states.</p> <p>The FBI found a bullet-resistant vest, military-style clothing, knives, military-style gas mask, MSR-15 Patrol rifle, ammunition, a homemade silencer and bomb-making materials, including fireworks rigged with shrapnel.</p> <p>The suspect was previously known to authorities, as Reynolds had previously been detained by Ithaca police in June 2016 under Section 941 of the New York Mental Hygiene Law, the complaint shows. The law allows police officers to take a person into custody and take them to a hospital if they appear mentally ill.</p> <p>Reynolds used to be a student at Cornell University, but was currently taking classes at nearby Tomkins-Cortland Community College.</p> <p>"On Thursday, FBI agents arrested Maximilien R. Reynolds following the reported seizure by the City of Ithaca Police Department earlier this month of a number of weapons in his possession at his residence in the city's Collegetown neighborhood," Cornell University Police Chief Kathy Zoner said in a statement.</p> <p>"Cornell University Police is cooperating with IPD and the FBI in this investigation, and all agencies continue to work together to promote the safety of Cornell University's campus and the surrounding community.</p> <p>"Neither Cornell University Police nor the lead law enforcement agencies in this case believe there is a threat to the campus or Collegetown."</p>

<b>HEADLINE</b>	<b>03/16 Israel: 2 killed in car ramming attack</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/16/middleeast/west-bank-car-ramming-attack-intl/index.html">https://www.cnn.com/2018/03/16/middleeast/west-bank-car-ramming-attack-intl/index.html</a>
<b>GIST</b>	<p>Jerusalem (CNN) — Two Israeli soldiers were killed and three more were injured in a car ramming attack on Friday afternoon in the northern West Bank, according to the Israeli military and emergency services.</p> <p>The attack happened at 4:15 p.m. near the settlement of Reihan, about 25 kilometers west of Jenin, the military said.</p> <p>The Palestinian driver was evacuated to an Israeli hospital for treatment, said Israel Defense Forces (IDF) spokesman Lt. Col. Jonathan Conricus. The driver is being questioned.</p> <p>Earlier emergency services said three people had been injured.</p> <p>Conricus added that the ramming was a deliberate attack by the driver.</p> <p>The military said the soldiers were securing the routes around the settlement of Mevo Dotan in the northern West Bank.</p> <p>In response to the attack, Israeli Defense Minister Avigdor Liberman tweeted, "We will seek the death penalty for the terrorist, the destruction of his home, and punishment for anyone else involved."</p> <p>"This is terror that is promoted by [President Mahmoud Abbas] and the Palestinian Authority that pays money to the families of terrorists. We will stop them," he added.</p> <p>Israel announced that it would immediately suspend work permits for the driver's entire family, including 67 employment permits in Israel, 26 trade permits, and four employment permits in communities.</p> <p>Hamas praised the attack, calling for an "escalation of the Jerusalem Intifada to increase the cost of the</p>

	<p>occupier." Spokesman Fawzi Barhoom said the attack was "an affirmation of the insistence of the Palestinian people to continue the path of the resistance with all its means." Palestinian Islamic Jihad also praised the attack, claiming "there is no security and stability for this occupation."</p> <p>Palestinian Authority officials did not comment on the attack.</p>

The principle of 'Fair Use' was established as law by Section 107 of The Copyright Act of 1976. 'Fair Use' legally eliminates the need to obtain permission or pay royalties for the use of previously copyrighted materials if the purposes of display include 'criticism, comment, news reporting, teaching, scholarship, and research.' Section 107 establishes four criteria for determining whether the use of a work in any particular case qualifies as a 'fair use'. A work used does not necessarily have to satisfy all four criteria to qualify as an instance of 'fair use'. Rather, 'fair use' is determined by the overall extent to which the cited work does or does not substantially satisfy the criteria in their totality. If you wish to use copyrighted material for purposes of your own that go beyond 'fair use,' you must obtain permission from the copyright owner.

HEADLINE	03/15 Study: 'Big One' impact on Portland
SOURCE	<a href="https://portlandtribune.com/pt/9-news/389522-280189-offshore-earthquake-will-devastate-portland-area-much-more-than-scientists-thought">https://portlandtribune.com/pt/9-news/389522-280189-offshore-earthquake-will-devastate-portland-area-much-more-than-scientists-thought</a>
GIST	<p>The "Big One" will devastate Portland even more than scientists previously expected, according to a new state geologists' study of how a major earthquake will affect the tri-county area.</p> <p>The study released Thursday found that a magnitude 9 earthquake centered off the Oregon Coast in the Cascadia Subduction Zone would cause tens of thousands of casualties in the Portland area, displace tens of thousands of residents from their homes, and cost tens of billions of dollars in building damage.</p> <p>In Portland alone, the study calculates 119 to 896 immediate deaths from a major Cascadia earthquake, depending on when it occurs, plus hundreds to thousands more life-threatening injuries and people requiring hospitalization.</p> <p>Throughout Multnomah County, 302 to 677 buildings are projected to collapse.</p> <p>"Although damage estimates vary widely throughout the study area, no community will be unharmed," concluded study authors John Bauer, William Burns and Ian Madin of the Oregon Department of Geology and Mineral Industries.</p> <p>Though considerably less likely, an earthquake of magnitude 6.8 epicentered in the fault below Portland's West Hills would be even more catastrophic locally — causing more than twice the casualties and damages — according to their study. That would prove more devastating than an offshore Cascadia earthquake for people living within 15 miles of the fault, scientists concluded.</p> <p>In a major quake centered in the West Hills, as many as 120,000 Multnomah County residents could be displaced from their homes, or nearly one in six people.</p> <p>Recovering from a Cascadia earthquake won't be just a matter of putting out fires and stemming floods. There will be region-wide challenges to restore power, bridges and freeways, provide emergency medical care and assure food and water can be delivered. It will take months just to inspect homes and other damaged buildings to see if they're safe to occupy. Meanwhile, many will have to find other shelter, and some work places will have to be closed or relocated.</p> <p>More sophisticated software, new findings</p> <p>The new study, while showing more severe impacts than previous estimates, didn't bring any surprises or point to any new preparation efforts that haven't been considered before, said Dan Douthit, spokesman for the Portland Bureau of Emergency Management.</p> <p>"We've already been expecting significant damages," Douthit said, "and every year that goes by, we get more and more prepared."</p> <p>Emergency planners still will focus on the region's greatest vulnerabilities, including more than 1,600 unreinforced masonry buildings in the city of Portland.</p> <p>"We know that unreinforced masonry buildings are likely to collapse, especially during a Cascadia Subduction Zone earthquake," Douthit said. "Those pose an immediate life safety risk for people in them and people walking by during an earthquake."</p> <p>But the new study, using more sophisticated Hazus software developed for the Federal Emergency</p>

	<p>Management Agency (FEMA), enabled scientists to drill down to damages at the neighborhood level as never before. The software is being constantly refined, incorporating real-world experiences from floods and earthquakes taking place around the world.</p> <p>That enabled scientists to calculate the number of deaths, life-threatening injuries and hospitalizations that will occur in different neighborhood clusters in Portland and cities around the tri-county area.</p> <p>Much of the damage from an earthquake depends on its severity and when it occurs. There will be fewer people injured if one occurs at night while people are sleeping, as wooden-frame homes are about the safest type of building construction during earthquakes. Quakes occurring during the daytime in the rainy season, when the soils are wet, will cause the greatest harm.</p> <p>In the city of Portland, a major Cascadia quake could cause 675 deaths, life-threatening injuries and hospitalizations if it occurred during a late night during the summer. If the same quake occurred during the day in the rainy season, the number of serious casualties would jump to 4,549, according to the study.</p> <p>State geologists plan to release a second phase of their study next year, charting the potential impacts to Clark County, Washington and Columbia County, Oregon.</p>

<b>HEADLINE</b>	<b>03/15 USCG: icebreaker program 'at risk'</b>
<b>SOURCE</b>	<a href="https://www.hstoday.us/federal-pages/dhs/uscg/icebreaker-program-greatest-risk-uscg-appropriations-warns-commandant/">https://www.hstoday.us/federal-pages/dhs/uscg/icebreaker-program-greatest-risk-uscg-appropriations-warns-commandant/</a>
<b>GIST</b>	<p>Coast Guard Commandant Adm. Paul Zukunft told Congress on Wednesday that he's concerned about lawmakers gravitating toward flat budgets when the USCG needs money to grow, especially plowing forward with the critical icebreaker program.</p> <p>At a House Transportation and Infrastructure Subcommittee on Coast Guard and Maritime Transportation hearing on the fiscal year '19 budget, Zukunft said the USCG is "working with the administration to finalize our long-term major acquisition project," capital investment plan and unfunded priorities list.</p> <p>"Many of these were submitted months ago. We continue work with our department, and with the administration. We know you need those so you can help us in your endeavors to support the United States Coast Guard," he said.</p> <p>Conducting one of its "largest responses ever" after a string of devastating hurricanes last year, the Coast Guard rescued nearly 12,000 people, Zukunft said, but this "all-hands-on-deck campaign... came at a cost."</p> <p>"And I thank you and this Congress for the \$835 million to address Coast Guard response costs, and rebuild damaged infrastructure to modern standards," he said. "And while so many endured these natural disasters, transnational criminal organizations continue to raise havoc in the Western hemisphere."</p> <p>Zukunft said that "given our important work in the high latitudes, coupled with an ever-increasing assertive Russia and China," he's "very pleased" that President Trump's budget wish list "includes \$750 million for the Polar Ice Breaker Program, as well."</p> <p>"Our request for proposals, released just two weeks ago, has energized the U.S. industrial base, and keeps us on track. We're as close as we have ever been in over 40 years to recapitalize our nation's polar icebreaking fleet, and we must keep this momentum going," the commandant argued.</p> <p>While progress has been "meaningful and very encouraging," it is "simply not enough."</p> <p>"We need to continue building tomorrow's Coast Guard. Years of fiscal constraint under Budget Control</p>

Act caps have forced funding offsets, and reduced our force structure. Going forward, we require five percent annualized growth in our operations and maintenance account, and a minimum of \$2 billion in our acquisition account,” the commandant said, touting the “small ask for a service that provides great return on investment.”

Zukunft replied that he’s “concerned” when he’s asking for a five-year, \$2 billion floor “and we’re seeing our acquisition budget continue to be funded below that floor — and icebreaking is clearly the biggest risk.”

“There’s a \$15 million annualized appropriation to keep the Polar Star in service so there is a smooth handoff between the Polar Star and the next heavy icebreaker. That gets us right back to the status quo, though,” he said. “And we’re still only a nation of one heavy icebreaker, which means we need to continue to build out that program of record. We need to provide predictability for our shipbuilders, as well.”

The icebreaker program constitutes “an investment in our industrial base,” too, the commandant noted, “built in the United States and with United States steel.”

“So of all our appropriations, this is one at greatest risk and it does concern me. And there is going to be tension as we look at how do we fund other priorities within the Department of Homeland Security, and a concern that I will pass on to my relief is you may enter another cycle of flatline budgets at a point in time where our needs are continuing to grow, particularly in this domain,” Zukunft continued.

“2023 is when we anticipate taking delivery of the first heavy icebreaker. We want to sustain the Polar Star for two years beyond that to make sure as we go through sea trials that we’re fully mission ready.”

<b>HEADLINE</b>	<b>03/14 EU backs Britain complaints over Russia</b>
<b>SOURCE</b>	<a href="http://www.euronews.com/2018/03/14/europe-lends-its-support-to-britain-s-complaints-against-russia">http://www.euronews.com/2018/03/14/europe-lends-its-support-to-britain-s-complaints-against-russia</a>
<b>GIST</b>	<p>The poisoning of a former Russian double agent in Britain will be discussed at next week's summit of European Union leaders says European Council President Donald Tusk. Speaking at a joint press conference with Finland's prime minister, Tusk said this was no time for division in the west.</p> <p>"At a time when someone on the outside spreads fake news, meddles in our elections, and attacks people on our soil with the use of a nerve agent, the response must not be transatlantic bickering, but transatlantic unity," he said, although he criticised President Trump's import tariff plans.</p> <p>The Salisbury incident has raised concerns in Europe, but also support for Britain.</p> <p>"This behaviour is part of a pattern: annexation of Crimea, cyber attacks in Estonia and now we see chemical weapons being used in Salisbury, part of my constituency. We see the attempted murder of two people, a man and his daughter. This is unacceptable behaviour by Russia, it's an attack on the UK and the West must make it absolutely clear that this behaviour is absolutely unacceptable," said MEP Ashley Fox.</p>

<b>HEADLINE</b>	<b>03/14 Snohomish Co. students join walkout</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/news/students-here-join-thousands-nationwide-to-protest-shootings/">http://www.heraldnet.com/news/students-here-join-thousands-nationwide-to-protest-shootings/</a>
<b>GIST</b>	<p>EVERETT — Thousands of students around Snohomish County walked out of their classes Wednesday morning.</p> <p>Most protested for 17 minutes — 10 to 10:17 a.m. That’s one minute for every person killed in the shootings at Marjory Stoneman Douglas High School in Florida.</p>

The walkouts at local middle and high schools were part of a national movement exactly one month after the attack.

The student-led events were a way to remember those killed, and for young people to demand action on gun laws, school safety and mental health care.

Everett High School student Justin Zabel delivered a prepared speech through a megaphone on the front steps of the historic campus. Hundreds of students listened in the drizzle.

He had explained the evening before why he felt compelled to speak up.

“When I heard about the Parkland, Florida, high school shooting, it hit me really hard,” he said. “I was like, ‘That could have been my high school. That could have been me that was shot. That could have been my family that could be grieving.’ And I knew when I had that feeling, it was time to make a stand for our safety.”

Zabel worries that bullying motivates some school shooters. He favors laws that make it harder for young people to access guns.

On the front lawn, the crowd of Everett students chanted, “We need change! Enough is enough!”

At Scriber Lake High School in Edmonds, the walkout was organized by students, including senior Tyler Blanchard.

They oppose the sale of military-grade weapons to civilians, he said.

Some school districts chose to excuse absences for the walkouts, while others said attendance policies and classes would continue as normal.

In letters sent to families beforehand, leaders of local districts urged respect for students who chose to walk out, and for those who did not. While many students left classes, others chose to remain at their desks.

Multiple districts did not allow news media on campus. Marysville was one of them. In October 2014, five students were shot, four fatally, at Marysville Pilchuck High School, before the shooter killed himself. This year’s senior class were freshmen at the time.

Administrators in Mukilteo also asked reporters to stay off school property, including the fields at Mariner High School where students gathered. Just after 10 a.m., roughly 500 students filed out the main doors, according to school district estimates. At the same time, nearly 900 students spilled out of nearby Voyager Middle School. They walked out to the football field, circled the track and returned to class 17 minutes later, all in silence and without an adult having to say anything.

The Mukilteo district has been affected by gun violence. Four Kamiak High School graduates were shot, three fatally, at a house party in July 2016. In February, a student at Aces High School was arrested for allegedly plotting a mass shooting on the campus. He remains in the Snohomish County Jail, charged with attempted murder.

Multiple administrators expressed support for students exercising their freedom of speech, but said they could not sanction political messages.

In Sultan, students felt they were being dissuaded from walking out. Some planned to leave the high school campus and walk to a gazebo on Main Street. They changed plans Wednesday morning to avoid possible discipline.

	About 30 students marched to the sports stadium, chanting: “Spread love, not hate. We just want to graduate.”

<b>HEADLINE</b>	<b>03/14 South Sound students join walkout</b>
<b>SOURCE</b>	<a href="http://www.theolympian.com/news/local/article205085164.html#wgt=trending">http://www.theolympian.com/news/local/article205085164.html#wgt=trending</a>
<b>GIST</b>	<p>South Sound students joined others across the country in a 17-minute-long walkout Wednesday morning to protest gun violence.</p> <p>The nationwide protest comes one month after the shooting at Marjory Stoneman Douglas High School in Parkland, Florida that left 17 people dead.</p> <p>Since then, students have pressed legislators to pass stronger gun laws.</p> <p>Among the local students who participated were those from Timberline, Olympia, Capital and Tumwater High Schools; Reeves, Aspire and Reeves middle school; and South Puget Sound Community College.</p> <p>School administrators in Olympia said last week that students could face unexcused absences if they participate.</p> <p>“(E)vents such as these are student-led events and not school-sponsored activities ...,” the district’s email noted. It said that classes will continue on their normal schedule during the walkout.</p>

<b>HEADLINE</b>	<b>03/14 Snohomish Co. bans safe injection sites</b>
<b>SOURCE</b>	<a href="http://www.heraldnet.com/news/snohomish-county-permanently-bans-heroin-injection-sites/">http://www.heraldnet.com/news/snohomish-county-permanently-bans-heroin-injection-sites/</a>
<b>GIST</b>	<p>EVERETT — The Snohomish County Council passed a land-use ordinance Wednesday that would permanently ban supervised heroin-injection sites.</p> <p>The measure passed 4-0.</p> <p>The restriction was proposed by Councilman Nate Nehring to prevent any government-monitored injection sites like one that operates in Vancouver, B.C., and dozens of other locations around the world, where government nurses stand watch as drug users shoot up. Officials in King County and Seattle are considering opening a couple of sites based on a similar model in the hopes of lowering overdose deaths and preventing the spread of diseases.</p> <p>Council Chairwoman Stephanie Wright said there are no current proposals to establish any drug-consumption sites in Snohomish County. Wright described the council’s move Wednesday as proactive.</p> <p>Councilman Brian Sullivan was out sick during Wednesday’s vote.</p> <p>More than an hour of public comments was dominated by people who opposed supervised drug-use sites for fear that they could worsen crime and encourage more substance abuse. They also could create liability for the county, if someone were to die of an overdose, they argued. On the other side of the issue, one person said the sites should be considered as a possible way to get more drug users into treatment and to lower crime.</p> <p>Snohomish County’s permanent ban follows a moratorium the council enacted in September.</p>

HEADLINE	<b>03/14 Traffic deaths continue to soar</b>
SOURCE	<a href="https://www.washingtonpost.com/local/trafficandcommuting/traffic-deaths-continue-to-soar-despite-cities-pledges-to-get-them-to-zero/2018/03/14/36c57386-26c7-11e8-b79d-f3d931db7f68_story.html?utm_term=.54c3257ac3b4">https://www.washingtonpost.com/local/trafficandcommuting/traffic-deaths-continue-to-soar-despite-cities-pledges-to-get-them-to-zero/2018/03/14/36c57386-26c7-11e8-b79d-f3d931db7f68_story.html?utm_term=.54c3257ac3b4</a>
GIST	<p>D.C. Mayor Muriel E. Bowser stood in the heart of Union Station on Feb. 20, 2015, and promised to lead the nation’s capital into an era free of traffic fatalities.</p> <p>“We are taking our first step toward realizing a ‘Vision Zero’ where no lives are lost on our streets or at our intersections,” said a newly elected Bowser, setting a goal of zero road deaths by 2024.</p> <p>Instead, the number of traffic fatalities has steadily increased since then, frustrating city officials and advocates, and seemingly putting the goal further from reach.</p> <p>The District is not alone. Data recently released by the Governors Highway Safety Association shows that after decades of improvement, the number of victims on the nation’s roads is rising across the country — especially among pedestrians.</p> <p>Traffic fatalities had been declining significantly since the 1970s as a result of safer vehicles, increased enforcement of laws on drunken and impaired driving, and a greater use of seat belts.</p> <p>The trend is a particular setback for cities such as the District and Los Angeles that in recent years have pledged a “Vision Zero” approach to reduce fatalities and serious injuries, and are instead seeing their numbers rise.</p> <p>“We don’t want this to be a trend,” said Sam Zimbabwe, a top District Department of Transportation official. “We’ve got real concerns that to get to zero we need to drive this number down.”</p> <p>In Washington, where Vision Zero is one of the mayor’s signature initiatives, there were 30 traffic fatalities last year, up from 28 in 2016 and 26 in 2015. Of those killed on D.C. streets last year, 11, or nearly 40 percent, were pedestrians.</p> <p>Los Angeles, which adopted Vision Zero two years ago, fell short of its goal of reducing traffic deaths 20 percent by 2017. The 3 percent reduction the city experienced wasn’t viewed as much of a success because the share of pedestrian victims nearly doubled from 2015.</p> <p>Even in New York, where Vision Zero has been successful by some measures, several recent fatal incidents involving children as young as 1 have ignited protests and demands for safer street design and other pedestrian protections.</p> <p>“The news nationally is not good,” said Jonathan Adkins, executive director of the Governors Highway Safety Association, which issued a report last month that estimates about 6,000 pedestrians were killed on U.S. roadways last year. That number is basically unchanged from 2016 but represents a nearly 50 percent increase since 2009.</p> <p>Though the upward shift is most striking among pedestrian fatalities, overall traffic deaths also remain at an alarmingly high level, authorities say. For the second consecutive year, U.S. road deaths topped 40,000 last year, according to the National Safety Council.</p> <p>“The price we are paying for mobility is 40,000 lives each year,” said NSC chief executive Deborah A.P. Hersman. “This is a stark reminder that our complacency is killing us. The only acceptable number is zero.”</p> <p>At least 33 U.S. jurisdictions are part of the Vision Zero initiative, modeled after a pioneering Swedish program started in 1997, with the aim of eliminating fatalities and serious injuries. To achieve the goal, the program uses strategies focused on enforcement, public education, street engineering and data collection.</p>

	<p>But the increase in fatalities has led critics to question the effectiveness of the program and whether cities are doing enough to make streets safer for all road users.</p> <p>Few are willing to assign a clear cause to the increase in traffic deaths, but research shows alcohol, speed and distracted driving remain leading factors.</p> <p>Studies point to distractions among pedestrians, including texting while walking. The Governors Highway Safety Association study found marijuana use also could be a factor, noting that jurisdictions that have legalized the drug in recent years, including the District, have seen increases in the number of pedestrian deaths.</p>

<b>HEADLINE</b>	<b>03/14 Students unite from Tumwater to Seattle</b>
<b>SOURCE</b>	<a href="https://crosscut.com/2018/03/tumwater-seattle-students-unite-gun-walkout">https://crosscut.com/2018/03/tumwater-seattle-students-unite-gun-walkout</a>
<b>GIST</b>	<p>Absent any school bell to prompt them, thousands of teenagers in schools across Puget Sound left their classrooms as the clock struck 10 on Wednesday morning.</p> <p>Joining some tens of thousands of their peers across the country, the majority of the students walked out to send a message to Congress on gun control; others simply to memorialize the 17 people shot and killed at Marjory Stoneman Douglas High School in Parkland, Florida exactly one month ago.</p> <p>"We are tired of waiting for adults to take action while we continue to suffer and lose our friends, our classmates, our teammates and our peers," said Madison Thomas, a 20-year-old Seattle native who is among the 13 young leaders of the Women's March Youth Empower group, which helped coordinate Wednesday's massive protests across the country.</p> <p>For most of its participants, the National School Walkout underscored a call for gun reforms, including a ban on assault weapons and high-capacity magazines, an expansion of background checks to all gun sales and a rejection of proposals to bring more guns into schools, like President Trump's NRA-approved plan to arm school teachers.</p> <p>In Seattle, students carried the message of gun-control reform with rallies that included an appearance by Mayor Jenny Durkan on the University of Washington campus and a visit by Gov. Jay Inslee to Ballard High School.</p> <p>But not all students around the state walked out as a form of political protest.</p> <p>In one of Puget Sound's semi-rural, more conservative suburbs, student organizers in Tumwater toed a more cautious line, opting for unity over politics. "Our main message is to honor the lives of those who</p>

were lost,” said Brad Blackburn, a junior at Tumwater High School. “That could have been anyone. So, our main focus is emphasizing school safety.”

Tumwater High School, south of Olympia, draws from the rural parts of Thurston County. Tumwater itself is suburban, but students bus in from as far south as Littlerock off I-5’s exit 99. In sharp contrast to the progressive tilt of the state capital just 10 minutes north, Trump “Make American Great Again” hats are common among its approximately 1,200 students. During an assembly at nearby Bush Middle School last Veterans Day, some students flew a Confederate battle flag.

Gun culture here is strong; the Tumwater High School rifle club receives \$19,000 a year from the National Rifle Association, according to the Associated Press. The club’s website boasts of its NRA support.

Blackburn, a Tumwater native, is the exception more than the norm: He’s Black in a mostly White school, pro-gun control in a gun-friendly area, and he knows people talk about him and sometimes scoff at what they view as his Second Amendment opposition. But years of speaking his mind have given him a stiff backbone and the fortitude to help organize the walkout.

“Over time people have tried to bash me about it. But if you stand your ground, bullies tire,” Blackburn said.

Blackburn was lonely once, the feeling compounded by both his skin color and his courage to speak out. “When you’re walking down the hallways, you know what people are thinking,” he said. “People don’t like what you’re doing. At times, I feel very isolated.”

But he’s found a community in recent years in the school’s Cultural Awareness and Student Activism clubs, separate groups but with nearly identical members. It was a place where others who felt isolated could meet and celebrate diversity where it may otherwise lack.

It was in these meetings that plans for the walkout first formulated. And as they planned, they faced some backlash from other students who saw it as a protest against the Second Amendment. Amiya Bernard, a recent California transplant who’s the president of the Cultural Awareness club, insists that was not the purpose of Wednesday’s walkout. But regardless, she said, “If you care about this stuff, you might lose friends.”

Speaking before the 10 a.m. start of the event, she said that even if no one else showed up, the clubs’ walkout would be a voice for students too scared to speak out.

As it turned out, more than 200 students filed out of the school’s front door, gathering behind 17 empty chairs placed outside, each one with a picture of someone who was shot dead in Parkland. As they locked arms in silence for 17 minutes, students who remained inside the school looked on through the windows.

When the silence finished and students quickly returned to their classrooms — administrators adjusted the schedule to allow for the walkout — the organizers were elated, hugging each other, their teachers and even the principal, Jeff Broome. Aisha Thomas, a junior, said, “The fact that 200 people came is insane.”

In northeast Seattle, a few thousand students from as many as seven different high schools gathered at Roosevelt High School on Wednesday morning, eagerly embracing their megaphone in calling for an end to gun violence through gun-control reforms.

Together — shouting chants and holding colorful protest signs — they marched 1.5 miles from the school to convene in a massive rally at the University of Washington’s Red Square.

Student organizers didn’t want to just stage the 17-minute walkout as the national movement called for. “This deserves more than 17 minutes,” said Zach Heffron, an 18-year-old senior at Nathan Hale High School who helped mobilize his peers.

In the days after Parkland, Heffron, Roosevelt senior Gabe Rosenbloom and Roosevelt junior Scout Smissen led the charge to organize the school walkout — drawing inspiration from the Florida school student activists who drew national attention with their #NeverAgain movement.

“It’s always been that this happens and nothing comes from it – we’re numb to it,” Heffron said. “But this could be the one that we actually get the momentum on our side, we actually get something done and, as students, we raise our voices.”

Rosenbloom, 18, said state and federal lawmakers should take note of the students walking out across America, because if the students aren’t at voting age already, they will be soon. “Hear our voice now because soon, you work for us!” he said in a speech at the UW rally that capped off their morning protest.

Several students who marched said the Parkland shooting hit home for a simple reason: “Something like that could happen at Roosevelt, and the idea of that scares me,” Rosenbloom told Crosscut. “And that shouldn’t have to scare me when I’m in a place of learning.”

But the motivations for some marchers and organizers was even more personal. The walkout came just days after a Roosevelt High student was hospitalized last weekend after she was shot in a reported act of neighborhood gun violence. And in that same neighborhood almost six years ago, five people were shot and killed in a mass shooting at Café Racer.

“It was one of the most gruesome Seattle moments,” recalled Smissen, 17, who said she lost a “dear friend and a neighbor” in that tragedy. “For me, it’s not why I’m marching, but why wouldn’t I? There’s no reason not to be active in a time like this.”

As the crowd of kids flooded off the Roosevelt High football field and down 15th Avenue Northeast, they were cheered on and applauded by onlookers. A group of elementary school students from the University Cooperative School held up handmade signs and gave the high school students high fives as they marched past, one person from an apartment yelling “You rock!” to the crowd and other adults lining the sidewalks in visible awe of the students.

<b>HEADLINE</b>	<b>03/14 School walkout protests vary in tenor</b>
<b>SOURCE</b>	<a href="https://apnews.com/824a04eeeb8e4fc0875d9a0be8273c53/From-somber-to-angry,-school-walkout-protests-vary-in-tenor">https://apnews.com/824a04eeeb8e4fc0875d9a0be8273c53/From-somber-to-angry,-school-walkout-protests-vary-in-tenor</a>
<b>GIST</b>	<p>Students hoisted “Stand United” signs. They chanted ““Hey, hey, ho, ho - the NRA has got to go” outside the White House. Others put 14 desks and 3 podiums in a circle to honor the students and faculty killed at Marjory Stoneman Douglas High.</p> <p>These scenes played out across the country as students put down their pencils and pens and walked out of class to protest gun violence. Activists hoped it would be the biggest demonstration of student activism yet in response to last month’s massacre in Florida.</p> <p><b>A PERSONAL CONNECTION TO PARKLAND</b></p> <p>Students discuss gun violence ahead of a walkout at East Chapel Hill High School.</p> <p>At East Chapel Hill High School in North Carolina, senior Talia Pomp said one of her best friends attends Marjory Stoneman Douglas High and texted her during the rampage last month, leaving an everlasting impact on her.</p> <p>“That personal connection made it like super real for me ... and this has to be the last one,” said Pomp, who handed out orange T-shirts with #enough written on them to her classmates.</p>

Some of her classmates aligned their desks in a circle to discuss gun violence in America. Above them hung an image of Che Guevara, a prominent communist figure in the Cuban Revolution who went on to become a guerrilla leader in South America and a universal symbol of revolution.

#### PARKLAND HIGH - SHARING MORE THAN A NAME

Students hold their cellphones at a rally at Parkland High School outside Allentown, Pa.

Parkland High School outside Allentown, Pennsylvania, shares more than a name with the school in Parkland, Florida.

Stoneman Douglass freshman Daniel Duff, who survived the shooting by hiding in a closet but lost seven of his friends, is the cousin of Collin and Kyleigh Duff, who go to Parkland High in Pennsylvania. The Duff siblings have been selling #parklandforparkland bracelets, raising more than \$10,000 for the Florida shooting victims.

Daniel Duff described what it was like to live through the shooting in a video that was shown at the rally.

“How many more mass shootings does it have to take for real change?” he said.

#### PROTEST AND BE PUNISHED?

Students at Carlton J. Kell High School in Cobb County, Ga., sit in their classroom after they were asked not to leave by staff.

While some schools encouraged the walkouts and arranged the school day around them, others took a stand against the protests and threatened punishment.

At Kell High School in Marietta, just northwest of Atlanta, three of the 1,000-plus students walked out, then went back inside after their 17 minutes of protest. The school had said any protesting students would be punished, but it didn't specify the consequences.

Police patrolled outside. A British couple walking their dogs near the school wanted to encourage students, but they were threatened with arrest if they did not leave the campus.

About an hour's drive south, in Whitfield County, Superintendent Judy Gilreath wrote a letter threatening disciplinary action for students who walked out, citing concerns about confrontations between students over gun rights. And suburban Atlanta's Cobb County School District, one of the state's largest systems, announced that it does not support the walkouts, but the potential consequences didn't deter some students.

“Change never happens without backlash,” said Kara Litwin, a senior in Cobb County.

#### A POEM FOR PARKLAND

Yarmouth High School student Sage Watterson reads a poem she wrote titled “Never Again.”

In Maine, most of the walkout demonstrations were postponed because of school cancellations following a snowstorm that dumped up to 20 inches.

But more than 200 students gathered outside Yarmouth High School as snow pelted the crowd to hold a moment of silence for the victims.

“This is not politics. This is life, and the loss of it. This is the indisputable fact that every student in America goes to school with a bundle of fear tucked into their backpack. It is exhausting,” said Sage Watterson, reading from an original poem, “Never Again.”

She said she wanted to “grab James Madison by the whig” and tell him that the use of a comma in the 2nd Amendment opened the door to gun violence he never could’ve imagined.

“Do not use our forefathers’ words to mop up the blood on library carpets and cafeteria floors,” she said.

#### HITTING CLOSE TO HOME

A female student was fatally shot at Huffman High School in Birmingham, Alabama, earlier this month, so dozens of students walked outside and encircled a flagpole, which was still at half-staff in memory of 17-year-old Courtlin Arrington. They spent 17 minutes in silence for each of the Parkland deaths, and 1 minute for their slain classmate. A 17-year-old junior has been charged with manslaughter in Arrington’s death.

“We were out there for the Florida victims, as many other schools were, but we were also out there for one of our own and I think that was the hardest part,” said senior DeCarlos Bates, 17.

<b>HEADLINE</b>	<b>03/14 Tens of thousands stage school walkouts</b>
<b>SOURCE</b>	<a href="https://apnews.com/00f790b17b2542319cc1fa519259b86b/US-students-stage-school-walkouts-to-protest-gun-violence">https://apnews.com/00f790b17b2542319cc1fa519259b86b/US-students-stage-school-walkouts-to-protest-gun-violence</a>
<b>GIST</b>	<p>Warning their futures are being stolen from them, tens of thousands of young people across the U.S. walked out of school to demand action on gun violence Wednesday in one of the biggest student protests since the Vietnam era.</p> <p>Braving snow in New England and threats of school discipline in places like Georgia and Ohio, they carried signs, chanted slogans against the National Rifle Association and bowed their heads in tribute to the 17 dead in the Feb. 14 shooting at Marjory Stoneman Douglas High School in Parkland, Florida.</p> <p>“We’re sick of it,” said Maxwell Nardi, a senior at Douglas S. Freeman High School in Henrico, Virginia, just outside Richmond. “We’re going to keep fighting, and we’re not going to stop until Congress finally makes resolute changes.”</p> <p>Across the country and beyond, students were urged to leave class at 10 a.m. local time for 17 minutes — one minute for each of the dead in Florida. At some schools, students didn’t walk outside but lined the hallways, gathered in gyms and auditoriums or wore orange, the color used by the movement against gun violence, or maroon, the school color at Stoneman Douglas.</p> <p>“I don’t want my mother or my father having to worry about me going to school getting an education and then my life is gone,” said Leticia Carroll, a 15-year-old freshman who helped organize a walkout of more than 100 students at Groves High School in Beverly Hills, Michigan, outside Detroit.</p> <p>She added: “We need answers. We need something done.”</p> <p>Max Poteat, a student leader at North Carolina’s East Chapel Hill High School, said he was struck by the emotional weight of the moment.</p> <p>“I think halfway through it really hit me, and I think everyone around, that these are teenagers just like us and that their lives were taken innocently — and that time is needed for change,” he said.</p> <p>In joining the protests, the students followed the example set by many of the survivors of the Florida shooting, who have become activists on gun control, leading rallies, lobbying legislators and giving articulate TV interviews. Their efforts helped spur passage last week of a Florida law curbing access to assault rifles by young people</p>

In Washington, more than 2,000 high-school age protesters observed the 17 minutes of silence by sitting on the ground with their backs turned to the White House as a church bell tolled. President Donald Trump was in Los Angeles at the time.

#### Students rally in front of the White House

The protesters carried signs with messages such as “Our Blood/Your Hands” and “Never Again” and chanted slogans against the NRA.

Stoneman Douglas High senior David Hogg livestreamed the walkout at the tragedy-stricken school on his YouTube channel. Walking amid a mass of people making their way onto the football field, he criticized politicians for not taking more action to protect students.

He said the students could not be expected to remain in class when there was work to do to prevent gun violence.

“Every one of these individuals could have died that day. I could have died that day,” he said.

A nor’easter that buried Boston in snow and left many schools closed disrupted the protest plans. But hundreds of students still gathered at a Boston church before marching to the Statehouse, where they planned to lobby lawmakers to pass new gun regulations.

“I feel like there is a certain power in kids standing up for themselves and standing up for their safety,” said Esmay Price Jones, 14, a Somerville High School freshman

At other schools, students created symbols to try to represent the tragedy. At Cooper City High, near Parkland, students gathered around 14 empty desks and three podiums arranged in a circle outside the school, representing the 14 students and three faculty members killed in the shooting. The students then released 17 doves from a box.

Some schools applauded students for taking a stand or at least tolerated the walkouts, while others threatened discipline.

About 10 students left Ohio’s West Liberty-Salem High School — which witnessed a shooting last year — despite a warning they could face detention or more serious discipline.

Police in the Atlanta suburb of Marietta patrolled Kell High, where students were threatened with unspecified consequences if they participated. Three students walked out anyway for the 17-minute protest. A British couple walking their dogs went to the school to encourage students but were threatened with arrest if they did not leave.

The coordinated walkouts were organized by Empower, the youth wing of the Women’s March, which brought thousands to Washington last year. It offered the students a list of demands for lawmakers, including a ban on assault weapons and mandatory background checks for all gun sales.

The organizers are seeking to keep up the pressure for stricter gun laws despite resistance from the White House and little action over the years on Capitol Hill.

After initially endorsing an increase in the minimum age for buying assault weapons to 21, Trump left that out of a proposal that calls for a panel study on school safety.

Education Secretary Betsy DeVos had no immediate public comment on the walkout.

Historians said the demonstrations were shaping up to be one of the largest youth protests in decades.

“It seems like it’s going to be the biggest youth-oriented and youth-organized protest movements going

back decades, to the early '70s at least,” said David Farber a history professor at the University of Kansas who has studied social change movements.

“Young people are that social media generation, and it’s easy to mobilize them in a way that it probably hadn’t been even 10 years ago.”

<b>HEADLINE</b>	<b>03/14 Seattle task force pushes for more taxes</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/925685/task-force-employee-hours-tax-seattle/">http://mynorthwest.com/925685/task-force-employee-hours-tax-seattle/</a>
<b>GIST</b>	<p>A head tax on Seattle businesses may not be enough, according to a task force that is now recommending additional taxes on the city’s wealthy residents.</p> <p>“We therefore believe that the City of Seattle should pass legislation this year to generate \$150 million per year in new progressive revenue, including an Employee Hours Tax,” the task force states in its report to the council. “... wisely invested over the next 10 years, will result in significant and measurable progress toward ending the crisis of homelessness and housing insecurity in our city.”</p> <p>The <a href="#">March 9 report from Seattle’s Progressive Revenue Task Force on Housing and Homelessness</a> primarily proposes an employee hours tax — also referred to as a head tax. But it also proposes new taxes, including estate and CEO taxes.</p> <p>Additionally, the task force recommends the city change its approach to the homeless crises. For example, providing special RV tags allowing them to park without fear of being ticketed.</p> <p>The task force notes that cuts could be made to some city spending, such as the criminal justice budget. But it concludes that new revenue is the main solution to the homelessness crisis. The task force states that “tax burdens should not be increased lightly,” and that the homeless crisis is caused, in part, by Seattle’s economic boom.</p> <p><b>Employee hours tax</b></p> <p>The task force recommends the city establish an employee hours tax to go into effect Jan. 1, 2019. It provides a range of options based on employer size and type. In the end, it aims to raise between \$25 million to \$75 million a year. The reports states:</p> <p>‘Employers that can afford to contribute more should pay more, while employers that cannot afford to contribute as much should pay less.’</p> <p>Noting that it may not be perfect, the report encourages the council to “not let the perfect be the enemy of the good.”</p> <p>‘Care should be taken not to disproportionately impact POC- and other minority-owned businesses and employers, or to speed the process of gentrification and displacement that are already transforming business districts as well as residential areas in many neighborhoods where communities of color have historically resided.’</p> <p>The city would tax employers either with a flat fee per employee or as a percentage of payroll. It also suggests the council design the tax to vary depending on business size. The report states that the council should design exceptions, such as businesses under a certain revenue threshold.</p> <p><b>Other new taxes</b></p> <p>The task force recommends additional taxes to raise beyond the \$75 million employee hours tax. It admits that the amount it proposes won’t cover the entire housing need, but will be “a solid start” to solving the problem through affordable housing programs.</p>

‘The city can leverage state and federal funding, but still Seattle must pitch in ~ \$170,000 per unit. That means we need a total of \$3.4 billion, or \$340 million per year for 10 years.’

That \$340 million annual need only covers capital costs, not ongoing operations. The task force therefore proposes a variety of additional tax strategies beyond an employee hours tax.

- Local Estate Tax: Washington allows a [tax on estates](#) after an owner is deceased. The task force recommends increasing the estate tax locally by as much as 50 percent.
- Exceptionally high compensation: A tax on companies that have a CEO-to-worker pay ratio above 100-to-1. [Portland passed a similar pay ratio surtax](#) in 2016.
- Raise the REET: Seattle could lobby lawmakers in Olympia to get a new real estate excise tax authority. This would be a tax on property sales more than \$1 million, for example. It is also referred to as a mansion tax.
- The task force asks the council to lobby state lawmakers to give the city the authority to tax: second homes; vacant/unoccupied property; and speculative real estate investment activity.

### Strategies

The report also suggests a range of strategies to help combat the homelessness crisis.

Strategies include:

- A portion of the new revenue could be provided to faith communities in the form of grants.
- Split employee hours tax revenue by 80-20 percent between affordable housing programs and emergency shelters.
- Construct new shelter options until more affordable housing is available.
- Support people living in their vehicles: Modify scofflaw rules; make safety lots for off-street parking with access to bathrooms and trash pickup; provide waste removal for RVs; payment of tickets beyond what vehicle residents can pay; provide repair for vehicles that cannot move; provide fuel; assist with insurance and drivers license issues; issue RV tags allowing them to park in designated areas without fear of being ticketed.
- \$10 million should be used annually to augment the Veterans, Seniors & Human Services Levy.
- Support communities of color developing affordable housing. Prioritize projects that help “anchor communities of color and assist these organizations in developing internal capacity to conceive, design, finance, construct, and manage affordable housing projects.”

<b>HEADLINE</b>	<b>03/14 Seattle 14-mile pursuit under investigation</b>
<b>SOURCE</b>	<a href="http://mynorthwest.com/926785/police-pursuit-seattle-kent/">http://mynorthwest.com/926785/police-pursuit-seattle-kent/</a>
<b>GIST</b>	<p>Police involved in an approximate 14-mile chase from South Seattle to Kent are being investigated for their use of force in stopping a suspect, KIRO 7 reports.</p> <p>The chase began around 1:15 p.m. on Tuesday, March 13 in the 4400 block of Fourth Avenue South.</p> <p>According to the Seattle Police Department, the suspect driving a stolen truck was involved in “multiple collisions” before leaving city limits. KIRO 7 footage shows several collisions throughout the pursuit, including one that resulted in the driver of another vehicle being taken to the hospital.</p> <p>The pursuit ended around 2 p.m. in the 5700 block of South 272nd Street.</p> <p>Now, investigators are looking into whether or not law enforcement involved went too far in stopping the suspect, according to KIRO 7.</p> <p>That will depend on whether police violated pursuit policy. In Seattle, officers cannot pursue a suspect without justification that the need to stop a suspect outweighs the risk to the public. Simple traffic violations and misdemeanors, for example, are not reasons to start a pursuit, according to the department’s</p>

	<p>policy.</p> <p>Officers are expected to end a pursuit when the risk outweighs the need to stop the driver. Factors to end the pursuit include location, road conditions, speed, traffic conditions, and more.</p> <p>During the March 13 pursuit, the suspect took law enforcement through several neighborhoods and a school zone.</p> <p>Whether or not police needed to pursue the suspect has yet to be determined. It's likely they felt it was justified at the time because officers believed the suspect was involved in a weekend shooting.</p>

<b>HEADLINE</b>	<b>03/14 Recall: Ford Fusion, Lincoln MKZ</b>
<b>SOURCE</b>	<a href="http://www.fox5ny.com/news/local-news/ford-recalling-14m-cars-for-loose-steering-wheel-bolts">http://www.fox5ny.com/news/local-news/ford-recalling-14m-cars-for-loose-steering-wheel-bolts</a>
<b>GIST</b>	<p>(WJBK) - Ford is recalling nearly 1.4 million midsize cars in North America because the steering wheel can detach from the steering column and drivers could lose control.</p> <p>The recall covers certain Ford Fusion and Lincoln MKZ cars from the 2014 through 2018 model years.</p> <p>Ford says steering wheel bolts can loosen over time. The company says it knows of two crashes and one injury caused by the problem.</p> <p>Dealers will replace the bolts with longer ones that have more aggressive threads and a nylon patch to stop them from coming loose.</p> <p>Just over 1.3 million cars in the U.S. are being recalled. The rest are in Canada and Mexico.</p>

<b>HEADLINE</b>	<b>03/14 EU plan for return of illegal migrants</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/03/14/eu-to-limit-visas-if-countries-refuse-to-take-back-migrants.html">http://www.foxnews.com/world/2018/03/14/eu-to-limit-visas-if-countries-refuse-to-take-back-migrants.html</a>
<b>GIST</b>	<p>BRUSSELS – The European Union moved Wednesday to speed up the return of unauthorized migrants, announcing plans to punish countries that refuse to take back their nationals by restricting visas for their diplomats.</p> <p>While the number of people entering Europe in search of better lives has dropped dramatically over the past year, EU countries only send back around half of migrants denied visas, often because the migrants have lost or destroyed their ID documents and it's difficult to establish their nationality. Fake ID is also often used.</p> <p>France, for example, is angered that Mali routinely refuses to take back people that Paris insists are from there.</p> <p>Formalizing a threat already made to some African countries by EU member states, the EU's executive Commission announced that it has "a new mechanism to trigger stricter conditions for processing visas when a partner country does not cooperate sufficiently."</p> <p>The aim is to target decision-makers by dragging out the application time for diplomatic visas, hiking costs or cutting short their stays.</p> <p>At the same time, the Commission said it plans to make tourism visas more attractive. It would allow for earlier applications, electronic visas, and strictly limited stays of one week in one EU country.</p>

	<p>But the price of visas — already beyond the means of most Africans — would rise from 60 to 80 euros (\$74 to \$99), leaving many heading to Europe in search of better lives with little incentive to apply.</p> <p>"With these changes, we will keep Europe's door open for bone fide travelers but closed for those who pose security risks," said EU Migration Commissioner Dimitris Avramopoulos.</p>

<b>HEADLINE</b>	<b>03/14 Greece rejects Turkey extradition request</b>
<b>SOURCE</b>	<a href="http://www.foxnews.com/world/2018/03/14/greek-court-rejects-turkish-extradition-request.html">http://www.foxnews.com/world/2018/03/14/greek-court-rejects-turkish-extradition-request.html</a>
<b>GIST</b>	<p>ATHENS, Greece – A Greek court has rejected a Turkish extradition request for a young woman who was among nine suspected Turkish militants arrested in Athens ahead of an official visit by Turkey's president late last year.</p> <p>The three-member panel of judges ruled Wednesday that 21-year-old Halaz Secer was in danger of being tried for issues other than what the extradition request sought her for and that her life could be in danger if returned to Turkey. The judges also ruled that some offences she was being sought for, like participating in protests and making banners, were not crimes.</p> <p>The nine were arrested in December for alleged links to the left-wing Revolutionary People's Liberation Party-Front, which Turkey, the United States and the European Union consider a terrorist organization. She denies the charges.</p>

<b>HEADLINE</b>	<b>03/14 UN seeks \$540M for Palestinian aid</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/seeks-540-million-palestinian-aide-gaza-53737918?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/seeks-540-million-palestinian-aide-gaza-53737918?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>The United Nations says about \$540 million is needed for humanitarian relief in the Palestinian territories in 2018.</p> <p>Jamie McGoldrick, the top U.N. humanitarian coordinator, said Wednesday that 75 percent of that sum is for Gaza, where "a man-made tragedy is unfolding daily."</p> <p>Gaza has been under an Israeli and Egyptian blockade since the Islamic militant group Hamas took over the territory in 2007. The closure along with Hamas' conflicts with Israel and a bitter power struggle with the group's bitter rival, the Palestinian Authority in the West Bank, has devastated the economy.</p> <p>Half the sum is to support emergency projects by UNRWA, the main U.N. agency for Palestinian refugees, after Washington slashed its funding this year.</p> <p>The rest is to fund food, water, health, sanitation, shelter and education projects.</p>
<a href="#">Return to Top</a>	

<b>HEADLINE</b>	<b>03/14 Myanmar: ready for UN help w/Rohingya</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/myanmar-ready-rohingya-return-53736960?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/myanmar-ready-rohingya-return-53736960?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>Senior officials in Myanmar announced Wednesday that they have begun talks with U.N. agencies to see how they could assist with the repatriation of Rohingya refugees who fled to Bangladesh to escape violence against them.</p>

	<p>Foreign Ministry Permanent Secretary Myint Thu said the offices of the U.N. High Commissioner for Refugees and the U.N. Development Program responded last week with a proposal and concept paper to the government's invitation for U.N. involvement, which the government is now studying.</p> <p>"We considered that the time is now appropriate to invite UNHCR and UNDP to be involved in the repatriation and resettlement process, as well as in carrying out activities supporting the livelihoods and development for all communities in Rakhine state," Myint Thu said.</p> <p>Human rights experts believe safety cannot yet be guaranteed for about 700,000 Rohingya Muslims who fled the western state of Rakhine to Bangladesh after security forces carried out brutal crackdowns in response to attacks by Rohingya insurgents last August.</p> <p>Antagonism between Rakhine's Buddhist community and Rohingya Muslims led to communal violence in 2012, forcing at least 140,000 Rohingya from their homes into squalid camps for internally displaced people. Most Rohingya are treated as stateless persons with limited rights, and the insurgents drew support from the discontented as prejudice against their community grew in overwhelming Buddhist Myanmar.</p> <p>Stanislav Saling, a U.N. spokesman in Myanmar, confirmed that in response to Myanmar's initiative, the U.N. agencies submitted a note proposing how they could help create conditions "for the safe, dignified and voluntary return for refugees, in line with international principles."</p> <p>Neither the U.N. nor the government made public details of the proposal.</p>

<b>HEADLINE</b>	<b>03/14 Russia: UK expulsion 'unacceptable'</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/latest-russia-rejects-ultimatums-spy-poisoning-53733585?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/latest-russia-rejects-ultimatums-spy-poisoning-53733585?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>The Latest on the poisoning of a former Russian spy in England (all times local):</p> <p>2:10 p.m.</p> <p>Russia's UK ambassador says Britain's decision to expel some 23 Russian diplomats is hostile and unacceptable.</p> <p>The embassy says in a statement Wednesday that U.K. Ambassador Alexander Yakovenko was summoned to the Foreign Office and told of the expulsions. Prime Minister Theresa May announced the measure in response to the nerve agent attack on Sergei Skripal and his daughter Yulia.</p> <p>May gave the Russians an ultimatum until midnight Tuesday to explain how a nerve agent developed in the Soviet era came to be used in the March 4 attack. May responded with a package of diplomatic and economic sanctions after she said her request was met with disdain.</p> <p>Yakovenko says "we consider this hostile action as totally unacceptable, unjustified and shortsighted."</p> <p>_____</p> <p>1:30 p.m.</p> <p>A top Russian soccer figure is brushing off Britain's threat to ask its royal family to stay away from this summer's soccer World Cup in Russia.</p> <p>British Prime Minister Theresa May on Wednesday said Britain's royal family would be asked not to attend the tournament, as part of sweeping measures against Russia over the nerve agent attack on former Russian agent Sergei Skripal and his daughter in England.</p>

Nikolai Simonyan, vice president of the Russian Football Union, was quoted by the Interfax news agency as saying "It's not so important that officials wouldn't come, that's their problem. It's important if the team comes, and it wants to come."

12:50 p.m.

Britain is expelling 23 Russian diplomats after the nerve agent attack on a former Russian spy — the single biggest such expulsion since the Cold War.

Prime Minister Theresa May told the House of Commons on Wednesday that Russia has expressed "disdain" for Britain's wish for an explanation into the attempted murder of former spy Sergei Skripal and his daughter Yulia. She says that Russia's actions "represent an unlawful use of force."

May said the Russian diplomats have a week to leave Britain.

She also announced a range of economic and diplomatic measures, including a decision to cancel all high-level bilateral contacts with Russia and to ask the royal family not attend the soccer World Cup in Russia.

Russia has denied responsibility in the March 4 attack on the Skripals.

<b>HEADLINE</b>	<b>03/14 FBI: should have done more in Parkland</b>
-----------------	---

<b>SOURCE</b>	<a href="https://www.washingtontimes.com/news/2018/mar/14/fbi-says-it-should-have-done-more-run-parkland-sho/">https://www.washingtontimes.com/news/2018/mar/14/fbi-says-it-should-have-done-more-run-parkland-sho/</a>
---------------	---

<b>GIST</b>	<p>The deputy director of the FBI said Wednesday that the bureau should have done more in the run-up to the Parkland school shooting last month that claimed the lives of 17 people at Marjory Stoneman Douglas High in Florida.</p> <p>“While we will never know if any such investigative activity would have prevented this tragedy, we clearly should have done more,” Deputy Director David Bowdich said in prepared testimony for a Senate Judiciary Committee hearing.</p>
-------------	---

Mr. Bowdich said the bureau got an email tip on Sept. 25 from a person in Mississippi who said someone using the username “Nikolas Cruz” posted on a YouTube page: “Im going to be a professional school shooter.”

He said officials interviewed the tipster on Oct. 2, but the lead was closed after searches of FBI databases and open sources and a belief that the true identity of the poster could not be determined.

Authorities say Mr. Cruz, 19, used an AR-15-style rifle to kill 17 people at Stoneman Douglas on Feb. 14.

There was a subsequent phone call on Jan. 5 from someone identifying herself as a friend of the Cruz family who said the teen had threatened his mother with a rifle, that he wanted to kill people, and that he was “going to explode.”

After the call, the FBI operator conducted a search of FBI databases and found the closed lead out of Mississippi. She consulted with her supervisor and the matter was closed, and the information wasn’t forwarded to a field office for further review, Mr. Bowdich said in his testimony.

Mr. Bowdich said the FBI could have and should have done more in response, and that an internal investigation is ongoing. He said they’ve already doubled the number of special agent supervisors assigned to review tips received by “non-agent personnel.”

“When we make mistakes, we will not hide them, and we are committed, with your help, to doing whatever is necessary to correct our mistakes and prevent tragedies like this one from being repeated,” he said.

Senate Judiciary Committee Chairman Charles E. Grassley convened the hearing to conduct oversight of what happened in the run-up to the shooting and discuss potential legislative responses.

“At all levels, law enforcement must explain what went wrong, why it went wrong, and what steps it is taking to make sure these failures never happen again,” Mr. Grassley said as he opened the hearing.

<b>HEADLINE</b>	<b>03/14 Combat prep: tour of duty in Chicago</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/navy-medics-get-prepared-for-combatwith-tour-of-duty-in-chicago-1521028800">https://www.wsj.com/articles/navy-medics-get-prepared-for-combatwith-tour-of-duty-in-chicago-1521028800</a>
<b>GIST</b>	<p>CHICAGO— Konrad Poplawski, a 22-year old Navy hospital corpsman, is about to be deployed as a battlefield medic with the 2nd Marine Division, which has served in deadly battlegrounds in Iraq and Afghanistan.</p> <p>But first, he is making a pit stop at Cook County’s Stroger Hospital, which the Navy says is among few places here in the U.S. that provide experience treating the types of wounds they will inevitably see on the battlefield.</p> <p>For so long “the first time a corpsman got any trauma experience was when they were deployed, and some would just freeze up,” said Captain Paul Roach, the U.S. Navy surgeon who heads the program in the Great Lakes region. “We don’t want that to happen anymore.”</p> <p>The Navy is working to formalize a pilot program that has been tested here for three years, rotating newly enlisted hospital corpsmen—the combat medics for the Navy and Marines—and those needing a refresher while they are back home, for six to eight weeks through Stroger Hospital’s trauma center. The 14-bed unit treats over 6,000 trauma patients yearly, many of them with penetrating, life-threatening wounds akin to those on the battlefield.</p> <p>Though Chicago is experiencing a sustained drop in murders since a dramatic spike in 2016, it remains a</p>

city where a high number of gunshot victims cycle through the trauma center night after night.

About 30% of patients at Stroger Hospital, on Chicago's near West Side, are admitted to the trauma ward with wounds from firearms, compared with a national average of 4.2% for level 1 trauma centers—hospitals certified to have the resources to handle multiple victims with penetrating and other serious wounds—according to the National Trauma Data Bank.

“The experience here can't be replicated elsewhere, unless you have a major land invasion,” said Dr. Faran Bokhari, who chairs the trauma & burn surgery unit at the hospital.

In many front-line Marine units, immediate medical care for gunshots, explosions or shrapnel comes from these corpsmen who mostly are young, new to the service and new to seeing up close the wounds they train to treat. The Navy medics, known as hospital corpsmen, typically receive 14 weeks of training in first aid and patient care in Fort Sam Houston in Texas after initial boot camp, and then have the option for additional training.

The program at Stroger Hospital is part of a new push from the Department of Defense to prioritize civilian and military partnerships, specifically budgeted for in last year's National Defense Authorization Act. Navy corpsmen started embedding at Stroger Hospital as part of a pilot program in 2014, but the program will be expanded and designated an official training rotation this spring.

“Corpsmen are not routinely exposed to trauma or critically injured patients during their first assignments,” said Defense Department spokeswoman Maj. Carla Gleason. This “realistic, hands-on trauma training will allow them to hone their skills and increase their readiness.”

In recent days, the group of corpsmen have learned skills including how to scrub in before entering an operating theater and how to operate a range of machinery, including suction machines for patients who are losing blood. After just two days of training, they fully immersed in the trauma unit's team of doctors and surgeons, expected to help with procedures during the trauma unit's busiest shift from 3 p.m. to 3 a.m.

Navy corpsmen often operate independently in combat zones, and the immersion helps them learn protocol and procedures in a large hospital so they can later replicate that.

“A lot of it is here's your training, you learn, it gets drilled in into your head—then it's just go,” said Andrew Swain, a 26-year old corpsman who has served as a medic in Iraq. During that deployment, in his first “mass-casualty incident,” he and just a handful of other medics had to treat about eight injured at the same time, all with traumatic injuries.

A week into their training, the corpsmen have seen multiple patients come in with gaping bullet hole wounds, and one with a traumatic injury to the eye after a motorcycle he was working on blew up in his face.

For Corpsman Poplawski, who grew up in suburban Michigan, it was his first time seeing anyone with a gunshot wound.

The experience “has prepared me to deal with worse things out in the field,” he said. “I'll be the only one out there, so I'll have to learn from this.”

<b>HEADLINE</b>	<b>03/14 Anger over Kent school district layoffs</b>
<b>SOURCE</b>	<a href="http://q13fox.com/2018/03/14/parents-students-teachers-voice-anger-at-kent-school-district-for-planned-layoffs/">http://q13fox.com/2018/03/14/parents-students-teachers-voice-anger-at-kent-school-district-for-planned-layoffs/</a>
<b>GIST</b>	KENT, Wash. -- Parents, students and teachers packed a Kent School Board meeting Wednesday night to voice anger at the district's plan to cut nine administrator jobs and 127 staff positions.

	<p>In a marathon public comment session, person after person wanted to know why these cuts are happening just weeks after voters approved new levies to fund the district.</p> <p>"I think if we knew ... you wouldn't have got your money," one parent said, alluding to the levies. "I feel like I've been had."</p> <p>The Kent School District announced in a news release Tuesday that it is eliminating nine administrator jobs and 127 staff positions in the 2018-19 school year. It was not immediately clear what positions — ranging from teachers to secretaries to librarians — would be eliminated across the district's 42 schools.</p> <p>But the teachers' union said it believes as many as 130 of its members may lose their jobs.</p> <p>"To make these tough decisions, we looked at the entire KSD system," Superintendent Calvin J. Watts said in Tuesday's release. "We looked closely at several factors at the school level including enrollment, program needs, student needs, and the unique needs of each school community."</p> <p>The cuts are expected to save the district \$18 million.</p>

<b>HEADLINE</b>	<b>03/15 Link to more LNG exports established</b>
<b>SOURCE</b>	<a href="https://www.upi.com/Energy-News/2018/03/15/Link-to-more-US-LNG-exports-established/4851521105253/?utm_source=fp&amp;utm_campaign=ts_eng&amp;utm_medium=22">https://www.upi.com/Energy-News/2018/03/15/Link-to-more-US-LNG-exports-established/4851521105253/?utm_source=fp&amp;utm_campaign=ts_eng&amp;utm_medium=22</a>
<b>GIST</b>	<p>March 15 (UPI) -- Improvements to a pipeline system in southern Louisiana will help with U.S. efforts to get liquefied natural gas to the market, TransCanada said.</p> <p>The pipeline company said it placed its Cameron Access project into service in Louisiana. The project involved overhauls and extensions to an existing network that would feed an export facility slated to start operations by the end of next year.</p> <p>"The completion of Cameron Access creates significant value for our customers by providing additional connectivity for their domestically produced natural gas to the high-value U.S. Gulf Coast LNG export market," Stanley Chapman III, TransCanada's president of U.S. natural gas pipelines, said in a statement.</p> <p>The \$10 billion Cameron liquefaction project is led by a consortium of Japanese and French companies. The first train, a unit that converts gas to its liquid form, will be operational next year for exports. At least three trains are envisioned.</p> <p>U.S. leaders see LNG as a way to add diversification to a global energy sector that depends on a handful of major producers, like Russia. With shale natural gas production outpacing demand in some U.S. regions, and new infrastructure planned for exporting liquefied natural gas, outgoing U.S. Secretary of State Rex Tillerson said late January that Poland, which is almost entirely dependent on Russia, represents "fertile ground" for expanded business relations between the two countries.</p> <p>"U.S. companies have the right products and services to contribute to Poland's energy security," he said.</p> <p>Polish Oil and Gas Co., known commonly as PGNiG, signed a five-year contract to secure LNG from the Sabine Pass terminal in Louisiana, the first mid-term contract of its kind, in November.</p>

HEADLINE	<b>03/14 Detroit, Newark, Memphis airport measles</b>
SOURCE	<a href="https://www.usatoday.com/story/news/nation-now/2018/03/14/detroit-traveler-measles/425446002/">https://www.usatoday.com/story/news/nation-now/2018/03/14/detroit-traveler-measles/425446002/</a>
GIST	<p>Visitors to airports in Detroit; Newark, N.J.; and Memphis may have been exposed to measles after cases were confirmed in two international travelers, health officials in two states said Tuesday.</p> <p>But people who received the measles, mumps and rubella vaccine twice as children are considered protected for life, federal Centers for Disease Control and Prevention officials said. Others who have not been vaccinated or had only one shot could come down with the disease, which can be life threatening.</p> <p>The specifics:</p> <ul style="list-style-type: none"> <li>• Detroit. People who visited the North Terminal at Detroit Metropolitan Airport on the afternoon of March 6 likely were exposed to the highly contagious virus, according to the Michigan Department of Health and Human Services. Someone infected could develop symptoms as late as next week</li> <li>• Newark. Passengers in terminals B and C of Newark Liberty International Airport also were exposed and could develop symptoms as late as April 2, according to the New Jersey Department of Health.</li> <li>• Memphis. The young child diagnosed with measles arrived in Newark from Brussels and flew to Memphis International Airport that evening, exposing others along the way, New Jersey health officials said.</li> </ul> <p>In Detroit, "anyone who was in customs or baggage claim in the airport's North Terminal between 2 and 5 p.m. (ET) that day should seek medical attention from their primary care provider if they develop symptoms of the disease," Michigan health officials said in a news release.</p> <p>But call the doctor first. A person with measles sitting in a reception area waiting for treatment can transmit the disease.</p> <p>Detroit Metropolitan Airport is a hub for Delta Air Lines in its McNamara Terminal. Various airlines have international flights — many based in the North Terminal — that fly to and from Brazil, Canada, China, France, Germany, Great Britain, Japan, Jordan, Korea, Mexico and the Netherlands.</p> <p>Passengers at Newark airport between 12:45 and 9 p.m. Monday could have been exposed to the measles virus, New Jersey officials said. It was not immediately known what flight the infected child boarded to Memphis and when the youngster arrived, but United does have a 7 p.m. Monday flight to Memphis that arrives around 9:10 p.m. CT.</p> <p>International travelers who arrived in Newark's Terminal B on flights from Amsterdam; Beijing; Bogota; Brussels; Cancun, Mexico; Copenhagen; Dublin; Edinburgh; Frankfurt; Geneva; Havana; London; Madrid; Manchester, United Kingdom; Lisbon, Portugal; Lomé, Togo; Mexico City; Monrovia, Liberia; Munich; Oslo; Panama City, Panama; Paris; Quebec; Reykjavik, Iceland; Santiago, Chile; Shanghai; Tel Aviv, Israel; Toronto; and Zurich were potentially exposed. Domestic flights from Atlanta; Cincinnati; Detroit; Fort Lauderdale, Fla.; Minneapolis; Myrtle Beach, S.C.; Orlando; Raleigh-Durham, N.C.; and Salt Lake City also arrived during that time, according to Newark airport's flight list.</p> <p>Other travelers were exposed as the child made the trek to Terminal C, sat on the flight to Memphis and arrived at the airport terminal there.</p> <p>Measles begins with a "high fever, red eyes, cough, runny nose" and extreme sensitivity to light, according to the department.</p> <p>Not only is measles very contagious — it spreads through a cough or sneeze and even by being in a room up to two hours after an infected person has left — children younger than 5 can face serious complications, including permanent hearing loss from ear infections; pneumonia, which is a lung infection; or a swelling</p>

of the brain called encephalitis. Pregnant women are susceptible to giving birth prematurely or having a low-weight baby.

The illness has a 10- to 12-day incubation period. After the earlier symptoms, it develops into a red, raised body rash that starts on the head and face before progressing to the rest of the body.

People may be contagious for a few days before symptoms become noticeable, health department officials said.

<b>HEADLINE</b>	<b>03/15 What's next after national walkout day?</b>
<b>SOURCE</b>	<a href="https://www.cnn.com/2018/03/15/us/national-school-walkout-whats-next/index.html">https://www.cnn.com/2018/03/15/us/national-school-walkout-whats-next/index.html</a>
<b>GIST</b>	<p>(CNN)A generation of students raised in the shadow of gun violence is sending a loud and united message to lawmakers: Enough is enough.</p> <p>A month after a gunman killed 17 people at Florida's Marjory Stoneman Douglas High School, students across the country demanded lawmakers set up measures to prevent another mass shooting.</p> <p>In an unprecedented show of unity dubbed National Walkout Day, students put down their books and left class at 10 a.m. in each time zone for at least 17 minutes -- one for each person killed at the Florida school. Some students spelled out the word "Enough" on football fields with their bodies.</p> <p>"We are tired of being scared to come to school," said Ben Ramirez, a student in Los Angeles.</p> <p>In some places, students chanted "Hey hey, ho ho! Gun violence has got to go!" In Washington, students sat in silence, their backs to the White House.</p> <p>"Change is coming, change is here and change is here to stay," David Hogg, a Stoneman Douglas student who survived the shooting, told CNN's Anderson Cooper. "It shows that we have a national movement of young people, future voters ... coming out and standing together with us."</p> <p>Democratic New York Gov. Andrew Cuomo, who lay down on the ground with protesters as part of a "die-in," said he was inspired by the student-led movement.</p> <p>"A new generation is rising, and they're not afraid of the NRA," he later tweeted. "America's students can clearly see what the GOP cannot: weak gun laws are at the heart of America's gun violence problem."</p> <p>Equipped with resolve and social media savvy, the students will gather again on March 24 for an event dubbed the March for Our Lives in Washington, where they'll send a message to lawmakers up close. And more protests are planned for April 20, the anniversary of the Columbine High School massacre in Littleton, Colorado.</p> <p>"This is not a matter of left versus right. This is a matter of public safety," said Cate Whitman, a junior at LaGuardia High School in New York.</p> <p>"We're all working together, which is something we haven't seen from the adults in a very long time."</p> <p>While students marched Wednesday, the US House of Representatives passed a bill to fund more security at schools. The bill had bipartisan support, but it frustrated many Democrats due to its lack of any gun control measures.</p> <p>"This is a pretense that we are doing something while assuring the NRA that we aren't doing anything," said Rep. Steny Hoyer of Maryland, the second ranking Democrat in the House.</p>

Last week in Florida, the governor signed a bill named after Marjory Stoneman Douglas High. It raised the minimum age to purchase a firearm to 21, and the National Rifle Association quickly filed a lawsuit deeming it unconstitutional.

And in Illinois, the state Senate passed a bill that raises the legal age to buy assault weapons to 21.

The NRA reiterated its stance Wednesday, amid the protests.

"I'll control my own guns, thank you," it tweeted, along with a photo of an AR-15-style rifle, the same type of weapon used in last month's massacre.

In Parkland, Stoneman Douglas students rose before sunrise Wednesday to place hundreds of pinwheels around campus to mark the anniversary.

In a quote hung on a sign near the school, the environmentalist for whom the school is named tells students to "be a nuisance when it counts."

The students appear to be heeding that advice. Initially organized by the Women's March youth branch, the National Student Walkout on Wednesday demanded three key actions from Congress:

- Ban assault weapons;
- Require universal background checks before gun sales;
- Pass a gun violence restraining order law that would allow courts to disarm people who display warning signs of violent behavior.

<b>HEADLINE</b>	<b>03/14 Families voice input in search SPD chief</b>
<b>SOURCE</b>	<a href="http://www.king5.com/article/news/local/families-turn-anguish-into-action-voicing-input-in-seattle-police-chief-search/281-528709865">http://www.king5.com/article/news/local/families-turn-anguish-into-action-voicing-input-in-seattle-police-chief-search/281-528709865</a>
<b>GIST</b>	<p>As the city of Seattle searches for a police chief, families impacted by officer-involved shootings are getting involved in the selection process. Wednesday night, they met with Mayor Jenny Durkan to talk about the kind of leader they would like to see for the Seattle Police Department.</p> <p>Family members of Charleena Lyles, Tommy Le, Daniel Covarrubias, Eugene Nelson, MiChance Gittens, and Che Taylor attended the public meeting. The families are all connected by their loss of loved ones in officer-involved shootings.</p> <p>All of the incidents happened in recent years, mostly in the Seattle area. But some of the officer-involved shootings occurred in Pierce County. In certain cases, authorities called it justified, but family members see it differently.</p> <p>At Wednesday night's meeting, the focus was on finding Seattle's next police chief. Mayor Durkan listened as families shared their experiences with police.</p> <p>Family members called for more transparency in policing, and the mother of MiChance Gittens said, at times, a different approach is needed.</p> <p>"As far as using deadly force, is it absolutely necessary? Is there another way to de-escalate the situation," she asked.</p> <p>Mayor Durkan said, "It can be a real tough and dangerous job being a police officer, and that is why we have to do the cultural shift so when you get to that dangerous situation, the first reflex is not one of fear but one of training."</p> <p>As the city's search continues, families said they want to turn their anguish into action by adding their</p>

	<p>voices to the conversation about Seattle's next police chief.</p> <p>There are 25 members on the Mayor's search committee for Seattle's next Police Chief. There will be more community meetings before the Mayor selects a Chief. It is a decision she plans to make by June.</p>

<b>HEADLINE</b>	<b>03/15 European gun-makers flood the US</b>
<b>SOURCE</b>	<a href="https://www.usatoday.com/story/news/world/2018/03/15/european-gun-makers-flood-u-s-firearms/427188002/">https://www.usatoday.com/story/news/world/2018/03/15/european-gun-makers-flood-u-s-firearms/427188002/</a>
<b>GIST</b>	<p>What links some of the deadliest massacres in U.S. history?</p> <p>That they were carried out with guns — that are either heavily regulated or banned in Europe — imported from Europe or produced by European-owned companies in the US.</p> <p>The gun used in the June 2016 mass shooting in a gay nightclub in Orlando that left 49 people dead — at the time the worst massacre in U.S. history — was a Sig Sauer MCX rifle. SigSauer is owned by Germany's Lüke and Ortmeier Holding Gruppe.</p> <p>Assault-type weapons like these are either banned or heavily regulated in Germany where they can only be purchased with a special license.</p> <p>Guns by Austrian arms maker Glock and Germany's Sig Sauer were used in the December 2012 massacre in a Newtown, Conn. elementary school that left 28 people dead — until the recent shooting in Parkland, Fla., the worst high school shooting in U.S. history.</p> <p>A Glock gun was also used in the shooting spree inside a movie theater in Aurora, Colo. in July 2012 in which 11 people were killed.</p> <p>A semiautomatic weapon by the Austrian gun producer again featured in the January 2011 massacre in Tucson, Ariz., in which six people were killed and Congresswoman Gabrielle Giffords was seriously injured.</p> <p>Guns by Italian manufacturer Beretta were used in the April 2009 shooting in an immigration services center that left 14 people dead in Binghamton, N.Y.</p> <p>A German Walther and an Austrian Glock gun were used in the June 2007 rampage at Virginia Tech University that left 33 people dead — also at the time the worst mass shooting in U.S. history.</p> <p>All guns used in these mass shootings were bought legally in the U.S.</p> <p>This list of European guns featuring in U.S. massacres is not exhaustive, just exemplary.</p> <p>European gun-makers have doubled their exports into the U.S. civilian market between 2010 and 2016, according to U.S. government data compiled for DW by small arms trade expert Nicholas Marsh of the Peace Research Institute Oslo (PRIO).</p> <p>In 2010, European-origin guns accounted for two million of the estimated eight million US civilian gun market.</p> <p>In 2016, European-origin guns accounted for four million of an estimated 16 million U.S. civilian gun market.</p> <p>It shows that European gun-makers have kept pace with the market and ratcheted up their sales to Americans accordingly.</p>

While European gun-makers have doubled their exports into the U.S. firearms market in less than a decade in part by marketing guns that are banned or regulated in their home countries to Americans, there has been little public knowledge or discussion about the role of European firearms in America's gun violence epidemic. "There is no debate about this in Europe really," said Marsh. Similarly, the significant role of European guns has also not featured in the U.S. debate about gun violence.

One in every four guns of European origin

As a consequence, European gun-makers defended their share of the U.S. gun market between 2010 and 2016, according to PRIO researcher Marsh's analysis of data from the Bureau of Alcohol, Tobacco and Firearms (ATF).

"It was 25.7% then and it is 25.7% now," he said, which means that then as now one out of every four guns in the U.S. is of European-origin — with the key difference that the sheer number of European guns has doubled from two to four million.

The largest European player in the U.S. market is Austria with more than 1.3 million guns exported in 2016 compared to 434,374 in 2010. Austria's gun share stems almost entirely from Glock handguns, which are some of the best-selling firearms in the U.S.

Croatia comes in second, shipping 574,486 handguns to the U.S. in 2016 compared to 239,021 in 2010, all from one company called HS Produkt.

What is interesting about HS Produkt, said Marsh, is that the firm's entire business strategy revolves around marketing guns to Americans. "The U.S. market is basically what this company is selling into," he said. "So you have a company in Croatia which basically spends its time supplying the U.S. market."

Germany, which exported 473,278 guns to the U.S. in 2016 compared with 266,688 in 2010, ranks third among European countries selling into the U.S. civilian market, ahead of Italy and the Czech Republic, with sales of more than 300,000 and 100,000 guns, respectively.

But it isn't just Austria, Croatia, Germany or the Czech Republic that flood the U.S. with weapons. More than a dozen other European countries also shipped tens of thousands of guns into the U.S., among them Belgium (85,039), Finland (56,619), Spain (30,524) and the UK (10,061).

<b>HEADLINE</b>	<b>03/14 Wash. moves to protect killer whales</b>
<b>SOURCE</b>	<a href="https://abcnews.go.com/Technology/wireStory/washington-state-directive-aims-endangered-orcas-53759846?">https://abcnews.go.com/Technology/wireStory/washington-state-directive-aims-endangered-orcas-53759846?</a>
<b>GIST</b>	<p>With the number of endangered orcas that frequent the inland waters of Washington state at a 30-year low, Gov. Jay Inslee on Wednesday directed state agencies to take immediate and longer-term steps to protect the struggling killer whales.</p> <p>The fish-eating mammals that spend time in Puget Sound have struggled for years with a lack of food, pollution, noise and disturbances from boat traffic. There are now just 76 of the orcas, down from 98 in 1995.</p> <p>Inslee said the orcas are in trouble and called on everyone in the state to do their part. His executive order aims to make more salmon available to the whales, give them more space and quieter waters, ensure they have clean water to swim in and protect them from potential oil spills.</p> <p>"The destiny of salmon and orca and we humans are intertwined," the governor said at a news conference at the Daybreak Star Cultural Center in Seattle. "As the orca go, so go we."</p>

	<p>An orca task force forming now will meet for the first time next month and will come up with final recommendations by November.</p> <p>"This is a wake-up call," Suquamish Tribal Chairman Leonard Forsman said, adding, "It's going to take some pain. We're going to have to make some sacrifices."</p> <p>Many have been sounding the alarm for years about the plight of the closely tracked population of southern resident killer whales. The federal government listed the orcas as endangered in 2005, and more recently identified them as among the most at risk of extinction in the near future.</p> <p>A baby orca has not been born in the past few years. Half of the calves born during a celebrated baby boom several years ago have died. Female orcas also are having pregnancy problems linked to nutritional stress brought on by a low supply of chinook salmon, the whales' preferred food, a recent study said.</p> <p>"We are not too late," said Barry Thom, West Coast regional administrator for NOAA Fisheries. "From a biology perspective, there are still enough breeding animals, but we need to act soon."</p> <p>Whale advocates welcomed the statewide initiative, saying it creates urgency and calls attention to the issue. But some also said it was long overdue.</p>

<b>HEADLINE</b>	<b>03/14 Native American overdose deaths surge</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/Health/wireStory/native-american-overdose-deaths-surge-opioid-epidemic-53759812?">http://abcnews.go.com/Health/wireStory/native-american-overdose-deaths-surge-opioid-epidemic-53759812?</a>
<b>GIST</b>	<p>Overdose deaths in Native American communities have skyrocketed in the time the opioid epidemic has swept the U.S. and federal officials are looking for solutions.</p> <p>Native Americans and Alaska Natives saw a fivefold increase in overdose deaths between 1999 and 2015, Dr. Michael Toedt told the U.S. Senate Committee on Indian Affairs on Wednesday.</p> <p>Centers for Disease Control and Prevention figures indicate the increase in that period was higher for Native Americans than any other group, jumping to roughly 22 deaths for every 100,000 people in metropolitan areas and nearly 20 for every 100,000 people in non-metropolitan areas.</p> <p>But the statistics, while staggering, may represent an undercount for Native Americans and Alaska Natives by as much as 35 percent, because death certificates often list them as belonging to another race, said Toedt, who is the Indian Health Services' chief medical officer.</p> <p>The hearing in Washington comes as a growing number of tribes file lawsuits against drug manufacturers and distributors, saying they misrepresented addiction risks.</p> <p>Federal officials said the opioid epidemic is straining tribal resources.</p>

<b>HEADLINE</b>	<b>03/14 Toys R Us plans to shutter US stores</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/toys-us-planning-liquidate-us-operations-53759982">http://abcnews.go.com/International/wireStory/toys-us-planning-liquidate-us-operations-53759982</a>
<b>GIST</b>	<p>Toys R Us appears headed toward shuttering its U.S. operations, spelling an end to a chain known to generations of children and parents for its sprawling stores and Geoffrey the giraffe mascot but that fell victim to brutal retail-industry trends.</p> <p>The closing of the company's 700 U.S. stores over the coming months would jeopardize the jobs of some 30,000 employees.</p>

	<p>The company's management has told its employees that it will sell or close all of its U.S. stores, according to a toy industry analyst who spoke to several employees who were on the call Wednesday.</p> <p>Jim Silver, a New York-based long-time toy industry expert, said Toys R Us's CEO David Brandon told employees the company's plan is to liquidate all of its U.S. stores and after that, it could do a deal with its Canadian operation to run some of the U.S. stores. The CEO also told employees that the chain was also likely to liquidate its operations in France, Spain, Poland and Australia, according to Silver.</p> <p>The chain filed for Chapter 11 bankruptcy protection last fall, saddled with \$5 billion in debt that hurt its attempts to compete as shoppers moved to Amazon and huge chains like Walmart.</p> <p>It pledged then to stay open, but had weak sales during the critical holiday season as nervous customers shied away. In January it announced plans to close about 180 stores over the next couple of months, leaving it with about 700 stores.</p> <p>The company's troubles have affected toy makers Mattel and Hasbro, which are big suppliers to the chain. But the likely liquidation will have a bigger impact on smaller toy makers, who rely more on the chain for sales. However, many have been trying to diversify in recent months as they worried about the chain's survival.</p>

<b>HEADLINE</b>	<b>03/14 Alarm over global water crisis</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/world-leaders-sound-alarm-over-global-water-crisis/">https://www.cbsnews.com/news/world-leaders-sound-alarm-over-global-water-crisis/</a>
<b>GIST</b>	<p>UNITED NATIONS -- The World Bank and the U.N. are sounding the alarm over a global water crisis. A joint report released Wednesday says that 40 percent of the world's population is affected by water scarcity.</p> <p>The report, based on two years of research, says that 700 million people are at risk of being displaced by intense water scarcity by 2030. More than two billion people are compelled to drink unsafe water, and more than 4.5 billion people do not have safely managed sanitation services.</p> <p>"The ecosystems on which life itself is based – our food security, energy sustainability, public health, jobs, cities – are all at risk because of how water is managed today," World Bank Group President Jim Yong Kim said.</p> <p>"The world can no longer afford to take water for granted," he said.</p> <p>The wars of the 21st century may be fought over water, some scientists and policymakers argue, and the demand for fresh drinking water to drink and grow food has surged, "60 Minutes" correspondent Lesley Stahl reported in 2014, and the problem has only gotten worse.</p> <p>While presenting the new report, Prime Minister Mark Rutte of the Netherlands said, "We must work to tackle global water crises now. There is no other option."</p> <p>"The innovative solutions of today's creative minds can safeguard the future of generations to come," Rutte said.</p> <p>But, that said, freshwater shortages are increasing.</p> <p>"The problems of water are many, like more intense droughts caused by climate change, such as the one that parts of East Africa is experiencing now," Dan Shepard, an information officer with the U.N. Department of Public Information, told CBS News, "And then there is water mismanagement, allocation and inadequate infrastructure."</p>

	<p>South Africa's Cape Town, with water all around it, may be the first major city to run out of it. The city has prepared for weeks for "Day Zero," when the taps will be turned off, but authorities have said that "Day Zero" may not happen until 2019 thanks to conservation efforts.</p> <p>As one of the leaders issuing Wednesday's report, South Africa's President Cyril Ramaphosa said, "We have a single opportunity, to change the narrative on water, by acting timeously in pursuit of a more promising future, in a better world, which should never face the scenario of the last single drop of water."</p> <p>The U.S. is also trying to cope with shortages, as is Canada, where scientists have warned several areas to be on the alert.</p>
<p><a href="#">Return to</a> <a href="#">Top</a></p>	

<b>HEADLINE</b>	<b>03/14 Students protest gun violence nationwide</b>
<b>SOURCE</b>	<a href="https://www.cbsnews.com/news/students-nationwide-school-walkout-gun-violence-today-2018-03-14-live-stream-updates/">https://www.cbsnews.com/news/students-nationwide-school-walkout-gun-violence-today-2018-03-14-live-stream-updates/</a>
<b>GIST</b>	<p>Students at thousands of schools across the country walked out of class Wednesday morning to protest gun violence. The 17-minute walkout is a tribute to the 17 victims who were fatally shot at Marjory Stoneman Douglas High School in Parkland, Florida, last month.</p> <p>According to the Say #Enough website, which compiles the stories of shooting victims and advocates for change, there will be more than 3,000 walkouts held in communities coast to coast and in Puerto Rico. Students participating in the movement left or were leaving their classes at 10 a.m. in their respective time zone.</p> <p>Students from 28 schools in Washington D.C., Maryland and Virginia marched to Capitol Hill, extending their protest, while inside lawmakers grilled officials from the ATF and FBI on how they proposed to tackle safety in schools in the wake of the school massacre. They gathered where just the day before, 7,000 pairs of children's shoes were placed outside Capitol Hill to represent the children killed by guns since Sandy Hook.</p> <p>As a crowd of lawmakers gathered to joining them, the first student speaker, Matt Post, started his speech by urging students to refuse compromise measures. "We will not sit in classrooms with armed teachers," Post said. "We will not learn in fear."</p> <p>Post said that students should not settle for anything less than comprehensive gun control reform, and urged students and others to vote out legislators who failed to act. Almost immediately after Post's line on gun control, the National Rifle Association tweeted out a defiant message in defense of the second amendment.</p> <p>Snapchat's "Snap Map" feature, meanwhile, showed a vast number of walkouts Wednesday, with students sharing their experiences at gatherings around the country. At 12pm ET, schools further west, including Columbine High School in Colorado, began walking out. None of the current students in Columbine would have been born at the time of the notorious mass shooting there, which resulted in 15 deaths in April 1999.</p> <p>In Broward County, Florida, where the Parkland massacre took place, public schools superintendent Robert Runcie said students who walk out of class would not be disciplined for leaving. He said teachers should make this a "teachable moment."</p> <p>CBS News correspondent Adriana Diaz reports Stoneman Douglas students walked out to the football field. School officials said they want students to exercise their First Amendment rights in a safe environment that's supervised by adults.</p>

	<p>However, some schools across the county, including a group in Pennsylvania, hesitated about participating in Wednesday's walkout.</p> <p>Stoneman Douglas student David Hogg, who has been an outspoken advocate of gun control since the shooting, spoke with CBSN about the significance of Wednesday's walkout.</p> <p>"I'm feeling happy to know that this has stayed in the national media and to know that people are taking action," Hogg said. "To know the fact that we all are standing up as Americans is a huge deal to know, and it means a lot just that we're coming together and working hard to change this issue."</p> <p>"The goal here is just to make sure our legislative leaders know that their actions are going to be held accountable to them and that there will be ramifications for either what actions they have had or what inactions they had," he said before referring to the date that marks two months since the shooting. "How many other mass shootings are we going to have to have? ... I'm worried about what's going to happen after April 14. That terrifies me."</p>
<p><a href="#">Return to Top</a></p>	

<b>HEADLINE</b>	<b>03/14 Russia: lack of video in poisoning case</b>
<b>SOURCE</b>	<a href="http://abcnews.go.com/International/wireStory/latest-russia-rejects-ultimatums-spy-poisoning-53733585?cid=clicksource_76_4_article%20roll_articleroll_hed">http://abcnews.go.com/International/wireStory/latest-russia-rejects-ultimatums-spy-poisoning-53733585?cid=clicksource_76_4_article%20roll_articleroll_hed</a>
<b>GIST</b>	<p>The Latest on the poisoning of a former Russian spy in England (all times local):</p> <p>7:40 p.m.</p> <p>The spokeswoman for Russia's Foreign Ministry says one of the many reasons to dismiss Britain's accusations against Moscow in the poisoning of a Russian ex-spy and his daughter is a suspicious absence of video footage.</p> <p>Sergei Skripal and his daughter were found poisoned on March 4 in Salisbury. Russia vehemently denies involvement and has pointed to a number of possible anomalies.</p> <p>Maria Zakharova told The Associated Press that the apparent lack of video of the Skripals being poisoned is a red flag.</p> <p>She said that "I will never believe that this person or group of people ... would not be seen after the commission of the crime. I will never believe it."</p> <p>"You have video cameras everywhere!"</p> <p>Zakharova also reiterated Russian criticism that Britain hasn't followed international procedure in the case by not providing Russia information.</p> <p>She said that "if an emergency occurs in which a chemical, poisonous agent is used, there is an accompanying legal mechanism ... it's obligatory to immediately begin a bilateral investigation."</p> <p>_____</p> <p>7:35 p.m.</p> <p>Britain's deputy U.N. ambassador says the government is asking the international chemical weapons watchdog to independently verify its analysis that a military-grade nerve agent from the former Soviet Union was used to poison an ex-Russian agent accused of spying for the United Kingdom.</p> <p>Jonathan Allen said that without any alternative explanation from Russian authorities about the nerve</p>

	<p>agent "we have no choice but to conclude this was a state-sponsored act against the prohibition and use of chemical weapons and in defiance of international law."</p> <p>He said the Organization for the Prohibition of Chemical Weapons has been informed about the use of the nerve agent and the U.N. "are inviting them to independently verify our analysis." He said: "We are making every effort to expedite this process."</p> <p>Allen told reporters before heading into an emergency meeting of the U.N. Security Council called by Britain on Wednesday afternoon that "today I'll be calling on my council colleagues to stand with us ... against an illegal act, against a very troubling act, and against a reckless and indiscriminate act which puts civilian lives at risk."</p>

<b>HEADLINE</b>	<b>03/14 Morocco: terrorists, organized crime link</b>
<b>SOURCE</b>	<a href="http://northafricapost.com/22701-morocco-warns-connivance-terrorist-organized-crime-groups-sahel.html">http://northafricapost.com/22701-morocco-warns-connivance-terrorist-organized-crime-groups-sahel.html</a>
<b>GIST</b>	<p>Morocco is looking carefully to the situation in the Sahel where terrorists are increasingly resorting to organized crime and trafficking to fund their activities, head of Morocco's counterterrorism agency, BCIJ, Abdelhak Khiame said.</p> <p>Speaking to local press, Khiame rang the alarm bell regarding the fallout of the connivance between terrorists and organized crime groups on Sahel states, including Algeria.</p> <p>Past cases of foiled trafficking attempts in Morocco reveal the scale of the terrorist threat fed by organized crime in the Sahel, he said.</p> <p>Although Morocco remains largely insulated from Sahel terrorism, neighboring states such as Algeria and Mauritania remain largely prey to terrorist groups such as Al Qaida branch (AQIM).</p> <p>The BCIJ chief also pointed to the link between Polisario separatists and terrorist groups. He said that individuals hailing from the Tindouf camps have on multiple occasions been involved in drug trafficking. Some of them have joined the ranks of AQIM.</p> <p>Last year, a study by the Foundation for Defense of Democracies unveiled said that AQIM has reaped around \$100 million through ransoms, drug smuggling, taxing locals and donations from around the world.</p>

<b>HEADLINE</b>	<b>03/14 Hackers hurdle two-factor authentication</b>
<b>SOURCE</b>	<a href="https://www.ft.com/content/b7be1c96-1b04-11e8-aaca-4574d7dabfb6">https://www.ft.com/content/b7be1c96-1b04-11e8-aaca-4574d7dabfb6</a>
<b>GIST</b>	<p>For years, cyber security experts have been urging users to add a second layer of authentication to their accounts, often a code sent by text message to their phone.</p> <p>But determined hackers are now able to hurdle over this extra measure by spoofing your SIM card, intercepting the unencrypted message as it is sent over the network or trying to steal databases filled with information about mobile accounts from telecoms operators.</p> <p>Last year, there were reports of cyber criminals draining bank accounts in Germany after hacking the routing system to redirect text messages. The hackers obtained users' passwords by sending phishing emails and then exploited a vulnerability in the signalling network used by different telecoms operators to connect calls and messages.</p>

In the US, T-Mobile notified hundreds of customers in October that criminals were trying to hijack their SIM cards. The hackers had taken advantage of a bug on T-Mobile's website that allowed them to access users' personal details and wanted to use it to impersonate them and obtain a copy of their SIM cards. Rashmi Knowles, Emea chief technology officer for RSA Security, a cyber security company, believes using SMS is less secure than other forms of second-factor authentication, such as physical tokens or authenticator apps on smartphones. "The two-factor authentication we are all familiar with is meant to be something you have and something you know," she says.

The first factor, a password, is what you have in your head. The second factor is meant to be what you have in your device. But SMS does not quite work like that as it is sent from a network to the phone, giving a hacker an opportunity to capture it.

One popular hacker technique involves "socially engineering", in other words, persuading call centre or shop staff at telecoms operators to give them an identical SIM. They often pretend to have lost their phone. The victim can learn about this quite quickly, as their service is cut off. Other tactics are more high-tech. Ms Knowles warns that devices called stingrays can be bought online and set up anywhere mimicking mobile phone towers and capturing data from nearby phones.

Andrew Blaich, a senior security researcher at Lookout, a mobile security company, warns that SMS messages are never encrypted. "Sending sensitive information over standard text messages is not a great idea," he says.

But the attacks still tend to be targeted, as the hacker must already have the victim's phone number and the first password they use to access their account. Nation-state actors may target political opponents, or financially motivated criminals could target wealthy individuals. For many people who might only be caught up in mass data breaches, two-factor authentication by text message will make their accounts more secure.

<b>HEADLINE</b>	<b>03/14 DHS targets cyber risks IT supply chain</b>
<b>SOURCE</b>	<a href="https://fedtechmagazine.com/article/2018/03/dhs-targets-cybersecurity-risks-it-supply-chains">https://fedtechmagazine.com/article/2018/03/dhs-targets-cybersecurity-risks-it-supply-chains</a>
<b>GIST</b>	<p>It's much easier to block a cybersecurity threat from getting in the door than to try and track it down once it's already inside.</p> <p>That's why the Homeland Security Department recently launched an initiative to identify and target risks in the IT supply chains of government agencies and their contractor partners. The effort also involves government contracting leaders from the General Services Administration and counterintelligence officials, according to Jeanette Manfra, the assistant secretary for the office of cybersecurity and communications at DHS' National Protection and Programs Directorate.</p> <p>Speaking at a panel discussion on Feb. 14 at the Brookings Institution in Washington, D.C., Manfra said DHS wants to close any gaps between agencies and their contracting partners as they address cybersecurity risks in their IT equipment.</p> <p>The initiative, which Manfra said came about via an internal DHS memo earlier this year, is designed to give actionable intelligence to users, buyers, manufacturers and sellers of government technology products. The goal is to identify risks earlier in the process so that risky IT equipment does not turn into a cybersecurity vulnerability inside an agency's walls or network.</p> <p>DHS is not tackling this problem on its own, Manfra said. The agency is consulting with some industry leaders on how they manage supply chain risks, though she declined to name them, Nextgov reports.</p> <p>DHS and the GSA have given agencies tools to reduce supply chain risks in the past, and the National</p>

Institute of Standards and Technology has also offered detailed guidance on the topic. Manfra mentioned NIST as a partner in the effort during the panel discussion, according to FCW.

The new program is "a focused effort with dedicated staff," Manfra said, FCW reports. Still, she made clear that DHS is working with other agencies on the effort.

"We need to have improved ability for DHS, GSA [and] the intel community to be in a position to help inform procurement decisions by the federal government agencies throughout the civilian government," Manfra told reporters at the event, according to Federal News Radio. "We're working on building those mechanisms and DHS' role in pulling all of that altogether, and also working with industry experts to refine what are the supply chain risks that we should be concerned about."

A timeline has not been set for the program to achieve its goals, but Manfra said DHS is considering it more of a "potentially enduring function" that serves as a "concerted effort to take all of the potential gaps that may be in the federal system or industry and figure out, what is the role of DHS," FCW reports.

<b>HEADLINE</b>	<b>03/14 Cybercriminals attack Russia banks</b>
<b>SOURCE</b>	<a href="https://www.ft.com/content/b813ab48-1b04-11e8-aaca-4574d7dabfb6">https://www.ft.com/content/b813ab48-1b04-11e8-aaca-4574d7dabfb6</a>
<b>GIST</b>	<p>As the investigation into the Kremlin's alleged interference in the US presidential election continues to swirl, Russia has effectively become the poster child for all things cyber crime.</p> <p>"I believe that President Putin has clearly come to the conclusion there's little price to pay here and that therefore 'I can continue this activity'," NSA director Mike Rogers said in a US congressional hearing in February.</p> <p>In Russia, however, the scourge of its hackers is fast becoming a problem for the country's own businesses.</p> <p>Russia was one of the countries worst affected by the WannaCry attack last year. Even though the US and UK have blamed the Kremlin for using the NotPetya attack a few months later to target Ukraine, Russian companies such as Rosneft, state-run oil giant, were also affected.</p> <p>Most vulnerable, however, are Russia's banks. Hackers used the Cobalt Strike security-testing tool to steal more than \$17m from more than 240 Russian banks in 2017, according to the central bank. In the past few months, hackers used the Swift payment system to steal \$6m from an unnamed bank and tried to steal nearly \$1m from state-owned Globex.</p> <p>Russia is now keen to change the perception of the country as a hacker's paradise by showing that it, too, is trying to clamp down on cyber threats.</p> <p>Dmitry Skobelkin, a deputy central bank governor, said last month that the central bank would create an information security department.</p> <p>Those efforts will come on top of the work already being done by state-owned Sberbank, Russia's largest lender. The bank's size — it is nearly three times as large by assets as its nearest rival and has half of all bank deposits in Russia — has made it a prime target for hackers.</p> <p>"Sberbank gets hit by everything first," says Ilya Sachkov, founder of Group-IB, a Moscow-based cyber security company. "They're the first line of defence."</p> <p>In response, Sberbank has developed a state of the art cyber security centre that monitors the bank's 16,000 branches for threats, and successfully repelled the WannaCry virus in May last year. The bank has even offered its services to other lenders in an effort to remove weak links in the system.</p>

“Little banks can’t afford good security,” says Sergey Golovanov, principal security researcher at Kaspersky Labs in Moscow. “Banks don’t have legal reporting requirements and nobody knows what to do.”

Sberbank is planning to launch its own cyber risk insurance service this spring. “It’s very complicated and very serious,” said Stanislav Kuznetsov, Sberbank’s deputy chairman in charge of cyber security, in January, according to the state newswire RIA Novosti.

“It could be a breakthrough for us, when our platform will defend banks and companies from any and all attacks.”

Mr Sachkov says Russian hackers have turned to Russian banks in recent years because of the relative ease of making off with the proceeds of theft.

“It’s very hard to find a way to turn [stolen money] into cash in the US,” he says. In Russia, by contrast, where a third of the economy exists in cash-based “grey zones”, disguising stolen money as cash withdrawals is far easier.

The greater prize of hacking financial institutions in the US, nonetheless, still tempts Russian hackers.

Russian banks are targeted because of the relative ease of making off with the proceeds

Last December, Group-IB published a report about a new group called Money Taker, which probably has ties to Russian cyber crime and has carried out most of its 20 attacks on banks in the US, with just three in Russia.

“Most problems in Russia are from Russia,” Mr Sachkov says.

<b>HEADLINE</b>	<b>03/15 Attack in Saudi Arabia had deadly goal</b>
<b>SOURCE</b>	<a href="https://www.nytimes.com/2018/03/15/technology/saudi-arabia-hacks-cyberattacks.html">https://www.nytimes.com/2018/03/15/technology/saudi-arabia-hacks-cyberattacks.html</a>
<b>GIST</b>	<p>In August, a petrochemical company with a plant in Saudi Arabia was hit by a new kind of cyberassault. The attack was not designed to simply destroy data or shut down the plant, investigators believe. It was meant to sabotage the firm’s operations and trigger an explosion.</p> <p>The attack was a dangerous escalation in international cyberwarfare, as faceless enemies demonstrated both the drive and the ability to inflict serious physical damage. And United States government officials, their allies and cybersecurity researchers worry that the culprits could replicate it in other countries, since thousands of industrial plants all over the world rely on the same American-engineered computer systems that were compromised.</p> <p>Investigators have been tight-lipped about the August attack. They still won’t identify the company or the country where it is based and have not identified the culprits.</p> <p>But the attackers were sophisticated and had plenty of time and resources, an indication that they were most likely supported by a government, according to more than a dozen people, including cybersecurity experts who have looked into the attack and asked not to be identified because of the confidentiality of the continuing investigation.</p> <p>The assault was the most alarming in a string of cyberattacks on petrochemical plants in Saudi Arabia. In January 2017, computers went dark at the National Industrialization Company, Tasnee for short, which is one of the few privately owned Saudi petrochemical companies. Computers also crashed 15 miles away at Sadara Chemical Company, a joint venture between the oil and chemical giants Saudi Aramco and Dow</p>

Chemical.

Within minutes of the attack at Tasnee, the hard drives inside the company's computers were destroyed and their data wiped clean, replaced with an image of Alan Kurdi, the small Syrian child who drowned off the coast of Turkey during his family's attempt to flee that country's civil war.

The intent of the January attacks, Tasnee officials and researchers at the security company Symantec believe, was to inflict lasting damage on the petrochemical companies and send a political message. Recovery took months.

Energy experts said the August attack could have been an attempt to complicate Crown Prince Mohammed bin Salman's plans to encourage foreign and domestic private investment to diversify the Saudi economy and produce jobs for the country's growing youth population.

"Not only is it an attack on the private sector, which is being touted to help promote growth in the Saudi economy, but it is also focused on the petrochemical sector, which is a core part of the Saudi economy," said Amy Myers Jaffe, an expert on Middle East energy at the Council on Foreign Relations.

Saudi Arabia has cut oil exports in recent years to support global oil prices, a strategy central to its efforts to make a potential public offering of shares of government-controlled Saudi Aramco more attractive to international investors. The kingdom has tried to compensate for its lost revenue by expanding its petrochemical and refining industry.

Some technical details of the attack in August have been previously reported, but this is the first time the earlier attacks on Tasnee and other Saudi petrochemical companies have been reported.

Security analysts at Mandiant, a division of the security firm FireEye, are still investigating what happened in August, with the help of several companies in the United States that investigate cyberattacks on industrial control systems.

A team at Schneider Electric, which made the industrial systems that were targeted, called Triconex safety controllers, is also looking into the attack, the people who spoke to The Times said. So are the National Security Agency, the F.B.I., the Department of Homeland Security and the Pentagon's Defense Advanced Research Projects Agency, which has been supporting research into forensic tools designed to assist hacking investigations.

All of the investigators believe the attack was most likely intended to cause an explosion that would have killed people. In the last few years, explosions at petrochemical plants in China and Mexico — though not triggered by hackers — have killed several employees, injured hundreds and forced evacuations of surrounding communities.

What worries investigators and intelligence analysts the most is that the attackers compromised Schneider's Triconex controllers, which keep equipment operating safely by performing tasks like regulating voltage, pressure and temperatures. Those controllers are used in about 18,000 plants around the world, including nuclear and water treatment facilities, oil and gas refineries, and chemical plants.

"If attackers developed a technique against Schneider equipment in Saudi Arabia, they could very well deploy the same technique here in the United States," said James A. Lewis, a cybersecurity expert at the Center for Strategic and International Studies, a Washington think tank.

HEADLINE	<b>03/14 Trans-Alaska pipeline: 22M attacks daily</b>
SOURCE	<a href="https://www.ktoo.org/2018/03/14/trans-alaska-pipeline-fights-off-22-million-cyber-attacks-daily/">https://www.ktoo.org/2018/03/14/trans-alaska-pipeline-fights-off-22-million-cyber-attacks-daily/</a>
GIST	The symbol of a well-known caped crusader is taped to the door of a secure room at Alyeska Pipeline

Service Company's Anchorage headquarters. The sign reads: "THE BAT CAVE."

My guides don't know why the sign's there. Maybe it's the lack of windows. Or maybe it's because the people who work in this room see themselves as undercover crime-fighters, like Batman — because they sort of are. This is the office of Alyeska's cybersecurity team.

The trans-Alaska pipeline has dealt with its share of problems — earthquakes, declining oil flow, even gunfire. But today, the pipeline is facing another, more modern threat: cyberattacks. Energy infrastructure is a tempting target for hackers, and the trans-Alaska pipeline is no exception. Alyeska, which operates the pipeline, now ranks cyberattacks as one of its top three risks.

In the room where part of the pipeline's cybersecurity team is stationed, Alyeska's Bill Rosetti points at a wall of data flowing down three giant screens hanging above the cubicles. It's all totally incomprehensible to a layperson. But for Rosetti and his staff, weird activity on one of the colorful charts rippling across the screens could indicate something serious.

"The idea here is that we are looking for things to be normal," Rosetti explained. "And anything that's not normal is something that needs to be investigated."

Rosetti is Alyeska's chief information officer. He's in charge of keeping cyberattackers at bay. Rosetti takes that job seriously, because the trans-Alaska pipeline is getting hit by cyberattacks all the time — and not just a few.

"We see about 22 million attacks a day," Rosetti said.

And that's an average.

"It can be six or seven million some days and 45 million the next," Rosetti said. "I wish I could tell you why it changes that way, but I really don't know."

Of course, there aren't millions of people carrying out these attacks individually. These are mass, automated attacks, often coming from servers overseas.

Rosetti said so far, none of the cyberattacks have been successful; Alyeska has never been breached. But the challenge is growing. Rosetti said the rate of cyberattacks has roughly doubled in the last five years.

So how are hackers going after the trans-Alaska pipeline, and why? Rosetti says they have all kinds of goals, and all kinds of techniques. There's phishing, for example:

"Some are very focused — that's called spear-phishing — where they're aimed at our CFO, trying to get people to wire them money," Rosetti said.

And then there are attacks that threaten the trans-Alaska pipeline itself. As the energy industry settles into the Internet age, more of its machinery is controlled remotely by computers. If someone manages to breach those systems, there could be dangerous real-world consequences. I asked Rosetti what the worst-case scenario would be if there was a major cyberattack on the trans-Alaska pipeline.

"We think about what the worst case is so we can protect against the worst case. And I don't want to share what that is," Rosetti said.

Throughout the interview, Rosetti was very vague and careful with his words, because, he said, he didn't want to give hackers any clues. But he did acknowledge that a successful cyberattack could interrupt the flow of oil down the pipeline. It could even result in people getting hurt.

The growing cyber threat to pipelines and other infrastructure is worrying the topmost levels of government — late last year, the Department of Homeland Security and the FBI issued a warning that

	sophisticated cyberattackers have targeted the U.S. energy sector, in particular.

<b>HEADLINE</b>	<b>03/14 Google to ban cryptocurrency ads</b>
<b>SOURCE</b>	<a href="https://www.infosecurity-magazine.com/news/google-moves-to-ban-ads-for/">https://www.infosecurity-magazine.com/news/google-moves-to-ban-ads-for/</a>
<b>GIST</b>	<p>Following a similar no-quarter approach taken by Facebook, Google plans to ban crypto-related advertising starting in June.</p> <p>The ban includes ads for initial coin offerings (ICOs), wallets and trading advice, across any Google platforms. The prohibition will be far ranging: Google's ad engines place ads on not just its own sites but also on third-party outlets.</p> <p>The concern is that virtual currency speculation has created a boom in the sector, yet the space largely lacks regulation and consumer protections. Cryptocurrencies like Bitcoin, Monero and others have also been the impetus for various fraud efforts and are at the heart of coin-mining, which has proven to be a lucrative new revenue stream for cybercriminals.</p> <p>"We don't have a crystal ball to know where the future is going to go with cryptocurrencies, but we've seen enough consumer harm or potential for consumer harm," Scott Spencer, Google's director of sustainable ads, told CNBC.</p> <p>The change is part of Google's update to its financial services-related ad policies. The search engine, which makes 84% of its revenue from advertising, is no stranger to censoring ads: In a report, it said it took down more than 3.2 billion ads in 2017 for violating its policies. That's nearly double the 1.7 billion it removed in 2016.</p>

<b>HEADLINE</b>	<b>03/15 'HenBox' Android malware discovered</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/new-%E2%80%9Chenbox%E2%80%9D-android-malware-discovered">https://www.securityweek.com/new-%E2%80%9Chenbox%E2%80%9D-android-malware-discovered</a>
<b>GIST</b>	A newly discovered Android malware family masquerades as various popular applications and can steal a

broad range of information from infected devices, Palo Alto Networks warns.

Dubbed HenBox, the malware was observed installing the legitimate versions of apps it poses as to hide its presence on compromised devices. The threat is distributed via third-party app stores and mainly targets Uyghur, a minority Turkic ethnic group in the Xinjiang Uyghur Autonomous Region in North West China, and Xiaomi devices.

On the infected devices, HenBox can steal information from mainstream chat, communication, and social media apps. It gathers both personal and device information, can track the device's location, can access the microphone and camera, and harvests outgoing phone numbers with an "86" prefix (the country code for the People's Republic of China).

Palo Alto's researchers discovered nearly 200 HenBox samples, the oldest dating back to 2015, but activity occurred in the second half of 2017. A small but consistent number of samples has been observed this year as well.

The HenBox app had the look and feel of DroidVPN and also contained a legitimate version of the app within its APK package as an asset, to hide any malicious behaviors occurring in the background. The malware authors even embedded HenBox with the same version of the legitimate DroidVPN variant available for download on the third-party store.

DroidVPN, however, is only one example. Other apps were also found, some in other third-party stores. One was a Uyghur language keyboard app, while another was masquerading as Android's Settings app.

A third app was called "Islamawazi," which is the name of the Turkistan Islamic Party, formerly East Turkestan Islamic Party, a purportedly Islamic extremist separatist organization founded by Uyghur jihadists.

"These examples, together with the HenBox app placed on a very specific third-party app store, point clearly to at least some of the intended targets of these malicious apps being Uyghurs, specifically those with interest in or association with terrorist groups," the researchers note.

<b>HEADLINE</b>	<b>03/15 Qrypter RAT hits worldwide</b>
<b>SOURCE</b>	<a href="https://www.securityweek.com/qrypter-rat-hits-hundreds-organizations-worldwide">https://www.securityweek.com/qrypter-rat-hits-hundreds-organizations-worldwide</a>
<b>GIST</b>	<p>Hundreds of organizations all around the world have been targeted in a series of attacks that leverage the Qrypter remote access Trojan (RAT), security firm Forcepoint says.</p> <p>The malware, often mistaken for the Adwind cross-platform backdoor, has been around for a couple of years, and was developed by an underground group called 'QUA R&amp;D', which offers a Malware-as-a-Service (MaaS) platform.</p> <p>Also known as Qarallax, Quaverse, QRAT, and Qontroller, Forcepoint explains that Qrypter is a Java-based RAT that leverages TOR-based command and control (C&amp;C) servers. It was first detailed in June 2016, after being used in an attack targeting individuals applying for a U.S. Visa in Switzerland.</p> <p>The malware is typically delivered via malicious email campaigns that usually consist of only a few hundred messages each. However, Qrypter continues to rise in prominence, and three Qrypter-related campaigns observed in February 2018 affected 243 organizations in total, Forcepoint's security researchers say.</p> <p>When executed on a victim's system, Qrypter drops and runs two VBS files in the %Temp% folder, each featuring a random filename. The two scripts are meant to gather information on the firewall and anti-virus products installed on the computers.</p>

	<p>Qrypter is a plugin based backdoor that provides attackers with a broad range of capabilities: remote desktop connection, webcam access, file system manipulation, installation of additional files, and task manager control.</p> <p>The RAT is available for rent for a price of \$80, payable in PerfectMoney, Bitcoin-Cash, or Bitcoin. Interested parties can purchase three months or one-year subscriptions for a discounted price, the security researchers discovered.</p>

<b>HEADLINE</b>	<b>03/14 Electric utility hit with record fine</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/application-security/electric-utility-hit-with-record-fine-for-vulnerabilities/d/d-id/1331271">http://www.darkreading.com/application-security/electric-utility-hit-with-record-fine-for-vulnerabilities/d/d-id/1331271</a>
<b>GIST</b>	<p>A record \$2.7 million fine has been levied against an electric utility for vulnerabilities in its IT infrastructure.</p> <p>The North American Electric Reliability Corporation (NERC) notified the Federal Energy Regulatory Commission (FERC) that it has reached a consent agreement with an unnamed electric utility for the fine over the exposure of information regarding critical infrastructure for at least 70 days. The exposed information includes tidbits like system names and locations, user names, and cryptographic information that could be used to decrypt passwords.</p> <p>All of the information was in a file that was entirely open to the public, with no user name or password required for access. In this case, there is no allegation that a breach actually occurred because of the vulnerability: the fine is for the vulnerability itself.</p> <p>The utility's name was redacted from the public version of the NERC notification, though the filing did include standard language from consent decrees to the effect of, "we didn't do it the first time and we promise not to do it again."</p>

<b>HEADLINE</b>	<b>03/14 BlackTDS malware distribution service</b>
<b>SOURCE</b>	<a href="http://www.darkreading.com/vulnerabilities---threats/new-hosted-service-lowers-barriers-to-malware-distribution-/d/d-id/1331277">http://www.darkreading.com/vulnerabilities---threats/new-hosted-service-lowers-barriers-to-malware-distribution-/d/d-id/1331277</a>
<b>GIST</b>	<p>A newly discovered malware distribution operation that has been advertising its services on underground markets since late December 2017 is the latest example of the growing maturation of cybercrime as a service.</p> <p>BlackTDS is a cloud-hosted traffic distribution system (TDS) for distributing malware. Security vendor Proofpoint, which has been tracking the service for the past several weeks, describes it as lowering the entry barrier for threat actors that want to engage in drive-by attacks.</p> <p>The service isn't a completely turnkey one, since threat actors must still find a way to drive traffic to BlackTDS. "[But] it is otherwise a fairly complete solution, including social engineering for Web-based attacks that is fairly simple and inexpensive to configure and use," says Kevin Epstein, vice president of threat operations at Proofpoint.</p> <p>A TDS is designed to take traffic from different sources; filter it based on parameters such as user agent, browser, and geography; and then redirect users to various websites, depending on their profile. Malicious distribution systems like BlackTDS use the parameters to redirect users of interest to specific malicious websites and payloads instead.</p>

"For example, an actor might want to send Australian users who click on a malicious link in an email to a banking Trojan configured with injects for Australian banks but make sure that everyone else gets ransomware," Epstein explains.

The use of traffic distribution systems to distribute malware is not new. As far back as 2011, Symantec had reported on cybercriminals using a TDS to distribute exploit kits and malware to targets matching specific profiles. In 2016, Forcepoint reported on a threat actor using a malicious TDS dubbed BlackHat-TDS to redirect users to websites that hosted exploit kits.

As Forcepoint had noted at the time, threat actors running a TDS can set up blacklists of IP ranges to filter out traffic from security vendors and Web crawlers while ensuring traffic from ordinary users gets redirected to malware and exploits.

What makes BlackTDS different is that it is being delivered as a highly scalable, easy to deploy, and relatively inexpensive service. Threat actors can simply drive traffic to BlackTDS using spam, malicious advertisements, and other means; set up or provide access to their malware; and then let the service handle the rest of the distribution process.

<b>HEADLINE</b>	<b>03/14 Survey: 26% online constantly; 77% daily</b>
<b>SOURCE</b>	<a href="http://www.pewresearch.org/fact-tank/2018/03/14/about-a-quarter-of-americans-report-going-online-almost-constantly/">http://www.pewresearch.org/fact-tank/2018/03/14/about-a-quarter-of-americans-report-going-online-almost-constantly/</a>
<b>GIST</b>	<p>As smartphones and other mobile devices have become more widespread, 26% of American adults now report that they go online “almost constantly,” up from 21% in 2015, according to a Pew Research Center survey conducted in January 2018.</p> <p>Overall, 77% of Americans go online on a daily basis. That figure includes the 26% who go online almost constantly, as well as 43% who say they go online several times a day and 8% who go online about once a day. Some 11% go online several times a week or less often, while 11% of adults say they do not use the internet at all.</p> <p>Adults with mobile connectivity are especially likely to be online a lot. Among mobile internet users – the 83% of Americans who use the internet at least occasionally using a smartphone, tablet or other mobile device – 89% go online daily and 31% go online almost constantly. Among Americans who go online but not via a mobile device, by comparison, 54% go online daily and just 5% say they go online almost constantly.</p> <p>Younger adults are at the vanguard of the constantly connected: Roughly four-in-ten 18- to 29-year-olds (39%) now go online almost constantly and 49% go online multiple times per day. By comparison, just 8% of those 65 and older go online almost constantly and just 30% go online multiple times per day.</p> <p>Americans ages 30 to 49 are now about as likely as younger adults to use the internet almost constantly (36% versus 39%). The share of 30- to 49-year olds who say this has risen 12 percentage points since 2015. Meanwhile, the share of constantly online Americans ages 50 to 64 has risen from 12% to 17%.</p> <p>Other demographic groups that report going online frequently include college-educated adults, black adults, adults who live in higher-income households and non-rural residents.</p> <p>Some 34% of adults with a college education or more go online almost constantly (and 92% go online daily), compared with 20% of adults with a high school education or less. At the same time, roughly four-in-ten blacks (37%) report using the internet almost constantly, compared with 30% of Hispanics and 23% of whites. The share of blacks who are almost constantly online has risen 14 points since 2015, while the share of Hispanics who say this has gone up by 11 points. Among whites, there has been little change.</p>

While 35% of adults with an annual household income of \$75,000 or more use the internet almost constantly (and 91% use it daily), this is true for just 24% of those making less than \$30,000. Adults who live in urban and suburban areas are more likely to go online almost constantly than those who live in rural areas: 32% of adults living in urban areas and 27% living in suburban areas say this, compared with 15% of rural residents.

<b>HEADLINE</b>	<b>03/14 Cryptocurrencies take plunge w/bad news</b>
<b>SOURCE</b>	<a href="https://www.nbcnews.com/tech/tech-news/bitcoin-other-cryptocurrencies-plunge-wave-bad-news-n856821">https://www.nbcnews.com/tech/tech-news/bitcoin-other-cryptocurrencies-plunge-wave-bad-news-n856821</a>
<b>GIST</b>	<p>The penny dropped for cryptocurrencies like Bitcoin on Wednesday as prices plummeted on bad news from Google, international regulators and Congress.</p> <p>Major cryptocurrencies fell by double-digit percentages on legitimate markets Wednesday after a triple whammy of adverse developments: Google announced that it will ban cryptocurrency-related ads, the International Monetary Fund called for a worldwide regulatory crackdown on cryptocurrencies, and members of Congress clobbered them at a hearing on Wednesday.</p> <p>Bitcoin dropped by more than 16 percent in 24 hours on the Luxembourg-based Bitstamp exchange, falling from \$9,346 to \$7,831 on Wednesday night. Litecoin, another popular cryptocurrency, lost 13 percent, settling at \$155, and Ethereum plunged by more than 17 percent, to \$582.</p> <p>Without government regulation, cryptocurrencies can fluctuate massively from day to day, and the digital mechanisms behind them are regularly hacked by cybercriminals. They're particularly vulnerable to manipulation by fraudulent advertising and scam artists, which has put pressure on companies like Facebook and Google to take action.</p> <p>Facebook went first, in January, when it banned "ads that promote financial products and services that are frequently associated with misleading or deceptive promotional practices," like initial coin offerings and cryptocurrency.</p> <p>Tuesday, Google followed suit, saying it would also ban cryptocurrency-related ad content beginning in June.</p> <p>Google's news landed as the International Monetary Fund, or IMF — in a paper ominously titled "Addressing the Dark Side of the Crypto World" — called on governments to impose "regulatory technology and supervisory technology" to "help shut criminals out of the crypto world."</p> <p>"The same reason crypto-assets — or what some people call crypto-currencies — are so appealing is also what makes them dangerous," the agency wrote, citing the decentralization of networks that allow traders to remain anonymous.</p> <p>"The result is a potentially major new vehicle for money laundering and the financing of terrorism," it said. And correcting the problems will "require close international cooperation: under a "global" framework — words that are poison to many cryptocurrency investors.</p> <p>Then, on Wednesday, Congress got into the act. At a hearing of the House Financial Services subcommittee on markets and securities, members and witnesses colorfully expressed deep skepticism.</p> <p>Rep. Bill Huizenga, R-Mich., the subcommittee's chairman, derided what he called the "crypto craze," promising: "This panel, this Congress is not going to sit by idly with a lack of protection for investors."</p> <p>Rep. Brad Sherman, D-Calif., was even more blunt, declaring: "Cryptocurrencies are a crock."</p>

<b>HEADLINE</b>	<b>03/14 France targets Apple, Google</b>
<b>SOURCE</b>	<a href="https://www.wsj.com/articles/france-targets-apple-google-for-abusive-commercial-practices-1521031428">https://www.wsj.com/articles/france-targets-apple-google-for-abusive-commercial-practices-1521031428</a>
<b>GIST</b>	<p>PARIS—France wants to fine Apple Inc. AAPL -0.85% and Google for allegedly taking advantage of smaller French software developers, targeting two of the U.S.’s biggest companies, as tensions heat up between the two continents after President Donald Trump said he would adopt new tariffs that could hit European firms.</p> <p>The French Finance Ministry said Wednesday it has filed a complaint asking a Paris court to order Apple and Google, a unit of Alphabet Inc., GOOGL 0.79% to end “abusive commercial practices” following a three-year government investigation into how the Silicon Valley companies treat French start-ups that develop and sell applications for mobile phones. Some developers and publishers are unhappy that Apple and Google at times take a cut of in-app purchases and get access to more data on their users and subscribers than the developers do.</p> <p>“No matter how powerful Google and Apple may be, they cannot treat our start-ups and developers the way they do today,” French Finance Minister Bruno Le Maire said on French radio.</p> <p>“We believe our terms comply with French laws and are looking forward to making our case in court,” a Google spokeswoman said. Apple didn’t immediately respond to requests for comment.</p> <p>The French finance ministry says there’s no connection between taking on tech firms and the U.S.’s new tariffs and taxes.</p> <p>However, France has recently become more vocal about its actions against U.S. firms. A finance ministry official said Europe “needs to stand up and defend its own interests.”</p> <p>The case France announced Wednesday seeks to address a “significant imbalance” in the way Google and Apple treat developers, the finance ministry said, adding the government is seeking to fine each company two million euros.</p> <p>“When our developers want to sell their app on Google or Apple, the fees are imposed on them,” Mr. Le Maire said. “That’s unacceptable. It’s not the economy we want.”</p>
